would tell of the failures which led to their present position, (success without some failures are very rare), there would be fewer people going into the business one year and dropping out the next disgusted with the whole thing. If they had known what to expect, the probability is a less number would make the venture, and those who did, would more than likely make a success of it. As it is, most persons get an idea, after reading some glowing account, that poultry business is all sunshine. That is all right until after they have made a trial, then it is altogether different. In my experience I have seen enough to convince me that it is not all sunshine. I do not say this to discourage anyone intending to enter the poultry field, but rather to encourage and point out the difficulties that are sure to present themselves. Poultry are not hard to raise if you use only common sense. There is no success without great labor and no one should go into the poultry business expecting to sit by the fire, turn a crank and raise all kinds of poultry. There is no occupation that requires more nerve and ability to look after all the "little details," than the poultry business. "Labor conquers all," is a proverb as old as the hills. There are poultry raisers on all sides who get into careless "slip shod" habits of management that can result in nothing but failure. One must exercise eternal vigilance, and study the life and habits of fowls. It is surprising how little the majority know of the life, habits and requirements of their own flocks. Yards are as bare as use can make them, and houses the same. A knowledge of chemistry and science goes well in the poultry yard. We should have faith in our business and own ability, work with eyes open, and strive for a purpose,

thousands of poultry keepers in the United States no two of whom possess the same degree of skill. I have a way that is a way of my own and it may not come up to what a great many of you have experienced, nevertheless I get good results and that is what we are all after. In raising brooder chicks perhaps the first important thing is to have a handy spot to be used as a cemetery. next a brave spirit, don't get discouraged when you find the chicks dropping off one, two or a half a dozen a day. "Don't get blue." There may be some readers who think there is no need of a "cemetery" or "blues," and that chickens brought up as they should will not die. That is true, but how many raise a flock of chickens from the incubator to a marketable age? Such cases are so rare that they serve as a glowing account for the newspapers, where the innocent are encouraged to go into the poultry business where will be found plenty of money and an easy occupation. Such glowing accounts also have a tendency to discourage the amateur already in. If we have discouragements and failures that would paralyze most people, discouraging times, hard work with chickens when everything seems dark, blot them out and start over again, try and win through the rough school of experience. The tuition often comes high. Our watchword should be: "What man has done, man can do." There is much in the past that can be used as object lessons and guides for the future. It requires more of an expert to count the chicks (the same number) when ready for the market than it does to count them before they are hatched. There are reasons for this decrease in numbers, but it does not seem so large until the season is over, then it is too late to mend. By another season

the troubles are forgotten and many go through the same experience as before. I believe that not one-half of the chickens hatched reach a marketable age. Their death is caused by poor management and a lack of knowledge of the business. Most chickens are given their liberty on the farm where all sorts of dangers are lurking near, such as rainstorms, rats, skunks, hawks, etc., and then it is all laid to bad luck which has

S. C. BROWN LEGHORN PULLET.
Winner of first prize at Rochelle, Ill. Score 95, by McClave. Bred and owned by Paul T. Hobart, Roscoe, Ill.

had a good many things laid to it that never belonged there. Each dead chicken represents a fifty-cent piece. If every poultry raiser would keep in mind that every dead chicken represents so much loss, so much less cash returns, he would take more pains to prevent the losses. Brooding chicks by artificial means is an art, but with the best of appliances it is fully as successful as with hens. People have said what a task it is to look after your young chicks. I do not consider it such a task since learning how to use common sense and system about the work. Chickens grow and thrive even while we sleep. Just before leaving the shell the chick draws into the body the whole of the unabsorbed yolk of the egg. This is its food before and after leaving the shell. It must be exactly right, as nature never errs. It is the food nature provided to sustain life until the chick is strong enough to take other food. Chicks should not be fed until 48 hours old. If fed too soon or too much the yolk of the egg which it took into the body before leaving the shell will not be drawn upon, it will remain unabsorbed and in time decompose, causing bowel trouble and death. The great number of chicks which die of bowel trouble do so at about a week or ten days of age. If you will open one of the dead chicks, nine cases out of ten you will find decomposed yolk in the yolk sack. Chicks normally hatched and given almost any kind of care will live and seem to thrive for the first week, then the trouble begins. The critical period in the chicks life is the first two weeks. Starting the chicks right is half the battle. When they have arrived at 3 or 4 weeks old they have nearly passed the dangers of chickendom. One great danger is overfeeding. The young chickens require but little food for the first few days of their life. Their digestive organs are not strong, and by overfeeding it overtaxes the digestive system and bowel trouble results. Improperly feeding chicks, especially for the first two weeks, it makes more would-be poultrymen than any other one thing in the whole business. It is the foundation of all disease. It is essential that chicks should be well born. There is no mystery about feeding chicks. It is easy and only requires common sense. When this is lacking better tackle something else. Chicks die of "too high living." No matter what the feed, be careful to just supply the need of the chick. Better keep them just a little hungry than to feed too much. After the chicks are a few weeks old they will be able to stand more feed. Failure in brooder chicks is due to the care given them. In most cases it is wretched. The more care you give them the larger the returns. Lice prey upon the chicks if brooders are not kept clean. They should be cleaned every day. When lice and mites are present you feed in vain, verily, the path of the brooder chick is strewn with thorns if you do not give them constant care. As has been truthfully said, it is one thing to hatch the chicks; but another to raise

them. I don't claim to know it all; but there are a few things that I have found out through sad experience and that I can properly claim as my own. I shall endeavor to give a synopsis of the method I have found to be the most successful. I raise 3,000 and 4,000 chicks every year. I'll not go into details, but hope you will get my idea. The only right way to start is to start right. The breeding stock must be healthy and vigorous. If this is not the case you had better quit before you start. There are a number of good brooders in the market. Don't put more than 75 or 100 chicks in a brooder of any size. If you have a brooder as large as a house and more than this number are placed therein, they will crowd them and your troubles will commence. After the chicks are two weeks old I remove them from the brooders and place them in boxes in numbers of 15 or 20. As they grow older decrease the number in the boxes. I find they do better handled in this way than when left in the brooders. First the chicks are placed in the brooders, the floor of which is covered by newspapers and on the paper is placed about an inch of chaff from the hay loft, and the whole made warm and dry before the chicks are placed in the brooder; into this chaff I scatter a handful of oatmeal, bread crumbs or prepare chick food, sharp sand, also a little charcoal. This will prepare them for their first meal. I prefer the dry method of feeding. Almost anything of a vegetable nature is good for feed. After the chicks are ten days old, they should have grit, charcoal and water from the start. One of the main points in raising brooder chicks is to keep them active. Throw their feed in the litter. Make them work for it, for exercise is the only method to develop muscle and make a strong, healthy chick. A few advantages in raising brooder chicks are, you can raise larger numbers and in case of danger of storm you can call them and they will run and fly to you; in a few seconds you will have them under control, whereas it would take you a long time to drive them to a place of shelter and lots of them you could never drive up before they got wet and chilled.

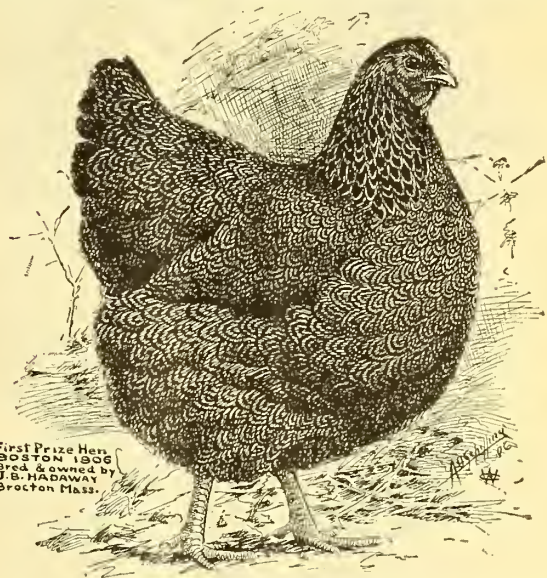

Let us all look into the poultry question a little closer and try to give it the same consideration and preparation to importance that is devoted to other kinds of stock.

ADVICE TO BEGINNERS.

How to Make a Success of the Poultry Business—Thoroughreds the Kind that Pay—Everyone Cannot be Successful in Their First Attempt.

Written for American Poultry Journal by Mrs. H. C. Kolster, Reedsburg, Wis.

For the benefit of beginners in the poultry business, or perhaps some who did begin, but because success failed to crown their first attempts they became discouraged and gave up the

PARTRIDGE WYANDOTTE HEN.

work, let me say that if you will persevere in the work you have begun you will surely succeed. You know the adage, "If first you don't succeed, try, try again." First let me say, if you are a beginner and are not already a subscriber to some reliable poultry journal, do not wait any longer, but subscribe at once for at least one good poultry journal, and more than one will do no harm.

In order to make a success of the work, you must have something to guide you in your work, and what can be of more benefit than a reliable paper whose every issue contains some helpful hints.

I will give a short outline of my experience, and hope it may be of help to some one who has met with failure in their first attempt. When I came from the city to the farm, I found about 200 chickens, all mongrel stock. I wanted to raise thoroughbred poultry. My first step was to subscribe for a reliable poultry journal and ordered the AMERICAN POULTRY JOURNAL, in which I found many helpful items each month. My next step was to get rid of my mongrel stock. I kept about eighteen hens for sitters in the spring. My advice to all beginners is to start right, and the right way is to use eggs for hatching from some good breed of poultry.

Of course, the best way is to purchase a trio of the breed you wish to raise, but I think a farmer would find it slow work to stock a farm with poultry in that way. I purchased eggs for hatching from thoroughbred stock. When the eggs began to hatch my troubles also began.

I also sent to a well-known poultry farm for a sitting of eggs so I might have a rooster who was not related to my flock. I placed the eggs under a hen and awaited results. Bidy was faithful and at the end of three weeks hatched twelve little fluffy, downy chicks. They thrived and grew for about two weeks, when one morning upon my arrival at the coop, imagine my surprise to find but three little chicks, the

FIRST PRIZE BOSTON 1906
FIRST PRIZE BOSTON 1905 (AS CHL.)
BRED & OWNED BY
D. W. YOUNG, RIDGEWOOD, N. J.

FIRST BOSTON WHITE LEGHORN COCK.

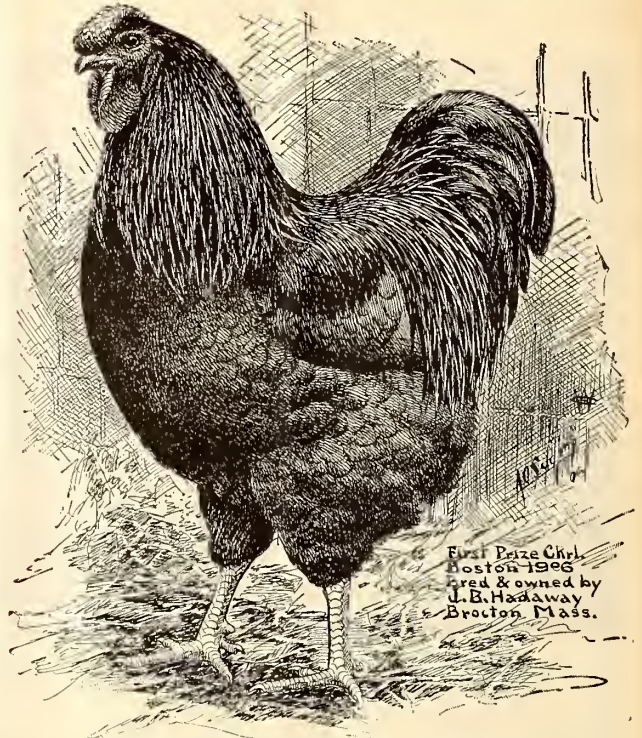

Three out of five first prizes at New York and four out of five first prizes at Boston, following Mr. D. W. Young's unprecedented record at these two shows last year is indeed convincing proof of the quality of the White Leghorns bred at his yards at Ridgewood, N. J. The finished character and gracefulness of the birds this strain has produced during their appearance at the late eastern shows speak volumes for Mr. Young's ability and science in breeding. That the popularity of the White Leghorns as a show fowl is keeping equal pace with its immense popularity as an egg producer, is attested by the 273 penned at New York this year.

The subject of the above sketch has won highest honors in the open class at Boston for two years in succession, and excepting Mr. Young's first prize cockerel at New York this last winter is perhaps as near his ideal of what a white leghorn should be as any he ever produced.—F. L. SEWELL.

rest having been devoured by rats during the night. Would you call that success? However, I continued to purchase eggs from the city. During the season I purchased 498 eggs and hatched about 300 lively little chicks.

I lost very few from any sickness, but at the end of the season I had sixty chickens, and the rats had the rest.

It would take too much space to relate my experience with rats during the summer, but many times I was almost discouraged. Last summer I had better success, having rid the farm of rats, and now am on the road to "successful poultry

FIRST PRIZE CHL.
BOSTON 1906

raising." Am living in a community where thoroughbred poultry is scarce, and consequently am called a crank on the subject, for I never lose an opportunity to talk about "the kind of poultry that pays."

I asked a neighbor, "Are you getting any eggs this winter?" "Oh, yes; I get eight or ten eggs." And they keep from 150 to 175 hens. "Do you find any?" they ask in return. "Oh, yes," I reply, "I find from twenty-five to thirty eggs each day." Have sixty hens. Of course, their next question is what I do to find so many eggs. My first answer is, I keep thoroughbred poultry, the "kind that pays," and then a few words as to my method of feeding. In the morning I scatter mixed grain in the scratching shed, where the hens work diligently until the noon hour. At noon I give them a mash feed consisting of boiled potato parings with a little ground oats or corn mixed in, and about twice a week I add one tablespoonful of black pepper for every 30 hens. They eat their mash feed and soon return to the scratching shed, where they busy themselves until night. At evening I give them a generous amount of shelled corn, and they in return have given me a goodly number of eggs. I keep oyster shell and grit before them all the time. Also hang a cabbage in the chicken house for them to pick quite often.

Feed them beef scraps in a self-feeder and in that way none is wasted. And I also give them a pail of separated milk every morning, and how they do enjoy it! But it is so much work to give chickens such good care. Oh, yes, it is work, I know, but it is work that brings success.

I love my poultry and they return the favor. How do I know? I was absent about two weeks during the early winter, and upon my return I made a visit to my chicken house. They flocked around me and showed their delight by singing a song of welcome such as only hens can sing, and I was happy to be with them again. Treat your hens with kindness and they will repay you in more ways than one; but if you slight them they will slight you every time.

Everyone can not be successful in their first attempt with poultry raising, but if you have the determination to overcome the little difficulties you are sure to meet with in this work, success will surely crown your efforts. It is not enough that you like your work, but you must also like the little busybodies that are the cause of your work. It is a real pleasure to go among your poultry and see that they do not know the meaning of the word "fear" when you are with them.

DUCK CULTURE.

Caring for the Eggs to be Used for Hatching—Testing the Eggs—Removing the Ducklings from the Incubator—Feeding and Care.

Written for American Poultry Journal by Wm. O. Jennings, Marathon, N. Y.

Let us start first with the egg. To keep duck eggs in the best condition before they are hatched they should be placed in a cool room, say forty-five or fifty degrees. It is not necessary to turn them every day if they are placed on end; however it is but little trouble to turn them occasionally, as they can be placed in any ordinary duck-egg case and these cases and contents can be turned as readily with a dozen eggs as when full. Eggs under these conditions can easily be kept twenty-one days, but fresh eggs are preferable.

The next thing is testing the eggs. This method is essential as well as economical with both hens and incubators. I once knew a man who ran a 300-egg incubator for three weeks with only one fertile egg. The other two hundred and ninety-nine proved infertile and he did not know it until the end of three weeks. A great waste of time and oil. Three weeks in the best part of the hatching season means a good deal

hazard. Failure and misfortune are always attributed to conditions. Circumstances or hard luck, never themselves, in the case of a poor hatch, the fault always lies in the incubator.

Our next source of trouble lies in removing the ducklings from the incubator and placing them behind the stove or some other place to dry. For every fifteen ducklings removed the heat in the incubator chamber is reduced one degree. If the machine is not gauged higher to correspond with the number of ducklings removed the result will be fatal to the unhatched eggs. After all the ducklings have been removed, the egg tray or trays should be taken out, the valves opened and the machine cooled down to 90° and the ducklings replaced in the incubator and allowed to remain for at least twenty-four hours. One reason for removing the ducklings is to prevent the older ones from harming the younger ones. A very good plan is to cover the bottom of the machine with litter; I usually use wheat bran, as this acts both as an absorbent and as a disinfectant.

The brooder house should be the same whether growing on a large scale or a small one with simply the length proportional to your needs, but always remember the heat should come from above, as bottom heat will soon cripple them in the legs and render them helpless. Let it be understood that a good brooder is next to the incubator, the most important thing in the business.

Ducklings will never smother each other by over-crowding, but, of course, will not thrive when too close together.

In feeding the young ducks, nothing can be produced any better than stale bread. It can profitably be mixed with milk, not too sour; but do not give milk as a drink because the young ducklings will smear themselves over with it; their bills and eyes will be stuffed up, the down will come off their little bodies in patches. Another important thing in caring for ducks is a regular feeding and watering time. After two or three days old a good feed for ducks is four parts of wheat bran to one part of meal, with a little wheat flour to connect the mass but not enough to make it sticky. One or two per cent of fine grit should be added to this, giving a well-balanced ration for young ducks till one week old, when a little fine beef scraps should be introduced, soaking a little before mixing. Finely chopped cabbage or lettuce makes a fine green food. When two weeks old feed one part of corn meal and three parts of bran. This food should be scattered on feeding troughs which are simply one-half inch boards, nine inches wide and three or four feet long, with lath nailed on the sides and ends. Water cans that young ducks can easily drink from without getting wet should always be convenient to the food. Be careful about keeping water cans and feed troughs clean, as all these things tend towards a rapid growth of young ducks.

SUCCESSFUL POULTRY RAISING.

Ambition the Kingbolt to the Success of Poultry Raising—It's Like Building a Wagon—Infusing New Blood Into the Flock.

Written for American Poultry Journal by Mrs. Frances Tallon, So. Haven, Mich.

We start out to raise poultry with a certain amount of enthusiasm—we get a cheap sitting of eggs—or a hen or bird and cock or cockerel cheap—thinking that will do—can't afford high-priced grades, we lose a year or two in this way, time, and everything lost, for had we started with the best we could have had experience, and something to show for it.

Then to us is born the ambition to excel in the raising of poultry not only to raise as good as anyone but to excel—that is one of the front wheels—you say it don't take much to make a wheel—why the very best material the whole success of your wagon is in this wheel—to excel.

We carefully investigate the different breeds to our satisfaction choosing what looks to us the right kind. We proceed to buy either stock or eggs, paying if it suits us a good price for it—cheap poultry stock is like buying cheap clothing—not apt to be satisfactory. We do not necessarily have to buy of the old established farms whose reputation is such that they can ask fabulous prices—for often times the man who has taken great pains with his stock, but has not been in business long enough to ask fancy prices, has just as good stock—not cheap by any means—when you see a man selling for a little above market price—you can depend on it nine times out of ten he has not taken any pains with his stock. Now you have bought your good stock that's the other front wheel.

Then you build your poultry houses comfortable and convenient, but not fancy, for that is waste of money, and a chicken don't appreciate it; leave that too for the rich fancier. You want to breed for all good points or the points you most

BARRED PLYMOUTH ROCK COCKEREL.

Winner of first prize at Chicago, 1906. Bred and owned by Dr. O. P. Bennett, Mazon, Ill.

sometimes. Eggs tested after four or five days of incubation are just as good for table use as fresh ones. Another important thing is the room in our incubators. It often happens in the winter when eggs are apt to be infertile that after testing 300 eggs we can easily find room to start 50 or 75 more. I usually test duck eggs at the end of four days; the fertile germ is then plainly visible and the eggs can be passed before the light several at a time. The color of the egg makes a great deal of difference in the time before the first test, as the germ cannot be seen as readily through the dark shelled eggs as through the light ones. The most important test is at the tenth day, when we should be sure that all dead germs are removed, as many a good hatch has been ruined by dead germs. These dead germ eggs are valuable as food for young ducklings. Another potent fact is always having the thermometer on a strong germ egg, as there is from one to two degrees difference between live and dead germ eggs, and when the thermometer is placed on a dead germ and the incubator is being run at 103°, the live germ eggs are 105°, which should not be. Too much accuracy cannot be taken in running your incubators or in testing the eggs. In the composition of some men there is no such thing as accuracy. Things are run hap-

want in your particular fowl—I never can leave out any. Now you have your first hind wheel.

Then you study what is the best food for their success—not heeding *all* of the articles written on feeding and food, but using your own judgment as to best results. Then your incubators and brooders must be carefully selected, chosen *very* carefully, or you may lose your early start. This is the other hind wheel. The running gears are there in the way of yards, finally troughs, advertising, etc. Now you are ready for the completeness of your vehicle which is to carry you safely to success and that is the kingbolt, *Ambition*.

Your aim now must be to improve each year, not by buying new stock until you have bred the old to where you want it. Select for your pens what will improve your stock. If you are too dark on color put in a lighter male; if too light a darker one. Keep at it regardless of promiscuous advice; of course take advice, but keep on with your own ideas and ambition. If your birds do not suit you in shape mate up until they do—this is the way our great fanciers brought so many of our fowls to perfection, they did not do it in one year, neither can you; but if you find that your birds are coming up to your ideas, keep on.

After breeding in the one family for some time, make up a pen with a male bird from another strain—or use your male with new hens—see what you get; don't do this until you think the relationship is getting too near; then gradually infuse this new blood in your stock, it will give them strength, but maybe give you more off color for a while. I learn that our old, line breeders, gradually at times infuse new blood—paying fabulous prices for either sex that suits them. But don't do as a man I knew did. He had a fine start but with the old farmer idea of getting a new male each year, he did so, with the result that he had the most measly lot of birds I ever saw for blooded stock.

Ambition to excel will give you perseverance to reach your aim.

THE PHEASANT INDUSTRY.

Pheasant Breeding is Now on the Increase in this Country—There are Over Thirty Varieties of Pheasants—The English Variety the Best Layers.

Written for American Poultry Journal by E. C. Wainwright, Little Silver, N. J.

R. H. S. of Jersey Shore, Pa., asks in a recent issue of the AMERICAN POULTRY JOURNAL, for some information on Pheasant culture. I am going to tell you of how I succeed with them and my views of the Pheasant raising in the East as what I have learned from many years of hard earned experience.

Pheasant breeding in this country, for a number of years past has been very poor, but of late it is becoming very popular in the East, and without any doubt whatever in a very little time there will be as many people interested in raising Pheasants as in any other feathered fowl. There is not a nation in the world that does appreciate these beautiful and interesting birds as our country does.

There is not a more noble, attractive head, beautiful form, short wings, stout bills, and withal an elegant tail, which is carried as though proud of it. I see no reason why they shouldn't be. These birds are very beautiful, and far ahead of what anyone would think for, if they have not seen them from life. A visit to an aviary or pheasantry, containing varieties of pheasants, will convince anyone that they are not a dream, but one of the nature charms to the eye.

There are over 30 varieties of pheasants. Among these are the "English," "Ring Necked," "Mongolian," "Golden," "Silver," "Reeves," and "Lady Amherst." These are the ones chiefly used in this country as all the above are hardy, and will breed in confinement and the last three named above can be allowed full liberty for they are very easily tamed and will not leave the place. The "English" lay from 50 to 60 eggs, which is the leader over all the others, the "Mongolians" lay about the same. (That is what some breeders say, but ours never has proved this to me). The "Goldens," from 40 to 50; "Sivers," an average of 50 eggs, 35 pairs having laid the same even number. The "Reeves," are also very free layers, laying about 50 eggs a year. The "Amherst" lays about 30 eggs in a season, and they are not quite as hardy as the others and prove sometimes a heavy loss to their owners when we have a severe winter. But, however, the past season and winter thus far has been very favorably to the breeders of this variety. But the other varieties can stand 30 degrees below zero if they have good protection from the severe winds. They are not liable to diseases, and are as easily raised as chickens.

Some pheasants should be kept in pairs, while others may be kept in lots of five and six hens to one male. The pens should be made so as to allow 50 square feet to one pair of pheasants,

but as much over that number as can be given is all the better. The yards or pens should be made of one-inch mesh poultry netting.

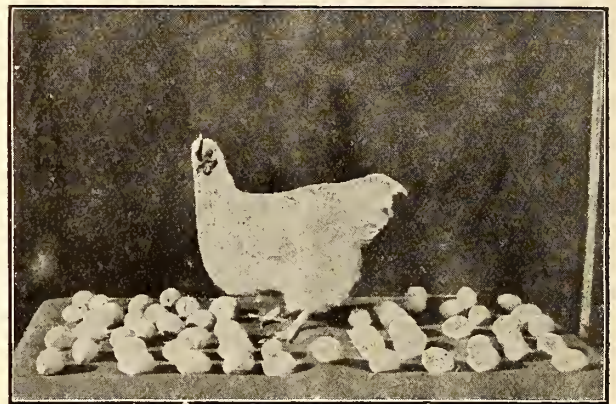

Pheasants should be supplied with plenty of green food, such is their principal food. This in the winter can be secured by feeding apples and potatoes, etc. Feed no grain in breeding season except oats, kaffir corn and red clover seeds.

Feed corn only in winter or cold weather. Bantam hens or Silklies make the best kind of mothers for pheasants, although pheasant hens make excellent good mothers, especially the "English," and pullets very seldom become broody.

There should be some shade in the runs, but the sun altogether should not be excluded. As regards the demand for pheasants this is always greater than the supply, selling from \$1.00 to \$10.00 per pound. The plumage is in demand by milliners and taxidermists, single feathers selling for 50 to 75 cents each. Can any one of our readers explain why the pheasant industry for both fancy and utility purposes could not be made a paying proposition if carried one in the way of poultry keeping?

Dr. John L. Marsh, writes some very high words of praise on rearing the golden pheasant. He does not forget with all he has to say about the "Goldens," the "English" as an "O. K." variety Dr. Marsh writes as follows: The pheasant family includes quite a number of varieties, all of which are natives of some parts of Asia. They belong to the general family phasianidae, which are characterized by having the legs, toes and nasal posel bare, the tarsus in the male with one or more spurs and the hind toe elevated from a large one and includes the turkeys, peacocks, guinea fowls, jungle fowls, domestic fowls and pheasants.

The pheasants are characterized by having long tails, the feathers of which overlap like tiles. They are of ancient origin and have been known in every country in the world. The best known varieties in this country are the "English," "Chinese"

Herewith we present Hen No. 11 with one clutch of her eggs—58 eggs laid in 62 days. Score 94. Bred and owned by J. A. Bickerdyke, Millersville, Ill.

or Mongolian," "Golden," "Silver," "Lady Amherst," and "Reeves."

There are several other varieties bred in different parts of the country. The "English" and "Mongolian" are covert birds, while the "Golden," "Silver" and "Lady Amherst," are the best for the "aviary." My experience has only extended to the "Golden" and "English" varieties.

The "Golden Pheasant," while not so large as some of the other varieties, makes up in generous plumage and docility what it lacks in size. Both male and female are much more beautiful than the "English." A male "Golden" pheasant in full plmage is a sight to behold in the way of beauty. They are of slender upright carriage, with full blood-red breasts, large golden crest, alternate, rings of old gold and black on hood or hackles of neck, wings of blue and red with golden back, a tail near two feet long of spotted brown or dove color, which is a make-up in color hard to excel. The females are not so highly colored but are very pretty, resembling the quail in color only the plumage is light and dark, barred with golden tinge, especially on the breasts. The females like the males get prettier as they grow older, and are not at their best until three or four years old. The females lay the next year after hatching or when one year old, but lay better when two or more years old. The males do not come in full plumage until July or August of the second year. Owing to the lack of time in preparing this article for this issue of the AMERICAN POULTRY JOURNAL, I will continue it until the next issue.

(To be continued.)

Salt aids in the performance of the various functions of the body, as digesting the food and its absorption of the blood.

PRIZE ARTICLE DEPARTMENT

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communication about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. All articles must be written on one side of the paper only. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

The first prize in the contest this month has been awarded Alma Cole Pickering, Plainfield, Wis., and second prize to A. V. Meersch, Poughkeepsie, N. Y.

INFLUENCE OF MATING.

In the April issue of a popular poultry journal the question regarding the influence of mating of fowls is asked as follows:

Q.—“We have lost several sales of White Wyandottes because we let them run with our Barred and Buff Rocks. The males and females running together about the place as we always let them in the fall and early winter; during the remainder of the year each breed is kept separated. Some people think that breeds will not throw *pure* if allowed to run together. Is this not a mistaken idea?”

Ans.—“It is. It is perfectly safe to allow all varieties to range together on the farm between the end of the breeding season and the beginning of cold weather with the exception that *the males may injure each other by fighting*. This method is even advisable because it gives the fowls free range. * * *”

Other journals as well as the one from which the above query and reply are quoted are making like replies to earnest inquirers. Do such replies help or hinder the advance in pure bred stock?

Again, some fancier (?) will describe the progeny from the mating of some prize Cochins with an equally well bred Leghorn, or perchance it may be a Rock and a Langshan. They will dilate on the peculiar markings from *blending* these “alien bloods,” how certain characteristics “war for supremacy,” etc.

Such experiments no one will presume to forbid. They may be interesting to the student (?) of nature, (?) but is it honest and right to sell future offspring from fowls that have been so mated as *pure*? Is it true that previous matings have no influence on the young? Do authentic facts prove this a mistaken idea or no? Let us carefully review some instances of fact bearing upon this subject, instead of clinging to fallacious theories.

Theoretically the popular belief seems to be that the “new creature” is solely the product of the union of the male and female elements by the act of a particular copulation *uninfluenced* by any previous conception. *Facts*, however, successfully contradict that the *female does not carry the influence of a previous mating*.

To illustrate: a learned physician and an eminent authority upon this subject cites in illustration of the contention an instance of a mare having had a foal, the sire of which was termed a *guagga* (an animal of the genus of the horse). The foal was the color of the sire, with a black stripe down the back and around the legs. This mare was *never bred* to the “*guagga*” again and yet *these peculiar markings—mentioned—as well as the color of the guagga remained on the second and the third foal of this mare*. Though they were not present on the fourth foal, who can refute the contention that *all other characteristics had been obliterated*.

Several other circumstances recited by this same eminent student of “principles and influences of mating” substantiated his position as tenable.

This retroverting influence was cited in all kinds of brute animals showing forth “unto the third and fourth generations,” and the statement was made in the lecture room that “what was true in the brute creation was also witnessed not infrequently in the human.” Instantly there flashed into the minds of more than one listener the remembrance of an atrocious murder that had been committed in Milwaukee, Wis., not long before when the father of a nursing babe stabbed the little one to death as it nestled in its mother's bosom. “*Because it looked so much like the first husband of my wife*” was the excuse the murderer gave for the inhuman act. The mother was a widow with four small children when he married her. Insanely jealous of the marked resemblance to the *dead man*, he killed *his own* innocent child.

Poultry breeders who write for the poultry press may claim that the same laws of reproduction and previous influence do not govern or apply to domesticated fowls or to bird creation because they lay eggs. They may even resort to the assertion made in the answer to the question as asked above or they may advocate as has more than one noted poultry judge: “A separation of *six weeks* is sufficient to insure *purity of breed*.” Such assertions and such methods scarcely seem reliable in face of contrary evidence based on fact.

To contend that mammals and fowls differ does not *disprove the influence of mating*. The difference in this particular being only that the former incubates the egg before expulsion from the body, while the egg of the latter is incubated afterward.

If prominent influences from a previous mating follows on for a period of two, three or even four years, is it not incumbent upon every poultry writer to acquaint himself with such facts? A poultry advisor is, in a large sense, his brother's keeper!

The reputation of a poultry breeder once sacrificed through the selling of fowls that *do not breed true to their own kind* can seldom be regained. A good name is truly above price in the poultry business.

“He who steals my purse steals trash,

But he who steals my *good name*

Does not enrich himself

And—makes *me* POOR INDEED.

Good advice enriches and builds up.

Wrong admonitions debase and undermine.

ALMA COLE PICKERING.

THE COLORS AND MARKINGS OF YOUNG CHICKENS.

The beginner at poultry keeping, who may have purchased sittings of eggs from pedigree fowls is frequently in ignorance as to the color and markings of the young chickens. He thinks, perhaps, that the little birds should resemble their parents, and is apt to write indignantly to the vendor of the eggs when he finds them quite unlike the adult fowls. A common instance occurs with the chicks of black poultry. Minorcas, Black Orpingtons, Black Leghorns, Black Hamburgs and others of sable plumage are black and white, when they come out of the shell. The white is on the breast, lower parts, flight feathers, and sometimes on the head. In fact it predominates largely over the black, yet in many instances the chicks that shows most white when just hatched are those that turn out the best in color when matured.

The buff breeds at present so popular are usually yellowish, although some chicks will have dark specks. The color of the legs will vary and change, so it is as well not to dispose too readily of birds which in their early youth apparently have shanks of the wrong shade. Chickens having willow legs will sometimes become yellow legged as they get older, while the yellow-legged youngster not uncommonly turns too pale in its lower extremities. Brown Leghorns, Black Red Game, Partridge Wyandottes and Partridge Cochins are clearly marked along the back with a broad rich brown stripe with a narrower stripe on each side, the general shade being light brown. Indian game chicks are marked in much the same manner. Some being much lighter than others. Indian Games feather rather slowly, becoming bare and naked in the process, especially about the shoulders.

In white varieties the chicks are usually white or creamy. Barred Plymouth Rocks are dark, sooty brown on the back and neck with a light grey spot on the head. As they fledge it is no uncommon thing for one or two black chickens to appear in the brood and these are usually pullets. But this does not prove that the eggs were from inferior birds. Colored Dorking chicks are light brown, with darker rich brown stripes along the back. If they are dark brown all over when they come out of the shell, they will feather too darkly as they grow up. Silver-grey Dorkings also have brown stripes on the back, but they are lighter in shade than the chickens of the other variety. Both breeds of Dorkings have white legs and feet and five toes on each foot. Andalusians are bluish black as chicks, and it is by no means unusual for black as well as white chickens to appear in a brood. Faverolle chickens are yellowish white at first, gradually becoming darker as they grow older. Houdans are whitish with black markings on the head, shoulders and back. They have also a tuft on the head, and this will show whether the birds when grown up will have a large or small crest. The little Houdans should have five toes on each foot. As the chickens from different breeds of fowls grow up, certain strains will be found to feather in different styles. A good deal of experience is required in order to form an accurate idea as to the future appearance of all birds, so they should not too readily be discarded for what after all may not prove faults.

GUARANTEED SUBSCRIBERS.

To our subscribers the display advertisers of the American Poultry Journal are guaranteed; that is, if any advertiser using display space in these columns is proved to be a swindler, the American Poultry Journal will make good to the subscriber the amount lost. We do not guarantee that men in good standing shall agree in their opinions; we do not guarantee nature against infertile eggs, but we do agree that in case a downright swindler succeeds in swindling a subscriber, we will reimburse that subscriber and publish the rascality of the swindler. We ask, in consideration of this guarantee, that our subscribers, when writing to an American Poultry Journal advertiser, say, in every case, "Saw your ad in the American Poultry Journal." In no case will this be to your disadvantage, while in many cases it may serve you well. In either event we shall be obliged to you.

Mayor George S. Barnes, of Battle Creek, Mich., needs no press agent for his Buff Leghorns—they exploit themselves. A dispatch from his home town to the Detroit dailies tells us that he has built a fine flat from the proceeds of his fancy hens in the last few years. The news is accompanied by a picture of the flat itself. We hear much about fancy poultry paying profits and here is a fact that corroborates the idea.

Common report has it that Auburn, N. Y., where the next annual meeting of the A. P. A. is to take place, has an agricultural college with a good sized poultry department and that this school will give something extra fine in the way of lectures while the A. P. A. is in session there. One thing the A. P. A. might do to increase the attendance at its meetings is to provide a goodly program at each annual meet. We hope that the way Auburn handles her entertainment of the A. P. A. will point the way.

Next Annual Meeting of American Poultry Association.

The vote on place of meeting closed on April 2, 1906, and Auburn, N. Y., was the place chosen by the majority. The result of the vote being 65 for Auburn, 43 for New York and 2 for Ft. Wayne, Ind. Ft. Wayne, Ind., had presented an invitation and received quite a complimentary vote; but that association, finding a large majority of the executive committee favored a location farther east, and knowing that its vote might cause a delay by preventing a majority vote for either New York or Auburn, withdrew from the contest and notified its promised supporters to change their votes to one or the other of these two cities. This will be the thirty-first annual meeting of the association and will be held during the week of January 7-12, 1907. Definite time and place will be announced later.

Another Petaluma Record.

Petaluma is still grasping to the championship for all hen wonders. What is easily the world's largest single day's shipment of day-old incubator chicks was shipped out recently by a big concern at that place. Five thousand balls of golden, fluffy chicks were sent out into the cold, cruel world on March 23. These White Leghorn chicks were sent to buyers in California and Oregon and other states west of the Rockies. This famous 5,000 were hatched on the morning of the 23d and it took a whole afternoon to pack them up and ticket them out. The climate of southern California is dry and mild, and not a great deal of warmth has to be taken into consideration in shipping them. This branch of the industry gives promise of being at its height soon in this sunny clime. The chicks can safely go without food 48 to 60 hours and the industry is sure to grow with each season.

Sure Enough Breeder.

A poultry fancier may breed something of value besides chickens. There are but few poultry cranks who know that Mr. A. C. Hawkins is a breeder of good horses. At one time he was an extensive breeder of Holsteins and even now displays considerable interest in that breed of heavy milking cattle. At the late Worcester, Mass., fair, Mr. Hawkins exhibited three grand two-year-old colts and one of them won the blue, so we understand. This colt was sold for \$2,500. Mr. Hawkins not only uses his knowledge of breeding among fowls but applies it elsewhere to advantage. Study into the science of mating and selection and you acquire more of a love for the work. You become buried in it because it appeals to you. When you get covered up in your labor then will the world see that you are in earnest and buy at your door. The man who works earnestly and knowingly already has Success by the heels.

Things Be Moving.

One of the signs of the times that points to advancement is a little squib in the *American Fancier* calling attention to the recent organization of a poultry club at White Plains, N. Y. The fanciers of the vicinity have been in the habit of sending their birds to the

Westchester county fair and they think more attention should be paid the poultry exhibit. They are well located for a cracking good fall show and demand better classification and recognition from the fair management. The efforts of White Plains fanciers brings to mind that throughout the west there are county fairs that need better poultry management. Not long ago the Clay Center, Neb., fair was a small affair in hens, but a dozen fanciers got in a bit of work and now there are from twelve to fifteen hundred birds exhibited annually. A better classification than by pairs, old and young, is to account for the improvement. Formerly three or four hundred birds was a big display.

There is no "Dull Season" in The Poultry Field.

Most every poultryman in the country knows of the big Cawston ostrich farm in California. This farm is one of the show places for visitors and the work of hatching and rearing chicks is particularly interesting. On this farm the Petaluma Incubator Company erected a big hatching house to advertise the fact that Petaluma machines were the ones solely used to bring out the baby ostriches. This is good advertising and though not directly returning the expenditure can be considered as a legitimate piece of business. And this principle of advertising may be applied to the advertising of breeders. Advertising pays the year 'round. To prove it we point to the leaders in every line. They are continuously at it. Not one of them has a dull season. When the egg season is over they immediately catalogue their breeding birds and put them on the market. By that time the fairs are on and fanciers need something to help fill out their lines of show stuff. The whole thing is in breeding worthy stock and buying publicity. This means a twelve months' busy season.

The King Success.

The camp of the veteran breeders and fanciers is still and quiet. Not a sound injures the melody of darkness and the spitting camp-fire. The campers are comfortable and contented. The watchman has fallen asleep and the fire now burns low. At midnight a round, high note, at first faintly heard, then gradually growing louder and long, is carried to us on the breath of the wind. Some one in the camp stirs. He awakens others. They listen. The plaintive sound issues again and again from the distance. It seems to grow louder at each interval, and the veterans are trying to decipher its meaning and from whence it comes. "Rest easy, my brothers," finally sings out one scarred veteran; "it is but a new member—a beginner—a novice—seeking the camp." And straightway they again fall asleep.

Sometimes, in the dead of the veteran's sleep, as it were, the novice creeps in and lays hold of the veteran's honors. This species of new breeder crawls up on the camp without his being heard. That is the safest way—for if one is then obliged to retreat, his advancement has not been noted or heard. He who makes no noise usually has a superabundance of faith, nerves, conceit and hen-sense, that latter being the key to admit one into the garden

of Success. The blusterer spends his energy in blustering, that is to say, he has nothing left to conquer Success with. Again, spreading one's self out thinly over a few breeds courts failure. Success is concentration. Knowing one breed well elevates a breeder higher in the scale of the fancy than if he chooses to expend his time on two or a dozen. A fancier of one fowl knows four times as much about his hobby as one who breeds four varieties. The household names in hendom were made by devotion to a single, vital idea pursued into its lair. In the feathered realm it seems as if he who goes to the top soonest reaps the big reward, as no sooner does he get there than the public transfers its favors upon him. The field is fair to fight and there is plenty of room for strategy. These days the rapid coming to the front of dozens of breeders causes one to remember Mr. Dooley's saying that Opportunity lies about waiting for us. It is not saying too much when one declares that Opportunity waits behind the hen-house door; it lies about the whole plant and hits us a baste at every turn. Some feel it; some are too tough hided and stubborn. These saunter on in ignorance and some day this misused and overlooked Opportunity kicks them from behind, raising them up and dropping them into the rumbling mass of oblivion. Mr. Henman, are you listening to the beck of Opportunity or toiling away in the darkness?

Praise From a Foreign Contemporary.

In its March issue, the AMERICAN POULTRY JOURNAL, a high-class monthly publication which has been in existence for nearly thirty-seven years, devotes no less than eighteen pages to articles treating of the Orpington fowl, which are contributed by as many as sixteen different breeders and fanciers. The frontispiece of the number, besides being a splendid portrait of a typical

black Orpington cock, is one of the best half-tone cuts of a fowl that we have seen, and reflects the greatest credit on Mr. A. O. Schilling, whose work it is. The letterpress is also interspersed by numerous illustrations, among which the place of honor is given to a familiar photograph of the late Mr. W. Cook, while the leading article is by his son, Mr. Percy A. Cook, of Scotch Plains, New Jersey. Much valuable and interesting information concerning the breed is imparted in the contributions, which also show that the present vogue of the Orpington in the United States is by no means a limited one.

Commenting editorially on the popularity of the Orpington, the AMERICAN POULTRY JOURNAL says: "Someone asks why Orpingtons are so popular. In the first place they have a solid foundation on which to build popularity, and in the second, they have been boomed into favor by enthusiastic fanciers and breeders. Merit as a good general-purpose fowl cannot be hammered into a practical poultry public! The bird must be one of excellence and worthy of having nice things said of it. If the Orpington had not been able to 'do' the part it was given credit for, the audience would have hissed the play and the curtain would have been rung down. Reputation is a matter of creating a good impression, and then living up to it. Popularity, likewise, is having good things said of a fowl, and then its exceeding them. Breeders of Orpingtons should at all times be careful in their matings and selections to keep the breed advancing. Let them have the future of these popular fowls ever in mind, and strive to aid the breed as well as their flocks. When William Cook gave the Orpington to England it was after ten years' careful breeding, and five previously of experimenting. He knew what he offered to the public; and then with printer's ink he let the Fancy know what he had. A few breeders in this country caught the swing of the Orpington stride, and worked like Tro-

RANKIN'S ROYAL STRAIN OF "AMERICA'S BIG FOUR"

Barred, White and Buff Ply. Rocks and White Wyandottes are bred to win and bred to pay, bred for quality in every way. All stock selected specimens that are line and pedigree bred by the trap nest system from America's greatest sires and champions. Catalogue pronounced the neatest, most complete and business-like ever gotten up, sent free, together with the most beautifully illustrated mating list ever published, if you mention this Journal. Eggs \$1.50 to \$10 per 15, \$7 to \$20 per 100. Seriously, you can't afford to place an order before writing me.

H. P. Rankin, B. 61, Hartington, Neb.

DEATH TO LICE

powder is the safest and most certain louse killer on the market. There is no getting away from it. Perfectly harmless to the user but sure death to vermin and lice. They cannot live were it is. Can be sprinkled on from the can or used in liquid form for spraying roosts and perches. Lambert's Death to Lice

Makes Poultry Pay

better dividends by keeping fowls in clean, cheerful condition.

THE BEST HE EVER USED
BATH, N. Y., SEPT. 23, 1904.
D. J. LAMBERT,
DEAR SIR:—

I have used the powder a long time and call it the best thing I ever used. A louse can't live where you use it.

ORIS BARNES.

Put it in the nest when you set your hens and get more chicks. Make the other hens contented. Sprinkle the powder in the fluffy feathers of your layers and spray the roosts with Death to Lice Liquid. Kill head lice on young chicks with Death to Lice Ointment. It's safe and sure. Prices, 100 ozs. \$1.00; large sample 10c. "Pocket Book Pointers," Free.

jans to tell the public of their enterprise. These energetic men were the creators of the Orpington; and if you ask them for the recipe they will smile—then go to work again."—*Poultry*, England, March 23, 1906.

Should Birds be Weighed When Judged by Comparison?

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Now that all our winter poultry shows are over, I believe that it will not be amiss if I should dwell on a subject which has been the cause of much argument during the past season.

It appears to me that our western judges do not interpret the American Standard of Perfection as some of our local fanciers do, that is, in regard to comparison judging. I have had the honor of managing a very successful poultry show this winter and as our show is judged by comparison, we of course weighed the birds. Now one of our judges, who, by the way, is a man of considerable reputation, claimed that it was not necessary to weigh the birds, as this should be done only in case of a tie. I cannot agree with him for this reason: It is just as necessary to weigh the birds at a comparison show as it is at a show judged by the score card method, for if this be not the case of what use is our Standard?

The big shows, such as Boston, New York, etc., are judged by comparison, and while I do not know, I believe that the birds at these shows are weighed, if not, I would like to know the reason why.

Many of our western fanciers do not seem to realize what comparison means. I am under the impression that the majority of them believe that a comparison show is run the same as the shows at a county fair. Under these circumstances, it places the comparison system at a great disadvantage.

I would be greatly pleased to have the makers of the Standard of Perfection inform that class of poultrymen that stands for fairness, just where they stand in this matter. WM. B. KLEIN.

St. Paul, Minn.

[Would be pleased to have our readers express their views on the above subject.—Ed.]

CHICK FEED

How can you expect your Baby Chicks to grow and thrive on "corn meal dough?" Give them Purina Baby Chick Feed—properly balanced and composed of a variety of seeds and grains, such as shelled oats, cracked wheat, cracked kafir corn, etc., all carefully milled with the meal and siftings screened out—no waste, NO GRIT. Trial 100 lb. sack \$2.50, freight paid. Purina absolutely guaranteed or money refunded. Purina Mills, B. St. Louis, Mo.

You Need Protection So Do We — That's Why

Cyphers Poultry Foods Are Sold Only In Sealed Bags.

Refuse all bags from which the seal has been removed.

What's the use of putting your valuables in a bank unless they are under lock and key? What's the use of asking you to Buy the Best Poultry Foods unless we guarantee them to be The Best? And what's the use of attempting to Guarantee them to be The Best unless we protect ourselves in their sale, and protect you in their purchase by placing them Under Seal? Our Motto is: **"QUALITY FIRST—THE PRICE AS LOW AS WE CAN MAKE IT."**

Nobody—Neither you nor one of our 7,000 agents—can buy Cyphers Poultry Foods from Us in Bulk. Its reputation is too Valuable for us to risk adulteration. It is therefore Sold Only in Sacks of 50 and 100 pounds—Every One Sealed. First we buy the Pure Grains Unmixed; Then We Remove All Weed Seeds; Next the grains are Scientifically Balanced for our several foods, which are then weighed, sacked and Sealed.

Cyphers Chick Food Makes Chicks Healthful because it is scientifically balanced; it is so blended as to furnish food for **muscle**, food for **feathers** and **flesh-forming** food. Avoid indigestion, diarrhoea, and consequent mortality by using it.

Cyphers Chick Food Makes Chicks Grow because it is composed of foods selected and mixed by expert poultrymen whose lives have been devoted to the business.

Cyphers Chick Food QUICK-GROWTH HEALTH-GIVING Is By Us So Protected From Adulteration

because we want your trade. We want you to know that when you buy it you are getting value for your money and are also getting such results as the following in your attempts to raise prize winners and money-makers.

Chicago Winners.

At Chicago show my second prize pen, first and fourth prize hens second and fourth prize pullets and third prize cockerel were all hatched in a Cyphers Incubator, brooded in a Cyphers Brooder until they were six weeks old and were fed almost exclusively on Cyphers Foods until over three months of age. F. C. Shepherd, Toledo, Ohio.

Noticed the Absence of Bowel Trouble.

The chicks seem to thrive on this food and grow from the start; and that is what makes a healthy chick—not to allow it to stop growing a minute after it is out of the shell. One thing I have noticed in using this feed is the **absence of bowel trouble**, and a very small death loss among little chicks. F. M. Buckingham, Green City, Mo.

No Drooping or Stunted Chicks.

Your Chick Food proves very satisfactory to me. My chicks thrive on it for a longer time than they possibly could on any other single diet. **No drooping nor stunted chicks are found while fed on it.** Many others as well as myself are beginning to see the value of such a scientific food. Samuel Dowds, Dunbar, Pa.

I Have Not Lost a Chick Since Using It.

I bought a sample of your wonderful "Chick Food," and at the time had a couple of broods of White Wyandotte chicks. Year after year I lost a great many small chicks but **since using your wonderful "Chick Food" I have not lost a single chick.** A. J. Seits, Philadelphia, Pa.

New York and Cincinnati Winners.

At the great New York show last month I won 2nd cockerel, 3rd cock and 4th breeding pen, and at the American Poultry Ass'n show held at Cincinnati I won 2nd pen, 3rd & 4th cocks, 3rd & 4th hens, 3rd & 4th cockerels and 3rd & 4th pullets on our Partridge Wyandottes, and **these prize winners were all hatched in the Cyphers Incubators and reared on Cyphers Chick Food.** H. B. Hark, Hartman Stock Farm, Columbus, Ohio.

Better Than Table Scraps.

Our first hatch of chicks did not do very well and a neighbor told us about the chick food being so good for young chicks that we concluded to try it. Now I am glad we gave it a trial. **I have raised more chicks than I did on scraps from the table**, and am more pleased with it than the other foods we had before using it. Mr. & Mrs. Harry Watson, Seely, Kans.

New York Winners.

I have used Cyphers Chick Food for two years with record breaking results. All my New York winners were reared on this feed, and I shall never attempt to raise chicks without it. C. H. Welles, Stratford, Conn.

Never Lost a Chick From One Hundred.

Your Chick Food is the best food for little chicks that I have ever used. **I used it for the first three weeks on one hundred chicks and never lost one.** They were entirely free from bowel trouble. I would not be without it for twice what it costs. R. F. Fieldhouse, Hurley, S. D.

THE LARGEST POULTRY FOOD MILL IN THE WORLD is our Kansas City Mill where we manufacture **nothing but poultry foods and clover and alfalfa products**—no breakfast foods nor ordinary stock foods. From us every customer will receive absolutely sound, cleanly cut, dust-free grains; not by-products, waste materials and sweepings that remain after putting the better parts of the grains and seeds into other foods. The following is our list of Balanced Poultry Foods. Every sack contains a 16-page booklet "Foods and Feeding" telling how to feed:

**CYPHERS LAYING FOOD,
CYPHERS DEVELOPING FOOD,
CYPHERS SCRATCHING FOOD,
CYPHERS FORCING FOOD,**

**CYPHERS CHICK FOOD,
CYPHERS SHORT-CUT ALFALFA,
CYPHERS SHREDDED ALFALFA,
CYPHERS MEALED ALFALFA.**

Six Places of Business and Over 7,000 Dealers—To Save customers time and money, to lessen the freight charges, and insure quick delivery, we maintain six branch houses whose addresses are given below. Goods will be shipped from the branch nearest to you if you write to that Branch. Ask your local dealer for Cyphers Foods and accept no other. If he doesn't keep them please write our nearest branch for **Free Samples** of either of the above Foods.

Our 1906 Catalogue, entitled "Poultry Raising Made Easy and Profitable" will be mailed Free to all who mention this paper and send us the addresses of two neighbors who are interested in poultry for profit. It has 228 pages, and contains A Large Amount of Valuable Information, including Six Chapters on Poultry Raising for Profit, the Raising of Broilers, Roasters, Capons and Ducks for Market, Poultry-keeping on the Farm, Photographs of America's Leading Successful Poultrymen, and Illustrations of the Largest Poultry Plants in the World. Address nearest office.

Cyphers Incubator Company, Factory and Home Office, Buffalo, N. Y.

Ask Your Local Dealer For Cyphers Foods—Look For The Seal.

EGG EATING.

Several Recognized Methods For the Cure of This Habit.

Egg eating is a morbid and depraved appetite which seems to arise spontaneously in an individual bird of a flock, and one which, if not speedily rooted out, will be learned by the others. The result is a serious loss of eggs. No doubt fowls in confined runs are more liable to take the disease than others with free ranges (for small runs often tend to bring out latent evils), though it is by no means peculiar to them. It is a habit not easily discovered at first, as the offender probably leaves no traces of the depredation. The owner will only notice an unexpected falling off in the daily sup-

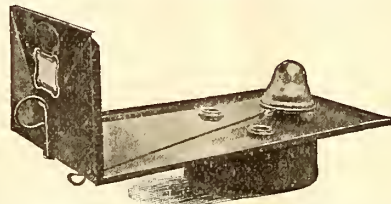

ply of eggs, which he may attribute to anything but the real trouble. At last, however, a splash of yolk or scrap of shell may openly betray the cause. The next thing is to discover the actual culprit. The best means to ascertain this is to place a common egg in the run and watch the fowl that tampers with it. There are several recognized methods for the cure of this habit of cannibalism, and they are all the more or less efficacious. The first is the cooking pot. The second, which must always be detrimental to the constitution of the bird, besides frequently failing in the desired end, is the filling of blown shells with mustard, pepper, or other condiments. Another method advanced is something like the Norwegian cure for inebriates, namely, satiety. Let the fowls eat rotten eggs and shells to their hearts'

content, and finally to their palates' loathing. The last method is, in my opinion, the easiest, cleanest, least expensive, and most effectual of all—except the pot aforesaid. It is simply to put a dummy egg in each nest box and one or two about the run. The egg eaters very soon give up trying to break these, and all other eggs in disgust. This plan has the further merit of leaving it unnecessary to pick out the particular offender, which is often very difficult. I do not know who originated the idea, but it certainly ought to be more widely known, as it will often save considerable trouble and annoyance. It is noteworthy that a bird who will eat a cracked egg with a relish, would not touch a perfect one. It seems to be known instinctively that a cracked egg is a dead egg. FRED KAZMEIER.

WARNING TO BROODER USERS!

We are Sole Owners of U. S. Patent No. 644,599, granted March 6th, 1900 on the Peep-O'-Day Brooder Lamp, shown below,

and we hereby warn all Makers, Dealers and Users of Brooders, that infringement in the slightest degree will be dealt with to the full extent of the law.

We manufacture Peep-O'-Day Brooders in 9 different styles:

No. 0 Outdoor Brooder	\$ 5.00	No. 4 Indoor Brooder	\$ 8.50
No. 1 Indoor or Outdoor Brooder	10.50	No. 5 " "	7.00
No. 2 " " "	11.00	No. 6 Indoor or Outdoor Brooder	13.50
No. 3 " " "	7.50	No. 7 " " "	12.00
No. 8 Outdoor Brooder and Colony House Combined, on runners	- - - -	- - - -	16.00

IF YOU WISH TO REAR ALL OF YOUR CHICKS PURCHASE A PEEP-O'-DAY.

THE CORNELL INCUBATOR embodies a balanced system of Heating, Regulation, Ventilation and Supplied Moisture.

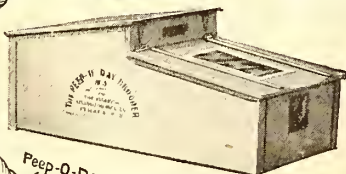

It gives maximum results for minimum attention.

THE PEEP-O'-DAY PORTABLE POULTRY HOUSES are a necessity on a Poultry Farm and are listed more reasonably than you can make them at home.

Send for 1906 Catalog describing all of our manufactures. Free for the asking.

Box A, Downers Grove, Ill.

MILK FOR GROWING CHICKS.

Several years' experience has thoroughly convinced me that I have found a remedy that will positively prevent bowel trouble in young chicks. It is within the reach of any one, and as precautionary methods are better than any other, you may demonstrate to your own satisfaction.

It is simply nothing more than feeding *boiled sweet milk* once a day from the day you begin feeding chicks, and I continue indefinitely, although after chicks are six weeks old I do not boil the milk, but feed it raw. But never feed milk raw to young chicks; boiled milk is a common-sense remedy. Our grandmothers taught us to give it to our children for any bowel ailment, and its effects are equally satisfactory with chicks. The great difference lies in the fact that by proper care children recover, but a recovered chick is not of much value, therefore we must use precautionary methods. And I have never known bowel trouble in any form where this method of feeding existed. I always feed in the morning before they have had access to water, so all will be sure to drink. The best drinking fountain of which I have any knowledge may be improvised from a gallon tin can or bucket, such as syrup comes in. Take

a nail and puncture several holes around the top, fill or partly fill with milk.

JULIUS J. KLEIN, MACON, ILL.
Superintendent Illinois State Poultry Show,
1907.

Place a tin pie plate upside down over the top of bucket, then invert and place in a convenient place for the little

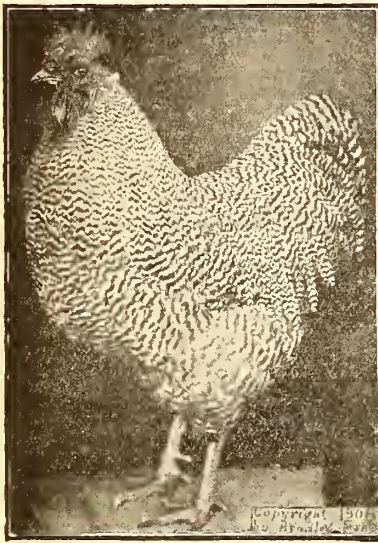

chicks. They will scramble over each other trying to fill up, but they can't upset the bucket or get their feet into the milk, and they will drink it up as fast as it comes from the bucket. Remember, the secret of its success lies in thoroughly sterilizing the milk. Ten minutes is not too long to boil it, and a little water added prevents the milk from scorching so readily. I imagine that a pinch of salt makes it more palatable.

I always feel that I have done my duty better when I feed young chicks on corn bread baked and seasoned well with salt, soda, meat scraps, egg shells and a generous supply of clean sand, yet I have fed dry meal with equally good results, but I never fail to feed oat meal and the boiled milk, and I have more faith in the efficiency of the milk than anything else, and since the prevailing disease that baffles so many and sends countless numbers of young chicks to premature death may be prevented by this manner, the experiment is at least worth a trial. ADA B. F. PARSONS.

Fairfield, Iowa.

Mrs. Mary E. Schatzley, Wheatfield, Ind., breeder of White Wyandottes and Imperial Pekin ducks, has made a big reduction in the price on eggs this month. Look up her ad and write her for particulars. Mention AMERICAN POULTRY JOURNAL.

AGAIN BRADLEY BROS.' BARRED PLYMOUTH ROCKS WIN

SIRE OF THE FIRST PRIZE AND CHAMPION MALE AT NEW YORK SHOW, 1906.

Forty-five Winning Males at New York Shows have been bred by us the last Seventeen years. The last Eight years Thirty-one birds bred by us have sold for \$100.00 or more each, or that price refused.

N. B. The foregoing facts are compiled from actual records carefully kept.

300 Breeding Birds of our Best Winning Lines for sale at \$3.00 to \$25.00 and up. Choice Pens of five birds \$20.00 to \$40.00.

EGGS From Best Pens and Best Pens only, \$7 per 13, \$20 per 39, \$48 per 100. \$250 was refused for a Cockerel and Pullet hatched by two customers from eggs we sold.

FREE---Large Circular, "America's Best---Illustrated," 22 pictures of New York Show Winners; also new testimonial sheet. Send for it.

BRADLEY BROS. - - Box 909, Lee, Mass.

WE BREED OUR WINNERS. EVERY ONE OF OUR WINNERS AT NEW YORK WAS OUR BREEDING, PURE.

"I take pleasure in writing you that my First Chicago cock is the same that won First as cockerel at Kansas City last year, and the one hatched from eggs you sold me. This I think, should be convincing proof to any one that you sell eggs from your best pens. I believe that 90 per cent. of Eastern birds that win in the large Western shows are of your breeding. Yours very truly, W. W. BYWATERS. February 1, Camden Point, Mo"

AT NEW YORK SHOW, 1906, in a class of nearly 500 Barred Plymouth Rocks, Representing All the Largest Breeders, **we won** as follows:

The Prize of Prizes of the Entire Show;

First and Sweepstake on Cockerel;

The best record for Cocks and Cockerels;

The best record for Cockerels Alone;

Spratt's Gold Special for best Plymouth Rock

Cockerel or Pullet, any color, Spratt's Fed;

Special for Champion B. P. Rock Male;

Special for best Pullet Mated Exhibition Pen.

Our "World's Champion" Cockerel and his Sire are both

Pure Bradley Bred and of our Richest New York First Prize Winning lines, extending back for Seventeen years.

FOR SEVENTEEN YEARS BIRDS THAT WE BRED

AND RAISED have won at New York Shows more first prizes by over 25 per cent. than any other exhibitor has

won on any stock; 25 per cent. more first prizes on Exhibition Pens, and double the number of first prizes on

Cockerels; also nearly three times the number of first prizes on Males that any other exhibitor has won on stock

not our breeding.

\$2000 VALUE OF TWO Fishel White Rocks \$2000

The noted prize hen, "MARY E." first and special World's Fair, St. Louis; first, special and Silver Cup for Whitest fowl, Cincinnati; first, special and Silver Cup for whitest fowl, Indianapolis. Prize cock, "FISHEL'S BOY II," first and special, Cincinnati; first and special Indianapolis, where I refused \$1000 for him.

\$800 FOR A FISHEL WHITE ROCK \$800

This is the amount I received for "Prince of Indiana," the 2d prize cock at Indianapolis, 1906. I mention this sale to convince you of the importance of your buying

EGGS FOR HATCHING

from stock that you know will give you results, and from matings which produce these high priced and valuable specimens. When you buy eggs from my yards you get the same blood lines that produced "Edward B Jr." that sold for \$500. Also "Mary E," the \$1000 prize hen, etc. I am pleased to say that birds hatched from eggs I sold last season did most of the winning at most of the shows the past season.

THE FISHEL WHITE PLY. ROCKS

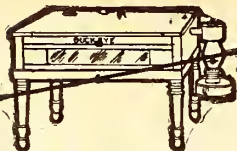

are conceded the world over to be the best there is in poultry, both from a commercial and fancy point of view. My matings this season are the best I ever owned, in fact I doubt if there was ever as many high-class birds mated up as I have in my matings this season. My winnings of every **FIRST PRIZE** but one at three large shows the past season, together with **two Silver Cups for whitest fowl in show**, surely convinces you that the Fishel White Rocks are

"THE BEST IN THE WORLD"

Send three 2-cent stamps, please for my 48-page catalogue, and remember I have a lot of choice breeders and utility birds still to sell; in fact am in a position at all times to supply your wants for whatever you may need in White Rocks, the most beautiful and profitable of all breeds.

EGGS \$5 per 15
\$15 per 50
\$25 per 100

A SCHOOL FOR JUDGES.

The rapid developments along all lines of poultry culture in the past few years has brought out many new factors that place this industry in the very forefront of our commercial industries. The incubator industry, the correspondence school for the education of breeders and fanciers, the many poultry exhibits that are increasing to such a degree that I believe it will only be a short time until we have a poultry association in every county throughout the central western states.

Illinois, with six of the largest and most widely circulated poultry journals in the United States, lead all other states in this line of education. One or more of these journals should have at least two thousand readers in every one of the one hundred and two counties in this state. With this number of readers in every county, there would soon be an awakening to a point where an association would be organized to hold an annual poultry and pet stock exhibit. Such local exhibit must be the primary school for the amateur and novice in standard poultry culture.

At the World's Fair in 1904, the secretary of the poultry department reported two hundred and eighty-five applicants for position as jurors, from which twenty were selected to make the awards at this, the greatest exhibit of standard bred poultry ever brought together. Eight of these applicants applied from

Illinois. Personally, I only know of four in Illinois who have recognition in the broader field of work as judges of standard poultry.

Illinois has as many breeders of standard poultry as any state in the union. Illinois, Iowa, Missouri, Kansas, Indiana, Michigan, Minnesota, Wisconsin and Kentucky have young, wide-awake and progressive men and women who are giving the Standard of Perfection close and careful study, with the ultimate aim of perfecting themselves in applying the law as therein laid down, so that it can be made of greater and more practical use as a guide to broader knowledge and a more scientific application with the use of the score card.

Having given this subject much study and thought since 1883, and having had ample opportunity to meet with many in my work while judging exhibits from Manitoba, Canada, to Mississippi and southern Texas, and from Ohio to the Rocky Mountains, I am confident that now is the time to establish a school of instruction to the would-be judges of the future. With this aim in view, I write this, fully believing that now is the time for those who have desire and ambition to take up this work as it should be, devote time to reading and study, to attend classes where pictures and living specimens can be used to give lessons, and instructions as to applying the score card by a system that brings the philosophy of judging to a practical demonstrated fact.

All such who desire to enter into this work and spend the month of May and June in whole or part with me, write at once.

D. T. HEIMLICH.

BUFF LEGHORNS

Winners at New York. Bred to pay. Eggs for hatching from best pens of Arnold and Cornell-Wyckoff strains. Choice birds \$3.

White Rocks (pure white) America's best strain. Eggs from prize matings \$2 per 13; \$4 per 30. Write your wants.

JAS. KUGLER, Jr. :: R. F. D. 1, Frenchtown, N. J.

YES SIR, IT'S A FACT
The REMARKABLE INCREASED POPULARITY OF
COLUMBIAN
WYANDOTTES

during the past few years clearly indicates they are destined to be acknowledged the premier variety of America's most valued breed. And why? Well, because they have given abundant evidence of being steady, all-the-year layers. Grow with quick vigor—early developing the chubby body characteristic of the Wyandotte breed, and which has given them their unapproachable pre-eminence as the standard commercial fowl of America, and last, but by no means least, their dark hackle and tail contrast pleasantly with the soft whiteness of body plumage.

EGGS FOR HATCHING, \$5 THE SITTING

Next fall I shall have a grand lot of early hatched cockerels and pullets for sale—progeny of carefully selected breeders.

MY WHITE WYANDOTTES

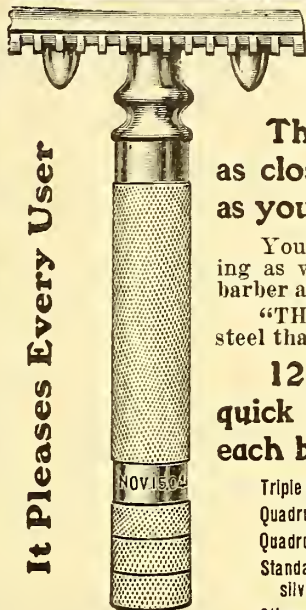

are excellent layers. Eggs, \$3 the sitting; 4 sit-tings, \$10. Baby chicks, 18c and 25c each. Why not procure new blood from me this year and lay the foundation of a persistent rough weather laying flock—the kind that pays? Send for useful desk blotter—'tis free.

We Produce More Winning Partridge, Silver Penciled and Columbian White

WYANDOTTES

than any breeder in America. We head the list in quality. Why shouldn't we, when we produce winners that have won the blue at Madison Square Garden, N. Y., and numerous other shows? The greatest sire of Partridge Wyandottes, namely: my first cock at both Herald Square and Madison Square Garden, '05, has stamped his type on my this year's breeding stock. Also have a selected pen of Partridge Plymouth Rocks. If you want breeders or eggs for hatching, write

MOUNTAIN CREST POULTRY FARM, F. A. Keller, Prop., Box F, Pigeon, Forest Co., Pa.

NETTLETON'S LIGHT BRAHMAS

Grand in size, shape and color, winners at New York, Chicago, Hagers-town, Newark, Paterson, in hot competition. Eggs and stock for sale.

C. P. NETTLETON

Box L, Shelton, Conn.

Allison's Buff Rocks.

EGGS: \$5.00, \$4.00 and \$3 per Fifteen

My birds won every first prize but one at the great Cincinnati A. P. A. Show, Jan. 16-20, 1906, winning 1-2 cock, 1-3 ckl., 2-3 hen, 1-4 pul., 1 pen and 3 special prizes. They won more prizes than any other two exhibitors at the Indianapolis A. P. A. Show, (141 birds in the class). Won at World's Fair, St. Louis, 1904, Indianapolis, Feb., 1904, and are winning for my customers wherever shown. Have some choice birds for sale. Send for my 1906 mating circular.

E. C. ALLISON

Box 5, Hope, Indiana

WHITE WYANDOTTES

My birds are white, are good in size and are Wyandottes in shape. Females score to 96½. At the Northern Illinois Poultry Association Show at Belvidere, February 5th to 10th, 1906, won first cock, first and fourth cockerel, first, second and fourth hen, fourth pullet, first and third pens. I also breed choice Single Comb Brown Leghorns. Eggs for hatching.

W. F. ALLEN

BELVIDERE, ILL.

OAK BLUFF LIGHT BRAHMAS, PARTRIDGE AND COLUMBIAN WYANDOTTES

won in four of the largest shows in Iowa this season in hot competition, with Light Brahmas as strong as ever. Partridge Wyandotte ckl. scoring 95, pullets 94. hens 94½ under Hewes. My Columbian Wyandottes were pronounced by Judge Hewes the best he had seen this year; they follow the Lt. Brahmas closely in color, and hold that short, low Wyandotte shape. I can supply you with some elegant stock in Lt. Brahmas and Partridge Wyandottes. Send for 1906 catalog which describes my six grand matings of Light Brahmas, six elegant matings of Partridge Wyandottes and two fine matings of Columbian Wyandottes. All infertile eggs replaced free. After May 15, Light Brahma and Partridge Wyandotte eggs will be \$3. DR. N. E. MIGHELL, Oak Bluff, Avenue A, MARSHALLTOWN, IA.

BUFF ORPINGTONS AND Barred Plymouth Rocks

Silver Laced, Partridge and White Wyandottes, Buff, White and Brown Leghorns, White Holland and Bronze Turkeys, Peafowls, and Pigeons, etc. Stock and eggs reasonable. Address

PEACOCK POULTRY CO.

Box 28, Buckholts, Texas

HOW TO BROOD THE CHICKS.

From now on for a few weeks millions of young chicks will be hatched. The great problem is to get them safely through the dangerous period of early chickhood. It is frightful to contemplate the losses. Probably not over a half of all the chicks hatched grow to maturity. If these losses could be avoided, even cut in two, what a saving to the poultry business there would be.

The Pure Air brooder, perfected by Humphrey, Joliet, Ill., is justly regarded as one of the best appliances for mothering and bringing young chicks safely through the danger period. Mr. Humphrey is not an incubator man, but a brooder man. He has thrown all his genius into the perfecting of a brooder, recognizing that it is far more difficult to raise chicks artificially than to hatch them in incubators. The indispensable requisites of a brooder are heat—modulated to suit conditions—and pure air. These two things are the basis on which Mr. Humphrey has worked, apparently with great success. The trouble with most brooders is that there is overheating and there's chilling. Again there are times when there are deadly fumes, bad smells; in other words, impure air owing to faulty ventilation. It is not enough that these things occur but seldom. They must not occur at all. The result is fatal if chicks are housed over night or but a single hour in overheated quarters or poisoned air. The beauty about this Humphrey brooder is that it does not have to be watched to keep it from going wrong. It can be depended on to supply pure air and to maintain a right temperature at all times, and to keep quarters perfectly sanitary. That is the kind and the only kind of brooder that will raise chicks profitably. Owners of the Humphrey Pure Air brooder are uniformly successful chick raisers. They all indorse the Humphrey brooder. Mr. Humphrey has regularly advertised his brooder in this paper during the last few months. We believe those of our readers who have trouble raising their chicks would do well to try the Humphrey way. In any event it would be wise to send and get the book Mr. Humphrey has published, which describes his famous brooder fully. It will be mailed free if you mention this paper. Note his advertisement elsewhere and direct accordingly.

SHOEMAKER'S BOOK ON POULTRY

AND ALMANAC FOR 1906.

There is nothing in the world like it. It contains 224 large pages, handsomely illustrated. A number of most beautiful Colored Plates of Fowls true to life. It tells all about all kinds of Thoroughbred Fowls, with life-like illustrations, and prices of same. It tells how to raise poultry successfully and how to treat all diseases common among them. It gives working plans and illustrations of convenient Poultry Houses. It tells all about

Incubators and Brooders.

It gives full instructions for operating all kinds of Incubators. This chapter is marvellously complete and worth dollars to anyone using an Incubator. It gives descriptions and prices of Incubators, Brooders and all kinds of Poultry Supplies. In fact, it is an encyclopedia of chickendom and will be mailed to anyone on receipt of only 15 cents. Your money returned if not pleased.

J. A. LELAND - SPRINGFIELD, ILL.

COMMON SENSE.

The idea promulgated by the BeSaw Chemical Company, whose ad appears on another page of this paper, is one remarkable for its uniqueness as well as its common sense argument through and through. They argue that with one of the poultry tablets, which is made from the extracts of wild flower seeds reduced to tablet form and which cost the feeder 1 cent, you can make a pound of the best tonic poultry food ever placed on the market. The goods have been on the market in this country for two years and have already won for this company a most remarkable trade, because of its low price and common sense. It places in the hands of the feeder and raiser of poultry a very desirable and commendable tonic preparation at an extremely low price and a price which every poultry raiser can afford to pay.

They also put up a roup cure in powdered form which is in itself a commendable feature. This roup cure has been tested and tried by the leading poultrymen of the country and, in fact, the cure was placed on the market in tablet form at the request of many of the leading poultry judges. Tests and experiments of these judges have proven beyond the question of a doubt the merits of the preparation.

They also manufacture a line of cholera cure, louse killer, disinfectant, etc. Their little booklet, which is sent free to all people mentioning this paper, is worth money to every poultry raiser, and we believe that our subscribers would be justified in writing for a booklet.

To our Patrons and Friends:—We wish to say that we are in a position to offer you some choice bargains in stock and eggs for the months of May and June. See our ad on another page.

MRS. J. H. OREBAUGH,
Proprietor of Phoenix Poultry Yards, Batavia, Ohio.

Aspetong Farm wishes to announce that J. J. Anthony is no longer employed on the place. Kindly direct all communications in the future to George Bawden, superintendent, Newburgh, N. Y.

Conkey's Roup Cure

The only sure cure for roup, colds and canker in Chickens, Turkeys and Pigeons. Keep a package on hand and give to fowls in drinking water when they show signs of the disease. Put up in 50c and \$1.00 packages. Your money back if a cure is not effected. Druggists and Poultry Supply Dealers sell it. If they haven't it, send to us direct. We pay postage. If you want to keep your flock healthy send for our book on "Poultry Diseases." We sell it for 25 cents, but to any reader of this paper who will send the names of two other poultry raisers we will send a copy free for only 4 cents to pay postage.

EARTHQUAKE IN WISCONSIN.

Kendall, Wis., April 11.—(By Special Dispatch.)—The following telegram tells how three separate manufacturers met an earthquake that jarred the ground under their feet:

"Kendall, Wis., April 11.—The Sharples Separator Company, Chicago: In presence of forty dairymen Tubular won big contest here yesterday over three competitors. Sold committee six sixes. MAIRE."

Mr. Maire is the traveling representative of the Sharples Separator Company, of West Chester, Pa., Chicago, Ill., and Toronto, Can., manufacturers of the famous Sharples Tubular Cream Separator. The Sharples Separator Company certainly seems to have things about their own way, easily winning all public contests in which they enter their machines. This contest certainly proved an earthquake to the three defeated competitors, and Mr. Maire's telegram says they were not only defeated but that six of the popular No. 6 Tubular Cream Separators were sold on the spot as a result of this contest.

Schumacker Bros., of Plainfield, Ill., breeders of Golden Wyandottes and Barred Rocks, report that the past season has been by far the best they have ever had, and from present indications and the demand for young stock they have reasons to expect a still more successful season the coming year, the demand seeming to be about equally divided among the two varieties. At present Schumacker Bros. are increasing their capacity and will then be able to winter a much larger number of cockerels than before. Eggs hatched well for them and their customers generally. Everything will be done to still further improve conditions so as to obtain good, fertile eggs that will not only hatch well but that hatch chicks that will make rapid growth from the start and mature large, vigorous stock.

J. W. PARKS, Box A, Altoona, Pa.

ARNOLD'S COLUMBIAN EGGS HATCH IN ENGLAND.

Aug. D. Arnold informs us that his egg hatch is remarkable. His last set of 121 were all fertile but one egg. His first shipment went to Canada, with a report of twelve chicks from fifteen eggs. The next lot went to England to M. W. & C. A. Armstrong, Farmingham. This shipment consisted of four settings (sixty eggs); result, forty live chicks; two crushed in nest. This is a remarkable hatch for eggs sent from America to England. They were shipped the last of February. Mr. Arnold has shipped eggs to California, with a hatch of fifteen chickens from fifteen eggs. This is proof that eggs can be shipped a great distance and hatched as well as at home. Two of the settings Mr. Arnold sent to England were \$20 settings and each setting produced eleven chicks.

PERSONALLY CONDUCTED FOUR WEEKS' EASTERN TOUR.

A personally conducted party in a special train of Pullman sleepers, including a dining car, will leave Chicago via the Wabash, July 5, for a few weeks' tour of the east, covering the following route:

Detroit, Toronto, Niagara Falls, Kingston, St. Lawrence river, Thousand Islands, Montreal, Ottawa, Quebec, White mountains, Portland, Me., Old Orchard, Portsmouth, Plymouth, Boston, New York, Philadelphia, Baltimore, Washington, Pittsburg and Toledo.

Rates very reasonable. For complete itinerary of the trip with rates and other details address F. H. Tristram, assistant general passenger agent, 97 Adams street, Chicago.

F. E. Gilliland, proprietor of the Golden Nugget Poultry Farm, Hope, Ind., reports that the eggs from his noted Buff Plymouth Rocks are hatching exceptionally good this season. He still has eggs for sale from his best pens and we would suggest that our readers look up his ad elsewhere in this issue and write him for particulars. Mention AMERICAN POULTRY JOURNAL.

PAINT WITHOUT OIL

A remarkable discovery that cuts down the cost of painting 75 per cent. It is the cement principle applied to paint, and produces a fireproof, weatherproof, slipproof and sanitary paint which spreads, looks and wears like oil paint and costs as much. Write to A. L. RICE, Mfr., 584 North St., Adams, N. Y.; he will send you free sample, color card and price delivered. You can save a good many dollars. Write to-day.

We desire to inform all parties interested in Poultry or Poultry Supplies that we do not deal in anything but

CHARCOAL

Which we prepare especially for Poultry and Pigeons.

Being the direct producer, we are able to sell at a very low price. If you keep Poultry or Pigeons, or deal in Poultry Supplies, kindly drop us a line stating how much you can use, and we will give you a price that will astonish you. We guarantee our charcoal to be as good as you ever had. Special prices to dealers. Samples sent.

Are the leading strain for exhibition and utility. I have three pens of deep, blocky, pure white and stay white birds mated for this season's breeding. Eggs \$2.50 per setting, three settings for \$6. Scotch Collies of the finest breeding.

J. H. VANDEN BOSCH, JR. : R. D. 7, Auburn, N. Y.

ALWAYS WIN

Barred Rocks, White Rocks and White Wyandottes.

During the past season I exhibited 37 birds and won 27 prizes, including 11 firsts and five specials. Eggs \$2.00 and \$3.00 per fifteen, one-half hatch guaranteed.

T. E. Quisenberry Slater, Missouri

Dakin's W. Wyandottes.

PREMIER STRAIN OF STANDARD TYPE

Bred and raised more winners of the very highest awards at New York (Madison Square), Boston, Chicago and St. Louis than any other. This is a fact. Some know it—you ought to. You can't get good results from cheap inferior stock, that's sure. Limited number of stock, and eggs for hatching.

JOHN L. DAKIN - Roxbury, Mass.

Rhode Island Reds

Greatest Winnings of The Season

At the great A. P. A. Show, Cincinnati, 1906, I won on S. C. R. I. Reds, four 1sts, three 2ds, five 3ds, two 4ths. On R. C., two 1sts, three 4ths, four 5ths and special for best shape and colored female in Single Comb. Also three silver cups. Send for free circular.

LESTER TOMPKINS, Concord, Mass.

Seip's Barred Rocks

Seip's Pride holds the record of winning 1st at Kansas City in 1903, 1904, 1905, and 2d in 1906 as cock bird. Stock at reasonable prices. Eggs \$3 per 15, \$5 per 30.

B. F. SEIP - Cameron, Mo.

Who Bred The Buff Rock Winners at N.Y.?

Tuttle's Golden Rod Strain won 1st and 3d cockerel, 1st and 4th pullet. No old birds shown. These birds were not picked up around the country but were bred in our yards, from our own eggs, from a long line of winners. Eggs from our New York winners at \$5.00 for fifteen. Will hatch you winners. Mention American Poultry Journal.

R. A. TUTTLE

Center Moriches Long Island, N. Y.

MARKETING EGGS.

The Shipping of Eggs Should be Conducted Along the Same Lines as the Method of Handling Milk.

For the benefit of both producer and consumer there ought to be in this country a system of marketing eggs similar to that in vogue in Denmark. Until some such system is established each one must depend upon himself to secure the best possible prices. It is a shame to sell fine quality, large, clean, guaranteed fresh eggs for the same price as is paid for average receipts, many of which are small, dirty, stale, partly incubated or of inferior quality. It is a wretched system, or lack of system, which prevents the producer of superior eggs from supplying them while yet fresh to the consumer. If milk can be shipped one hundred miles and delivered to the customer the same day that it is drawn from the cow, why cannot eggs be furnished to city consumers before they are a week old, and to all who so desire, less than three days old? Who will take up this matter and inaugurate a reform? Shall the farmers, the poultry associations, the grocers, the city residents, or even the commission men? All should be deeply interested. By the farmer's carelessness in gathering and holding for convenient time to go to town or for better prices; by the storekeeper's delay in shipping, and the unavoidable wait in the commission houses, enough eggs are spoiled to well repay the egg producer for better care, the merchant a sure profit, and still save the consumer money. The careful, conscientious egg raiser does not receive a fair price at the store, the grocer who has no retail egg trade makes nothing out of them, and the consumer pays a high price for stale products. Those who have convenient shipping points and secure regular city customers; those who live near town and sell to hotels, restaurants, boarding houses or to gro-

Scotch Collie Dogs

Catalogue showing new 400 capacity henneries, free.

Beautility Henneries R. 13, Battle Creek, Mich.

WHITE BEAUTILITY WYANDOTTES

ers who have a good demand for fancy eggs, can secure good prices for reliable goods.

For the benefit of any who are similarly situated I will briefly state how I market eggs. My principal trading place is eight miles distant. I furnish eight or ten regular customers there with butter once in two weeks. As I make the round with butter I sell to any who wish eggs, charging them the same as their grocer would to deliver eggs. I do not peddle from house to house. My time is worth more at home. I guarantee that my eggs are gathered the same day as laid, and all marketed every time I can get to town—fortnightly or oftener. The size, quality and freshness of my eggs make them worth more than the retail store price, but I can seldom get more because so many farmers peddle eggs at a cent or two per dozen more than the stores pay. Whatever eggs I have left after selling the butter I take to a certain grocer. He agrees to pay one cent per dozen for them more than any other grocer in town is paying. Sometimes he does better than that.

Besides the manner of handling there is another reform to be striven for. The only proper way to sell eggs is on a basis of weight. If we cannot sell by the pound, let us have a standard weight per dozen, so that extra size eggs shall bring proportionately an extra price and the small eggs the minimum. E. E. WHITNEY.

AMERICAN SINGLE COMB LEGHORN CLUB CATALOGUE.

American Single Comb Brown Leghorn Club catalogue is ready and will be mailed to anyone writing the secretary. Every breeder of the Browns should become a member.

White Ply. Rocks

By the use of trap nests and a system of pedi-
gree record keeping we have produced a su-
perior strain and are still progressing. Let us
prove it to you by sending you some eggs.
Seven pens of choice breeders.

HUNKYDORY FARM :: PELLA, IOWA

Gasoline Burners for Brooders

Floyd Q. White in the Rural New Yorker issue of
Feb. 17, 1906 says: "The burner we use is called a cut-
off burner, and is the best one (best because sim-
plest) that we know of, and is one we get from the
Omaha Stove Repair Works, Omaha, Neb." These
burners are being used in every state in the Union and
are sold at the low price of \$1.65 each, ready to con-
nect to supply tank. Draft with order.

OMAHA STOVE REPAIR WORKS :: OMAHA, NEB.

CHICKS.

Be sure and see that the chicks have
no lice on the backs of their heads. The
louse kills more chicks than all other
things combined.

When the chicks droop their wings or
are dumpish, look for lice. This has
been my experience. C. H. CASE.

St. Louis, Mo.

George M. Kline, Downer's Grove,
Ill., breeder of choice White Wyan-
dottes, is now offering an exceptional
opportunity to anyone desiring to pur-
chase eggs from his choice matings.
He has bred this variety for fourteen
years and during that time birds of his
breeding have scored to 96½ points,
and they have won first prizes at sev-
eral of the largest western shows. For
the benefit of the readers of The Amer-
ican Poultry Journal he has reduced the
price of eggs from \$5 per setting to \$2
per setting, giving everyone that desires
to purchase eggs from his choice mat-
ings an opportunity to raise as good
stock as breeders in America can pro-
duce. The reduction in price of these
eggs should alone be an inducement for
any Wyandotte breeder to send an or-
der. One of his choicest pens contains
the cockerel that headed the first prize
pen at Chicago show this year; he is of
grand size and shape, having a perfect
back and tail, and he was superior to
any in the class. Orders will be filled
from this pen at \$2 per setting. No
other breeder can possibly give anyone
a better chance to raise good stock and
nothing but square, honest, upright
dealings are transacted. All customers
are given more than full value for their
money.

**Golden Wyandottes
and Barred Rocks**

50 choice breeding birds for sale.
Eggs from our Chicago and
Naperville winners, \$2 per set-
ting. Write your wants to

SCHUMACKER BROS., :: R. 1, PLAINFIELD, ILL.

THE RHODE ISLAND WHITES

are America's utility fowl, as dressed poultry, in quality, and as egg producers. They have established a reputation that no other breed has reached. Illustrated descriptive catalog free if you mention this paper.

J. ALONZO JOCOY
Originator and Breeder WAKEFIELD, R. I.

INCREASE OF BUSINESS.

The weather so far has proved so open that my hens have commenced laying (in fact, they have never left off) with more than usual vigor, and it is well they have, for the demand for "eggs to hatch" is already commenced. I have never shipped any before February 1st until this year, and now by that time this year I shall be well at it in earnest. Stock is better than ever.

ALTER SHERMAN,
Citizen Farms, Newport, R. I.

SHIPPING BREEDING STOCK.

Great care should be used in crating as light as possible, yet in strong, comfortable coops. This saves express charges and trouble. See that shipping directions are very plain, and don't forget to write county on tag. Also see that agent gets rate correct; it may save annoyance. If the fowls are fully up to or slightly better than description, you are almost sure of a pleased customer.

JOHN F. WOODS.

DON'T KILL LAYING HENS

Pick Out The Non-Layers

Any man or woman can easily and quickly learn "The Potter System of Selecting Laying Hens." To anyone who has twelve hens or more this information is worth \$10. We teach you fully for \$1.00 and guarantee satisfaction. It tells 15 ways to make poultry pay bigger profits. U. R. Fisher and other prominent poultrymen recommend it. Circular free. Ask us questions.

T. F. Potter & Co., Box A, Dewner's Grove, Ill.

PEARL GRIT

Grit is of vital importance to little chicks. There is nothing in their little crops to grind with when they first enter this world. Unless provided with grit they soon weaken and die. Grit in some form should be given with their earliest food. No. 1 Pearl Grit is especially prepared for little chicks and they eat it readily. It is clean, small, white in color—sharp enough to grind well but not too hard for their delicate organs; furnishes just the right substance to promote rapid, vigorous growth and is just what they require for it nourishes as well as grinds. Try it and see how they grow. The larger sizes of Pearl Grit are splendid for adult fowls and full fledged young birds. It increases egg production—keeps the fowls healthy and prevents "crop-bound" fowls. Poultrymen everywhere use Pearl Grit because it pays. Write for free booklet. Manufactured by The Ohio Marble Co., 209 N. Wayne St., Piqua, Ohio.

WONDERFUL PROGRESS IN ELECTRICAL SCIENCE.

Farmers of the Civilized World Being Enriched by Discoveries Made by Prominent Wire Manufacturers.

It is often said that nothing is impossible where electricity is concerned, and this seems to be absolutely true.

One of the main items of expense to the farmer is the question of fencing, and millions of dollars are being spent annually in this direction, all sorts and kinds of fence (mainly made of steel wire) being offered to the farmer.

For some time past the wire manufacturers above referred to have been striving to give to the fence user a perfect fencing fabric, and to this end have utilized the electric current to bring results and, after many years of patient experimenting, have accomplished what has long been the aim of all manufacturers; that is, to make a fence in which there are no wraps or clamps, both of which have always proven a detriment to the life and effectiveness of wire fencing on account of wraps and clamps damaging the wires and leaving a place for moisture to accumulate, thereby causing rust.

With the electric current all this has been done away with. The wires, both cross and line, are amalgamated and practically become one piece, thus leaving no wraps to get loose, no projections to injure stock or tear wool from sheep; in fact, in the electrically welded fencing innumerable fence defects of the past have been eliminated, and the result is a truly wonderful fence, coupled with such extremely low cost that it is no wonder that the fence using public has taken so kindly to it.

It is worthy of remark that the Pittsburg Steel Company, of Pittsburg, Pa., appreciate and understand the requirements of a first-class fence and, in addition to the cattle and hog fences, they are making a poultry fence by this electric process that is universally being adopted by poultry raisers.

Willow Brook Farm, W. L. Davis, proprietor, has been fortunate enough to secure the services of H. M. Lamon, who for a number of years has produced the best Buff

Leghorns and Buff Rocks that have been shown at Madison Square Garden, New York, and nearly all of our exhibitions. Mr. Lamon will move his family to Willow Brook Farm at Berlin so as to give his full and undivided attention to its affairs. This new move ought to place Willow Brook Farm one step still further ahead in the Orpington business of this country. Willow Brook Farm is noted for its winnings the past five years, they having beaten the majority of the English birds that have come over to this country, and with their long established breeding lines are in a position to give to the poultry public the best value that can be obtained in the S. C. Buff, Black and White Orpingtons. Mr. Lamon, the manager, and Mr. Davis, the proprietor, being two young men, should make the best of a team and one that will be heard throughout the country.

Alfred A. Ziemer, Waltham, Minn., writes us that his winnings at Cresco, Ia., show on Buff Rocks included first and second cockerel; first, second, third pullet; first pen. On Buff Wyandottes Mr. Ziemer won first hen; second and third cockerels; second pen. On Buff Leghorns, first cockerel; first and third hen; first and second pullet; first pen. On Single Comb Buff Orpingtons, first hen; third cockerel; third pullet; second pen. When you write Mr. Ziemer do not forget to mention that you saw his ad in AMERICAN POULTRY JOURNAL.

Robertson & Holland, of New London, Ia., won at New London Poultry Association, New London, as follows: First hen, score 93; third hen, second cockerel, first pen. On Barred Rocks. On Barred Rocks at Iowa State Show special on combined cock and cockerel. On Barred Rocks had two pullets at Monmouth, Ill., that scored 92, with a 2-point cut for weight. Pedrick judge at New London, Russel at State Show, McClave at Monmouth.

Otter Creek Poultry Farm Company, Watertown, N. Y., have a change of ad this month in which they are offering eggs at a big reduction in prices for the balance of the season. Mention AMERICAN POULTRY JOURNAL when writing.

Gleason & Detwiler, Dunlap, Iowa, have a few choice settings of eggs that they desire to exchange for money. Write them and mention AMERICAN POULTRY JOURNAL.

Shed Roof Canvas Lighted House.

Hare-Curtis Hygienic House.

Apex House for Boys.

Suburban House with Two Rooms.

Portable Poultry Houses. Take Your House With You When You Move.

Our Portable Poultry Houses have been designed with a view to furnishing poultry keepers on rented lands a house that can be set up and taken down readily without driving a post or fixing them in any way to the ground. They are also just the thing for poultry farming on a large scale as they are easily moved from place to place. They are shipped "knock-down" with accompanying instructions how to set up; therefore the freight charges are low. **The Shed-Roof House** possesses two doors—one of wood, the other of canvas—either or both may be used. It also possesses a canvas window with wooden shutter. **The Suburban Poultry House** has two rooms—one with wooden floor the other being a scratching room. one window in each room. **The Hare-Curtis or Hygienic Poultry House** is specially constructed for a brooding house for young chicks, although equally suitable for old fowls. It is equipped with special roof for advanced mode of ventilation. **The Apex Poultry House** is a smaller, low-priced house for beginners—built for the boy to give him a start at little cost. Our big, free catalogue gives full photographic illustrations and description with sizes and price.

Experienced poultrymen who have encountered the disappointment of chicks dying without apparent cause are convinced that the following requirements in a brooder are absolutely necessary: 1st—The admission of fresh air in the Hover Chamber; 2nd—The introduction of Perfectly Regulated Heat Free from Oil, Fumes and Smoke; 3rd—Sufficient Floor Space for exercise during inclement weather. The combination of the two former requirements calls for such scientific construction as combines the fresh air with the heat and keeps both continually renewed. A box heated with a lamp cannot accomplish this. A scientific knowledge of heat and cold and the action of air currents (drafts) and ventilation is necessary. This knowledge aided by many years of practical experience in raising chickens has enabled the Cyphers

THREE STYLES, FOUR SIZES Cyphers Brooders

THE BACKWARD GLANCE.

A story has been going the rounds of the press about a girl who was greatly distressed because the door of her room had been left open, showing a sad state

for arranging the contents, dresses were picked from the floor and laid over the back of a chair, and in just one minute by the watch the room was at least presentable, although it would require half an hour or so later to put it in immaculate order.

The backward glance and the seeing eye are as necessary in all parts of the housekeeping and home-making as they were in this instance, and if the habit

never given them a thought until now. Many of them can be adjusted with only a touch. Others have served their time and may be removed entirely. Still others need more time, but even so, can be improved upon temporarily and made to wait a more convenient time for complete repair or change.

What is true of the house is equally true of the outdoor surroundings. Look at your chicken yard, the lawn and garden this spring with the critical eye of a stranger and see if there are not many little things which can be done to better them. Wonders can be accomplished with a hammer and nails, a can of paint and a brush, and this is work which does not require the strong right arm of a man. It is light work and something every woman can do.

When you have gained the habit of the backward glance you will find yourself acting instinctively and going straight to the point every time, with no loss of time or unnecessary expenditure of energy.

Some fine Buff Cochins and White Cochins Bantams, owned by E. J. W. Dietz, Secretary White's Class Advertising Co., Caxton Building, Chicago, Ill. These birds were photographed and photo retouched by Mr. A. O. Schilling, poultry artist in the employ of above named company. It is the practical knowledge gained by having thorough poultry fanciers and artists in their employ that has brought to White's Class Advertising Co., so many poultry advertising customers.

of disorder in the early morning, just as a guest of the family passed through the hall. Her aunt discovered the weeping girl in the midst of the confusion, and gave her a practical lesson. She had her stand at the door and give a sweeping glance at the room to see what things looked the worst. Then with a few quick touches the bed was thrown open, the window opened, bureau drawers closed until a more convenient season

is once acquired it will make all the difference between a slatternly and run-down home and one which seems always ready for company. Try coming into the house or yard some time with the glance of a stranger and see how the sight will affect you. You will be surprised at the innumerable little things which jar upon you but which you have become so accustomed to by days and months of familiarity that you have

THE USEFUL FOOD CUTTER.

There are many household articles which tempt the housekeeper and tend to lower her pocketbook, only to prove useless in the end. There is one, however, which is indispensable, and which should be in every home in the land. This is the meat and vegetable chopper, which can be attached to the table and adjusted in a moment, and which with its grinders of varying sizes will cut meat or vegetables in large pieces or reduce them to a paste, as desired. There is almost no limit to the possibilities of this useful article when it

EGGS AT CUT PRICES FOR BALANCE OF THE SEASON

Many a New York, Boston and Chicago First Prize Winner was Hatched in May or June

THIS is your chance to secure eggs from strictly exhibition bred stock at about half price. I intend that May and June sales shall equal March and April, which were nearly double any corresponding month's business. My matings never were better. Book your order today. Shipments made promptly and 85 per cent fertility guaranteed. You may have been disappointed on results from other breeders. My stock is kept back from heavy winter laying, wishing all strength, vigor and vitality during the hatching season.

EGG PRICES—All Special Matings. Pens headed by champion-ship winners, cup winners, Ivory Soap cup winners gold special winners, imported blood line cocks, first prize winners at New York, Boston, World's Fair, etc., now \$5 per 12 straight, instead of \$10 per 12 straight.

All Grand Exhibition Matings now \$3 per 12, \$10 per 50, instead of \$5 per 12, \$10 per 36. These matings will produce winners for most shows. All laying matings \$7 per 100, \$60 per 1000, instead of \$8 per 100, \$70 per 1000. About 3000 eggs received daily. **5000 breeders for sale.** Little chicks right from the incubator \$15 per hundred.

Elm Poultry Yards, Box 121 Hartford, Conn. Established 1888

comes to preparing food. Indeed, one little woman was heard to say the other day that she had put almost everything eatable in the house through hers, except the baby, which looked good enough to eat, but which she had so far managed to keep out of it.

One of the latest uses which has been found for the chopper is the grinding of horseradish roots. It is much faster and easier than the old method of grating and much more pleasant for the eyes. Slice the roots crosswise after washing and scraping them, and run them through, the same as sausage meat, using the small grinder. In a few minutes enough can be prepared to last all spring. Cover with cider vinegar and seal air tight while fresh. The city meat markets sell bottled horseradish the entire year through, but any housewife can easily prepare her own, bottling it and using it as desired, at an expense of only the trouble of raising it and the vinegar used in covering it.

CHOCOLATE CAKES.

It is interesting to note the changes in cake making as the years come and go. In the times of our grandmothers pound cake, fruit cake, seed cakes, and what was known as "one, two, three, four cake," were the general favorites, and layer cake was a thing unknown. Indeed, it was after the mother of the writer was a married woman and had gone "back east" for a visit that she first saw and tasted a layer cake. These are now made in almost infinite variety and the changes are rung until one is forced to believe that Solomon was mistaken and that there is really something new under the sun. Of late years the chocolate layer cake has lost its place as favorite, the palm being awarded to the chocolate loaf cakes, into the batter of which the chocolate is stirred. This is often called "devil's food," in contradistinction to the delicate, snowy white "angel's food," but the name does not seem to deter even the strictest church members from enjoying it. We give several tried recipes this month for this popular form of cake.

Loaf Cake No. 1.—Cream until very light half a cup of butter and one cup of sugar. Add two ounces of unsweetened melted chocolate and the well-beaten yolks of two eggs. Sift together one and one-half level cups of flour, one-half teaspoonful of powdered cinnamon and two and one-half level teaspoonfuls of baking powder, and add to the mixture, alternating with one-half cup of milk. Lastly stir in one teaspoonful of vanilla and fold in the stiffly beaten whites of two eggs. This will bake in forty minutes if made in a loaf and cooked in a moderate oven, or it can be baked in layers in about eighteen minutes. It is delicious made as a layer cake with a stiff boiled frosting in which chopped nuts have been stirred.

Loaf Cake No. 2.—Two cupfuls flour, one and one-half cupfuls sugar, one-half cupful butter, four eggs, one-half cup sweet milk, four ounces chocolate, one heaping teaspoonful baking powder.

Cream the butter and sugar and add the beaten yolks of the eggs. Then add the grated chocolate after melting it in five tablespoonfuls of boiling water.

Add the milk and part of the flour, beat well, then add the stiffly beaten whites; lastly add baking powder and remaining flour. Flavor with vanilla.

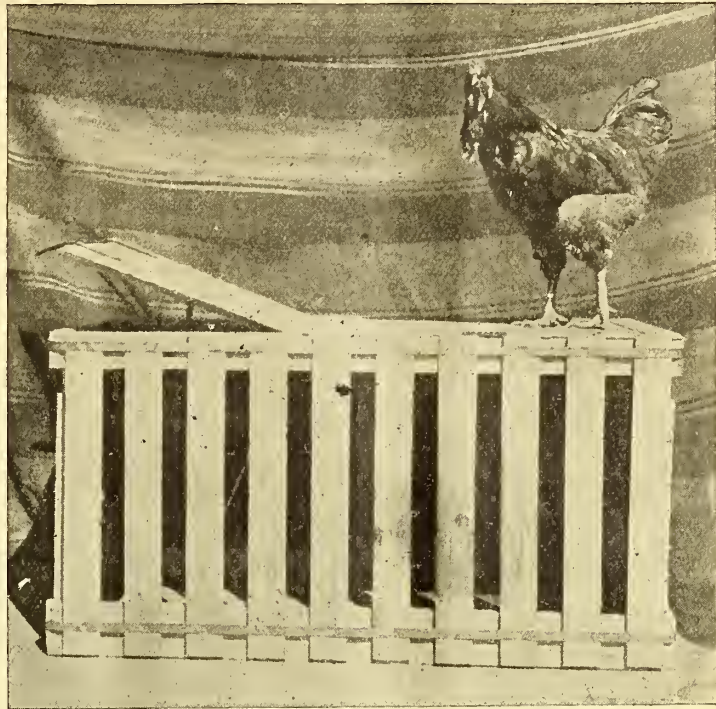

Photo of coop in which Simon Beuth, of German Valley, Ill., shipped a pen of his Buff Wyandottes to Buenos Ayres, South America. The fame of Mr. Beuth's Wyandottes is world-wide.

Questions and Answers

Questions asked by subscribers will be answered in this department only under the condition that the full name and address is signed by the writer.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer following question in your journal: How long are eggs fertile after laying?

L. M. F.

Burlington, Iowa.

Answer:—From two to six weeks.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer through Question and Answer column of the JOURNAL. We feed a good deal of clover, and on the barn floor where the clover is thrown down there is always a great deal of fine clover pieces, mostly heads and leaves. If this is steamed, is it as good for laying hens as cut clover would be? If not, what would be the relative value?

W. G. M.

Danvers, Ill.

Answer:—This makes the best kind of feed for winter use, and is as good as cut clover.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer in your Question and Answer department, if chicks can be hatched in the summer months (in incubator) and raised with any degree of success. If so, would you state any special means of raising them in the hot summer months?

L. M.

Nashville, Tenn.

Answer:—Chicks can be hatched in

incubators during the summer as well as any other season of the year. By providing suitable shade for them during the hot days they can be raised with a very small percentage of loss.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—There was a question asked in the February issue about chickens going blind, and you could not answer it, so I will here give a remedy for same. Put six drops of tincture of arnica in a teaspoonful of chicken lard, apply to the head around the eye a few times, and the bird will soon recover. This question was asked by O. O. H., Oelwein, Ia.

ALBERT D. NELSON.

Minden, Neb.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer in Question and Answer column of next month the following: Am raising incubator chicks; they grow fine until almost four weeks old, when they seem to lose control of their legs, stretch them back, and in trying to walk they go sideways. Continue in that condition for a few days, then droop and die. Can you tell me the cause?

W. W. M.

Pleasant Hill, Mo.

Answer:—This is probably due to improper heat in brooder. See that floor of brooder is not allowed to be

come too warm, as this will cause leg-weakness very quickly. Give the chicks plenty of cut clover hay to scratch in and scatter their feed in this litter; this will give them plenty of exercise, and leg-weakness will be unknown.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Will you please answer the following questions:

1. Are the Black Wyandottes very widely known and raised, or are there objections to them? In your paper I notice almost every kind of Wyandottes widely advertised except the Black.

2. Are the Black Wyandottes a suitable fowl for all-round breeding on farm in the state of Mississippi?

3. Would you advise a Wyandotte farm being stocked with Black Wyandottes only? Or would you have the other kinds along with them?

4. Which do you think would succeed best in this state, a farm of one kind of fowls or a number of kinds, to sell fowls and eggs from?

J. W. T.

Tupelo, Miss.

Answer:—1. Black Wyandottes are not bred very extensively. 2. Black Wyandottes are not as popular as the other varieties, and therefore would not be as profitable. 3. We believe in specialty breeding. Take up the variety that is the most popular and for which there is a demand. 4. The breeders who have made the greatest success have done so with one variety; some of whom have taken up other varieties as occasion seemed to warrant it.

Editor AMERICAN POULTRY JOURNAL.

UNEQUALED ORPINGTON TRIUMPH!

Again in 1906 at Madison Square Garden, New York, we win SEVEN FIRSTS, NINE SECONDS, SEVEN THIRDS, FOUR FOURTHS and FOUR FIFTHS in

The Strongest Class of Orpingtons

ever brought together. This is a record unapproached by any other Orpington breeder. Furthermore, Willow Brook Farm won on stock we bred and raised at our own farm. In other words, WE DID NOT HAVE TO BUY ONE BIRD—NOT ONE—to make this great winning.

For the past four years we have been the LARGEST ORPINGTON WINNERS at New York. Others may make this statement, but we stand prepared to prove our claim.

If you wish to produce winners, it is necessary that you buy from the farm that has the winning lines and that breeds its own winners—every one of them.

If You Want the Best Obtainable

in either S. C. Buff, Black or White Orpingtons, why not come to the fountain head, to the farm that has its established breeding lines and has produced year after year the majority of the New York winners? We do not have to mislead our customers in advertising, as OUR FARM CAN BE SEEN, and the birds are here to show for themselves.

Remember that our show record and winnings have been obtained in competition with THE BEST PRODUCED IN THIS COUNTRY AND ENGLAND. Each year thousands of dollars have been paid for birds imported to this country, and not withstanding this fact we have been

The Largest Winners the Past Four Years

More than 370 S. C. Buff, Black and White Orpingtons were on exhibition at Madison Square Garden Show this year.

WE NOW KNOW that our matings for the breeding season of 1905 were correct, and that our stock is better than ever. We offer you stock and eggs from which you can get results. OUR ORPINGTONS are winning in the hands of our customers all over the country. We have forty breeding yards mated FOR THE PRESENT SEASON, and for the asking will mail you our mating list, giving you prices of eggs, etc. We have the largest flock of Orpingtons in America to select from, and would be pleased to sell you either exhibition or breeding stock, as may be desired.

Buy Poultry Supplies from YOUNG

Everything for the poultry raiser. Incubators, Brooders, Feeds, Tonics, Powders, Wire Fences, Leg Bands, Egg Boxes, Gape Worm Extractors, Bone Cutters, etc. Instead of sending to one place for an incubator and to another for a bone cutter or a chicken food, buy all your supplies from the one place. It's more convenient, and besides you save money. Let us send you a copy of our Poultry Supply Catalogue. You'll be surprised how much money you can save. We also sell Farm Implements. Don't forget to also ask for a free copy of

Young's Great Farm Catalogue

It contains everything in the way of farm implements that the farmer or gardener needs; also gives special directions for successful cultivation. Whatever other catalogue you may have be sure you get a copy of Young's.

JOSIAH YOUNG,
17 Grand Street,
New York.

following questions: I had a Partridge Cochin cockerel which died recently. He was healthy, had good, comfortable house and plenty of exercise. In the last two or three days he sat around, making nests in different places. He could not use his legs, and frothed at the mouth; he would not drink; his crop was about half full when he died. After he died his head turned a dark purple. I also have two White Leghorn pullets. They are fine looking, except their combs, which stand straight; one of them drops over for a few days, and then straightens up again. E. L. K.

Lafayette, Ind.

Answer:—Your cockerel died of liver trouble. This is usually caused by lack of grit and improper feeding. Pullets should be fed about two ounces of raw meat three times a week.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer in the JOURNAL if this is a square deal. I will mention no names. A gives B a setting of eggs; B hatches them and gets eight chickens. When they are six months old A picks out one-half of

Incubators and Brooders will hatch and brood your chicks, but

STEINMESCH

Extra Quality "Quick Meal" CHICK FEED

is needed to raise them all—make 'em grow and thrive like a Green Bay Tree. STEINMESCH Chick Feed is a mixture of cracked grains, small seeds—Beef, Bone and Grit. Twenty different kinds, especially prepared for the rearing of chicks, from the time they are hatched until ten weeks old. Feed dry, always handy and ready for use. No waste, always the same. THE BEST, and no higher in price than other feeds.

Price: 100 lb. sack, \$2.50.
Feeds 40 chicks 10 weeks.
Send orders to

them, leaving B the remainder. B to furnish feed and care of them until they are six months old. L. M. S.

New Britain, Conn.
Answer:—Yes.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Kindly answer in your next issue the following questions: I bought a pen of W. P. Rocks. How long before the egg will be fertile? What size nests do I need to set them in? How many eggs can I put under large hens? What is best to feed them while setting? How long can they stay off the eggs in March to feed? Will hammering nails hurt the eggs when hen is setting? Is there a way to tell if an egg is fertile? How high from floor will I put dropping board? How far from side wall will I put first roost, and how far from first roost will I put second roost? H. B. S.

Staten Island, N. Y.

Answer:—About the sixth egg laid. Nests should be about 12x14 inches. Fifteen eggs is plenty for any hen. Corn is best for setting hens. Grit, a dust bath and plenty of fresh water

FREE BOOKS EVERY FARMER'S WIFE SHOULD HAVE

We want every farmer's wife to know the great saving our plan of direct dealing will afford her, that is, buying direct from the manufacturer all her household supplies.

We want to show her in actual dollars and cents just how much money she can save every few weeks by our factory to family saving plan.

We also want to show her how she can furnish her home without cost on our free home furnishing plan.

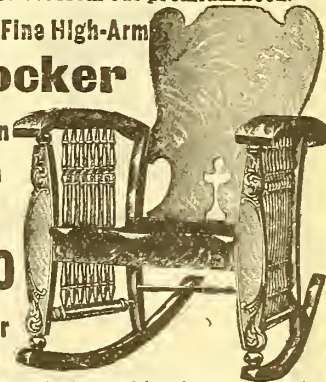

In order to make this plain to her we have published these two books which every farmer's wife should have. One of them tells "How The Farmer's Wife Can Save \$10.00" in a short time and the other one "How The Farmer's Wife Can Furnish Her Home Without Cost."

The first book contains a full line of the goods we manufacture; with honest descriptions and just as an illustration we wish to mention that in baking powder alone which you are now paying your dealer 25c per can, we sell you a Pure Cream Tartar Baking Powder for 12c per can, a clear saving of one-half. This same great saving is afforded throughout our entire list of 140 different articles, some of which you buy and use every day. We practically cut the dealers price in half on everything.

The other book contains illustrations and descriptions of nearly 1000 beautiful, useful articles which we give away free with purchases of our household supplies. For example—with a \$10 order of goods we give you a \$10 premium like illustration herewith or any other you may select from our premium book.

This Fine High-Arm Rocker

Given With A \$10 Order

You ought to send for these two books and learn how to save half the money you are now spending for household necessities, and how to furnish your home without cost—they are free.

SPECIAL INTRODUCTORY OFFER
To remove any doubt you might have as to whether our goods are right—whether they will be satisfactory to you in every respect, we will send any supplies you may select from our catalog to the amount of \$2.00 for only \$1.00—and prepay the charges to your address provided it is east of the Rocky Mountains. Do not send us any money. Simply order the goods and we will ship them subject to approval. If they are satisfactory when you get them send us the dollar; if not send them back at our expense. Is that not the best guarantee we could offer as to the quality of our goods? You can't afford to overlook this offer.

CROFTS & REED,
840 W. Kinzie Street, Chicago, Ill.

Gape kills more chicks and growing fowls than any other disease. Of all poultry diseases it has been the most obstinate and one of the most destructive. The gape worms are bred by the wet weather, damp ground and low land, and these worms get into the throats of your chicks and the chicks die. That spoils your chances of a successful year. The very location of the disease—in the windpipe—makes it difficult to reach and destroy the worms.

Conkey's Gape Cure

puts an end to them. A positive preventive and cure of this disease. It comes in the form of a powder and is mixed with the soft feed. It kills the worms and makes the chicks feel good. It will instantly stop the progress of the disease in your flock. A cure guaranteed. If your chicks are not cured you can have your money back. Do not take chances. Get a package from your dealer or druggist, or by mail, 50c, postage prepaid.

OUR FAMOUS BOOK ON POULTRY DISEASES.

A practical book of information on how to keep the flock healthy, for only 4c in stamps to pay postage, and the names of two other poultrymen. (Usually sells for 25c.)

G. E. Conkey & Co., 1 Ottawa Bldg., Cleveland, O.
Petaluma Incubator Co., Petaluma, Cal., Pacific Coast Agents—
Agents Wanted Everywhere.

should be kept where the setting hens will have access to them at all times. Instinct will tell the hen how long to stay off the nest. Hammering will not injure the eggs, providing there is no severe jarring of the eggs. There is no way of telling whether an egg is fertile or not until the egg has been incubated for four or five days. Dropping boards should be about 18 inches from the floor. Roosts should be 8 to 10 inches from wall and 14 to 16 inches apart.

Editor AMERICAN POULTRY JOURNAL.
Dear Sir:—As I am a subscriber and a reader of your paper, I would like to ask a few questions through your Question and Answer department.

1. I have 17 young chicks, hatched February 14; were all doing well until a few days ago, when they got cramps, or that is what I thought it was. They would stretch their legs out behind them and could not walk or stand on them. I lost one of them. They are nearly all feathered out. Let me know what the cause may be and what to do for it.

2. How large a house may I use for 50 fowls, and how much feed per meal of oats, wheat, corn and speltz, and how shall I feed it?

3. I have a White Wyandotte cockerel that had the roup. Would you suggest breeding from him? W. F. A. Porter, Minn.

Answer:—The trouble is of a rheumatic nature and is usually caused by improper heat in the brooder and lack of exercise. Give them plenty of clover chaff to scratch in and give them a teaspoonful of common baking soda in their drinking water. 2. A house 14x28 will accommodate 50 fowls very nicely. The

feed question is a very perplexing one, both in amount of feed and how to feed it. Where fowls have free range they do not require nearly as much feed as where they are confined. Six to eight quarts of grain twice a day is enough for 50 fowls, providing they are sup-

Barred Plymouth Rock cockerel heading pen No. 2 in the yards of Geo. O. Anderson, Rushville, Ind.

plied with plenty of green food and a mash once a day consisting of table scraps, bran, etc. 3. No.

Editor AMERICAN POULTRY JOURNAL.
Dear Sir:—Am a new subscriber for

your journal, and would like you to answer in your next issue.

1. What causes my chickens' eggs to have a peculiar flavor? The whites are all right, but the yolks have a nasty taste. The chickens have plenty of exercise. They are fed warm bran mash with table scraps in the morning, and mixed grain at noon and night. They have oyster shell and are fed cabbage twice a week. They eat well and lay well.

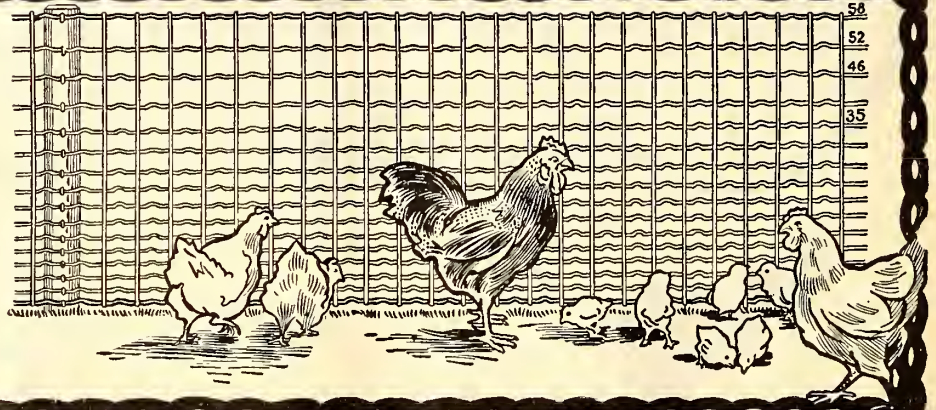

2. Can anything be done to prevent a chicken from setting? W. B. Brantford, Ont.

Answer:—1. The bad flavor of your chicken eggs is due to something they eat, but we are unable to say what it is. 2. Cooping the broody hen up in a dark, bare coop for a few days will usually have the desired effect.

Editor AMERICAN POULTRY JOURNAL.
Dear Sir:—Please answer the following: What do you mix with grease to keep the lice off of the roosts, or what do you use? How would you fix potatoes and what would you mix with them for laying hens? How warm should it be before you would let the fowls out? Do you think eggs with ridges around them and eggs with warts and wrinkles on them are good to set? P. S. G. Anoka, Minn.

Answer:—Kerosene oil used on the perches and dropping board will keep the lice away. Lard, to which has been added a few drops of kerosene is good to apply on the heads of young chicks and under the wings and around the vent of mature fowls. Potatoes may be cooked and mixed with bran, middlings

What's this
We're up
Against?

At Last a Perfect Poultry Fence

The "Pittsburgh Perfect" Poultry and Garden Fence is exactly what its name indicates. It is "Perfect" because made of special steel of our own formula; "Perfect" because heavily galvanized, thus preventing rust; "Perfect" because our electric welding process makes stay and strand wires one piece so that mesh cannot spread to let fowl through; "Perfect" because smallest wires in it are heavier than the wires used by most fence manufacturers for a regular stock fence; "Perfect" because it is the only fence that will not unravel if strand or stay wire is cut.

Don't buy flimsy hexagon poultry nettings; they rust out quickly, won't stand up, and are but makeshifts and disappointments at best. It's "the WELD that HELD" that makes a perfect poultry fence. No top or bottom board needed. Heavy top and bottom wires take their place. Nothing can get through—nothing from the small chick to a mad bull.

THE ONLY ABSOLUTELY "PERFECT" POULTRY FENCE ON THE MARKET.

The price is small—the satisfaction is great.

Thousands of dealers handle the "PITTSBURGH PERFECT" FENCES, from the Extra Heavy Fences for stock to the king of all Poultry Fences.

THE "PITTSBURGH PERFECT" POULTRY FENCE. Has Your dealer got it? If not, write us for catalogue.

Pittsburgh Steel Company, Pittsburgh, Pa.

or chop stuff and fed as a mash. Fowls may be allowed free range as soon as the weather moderates enough so that their combs and feet will not freeze. Only smooth, well-shaped eggs should be used for hatching purposes.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer in your next issue the cause and remedy for the inside lining of the egg being tough. Last year I lost a lot of chickens just as they were ready to come out, on account of the inside lining of the shell being too tough for them to get through, and I notice this year it is in the same condition.

G. E. B.

Hancock, Mich.

Answer:—This is due to insufficient moisture in the machine. You probably allow too much ventilation in the incubator, which causes the eggs to dry down too much. A pan of warm water placed in the machine might remedy this.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer the following questions in the next issue of the AMERICAN POULTRY JOURNAL:

1. If new blood is introduced in a flock, will the chickens raised from the flock be of a larger size than the parent birds?
2. If you take a pair of chickens and breed from them, will all the chickens raised from them be exactly like the parent birds?
3. Do you advise inbreeding?

J. F. H.

Cumberland, Md.

Answer:—1. This all depends on the quality of blood introduced. 2. Not always. This depends on whether they are thoroughbreds and how the parent stock has been bred. 3. No.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Seeing a number of inquiries to cure sneezing colds and first stages of roup, here is the best remedy I know of and easily used. After fowls go to roost heat an old kettle or stove lid that has a rim around it, red hot; place on a couple of bricks just inside coop door; pour one or two ounces of carbolic acid on, according to size of coop. Be careful not to breathe fumes. Shut door at once and leave till morning. Once is sufficient to kill all germs.

J. S. GASPEN.

Rudolph, Ohio.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Will you please tell me what is the matter with my young chicks. They are a brood of pure B. P. Rocks; they are five days old; the first three days they looked fine, now they are droopy; they go drawn up in a little ball; the droppings of some are very thin, mixed white, like chalk. They eat plenty, but get lighter all the time, and the last three days of their life their faces get pale and sink about their eyes and the skin on their legs draws or wrinkles as their legs and feet get thin. I had some die last year, one month old, with the same symptoms, only their droppings were not thin, but gray; get lighter and weaker till they die in about four days. I have read three poultry books and your journal, the three numbers that I have received; have found nothing like the symptoms of my young chicks. They are in a warm coop; there has been no rain or cold weather till now. The hen is in the coop and the chicks go in and out as they like. When

Only \$38 ON EARTH THE GREATEST BARGAIN KEEPS OUR COMPETITORS AWAKE NIGHTS TO TELL HOW WE DO IT.

DESCRIPTION—Selected second growth hickory wheels and gears; Norway iron clips and bolts; inch axle double collars, full length body loops, long body, any width. All wool top lining, leather quarters and back stays, curved top joints if desired, complete with storm apron, side curtains, boot and full length carpet. Nickel dash rail, hand rail and lazy back rail. **Send for Big Free Catalogue of Vehicles and Harness in colors.** A buggy factory selling direct must pay all of their expenses, salaries, etc., out of a few thousand bargains. Our expenses are all paid out of our agricultural implement factory. A buggy factory would starve to death on the small profit we get on a buggy. Write us before buying. **The only plow factory in the world selling direct to the consumer at wholesale prices.**

HAPGOOD PLOW COMPANY, 835 FRONT ST., ALTON, ILL.

LEE'S LEADERS

LICE KILLER Don't expect your hens to lay fertile eggs and fight lice at the same time. Your profits are at stake if you neglect to spray Lee's Lice Killer on your poultry-house walls and roosts. Lee's Lice Killer destroys by contact all nits and larvae, and the fumes make the big ones drop dead. Arm yourself with a spray pump loaded with this best of all lice killers and clean out these self-invited sharers of your profits. Do it now before the young chicks become infested. All you have to do is spray Lee's wherever you think a louse could hide himself. No greasing, dusting or handling fowls. **Order today. Price 35c, 60c, \$1.00.**

GERMOZONE The spring tonic, bowel regulator and cholera preventive should be a part of your "on hand" poultry supplies. Twice a week add a small quantity of Ger-mozone to the clean drinking water, and you can assure yourself that no disease will run rampant through your flock and that vigor and health will be promoted. Ger-mozone prevents cholera, cures roup, colds, canker, swelled head and inflammation of the bowels. Liquid or tablet as preferred. 50c will buy enough to last a large flock a month. Ask for Lee's new books. Sent free.

EGG-MAKER The profitmaker for the poultryman, the incentive that induces laying hens to keep busy. Contains the nourishing elements that make hens lay more eggs than they possibly can lay on the ordinary foods thrown out at random. For hens that are kept in pens it is invaluable. Chicks thrive on it, and old cluckers become cacklers. 25c, 50c and \$2.00 according to size. It's a winner. Write today for the "Mandy Lee" Incubator and Brooder catalogue.

GEO. H. LEE CO., OMAHA, NEBR.

ON THE IRRIGATED FARMS

In the valleys of the Grand, Gunnison, North Fork and Roaring Fork Rivers and in the San Luis and Uncompahgre Valleys, of Colorado, and the Farmington district of New Mexico,—farming, stockraising and fruit growing are carried on in a way that is a revelation to the farmer in the east.

For those who desire to make new homes, there is no other region that offers better advantages than western Colorado—a land of blue skies and sunshine, with a temperate and even climate, where the erstwhile desert needs but to be tilled and watered in order to verily "blossom as the rose." Several illustrated publications, giving valuable information in regard to the agricultural horticultural and live stock interests of this great western section, have been prepared by the DENVER & RIO GRANDE RAILROAD, and can be obtained by addressing

S. K. HOOPER, G. P. & T. A., Denver, Colo.

WRITE TODAY FOR FREE COPIES

they are out with the hen they run after her, chirping all the time, except as she sets over them. I feed them as the directions of your journal say. Tell me a cure. Mrs. L. M. G.

Memphis, Tenn.

Answer:—Lice. Grease the top of the heads of the little chicks with lard to which add a few drops of kerosene oil. A few applications will generally rid them of lice. The hen should be thoroughly dusted with some good lice powder two or three times a week. Thoroughly clean your brood coop and disinfect it with a five per cent solution of carbolic acid.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Being a subscriber of the AMERICAN POULTRY JOURNAL, and an amateur in the poultry business, I would be pleased to have a few questions answered in the Question and Answer department. In beginning the poultry business what size incubator would you advise me to purchase, and of what make, please? What would be a fair price to charge the general farmer for hatching? If I furnished the eggs? If the eggs were furnished? Will you kindly give me the dimensions of a laying house suitable for twenty-five laying hens, and a yard for same? Also can you prescribe a good, balanced ration for same? I am under the impression, if I should cross a Leghorn and a Brahma I would get a larger broiler and a tender-meated bird on less feed? Would it be advisable to do so? Would you recommend the use of rolled rice to be fed to little chicks, and how much? J. B. G.

Ringoes, N. J.

Answer:—The size of the incubator depends upon how many chicks you the chicks. If eggs are furnished, the usual price for hatching is 6 cents wish to hatch. A 360-egg machine can

be run as easily as a 120-egg one; but if you desire to hatch only a few, the 120-egg size will answer the purpose. We never advise anyone what make they should buy. Any of the standard makes advertised in our columns will do the work. If you furnish the eggs you

Second Black Langshan cockerel at Illinois State Show, 1906. Score 94 3/4. Owned by Wm. Turnbull, Waverly, Ill.

should get at least 20 cents apiece for apiece. A house for 25 fowls should be about 12x14, and the yard 14x50, or as much larger as your space will permit. We never advocate the crossing of standard bred poultry, for by so doing you undo the work that it has taken years of patient study and labor to ac-

complish, and in the end you have nothing but a lot of scrubs. Rice in moderate quantities may be fed to little chicks, but it is not as good as the prepared chick feeds that are now being sold for this purpose.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please tell me what ails my chicks, through your journal, next month. When about a week old they began to be affected. When first taken they fall over, and often stretch their legs out behind them, and close their eyes, and only for their heavy breathing one would think they were dead. After a minute or so they would get up and stagger around a little and go to eating, and appear to be all right. At other times they will open their mouths, shake their heads, run backwards and make a noise as though something had hold of them. Quite a number are lame, and before they die they lose the use of their legs. Have examined some that have died, but found nothing wrong.

W. H. R.

Oakley, Mich.

Answer:—This is probably due to indigestion, which is brought on by various causes, sometimes from overheating, and again from being chilled. Give powdered charcoal in the soft feed and put a little citrate of iron in the drinking water, just enough to make the water the color of strong tea. Feed principally on grain and scatter it in cut clover hay litter.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Will you please answer the following questions in your next number of AMERICAN POULTRY JOURNAL:

1. Could I keep 600 hens on three acres of good farm land, fenced in?
2. If they were well taken care of, how long could I keep them there with-

Keeps Poultry Healthy **VIGER'S** Prevents Disease
Crushed Charcoal

IF HENS COULD TALK It wouldn't take them long to tell their breeders what they needed to make the eggs come faster. And they'd put it something like this: "We need something in our crops to absorb all the impurities, gases, and correct digestive disorders. Pure Charcoal will do all this in great style, because it's the most powerful absorbent and purifier known. It makes us healthy and strong and ready to lay our daily egg. Viger's Crushed Charcoal is the best, because it's the most chemically pure." Send for a 50-pound trial bag (\$1.00), and let the hens show you how they like to eat it. Prepared in 3 sizes: Coarse granulated, for mature poultry; fine granulated, for little chicks; pulverized for soft feed. Special prices for quantities. Sample free.

GARDNER & DUNNING'S Barred Ply. Rocks

DISTANCE ALL COMPETITORS

At Madison Square Garden, January, 1906, in a class of 474 Barred Plymouth Rocks, the largest and best collection ever seen in any show room in America, we won twice as many regular cash prizes as any other exhibitor; the National Club Cup for best cock, hen, cockerel and pullet, and the most valuable of all prizes, the cash special for best display.

Since 1900 we have won at Madison Square Garden and the New York State Fair, more first prizes than all our competitors combined. Write for catalogue and mating list, giving prices of eggs and full description of matings.

GARDNER & DUNNING, M. S. Gardner, Mgr., Auburn, N. Y.

out having to move them to some other part of the farm?

3. Which would be the best, to have 12 houses built to hold 50 hens to the house, or have 20 smaller houses and hold 30 hens to the house, and have them placed around on the colony plan? A. A. A.

Newport, R. I.

Answer:—1. Yes. 2. An indefinite period. 3. Twelve houses would be the most economical, and we believe would give as good results.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer in your Question and Answer department the following: Today I found in a freshly laid egg a thing about six inches long, resembling a worm; it was of a bright yellow color, not as dark as the yolk of the egg, and was attached to the center of the yolk. It was long and thin. A party told me it was a tape worm, but don't know what it was. Please answer in the next issue of your paper. V. H. S.

Homestead, Pa.

Answer:—We don't think this was a worm of any description, but was probably due to some slight injury to the egg-producing organs.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer in your paper the following and oblige: I have some White Leghorn pullets; they have layed since last November; seem to be in good health. I feed them wheat, oats and barley, boiled with a little linseed once or twice a week. I give them soft feed once a day, of oats, peas and barley in a mash. They always get soft feed once a day, sometimes some turnips, potatoes, sugar beets, boiled and thickened with hashed beef scraps, boiled, three times a week. They get lots of charcoal, grit and coarse sand to eat. Three of them have died; just sit around with their heads down for an

hour or so, and then die. There is a white discharge from them and water running out of their mouths. I opened them, but could find nothing the matter. They are not lousy. Is buttermilk or sour milk scalded good to wet their soft feed with? Please tell me the cause of

Third S. C. Buff Orpington pullet at Illinois State Show, 1906. Score 94. Owned by Wm. R. Turnbull, Waverly, Ill.

their dying, or what would be a good cure for them. MRS. B. R.

Braeside P. O., Ont.

Answer:—Too rich food and not enough exercise is the cause of your trouble. Stop feeding mash and feed only whole grain, and scatter this in deep litter, where they will have to work for all they get. Leghorns are a very active breed and should not,

ordinarily, get in this condition. Also supply them with plenty of good, sharp grit and oyster shells. A little tincture of iron in their drinking water would also be beneficial.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Will you please answer the following question in May number? 1. Do you have to know what strain the stock is when you enter them in a show? 2. What is the difference between a cock and a cockerel? 3. What is the difference between a hen and a pullet? 4. Please give me the address of the secretary of the White Leghorn Club; also Barred Plymouth Rock Club. J. T. P.

Glenridge, N. J.

Answer:—1. No. 2. A cock is a male bird over one year old, and a cockerel is a male bird under one year. 3. A hen is a female bird over one year old, and a pullet is a female under one year. 4. Irving F. Rice, Cortland, N. Y., is secretary of the National Single Comb White Leghorn Club. H. P. Schwab, Rochester, N. Y., is secretary of the American Plymouth Rock Club.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Will you please answer in the May JOURNAL, if possible, some remedy for my hens. I have year-old hens that have been laying very well since December. Since warm weather commenced we have, nearly every day, one or two hens that cannot stand up, and they can hardly breathe. Will be affected for several hours, sometimes all day, then get over it and seem all right again and soon lay as well as before. We have 25 in a room 10x12; two windows, one window is open all the time during weather as cold as 15 degrees above. We had a frame covered with cloth to set in window. The house has been warm and dry till snow melted, then the ground has been somewhat damp. Have fed oats, wheat, barley,

corn, buckwheat, macaroni wheat; about two-thirds oats, with the other grains one-third, change about. They had a deep litter of straw and coal cinders, with grain buried night and morning, about four quarts to 25 each feed. Only a very few seem to be very fat. They would not lay on less feed. Oyster shells and grit and fresh water twice a day with chill taken off through cold weather, dust box and cut clover before them all the time; either fresh meat twice a week or beef scraps mixed with bran. Several had loose bowels, the feathers being coated, which looked like moistened ashes.

A. S.
Answer:—We have had fowls affected in this manner, but could never discover the exact cause of it. We gave, with good results, what is known as Douglas Mixture, which is prepared as follows: Sulphate of iron (common copperas), 8 ounces; sulphuric acid, one-half fluid ounce; one gallon of water. Place the gallon of water in a jug or crock, and add the copperas. When the latter is dissolved, drop in the sulphuric acid, and when the compound clears it is

First prize R. C. R. I. Red cock, Chicago, 1906; 2d prize, Indianapolis, 1906. Owned by E. E. Beck, Hammond, Ind.

ready for use. This is a tonic and may be given to fowls in the drinking water, at the proportion of a gill to twenty-five head, every other day.

Editor AMERICAN POULTRY JOURNAL.
Dear Sir:—Will you please tell me in the May issue of AMERICAN POULTRY JOURNAL what ails my White Plymouth Rock cock, also remedy? He was well and hearty until a little over a week ago, when one morning I let them out he could not stand on his feet or walk. Seemed to have no use of his knees, and is still the same, but slightly better. They have had screenings, oats (cracked corn and bran mash with scraps when cold), with plenty of sand for grit. Their house is kept clean and dry. We had a couple of weeks of bad weather, when they had to be kept in nearly all the time. I thought that might have had something to do with it. The pullets are well and laying regular. This cock is well otherwise, eats well and has bright red comb and wattles. I thought it might be rheumatism, so gave him iodide of potassium, recommended in Conkey's book. He is a nice bird and I dislike to part with him. Should he

Sharples TUBULAR CREAM SEPARATORS
21 POUNDS MORE BUTTER PER WEEK
Barnesville, Ohio, June 20, 1905: We were milking ten cows May 19. That day we took a Tubular separator for trial. We used it one week and got 86 pounds of butter that week. The week before we used it, we got only 65 pounds. The week after the agent took it away we got only 64 pounds. We felt we ought to have it. Later we arranged to buy it. We recommend the Tubular to anyone interested in cows. It surely will pay any one to buy a Tubular.

Success with the Chicks
Don't depend upon how many you hatch but upon how many you raise. Many fine hatches of a hundred chicks leave you with but a dozen scrawny little birds after a few weeks. You know why—Cholera, Indigestion, Bowel Trouble, Diarrhoea, Dysentery, Sour Crop. These are the things that knock a poultryman's profit.
CONKEY'S CHOLERA CURE
will positively cure and prevent all of these diseases. We know it. We guarantee it. We'll give your money back if we don't prove it. Get a package of Conkey's Cholera Cure from your Druggist or Poultry Supply Dealer, or send direct to us. It is equally good for turkeys, chickens and pigeons, old and young. Price 50c per box post paid.
Our new 48 page book on poultry diseases sells for 25c., but if you answer this advertisement and send the names of two other poultry raisers and 4c in stamps to pay postage, we'll send you a copy free.

get well, will he be profitable as a breeder?

MRS. W. A. B.

So. Omaha, Neb.

Answer:—Rheumatism. This is usually caused by exposure to cold and dampness, or may be hereditary. Affected bird should have frequent change of ration with plenty of green feed. Begin treatment with a dose of Epsom salts, 20 to 30 grains. The following day add 30 to 40 grains of bicarbonate of soda (baking soda) to the quart of drinking water, and give 2 or 3 grains of salicylic acid twice a day. Apply camphorated or carbolic ointment to the affected joints.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer the following question in your May Journal and oblige:

1. Where do you advise running an incubator, in cellar or not?
2. How low may the temperature go and not injure the hatch to any great extent?
3. What causes crippled chicks?
4. How far may day-old chicks be shipped?
5. What do you think of cement floors?
6. Which are the best layers, Aneonas or Leghorns?
7. Is there any way to make hens molt in early summer?

E. M. T.

Cassadaga, N. Y.

Answer:—A cellar that is well ventilated is an ideal place for an incubator. 2. This all depends at what period of the hatch the reduction in temperature occurs; if between the fifth and tenth days the temperature should go below 85 degrees, and remain there for any length of time, the results would

be fatal to the hatch. After the tenth day this would not have such a serious effect, as there is more animal heat in the egg, and would probably result only in delaying the hatch a few hours. 3. Too much heat at certain periods

there is much to choose between the two varieties. They are both good layers. 7. No.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer the following questions in your May issue:

1. About six weeks ago I purchased a cock from a reliable breeder and placed him with 10 hens, but he will not perform his duties. I feed a mixed feed of corn, wheat, oats and a little buck-wheat and sunflower seed. Hens lay well, but eggs are not fertile. How can I remedy this?

2. About a week ago I hatched out a batch of chicks, W. Wyandottes. After they were 36 hours old I fed them some chick feed; in three days they commenced to die. They would mope around and get so weak they could not walk, and then die. Their vents were mostly all closed, and it seems as if they could not perform their proper functions. Please explain this and tell me how to remedy it and oblige.

A. W. S.

Springfield, Mo.

Answer:—1. Procure a more vigorous male bird. 2. Bowel trouble is what is the trouble with your little chicks. This is brought about by various causes. In your case you fed the chicks too soon and probably too much. Chicks should not be fed for from 48 to 60 hours after they are hatched, and then fed only a little at a time, and this should be scattered in litter, such as cut clover, hay or clover chaff. One of the most frequent causes of bowel trouble is improper heat in the brooder, either too much or too little. Read April issue of AMERICAN POULTRY JOURNAL for further instructions on care of little chicks.

SCHOFIELD BLDG. - POULTRY DEPT. - CLEVELAND, OHIO

If you want a ready roofing that will last for years without painting or coating, buy **Amatite**. If, on the other hand, you want something that will "do" for a time Amatite won't interest you. It is too good. It will last too long for a man who wants a temporary roofing.

Amatite is made to wear.

It is strong, tough and durable with a protective mineral surface such as no other Ready Roofing can offer.

Its strength lies in the toughness of the materials which go into its make-up—real wool-felt and coal tar pitch—the best water resisting materials known.

Pitch is used in water-proofing all the big buildings, tunnels and subways throughout the country. Recently the old New York Central tunnel was uncovered and some pitch which had been in use for **over thirty years** was unearthed and the engineers in charge of the work found it just as pliable and

water resisting as the day it was put in.

When you buy Amatite you are sure of getting a roof that will keep out the water—Pitch is absolutely impervious to water.

We are so sure of the superiority of Amatite over any other ready roofing that we are anxious that you should see a sample which you can submit to any test you like. We are certain that Amatite will give better service for a longer period, at less cost, than any other ready roofing made.

You may not be in need of a new roof at the present time, but we would like to have you know about Amatite, so that you will not need to investigate the roofing question when the need of a new roof arrives. Write to-day for the free sample to the Barrett Manufacturing Co. at New York, Chicago, Cleveland, Boston, Allegheny, St. Louis, Minneapolis, Philadelphia, New Orleans, Cincinnati or Kansas City.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Will you be so kind as to tell in your next issue if there is a book published that will illustrate and describe all breeds of poultry, giving standard weight of each class of each breed? If there is, what is its name and the address, and what will it cost?

O. W. W.

Manville, Ill.

Answer:—American Standard of Poultry, published by American Poultry Association. Price, \$1.50. For sale by American Poultry Journal Publishing Company, Chicago, Ill.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—What is the cause of soft-shelled eggs? I have six White Rock hens I purchased from a noted White Rock breeder of the East. One has laid very poor shaped eggs and none ever had good shells and more than half have been laid while on roost. They have grit at all times and plenty of oyster shell broken fine, also charcoal in ashes. Feed wheat, corn, bran, barley and pork cracklings.

No. 2.—One other hen seemed perfectly well when fed and in a few minutes was carrying one wing on the ground, held up one leg as though in pain, in morning was helpless. Was this paralysis? Is there a remedy for same? Mrs. L. D.

Eureka, Cal.

Answer:—1.—The production of eggs without shell, or the so-called soft-shell eggs, may be due either to lack of shell-making material or to inflammation of the shell-forming chamber of the oviduct which no longer secretes calcareous matter. Eggs without shells are more difficult to lay than are those which are perfect, and, hence, they are frequently retained a considerable time in the uterus, adding to the irritation and inflammation. As treatment, it is sufficient to remove the cause. Give the fowls plenty of shell-forming material, such as wheat bran, crushed egg shells, cut or calcined bone, broken mortar, crushed oyster shells, etc. Give green food and avoid the causes of inflammation of the oviduct. This inflammation in the egg-forming chamber is also the cause of the eggs being poor shaped. 2.—This, we believe, was the result of injury.

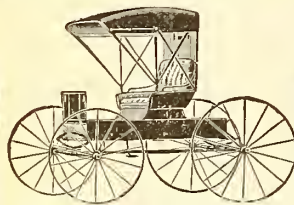

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer the following questions in AMERICAN POULTRY JOURNAL:

1. What is the difference between bran, middlings, shorts, shipstuffs?
2. Could I keep 25 Brown Leghorn pullets in a house containing 300 square feet, and a yard containing 600 square feet? Intend to let them in another yard about three times as large as their regular yard and let them pick at the grass about half hour each day.
3. The other day I got a soft-shell egg, what is the cause of it? I keep gravel, charcoal and oyster shells before them all the time.
4. I have scrubs at present, but I intend to discard them and get S. C. B. Leghorns. Don't you think \$20 for twenty pullets is rather cheap?
5. How much ought I get for a setting (13) of eggs from S. C. B. Leghorns, scoring 90 to 93?
6. What is the matter with my chickens, they won't eat gravel at all? They eat broken china plates, ground up. I have fed them broken plates, etc., and

After May eggs half price and breeders for sale.

M. M. SMITH - Farmersville, Ill.

have not had any fatal results so far. Would you advise me to keep it up?

7. What is the advantage of grit over gravel? H. H.

St. Louis, Mo.

Answer:—1. Bran is the outside hull of the kernel, middlings and shorts are practically the same—are the refuse after the flour is taken out. Shipstuff is a combination of all three. 2. Yes. 3. Read answer to Mrs. L. D. in this issue. 4. Yes. 5. Two fifty to three dollars. 6. Broken china makes good grit for fowls, and as the cost is very little we would advise its use. 7. Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—As I am a subscriber of your valuable journal, will you kindly answer the following questions in your next issue:

1. I have a Wyandotte cockerel, ten months old, weight 9½ pounds, solid buff with exceptions of a few black feathers in tail. Is he suitable for breeding purposes?

2. Is "beef scrap" as good as fresh ground "green bone," and how much ought I to feed to every fifty hens?

3. I have rooms 8x11 with small runs, how many Barred Plymouth Rock hens ought I keep with each cockerel for best results?

4. I have some Black Langshan hens that have been running with Barred Plymouth Rock cockerels, but I now have them with Black Langshan cockerel. How long now before eggs will be suitable for setting purposes to insure full-blooded stock?

5. How many Leghorns can be confined in a house 8x16 for best results?

6. How many of same breed can be housed of nights in building of same size if run at large? H. F. S.

Luray, Va.

Answer:—1. This bird should be disposed of as he is not suitable for breeding purposes. 2. Beef scraps are very

good, but where fresh green bone can be obtained, we would prefer their use; about 2 ounces to each fowl three times a week. 3. Ten females to one male is about right. 4. It is a great mistake to let fowls mingle in this manner. Some of our best authorities claim that the eggs from fowls allowed to run with males of another variety will always produce chicks of mixed blood to a greater or less extent. Others claim after two weeks they will not show any signs of

most profitable to keep for eggs alone? I mean eggs for market.

2. Which breed for broilers alone?

3. Which breeds for soft roasters? Cockerels to be caponized.

4. Which breed for all-round purposes of both eggs and broilers?

5. Can young turkey toms be caponized, and is there anything to be gained by it in selling them in the market?

6. I have seven acres of land. Can I fence off two acres by itself and keep young chicks, turkeys, ducks and geese all together on it? It is an old orchard, plenty of grass and shade. Or would you advise sub-dividing it into smaller lots and keep them separate?

7. About how many young stock could I keep on two acres?

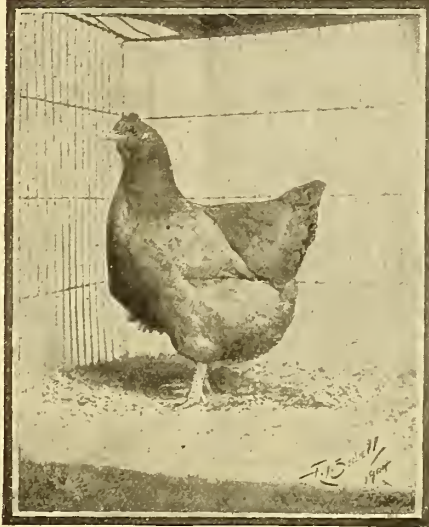

8. What breed of turkeys will stand confinement the best? D. L. T.

Grey Cliff, Mont.

Answer:—1. Any one of the Mediterranean breeds. 2. One of the American breeds. 3 and 4. One of the American breeds. 5. We don't believe it would be profitable. 6. Not successfully. It would be better to divide your space and keep the different varieties separate. 7. From 500 to 2,000, depending on the care and attention given them. 8. Any of the domestic breeds of turkeys do well in confinement.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Please answer in your next issue of your journal the following questions: 1st. What can be the matter with my hens? They die suddenly, mostly at night; they will fall from roost dead. Nearly all of them have full crops, are healthy looking birds; feed whole grain in litter in morning, mostly oats; also a mash of middlings and oats, ground, sometimes bran instead of ground oats. In cutting open four hens they seemed to be quite fat, but were laying; three had natural color fat; one's fat was white like lard. Liver of all was spotted, looked like color of sulphur spots. 2d. What can be the matter with my geese eggs not hatching? Have three hens, one

gander; have free range with access to running water. Geese are all now coming three years old; gander same age and very active; all Toulouse geese.

Fennimore, Wis.

E. L. K.

Answer:—1. This is due to a diseased condition of the liver, symptoms of which are obscure. This is caused by lack of exercise and overfeeding; also from the birds taking tainted or moldy food or poisonous substances of various kinds into their digestive organs. If the condition is suspected in time for treatment, give sulphate of magnesium or sulphate of sodium in a purgative dose (20 grains to a dram) and follow with sulphate of magnesium 10 grains, bicarbonate of soda 2 grains, repeated daily for a week. 2d. We are unable to say, but would suggest that you procure another gander.

INTERESTING BOOK, "CHICKEN CHAT."

One of the simplest and cleverest little booklets that has come to our attention is Zenoleum Chicken Chat, issued by the Zenner Disinfectant Company, 117 Lafayette Ave., Detroit, Mich. This contains a series of poultry diseases giving symptoms, cause and remedies for practically all the diseases to which poultry is heir. Each of our readers should have a copy. Sent free on request.

AN OPPORTUNITY FOR BEGINNERS.

There are many families who have considered the incubator hatching of chickens, but who have never made a start in that direction on account of the expense involved in purchasing an outfit. Not knowing just how successful they would be, they have desired to be very conservative in the outfit for hatching machinery.

The Geo. Ertel Co., of Quincy, Ill., gave this desire careful attention last summer and decided that they could afford to make a very close price on a small machine, which would do good work and which would serve to introduce their goods to users, who, making a success of the small machine, would certainly want a larger one in time. By careful figuring on the manufacture of such a machine in large quantities they decided that they could get the price down to \$7.90 for the incubator delivered anywhere east of the Rocky Mountains, and that it would be possible to include the Brooder for a delivered price of \$11.50. On account of the high freight rates, the prices to points west of the Rocky Mountains have to be a little higher.

They have thousands of these machines all crated and ready to ship, and those who have seen them say they are an up-to-date machine which will certainly do good work.

This machine is made in one size, 100-egg capacity, and is an improved form of the Hatching Wonder which they have sold for a number of years, and with which, doubtless, many readers of the AMERICAN POULTRY JOURNAL made their start in chicken raising.

Chas. Bennington, of Edmeston, N. Y., won at Fulton County Poultry & Pet Stock Club, Gloversville, Nov. 20 to 25, 1905, as follows: First cock, first hen, first cockerel, third pullet, first pen; special for best cock, hen, cockerel and pullet and special for best display. At Scranton, Pa., Jan. 15 to 20, 1906, eight prizes. Among winnings in bands of customers are first cockerel at Cleveland and first pullet at Cincinnati. In S. C. Buff Orpington class.

Dr. C. M. Baskerville, of Mt. Pleasant, Mich., won at Ann Arbor, Mich., January, 1906, as follows: First cock, fourth hen, first, third and fourth pullet, first pen. At Holland, Mich., December, 1905, in hot class of 76 birds, first and second cock, second hen, third cockerel, second pen; specials for best colored male, best colored female and best shaped female. Hewes, McClave, judges. Forty in Part. Wyandotte (Ann Arbor), 76 in Part. Wyandotte (Holland).

J. A. Leland, Springfield, Ill., has several fine Pekin drakes and Light Brahma hens to dispose of at a very reasonable price. Also has a surplus of Rose Comb White Leghorns. Write him for prices and particulars and mention AMERICAN POULTRY JOURNAL.

A NOTED POULTRY FOOD EXPERT.

It is with a great deal of pleasure that we are presenting to our readers this splendid picture of Dr. Petros F. Nishkian, who gave to the world the first real balanced poultry ration.

Nearly every chick raiser knows more or less about Midland Poultry Foods, and the place they occupy in the economy of profitable poultry growing, but very few know anything about the man who is responsible for them and to whom the credit is due for their existence. This is not strange, for the Doctor is not a man to advertise himself. To him, however, the poultry world owes a debt of gratitude, and we know that our readers will be glad for this opportunity to get better acquainted with the man.

It is intensely interesting to sit and listen to the Doctor relate his experiences during the years that he labored in his laboratory to perfect the "ideal" on which he had set his heart, his mind and his determination. When talking on his "hobby" he becomes enthusiastic and drops many thoughts that show the deep interest he takes in the poultry raiser's business and its possibilities for better returns.

But in regard to himself the Doctor is extremely modest and unassuming, and it was with considerable difficulty that your correspondent was able to obtain from him even the very meager facts about his life and his life's work which we have chronicled here. We know, however, that these few facts will be welcomed by every reader of this paper and especially by those who have fed Midland Poultry Foods.

Dr. Petros F. Nishkian is of Armenian parentage. His boyhood education was completed at the famous Roberts College in Constantinople. He next went to France for special studies, and in 1880 his father sent him to Philadelphia, where he entered the Pennsylvania University in the fall of that year. After a thorough training in English he pursued a chemical course in accordance with his tastes and natural inclinations. After graduating in that branch he did considerable research work for the world-famous Dr. Ganz, of the University of Pennsylvania, at Philadelphia.

In 1886 he was Chief Chemist of John E. Taggart & Co.'s animal fertilizer works at Philadelphia. Chemistry having a wonderful fascination for him, he sought and found broader fields for his talents, and in 1888 moved to Franklin, Mass., to take charge of the aniline department of commercial coloring of straw and silk wares.

He also did chemical research work for Theodore Metcalf & Co., Boston, upon wool fat, which made this firm famous. About this time the imperial West, with its undeveloped possibilities and its great need, appealed to him and he took Horace Greeley's advice and went west. In 1889 he was engaged by the great Armour Packing Co. as their chief chemist, and the years he worked in that capacity were busy, fruitful years, giving to the world many wonderful discoveries.

Dr. Nishkian has the distinction of being one of the original workers in digestive ferments, such as pepsin, etc., in a modern packing house, and he was also identified in

DR. PETROS F. NISHKIAN.

producing extract of beef on a large scale in that great institution. Foods and their detailed and laborious investigations, from a scientific standpoint, were his special field in this great food factory.

It was while thus engaged in his food researches that the balanced ration idea for stock in general was for the first time worked out by the Doctor on absolutely scientific grounds. He had a well defined idea about certain food combinations to produce the ideal balanced food ration. Under many adverse conditions and circumstances he followed the original idea which he conceived at the Armour laboratories until complete success crowned his labors.

When he was fully convinced that his

30 Years of Satisfaction.

BLACK DIAMOND

Ready Roofing

On ten years and still in good condition.

Covered with 15,000 ft. of Black Diamond Roofing.

Black Diamond is not an experiment. For over 30 years it has been used all over the country with satisfaction. Millions of rolls are being sold every year.

Black Diamond is not sold on a promise of what it will do, but on a record of what it has done.

No other ready roofing can equal its record. It is made of wool felt and pitch, the best waterproofing materials known. Anyone can lay it—no skilled labor required.

Samples and booklet showing buildings all over the country that are covered with Black Diamond, mailed free on request.

balanced ration was not only the ideal ration, but that it was a thoroughly commercial proposition as well, he gave up his lucrative position with the Armour's and devoted his entire time and attention to the preparing of his now world famous balanced rations for poultry. The Midland Poultry Food is known and fed wherever poultry is raised profitably.

The Doctor is intensely interested in and is an enthusiast on the question of feeds and feeding. His studies have enabled him to fatten steers at the rate of 4¾ pounds solid, fine meat per day at the Missouri Cattle & Milling Co.'s plant in Kansas City. And with his Dairy Food he has succeeded in producing 33 per cent more milk than has ever been obtained with any other food in this country or on the continent of Europe. These facts prove the earnest zeal and the willing slavery of a conscientious chemist to his chosen profession.

Dr. Nishkian is also a well known pioneer member of one of the greatest scientific organizations in the world—the "American Chemical Society"—and is a close friend of Dr. Wiley, the Government Chief Chemist at Washington, D. C.

For the assistance of poultrymen and to meet a great need, the Doctor has written a very interesting and valuable book, "The Science of Poultry Feeding," which treats the subject in a way that cannot fail to be profitable to those who will follow the directions. It will be sent free to those interested who will write and ask for it. Address Midland Poultry Food Co., Kansas City, Mo., and kindly mention this paper when you write.

A WONDERFUL BUSINESS CONCERN.

How the Chicago House Wrecking Company Swings Million-Dollar Deals and Sells Goods to Its Customers at Less Than the Cost of Manufacture.

The Chicago House Wrecking Company is the largest concern of its kind in the world and the business done by it runs away up in the millions every year. While it has bought and wrecked every world's fair since 1893, including the Chicago, Buffalo, Omaha and St. Louis Expositions, its business is not confined to the wrecking of houses by any means. This great concern buys bankrupt stocks of goods of all kinds at shippers' and receivers' sales all over the country and supplies hundreds of thousands of customers with everything needed for the farm and home. It buys in such immense quantities and is able to swing big deals that no other company can handle, that in most cases this company can fix its own price in buying its goods and can therefore supply its customers with goods at less than the actual cost of manufacture. There isn't an article that goes onto the farm or into the home that this company is not able to supply to its customers at a great saving of money. Furniture of every description, household articles of every kind and character, lumber, wire, nails, tools and farm implements of all kinds, engines, boilers, machinery of every kind in the world, all kinds of piping, bath room outfits, carpets, rugs, dishes, kitchen utensils, desks, office furniture, roofing, wire netting, barbed wire, posts, windows, doors, blinds, sash, etc.—these are just a few of the different kinds of articles that this great concern is supplying to its thousands of customers daily at an immense saving of money.

No one who buys articles for the farm and home can afford to overlook this opportunity to obtain all that is needed at such a great saving. As it costs nothing to get their catalogue, you should write for it without delay. The Chicago House Wrecking Company is saving its customers thousands of dollars every week. Why not you?

Send your name and address today to The Chicago House Wrecking Company, 35th and Iron streets, Chicago, Ill., and their large illustrated catalogue will be mailed you free of charge, showing these thousands of articles and the wonderful special bargains that mean dollars in the pocket to everyone who buys from them.

The Arizona Ostrich Co., Phoenix, Ariz., desire to know where they can procure Chinese Pheasants or eggs for hatching. Will some of our readers please inform them?

Harmon Bradshaw, Lebanon, Ind., the noted Single Comb White Leghorn specialist, has a change of ad this month. Look it up and write him for particulars. Mention AMERICAN POULTRY JOURNAL.

prove the superior merits of my stock above all competition. Order a sitting of eggs from these phenomenal layers at \$2 and \$3 per 15. Square deal or no trade. Send for grand pictorial circular, it's FREE.

PETER S. HURT, :: R. R. 5, THORNTOWN, IND.

THE PHONE AND THE FARMER.

The following extract from a new booklet issued by the Electric Appliance Company of Chicago clearly sets forth the many advantages of the 'phone on the farm. It strongly contrasts the old way and the new way of farming, and shows the immense progress made in agricultural lines the past few years.

Twenty years ago it was considered nothing uncommon to rise hurriedly in the middle of a perhaps cold, stormy night and sally forth for medical assistance, or to render some neighbor in distress a needed service.

Today it is possible for the farmer to answer all demands of a neighborly or social character, transact business at a sav-

ing of time and trouble, extend and enlarge his acquaintance, enter into the spirit and activity of town life, and direct his affairs on an absolute surety of success by having a reliable 'phone in the home.

Not a day passes but some trip will be saved; not a day passes but some business transaction will be completed that will be worth the yearly cost of maintaining a good 'phone.

The rural mail service has produced some very radical changes in the social and business life of farmers in general, but the farm 'phone will eventually produce even greater changes by bringing more closely together the progressive people of town and country, whose interests must always be identical—the welfare of the one depending upon the progress and advancement of the other.

Without a 'phone on the farm every errand, little or big, demands the personal attention of some member of the farmer's family, with perhaps a team to carry him, at a loss of time and help, of both. This, too, when work is pressing and every moment means dollars.

On the farm where decided action and quick judgment are needed every hour in the day the Eaco Farm Telephone is as much of a necessity as any other labor-saving implement on the place. In these days of competition in sales, in being first on the market, the farmer who has not a good, reliable 'phone is, to all intents and purposes, just as well isolated and apart from the actual business of a community as ever Robinson Crusoe was on the desert island.

We can heartily recommend this little

BLANCHARD'S WHITE LEGHORNS

are no experiment, having been carefully selected and bred for over twenty years. No labor or expense has been spared in building up and perfecting this strain and while the production of large, pure white, fancy market eggs has been the main object, **standard qualities have not been neglected.** They are large, vigorous, active and handsome. Good winter layers and keep at it all summer. Unexcelled for introducing new blood or as foundation stock. **NONE BETTER ANYWHERE AT ANY PRICE. Eggs for hatching, from my regular matings, \$2 per 15; \$3.75 per 30; \$5 per 45; \$10 per 100.** From exhibition matings, \$3 per 15; \$5 per 30. Illustrated circular free.

KILLED BY THE FUMES.

You must kill the lice on the fowls some way. If you don't care to handle them singly, use our liquid

PRUSSIAN LICE KILLER.

Simply paint the roosts and drop boards with it. The fumes arise and kill the lice on fowl and pen. It catches them all to the last mite, and it takes the nit as soon as it comes to life. The fumes do the work. It is the perfect, easy method of protection and cure. But if you like the powder treatment better, don't forget the old reliable **Prussian Lice Powder**.

Enclosed please find 40 cents for another can of lice powder. We were well pleased with the first can, but we need and must have more.—H. F. Lake, Yankton, S. D.

Prices: Lice Killer, 50c and \$1.00; 5 gallon can, \$4.00. Lice Powder, 25c; by mail 40c. Remember also our famous **Prussian Poultry Food**. Get either of these from your dealer. If you don't find them write us at once. We will supply you and send you also our 68-page book.

Prussian Remedy Co., St. Paul, Minn. Special Agents: Chas. H. Lilly Co., Seattle, Portland, San Francisco; Chas. Winsel, Los Angeles; J. S. Pollock, Pittsburg; Eitmiller Bros., Baltimore; Vaughan Seed Store, Chicago; J. W. Wilder & Co., Cincinnati, Ohio.

book to all who are interested in building a telephone line of any description, as it gives a great deal of valuable information about line building, cost of building, etc. A mention of this paper will secure the book free postpaid.

A LONG DISTANCE CONCERT.

Some time ago the author participated in a musical performance given by two players separated by many miles, with the audience located at yet a third distant point. The author, provided with a head receiver connected to the telephone circuit and standing before a large horn attached to the transmitter, played on a French horn for the benefit of listeners in the office of the *Spokesman-Review*, at Spokane, Wash., 726 miles from Salt Lake City, in which place he was located.

The remarkable feature of the performance was that the piano accompaniment was played by a music dealer named Reeves at his store in Helena, Mont., 525 miles away. A transmitter, equipped with a megaphone, was mounted on top of the piano and this player also wore a head receiver.

In playing the Miserere, from Il Trovatore, for instance, your correspondent waiting in Salt Lake City could hear Mr. Reeves play the introduction, and then being well acquainted with the score knew just when to begin with the melody. Then at the close of the strain he would listen until the intermezzo had been played on the piano up at Helena, and then begin again. There was not the slightest jar between horn and piano during the entire program, and people listening along the line thought both instruments were being played in the same room. Your correspondent serenaded the adjutant's office at Fort D. A. Russell and the offices of the Cheyenne newspaper 500 miles distant, and one night was got up out of bed at 11 o'clock to serenade numerous central offices of the company scattered through the southern part of Utah. General Manager Murray was much interested in these experiments and afforded every facility for their conduct.—*American Telephone Journal*, Feb. 10, 1906.

CATCHING PICKPOCKETS.

The Sharples Separator Co., of West Chester, Pa., have a man in almost every town who makes it his business to catch pickpockets. Strangely enough, these pickpockets are always caught robbing themselves—and are always farmers or dairymen. The Sharples Separator Company's men do not send these convicted self-pickpockets to jail, but show them how to make more money. They prove to them that, if they have not a famous Sharples Tubular Cream Separator, they are picking out of their own pockets one-third to one-half the profits they should make from their milk—that they are, in fact, losing one-third to one-half their cream. These men can con-

ROCK HILL POULTRY FARM

OSSINING, NEW YORK

First Prize Hagerstown, special for best white bird in the show; special for best Wyandotte, any variety; special for best White Wyandotte Pullet.

White and Silver Penciled Ply. Rocks, White and Partridge Wyandottes, S. C. White Leghorns, Buff Cochin Bantams

Show Record For 1905 and 1906, at Syracuse and Hagerstown

We won 41 first and 36 second prizes, together with eight of the best specials given at the latter show, namely: silver cup for best white bird in the show; specials for best Wyandotte, best Plymouth Rock and best Leghorn, any variety, in the show, and specials for best White Wyandotte cock, hen, cockerel and pullet.

At Madison Square Garden we won 34 ribbons besides a large number of special prizes, including specials for best display of White Wyandottes, and best display of Silver Penciled P. Rocks. After studying the above record you must be convinced that we keep the **blue ribbon breeders**. Eggs from the best matings of the season, \$5 per 15, \$20 per 100. Visitors always welcome. Send for illustrated catalogue containing description and mating list.

GEN. E. A. McALPIN, Prop. :: :: F. W. COREY, Manager

vict you of robbing yourself. They will do it, either by lending you a Tubular for a free trial, or by skimming for you, free, a batch of milk you have already skimmed with pans or cans, and taking out of that milk, which you think is skimmed clean, the cream you have left in it. This proof won't cost you one cent, but will help you increase your butter money from one and one-third to double what you now make. All you need do, to find out how much cream your pans or cans lost, is to borrow a Tubular from the agent for a free trial, or take a batch of skimmed milk to the nearest Tubular agent. The result will surprise you, cost you nothing, and put money in your pocket. We suggest that you write The Sharples Separator Co., of West Chester, Pa., about this, at the same time asking for catalog Y 205.

GET THESE GREAT BOOKS.

Show How Gardeners, Farmers and Poultrymen Can Save Money by Purchasing All Their Supplies from One Place.

If every gardener, farmer and poultryman will write to Josiah Young, 17 Grand street, Troy, N. Y., for copies of his catalogues, they will find that it is now possible to buy seeds, farm implements, poultry supplies, and, in fact, everything that is needed on the farm right from one place.

This method of doing business is not only a great convenience, but remarkable savings are the result of such an arrangement. It's the carrying of the mail order business a step further—from what the farmer needs in his home to what is required on the farm to do the work. Whatever the farmer requires—seeds, an implement of any kind, wire fencing, fertilizers or any little article that may be needed—it can be ordered from these catalogues. The poultryman can get his supplies in any quantity he desires, and he can buy anything from an incubator to insect powder, and both the farmer and poultryman will find this way of buying safe and very satisfactory. By writing

10 DAYS FREE TRIAL SEND NO MONEY

Simply write us a postal card saying "send me your catalogues and free trial offer" and we will send you by return mail, free, postpaid, the handsomest art catalogue of the season and our new and marvelous proposition, the most liberal bicycle offers ever made by any house. OUR CATALOGUES SHOW large photographic illustrations of all our models, the most complete line of high grade bicycles in the world, and describe and explain every detail of construction. They show the difference between high class material and work and cheap contract built wheels. We explain how we can manufacture bicycles of the very best material, furnish the finest equipment, coaster-brakes, puncture-proof tires and sell direct to the rider at less than dealer's cost. WE SHIP ON APPROVAL to any person, anywhere, without a cent deposit, pay the freight and allow ten days free trial on all our bicycles. Write for our catalogues, select your wheel, and send us your order on these terms. Do not buy elsewhere until you try our wheel 10 days free. We will convince you that we sell BETTER BICYCLES at LOWER PRICES and broader guarantee than any other manufacturer or dealer in the world. We have reliable bicycles for men and women, boys and girls, cheaper than the lowest prices of any other house; we have the highest grade bicycles that it is possible to make at prices as low as a jobber can get in 1000 lots. We have branch houses in Liverpool and London, and we sell bicycles in every country on the globe. BICYCLE DEALERS filled the day received. Many dealers are handling our line. Rider Agents make money selling our bicycles, tires and sundries without interfering with their other work. Splendid opportunity for one agent in each town. If you own a bicycle write to us anyway; there are suggestions and information in our catalogues that will be of immense value to you.

TIRES, COASTER-BRAKES, built-up-wheels, saddles, pedals, parts and repairs and everything repair men. Ask for our tire and sundry catalogue. If you want children's wheels ask for Juvenile Catalogues. DO NOT WAIT but write a postal today. Do not think of buying a bicycle or a pair of tires from anyone until you know the new and wonderful offers we are making. It only costs a postal to learn everything. Write it now. MEAD CYCLE COMPANY, Dept. S 126 CHICAGO, ILL.

Doolittle's Partridge Wyandottes

BEST ON EARTH. Winners of the most coveted prizes at three of America's largest shows. First and \$50 championship silver cup for best male; silver medal for best shaped male; 1st and 2d hen. 4 points more than any competitor at New York, 1906. 1st cock, 1st hen, 1st pullet, 1st pen. silver cup for best display and 7 other specials—15 prizes in all; more points than all competitors combined at Chicago, 1906. 2d cock, 1st hen, 1st cockerel, 1st pullet, all but one possible 1st; 11 prizes on ten entries. More prizes than any three competitors at World's Fair, 1904. Who can dispute their championship? Eggs from the same yards that I am hatching myself: \$5 for 15; \$8 for 30. The handsomest and most complete catalog to date, with color plate, and telling how to mate and breed Partridge Wyandottes, mailed for 10c in stamps.

FREE SAMPLE OF BLACK DIAMOND ROOFING.

The little "Black Diamond" trade mark has been a familiar sight on roofing materials for some thirty years or more.

Free sample of this famous roofing may be had on application to the nearest office of the Barrett Manufacturing Company, New York, Chicago, Cleveland, Allegheny, Kansas City, St. Louis, Minneapolis, Philadelphia, New Orleans and Cincinnati.

ONE WAY TO GET AHEAD OF THE INCUBATOR MANUFACTURER.

The writer of the following letter evidently believes in making the most of a good thing. The good thing in this instance was a Missouri Queen Incubator, and any one else who desires to do likewise should possess one of these very excellent machines.

"Lineville, Iowa, April 2, 1906. "Mr. W. P. Sheets, Princeton, Mo. "Dear Sir:—I want to tell you what I have been doing with my 150-egg Missouri

Queen this spring. I have just taken off a hatch of 180 chicks. Now for fear some would think this a fish story, I will explain how I did it. I filled the trays, then put eggs on top until I had something near 200. I could just as well have put in more if I had known it would have been a success.

"Wishing you success, I remain, "Sincerely yours, "MRS. HENRY WINDLAND."

William K. Lewis, Dry Ridge, Ky., the Buff Wyandotte specialist, is advertising eggs at a bargain in this issue. Look up his ad and send in your orders.

Merchandise From Sheriff's and Receiver's Sale

Also Material From the \$50,000,000 St. Louis World's Fair.

THE CHICAGO HOUSE WRECKING COMPANY is unquestionably the most unique institution on earth. Our business consists in the purchase of general stocks of merchandise of every kind and character, at Sheriff's, Trustee's, Assignee's, Manufacturer's and other sales. Purchasing our merchandise in this way gives us an opportunity to sell you goods at prices that seldom represent the original cost of manufacture.

3000 Rugs at 85c. Size 27x58, in a handsome assortment of designs. 100 9x12 tapestry brussels rugs, \$11.50. 1600 velvet rugs in beautiful patterns, size 9x12 feet, worth \$30.00, our price \$10.50. 600 9x12 velvet rugs at \$19.50. 100,000 yards of genuine linoleum, 29c, 40c, 75c and \$1.00 per yard. A car load of oil cloth, per square yard 19c. All kinds of carpets from 20c to \$1.25 per yard. We guarantee a saving of 25 to 50 per cent. Write today for special carpet and rug list.

Our purchase of general stocks at various sales is but one of our methods of obtaining material. In addition, we purchase outright Expositions and other Institutions. We bought and dismantled every Exposition of modern build, including the Fifty Million Dollar St. Louis World's Fair, the Thirty-Three Million Dollar Chicago World's Fair, the Nine Million Dollar Pan American Exposition and the Four Million Dollar Omaha Exposition.

Ballbearing Grindstones \$2.25. Boyce grind stones, ball-bearing throughout at \$2.25, lanterns 45c, blacksmith forges \$4.75; wrought iron anvils, per lb. 6c. Ax handles 7c. Shovels 50c. Axes 50c. These are samples of the prices we are offering on our high grade tools for. A full list of tools on application.

Handsome Metal Beds \$1.95. Heavy tubing, nice design, best enamel coloring. Other chairs from 25c to \$1.50. 500 rocking chairs from 95c to \$1.75. 850 leather rockers and easy chairs, worth \$20.00 to \$40.00, our price \$7.00 to \$20.00. Dressers, commodes, office furniture and supplies of every kind.

From these various Expositions we obtained millions of dollars worth of valuable building supplies and furnishings. Take for instance, at the St. Louis World's Fair, we had over 100 million feet of lumber, ten thousand doors, ten thousand windows, fifty miles of pipe, in fact, sufficient material to build outright a City with a population of 50,000 to 60,000 people. In this advertisement we offer but a few of the many items we have for sale.

A Carload of Lumber, \$100.00. We are still engaged in dismantling the St. Louis World's Fair and have millions of feet of the best Southern pine lumber for sale. Send us your lumber bill for our estimate, we will make you a very close price. We have lumber for any kind of building. At \$100.00 we will furnish you with 12,000 feet of lumber in short lengths. This is an accumulation that we must dispose of quickly. A full description will be mailed if you will write directly to our St. Louis headquarters. We have an office on the Exposition grounds, address Chicago Housewrecking Co., World's Fair Grounds, St. Louis, Mo.

Wire Nails \$1.50 a Keg. At this price we offer you 10,000 kegs of new wire nails mixed, a 11 kinds in a 12 a handy assortment for anyone. While they last, \$1.50 per keg. 1000 kegs best cement coated wire nails 30 pennyweight and larger, one size to a keg, per keg, \$1.50. Wire nails and supplies of every kind. Rope Bargaish. Good Manila Rope, slightly used, all sizes, 1/4 in., per 100 feet, \$2.75. Manila Rope, slightly shophorn, per lb. 10c.

Steel Roofing \$1.75 PER 100 SQ. FEET. Painted red, both sides, most durable and economical roofing, sliding roof ceiling for barns, sheds, houses, stores, cribs, poultry houses, etc. Easier to lay and cheaper than any other material. No experience necessary to lay it. A hammer or hatchet are the only tools you need. We pay the freight to all points east of Colorado, except Colorado, Oklahoma, Texas, and Indian Territory. This is our No. 15, semi-hardened flat steel roofing, 24x24 inches, per square of 100 sq. ft., \$1.75. Corrugated V crimped or standing seam, per square \$1.85. For 25c per square more we furnish this material in 6 and 8 foot lengths.

100 Lbs. Fence Wire \$1.25. At this price we offer our Painted Wire Shorts, No. 12. Galvanized Wire Shorts, No. 14, \$1.60 per 100 lbs. No. 11 Galvanized Wire, continuous lengths, "B. B." Wire, 100 lbs., \$2.50. Painted Barb Wire, per 100 lbs., \$2.00. Galvanized Barb Wire, per 100 lbs., \$2.50. Galvanized Poultry Netting, 100 sq. feet, 40c. Galvanized Field Fence, finest manufacture per rod, from 16 40c-Fence Wire for every purpose, 1000 feet of Lawn Fencing, per ft., 25 to 60c. Steel Fence Posts, Indestructible, latest patent, 48 inches above ground, complete per post, 35c.

Pipe for Every Purpose. One inch iron pipe with couplings, per foot 3/4c, 1 1/2 inch 4/4c, 2 inch 5/4c, 2 1/2 inch 7/4c. All sizes from 3/4 to 14 inch. 3 inch lap welded well casing with couplings per foot, 11c, 4-in. per foot 16c. Boiler tubes and pipe of every kind.

Shrewd Buyers Act Quickly. Now is the time to buy. You need supplies for your contemplated improvements. We are still engaged in dismantling the \$50,000,000 Exposition at St. Louis, and can deliver to you immediately the very best of lumber, at prices that will save you from 30 to 50%.

1/2 Horsepower Gasoline Engine \$50. At this price we are offering you the best gasoline engine ever manufactured. It is complete with pumping jack and will do all kinds of work. Other engines from one to eight horse power. Machinery for all purposes, saw mill outfits, boilers, etc.

60c Per 100 Square Ft. This is our price on our splendid two ply Eagle felt roofing. Three-ply per square 90c. Vulcanite roofing with nails, caps and cement, per sq. \$1.75. Galvanized rubber. The highest grade roofing manufactured, complete at \$1.50, \$1.90 and \$2.15 per sq. Conductor pipe, save troughs and roof trimmings of all kinds. Free samples are sent on application.

Our Guarantee. We guarantee everything to be exactly as represented or money refunded. We only buy the very best material, and describe it exactly. You can rely on our description being absolutely true, or we will quickly return your money.

Bath Tubs, \$6.30. At this price we offer you a complete modern style enameled bath tub. Other tubs ranging up to \$20.00. We sell complete modern bath room outfits, everything needed to live in comfort, for \$25.00 up. 10,000 kitchen sinks, from 50c up, 15,000 closets from \$4.00 up. All kinds of plumbing supplies. Your home furnished with waterworks at a low cost.

CLASSIFIED ADS.

Under this heading ads will be inserted for six cents per word each month for less than three months, **four cents per word each insertion for three months or longer**, changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under **classified headings**. No ads accepted at less than an average of 50 cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Copy for classified ads should reach us by 19th of month preceding date of issue. Write your copy plainly, as upon this the correctness of your ads largely depends. AMERICAN POULTRY JOURNAL is furnished every advertiser during the time his ad is running. **Fifty thousand per month**. We guarantee an average monthly circulation of 50,000 copies of AMERICAN POULTRY JOURNAL. When placing your ads remember that advertisers of Classified Ads get better returns from AMERICAN POULTRY JOURNAL than from any other poultry journal—none excepted.

On writing any of these advertisers mention A. P. J. It helps you and doesn't hurt us.

All Copy for Classified Ads Must Reach us by the 19th of the Month.

System in Poultry Practice BY JAMES Shackleton.

30 Chapters, 147 Pages, One Dollar, Postpaid.

April 10, 1906. Sales to this date in 1906 are vastly greater than in previous years, and are more evenly spread all over the English speaking world. Everybody having fowls need the book, and people who get it tell that to all their friends and acquaintances. It is the only book in any language that does, or ever did, take poultry keeping out of blind guessing into exact methods and constant improvement. Circular free.

The book and American Poultry Journal for one year for \$1.10 new or renewal.

JAMES SHACKLETON, Box A 12, Milburn, New Jersey

WHITE WYANDOTTES!

Biggs' White Wyandottes have been line-bred since 1897—bred for Wyandotte form and color and for egg production.

Shape and color characteristics have been firmly fixed. These Wyandottes are the low-down, blocky kind, in weight exceeding somewhat standard requirements.

Unapproached in size, style and finish, they have never failed to win the coveted prizes in the strongest competition, east and west. Every bird line-bred and pedigreed and sold on approval. Eggs: \$3 per sitting; two for \$5; three for \$7.

HOUDANS

Line-bred since 1874. Acknowledged standard of Houdan excellence in America.

Eggs: \$3 per setting; two for \$5; three for \$7.

THOS. F. RIGG IOWA FALLS, IOWA

Give little chicks a chance for their lives. Dust them with Pratts Lice Killer and make them feel so good and happy.

"RINGLETS" Soar Still Higher.

At the Imperial Show of the Nation
Madison Square Garden, New York

E. B. THOMPSON'S BARRED P. ROCKS

A "Ringlet" 1st Prize New York Cock and two of his Sons.

Stamped their superiority in the most decisive manner, winning again the Superb Challenge Trophy, value \$100, for best cock, cockerel, hen and pullet. This is the third time the "Ringlets" have won this grandest of all trophies, giving them now absolute and final ownership. In this "COLLUSAL CONFLICT" the "Ringlets" lifted the great National Sweepstakes Cup, presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. My Barred Rocks won double the number of silver cups and special prizes of any competitor, including the sweepstakes special in gold for best Plymouth Rock on exhibition male or female any variety.

The "RINGLET" World's Record of four years in succession at New York is a page of history. The "RINGLET" World's Record of first on exhibition pen at this great show, three years in succession, is the undisputed champion.

The "Ringlet" clean sweep 1st, 2d, 3d, 4th and 5th prizes on pullets has never been approached at Madison Sq. Garden, and stands alone and unequalled. The "Ringlets" have won at New York—exhibited by me personally—a grand total of 101 prizes, 48 of these are 1sts and specials, being more than double the number of 1st and special prizes won by any competitor in the history of the show.

GRAND STOCK FOR SALE

In any number. Rare bargains in yearling breeders in lots of a trio or 100. Show birds fit to win in the fastest company—600 choice breeding cockerels. Richly illustrated 36 page catalogue on application. It is full of original illustrations of New York winners from life. Eggs from finest exhibition matings. One setting \$5, two settings \$9, three settings \$12, four settings \$15. Address

DEAN'S BARRED AND WHITE PLY. ROCKS AND WHITE WYANDOTTES

are winners at many of the leading shows. I have in my breeding yards without doubt as fine birds as there are in America. If you are looking for quality I can certainly please you. Will sell eggs for hatching that are bound to produce prize birds at \$3 per 15. L. B. Dean, Box 62, Lakeside, Ill.

BUFF WYANDOTTES

A large flock to select from. The result of ten years' careful breeding of Chicago, Detroit, Cleveland and New York winners. Fine breeders from flock of youngsters for sale at reasonable prices. Show birds that will win in strong competition. To obtain the best, look for stock from a long line of winning specimens. Years of success with the variety will insure the best of results to purchasers.

Buff Rocks that are unexcelled.

Indian Runner Ducks, the money makers.

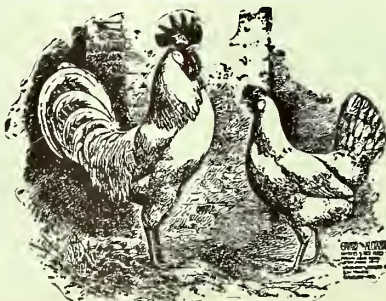

W. R. WOODEN Battle Creek, Mich.

WHITE WYANDOTTES

My birds are white, are good in size and are Wyandottes in shape. Females score to 96 1/2. At the Northern Illinois Poultry Association Show at Belvidere, February 5th to 10th, 1906, won first cock, first and fourth cockerel, first, second and fourth hen, fourth pullet, first and third pens I also breed choice Single Comb Brown Leghorns. Eggs for hatching.

W. F. ALLEN - - BELVIDERE, ILL.

Young's Strain S. C. White Leghorns

I HAVE NO OTHER BREEDS

My strain again for the sixth consecutive year shows its superiority by winning more prizes at Madison Square Garden, N. Y., in the strongest competition ever known, than all others combined, including 17 specials, and again winning the Nat'l S. C. W. Leghorn silver cup. Two weeks later I almost duplicated my wonderful win of last year at Boston by winning 9 prizes on 9 entries against the most prominent breeders of the east. My winnings for 1906, at the world's 2 greatest shows, as follows:
NEW YORK: Cocks, 1st, 3d, 4th; ckls., 1st, 4th; hens, 2d; pul., 1st, 2d, 5th; pen, 4th.
BOSTON: Cocks, 1st, 2d; ckls., 1st, 2d; hens, 1st, 4th; pul., 2d, 3d; pen, 1st.

This record has never been equaled by any other Leghorn breeder in America. Stock and eggs for sale at all times. 1906 mating list free. D. W. Young, Highland, N. Y. and Ridgewood, N. J.

Address D. W. YOUNG RIDGEWOOD, N. J.

Petersen's Houdans

Reign Supreme at the Nation's Greatest Shows

My record has never been approached by any breeder.
BOSTON, 1900. In world famous competition, 135 Houdans exhibited. I won 1st cock, 1st and 2d pullet.
BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.
BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials.
BOSTON, 1905. We won every important prize. 1st and 2d cock, 1st, 2d, 3d cockerels, 1st, 2d and 4th hen, 1st, 2d, 3d and 5th pullets; \$100 champion challenge cup for best male; American Houdan Club Cup for best cock, hen, cockerel and pullet. All shape and color ribbons; gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition.

ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdan's.
Also highest honors at Madison Square Garden, Philadelphia, Pan-American Hagerstown, Toronto. No matter where you want to exhibit, no matter what the competition, I can furnish the winners. Photographs on application. Eggs in season.

\$7.90 FOR OUR 100 EGG HATCHING WONDER INCUBATOR

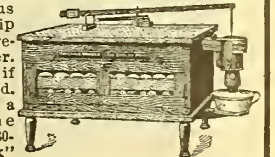

Delivered, in U. S. east of Rockies, or with Brooder, making complete outfit only \$11.50

The 100-egg Hatching Wonder has triple case, large aluminum-coated tank, double-jacketed heater and our Victor Regulator. The lamp has a big bowl, wide burner and stout metal chimney. Ventilated egg chamber with double glass in door contains movable egg-tray with nursery below. The machine is 26 inches long, 21 inches wide and 15 inches high. In addition to this substantially built incubator, with its egg-tray and nursery, aluminum-coated tank, double-jacketed heater, modern lamp and automatic regulator, the \$7.90 price includes a thermometer, funnel and book of instructions, telling how to get the best results from the incubator, all delivered at any railroad station east of the Rocky Mountains.

If the Brooder is ordered with the Incubator the price of both is only \$11.50 delivered anywhere in U. S. east of the Rockies. The price of the Incubator delivered west of the Rockies is \$9.99 and the Incubator and Brooder together \$14.75.

Better write us today; we will ship promptly on receipt of your order. Money returned if not as represented.

If you want a larger machine write for our 80-page "Victor Book"

Better Construction of Advance Fence

It takes longer to weave, but when finished is a solid wire fence. The stay wire is continuous, being woven in with the main top and bottom wires from one stay to the next.

There are no out wires in it—no wrapped ends where strength leaks out. Others cut the stay wires at top and bottom—some at each intersection of the strand wires. That wastes strength. Try this fence 30 days. You can see the strength in this fence as well as test it. Prove its qualities to yourself. We'll refund your money if you don't keep it. We pay the freight, too. Send for free fence book. It's worth a postal.

ADVANCE FENCE CO., 1380 Old St., PEORIA, ILL.

Feed Facts

When we began the manufacture of Midland Poultry Foods—the 10 balanced rations for all fowls—we met with a condition that seemed almost insurmountable. Poultry-raisers, as a rule, did not realize that there was such a thing as a scientific way to feed poultry to accomplish the various things they wanted. One food was fed to all kinds and conditions of poultry in a haphazard way. But

4
MIDLAND POULTRY FOODS
5

soon established a place for themselves and quickly demonstrated to poultrymen that there was such a thing as science in feeding for profit. We claimed that no feed could be made that would do for all purposes—that it was sensible and much cheaper to compound a feed for a specific purpose—in fact that the ideal ration must be scientifically prepared to meet conditions, not theories. The constantly growing sale and phenomenal demand for Midland Poultry Foods, and the wonderful success of poultry-raisers and the largest duck growers in the world, who all feed them, prove that our contention is correct—therefore, it should need no further argument to induce you to try them. Petaluma Chick Food—a new addition to the Midland line—is a dry chick food without grit or gravel. No other dry food compares with it. Our book, "The Science of Poultry Feeding" sent free upon request, tells you how to feed your fowls scientifically for more profitable results. Write for it today. We'll tell you how and where to buy our foods.

Tolman Ranges

GIVE WORLD WIDE SATISFACTION

THE experience of twenty-three years of range manufacturing and selling enables us to offer you a steel range which in every detail is "BUILT TO BAKE." The housewife who uses a Tolman Range is confident that cakes or pies will bake just as evenly in one corner of the oven as in the other, because the ovens of all our Tolman Ranges are large, square and evenly heated. The flue linings in our ranges are also ventilated, thus allowing air to pass behind them. The ovens are lined with heavy asbestos, recovered with sheet steel, thus retaining the heat in the oven, which saves fuel, time and worry.

**BUILT
TO
BAKE**

**60,000 in
Use — All
Giving Sat-
isfaction**

Our ranges are all high grade first-class goods in every particular, and never fail to give entire satisfaction in every way. We use only the very best material in the construction of our ranges, and we employ only skilled workmen. We have added every improvement to our ranges that we could possibly adopt that would be of any advantage. In this way we have brought our ranges to a very high standard of perfection. There is absolutely nothing on the market to-day in the line of steel ranges that can compare with ours.

For durability our Tolman Steel Ranges are unsurpassed. They are made from the very best of material. Every sheet of steel which enters our factory is carefully inspected and tried before being cut into shape. All the cast iron used in our ranges is cast in our own foundry, from the best of material, by the most skilled workmen money can hire.

The machinery with which our factory is equipped is the very latest and best.

We are thus enabled to offer you a stove or range second to none in the world at a price far less than your local dealer can even buy such a range. Moreover, we have the determination to place on the market, a range of the very highest quality.

If you had only our unsupported statement that our ranges were the best, we would expect you to take such a statement with due allowance, but we have such confidence in the superiority of our ranges and in order to gain your confidence, we will ship you a Tolman Range on

**ONE YEAR DECISION TRIAL AND GIVE
YOU A WRITTEN 10 YEARS' GUARANTEE**

Write us about this feature. It is unique and interesting, and we should like to present it for your consideration. We know you will be pleased with this feature of our proposition. We make this offer so that our customers will run no risk when buying of us.

Our plan of selling direct "From Factory to Family" saves you the \$15 to \$40 profits of the middlemen and dealers.

We have printed below copies of letters received by us just before this advertisement went to press, which shows clearly the satisfaction we give our customers. As these people have been using our ranges for some time, we take pleasure in presenting their letters for your careful consideration.

LETTERS RECEIVED BY US

JUDSON A. TOLMAN CO.,
Dear Sirs:—
I take the privilege of informing you in regard to your stoves. I know they are the best stoves I ever saw, for the least money. I would not part with mine, even if I had to take it to Europe with me. I got it January 19, 1904, and it has always given me entire satisfaction.

Yours respectfully,
Daniel E. Coriwell,
R. R. 2, Wellsville, N. Y.

TOLMAN STOVE MFGS.,
Kind Friends:—My wife wrote you upon the arrival of the range how she liked it, but I think that it deserves extra praise from me. If this letter will be of any service to you, you are at liberty to use it, because I want everyone who buys a range to buy of you, for you do certainly give your customers satisfaction. After trying the range for some time, I find it in all points correct, as promised in your catalogue. It is beautiful in appearance, and excellent in its working qualities. I pronounce it a PERFECT GEM.

Yours truly,
Nicholas Black, Batesville, Va.

JUDSON A. TOLMAN CO.,
Dear Sirs:—
It is a real pleasure to recommend your ranges. I bought mine nearly a year ago, and I really believe it burns less fuel than any other range I ever saw. It's certainly BUILT TO BAKE, and I know it is by far the best range in our neighborhood.

Yours truly,
Mrs. A. B. Harper,
Conroe, Texas

We know you would be interested in our large free catalogue, because it shows over sixty different styles and sizes of Steel Ranges. It tells clearly how we ship so that you run no risk. This catalogue will be mailed you free.

ORIGIN AND HISTORY OF THE BREEDS

No Perplexing Mystery Surrounding the Origin of the Black Langshan, Which Were Given to the World by Aged Chinese Fanciers and to the New World by Major Croad of England—How English Fanciers Departed from the Original Type and Produced the Game—Like Creation Now So Popular With Englishmen—Bitter Contest Being Waged Between Adherents of the Two Types—American Fanciers Have Stood Firm—Breed Characteristic of the Black and White Langshans.

Paper No. 12—The Langshan.

Written by Thos. F. Rigg, Associate Editor American Poultry Journal.

The origin of the Langshan fowl is enveloped in no mystery. There is no romance or glamor surrounding the birth of the original Langshan. The "Heathen Chinese," whose contribution to the present day civilization is not extensive, has, all the same, given us one of the most beautiful and valuable of all domestic fowls.

The Black Langshan has not been with us long, only for a brief time, as time is now computed.

From 1880 to 1890 numerous importations of this fowl was made by fanciers of this country, England being the source of supply.

Major Croad has the honor of introducing the Black Langshan to the English fanciers. About 1870 he brought a number of these fowls from China to his English house. They did not cause a sensation. In fact, they were not even kindly received by the English fancier for a time. But they soon found friends, and ere long fanciers were loud in their praise of the strangers from China, and delighted to refer to them as "the Lordly Langshans." Then, too, these fowls had demonstrated their worth as a utility breed.

These original Langshans were as much unlike the English Langshan of today, so far as form and carriage is concerned, as is possible. Within a few years after their introduction into England exhibiting breeders began to breed for a bird higher on legs than were the birds of Major Croad's importation. The friends of the original Langshan—the true Langshan—protested. But their efforts were in vain. Those intent upon breeding the high standing, game-like specimens seemed to have all influential agencies working for them. Judges in the show room favored the latter-day production. And then and there one of the most useful breeds of fowls ever given to man would have been ruined had not Miss Croad, who survived her father, clung to the original type and by much effort kept them pure, not only in her own yards, but in the yards of a number of fanciers.

Today there are two Langshan clubs in England, one championing the cause of the true Langshan, the other vigorously espousing the cause of the game-like so-called Langshans. There is every reason to believe that the fanciers will eventually turn as one man to the true type.

In this country we have put the Langshan a little higher

on his legs than we should have done, but this mistake is being corrected. No American fancier would for one moment tolerate the "Black Game" Langshan, so much admired by a majority of the English breeders. Franklin L. Sewell, who made a visit to England in 1905, tells us that in the show rooms there he saw winning Black Langshans standing as high on their legs as our Standard Games.

THEIR HISTORY HERE.

There was a great Black Langshan boom in this country from 1880 to 1890. One of the effects of this Langshan activity was the passing of the Black Cochins. These Black Cochins, never very popular, were driven to cover. However, some breeders used them and sent out the stock so produced as Langshans. The fraud was soon detected, however. The Langshan pleased the people and soon took its place among the most popular of breeds. But, sorry to tell, it does not today hold the high place it once did as a fancier's fowl. Every one recognizes the worth and the beauty of a well bred Langshan, but they do not appear in the show room as of old. It is a fact that the Langshan is the best egg producer of all the Asiatic breeds; but as a roaster no other breed can compare with it where a flesh-colored carcass is in demand. The Langshan needs better friends and deserves them.

THE WHITE LANGSHAN.

The White Langshan, introduced here several years after the advent of the Black variety, has not taken a strong hold upon popular favor. The comparatively few breeders who have them are enthusiastic in their praise of the virtues of these white fowls.

L. Lansing Knapp, who for years resided in China, made a careful study of the Langshan while there. In a letter he said:

"The White Langshan is not a distinct breed, as is the Black Langshan. Here and there we found a white fowl with some Langshan characteristics, but it can be safely stated that no distinct breed of this class exists here."

It is not at all unlikely that some one in China moulded these white fowls to the form of the Langshan. In fact this has been done in England and the United States. It is a fact that no record is given where the Black Langshan sported a pure white offspring.

BREED CHARACTERISTICS.

Standard weights: Cock, 10 pounds; cockerel, 8 pounds; hen, 7 pounds; pullet, 6 pounds.

The Langshan has a type, a character, a form all its own. And no more graceful lines and curves are to be found in all fowldom than in those of the Standard Langshan male. The whole being of a Langshan male is grace and dignity. The erect carriage, the curved back, the deep, broad breast, the large and somewhat spreading tail, united in one creature, form a very striking fowl.

In color the Black Langshan is of striking appearance, the green sheen shining like the imprint of the sun's kiss on the magnolia leaf. There must be no brown tinge in the plumage of a Black Langshan. That will not do at all.

In the plumage of the White Langshan no foreign color must show.

No one will make a mistake in accepting the Langshan as a utility fowl. Of large size, wonderful egg producers and unsurpassed as roasters, they are eminently qualified for the farm and town lot. As a fancier's fowl they possess rare merit.

JUNE CARE OF THE YOUNG STOCK.

The Work of the Summer Months has an Important Bearing on the Result of the Year's Work—More Room is Needed in the Brood Coops

—Drinking Vessels Require Frequent Cleaning

—Shade Necessary During Summer.

Written for American Poultry Journal by Victor D. Caneday, Taylor's Falls, Minn.

By the time this article is read most of the youngsters that are to make the big egg records and win the coveted prizes at the poultry shows will have been hatched for this season and the principal matters for the poultry keepers' consideration will be how to keep them growing and in the best health and vigor, for whether the object be a full egg basket next winter or a long string of blue ribbons, health and vigor are important factors in the realization of the objects to be attained.

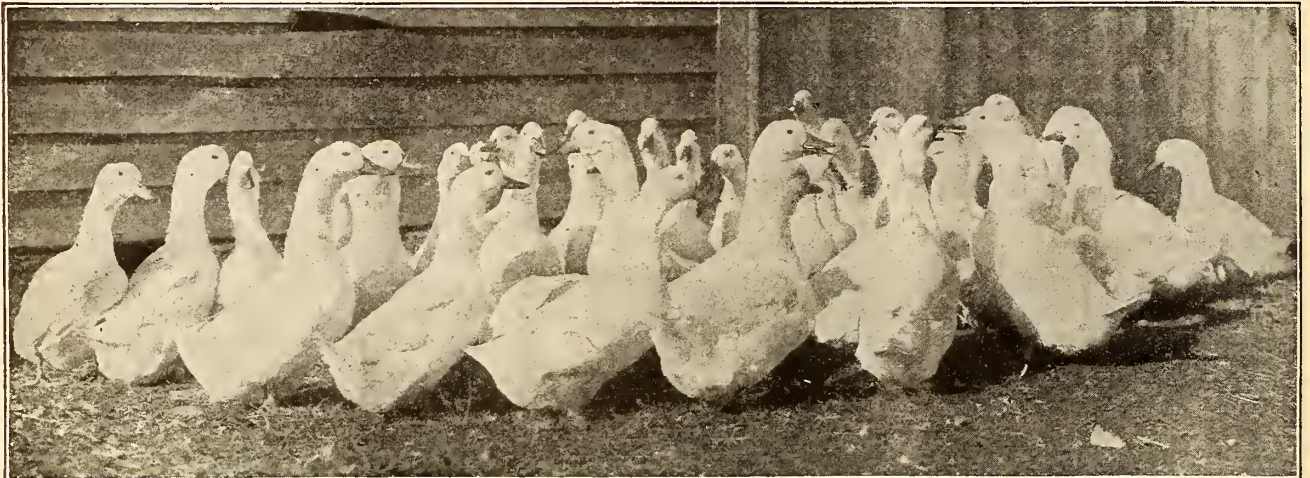

Many an amateur has early learned the fact that hatching a large flock of chickens and raising them to maturity in good health and vigor was two entirely different things. The larger the number of chickens that has been hatched the more vigilance there will be necessary to raise them properly. In small flocks on free range it is a comparatively simple matter to grow fine, large birds, but when several hundred are hatched out and raised on one place, conditions must be pretty near what they ought to be and the care and feeding closely attended to by some one who is faithful and thorough or a

in the spring, and he forgets that they are just as much in need of fresh air now as they were in need of protection from the cold earlier in the season. The early broods have been growing and unless their coops are so constructed as to give them plenty of air on warm nights they should be removed to colony coops that will afford them a comfortable chance to thrive.

Where there is any danger of rats or skunks or other nocturnal vermin making inroads on the flock of youngsters, the coops should be provided with board floors and these floors should be removable, so as to be easily cleaned, for work that is both difficult and disagreeable is pretty sure to be neglected and cleanliness is an important factor in the health of the flock. In this connection the drinking vessels require watching and frequent cleaning, and fresh, pure water kept constantly before the flock.

The majority of soils are deficient in good, sharp grit and as it is one of the most essential factors in the health of the chicks, it is a wise plan to provide good grit for them, where it is in easy access of the flock all the time. Most of the digestive troubles in growing stock or old birds is caused by a lack of grit that is grit. Small round cornered stones are not grit. Grit for poultry must be sharp and of a nature that it will stay sharp until used up or voided by the fowls. Sharp sand may do all right for the newly hatched chick, but when several weeks old it is practically useless to it, and if the chick is not provided with something in the shape of grit that it can grind up its food with, it will soon stop making the growth that it should make and curtail its owner's profits.

The poultry keeper who aims to get the most possible out of

A flock of Pekin Ducks raised on the Golden West Duck Ranch, Joliet, Ill. Two of the drakes in this flock weighed 24 pounds and were sold to a party in Canada for \$20.

large percentage of the birds raised will never make a very large profit for their owner in winter eggs or win many prizes at the next winter's shows.

Good breeding is an important factor in the production of quality in both exhibition excellence and the ability for heavy egg production, but not more so than the care and feeding necessary to bring them to maturity, for without proper rearing the best bred stock degenerates into scrubby, unprofitable poultry when considered from any standpoint. The work of the summer months in the care of the growing stock has a great deal to do with deciding whether the year's work will be a success or a failure.

Not a few invite failure right from the start with the little chicks by placing too many in a brooder or giving too many to a hen to care for. Fifteen chickens is enough for one hen to properly care for and eighteen ought never to be exceeded, even in warm, settled weather, if the best results are sought for, and no brooder is made big enough to properly raise more than fifty chickens for the simple reason that fifty chickens is as many as can be kept in one flock with any reasonable hope of raising them the way they ought to be, to be a credit to their keeper.

This month we come to a different set of conditions than what we had to reckon with last month and during April. Prior to this time the poultry keeper has aimed to protect the youngsters from the cold and prevent them getting chilled on cold nights or on the many cold days of late spring, but now the nights are warm and nice and the temptation comes to many to relax their watchfulness, and in many cases the amateur finds the chicks not growing so well as they did earlier

the food consumed by his fowls is careful to always provide plenty of good, sharp grit for them.

The quality of the food fed to young chickens plays an important part in the steady growth and health and vigor of the flock. Poor food is a poor investment for feeding to any fowls, old or young, but the disastrous effects are more apparent and far-reaching with the young, growing birds than with those which have already reached maturity. The temptation to buy spoiled and musty grain because it is cheap is often strong to the amateur, especially when grain is pretty well up in price, but the seeming cheapness of the spoiled article is a delusion and a snare and sooner or later the amateur will learn it by bitter experience if he is not willing to take the experience of those who have warned him. One year in my early experience I lost something like one hundred of my best chicks by accepting some wheat which I was told was good enough for chickens. Now I buy the best grain I can find for sale and pay the highest market price for it, satisfied that it is the best investment I can make in grain for my fowls.

The younger chicks need the early feeds, such as oat meal, hard boiled eggs, chopped fine, and bread or cracker crumbs, moistened in sweet milk, but the older ones can be fed cracked or whole wheat and cracked corn and a corn bread with beef scraps and bran and fed dry.

The hopper system of feeding dry cracked grains and beef scraps is a great saving in labor and will give the best results in the majority of cases where the young stock is allowed free range. With this system the food is constantly within reach of the chicks in a perfectly dry state and they are

not at all inclined to overeat, as is the case with hand feeding when too much is given at one time. While free range is not always a possibility, it is without any question the best way to raise poultry. In limited quarters great care is necessary not to try to keep too many and unusual care and attention to their wants is the only way they can be properly grown. Chicks on free range are pretty sure to mature into large,

Single Comb White Orpington hen owned by F. C. Bailey, of Coldwater, Mich. This hen was a winner at the St. Louis World's Fair. See Mr. Bailey's ad elsewhere in this paper and get his catalog.

strong, vigorous birds if they have any reasonable kind of care and the new beginner is always safest in allowing his chicks all the range possible.

The June chick on the warm, bright days that are so common in this month will be looking for a shady spot to dig and dust in in the cool, moist earth, and if nature has not provided plenty of shade for them, some artificial shade should be provided for them in a convenient place, where they will make use of it in the warmest part of the day.

As the warm days of summer come more care is necessary to prevent the lice and mites getting a foothold in the coops and checking the growth of the chicks. Each time the coops are cleaned they should receive a good sprinkling with kerosene oil to prevent red mites getting a start, for if once allowed to get a foothold they will soon make a sorry looking sight of the chickens, and their owner will have a very dis-

R. C. RHODE ISLAND RED.
A noted prize winner. Owned by F. W. Young & Son, Birmingham, Mich.

agreeable job on his hands getting rid of them. Where setting hens are used and the chickens given to natural mothers, the lice problem is easily solved by thoroughly dusting the setting hens and starting the chickens out in life free from the pests. If this has not been done, some good lice paint can be used on the coop floors or the mother hen can be frequently dusted with a good insect powder the last thing at

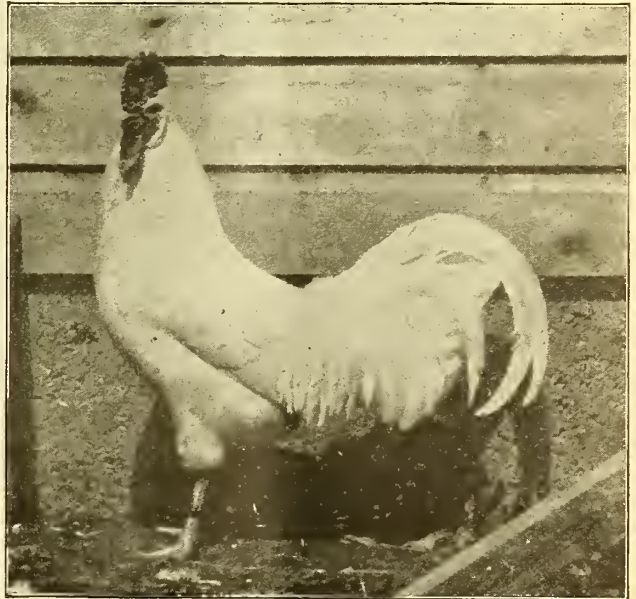

night as they are being closed up. Where chicks are raised with hen mothers care should be taken to see that the mother hen is free from scaly leg or if she has the trouble her legs should be moistened with kerosene oil two or three times, a week apart, so as to stop the trouble and prevent her giving it to her brood.

Chickens from well bred fowls, given proper care and fed with good judgment, are pretty sure to grow into birds that will add both pleasure and profit to the poultry keeper and make him feel that life is worth living. But poor stock and poorly raised chicks are an eyesore to their owner and often the cause of the beginner giving up poultry culture, and in many cases saying there is nothing in the business, while it is principally the fault of the care in raising the fowls that has made the profits disappear. Good breeding and good rearing are the prominent factors in the profits of all successful poultry keepers.

CHICKEN CHOLERA.

Symptoms of this Disease as Described by Dr. D. E. Salmon—Post-Mortem Appearance—Cause and Treatment—A Remedy that Proved Very Effective.

We have been asked by several of our subscribers to give the cause of cholera in fowls and a cure for same. One of the most thorough articles that we have ever read on this subject is that written by Dr. D. E. Salmon in his book, "The

S. C. WHITE LEGHORN.

Eight and three-quarter pound cock-bird, bred and owned by John C. Plane, Belvidere, Ill. Pronounced by several judges as one of the best birds they had ever seen.

Diseases of Poultry," published by the Howard Publishing Co., Washington, D. C., and we will therefore quote from same.

In writing of this disease Dr. Salmon says: "This is a contagious disease of birds caused by bacteria, and transmissible by cohabitation and inoculation. It is characterized by high fever, great weakness and prostration, and usually terminates in the death of the bird.

"Fowl cholera attacks all varieties of domesticated poultry—chickens, ducks, geese, pigeons, turkeys—and also cage birds, such as parrots and canaries. It also affects some species of wild birds.

"The infection generally occurs by taking food or drink contaminated with the excrement of sick birds. It is also possible for birds to be infected through wounds of the skin, or by inhalation of the germs in the form of dust suspended in the air. They often take the germs into their bodies by consuming particles of flesh or blood from the carcasses of affected birds that have died or have been killed.

"This disease is generally introduced upon a farm, or in a locality, with new birds purchased for improving the flocks, or with eggs for hatching. When it exists in a district it may be disseminated by wild animals or wild birds.

"Fowl cholera is communicable by inoculation to rabbits and mice. Guinea pigs are not very susceptible; the young

animals may die but the adult ones usually have nothing more than abscess at the point of inoculation.

SYMPTOMS.

"This disease as it occurs in Europe is more rapid in its course and differs somewhat in its symptoms from outbreaks which the author has observed in the United States. The incubation in Europe is placed at eight to sixteen hours. In the case of forty fowls inoculated by the author the average period of incubation was eight days, and it varied from four to twenty days. The virus evidently varies in its activity in this country. The duration of the disease, also, varies. With the forty cases mentioned above it averaged three days.

"The sick birds generally stop eating or the appetite is lessened, though occasionally they continue to eat almost to the time of death. The earliest indication of the disease is a yellow coloration of the urates, or that part of the excrement which is excreted by the kidneys. This is in health a pure white, though it is frequently tinted with yellow, as the result of other disorders than cholera. While, therefore, this yellowish color of the urates is not an absolute certain proof of

ently paralyzed. There is in most cases intense thirst. If the birds are aroused and caused to walk there is at first an abundant discharge of excrement, followed at short intervals by scanty evacuations.

"With the beginning of diarrhœa the body temperature rises to 109 degrees or 110 degrees F., which is 2 degrees to 4 degrees above the normal. The comb loses its bright hue and becomes pale and bloodless. In Europe the comb is described as dark blue, purple or black, and some writers in the United States have referred to it in the same terms, but the author has never observed a dark comb in the cases he has seen.

"Diseased birds rapidly lose in weight; they are so weak that a slight touch causes them to fall over, and they walk with great difficulty. Death may occur without a struggle or there may be convulsive movements and cries.

"This disease may rapidly run through a flock, destroying the greater part of the birds in a week, or it may assume a more chronic form, extend slowly and remain upon the premises for several weeks or months.

cholera, it is a valuable indication when the disease has appeared in a flock and an effort is being made to check its course by isolating birds as soon as possible after infection.

"In a few cases the first symptoms is a diarrhœa in which the excrement is passed in large quantities and consists almost entirely of white urates mixed with colorless mucus. Generally the diarrhœa is a prominent symptom. The excrement is voided frequently and consists largely of urates suspended in a thin, transparent, sometimes frothy, mucus. The urates have a deep yellow color, which in the latter stage of the disease may change to greenish or even a deep green.

"Very soon after these first symptoms appear the bird separates itself from the flock, it no longer stands erect, the feathers are roughened or stand on end, the wings droop, the head is drawn down towards the body and the general outline of the bird becomes spherical or ball-shaped. At this period there is great weakness, the affected bird becomes drowsy and may sink into a deep sleep, which lasts during the last day or two of its life, and from which it is almost impossible to arouse it.

"The crop is nearly always distended with food and appar-

POST-MORTEM APPEARANCES.

"The comb is pale and bloodless, but neither dark nor dark blue, as it has often been described, particularly in Europe. The superficial blood vessels generally contain but little blood, and there are in most cases soiled feathers about the annus, to which the excrement may adhere in considerable quantity.

"The liver in nearly every case is enormously enlarged, softened, with blood vessels very apparent, often of a very dark or dark-green color. The gall bladder is distended with thick, dark bile.

"The crop is generally distended with food, though no special lesions have been noticed here. The stomach, viewed externally, often presents a number of circular discolorations about one-tenth of an inch in diameter, which on inspection are found to be small clots of extravasated blood. The small intestines are congested.

"The rectum and cloaca generally present deep red lines upon their mucus membrane, evidently the first stage of inflammation, which results, in chronic cases, in thickening of the walls, especially of the rectum, the desquamation of the mucus membrane and the formation of large ulcerous surfaces.

"The mesentery is generally congested, often greatly thickened and rendered opaque by inflammation. The ureters are distended with yellow urates; the kidneys seem engorged, and on sections accumulations of the tenacious, yellow urates are frequently seen. The spleen is generally normal in size and appearance, though frequently enlarged and softened.

"The pericardium is sometimes distended with effusion, in which case there is noticeable hyperæmia of the surface of the heart. The lungs are often, though not generally, engorged with dark blood; they are seldom, if ever, hepatized.

CAUSATION.

"The cause of fowl cholera is a minute germ which under the microscope presents either a circular or oval outline. It is one of the bacteria and has been called by some a micrococcus, and by others a bacillus. It is about one fifty-thousandth of an inch broad and two or three times as long. It grows best at from 85 degrees to 105 degrees F. It has no power of movement, does not form spores and is easily destroyed by drying, by the ordinary disinfectants, and by a temperature of 132 degrees F. for 15 minutes.

"In the experiments of the author it was found that the

quarantine newly purchased birds for two weeks before they are mixed with his flock.

"Should the disease appear in spite of precautions isolate and disinfect. The isolation need not require a wide separation of the birds. Ten feet is sufficient distance to prevent the communication of this contagion, if it is not carried in some way from pen to pen by the attendant or by animals. It does not spread to any appreciable distance through the atmosphere."

A few years ago Dr. Truman, of Chicago, who at that time was an enthusiastic fancier, had the misfortune to have his flock attacked with chicken cholera. After experimenting with various kinds of drugs and disinfectants he tried tannic acid and powdered charcoal with wonderful success, curing every bird that was not too far gone to eat. To every 10 quarts of mash feed he added two ounces of tannic acid and one pound of powdered charcoal; gave the fowls all the fresh water they would drink and as much free range as his limited runs would permit. He gave the fowls nothing else to eat until improvement was noticed. As soon as the diarrhœa was checked he discontinued the tannic acid, but continued the charcoal for some time. In addition to the medical treatment

A flock of Poultry and Poultry House on Pleasant View Poultry Farm. J. A. Bickerdike, Proprietor, Millersville, Ill.

virus was destroyed by salicylic acid, 1 per cent; benzoic acid, 1 per cent; carbolic acid, 1 per cent; sulphuric acid, ½ per cent.

TREATMENT.

"All forms of medical treatment for cholera have been unsatisfactory when tested sufficiently to prove their exact effects. Many preparations have been recommended, but their sanguine discoverers had not been careful to ascertain that they really were treating cholera or they had tried them on so few birds that their results were untrustworthy.

"The drugs most frequently used are sulphur, copperas, capsicum, alum and resin, given either alone or mixed together. The effect of these remedies is either stimulating or astringent or both, according to the combination that is used. Some recommend a solution made by diluting one dram of carbolic or hydrochloric acid with one quart of water. This given to adult birds in the dose of a dessertspoonful.

"The proper manner of combating cholera is to carry out strict sanitary precautions. Remember that it is a contagious disease and that it depends upon germs which are in some way brought upon the premises from some other place where the disease exists. The contagion may be carried in various ways. Sometimes it is brought with newly purchased birds; sometimes it comes with eggs; sometimes it is carried by wild birds, and sometimes it is transported by animals. The poultryman must guard against the introduction of contagion into his flock by all means at his command. He must isolate and

he kept his houses and runs thoroughly disinfected with a 5-per cent solution of carbolic acid. In the short period of two weeks he had thoroughly eradicated the disease from his premises. This is a simple and cheap remedy and we believe our readers will find it very effective.

There is a greater danger in carelessness than disease.

Nothing will more quickly make scrubs out of good stock than scrub treatment.

We would rather own a healthy and good scrub fowl than a poorly bred thoroughbred.

It is a "penny wise and pound foolish" practice to start a poultry farm with scrub stock.

It is only the shiftless poultryman that puts off until tomorrow what should be done today.

For limber neck, a teaspoonful of sugar, dissolved in a wine-glass of water, a lot of which is squirted down the throat of the afflicted fowl, is recommended.

It is said by those who tried it, that gin and molasses, equal parts, put in a bottle, and well shaken before using, is an excellent tonic and preventive of colds and roup.

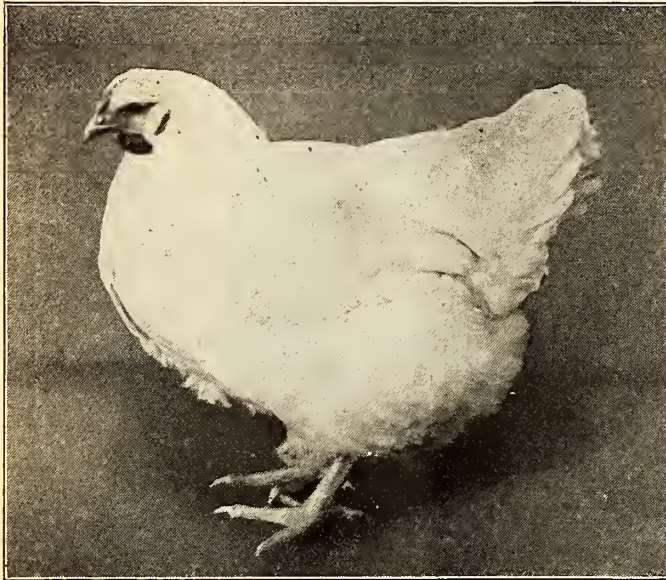

PRIZE ARTICLE DEPARTMENT

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communication about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. All articles must be written on one side of the paper only. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

The first prize in the contest this month has been awarded E. B. McBride, Edgewater, Colo., and the second prize to Fred Kazmeier, Kieh, Wis.

TURKEY RAISING IN COLORADO.

Colorado is destined to become the home of the turkey. The dry climate and wide range and abundance of insect food, offer conditions many times more congenial to the tender little poults than the dews and damps of eastern states. Chilly mornings and wet grass kill more little turks than all other causes put together. It is true that for the first few weeks the diet must be right, or death will follow, but this is simply a matter of feeding and can be easily controlled by the attendant. It is not so long since the turkey was brought in from the wilds

A St. Louis World's Fair Winner. White Wyandotte pullet. Bred and owned by Ira C. Keller, Prospect, Ohio.

and made one of our domestic fowls. The time has not been sufficient to have completely adjusted him to the new environment. It takes years and years of evolution and careful selection to develop the desirable characteristics in a wild creature. In the case of the turkey the herb and insect diet have been changed to a rich concentrated ration of grains. The weakest point, then, of these hardy, robust fowls is in their digestive organs. The sturdy "Tom" that roosts on the comb of the barn when the mercury is playing near zero, quickly succumbs to an attack of indigestion. This difficulty is perhaps more easily controlled in Colorado than in most eastern states, for insects of various kinds are abundant, grasshoppers being especially plentiful, so that the little turkey, from the time it is able to follow its mother, can satisfy its appetite with the most natural foods. This being the case, it is very evident that with free range large numbers of turkeys can be raised with but little expense. A little care in starting them right and hunting them up in the evenings till old enough to roost, is about all the attention required till full grown. From their natural hardiness they require little or no protection from the weather. The strong limb of a tree, well up from the ground, furnishes a safe and comfortable roost. In localities where there is much snow an open shed facing the south would be necessary at least for a feeding ground and standing room in daytime. Roosts might be added if the weather were very

rough. Another strong point in favor of profitable turkey culture in Colorado is our open winter. With little snow and lots of sunshine, the hens are induced to lay early in March, or even February. The market stock can then be hatched early and matured for the Thanksgiving trade, thus cutting the expense of feed considerably, as well as the care of a large flock in cold weather.

Of late the demand for turkeys has been so much above the supply that they have been a real luxury and prices have gone skyward. In the fall and winter of 1905 buyers were offering 18 and 20 cents for first class live stock, but even at these paying figures enough could not be furnished to supply the demand. This great demand has induced many ranchers to add turkeys to their poultry department. I will here give our experience along this line. In the fall of 1904 we secured three mature bronze hens, and a vigorous young bronze Tom—not a kin—to mate with them. With free range all winter, a tree roost at night, a light ration of mixed grains and what roots and green food they would eat, this little flock entered the laying season in the pink of condition. As a natural result the eggs showed almost perfect fertility, and very strong vitality, developing into sturdy little poults. At the end of the season we had fifty mature birds for our trouble—a record considered good for an inexperienced hand. This season we increased the number of breeders to six, instead of three, and with the experience of last season expect still better results.

But has the turkey no other enemy than wet grass? Yes; many of them, chief of which are vermin, bird dogs, thieves and mouldy feed. Small vermin are to be feared only while the poults are young. As soon as they can take a high roost they leave many dangers behind, but the coyote has been known to wait near the roost in the morning till they left the trees, thus destroying a whole flock. But the trapper and the sportsman's hounds are fast driving this enemy back to the wilds. The bird dog, however, works in daytime, killing anything from a poult to a mature Tom. The country should be protected the same as the city against unmuzzled dogs. As to mouldy feed, nothing is surer death to a turkey old or young. I have seen whole flocks carried off by this cause. They would become listless, droop about, refuse all feed, but drink quantities of water. All the while they would seem to be suffering from a severe attack of diarrhoea, and after about a week of these symptoms death came, no matter how many remedies were used. The owner would say: "My turkeys have the cholera," or "some enemy is poisoning them," and all the while he would be feeding mouldy corn. At last a remedy has been discovered, which, if used in time, is a sure cure for this trouble. Place the sick fowls in individual coops, where they can be easily cared for, and where the healthy ones cannot beat their lives out. Give each one about two tablespoonfuls of castor oil, repeating the dose the next day. This soothes and heals the irritated digestive organs and gently purges out the poison. Keep pure water and sweet milk before them and feed easily-digested food, like bread soaked in milk; also keep grit and cracked charcoal before them. In about a week's time they may be let out, but should be kept on a light ration for some time.

Edgewater, Colo.

E. B. McBRIDE.

DUCK RAISING ON THE FARM.

On every farm there is to be found a flock of chickens, on a large per cent of farms may be found turkeys, but there is only a small per cent where ducks are to be found. The farmer's wife likes to have pillows or billowy feather beds, so she will keep geese until they pick the baby's eyes out and terrorize the neighbors' children; she then disposes of the quarrelsome, noisy things.

Many farmers' wives have found a fair profit in a small flock of hens without incubators and brooders. There is a fairer profit at less expense in a small flock of ducks, no expensive buildings being necessary, for I am assuming that the ducks may have the range of the farm. My chicks have had the freedom of my vegetable garden, yet, on the whole, as a destroyer of insects they have more than compensated for the damage they have done. I generally plant enough that they may destroy some.

My first duck house was an old shed, which could not be used for anything else, but the ducks thrived well. There were no lice to contend with, as with chickens; only on the young ones when hatched under hens. Grease their heads when taken from the nest and again in two days and all danger of lice is past.

I find it easier and safer to raise ducklings until some weeks old in small pens. A pen 12x12 will accommodate fifty ducklings four weeks if sand, water and green food are supplied. They will not hop over a foot high pen. After this if you wish they can take care of themselves. I would advise feeding at night and shutting in boxes, away from rats or other ani-

mals. Have openings in the ends of the boxes and for greater safety tack over them screen wire. Rats are very fond of young ducks. I put shed roofs on these boxes to shed water, so they may be set out in the orchard or anywhere you desire. The openings give the ducklings plenty of air. They smother more quickly than chickens. If you want to yard the ducklings you can do so cheaply as an 18-inch fence board will keep them in when grown. While in confinement your waste vegetables will go a long way towards feeding them; some meat scrap and corn meal is necessary for rapid growth. As fine ducklings as I ever raised were not fed after they were four weeks of age and were given their liberty at that time. The flock saved my garden from destruction from grasshoppers.

My neighbors all lost theirs. The only damage done by the ducks that year was to destroy a small bed of onions. My onions have not been meddled with since.

To avoid having horse troughs fouled we keep a low, broad trough made of galvanized iron in the small enclosure, where my breeding stock is every morning confined until after 9 o'clock, that we may secure all their eggs. This little pen they know as home and they make frequent excursions to the trough, leaving the horse troughs, which are higher and less convenient, unmolested.

If you desire feathers, begin plucking in August. You can pluck twice while the ducks are alive, fatten them, and take the third crop of feathers when you dress them for market or for the table.

FRED KAZMEIER.

Kiel, Wis.

STUDY THE BUSINESS.

The Man Who Would Make a Success of the Poultry Business Must Make a Constant Study of it—Pick out the Best Ideas and put them in Practical Use.

How few poultry keepers do we find who really know the business! Most of us think we know, but when we come right down to hard facts there are very few who know the poultry business thoroughly. It is the skilled men to-day in all departments of life who are making the most money; and in poultrydom also the men who are best informed and the most experienced along all the practical lines will make the greatest success. The only way to be thoroughly "up" in the business is to be constantly studying it. In other trades and professions one must study a good deal before becoming proficient; but somehow there is an idea prevalent that it doesn't take much brains to raise chickens, and so people do not study the subject much. This is a totally wrong idea, and as proof of it there are thousands of people who fail every year who have

BLACK ORPINGTON HEN.
Bred and Owned by Willow Brook Farm,
Berlin, Conn.

gone into the business with very little back of them but enthusiasm and practically no knowledge of the subject. The beginner must study all lines of the business, both theoretically and in practical experience; and all poultrymen, both old and new, must continue to study as long as in the business in order to be up-to-date and in touch with the latest helps to success. The first thing to study is the literature on the subject—the

books and periodicals. One should have several of these and study them carefully. Pick out the best ideas. Do not think that because a thing is in print it must be true; there are some ideas printed that are not worth the paper on which they are put, while other suggestions are very valuable. Use good judgment and common sense in picking out the methods you intend to employ, especially noting the methods of experienced and successful breeders. Mark these best ideas in your

BUFF ORPINGTON COCKEREL.
Bred and Owned by Willow Brook Farm,
Berlin, Conn.

books or papers and save them for future reference, or make a scrap-book of them.

The second method of study is the study of the fowls themselves. This is as important, if not more important, than the other method; but both methods must go together. One might study the literature for a year and still not be able to make a success with poultry; the ideas learned in reading must be practical and tested. And on the other hand, if one studies his fowls only he misses a good many valuable ideas and methods used by others, which he might learn if he had the right books and papers. In studying the fowls it is a good idea to keep accurate records of everything—of food consumed, eggs laid, percentages of eggs hatched, percentages of chicks raised, time spent in various ways, etc., etc. This is a fine way to find out where the leaks are and where the greatest profit lies. Trap nests are very valuable in many ways, but one of the most important uses of them, which is not often mentioned, is that they enable one to know his birds and study them individually. For a beginner it is an excellent idea to have a pen of only a few fowls which he can be with a great deal in order to watch and study them. Study their individual traits, watch them when they eat and when they are on the nest, see how much they exercise and otherwise learn all that can be learned. In this way one can learn a whole lot about "henology" that he cannot learn elsewhere and that will be very valuable to him later.

There are many other ways of studying poultry, especially in the fancy line, which one will learn when he gets started. The way in which one goes at it doesn't make as much difference as it does that he should use plenty of brains and common sense and keep studying. No one ever failed because of knowing too much, while the one who knows the most, both from reading and from experience, will probably be the one who gets the best results.

H. M. BORTHWICK.

Boulder, Colo.

We fear this getting the Brown Leghorns down to bantam size is going to cripple the egg production.

C. P. Reynolds says vigilance wins a thousand successes for the poultryman where "luck" captures one.

Women, as a rule, are more successful with poultry, as they are more mindful of the details of the work.

The American idea in a breed is hardiness and utility, and any fancier who ignores those qualities is certainly un-American.

American Poultry Journal

Issued the first of each month.

GUARANTEED SUBSCRIBERS.

With each subscriber to our publication we positively guarantee, while his subscription lasts, that no advertisement is allowed in our columns unless we believe that any subscriber can safely do business with the advertiser, and we agree to make good any loss which any such subscriber may sustain by trusting any such advertiser who may prove to be a deliberate swindler; but we do not undertake to adjust trifling differences between subscribers and responsible advertisers. To take advantage of this guarantee, written complaint must be made to the publisher within two weeks from the date of any unsatisfactory transaction, with proofs of the swindle and loss, and within two months from the date when the advertisement appeared, and the subscriber must prove that in writing to the advertiser he said, "I saw your advertisement in the American Poultry Journal."

The Specialty Club.

The specialty clubs are doing a great work. There is probably nothing in the country that is doing more for the advancement of the chicken business than the various specialty clubs. They not only advance the interests of the special variety of fowls they represent but stimulate the business as a whole. Every breeder of fowls should be a member of a specialty club, and work with his brother fanciers for the advancement of his chosen variety. Now is the time to put your shoulder to the wheel and help push your variety to the front and no way can you do it more effectively than by joining the specialty club devoted to your variety. If you do not know the address of the secretary of the club you wish to join, send your application to AMERICAN POULTRY JOURNAL and we will take pleasure in forwarding same to the proper person.

A Civil Service Poultryman.

On the 23d of May the United States Civil Service Commission held examinations all over the country for the purpose of selecting an assistant poultryman for the Bureau of Animal Industry of the Department of Agriculture. In applying for examination the applicant had to submit a thesis on some subject involving personal research along the line of poultry feeding and management. The applicant had to make affidavit that this was a piece of his own and it figured in on the sum total of the rigid examination. The appointee to the specific vacancy mentioned above will be assigned to work consisting principally of conducting correspondence and investigations of the Bureau of Animal Industry concerning the feeding, breeding and management of poultry under the direction of the animal husbandman. Necessary traveling expenses incurred in the work will be allowed. The salary for the position is \$1,200 per annum. The examination was open to all citizens of the United States who complied with the requirements. Examination consisted of a knowledge of the breeds, feeding and management; turkeys, ducks and geese, breeding, feeding and management; the thesis and training and experience.

As Harker Sees It.

Editor Charles R. Harker, of the San Jose Fanciers' Monthly, devotes a considerable amount of space in his May issue to a history of earthquakes, hoping to stem the reaction that has set in reducing the numbers of Easterners headed for the Pacific coast. All poultrymen sympathize with the natives of the stricken country and believe that another such shake will be many years coming. There is no doubt that many will cease preparations to move to the Golden State owing to the disaster, but others who summon their common sense will not be deterred in their plans. Editor Harker rather dramatically describes the quake as it shook his home, "The Magnolias." His little story shows him to have lately been in close association with an encyclopedia, for he gives us a very good history of quakes and their effects on commerce and trade in principal instances. Between the horrible storms, cyclones and tornadoes of the East, as Brother Harker tells us, and the quakes of recent date on the Pacific, there is little ground to be chosen, and we gather from his remarks that we had best be about our business and be kind, gentle, affectionate, honest and mindful.

Incorporation Desired.

The trend of opinion among A. P. A. members is that the organization should be incorporated. Lately the flagrant violations of the copyright seem to demand incorporation that prosecution of the offenders might be successfully accomplished. Three editors acknowledge that they have used more of the Standard than copyrights allow, and the officers and members of the society will in all probability authorize incorporation at the Auburn meeting.

Close of Australian Contest.

Here is a comparison of the four Australian laying contests:

	1902-3.	1903-4.	1904-5.	1905-6.
Number of pens.	38	70	100	100
Winning pens' total	1,113	1,308	1,224	1,411
Lowest pens' total	459	666	532	635
Highest monthly total	137	160	154	168

Remember that each pen contains only six hens. This is a government affair held annually at the Hawksbury Agricultural College and has done more to improve layers in that country than all else. The standing of the first twelve pens follows:

	Total eggs.
1. Luck, S. C. White Leghorns	1,411
2. Howell, S. L. Wyandottes	1,303
3. Cox, Imperials	1,251
4. Stewart, S. C. White Leghorns	1,247
5. Peters, Golden Wyandottes	1,222
6. Johnson Bros., S. C. White Leghorns	1,205
7. Mrs. Every, S. C. White Leghorns	1,205
8. Kelly, Black Orpingtons	1,188
9. Woodland, Black Hamburgs	1,185
10. Reliable P. Farm, R. C. B. Leghorns	1,183
11. Wade, S. L. Wyandottes	1,180
12. Laraghy, S. L. Wyandottes	1,176

When the last contest opened April 1, 1905, there was an "overflow" competition to allow all entries to compete. Here is the record of the overflow:

	Total eggs.
1. Loughman, Black Orpingtons	1,461
2. Fleming, S. C. White Leghorns	1,443
3. Douglas, Minorcas	1,425
4. Creaser, Black Orpingtons	1,404
5. Littlewood, S. C. W. Leghorns	1,380
6. Gamble, Black Orpingtons	1,368
7. Darragh, S. C. White Leghorns	1,349
8. Jones, Black Orpingtons	1,340
9. Albone, S. L. Wyandottes	1,332
10. Woods, S. C. B. Leghorns	1,316
11. Winton, Langshans	1,311
12. Morrin, Black Hamburgs	1,301

We who shout about the American 200-egg hens can profitably take pencils and figure out how many eggs each hen laid in the first pen in the overflow competition. That's a good record.

A Good Argument.

Edwin B. Miller, in a well-written article in the St. Louis Rural World, tells why Missourians should work for a thousand-dollar appropriation for the State Poultry Association. Among the best of his points are these:

Total value of Missouri's poultry product, \$31,642,762.

Only two-fifths of the product is sent to market!

This means that the real value of Missouri poultry products is annually about \$79,000,000.

After all this, what is the state doing for the hen?

The hen is doing for the state in every egg laid.

The Missouri Board of Agriculture gives the poultry association \$100 annually!

Why not a better poultry department at the University of Missouri?

The horticulturists receive \$8,000 annually.

Fruit experiment stations get \$34,700; \$23,000 of this for salaries.

Board of Agriculture gets \$44,800.

State fisheries have a \$10,000 appropriation annually.

Geology and mines received \$105,680.

But what has been done for Biddy?

The Missouri fanciers should get after their representatives and name their wants. When so large and wealthy a state cannot and does not aid a worthy industry, it is time to loosen up the quiet and shout some! Get busy, Missourians!

How the American Hen is Attracting the Attention of the Daily Press, Law Makers and the General Advertiser.

It can be positively stated as a fact that poultrymen are familiar with the magnitude of the poultry business. The figures showing the size of this business are in no way a surprise to them; but when the figures and facts regarding the poultry business are submitted to the layman (this is not intended as a pun), he is startled at the magnitude of a business hat is conducted so quietly and unversally all over the country.

One reason for the apparent lack of general information regarding the poultry business lies in the fact that the business is so widely scattered and in the hands of breeders and poultry raisers in every section of the country. Being so widely scattered, it is absolutely impossible of being appropriated or cornered by any man or set of men, as is so universal in other lines of business. The people of this country, however, are gradually coming to realize the enormous figures that mark the size and development of the poultry business.

A good index of the general spread and knowledge on any subject is when the general newspapers treat upon such subject editorially or in their news columns. The high priced and intelligent cartoonists employed by the daily press are men of quick intelligence. It is a part of their business to portray through their sketches and cartoons events which are of particular importance, and in a well executed drawing will say more in a smaller space with their pencil than could possibly be conveyed through columns of reading matter. These men are quick to grasp an essential point and concentrate the attention of the public upon those things that are most talked about. Their influence is more widespread than one at first imagines, for the cartoon of the present day is not a caricature, but conveys at times the most valuable information, and makes a more lasting impression while being presented, perhaps, in a facetious manner.

A long story could be made of the part that the cartoonist plays in shaping of public sentiment on all questions of the day. The problems of our first and earliest cartoonists of, perhaps, a score or more years ago, were to cover the political field, and many public men have been made and unmade in their career through the influence of the cartoon.

A gradual development has permitted the cartoonists to cover all lines of thought and every enterprise in which the American people are interested, so when that greatest of American cartoonists, McCutcheon, of the Chicago Tribune, turned his attention to the American hen, he wrote a whole book

and made an impression upon hundreds of thousands of readers in his clever work in the April 23 issue of the Tribune, which we reproduce here.

THE HEN IS BEING PROPOSED AS A BETTER NATIONAL EMBLEM THAN THE EAGLE.

—Chicago Tribune.

This cartoon had its inspiration from the speech of Representative Albert F. Dawson, of Iowa, made April 25, 1906, and it is of so much interest to poultry readers that we reproduce it in full. The fact that only two days elapsed between the delivery of this speech and the time that the cartoon appeared, demonstrates very forcibly the close attention that the cartoonist pays to interesting and current events:

THE AMERICAN HEN.

Mr. Dawson—Mr. Chairman, as Secretary Wilson says in his annual report, the American hen is becoming a worthy companion to the cow. As everybody on this floor knows, the raising of poultry is largely incidental to the general business of the farm. And yet the annual production of eggs has reached more than a score of billions, and the poultry products have mounted to a place of more than half a billion dollars in value.

We hear a great deal on this floor about the glory of the American eagle, and artists in the past have painted the beauties of the birds of plumage, but, Mr. Chairman, the American hen is entitled to a modest tribute for her industry, her usefulness and productivity. [Applause.] Why, Mr. Chairman, the American hen can produce—

The Chairman—The time of the gentleman has expired.

Mr. Dawson—May I have ten minutes more?

Mr. Henry, of Connecticut—Mr. Chairman, I yield ten minutes more to the gentleman, that he may finish his remarks.

Mr. Dawson—Mr. Chairman, the American hen can produce wealth equal to the capital stock of all the banks in the New York clearing house in three months and have a week to spare. [Laughter.] In less than sixty days she can equal the total annual production of all the gold mines in the United States. More than that, the United States proudly boasts of its production of pig iron—far greater than any country in the world—and yet the American hen can produce as much wealth in six months as all the iron mines in the country can produce in a year. Give the American hen one year and ten months and she will pay off the interest-bearing debt of the United States. [Applause.]

Mr. Chairman, these figures of the production of wealth from farm crops, large as they are, tell but little more than half the story. When we add to these the crops which I have not enumerated, the wealth production of the farms of the United States

EASY TO USE QUICK ACTION

That's what you want when you have vermin and lice in your poultry pens. Lambert's Death to Lice is the quickest safest louse killer made. Cannot harm anything except the lice. You can sprinkle it on from the can, with very little trouble. If you want to apply to woodwork it can be had in liquid form for spraying. For head lice on chicks Death to Lice Ointment never fails to do the work.

Lambert's Death to Lice

powder has been on the market for nearly 25 years and used by successful poultrymen everywhere. Guaranteed to clean out vermin in poultry pens, on stock, or bugs from vines.

Lewistown, Me. Apr. 19, 05.
Mr. D. J. Lambert, Apponaug, R. I.

GRAND CLEARING SALE!

Six hundred choice 1906 breeders. "America's Big Four" Barred, Buff and White Ply. Rocks and White Wyandottes positively must go at a sacrifice. Utility breeding pens, 10 females and 1 male, for the next sixty days at the unheard of low price of \$15.00. All surplus stock at comparatively low prices. Order early. "Rankin's Royals" won't last long at such bargain prices. Big reduction on eggs for hatching after June 1st. Write your wants and I will do the rest.

H. P. RANKIN - Box 61 - HARTINGTON, NEBRASKA

last year reached the stupendous sum of \$6,415,000,000, a sum nearly two and one-half times as great as all the money in circulation in our country.

In the April 26 issue of the Chicago Post the editorial writer was equally as quick to grasp the importance of Representative Dawson's speech, which he wrote of as follows:

WAY FOR THE HEN!

The hen is coming into its own—not any hen or every hen, but the plain, every-day, industrious, modest American hen.

Representative Albert Foster Dawson—let him have his full name—of Iowa with scant apology shoulders the eagle aside and puts the hen in its place. Beak and talon and high soaring have held national favor all too long; let them now make way for the lay of the barnyard hen.

And how appropriate it is that the hen should become our national bird. The eagle is nothing but an ornament, a poser. The hen does things, and does them well. The

eagle is a consumer; the hen is a producer. The eagle costs money; the hen makes money—plenty of it.

In five minutes' talk any live American can convince the world that the hen is more American than the eagle. Mr. Dawson does it in less than five minutes. He simply loads the hen up with statistics that are fairly staggering and clinches his argument by making the national debt look smaller than a fresh egg.

Make way for the great American hen! By untiring industry and close application to business it has worked its way to the top. We can understand and admire the hen, because we understand industry and application—and profit. Hereafter on the Fourth of July let the hen cackle, for her cackle means cash; and cash means national greatness—as estimated by Congressman Albert Foster Dawson, of Iowa.

The paragrapher of the Chicago Record-Herald also took advantage of this speech, but could not refrain from

cracking a joke regarding the American hen, and in this connection it may be very truthfully said that the American hen has always been and probably always will be the subject of popular jokes, which manner of publicity is more effective than any other advertising that can be discovered:

Some statistician has put forth the declaration that the annual products of all the gold mines in the United States do not equal in value the eggs that are laid by American hens each year. We may add that very few of the hens crow over it, either.—Record-Herald, Chicago.

The Chicago Daily News could not let the outcome pass without adding also its contribution to the general hilarity of the world by giving the hen the following boost:

Great as the hen is, she cannot be made the country's emblem. What patriot would be willing to have the national emblem served for his dinner?

In a more serious vein, one of the greatest manufacturers of soap in the country has considered the hen of sufficient importance to make it a part of its advertising campaign. Every poultryman who has attended a poultry show during the past season will remember the Ivory soap special prizes that have been offered for the whitest and cleanest bird in the show, and while, perhaps, scanty attention has been given by the visitor at poultry shows as to the reason for the giving of these prizes, the advertisement that we reproduce here explains the policy of this concern in distributing its prizes all over the country at our poultry shows, demonstrating that it was a part of its general policy in its advertising campaign.

SIRE OF THE FIRST PRIZE AND CHAMPION MALE AT NEW YORK SHOW 1906

Forty-five Winning Males at New York Shows have been bred by us the last Seventeen years. The last Eight years Thirty-one birds bred by us have sold for \$100.00 or more each, or that price refused.

BRADLEY BROS.' BARRED PLY. ROCKS AGAIN WIN!

AT NEW YORK SHOW, 1906, in a class of nearly 500 Barred Plymouth Rocks, representing all the Largest Breeders,

WE WON

THE PRIZE OF PRIZES OF THE ENTIRE SHOW, First and Sweepstakes on Cockerels;

The Best Record for Cocks and Cockerels; The Best Record for Cockerels alone; More in cash Regular and Special Prizes on Cocks, Cockerels, Hens and Pullets than any competitor;

Spratt's Gold Special for Best Plymouth Rock Cockerel or Pullet, any Color, Spratt's Fed. Special for Champion B. P. Rock Male; and Prize for Best Pullet-mated Exhibition Pen. Every Winner Our Breeding Pure.

For Seventeen Years Birds we Bred and Raised have won more First Prizes at New York's Shows than any other exhibitor has won on ANY STOCK.

Getting Ready for the County Fair.

Wash your fowls with Ivory Soap before you put them on exhibition at the county fair.

With very little labor and at trifling expense, you can make a wonderful improvement in their appearance.

The feathers will fairly glisten, while the combs, legs and toes will look clean enough to eat.

All you need is a tub of lukewarm water, a fairly stiff brush and a cake of Ivory Soap.

At the principal poultry shows, special prizes are given to the owners of fowls which have been washed with Ivory Soap.

It Floats**

What T. E. Orr says about the Prairie State Universal Hover

Read what Mr. Orr, sec.-treas. of the American Poultry Association, says of his experience with Prairie State Universal Hovers. The Universal Hover has completely revolutionized the rearing of chicks. No device offered to the poultry raisers has ever received such an overwhelming endorsement. From the coldest parts of Canada and the Northwest to the warmest parts of the South have come flattering reports of the successful rearing of little chicks, under the most adverse conditions. When used in a portable Colony House chicks can be reared with this brooder out of season, during the hot dry months of June, July and August, when they cannot be reared with hens. There is practically no limit to its adaptability either to cold or heat. With a new Prairie State Brooder, it is now possible to raise every healthy chick. Send for our latest descriptive catalog of these brooders and get further information in regard to our open bottom Prairie State Incubators.

PRAIRIE STATE INCUBATOR CO.
468 Main St. Homer City, Pa.

BEAVER HILL FARM
The Home of Prize Winning Wyandottes
Beaver, Pa., April 25, 1906
Prairie State Incubator Co.

Dear Sirs:—I think I ought to tell you how well we like your new Universal Hovers. We now have five of them attached to our big piano box brooders, shown on this sheet, and it has been a constant surprise to me to see how thoroughly your hovers, with a No. 2 burner, heat these immense brooders. Last night it was cold and windy, ice formed nearly an inch thick. We made a record of all thermometers at 7:30 p. m., 10:30 p. m., and 5:30 a. m. At first test they ranged, as we wanted them, from 85 to 92 degrees, varying with the age of the chicks. The two subsequent tests showed a variation of scarcely a degree in any one of them. Yours truly,

T. E. Orr

Mr. Orr's Five Piano Box Brooders

In all this we can see how the American hen has been benefited, and we can be proud of the fact that the business in which we are interested, which has, we regret to say, been for so many years neglected by the statisticians and very often overlooked by the government in its reports of the great wealth of this country, is now beginning to come into its own and stand where it should in the knowledge of the people in general as one of the greatest sources of wealth and prosperity that our country enjoys.

Work For the West to Do.

Of the forty-five agricultural colleges in America, only twelve are giving some form of poultry instruction. Maine, New Hampshire, Massachusetts, Rhode Island, New York, Connecticut, Delaware, Nebraska, Minnesota, Missouri, Kansas, Oklahoma, Arkansas and California give some poultry instruction. The regular work in poultry instruction is not elaborate enough to make it of great value, but the short courses of these schools, which run from two to twelve weeks, are very helpful, and classes range in number from ten to thirty. New York has the largest amount invested in a poultry department. Both at Geneva and the Cornell University she has good poultry schools. Rhode Island and Maine have about \$2,000 each invested. Canada's big school at Guelph leads any one poultry course in the country. Western states, which grow more fowls and produce more eggs than any of those having schools, are not giving poultry instruction. This shows that each state's fanciers and breeders have a task ahead to be represented. It all lies in the one word: Push!

For a Higher Entry.

Secretary Crawford, of the New York Show, seems to be determined to lead the van and place New York's Madison Square Garden at the head as America's premier show. The poultry talk down East right now is largely of the rumor that entries will be raised to \$3 for single birds at the garden. There were dozens of bantams on show, so say some of the bantam wiseacres, that would not have been there at the last exhibition if the \$3 entry had been in use. The trend of opinion is that a \$3 entry will make the show more of a quality one and easier to handle. Many reported last winter that the garden was too crowded for convenience.

Orpingtons and Athletes.

The popularity of the Orpingtons continues to climb. They have carried England by storm, and this season marks a long stride forward for them in America. One of the most clever pieces of publicity that English fanciers are guilty of appeared in the London *Sketch* recently. This paper contains a half-tone of a flock of Buff Orpingtons which laid the eggs used

on the training table of the far-famed Cambridge, Eng., boat crew. The line under the picture gave the information to the general public that this Buff Orpington flock had been supplying the Cambridge crew with eggs: The fact that eggs figured very prominently in the diet of these knights of the oars has aroused much interest. The crew eats sixty eggs per day and now English Orpingtonists declare, "If you would be strong, eat Orpington eggs."

The Goose Neglected.

The principal fattening station for southern geese is at Richmond, Va., where a firm known as the Neffs fattened about 10,000 the past winter. Their fattening pens hold about 2,000 at a time, and when these are thoroughly ready for the market enough more have been collected to take their places in the pens. Kentucky is one of the great goose states, and breeders claim that she will make a record this year in the production of goose eggs. The above goose fattening firm is handling many thousands of goose eggs, but what they do with them is more than we can say. Geese and waterfowl in general are deserving of more attention by all farmers, and the farm and poultry press is eager to publish anything breeders will furnish on the subject.

The Dorkings.

Mr. George B. Inches, who abides in Massachusetts, has recently imported from the famous Dorking yards of Mr. Herbert Reeves three very fine birds. Down East they say that Mr. Inches is breeding from a very superior line of Dorkings. The Dorking is a fowl that we see far too little of and should be taken up by many who like a fowl because it is meritorious. The Dorking is an ideal farm bird and comes in a variety of colors. The Red, Colored and Grays are the principal ones in America. No one who has given these birds a fair trial has gone back on them, and though all fowls cannot be popular, it should not be the Dorking that is lost to the fancy and utility breeders.

Attend to the water supply regular this month. Give the fowls fresh water at least three times a day during the extremely hot weather.

A Good Old Breed.

From the looks of a few American poultry journals the Sussex fowl will soon be introduced to our shores. The Sussex is not a new fowl—on the contrary, it is extremely old, for one hundred years ago they were quite popular in England and even now are well represented in that country's shows. The Dorking and the Sussex fowls originated from the same parents, it is said by authorities, and their similarities plainly point to this conclusion. They take their name from the county Sussex, where they are well known among farmers. In England a dressed Sussex fowl is a fowl fattened and dressed in a certain way and is not always of the breed from which it takes its name. It is claimed by the breeders of the Sussex that they are harder than the Dorkings and a trifle finer fleshed.

Beginning with the June issue, the *Eastern Poultryman*, published at Kent's Hill, Me., will be consolidated with *Western Poultry Journal*, Cedar Rapids, Iowa.

White Ply. Rocks

By the use of trap nests and a system of pedigree record keeping we have produced a superior strain and are still progressing. Let us prove it to you by sending you some eggs. Seven pens of choice breeders.

Facts and Fancies for the Curious

Louse of the Domestic Fowl—How the Jungle Fowl is Caught—A Peculiar Incident—Ages of Various breeds—Some Noted Cock Fighters—Eggs of Various Fowls Much Alike.

Written for A. P. J. by Rev. C. E. Petersen.

"Monographia Anoplurorum Britannia," is the title, in part, of a work of 262 pages dealing with parasitic insects, and that a great deal of learning is necessary to give a description of a common hen-louse is evident from the following minute particulars:

"GONIOCOTES HOLOGASTER (LOUSE OF THE DOMESTIC FOWL).

"Head sub-orbicular, clypeus broad and rotundate, with a pitchy margin, from which arise on each side a tongue, shaped oblique black fascia, temporal fossa deeply excavated, with a quadrangular black patch in the center, lateral margin sinuated at the base, with two black spots, occiput sub-truncate and black; eyes prominent and black; antenna pale yellow, the second joint very long, subclavate; prothorax small, transverse, anterior margin rotundate and black; metathorax as broad as the head, lateral margin round, posterior produced in the center, and sub-angular, anteriorly, with two broad black fascia; abdomen large, oval, pale yellow white, the first segment large, with a pale ash-colored humeral patch, the remainder small and equal, with transverse sinuated fascia, margined with black; legs long; femora and tibia, with the su-

perior margin black, length one and a half."

This is what we may call a Standard on the Hen-Louse, by Henry Denny, the noted author of the above mentioned work.

HOW THE JUNGLE-FOWL IS CAUGHT IN INDIA BY THE NATIVES.

The Shecarries, or low caste, in India, catch the jungle-fowl by the following method: "Two or three men go together and proceed in this manner: A line thirty or forty yards long is fastened to the ground with wooden pegs at each extremity, and is then elevated by props to the height of about eighteen inches.

"To this prop nooses of horsehair are fastened about two feet apart. When the birds attempt to pass under the line they are caught in the noose by their necks. Sometimes a similar line is fastened to the ground and left lying there with all the nooses spread, and as the birds pass over them they are caught by the legs; these lines are never spread where there is much jungle.

"When the lines are ready the men go to a considerable distance and beat the bushes, thus driving the game toward them."

This method is precisely the same as that used by the savage tribes of the South Sea Islands. It is also put into practice for catching pheasants by poachers in England.

A PECULIAR INCIDENT TOLD BY MOUBRAY IN HIS TREATISE ON POULTRY, 1815.

"Every one has heard the horrible story of Ardesoif of Tottenham, who, about thirty years since, being disappointed by a famous game cock refusing

to fight, was incited by his savage passion to roast the animal alive, whilst entertaining his friends.

"The company, alarmed by the dreadful shrieks of the poor victim, interfered, but were resisted by Ardesoif, who threatened death to any who should oppose him; and in a storm of rage and vindictive delirium, and uttering the most horrid imprecations, he dropped down dead. I had hoped," says our author, "to find this to be a falsehood, but to my sorrowful disappointment, on a late inquiry among the friends of the deceased miscreant, I found the truth of the horrible story but too probable."

THE AVERAGE AGES OF VARIOUS BIRDS.

The doctrines of vegetarianism appear to be slightly shaken by the result of an investigation that an English newspaper has made into the subject of the longevity of birds.

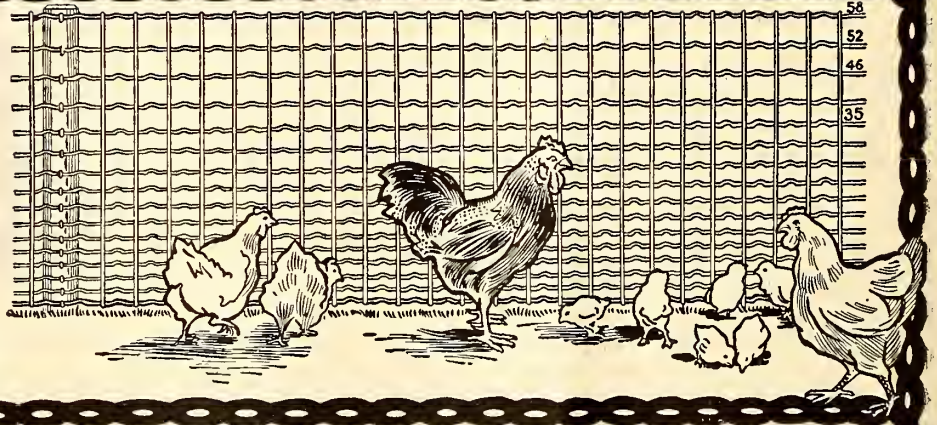

With one exception the meat-feeding birds are the longer lived.

The exception is the swan.

The average ages of some of the best known birds are given in the following table:

	Years.		Years.
Blackbird lives	12	Parrot lives	60
Blackcap	15	Partridge	15
Canary	24	Peacock	24
Crane	24	Pelican	50
Crow	100	Pheasant	15
Eagle	100	Pigeon	20
Fowl, common	10	Raven	100
Goldfinch	15	Robin	12
Goose	50	Skylark	30
Heron	59	Sparrow Hawk	40
Lark	13	Swan	100
Linnet	23	Thrush	10
Nightingale	18	Wren	3

What's this
We're up
Against?

At Last a Perfect Poultry Fence

The "Pittsburgh Perfect" Poultry and Garden Fence is exactly what its name indicates. It is "Perfect" because made of special steel of our own formula; "Perfect" because heavily galvanized, thus preventing rust; "Perfect" because our electric welding process makes stay and strand wires one piece so that mesh cannot spread to let fowl through; "Perfect" because smallest wires in it are heavier than the wires used by most fence manufacturers for a regular stock fence; "Perfect" because it is the only fence that will not unravel if strand or stay wire is cut.

Don't buy flimsy hexagon poultry nettings; they rust out quickly, won't stand up, and are but makeshifts and disappointments at best. It's "the WELD that HELD" that makes a perfect poultry fence. No top or bottom board needed. Heavy top and bottom wires take their place. Nothing can get through—nothing from the small chick to a mad bull.

THE ONLY ABSOLUTELY "PERFECT" POULTRY FENCE ON THE MARKET.

The price is small—the satisfaction is great.

Thousands of dealers handle the "PITTSBURGH PERFECT" FENCES, from the Extra Heavy Fences for stock to the king of all Poultry Fences.

THE "PITTSBURGH PERFECT" POULTRY FENCE. Has Your dealer got it? If not, write us for catalogue.

Pittsburgh Steel Company, Pittsburgh, Pa.

The average age of the boarding-house variety of chicken is still undetermined, though investigations are still going on.

SOME NOTED COCK FIGHTERS.

Polyarchus was noted for his devotion to this cruel sport, and Alian says that public funerals were given to his favorite cocks that fell in battle, and monuments erected on which epitaphs in praise of the birds were placed.

Henry VIII of England built a cock-pit in Whitehall, but later signed a mandate making the sport unlawful.

Charles II is said to have originated the Red Pile Games.

James I, "the Defender of the Faith," so called, history tells us, was entertained by cock fights at least twice a week. His son, Prince Henry, had a stud of his own, there being an entry in his household expenditures to that effect.

It was again forbidden by an act of Parliament during the time of Oliver Cromwell, though judging from the proclamation, not because of cruelty, but because of the gathering together of a crowd of disorderly persons.

Whatever may be said in the matter of cock fighting, having been the chief means of preserving for us a fine breed of fowls it is a sport, if it can be called by such a name lawfully, as sport is never cruel, that today is discountenanced by most all civilized nations as a relic of barbarism.

EGGS OF VARIOUS FOWLS MUCH ALIKE.

The white of an egg is nearly seven-eighths water, the balance being pure albumen.

The yolk is slightly less than one-half water. These figures apply approximately to the eggs of turkeys, hens, geese, ducks and guinea fowls.

To show how nearly alike the eggs of various domestic fowls are in respect to composition, the following figures are appended: Hen eggs, 50 per cent water, 16 per cent protein, 33 per cent fat; duck eggs, 46 per cent water, 17 per cent protein, 36 per cent fat; goose eggs, 44 per cent water, 16 per cent protein, 36 per cent fat; turkey eggs, 48 per cent water, 18 per cent protein, 33 per cent fat. This goes to show that the old saying that an egg contains as much nutriment as a pound of beefsteak is far from correct. It would be nearer fact to estimate a pound of eggs as equal to a pound of lean beefsteak in nourishing power.

CARE OF YOUNG CHICKS.

A Successful Method of Caring for Chicks From the Time They Are Hatched Until Maturity.

The following is my method of caring for young chicks, and has given perfectly satisfactory results: For the first few days young chicks need nothing but quiet and warmth. To accomplish this they are taken into the house as fast as they hatch, except in extremely cold weather, and placed in a basket lined with paper and cloth, and covered with warm cloths. The hens can then be re-set, leaving as many as may be needed to care for the chicks, allowing about twenty chicks to one hen. This also prevents the chicks being trampled in the nest by the hen. Have had no difficulty keeping chicks warm, as the warmth of their bodies helps when a number of them are together.

30 Years of Satisfaction.
BLACK DIAMOND
Ready  **Roofing**

On ten years and still in good condition.

Covered with 15,000 ft. of Black Diamond Roofing.

BLACK DIAMOND is not an experiment. For over 30 years it has been used all over the country with satisfaction. Millions of rolls are being sold every year.

Black Diamond is not sold on a promise of what it will do, but on a record of what it has done.

No other ready roofing can equal its record. It is made of wool felt and pitch, the best waterproofing materials known. Anyone can lay it—no skilled labor required.

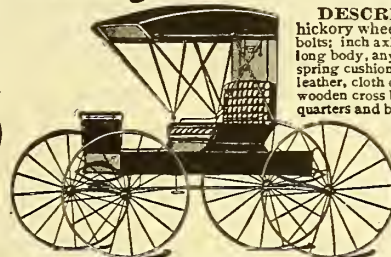

Samples and booklet showing buildings all over the country that are covered with Black Diamond, mailed free on request.

PEARL GRIT

FOR CHICKS

Grit is of vital importance to little chicks. There is nothing in their little crops to grind with when they first enter this world. Unless provided with grit they soon weaken and die. Grit in some form should be given with their earliest food. No. 1 Pearl Grit is especially prepared for little chicks and they eat it readily. It is clean, small, white in color—sharp enough to grind well but not too hard for their delicate organs; furnishes just the right substance to promote rapid, vigorous growth and is just what they require for it nourishes as well as grinds. Try it and see how they grow. The larger sizes of Pearl Grit are splendid for adult fowls and full fledged young birds. It increases egg production—keeps the fowls healthy and prevents "crop-bound" fowls. Poultrymen everywhere use Pearl Grit because it pays. Write for free booklet. Manufactured by The Ohio Marble Co., 209 N. Wayne St., Piqua, Ohio.

Give them fresh air occasionally, and in the warm, dark basket they keep quiet and contented. When the oldest ones are forty-eight, or preferably seventy-two, hours old, they are given a light feed of fine grit and a drink of water. A few hours later they are fed toasted bread crumbs squeezed dry in scalded milk, two or three crumbs apiece being enough for a first feed. They are then placed under the hen and taken to a coop, and are fed three times a day and rather sparingly until two weeks old, the most of their feed being cracked wheat, with bread crumbs for a change, either dry or moistened with scalded milk. Occasionally they have rolled oats if convenient. After one week old they are fed a little meat scrap once a day. They are well supplied with water, grit, charcoal and grass or other green feed, and frequently have scalded milk to drink.

When two weeks old they have whole wheat in the morning; mash at ten, composed of bran, cornmeal and a little meat scrap; at two, milk curd, and at night cracked corn.

After six weeks old they have cracked corn morning and night, mash at noon. This for layers and breeders. Should feed differently for market chicks. Feed on board in front of coop, never on the ground.

Good, rain-proof coops are made from dry goods boxes, with tight floor, slant roof covered with tarred paper and extending over the front. The sides also are covered with paper. A door frame is made to cover the entire front, the lower part with upright bars far enough apart for chicks to pass between, the upper part covered with wire netting. It is hung with leather hinges and has a hook to fasten the other side.

Cover the lower part of door at night with a board, until the hen weans the chickens; then tack netting over the bars and leave the door open through the day for the chickens to go out and in. This allows them plenty of fresh air at night and keeps out rats and other enemies. The floor of coop has two or three runners fastened to the ground and keep the floor dry. The floor is kept covered with dry earth and is cleaned once or twice a week, the large door making it easy to clean. The coops open to the east to get the morning sun, and each one is set under a tree for the protection from the noon-day sun; but they can be turned with their backs to a heavy storm, and with a board across the front they keep dry in the hardest storms.

Have raised chickens by this method without having a single case of illness of any kind and without any losses except a few by accidents.

MARY ANDREWS.

Farina, Ill.

THE OUTING MAGAZINE FOR MAY.

Jack London opens The Outing Magazine for May with the first installment of his serial, "White Fang." Every reader of "The Call of the Wild" will admire this story which is probably the greatest work that has yet come from Mr. London's pen. "White Fang," instead of being a story of the return to the "Wild" or "barbaric" is a story of the civilization of a wolf-dog. The beginning of this story is without a doubt the literary event of the month. The first installment has been so wisely chosen that it is almost a complete story by itself; hence the reader runs no risk in purchasing a copy for May. We are sure that once he has purchased and started "White Fang" he will follow it to its close.

POULTRY FOR PROFIT.

Thoroughbreds Pay Best - Make a Specialty of One Breed.

Poultry for profit from a money point of view must mean the dollars and cents we can derive from our flock of poultry. To begin one should have a flock of not less than 50 hens; 5 males. Less number of males will do, but there is work and plenty of work attached to raising chickens, so it does not pay to get saving in the start with the proper number of males. The chickens are stronger, so much easier raised, for a chicken well hatched is a good beginning. Have you not seen little chicks when taken from the nest so strong and ready to pick and scratch that they seemed strong and truly well hatched, while other broods have been puny, weak chickens, not caring to eat, but peep and stand around in a round ball, ready to die and give up all promise of success or profit. Well, the first ones were from properly mated breeding stock. The hen had only the eggs she could cover nicely, while the others for some reason were not well started the year before. From a flock of 50 hens, if they are well managed, one can very easily raise 200 young chickens and then spare a few settings of eggs, enough to keep the expenses paid and hatch them with hens. Give the hens good, roomy hatching coops to themselves, so there is no lost settings of eggs. Watch them and feed them each day, and you will be repaid by a nest full of downy chicks. If the hen is quiet don't bother her much. Slip the empty shells from under her and let her brood them for 24 hours. Then they may be fed some bread crumbs. Dry oatmeal flakes are good and they seem to grow so fast when fed oatmeal until 3 weeks old. Millet seed and cracked corn are the next feed. Give them water in shallow dishes and feed all their food dry. Sweet milk is good for little chickens. You will be surprised how soon they will be feathering, the feed and care has much to do with growing them into beautiful chickens, ones that will be profitable. Raising poultry for market gives some profit, but to make the most from a small flock the pure bred chickens pay much the best. Eggs can be sold for good prices for setting. The surplus male will bring from \$1 to \$5, owing to quality, so a much smaller flock can be made to pay a greater profit with so much less labor. Make a specialty of one breed, then give all time and money to raising the best of this variety. Subscribe for a few poultry journals; there are so many good ones and without them we would be in poor shape, for we must advertise if we get our share of the great number of orders there is given for eggs and poultry. The poultry business is an enormous business, and the beauty of it is there is room for all. Any one that can raise chickens has a chance at the profits that are constantly passing.

Abilene, Kan. MRS. J. B. JONES.

Scribner's Magazine for May opens with an article by E. S. Curtis on "Vanishing Indian Types," dealing particularly with the tribes of the Southwest. The illustrations are from the remarkable series of photographs which Mr. Curtis has been engaged in securing for six years. In this article are photographs not only of the striking facial types of the Apaches, but views showing the region in which they live, their camps and their industries.

Amatite ROOFING

NO EXTRAS. Everything needed to lay Amatite goes in the package, and you or the hired man or boy can lay it. It's easy.

Amatite is wind, rain and weather proof. To summer heat and winter freezing it is alike impervious. It will give as perfect service on roofs in Panama and Alaska as here. It requires no painting nor coating and is the best ready roofing in EVERY RESPECT for the money.

Pails to catch leaks are never needed under Amatite.

TEST A SAMPLE—our nearest office will send one to you free upon request, and also mail you a copy of our booklet about it.

HANSEN'S WORLD CHAMPION

RHODE ISLAND REDS

Winners of more cash prizes at World's Fair than any other exhibited. Won every first prize at Madison Square Garden, N. Y., 1905. Also three specials for color and shape at Chicago, December, 1904, won every first prize and Silver Cup for best ten Reds in show. Rose and Single Comb competing. Also won all first prizes at Cincinnati, 1903 and 1904; Indianapolis, Louisville, Hamilton and Warsaw. They have this year won prizes at New York and Birmingham, Ala.; also in hands of my customers. Eggs now booked at \$3, \$5 and \$10 per setting.

C. N. HANSEN :: F. R. 1, Warsaw, Ky.
PRESIDENT NATIONAL RHODE ISLAND RED CLUB

REARING CHICKS.

Good Judgment and Common Sense is all That is Necessary - Stop Doctoring and Use the Hatchet.

In rearing chicks, we must use judgment. When one of these little fellows get sick, think for a minute what would we do for a child with the same disease. Well, that same remedy will be good for the chick, but not as large a dose. I have found through experience that the same treatment that is used for people will do for chickens. I have cured the much dreaded white diarrhoea among chicks by giving thirty drops of paregoric in half pint of water and making the chicks drink this until better. When they begin to improve I give it twice daily, morning and night, until well. I feed only dry feed, as it is almost impossible to keep the little ones in good condition on wet feed. My first feed is rolled oats or steel cut oatmeal, and I give them this for about ten days, and then I change to corn bread, made up with soda and buttermilk and a little salt, and find this to be a good food for the chicks. I scatter millet in cut straw for them to work for in order to get the exercise they should have. Do not have your brooders too hot; rather have them a little cold than too hot. I have reared June chicks with a jug of hot water for them to hover around, and had the best of luck.

The main thing to have good, strong, healthy chicks is to have good, strong, healthy birds to breed from. Don't breed from a sick cock or hen and expect to get strong chicks. Do not breed from a chicken that has had disease such as roup, limber neck, cholera and a number of other diseases. When I first started into the poultry business, I doctored and could cure nine cases out of ten of these diseases, but had trouble every year with the same disease (with the exception of cholera and limber neck). Five years ago, I decided to stop doctoring and use the hatchet, and have found that remedy the best yet, although a little hard on the flock the first year's trial; however, it will pay in the long run. We are not doing the people right that buy our eggs and birds, to breed from such diseased fowls. We have paid handsome prices in order to get the best White Plymouth Rocks, and in some of these birds I could tell they were reared from weak stock. Since I have adopted the hatchet to treat all birds that show signs of any disease, I can hatch and rear birds that will grow quickly and have no more trouble with them. I have used the hatchet on some very fine birds, but felt it was my duty to do so. If the poultry breeders will adopt this plan, I assure them they will be pleased with it the next year after starting the plan.

For those that treat their birds, I will give some cures that will cure them of the disease mentioned. For roup and limber neck saturate a turkey feather with turpentine and run it down into their crop and turn the feather around and draw out. Do this twice daily. Also put a drop of turpentine on nostrils.

For cold, give the birds three drops of camphor on sugar and put coal oil up their nostrils.

If you will use the hatchet and keep the houses clean, you will need no doctoring.

C. D. MILLER, Mgr.
Kingston, Ky.

Shows, Associations and Clubs.

The Latest News of the Show Room—Announcements of Special and Regular Meetings of Associations and Specialty Clubs—Secretaries are Requested to Send in the Latest News.

MIDDLETOWN, CONN.

At the annual meeting of the Middlesex County Poultry, Pigeon and Pet Stock Association, held at Middletown, Conn., the following officers were elected for the ensuing year:

President, C. R. Corey; first vice-president, G. G. Whitmore; second vice-president, S. W. Starr; third vice-president, W. A. Pease; fourth vice-president, W. J. Kieft; secretary, A. L. Clark; treasurer, F. H. Smith; auditor, J. L. Fisk. Executive committee, W. H. Shute, C. D. Armstrong, R. L. Lyman, G. D. Hastings, Thomas Peddan and Alex. McArthur.

The association is in an excellent condition for the coming year.

The next show will be given Jan. 8-11, 1907, with R. W. Graves, of Springfield, Mass., and C. W. Bunnell, of New Haven, as judges. It is the intention of the members to make this one of the best poultry exhibitions ever given in Connecticut.

A. L. CLARK, Secretary.

OELWEIN, IOWA.

The Oelwein Poultry Fanciers' Association at their meeting in March elected the following officers for the ensuing year: E. L. Elliott, president; J. E. Lilley, vice-president; A. H. Ford, treasurer; Frank Kirkpatrick, superintendent; F. D. Miner, secretary. The dates for the next show was decided for January 28-31, 1907, with W. S. Russell as judge. Our first annual show was a decided success, both in number and quality of birds shown, and we aim to make our second bigger and better than ever.

F. D. MINER, Secretary.

SIDNEY, OHIO.

The Sidney Poultry and Pet Stock Association will hold their second annual exhibition at Sidney, Ohio, January 8-12, 1907. Chas. E. Cram and J. E. Gault will judge the birds. This is the association that was organized (from green timber) worked up a show of seven hundred entries, all in five weeks. Their first show was a grand success. Look out for Sidney, 1907.

EARL LEE, Secretary.

PHILMONT, N. Y.

The Philmont Poultry, Pigeon and Pet Stock Association has been recently formed, with William Richardson, president; Geo. Cookingham and E. P. Chapman, vice-presidents; G. J. Anderson, secretary, and John Brennan, treasurer. Their show will be held December 4-7, 1906, with judges of national reputation to place the awards.

G. J. ANDERSON, Secretary.

PIERCE CITY, MO.

To the Editor: At the annual meeting of the Pierce City and Monett Poultry Association, J. G. Kelley was chosen

president and Thos. Carlin secretary for the ensuing year. Next show will be held Dec. 17 to 20, 1906, C. A. Mary, of Carthago, Mo., judge. There is increasing interest in the poultry industry, and poultry supplies are not equal to the demand.

THOS. CARLIN, Sec.

MERIDEN, CONN.

The Meriden Poultry, Pigeon and Pet Stock Association will hold their sixteenth annual poultry show December 29, 1906, to January 2, 1907, inclusive, with the exception of Sunday, December 30, on which day the show will be closed to the public.

They have secured the services of Mr. W. H. Card, of Bristol, Conn.; Mr. David A. Nichols, of Shelton, Conn., and Mr. D. J. Lambert, of Apponaug, R. I., to judge the show, and their past reputation is a guarantee of fair treatment to all.

The coming show will be a catalogue show, doing away with the old way of having exhibitor's number on the coops. Another feature that helps make the Meriden show a success is the fact that the association has a bank account and always pays premiums on the last day of the show where possible.

W. W. SLEETER, Sec.

VILLISCA, IOWA.

The Villisca Poultry Association will hold their annual poultry show Dec. 5-8, 1906. W. S. Russell, judge. They aim to have one of the best poultry shows in southwest Iowa.

MOUNT VERNON, OHIO.

The Knox County Poultry and Pet Stock Association will hold its show the second week in December, 1906, with Ira C. Keller, Prospect, Ohio, as judge. They expect to make this as good a show as any in central Ohio, and their premium list will contain a list of specials second to none.

ST. MARYS, OHIO.

The St. Marys Poultry and Pet Stock Association will hold its show on Dec. 12, 13, 14 and 15, 1906, in this city, with Wick Hathaway as judge. W. L. Smith, president; F. F. Aschbacher, secretary.

AMERICAN WHITE PLYMOUTH ROCK CLUB.

The American White Plymouth Rock Club is now making plans to push White Rocks harder than ever. The club more than doubled in membership the past year and will double its present membership during 1906. Now is the time to join, as your membership fee pays all dues to July 1, 1907, insures the publication of your name in the club Year Book and puts you in line to compete for all club specials offered at the poultry shows this winter. If you are

She's Too Lousy

A printed five minutes talk sent free to everybody. "How to Keep Away Vermils Permanently," saving monthly expenses for whitewash, kerosening, insect powder, lice killers.

Carbollicum Wood Preserving Co.,
122 Reed St., Milwaukee, Wis.

Gape kills more chicks and growing fowls than any other disease. Of all poultry diseases it has been the most obstinate and one of the most destructive. The gape worms are bred by the wet weather, damp ground and low land, and these worms get into the throats of your chicks and the chicks die. That spoils your chances of a successful year. The very location of the disease—in the windpipe—makes it difficult to reach and destroy the worms.

Conkey's Gape Cure

puts an end to them. A positive preventive and cure of this disease. It comes in the form of a powder and is mixed with the soft feed. It kills the worms and makes the chicks feel good. It will instantly stop the progress of the disease in your flock. A cure guaranteed. If your chicks are not cured you can have your money back. Do not take chances. Get a pack- age from your dealer or druggist, or by mail, 50c, postage prepaid.

OUR FAMOUS BOOK ON POULTRY DISEASES.
A practical book of information on how to keep the flock healthy, for only 4c in stamps to pay postage, and 10 names of two other poultrymen. (Usually sells for 25c.)

SALEM, OHIO.

The Salem Poultry and Pet Stock Association organized March 2, 1906, with a large membership, and set Dec. 10, 11, 12, 13, 14 and 15, 1906, as dates for holding their first show. The following officers were elected: Edwin F. Weldon, president; T. Cadwallader, vice president; J. Alton Cornell, secretary and treasurer. They have secured the services of Thos. F. Rigg, of Iowa Falls, Ia., to do the judging.

BANTAM CLUB CATALOGUE.

The International Bantam Breeders' Club has just issued a handsome catalogue. It is illustrated with numerous half-tones, and contains several valuable articles for bantam breeders. The secretary of the club will be glad to send one to any breeder of bantams who may apply. Although not required, we will appreciate it if you enclose a two-cent stamp with your request for a copy.

The catalogue contains a complete list of the club membership, and it is hoped that many more fanciers of the bantam fowl will join in the near future. With the catalogue we are sending a very attractive membership offer.

FRANK W. RADFORD, Secretary.

held in Auburn during the week of the show, for which purpose the state has appropriated two hundred dollars, to be used in employing the best speakers obtainable. The show will be held in the Armory, which is a large, well lighted hall, in the center of the city. The Empire Cooping Co. will coop the show; the entries will be limited to capacity of hall and only one bird shown in a coop.

The following is a list of the officers of the association:

President—Philo Adams.
Vice-Presidents — Wallace Walker, Mrs. A. E. Pierce.

Secretary and Treasurer—John Scott.
Superintendent—H. R. Bush.

Recording Secretary—Earl Williamson.

Executive Committee—John Carpenter, Louis Seim, John Lee, W. H. Gifford, M. S. Gardner, John Clark, John Post.

List of Judges—T. E. Orr, Beaver, Pa.; Thomas F. Rigg, Iowa Falls, Ia.; Eugene Sites, Elyria, Ohio; Newton Cosh, Port Dover, Ont., Can.; M. S. Gardner, Auburn, N. Y.; J. H. Quilhot, Johnstown, N. Y.; Clarence King, Seneca Falls, N. Y.; Morris Davenport, Henry Trafford, Chenango Forks, N. Y.

The next meeting of the American Poultry Association will be a very important and interesting one. The committee of fourteen which meets this summer to formulate a new constitution and by-laws, will make its report. We all believe the American Poultry Association is to be placed a long way forward at this meeting. Every breeder should be present. The Auburn show is managed by gentlemen and fanciers and will make it more than worth while for every progressive fancier to show some stock at this exhibition.

Let the watchword be "On to Auburn."
THOS. F. RIGG.

LONG ISLAND POULTRY BREEDERS' ORGANIZATION.

A meeting of Long Island poultrymen and fanciers, called to organize an association to encourage among the people a greater love for standard-bred poultry, was held in the parlors of

Johren's Hotel, Mineola, L. I., N. Y., at 2 p. m., Robert Seaman acting as chairman. The following officers were elected:

President, P. Halstead Scudder; vice-president Kings county, Edward R. Collins; vice-president Queens county, Isaac Keator; vice-president Nassau county, Thomas Bacon; vice-president Suffolk county, F. B. Jackson; secretary and treasurer, Robert Seaman, Jerico, L. I. Executive committee, Kings county, Rowland Story, Leon Helfereich, George Young; Nassau county, R. E. Huntington, Wm. P. Titus, R. H. Jacob; Queens county, Herbert B. Roweddud, Chas. M. Smith, J. Hart Wilson; Suffolk county, L. P. Clark, Robert A. Tuttle, C. E. Arnold.

Under the provisions of the constitution and by-laws the executive committee are the twelve gentlemen elected with the president, vic-presidents and secretary-treasurer.

The constitution and by-laws were read by sections and adopted as presented with few amendments.

All those present, and others who sent letters signifying their desire to become members of the association, were made charter members, making a membership of over one hundred.

It will not be so easy to join the association in the future, as an application must be presented by one member and endorsed by another after which a ballot will be taken by mail, five black balls being sufficient to reject.

The object of the association is to encourage the breeding of the Standard-bred poultry and further square dealing among breeders of all classes.

A member can be expelled if found guilty of misrepresenting his stock.

It is the purpose of the association to offer prizes at the agricultural fairs and other shows, competitions for which will be restricted to members of the association.

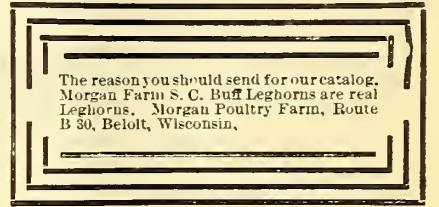

Those present at the meeting were enthusiastic over the outlook, and predicted that the association of breeders would have a very beneficial effect on the industry all over the island.

HERBERT B. ROWEDDUD.

ORR'S Wyandottes Orpingtons

CHAS. McCLAVE - - - - - NEW LONDON, OHIO

WE WIN!

At the late Madison Square Garden Show, New York, in the S. C. Buff, Black and White Orpington classes as follows: 7 firsts, 9 seconds, 6 thirds, 4 fourths and 3 fifths, and these in the strongest classes of Orpingtons ever put together, there being 370 birds competing. We also won the most prizes of any breeder in these same classes. We have the stock and established winning breeding lines, but buying high-grade stock and eggs cannot safely be done upon the strength of the mere argument a breeder has room to advance in his advertisements. Now we want you to send for our catalogue, testimonial book and a very elaborate mating list, describing over forty different breeding yards and prices of eggs from same. Do not be fooled or misled by mis-advertising, but come to the fountain head to get your start.

WILLOW BROOK FARM
W. L. Davis, Prop. Box A, BERLIN, CONN.

The first catalogue of the National Single Comb Buff Orpington Club is now ready for distribution and will be sent free to any one interested in this variety. This catalogue contains 72 pages and cover and is gotten up in a very neat and attractive manner, and is full of interesting and instructive reading on the Orpington. Great credit is due Mr. Will H. Schadt, secretary, Goshen, Ind., for his untiring efforts in getting out this catalogue.

The poultry fanciers of McConnelville and Morgan Co., Ohio, have organized an association and elected the following officers: President, G. M. Harris; vice-president, C. H. Morris; secretary, Frank Sheridan; treasurer, J. V. Rutledge; superintendent, Chas. Plumley, all of McConnelville, O. They expect to hold a show in December or February. It will be a red hot one, as there is a lot of fine poultry in this section of the country. They will put up some good prizes and will have one of the best judges that can be secured and guarantee fair treatment to all.

THE WORK OF A POULTRY FANCIER.

Although there is an endless amount of labor in raising a superior strain of thoroughbred fowls, the work is so healthful, so interesting and so fascinating that one forgets the strength and time expended. To me the work in connection with trap nests is especially engaging. The information obtained is a great satisfaction. You soon find out whether that particularly fine pullet is a persistent layer and her egg a well-shaped, good-colored one with a fine shell, and in a few weeks you will know something of the fertility of those eggs and whether they hatch strong, vigorous chicks, and in a few months you can send that pen of pullets, "as like as peas in a pod," to the poultry show, to take in the prizes. O. L. RIETVELD.

Hunkydory Farm, Pella, Ia.

DAMP QUARTERS.

As my experience is widening with time, I wish to emphasize the fact that it is impossible to make fowls thrive in damp quarters. Better have zero temperature if thoroughly dry than 50 above and wet. Hence give plenty of dry, fresh air, a variety of food to scratch for, and if the fowls do not thrive and give an abundance of eggs it is because you have the wrong variety.

CHAS. BENNINGTON.

Edmeston, N. Y.

FEEDING.

For some time past we have been feeding our mash dry, as it seems to offer the best satisfaction for the afternoon feed. In the morning we feed regular grain scattered in litter, thus keeping our birds busy all day.

J. W. EASTES.

Galesburg, Ill.

A LARGE EGG.

On January 5 one of my Black Minorcas layed an egg almost perfect in shape; size, 8½ by 7 inches; weight, 4 ounces. If this is large and worth mentioning, do so; if not, all right. Any way, I still have the egg.

Carbondale, Ill. A. STARZINGER.

You Need Protection So Do We — That's Why

Cyphers Poultry Foods Are Sold Only In Sealed Bags.

Refuse all bags from which the seal has been removed.

What's the use of putting your valuables in a bank unless they are under lock and key? What's the use of asking you to Buy the Best Poultry Foods unless we guarantee them to be The Best? And what's the use of attempting to Guarantee them to be The Best unless we protect ourselves in their sale, and protect you in their purchase by placing them Under Seal? Our Motto is:

"QUALITY FIRST—THE PRICE AS LOW AS WE CAN MAKE IT."

Nobody—Neither you nor one of our 7,000 agents—can buy Cyphers Poultry Foods from Us in Bulk. Its reputation is too Valuable for us to risk adulteration. It is therefore Sold Only in Sacks of 50 and 100 pounds—Every One Sealed. First we buy the Pure Grains Unmixed; Then We Remove All Weed Seeds; Next the grains are Scientifically Balanced for our several foods, which are then weighed, sacked and Sealed.

Cyphers Chick Food Makes Chicks Healthful because it is scientifically balanced; it is so blended as to furnish food for **muscle, food for feathers and flesh-forming** food. Avoid indigestion, diarrhoea, and consequent mortality by using it.

Cyphers Chick Food Makes Chicks Grow because it is composed of foods selected and mixed by expert poultrymen whose lives have been devoted to the business.

Cyphers Chick Food QUICK-GROWTH HEALTH-GIVING Is By Us So Protected From Adulteration

because we want your trade. We want you to know that when you buy it you are getting value for your money and are also getting such results as the following in your attempts to **raise prize winners and money-makers.**

Chicago Winners.

At Chicago show my second prize pen, first and fourth prize hens second and fourth prize pullets and third prize cockerel were all hatched in a Cyphers Incubator, brooded in a Cyphers Brooder until they were six weeks old and were fed almost exclusively on Cyphers Foods until over three months of age. F. C. Shepherd, Toledo, Ohio.

Noticed the Absence of Bowel Trouble.

The chicks seem to thrive on this food and grow from the start; and that is what makes a healthy chick—not to allow it to stop growing a minute after it is out of the shell. One thing I have noticed in using this feed is the **absence of bowel trouble**, and a very small death loss among little chicks. F. M. Buckingham, Green City, Mo.

No Drooping or Stunted Chicks.

Your Chick Food proves very satisfactory to me. My chicks thrive on it for a longer time than they possibly could on any other single diet. **No drooping nor stunted chicks are found while fed on it.** Many others as well as myself are hesitating to see the value of such a scientific food. Samuel Dowds, Dunbar, Pa.

I Have Not Lost a Chick Since Using It.

I bought a sample of your wonderful "Chick Food," and at the time had a couple of broods of White Wyandotte chicks. Year after year I lost a great many small chicks but **since using your wonderful "Chick Food" I have not lost a single chick.** A. J. Seits, Philadelphia, Pa.

New York and Cincinnati Winners.

At the great New York show last month I won 2nd cockerel, 3rd cock and 4th breeding pen, and at the American Poultry Ass'n show held at Cincinnati I won 2nd pen, 3rd & 4th cocks, 3rd & 4th hens, 3rd & 4th cockerels and 3rd & 4th pullets on our Partridge Wyandottes, and these prize winners were all hatched in the Cyphers Incubators and reared on Cyphers Chick Food.

H. B. Hark, Hartman Stock Farm, Columbus, Ohio.

Better Than Table Scraps.

Our first hatch of chicks did not do very well and a neighbor told us about the chick food being so good for young chicks that we concluded to try it. Now I am glad we gave it a trial. **I have raised more chicks than I did on scraps from the table**, and am more pleased with it than the other foods we had before using it. Mr. & Mrs. Harry Watson, Seely, Kans.

New York Winners.

I have used Cyphers Chick Food for two years with record breaking results. All my New York winners were reared on this feed, and I shall never attempt to raise chicks without it. C. H. Welles, Stratford, Conn.

Never Lost a Chick From One Hundred.

Your Chick Food is the best food for little chicks that I have ever used. **I used it for the first three weeks on one hundred chicks and never lost one.** They were entirely free from howel trouble. I would not be without it for twice what it costs. R. F. Fieldhouse, Hurley, S. D.

THE LARGEST POULTRY FOOD MILL IN THE WORLD is our Kansas City Mill where we manufacture **nothing but poultry foods and clover and alfalfa products**—no breakfast foods nor ordinary stock foods. From us every customer will receive absolutely sound, cleanly cut, dust-free grains; not by-products, waste materials and sweepings that remain after putting the better parts of the grains and seeds into other foods. The following is our list of Balanced Poultry Foods. Every sack contains a 16-page booklet "Foods and Feeding" telling how to feed:

**CYPHERS LAYING FOOD,
CYPHERS DEVELOPING FOOD,
CYPHERS SCRATCHING FOOD,
CYPHERS FORCING FOOD,**

**CYPHERS CHICK FOOD,
CYPHERS SHORT-CUT ALFALFA,
CYPHERS SHREDDED ALFALFA,
CYPHERS MEALED ALFALFA.**

Six Places of Business and Over 7,000 Dealers—To Save customers time and money, to lessen the freight charges, and insure quick delivery, we maintain six branch houses whose addresses are given below. Goods will be shipped from the branch nearest to you if you write to that Branch. Ask your local dealer for Cyphers Foods and accept no other. If he doesn't keep them please write our nearest branch for **Free Samples** of either of the above Foods.

Our 1906 Catalogue, entitled "**Poultry Raising Made Easy and Profitable**" will be mailed Free to all who mention this paper and send us the addresses of two neighbors who are interested in poultry for profit. It has 228 pages, and contains A Large Amount of Valuable Information, including Six Chapters on Poultry Raising for Profit, the Raising of Broilers, Roasters, Capons and Ducks for Market, Poultry-keeping on the Farm, Photographs of America's Leading Successful Poultrymen, and Illustrations of the Largest Poultry Plants in the World. Address nearest office.

Ask Your Local Dealer For Cyphers Foods—Look For The Seal.

The Quincy Incubator, THE HATCHER YOU WANT.....

Because it is easy to operate, being self regulating, self moistening and self ventilating. The ventilation is positive. Nothing left to chance. Economical in the use of oil.

90 DAYS TRIAL.
Don't fail to investigate the Quincy. It's different from others and our offer is the most liberal. Price low. Send for Free Catalogue. It will help make more poultry profit.

QUINCY INCUBATOR CO., Box 54, QUINCY, ILL.

"Money in Poultry"

Our new 84-page book tells how to make it; also how to feed, breed, grow and market poultry for best results; plans for houses and much useful information. Illustrates and describes the largest pure-bred poultry farm in the world. Tells about our 25 leading varieties; quotes low prices on fowls, eggs, incubators and brooders. Send 4c in stamps to **F. FOY, Box 13, Des Moines, Ia.**

TEST YOUR EGGS

with a Pocatenco Egg Tester. It throws such a powerful light that fertile eggs are accurately determined the second day of incubation. Pays for itself many times over. Price, complete with lamp, \$2.00. Illustrated booklet free. **POCANTENCO POULTRY YARDS, Box B, Pocatenco Hills, N. V.**

Who Bred The Buff Rock Winners at N.Y.?

Tuttle's Golden Rod Strain won 1st and 3d cockerel, 1st and 4th pullet. No old birds shown. These birds were not picked up around the country but were bred in our yards, from our own eggs, from a long line of winners. Eggs from our New York winners at \$5.00 for fifteen. Will hatch you winners. Mention American Poultry Journal.

R. A. TUTTLE

Center Moriches Long Island, N. Y.

Conkey's Roup Cure

The only sure cure for roup, colds and canker in Chickens, Turkeys and Pigeons. Keep a package on hand and give to fowls in drinking water when they show signs of the disease. Put up in 50c and \$1.00 packages. Your money back if a cure is not effected. Druggists and Poultry Supply Dealers sell it. If they haven't it, send us direct. **We pay postage.** If you want to keep your flock healthy send for our book on "Poultry Diseases." We sell it for 25 cents, but to any reader of this paper who will send the names of two other poultry raisers we will send a copy free for only 4 cents to pay postage.

Before and After Taking

TRAP IS UNDER HERE

KILL 'EM

these miserable pests that tax your patience, craze your hens, and cut your profits beyond the living limit. Don't rely on the old, filthy, disease-breeding roosts and nests. We can prove that it's economy and foresight to install the

Potter Vermin Exterminator Roosts

They are sanitary, easily moved and cleaned; made of hardwood, smooth and oil finished; underneath roost is our "mite trap" where we catch the mites and kill them sure. Our improvement for killing lice without touching the hen is a "happy idea." Write for our free catalog with prices and illustrations of all styles of Poultry Fixtures. It explains about our new 1906 improvements and tells how the "trap" and lice-killing device act.

T. F. POTTER & CO.,
Box A, Downers Grove, Ill.

WOMAN'S HOME DEPARTMENT.

Mabel Bates, Editor.

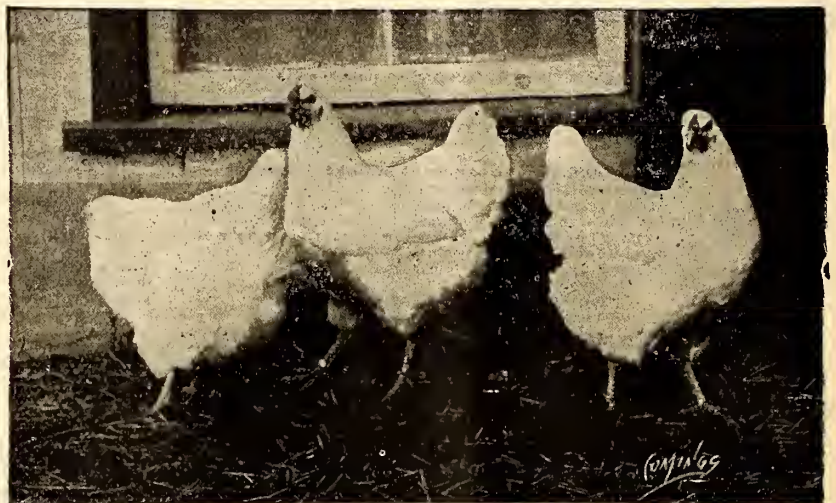

This department will not be confined to poultry items entirely, but to all matters pertaining to household economics. We want every woman who reads American Poultry Journal to consider herself a member of this department. If you have a bit of practical knowledge in household matters, an item of experience in raising poultry that will be helpful to others; a favorite recipe, etc., send it along. This is your department, just as far as you are willing to make it.

All communications should be addressed to the Home Department of American Poultry Journal Publishing Company, 325 Dearborn Street, Chicago, Ill.

USELESS HOARDING.

In your housecleaning this spring, how many things did you find that had been stored in the attic or on the top shelf in the closet since the time when no man knoweth the contrary? And for how many successive years have you carried them out and with back-aching weariness hung them on the line or sorted them and dusted them, only to store them away again until the next annual upheaval? Oh! tired housemothers, why do so any longer? There is perhaps one chance in a hundred that you will find a use for them some time, but you have not found that one chance in

the children quiet for a long rainy afternoon. The dishes will help furnish the scanty table of a family who have been burned out of all their possessions. And in the meantime your own burden of housekeeping will have been made easier and you will have room on your shelves for things that have been crowded into the corners, while your conscience will have the comfortable feeling which comes when something worth while has been done. Of course there are many things which can and will be used again, and which it would be folly to dispose of, but there is scarcely anyone in this world so needy that they have not something which is being hoarded uselessly and

Three White Wyandotte Sisters. Bred and owned by Ira C. Keller, Prospect, Ohio.

the last five years, and probably you never will. And there is some one to whom the old skirt, the bundle of out-of-date magazines, the chipped dish would be a veritable godsend. Would it not even be better to give it away and find that afterward you might possibly have used it, rather than to let it cumber your store-room another year?

The pity of it is that the world is full of people who need that very thing. You doubt it? Did you ever send to a rummage sale a basket of things which you considered worth nothing, and notice the eagerness with which some one seized them, declaring they would just meet a long felt want? Instead of putting away clothes which have become absolutely worthless to you, try the experiment of finding a place where they will do some good. If you live in the city and do not have the time to search for yourself, the Salvation Army will welcome them with open arms. There is some sick person to whom the magazines will bring many a happy hour, and the bunch of old picture cards will keep lit-

which will fill a want in some nearby home. If this is true in your case do not wait for that more convenient time, which is like a will-o'-the-wisp, always a little ahead of us. Do it now and acquire that sense of virtue which always follows close on the accomplishment of a good deed.

A MESS OF GREENS.

Mother Nature is a wise provider and at this time of the year she furnishes food, medicine and tonic in most palatable form. Every patriotic American hails with joy the advent of the dandelion green, and people are coming to be better acquainted with the merits of spinach as the seasons come and go, but few know how many delicious greens can be found if they are fortunate enough to live where the country is easy of access.

Among the earliest greens are cowslips, the young, tender shoots of which cooked as any other greens by boiling and chopping slightly have many to sing their praises. Not so many know, how-

ever, that the common wild brakes, if picked just as the "fiddle tops" are up a few inches above the soil, taste like the most delicate and delicious asparagus. This has recently been exploited in the newspapers as a rare Japanese dish, and it is said that an attache of the Japanese legation at Washington has acquired wide fame by serving them, but they have for years been an article of diet in many localities. It should be understood that by "brakes" the coarse ones are meant, which grow in great luxuriance in poor, sandy soil on the plains or in oak openings, not the more delicate ferns.

Milkweed shoots have a delicious flavor all their own, and it is even whispered by those who have tried it that the most plebeian pig-weed is not to be despised in its day, while radish tops have their adherents. Sorrel, with its tart taste, makes a delicious salad, also. There are many ways of preparing spring greens, among which are the following:

Southern Salad—Boil young, tender turnip greens until very tender. Drain and chop fine. Press in a fancy shaped dish until firm, turn out on a platter and garnish with slices of hard boiled eggs. Dress with pepper sauce made by soaking tiny red peppers in hot vinegar, cooling and bottling the vinegar. Beet greens are fine if prepared in the same way, and are better still if the tiny beets are cooked and cut up with them.

Dandelions in Cream Sauce—After picking over the leaves, take them, dripping wet, and place them closely in a double boiler. Cover and cook fast until so tender that they can be pressed through a sieve or colander into a sauce pan. Beat in a tablespoonful of butter, a teaspoonful of sugar, salt and pepper to taste, a teaspoonful of lemon juice and last add three tablespoonfuls of hot cream to which has been added a pinch of soda. Stir until smoking hot over the fire and serve at once.

Spinach Salad—Boil spinach and season well, adding plenty of butter. Put in cups to cool, pressing it well, and after it is perfectly cold turn out, scoop a nest in the center of each and put in a tablespoonful of mayonnaise or cooked salad dressing.

These are only a few suggestions, and we would be glad to have others sent us by the readers of this department. If you know of a good recipe, pass it along for the benefit of our other readers.

MORE CHOCOLATE RECIPES.

Little Chocolate Cakes.—Cream one-half cupful of butter, add to this one-quarter of a cupful of dry cocoa, working it together. Beat the yolks of three eggs well and add to the cocoa and butter. Put in a sieve one cupful of flour and one teaspoonful of baking powder and sift them together ready to mix in

the cake. Mix one teaspoonful of cinnamon and one-quarter of a teaspoonful of cloves with one cup of fine granulated sugar, or one teaspoonful of vanilla may be used instead of the cloves, if preferred. Add the sugar and spices to the butter and eggs and beat well. Add the whites of three eggs beaten very stiff, alternating them with the sifted flour and baking powder and one-half cupful of water. Add first a tablespoonful of the flour, then a little water until all has been used. Fill small round iron gem pans three-quarters full and bake from fifteen to twenty minutes. Frost with

Chocolate Frosting.—Melt two squares of unsweetened chocolate over the steam of the teakettle. Add three tablespoonfuls of boiling water and enough confectioners' sugar to thicken it. Flavor with vanilla.

Chocolate Layer Cake.—Cream one cup of butter and two cups of sugar. Add one cup of sweet milk, three cups of flour into which three teaspoonfuls of baking powder have been sifted, and the whites of eight eggs. When well beaten divide in two parts and to one add a cup of cocoa. Bake in layers and spread with a custard made by adding a tablespoonful of butter to a pint of milk. When it reaches the boiling point add the yolks of four eggs beaten and stirred into one cup of sugar, and two teaspoonfuls of cornstarch moistened in milk.

BLANCHARD'S WHITE LEGHORNS

are no experiment, having been carefully selected and bred for over twenty years. No labor or expense has been spared in building up and perfecting this strain and while the production of large, pure white, fancy market eggs has been the main object, standard qualities have not been neglected. They are large, vigorous, active and handsome. Good winter layers and keep at it all summer. Unexcelled for introducing new blood or as foundation stock. NONE BETTER ANYWHERE AT ANY PRICE. Eggs for hatching, from my regular matings, \$2 per 15; \$3.75 per 30; \$5 per 45; \$10 per 100. From exhibition matings, \$3 per 15; \$5 per 30. Illustrated circular free.

Keeps Poultry Healthy Prevents Disease

VIGER'S
Crushed
Charcoal

WATCH YOUR HENS' CROPS. Most people dig their graves with their teeth. Of the toothless hen we may say with equal truth that its crop is its thermometer of health. If the crop is filled with poisonous substances and the hen suffers from digestive disorders, the hen will become weak, unhealthy and cease to lay regularly. Viger's Crushed Charcoal will absorb all poisons and noxious gases in the crop and put your hens in prime condition.

Not a drug, but a simple product of nature, recommended by the highest authorities. Our iron-clad guarantee with every bag; the results we claim for it or money refunded. A trial is all we ask.

3 sizes. Coarse granulated, for mature poultry; fine granulated, for little chicks; pulverized, for mashers.

Prices—\$1.00 per 50-pound trial bag. Special prices in quantities. Samples free.

454 20TH STREET, VIGER'S COAL & WOOD CO. DETROIT, MICH.

GRAND SALE S. C. WHITE LEGHORNS

Will spare about 100 of this season's breeding hens one year old, and a few extra good cocks. These birds are of the celebrated "Purity Strain," noted for their pure white plumage, deep yellow legs and beaks and their exceptional egg laying qualities. They will go at right prices, considering quality, just to make room for young stock coming on. In lots of 25 or more I will ship for half the purchase money with the order and balance C. O. D., but in all cases I will positively refund money if customer is dissatisfied.

BIG SUCCESS WITH HOGS.

SOME farmers are more successful with hogs than others. The man that only gets 8 lbs of pork out of a bushel of corn fed to hogs makes only half as much as the man that gets 18 lbs.

The American Swineherd is a specialist and the best authority on the hog industry.

The greatest success results from concentrating all efforts upon one line.

Three-fourths of the farmers waste a third of their feed given to hogs because they do not understand the best methods.

The American Swineherd teaches you how to be successful.

How to secure the greatest profits.

How to feed, to double the growth and gain over usual methods.

How to keep your hogs healthy, as only healthy ones are profitable.

How to get 18 pounds of pork out of a bushel of corn, and 20 pounds out of a bushel of wheat, fed to hogs.

Prof. Kennedy of the Iowa Agricultural College says: "Your paper is a leader on feeding."

One man writes: "A single instructive lesson in the Handbook on Hog Hygiene saved me \$50 in feeding a litter of 40 hogs 60 days over the ordinary way of feeding. It is the best investment I ever made."

Every owner of hogs should take advantage of this special offer.

Send us \$1 for two years' subscription to the American Swineherd and it will entitle you to a free copy of the Hand Book on "Hog Hygiene," with trade secrets, recipes, valuable information, etc. If the offer is accepted in ten days we will send you in addition "The Pig Feeders' Manual," worth a \$1 itself.

This equips you for a successful hog business.

WHY BREED MONGRELS?

Mongrels Should Have no Place in the Poultry Yards of Today—Reasons Why the Thoroughbred Fowl is Far Superior.

"Where ignorance is bliss, 'tis folly to be wise!"—The quotation certainly applies to the would-be poultryman who has led himself to believe that mongrels are more profitable and more to be desired than thoroughbreds. Whenever I see a flock of such birds, and hear their owner assert that he intends to accomplish something in the poultry business, I feel sorry for that man, and wish that I were able to convince him that he is on the wrong track. However, it is astonishing how tenaciously even those who have been raising chickens for years adhere to old fallacies, believing them to be truths.

You have, no doubt, looked over some would-be poultryman's back fence and seen a hundred fowls—birds of all sizes, shapes and ages, the offspring of a dozen, or more, different breeds, birds of all shades of the rainbow and some other shades for which a color name has never been coined; yet, perhaps, you have heard the owner thereof declare that he was experienced in poultry raising and that mongrels were his choice! And why his choice? Simply because an old foggy notion exists in the minds of many, in the minds of the majority of those who have had no actual experience (and dabbling in poultry for years does not necessarily indicate experience), that mongrels are healthier and hardier, also better layers, than thoroughbreds. A more erroneous idea was never advanced. What better evidence have we of the falsity of such a claim than the thousands and tens of thousands of healthy and thrifty fowls—veritable egg-machines—on our immense poultry farms throughout the country, where only thoroughbreds are permitted? No further argument is needed to convince the fair minded that the mongrel should have no place in our yards; but there are dozens of other arguments, equally as good, if one will seek them impartially.

This winter it has been my lot to pass a yard daily where one of these "conglomerated messes" is quartered. On several occasions I have paused "to admire" the lot, and have inquired as to the number of eggs the owner thereof has been getting. The reply has invariably been, "Oh! they are doing quite well; but they are a little young yet, and have not all got down to business." From another party, who is reliable, I have learned that one egg every other day has been the actual production thus far of these pullets, about fifty in number. Just what they will do when they "get down to business" I cannot say; however, our own thoroughbred White Leghorns, hatched about the same time, have been veritably "shelling out" the eggs all winter. But here is the difference—while I do not mean to infer that some mongrel flocks do not lay quite well sometimes (for mongrels), our own pullets have been bred for laying year after year; at the same time it has been an earnest study with us how to breed out any defects and weaknesses that might have been inherited from parent stock (since no strain can be perfect), whereas, the mongrel pullets in question (in their "strange admixture," worse than Milton's "Confusion worse

FACTS FOR FARMERS!

Southern lands are fertile and productive and are low in price. The rainfall is ample for all purposes, and irrigation is not needed.

The Southern farmer is in close reach of the principal markets of the country and has the best of railway facilities for the transportation of his crops.

General farming shows good returns. The crops grown cover a wide range and yield an abundant harvest. The cereals and grasses thrive. The stock raisers find the South a profitable field. Cattle can be raised at the lowest cost. There are finest opportunities for raising horses, mules, sheep and hogs.

There is a demand for a greater dairy interest in the South. Local markets are good. The conditions are most favorable for the success of the milk producer and butter maker.

Trucking is extensively engaged in along the Southern Railway. Lands especially adapted to this branch of farming may be purchased at low figures and upon good terms. The facilities for quick handling of the crops are first-class and the products reach the best markets of the country in good condition. All fruits are grown in the South. The commercial orchards along the Southern Railway are extensive and the quality of the fruit is unexcelled. The best sections of the South are reached by the

confounded") have inherited manifold defects and weaknesses from a dozen different sources, the eradication of which would be almost an impossibility by any means known to the breeder's art—unless eradicated at once by use of the hatchet.

The owner of these fowls, who has steadily spurned the good advice of practical poultry people, came to me a few days ago, desiring to purchase (for 75 cents) a Single Comb White Leghorn cockerel to mate to some of his lighter birds, saying he thought they needed "a change of blood." I did not tell him I thought they already had too many changes, nor did I ask him to advance any of his theories in regard to the proposed mating; however, I remembered that last year his principal male breeding bird was a Rose Comb (!) White Leghorn, with folds of brass on his back that would do justice to a Roman god! Yet, this party claims to be experienced, the type of "poultryman" who looks down upon the earnest student of poultry culture as an ignoramus, and despises the research of years of men whose theories should have the profound respect of all!

This is the type of person who is doing the poultry industry a great injury, the one who professes to know all there is to know about the business, yet persists in "breeding" the poorest stock in the land. If there were one argument in favor of such a course, the case might be different. But can one answer the following questions fairly and impartially and still admit that barnyard fowls are to be preferred? Taking statistics as our guide, are such birds healthier and hardier than thoroughbreds? Are they better layers? Are they as good market fowls? Do their eggs bring as high prices for domestic use? Have their eggs equal value for breeding purposes, or have the birds themselves any particular value or sale as breeders? Are such fowls as beautiful and pleasing to the fancy as thoroughbreds? Every one of these questions must be answered decidedly in the negative; for authoritative reports prove conclusively that there is not one particular in which mongrels excel or even approach thoroughbreds. Then, why will poultry raisers stand in their own light and persist in remaining in ignorance? They are not posted, that is the "long and short" of it. Surely a few subscriptions to some good, reliable poultry journal would set some one right every now and then.

Poultry breeding is fast becoming a science, an art (if it is not both already), which is beginning to command the respect of the cultured and refined in all walks of life. Today hundreds of professors, doctors, lawyers, ministers and other professional men are deriving both pleasure and profit therefrom. What kind of fowls are they breeding? Most decidedly not mongrels! So, it seems to me, that, when this great industry is receiving such an honorable endorsement, we should all strive to do everything we can to make its advancement even more rapid; for surely no industry has greater possibilities. It is truly helping the good work along to discourage, whenever we can, the "breeding" of the mongrel fowl.

KILLED BY THE FUMES.

You must kill the lice on the fowls some way. If you don't care to handle them singly, use our liquid

PRUSSIAN LICE KILLER.

Simply paint the roosts and drop boards with it. The fumes arise and kill the lice on fowl and pen. It catches them all to the last mite, and it takes the nit as soon as it comes to life. The fumes do the work. It is the perfect, easy method of protection and cure. But if you like the powder treatment better, don't forget the old reliable **Prussian Lice Powder**.

Enclosed please find 40 cents for another can of lice powder. We were well pleased with the first can, but we need and must have more.—H. F. Lake, Yankton, S. D.

Prices: Lice Killer, 50c and \$1.00; 5 gallon can, \$4.00. Lice Powder, 25c; by mail 40c. Remember also our famous **Prussian Poultry Food**. Get either of these from your dealer. If you don't find them write us at once. We will supply you and send you also our 68-page book, **Prussian Remedy Co., St. Paul, Minn. Special Agents: Chas. H. Lilly Co., Seattle, Portland, San Francisco; Chas. Winsel, Los Angeles; J. S. Pollock, Pittsburg; Eltmiller Bros., Baltimore; Vaughan Seed Store, Chicago; J. W. Wilder & Co., Cincinnati, Ohio.**

LEE'S

3

LEADERS

LEE'S LICE KILLER

Poultry simply cannot do its best when pestered and bothered by lice. Young chicks cannot grow—they become weak, stunted and die, and the profits you figured on dwindle down to nothing. Don't let lice get the best of you. A few liberal doses of **Lee's Lice Killer**—the peer of lice exterminators—quickly put all the lice out of business. Spray it about the houses in every crack and crevice, on the roosts, nests and dropping board, it will kill every louse in the house by direct contact or by its strong, penetrating fumes that won't let a louse escape. No greasing, dusting or handling of fowls necessary—just a few moments' work with a spray pump and your loss will be turned into profit. Order to-day. Price 50c, 60c, \$1.00.

LEE'S GERMOZONE

Just the spring medicine your fowls need. A tonic and health builder that poultrymen everywhere endorse for its good work. Regulates the bowels, prevents cholera and wards off disease. **Germozone** twice a week, added to the drinking water, will keep your birds in the pink of condition, and the birds become their own doctor. Don't be without it—one bird saved will pay for all you'll need in a season. It prevents cholera; cures colds, roup, canker, swelled head and inflammation of the bowels; promotes health; prevents loss. 50c buys enough to last a large flock a month.

LEE'S EGG MAKER

Keeps up the egg production, because it contains all the elements of food the hen needs to make egg and shell—it keeps her busy—gives you more eggs, better eggs—it's a sure profit maker. Shut-up hens need the help of **Egg-Maker**. Little chicks grow big on it. 25c, 50c and \$2.00 according to size. Have you read Lee's new books? Every poultry-raiser will find them valuable in his business. We will send them free if you will write and we'll include a "Mandy Lee" incubator and Brooder Catalog that tells some facts you may not know about hatching and rearing chicks. Write to-day.

GEO. H. LEE CO., OMAHA, NEB.

TO THE POULTRY JOURNALS OF AMERICA.

You have been the active agents that have sold at least three-fourths of the fifteen thousand copies of the Illustrated Standard of Perfection the past year.

The second edition is now ready, and herewith you will find a circular naming the reduced wholesale prices at which the books can be supplied to you.

It has been intimated by some of your number that the changes and corrections on the first edition made at Cincinnati should be given through you to your readers who have purchased the book.

Herewith please find a complete list of those changes and corrections, which you are at liberty to publish, if you so desire, without any infringement upon the copyright of the book. This office does not undertake to furnish this list to individual purchasers of the Standard:

Corrections and Changes Appearing in Second Edition of Illustrated Standard of Perfection.

Page 25—Section "Sweepstake and Special Prizes," in fifth line, word "latter" changed to "former."

In each of the following cases, at end of line named, these words are added, "under-color, dark slate:"

Page 47—Section "Wings," to fourth line.

Page 58—Color of Male, section "Wings," to fourth line.

Page 58—Color of Female, section "Neck," to third line.

Page 59—Section "Body and Fluff," to second line.

Page 59—Section "Wings," to third line.

Page 62—Color of Male, section "Wings," to fifth line.

Page 63—Color of Female, section "Wings," to second line.

Page 63—Section "Tail," third line, words "under-color, dark slate," stricken out.

Page 75—Shape of female (Rhode Island Red) changed to read: "Comb—Single, similar to that of male, but much smaller."

Page 78—Color Rhode Island Red Male, section "Wings," second line, "wing-coverts" changed to "flight-coverts."

Page 114—Color Brown Leghorn, female, section "Back," third line, word "shading" changed to "shafting."

Page 139—Bottom of page, below section "Legs and Toes," words, "under-color, dark slate," supplied.

Page 142—Below section "Legs and Toes," words "under-color, dark slate," supplied.

Page 274—Colored Muscovy ducks, under "Color of Drake and Duck," description of tail is changed to read: "Tail—Black."

The following new varieties were admitted at the Cincinnati meeting: Single Comb Black Orpingtons, Single Comb White Orpingtons, Rose Comb Rhode Island Reds, Rose Comb Buff Leghorns and Columbian Wyandottes. The second edition, now going out, contains the descriptive standards of all these varieties, also illustrations of Co-

lumbian Wyandottes and new illustrations, by Sewell, of Single Comb Buff Orpingtons.

Caution as to the Copyright.

While you are at liberty, in describing this second edition, to state the facts announced in the preceding paragraph, any copying of the descriptive parts or illustrations of these newly admitted varieties, or of any other portion of either the first or second edition of the Illustrated Standard of Perfection, will be esteemed a flagrant violation of the American Poultry Association's copyright. See the page, "To Whom It May Concern," in both editions.

Applications for Membership.

In response to a circular sent out recently from this office to annual members quite a number have sent in the eight dollars necessary to transfer their names from the Annual List to the Life List.

Please say to others that the list of members to appear in the forthcoming book of proceedings will be kept open for such transfers for another month; also that those who send in their applications to become new members, either life or annual, by doing so now will have their names and addresses given in the book of proceedings.

T. E. ORR,

Beaver, Pa., May 3, 1906.

FEEDSTUFFS THAT WILL BE FOUND PROFITABLE FOR POULTRY.

Generally speaking, the feed value of food stuffs is not so well understood by the average poultry raisers and farmers as they should be for the largest profit.

I have found that low-priced food stuffs as a rule are the most costly feed in the end. Food stuffs to have a practical value must be sweet and clean, and be of a variety that will furnish the poultry just the nutriment required to develop whatever particular product that may be desired, without the poultry having to digest a lot of waste material that they have no immediate use for. As the old saying goes, "It's just what you put into a thing as to what you take out." This saying is certainly true in the poultry industry, as hens are only capable of developing eggs or meat to that capacity in accordance with the material they have to work with. Nature has not given them the power of converting what they eat into any element different from the element the feed actually contains. To illustrate the matter in a plain way, supposing that 160 hens were fed one bushel of corn, which is a fair day's ration for that number. The bushel of corn alone does not contain lime or protein enough to develop over 32 eggs, which would only be 73 eggs per hen in a year, but it contains fat-forming material enough for 320 hens for one day, or as much again as 160 hens should have for best results. Now as the whole food stuff must be digested before the egg-producing material is available for the development of the eggs, it is plain to be seen that the energy of the digestive organs when fed on a corn ration entirely is taxed to about double the capacity they should be, which means a loss to the raiser of no less than 50 cents per hen in a year. A ration for the winter months that will be found very satisfactory is as follows: Morning feed, kaffir corn 1 part, oats 19 parts, one quart to fifteen hens, fed in a deep litter. Noon feed, wheat bran 3 parts,

clover or alfalfa meal 1 part, corn meal 1 part, ground beef scrap 2 parts, one quart to fifteen hens, fed dry in troughs. Night feed, wheat and yellow corn equal parts, 1 1/4 quarts to fifteen hens, fed in litter. My reasons for feeding dry feed and feeding it at noon are, as the middle of the day is generally the most comfortable part of the day, feed that does not require much exercise to eat should be fed at that time. The feed being dry they cannot be greedy in eating it; they have to eat it slow. This develops a power of digestion that cannot be reached in any other way. By feeding the whole grains morning and night in the litter, they have to work hard to find it. This particular exercise develops heat and muscles, two important qualities that must be reached before they are in condition to produce eggs. Hens standing around idle in the cold are living at the expense of the owner, when if they were given the proper conditions and plenty of work to do, they are more productive than any other animal on the farm. A practical ration for young chicks should be similar to that for laying hens, except the beef scraps, which should be fed sparingly until the chicks are six weeks old. The grains should be cracked fine and all mixed together and fed dry. There are several brands of poultry foods on the market today that are a correct balanced ration, and if fed according to the directions that come with them they will be found a very profitable investment.

DISTANCE ALL COMPETITORS

At Madison Square Garden, January, 1906, in a class of 474 Barred Plymouth Rocks, the largest and best collection ever seen in any show room in America, we won twice as many regular cash prizes as any other exhibitor; the National Club Cup for best cock, hen, cockerel and pullet, and the most valuable of all prizes, the cash special for best display.

Since 1900 we have won at Madison Square Garden and the New York State Fair, more first prizes than all our competitors combined. Write for catalogue and mating list, giving prices of eggs and full description of matings.

GARDNER & DUNNING, M. S. Gardner, Mgr., Auburn, N. Y.

MUSLIN COLONY HOUSE.

The accompanying illustrations give three views of a muslin colony house which has been constructed and a number of which are now being used on White Rock Poultry Farm, Mannheim, Ill. These houses seem to answer every purpose of the wooden colony house. The construction is as follows:

They are 6 by 8 feet, are 5 feet high in front and 4 feet in the back; shed roof with one door in the front running from the ground to the roof, cut through

18 inches from the bottom so that the lower part can be opened and the top part closed if desired, or both can be opened for easy ingress and egress. The top, ends and sides are made in sections and put together with wooden pegs so that they may be taken apart, folded up and stored in a small space. The sections are made of 1 by 2-inch strips. The lower 18 inches of the house is protected on the inside by 1-inch mesh poultry wire, this to prevent rats and other vermin from destroying the chickens. These sections are covered with or

dinary muslin except the top which is covered with any good roofing paper that will shed water. Do not paint the muslin, as that would, to some extent, shut off the light. No floor is used in this house. When it is necessary to clean it, simply pick the house up and move it on to a new place. The whole thing weighs about 75 pounds and including labor does not cost over \$5.00 to make.

Two of these houses have been used since February as indoor brooder houses. It is surprising how warm they are, even when the outside temperature is very low and the wind blowing hard. They have been able to run indoor brooders in

them with best of results. During the summer these certainly will be ideal houses, as they furnish an abundance of light and fresh air without permitting any drafts to strike the chickens.

This idea should be a boon to poultry breeders who use colony houses and desire to give their flocks free range during the summer months. The ordinary wooden colony house is expensive to build, and difficult to store when not in use, and we do not believe that they are as good for above purpose as these muslin houses.

THE VALUE OF FEATHERS.

All Poultry Feathers are Salable and the Amount of Money That Can be Gotten out of Them, When they are Properly Taken Care of, is Really Surprising.

From personal experience, we know of any number of poultry men who figure that their whole year's labor is paid for by the saving of feathers, and in some cases they also figure that the feathers pay for the labor of their entire product, besides poultry.

In handling dry-picked feathers, we would suggest that boxes or barrels be placed in the killing room within reach of the men who are dressing the fowls, so that they may take off the different grades of feathers and place them in the barrels. In this way avoid all the dirt and trash that accumulates on the floor.

There should be a barrel for white body, one for colored, one for the quills, etc.; or, in other words, a barrel for each grade of feathers. This will keep the feathers perfectly clean and avoid the colors becoming mixed, to say nothing of the labor that would be saved by dropping them altogether (quills and all), then reasorting them.

These barrels or boxes should then be taken into another room and emptied out on the floor to a depth not exceeding three or four inches. This room should be kept very clean and the feathers in it should be stirred once or twice every day. After two or three days' turning, these feathers are in proper shape to pack in the bags and store away or ship to market.

If stock is not handled in this manner and is packed in the sacks immediately after picking, the animal heat in same will begin to work, and in a short time the feathers will become damp and moldy, and while they might bring some price in the market, still it would be fully half of what good feathers are worth.

In the handling of turkey feathers, it is well to take special pains, as the No. 1 stock only will bring the top prices. Turkey quills that are splashed full of blood and have become damp and moldy are really worthless, as these goods are used in the manufacture of feather dusters, and only clean, long feathers can be bought.

There are a good many poultry shippers who scald their stock and also save the feathers. These should be taken care of in the same manner as the dry-picked stock, but will, of course, take a great deal more labor on account of the water or dampness.

It would be well to run this wet stock through an ordinary wringer, in order to get out most of the water, and then spread same on the floor. It will require more turning and the lumps must be broken up quite often.

Scalded turkey feathers and quills are of no value and should not be saved.

White feathers of each grade of poultry always bring a much larger price than colored stock, ranging in value as follows:

- Colored chicken body..... 5c
- White chicken body, about..... 20c
- Colored turkey body..... 5c@ 6c
- White turkey body..... 60c@75c
- Colored duck..... 35c
- White duck..... 40c@45c
- Colored goose..... 40c
- White goose..... 60c@65c

Turkey quills range in price from 6 to 7 cents for pointers, 18 to 20 cents on wings, 40 to 45 cents on tails.

The above prices are not quoted from to-day's market, but goods have brought these prices in the season just past, and will come very near it at all times.

All turkey and chicken body feathers should be packed in strong burlap bags, and the goose and duck and other lighter feathers should be packed in white muslin or sheeting bags.

Turkey quills, in order to bring the highest market price, should be assorted cleanly and laid straight in boxes, all butt ends one way. If no boxes can be had these quills may be shipped in bags, but they will not bring quite as high a price as the goods which are packed neatly in boxes.

"POULTRY ON THE FARM."

You often hear the farmer wife say, "I have no success with my poultry." Then you ask what kind she has. "Well, I have Barred Rocks." Probably mated to a Buff Cochins or some kind of a B. Rock that as a cock weighs five or six pounds. When in the hog and cattle lot you find thoroughbreds of elegant type—big, fat fellows. This should not be. Give the farmer's wife good, thoroughbred poultry, housed and cared for like the cattle, and notice the results.

W. A. HAYES.

Monmouth, Ill.

MATING WITH PLYMOUTH ROCKS.

In mating White Plymouth Rocks it is well to look at the utility side as well as the fancy. Pure white birds with good breast, low comb, stout medium length shanks and yellow skin, are preferable. If you have one or more birds in your flock with good egg records, mate them to one of the best sons hatched from these hens' eggs. This is a sure way of making a good laying strain if methods are carried on each year.

J. KUGLER, JR.

Questions and Answers

Questions asked by subscribers will be answered in this department only under the condition that the full name and address is signed by the writer.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Will you kindly reply to this question in AMERICAN POULTRY JOURNAL under "Questions and Answers"? If I use two cocks in a pen of B. Rocks, keeping one in a resting pen each day, what is the largest number of hens I can have in the pen and be assured of good fertile eggs, the fowls to have good care, of course? A pen of S. C. B. Leghorns used the same way, how many hens could I have? What

turkeys be raised with success in a brooder? Mrs. S. A. Y.

Goshen, Ind.

Answer—Yes, to both of the above questions.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Please answer the following through your paper: 1st. What is the cause and cure for leg weakness in chicks? 2d. Why is corn not suitable for young chicks? 3d. At what age may

SILVER LACED WYANDOTTE.

A prize winner. Notice the open centers. Bred and owned by E. B. Barnett & Son, Michigantown, Ind.

would be best to feed the cock the day he is in the resting pen? 2. Probably how many eggs will a strong cock fertilize at one treading of the hen? Milton, Ill.

I. A. E.

Answer—1st. From 12 to 15 B. Rocks and from 15 to 20 Leghorns. Whole wheat should be the principal food; but he should also have plenty of green food, beef scraps or fresh meat, etc. 2d. This is a question that has received much attention from poultry writers and fanciers, but has never been decided with any degree of certainty, and the figures vary all the way from one to fifty.

bran and beef scraps be left by little chicks all the time? 4th. What should be done for a disordered liver in chicks or older fowls? Mrs. M. B. Cowgill, Mo.

Answer—1st. Leg weakness in chicks is generally caused by improper heat in the brooder, and lack of exercise. 2d. Corn contains too much fat forming ingredients and not enough bone growing material. 3d. Three weeks. 4th. Diseases of the liver are generally not noticeable until far advanced. Where fowls are given frequent change of ration and plenty of green food is supplied, liver trouble seldom occurs. When the disease is noticed, a laxative of some character should be given, such as Epsom salts, 10 to 20 grains, followed in twelve hours with two grains of bicarbonate of

soda. We have used Carter's Little Liver Pills with very good results; one pill every day for three days. When the fowl shows improvement give green food, tonics and raw beef, and allow the bird free exercise in the open air.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: My hens were fed corn, oats, wheat and rye with a scalded and cooled mash of corn meal, ground oats, bran, middlings and oil meal, while the following were kept in hopper: Oyster shell, dry cut bone, grit, charcoal and dried beef scraps. They were fed mangels once a day and sometimes clover chaff. Do you call that forcing for egg production? They laid well and are laying even better now. They were hatched in February and March, 1905, and I commenced to save eggs for hatching in December, 1906. I did not hatch more than 40 per cent of fertile eggs. Do you think it was on account of the forcing or their age? B. X.

W. Richfield, Ohio.

Answer—The low percentage was due to the age of the fowls and to the season of the year. Spring is the only natural breeding season and is when the large per cent of fertile eggs are laid.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Will you kindly answer me through your "Question and Answer Department" what would be the right number of ducks to keep to raise ducks for market as a business and how much ground would be required? P. E. B. Clay, Calif.

Answer—Your question is too indefinite to permit of an intelligent answer. Would suggest that you procure some good book on duck culture, which would give you more general information than can be given here, where our space is limited.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Here are a few questions I would like to have you answer in your paper: 1st. I have a hen that has been sick for some time with a swollen head and neck, and when she walks steps very high and at times will hold her head up and gasp for breath. Can you tell me what is the matter and a cure for her? 2d. How do you select the laying from the non-laying hens? J. L. A. Central City, Iowa.

Answer—1st. Swelled head comes from a cold, and unless the fowl is a very valuable one would not advise doctoring. A cheap and simple remedy is lard and kerosene oil. Melt a lump of lard the size of an egg, to which a tablespoonful of kerosene oil is added. Give a tablespoonful of this three times a day; also rub some of the mixture on the head and throat. Unless the case is of a very severe character this will have the desired effect in three or four days. 2d. By consulting the advertising columns of AMERICAN POULTRY JOURNAL you will find the advertisement of firms who sell the secret of how to tell the laying hen.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Please answer the following question in JOURNAL: What is cause and remedy (if any) for following complaint: My incubator-hatched chicks, two to three weeks old, seem hardly able to draw another breath, then seem all right for a day or two, but finally all die. E. P. Bingham City.

Answer—The trouble is caused by improper feed and care in the beginning.

Bred to Lay
198 egg strain of Barred Rocks. Eggs, \$2.50 per 15, \$12 per 100. Circulars free.
J. W. PARKS, Box A, Altoona, Pa.

If chicks are given the proper start all this trouble will be avoided. Read the articles on the care of little chicks in the April and May issues of the AMERICAN POULTRY JOURNAL and follow the instructions given therein. The writers of these articles have went through the school of experience and know whereof they write.

Editor AMERICAN POULTRY JOURNAL.
Dear Sir: Will you please answer the following in the next issue of your paper. (1) Will Rose Comb Rhode Island Reds ever produce single comb chickens?

disease. I keep the houses clean and fresh water for them twice a day. Grit, oyster shells and charcoal before them all the time, and fowls also have free range on a 16-acre farm. **J. M. C. Lakewood, N. J.**

Answer—Canker is due to a cold and is really a form of roup. This is due to various causes, such as being allowed to roost in drafts, being caught out in a cold spring rain, roosting in poorly ventilated quarters, etc. There are several good cures advertised in these columns, and would suggest that you procure one of them and use as directed.

EDWARD 4th
FIRST PRIZE NEW YORK 1906.
FIRST PRIZE BOSTON 1906.
BRED & OWNED BY
D. W. YOUNG RIDGEWOOD N. J.

D. W. YOUNG'S NEW YORK COCKEREL.

Beauty and business is well combined in the New York winning White Leghorns of the present. It is a constant source of gratification to note that American fanciers are building their ideals along practical lines and that the most prolific races are prime favorites. D. W. Young, of Ridgewood, N. J., knows the history of the best strains of White Leghorns that have led in American show rooms, and believes in their future as one of the most valuable producers of fancy eggs for New York markets. That his strain can hold its own in Madison Square Garden the records prove. To quote Mr. Burgott, who judged the class this past winter, he said, "The 1st White Leghorn cockerel at Madison Square, as an all round specimen, I consider the best that has been shown there—his type the very best."—F. L. SEWELL.

(2) If so what would be the average per cent of single combs? (3) Would single comb Reds produced from rose comb parents be good for breeding single comb Reds? If not, why?
Springfield, Mo. R. O. C.
Answer—1st. Yes. 2d. We cannot say. 3d. No. The chances are that the percentage of good combs secured from such breeding would be so small that the experiment would be a failure.

Editor AMERICAN POULTRY JOURNAL.
Dear Sir: Please let me know through your paper the cause and cure for canker. I have a lot of S. C. White Leghorns and have several sick with this

Editor AMERICAN POULTRY JOURNAL.
Dear Sir: Will you please answer me the following questions in your valuable journal: I have a nice flock of Barred Plymouth Rock chickens and as fine a male bird as you want to see; all seem to be in the best of health. I hatched two settings of their eggs and only about one-third of the peeps came out, but could not walk, or not even stand on their feet. All of the eggs were fertile, but the peeps seemed too weak to pick the shell. I feed wheat and corn and all the green cut bone they want to eat. What is the cause of this? All of the baby chicks died the second day.
Elizabethville, Pa. H. M. C.

Answer—This is probably due to too close confinement of the breeding stock during the winter season, which causes a lack of vitality in the germ, or it may be due to an over fat condition of the fowls. Green cut bone should not be fed oftener than three times a week; about two ounces to each fowl.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Please answer through your valuable paper the following questions: 1. What kind of buildings, yards, etc., are needed for the proper care of pheasants? Are they a profitable bird to raise on a small farm? 2. What is the best kind of a floor for a poultry house? Is a cement floor good? 3. What kind of chickens are best for market and what kind are best layers? 4. What kind of an incubator is best? 5. How large a poultry house is needed for 300 White Leghorn chickens? They are to have free range at all times. J. D. K.

Redfield, S. D.

Answer—1st. Read the series of articles on Pheasants beginning in May number of AMERICAN POULTRY JOURNAL. 2d. In our opinion a cement floor is best for poultry house, as it is rat proof, if properly constructed, and is very easily kept clean. 3d. We never say what kind of fowl is best, as our opinion would no doubt conflict with a large majority of the breeders of the country. 4th. This is a question that we never answer, except to say that all machines advertised in our columns we believe to be all right, otherwise we would not allow their advertisements to appear in our paper. 5th. A house 25x100 will accommodate 300 head of Leghorns where they have free range at all times.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Will you please answer in the "Questions and Answers" department of the AMERICAN POULTRY JOURNAL and tell the cause and cure for feather pulling and eating; also where the depluming mite does its most destructive work, or rather if it is usual for it to work in other sections without depluming the head very much.

Fort Wayne, Ind. G. W. F.

Answer—The habit of feather pulling is usually contracted during the winter months when fowls are confined in close quarters, and is due to the fowls having nothing else with which to keep occupied. Where fowls are given plenty of exercise this habit is unknown. When once contracted it is almost impossible to break them. A solution of aloes sprinkled on the feathers is recommended as being quite effective. The depluming mite generally does the most damage around the neck, but has been known to work on other parts of the fowl.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Will you please publish in your next journal a cure and prevention of gapes in little chicks and turkeys?

J. A. C.

Hicksville, Ohio.

Answer—The cause of gapes is the parasite worm known as the *Syngamus trachealis*. These worms attach themselves to the mucous membrane of the trachea and suck the blood of the bird, which forms their nourishment, and, in doing this, set up considerable irritation and even inflammation. The large and vigorous birds are not seriously disturbed by the presence of this parasite, particularly if the worms are not very numerous. Small and weak birds, how-

ever, are unable to successfully resist the combined effect of the loss of blood, the inflammation of the trachea and the obstructed respiration. The strength is rapidly lost, and the windpipe becomes obstructed until finally the bird dies of exhaustion or asphyxia. The affected chicks should be confined where they cannot mingle with the remainder of the flock, as this disease is scattered by the fowls coming in contact with the worms that have been caught up by the afflicted chicks and that have found lodgment in feeding and drinking vessels or on the ground itself. The runs and houses in which the chicks have been confined should be thoroughly cleaned and disinfected with a 5 per cent solution of carbolic acid. For treatment of the afflicted birds, take a feather, strip off the web to within an inch of the end, and moisten it well with oil of turpentine. Hold the chick firmly in the hand, force the mouth open and when the wind-pipe is open for breathing insert the feather, giving it a quick turn and removing it promptly. Two or three applications of this will bring the chick around all right. A good internal treatment is two or three feeds of garlic mixed with soft feed in a proportion of one good-sized bulb of garlic to about ten chicks. Camphor in the form of pills is also a good remedy, a dose being one-half to one grain twice a day. There is also on the market several Gape Worm Extractors and remedies which do the work very effectively.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Please answer in your next issue the following questions: How many points should a thoroughbred Single Comb Rhode Island Red cock have on his comb? And are the hens the same? How to mate your pens to produce pullets? Mrs. A. R.

Madrid, N. Y.

Answer—The comb of a S. C. Rhode Island should have five, even, well-defined serrations. Same for female. Questions in regard to mating, etc., occupy too much space to be answered here, but are answered from time to time in the general reading columns.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer the following questions in June number of the AMERICAN POULTRY JOURNAL: 1. What is the cause of diarrhea? 2. What is a remedy for it after the chickens have got it? 3. How can it be prevented? 4. What is the best thing to feed little chickens? A. T. S.

Rosemont, N. J.

Answer:—Diarrhea is caused by too much or too little heat in the brooder; by improper feeding and various other causes. 2. Boiled sweet milk, to which has been added a little cinnamon, is one of the best and most simple remedies for bowel trouble in chicks. 3. Bowel trouble can be prevented by starting the chicks off right and not keeping too many together. Where too many are kept in one brooder they are liable to "bunch" up and those in the center will become too warm and sweat, and as soon as they are exposed to the cool air will get chilled and bowel trouble will be the result in a few hours. 4. Any of the chick feeds advertised in these columns.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Will you please answer the following questions in the June number of the AMERICAN POULTRY JOURNAL: 1. Would an outdoor brooder give good

results when used in a brooder house that is not heated? Will it give as good or better results than an indoor brooder used in the same way? 2. What kind of chickens are best for market? 3. Is a cement floor as good or better than a wood floor for a poultry house? 4. Which is the best for a poultry house: double boarding or plastering? 5. Is a poultry house which has part of the front covered with muslin cloth as good or better than one which has not? 6. Is a hen house that is double boarded as easy to keep free from vermin as one that is plastered? 7. Should a hen house which has an open front be either double boarded or plastered? 8. What kind of ducks, geese and turkeys are best for market? 9. Where and at what price may a book telling how to properly care for pheasants be obtained? 10. What kind of hens lay best during the winter months?

Athol, S. D.

J. K.

Answer:—1st. No. 2d. We never say which is the best variety of fowls for any purpose, as opinions differ on questions of this kind. 3d. A cement floor, well covered with litter, is the

best floor, as it is rat proof and very easily kept clean. 4th. This is a matter of opinion; personally, we prefer the double board wall. 5th. This all depends on the climate. In your locality we would not advise the use of muslin for winter use. For summer it would be all right. 6th. Yes, if plenty of whitewash is used. 7th. No. 8th. This has to be determined by the market you are catering to. 9th. We are unable to say. 10th. Any standard variety of fowl that is given the proper care and feed will lay during the winter.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer the following questions in your next issue: 1. What is the cause of eggs becoming chalky in the incubator? Some of my eggs have a thick covering, resembling chalk, which covers the hand in handling them. 2. In my last hatch I had a number of dead birds that were fully developed and seemed to be all right, except that the tail end was stuck to the egg and seemed to be partly decayed; the yolk was not all absorbed, and had an offensive smell. What is the cause? 3. Is an incubator any good when the heat in the egg chamber changes one degree for every five degrees change in the temperature of the room? I called the attention of the manufacturer to this point, but he only gave me a slurring answer and said that I had no cause for complaint.

N. S.

Spanish Fork, Utah.

Answer:—1st. This is due to some mineral substance to which the fowls have access. 2d. This is sometimes due to a lack of moisture, but more frequently due to the improper ventilation of the incubator or a lack of cooling down the eggs enough during the hatch. 3d. We cannot condemn the incubator, as the fault may be with the operator. All incubators will vary to a greater or less degree, as the outside temperature changes. If the regulator is adjusted in the proper manner before the eggs are put in very little trouble should be experienced during the hatch.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Will you please answer the following questions in the next issue of the JOURNAL: 1st. I have lost several fine Buff Plymouth Rock chicks which were all affected alike with bowel trouble. They looked strong and healthy until about five or six days old, when they began to droop around and sleep a good deal, and their discharge was a thin, chalky substance; this continued about one or two days and they finally failed to have an action and soon died. 2d. Is 6-foot chicken wire high enough to hold turkeys and geese in a 10-acre pas-

ture? 3d. Is there a breed of geese that raise two broods of goslings the same season, laying the second litter of eggs while carrying the first goslings? If so what is the name of them and where could I get them?

G. O. L.

Dallas, Texas.

Answer:—1st. Bowel trouble in little chicks is the cause of more loss than all other diseases put together, and is usually the fault of the caretaker. Sometimes they are fed too soon. Little chicks should not be fed before they are at least 48 hours old and then only a very little. Feed often and a little at a time. Read answer to A. T. S. in this issue. 2d. A six-foot fence will not confine turkeys unless one wing is clipped. It will be all right for geese unless they are unusually wild. 3d. We are unable to say.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—In your next issue please answer questions and oblige: 1. I have fifteen Brown Leghorn pullets. All of them have had lameness in heel toe, causing toe nail to come off. What is cause of the disease and remedy? 2. Are the birds fit to breed from?

R. C. W.

Amity, Maine.

Answer:—1st. This is no doubt a form of scabies. Soak the feet in warm, soapy water, after which apply carbolic ointment or balsam of Peru. This is a contagious disease and, therefore, you should thoroughly disinfect your houses and yards with a five per cent solution of carbolic acid. 2d. Would not advise their use as breeders.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Am a subscriber to the AMERICAN POULTRY JOURNAL and would like to ask a few questions: 1. I hatched a lot of chicks in April and in a few days they began to droop. I examined them and found that their crops were inflated with air or what seemed to be. Will you please give cause and cure. 2. Have a cock that appeared sick and could hardly crow; caught him and found that he had something like phlegm in throat. What is cause and cure for same? 3. Had a laying pullet to remain on roost; took her off; she drooped about for an hour or so and fell over and died; her crop was full; it contained all the food given her the previous night. I examined her and found her intestines to contain twelve or fifteen round white worms, two to three inches in length. They were very tough and hard and seemed to have pin-like points at both ends. Was the cause of death worms? What will expel them?

Humble, Tex.

T. J. B.

Answer:—1st. Improper feeding is what caused your chicks to get in this condition. There is no cure for this. It does not pay to doctor little chicks, and there will be no reason for doctoring if chicks are started off right in the first place. Read the articles on care of chicks that have appeared in the columns of AMERICAN POULTRY JOURNAL for the past three months. 2d. This is caused by a cold. Give three drops of syrup of ipecac twice a day; force the bird to inhale the steam from boiling water in which has been placed a teaspoonful of carbolic acid to a gallon of water. 3d. The worms were probably the direct cause of the fowl's death. Turpentine is one of the best remedies for worms. Take a small piece of sugar and put two or three drops of turpentine on it and force it down the fowl's throat. Repeat the dose every other day for about one week.

1884. WILSON'S BUFF COCHINS

and Light Brahmans, winners of the blue at some of the largest shows. Eggs \$1 to \$2 a setting.

W. N. WILSON, Box H 768, Waterbury, Connecticut

YES SIR, IT'S A FACT

The REMARKABLE INCREASED POPULARITY OF

COLUMBIAN WYANDOTTES

during the past few years clearly indicates they are destined to be acknowledged the premier variety of America's most valued breed. And why? Well, because they have given abundant evidence of being steady, all-the-year layers. Grow with quick vigorously—early developing the chubby body characteristic of the Wyandotte breed, and which has given them their unapproachable pre-eminence as the standard commercial fowl of America, and last, but by no means least, their dark hackle and tail cont ast pleasantly with the soft whiteness of body plumage.

EGGS FOR HATCHING, \$5 THE SITTING

Next fall I shall have a grand lot of early hatched cockerels and pullets for sale—progeny of carefully selected breeders,

MY WHITE WYANDOTTES

are excellent layers. Eggs, \$3 the sitting; 4 sittings, \$10. Baby chicks, 18c and 25c each. Why not procure new blood from me this year and lay the foundation of a persistent rough weather laying flock—the kind that pays? Send for useful desk blotter—'tis free.

Box C, Union Stock Yards, CHICAGO.

WHITE'S CLASS ADVERTISING CO.'S BANQUET AND TALLYHO TRIP.

The annual banquet of the White's Class Advertising Co., of Chicago, was held May 22nd at the Auditorium Hotel in this city. There were over 600 in attendance, made up of representatives from twenty different states. It was given in the main banquet room of the hotel, filling that immense room and overflowing to the smaller dining rooms. After the banquet, the tables were removed and a splendid program, including vocal and instrumental music, and speeches by some of the best representatives of the different industries represented.

This annual event is given by these people for the purpose of bringing together the advertiser and the publisher, and is always an occasion of much social interest for those who have so much in common in these lines of work.

The next morning at 11 o'clock five big six horse tallyho coaches were provided by the White's Class Advertising Co. and the guests started from the office on Dearborn street, and were driven to the mail order house of Crofts & Reed and given an opportunity to thoroughly investigate the plant and its methods of business. From there they were driven to the plant of Sears, Roebuck & Co., and were entertained at luncheon in the dining room of this immense concern. The visitors then had an opportunity of going through the plant.

The White's Class Advertising Co. are to be congratulated upon this success, both of the banquet and the tallyho excursion, which latter was an innovation

and added much to the pleasure of the event. This has grown to be a well fixed custom with these people and each year they succeed in adding pleasant features and giving the guests the opportunity to become personally acquainted.

WINNERS IN SUBSCRIPTION CONTEST.

Following are the names of our agents who won the principal prizes in our great contest which closed May 20th: Prize.

- 1—N. E. Burroughes, Kentucky.... 651
- 2—S. M. Yoder, Maryland..... 352
- 3—W. A. Mumaw, Ohio..... 325
- 4—A. D. Homan, Ohio..... 323
- 5—W. E. Poorman, Pennsylvania... 303
- 6—Ira Sitterly, New York..... 289
- 7—O. J. Truman, Ohio..... 265
- 8—Wm. Gillespie, Ohio..... 240
- 9—Wm. Schadt, Indiana..... 234
- 10—J. F. Anderson, Arkansas..... 216
- 11—Conrad Terrettie, Indiana..... 206
- 12—J. E. Farmer, New Jersey..... 205
- 13—D. N. Bayhan, N. W. T., Canada. 184
- 14—C. L. Carney, Illinois..... 182
- 15—Wm. Niers, Iowa..... 181
- 16—Rev. J. Hewitt, Kansas..... 174

Great interest has been taken in this contest from beginning to end, and we congratulate the winners upon their success. We wish to heartily thank all for the interest they have taken in AMERICAN POULTRY JOURNAL and their good work for it. There are agents who did creditable work, but who did not procure quite enough subscriptions to win the big prizes, but all of them are entitled to the special premiums which we offered, and those whose names are not included in the above list are requested to make their selection from the premium list and let us know at once, if they have not already done so. If we do not hear from you within two weeks, we will advance your own subscription at the rate of one year for every ten subscriptions you have sent us. We would be pleased to have all our old agents continue taking subscriptions at the regular price, 50c per year, giving you a commission of 15c, and sending us 35c.

Let Me Hand You My Latest Book on Poultry Culture ABSOLUTELY FREE

I want to send you a copy of this book free. It is a gold mine of practical information for the poultry-raiser. I call it "An Easy Lesson in Poultry Culture," because the lessons it teaches are easy to learn and easy to apply. My object in publishing this book is to point out how dollars in place of cents can be made in producing poultry and eggs for market purposes. It is stated so plainly that the novice can follow the directions and make a success of the poultry business. I especially commend the chapter, "The Back-Lotter" to the city dweller who wants to "try-out" this business before going into it on a large scale. And then I have another book—a good companion for this one—"Poultry Feeding for Profit" that you should have also. It is full of feeding facts that I know, from actual experience, will be valuable to every chicken raiser. It gives feeding methods and information that will be helpful every day, for every fowl on your place—from the little chick "just out" to the old hen you are fattening for market. There is lots of money in the poultry business if you know how to handle chickens right. These two books will give you all the information you'll need—information you can put into practice. You cannot get this information anywhere else. Write today, I will send both books free, and also send my catalog on Model Incubators and Brooders the latest and most successful hatching and rearing machines on the market.

CHAS. A. CYPHERS, 301 HENRY ST., BUFFALO, N. Y.

Do not confuse me with any Company, and be sure to include my street address.

Member of the Orpington Club of Canada.**THE WORLD'S BEST Buff Wyandottes.**

Ten grand special matings. Prices on eggs reduced for balance of season. Send for mating list.

RALPH W. STURTEVANT Lock Box B, : Beloit, Wisconsin**DO YOUR CHICKENS FLY OVER THE FENCE?**

In another column of this issue will appear an advertisement of interest to every breeder of the feathered tribe.

One of our patrons has invented and placed on the market a simple little device very aptly termed a WING-HOBBLE, (which is attached to one wing of any fowl and positively prevents flying. It can in no way mar or injure the plumage, even that of the rarest specimen. Every breeder has been more or less troubled with his birds flying out of their yards, crossing with other pens or trespassing in other ways upon forbidden ground. Clipping the wing ruins our birds for the show room, also discounts them heavily when offered for breeding purposes. The Wing-Hobble is especially serviceable in yarding turkeys or any of the smaller breeds of chickens where high fences otherwise would be imperative.

This little device has been on the market for something over a year and the increasing demand for the hobble is the best evidence we have of its merits. It will pay you to look up the ad.

U. R. FISHEL'S ANNUAL SALE.

For several years it has been the custom of U. R. Fishel, Hope, Ind., to have a special sale of his noted White Plymouth Rocks at this season of the year, and this season will be no exception to his well established rule, and for the next ninety days he will sell choice birds at very low prices.

These annual sales of Mr. Fishel's give the people a chance to get some of his noted stock at prices that otherwise a great many could not afford to pay. He has issued a special sale list describing just what he has to sell, with prices and other information. His sale this season will include a number of high-class prize winners, choice exhibition birds, selected breeders, besides utility flocks of different numbers.

Anyone who is at all interested in White Plymouth Rocks cannot afford to miss the many bargains he is offering.

For the balance of the season he is selling eggs at half price.

Mr. Fishel has a large 48-page catalogue which he will send to anyone for a 2-cent stamp. Special sale list mailed free. Drop a postal for it today and mention AMERICAN POULTRY JOURNAL.

IMPORTANT LETTER.

Great Success from Feeding Purina Baby Chick Feed.

Poultry raisers everywhere, both experienced and beginners, will be interested in this letter:

Quincy, Ill., April 9, 1906.

Ralston Purina Mills, St. Louis, Mo.

Gentlemen: It gives me pleasure to report highly successful results from Purina Baby Chick Feed, which we have used this spring. We have a flock of chicks of extra good quality that we are anxious to bring through, and your Baby Chick Feed has done the work. Yours very truly,

(Signed) **F. PIGGOTT.**

If you have never tried Purina Baby Chick Feed, write the makers today for full particulars. Address Ralston Purina Co., Dept. B 1, St. Louis, Mo., and mention this paper.

It may interest many of our readers who have not gotten out chicks as intended to know that Mr. Groesbeck, of Hartford, Conn., proprietor of Elm Poultry Yards, offers little chicks for sale for the balance of the season at \$15 per hundred. These are shipped successfully on 60 hours' trip and furthermore safe delivery is guaranteed. His adv. on page 661 this issue will interest you.

BARKER'S LIGHT BRAHMAS.

ALWAYS WIN

Barred Rocks, White Rocks and White Wyandottes.

During the past season I exhibited 37 birds and won 27 prizes, including 11 firsts and five specials. Eggs \$2.00 and \$3.00 per fifteen, one-half hatch guaranteed.

T. E. Quisenberry Slater, Missouri

Dakin's W. Wyandottes.

PREMIER STRAIN OF STANDARD TYPE

Bred and raised more winners of the very highest awards at New York (Madison Square), Boston, Chicago and St. Louis than any other. This is a fact. Some know it—you ought to. You can't get good results from cheap inferior stock, that's sure. Limited number of stock, and eggs for hatching.

JOHN L. DAKIN - Roxbury, Mass.

Rhode Island Reds

Greatest Winnings of The Season

At the great A. P. A. Show, Cincinnati, 1906, I won on S. C. B. I. Reds, four 1sts, three 2ds, five 3ds, two 4th. On R. C., two 1sts, three 4th, four 5th and special for best shape and colored female in Single Comb. Also three silver cups. Send for free circular.

LESTER TOMPKINS, Concord, Mass.

Seip's Barred Rocks

Seip's Pride holds the record of winning 1st at Kansas City in 1903, 1904, 1905, and 2d in 1906 as cock bird. Stock at reasonable prices. Eggs \$3 per 15, \$5 per 20.

B. F. SEIP - Cameron, Mo.

HANCHETT'S LINE BRED BUFF COCHINS

What other breeders are striving for in shape, color and feathering, my birds already possess. They win everywhere for my customers, even at New York. Write, stating your wants.

H. N. Hanchett : Jackson, Mich.

Buff Orpingtons

At Minneapolis and St. Paul, 1906, won seven 1sts, two 2ds, two 3ds, two 5ths, two specials and two sweepstakes. The utility qualities of our birds are also worthy of attention. Order eggs early.

G. A. GIBSON : R. R. 2, Hector, Minn.

ORPINGTONS

Rose and Single Comb Buff, Black, and White Orpingtons. Won medal for best display at Chicago, 1905. 24-page catalogue in colors for stamp. Stock for sale. Eggs for hatching from wonderful stock. You owe it to yourself to write me.

C. F. Bailey, No. 2, Coldwater, Mich.

FARM FENCES.

Fences on a well fenced farm cost so much that it is of the utmost importance to thoroughly investigate quality before buying.

A good fence, like your farm buildings, is a permanent improvement, an investment that you can hand down to your heirs. It holds all your stock all the time, prevents intrusion from neighbors' stock, and lasts.

Page Fence is undoubtedly the best fence investment, because it is made of the strongest coiled coil spring wire, heavily galvanized, and is woven in the most practical manner—just horizontals and cross bars woven together. No locks, no staples and no cut ends or rough joints. The woven fabric cannot come to pieces.

The Page Fence Company make all their own wire. Page wire contains enough carbon and receives just the proper physical treatment to give it double the tensile strength of common fence wire of the same size and also the springiness of a high grade wire spring. It is the only fence wire that will hold the coil shape.

If you need fencing now, or in the near future, turn to their advertisement on another page of this issue and write them. Their printed matter covers all the points of superiority of Page fences and tells how it may be erected at the cost of common soft wire fencing.

HOW TO KEEP EGGS FRESH.

There is not a poultryman or farmer living but that could make more out of his eggs if he had a good egg preserver. Good eggs always bring good money, but there are times when they bring a great deal better money. The only trouble is to preserve the eggs strictly fresh until that time comes.

The secret of egg preserving as worked out by Rolla A. Willett, Anderson, Ind., is the very best, simplest and cheapest method known, and is doing much for all of its users. It costs but a trifle to preserve eggs under the Willett formula and they can be kept for almost an indefinite period. Willett's Pure Water Glass Preserver accomplishes exactly the two things required of an egg preserver, namely, preserving eggs really fresh and with a fresh laid appearance. Immense quantities were sold last year and it gave satisfaction everywhere. It is highly recommended by the United States and German governments and it is also guaranteed by Mr. Willett, if used according to his directions.

The following testimonial letter from M. L. Grant, of Bee, Neb., under date of January 19, 1906, shows how the users regard it:

"I wish to say that I am more than pleased with your Water Glass Egg Preserver. It is strictly a high class preserver. My experience is of the best. Have put down eggs in your water glass and kept them six months, and put them on the market fresh as when they were laid. Buyers, who pretend to know at sight packed eggs, have remarked to me: 'Oh! what nice fresh eggs.' And they speak the truth, for eggs put down in your water glass are as strictly fresh at the end of six months to my knowledge, and I fully believe they can be kept for a year or two by this method, and I highly recommend Willett's water glass to anyone wishing an egg preserver. It's simply remarkable and I would not be without it."

The prices of the Willett preserver are the same this year as heretofore, \$1 a gallon, which is enough to preserve 100 dozen eggs. The Willett preserver is advertised regularly in this paper. Orders should be sent direct to Mr. Willett or to his company as named in the advertisement, to Box 56, Anderson, Ind.

Anyone wanting White Wyandottes will do well to correspond with B. S. Hume, manager of Glen Echo Poultry Farm, French Village, Ill. You will receive fair and upright treatment at the hands of this able manager. His plant is located on top of bluff of Mississippi river, just three miles from East St. Louis. Anyone wishing to visit his plant can go by way of interurban electric line, which runs between East St. Louis and Belleville, and passes his door.

R. H. Robson, Urbana, Ohio, has reduced the price of his Buff Rock eggs for the balance of the season to \$1 per 15. He also has a few choice breeding birds for sale cheap. Write him and mention AMERICAN POULTRY JOURNAL.

"Canada's Best" Buff Leghorns.

Awarded 57 best prizes at foremost 1906 shows, New York, Chicago, The Ontario. Postal brings new catalogue. NATE K. CORNWALL Drawer A, Thamesville, Ontario, Canada

COCHIN BANTAMS Black, White and Buff.

Seven first prizes at Madison Square, 1904.

"BRED TO LAY" WHITE GOLDEN WYANDOTTES

Choice matings and eggs from the finest bred strain of Wyandottes. If we haven't the stock on hand we will tell you so, for we never fill orders through outside parties, giving you inferior stock when you have paid for the best. "Get what you pay for," our motto.

KENILWORTH POULTRY YARDS, Kenilworth, Ill.

Natural Incubator Chicks.

are strong and healthy because this incubator supplies fresh air in just the right way and in the right quantity. Made of Glazed Paper Board, same as car wheels are made. Can't warp, crack or split. Freight paid as far as Mississippi River.

Perpetual Hen Co., 12 Eschar St., Trenton, N.J.

Prompt And Honest Treatment

is our motto. We are making a specialty of the egg trade this season from prize winning snow White and Silver Wyandottes. If you want the best send your orders to the Sunny Heights Wyandotte Farm; \$2 per 15 eggs; three settings for \$5.00. Also Fox Terrier pups, fine as silk.

G. W. CAMPBELL & SONS, MT. VERNON, INDIANA

CHEAP SUMMER RATES TO CALIFORNIA.

The transcontinental lines always have made reductions in the round trip rate to California for a few days each summer, account some big national gathering. Not until this year were such low rates authorized for the entire summer. This new departure was adopted in order to stimulate travel to California, and thereby induce Americans to see their own country first, instead of going abroad.

Beginning June 1, and until the middle of September, first-class tickets will be sold to the principal California points at \$75 from Chicago, \$69 from St. Louis, \$60 from Kansas City, and proportionately from the east generally. These tickets will be limited for return until October 31.

The Santa Fe also announces that the summer rate to the Grand Canyon of Arizona and return, also to Phoenix and return, will be \$5 less than the above figures. Tickets sold at rates named will be honored on the California Limited.

During the last week in April and the first week in May, also during the last week in June and the first week in July, the Santa Fe will make a rate of about one fare to California and back, account Mystic Shriners' convention at Los Angeles and N. E. A. convention at San Francisco. Several special excursions will be run from Chicago by way of the Grand Canyon.

GOLD MEDAL FOR DIP, DIPPING TANKS AND DIPPING PROCESS.

The first and only gold medal that we know anything about that was ever awarded to a dipping preparation was won by the Moore Chemical & Mfg. Co. on the Car-Sul Dip.

Moore Chemical & Mfg. Co., Kansas City, Mo., is the pioneer in the dip and dipping business; in fact, this company originated

the dipping tank and its Car-Sul Dip has gained a world wide reputation.

The Gold Medal was awarded them by the St. Louis World's Fair Commissioners for the record they made at that exposition and the excellent disinfecting work done in the live stock department. The award of this highest and only prize issued not only on their dip and disinfecting preparation, Car-Sul, but embraced their tanks and dipping process as well.

This is a decided triumph for the Moore Chemical & Mfg. Co., and will add still more to the confidence that thousands upon thousands of stock raisers and farmers have in all products put out by this company.

One thing that has done much to build up the reputation of this company and its products is the fact that their Car-Sul Dip and all other preparations are always uniformly good. Each gallon is just like the other, and as an additional protection to the public against substitution and consequent disappointment, every can is sealed with a red label bearing their "Mark of Merit," an illustration of which we show here.

Whether it be Car-Sul Dip, Red Label Lice Killer, Fli-Kill, Moore's Hog Remedy, or anything else manufactured by the Moore Chemical & Mfg. Co., this "Mark of Merit" label is there, and this unique monogram has been used from the beginning of the business.

Another thing which will interest many of our readers is that this firm has the reputation of issuing very complete and instructive booklets on their different preparations, and anyone who wishes literature on dipping hogs, sheep or cattle or disinfecting their quarters, or those who are handicapped in their poultry operations by

the lice pest, will do well to address the Moore Chemical & Mfg. Co., Kansas City, Mo., and ask for hints on any live stock troubles they may have. The mention of this paper will be all the introduction you will need to insure yourself prompt attention.

PROFIT IN CAPONS.

The wise farmer, looking to profit, sees more weight in the steer than the bull. Poultrymen are finding that it pays well to raise capons instead of cockerels. What to do with the cockerel has been a problem, as they are hard to fatten. On the market the capons always find a quicker sale and at nearly double prices than ordinary chickens. A very instructive book on raising capons has just been published by George P. Pilling & Son, of Philadelphia, Pa. It shows how farmers and poultrymen can easily make a big increase in the revenue of the poultry yard by caponizing. There are instructive chapters on feeding and dressing capons. Readers of AMERICAN POULTRY JOURNAL can obtain a copy of this interesting book by sending to George P. Pilling & Son, of Philadelphia, Pa., enclosing a stamp for postage. A full set of capon tools are sold by the above firm for \$2.50. They will send you a set with full directions, including book, on receipt of price.

INTERESTING BOOK, "CHICKEN CHAT."

One of the simplest and cleverest little booklets that has come to our attention is Zenoleum Chicken Chat, issued by the Zenner Disinfectant Company, 117 Lafayette Ave., Detroit, Mich. This contains a series of poultry diseases giving symptoms, cause and remedies for practically all the diseases to which poultry is heir. Each of our readers should have a copy. Sent free on request.

KEELER'S W. WYANDOTTES

"THE WORLD'S GREATEST STRAIN"

Winning for the past ten years in my own and my customers' hands in the largest and hottest shows in America, including the World's Fair, St. Louis, the Lewis and Clark Exposition, Chicago, Indianapolis, Philadelphia, San Francisco and Washington, D. C.

Scotch Collie Dogs

Catalogue showing new 400 capacity henneries, free.

Beautility Henneries R. 13, Battle Creek, Mich.

WHITE BEAUTILITY WYANDOTTES

EARTHQUAKE HITS THE PETALUMA.

One of the large sufferers in the late California earthquake was the Petaluma Incubator Company. Not that the great factory at Petaluma was destroyed or seriously injured. The shock was distinctly felt there and some damage was done, but the factory is again in full operation. But it was in the ill-fated city where their great damage occurred. The branch house and warehouses in San Francisco, where they did an enormous business, were entirely destroyed. But with characteristic western pluck and energy they set about reestablishing themselves at that point, and they report that they are already in a position to handle their western trade as if this disaster had not overtaken them. Fortunately they had stocked up the Indianapolis branch with a large number of incubators and brooders and hence continued to fill all orders promptly. We congratulate the Petaluma company on their escape from total loss and on their resourcefulness in being able so promptly to fill all orders without delay.

SAVING NIAGARA.

The question as to whether Niagara should be used solely as a source of mechanical power, or be preserved as a beautiful and wonderful natural feature, has come up in our day for permanent decision. There are some minds that have decided, for themselves, in favor of the former proposition. But they seem, fortunately, to be in a minority both in Canada and in the United States. Niagara is to be preserved both in what have been called its "little loveliness" and in its grandeur. America is "practical"; it has allowed its forest to be dangerously diminished, it has allowed Niagara to be seriously threatened; but American sentiment, when once aroused, is irresistible, and American sentiment has declared in favor of Niagara as Niagara.—From an editorial in the *May Century*.

"Ralph D. Paine, the author of 'The Praying Skipper and Other Stories,' recently issued by The Outing Publishing Company, has received a letter from M. Jacques des Gachones, editor of the French magazine, *Je sais tout*, asking permission to translate and publish his story, 'The Last Pilot Schooner.' This story is included in the volume mentioned and was originally published in *McClure's Magazine*. 'M. Gachones says of this story: 'It is so touching, vivid and picturesque that it cannot fail to please French readers, even in a translation.'"

A New Fuel.—The time is not far distant, probably, when anthracite coal will be superseded in many American homes by briquettes or cakes made from bituminous coal. The federal government has tested 150 different kinds of soft coal with a view of making bituminous coal available for household use, establishing its relative economy of the different kinds. The contents of old coal piles are washed and converted into briquettes, which, it is said, are almost free from smoke or waste. The use of briquettes is extensive in France.—*Good Housekeeping*.

Harmon Bradshaw, Lebanon, Ind., the Single Comb White Leghorn specialist, has issued a very neat and attractive catalogue and is desirous of placing a copy in the hands of every one of our readers who are interested in this variety. Mr. Bradshaw is an old breeder of this variety and has produced some of the noted prize winners. Write him for catalogue and mention AMERICAN POULTRY JOURNAL.

A. L. Emerson, the Barred Plymouth Rock specialist, Inkster, Mich., has as good a flock of this variety as there is in Michigan, and is selling eggs from five grand matings at prices that anyone can afford to pay for first-class stock. His stock has been winners at all the leading shows in Michigan and will produce winners. Write him today and mention AMERICAN POULTRY JOURNAL.

Clement & Fike, Libertyville, Ill., the noted White Wyandotte breeders, have reduced the price of eggs from their choice breeders to one-half for the balance of the season. Here is a chance for our readers to get some of this noted blood at a very low price. Send in your order today and mention AMERICAN POULTRY JOURNAL.

HY. J. BARNETT, Box 4, WINAMAC INDIANA

START RIGHT.

There are two ways in making a poultry start—right and wrong. Carefully consider what you wish to breed, for show or utility. If the show room be the aim, obtain eggs or stock from the best fanciers, and you won't go wrong. If it is winter eggs and many of them you are after, get eggs or stock from the best 200-egg strain. The two cannot be combined for greatest possible results. Choose between them.

J. HARRY WOLSIEFFER.

Iolink Poultry Farm, Egg Harbor City, N. J.

PRODUCING A SWEET TEMPER.

We do not know of any single thing that is more effective in sweetening the temper of the housewife on the farm than "Tolman's Cooking Range," advertised in this issue. It performs its work so satisfactorily and bakes so perfectly that there is no cause to find fault with it. When you open the oven doors and draw out the plump loaves of light, nicely browned bread, just done, and not overdone or underdone, you are led to exclaim "Tolman's Range is my favorite."

From an investigation that we have made we have come to the conclusion that this stove, "built to bake," has more friends than any other single stove that we know of, and it is all because it can be depended upon. It is a reliable baker. It does not disappoint you. It responds to its work and gives you satisfaction. One stove sells another and another until all the families needing new stoves around about it are supplied. It is one of the stoves that makes good. It is not only built to bake but built to last and to stand hard usage. The more that you investigate it the better you are satisfied with it. They offer the best bargains that are offered on any good stove. It is so convincing that you cannot resist giving it a trial, and that is all that Tolman's Range asks. It should make friends wherever tried. If interested in ranges at manufacturers' prices, turn to the page advertisement in this issue and write them, mentioning AMERICAN POULTRY JOURNAL.

Jos. A. Burkhart, Smithsburg, Md., who is the state's vice president of the National S. C. White Leghorn Club, announces a grand sale of 100 of this season's breeding hens one year old and a few extra good cocks. These birds are of the celebrated "Purity" strain, noted for their pure white plumage and yellow legs and beaks and their exceptional egg laying qualities. They will go at right prices, considering quality, in order to make room for young stock coming on. He makes an exceptionally

good offer if sold in lots of twenty-five or more, and in all cases will positively refund the money if the customer is dissatisfied.

Harry J. Wolsiefer, of the Iolink Poultry Farm, Egg Harbor City, N. J., informs us that on June 1 he will move his stock to the new farm, which will be conducted under the firm name of Schoyer & Wolsiefer. This farm consists of sixty acres, seeded to grass and fruit trees, and is an ideal place for best results in poultry raising. The combined flocks give them 214 head of mature White Wyandottes and puts them among the leaders in this variety. They now have 3,000 young chicks which will be given free range on the farm until ready to lay in the fall. They have stock for sale at all times.

Smith & Arford, of Oakwood Poultry Farms, Marshall, Ill., are making very low prices on eggs from their Single Comb White Leghorns for the month of June. Anyone wishing to make a beginning with White Leghorns or desiring to introduce new blood into his flock from handsome, pure white stock will do well to look up their ad in our columns or write to them for prices. They have a good show record, are perfectly reliable and will take pleasure in filling an order for a single setting or for a thousand. They are also breeders of White Wyandottes.

O. A. Bogardus, of Warsaw, Ky., won at Cincinnati, Ohio, January, 1906, as follows: Black Orpingtons—1st and 2d cock; 1st, 2d and 3d cockerel; 1st, 2d and 5th hen; 1st, 2d and 3d pullet; 1st pen; also two specials. Buff Orpingtons—1st cock; 4th hen; 2d cockerel; 3d, 4th and 5th pullet; 1st pen; also special for best cock, cockerel, hen and pullet. This is a record that Mr. Bogardus should feel proud of and shows that he has the right kind of stock. Write him for prices and particulars and mention AMERICAN POULTRY JOURNAL.

Mrs. A. J. Colvin, Pearl, Ill., has reduced her prices on eggs this month and is now offering twenty Barred Plymouth Rock or White Wyandotte eggs for \$1, and Bronze turkey eggs \$3 for 13. At these prices she should do a good business. Mention AMERICAN POULTRY JOURNAL when writing.

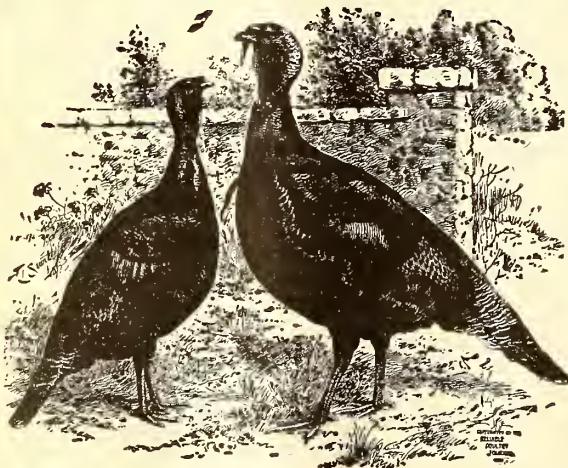

Parlor Poultry Yards, F. C. Tabor, prop., Worcester, N. Y., is advertising a midsummer sale of choice breeders of his Rose Comb Brown Leghorns, including first prize cock at Madison Square Garden. Write him for bargain prices and mention AMERICAN POULTRY JOURNAL.

Shed Roof Canvas Lighted House.

Hare-Curtis Hygienic House.

Apex House for Boys.

Suburban House with Two Rooms.

Portable Poultry Houses. Take Your House With You When You Move.

Our Portable Poultry Houses have been designed with a view to furnishing poultry keepers on rented lands a house that can be set up and taken down readily without driving a post or fixing them in any way to the ground. They are also just the thing for poultry farming on a large scale as they are easily moved from place to place. They are shipped "knock-down" with accompanying instructions how to set up; therefore the freight charges are low. **The Shed-Roof House** possesses two doors—one of wood, the other of canvas—either or both may be used. It also possesses a canvas window with wooden shutter. **The Suburban Poultry House** has two rooms—one with wooden floor the other being a scratching room. one window in each room. **The Hare-Curtis or Hygienic Poultry House** is specially constructed for a brooding house for young chicks, although equally suitable for old fowls. It is equipped with special roof for advanced mode of ventilation. **The Apex Poultry House** is a smaller, low-priced house for beginners—built for the boy to give him a start at little cost. Our big, free catalogue gives full photographic illustrations and description with sizes and price.

Experienced poultrymen who have encountered the disappointment of chicks dying without apparent cause are convinced that the following requirements in a brooder are absolutely necessary: 1st—The admission of fresh air in the Hover Chamber; 2nd—The introduction of Perfectly Regulated Heat Free from Oil, Fumes and Smoke; 3rd—Sufficient Floor Space for exercise during inclement weather. The combination of the two former requirements calls for such scientific construction as combines the fresh air with the heat and keeps both continually renewed. A box heated with a lamp cannot accomplish this. A scientific knowledge of heat and cold and the action of air currents (drafts) and ventilation is necessary. This knowledge aided by many years of practical experience in raising chickens has enabled the Cyphers

System in Poultry Practice BY JAMES SHACKLETON.

30 Chapters, 147 Pages, One Dollar, Postpaid.

April 10, 1906. Sales to this date in 1906 are vastly greater than in previous years, and are more evenly spread all over the English speaking world. Everybody having fowls need the book, and people who get it tell that to all their friends and acquaintances. It is the only book in any language that does, or ever did, take poultry keeping out of blind guessing into exact methods and constant improvement. Circular free.

The book and American Poultry Journal for one year for \$1.10 new or renewal.

JAMES SHACKLETON, Box A 12, Milburn, New Jersey

WHITE WYANDOTTES!

Rigg's White Wyandottes have been line-bred since 1897—bred for Wyandotte form and color and for egg production.

Shape and color characteristics have been firmly fixed. These Wyandottes are the low-down, blocky kind, in weight exceeding somewhat standard requirements.

Unapproached in size, style and finish, they have never failed to win the coveted prizes in the strongest competition, east and west. Every bird line-bred and pedigreed and sold on approval. Eggs: \$3 per sitting; two for \$5; three for \$7.

HOUDANS

Line-bred since 1874. Acknowledged standard of Houdan excellence in America.

Eggs: \$3 per setting; two for \$5; three for \$7.

THOS. F. RIGG IOWA FALLS, IOWA

Black Minorcas Rose and Single Comb. Britton's Black Minorcas are the best. Write your wants Circular free. **W. W. BRITTON, The Gleyne Minoreca Yards, Box W, Elgin, Ill.**

Wanted—every poultryman and farmer in America to try Pratts Lice Killer. Easy to handle and it does the work.

A "Ringlet" 1st Prize New York Cockerel and two of his Sons.

"RINGLETS" Soar Still Higher.

At the Imperial Show of the Nation
Madison Square Garden, New York

E. B. THOMPSON'S BARRED P. ROCKS

Stamped their superiority in the most decisive manner, winning again the Superb Challenge Trophy, value \$100, for best cock, cockerel, hen and pullet. This is the third time the "Ringlets" have won the grandest of all trophies, giving them now absolute and final ownership. In this "COLOSSAL CONFLICT" the "Ringlets" lifted the great National Sweepstakes Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. My Barred Rocks won double the number of silver cups and special prizes of any competitor, including the sweepstakes special in gold for best Plymouth Rock on exhibition male or female any variety.

The "RINGLET" World's Record of four years in succession at New York is a page of history. The "RINGLET" World's Record of first on exhibition pen at this great show, three years in succession, is the undisputed champion.

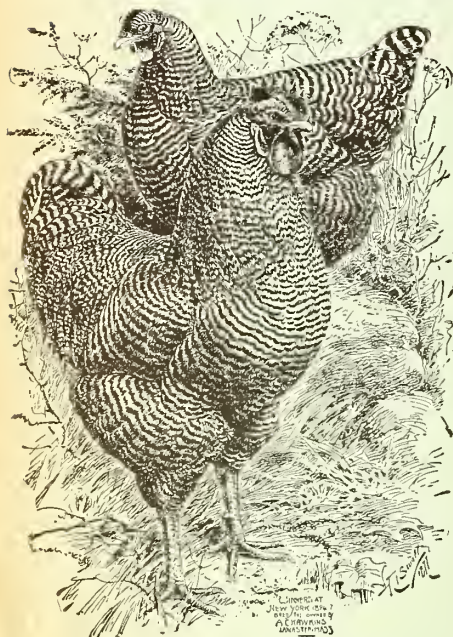

The "Ringlet" clean sweep 1st, 2d, 3d, 4th and 5th prizes on pullets has never been approached at Madison Sq. Garden, and stands alone and unequalled

The "Ringlets" have won at New York—exhibited by me personally—a grand total of 101 prizes, 48 of these are 1sts and specials, being more than double the number of 1st and special prizes won by any competitor in the history of the show.

GRAND STOCK FOR SALE

In any number. Rare bargains in yearling breeders in lots of a trio or 100. Show birds fit to win in the fastest company—600 choice breeding cockerels. Richly illustrated 36-page catalogue on application. It is full of original illustrations of New York winners from life. Eggs from finest exhibition matings. One setting \$5, two settings \$9, three settings \$12, four settings \$15. Address

E. B. THOMPSON, Lock Box 510, Amenia, Dutchess Co., N. Y.

ARTHUR R. PROBST Box 256, Pomeroy, Ohio

Young's Strain S. C. W. Leghorns I HAVE NO OTHER BREEDS

My strain again for the sixth consecutive year shows its superiority by winning more prizes at Madison Square Garden, N. Y., in the strongest competition ever known, than all others combined; including 17 specials, and again winning the Nat'l S. C. W. Leghorn silver cup. Two weeks later I almost duplicated my wonderful win of last year at Boston by winning 9 prizes on 9 entries against the most prominent breeders of the east. My winnings for 1906, at the world's 2 greatest shows, as follows: NEW YORK: Cocks, 1st, 3d, 4th; cks., 1st, 4th; hens, 2d; pul., 1st, 2d, 5th; pen, 4th. BOSTON: Cocks, 1st, 2d; cks., 1st, 2d; hens, 1st, 4th; pul., 2d, 3d; pen, 1st. This record has never been equaled by any other Leghorn breeder in America. Stock and eggs for sale at all times. 1906 mating list free. D. W. Young, Highland, N. Y. and Ridgewood, N. J. Address

ORIGIN AND HISTORY OF THE BREEDS

The Polish One of the Oldest of All Recognized Breeds of Poultry—Aldrovandus, an Italian who Wrote in Latin More Than Three Hundred Years Ago, Gave Wood Cuts of a Pair of Patavinian or Paduan Fowls, Which Bear Such Strong Resemblance to Our Polish as to Render Their Identity Very Probable—How the Breed Took Hold of the English Fancy and Later Made a Place for Itself in America—A Beautiful Fowl With an Individuality All Its Own.

Paper No. 13—The Polish.

Written by Thos. F. Rigg, Associate Editor American Poultry Journal.

The Polish or Poland fowls, among the most beautiful of all domestic poultry, appeal most strongly to the fancier, the utilitarian considering them more of an ornamental breed than a useful one. The modern Polish fowl is indeed a creature of beauty, and withal, possessing merit as an egg-producer. But it is as the fanciers' fowl that the race has been preserved and improved.

The origin of the Polish fowl is not definitely known. As Harrison Weir has said: "They are found in districts as widely apart as Russia, Turkey, Egypt, China and most parts of Europe."

Aldrovandi, writing in the sixteenth century, mentioned fowls with "tufts of feathers on head and throat."

Blumenback, in his book written in 1813, refers to the Polish as a remarkable variety of domestic poultry, "distinguished by a thickly feathered crest on the head and a ball-like protuberance on the forehead."

Mr. Harrison Weir, the eminent English writer and authority, has this to say of the fowls referred to by Blumenback: "In England this variety was originally known as the Hamburg, by reason of it being originally imported from that city. It was a breed much fancied in Holland, the Netherlands and in some parts of France, though the English dealers invariably obtained their supplies from or about Hamburg. It was more especially from the south of France that the Messrs. Baker, Chelsea, obtained those fine specimens that in other hands figured so largely at most of the early poultry shows. Philip Castang, another prominent exhibitor of Polish in early days, derived his stock from another source, and many of them, although large in crest, were without beard. From what precise locality they were obtained was kept a profound trade secret, although numerous efforts were made to discover the particular Dutch or Belgian fanciers that produced birds unrivaled by any other country, and always commanding the highest prices in the English market."

Dr. R. Brooks, in "Natural History of Fowls, 1763," referred to a fowl not unlike the White Crested Black Polish.

Bewick, England, 1820, speaks of the "crested cock, of whom there are several varieties, such as the W. C. Black, the B. C. White, the Golden and the Silver."

Boswell, in "The Poultry Yard," 1840, refers to Polish,

saying: "This is the fowl we esteem above all others, both for their appearance and usefulness."

While Aldrovandi in the sixteenth century referred to Polish fowls with "feathers on throat," but few of the specimens first exhibited were bearded. In fact the bearded specimens were religiously rejected by what would seem to have been a majority of fanciers. Rev. Saul Dixon in 1850, writing of the Golden Polish, used these words:

"Many of them are disfigured by a muff or beard. No such bird should be allowed the *entree* of the poultry yard, but should be dispatched at once to the fattening coop. The beard is a frightful appendage, and not easily got rid of if once introduced into the poultry yard."

In 1736 Albin, artist, made a drawing of a pair of fowls, "of a peculiar breed, which is brought from Hamburg by our merchants, with a short topknot, a decided beard and actual whiskers—a tuft of black feathers which cover their ears."

Some eminent authorities hold that the Polish originally brought into England were secured in Russia, and that the common crested fowl of Russia is in reality the foundation of the Polish fowls of the world.

Regarding the efforts of certain fanciers to secure recognition of the bearded specimens in England, Mr. Weir writes: "When the poultry shows commenced there were without any doubt two separate and distinct varieties of Polish, both having the singular formation of the skull. The black, with the white crest, never had a beard, while among the entire blacks there were some with beard and some without; so also among the golden and silver-spangled, the white, the blue and the fawn-colored. This being the case, and some of the fanciers preferring with, and some, like Mr. Dixon, without, there appeared to be nothing for it but to have separate classes for each. The contention was long and wordy, and somewhat militated against the advancement of the breed in the estimation of the public. The Messrs. Baker, who imported many of their best birds from Marseilles, contended that the silver and golden spangled should be bearded, but not the black with the white crowns. Mr. Perkins Jones, also a Polish fancier, was on the other side. The controversy dragged on, but as the bearded birds also had the best crests the beardless varieties ceased to be shown, and it is now doubtful if any can be found in England, or elsewhere for that matter. It does seem a little strange that the blacks with white crests should be allowed to continue beardless while all the other colors must have ruffs, beards and whiskers, as well as large and full crowns. But then poultry fanciers give singular names to breeds, and are also a little odd in their likes and dislikes. One point of interest to be noted is that, from the small number of entries shown, it is evident that sixty years ago the breed was not only scarce but in the hands of a very few fanciers."

The American Standard of Perfection recognizes eight varieties of Polish, as follows: White Crested Black, Golden Bearded, Silver Bearded, White Bearded, Buff Laced, Non-bearded Golden Silver and White.

Polish fowls were brought to the United States as early as 1840. From 1860 to 1870 they were in great demand and were largely bred. But fanciers seemed to put size of crest above all other points in their Polish, and the breed lost in public favor. In fact the breed was nearly ruined, having lost strength, vitality and breeding power. About 1880 the Polish fanciers awoke to the seriousness of the situation, adopted new methods and to-day the Polish fowl is bred along lines of both beauty and utility. They are now large classes in the Amer-

ican shows and are popular throughout the land. To-day, as in the past, the White Crested Blacks are shown in the largest numbers and are more extensively bred than any other member of the Polish family.

BREED CHARACTERISTICS.

Polish are medium sized fowls. As egg producers they have a good record. They are a graceful and attractive fowl, their large, well-formed crests giving them an individuality all their own.

White Crested Black plumage color: Solid black with a metallic, greenish luster, free from purple bars. The crest

"DUKE."

White Plymouth Rock cock, score 96 by Russell, sire of "Duke II," first prize cock-erel Chicago, 1906. Bred and owned by Sass Bros., Ancona, Ill.

should be pure white, although a narrow band of black feathers at base of feathers in front is allowable.

Bearded Golden Polish plumage color: A ground work of golden bay. In neck each feather laced with black. In back golden bay, each feather ending with black, approaching a letter V in shape. Breast golden bay. Tail, golden bay, each feather laced with black. Under color, dark slate.

Bearded Silver Polish plumage color: Same as in Bearded Golden Polish, substituting white for bay, or golden bay.

Bearded White Polish plumage color: Pure white throughout, including crest.

Non-bearded Golden, Silver and White Polish plumage color: Same as bearded varieties in every respect.

Buff Laced Polish plumage color: Rich buff, with a narrow, white lacing.

CAUTION TO BEGINNERS IN POULTRY.

Some of the Pitfalls to be Avoided in Starting in the Chicken Business—
Advice that is Misleading.

Written for American Poultry Journal by Mrs. Frances Tallon, South Haven, Mich.

I hope that if any of the readers of the American Poultry Journal reads an article that I have just read—it's not new by any means, I have read similar articles before—that they will not follow the advice given. It is about having poultry runs where your plum trees are; that the fowls will eat all bugs; that they stand—so it seems—expectantly watching with mouth open for the poor little curculo. Next thing we know some one will have chickens cleaning the trees of scale. What a blessing that would be to the Michigan fruit grower just to turn a flock of chickens in the orchard, and your trees are picked clean of the dread San Jose scale, and then it would answer as well as meat to the fowls. And again, that they cultivate your trees by scratching. No more hard work for man or horse, just sit still and let the chickens do the work. Some advocate having the runs where small fruit is. Now that would do where only black currants are, for I truly believe its the only fruit that a chicken will not eat. Just turn a few

chickens into your raspberry patch or red currants and watch them eat as high as they can jump.

We tried the plum and chicken business one year. The chickens no doubt ate the bugs. I know they did every plum they could reach; would fly up in the trees after them as fast as they turned. The plums were a fine variety, Satsumas, and the chickens Barred Rocks. I always found a Rock hungry. No wonder beginners get discouraged when they are advised to do such things as putting their poultry runs where small fruit is and then find the fruit all eaten up by the chickens. They then conclude that chickens are too expensive, and at that rate they are. They soon eat up all of the grass, then eat everything in sight or reach. Now when you make your chicken runs, first put them where there is no fruit, if you want the fruit. They also say plant currant bushes for shade for the poultry. Your chickens would be pretty ancient by the time the bushes were large enough for shade trees, then no doubt you would have to go out every day and cover up the roots, for if there is anything a chicken likes it's scratching or wallowing around the roots of a bush or tree. Anyhow don't try it, you would be too old to be in the business before the shade was enough to do any good. There are other ways for shade easier and better—a few boards or boxes.

Now stop to think before doing this or that whether it seems practical to you. Use your own judgment. Don't be advised too much in fruit and poultry. It seems as though there is more useless advice offered than in any other business. Advise with some reliable person when you need advice, and don't ask too many. The poultry business is a very easy business to conduct if you use judgment and don't go in too big at first. Go slow and get your own ideas.

Again you read to plow up the runs and sow to clover. It's a good plan, but you can't let the chickens run in there while it's coming up; they would eat every spear as soon as it showed itself above ground. Wire grass is the only thing in the grass line that they will leave alone, but no one wants wire grass.

Why do people write such advice? Our old breeders know better than to try it, and I hate to see our beginners discouraged with such advice. Often beginners start with fine stock or eggs and would be very progressive if it was not for the discouragements they get by such advice as I have mentioned. Chickens do not care for pears as much as some fruits, but if there is a few nice ripe ones (choice, of course) they will taste them, and one or two picks spoils them for market. We have our runs this year in a young pear orchard.

I want to say a word in regard to incubator thermometers. It's a little late, but will do for next season. Have your thermometer tested at the beginning of the season. Don't make any difference if it has proved correct in the past, be sure it is for the future before you use it. I speak from dear experience. Have everything in "ship-shape" before starting your first hatch, and then you can smile at the old fancier who knows it all, or you think he does, and have the best and everything in order, and in good condition. Buy best makes of machines, best incubators and brooders, good oil, and do not neglect your duty, and I think the beginner can be as successful as any one. Study your business the same as any other business. You may be able to discover new things of benefit as well as any one else. Take only the best journals, for they take more pains to furnish you good advice—the American Poultry Journal, for instance.

"Procrastination is the thief of time" is an old proverb that applies to the poultry yard as forcibly as anywhere else.

It is better for the wife to earn pin money at poultry raising than at the washtub or the sewing machine.

THE PROCESS OF MOLTING.

The General Care of Fowls during the Molting Period—How and What to Feed—Shade Necessary where a Luxuriant Plumage is Desired.

Written for American Poultry Journal by J. M. Sevenich, Milwaukee, Wis.

At this time of the year, when hens begin to sit around and are less active than heretofore, we hear many complaints about sick hens. This is due to the fact that molting was classified as a disease in years gone by. This misconception has passed from generation to generation; hence we find it prevalent in some of the rural districts at the present day. Poultrymen who study their fowls need not be told that molting is not a disease. They know that molting occurs every year, and they can distinguish it from diseases or bad habits.

Molting is the natural process of exchanging the old feathers for new ones. We may term it as the hen's vacation, in which time she prepares for winter and a new season. All birds molt, and all birds, from the ostrich down to the sparrow, are subject to this natural law; but there is quite a difference in the molting of our domestic fowls and the birds at large.

A comparison is easily made possible, and instructive as well, by placing a domestic hen and a partridge, often called the wild hen, side by side. The partridge, after having laid fifteen to eighteen eggs, hatches the young, cares for them

and feathers at the same time. It is an easy matter for us to check the production of eggs by reducing the ration of food. Once checked, it requires some time for new eggs to develop, and if checked at the proper time, say in the months of June or July, the old feathers mature rapidly and new ones begin to develop. Before a feather drops off it must be ripe, and by this we understand a dry feather with a dry quill and quill point. If we examine a feather, we can soon tell as to whether it was dropped as a ripe feather, or if it was removed by force. The ripe feather is dry and the quill becomes less flexible than the quill of the growing, unmaturing feather. The nerve within the quill and at its point resembles a film in sections, and the outer layer is much of the same condition, whereas the quill of the growing feather is soft and flexible and has a trace of blood at its point. As the old feathers drop off, the new ones make their appearance underneath the skin, and resemble small black specks. In order to aid their growth it now becomes our duty to feed our hens well; therefore, we return to the original rations, and feed such food as has a tendency to promote the production of feathers. In choosing the food the poultryman must be very careful, lest he begins to fatten his little egg machines, instead of preparing them for the coming laying period. Therefore, all food which contains a greater percentage of fat must be avoided as much as possible.

It is quite difficult to state precisely what to feed. On the point of feeding no two poultrymen agree. Oats is about as good a food as can be found, but you cannot stuff your hens with oats; they want a change, and we must give them a

VIEW OF COLONY HOUSE SYSTEM ON WILLOW BROOK FARM, BERLIN, CONN.

They have a large number of these colony houses and each one is provided with an immense run. All surplus breeding stock and extra male birds are kept in these colony houses and runs during the spring and summer.

and then begins to molt. The process is very slow, the feathers drop off one by one, and at no time does molting interfere with the flight of the bird. It is quite different with the hen. In domesticating the animals, man has brought about a change in their life and nature. Domestication has extended the period of lactation of the cow far beyond the original period, when the cow only produced milk to nurse her young. The horse in the present development needs shoeing; the hog grows to an unnatural size, and the sheep produces a fleece altogether different than the fleece of its ancestor, the big horn or the mountain sheep. Fowls, too, have undergone a change, and are as much dependent upon man as the other domestic animals.

Molting, the laying bird, the time of hatching, follow one another in rotation. The domestic hen has been turned into a veritable egg machine, and lays her eggs for a different purpose than the wild bird. Originally, all eggs were destined for the propagation of their species, but now, with a few exceptions, the eggs represent a commodity and an article of speculation. The egg is a finished article for the market, and it is this article, rather than the chick, that most of the poultrymen are looking for. The change which was brought about by breeding for egg production interferes with the hen's nature and her natural functions, and gives her a course, suitable for man's purpose, but not in conformity with natural laws.

We have the nonsetting breeds, but we have as yet not succeeded in bringing forth a breed which does not molt, but we have succeeded in getting at methods by which we control molting.

Feathers and eggs are two different things, yet both are made of organic matter which has been consumed by the hen as food. It is impossible for the hen to produce eggs

change in feed, unless their appetite and general condition will be far below the requirements. If hens have free range, as they have on our farm, they find many insects, worms, etc., which saves the cost of substitutes, such as bonemeal, meat (scraps or meal) to be fed at the rate of 125 grains for each ten hens a day. We feed sparingly in the morning, which induces the fowls to take to the fields, which afford them feed and exercise. Regular feeding induces them to return about 10 o'clock, and they are then fed oats and small grain, all they care to eat. During the afternoon the hens take a rest in the shade, a point which I will touch upon later. In the evening, an hour before sundown, we feed them grain and a little corn, but just enough of the latter to arouse their appetite. We keep them in a clean, well ventilated house at night and give them all the fresh water they care to drink. Grit, shells, gravel and road dust are at all times within easy reach.

Skim milk has always been considered one of the most valuable by-products of dairying, and as such it cannot be used to better advantage than as food for poultry. It must be remembered, however, that skim milk must be pure and fresh. It may be given as a drink, or used to make mash, at the rate of one pint for each ten hens per day. I will give a good recipe for a mash which is fed to molting hens quite successfully by poultrymen. It consists of 500 grains of boiled potatoes, 100 grains of cornmeal, 100 grains of wheat bran, 125 grains of meat scrap and one pint of fresh skim milk for each ten hens in a flock.

In feeding molting hens in confinement it is best to give them some grain, under straw litter, the first thing in the morning, then to give them the mash, followed by a good quantity of fresh-cut clover or clover hay, well seasoned, cut short and soaked in boiling water for a short time. The

evening ration may consist of corn, wheat, barley and oats.

Every poultryman, who has eyes to see, will observe that molting causes the hen much annoyance. The hens generally pluck their feathers, and, in looking themselves over, remove loose skin with the ripe feathers. The greater the annoyance, the less the appetite will be, and to make our hens feel like eating, we must make them feel quite comfortable, and this we can do by giving them a shady place to rest during the hot noonday.

In the center of our yard we have a large, shady elm tree; at the same time our hens have access to the orchard, which affords them much food in the line of insects. I have often observed that the molting hens, one by one, take to the shed at about 10 o'clock, when it is hot, while on more moderately warm days they stay under the trees. Of course, we poultrymen know it all—but the hen can teach us many things if we but care to learn. It is a fact that a hen, bare on the back and the wings, will soon have the skin scoured and blistered if the animal is forced to stay anywhere where the sun or the hot wind strikes it. Scorching and blistering causes the hen pain and annoyance; hence they are poor feeders and run down in condition, making them poor winter layers.

Proper feed and care not only promote the growth of new feathers, but give to the feathers a glossy color and the animal a luxuriant dress. But place a molting hen out in the sun and keep her there, and you will have a hen with a ragged, faded and unfinished dress.

To control molting means much to every poultryman. The

to help herself, and pulls them off. Naturally the food is of an inferior quality in such cases, and the hen, finding blood and particles of skin on the unripe feathers, gets a taste of meat and gradually acquires the bad habit of plucking her feathers and misleads others to do the same.

There is a lot of learning in the quill, and I have tried to shake out of my quill, in plain language, what observation and study have taught me while caring for my feathered friends.

CHICKEN SUCCESS WITH LIMITED CAPITAL.

What a Farmer's Wife Can do with Small Capital and Plenty of Work, Besides Caring for the Poultry—A Lesson Worth Learning.

Written for American Poultry Journal by Mrs. J. E. Dillinger, Paris, Mo.

We moved to Missouri in the spring and brought with us about six dozen "scrub" hens and three or four males. They were anything and everything, and the poultry house already there—well, it was next to impossible. Other improvements on the farm called for all the time and money, and it had to do for that summer. It is needless to say that we hardly had eggs enough that summer for our own use, and none of the hens set until June, so fried chicken, or any other, for that matter, was out of the question until late in the fall. In July we resolved to turn over a new leaf—not

A flock of White Plymouth Rocks owned by Sass Bros., Ancona, Ill.

hens, when they molt early, will begin to lay along the beginning of November, if we do not neglect them after the molting season. Do not think that your hens, after putting on a new and warm dress, can get along without warm quarters or because they are clean, are not subject to be infested with mites and lice. The up-to-date poultryman will keep his fowls stabled at night all the year. This means that he keeps the house in proper condition, clean, ventilated and well lighted twelve months in a year, and this is the only means of controlling the fowls.

After having molted, our hens ought to be in a very vigorous condition, and it is only necessary to feed for eggs in order to get them. It would be unwise to feed the hens in such manner, as to get eggs for hatching purposes only, if we make it a business to sell sittings. Fresh eggs are well paid for along the holidays, and no matter how early we get the hens started we will have plenty of settings when the season opens in early spring.

As a matter of fact, old hens molt late, but we must not tolerate such hens. We do not want them, because they are unprofitable, both as layers and broilers. We have all of our hens properly banded or marked, and after molting, all the old ones are culled out to be fattened. We do not waste feed or time with them, but sell them as soon as they are fit for the market.

It is advisable for every poultryman to study the process of molting and to learn how it may be controlled, i. e., how hens can be induced to molt at a time when eggs are abundant and cheap.

So much has been written and said about the bad habit of feather pulling. Can it be that delayed and obstructed molting leads to this habit? I am inclined to think so. If the feathers do not come out by themselves, the hen is bound

waiting for the new year. We sold all our mongrels on the market for the magnificent sum of about \$13. With that sum we bought, from a neighbor, twenty-five Barred Plymouth Rock hens and two cocks. Later on, as a little money came into the family purse, we bought more, a few at a time, until we had about sixty hens and five males. We paid from 50 to 70 cents apiece for them.

When we first came to the place the house we were to live in had two old rooms to the south that were unfit for use. The "man of the house" tore them down and used the lumber, windows, etc., for a new poultry house, building it as large as the material on hand would allow. It was about 30 feet long by 10 feet wide, and consisted of a room at each end, 10 by 11, with a scratching shed between, open only to the south. One room had a window to the south and one on the east. The other one at the south only. Both rooms opened into the scratching shed. The house was built with a shed roof, 9 feet high at the back, 11 feet in front. Both rooms had perches and nests. The nests were really built on the ground, by means of a board about 6 inches high, running the length of the room, 2 feet from wall, divided into nests by shorter boards, and a board the width of the nest fastened about a foot and a half above the nest. The perches were hinged and could be raised, allowing the room to be easily cleaned. The next summer we used a small house near by to set the hens in.

We fed our poultry on what we raised on the farm, such as sunflower seeds, sorghum, kaffir corn, the poor heads of cabbage, beets, and anything else we had. We kept the vegetables in a small cave during the winter.

I have a box for charcoal in the scratching shed, also a dish for water in the winter, and a box of road dust. I gave them warm water twice a day in winter and they are

fed twice a day. Their house is cleaned once or twice a week, as I have time. Of course in the summer and on warm days in winter they have the run of the farm. In the summer only the chicks are fed. I keep plenty of lime and gravel handy the year round.

Understand, that money was and is scarce and everything must be done as cheap as possible. Probably, with a little cash, we could have provided a more suitable house for them, but the nails were all we bought. It was the same way with their feed. Their care was not of the best, for I am a very busy woman, but the success has been all I could ask for. I realize they would not make much of a showing on the score card. This summer, if they do well, I shall get several settings of eggs from some reliable breeder and, in that way, will build up my flock. I did not write this to give advice to any one, for I need all I have and more, too, but just to show what a farmer's wife can do with very limited means and lots of work besides the chicken work.

I do not say that Barred Plymouth Rocks are the only ones, but they have done well for me, in a small way, and I am satisfied. It may be that with some other breed I could do better, but at present I am not going to change.

THE SPECIALTY BREEDER, OR THE OTHER ONE

An Argument in Favor of the Breeder who Devotes his Energies to the Rearing of more than one Variety of Thoroughbred Poultry.

Written for American Poultry Journal by Mrs. W. A. Gibbon, Arlington, Tenn.

A plea for the poultry man or woman who raises more than one variety of thoroughbred fowls! Why not? Cannot the lover of the beautiful say of flowers, for instance, raise more than one kind? Does not a breeder pass from one flock to another of his different chosen varieties, taking particular notice of their different points, good looks, good qualities, carriage, etc.? In one variety he sees a male and female that he cannot help petting, because it is such a perfect beauty. Then take the whole flock or pen of one quality, say, of buffs. What prettier sight to the lover of pretty fowls than to scatter the grain in circles, or half circles, or rows, and watching the yellow beauties feast at their tables? As the owner goes to feed his white birds he grows enthusiastic over the white purity of their plumage and for the time forgets the buffs. He goes among them, perhaps lies down on the grass—if he has time—they will crowd around him, looking for more to eat, for a healthy fowl is always hearty, and it will be like the old game of clubfist that was played when I was a child, and is played today; if he grins at them he will get a pinch, or, rather, a peck, for they will try to get his teeth, sure. You know they have none of their own. And while this lover of the fancy objects to parting with his teeth, it will amuse him greatly. He will pet this one, then that one. What a fine comb this one has; here is one with such a beautiful plumage, and here is one whose grand carriage and correct shape is superb. Next, he goes to the pen of the old reliable, the Barred Plymouth Rocks. Here, too, they are perfectly gentle. We who do not raise this kind must acknowledge the many good qualities of this, our American breed. And he, the owner, looking with pride at the good shape of the fowls, perfect barring, of their plumage, remembering their many good qualities, and knowing that he has helped bring them this near perfection, cannot help feeling a greater interest in this flock than some other one, though that some other one be an admirer of this variety. Suppose a breeder keeps three distinct breeds, all of, say, the buff variety of such large birds as Wyandotte, Plymouth Rock and S. C. Buff Orpington. Without regarding the rose comb of the first and difference in legs and skin of the Wyandottes and Rocks from Orpingtons, he would have a good chance to study the shape of these breeds. I have good birds from eggs purchased from the raiser of more than one breed.

To be sure, he would have to give more time, more study to poultry, and is supposed to do so. He has the different breeds and varieties and must study them, or get left in the business. I do not speak against the specialty breeder; no need to; his place is secure. The man must make his place in the poultry world, be he specialty or otherwise, and it would not do for one to commence with too many breeds, but do start with one good one, unless you are afflicted with a great deal of money, a good deal of brains and educated for the business. As for my humble self, I keep one kind, work with them myself and strive to make them better. But I do admire the poultry man or woman who can keep more than one breed.

MANAGEMENT OF A POULTRY PLANT.

System one of the Mainstays to Success in Poultry Keeping—Weekly Program and Daily Routine Should be Followed.

Written for American Poultry Journal by Mrs. R. D. Laugh, Vienna, Ill.

Any vocation, to be a success, must have system, down to the minutest details of the work. Poultry keeping is no exception to the general rule, even requiring more intensive planning and forethought than most occupations. In the general plan, there must first be provision for shelter for the fowls. In their wild state nature assisted them in caring for themselves, but now they are domesticated and their nature somewhat changed, man must come to their help and provide for their comfort.

Shelter does not mean what most people consider it to be. It is protection from winter's storms of cold, rain and snow; also shade from summer's heat and drought. Houses should be prepared and kept in proper condition at all seasons of the year. Trees should be planted, where necessary, for windbreaks in winter and shade in summer, thus affording comfort and convenience for the fowls. There should be windows, of ample size, to admit sunlight and air for ventilation, as no flock can do its owner justice without plenty of "nature's cordial"—pure, fresh air and sunlight.

Watering should be attended to, ordinarily, twice per day; or, if very cold weather prevails, oftener. Place fountains or troughs where they cannot become fouled with droppings or litter trash, and convenient for all to have access to them. Watering receptacles should be raised every morning and scalded with crude carbolic acid and hot water once a week. (Saturday is our trough cleaning day.)

Houses and runs should be cleaved often. Clean house once a season and dropboards on Friday of every week. Using a box the width of the board, place one end upon the side of box and use scraper to rake droppings into the box; load on wheelbarrow and away we go to garden or orchard.

Dust baths are essential for cleansing the fowls' body and feathers from vermin. We use soap boxes for small pens and 2 feet by 3 feet 6 inches for larger pens. Fill with sand, road dust and wood ashes, over which sprinkle "Louse Powder," and set under a window where the sun will shine into the box. The hens will do the rest.

Every house should be provided with litter, into which can be scattered the grain food.

Nests should be plentiful, roomy and well placed, after which care should be taken to provide clean, soft nesting material. Nests should be scalded and sunned every season; then whitewashed or painted; filled with clean hay or straw, and a china nest egg snugly nestled therein, and Bidly will produce more than one of different and edible material.

Fowls must have some efficient exercise, either by scratching for "tidbits," or become "bouncing Betties," after an onion, apple, turnip or cabbage suspended from some convenient quarter.

A card should be provided, giving "weekly program" and "daily routine" of work. This card should hang where the persons having charge can easily see it, and thus be reminded of duties to be performed, which might otherwise be overlooked. Below is specimen of above named cards:

Weekly Program.

Saturday—Scald and clean all feed and watering troughs; after supper case eggs.

Monday—Feed mash, ship eggs.

Tuesday—Give tonic in water.

Wednesday—Feed green food, ship stock, etc.

Thursday—Feed mash; see to bone, charcoal and grit boxes.

Friday—Clean houses, nests and runs.

Daily Routine.

Morning—6 a. m., water and feed; 10 a. m., feed mash, green bone or vegetables; 12 m., water and gather eggs; 3 p. m., feed grain and see to water; 5 p. m., gather eggs and lock up.

In hatching season have one person oversee young and another the old stock. Look for emergencies—be ready.

Whatever is worth doing at all is worth doing well. Things done in a haphazard fashion are never rightly performed.

We never yet saw a man succeed in poultry culture that had a quick temper, or who was easily discouraged.

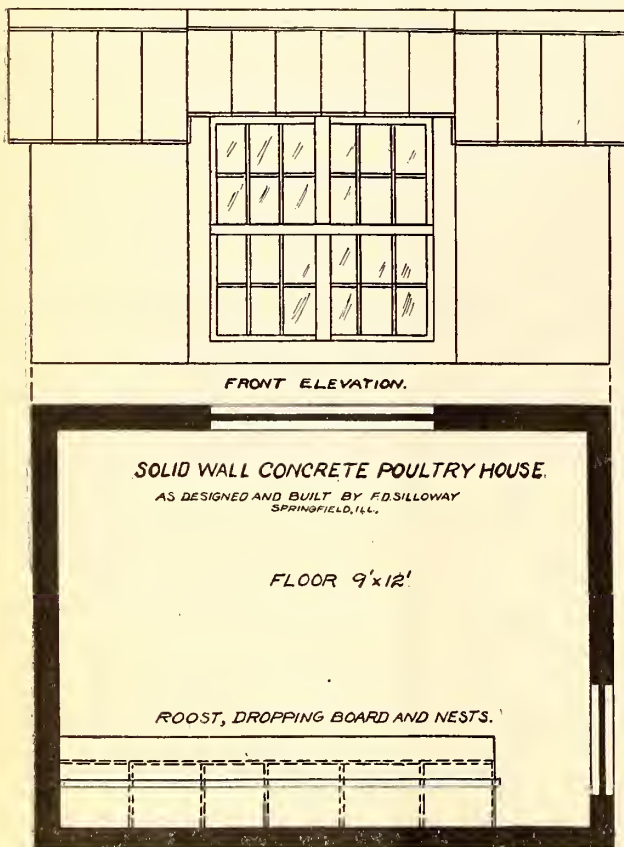

PRIZE ARTICLE DEPARTMENT

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communication about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. All articles must be written on one side of the paper only. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

The first prize in the contest this month has been awarded Fred D. Silloway, Springfield, Ill., and the second prize to L. H. Phinney, Orange, Mass.

A CONCRETE POULTRY HOUSE.

I have recently completed an experiment with a solid wall concrete poultry house, which may be of some interest to the readers of the American Poultry Journal, as well as of some profit to those who have been contemplating the construction of a poultry building of this material. Much has been

written lately for the poultry press concerning the use of concrete for poultry houses, but this discussion has been mostly confined to the hollow walled house built of concrete blocks, which is naturally too expensive to be thoroughly practical.

My chief objection to the solid wall type of house at the beginning was in regard to dampness, which I feared would be the result of a wall with no air space. To offset this I concluded to construct a wall as thin as was possible to still preserve the necessary strength and rigidity. Six inches I found to be as thin as was consistent with strength, and though eight inches might be more desirable, six inches answered admirably.

I also understood the necessity of sunlight and air to dispel any lurking moisture, and I designed a building with a practically open front to the south. Into this front I insert glass during the winter and a curtain is provided to be let down inside the glass at night during the coldest weather, as glass, though warm when the sun is shining on it, gives off a great deal of cold at night.

The house is 9 feet by 12 feet, inside measurement, which

allows ample space for one pen, giving plenty of room for a scratching floor. The rear wall to the north is left without any openings, and against this the roost, dropping board and nests are placed, insuring necessary warmth and lack of draft, at the same time allowing a circulation of fresh air from the open front. The floor is of dirt and ashes, which, to my idea, besides being infinitely cheaper, is far better than concrete. The roof, although gable style, could be modified to suit any conditions. In fact this type of building could be enlarged or altered to suit the desires of the builder and still the results would be uniformly good.

The proportion of mixing the material for the wall is: One part cement, one part sand and two parts gravel, all thoroughly mixed and deluged with water. The slushier the consistency when put in the wall insures less moisture later on, as this flooding destroys the absorbing quality of the cement when dried.

It is necessary to form molds for the walls of the house by fixing boards horizontally against uprights, which must be thoroughly braced so that they will not yield to the pressure outward as the material settles; the standards are set in pairs around the building where the walls are to stand, from six to eight feet apart and so wide that the inner space shall form the thickness of the walls. Into the molds thus formed is thrown the concrete material. In a short time the walls will be as hard as solid rock.

This poultry house has been in use now for one year, during the fall and winter as a brooder house and in the early spring as a breeding pen, and I believe it has had a fair test in all sorts of weather. As far as the dampness I feared is concerned, I will say that I have had no cause to complain from such a source, as I am sure that no more moisture exists within its walls than could be found in a tar-papered wooden house. In fact the floor is dry and dusty at all times and is an ideal dusting and scratching floor for fowls in winter.

The permanency of this building and the fact that the walls are rat, lice and germ proof makes a very desirable feature, aside from the cheapness of construction, which, on a farm where sand and gravel are abundant, is reduced to a minimum. The only necessary expense is for concrete and for the lumber for the roof.

I believe under the majority of conditions that this house will prove an effectual substitute for the board house so much used, where drafts, rats and lice cheat the poultryman out of his profits. Since it is so cheap and permanent I cannot see why it should not become more universally used among those who love their feathered flocks and wish for their comfort.

Springfield, Ill.

Fred D. Silloway.

POULTRY ON THE FARM.

It has often been stated that ideal conditions for poultry raising exist on the farm. And yet there is no other class of stock so neglected by the average farmer.

On many farms can be found sleek, well-fed cows, handsome horses, prosperous-looking swine, a comfortable flock of sheep, and about a dozen hens resembling a partridge in size and a crazy quilt in color.

All the other stock is provided with comfortable quarters, which are kept clean and free from vermin, while the hen house is well supplied with cracks, broken windows and lice, and has not been cleaned for two years. Ask any of these men why they don't keep more hens and you will be told that they don't pay; that they only keep a few to supply eggs for home use and have to buy eggs in the winter; also that they roost on the wagons and farm machinery, scratch up the "garden-sass" and are a nuisance generally. Now, how can these objections be removed and poultry be made to pay on the farm?

First—By replacing the mongrel birds with thoroughbred stock. This can be done at small expense by purchasing eggs and using the scrub hens as incubators. Pure-blooded, bred-to-lay fowls, properly housed and cared for, can be depended upon to supply eggs at all seasons, and as market fowls they are greatly superior to mongrels. Some one of the American breeds—Rocks, Wyandottes or Rhode Island Reds—would probably be best for the average farmer, as they are of good size for market as well as good egg producers.

Second—By providing comfortable houses for the birds. This does not necessarily mean expensive houses. Buildings good enough for all practical purposes can be built of inch lumber, pine or hemlock, new or old, with inside surfaced so that they may be readily whitewashed, and outside covered with building paper with battens over cracks. The shed-roof is probably the most popular style of house. If prepared roofing is used a two-foot pitch is sufficient, so buildings can be made low.

Third—By keeping the interior of the poultry house in a clean and sanitary condition. Dropping boards should be

placed under roosts and should be cleaned at least once a week. A good coat of whitewash should be applied to the interior of house at least once a year. Kerosene sprinkled over roosts once a week would dispose of mites, and sulphur in the nests would discourage lice. All nest boxes, roosts and dropping boards should be so made as to be easily removed for cleaning.

Fourth—By confining the fowls in suitable yards or runs. By providing two large runs for each house and planting alternately all of the land is available for cultivation, and would be much benefited by the droppings of the fowls. Many times fowls can be turned among growing corn or potatoes, with benefit both to the crops and to the birds.

Fifth—By managing the poultry in a strictly business manner. An account should be kept of all money expended for feed, buildings, etc., and of all money received for poultry and eggs; also of all eggs and poultry consumed by the family.

On many farms the surplus eggs are exchanged for groceries at the village store at a very low figure. Many of these men have milk, butter or vegetable routes, and a little canvassing would secure customers for both eggs and poultry at good prices.

Then there are the summer resorts, hotels, hospitals, all with a demand for the best poultry products.

To devote the same care and attention to poultry as to other stock is to make it pay and pay well.

It is not a "snap" nor a get-rich-quick scheme. But, managed properly, it will give a substantial increase of income on any farm.

Orange, Mass.

MISTAKES MADE IN POULTRY RAISING.

The Person that can Profit by the Mistakes of Others can save Himself much Trouble—A Thorough Knowledge of the Business Should be the First Study.

There are so many mistakes made by thousands of poultrymen every day that I have decided to write a short article on just a few of the most common mistakes which are made by many poultrymen, and especially by beginners. A slight mistake may cause any one very much trouble. Many beginners get discouraged when they meet with an accident through some slight mistake. The person that can learn by the mistakes of others can save himself much trouble. Experience is the best teacher, but it takes a long while to learn it.

When the beginner starts in the poultry business, he invests all of his savings, and if he does not get any returns

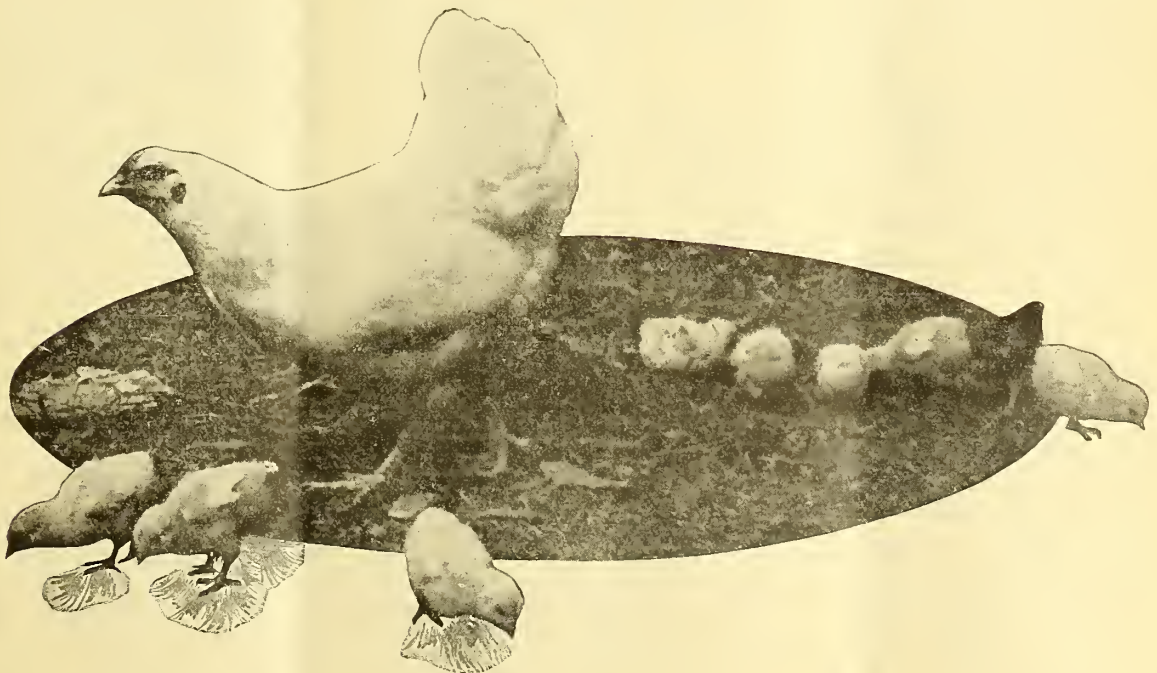

he gets discouraged and quits. He has big ideas of what he is going to accomplish in the poultry business, and when he discovers his error it is too late. All the failures come because the beginner rushes into the business without any knowledge whatever about the poultry business. The poultry business would be much larger today if it were not for these failures. The beginner should start in small and increase his business as he goes along. The labor is what counts in the poultry business. Any beginner, who is an earnest worker, can build up quite a paying business in a few years.

Another great mistake is that the beginner starts in with mongrels. Here is where he makes his mistake. He does not want to pay much for his stock and when he can get some mongrels very cheap he buys them and thinks he is getting a great bargain. If he paid a little higher price he could get some pretty good stock, with which he could build up quite a good business in a few years.

Many poultrymen make a great mistake in building their poultry house. The poultry house should be very plain. The plainer the better. A poultry house is not complete if it is not dry, light and warm. These are the three necessary elements to every poultry house. It should have a tight roof, a large window in the south, and the cracks should be shut up, so as to keep out the cold winds.

Overcrowding and overfeeding are two very bad mistakes. Many poultrymen keep fifty hens in a poultry house which could barely hold twenty-five. A hen should have lots of room, so that she can exercise. Fowls should have almost all of their food put in scratching material, so as to compel them to exercise, because the busy hen fills up the egg basket. Many persons throw the grain down before them and let the hens eat all they want, and when they get through they go in some corner and rest till they get hungry again. This is no way to feed the chickens. One should not be so liberal with the food. A hen should always be hungry. The exercising is not so necessary in the summer, but it is absolutely necessary in the winter, if one wants eggs.

The beginner should subscribe to one or more good poultry journals. One can get much information from a good poultry journal, because he can learn the ideas of many different poultry men, all of whom have had experience in the poultry business. There are thousands of poultry men in the country today who could make much more out of their chickens if they would subscribe to a good poultry journal, but their only reason is that they cannot spare the 50 cents. One issue of the American Poultry Journal is worth the price alone. No one who is engaged in the poultry business can do without a good poultry journal, whether he be a beginner or an expert.

American Poultry Journal

Issued the first of each month.
Published by

AMERICAN POULTRY JOURNAL PUB. CO.

GEO. G. BATES, Pres.
325 Dearborn St., Chicago, Ill.

GEO. G. BATES, Editor.

THOS. F. RIGG, Associate Editor.

J. W. BELL, Associate Editor.

Subscription 50 Cents a Year—5 Cents a Copy of all Newsdealers. Chicago subscriptions 60 cents (when delivered by carriers). Foreign subscriptions \$1.00.

Look at the date upon your wrapper. Many subscribers write to ask when their subscription expires and many complain because we discontinue sending the JOURNAL at the expiration of the time for which it is paid. The date when your subscription expires is found on the wrapper each month.

AMERICAN POULTRY JOURNAL is the oldest poultry paper in America. It has a national and world-wide circulation. The best writers on poultry matters contribute to its columns. It receives the patronage and endorsement of the foremost representative breeders of standard poultry and manufacturers of poultry appliances in the country.

Advertising rates are sent upon request.

50,000 A. P. J.'s for July, 1906.

State of Illinois, County of Cook, ss.

Chicago, June 25, 1906.
J. G. Budde, secretary and treasurer of Regan Printing House, Chicago, being duly sworn, certifies that the American Poultry Journal has contracted for printing and binding fifty thousand copies of the July, 1906, issue.

J. G. BUDDÉ.

Subscribed and sworn to before me this 25th day of June, 1906.

BLANCHE ELDER EDDY,
Notary Public.

GUARANTEED SUBSCRIBERS.

With each subscriber to our publication we positively guarantee, while his subscription lasts, that no advertisement is allowed in our columns unless we believe that any subscriber can safely do business with the advertiser, and we agree to make good any loss which any such subscriber may sustain by trusting any such advertiser who may prove to be a deliberate swindler; but we do not undertake to adjust trifling differences between subscribers and responsible advertisers. To take advantage of this guarantee, written complaint must be made to the publisher within two weeks from the date of any unsatisfactory transaction, with proofs of the swindle and loss, and within two months from the date when the advertisement appeared, and the subscriber must prove that in writing to the advertiser he said, "I saw your advertisement in the American Poultry Journal."

The Committee of Fourteen.

"That a committee of twelve, together with the president and secretary, be appointed, to meet at the call of its chairman, to consider and report for action, at our next annual meeting, on all proposed or necessary changes in the constitution and by-laws, with special instructions to consider carefully the question of the division of America into territorial and district organizations, which shall be auxiliary to this association." Motion adopted by a rising unanimous vote at the annual meeting of the American Poultry Association at Cincinnati, January, 1906.

The object of the organization of the American Poultry Association was to formulate and adopt a standard of excellence. Its business so far has been confined to its publication and sale. If matters of national importance, con-

cerning the poultry interest, have been considered and acted upon, they have been touched so lightly as to leave no sensible impression.

That the work undertaken has been well done so far no one can dispute. The last revised and illustrated edition is a success. To make it complete it should show the correct colors in all sections of all breeds.

We believe the action taken at Cincinnati by the unusual method of a rising unanimous vote was a spontaneous expression of a general belief that the field of the activities of the association should be very much enlarged.

It has been suggested the association should conduct an annual National Poultry Exhibition. If this is deemed advisable the committee will be called upon to make constitutional provision for all the details of its management. We doubt the wisdom of such action. But we do believe the association will do well to get in closer touch with the many local associations now conducting annual shows. As long ago as 1901 the Wooden resolutions were the initiative of this idea. An amendment, providing for an association league committee, was adopted at the annual meeting at Charlestown. The duties of such committee are prescribed in section 4, article 8, of the by-laws. For some reason the matter has been entirely ignored. Should it not be taken up and pushed along these lines?

While there is much of general satisfaction with the standard, there is much of general dissatisfaction with the manner of its application. Specimens awarded first prize at New York have been disqualified at Boston. First prize winners at both New York and Boston have not been given a place at Chicago; all within a period of twenty days. Incidents of this kind are innumerable. There is not a show secretary that has not been harassed almost beyond endurance by the complaint: "My bird at ——— show was awarded first, with a score of 96, by ———, a prominent judge, and you do not give him a place. First is given to a bird which at the same show was only given 90." It has been repeatedly charged that judges have placed awards at one show and with the same specimens at another show made an entirely different decision. No doubt there is much of exaggeration and want of knowledge of conditions, which is responsible for this widespread feeling of distrust of the competency and fairness of the poultry judge. But there is a demand that "the judges in some way get together." An association of judges has been suggested. Better by far that some central body, say a commission of acknowledged, prominent and capable judges should be formed as a part of the machinery of the American Poultry Association, to establish rules and regulations, issue licenses and pass upon disputes and decide complaints. The law wisely provides for licensing doctors, lawyers, druggists, teachers and the like. The best results are obtained where civil service, with examinations, prevail. One cannot pass from grade to grade in our public schools, be admitted to academy, college or university, without examination. Many of the railway, telegraph and telephone companies maintain not only a mental and moral examination bureau, but a physical test as well. If the system has

been found to work well in other lines of business, why not in the business of poultry judging. It cannot be hoped to reduce poultry judging to an exact science. It is too much a matter of opinion to do that. But much can be done to bring opinions to an agreed common starting point. The standard is largely the work of the older, prominent poultry judges. To be sure, specialty clubs and breeders have done their share, but while the breeder deals with his flock, it is the judge who deals with all flocks. By coming in contact with many he has been able to decide where should be "the give and take" which makes agreement possible in the right place. If this is so, what more sensible than to entrust to this body of standard makers the supervision of its application. If this is done it must surely produce better results in judging. It will add dignity to the profession. It will place upon it a feeling of responsibility. With this will come a more uniform and better remuneration. It will do away with the evils of exaggeration and ignorance which now bring many erroneous charges against the judges. And more than all, it will maintain confidence in the honesty existing in the fancy poultry business.

The American Poultry Association has thus far had nothing to do with the utility side of the industry. Is it not an opportune time to get in touch with it? Should not provision be made for something more than form and color? The work should not be left to experiment stations entirely. There should be an affiliation and consolidation of all these interests.

A Market for Wastes.

There is now a story going the rounds of the press to the effect that Frenchmen of the sixteenth and early seventeenth centuries were very fond of eggs boiled hard after they had been for some time in the process of incubation. At six to twelve days of incubation they were said to be a dish for the gods. Certainly they are not the dish for us! In some countries the eggs of their domestic hens are not eaten till they show that the chick has started! It might be well for the American poultrymen to get in touch with this kind of a people, for then we could get a ready market for eggs that had started but refused to go further. From the reports of the profits in the breeding of pure-bred poultry that occasionally find their way into the daily press the outsider will soon begin to think that there is a market for every rotten egg and all of the wastes that are regularly thrown away.

The Incubator Industry.

An incubator statistician has ventured that 250,000 incubators and brooders are manufactured in the United States annually. Just what percentage of all these hatchers go to fanciers of pure-bred poultry is more than we can determine, but it is a sure thing that every buyer of incubators becomes, sooner or later, acquainted with the fact that good fowls pay best. The incubator makers are playing an important part in educating the farmers to pure-bred poultry. Let their praises be sung.

Green Duck Going Up.

Down east there is an organization known as the Long Island Duck Raisers' Association, and about thirty of the members, including a few from Jersey and Pennsylvania, met in New York recently to decide on the spring selling campaign. Spring duck will be higher than before this season. Cost of labor and feed has gone up where the growers must have more money for their products. The growers get 14 to 16 cents per pound for their output and the retailer 25 to 30 cents. There is considerable talk of the growers installing their own stores and cutting the middleman off. The public will buy ducks because of the beef investigation, and it lies with the growers to raise their price to the middleman and have the latter raise on the consumers, or cut out the middleman altogether.

A Mid-Air Henner.

One of the latest ideas to be worked out in the interest of intensive culture of fowls is the novel scheme of Manager Stokes, of the Ansonia family hotel of New York. Instead of planning out a roof garden he has made a roof henner nearly 300 feet in the air on the top of his hotel building. It is said that the first old birds he put in his poultry houses died—he thought because of "the change of climate" or air. Later he began hatching his chicks by incubator power and grew them with no trouble. He has over 250 laying hens up there in the air now and they are in charge of an experienced poultryman who is making them shell out the eggs. Elevators carry curious folks up to the mid-air henner. It is a money-making venture.

The Captain Retires.

Captain Mitchell, the poultry famous citizen of Santa Barbara, Cal., is renouncing the hen once and for all. He will sell his White Leghorn plant, after being closely identified with things hen in California a long term of years. The captain wrote a poultry work of much consequence a few years ago and devoted it almost exclusively to the business in his particular locality. Santa Barbara is in southern California and the experiments that the captain has performed have been of great value to that section, as he has carried them out thoroughly. We well remember that the captain embarked in the business after many years before the mast and now the least we can do is to beg for a contribution from time to time and wish him well.

How About It?

British breeders make much of their export trade, and what puzzles us is the number of birds they send to the market that lies right under our noses—South America. It is no more than

business that gives them such an immense trade with South Africa, France, Ireland, Australia, New Zealand and India. Of course, these countries have built up a fancy about the inhabitants who love good stock, and these are usually Englishmen who are from, or their parents are from, the mother country. Thus it is but natural that they trade at home, as it were. But here lies South America at our feet, and still we overlook her trade. We are not living up to our opportunities.

Reds in England.

We have every reason to believe that the Reds are going to invade England. The echoes of the Red strife in this country have thoroughly awakened England and already a number of exportations to that little isle have taken place. Poultry, the weekly poultry paper of Britain, in its issue of May 25 gives a whole page to the illustration of a pair of Single Comb Reds. It also uses from a recent issue of the American Poultry Journal "The Origin and History of the R. I. Red Fowl," as prepared for this journal by our associate editor, Thomas F. Rigg. This will undoubtedly give the Red a boost over there and help prepare the way for a good business in Reds between American and British fanciers.

Distinguished Visitor.

The well known English writer, Mr. Edward Brown, F. L. S., sailed for America on the Cunard steamer "Umbria," June 2. He is now among American fanciers and breeders and English papers say that he will stay on a prolonged mission of inquiry. Mr. Brown is secretary of the National Poultry Organization Society, but we cannot say just what influence it has in poultry affairs in that country. We hope Mr. Brown will be well impressed with the degree of excellence he finds in our large and small plants and flocks. He should not go home without giving his thoughts publicity in the American poultry press.

For Quality Eggs.

The day of the market poultryman is dawning, for now the big egg buyers demand eggs by the dozen instead of by the case. Buying by case means accepting good, bad and rotten; buying by the dozen means that eggs are candled and poor ones not paid for. This aids the poultryman who desires to work up a high-class demand for a strictly fancy product. The Beatrice Creamery Co., the largest buyers of eggs, now demand quality before quantity and they pay good, liberal margins over the market to get what they want. This company is putting out shipping directions for poultrymen and points the way to better prices. Clean, fresh eggs are what they demand, and they soon cut from their lists the ones who forward the inferior stuff along with the good. Quality counts.

DEATH TO LICE

The old favorite louse killer used by successful poultrymen everywhere. A vermin killer wherever you put it, but harmless to human and animal life. The original Lambert's "Death to Lice" has been in use nearly a quarter of a century. It never fails to give satisfaction.

FOR POULTRY

take the fowls singly from the roost, hold them head down and sprinkle a small quantity among the short fluffy feathers. Only takes a few minutes to go over the entire flock. Then the next day spray the roosts with "Death to Lice" liquid. For setting hens sprinkle the powder in the nest and in the ruffled feathers. For head lice on chicks use "Death to Lice" ointment. This is an old English remedy in use for years. It's sure and safe.

FOR STOCK

sprinkle "Death to Lice" powder in the mane of your lousy horse and wherever he rubs. The lice will soon depart. Sprinkle or dust it on with a bellows along the neck, back and loins of the cow or wherever the hair is coming out. One good application is generally sufficient. Sometimes it is necessary to scatter the powder over a blanket and strap the blanket on tightly. This takes a little more powder but it gets the lice killer right where it will do the most good.

FOR SHEEP

for ticks on sheep part wool where the lice abide and sift in the "Death to Lice" powder with a bellows or blower. "Death to Lice" liquid sprayed in the pens and sleeping places will help to effectually remove them. One good thorough application is better than several half-way attempts. "Death to Lice" may also be profitably used on swine or other animals infested with vermin. No hog can fatten and fight lice at the same time. Kill them off and save feed.

FOR PLANTS

and vines infested with lice, squash beetles, cabbage worms or the like, dust while damp with "Death to Lice" Powder. Gardeners and florists use it. 100 ozs. \$1.00 or Sample 10c postpaid.

GRAND CLEARING SALE!

Six hundred choice 1906 breeders. "America's Big Four" Barred, Buff and White Ply. Rocks and White Wyandottes positively must go at a sacrifice. Utility breeding pens, 10 females and 1 male, for the next sixty days at the unheard of low price of \$15.00. All surplus stock at comparatively low prices. Order early. "Rankin's Royals" won't last long at such bargain prices. Big reduction on eggs for hatching after June 1st. Write your wants and I will do the rest.

H. P. RANKIN - Box 61 - HARTINGTON, NEBRASKA

A WOMAN'S EXPERIENCE.

Washed in 1 minute

Count the pieces — notice the difference—and you'll understand why the one who has to do the cleaning prefers the simple Sharples Tubular.

There are other advantages just as much in favor of the Tubular. Write today for catalog V-205—it tells you all about the gain, use, and choice of a separator.

The Sharples Separator Co.
West Chester, Pa.

Toronto, Can.

Chicago, Ill.

A Big Difference

One Minute's Washing as compared to at least fifteen. Wouldn't you like to save at least fourteen minutes twice a day? **One minute** with a cloth and brush cleans the absolutely simple Sharples Dairy Tubular Cream Separator bowl shown in the upper picture. It takes fifteen minutes to half an hour with a cloth and something to dig out dents, grooves, corners and holes to clean other bowls—one of which is shown in lower picture.

Washed in 15 to 30 minutes

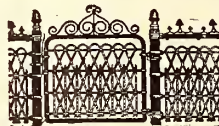

Having read your very urgent request that readers of your paper write something for publication, I felt this is my opportunity to gratify a long felt ambition, namely, to try to help some poor sister along in her desire to secure a little pin money, all her very own, that she may spend for just what she pleases, so you who are fancy breeders need not spend your time in perusing these lines. I am an old lady, having reached the age where one of our scientists tells us we should be chloroformed, but being a woman, and perhaps a little obstinate, I refuse very decidedly to submit to such treatment, and prefer to raise chickens. One year ago I bought an 150 egg incubator, from which I obtained two hatches of something like 120 each, and as we had a wet spring, I lost quite a few of the first hatch, but very few of the last, as it came off the last day of June. I set hens, seven each time, and gave the chicks to the hens. My hens were old, so concluded to sell them last fall, as I had succeeded in raising about 100 young hens, but if any of you are tempted to do likewise, don't do it, at least, not all of them, for this spring my troubles began, for not a hen could be induced to set, and as I had no brooder, I could not start my incubator. My John finally said start it, for there will be plenty of hens that will want to set, and we will slip the chicks under them some night, and fool them a trip. But I hadn't his faith, but being a dutiful wife I started my machine, and began to watch the hens very closely, but hatching time was approaching, and never a chick from one of those unnatural hens; well, I felt there must be something doing, so began to phone around and got track of a brooder, but it was four miles from me, and every horse in the field; even the ponies were doing what they could. In the meantime my hatch came off, there was no stopping it, and no hen nor brooder to receive them. From 150 eggs got 118 chicks; cold as March outside. So I got two boxes about twenty inches deep, and one the same number of inches square, the other a little longer, and put pieces of wool blanket in the bottom, put my chicks in, covered them over, pushing the cover down almost to the chicks; left them until evening. At bed time I filled two fruit jars with hot water, and put in the boxes, wrapping them in a thin cloth, covered them snug and they were warm as toast in the morning. We kept no fire at night. I kept them in the house for four days; made a little pen in the kitchen, spread papers, then put sand on that, and took chicks out when I fed them; gave them soaked bread for the first four days; since then, wheat and coarse cornmeal; all the water they want, a little sharp grit, broken dishes, and after putting them in the hen house, I gave them timothy and clover chaff by the basketful, to scratch to their heart's content. Fed them four times a day until two weeks old; now three times, as they run all over now. When night approaches, they gather in, and I gather them up by the double handful, and put them in their boxes, cover over with an old comforter doubled, but no more hot water, and they are snug for the night. I have my brooder now, but only used it a few days when it was raining, and could have gotten along without it then, by putting them in their boxes for a short time, to warm up. Now, if any of you find your-

selves in the same dilemma, don't worry, but try the boxes. My first hatch is three weeks old, and have taken off a second today, 115 this time. Wishing you all success, I will close.

Mrs. A. J. Hurless.

BIG SUMMER REDUCTION SALE.

R. E. Jones, The Pines, Paducah, Ky., is offering some rare bargains in this season's breeders and wishes the readers to take advantage of this offer. He offers 500 Silver, Golden and White Wyandottes, all yearling birds, including hens that score from 90 up; also a grand lot of yearling cock birds that will do to head any yard, as well as show stock for the fall and winter shows. He states that while he is not cramped for room, as the plant is amply large to accommodate all, that it has always been a custom to offer during the summer months a lot of high class breeding birds at reduced prices, and his many customers look forward to this sale. He states that so many letters have been coming in asking if this sale will be opened as in former years that he feels it due them that a notice of this kind be published. To those that desire birds of high quality at low prices we advise that you get his summer sale list and catalogue. We guarantee every bird Mr. Jones sends out to be as recommended. Don't fail to get his summer sale list. Address R. E. Jones, The Pines, Paducah, Ky.

KEEP YOUR HENS HEALTHY.

Prevention is best. Gallons of germicides and antiseptics will not take the place of cleanly, preventive measures. If you start right (if you are a beginner), or are willing to make a change for the better, send for a brand new book, "Portable Poultry House Fixtures," just warm from the press. It has sixty-four large pages, fifty illustrations. It shows how, at a reasonable price, anyone can have a neat, convenient, sanitary hen house, one where it is possible to be free from these inveterate foes—lice and mites.

This book tells all about the Potter Vermin Exterminator Roosts, illustrates three styles and fifty different sizes, for every sized purse.

Sandwiched between the articles and illustrations are honest letters from poultry raisers who have actually proven Mr. Potter's contentions—that his hen house fixtures will make healthier hens, that these fowls will eat more food, lay more eggs. This means pleasure, profit, good expectations, instead of loss, disappointment, discouragement and failure.

Don't build a new one or fix over your old hen house till you read the good suggestions in this new book. Whether you buy Potter fixtures or not, it is worth, because of its practical suggestions, twenty-five times the 2-cent stamp.

Another thing don't do—don't kill any hens till you know whether they are layers or not. The Potter system of knowing the "layer" from the "loafer" is sure.

A 2-cent stamp enclosed in a letter, requesting the new book just out, will bring it promptly. Besides this, Mr. Potter will send the recently published opinions of the foremost poultrymen of the country, commending his wonderful discovery of how to discover surely the laying hen. The T. F. Potter Company are at Downers Grove, Ill.

55 Egg Incubator \$5.50

HELPFUL HINTS.

A Few Short Paragraphs That will be of Great Assistance to the Busy Poultrymen, if they Will Pay Attention to the Advice Given.

Written for A. P. J. by Rev. C. E. Petersen.

Eggs from hens that are too fat or too poor do not hatch well. Eggs from hens that have been forced for egg production during the winter months do not hatch well, as a rule.

There is no such type as an egg type; another fallacy, mainly built on speculation, never on observation.

There are no known means to tell whether an egg will hatch a female or a male, but it is generally conceded that the males preponderate where young males are mated to hens, but even this may be doubtful.

Eggs from perfectly mature birds produce stronger chicks than eggs from immature stock; by immature we mean birds under a year old.

Don't trouble the hen at the time of hatching. Be patient, keep out of her sight. You will get a better hatch by so doing.

Don't sprinkle or immerse in water the eggs the day before hatching. It will do no good, whatever is said to the contrary, and only impair your chances of a good hatch.

If you have paid well for a setting of eggs, you will naturally be over-careful with the chicks hatched from the eggs, cooping them up and cuddling them in a number of ways. Don't do it. Let the hen run with them, whenever possible. They will do so much better, and grow into good, strong stock. Lots of chickens that might have shown off

to good advantage, and from a good strain, have been ruined and runted by such treatment.

A little bonemeal administered daily in the chicks' ration will save them from two great evils—bowel trouble and leg weakness.

There are some lice powders and fumigants that are more deadly to the chicks than the lice they are supposed to remove. Get rid of lice, but be careful in your selection of the means employed.

Don't be afraid of June-hatched chicks. If well cared for, they will do well, and lay well by December. But we don't advise making a practice of late-hatched chicks. It will do once in a while, when the case stands June-hatched chickens or none, but it is not advisable.

The advantages of early hatching are manifold. First, fall and winter layers are secured; second, they will mature and get into breeding shape by the following spring, and for exhibition purposes will, of course, excel in size and in a number of other ways. Early hatching is imperative for continued success in poultry keeping.

It is a common belief that when a hen hides her nest she is very likely to hatch all her eggs, this success being generally attributed to the fact that the hen is undisturbed while sitting.

But complete success in hatching can be equally attained when the hen is given a chance to leave her nest to feed, and eggs that are unfertile taken out.

The more reasonable explanation is that the hidden nest is generally made on the ground, where the necessary moisture is secured.

Again, a hen sometimes hides her nest and abandons it in a few days after be-

ginning to sit, and leaves the eggs to rot.

It is when the hatching is brought to a successful conclusion that we have the means of finding it out, by the hen bringing home her brood.

The writer of a popular work on poultry having noticed that a hen abandoned her nest after sitting for a few days, and that the eggs on being broken, were all unfertile, comes to the extraordinary conclusion that a hen is able to distinguish (through the pulsation which begins in fertile eggs on the fourth day) whether eggs are fertile or not, and that if unfertile she abandons them! Those who have seen the persistency with which a hen will stick to a door knob, or even to an empty nest, will not give her credit for so much wisdom.

And yet why is it that almost invariably I have found the eggs that were unfertile on the outer edge of the eggs in the nest, the fertile ones seemingly getting into the center of the nest, or in other words, getting her best attention?

Our confidence in the "too much" moisture question has had a rather severe setback within the past few days.

Two of our incubators were, as usual, placed in the cellar, but on the second week of the hatch heavy floods and much rain, little by little, filled the cellar bottom with water; and as I had no means of either removing the water or the incubators, they were left in rather an unfavorable situation, and my hopes of a good hatch did not run very high. Last night the water rose till it stood high around the incubator, but the eggs were beginning to show signs of hatching, and today I have the largest and most successful hatch that I have taken off for years. We certainly had no lack of moisture for two weeks in this case. No, we don't know it all yet about successful incubation, but we will some day, and then perhaps we will find that we have troubled about questions that have no bearing on the subject of successful incubation.

Carelessness in the selection of eggs for hatching is a frequent cause of smallness of size and weakness in the brood. Eggs laid by unhealthy or ill-conditioned fowls will hatch small, puny chickens, which will never attain a fair size.

If you continue to work against nature, you will find she will pull against you at every turn, and the pulling will be very much in proportion to the degree of departure you are aiming at.

If you work with her, she will work with you, and as co-laborers much can be accomplished.

Cutting the spurs off your cock birds will increase fertility in your flock, and where a long, sharp spur is left on the shank it will in many cases be found a sufficient explanation why eggs from this pen do not hatch well.

THE NECESSITY OF GRIT.

This spring I have found what it is to be without grit, and lost six nice hens before I could find out the trouble. So, for the benefit of those who are new at the business of confining poultry, I will say, do not neglect the grit, for your chickens at all ages need grit and plenty of good, sharp cutting material to grind their grain.

Center Moriches, Long Island, N. Y.

A FEW HINTS ON POULTRY.

Make your poultry happy, and be happy yourself. Did you ever notice that under certain conditions your chickens are like people, bright and happy or dejected?

They are willing to work if you give them favorable surroundings, and work to do, and with plenty of work just see how happy these old hens look, and the cock bird, too, has a look of perfect contentment and assurance.

Also the little chicks, turn them loose in a freshly plowed field or a newly mowed meadow, where they can pick up worms, catch grasshoppers and bugs, their eyes sparkle, and they look as happy as a golf club—full of health and animation.

But pen them up and notice the difference in expression; looking through the bars, prisoners, maybe, for life, and no offense booked against them, just cruel inhumanity behind it all.

No grass, no bugs, was there ever a beef scrap half so delicious as a worm or a bug fresh caught? Then the healthful pastime of catching that worm or bug.

Don't use hens to raise chicks, but brooders. And let the chicks run loose where they will if you want fine young fellows, good bone and fine feathers.

You can't have the same results, with the same feed, with chicks shut in a park as those running loose.

After a hen is fully matured she can stand confinement better, but nature never intended her feet to be idle.

A hen running at large consumes less feed, lays more eggs, and has much more style and feathers richer. We have tried this plan. Now for moulting. I would shut them up in July (last week) in very small quarters and short rations, just enough to keep them alive, and take off all the fat. After about 12 or 15 days of this kind of treatment, give a little more feed, a little cut grass for 5 days, then more feed, and a couple of hours running to grass for three days; then half a day's sun; after that let them go and feed well. Good corn is my best feed, but it must be good, sound corn.

Now watch the old feathers fly and the new glossy ones come in. You have new, beautiful plumage, and you soon have them ready with new clothes for the show room.

Always have plenty of good water for them. Fowls suffer more for the want of water than feed, but can go a long time without either and live.

Last November we missed a fine Buff Orpington hen. As she was one of my best layers, I hunted, as I supposed, every place for her.

For two weeks we are positive of and think it was most three weeks we never saw her. One day I found her (alive) wedged in between some baled straw and a wall. Not a bite to eat or a drop of water in all that time. She could not stand. I fed her bread soaked in sweet milk, a very little at a time, but quite often. In a couple of days she was running with the rest and eating corn. But she did not lay so well as formerly.

A CONVENIENT FEEDER.

Illustrations and Description of a Feeder That Has Proved to be a Money Maker and Labor Saver.

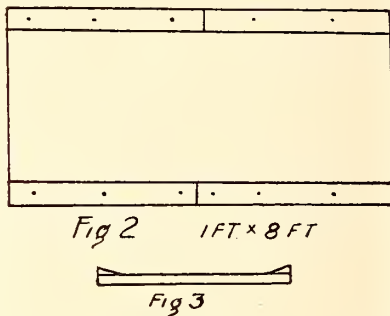

Written for A. P. J. by E. E. Whitney, Ann Arbor, Mich.

It matters not whether one is still in favor of warm mashes for hens in cold weather, or whether he has adopted dry feeding, such an appliance as is here

described will often be found very convenient. Feeding mash, meat scraps, cooked vegetables, cracked corn and the like in open pans, on box covers or boards results in the dishes being upset, the food scattered on the ground, trod-

shown in Fig. 1. Bevel four lath and nail them on the 12-inch by 8-foot board, the thick edges flush with the edges of the board as shown in Fig. 2. These will prevent the feed being raked off the sides. An end view of the bottom board is shown by Fig. 3. Then set up the end boards, lay the bottom board on the cleats and nail to them with light nails; also nail through the end boards into the ends of the bottom board with long nails. Then a 4-inch board is to be nailed into the notches at the top on each side, and the frame

is made. Cut lath into 12-inch pieces and nail on each side as shown in Fig. 4. The easiest way is to lay feeder on one side, leave the width of a lath and nail a lath, right through. Use small nails for tops of lath so that none will

feeder it would, when thrown back and having several fowls alight on it, be liable to tip the feeder over on its side. Two or three blocks nailed on top for the lid to rest upon when open, allowing a backward inclination of 30 or 40 degrees, will enable one to close it quickly.

I built one feeder with a top shaped like Fig. 6, but the opening was too narrow. If one never expects to use the feeder for chicks, he could use slats 3 inches wide, and leave $2\frac{1}{2}$ inches between them, and that would nicely accommodate an ordinary sized hen at each opening. But quite a good-sized chick will squeeze through a $2\frac{1}{2}$ -inch space and get inside. If built for chicks alone, I would make the spaces between lath only $1\frac{3}{4}$ inches, use a 10-inch board for the bottom, and make it about 16 inches high.

If used in the scratching shed, the hens will kick the litter into it, and then it must be brushed out or turned upside down and shaken out, but in every other location it is always ready for the feed to be placed in it. The top of the opening through which the hen feed is 15 inches from the ground, none too high for her to back out naturally and gracefully.

SEASONABLE TOPICS.

Nearly all breeders of live stock are in the habit of announcing that the male is one-half of the mating; but is

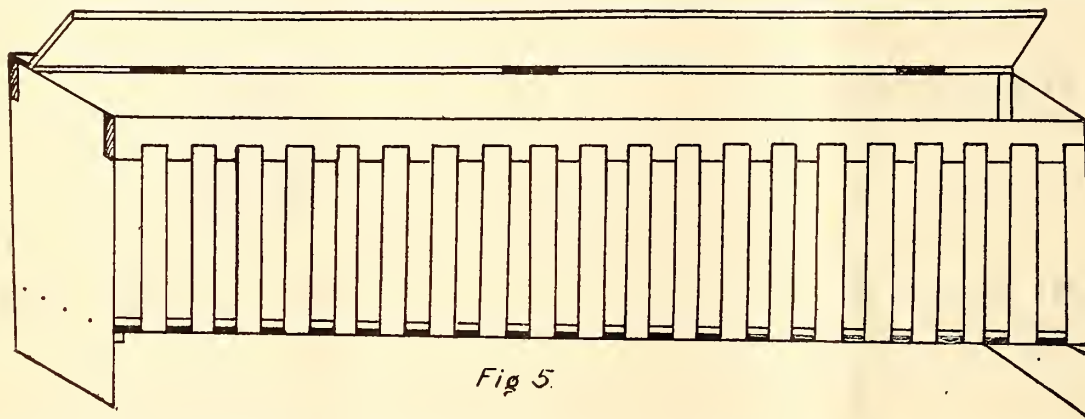

Fig 5.

den upon by the hens or mixed with their droppings, all of which is undesirable.

As I could find in none of my papers or books a description of a feeder to my notion, I set about to devise and build one. I succeeded to my entire satisfaction. The accompanying illustrations and description will enable anyone to build similar ones. Mine are 8 feet long, 20 inches high and 12 inches wide, and will each accommodate 32 hens or 48 half-grown chicks without crowding. Calculate four hens to each foot (that is two on each side of feeder) or six chicks; and build any length desired. It requires but little more labor to build a long one than a short one, though a 5 or 6-foot feeder would be more convenient for one person to carry.

Of dressed lumber, $\frac{3}{4}$ or 1 inch thick, it requires two pieces 12x19 inches; one piece, 12 inches wide and 8 feet long; one, 9 inches by 8 feet; three, 4 inches by 8 feet, and 16 lath, which are 2 inches by 4 feet. Cut notches 1x4 inches in the top corners of the two 12x19 end boards and nail cleats below a line 5 inches from bottom ends as

protrude inside of feeder. No. 2s will do for top, Nos. 3 or 4 for bottom. Finish both sides alike and you are ready for the cover. Nail a 4-inch strip on top at one edge, and hinge to it a board 9 inches wide. This allows

he? Speaking from a poultry fancier's standpoint, I feel justified in questioning such argument.

In mating Barred Rocks the influence of the male varies according to the mating. For instance were the best exhi-

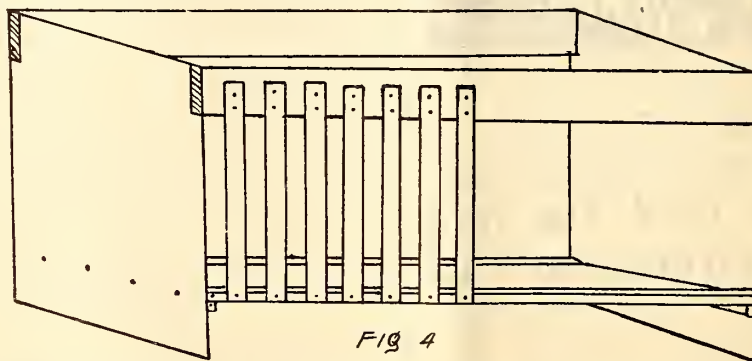

Fig 4

the lid to project over the side 1 inch, making it convenient to open. Fig. 5 shows a front view of the completed feeder.

If the lid were the full width of the

bition Barred Rock male extant mated to a mediocre lot of females, or even to a fine lot of pullet-bred hens, the result would be of little value from a fancier's standpoint; therefore, that male could

MRS. DENTON COLE :: Winwood, Pa.

not be considered one-half of the mating when breeding for exhibition stock; this, however, is not the fault of the male, the fault lies with the breeder, for if this male is mated to females bred in line for fine males, one is justified in expecting a big percentage of exhibition males from such mating. So in justice to the contention that the male is one-half of the flock, we must mate him with females of like quality—or rather with females from a line of exhibition males. By good judgment and accurate knowledge, a male may be of much greater value than 50 per cent, or by poor mating may even be put at zero.

This is one great stumbling block for most beginners in Barred Plymouth Rocks; they make a habit of buying fine males, but neglect supplying suitable mates for them, and I seriously advocate that no new breeder should ever purchase a fine male without at the same time buying at least two females suitable for mating with the male; in this manner one can establish a fine flock the first season, and it is much cheaper than buying males every year, and never raising stock equal to the males purchased.

Two trios—one from each mating—would put any new breeder well up to the front in one season if he proved capable.

Another contention which contains a yawning pitfall, is that of "line breeding."

Line breeding if conducted with great care, will intensify and perpetuate favorable characteristics; but to the ordinary fancier, careful selection with unrelated specimens is much the safer road to travel. When you are advised to mate a male to his own daughter—hesitate—far better let him go back to the mates he has already consorted with, and mate those daughters with a male of altogether foreign blood, but of as high type and quality as you can obtain—this is, of course, supposing that your stock is high class.

There is no question but that in-breeding weakens and destroys, lowers vitality, thereby inviting the many diseases that poultry men constantly fight; lowers fertility, in fact destroys such factors which are absolutely necessary when the final test of any breed is applied—the butcher and the cook. To hold its own commercially a breed must not be weakened and devitalized by the crime of in-breeding.

Why should we in-breed? Western breeders of Barred Rocks are greatly misled by the Eastern slogan of "My strain," "Forget it." Read between the lines a little and you will find that even the big Eastern breeders are always willing to buy an outstanding bird of some other breeder and to pay a good price for it.

I will here assert that our most prominent breeders do not in-breed, excepting in exceptional instances; there are times when they do so from an experimental standpoint. It is also true that almost all matings hold relationships, but they are not close enough to hold serious menace; and you will find that matings are chosen and made up, chiefly by the outward and visible sign of suitability; not by the toe-mark.

In choosing your matings make rugged health the first consideration; the quick growing aggressive chick will make the most valuable breeder, keep him growing; ignore the Standard cut

Schoyer & Wolsieffer, Egg Harbor City, N. J.

for overweight; it won't be long before the A. P. A. will recognize the error of its way, and the Barred Rock is too valuable for any retrograde movement regardless of any club ruling. I notice that the world at large is willing and ready to adopt the Orpington, which scales heavier than the Rock, so Rock breeders hang on to your overweight breeding stock, you'll need it in your business.

I never had a pullet yet which if it weighed six and one-half pounds at seven months, did not weigh from nine to ten and one-half pounds in good laying condition a year later; and a cockerel which weighs eight pounds at seven months, will weigh eleven to twelve pounds a year later.

If you've got to show adult birds, hatch a few in July and August, they will just catch Standard weights when fifteen or sixteen months old, and make good active stock birds at a pinch.

A late hatched cockerel makes a fine breeder in its second year; it weighs around nine pounds, and is surer in its service than the larger male.

Matt W. Baldwin.

Sioux City, Iowa.

Hats Off to the American Hen.

Figures Showing the Immense Amount of Wealth Produced by the Poultry Raisers of this Country—The Hen a Potent Factor in Building up the Revenue of the American Farmer.

When the secretary of agriculture admits that the American hen is a potent factor in building up the revenues of American farmers, the breeder of poultry has warrant to hold his head high and consider himself as being among the important members of the wealth-making class. In a recent report Secretary Wilson calls attention to the fact that the wheat crop of 1905 was worth \$525,000,000, adding that the American hen produced an amount nearly as large, his estimate being \$500,000,000.

There are good reasons for thinking this estimate for the poultry business too low. The census of 1900, which took account of industries as they appeared for 1899, gave poultry credit with having produced poultry and eggs to the value of \$281,078,035 in that year. This poultry was kept on 5,096,252 separate farms. On these farms were 233,598,085 chickens and guinea fowls, 6,599,367 turkeys, 5,676,863 geese and 4,807,358 ducks, a grand total of 250,681,673.

The census enumerators took no account of any poultry kept in any village, town or city, or on any farm of less than five acres. This rule excluded hundreds of thousands of fowls, as almost every village, town and city in this country contains many flocks of chickens, and it is estimated that at least 50,000 fowls are kept within the city limits of Chicago.

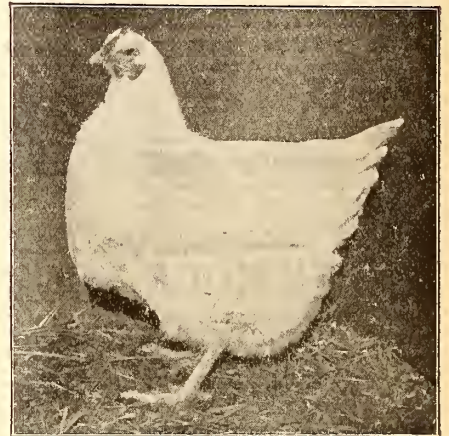

It is hard for the untrained mind to comprehend what is meant by the figures representing the number of fowls kept in this country. To the average mind 100,000,000 is an indefinitely large sum, amount or quantity. We read lightly about multimillionaires and billion dollar appropriations, but we rarely stop to consider what these large figures represent.

To illustrate: If the average weight

of all the fowls in this country were only four pounds each and they all were loaded on cars, each car containing twenty-five tons, and these cars were made up into trains of fifty each, it would require 400 trains to transport them. Each train would be 1,850 feet long, and if they were run a mile apart it would require nearly 550 miles of trackage to contain the shipment. At 10 cents a pound, this consignment of poultry would be worth more than \$100,000,000.

Owing to our defective system of gathering statistics, we have nothing but isolated attempts to gather poultry statistics by which to be guided in making estimates. I have been making guesses of this kind for more than twenty years, and have become sufficiently familiar with the tendencies of the business to be able to guess closely to the facts. In 1889 this country produced, in round numbers, 820,000,000 dozens of eggs.

In 1899 it produced in round numbers 1,294,000,000 dozens. This is an in-

First prize hen bred and owned by Sass Bros., Ancona, Ill.

crease of over 40 per cent. There is good reason for believing that since the last census was taken the poultry business has increased at least 60 per cent, for never before in the history of the country has any industry had such a rapid growth.

Breeding poultry is a small business, if we consider individual breeders, comparatively few breeders making it a specialty to which all their time is devoted; but in the aggregate it is a business which equals the growing of wheat; and as a nation we are proud of our place as providers of bread for the world.

Sheep breeding is one of the aristocratic industries of this country. So important is it considered by congress that the wishes of sheep breeders are consulted whenever a new tariff law is under way, yet the poultry breeders of this country could buy all the sheep and wool in this country with only a portion of the money they get for eggs alone.

Our national debt is quite a ponderous load, but it is not so large the poultry money of the country could not pay it within two years.

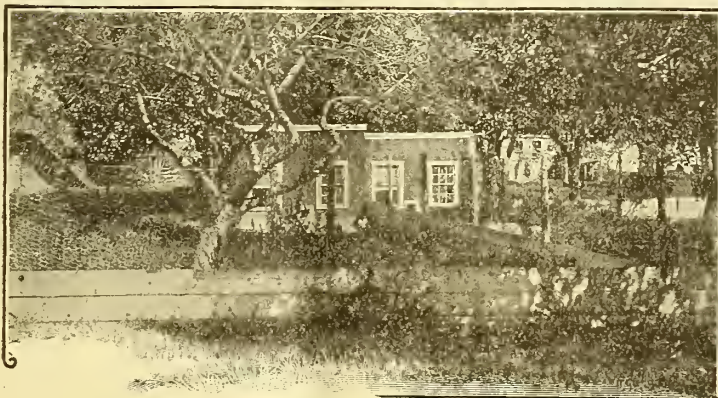

The immense aggregate revenue of this great little industry is divided among millions of individuals. The average return from each flock is about \$110 per annum. This money is practically profit, as 90 per cent of the fowls of this country live on feed which other-

wise would be wasted. Hundreds of thousands of flocks are kept on the back end of town lots and fed on the scraps from the tables of their owners, or on the garden truck of the next door neighbor, with trifling expense for food that has to be paid for. The writer has kept a dozen laying hens in his back yard for six months at an expense of 20 cents for feed other than the scraps from the table and waste vegetables from the kitchen, these hens keeping the family in eggs all the time.

The popularity of the poultry business rests on its adaptability to people in all walks of life. The farmer keeps fowls on his wide fields, and they pick up and turn into money scattered grain, weed seeds, insects, which if left alone, would injure his crops, and the grass that grows everywhere. The man who raises garden stuff keeps his fowls and feeds them the thing of which he cannot otherwise dispose, and adds to his income without expense. The shop worker, the clerk, the street car employe, and others who follow gainful occupations in towns and cities keep little flocks, which consume the waste products of the family and return fresh eggs that add to the bill of fare, save the purchase of meat, and make living easier. Every flock, no matter where it

eggs are never satisfied, and a careful review of the prices for twenty years shows a gradual rise, which of late years has been marked.

The growers of wheat, corn and oats have almost forgotten the old belief that prices are regulated by supply and demand. Boards of trade, elevator companies, and other factors in the trade make prices without much regard to the supply or the demand. Trusts make the prices to suit their interests, and the grain grower must take what is offered to him without regard to lean or fat years. No trust has ever been able to get control of the poultry business. Even the cold storage proposition has lost out. The profits of the business are used in the homes of poultry men themselves, or in nearby towns. Only the surplus goes to market, and this surplus is always in such demand that it brings fairly good prices. Breeding poultry is eminently the business of little things, so divided among the millions that it cannot be reached in effective form. The big packing firms have tried to get control of the market end of the business without success. Some of them have abandoned the field, and those still in it have been compelled to content themselves by taking the legitimate profit and allowing the poultryman his share. They

Breeding Yards on the Willow Brook Farm, Berlin, Conn.

is kept, improves the condition of its owner and adds to the wealth of the nation.

Pure bred poultry is sought everywhere. The price received for it astonishes those who have never given the subject attention. Last winter at a poultry show in New York, a man who had but little of this world's goods brought fourteen chickens to the show. A rich manufacturer, who supports a large poultry farm, asked what would buy these birds. The owner hesitated and finally said he would take \$1,500 for them.

The poultry business may be started by the investment of a small sum, and the man who has a flock on a town lot is likely to breed prize winners, which will sell for a high price, as the man who has unlimited room. In every large city may be found poultry breeders who raise pure-bred fowls, which sell for from ten to a hundred fold more than than they would bring in the market for food. The demand for this kind of fowls is large and keeps growing. The demand for "fancy" poultry is as steady and as insistent as the demand for poultry for food.

The food markets for poultry and

had to choose between this and letting the poultry man do business for himself. Eggs are easily packed and safely shipped almost any distance. Eggs can be shipped from Chicago to New York for 1 cent a dozen.

Breeding poultry is a business which can be made to pay on any scale, from a flock in the back yard to thousands of fowls occupying a whole farm. Egg farms and poultry farms are becoming more numerous every year. The poultry business is now a \$500,000,000 business. At its present rate of increase it will be a billion dollar business when the next census is taken.—Tri-State Farmer, Chattanooga, Tenn.

BREED FOR EGGS.

There is no poultry breeder that can successfully breed for show birds alone and make a success out of the poultry business. He must breed for something else besides the show room. His poultry must give him a daily profit, or his poultry fever will soon cool down. Begin by breeding for market and eggs, and there will be a profit and a love for the work, and you will make a success.

WOMAN'S HOME DEPARTMENT.

Mabel Bates, Editor.

This department will not be confined to poultry items entirely, but to all matters pertaining to household economics. We want every woman who reads American Poultry Journal to consider herself a member of this department. If you have a bit of practical knowledge in household matters, an item of experience in raising poultry that will be helpful to others: a favorite recipe, etc., send it along. This is your department, just as far as you are willing to make it.

All communications should be addressed to the Home Department of American Poultry Journal Publishing Company, 325 Dearborn Street, Chicago, Ill.

BE MISTRESS, NOT SLAVE.

July, to nearly all the readers of this department, means canning, company, cooking and confusion thrice confounded. It is hard not to let the work burden one, especially when that one knows that the work must not be allowed to get behind, even for a day, or it will overwhelm her with its immensity. One of

Saying so makes it so. Never affirm such a thing. It depends entirely upon each one of us whether we or our work are the master. If questioned say, 'Yes, I am busy, but everything is going on all right and will be done in due time.'

'The reason you are tired is because you are trying to do everything at once, in your mind. Do one thing at a time, the thing that needs to be done first. If the Lord meant us to do more he would

Typical feathers of Mrs. Denton Cole's "Ideal" Silver Wyandottes, Winwood, Pa. Four of "Lady Somerset's" daughters now in her yards.

the busiest women the writer knows has solved the problem in a large measure. Her work keeps her occupied from morning until night, and much of her time in the evening is spent in planning out the morrow's tasks. With it all she never has a frown or cross word for any one, and accomplishes all she undertakes with seemingly but little friction or weariness. In speaking of work to a friend she said:

"Yes, I know you are busy, but when people ask you about it don't say, 'Oh, I am buried, simply buried in work.'

have given us a larger supply of hands.

"It is easy enough to be master of one thing at a time, and by working steadily and systematically, without carrying the morrow's burden of work, you will be surprised at night as you look back over the day to see how much has been accomplished, and with half the strain, mental and physical, of your former method."

Try this for a day, busy reader, and see if it does not possess a magical charm, which will make even the roughest places smooth.

UNUSUAL WAY OF CANNING RASPBERRIES.

It may be a little late for raspberry recipes in some localities where the American Poultry Journal goes, but if so the recipes can be clipped and used another year.

Those who have tried making raspberry jam without cooking it will never go back to the old method. The flavor is that of freshly picked berries. Care must be taken in making this delicious confection, however, or it will ferment and necessitate cooking later in the season. The proportion is pound for pound of berries and sugar, and a quart box of berries weighs a pound. Put the berries and sugar in a dish and mash them with a potato masher until every little globule is broken. Right here lies the success of the undertaking. If all are not broken the jam will spoil. Put the uncooked pulp, just as it is, into cans, screw the covers on tightly and set in a window where the sun can shine on it. In twenty-four hours it will be ready for the cellar. Remember that the whole secret lies in breaking up every berry perfectly. Too many berries should not be handled at once. It is no trouble to put up a quart at a time, and the small amount is quickly and easily cared for. Currants can be preserved in the same way if every berry is broken.

Cooked Raspberry Jam.—Allow pound for pound of berries and sugar. Put the berries in a bowl and crush them well. Add one cupful of water to every three pounds of sugar, let it boil until almost ready to turn back to sugar, then stir in the berries and boil ten minutes.

NOVEL CURRANT RECIPES.

Spiced Currants.—The following recipe has been used for many years in the family of one reader of the American Poultry Journal, and is considered the best of its kind: Six pounds of currants, four pounds of sugar, one pint of vinegar, two tablespoonfuls of cinnamon, one of cloves, one of black pepper. Put the spices in a bag. Mash the currants and bring them to a boil. After cooking a few minutes strain the currants through a colander, add the juice to the vinegar, sugar and spices, let them boil fifteen or twenty minutes and pour over the currants.

Currant Conserve.—Something a little new is currant conserve. Once tried it will be part of the yearly canning program. Five pounds of currants, two of raisins, four of sugar, four oranges, one cup pecan or walnut meats. Seed the raisins and chop them fine. Seed oranges, chop fine, peel and all. Break the nuts in small pieces. Crush the currants and after adding the other ingredients cook slowly as for jam.

Currant Catsup.—Ten pounds of currants mashed and strained through a cloth. Add one quart vinegar, five pounds granulated sugar, three tablespoonfuls cinnamon, two of allspice, one of cloves and one of salt and one-half teaspoonful red pepper. Boil slowly one hour and put up in bottles.

BACK DOOR NEIGHBOR'S CHATS.

The Back Door Neighbor dropped in the other morning for the little visit which always sets the day to running right. She said she could stay but a moment, as her currant jelly was all ready to put up. Now jelly has always been a mystery to the Young House-

keeper, to be undertaken with fear and trembling and approached with mystic rites and magic charms. "Jelly that won't jell" is the bane of her existence. With admiration and awe in her voice she ventured to ask what methods could possibly be employed that did not necessitate hours of mental suspense.

"Why, bless you, child!" exclaimed the Good Neighbor, otherwise known as the Friend in Need. "There's nothing in the world easier than making currant jelly. The berries should not be over-ripe and should be as nearly freshly picked as possible. I wash them and dump them in a big porcelain kettle. When they are thoroughly heated I mash them with a wooden masher to break all the currants, turn them into a bag and hang them over a dish to drip all night.

"After the breakfast work is out of the way the next morning I measure the juice by bowlfuls back into the kettle, being very careful not to squeeze the bag, as juice extracted that way makes cloudy jelly. Into a tin I put as many bowlfuls of sugar as there are of juice

bottle the juice. In the late fall, when the rush of work is over, make crab-apple jelly and add the raspberry juice. The result will be a firm, clear pink jelly, with a most delicious flavor. It can be made in small quantities if desired and hardened in a fancy mold, and served with whipped cream for dessert, or used as a regular jelly with the meat course.

TWO GOOD RASPBERRY RECIPES.

Raspberry Cream.—Mash a quart and a half of berries, add half a pound of sugar and the juice of one lemon and stir until the sugar is dissolved. Put a pint of cream in a double boiler, add half a pound of sugar and stir until the heated cream dissolves the sugar. When perfectly cold add another pint of cream, put in the freezer and when it is frozen like a thick batter, open the can and stir in the raspberries. Turn the freezer slowly until the cream is frozen. Pack and leave for a couple of hours to ripen.

Raspberry Mousse.—Make a rich

One of the breeding houses on farm of Sass Bros., Ancona, Ill.

and set it into the oven to heat. When the juice comes to a boil I put in the hot sugar and give it a thorough stirring. After that it must not be stirred again, but the scum must be carefully removed. Never use a tin spoon or dish in handling the fruit. Fifteen minutes of cooking should finish it. Try a little on a saucer and when it 'sets' fill the tumblers and the job is done. The jelly will be clear and of just the right consistency. I don't like jelly that is like chewing wax, myself.

"Try my plan, child, and you'll never have to worry over jelly making again and tire yourself all out in the bargain.

"Why don't I tell other folks how to make it? Bless your heart, child, everybody makes it that way!"

But to the Young Housekeeper it was a revelation, and she passes it along for the sake of her sister housekeepers, who, like herself, are having their first experience this year in jelly making.

FOR LATER USE.

Those who have tried to make raspberry jelly, only to have it turn out on the dish in a soft, mushy lump, will be glad to know of any easy way to prepare this dainty relish. Instead of trying to make jelly when all the summer work is crowding, mash and cook unsweetened raspberries until the juice is extracted, and after straining can or

boiled custard of milk, eggs and sugar. When cold add a pint of whipped cream and a tablespoonful of powdered sugar and freeze until it is like a thick batter. Add half a pint of sweetened and crushed raspberries and freeze very hard.

A CANNING HINT.

Tops of fruit cans which have become covered with mold and rust can be cleaned by leaving them in sour milk or vinegar for some time and then scrubbing them with a stiff brush.

GOOD THINGS TO EAT.

Raisin Tarts.—When pie crust is left over, try making raisin tarts. Steam a cupful of seeded raisins until tender and let them cool. Add half a cup of chopped apples and half a cup of sugar. Line patty pans with the pie crust, fill with this, cover with a top of pie crust and bake in a moderate oven. If the children do not consider these the best pies that they ever tasted for school luncheons, something is the matter with their judgment.

Velvet Sponge Cake.—Beat two teacups of granulated sugar with six eggs for fifteen minutes, reserving the whites of two of the eggs for frosting. Add a cup of boiling water, pouring in a little at a time and beating vigorously between

each portion. Stir in two and a half cups of flour into which a tablespoonful of baking powder has been sifted. Flavor to taste and bake in four layers.

Frosting for Velvet Sponge Cake—Beat the whites of the two eggs stiff. Have ready one and a half cups of granulated sugar which has been boiled with six tablespoonfuls of water until it threads. Pour this slowly upon the beaten egg, beating it all the time. Add flavoring and beat until cool enough to spread. If liked, chopped nut meats can be added to the frosting, or chopped raisins.

Good Cookies—Two cups sugar, one cup butter, one cup sour cream or milk, three eggs, one teaspoonful soda, one teaspoonful of flavoring. Mix soft, roll thin and sift granulated sugar over the dough, rolling it gently in, just before cutting out.

SOME EGG DISHES.

Custard Eggs—Stand as many cups in a pan of hot water as there are persons to be served. Take one egg for each person, separate the yolk and whites of half of them, putting the whites at one side. Beat the whole eggs and yolks together and stir into milk which has been heated in a double boiler, allowing half a cup of milk for each person. Stir the milk and eggs until they form a soft custard, season with salt and a dash of pepper. Turn the custard into the heated cups, beat the whites to a stiff froth and heap each cup full. Set the pan into the oven till the whites brown slightly.

Buttercups—Take hard boiled eggs, cut in halves and remove the yolks into a bowl. Mash them to a pulp, add a tablespoonful of butter, a large teaspoonful of made mustard, a salt spoon of pepper and two of salt. If there is any boiled salad dressing in the house

this may be used instead of the made mustard, and grated cheese or finely chopped ham makes a nice variation. Fill the cavities in the whites of the eggs with this paste and serve them on a platter, daintily garnished with water-cress or parsley.

Egg Nests on Toast—Separate the whites and yolks, leaving the yolks in the shell. Beat half the whites stiff, reserving the rest for any other use desired, heap them on slices of hot buttered toast and make little nests in them in which slip the yolks. Sprinkle salt and pepper and pour melted butter over them and set them in a hot oven a few minutes to set the yolks. If liked chopped meat can be sprinkled over them and a cream gravy adds to the result if a little more work is no object.

FAIRY CAKES.

One heaping cup of sugar, one egg beaten well with the sugar, three-fourths cup of melted butter, three-fourths cup sweet milk, one teaspoonful rosewater, one-half teaspoonful grated nutmeg, one teaspoonful caraway seeds, two heaping teaspoonfuls baking powder, flour to make stiff batter. Beat very hard and put in gem pans. Bake from twenty minutes to half an hour.

MISS FLORA FINLEY.

Ann Arbor, Mich.

EGGS WITH RICE, LEMON SAUCE.

A delicious and somewhat unusual way of cooking eggs is with rice. Cook rice until each grain is separate and thoroughly cooked. Take from the fire, dash cold water over it, drain and return to the stove to heat with a dessert-spoonful of butter and half a teaspoonful of salt. Boil eggs three minutes, knock very gently to chip the shell, and peel it off carefully. The white should

be done, but the yolk soft. Put the rice in a heated serving dish and place the eggs on it, sprinkling them with salt and pepper. Cover with the following sauce:

Lemon Sauce.—Melt half a tablespoonful of butter with a half a tablespoonful of flour in a sauce pan and stir until smooth. Add one-fourth of a cup of water and the juice of two lemons, stirring constantly. Put in a salt spoonful of salt, a little celery salt and a grating of nutmeg. Cook until nearly as thick as honey.

NORWEGIAN PRUNE PUDDING.

This is something a little out of the ordinary, and makes a good dessert for hot weather, as it can be prepared in the early morning, or even the day before. Wash one pound of prunes and soak them over night in one quart of cold water. In the morning boil them in the same water until soft. Stone, add one pint of water and cook up again. While boiling add two cups of sugar, five tablespoonfuls of cornstarch mixed with enough cold water to dissolve it, and put in a piece of stick cinnamon. Boil five minutes, stirring constantly. Pour in a mould to cool, and serve with cream and sugar.

KITCHEN FLOOR PAINT.

A paint that is easily prepared and which will dry the same day that it is put on is made by taking two ounces of glue and one quart of rainwater and letting it stand on the back of the stove until the glue is dissolved. Then mix it with yellow ochre until it will spread nicely. Paint the floor with this and go over it again with boiled oil. It has the double merits of cheapness and long wear, as it is said by those who have tried it to last three or four years without renewing.

CURE FOR INSOMNIA.

If you are troubled with sleeplessness, try a cayenne sandwich just before retiring for the night. Butter a couple of crackers generously, sprinkle them liberally with cayenne and press together. No unpleasant sensation will be felt on eating it and it is said by those who have tried it to be one of the surest ways of bringing sleep, the cayenne drawing the blood from the brain to the stomach.

HOME-MADE SAUSAGE.

There is a delicious home-made sausage which does not depend upon pork for its foundation. Instead a mixture of veal and bacon is used. They are run through the chopper together and seasoned with pepper, salt and sage, about one part bacon to three parts veal being the proportion used. Made into cakes and fried, and served with a cream sauce made in the frying pan, they are sure to please every member of the household.

A hotter oven is required for small layer cakes than for loaf cakes.

Only a few people know that butter will take tea, coffee and fruit stains from linen or cotton. It should be rubbed on and then the material should be soaked in hot water and a mild soap.

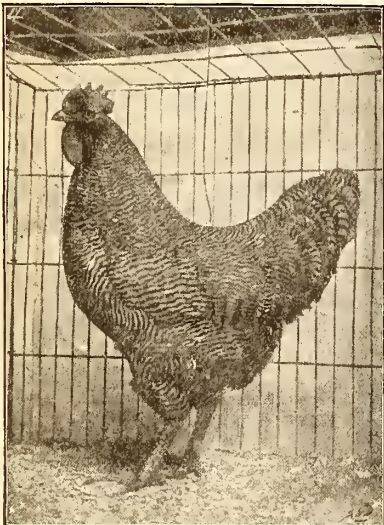

RINGY CHICKS

TWELVE TOOLS IN ONE

Hatchet, Hammer, Pincers, Alligator Wrench, Leather Punch, Gork Screw, Wire Cutter, Wire Splicer, Nail Claw, Hunter's Knife, Can Opener and Screw Driver. All of which are convenient and practical tools, ever ready at hand for immediate use in any emergency.

There has been a long felt want for such a tool, but nothing hitherto attempted approaches it, even in the slightest particular, in point of novelty, convenience or excellence of quality, all of which are universally conceded.

The tool is acknowledged by mechanical experts to be the most complete and practical combination tool ever invented. In design and construction it is the most radical departure from the ordinary method of tool manufacture ever before attempted, being stamped cold out of cold rolled,

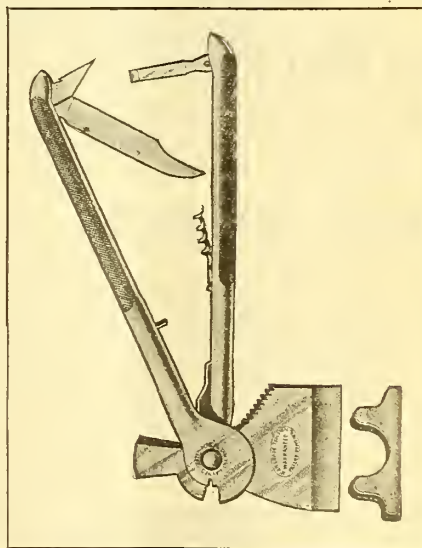

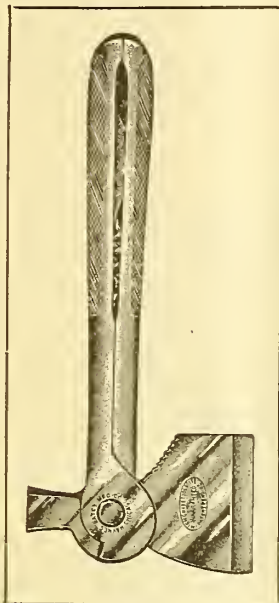

high carbon, tool steel, which does not vary one one-thousandth part of an inch in thickness at any point, each of the many parts being so perfect as to be interchangeable. We do not hesitate to make the statement here, that there is not now, nor has there ever been, a hatchet, hammer, ax or wire cutter, or similar tool ever manufactured, that contained steel equal to the steel used in this combination tool. The fact is, we could not find anything superior for this purpose—it is not made. Many of the "standard" tools, so-called, are either of cast steel or drop forged, in neither of which is it possible to maintain a high standard of quality.

One of these tools should be on every poultry farm in the country. No need of paying out from \$10 to \$15 for the different tools required on a poultry plant, when a combination tool of this character can be procured for the low price of

\$2.50

DEAN'S BARRED AND WHITE PLY. ROCKS AND WHITE WYANDOTTES
 ARE BIRDS OF QUALITY
 L. B. DEAN :: Box 62, Lakeside, Illinois

For Sale

200 Barred and White Plymouth Rocks, White Wyandottes. This year's breeders of all quality. Stock in lots of 10 or more at a bargain.

D. T. HEIMLICH :: Jacksonville, Illinois

ANNUAL SUMMER REDUCTION SALE

As has been my custom for a number of years after June 1st, to sell out my this season's breeders, I am now offering some rare bargains in

Silver, Golden and White Wyandottes

including some high-class yearling hens, pullets and male birds of exceptionally strong breeding points. In this sale goes some high scoring exhibition birds that will win in hot company, and for those desiring "Fall Fair Winners," here is your chance to get the

Strongest Blood Lines on Earth

at just ONE-HALF their real value; I will sell these single, in pairs, trios or pens, or in large lots as desired. Get my prices and save money on high class birds.

Jones, The Wyandotte Man

has the goods, and has proven beyond a doubt that they are "The Gladiators," having won at all of the leading shows of the country. EGGS HALF PRICE REMAINDER OF SEASON—\$1.50 per setting. Fifteen high class Collie puppies to sell.

R. E. JONES, "The Pines," R. F. D. 50, Paducah, Ky.

Potter's New Book On Poultry House FIXTURES

Just Out The latest, biggest and best book ever issued, telling all about our model and modern hennery equipment. It shows you how to have a neat, convenient and sanitary hen house; one forever free from the pests—lice and mites. You can have healthy hens, get more and better eggs and save time and labor in your work. You can have pleasure and profit in poultry raising—not loss and discouragement. Only take right care of your fowls.

DON'T BUILD

that new hen house or think of fixing up the old one until you have seen our latest and best catalogue. It tells all about the Potter Fixtures; our double vermin proof and exterminator roosts (sure death to lice and mites); our "Simplex" trap nests; improved W. P. attachment, etc. It shows fixtures in three styles and 50 different sizes; 64 large pages and over 50 illustrations. It has cost you hundreds of dollars, but we send it free to you for 2 cents to cover postage. Write today and learn how to save time and labor with this 20th century line of up-to-date hennery fixtures.

NOW'S THE TIME

to learn the Potter System of profitable poultry culture. Hens "dry up" the same as cows. Do you know why and how? Our system teaches you 15 different ways of making more money on your poultry. Hen selling time is coming, but "DON'T KILL" a laying hen, or sell any hens until you know just their condition.

The Potter System teaches you how to pick out every laying hen in your flock. You can keep fewer hens, get more eggs and make more money on your poultry if you know the Potter system. Write today for printed matter and learn what prominent judges, breeders and editors think of our wonderful discovery and its great value to poultrymen.

NEW BREEDS—DO WE NEED THEM?

Stop the Craze for New Varieties of Fowls and Devote More Time and Money to the Improvement of Some of the Old Varieties.

Written for A.P.J. by Plummer McCullough, Mercer, Pa

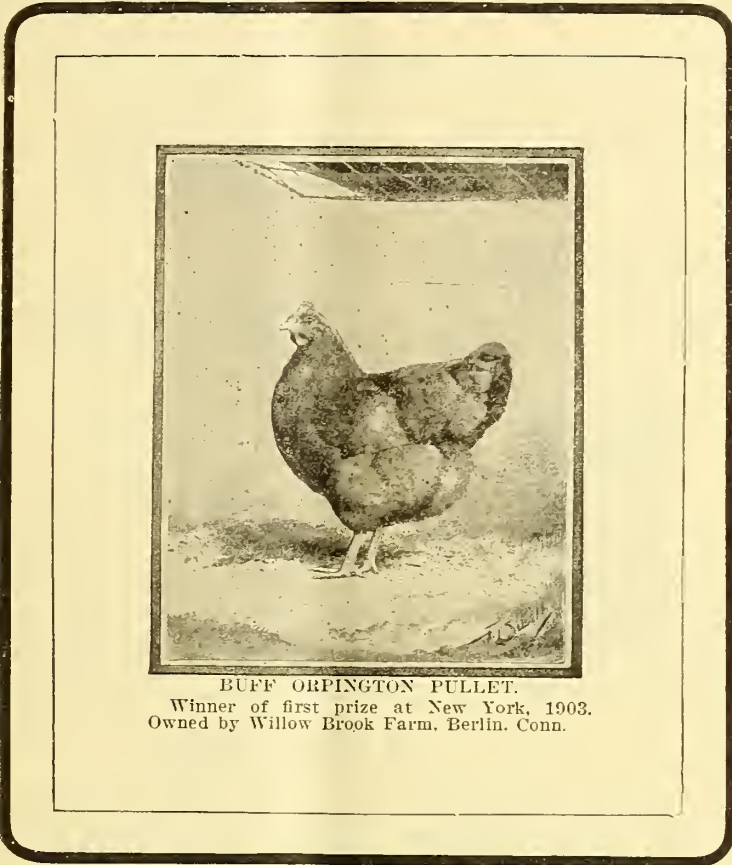

It is certainly wonderful how many new varieties have sprung into existence the last few years. Only a few years ago we only had one variety of Plymouth Rocks, viz.: the Barred. Now we have the Whites and Buffs, and also Blacks, Silver Penciled, Partridge, Golden Barred, and a breeder is now advertising Silver Laced Plymouth Rocks. In Wyandottes we have Silver Laced and Golden, White, Buff, Black, Partridge, Silver Penciled, Columbians, Violets and even Silver Spangled Wyandottes. Not only this, but it is the same in every breed. We now have breeders of Rhode Island Whites, which I think is going entirely too far. I like to see a good thing as well as anybody, but I know when I have enough. Some people will say if we can find fanciers for these new varieties what is it your business? Very true, but the question is, do we need these new varieties? I say I don't think we do. What difference is there between Rhode Island Whites and White Rocks or Wyandottes? Very little, I judge. What do we need with Silver Laced Plymouth Rocks, as they are simply Silver Wyandotte culls, or at least of the same type. What do we need with Silver Spangled Wyandottes, as they are so near like the Silver Laced? In fact, I have seen Silver Laced birds (so called) that would pass for Silver Spangled. I ask again, do we need these new varieties? Now the old breeds are continually being crowded out for these new breeds when they are as good if not better than the ones that take their place. It takes work and money to get up a new variety, but if this money and work was put in the old varieties in trying to make them better wouldn't we be just as well off? What has become of the Dominique? Now we all know that the Dominiques are one of the best fowls we have today. Why are they not bred? Because they are crowded out by other varieties not half as good. Where is the Java gone to? These are one of our best general purpose fowls. They, too, have been crowded out. Where is the Hamburg? These are the handsomest fowl in existence today. Someone says they are not hardy. Perhaps they are not quite as hardy as some varieties, but all they need is someone to get a hold of them and breed vigor and vitality into them. They have been neglected is the reason they are not hardy. The Red Caps are also a backslider. These two breeds are as good layers in my estimation as there is in existence today. The Dorking has also fallen for some reason. There is no reason why they should not hold the same place the Orpingtons do today. If the work that has been put in Orpingtons was put in Dorkings instead don't you think we would be just as well off? I do. If we keep on getting new varieties as we have the last ten years the American Standard of Perfection will be so full of varieties that we will soon have a variety for each

family in the United States. I, for one, would like to see this new variety business stop right where it is. We certainly have enough varieties now to suit anybody, and these new breeds are no better than the old, if as good, in the long run. If the extra work was put in our old reliable varieties we would be money ahead in the end. Someone needs to take up the breeding of Dominiques, Hamburgs, Red Caps, Javas, Dorkings and some others, and you will make just as much money from them as though you had some of these

of the Buffs in egg yield. At the end of the year (12 months) the Buffs were ahead, not a great deal, to be sure, but they were ahead.

The automobile that wins a race does not a rule cross the tape very many seconds ahead of its nearest competitors, but it is the winner. The same make of machine goes the race several seconds better the next race, and so on. They keep on improving it, for it has proved that it has the possibilities in its make-up.

That's the Buff Leghorn. It is as great

new varieties. Let us stick up for the grand old breeds and put them again to the front, where they deserve to be.

BUFF LEGHORNS AS MONEY-MAKERS.

(By H. L. Haff, Manager of Morgan Poultry Farm, Beloit, Wis.)

A number of years ago I made up my mind to breed one breed exclusively. I had at that time about five distinct breeds; also scrubs.

It wasn't easy to decide what breed to keep and what to discard, for I loved them all "with all their faults," but business is business, and I could see plainly every day that a lot of the birds were eating a hole in my pocketbook.

My first move to get my pocketbook repaired was the making of some trap nests. They caught the loafers, or rather the layers, for the loafers stayed outside; they had no use for trap nests or any other kind of nests.

In eight months from starting the trap nests every breed had to go except the Buff, Brown and White Leghorns. The test was started early in the spring. At the end of the eighth month, the Brown and White were slightly ahead

a layer as any fowl living. You can help to make it still better. For it has the possibilities within it.

Where you now have roosting space for 25 large fowls, you can successfully keep 40 Buff Leghorns.

Now 40 eggs is surely worth more than 25, and especially so when you don't have to increase the feed-bill.

While a balanced ration will nearly always give best results, you need not be afraid if your Buff Leghorns have free access to the corn-bin that they will lay down in some corner and put on fat. No! They will hustle and provide for themselves what you have neglected to do. If the Buff Leghorn is anything, it is certainly a farmer's fowl.

All who have seen a well-bred flock of Buff Leghorns will admit that they are beautiful.

Their beauty does not all lay in their golden hue; it is the combination of graceful curves, sprightly movements and golden feathers that makes them so very charming and fascinating to the true fancier.

Have you ever had the opportunity of seeing several hundreds of these birds out in a clover field on a sunny spring day? You haven't; well, cheer up, you have something yet to live for.

BIG MONEY IN EGGS

Green cut bone doubles egg yield. Mann's Latest Model Bone Cutter. 10 days free trial, no money in advance. Cattle free. F. W. Mann Co., Box 50, Millford, Mass.

USE YOUR NOSE.

In Your Poultry House More than any other Place
You should Use Your Nose to Detect Bad
Odors—Fresh, Pure Air in the Poul-
try House is Absolutely
Necessary to Success.

Written for A. P. J. by Mrs. D. Cole, Winwood, Pa.

I remember, when a child, we used to
play a game in which the leader asks:
"What are your eyes for?" "To see
with."

"What is your nose for?" "To smell
with," etc.

But in visiting some poultry houses
through the country, it strikes one the
owners have forgotten that game or the
natural use for the organ of smell.

A wise and loving creator has endowed
us with many blessings; some of them,
because of constant use, and hence
"common," pass us by, in many cases
unheeded. Some of these more common
blessings are not appreciated as they
should be, until the loss of them brings
us to a realization of their true worth.

The gift of sight always seemed to
me to be the very greatest physical bless-
ing; and yet how many of us forget to
lift our hearts in thankful prayer, in
return for this, in common with the
many others constantly enjoyed by the
majority of mankind. However, if de-
prived of the opportunity to enjoy this
great gift, I think few of us would for-
get to lament the lack of former appre-
ciation. So it is all the way down the
list of constant blessings. I was led to
think more of this, and to write this
article through the entire temporary loss
of the sense of smell lately, from an
attack of what I think is a form of
grip. Each victim lost entirely through
the middle stage of the disease the senses
of smell and taste. While I must con-
fess that *sometimes* the privation of
both of these seem a blessing, still it let
me realize more than ever before the
wisdom and love that gave us the olfac-
tory nerves.

In nature nothing goes to waste, we
are taught. The creator did not make
one nerve, bone, muscle, nor anything
without its use, and the wise and right
use of each of these are for our pleasure
or profit. The constant neglect to use
any part of the body results in a weaken-
ing of that part; so it is that many,
neglecting to "use the nose," finally
reach the stage where the nerves are
unresponsive.

I confess to allowing my own poultry
houses to go much worse than I desire
(as I have too many other duties to
care for them as I should like to do),
but when I enter the houses where the
droppings are removed only once a year,
and quite often you hear, "John didn't
get it cleaned out last spring," I must
think that the owners fail to use their
noses, and I have even been where *my*
nose would not allow me to enter at all.
I often wonder *how it is the fowls in*
such quarters can possibly exist—to say
nothing at all of giving their care-
taker (?) any fruits for their "labor."

Look in your houses and see if they
seem reasonably free from droppings,
etc. If so, go to the roosts (remember
this is the sleeping quarters of your
birds, that produce for you two kinds
of food), and *use your nose!* I won't
ask you to put your nose where the
fowl's must necessarily be, near the

droppings board, but note how it is as
you stand. Does it smell sweet and
wholesome? Then take some dry earth
—nature's absorbent—or coal ashes,
lime or some other accessible absorbent,
and sprinkle liberally all around where
the droppings fall. After cleaning, and
using the dirt, I sprinkle liberally, once
or twice a month, all around dropping
boards, roosts, nests, etc., "Will-Kill"
lice powder. This is a deodorizing disin-
fectant and also helps to keep down ver-
min. I never have a red mite in my
buildings.

If your fowls have a cold, use your
nose, for the first sign of rousy smell.
Personally, I have never had a case of
real roup, but I read that a disinfective
odor always accompanies this dreaded—
and dreadful—disease.

At one time I was called by a neigh-
bor woman to see "what ailed one of
her hens," and with the help of my eyes,
my nose immediately told me. The
trouble was vent gleet, and I advised her
to have her killed at once.

Use your nose when visiting the set-
ting hens' nests; also the incubator, and
you can usually tell if there are dead
germs decomposing, or "rotten" eggs.

Use your nose when buying feed, and
see if it is musty or "heat." Last
spring I lost between \$25 and \$40 worth
of breeders by feeding corn feed that
was heating. I had no other feed at
the time, and no chance to get any, so
had to use it for a few feeds, with
above result.

Use your nose around the brooders or
brood coops to ascertain if there are
dead chicks out of ready reach of your
other faithful allies (your eyes); also
that no droppings are making the air
foul and unwholesome.

Use your nose inside the drinking
fountains occasionally. It will do no
harm at any rate to keep a handful of
fresh charcoal in the fountains during
hot weather, and occasionally to scald
out with boiling water, using a teaspoon-
ful of borax, soda or lye in each foun-
tain.

Use your nose once in a while to see
the litter in which the dry feed is scat-
tered is O. K., or if wet mash is fed
use your nose *often* around the feed
dishes.

Use your nose mornings when you open
the buildings to make sure of the con-
dition of the atmosphere where your
birds are kept nights—and sometimes
days also.

These are a few of the many ways
in which your nose may be made a very
helpful factor in your poultry yard.

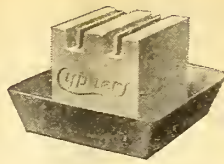

Remember, our fowls are under our
direct care. We are in duty bound, for
humanity's sake, to make them as com-
fortable and happy as possible. But
there is still a greater reason outside
of this, that they should be kept in a
sanitary condition. They are producing
food for human consumption either in
the form of eggs, or their own flesh; so
merely from the "business" standpoint
it is policy to treat them in a humane
and health-giving manner.

INTERESTING BOOK, "CHICKEN CHAT."

One of the simplest and cleverest
little booklets that has come to our at-
tention is *Zenoleum Chicken Chat*, is-
sued by the Zenner Disinfectant Com-
pany, 117 Lafayette Ave., Detroit,
Mich. This contains a series of poul-
try diseases giving symptoms, cause
and remedies for practically all the dis-
eases to which poultry is heir. Each
of our readers should have a copy. Sent
free on request.

A LINE OF LICE KILLERS

It takes a Poultryman to know the needs of Poultrymen.

That's why all the goods manufactured by the Cyphers Incubator Company are a little better than others. Not one man's knowledge has built up this biggest manufactory of poultry supplies in the world. We pride ourselves on the fact that this Company is composed of men who have devoted their lives to the poultry business—men who have met their difficulties in the showroom and in the poultry market just as you may have done—men who have reached the front in all branches of poultry culture and whose combined knowledge has been the step to success both for this company and for its numerous customers. This combined knowledge is your safeguard and makes certain that what you buy of Cyphers Company shall be better suited to your needs than any other you can buy. Our principle is **Quality first—the price as low as we can make it.**

OUR MILL

Situated at Kansas City, has enabled us to guarantee the quality of Cyphers Poultry Foods because we buy the grains and mix them ourselves, thereby rendering impossible adulteration by middlemen. **Every Sack is Sealed** and your rights are thereby protected. See that the Seal is not Broken when you get it. Remember that Cyphers Poultry Foods contain **No Weed Seeds**, and when you want to decide which is worth buying compare it with any other food on the market. Sample free for the asking.

OUR FACTORY

Possesses facilities for making everything poultrymen need in the form of wooden and metal goods in addition to **INCUBATORS AND BROODERS**. In our Laboratory we make our own Lice Killers, Poultry Remedies, Egg Preservatives, etc., and our Publishing Department has issued a most complete line of poultry books including: "Profitable Poultry Keeping in All Branches," "Profitable Care and Management of Poultry," "Profitable Poultry Houses and Appliances," "Profitable Egg Farming," "Profitable Market Poultry," "Capons For Profit," "Poultry Plant Construction," "Profitable Poultry Feeding."

Our Illustrated Poultry Supply Catalogue is Free. Write for it. Our Poultry Supplies as well as Incubators and Brooders are kept in stock by over 7000 Agents and Dealers. If your local dealer does not handle them, write us direct, and kindly send us his name and address.

Questions and Answers

Questions asked by subscribers will be answered in this department only under the condition that the full name and address is signed by the writer.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—As I am a subscriber of your valuable journal I would be pleased to have you answer a few questions in your next issue: 1st. I sent for a few settings of eggs; would the cockerels from these eggs be all right to breed to the pullets from the same, or would I have to get cocks or cockerels from a different place? Will I have to change cocks every year?

Manson, Iowa.

Answer:—The cockerels will be all right to use with the pullets for another season. The second year will require new blood, unless you intend to line breed, and unless you have thoroughly studied the question of line breeding we would not advise you to undertake it.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Will you please tell me in your June JOURNAL what is the matter with a hen that seems to be well and lays an egg and dies in about half an hour after?

Mrs. E. F. M.

South Tacoma, Wash.

Answer:—Apoplexy, for which there is no cure.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—In your next issue will you please tell me what is wrong with my hens, and, if possible, give remedy? I

have had three, at various times, get drowsy and stop eating, and within two days they were dead. Two of them kept to the nests. There is no symptom whatever except the drowsiness and no eating. I have two now that are drowsy and have refused to eat for nearly a week. They have no other symptoms. Yesterday one kept drinking for a number of minutes, but neither one will eat.

Chicago, Ill.

G. T.

Answer:—From the symptoms given we believe your fowls have liver trouble. This is usually brought about by feeding on too rich food and lack of exercise. But, of course, a postmortem examination is the only thing that can determine just what the trouble is. Would suggest a change of diet and feed rather sparingly for a time. It is also possible that your fowls are brought to this condition by lice. Endeavor to locate the cause of this trouble and you will have no occasion to resort to medicines.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer in the Question and Answer column of next month's issue of AMERICAN POULTRY JOURNAL the following: 1st. I have a Buff Orpington hen that can't get her head down to the ground to eat; she will eat when you hold the feed up to her beak. I feed her oats, corn, wheat, etc. She has free range to

an oat patch. She gets better occasionally and lays a few eggs. Her head is red. Her neck seems to be swollen, and I have to press the food down from her craw. What is the matter and remedy? 2d. What is the best food for young chickens.

A. M. B.

Nellie, Ohio.

Answer:—This is probably due to improper circulation of the blood, which causes an overabundance to gather in the neck and head, and gives the neck the appearance of being swollen. Give her only soft, cooling foods, such as stale bread, wheat bran, etc., and cut out the grain diet entirely for a time. 2d. Any of the prepared chick feeds advertised in these columns is all right to feed young chicks.

Editor American Poultry Journal.

Dear Sir: Please answer in your paper: 1. Can you remove a setting hen from the nest and place another hen on it without hurting the eggs? 2. How many chickens can be kept in a coop ten feet wide and seventeen feet long, with a run seventy feet long and forty feet wide? 3. How high should I have a picket fence to keep Barred Rocks and Buff Orpingtons in?

Jackson, Mich.

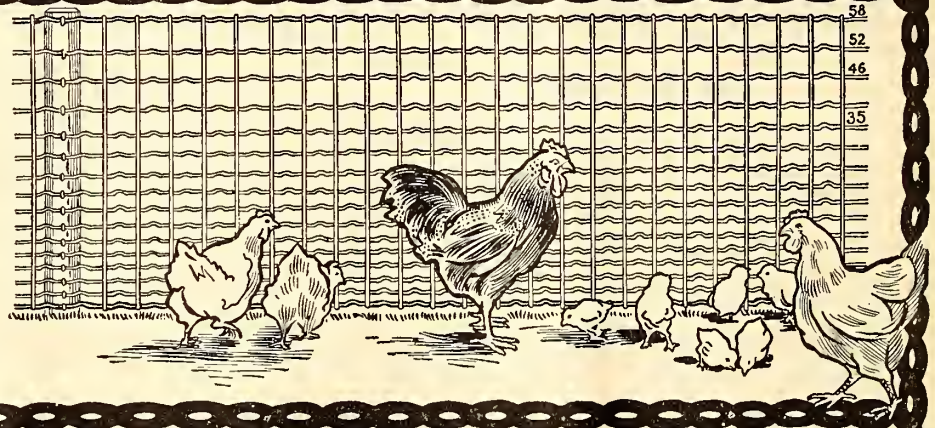

F. H. M.

Answer.—1. Yes. 2. About twenty-five. 3. At least six feet.

Editor American Poultry Journal.

Dear Sir: Please answer the following in your question and answer column of your next issue: What is the best and most productive chicken feed to raise, and what kind should be raised for the spring and summer season for

What's this
We're up
Against?

At Last a Perfect Poultry Fence

The "Pittsburgh Perfect" Poultry and Garden Fence is exactly what its name indicates. It is "Perfect" because made of special steel of our own formula; "Perfect" because heavily galvanized, thus preventing rust; "Perfect" because our electric welding process makes stay and strand wires one piece so that mesh cannot spread to let fowl through; "Perfect" because smallest wires in it are heavier than the wires used by most fence manufacturers for a regular stock fence; "Perfect" because it is the only fence that will not unravel if strand or stay wire is cut.

Don't buy flimsy hexagon poultry nettings; they rust out quickly, won't stand up, and are but makeshifts and disappointments at best. It's "the WELD that HELD" that makes a perfect poultry fence. No top or bottom board needed. Heavy top and bottom wires take their place. Nothing can get through—nothing from the small chick to a mad bull.

THE ONLY ABSOLUTELY "PERFECT" POULTRY FENCE ON THE MARKET.

The price is small—the satisfaction is great.

Thousands of dealers handle the "PITTSBURGH PERFECT" FENCES, from the Extra Heavy Fences for stock to the king of all Poultry Fences.

THE "PITTSBURGH PERFECT" POULTRY FENCE. Has Your dealer got it? If not, write us for catalogue.

Pittsburgh Steel Company, Pittsburgh, Pa.

BIG SUCCESS WITH HOGS.

SOME farmers are more successful with hogs than others. The man that only gets 8 lbs of pork out of a bushel of corn fed to hogs makes only half as much as the man that gets 18 lbs.

The American Swineherd is a specialist and the best authority on the hog industry.

The greatest success results from concentrating all efforts upon one line.

Three-fourths of the farmers waste a third of their feed given to hogs because they do not understand the best methods.

The American Swineherd teaches you how to be successful.

How to secure the greatest profits. How to feed, to double the growth and gain over usual methods.

How to keep your hogs healthy, as only healthy ones are profitable.

How to get 18 pounds of pork out of a bushel of corn, and 20 pounds out of a bushel of wheat, fed to hogs.

Prof. Kennedy of the Iowa Agricultural College says: "Your paper is a leader on feeding."

One man writes: "A single instructive lesson in the Handbook on Hog Hygiene saved me \$50 in feeding a bunch of 40 hogs 60 days over the ordinary way of feeding. It is the best investment I ever made."

Every owner of hogs should take advantage of this special offer:

Send us \$1 for two years' subs, ription to the American Swineherd and it will entitle you to a free copy of the Hand Book on "Hog Hygiene," with trade secrets, recipes, valuable information, etc. If the offer is accepted in ten days we will send you in addition "The Pig Feeders' Manual," worth a \$1 itself.

This equips you for a successful hog business.

SEABOARD AIR LINE RAILWAY

little chicks, and what kind to grow for them to forage their own living from? I would like to know if the Buff Plymouth Rocks are as good layers as the White Wyandottes? T. E. M. Klondike, Texas.

Answer.—Wheat is one of the best feeds for poultry the year round. Where wheat, oats and barley can be grown no other grain food is necessary. For green food cabbage, turnips and rape will answer every purpose. If given proper care the Buff Plymouth Rocks are good egg producers and will no doubt lay as well as the Wyandottes.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—The first number of my subscription of your JOURNAL came last week. There are loads of information in it for beginners.

Will you please answer the following questions in your June number, if this is in time:

1st. Is it not better for even the best bred fowls to roam at large than to be confined in runs; that is, if there's no danger of them mixing with others?

2d. I have one hen whose lower back parts are swollen into a large heavy lump, and she has indications of diarrhoea, and another hen has a lump swollen in front of each eye. What is the trouble and is there any cure? or, if they do not improve, would they be fit for table use in fall?

3d. Is it necessary to feed mashes all summer if fowls are let roam at large? and would you advise it if they were confined in runs?

4th. Would you advise feeding "prepared foods" all the time?

MRS. A. L.

Drumbo, Ont.

Answer:—1st. Yes. 2d. This is what is known as "bagging down behind" and is usually caused by the fowls becoming too fat. It does not pay to doctor birds that get in this condition. The other fowl should be killed at once, as this is one of the chronic stages of roup, and the carcass should be either burned or buried very deep. 3d. No. 4th. Feed the kind of feed that is cheapest, providing it is good and sound. Musty or poor quality grain is dear at any price. Until you get better acquainted with the business and you are able to judge which food is best for your purpose, we would advise you to feed the prepared foods.

Editor American Poultry Journal.

Dear Sir: Please answer in your next Poultry Journal the following questions: 1. I had a very fine Barred Plymouth Rock cock which died recently. Upon examination I found a hard growth in his crop. When he died he simply fell over and was dead. Did the growth cause his death? If so, what caused the growth? It (the growth) was the size of a small egg. The flesh outside of the growth was red but not sore. He also had two small red places on his neck where no feathers grew, and his feet seemed to be slightly swollen. 2. Why do hens get broody, and why don't all hens get broody? 3. Why don't pullet eggs hatch well? W. H. B.

Mound Prairie, Minn.
Answer.—1. The growth mentioned was no doubt a tumor, caused by an injury, and probably was the direct cause of the bird's death. 2. It is the natural instinct for a hen to become broody. By years of selection in mating this has been bred out of some vari-

PEARL GRIT

Grit is of vital importance to little chicks. There is nothing in their little crops to grind with when they first enter this world. Unless provided with grit they soon weaken and die. Grit in some form should be given with their earliest food. No. 1 Pearl Grit is especially prepared for little chicks and they eat it readily. It is clean, small, white in color—sharp enough to grind well but not too hard for their delicate organs; furnishes just the right substance to promote rapid, vigorous growth and is just what they require for it nourishes as well as grinds. Try it and see how they grow. The larger sizes of Pearl Grit are splendid for adult fowls and full fledged young birds. It increases egg production—keeps the fowls healthy and prevents "crop-bounding" fowls. Poultrymen everywhere use Pearl Grit because it pays. Write for free booklet. Manufactured by The Ohio Marble Co., 209 N. Wayne St., Piqua, Ohio.

HUNKYDORY FARM :: PELLA, IOWA

YES SIR, IT'S A FACT

The REMARKABLE INCREASED POPULARITY OF

COLUMBIAN WYANDOTTES

during the past few years clearly indicates they are destined to be acknowledged the premier variety of America's most valued breed. And why? Well, because they have given abundant evidence of being steady, all-the-year layers. Grow with quick vigorousness—early developing the chubby body characteristic of the Wyandotte breed, and which has given them their unapproachable pre-eminence as the standard commercial fowl of America, and last, but by no means least, their dark hackle and tail contrast pleasantly with the soft whiteness of body plumage.

EGGS FOR HATCHING, \$5 THE SITTING

Next fall I shall have a grand lot of early hatched cockerels and pullets for sale—progeny of carefully selected breeders,

MY WHITE WYANDOTTES

are excellent layers. Eggs, \$3 the sitting; 4 sittings, \$10. Baby chicks, 18c and 25c each. Why not procure new blood from me this year and lay the foundation of a persistent rough weather laying flock—the kind that pays? Send for useful desk blotter—'tis free.

eties, which are now classed as non-setters. 3. If properly mated pullets' eggs will hatch as well as those from older stock.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Will you please answer the following questions in the June issue of your AMERICAN POULTRY JOURNAL?

1st. How long do you consider it necessary for B. P. Rock chicks (hatched March 30) to be kept with the mother hen?

2d. How old should a B. P. Rock hen be before it is unfit for breeding purposes?

3d. Will it harm a hen to set her more than once during the hatching season?

4th. How much corn, wheat or buckwheat do you consider a good feed for twenty-three hens?

5th. Do you consider a cock two years old sufficient to head a pen of twenty-three hens?

6th. Are hens four or five years old more liable to lay imperfect shaped eggs than yearlings?

7th. Is it a good plan to keep the nests darkened with a curtain or not?

8th. How many eggs is a good gathering per day from twenty-three hens?

Meadville, Pa. C. R. W.

Answer:—1st. Six weeks to two months. The hen usually decides this question herself. 2d. Four years is usually the limit of a hen's usefulness. 3d. No. 4th. Three pints. 5th. No; a male bird should not be given more than ten females, unless they have free range, when fifteen may be given. 6th. Yes. 7th. It is always best to have the nest dark. 8th. An average of fifteen.

Editor American Poultry Journal.

Dear Sir: As I am a subscriber and reader of your valuable paper, I would be pleased to have the following questions answered in your July number: What per cent, by weight, of meat meal would you advise mixing with Chamberlain's Perfect Chick Feed? I keep the feed in hoppers before them always. The chicks are now five weeks old. Should the quantity of meat-meal be reduced after they are well feathered, and if so to what percentage? Or, would you advise mixing the meat-meal with a dry mash made up of two parts wheat bran, one part wheat middlings and one part cornmeal and fed in hoppers, feeding the chick feed separate in hoppers also without the meat-meal? W. E. W.

Shrewsbury, Mo.

Answer.—Would not advise the mixing of meat-meal with the chick food. This can be mixed with the mash or fed separate. Where mixed with the mash about 10 per cent is enough. When fed separate it can be placed in hoppers the same as the chick feed, and the chicks will eat what they desire. We prefer beef scraps to the meat-meal.

Editor American Poultry Journal.

Dear Sir: Would you kindly answer the following questions in your next issue: 1. What cross makes a Black Leghorn? 2. What is an easy and simple cure for the gapes? 3. How old must a Leghorn chicken be to lay the first egg? 4. What is good to give little chicks when costive? 5. Where is a good place to buy Black-Breasted Red Game eggs? E. B.

Williamsport, Pa.

Answer.—1. The Black Leghorn originated in Italy prior to 1872, but we are unable to say what crosses were used in

FACTS FOR FARMERS!

Southern lands are fertile and productive and are low in price. The rainfall is ample for all purposes, and irrigation is not needed. The Southern farmer is in close reach of the principal markets of the country and has the best of railway facilities for the transportation of his crops. General farming shows good returns. The crops grown cover a wide range and yield an abundant harvest. The cereals and grasses thrive. The stock raisers find the South a profitable field. Cattle can be raised at the lowest cost. There are finest opportunities for raising horses, mules, sheep and hogs. There is a demand for a greater dairy interest in the South. Local markets are good. The conditions are most favorable for the success of the milk producer and butter maker. Trucking is extensively engaged in along the Southern Railway. Lands especially adapted to this branch of farming may be purchased at low figures and upon good terms. The facilities for quick handling of the crops are first-class and the products reach the best markets of the country in good condition. All fruits are grown in the South. The commercial orchards along the Southern Railway are extensive and the quality of the fruit is unexcelled. The best sections of the south are reached by the

their production. 2. Read answer to J. A. C. on page 683 of our June issue. 3. From four to six months. 4. A few drops of sweet oil generally has the desired effect. 5. We never recommend any particular breeder, but refer all to our advertising columns.

Editor American Poultry Journal.

Dear Sir: Will you please answer the following: 1. What causes gapes? 2. What is a cure for gapes? 3. What is a preventive of gapes? Mrs. J. B. Colchester, Ill.

Answer.—Read answer to J. A. C. on page 683 of our June issue.

Editor American Poultry Journal.

Dear Sir: Please answer the following in American Poultry Journal: I have the single-comb White Leghorn chickens. Some of the little ones when they are hatched shake so just like anyone that was cold. They just sit and shake their head all the time. Some of them get over it, but the majority of them die. I also have the Buff Cochins chickens; some of the cockerels have black feathers in their tail. Would it be better to get rid of them? Have the pure-blooded Buff Cochins any black feathers in them at all?

Mrs. A. C. E.

Anking, Iowa.

Answer.—Not knowing the conditions under which these chicks were hatched, we are unable to say what the trouble is or suggest a remedy. Black feathers in any part of a Buff Cochins is considered a serious defect, but not necessarily a disqualification. A great many very fine specimens of this variety will show black in the tail.

Editor American Poultry Journal.

Dear Sir: Please answer in your Questions and Answers column: Do you advise grain in hopper, and if so, how, then, are we to keep the hen busy and keep her from getting too fat? Will they keep in better laying condition and lay more eggs by using the hopper method? Would not this method work better with pullets than old hens? Would this be a successful method and would you advise the use of it in raising young chicks? 2. Would a mixture of wheat screenings,

cracked corn, millet seed and timothy seed make a good chick feed?

Phalanx, Ohio. I. J. S.

Answer.—1. Hopper feeding is coming into general practice in rearing little chicks and some breeders are advocating this method of feeding laying hens; but we are not prepared to say whether it is a success or not. For little chicks it is all right. 2. In preparing a mixed feed for little chicks,

day I found the eggs just as good as the day when I set her. What caused the eggs not to hatch? I set another hen on the same day with the same kind of eggs. She hatched them all out but one. Kindly give me an explanation. Fremont, Ohio. W. G. H.

Answer.—1. Feather eating is caused by too close confinement and lack of exercise. This vice is generally contracted during the winter when fowls are confined in close quarters. When they once get into this habit it is almost impossible to break them of it. Put aloes on the feathers, this sometimes has the desired effect. 2. The eggs were not fertile is the only explanation that can be given for their failure to hatch. If they had been fertile they would have been rotten before the twentieth day.

Editor American Poultry Journal.

Dear Sir: Please answer the following questions in your query column: 1. How many Wyandottes can I keep profitably in a pen 10x10 feet, used as a scratching shed also, with a run 15x35 feet? How many Leghorns? 2. Is there any danger of unsuccess in using the forced moulting process so much spoken of in the poultry papers, and is it considered a wise plan to follow out? 3. What is the best process of forced feeding for eggs? Would there be greater chances of infertile eggs? 4. Is there any harm in whitewashing the inside of brooders? 5. What is the proper age or size of chicks to kill for broilers? 6. Do Leghorns make good broilers? H. D. W.

Oak Park, Ill.

Answer.—1. Twelve Wyandottes; fifteen to eighteen Leghorns. 2. We do not advocate forcing the molt. Nature will do this in the proper manner, and the results will be more satisfactory than where any forcing process is used. 3. Where fowls are given the proper feed and care there will be no occasion to force them for egg production. Where egg-forcing feed is given the eggs are seldom fertile. 4. No. 5. From six to ten weeks. 6. Yes, but they are rather small.

Editor American Poultry Journal.

Dear Sir: Please answer in your

What T. E. Orr says about the Prairie State Universal Hover

Read what Mr. Orr, sec.-treas. of the American Poultry Association, says of his experience with Prairie State Universal Hovers. The Universal Hover has completely revolutionized the rearing of chicks. No device offered to the poultry raisers has ever received such an overwhelming endorsement. From the coldest parts of Canada and the Northwest to the warmest parts of the South have come flattering reports of the successful rearing of little chicks, under the most adverse conditions. When used in a portable Colony House chicks can be reared with this brooder out of season, during the hot dry months of June, July and August, when they cannot be reared with hens. There is practically no limit to its adaptability either to cold or heat. With a new Prairie State Brooder, it is now possible to raise every healthy chick. Send for our latest descriptive catalog of these brooders and get further information in regard to our open bottom Prairie State Incubators.

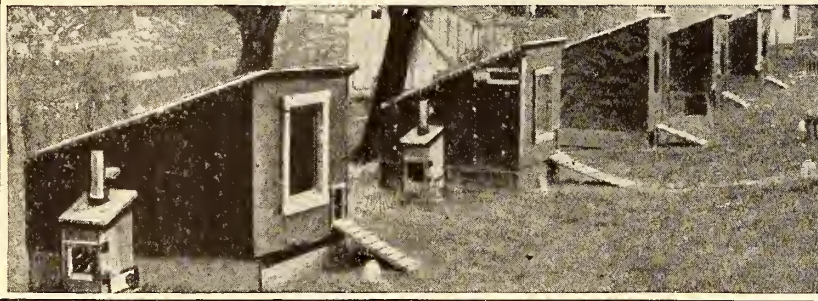

PRAIRIE STATE INCUBATOR CO.
468 Main St. Homer City, Pa.

BEAVER HILL FARM
The Home of Prize Winning Wyandottes
Beaver, Pa., April 25, 1906

Prairie State Incubator Co.
Dear Sirs:—I think I ought to tell you how well we like your new Universal Hovers. We now have five of them attached to our big piano box brooders, shown on this sheet, and it has been a constant surprise to me to see how thoroughly your hovers, with a No. 2 burner, heat these immense brooders. Last night it was cold and windy, ice formed nearly an inch thick. We made a record of all thermometers at 7:30 p. m., 10:30 p. m., and 5:30 a. m. At first test they ranged, as we wanted them, from 85 to 92 degrees, varying with the age of the chicks. The two subsequent tests showed a variation of scarcely a degree in any one of them. Yours truly,

T. E. Orr

Mr. Orr's Five Piano Box Brooders

Links in the Chain of a Chick's Life

How are you feeding your fowls? Do you know in advance, for a certainty, what the results are going to be? Are you positive that the feed you use is the best for the purpose? Or are you just feeding as you always have, and trusting to luck for results? The feed you employ should be scientifically suited to the purpose for which you are feeding, if you want to be sure of best results at least cost. If you are raising chicks and want to know that you are feeding them according to the most scientific method you should begin to feed them Midland Poultry Food from the very first feed. Among our 10 balanced rations for fowls you will find a food that just fits your chick's needs every day of its life. Like the links of a chain, every one of these

The demand for Midland Poultry Foods and the success of those who feed them exclusively, and according to directions, demonstrates beyond a doubt that it is wise economy to observe the scientific laws which we have discovered. You may be fairly successful with your own way of feeding, but are you sure that you could not be even more successful, and save money besides, if you were to feed scientifically with a distinct object in view and a ration for that distinct purpose?

1 Midland Poultry Foods

are the result of the life-work of an eminent food specialist, a chemist of national reputation. They are not compounded from the refuse of a seed store or a flouring mill, but contain only the choicest grains, seeds, etc., that money can buy. Making them in enormous quantities as we do we can sell them cheaper than you could begin to make them for at home, even if you knew scientifically just how to make every feed we offer you. From every view point it will pay you to feed Midland Poultry Foods and make more money from your fowls. We'd like to tell you more about these foods—we'd like to take you through the factory and show you how they are made and explain the reason for each and every ingredient—to tell you what each food is for—why and when to feed each one and just what the result would be. As we cannot do that we have published a book, "The Science of Poultry Feeding," which tells how to feed and which feed to feed. It's free. Write for it today. We'll tell you where to buy Midland Poultry Foods so you can give them a trial.

MIDLAND POULTRY FOOD CO., Dept. A, Kansas City, Mo., U.S.A.

2 Scientific Poultry Rations

is a link by itself made for a specific purpose and has its special part to perform. They all join together and form a chain of the most practical poultry foods ever produced. To raise good, strong, healthy chicks every link in the chain of feeds they are fed must be just right. As the chick grows older it will require different ingredients in the ration. If you are feeding for market certain grains and seeds develop the fowls for table use. If you want eggs—other grains, etc., are necessary. But do you know what these other things are? Can you prepare a properly balanced ration for all these different purposes? Wouldn't it pay you to do it if you could. You can buy these foods already made cheaper and save time.

3

4

paper the following: 1. How many hens could I keep in a house 10x20 where they have run of a farm except in severe weather? 2. Answer.—1. About 35. 2. Yes. 3. The size of the colony house should be about 10x12. This is large enough for 25 fowls where they have free range. We cannot give plans of houses in this department. Our book on How to Build Poultry Houses will be a valuable aid to you. Price, 50 cents.

Editor American Poultry Journal.

Dear Sir: Please will you tell us what is good for rheumatism? We have a hen that we think has rheumatism. She is so stiff on her legs that she sits around all the time. She eats hearty and is all right except she can't use her legs. What would be good for her? Enid, Okla.

Miss L. A.
Answer.—Rheumatism is caused by the fowls being allowed to roost in damp quarters; an overfat condition also has a tendency to produce rheumatism. Begin treatment with a dose of Epsom salts, 20 to 30 grains. The following day add 30 to 40 grains of bicarbonate of soda (baking soda) to the quart of drinking water, and give two or three grains of salicylic acid twice a day. Apply camphorated or carbolic ointment to the affected joints.

Editor American Poultry Journal.

Dear Sir: Please answer this question in your information department of your next issue: 1. Do the higher class of Silver Laced Wyandottes throw sports or white chicks, if so, how many to the 100 chicks is there likely to be? 2. Is the Silver Laced Wyandotte as hard as any to breed to Standard? Bowen, Ill.

W. T.
Answer.—1. The Silver Laced Wyandottes, like any other standard variety of fowls, are liable to throw "sports," but no one can tell what the percentage would be to 100 chicks. In fact, there might not be one to 1,000, and there might be several to a hundred. All varieties of poultry are more or less difficult to breed to standard requirements and the Silver Laced Wyandottes are no exception.

Editor American Poultry Journal.

Dear Sir: Please answer in your Poultry Journal: I have a pair of Pekin ducks I had shipped from Freeport, Ill., in February; they have free range, free water in a little spring creek; have not laid but fourteen eggs to date. I feed them all the wheat and mash they want, also table scraps and cottage cheese. What is the cause? 2. What is the cause of one laying a dark green egg and the other a white one? Livingston, Mont.

C. W.
Answer.—We are unable to say why your ducks have not laid better. Probably they have laid in the water. This happens very often where they have free access to water. 2. As to the color of eggs, it is the same with ducks as it is with chickens; they do not all lay eggs with the same colored shells.

Editor American Poultry Journal.

Dear Sir: I have a fine buff Rock chick, well proportioned body and for

seemed to be perfectly healthy; but it several days after it was hatched it began to cry after its mother, as if it was cold and wanted to be hovered. Its breathing was hard and much of the time its crop seemed entirely empty. What was the trouble and what the remedy? Please answer in next month's Poultry Journal. G. W. G.

Saltillio, Mass.

Answer.—The above can be answered by the one word—lice. The mother hen should be thoroughly dusted with some good lice powder, and the little chicks should have the tops of their heads greased with lard, to which has been added a few drops of kerosene oil.

Editor American Poultry Journal.

Dear Sir: Please answer the following question in your journal: What is the cause of chicks being crippled in the knee joint when hatched? The joint is stiff and causes them to walk on the leg instead of foot. The chickens were hatched with incubator.

Kirtland, N. M. Mrs. B. F. S.

Answer.—This is usually caused by the temperature in the incubator being too high at some period during incubation. All chicks hatched in this condition should be killed at once, as they will never amount to anything.

Editor American Poultry Journal.

Dear Sir: Kindly answer in July number the following questions: I purchased four settings of eggs through your columns last year and reared 32 chicks, Orpingtons and Rocks, of different people, and I mated same and have raised over 200 this season so far. Would it be proper to mate the cockerels I used this season to their own pullets next spring? Also to mate this year's cockerels to the old hens next spring? As I understand it this is line breeding. Is it not? Is Fenugreek seed good for chickens? H. S.

Amboy, Ill.

Answer.—If the male birds are strong and up to standard requirements it will be all right to mate them with the pullets another season, and the cockerels reared this season can be mated to the parent stock. This is one of the first

steps in line-breeding. In making matings of this kind care must be exercised in the selection of the specimens. Where the male bird is weak in any particular section, females must be selected that are strong in this section, in order to overcome the weak part in the male. Fenugreek seed acts as a tonic and stimulant and a little mixed with the other feed is very good for fowls.

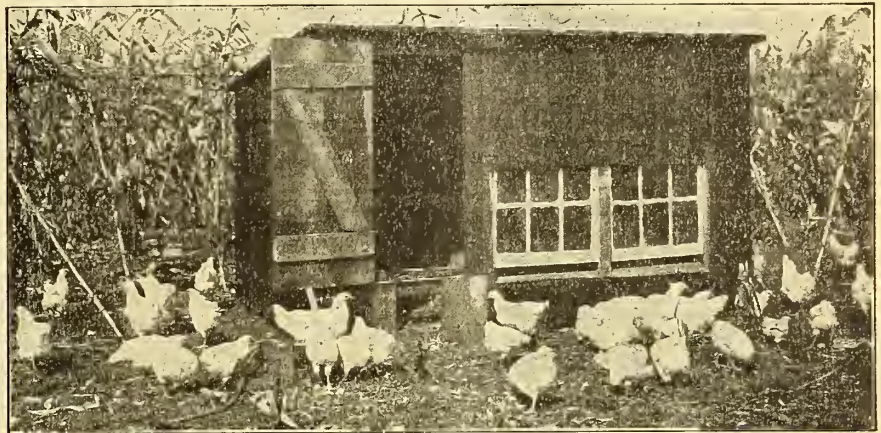

Editor American Poultry Journal.

Dear Sir: Will you kindly inform me through your questions and answers columns the reason for my goose eggs

laid quite a number. Mrs. J. T. C.

South Plymouth, N. Y.

Answer.—We can see only one reason for the eggs not being fertile, and that is the gander is either too young or has not the necessary vitality. Geese, as a rule, are not at their best until they are two or three years old, and this may have something to do with the fertility of the eggs laid by them this season. Young geese usually lay from 18 to 24 eggs the first season, and old geese will lay from 30 to 40 during the season. Young geese very seldom get broody the first season.

Colony house on the farm of Sass Bros., Ancona, Ill., where prize-winning White Plymouth Rocks are bred.

not being fertile? Up to date the two geese have laid seventy-six eggs; one laid about thirty, the other is laying still and acts as if she would for some time. I set the goose and three hens on goose eggs and after setting ten days I tested for fertility, then again about a week before they should hatch and not any have been fertile, and yet they seem to be in perfect condition. I feed them with the hens and they have their freedom with a creek to swim in when they wish. They are last year's goslings and I do not think the gander is akin to the geese. How many eggs will a goose lay? It seemed as if they

Editor American Poultry Journal.

Dear Sir: I see in the Questions and Answers Columns of the June Journal where J. A. C., Hicksville, Ohio, asks for a cure for gapes, and while you gave him several remedies you did not give the one that I use, and as it has never failed me yet I will give it and if you see fit to publish it maybe someone will be benefited by it.

To make the outfit you take a small box about 15x15x18 inches and put a shelf in one-third of the way from the bottom. I bored some holes in the shelf and covered it with wire screen to keep the chicks from stepping through. You

BLANCHARD'S WHITE LEGHORNS

are no experiment, having been carefully selected and bred for over twenty years. No labor or expense has been spared in building up and perfecting this strain and while the production of large, pure white, fancy market eggs has been the main object, standard qualities have not been neglected. They are large, vigorous, active and handsome. Good winter layers and keep at it all summer. Unexcelled for introducing new blood or as foundation stock. **NONE BETTER ANYWHERE AT ANY PRICE.** Eggs for hatching, from my regular matings, \$2 per 15; \$3.75 per 30; \$5 per 45; \$10 per 100. From exhibition matings, \$3 per 15; \$5 per 30. Illustrated circular free.

Keeps Poultry Healthy

VIGER'S

Crushed Charcoal

Prevents Disease

A DISEASED CROP is the root of all poultry evils. If your fowls are free from digestive disorders and impurities and gases in the crop, they'll lay, and lay regularly. If the crop is unhealthy, full of disease germs and noxious gases, your hens won't lay.

Now what will make this crop healthy and make your hen a perfect-running egg-machine? Pure Charcoal will, because it's the greatest absorbent known in nature and thus cleanses the crop and entire system of all impurities. It is a sure preventative of all diseases.

Viger's Crushed Charcoal is absolutely chemically pure. It comes in 3 sizes: Coarse granulated, for mature poultry; fine granulated, for small chicks; and pulverized, for soft feeds, mashies, etc.

It will mean a fuller egg basket for you. Remember it's "no result, no pay" with us. Price \$1.00 per 50-pound trial bag. Special prices in quantities. Samples free.

Viger's Coal & Wood Co., 434 20th St., Detroit, Mich.

GRAND SALE S. C. WHITE LEGHORNS

Will spare about 100 of this season's breeding hens one year old, and a few extra good cocks. These birds are of the celebrated "Purity Strain," noted for their pure white plumage, deep yellow legs and beaks and their exceptional egg laying qualities. They will go at right prices, considering quality, just to make room for young stock coming on. In lots of 25 or more I will ship for half the purchase money with the order and balance C. O. D., but in all cases I will positively refund money if customer is dissatisfied.

CHAS. McCLAVE - NEW LONDON, OHIO

WE WIN!

At the late Madison Square Garden Show, New York, in the S. C. Buff, Black and White Orpington classes as follows: 7 firsts, 9 seconds, 6 thirds, 4 fourths and 3 fifths, and these in the strongest classes of Orpingtons ever put together, there being 370 birds competing. We also won the most prizes of any breeder in these same classes. We have the stock and established winning breeding lines, but buying high-grade stock and eggs cannot safely be done upon the strength of the mere argument a breeder has room to advance in his advertisements. Now we want you to send for our catalogue, testimonial book and a very elaborate mating list, describing over forty different breeding yards and prices of eggs from same. Do not be fooled or misled by mis-advertising, but come to the fountain head to get your start.

WILLOW BROOK FARM
W. L. Davis, Prop. Box A, BERLIN, CONN.

then get an iron ladle and a piece of glass large enough to cover the front of the box and you have your outfit for curing gapes. Now put the affected birds in the box on the shelf and heat the ladle pretty hot and put a few drops of carbolic acid in the ladle and put under the shelf and let the fumes go up among the chicks; watch the chicks through the glass and when they seem to have enough take them out in the fresh air and a case of gapes that this treatment will not cure is an exceptionally bad one. Once in a while a second treatment will be necessary, but not often. I have cured over a hundred cases and have not lost more than two or three chicks that were so treated.

Robison G. Welter.

McClellandtown, Pa.

1,000 FINE WHITE PLYMOUTH ROCKS.

A representative of the American Poultry Journal called at the farm of Sass Bros., Ancona, Ill., and found that they had 1,000 fine chicks hatched out, and 800 eggs still in process of incubation. These birds are all very promising for the early fall fairs and winter shows—showing very plainly the strain of their first and second prize cockerels at Chicago 1906.

Sass Bros. are not new at the business—having bred White Plymouth Rocks for the past eleven years. They have furnished many first prize winners for the leading shows and captured the most coveted prize of first cockerel, besides second cockerel, second and third hen in five entries at the last Chicago show.

They have mated up eleven yards of the very highest quality—not a poor specimen in the whole lot. They did not have pens enough to accommodate all the prize winners. Their farm is located one-half mile from Aucona Station, six miles from Streator, Ill., on the Santa Fé railroad.

Anyone who is interested in White Plymouth Rocks should pay them a visit or write.

FEEDING.

The following feeds we have found sufficient for a laying hen or growing pullet: Oats, barley, corn, millet, wheat, middling and bran. Animal food in some form. For grit ordinary round gravel; cinders are also good. Clean water. That's all.

MORGAN POULTRY FARM.

Beloit, Wis.

BEEF MEAL OR BLOOD MEAL FOR CHICKS.

If you like to see your young chicks of three weeks or more age enjoy a meal better than ordinarily, make a crumbly mash, using 4 parts middlings and bran, and 1 part beef or blood meal that is good and fresh, and see how they will fall over each other to get it as soon as they learn what it is. And see them grow accordingly.

Greenville, Ohio. E. M. BUECHLY.

WHAT TO FEED.

Mr. J. M. Wilson says: "Up to September continue to feed your chicks Purina Baby Chick Feed. It has the greatest variety of seeds and grains and is the cleanest feed on the market. To make your pullets lay early, nothing equals Purina Scratch Feed. It's an all the year round feed which contains the variety that a hen must have. No grit, burnt grains, or inferior stuff in these feeds. They are made by the PURINA MILLS, St. Louis, Mo., who protect users by putting their goods in 'checkerboard' bags and absolutely guaranteeing them." Mr. Wilson ought to know.

CAN THE SPRING RISE ABOVE ITS FOUNTAIN HEAD?

Written for A. P. J. by Will L. Clark, Sullivan, Ohio

It may be considered rather late in the season for an article on artificial incubation, but there is one theory which we have often seen advanced, and to which Mr. Wm. O. Jennings also refers in his article on "Duck Culture," in the May number of AMERICAN POULTRY JOURNAL, that I cannot refrain from expressing myself on the subject.

And that is whether or not it is necessary for the thermometer to be placed in contact with a fertile egg in order to insure the best results in artificial incubation. In the article mentioned above the writer claims that the thermometer, when placed on a fertile egg, will register two degrees higher than when on an infertile egg.

Now what readers of the poultry press want are established facts and not theories. And as often as I have seen this theory advanced, I have for the first time to see a case where the writer claims to have proven it a fact by actual test.

I do not wish to be misunderstood as believing that fertile eggs do not give off a certain amount of animal heat, and especially during the later stages of the incubating period, for they certainly do. And the heat so produced greatly assists in heating the entire egg chamber.

The heated air in the incubator being warmer than the normal temperature of either the fertile or infertile eggs, they are therefore brought up to an equal temperature with that part of the air which is on the same level with the eggs.

If the thermometer by coming in contact with a fertile egg registers 105 degrees, when under other circumstances it would register but 103 degrees, then why does not that same fertile egg, by contact with an infertile egg lying beside it, raise its temperature also?

The temperature of the hen's body is 103 degrees and the eggs, when placed under the hen, are brought up to the proper temperature for natural incubation. Do the fertile eggs in contact with the hen, then, run up to 105 degrees, two degrees above the source from which the heat comes?

It is not the temperature of the egg itself that we wish to measure, but rather that which is to warm the egg. Then, if the hen's body registers 103 degrees, the air in the incubator (on the same level with the egg) should register 103 degrees.

I have had some experience with incubators and I always place my thermometer in such a manner that I can get the exact temperature of the air on a level with the eggs, and the results have been very satisfactory.

I have just completed a hatch of my Silver Spangled Hamburgs, and succeeded in hatching 96 1/2 per cent of all fertile eggs.

We cannot improve upon nature, we can only imitate it as closely as possible for the best results. And as nature provides a temperature of 103 degrees in the body of the hen, then we must provide that same degree of temperature in the air which is to apply the heat to the eggs in artificial incubation.

Am I wrong in this matter? The water in the spring cannot rise higher than its source, the fountain head.

Neither will the egg become heated to a degree beyond the source from which the heat is supplied.

JACKSON, MICH.

The second annual exhibition of the Jackson Poultry and Pet Stock Association will be held December 4, 5, 6 and 7, 1906, at Jackson, Mich. A large and commodious hall has been engaged and with three judges, James A. Tucker, Sharp Butterfield and F. W. Traviss, to place the awards a large list of entries will result.

The members of the association are determined to put up a show that for character and importance will make Chicago and Detroit look to their laurels. Jackson is a great railroad center, being on the main line of the Michigan Central with three branch lines connecting with other roads. Then, too, we have two branches of the Lake Shore & Michigan Southern, the Grand Trunk connecting with Detroit and Chicago and a through line to Cincinnati. Several interurban lines center in Jackson. With these facts known to the poultry public there certainly ought to be a large number of exhibitors from Ohio, Indiana, Illinois and Canada. Very liberal regular and special prizes will be offered. Already six silver cups are in sight. The special prizes will include prizes that the winners will be proud of.

The following is the list of officers: President, Dr. Frank Pelham; vice president, A. C. Northrup; secretary, C. W. Kroosz; treasurer, A. B. Lincoln. Executive committee: John B. Ford, Ralph E. Snow, N. Schweinfurth, together with the president and secretary. Money talks. The association has a sufficient bank account to meet all liabilities. A member found guilty of misrepresenting his stock can be expelled. A large and attractive premium list will be issued October 10.

GREENFIELD, OHIO.

The Greenfield Poultry Association will hold their third annual exhibition December 31, 1906, to January 5, 1907. D. J. Lambert will place the awards. Everything will be done to make this one of the largest and best shows in the state.

This association is noted for its honest business methods and the courteous treatment accorded exhibitors. Get ready for Greenfield. For further information address Lee W. Devoss, Secretary.

MOBILE, ALA.

The Mobile Poultry Breeders' Association will hold its third annual show December 8-12, 1906. N. L. Hutchison, Judge. Liberal cash prizes and silver cups will be offered and prospects point to Mobile having the banner show of the Gulf States the coming season. Premium list and catalogue will be out at an early date. Write for further information and get your name on the mailing list. Edw. R. Hayssen, Secretary.

CEDAR RAPIDS, IOWA.

The Twelfth Annual Show of the Western Poultry Fanciers' Association will be held November 26-December 1, 1906. F. H. Shellabarger, W. S. Russell and U. J. Shanklin, Judges; O. W. Iiten, Secretary.

OCONOMOWOC, WIS.

The Oconomowoc Poultry and Pet Stock Association will hold its second annual exhibition December 7-13, 1906.

J. A. Tucker and H. Vanslow, Judges; Charles Behrend, Jr., Secretary.

OSHKOSH, WIS.

The tenth annual exhibition of the Wisconsin State Poultry Association will be held February 1-7, 1907. Charles McClave and James A. Tucker, Judges; James F. Irvine, Secretary.

MOUNT VERNON, OHIO.

The Knox County Poultry and Pet Stock Association will hold its annual show the second week in December. Ira C. Keller, Judge; George H. Brown, Secretary.

SPRINGFIELD, OHIO.

The Springfield Poultry and Pet Stock Association will hold its annual show January 28-February 2, 1907. Ira C. Keller, Judge; Albert Seitz, Secretary.

DUNLAP, IOWA.

The Badger Valley Poultry Association will hold their next exhibition December 26-29, 1906. George D. Holden, Judge; E. R. Cadwell, Corresponding Secretary.

SCRANTON, PA.

The Scranton Poultry and Pet Stock Association will hold their second annual exhibition January 14-19, 1907. Drevensdt, Pierce and Stanton, Judges; A. W. Close, Secretary.

PARSONS, KAN.

The Southeastern Kansas Poultry Association will hold its Eleventh Annual Show December 3-8, 1906. Adam Thompson, Judge; C. S. Forcum, Secretary.

DOWAGIAC, MICH.

The Cass County Poultry Association, which was recently organized, will hold its first annual show December 5-8,

COMBINATION FOOD AND WATER FOUNTAIN

Let Me Hand You My Latest Book on Poultry Culture ABSOLUTELY FREE

I want to send you a copy of this book free. It is a gold mine of practical information for the poultry-raiser. I call it "An Easy Lesson in Poultry Culture," because the lessons it teaches are easy to learn and easy to apply. My object in publishing this book is to point out how dollars in place of cents can be made in producing poultry and eggs for market purposes. It is stated so plainly that the novice can follow the directions and make a success of the poultry business. I especially commend the chapter, "The Back-Logger" to the city dweller who wants to "try-out" this business before going into it on a large scale. And then I have another book—a good companion for this one—"Poultry Feeding for Profit" that you should have also. It is full of feeding facts that I know, from actual experience, will be valuable to every chicken raiser. It gives feeding methods and information that will be helpful every day, for every fowl on your place—from the little chick "just out" to the old hen you are fattening for market. There is lots of money in the poultry business if you know how to handle chickens right. These two books will give you all the information you'll need—information you can put into practice. You cannot get this information anywhere else. Write today, I will send both books free, and also send my catalog on Model Incubators and Brooders the latest and most successful hatching and rearing machines on the market.

WHY WE TAKE COLDS AT POULTRY SHOWS.

It has been my experience, or misfortune, to nearly always take a severe cold at any poultry show which I attended for several days in succession. I notice others do the same. Have been wondering if the tobacco smoke was not in part the cause, and also the cause of the fowls taking colds. Gentlemen do not seem so free to smoke at other public gatherings when held in a building, but they seem to forget that their pipes or cigars may be objectionable not only to lady exhibitors, but also to the poor fowls.

MRS. TILLA LEACH.
 Cheneyville, Ill.

A CORRECTION.

In our April issue we published an illustration of a Buff Cochon coek, owned by C. F. Young, Topeka, Kans. Through error we added the words "bred and" to the foot note. Mr. Young does not claim to have bred this bird and did not so state on the copy he sent us, and as Mr. Young is not desirous of claiming anything that is not due him, we make this explanation.

We learn from a late issue of the AMERICAN POULTRY JOURNAL that its esteemed contemporary, the Commercial Poultry Journal, is about to move from the shores of the great unsalted Lake Michigan to Marseilles, situated some 75 miles from Chicago, on the main line of the Rock Island. This leaves the windy City alone to our friend, Geo. G. Bates, to hustle around in and maintain the ever high standard of his sterling publication.—The Live Stock Tribune.

Separate the large chicks from the flock this month. It will give the smaller ones a chance to catch up.

Do not overfeed your fowls during hot weather, or you will bring on liver trouble.

Success in the poultry business is only secured by a strict attention to details.

LEE LEADERS

GERMOTONE—best cure for bowel complaint and chicken cholera.

CYCLING COMING IN AGAIN.

Now that mild weather has set in, it is surprising to see the number of wheels in use on the streets and pleasant country highways. It begins to look as if the pastime of bicycling will soon be as popular as it was several years ago, when everybody who could buy, beg or borrow a wheel was out "on pleasure bent."

The Mead Cycle Company, of Chicago, a firm who have made a specialty of selling bicycles only, for a number of years, report their sales up to May 1 greater than the same months of any year in their history. The explanation of this statement lies in the fact that the low price at which this concern is now able to offer high grade wheels is a strong inducement to the lover of this sport to again own a bicycle.

Improved methods of manufacturing and a riper knowledge of the requirements have made it possible to produce better wheels than were sold during the craze at two or three times the prices now charged. For instance, a bicycle which then sold for \$75 to \$100 can now be purchased for \$27.

Not only are the wheels better as a whole, but every one is equipped with puncture proof, self-healing tires, insuring rides free from disagreeable mishaps. Another strong feature is the coaster brake, the greatest invention pertaining to bicycles ever made since the pneumatic tire. This device enables the rider to coast down hill with the pedals motionless. To slacken speed or stop instantly all that is required is to back pedal. One-third less pedaling is needed, and the wheel is under the rider's control at all times.

The Mead Cycle Company ships wheels on approval for free examination and trial all over the United States, Canada and Mexico and is always ready to establish connections with desirable representatives.

SUGGESTIONS FOR THE HOUSEWIFE.

In Isabel Gordon Curtis's helpful paper entitled "The Progress of a Housewife," in the July Delineator, she gives some useful hints as to how to make the best of vegetables.

Root vegetables, such as beets, turnips, carrots or parsnips, should have moist, dirty roots and fresh tops. If the roots are very clean and the tops cut away, you may be sure the market man has tried to freshen them. The smaller these vegetables are the more tender. Parsnips and carrots require scraping, except when they are young and tender. Turnips should be pared; while the skin of beets should not be broken or the tops cut more than two inches above the beet, otherwise they will lose color and sweetness.

When buying Lima beans, choose green, juicy pods with small, finely veined beans. Cook for one hour and a half in just enough boiling water to cover. Add salt when nearly done. Drain off part of the water, season with pepper, salt and butter, and send to the table piping hot. String beans are cooked in the same way after being strung and snapped.

In addition, Anna W. Morrison gives a number of illustrated suggestions for Novelties for Summer Feasts, and there are pages devoted to banana dainties and New Vegetables Cleverly Served.

A WONDERFUL REMEDY FOR HEAVES.

Horses are more valuable today than they have been for a number of years. Persons owning horses that are troubled with heaves or cough should certainly be interested in learning of the Prussian Heave Powders, which are manufactured and guaranteed by the Prussian Remedy Company, of St. Paul, Minn. They have the exclusive right for the sale and manufacture of these powders in this country and sell them under an absolute guarantee to give satisfaction. This company has sold these goods for over twenty years in this country and today have a large trade in every state in the Union. We recommend anyone having a horse troubled with heaves or cough to write to the Prussian Remedy Company. Price of the heave powders, by mail, 60 cents; at dealers, 50 cents.

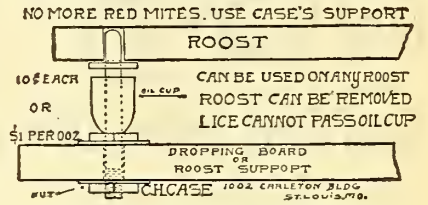

J. C. Fishel & Son, Hope, Ind., are now advertising their annual sale of their noted White Wyandottes. These birds are the ones they have been breeding from the past season and purchasers can rest assured that they will get their money's worth, and more, too, for money could not have bought these birds before the breeding season, but they now need the room

WATER GLASS EGGS

Preserve them for many months just as fresh as the day they were laid with

for their young stock and are therefore offering some big bargains. Anyone looking for foundation should write them at once and get first choice. They also have some choice Fox Terrier puppies for sale. Write them and mention American Poultry Journal.

BEATS HAND WORK AT LICE KILLING.

It is always the simple inventions that are the greatest successes. A good illustration of this for the poultryman is the Schild Lightning Lice Killing Machine. It requires no argument to convince anyone that it will do the work. Take a good look at the picture in the advertisement. It is a canvas covered cylinder hung on a neat frame and made to revolve by means of a hand crank. You place your chicks or fowls and the lice powder within the cylinder and turn the crank. Common sense teaches that the powder must be sifted in and through the feathers to the skin. It does not matter about the size of the fowls—little or big, they act the same way. Wings will be spread, muscles relaxed and feathers raised in the effort to keep themselves from falling as the cylinder is slowly revolved. The cylinder is filled with the powder dust. If the poison is good it is bound to do the work, for it must be brought home to every louse.

Contrast this with the hand work, sifting the powder through a pepper box, etc. No amount of hand picking can be as effective as a few turns of the crank with the Schild machine. And you avoid the disagreeable and tedious work of handling by hand. The Schild machine will turn out the huge chickens at the rate of 100 an hour, the small ones 300 an hour. In other words, just as fast as you can catch them and chuck them into the cylinder.

There is no evil effect upon the fowl from having been for the half minute in the closed cylinder. They come out dizzy, of course, stagger for the moment, and then they go to straightening out the feathers and eating. But the lice are dead.

Booklet giving full particulars of this valuable machine, or the machine itself, may now be had, either from the Charles Schild Company, Department 851, Cleveland, Ohio, or from the Des Moines Incubator Company, Department 1, Des Moines, Iowa.

MITES AND LICE.

At this season of the year poultry of all kinds are infected more or less with lice and mites. There is a marked difference between the red mites and lice which is not easily distinguished by the average poultryman. Red mites are the insects that are so often found on the roosts, walls and in the nest boxes of the poultry houses. They breed in the cracks and crevices of the woodwork. They are more like a minute spider in form than a louse. The Prussian Remedy Company, of St. Paul, Minn., make a liquid lice killer which they claim is a most effectual remedy for mites and lice. It is called the Prussian Lice Killer and is applied thoroughly with a paint brush to the walls, roosts and nest boxes or with a sprayer. They advise the use of a sprayer, as the vermin are killed both by the vapor and by contact with the liquid. They say that once rid of the vermin, a light spraying on the roosts and in the nest boxes will effectually prevent them from appearing again. The use of the Prussian Lice Killer is very inexpensive. They also make the Prussian Lice Powder, a very effectual remedy, easy to apply, for dusting into the feathers and the nest boxes. Liquid Lice Killer is put up in 35-cent, 50-cent and \$1 cans and the lice powder in 25-cent and 50-cent packages.

AN OLD FRIEND.

A newcomer to our advertising pages is Black Diamond Ready Roofing.

To our readers, however, this old and famous roofing is well known. It was the great pioneer of ready roofings. More rolls are sold yearly than all other ready roofings combined. Properly taken care of, it will furnish thorough and efficient protection for many years.

If it is not familiar to any reader a sample and full information will be sent on application to the nearest office of the Barrett Manufacturing Company, Black Diamond Department, New York, Chicago, Cleveland, Allegheny, Kansas City, St. Louis, Minneapolis, Philadelphia, New Orleans and Cincinnati.

SICK BULLETINS.

When one is sick in Holland, instead of subjecting the family to calls and telephone inquiries, visitors read a bulletin which is prepared every day and hung by the door bell. When it is a "stork" case, beside the bulletin announcing mother and baby's health, is hung a red pin cushion, if the new arrival is a boy; when a little girl is the welcome guest, the cushion is a white one. These pin cushions are handed down from generation to generation, and in wealthy households are made from bits of priceless lace and rare embroideries.—Good Housekeeping.

A NEW NOVEL BY MASON.

A. E. W. Mason, author of "Four Feathers" and "Miranda of the Balcony," has written a new novel, "Running Water," serial publication of which will begin in the August Century. The scenes are laid in the Alps, then in England, and later in the Alps again; and the story is one of lively adventures as well as of character development.

FAIRY TALES BY MRS. BURNETT.

Mrs. Frances Hodgson Burnett, perhaps the best known writer of the day of stories for children, has written a series of fairy tales, which will begin in the October St. Nicholas and continue through several numbers. The stories are based on a quaint and humorous conceit, carried out, it is said, in Mrs. Burnett's happiest vein; and are to have a number of illustrations in color by Harrison Cady.

Scribner's Magazine for June opens with a plea for "The Larger Training of the American Army," by Captain T. Bentley Mott, U. S. A., who was for six years military attaché at Paris, and had during that time every opportunity to observe the armies of England, France, Germany and Russia. Captain Mott shows that our army is scattered through more than 100 small posts, and that no officer has an opportunity to command more than a regiment of men. Captain Mott advocates the establishing of large concentration posts, after the manner of Aldershot, where 30,000 men are at all time under training. The article is in line with recent recommendations of the president.

The Otter Creek Poultry Farm Company, Watertown, N. Y., are now offering a large number of their breeders for sale at less than half price. This offering includes seventy-five S. C. White Leghorn yearling hens, seventy-five B. P. Rock yearling hens and 125 S. C. Black Minorca yearling hens and a number of fine yearling cocks. This is a good opportunity to get some choice stock in these varieties and our readers should take advantage of it. Write them and mention American Poultry Journal.

If you are contemplating visiting the summer resorts of Wisconsin write to James C. Pond, general passenger agent of the Wisconsin Central railway, who will send you summer booklet which furnishes authentic information regarding the summer resorts reached by the Wisconsin Central railway in Illinois and Wisconsin, and aids the tourist in selecting a summer home or place to spend a vacation. Address James C. Pond, Milwaukee, Wis., and mention American Poultry Journal.

E. C. Stearns & Co., Syracuse, N. Y., manufacturers of the Stearns Green Bone Cutter, have just issued a 40-page booklet entitled "How to Make Poultry Pay," which gives illustrations and prices of their various bone cutters, together with much valuable reading matter from which any poultry raiser will gain valuable knowledge. Send for a copy and mention American Poultry Journal.

COCHIN BANTAMS *Black, White and Buff.*

Seven first prizes at Madison Square, 1904.
DR. WILLIAM Y. FOX, Taunton, Mass.

Rudolph Poultry Yards.

Buff and Barred Rocks
and White Wyandottes

One hundred breeding birds for sale now from this season's yards at prices reasonable, in trios, pens or dozens.

F. S. & J. S. GASPER Rudolph, Ohio

MILLER'S LANGSHANS

Were again in evidence at the state shows of Colorado, Kansas, Illinois and Missouri. Send for a list of our winnings. **CHAS. G. MILLER & SON, Box 702 A, Boonville, Mo.**

WHITE and BLACK ORPINGTONS

Importer of the Birtton strain of Blacks. Whites direct from Knowles, Young & Co.

W. H. GIFFORD & SON 151 Franklin St., Auburn, N. Y.

BARRED PLYMOUTH ROCKS.

Bradley Bros. Strain. A few choice cockerel bred yearling hens and exhibition cock birds for sale. Satisfaction absolutely guaranteed.
F. F. WINSON :: Hollenburg, Kan.

ALWAYS WIN

Barred Rocks, White Rocks and White Wyandottes.

During the past season I exhibited 37 birds and won 27 prizes, including 11 firsts and five specials. Eggs \$2.00 and \$3.00 per fifteen, one-half hatch guaranteed.

T. E. Quisenberry Slater, Missouri

Dakin's W. Wyandottes.

PREMIER STRAIN OF STANDARD TYPE

Bred and raised more winners of the very highest awards at New York (Madison Square), Boston, Chicago and St. Louis than any other. This is a fact. Some know it—you ought to. You can't get good results from cheap inferior stock, that's sure. Limited number of stock, and eggs for hatching.

JOHN L. DAKIN - Roxbury, Mass.

Rhode Island Reds

Greatest Winnings of The Season

At the great A. P. A. Show, Cincinnati, 1906, I won on S. C. R. I. Reds, four 1sts, three 2ds, five 3ds, two 4ths. On R. C., two 1sts, three 4ths, four 5ths and special for best shape and colored female in Single Comb. Also three silver cups. Send for free circular.

LESTER TOMPKINS, Concord, Mass.

Seip's Barred Rocks

Seip's Pride holds the record of winning 1st at Kansas City in 1903, 1904, 1905, and 2d in 1906 as cock bird. Stock at reasonable prices. Eggs \$3 per 15, \$5 per 30.

B. F. SEIP - Cameron, Mo.

**HANCHETT'S LINE BRED
BUFF COCHINS**

What other breeders are striving for in shape, color and feathering, my birds already possess. They win everywhere for my customers, even at New York. Write, stating your wants.

H. N. Hanchett :: Jackson, Mich.

OAK GROVE POULTRY FARM

White Wyandottes

Thirty-five head of the stay white kind at \$1 each, guaranteed to please or will return the money. Closing out the above. Scored as high as 95 points. Remember that one of the best flocks of S. S. Wyandottes in America is found on our farm. Eggs \$2.00 per fifteen.

E. B. BARNETT & SON, :: Box 92, Michigantown, Ind.

Buff Orpingtons

At Minneapolis and St. Paul, 1906, won seven 1sts, two 2ds, two 3ds, two 5ths, two specials and two sweepstakes. The utility qualities of our birds are also worthy of attention. Order eggs early.

G. A. GIBSON :: R. R. 2, Hector, Minn.

The Great Central Poultry Farm

Eggs, ordinary breeds, \$1 setting till August. Fancy varieties, \$1.50 and \$2.25. Quality of birds unexcelled. 3785 prizes to their credit. Clearing sale! 1500 breeders at once. 500 show birds in October. Five birds, \$7.50 till October. Fancy breeds, special prices. Order a Great Central Incubator. Guarantee satisfaction. Write now and send 10c. for catalogue.

F. W. NIESMAN CO. Box 40, Freeport, Ill.

CLASSIFIED ADS.

Under this heading ads will be inserted for six cents per word each month for less than three months, **four cents per word each insertion for three months or longer.** Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under **classified headings.** No ads accepted at less than an average of 50 cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Copy for classified ads should reach us by 19th of month preceding date of issue. Write your copy plainly, as upon this the correctness of your ads largely depends. **AMERICAN POULTRY JOURNAL** is furnished every advertiser during the time his ad is running. **Fifty-five thousand per month.** We guarantee an average monthly circulation of 55,000 copies of **AMERICAN POULTRY JOURNAL.** When placing your ads remember that advertisers of Classified Ads get better returns from **AMERICAN POULTRY JOURNAL** than from any other poultry journal—none excepted.

On writing any of these advertisers mention **A. P. J.** It helps you and doesn't hurt us.

All Copy for Classified Ads Must Reach us by the 19th of the Month.

System in Poultry Practice **BY JAMES SHACKLETON.**

30 Chapters, 147 Pages, One Dollar, Postpaid.

April 10, 1906. Sales to this date in 1906 are vastly greater than in previous years, and are more evenly spread all over the English speaking world. Everybody having fowls need the book, and people who get it tell that to all their friends and acquaintances. It is the only book in any language that does, or ever did, take poultry keeping out of blind guessing into exact methods and constant improvement. Circular free.

The book and American Poultry Journal for one year for \$1.10 new or renewal.

JAMES SHACKLETON, Box A 12, Milburn, New Jersey

WHITE WYANDOTTES!

Rigg's White Wyandottes have been line-bred since 1897—bred for Wyandotte form and color and for egg production.

Shape and color characteristics have been firmly fixed. These Wyandottes are the low-down, blocky kind, in weight exceeding somewhat standard requirements.

Unapproached in size, style and finish, they have never failed to win the coveted prizes in the strongest competition, east and west. Every bird line-bred and pedigreed and sold on approval. Eggs: \$3 per sitting; two for \$5; three for \$7.

HOUDANS

Line-bred since 1874. Acknowledged standard of Houdan excellence in America.

Eggs: \$3 per setting; two for \$5; three for \$7.

THOS. F. RIGG IOWA FALLS, IOWA

Black Minorcas Rose and Single Comb. Britton's Black Minorcas are the best. Write your wants Circular free. **W. W. BRITTON, The Gleyh Minorca Yards, Box W, Elgin, Ill.**

From pure bred S. C. Brown and White Leghorns, Barred and W. Rocks, White Wyandottes and Black Minorcas. Also manufacture the "Uhl Brooder." Send for circular.

C. A. THOMPSON, Box 42, New Washington, Ohio

Wanted—every poultryman and farmer in America to try Pratts Lice Killer. Easy to handle and it does the work.

A "Ringlet" 1st Prize New York Cockerel and two of his Sons.

"RINGLETS" Soar Still Higher.

At the Imperial Show of the Nation
Madison Square Garden, New York

E. B. THOMPSON'S BARRED P. ROCKS

Stamped their superiority in the most decisive manner, winning again the Superb Challenge Trophy, value \$100, for best cock, cockerel, hen and pullet. This is the third time the "Ringlets" have won this grandest of all trophies, giving them now absolute and final ownership. In this "COLOSSAL CONFLICT" the "Ringlets" lifted the great National Sweepstakes Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. My Barred Rocks won double the number of silver cups and special prizes of any competitor, including the sweepstakes special in gold for best Plymouth Rock on exhibition male or female any variety.

The "RINGLET" World's Record of four years in succession at New York is a page of history. The "RINGLET" World's Record of first on exhibition pen at this great show, three years in succession, is the undisputed champion.

The "Ringlet" clean sweep 1st, 2d, 3d, 4th and 5th prizes on pullets has never been approached at Madison Sq. Garden, and stands alone and unequalled

The "Ringlets" have won at New York—exhibited by me personally—a grand total of 101 prizes, 48 of these are 1sts and specials, being more than double the number of 1st and special prizes won by any competitor in the history of the show.

GRAND STOCK FOR SALE

In any number. Rare bargains in yearling breeders in lots of a trio or 100. Show birds fit to win in the fastest company—600 choice breeding cockerels. Richly illustrated 36 page catalogue on application. It is full of original illustrations of New York winners from life. Eggs from finest exhibition matings. One setting \$5, two settings \$9, three settings \$12, four settings \$15. Address

E. B. THOMPSON, Lock Box 510, Amenia, Dutchess Co., N. Y.

HAWKINS'

ROYAL BLUE STRAIN

PLYMOUTH ROCKS

BARRED, WHITE AND BUFF.

WYANDOTTES, Silver White and Buff.

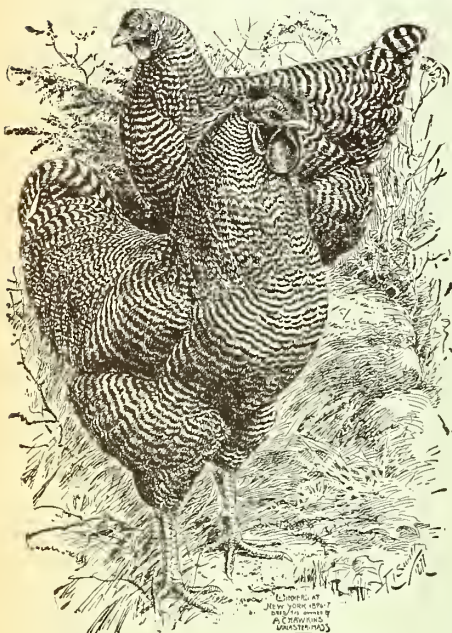

Have won more prizes at New York, Boston, Washington, and America's greatest shows than all others.

My matings this season are the best I ever owned.

At New York, in the largest show of Barred Rocks ever seen, 451 Birds, I won 1st, 2d, 3d and 4th Cockerels; 1st, 2d and 3d Pullets; 1st and 3d Cocks; 1st and 2d Hens; 1st and 2d Breeding Pens. My other varieties are of the same high quality. Hundreds of choice exhibition and breeding birds at honest prices. EGGS from Prize Matings: One setting, \$5.00; two settings, \$8.00; three settings, \$10.00; five settings, \$15.00. \$20.00 per 100. Catalog of America's finest Plymouth Rocks and Wyandottes free.

Petersen's Houdans

Reign Supreme at the Nation's Greatest Shows

My record has never been approached by any breeder.

BOSTON, 1900. In world famous competition, 135 Houdans exhibited. I won 1st cock, 1st and 2d pullet.
BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.
BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials.
BOSTON, 1905. We won every important prize. 1st and 2d cock, 1st, 2d, 3d cockerels, 1st, 2d and 4th hen, 1st, 2d, 3d and 5th pullets; \$100 champion challenge cup for best male; American Houdan Club Cup for best cock, hen, cockerel and pullet. All shape and color ribbons; gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition.

ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdan's.
Also highest honors at Madison Square Garden, Philadelphia, Pan-American Hagerstown, Toronto. No matter where you want to exhibit, no matter what the competition, I can furnish the winners. Photographs on application. Eggs in season.

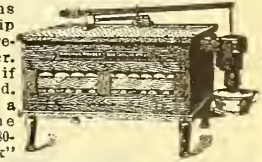

REV. C. E. PETERSEN, Pres. Houdan Club, Drawer 12, Penbrooke, Maine

\$7.90 FOR OUR 100 EGG HATCHING WONDER INCUBATOR

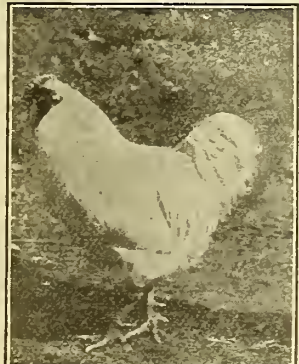

Delivered, in U. S. east of Rockies, or with Brooder, making complete outfit only \$11.50

The 100-egg Hatching Wonder has triple case, large aluminum-coated tank, double-jacketed heater and our Victor Regulator. The lamp has a big bowl, wide burner and ston't metal chimney. Ventilated egg chamber with double glass in door contains movable egg-tray with nursery below. The machine is 26 inches long, 21 inches wide and 14 inches high. In addition to this substantially built incubator, with its egg-tray and nursery, aluminum-coated tank, double-jacketed heater, modern lamp and automatic regulator, the \$7.90 price includes a thermometer, funnel and book of instructions, telling how to get the best results from the incubator, all delivered at any railroad station east of the Rocky Mountains.

If the Brooder is ordered with the incubator the price of both is only \$11.50 delivered anywhere in U. S. east of the Rockies. The price of the incubator delivered west of the Rockies is \$9.50 and the incubator and Brooder together \$14.75.
Better write us today; we will ship promptly on receipt of your order. Money returned if not as represented.
If you want a larger machine write for our 80-page "Victor Book"

OTTER CREEK POULTRY FARM CO., Box A, Watertown, N. Y.

Young's Strain S. C. W. Leghorns I HAVE NO OTHER BREEDS

My strain again for the sixth consecutive year shows its superiority by winning more prizes at Madison Square Garden, N. Y., in the strongest competition ever known, than all others combined; including 17 specials, and again winning the Nat'l S. C. W. Leghorn silver cup. Two weeks later I almost duplicated my wonderful win of last year at Boston by winning 9 prizes on 9 entries against the most prominent breeders of the east. My winnings for 1906, at the world's 2 greatest shows, as follows: NEW YORK: Cocks, 1st, 3d, 4th; ckls., 1st, 4th; hens, 2d; pul., 1st, 2d, 5th; pen, 4th. BOSTON: Cocks, 1st, 2d; ckls., 1st, 2d; hens, 1st, 4th; pul., 2d, 3d; pen, 1st. This record has never been equaled by any other Leghorn breeder in America. Stock and eggs for sale at all times, 1906 mating list free. D. W. Young, Highland, N. Y. and Ridgewood, N. J. Address

Will You Let Us Place a Tolman Range in Your Home on ONE YEAR FREE TRIAL?

We want to prove to you, at our risk, in your own home, without any obligation on your part whatever, that Tolman Ranges are absolute range perfection and that one in your home will cut the fuel bill and housework in half. Let us explain to you how we sell direct to you from our factory at

ACTUAL WHOLESALE PRICES

and thus save you \$15 to \$40 profits of middlemen and dealers. We give with every range a TEN YEAR GUARANTEE, which is as broad and binding as we can make it.

WE CLAIM THAT TOLMAN RANGES ARE THE ONLY RANGES MADE WHICH POSSESS ALL THESE FINE POINTS OF MERITORIOUS PERFECTION.

Isn't This What You Want When You Buy a Stove or a Range?

1. The range that will bake, heat and endure.
2. The range that is REALLY economical.
3. The range which turns the gases and smoke into BAKING HEAT.
4. The range that has an OLD ESTABLISHED REPUTABLE manufacturer behind it.
5. The range that will LAST THE LONGEST.

The riveting, the mounting, the finishing are all done BY HAND, by skilled workmen, under the personal direction of our PRESIDENT. We guarantee that there is not a better range made today, and few AS GOOD.

Is it not worth a minute's time and a postal card to send for our catalog, which tells all about this liberal special offer. Our catalog shows over 100 different styles and sizes of Wood Cook Stoves, Heating Stoves, Steel Ranges, etc. We are making many other liberal offers for the summer months. Are you interested? ORIGIN AND HISTORY OF THE BREEDS

The Game Fowl Bred and Admired by the Ancient Greeks and Romans for Their Pugnacious Propensities and Indomitable Courage—Known to Have Existed as a Distinct Breed in the Earliest Civilization—The Modern Exhibition Game the Result of Earnest and Skillful Labor by English Fanciers, Who Today Lead in the Production of Choice Specimens of the Several Varieties—But Little of the Character of the Original Game Retained—A Fowl Possessing Distinctive Characteristics and a Pleasing Personality—The Duplicates in Miniature Known as Game Bantams—Breed Characteristics.

Paper No. 14—Games and Game Bantams.

Written by Thos. F. Rigg, Associate Editor American Poultry Journal.

The American Standard of Perfection recognizes the following breeds and varieties of game fowls: Black Breasted Red, Brown Red, Golden Duckwing, Silver Duckwing, Birchen, Red Pyle, White and Black; also the following Oriental classes: Cornish Indians, White Indians, Black Sumatras and Malays.

The game fowl is as old as time, and has been found intact by the civilization of all ages. Saunders says that among the Greeks and Romans the pugnacious propensities and indomitable courage of animals, whether quadrupeds or birds, never failed to attract attention. The Romans, indeed, whose passion for the combats of the amphitheater was notorious, collected not only the ferocious tenants of the Libyan desert for the gratification of their blood-thirsty disposition, but bred up dogs for the arena, and even sent authorized officers to Britain for the purpose of securing those terrible mastiffs for which the island was so celebrated, and it cannot be supposed that the combativeness of the game cock would be overlooked. Cock fighting was as much in vogue in Greece and Italy in ancient days as it is at present in India, China, Malacca and the adjoining islands of Sumatra and Java. The Greeks produced several renowned breeds of game fowls, as did Media and Persia. On Caesar's arrival in England he found the fowls domesticated, but these as well as the hare were forbidden as food and were bred only for the fancy. But it is probable that we owe the game fowl to the Romans, for when Britain was a Roman colony it is not to be supposed that the Roman residents would give up the sports to which they were so passionately addicted; and as they sent British fighting dogs to Rome, so from Rome they undoubtedly imported their fighting cocks.

The modern game fowl—that is, the exhibition game, recognized by the American and English fanciers and authorities—is as far removed from the original game fowl as it has been possible for man to take them. No other breed of domestic poultry has been so skillfully remodeled

as has the game. The original game was built entirely upon fighting lines. He had not the tall, attenuated form of the modern game. He had come down intact, with his courage and vigor as an heirloom, from the time of the Romans; but with the advent of the poultry shows in England in 1851 the remodeling of the game began.

The original game fowls were of many colors and not uniform as to size, comb and carriage. It was not unnatural that the fanciers should desire to construct with the best of this material a pleasing game fowl, as they saw such a fowl in their mind's eye. And so it was that the shape, carriage and whole being of the old game were changed and the modern exhibition game given to the fancy.

Referring to the new game, Saunders has said: "If fowls were not wanted for the table or for egg production, and if perfect symmetry, beautiful color and daring were all that was required of them, the fancier might possess the game fowl and rest content."

English fanciers continue to lead the world in the production of show specimens of exhibition games. In the interchange among fanciers the game brings the highest price. In this respect they have always been leaders.

Breed Characteristics.

The exhibition game has a style and beauty all its own. High station, shape and carriage of tail and wings are most important, and are given the greatest consideration by the most skillful breeders. A game low on its legs is a thing to be shunned. Harrison Weir, describing the ideal English production, says:

"Head, long and narrow; beak, straight, with a light curve and finely yet strongly set on the head; the eye large, full and fiery; the neck long and thin, yet strong shoulders; wide in the body, deep, but rounded, and flesh on breast full and hard, with a slight tendency to length; thighs, long and thin, or slender, slightly bent in; the legs long, feet long and well to the ground, spur set on rather low; tail, narrow, small and carried low, the whole of the feathers short, hard, almost like scales, yet moist or cool to the touch; general carriage somewhat of a tendency to be upright."

The Black Breasted Red is the most popular of all Standard games, both in America and England. The plumage of this fowl is most pleasing. It is a mingling of black, orange and red. Body and stern are black. Back red, saddle light orange. This refers to the male. The female in color is a mixture of black, brown and golden brown.

In color the Brown Red is black in stern and body, the breast being black, evenly laced with lemon. Tail black, back lemon. The female is colored upon practically the same lines—less brilliant, of course.

The Golden Duckwing is one of the most beautiful of games. His body and stern are black, with a beautiful golden-colored back, breast glossy black. Shoulders and wing fronts are black; wing-bows, golden. The female is a mingling of black, silver gray and deep salmon.

The Silver Duckwing is the same as the Golden, substituting silver coloring for that of golden.

The body and stern of the Birchen games are black, neck silvery white, back white, shoulders black, wing-bows sil-

very white. The female is garbed in colors of brown, black and silvery white.

White games—plumage pure white throughout.

Black games—plumage throughout black, with metallic luster.

Game Bantams.

Game Bantams are in their entirety the product of the fancier. In shape, color and carriage they are the same as the Standard games, from which they were derived—simply miniature games. Dwarf fowl have been known throughout all ages. As to the origin of Game Bantams, Thos. F. McGrew in the Poultry Book says:

“Several writers have several theories about the origin of the Game Bantams. The majority of fanciers, however, agree with Mr. Entwisle, who gave John Crossland, of England, the credit of having produced the first Game Bantams of quality. Mowbray, in his early writings, states that there has just been obtained a new variety of Bantams, extremely small and smooth-legged, as are the game fowls. The records as early as 1850 describe beautiful game Bantams of very small size, weight considered, but no mention is made of their possible origin.”

Standard weight of Game Bantams—Cock, 22 ounces;

similar to the pea of the Brahma, but more elevated behind. In color the cock is a mixture of green-black and dark red; the hen is rather of a browner tint; both have a strong metallic luster.”

It will be seen that the Cornish Indian first exhibited was very unlike the fowl of that breed today. No mention was made by Mr. Lloyd as to lacing, without which the present Cornish Indian would be something other than itself. Malay build has since been introduced, and now the Cornish Indian and the Malay are much alike in shape. Perhaps no other breed of fowl, save the Cochins, ever had such a boom in America as did these so-called Indian Games. The boom came on about 1885. Fabulous prices were paid for specimens of the breed. The fanciers went “Indian mad,” and the introducers of the breed, Sharp Bros., of New York, reaped a very profitable harvest. These fowls were boomed as the most profitable and best table fowl on earth. However, they proved to be in no way superior to the American Plymouth Rocks and Wyandottes—in fact, not their equal—while as egg producers they were not at all satisfactory. In a word, the Cornish Indians soon took the place their merit entitled them to hold. Since then they have been improved both in beauty and as a market fowl and egg pro-

Partial front view of the Maples Poultry Farm, Geo. A. Barrows, Prop., Groton, N. Y., where 1,000 White Leghorns are raised every season. The birds in this view were hatched in February and March, and are now ready for the fall fairs.

cockerel, 20 ounces; hen, 20 ounces; pullet, 18 ounces.

The Black Breasted Red is the most popular of all Game Bantams.

Paper No. 15—Oriental Games.

In this class the American Standard of Perfection recognizes the following breed and varieties: Cornish Indians, White Indians, Sumatras, Malays and Malay Bantams.

Clark, accepted authority, says that “the Azell are the only proper and rightful owners of the well-earned appellation Indian Game.” In this he states a fact that is self-evident. The Cornish Game of the American Standard should never have been termed “Indian Game.” The American Standard of Perfection says that the “Cornish Indian was produced by a cross of the Azell (Asell) and Black Breasted Red Game, Sumatras blood being introduced into some strains later.” We do not know where the writer secured his authority for that statement. As Clark says, “The trouble about this is that a melange of five-pound birds could hardly turn out ten-pound offspring. The sum of it all is that if you mate a laced Azell cock with hens of almost any large sized smooth-legged race, you will be able to pick some Cornish Games out of the progeny.” There is no record to show that the blood of the Sumatras Games was ever used in the make-up of any strain of Cornish Indians. They are evidently a cross of the Malay and Azell and in some cases of other India games and the old-time pit game and the Black Breasted Red Game. They were first exhibited at the Crystal Palace Show in London, England, in 1858. Mr. J. Lloyd, an English writer, thus described these fowls shown at that time and place:

“Their peculiarities consist in the tail being set on in a horizontal position in a similar manner to the pheasant’s, so that the saddle hackles fall over and mix with it. The feathers on the hen have all the appearances of having been brushed up so as to meet the crown. The comb is something

ducer, and are fairly good classes in the leading shows.

The White Indian Game is a cross between the White Game and the Malay, alias Injee.

The Standard weight of Cornish and White Indians are—Cock, 9 pounds; cockerel, 7½ pounds; hen, 6½ pounds; pullet, 5½ pounds.

These fowls have short, thick legs, deep and broad breast, great width at shoulders. Their carriage is upright, the shoulders being carried high and the stern low.

In color the Cornish male is a bird of striking colors. Body and sterns are black; back glossy, greenish-black and dark red intermixed, the black predominating; breast black; wings black, except that primaries and secondaries are edged with bay.

The back, breast, body, wing-bows, wing-coverts and tail-coverts of the female are colored bay, approaching mahogany, each feather having two pencillings of lustrous black, the pencilling following contour of web of feather.

The White Indians are pure white throughout.

The Black Sumatra.

The Black Sumatras are natives of Sumatra. This is a beautiful fowl, with its graceful form, very rich greenish-black plumage throughout, and its long, drooping tail, with abundance of sickle feathers and coverts, which should be long and flowing. Comb, pea. The Black Sumatra is very rare, but few comparatively being bred in England or America. Just now a new interest is being awakened in this beautiful and useful fowl, and we expect to see them take a prominent place in the show room in America very soon.

The Malay.

The Malay is originally of India. Rees’ Cyclopaedia, 1810, showed a pair of these fowls as then bred in England. They were a tall, large, tight-feathered fowl. Sykes in his “M memoir of Birds” says he has reason to believe that the Malay is not a native of India, but was there introduced by the Mussulmans from Sumatra or Java. The Standard

weights of the Malay are: Cock, 9 pounds; cockerel, 7 pounds; hen, 7 pounds; pullet, 6 pounds. Standard heights (the only breed having Standard height): Cock, 26 inches; cockerel, 18 inches; hen, 18 inches; pullet, 15 inches. In build and form the Malay closely resembles the Cornish Indian. In all it is a massive fowl. In plumage color it is a mixture of black and red, both male and female.

The Malay bantams are the same in shape and color as the Standard Malays. Standard weight: Cock, 26 ounces; cockerel, 24 ounces; hen, 24 ounces; pullet, 22 ounces.

POULTRY DOCTORS.

We Have Doctors for all Other Kinds of Live Stock, why not for Poultry?
—This should be taken up by the Veterinary Colleges.

Written for American Poultry Journal by Mrs. Frances Tallon, South Haven, Mich.

Did it ever occur to you that poultry breeders should have poultry doctors, educated graduates, for the diseases of our high-bred stock, that are as much value to us as the stock breeder's herd of cattle or string of blooded horses? We have one veterinary for all kinds of stock, blooded or common, for dogs and cats, why not for our feathered stock, which is much more valuable than a great many dogs and cats that get medical attention from a graduate of some medical college? How many of us have lost a valuable cock or cockerel or hen during the past year by not knowing what ailed the birds? Of course, we can give a guess and try some of the numerous remedies. Now, who of us would do such guesswork with a cow or horse that perhaps is of no more value than our breeding bird, and how often we fail in our guesswork? Maybe we write to some one better posted than ourselves, but nine times out of ten the patient has died before we get a reply.

This year several valuable male birds that I know of died. In some cases the eye swelled; one eye would be worse than the other; bulge out until it seemed that it would burst open. The ax got them for fear the whole flock would contract the disease. There was a chance for medical diagnosis—some one thoroughly posted that could give prompt treatment, and the only way is to have a poultry doctor.

Don't say that they would starve if they had to depend on poultry doctoring for a living. Of course, it's a new idea. No doubt if that was all the line he had he would be a little hard up for a time; fees might be few for a little while. I can remember when a homeopathic doctor was hard up for both patients and fees, but see where they stand today! They have both patients and fees now.

The poultry doctoring might be put in the veterinary colleges. It surely would be an honor to prescribe for a fine, well-bred fowl.

This may sound foolish to some, but it seems serious to me—that we invest hundreds of dollars in birds of all kinds and there is not one man in a community that is capable of diagnosing or medicating the ailments of our valuable stock.

For instance, if one has a flock of valuable high-bred little chicks and some morning we find them standing with wings down and head up—cheap, cheap is all we hear—we feel cheap, too, not knowing what to do. You stop and say what ails them—is it lice, cold, liver trouble or what? You try this and that thing, and finally you have killed the whole lot by giving the wrong thing. Now, if we had some one near that was posted we certainly would call him in. Better pay \$2 or more than lose perhaps \$5 in that one flock of chicks!

I had the experience of doctoring a fine chick to death recently. I doctored it for something I did not know what; treated it for some ailment inside and it was soon dead. Then I found the trouble was all on the outside. Of course, at first only breeders of high class fowls would call the doctor, but the American people soon drop into doing what others do and it would only be a question of time before every fancier and a few farmers would call a doctor for his sick poultry; anyhow, if only breeders of good stock employed him he would do well, for the country in general has taken to raising blooded stock. A few years ago (not more than three) chick food and balanced ration in this locality was almost unknown; now it is almost universally used. Corn meal slop is almost a thing of the past. Now you see incubators and brooders everywhere you go. If that would grow into favor so rapidly, why not the physician?

Breeders often go for a long time without any sickness and suddenly something breaks out in his flocks that baffles

all his skill or his neighbor's. This spring there has been a great deal of complaint about young chicks dying with something they did not know what. Of course we have had a great deal of rain and cold nights.

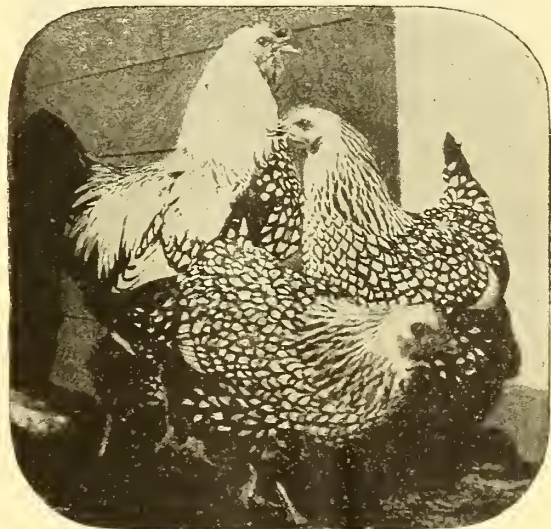

Another thing, every poultry association should pass a law that all poultry exhibited should be free from lice. Every fowl or bird should be thoroughly dusted with some sure louse killer for days before going to a show. I know my chickens were free from lice until I took them to a show. They came home covered. It made me sick, and the chickens, too; besides wecks of hard word getting rid of them. I learned afterwards that the chickens on both sides of me had them. It's not right to take such vermin to a public place like that. It should be classed with contagious diseases, barring them from showing, for what's worse than chicken lice of any kind? It won't be long now until poultry associations will be sending out their premium lists. Why not class lice with contagious diseases? I would rather keep our birds at home than to expose them to another siege of vermin.

ADVERTISING HELPS AND HINTS.

A Few Suggestions that will be of Great Help to the Beginner in the Advertising World—The Road to Success is Advertising.

Written for A. P. J. by Rev. C. E. Petersen, Penbrooke, Maine.

Advertising, derived from the Latin word *advertere*, to turn the mind to, to notice, is not an experimental luxury, but a necessary adjunct and invaluable assistant, to be

Trio of Silver Laced Wyandottes, owned by J. F. Van Alstyne, Niverville, N. Y. Note fine lacing.

paid for as logically as any other legitimate expense, not a new thing either, but a means by which the producer of commodities, has disseminated information regarding them from the earliest beginnings of history, though here as everywhere else the advancement of progress and science has given enlarged opportunities for the seller who before the invention of the printing press was limited to his vocal organs, and it was a matter of who could cry the loudest, who got the most attention from the purchasing public.

America is par excellence the country of the advertiser. In the colonial papers, advertisements furnish material for history, telling of new goods just imported from England, coffee, slave sales, runaway slaves and servants, or lost cattle.

Advertising has grown with the newspapers. In 1795 there were 200 newspapers in the United States; in 1850, 2,526; and in 1895, 20,217.

Newspaper advertising on a large scale dates from the establishment of the New York Sun in 1833, followed shortly by the New York Herald, the Philadelphia Public Ledger and the New York Tribune.

Estimates on the amount annually spent on advertising in the United States are as high as \$500,000,000, which goes to show the great importance of advertising in the commercial world, employing the keenest brains, the most talented

men and women, as business men begin to appreciate that advertising is no more incident of competition, but frequently the most important department, upon whose skillful management the growth and success of the business depends entirely. Business certainly seems to be king today, but except you want to have it dethroned, advertising must be resorted to, for without it, anything in the way of pre-eminence cannot be established; good goods, and well worded, persistent advertising, will in the end bring success.

More than wishing for success in business is necessary; you must let people know what you have got, and more so in the poultry business than perhaps in any other business, as it is largely a mail order business; people cannot come to me, I must out of a necessity go to them, and as I cannot carry my farm around with me, it becomes of vital importance that I advertise what I have got, and in well worded advertising direct their attention to my stock; no,

A prize-winning White Plymouth Rock, owned by Sass Bros., Ancona, Ill.

wishing never brought business; nothing but effort will do that, or in other words

Get Up and Scratch.

Said one little chick, with a funny little squirm,
I wish I could find a nice fat worm;
Said another little chick, with a queer little shrug,
I wish I could find a nice fat bug.
Said a third little chick, with a strange little squeal,
I wish I could find some nice, yellow meal.
"Now, look here," said the mother, from the green garden patch,

"If you want any breakfast, you must get up and scratch."

If you have a few dozen fowls, or a few hundred, advertise the fact; there are some other fellows that like to know what you got, and you will find a ready market for your extra cockerels, that you don't like to kill; such a shame, they are such beauties, would do the other man a lot of good if he had one of them; willing to take a reasonable amount of cash for them, comes from a good strain, had excellent care, too bad to kill them, oh dear, but I will have to; no, you will not; advertise them, and you will sell every one of them, which is done yearly by others. But advertising is expensive, you say; yes, in some journals it is, and we have proven it to our heart's content, in some journals advertising is cheap, for the inquiries are genuine, and the returns are large, for the circulation of the journal is among a class that don't fool away time and stamps writing for circulars, and if the editor will pardon me for so saying, the American Poultry Journal is one of the very best mediums we have ever used, and have introduced us to the very aristocracy of the poultry buying public, who are very willing to pay for the genuine article.

When you do advertise, be honest in your statements; don't gush too much; give the plain, unvarnished facts in the matter; space is too expensive to use for purposes that

can be much better carried out in a circular, or in correspondence; if you have won any prizes state so, and without prevarication; the readers will see through it in a moment and refrain from having anything to do with the writer of the advertisement.

Don't say "My birds win everywhere" except they do, for the intending purchaser will ask you "where?"

No use for a man to try to cover his tracks; cannot be done nowadays; will be found out before or later.

And in conclusion let me record a few hints on advertising that I have picked up from a number of sources and that will be of value to the readers of this journal, as well as they have been to me and others that become acquainted with them:

You cannot keep up steam without a continuous supply of fuel. Advertising is the recognized force which drives the engines of industry, but it must not be expected that the advertising of today will keep the wheels turning in a year from now.

Some ads scream and others whisper, some throw dust in your eyes and some perform vaudeville. Make your ad talk like a man to a man.

"A man must keep his mouth open a long time before a roast pigeon will fly into it," says a Danish proverb. And a man, nowadays, stands as poor chance of getting things without advertising as the seeker of roast pigeon in the proverb.

The man who went out to milk and sat down on a boulder in the middle of the pasture and waited for the cow to back up, was a brother to the man who kept a store and wouldn't advertise because he reasoned that the purchasing public would back up to his place of business when it wanted something.

A cow's tail has a limited circulation, but a reaches the fly.

These few selections, out of many, tell a tale worth listening to, so as the fall will soon be here, get before the public with what you have, and with a little money judiciously expended, you will find, like hundreds of others have found out, the money invested in advertising is a paying investment.

RAISING TURKEYS.

Turkey raising is very profitable if rightly managed, and there are many beginners in the turkey raising business this season that would like to have some advice on this subject. I will give my plan of raising the poults, which many think are hard to raise. I have had great success this season. By all means have pure-bred stock and keep them so and add new blood when necessary to do so. Always keep your early hens for breeders, and they should be healthy and vigorous. I make yards twenty by thirty feet; have a coop in yard about four by five feet, and when the poults have hatched and are about thirty hours old I take them and their mother to this coop and leave them as quiet as possible. When they are about six hours older I give them water. The water should be where they can't step in it, as this is very dangerous. I feed them first clabber cheese, with little black pepper on it; feed cornbread crumbs for a change. When they are a day older I turn them out in this yard and when one week old turn them out on free range, about an hour the first day, allowing them to stay longer each day. When two weeks old I turn them out as soon as the dew is off and pen them late in the evening. When they get to this age I feed corn chopped and clabber cheese and cornbread sometimes. Some people think the Bronze turkey goes too far from home when they are the blame for it all. My turkeys come home every night and are as tame as they can be. I feed at a certain hour and they always meet me there. I have tried the above plan this year and haven't lost a Bronze. I know this is a good way to raise turkeys. It is the best plan I have ever tried, and is as good as you could wish for. If you haven't raised as many turkeys this year as you think necessary please try this way. I don't claim this to be the only and best way, but I do claim this to be one good way. Don't let the poults get chilled or turn them on wet grass. Keep them free from lice, as that is what killed my turkeys the second year I raised turkeys.

I know a party who never raised a turkey last year, and he says the turkeys are the cause of it, when he is himself. You can't turn your turkeys out and let them go; if you do you will never raise many. Remember I never lost a turkey this spring, and they are growing nicely. Of course some like one breed of turkeys, some like another. The same way by chickens. But at present the Bronze is my favorite. They are the largest of turkeys, and as far as beauty they cannot be excelled. As for my opinion, I cannot understand why more people don't raise turkeys. Blanchard Spearman.

PRIZE ARTICLE DEPARTMENT

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communication about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. All articles must be written on one side of the paper only. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

The first prize in the contest this month has been awarded Floyd C. Hutchison, Frankfort, Ind., and the second prize to A. V. Meersch, Poughkeepsie, N. Y.

RAISING OF FALL CHICKS ON THE FARM.

Soon will be the time to take off our fall hatches. They can be raised as well as the spring ones if you give them a little more attention. When they are twenty-four or thirty-six hours old take them and the mother and place them in a dry coop, with a slat front, under the shade of some tree. We have a peach orchard we use which is very shady. Then feed them cottage cheese and oatmeal on sand, which answers the purpose of grit in their younger days. Feed them five times a day for the first two weeks. Keep fresh water before them all the time. One would not believe the amount of water they will drink these hot days. Sweet milk is very good for them. Ours are given a pan of separated milk every day, which is good for both young and old. Keep the drinking vessels clean by scalding them out twice or three times a week.

You should move the coop once a week to prevent disease, which lurks on every corner at this time of year. When they are two weeks old give them a change of feed. Cracked corn and millet seed are fed of a morning, screenings of wheat at noon and at night they are fed middlings and some good reliable poultry food. Keep a box of grit near them.

This time of year most farmers have an over-supply of lettuce. Give them a bunch and watch how quickly they will devour it. Feed them this way and you will be astonished how fast they will grow. Care for them this way and you will find you lose very few.

Then at this age I begin to feed them in troughs. They will not waste a particle of their feed in this way, and it will always be clean and healthy if you will keep your troughs scalded out. Troughs are made of half-inch pine with strips nailed on top lengthways to keep them out of the feed. But you must not forget the essential things, which is pure water and grit. Some say my chickens can get all the grit they need, but here is where they are mistaken. They get some, but it is not of the right kind. They must have sharp stone to make a healthy chick.

These feeds are all fed dry, which I find is a healthier way of feeding. It is also a more pleasant way of feeding. All have the same chance for their feed, both old and young.

When feeding dry feed at this age you would be astonished at the amount of water they drink. When they have eaten all they want the next thing they want is water. Then they are off for some currant or blackberry bush, for some insects or to lay in the shade and grow.

You will find a good market for these chicks for Christmas friers. The pullets will lay in May and June, while your spring chickens are setting.

If you have fancy stock they will make your best show birds when they are fourteen and sixteen months old. Give these chicks all the attention you can and in the end you will profit by it. Have raised chickens by this method and found it very profitable.

Frankfort, Ind., R. R. 9.

Floyd C. Hutchison.

BROODY HENS.

Difficult as they are to obtain during the winter and early spring, broody hens, as the season advances, become a regular nuisance in most yards. The advantage of keeping non-sitting breeds of fowl, especially where eggs are the chief source of profit, is very apparent when the weather begins to get warmer. Instead of plenty of eggs the nests are occupied by clucking and screaming hens that will remain there for weeks unless prompt steps are taken to cure them of their broodiness. The birds are only seeking to follow their natural instincts and to bring out a brood of chicks after they have laid their quota of eggs. But nowadays a large average of eggs is expected

to be laid by every hen, and this average will be greatly reduced if she is permitted to waste her time in sitting for days on a nest egg.

How to cure the clucking hens is a question often asked. Some of the methods that have been employed for many years are not only of little use but decidedly cruel and detrimental to the health of the hen. To subdue the bird for some seconds in a pail of water is a common practice in many parts of the country. Another equally useless and cruel practice is to tuck the head of the hen under her wing, swinging her round and then holding her under water for half a minute. To shut the bird up in a box in the dark, without food or water, is another so-called cure. A plan which is stated to prove successful is to freely wet the nest the hen has taken to and which she is said then to be glad to abandon. To tie a piece of white rag to the leg of the hen is a mode occasionally adopted, but with very doubtful advantage.

One of the simplest ways of curing the hens of broodiness and one that never fails is to remove the birds from the nests the first evening they are seen there and to place them in a coop, which should stand in a light spot—not in the dark—in the run with the other fowls, but not exposed to the sun. The hens must have plenty of grain to eat and water to drink. Under these conditions they will get thin and weak, but will lose their wish to sit in two or three days and recommence laying very soon.

Later in the season, when the moult is in progress, it is sometimes advantageous to allow the clucking hens to sit for

"GOLD COIN."

1st Prize Buff Wyandotte Cock, American Poultry Association Show, Cincinnati, Ohio, 1906. Owned by Wm. K. Lewis, Dry Ridge, Ky.

a short time. It is not necessary to put any eggs under them, as a nest egg will do. After they have sat for about two weeks and they are then put in a coop they will probably at once break into moult. Birds treated in this way will pass quickly through the moult and begin to lay again when eggs are scarce and dear.

A large trade has sprung up in the last few years, viz., the selling of day-old chicks, which will travel long journeys as soon as they are out the egg, and arrive healthy and well. A broody hen is useful to mother these little chicks. Most broody hens, even if they have only been desiring to set for a couple of days, will readily take to the little strangers, particularly if they are introduced to them at dusk.

Poughkeepsie, N. Y.

A. V. Meersch.

The moult also tests the color quality of the white breeds. If the prize cockerel shows brassiness after getting his new feathers, he will be very likely to transmit this failing to his chickens.

Study your individual birds, save the steadfast thorough-breeds for years and gradually develop whole flocks of them. It certainly pays both in satisfaction and in silver.

Do not allow the drinking water to be exposed to the sun. Give fresh water twice daily.

THE MOLTING PROCESS.

Extra Attention During this Period Will be Well Repaid—A Warm Shelter Will Hasten the Process—Inducing Early Molt—The Temperature of the Fowl's Body During the Molting Period.

Written for American Poultry Journal by A. V. Meersch, Poughkeepsie, N. Y.

With the egg basket becoming low and the older fowls looking ragged, loose feathers becoming plentiful in the house and run, poultry are in moult, but to make poultry profitable, the birds must not be neglected at that time. A little extra attention will help them to get through the moult as soon and with as little damage as possible.

Generally speaking, it is well for the fowls to begin to change their feathers about August. If they commence sooner the moult is only partial, the feathers coming off again freely in October or November; for if the moult begins very late, the long, cold nights and often wet days cause it to be prolonged. To some slight extent the moult can be hastened (a subject to which I will again refer further in this present article) or, if desired, postponed. It may, for instance, be desired to have a bird over the moult and ready for exhibition by a certain date, or it may be required to keep the hens laying as long as possible.

To defer the moult the hens must roost in a cool place. The door of the house must be kept open night and day, of course avoiding draught. If the hens are of a sitting breed they must be removed from the nests directly when they show signs of becoming broody and be put under a coop in a shady, cool place. To hasten the moult the fowls must be placed in a warm and sheltered house, when the increased temperature will cause them to shed their feathers quickly. If the hens are of an incubating variety, the moult can be brought about more quickly by allowing them, when they become broody, to sit for ten days or so on a chiuva or other nest egg, and then removing them to a small confined pen. This will cause them to drop their feathers all at once and quickly grow the new plumage.

In regard to food, fowls when moulting do not require strong stimulants; they should have plenty of fresh green food. The ordinary grain can be supplemented by a handful of hemp seed about twice a week. A little sulphate of iron in the drinking water does good at this season, care being taken not to give it in metal drinking vessels. Fowls eat less when moulting than when they are laying. Indeed, just as the moult commences some birds will hardly touch food and will stop on the perch in the morning, or mope in a corner of the house. Cleanliness must be specially observed, otherwise the fallen feathers will contain a lot of vermin and the poultry house will become unpleasant and unhealthy.

The birds must have access to shelter during rainy weather. A thorough soaking when they are nearly bare of feathers is apt to result in an attack of roup, or cause a chill that may throw the bird back for weeks. A hen that gets through the moult early and quickly will almost invariably prove a good winter layer. Sometimes when a fowl is thick in the moult, it will be seen constantly pecking at one particular place on its body. This may be caused by one or more of the new feathers failing to pass through the skin and causing great irritation. If a needle is passed under the covered end of the feather it will enable the feather to be drawn above the skin.

An early moult can be induced, and when the yearlings are to be kept for another season it is a good plan to get them through it as soon as possible. To do this you will have to stop their laying and, of course, lose eggs while they are sold already at a fair price. I need hardly point out the economic advantage. An early moult can be brought about by causing artificially those conditions that prevail at the normal moulting season. The fowls should be confined in a small shed or even in their sleeping apartment, as the subject is to provide as great a change as possible. They will have to remain in these limited quarters for two or three weeks, or until you find the floor of the place well strewn with feathers and the birds themselves presenting a very dilapidated appearance. It is hardly a question of feeding so much as not feeding them while thus confined. The best food to give under these circumstances is poor bail wheat or wheat screenings. As to the quantity, they should only receive one-fourth of their usual allowance of food per day. Give them, say, about one ounce each day, half in the morning and half at night, and give no other food at all except green stuff. All the drinking water they have should be made to taste saline by adding Epsom salts (again big doses are not needed; it is the small, regular doses that have the effect). On no account give any kind of meat food until the moult is well begun. It is also advisable to get birds to moult as quickly as possible, so that they are

ready sooner for both exhibition and laying purposes. Slow moulting is a great strain on the system; early moulting should be encouraged. Adding a small quantity of hemp seed or boiled linseed to their diet will be found to advantage, as well as the flower of sulphur, mixed with their soft food in the morning. Shade is principally needed for white and buff colored fowls during that period, as the rays of the sun have a bad effect on the plumage. The feathers become taunted and have that yellow tinge that is so much despised in the show pen. But do not go to the other extreme and moult the birds in a small, dark pen on straw, for nothing takes the stamina out of a fowl so much as long confinement.

It is well known that old fowls, by certain methods of feeding, can also be forced to moult early in the season, and would, thereby, have a full coat of new plumage by October early, and would, hence, be ready to begin to lay eggs when scarce. Three pens of birds were once selected with the idea of forcing them to moult, if possible. Two breeds of chickens were representing these pens, White Wyandottes and Barred Plymouth Rocks. Two of the flocks were housed in regular breeding pens, to which was attached a small grass run about 14 feet wide and about 70 feet long. The other pen had practically a free range. The experiment was started the first week in July. The birds were fed less than one-third of the usual quantity of feed, the object being to stop egg production. This method of feeding was continued for two weeks, after which the birds were fed in the best manner known. It is claimed that by using half or less of the usual feed for about two weeks the birds stop laying, after which, if the usual quantity of food is given again, they will in most cases begin to moult. In this experience with the two pens, which were confined in small runs, fully 75 per cent of the hens began to moult the third week of the test. The other 25 per cent began to lay freely when the heavy feeding had been in progress about a week. The birds that had free range stopped laying, but did not commence to moult. When the feed was lessened, they simply ranged farther, and as far as outward-appearance was concerned the amount of food gathered was used in maintaining the body in normal condition, practically no eggs being produced. When the heavy feeding commenced, they began to lay fairly well, but showed no inclination to moult; in fact, these birds were among the last to moult that year. This experience would seem to indicate that it is possible to control the moulting season more or less. It might be that the first week in July is a little too early to undertake work of this kind. A few of the hens that moulted first began laying in September and moulted a second time in November. This, of course, is a very serious objection.

Whether there is anything to be gained by forcing the hens to moult early in the season would depend entirely upon local conditions, such as markets and so forth. If eggs were high in price, it would be extremely doubtful if it would pay better to let the hens moult than to have them produce eggs.

Early in August a grain sprouting machine was used. The manufacturers of this machine claimed that it would make a saving in the food and would be profitable for the average farmer to buy. The writer has experimented with a fairly large number of chickens during the fall, but as yet has not sufficient data to warrant publication. He has found considerable difficulty in getting rations that were palatable. For example, a ration made of equal parts of oats, buckwheat and barley meal, when ground, make a fairly palatable ration. These grains when sprouted do not make nearly as good a ration, owing to the fact that chickens in nearly every instance refuse to eat the buckwheat unless practically starved to do so, in which case little or no gain is made. It will be seen from this that considerable time is lost in finding rations that are palatable. I have found that a ration of equal parts of wheat, oats and buckwheat work fairly well, both as ground grain and sprouted grain.

But as I seem to have somewhat neglected my moulting subject to give vent to above feeding method to the moulting of hens, I must here take up the process more explicitly by saying that during the succeeding months hens begin to show signs of distress, the result of a long season of laying. The comb has a dried, shriveled-up appearance, feathers are lacking in brilliant lustre (one of the first signs of condition), the eye has lost its sharp brightness, and the bird's usual activity has given place to listlessness. The reason of this is that the hens are rapidly approaching that season when Nature asserts herself, when the old feathers are cast off and are replaced by an entirely new set. In spite of the great achievements of domestication this annual and natural process takes place and while we cannot avert it we can do all in our power to assist Nature.

The time of hatching very largely determines the time of year of moulting; the birds hatched about March generally commence to moult a year from the following July or August, while those hatched very early or very late in the season moult

at awkward times. My experience has been that with those birds commencing to cast off their feathers during July or August, the process is more gradual, that is, as a few feathers are shed the new ones quickly take their place, and the blending of the old and the new is noticeable until the plumage is completely renewed. In the case of birds moulting later in the year, the feathers are cast off quicker than the new ones are formed, and naked parts of the body are very conspicuous and as a consequence the birds are less likely to be able to withstand the approaching cold weather. It also tends to prolong the process of moulting. The time occupied by the birds in changing their feathers depends very largely upon their age. Pullets usually complete the process in six or eight weeks, whereas, three-year-old hens will probably be fully three, three and a half, possibly four months ere the new set of feathers are complete.

The birds that are disposed of prior to moulting should be sold about June, as they are then in presentable condition. More money is usually procurable for them than is the case a few weeks later, when old hens are more plentiful, owing to gamekeepers disposing of the birds that have fulfilled their mission as "brooders."

The temperature of the fowls' bodies during moulting is about the same as when they are broody, from 103 to 105 degrees. Before going into the moult they should be in a lean, hard condition, and feeding should be to this end. This state should be brought about not so much by reducing the food allowance, but by supplying food of a strengthening, rather than a fattening, nature. For this purpose foods strong in nitrogenous materials should be given, which is necessary for the formation of the new feathers and to build up the frame, which is subjected to great loss. This loss is not only in feathers, but in flesh, largely owing to the high temperature of the body. A hen will lose as much as a pound to a pound and a half during the weeks of moulting, and this strain upon the system must be made up by feeding upon foods rich in the elements needed for the repair of the body. Barley meal, middlings, a little bran, together with a small quantity of pea and bean meal, are beneficial and should be supplied first thing in the morning in a warm condition. Mixed with the mash a little stimulating food has good effect; also every alternate morning some cooked lean meat, chopped up and mixed with the food, is to be recommended. It is a good plan to dissolve in the drinking water a little sulphate of iron—about half an ounce to every gallon of water.

THE ROAD TO SUCCESS.

Some of the Things That Must be Attended to if the Poultry Breeders wish to Make a Success—Description of Laying and Roosting Room Under One Cover.

Written for American Poultry Journal by Mrs. E. L. Gifford, Atlanta, Ga.

Who is there in the poultry business, either for pleasure or profit, who does not like to see their birds looking well and happy at all times, especially during the moulting season, when the fowls are obliged to wear "soiled and ragged clothes" for a while? Do we all stop to consider that our birds need our close attention and care at all times? So many care for their fowls in "fits and starts," which makes the work doubly hard. Of course "all we" poultry raisers get our ideas from the poultry papers, picking up ones we think best from all articles, then sticking to them. I have been very successful in raising poultry (thanks to the AMERICAN POULTRY JOURNAL and their writers). What are we to do to get on the road to success? First, thoroughly clean and disinfect all houses and coops and have them well ventilated, so as the sun can get into them, as well as fresh air. To disinfect the poultry house, mix whitewash to which carbolic acid has been added and thoroughly paint with same. About four times a year is enough, provided you spray all cracks and perches about once a week with coal oil and carbolic acid mixed. Some of your chickens look droopy? My friends, look for lice. Nine times out of ten they are living high off of our fowls, so we must declare war with them. Don't wait, but get some good lice powder and dust well all fowls and keep it up, say at intervals of about three weeks. What a change in our birds in such a short time! Takes less food, too, when we are not feeding lice. How thirsty we get this hot weather. So do our fowls, so we must see that they have fresh, clean water three times a day at least, and it must be kept in a cool, shady place, so as to keep fresh. Keep your drinking vessels pure and sweet by scalding with soda water every morning, using, of course, plain cooking soda. If we have not been doing so, we are from now on going to keep

ground charcoal and oyster shell where our birds can get it at all times. As we want our birds to keep busy, we are going to feed them only twice a day. In the morning make a mash of two-thirds wheat bran and one-third cornmeal, with occasionally a little sulphur added, then, as late in the afternoon as possible so as the fowls can go to roost with full crops, feed some good grain. Shade, shade, shade; we need it and lots of it. If we have no natural shade, suppose we plant sunflowers and not be stingy when we go to plant our seed, either. The leaves not only furnish shade, but what the fowls eat of them will do them good; then, too, the seeds are ripening in moulting season and dropping to the ground a few at a time where the fowls can get them and they are excellent for moulting fowls. We must be sure to separate the males and females as soon as we can determine the sex, and in our breeding pens as soon as the breeding season is over, for by so doing our males will be more vigorous and last longer as breeders. Don't let the fowls in the roosting room during the day, for we must keep the ground pure. Have a dripping board and keep air-slacked lime sprinkled over board and floor. I am sending a description of a laying and roosting room under one cover. House to be 15x12 by 10 feet high. The roosting room is 9 feet wide and 12 feet long; laying room 6 feet wide and 12 feet long. Put a wire partition between laying and roosting room. Perches are 3 feet from ground, 2½ feet apart and on a line, for when one roost is higher than another all fowls try for the highest and, consequently, crowd one another, which we do not want them to do. Have the dripping boards hung by hooks at either end and just escape the ground. In the laying room have the nest built about 5 inches from the ground and 12x15 inches in size, with partitions and roof, so as they can be easily removed, which makes cleaning easily and quickly done. The entire house is to be boarded to 8 feet, then finished to roof with poultry wire. A good sized window on the south side to admit sun, and a door on the most convenient side, with one between roosting and laying room. A small slide door leading from the laying room to the poultry yards. Bear in mind to keep doors leading into roosting room closed.

"When fresh-laid eggs are put into cold storage with a sweet, pure atmosphere at a temperature of 34 degrees F., very little, if any, change takes place in their quality. The egg cases should be fairly close to prevent circulation of air through them, which would cause evaporation of the egg contents.

When an egg is covered with boiling water in a bainmarie or double boiler, and the temperature of the water in the outer vessel maintained at 180-190 degrees F. for 30 to 45 minutes, the hard-cooked egg results, with the yolk dry and mealy and the white solid, yet tender.

In the United States corn is a favorite feed for chickens, though, as Professor Wheeler states, common grains "seem practically interchangeable and many grain by-products can be freely substituted for different whole grains or for each other and all combined as desired."

Linseed meal is a by-product of the manufacture of oil from flaxseed. "Old Process" contains somewhat more oil than "New Process" linseed meal and is, perhaps, on that account a little better to use, but both are excellent.

Experiments have proved that excessive feeding of middlings is apt to produce small-sized eggs. This, no doubt, is caused by the fact that middlings generally increases egg production.

Barley, either whole or ground, is very good. It has rather too much hull, but otherwise it is a satisfactory food. It is considered by many to be next to wheat in point of value.

While it is a fact that eggs, like beef, should be sold by the pound, it is not likely that we will reach that custom for a generation at least.

The "spring chicken" is one hatched not earlier than February nor later than May. It is marketed when two or three pounds in weight.

For a soft crop nothing is better than a gill of strong vinegar in a quart of drinking water.

Broad roosts not over two feet from the floor are the most comfortable and most sensible.

Kerosene your roosts, upper and under side, once a week.

Notary Public.

GUARANTEED SUBSCRIBERS.

With each subscriber to our publication we positively guarantee, while his subscription lasts, that no advertisement is allowed in our columns unless we believe that any subscriber can safely do business with the advertiser, and we agree to make good any loss which any such subscriber may sustain by trusting any such advertiser who may prove to be a deliberate swindler; but we do not undertake to adjust trifling differences between subscribers and responsible advertisers. To take advantage of this guarantee, written complaint must be made to the publisher within two weeks from the date of any unsatisfactory transaction, with proofs of the swindle and loss, and within two months from the date when the advertisement appeared, and the subscriber must prove that in writing to the advertiser he said, "I saw your advertisement in the American Poultry Journal."

An Appreciation.

Years ago Coburn, of Kansas, was not a much-known man. Of a sudden he was seized by an idea and that idea crystallized into the famous book issued by the Kansas State Board of Agriculture, *The Helpful Hen*. Coburn leaped into popularity; and though his reports along agricultural lines were widely read, it remained for the report on *The Helpful Hen* to fix the position he attained. On the front cover of *The Helpful Hen* report appeared the following, which has been styled a classic:

"The hen; while everything else was going to rack and ruin, she increased and multiplied; she supported herself and the family, too. The very insects which would have despoiled the farm she fattened upon, laying her daily egg—the blessed egg that took the place of beef and milk, mutton and pork—and in

good time, after all these services, surrendered her toothsome body to the cause of humanity. I am in favor of making the hen a national issue. Let us discard from our coat of arms the eagle and put a cock rampant and a hen couchant, with a golden field emblazoned with eggs and the motto: 'We keep the pot boiling, and don't you forget it.'"

Not long ago the Governor of Kansas offered the position of United States Senator to Coburn, but the latter replied that no glittering office suited him as well as the simple life he was following. This tickled Kansas farmers and live stock breeders greatly. They are still smiling. They want Coburn at home. The farm press and daily papers took up the incident and then came along the monthly press and it seems as if the end of comment is not yet. We have hesitated to mention the incident, waiting to see how far it would travel. Secretary Coburn is a farmer, live stock man and friend of the poultryman. He has done much of worth to the world and can do more. We appreciate his depth, width and commonplaceness.

Changing Type.

That incomparable English artist, M. Andrewes, has been drawing a cover illustration from week to week for *Poultry*, our London contemporary. It is quite a study to compare two types, the one as drawn by our best American artists and those delineated by M. Andrewes. His Leghorns are generally more "roomy" than ours; his Hamburgs are very fine and clean-cut. When he depicts the English Rock and Wyandotte, however, one who catches an idea quickly can see the difference of type immediately. Lately a White Wyandotte pullet of Mr. Andrewes' type graced the cover of *Poultry* and we were surprised to note the difference in type of English Wyandottes of ten years ago and of today. Those of the past we have almost invariably noticed to be low of leg and heavily feathered, giving full, round lines to the profile and a general "cobbiness" to the whole bird. Photos recently taken over the pond go to back up the new type of Wyandotte Mr. Andrewes is giving to the English fancy. His latest sketch shows a pullet with an almost straight, flat back and narrow pinched tail. Her body is too long. She needs more cushion and spread to tail, as well as a general shortening. Does the heavy laying now desired by the English breeders who patronize laying competitions come from long-bodied Wyandottes? We await an answer from our contemporary.

Iowa's New Move.

Iowa is one of the western states that is coming to the front as a pure-bred poultry commonwealth. At the recent meeting of the board of trustees it was decided that a poultry department be inaugurated because of the demand for poultry instruction and knowledge. The man who will be placed in charge of it is Mr. Howard Pierce, who is a graduate of the Cornell University poultry department. The course that Cornell gives is of the sort to make competent poultrymen, and undoubtedly Mr. Pierce will make a success of his work. Plans are now being made for the erection of a first-class plant on which the young idea is given a start. A large farm has been purchased for the dairy and poultry departments of this big institution, hence

the new department will be well started from the first. The first class will be called when the school opens this fall. We understand that feeding for egg production and fattening for market will comprise the major portion of the course for the present. Later on there will be some educational work along the lines of pure-bred poultry.

A Poultry Ark.

The University College, Reading, England, has at its head that well-known traveler and writer on poultry subjects, Mr. Edward Brown, now in America. We refer to the head of the College Poultry Farm which is a part of the big university. For some time past the poultry department has been experimenting with a portable brooder, one that is mounted on small wheels and may be moved daily to fresh ground for the chicks to roam over. The students have dubbed this brooder "The Ark," and it bears up under the name very gracefully. It is fourteen feet long and seven feet wide. It has five compartments and is arranged very conveniently for chicks and operator. We would say that it is a success. Heated by the hot water pipe system and well ventilated makes it built on the right ideas. Possibly some American manufacturer will duplicate it shortly, for it looks worthy of an honest trial.

Secretaries of Poultry Associations.

The secretaries of poultry associations are requested to forward the dates of their coming shows to us for publication. It is our desire to give as much publicity as possible to every show in the country, but unless the secretary, or other officer, furnishes us with the necessary information about their association it is impossible for us to do so. The show season will soon be here, and secretaries should now be "booming" their coming shows. Don't wait until the show season is upon us. Begin now and make your show a credit to your town and to yourself.

Business—Then Pleasure.

The incubator manufacturers are going to meet at Detroit, August 14. After a short session for business the body expects to go to a suitable watering place and enjoy themselves. There is some talk of the poultry press association meeting with them. The incubator people are anxious to have the editors and poultry writers lock up their desks and follow their leader to Detroit. There will be a gay old time 'round about Detroit, if the press and incubator folks hold a sort of family reunion at the same time. The press will probably give us a good account of the meeting.

Government Poultry Establishments.

There should be a poultry establishment on every state farm, at all industrial schools and every county poor farm. The most civilized countries of Europe have proven the value of poultry departments of importance on government farms. Not long ago we read an extended account of the installation of a poultry plant at an English school for wayward boys. The institution used so many fowls and eggs that the poultry

department was necessary to reduce the cost of supplies. Poultry departments of agricultural colleges in the East and in Australia, England and France have been made self-sustaining and even profit producers. What is needed is more pushing to the front of such subjects by breeders and fanciers. When they line up behind a project, it will have attention paid to it.

The Field Meeting Idea.

Field meetings are a new idea for poultry associations and they have been introduced to us by the old Nutmeg State's State Poultry Association which recently held two grand field meetings at Vernon and Storr's Agricultural College. The first meeting was held on the farm of F. O. Groesbeck, where on June 20 the proprietor made them welcome and was responded to by Professor Graham. Professor James E. Rice, of Cornell, made a splendid talk which the many listeners appreciated. Luncheon was served at noon and afterward good talks were given by Messrs. Rice and Graham and a demonstration of killing and dressing by Mr. F. S. Gammaek. The state association took advantage of attendance to solicit many applications for membership.

The Season's Fertility.

Nothing we can add will throw one ray of light on the season's fertility of eggs-for-hatching topic, but the reader may have faith enough to read of a few instances that we will mention even after we make the above admission. Those who are among the poultrymen report low fertility. In some western yards the fertility has been high all season but to balance this comes the report from down East that over half the shipments are failures. Every season has its good and bad hatches and yet no statistician has had the colossal nerve required to gather data on the subject. Lately we noted that a shipment of eggs from Scotland hatched better than 40 per cent. This is remarkable, though the eggs were extra well packed.

A Heart-to-Heart Talk With The Poultry Folk.

"There are tricks in all trades but our own," we are wont to declare when accusing others or making excuse for ourselves.

For a while let us cease to cry against corrupt dealings in high places, of graft, trusts, and dishonest gains. "Come, let us reason together," and right down in our inner consciousness see if our dealings in the poultry business will always bear close inspection.

The public places the utmost confidence in those who have birds or eggs to sell. If any one doubts this statement, let him advertise what he has for sale in poultry journals or local papers, and he will be surprised to find how many are anxious to buy, with

only a stranger's word as guarantee. There is no business that has greater temptations for little, mean, underhanded ways of dealing than the poultry industry, and it is time there was a reform in this direction. We hear of dishonest practices at the poultry exhibitions, but the victims of the private deals as a class keep quiet and few know of their wrongs. As the time of the year approaches when we send out eggs for hatching will we select eggs with the utmost care in regard to uniformity of size and color, have regard to the time kept after laying and to know from what pens and birds the eggs came? Will we be true to our customers in every particular of our dealings with them? There is a great difference with dealers' methods of doing business. Once in a while we are surprised in receiving even better than we expected, but not often enough for such an event to cease to be a novelty. There are many among us whose early education seems to have been neglected in regard to the rights of others—at any rate the David Harum version of the Golden Rule seems practiced too faithfully. No doubt many may exclaim against this as a libel, but it is the truth spoken in all seriousness of what we have seen and experienced.

"What do you do when roup gets into your flock?" was asked of a grower of a flock of two or three hundred. "Oh, kill and eat them and sell to the Italians." Another case, with shame be it said, a woman, when disease got into her flock and the birds were dying daily, killed the remainder and sold them so as not to lose money. Are these isolated cases? In this mammoth industry there is certainly room enough for every one engaged in it to make money honestly. Let those whose environment has placed them above temptation do all in their power by precept and example to raise the moral standard so that in no distant future the poultry business may become a synonym for integrity and uprightness.

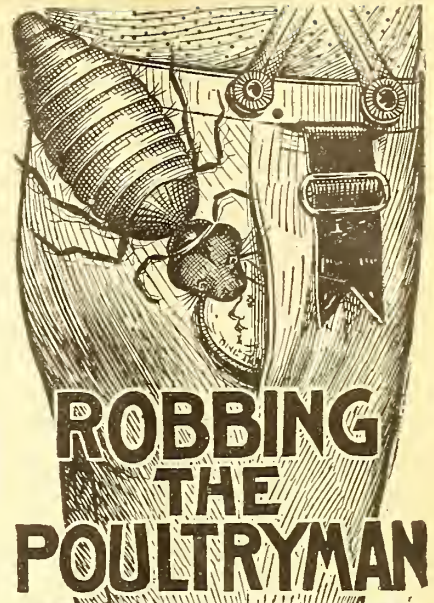

SARAH B. BOWERMAN.

Gates, N. Y., Monroe County.

Professor J. Willard Bolte, of the experiment station at Logan, Utah, a graduate of the Michigan Agricultural College, has been appointed assistant professor of animal husbandry at this college. He will have practical charge of the college poultry yards and classes in poultry keeping. Dr. Curtice will still retain direction, but will devote the major portion of his time to experiment station duties.

Mr. James G. Halpin, instructor in poultry keeping at this college and graduate of the course in agriculture at Cornell University, will be assistant professor of poultry husbandry in the Michigan Agricultural College after July 1.

August is a very trying month for fowls, and therefore unusual attention should be given them. Keep fresh water before them at all times and feed a liberal quantity of charcoal.

Every louse on your poultry is a robber. The longer you let them work the more money you are out of pocket. Stop them with Lambert's Death to Lice—the old favorite louse and vermin killer. Saves time because it does the work quickly; saves money because it saves fowls, saves you from bankruptcy because it turns loss into profit.

Get Death to Lice

It never fails to do the work. It is made in powder form for sprinkling, as a liquid for spraying, or as an ointment for head lice on young chicks. Lambert's Death to Lice is certain, safe and sure—a louse killer, and a profit maker.

WHAT HOBBS THINKS OF IT.
Ellenburgh Center, N. Y. March 7, 1905.
Mr. D. J. Lambert,
Apponaug, R. I.

Dear Sir:
Your Death to Lice is worth its weight in gold to any man who keeps poultry. It is fine for setting hens and the chickens grow strong.
(Signed) WILL HOBBS.

See that the name and picture of "Lambert" is on the cans. Ask your dealer for Lambert's Death to Lice. 100 oz. package \$1.00. Sample mailed postpaid, 10c.

O. K. STOCK FOOD CO.,
608 Monon Bldg., Chicago.

O. K. ROUP CURE

should be kept constantly on hand by every poultry raiser. It is not safe to be without it. Promptly cures Roup, Canker, Colds, Catarrh, and will reduce swelled head and eyes in a very brief time. Save yourself loss by preventing disease in your flock. Mailed postpaid for 50c.

THE O. K. STOCK FOOD CO.,
608 Monon Bldg., Chicago, Ill.

GRAND CLEARING SALE!

Six hundred choice 1906 breeders. "America's Big Four" Barred, Buff and White Ply. Rocks and White Wyandottes positively must go at a sacrifice. Utility breeding pens, 10 females and 1 male, for the next sixty days at the unheard of low price of \$15.00. All surplus stock at comparatively low prices. Order early. "Rankin's Royals" won't last long at such bargain prices. Big reduction on eggs for hatching after June 1st. Write your wants and I will do the rest.

H. P. RANKIN - Box 61 - HARTINGTON, NEBRASKA

QUEEN OF HATCHERS

TRY IT! Test its superior heating system at home for 30 days and if you are not satisfied that the **Missouri Queen Incubator** is the most practical and successful hatcher, return it at our expense. It's a hatcher you can depend on and we know you'll like it—write for descriptive catalog and free trial plan, Missouri Queen Incubator Co., Dept. C Princeton, Mo.

BARRED ROCKS
Exclusively Nonpareil Strain.

Bred from winners. Large colony yards on farm, producing fertile eggs. Do you want some good ones? Address

E. M. BUECHLY, Box 10, Greenville, Ohio

Gem Adj. No. 1

THE GEM Adjustable Leg Band.

Either band, price postpaid: 12 Leg Bands 15c; 25, 30c; 50, 45c; 100 75c. Sample Leg Band and Pigeon Bands with catalogue on Poultry Supplies Free.

SURE LOCK is made

in 6 sizes
No. 1, 1/2 in; No. 2, 3/4; No. 3, 3/4;
No. 4, 7/8; No. 5, 1 in; No. 6, 1 1/8.

Manufactured by H. TURNER & CO., 2026 Harvard St., Chicago, Ill.

Sure Lock.

1894 Barred Rocks 1906 EGGS

from America's best strains \$3 per 15, \$5 per 30, \$7 per 50. Line bred for heavy laying as well as high scoring. They won at Lacon, Ill., under Helmlich, 1st cock, 2d chl. tie, 4th chl., 1st, 3d pullet, 2d pen. No hens shown. Address

J. N. Young, Golden Rule Farm, Henry, Ill.

Barred Ply. Rocks

Exclusively I have a few good breeding chks. for quick buyers. Eggs in season at \$3 per 15, \$5 per thirty. Write me your wants and address

NICK BUCHER :: R. 1, Versailles, Ind.

**Breed W. and G. Wyandottes**

Rose and S. C. R. I. Reds. Are you in need of showy birds for the fall and winter shows? If so, I can furnish you the goods at reasonable prices. I have furnished others winners at our largest shows, why not you, 1000 head of good breeders and exhibition birds for sale. Stock sold on approval.

B. M. BILLINGS - Oberlin, Ohio

"Money in Poultry"

Our new 84-page book tells how to make it; also how to feed, breed, grow and market poultry for best results; plans for houses and much useful information. Illustrates and describes the largest pure-bred poultry farm in the world. Tells about our 25 leading varieties; quotes low prices on fowls, eggs, incubators and brooders. Send 4c in stamps to F. FOY, Box 4c, Des Moines, Ia.

**Conkey's Roup Cure**

The only sure cure for roup, colds and canker in Chickens, Turkeys and Pigeons. Keep a package on hand and give to fowls in drinking water when they show signs of the disease. Put up in 50c and \$1.00 packages. Your money back if a cure is not effected. Druggists and Poultry Supply Dealers sell it. If they haven't it, send to us direct. **We pay postage.** If you want to keep your flock healthy send for our book on "Poultry Diseases." We sell it for 25 cents, but to any reader of this paper who will send the names of two other poultry raisers we will send a copy free for only 4 cents to pay postage.

Before and After Taking

**GETTING READY.**

In writing timely articles for poultry papers I think there is nothing more important at this time of year than to consider what we are going to do next year. One cannot commence too early to get ready for next year. Are we going to raise more chicks next year than this? If so, what have we to provide? If it is buildings it is time to look up plans and get to work soon, for getting buildings built early gives time for the plaster in the walls to dry thoroughly, also for the ground to dry out in case no floors are used. Sand should be hauled in and allowed to get thoroughly dried. Old floors should be dug out and replaced with clean sand or dirt and the old houses cleaned.

If new fencing is to be built, consider how much is needed and where it is to be. The material should be bought with the money now coming in, so that the work may be done at times when other work is not driving.

Are we going into the fancy stock business on a larger scale? If so, the summer is the time to buy young stock, as it can be procured much cheaper than during fall or winter. A very necessary article to provide this year, before needed, is plenty of road dust, stored in barrels in each room or some other convenient place. It does not pay to put this off until fall, for dust is hard to get after fall rains commence. It is very nice to have plenty on hand. One day's work of a boy with the horse and cart will give a fair supply for two or three hundred hens. If one has access to a good gravel bed half a day's work will supply enough fine grit of sifted gravel for next year's chicks. A boy can do this also.

The chicks are now through with the brooders, so it is a good time to scrub them out, give a good sun bath and stack them away till next year. It is very nice to have them all ready for work when spring comes with its rushing work.

Really, this planning should have commenced several months ago if on a farm where feed for the chicks can be grown, as many things can be raised much cheaper than bought. Each one must plan according to circumstances, but I would advise planning for several years ahead and work accordingly. One ought not commence the poultry business till after studying the subject some time beforehand. It would save many dollars spent uselessly if one would also make up the mind to not get discouraged at failure to make anything the first year or much the second. It takes time, though, and considerable money to get a paying business started right. There is no business that needs more of each than the poultry business. A year or two for preparation is none too much for success.

ELLEN A. DAY.

H. P. Rankin, Hartington, Neb., breeder of "America's Big Four," Barred, Buff and White Plymouth Rocks and White Wyandottes, is offering 600 choice 1906 breeders at extremely low prices. This is his annual clearing sale and those who come first will get the cream. Mr. Rankin and his stock is too well known to readers of American Poultry Journal to need any further mention, and everybody should take advantage of the extra bargains that Mr. Rankin is now offering. Look up his ad, and write him today. Mention American Poultry Journal.

RACINE INCUBATOR

The practical, serviceable kind. Our remarkable Incubator Book, written by a man who devoted 24 years to nothing but incubators, is free to all who ask for it. Racine Hatcher Co., Box 26, Racine, Wis.

Rush's S. C. White Leghorns

Winners at Chicago, Detroit and Grand Rapids.

Free circular.
E. A. RUSH, 46A Coit Ave., Grand Rapids, Mich.

BUFF ROCK EGGS

that will hatch you winners, for 1 sell eggs from the same yards 1 set from myself, \$2 per setting; 3 settings \$5; \$10 per 100; half price after June 1st.

Golden Nugget Poultry Farm, F. E. Gilliland, Box R. Hope, Ind.

Choice breeding hens and yearling cocks for sale, and chicks of finest quality. Fine circular illustrated from life, free. Collie pups for sale, eligible to registry. **VICTOR D CANEDAY** Box A, Taylors Falls, Minn.

Ideal Silver Wyandottes. at sacrifice during August. Owing to poor health must close out nearly entire flock—six fine males and number of females, besides young stock at two-thirds or less actual value, to close out quickly. 120-egg Star Incubator, good condition, complete, \$10. **MRS. DENTON COLE** :: Winwood, Pa.

Free U. S. Gov't Lands Write to C. L. Seagraves, Genl. Colonization Agt., A. T. & S. F. Ry., 1117 Railway Exchange, Chicago, for free copy of new folder, telling all about Government lands along the Santa Fe in western Kansas, eastern Colorado, New Mexico, Arizona and California, subject to homestead entry. In that region are millions of unoccupied acres. Much of this land can be irrigated or crops grown under the Campbell system of "dry farming." It costs you only a postal card to find out the facts. **Southwest and in California**

"KEEP COOL."

In reading the many splendid articles contained from month to month in the American Poultry Journal, I am often struck by the fact that the great majority apply with more or less (generally more) force to conditions in the north. A foreigner, ignorant of our climatic conditions, might be excused for thinking this a continent of continued cold, or, with better knowledge on that line, he might imagine no chickens were raised in the south.

Of course all Americans know better. We have some very warm weather in the south, and we also raise some very fine chickens, though the poultry industry is not so far advanced as in the northern states and Canada. With us, at this time of year, the problem is not how to keep our chicks warm, but how to keep cool.

Last year we made a house that is very simple and yet answers the purpose admirably. It is about four feet square, six feet high in front and four feet in back, with good floor. It is single boarded four feet all round, the space above in front and at ends being covered with wire screening. A roof naturally slanting, and made waterproof by slats over the cracks between the boards, completed it. In one end is a door large enough to enable one to clean it, and in front a little door giving access to a runway where it is necessary to keep them within limits.

Last year I had a small brood hatched on June 15, which is extremely late for this section. Sixteen of them survived and thrived, and when the hen left them at six weeks old they went at once into this house. They did splendidly and I never had an hour's trouble with them. We kept six pullets and a cockerel over (the rest being used for the table, and fine they were, too) and four of the pullets laid early in December, the other two just after Christmas. I have used the cockerel for breeding this season and a fine, vigorous bird he is, producing a large percentage of fertility.

I attribute their success very largely to their having had plenty of fresh air through all the hot weather. When it was very warm they would all get as near the screening as possible and remain there all night. As a matter of fact they roosted there all winter, having, of course, free range in the day time. When it was wet, or extra cold, we put old canvas over it, thus protecting the birds without excluding the air. When we began hatching this year we made similar houses for our wee chicks and they have worked beautifully. I have just now two hens with thirty-five and thirty-three chicks, respectively, in two of these houses, and they are just thriving. The wire is too high to admit of cold air (if there is any) striking on the wee chaps, and at the same time the ventilation is perfect. They get into their wire yards every bright day and if it rains they have good litter on their floor to scratch in and they scratch and grow and seem happy, independent of the weather. A very few minutes every day suffices to sweep out the old litter and scatter in some fresh and your chicks reward you for it. To the big breeder, to whom expense is a secondary consideration, all this will seem very crude, if he trouble to read it

\$1 to \$2 per month rents any Buckeye Incubator Rent pays for it. We pay the freight and ship on 40 days' trial. Prices, ready to use, \$5.00 and up. Brooders \$3.50 and up, guaranteed. Catalogue free. Buckeye Incubator Co., Box 2, Springfield, Ohio.

PREMIER STRAIN OF STANDARD TYPE

Bred and raised more winners of the very highest awards at New York (Madison Square), Boston, Chicago and St. Louis than any other. This is a fact. Some know it—you ought to. You can't get good results from cheap inferior stock, that's sure. Limited number of stock, and eggs for hatching.

JOHN L. DAKIN - Roxbury, Mass.

at all, but to the many who, like myself, must study the expense side closely and still want to do the very best by their stock, there may be some helpful suggestion. E. W. R.

Mrs. Robt. Richardson, Oakhurst Plantation, Baton Rouge, La., R. F. D. 2.

FOWLS DURING THE MOULTING PERIOD.

A. V. Meersch, Poughkeepsie, N. Y.

Loose feathers will now soon be plentiful in the poultry yards, for many of the older birds will commence to moult. Those fowls that roost in cool open sheds or in trees will not usually go into moult so soon as those that pass the night in warm houses. But by September the large majority will be shedding their plumage. A quick and early moult is generally desirable. The fowls then get through the process before the cold weather arrives and thus avoid the ill effects that often result when they moult late. Stock birds will be in better condition to lay early in the winter and to produce stronger chickens and show birds will be well over their trouble and in the best of plumage when required for the fall exhibitions.

Poultry that have their liberty and are generally well fed, get through this period without difficulty. Those, however, that are kept in confinement are all the better for a little extra attention. The non-sitting breeds feather more slowly than others, perhaps because they lay a greater number of eggs, the production of which causes more exhaustion of the system. The food at this time should not be of too heating a description; it should comprise plenty of green vegetables, among these lettuce that is going to seed are as good as any. A little of the sulphate of iron tonic in the water every now and then is useful. Epsom salts, too (not Rochelle salts), are good; twice a week as much as will make the drinking water taste slightly. There must be ready access to shelter in order that the fowls may not be exposed to heavy rain. A thorough soaking when they are partly denuded of their plumage may result in roup or other serious illness. Hens that get through the moult early and quickly will most invariably prove good winter layers.

It is in every way better to separate cocks from hens during the moult. They are usually fierce and spiteful to the hens when changing their feathers, and sometimes will treat them cruelly. The tail and hackle feathers of the cock birds take a long time to grow, so the sooner they begin to drop these the better. Small and warm quarters promote the moult. It is surprising how quickly the feathers will grow under these conditions. Old hens, that are to be got rid of and which are intended for the table, should be disposed of just as they begin to shed their feathers. It is not always easy to tell from the appearance of a hen as she runs about whether she has begun to moult or not. Some hens will stop laying and will hardly eat anything for a few days and yet not shed any feathers till she suddenly appears almost bare. They will rapidly become thin after they have lost their appetites. If a visit is paid to the fowl house soon after the birds have gone

to roost, those that are still laying will be found to have full crops, while those that have stopped will have but little food in them. No great mistake, therefore can be made if those hens that are on the perch at that time with empty crops are selected for killing.

The house must be kept clean or the loose feathers will collect in the corners and harbor a lot of insect vermin. If those insects are in large numbers the birds will become so weak that the moult will be greatly prolonged. Any fowl that is intended for exhibition must be kept sheltered from hot sunshine, which is liable to sunburn or bleach the young new plumage.

If you are contemplating visiting the summer resorts of Wisconsin write to James C. Pond, general passenger agent of the Wisconsin Central railway, who will send you summer booklet which furnishes authentic information regarding the summer resorts reached by the Wisconsin Central railway in Illinois and Wisconsin, and aids the tourist in selecting a summer home or place to spend a vacation. Address James C. Pond, Milwaukee, Wis., and mention American Poultry Journal.

Simon Beuth, German Valley, Ill., the noted Buff Wyandotte breeder, is offering some of his choice breeders for sale at prices that will move them quick. Any of our readers who are interested in this variety should take advantage of this mid-summer sale and secure some of this blood. Write him for prices and mention American Poultry Journal.

Don't be afraid of overfeeding; find out how much your fowls need. There has been a lot of underfeeding of late on account of this cry of overfeeding in the press.

Never let cockerels and pullets run together after the fourth month. Don't keep chicks together of all sizes or they will not thrive.

We would like to send you our new catalog free telling why the "Continuous" Hatcher hatches more, better, stronger chicks than any other, and explaining how it works continuously. Write today. Hatcher Incubator & Mfg. Co., 3101 N. Jefferson Ave., St. Louis, Mo.

CHICKS EVERY DAY

THE ECONOMIC SIDE OF COLOR.

As breeds we speak of fowls according to the quality of their flesh or as being prolific egg-producers, and as varieties their color is often referred to as affecting neatness of the dressed carcass. The selection of whatever color we take up is generally a matter of fancy or policy in view of profitable sales. But there is a practical side to this matter of color. Can we not determine some relation between color of plumage and its wearer's intrinsic worth? Has the hen of some particular color any advantage over her different colored sister? Is she more thrifty? Will she lay more eggs?

Egg production consumes life's forces, which is manifested in loss of vigor and occasionally in change of color of the plumage. A few years ago I saw a hen at a show in Elmira which nicely illustrates this point. She was of the Spanish breed and had won first here at some former show. The following year she had moulted pure white, and her owner had continued to exhibit her as a curiosity; and when I saw her, a year later, she had regained in part her original color, being mottled in large patches. As she had been a remarkable layer her owner attributed her loss of color to that fact. However, such an instance, although mysterious to the novice, is but an exaggerated example of the rule that prolific laying generally weakens a hen's color in some degree. And with such breeds as are not narrowly restricted in color this loss may be corrected by suitable mating, so as to be overcome in the next generation. The Black Spanish had been spoiled for breeding typical colored chicks. In the case of a Houdan or a Barred Rock the hen deficient in color from prolific laying is not debarred from breeding if suitably mated, and may be retained to intensify the laying trait in the flock.

This is a day of fads, and perhaps the most pronounced fad before the public is the one of developing a heavy-laying strain by selection. I believe it yet remains to be demonstrated that the hen with a big record is any better than, or even so good as, another of the same breeding which has not in this manner expended her vigor, when it comes to transmitting this trait to the next generation. If her youth were availed of for breeding purposes, and her record established later, this objection of diminished vitality would be removed. The enhanced egg-production of our modern breeds, as compared with the native wild stock, is largely a matter of increased digestion, or an improved environment, including both better care and better or more abundant food. And the Black Spanish hen in the case above cited may theoretically have been no better in view of establishing an egg strain than her sisters possessed of a sounder color.

But whatever may be said of the possible relation between color of the plumage and the egg-product there is certainly a wide odds between the various colors as regards economy of management, especially as to foods, that is, if the breed is going to be kept up to standard color. At the recent Boston show my attention was called to a special food for growing white chicks, comprised of white wheat, broken white corn and various seeds of the same color. It is well known that a white fowl at all stages of its career must be fed sparingly, if at all, of yellow corn, beef

scraps or other oily foods, else its plumage takes on a brassy tint. And apart from such feeding the chicks growing up on a full range and under the full influence of the sun acquires this tendency of color. The moral is obvious. A variety which is white, in whole or in part, is not economical in highest degree as to color. Even the popular Barred Rock is not exempt in this respect, especially if in addition to a full latitude as to range and foods breeders are selected with the much admired orange shanks and skin. The Standard very wisely does not demand this, and stops with "yellow" unqualified. The Brahmas of both colors, as well as the newer Wyandottes corresponding in color, come under this head. A Light Brahma male free from brassiness is a rarity unless artificially treated to overcome this defect.

Upon the other hand Nature points to the breeds having no white in their plumage, but red in some degree, as exclusively privileged to fill up on good honest yellow corn and rough it to their heart's content. The deeper the hue resulting the better for their color development. In this class we have the partridge varieties, now to be found in three breeds, the Golden Wyandottes and the Rhode Island Reds. The promoters of any of these are not making the most of their favorites' advantages if they do not press this point upon the public. Spencer, Mass. Fred W. Proctor.

U. R. Fishel, of Hope, Ind., has sent us one of his annual Special Sale Lists, describing his White Plymouth Rocks. This could be better called a catalogue rather than a sale list, as it consists of 24 pages and is splendidly illustrated and arranged with price list of bargain offers of his White Plymouth Rocks, including also price list of Mammoth Bronze Turkeys, Fox Terriers, Beagle Hounds and Pointers.

This Special Sale List of bargains is anxiously waited for by breeders of White Rocks; and as last season his list was out for only a short time when every bird was sold, therefore, it would be well to send at once for the list and order as quickly as possible before these bargains are all picked up.

The U. R. Fishel White Plymouth Rocks are better than ever, as his record at three large shows last season proves. He won at these three shows every First Prize but one, every Second Prize and all Specials. This record makes good his claim to "The Best in the World." His sale of seven birds for \$1,750.00 proves what the quality of his White Rocks are, and his refusal of \$1,000.00 for a male bird as well as a hen proves to you in what estimation the blood lines of the Fishel White Rocks are held by the fanciers of the world.

If any of our readers are in the market for White Plymouth Rocks, they should send for a list and consider it carefully, remembering that U. R. Fishel more than pleases his customers.

J. A. Bickerdike, Millersville, Ill., is having a special summer sale of his choice White Plymouth Rocks to make room for his growing stock. These are birds of quality, pure white and high scoring, and were used in his breeding yards the past season. They have all been scored by Judge Heimlich and score card goes with each bird sold. Look up his ad. elsewhere in this issue and write him today if you want a bargain. Mention American Poultry Journal.

FACTS FOR FARMERS!

Southern lands are fertile and productive and are low in price. The rainfall is ample for all purposes, and irrigation is not needed.

The Southern farmer is in close reach of the principal markets of the country and has the best of railway facilities for the transportation of his crops.

General farming shows good returns. The crops grown cover a wide range and yield an abundant harvest. The cereals and grasses thrive. The stock raisers find the South a profitable field. Cattle can be raised at the lowest cost. There are finest opportunities for raising horses, mules, sheep and hogs.

There is a demand for a greater dairy interest in the South. Local markets are good. The conditions are most favorable for the success of the milk producer and butter maker.

Trucking is extensively engaged in along the Southern Railway. Lands especially adapted to this branch of farming may be purchased at low figures and upon good terms. The facilities for quick handling of the crops are first-class and the products reach the best markets of the country in good condition. All fruits are grown in the South. The commercial orchards along the Southern Railway are extensive and the quality of the fruit is unexcelled. The best sections of the south are reached by the

KEEPING POULTRY FOR PROFIT ON A SMALL SCALE.

I would like to give my experience in keeping poultry for profit, as my first year came to a close on the thirteenth day of December, 1905. In November, 1905, my husband built a good warm hen house 20x16 and gave me the business, as he is away from home most of the time. I started out to see how much I could make out of the poultry business, intending to enlarge the stock if I could make it pay. We live in a small village and have two acres of land. We had twelve large apple trees, so we built the hen house in the orchard among the trees. Then we put common chicken wire around the entire orchard and divided it in two yards, one yard for the hen house and old hens, the other was to be for the chickens that we intended to hatch in the next season.

Well after the house and yards were ready I secured one Rhode Island Red Cockerel and ten pullets. These were supposed to be pure bred and they were beauties to look at.

Then I picked up seventeen other common fowls, some of them two years old, making twenty-seven hens and one cockerel. On the thirteenth day of December, 1904, I found one egg, which I duly recorded. I kept account every day for the whole year.

During the month of December, 1904, they layed twelve and one-half dozen eggs, and on the first day of the following May they had layed one hundred and forty-four dozen eggs. I received thirty cents per dozen for most of them, as I sold them all in the village at home, never shipping any of them.

Now on the thirteenth day of December, 1905, just one year from the day I gathered the first egg, I had gathered two hundred and ninety-seven dozen eggs. At an average of twenty-five cents per dozen the eggs brought me \$74.25.

Perhaps some one would like to know how and what I fed my flock. For the benefit of such ones I would say my hens received the best of care every day, not now and then, but every day. In the morning, just as soon as it was light enough, they got a feed of warm oats; later on, say 9 o'clock, some apples stuck on spikes drove in a board, then the board nailed up so as to leave the sharp end and most of the length of the spike inside. On this I could stick three or four apples, which they would eat up quickly. Sometimes for a change I would stick a cabbage on the spike. Then fresh warm water twice a day. At noon a warm mash made of a few boiled potatoes and a little meal scraps from the table and mixed thick with bran and fed quite warm, as much of this as they would eat up clean. At night they got corn or wheat warmed. Always they had oyster shells and a box of dust for their bath, supplied with fresh dirt whenever it got low. In the fall I laid in a supply of dirt out of the garden, but did not give it to them all at once, for they would waste it. Late in March I purchased a small incubator, one that would hold five dozen eggs, also a brooder. Then I set out to raise chickens. I put the eggs in the incubator and also set one hen at the same time. I was a novice at this, as I had never seen an incubator run and knew nothing about it, except what I had read in the American Poultry Journal.

After many anxious hours and lots of worry for fear the machine would turn

out to be worthless, as I had heard so many say, this one and that one set a hundred eggs and only hatched one or two chickens, the time arrived for my hatch to come off. I had thirty nice smart chickens out of the incubator and the hen brought out eight out of twelve eggs. I put the thirty chicks in the brooder and allowed the hen to keep hers for ten days, when I saw those in the brooder were ahead of the ones with the hen, so I put them all in the brooder. This entire lot of thirty-eight chickens brought me \$7.60 the day they were two months old. I kept on setting the incubator until I had four hatches, the largest number at one hatch was thirty-nine. I will say right here that I never lost but one chicken all summer, and that was killed by an old hen getting in the chicken yard.

As I said in the beginning, we had half the orchard for the chickens. In this yard I put the brooder, and when another hatch came off I would take the ones out of the brooder and put them in a coop made out of a dry goods box. They being three weeks old they had the run of the big yard, but would come back to the box to feed and sleep. They also had plenty shade and grass and seemed quite happy. The entire lot of chickens brought me \$54.43. This amount added to the \$74.25, the amount received for the eggs, making \$126.68.

Now I do not know what the expense of the feed was, as I lost account during the summer when my husband was sick for two months with typhoid fever, so I can only give the facts about the income of a few hens taken care of entirely by myself. I am going to commence on Jan. 1, 1906, with forty-five hens and keep account of expenses as well as income. If I do well you may hear from me again another year.

Henvelton, N. Y. Mrs. M. Backus.

The August Century is notable for the strong opening chapters of A. E. W. Mason's latest novel, "Running Water," and for new light on the Vesuvius and San Francisco disasters from William P. Andrews, Benjamin Ide Wheeler and Louise Herrick Wall. The discussion of "The Future of San Francisco" by the president of the University of California is, of course, of much authoritative interest. Louise Herrick Wall's story of "Heroic San Francisco" is a sympathetic record of the pluck and heroism of the people of the stricken city, written out of the fullness of wide experience—the writer having tramped twenty miles through the city the day after the earthquake. Of rare interest, too, are the illustrations—there are five, full page, one in color—by C. Dormon Robinson, drawn in pastel in the midst of the smoke and flames. William P. Andrews' account of "Vesuvius in Fury," with many interesting references to the great eruption of A. D. 79, is rich in unusual illustrations, too, reproductions from drawings in pastel made by Charles Caryl Coleman from his villa at Capri during the eruption. Two of these are happily shown in color.

Mrs. Anna L. Day, Fillmore, Ind., who breeds Barred Plymouth Rocks exclusively, writes that she has over four hundred very choice young birds coming out for the fall and winter shows, and as she needs room for the proper development of these young fowls she will dispose of some of her choice breeders at bargain prices. Write and mention American Poultry Journal.

THE RAGE FOR WHEELING NOT DEAD.

"We sold more bicycles this year up to May 1, than for the same months in any other year in the history of our house," said a member of the Mead Cycle Company, of Chicago, recently. "It looks like the people all over the country are waking up to the fact that they have been neglecting a good thing in giving up wheeling."

And they have. The owner of a bicycle has at his command a means of pleasure and outdoor exercise which is unexcelled; his lungs are filled with ozone and his muscles develop healthily as he spins along the pleasant roads.

Wheels which are even better than those sold during the craze, can now be bought for one-half to one-third the prices then paid.

Besides being greatly improved in style and general construction, a wheel bought from the Mead Cycle Company, has puncture-proof tires, which outlast two of the old-style tires; and the celebrated Coaster Brake, which has done more to revive cycling than anything else. This Coaster Brake gives the rider absolute safety and control of his wheel. He can coast with the pedals at rest, and can check his wheel or stop immediately by a simple back-pedal movement. There is no strain at any time, and no danger of losing pedals.

The plan of the Mead Cycle Company in sending bicycles for 10 days' free trial, without cost, is one which should commend itself to every reader of this paper. Their large, illustrated catalogue may be obtained free by addressing the Mead Cycle Company, Chicago.

MIXTURES.

What could be more pleasing to the eye than a flock of chickens of one breed? Uniform in color, all of a size and all of one pure breed. On the other hand there could not be anything more displeasing than a flock of mixtures. Such a flock bears resemblance to a paint dealer's color card—no two of the same shade. In size they vary all through the list from the Bantam to the Brahma, with pedal extremities ranging in length from the short-legged Dorking to the long-legged Shanghai. Such fowls have been inbred and cross-bred until they cannot claim to be the descendants of much of anything.

It is the very absurd custom of a great many keepers of chickens to get each spring a different breed of cockerels. They will then proceed to make such rank crosses as the Mediterranean breeds mated with Asiatics. These rank crosses tend to destroy the good qualities of each of the original breeds and begets a mongrel offspring. Select the breed that suits your fancy and requirements and stick to it. Even if you start with grades keep grading up with pure blood cock birds of the breed you have in mind, introducing fresh blood each year, and you will in the course of a few seasons have a flock to be proud of. Such a flock of uniform grades or pure bloods will give better results and prove a better paying proposition than all the mixtures that ever got mixed. This you will note by the following reasons: Where large and small breeds run together the smaller ones are continually being fought and cowed. On the other hand when feed is given the flock, the smaller being more active, get more than their share. Heavy hens set upon eggs laid

by light hens, always stand a good chance of breaking about half. Your light weight hens will not likely be disposed to hatch either class of eggs. The market and consumer require eggs of uniform size and color. They will likely call for brown eggs or they may perhaps call for white eggs, whichever best suits their individual tastes. You cannot produce eggs of uniform size and color from your "mixtures," and therefore cannot command the fancy prices. The market and poultry dealer will always give a few cents more per pound for a coop of uniform poultry where their dressing qualities are about equal. I am sure a coop containing one breed will always attract the eye of the buyer.

The day for haphazard breeding is fast passing or should be. If a person will have the nerve to still contend, at the present development of poultry, that his "mixtures" are the proper thing such person is about sixty years behind the times. He is still living in the age when people kept "dung hills."

If plenty of eggs are your requirements select some one of the nervous, so-called non-sitting breeds. If your object is weight select a breed of the "great big" fellows. Providing you require a general purpose fowl for both eggs and flesh one of the American breeds will give satisfaction. Go your neighbors one better. Keep a flock of pure blood chickens and hear them run your breed into the ground. This is only jealousy—they are envious of your fine looking flock. Pay no heed whatever to what any person may say to discourage you on the breed you have selected. I say once more stick to it, stick to it until you have a flock of pure bloods, uniform in every manner, and a flock that will swell your purse.

Elburn, Ill. Harry H. Wheeler.

CARE AND FEED.

One of the most difficult problems we have to solve is the care and feed of chicks these hot and sultry days. Be sure and have plenty of nice fresh water where the birds can get it at all times. Shade is absolutely necessary and is something that most poultry brotherhood neglect. If your birds have no shade, make artificial shade for them, as it only takes a few moments. Drive a few stakes, place some grass or hay on same. The question of feed and which brand to buy is what troubles most of us, but at last we have a brand in the Red Comb. The formulas are made of grain, tests of which have been taken by the government experimental stations, and assures us that they are properly balanced. A nice little folder, telling how and what to feed will be cheerfully mailed free, upon sending your name and address to Chicago Poultry Supply House, 407 Dearborn St., Chicago, who are general distributors for this brand.

J. A. Leland, Springfield, Ill., writes that he has a few good useful Light Brahmas and Pekin Ducks to spare. Also some Homing Pigeons and several Rose Comb White and Brown Leghorns; besides a good lot of laying stock in Single Comb Buff, Brown and White Leghorns, that he will dispose of at very low prices for the next ninety days. Write him and mention American Poultry Journal.

The Fiction number of Scribner's Magazine is made notable by a complete novelette by the author of "The House of Mirth." Mrs. Wharton's story is en-

titled "Madame de Treymes," and the setting of it is in Paris and has to do with the wrongs of an American woman who married into the French aristocracy. The story is a most subtle presentation of the national point of view in regard to the position of the family in society.

It is absorbing both as a character and racial study.

Hopper feeding is coming into general use, especially in the east.

WOMAN'S HOME DEPARTMENT.

Mabel Bates, Editor.

This department will not be confined to poultry items entirely, but to all matters pertaining to household economics. We want every woman who reads American Poultry Journal to consider herself a member of this department. If you have a bit of practical knowledge in household matters, an item of experience in raising poultry that will be helpful to others; a favorite recipe, etc., send it along. This is your department, just as far as you are willing to make it.

All communications should be addressed to the Home Department of American Poultry Journal Publishing Company, 325 Dearborn Street, Chicago, Ill.

A VACATION FOR EVERYONE.

During the hot, depressing days of summer every one feels the need of a vacation, even though it be but a short one. But some one must always stay at home to keep the household wheels running smoothly, and the lot usually falls to the house-mother, in reality the one who most of all needs the little change and the getting away from the daily routine of housework. If it is

preparation and a long drive to some lake or stream. If you have a shady, grass-covered nook in your own yard it will answer every purpose. The children will hail the plan with glee and will take all the extra steps in arranging the table, and the same things you would have had for a house supper will taste a hundred per cent better when eaten under the flickering leaf shadows to the music of a bird orchestra.

House for surplus cockerels on the farm of J. F. Van Alstyne, Niverville, N. Y.

possible to compass it she should have an outing, but in the many cases where this is out of the question there are still possibilities for rest and variety in the daily routine. If there is any part of the work that can be neglected without serious results, now is the time to let it go. A few minutes of complete rest after the noon meal will so refresh that the work which follows can be done with twice the ease and speed.

Instead of preparing heavy dinners let your head save your hands, and in the early hours of the morning lay out the day's menu and arrange to have things which as far as possible can be cooked and put aside before the heat of the day. In the place of two or three hot side dishes and a heavy dessert, why not have an occasional salad and wind up the meal with some of the fruit which grows so abundantly on nearly every farm?

One thing more, and this many readers of our department will smile at and call impractical, but it is worth trying, nevertheless. Have a picnic supper at least once a week. This does not necessarily mean a hard day of

There is a real virtue in the health-giving, rest-producing qualities of good old Mother Earth. It is a pity that we so seldom try it. Let us this summer, instead of being slaves to our work, become masters of it and give ourselves the little bit of daily rest, the quiet half hour under the stars at night, the five minutes of sunshine and fresh air in the morning and at frequent intervals during the day. And when autumn comes we will take up the burden again with renewed strength and courage, even though we have not gone far afield for our vacation.

SPONGE CAKE.

Mrs. Edward Lundeen of St. Paul, Minn., sends a recipe for delicious sponge cake which she makes frequently and always with good success:

Two cups of sugar and four whole eggs (must be strictly fresh). Cream this; add two cups of flour; cream this with the sugar and eggs, then add one cup hot water slowly, heating all the time. Sprinkle over this four teaspoons of baking powder and one teaspoon of vanilla. Bake in three layers. For the

filling take one white of egg and one cup sugar, one apple peeled and grated, mix all together and beat with fork for twenty minutes. It will be just like whipped cream.

IN CHERRY TIME.

Try using a new, stout hairpin for pitting cherries. It removes the pit without spoiling the shape of the cherry and with very little loss of juice.

Pickled Cherries—Select large, firm cherries with the stems attached. Wash and dry and pack in wide-mouthed jars. Make a sweet pickle by scalding together one quart cider vinegar, two pounds sugar, one-half ounce each of cloves, cinnamon and mace, tied in a bag. Pour this while hot over five pounds tart cherries, screw the tops of the cans on tightly, and keep in a cool place. They can be used in a week, but are better with age.

Cherry Drink—Wash and stem ripe red cherries and to three pounds add three quarts boiling water. Steep slowly for two hours. Make a syrup of one and a half pints water and one and a half pounds sugar. When it cooks clear let boil for ten minutes. When the cherries are soft put in a jelly bag and let the clear juice drain off, add the syrup and boil for ten minutes. Keep for a day before using, and serve with chipped ice in the glasses. This may be bottled and used later as wanted.

Cherry Icing for Cake—Boil one cup of sugar with four tablespoonfuls of cherry juice until it threads from the spoon. Have ready the white of one egg beaten stiff, beat the boiling sugar into this until thick enough to spread well.

Cherry Cup—Stone and bruise one pound of cherries. Add the juice of six lemons and four oranges and a syrup made of one pint of granulated sugar boiled with half a cup of water. Cover and let stand for two hours, strain on a pint of chipped ice, and add a pint of sliced strawberries or raspberries and a few sprigs of mint.

GOOD CORN RECIPES.

Corn Fritters—Take corn with well filled ears, score each row deeply with a knife, and scrape off the pulp. To a pint of this add half a teaspoonful of salt, a saltspoonful of pepper and two well beaten eggs. Mix thoroughly and fry by spoonfuls on a hot griddle with a liberal quantity of butter. Do not use any flour to thicken.

Scalloped Corn—Stewed corn should be used for this. Put a spoonful in individual baking dishes, then a layer of cracker and bread crumbs mixed, some bits of butter, more corn, and so on until the dish is well filled. Do not have the oven too hot while baking.

SUMMER SALADS.

Many people have an idea that salad is a dish to be served only on festive occasions, and the thought of making a salad dressing fills them with dismay. If they only knew it, there is no simpler and at the same time more wholesome dish that can be prepared for a dinner or supper. They are especially good during the hot summer days, when too hearty food should not be indulged in, and one especially de-

sirable feature is that they can be in large measure prepared hours in advance, before the heat of the day, and put in a cool place until just before the meal, when only a few minutes will be necessary to add the last touches. If farmers' wives would only accustom themselves to preparing them they would find them a delightful and wholesome change from the hot vegetable dishes they are used to serving.

The taste for an oil dressing has in most cases to be acquired. For those who prefer a cooked dressing the following recipe will be found entirely satisfactory. It can be prepared at any leisure time, and will keep on ice for a week or more. In making this dressing a little whipped sour cream or a few tablespoonfuls of sour cream will make a delicious addition if stirred into the dressing at the last moment before serving.

Salad Dressing—One cup sweet milk, one-half cup butter, two level tablespoonfuls flour, two of sugar, three eggs, one teaspoonful salt, one-half cup vinegar, a little red pepper and one or two tablespoonfuls of mustard, according to taste. Put milk in double boiler and when hot add flour and butter which have been melted together and stirred until smooth. Beat eggs in one dish. In another put the rest of the ingredients, mix and add to the beaten egg. Stir well, pour into the milk and cook three minutes.

It is unnecessary to speak of the better known salads, such as lettuce, tomato, cucumber, celery, and their combinations. Among other easily prepared salads for summer are:

Beet Salad—Slice cold boiled beets and cut into strips. Serve on lettuce leaves and cover with the dressing.

String Bean Salad—Cook young and very tender beans for twenty minutes in salted water and drain. Cover with cold water and cook fifteen minutes, then put back in boiling unsalted water and cook fifteen minutes longer. Drain, cool and serve with dressing on lettuce leaves.

Cauliflower Salad—Cook cauliflower in salted water. Separate the little flowerets when cold and put with celery cut in small pieces.

Potato Salad—Every one is used to seeing the ordinary sliced potato salad. For a change take mashed potatoes and run through a potato ricer. Add three-quarters of a cup of finely chopped cabbage to two quarts of the potato, mince two tablespoonfuls of gherkins and mash the yolk of a hard boiled egg and mix all together. Pour over it the salad dressing, mix well with a silver fork, and serve. Celery is good with this instead of cabbage. This is a favorite Virginian salad.

Apples, walnuts and celery, cut fine form what is known as Waldorf salad, and this is a fine picnic supper dish. One enthusiastic salad maker declares she can mix a delicious salad with "anything that happens to be on the pantry shelf," and her friends think she is about right in this. One of her favorite salads is made with sliced bananas, bits of orange or apple or pineapple, pieces of canned fruit that have been left from previous suppers, and as a special touch she sometimes adds a few canned cherries and their juice to the salad dressing.

Nearly every reader of this department has some favorite salad recipe which will be new to others. Why not

take a few minutes right now to write it out and send it in for the benefit of other interested readers?

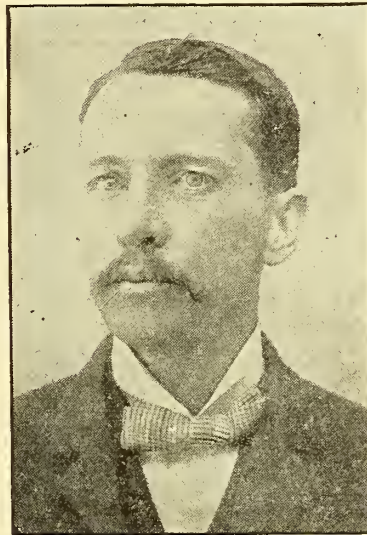

PICNIC DAINTIES.

August is the month when picnics most abound. For some reason ham or chicken sandwiches seem to be considered the most necessary articles of diet on these occasions. Below are given a few variations from the customary bill of fare which are easily prepared and will be voted delicious by all who try them.

Roast Beef Sandwiches—Chop rare roast beef very fine, using only the lean portions of the meat. Sprinkle with salt, pepper and grated horseradish and put between slices of graham bread.

Peanut Sandwiches—Put through the medium cutter of the meat grinder fresh roasted peanuts. Mix them with either a mayonnaise dressing or with Dutch cheese, and spread white bread.

Ham and Olive Sandwiches—Run lean ham through the fine cutter of the meat chopper—and, by the way, if you

Wm. K. Lewis, Dry Ridge, Ky., noted breeder of Buff Wyandottes.

haven't one of these useful articles you should get it the next time you visit a hardware store. Add a tablespoonful of melted butter, a teaspoonful of vinegar, a teaspoonful of made mustard, six olives chopped fine, and a teaspoonful of chopped parsley. Work to a paste and spread on thin slices of white bread.

Fried Egg Sandwiches—These are not specially dainty, but are just the thing to satisfy the appetite of hearty boys, and will not be despised by even the feminine portion of the party. Take a frying pan with you to the picnic grounds and a quantity of uncooked eggs and butter. Fry the eggs over the picnic fire, breaking the yolk, so that they will cook in a thin, flat sheet. Put the hot eggs between slices of bread and butter, first seasoning them with salt and pepper. If you have never tried these you will be surprised to find how good they are.

Stuffed Eggs—These are not a new dish for picnic suppers, but are always favorites. Prepare hard boiled eggs, let them get cold, shell them and cut in halves the long way. Take out the yolks and mash them in a bowl with a cooked salad dressing for moistening,

CHAS. McCLAVE - NEW LONDON, OHIO

WE WIN!

At the late Madison Square Garden Show, New York, in the S.C. Buff, Black and White Orpington classes as follows: 7 firsts, 9 seconds, 6 thirds, 4 fourths and 3 fifths, and these in the strongest classes of Orpingtons ever put together, there being 370 birds competing. We also won the most prizes of any breeder in these same classes. We have the stock and established winning breeding lines, but buying high-grade stock and eggs cannot safely be done upon the strength of the mere argument a breeder has room to advance in his advertisements. Now we want you to send for our catalogue, testimonial book and a very elaborate mating list, describing over forty different breeding yards and prices of eggs from same. Do not be fooled or misled by mis-advertising, but come to the fountain head to get your start.

WILLOW BROOK FARM
W. L. Davis, Prop. Box A, BERLIN, CONN.

if you have it. If not, use melted butter, salt, pepper and a small quantity of made mustard. Stuff the whites with this preparation. If liked, a variation can be made by adding finely chopped meat to the filling.

HOUSEHOLD NOTES.

If fish and oysters are rolled in cornmeal before frying they will fry brown and crisp.

To prevent suet from sticking to the knife when chopping sprinkle it with a little ground rice.

If a little cornstarch is mixed with salt before being put in the shaker it will keep it from clogging.

Careful housewives do not forget that the teakettle as well as the tea and coffee pots should be washed on the inside and outside every day.

To keep moths from rugs and carpets, sprinkle well with salt, then wipe with a cloth dampened with warm water having spirits of turpentine added in the proportion of a spoonful to every quart of water.

A loosened knife handle can be satisfactorily mended by filling the cavity in the handle two-thirds full of powdered rosin and brick dust, heat the shank of the knife, and while hot, press it in to handle, holding it in place until firmly set.

An excellent way to keep the stove always looking bright and clean is to paint it. Procure a can of black enamel and paint the entire stove with it. The stove will look like new, will not rust, and will need no cleaning except dusting and wiping off.

When hot fat is spilled on table or floor, pour cold water or drop ice on the place immediately to harden the grease and prevent its soaking into the wood, then when attention can be given to it, wash out with very hot soda water and scouring sand.

The white spots on furniture caused by steam or hot dishes being placed thereon may be removed by applying a soft cloth dampened with spirits of camphor. Rub the spot well and then polish with another dry soft cloth. If one application does not entirely remove the stain, repeat until it disappears.

In seasoning a fowl the flavor may be improved by rubbing well into the flesh salt and pepper to which ginger has been added. If an apple or onion is put in a duck to be roasted it gives a better flavor to the meat. A spoonful of vinegar in water in which fowls are boiled makes them tender.

Almond Soup—Cut in small cubes a bunch of celery after it is carefully scraped, 6 peppercorns, 3 bay leaves, 1 tablespoon onion juice, 1 slice of lemon, 1 teaspoon salt and 1 stick cinnamon. Cover with 1 quart of water and cook 1 hour. Strain and again reheat. Stir in a cup of blanched almonds that have been pounded to a paste and boil 5 minutes. Serve hot with crackers.

Cream Tomato Soup—Boil 1 quart tomatoes, 1 pint water, 1 teaspoon salt, 1 tablespoon sugar, 5 cloves, ½ teaspoon peppercorns, 1 onion and 1 tablespoon parsley. Rub through a sieve, return to fire, cream together butter size of an egg and 1 tablespoon flour; stir in soup to thicken; add 1 quart of milk a little at a time. Don't boil after milk is added, or it will curdle; just let it come to a boil and serve hot with toasted bread.

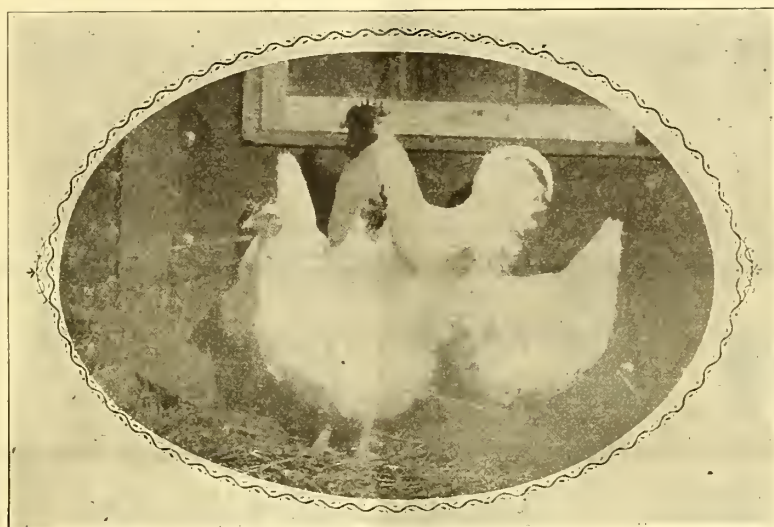

Regulation of Poultry Shows.

Some English Ideas of how Poultry Shows should be Managed The Exhibitor would be Assured of Fair Play.

Those of us whose business or pleasure it is to attend shows or make use of them in any way, have often felt the need for some reform in the direction of regulating such events, and keeping some hold over them. I am not sanguine about anything being done to avoid clashing, for as there are some thousands held during the year, and only three hundred and thirteen week days available, it is too much to suppose that any particular show can monopolize a date during the busy season. Clashing has its advantages, too, for it increases exhibitors' chances, and I am inclined to think that any movement in the direction of reducing clashing to a minimum would have the unfortunate effect of stifling competition, and detracting very materially from the attractiveness of the fancy. Another thing, it would be impossible for any governing authority to decide dates for provincial shows. These generally have to be held when a suit-

to avoid loss. And this is not mere supposition, for it happens week by week in the show season, and the poor exhibitor writes a strong letter to his fancy paper, resolves to boycott that particular show in future, but straightway falls into the clutches of others playing the same game. So it goes on, and as it is evident that nothing can stop this trickery, and no one is found willing to go to law with a society that is apparently always on the point of being wound up with no funds, it is becoming a more and more common custom to hold shows on the chance of scoring a success, but with the certainty of getting out of the ditch by means of customary methods in case of failure.

What stronger argument than this can there be for the need of some governing authority? If every show had to be licensed, and required to form a guarantee fund according to the extent of its operations, there would no longer be any complaints about defaulting shows. Some might object about the guarantee, but this should be strenuously enforced, for what right, I should like to know, has a show to issue a schedule without the means to meet its obligations? Who would be the loser in case of failure? In some cases where losses have been ex-

First-prize pen White Plymouth Rocks, owned by Sass Bros., Ancona, Ill.

able hall is vacant, and there are other considerations which would give rise to never-ending trouble if an attempt were made to apportion dates in the same way as the jockey club allots dates for race meetings.

The real work for some governing authority would be to assure that every show was properly managed, properly financed, able to meet its obligations, and prepared to enforce such regulations for the safeguarding of exhibits as would be drawn up by the aforementioned authority. At the present time there is nothing whatever to prevent a show committee or a private individual drawing up rules to be interpreted as they choose, with the sole idea of getting something out of it. A private person may, and probably does, organize a show on his own responsibility, beg specials, issue a schedule, and, according to the number of entries, cancel, amalgamate and withhold prize money until he is assured of sufficient to pay him for his trouble. A society, too, may launch out on a capital of a few shillings, and contrive, by robbing the exhibitors to the fullest extent,

perceived a special fund has been raised to liquidate the debt, and a society meaning well like this would readily form a guarantee fund. It is only the crooked societies that do not want to pay if they can possibly help it, that would object to the regulation, and these are the very ones that we can do without.

Naturally, the majority of exhibitors would consider the prompt payment of prize money the most important rule to be enforced, but there are other reforms that a governing body should and would insist upon, and that exhibitors generally consider desirable. It should be required that none but non-exhibiting officials and reporters be permitted in the hall during judging, and that stewards and committeemen who are competing be treated the same as strangers, for it has always puzzled me why members of a society should be permitted to accompany the judge round the pens when the same privilege would cause universal disapproval if permitted to non-members. A time should be fixed for removing exhibits, but though an exhibitor should be

permitted to pen his birds, no distinguishing marks in the pens should be allowed.

No doubt other regulations might be suggested, and it is easy to draw up a programme quite Utopian in character. The task is to carry it out. In the first place, where is the governing body to do all this? Nominally, it should be in the power of the poultry club to do what has been done by the kennel club. I do not mean to suggest that the dog fancy is free from anything undesirable, but at any rate, the kennel club has a hold over dog shows to such an extent that a society finds it absolutely necessary to come under its rules or license. But this the poultry club cannot do, for the simple reason that it lacks the power. A body aiming to carry out these reforms must have the undivided support of all that is best in the fancy, and then the undesirable will either be forced into line, or else be obliged to relinquish their position. Unfortunately, the poultry club does not possess sufficient power to do this, and to judge from the progress it is making, it is exceedingly doubtful whether it ever will. I will not undertake to argue the reason, although I have a strong belief that it is due more to laxity among fanciers than to any fault of the club or its officials. But as this is a matter that affects fanciers of pigeons, rabbits, cage birds, and all exhibition fancy stock, I am inclined to think that the proper body to undertake a work of this kind would be a society formed by all sections of the fancy, and designed to undertake only this particular work without interfering with the interests of the poultry club and similar institutions.

I do not claim to be the originator of

this idea. No doubt it has been noted before, and probably it will have to be trotted out a good many times before the go-easy fanciers of the present day wake up to the fact that they really must put a stop to the wholesale systems of robbery so generally adopted at shows. At any rate, matters are bad enough now, and I doubt if any community puts up so readily with injustice as the fancy. The great difficulty in forming a society of this kind (call it the Fancy Stock Society) would be in getting fanciers to rally round it, and to induce all the good shows to join it, and force the doubtful ones to fall into line. Obviously, it would be unwise to impose a heavy subscription, seeing that fanciers have already so many calls upon their pockets from specialists clubs, but I do not think anyone would mind paying a shilling a year in support of a society that would carry out reasonable reforms for them. There would, of course, be difficulty in collecting these subscriptions economically, but I would suggest that in addition to the organizing secretary, local honorary secretaries should be appointed in every town where there is a fanciers' show, whose duty should be to secure new members, collect subscriptions, see that regulations are carried out at shows, and generally look after the society's interests locally.

But it is evident that the subscriptions of members would not suffice to enable the society to carry on its work, and a charge, say half a crown, would have to be made for licensing each show. The difficulty that presents itself now is how to induce the shows to rally round the society. They might ask why they should pay half a crown for a license when they can hold a show without one. Of course,

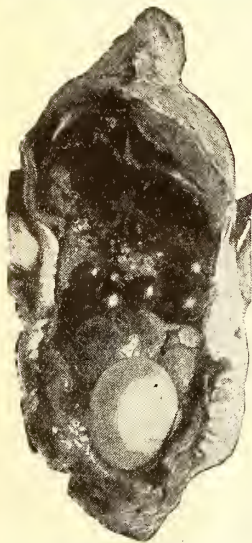

if this was the spirit that met the efforts of the society its work would be stifled at the outset, but we may reasonably hope that the better-class shows would give a more favorable welcome to a scheme propounded in the interests of fanciers, more especially if the society had a very strong following. This would be absolutely essential. It would be useless appealing to the shows with a few members such as the poultry club possesses, but if the whole fancy united to support the society, the co-operation of the shows would come automatically. Hence, the necessity for a distribution of the society's interests, and the appointment of local honorary secretaries.

Presuming, for the sake of argument, that the scheme was brought into being, an organizing secretary appointed, and a management committee elected, local secretaries appointed, and fanciers and their shows induced to join the movement, could the work be carried on to benefit individuals and for the good of shows in general? I think the result would depend entirely on the amount of support the society received, and its power to dictate terms to shows that refused to abide by its regulations and decisions. Autocracy is not a nice word for use in a free country, but there are cases where its true meaning might be profitably employed, and I believe this to be one. Anybody that attempts to regulate and govern poultry shows must be absolutely autocratic. It must publish its rules, and have the power to say that if you do not care for them it is useless holding your show, because members of our society, which means the entire fancy, will not support you. But such autocracy as this would be reasonable. The rules would be framed by

Do You Know

The Potter System of Selecting Laying Hens ?

GREATEST DISCOVERY OF THE CENTURY IN THE POULTRY WORLD

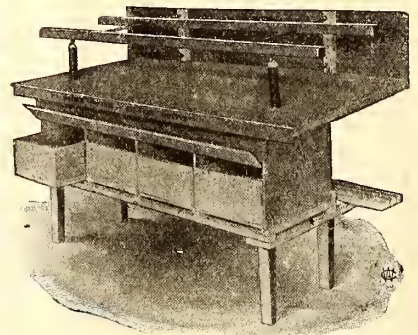

Don't kill a hen with money in her like this.

Do you know how you can have \$2 profit, not a \$1 loss, on every hen you keep?
 HOW to breed only laying hens?
 HOW to select your laying hens?
 HOW not to kill your laying hens?
 HOW to mate your birds for best layers?
 HOW to save feed, labor and money?
 HOW to keep the layers and kill the non-layers?
 HOW to tell the drones and the barren hens?
 HOW to select the best laying pullets?
 HOW to stimulate the hen's laying organs?
 HOW to estimate the number of eggs a hen will lay in a week or a month?
 HOW to keep fewer hens and make more money?
 HOW to keep your fowls and their quarters free from lice and mites?
 HOW to hatch chicks that will make laying hens?
 HOW to make poultry pay every month in the year.
 Do you want to make more money on your poultry? Do you want to be able to pick the layers from the loafers in your flock? Decide for yourself whether you need the valuable information we are offering. Thousands of poultrymen are using the Potter system to their profit and advantage. So can you. Write today for free circulars telling about it. Fill out and cut off the corner coupon and your request will have prompt attention

DON'T BUILD

that new hen house or think of fixing up the old one until you have secured a copy of our new, large 64-page catalogue on poultry-house fixtures; over 50 illustrations, the biggest and best ever issued. No poultry raiser can afford to be without this book if he wants complete, convenient and sanitary quarters for his fowls.

This cut shows but one of three styles and 12 sizes which we make.

Potter double vermin-proof roosts are sure death to lice and mites; every poultryman needs them. Our catalogue has cost us hundreds of dollars, but we send it to you for one red stamp to cover postage.

fanciers themselves, and for their own benefit. Remembering the object to be gained it would be in every fancier's interest to support the society, and thus force hesitating shows into submission. The autoeracy should even go so far as to declare that any person, exhibiting at an unlicensed show be prohibited from showing at a licensed event. This may seem a harsh regulation, but unless enforced we should just miss the point aimed at, and defaulting shows would be able to defy the society.

As the issue appears to rest with the exhibitor there can be no question whether the result would prove satisfactory to him. Indeed, he would be assured of fair play and prompt payment of prize money, and he need never make entries in the fear that possibly amalgamation or withholding of prizes will rob him of his deserts. Nor need he imagine that the working of the scheme will do away with shows from which nowadays he reaps a benefit. The only events that could possibly be adversely affected are those which make no study of the interests of fanciers, and those which through lack of funds are unable to meet their obligations, although they may profess the best intentions in the world. Neither of these shows is desirable. We could easily dispense with both, and never miss them, and I am sure that those exhibitors who have at one time or another been out of pocket through them would vote their elimination an actual blessing.

Here, then, is what appears to be the only way of dealing with a growing evil; an imperfect scheme, perhaps, but capable of being developed and polished up into something workable. It is not unreasonable to suppose that what the poultry club has hitherto failed to do, a body fully representative of every branch of the live-stock fancy could achieve. That is, of course, if it wanted to. This is rather an important proviso, because I believe a large proportion of fanciers at the present time would put up with any amount of swindling and mismanagement rather than make the slightest effort to put a stop to it.—W. M. Elkington, in London Poultry.

SOME IMPORTANT THINGS.

Raising a Flock of Hardy, Healthy Chicks—Well Ventilated Coops are Important Factors—The Use of Trap Nests—The Doctoring of Sick Chicks a Stumbling Block to Beginners—Shade for Fowls.

No poultry keeper who has long been in the business can help but realize that there are some things in his experience which are important points in the success which he has attained in his work. In a certain sense nothing is unimportant, but some things are of very much greater importance than others, and the beginner often fails to recognize the difference in the different lines of the work until the facts are pressed home by bitter experience.

In my experience I have found that the proper dusting of setting hens with a good insect powder is a most important matter, and if properly done will start the young chicks out free from lice and save a great deal of hard and disagreeable work later on. The use of plenty of kerosene oil or a good lice killer around the nest boxes, roosts and brood coops often, is also an important mat-

FEATHER AND FATTENING FOODS

7

The profit of fattening fowls depends entirely on the feeds used. You must get them to market in the best possible condition and in the shortest possible time, if your profits are to be worth while. Foods that shorten the feeding period are therefore profit producing foods, that it will pay you to know all about. **Midland Poultry Foods** solve the feeding and fattening problem for the poultryman by furnishing a scientifically prepared balanced ration that gives quick and sure results.

No. 3 is the great fattening and finishing food for early broilers and for fattening hens for market. A complete balanced ration—you need add nothing but grit and green stuff. It will put on a pound of flesh in 21 days at a cost of 6½ cents. Feed it as mash, wet, but not sloppy—all that your birds will clean up three times a day and your bank book will look better to you.

No. 7 for fattening ducks—puts on juicy, tender flesh fast—the kind that gets top-notch prices. Ducks eat it with great relish, and the profit pays you big for the feeding. **Midland Duck Foods** Nos. 5, 6, 7, 8, 9, have made many duck farms money-producers that were failures before. The big duck raisers wouldn't be without it. You ought to feed it—a test will convince you.

No. 4 the wonderful egg and feather food that egg-raisers and

fanciers use. It shortens the moulting period four weeks—will therefore put your hens in healthy condition, and ready to lay by early fall. **No. 4** makes eggs—lots of them. It also adds the brilliant, beautiful plumage to show birds that fanciers love to see—puts them on exhibition in all the glory and gloss that carries off the blue ribbons. More **No. 4** is fed to show birds and egg-layers than of any other food on the market. With it you can actually control, to a wonderful degree, the egg production of your fowls. You can have eggs to sell when eggs are like golden nuggets. Try it and see.

Grenadier Meal—the great milk-fattener, produces very choice meat—sweet, tender, juicy. This is the food the fatteners of Boston, Chicago, Philadelphia and New York use to fatten the fowls that please the fastidious tastes and strain the purses of these great cities. Milk-fattened poultry is a great luxury. The demand for which is constantly growing. You will find it's a profit producer for you, if you feed it right.

Midland Poultry Foods are the only real scientific poultry rations that are sold—each are for a specific and single purpose. We tell you which feeds meet your needs best. Write for our two free books "The Science of Poultry Feeding" and "Poultry Fattening Perfected." They tell the whole secret.

GRENADEIER MEAL

ter, and when thoroughly attended to will entirely prevent the red mites getting a foothold in the flock and save the poultry keeper considerable loss, as well as one of the most disagreeable tasks the careless poultryman can bring on himself.

In the raising of a flock of hardy, healthy young chicks I believe one of the most important factors is the time when the first food is given them. I have tried feeding them at different ages from the time they are just hatched and well dried off until they were twenty-four and thirty-six hours old and until they were fully three days old, and I have found by far the best results when they were given nothing but grit and water until they were seventy-two hours old. The early hatched ones were closed in with cloth curtained fronts to the brood coops this spring until three days old and none of them made any fuss or acted in the least bit hungry until the morning of the fourth day, and for results in health and thrift of the chicks no other method of feeding will compare with it. Out of over 400 chicks hatched on my farm this year I have not had but one sick chick and that one I think was due to its being improperly hatched. Many amateurs may be skeptical as to the practicableness of this system, but the proof of the pudding is in the eating. The mortality in young chicks with the majority of poultry raisers is something terrible to contemplate, but I believe much of it could be avoided if the chicks were given time to digest the yolk of the egg which nature provides them before they leave the shell.

Roomy, well ventilated coops are important factors in the raising of a healthy, vigorous lot of chickens. Overcrowded brood coops is a fruitful source of runty, undersized chicks, which are no contribution to either the pleasure or

profit of the poultrykeeper. The feeding of oats is an important point in attaining size, as it has a decided tendency to keep the bones soft and growing, while a ration made up largely of corn and wheat will cause the chicks to mature earlier and consequently check their growth.

One of the important things that is interesting poultry keepers more every year is the trap nest selection of the best layers or pedigree breeders for eggs. Many poultry raisers consider the eggs as the principal thing in the profitableness of a flock of poultry and in some markets this is true, but in sections where poultry has been an important market product for any great length of time choice table poultry is by no means a less profitable part of the work than the egg product. The popularity of the American class of our Standard bred fowls is a convincing proof that the majority of poultry keepers want both meat and eggs from the same flock, and breeders are beginning to wake up to the fact that the public want hens that are bred to lay.

Before the advent of accurate trap nests it was hard and laborious work to keep individual egg records or pedigree the chicks from one's best laying hens and few breeders attempted to do it. But at the present time the trap nest has been so much improved that any one willing to give a little time to the work may know accurately what each of their hens are doing and keep an accurate pedigree of each of the chicks they raise. It needs no argument to convince any one versed in the laws of breeding that the pedigree system is the only way to permanently improve a strain of fowls in laying quantities. Trap nests are opening the eyes of a great many to possibilities yet not

thought of in poultry culture and the future is bright with prospects for those who will take up poultry raising and put into practice the principles of breeding which have been the means of the wonderful improvement seen today in the best specimens of pure bred horses and cattle.

The doctoring of sick chickens is a stumbling block to many beginners and in many cases the cause of much of the sickness in the flock. With but few exceptions the hatchet is the best medicine to use on a really sick chicken. It is a sure cure and a pretty sure preventive of other members of the flock contracting the disease. Very few hens that get sick and have to be doctored are ever after worth much as breeders. They may be apparently cured, but the chickens that come from them are pretty sure to show a predisposition to the disease and prove a menace to the rest of the flock; especially is this true where the hens have had severe colds or roup or swelled head.

During the summer shade is an important factor in the comfort and thrift of both old and young stock and should be provided artificially if not already provided by nature. Green food, animal food and plenty of sharp grit and an abundance of pure water and fresh air are among other important factors in profitable poultry keeping, none of which the fowls can be deprived of without considerable loss to the poultry keeper. Anything that makes for the comfort of a flock of poultry is an important aid to the profit earning of the fowls.

In getting winter eggs it is important to have the pullets hatched early and keep them growing without any check right through the summer and have them in winter quarters early in the fall. In not a few cases the young stock is left

BLANCHARD'S WHITE LEGHORNS

are no experiment, having been carefully selected and bred for over twenty years. No labor or expense has been spared in building up and perfecting this strain and while the production of large, pure white, fancy market eggs has been the main object, **standard qualities have not been neglected.** They are large, vigorous, active and handsome. Good winter layers and keep at it all summer. Unexcelled for introducing new blood or as foundation stock. **NONE BETTER ANYWHERE AT ANY PRICE.** Eggs for hatching, from my regular matings, \$2 per 15; \$3.75 per 30; \$5 per 45; \$10 per 100. From exhibition matings, \$3 per 15; \$5 per 30. Illustrated circular free.

We won at Syracuse and Hagerstown over 75 ribbons, and 34 ribbons and several specials at Madison Square Garden this last season.

YOUNG STOCK

Over 3000 chicks are now growing on our farm, many of which will be ready for the fall shows. These young birds were all hatched from our own matings, all have free range. If you can't get what you want for breeders and show birds of us, where will you find them? Send for large illustrated catalogue and remember we satisfy or refund your money.

F. W. COREY, Manager.

in the summer coops too long and when they are removed to winter quarters many of them have colds which they have contracted from being overheated in the crowded coops at night and chilled when let out in the early morning in the cold days of early fall. The pullet that fills the egg basket in the winter must be handled so as to receive no set backs.

In the fall and winter treatment of the layers one of the most important things to attend to is to provide the hens with plenty of straw or other litter in which to scratch for all their whole grain. The exercise they obtain in this way is one of the most important factors in maintaining health and encouraging egg production in confinement during the winter months. To sum it up in a nutshell: The one important thing is to apply good judgement to the work of each season of the year and study the needs of the flock thoroughly enough to be acquainted with their condition and the things which will add to the profitableness of the business.

Victor D. Caneday.

Box A, Taylor's Falls, Minn.

A LETTER FROM THE LONE STAR STATE.

The Size and Growth of the Poultry Industry in Harrison County and Marshall.

Two years ago the East Texas Poultry and Pet Stock Association was organized and launched by the writer and Mr. K. A. Pauer in the city of Marshall, with twenty-five members and about \$25 worth of scrub chickens. At our first show, in November, 1904, \$2,000 would not have bought the poultry owned by the Marshall exhibitors. While our first show was not as good as some in the state, we don't believe any had a better one for the first time. Our show last season was one of the best in the state, if not the best south of the great Mississippi river, and the writer has not yet seen a better premium list with more cash prizes sent out than the East Texas show. Our judge, Mr. Laring Brown, said he had never judged a better class of birds in the south. Today we find the poultry industry in Marshall and East Texas fast climbing to the top, and in the near future we hope to see this the chicken center of the state. Already some small fortunes are being expended.

Mr. N. C. Matthewson, one of our best druggists, two years ago bought a pair of White Leghorns in our first show, and he had never paid over 30 cents for a chicken before. He is now part owner of the Matthewson & McCoy poultry yards at Woodlawn, Texas, five miles from this city. This farm has 440 acres. Forty acres is or will be cut up into breeding pens, they now having 1,200 White Leghorns, three yards of very fine Columbian Wyandottes, three of Buff Wyandottes and four of Rhode Island Reds.

In stocking this farm the finest breeds to be had have been secured for breeding stock. In the near future the writer hopes to see this one of the best poultry farms in the south, as there is plenty of running water and shade on the farm. Ten acres are now covered with peach trees, and more will be put out in peach and plum trees this fall.

We have others who are spending large sums. Messrs. Charles Merg-

bacher, E. P. Wamack, Dr. R. P. Hamill, W. R. Marney, M. M. Barues and Mary Athers, who never thought of fine poultry till the East Texas Poultry Association was organized, have their town lots and farms stocked with the best to be had.

The association has employed Mr. Laring Brown of the Belmont farm to judge its next show, November 20 to 23, 1906. We intend to make this one of the best in the state and south of the Mississippi river. This is to show what can be done if the people will only try and stick to it. The great trouble is so many go into the poultry business who never read a poultry journal, buy their eggs and give them no attention. The chicks soon die, and they cry out there is nothing in poultry.

It is very gratifying to read the reports from all over the country as to the condition the poultry business is in and what the different breeders think of the coming season.

To get profit out of poultry does not require burdensome labor, but it does require persistency and the exercise of

\$200.00 Columbian Wyandotte Cockerel. First prize at Madison Square Garden, New York, 1906. Owned by J. F. Van Alstyne, Niverville, N. Y.

common sense business judgment. Read all the poultry journals you are able to get, and if you have any stock to sell advertise in the same way as a man engaged in the mercantile or any other business. He plans after safe business principles. The chicken man should do the same.

But I must stop here. Wishing the American Poultry Journal success.

H. P. ATWOOD.

SPECIAL SUMMER SALE.

J. A. Bickerdike, Millersville, Ill., is offering a choice lot of breeding stock of White Plymouth Rocks at a great bargain.

The birds he is offering are birds of quality, pure white and high scoring. All of them were used in his breeding yards last season. They are all scored by Judge D. T. Heimlich, the score card to go with each bird sold. Scores range from 90 to 95. Price, \$1.00 to \$2.00.

This is your opportunity to secure good breeders at a bargain.

BIG SUCCESS WITH HOGS.

SOME farmers are more successful with hogs than others. The man that only gets 8 lbs of pork out of a bushel of corn fed to hogs makes only half as much as the man that gets 18 lbs.

The American Swineherd is a specialist and the best authority on the hog industry.

The greatest success results from concentrating all efforts upon one line.

Three-fourths of the farmers waste a third of their feed given to hogs because they do not understand the best methods.

The American Swineherd teaches you how to be successful.

How to secure the greatest profits.

How to feed, to double the growth and gain over usual methods.

How to keep your hogs healthy, as only healthy ones are profitable.

How to get 18 pounds of pork out of a bushel of corn, and 20 pounds out of a bushel of wheat, fed to hogs.

Prof. Kennedy of the Iowa Agricultural College says: "Your paper is a leader on feeding."

One man writes: "A single instructive lesson in the Handbook on Hog Hygiene saved me \$50 in feeding a bunch of 40 hogs 60 days over the ordinary way of feeding. It is the best investment I ever made."

Every owner of hogs should take advantage of this special offer:

Send us \$1 for two years' subscription to the American Swineherd and it will entitle you to a free copy of the Hand Book on "Hog Hygiene," with trade secrets, recipes, valuable information, etc. If the offer is accepted in ten days we will send you in addition "The Pig Feeders' Manual," worth a \$3 itself.

This equips you for a successful hog business.

Shows, Associations and Clubs.

The Latest News of the Show Room—Announcements of Special and Regular Meetings of Associations and Specialty Clubs—Secretaries are Requested to Send in the Latest News.

SPOKANE, WASH.

A poultry show will be given in Spokane from Sept. 24 to Sept. 30, during the meeting of the Spokane Interstate Fair. This fair is extending its scope each year and is growing more like the big expositions of the east. This is the first time in many years that a poultry show of any kind has been given in Spokane, but it is believed that it will be a good one. Premiums will consist of \$3 for first, \$2 for second, on pens of each variety; \$1.50 for first and \$1 for second on cock, cockerel, hen and pullet. All birds will be judged according to American Standard of Perfection. H. H. Collier of Tacoma, Wash., will be superintendent of the department. Special prizes of \$25, \$15 and \$10 will be given to counties making the largest and best display. In this the largest number of birds will count 30 per cent; largest number of varieties, 15 per cent; largest number of first prizes, 25 per cent; largest number of second prizes, 20 per cent, and the largest number of third prizes, 10 per cent. Other special prizes will be given.

No country of the world seems better adapted to raising poultry than the section around Spokane. The climate is comparatively dry. Birds are free from disease, and those who have been raising poultry for a number of years have captured first prizes in many cities of the United States, notably at the Na-

tional Poultry Show at Chicago in 1902 and 1904, for this western bird. The Spokane Poultry Association, of which H. C. Blair of Spokane is secretary, is assisting in giving the September show at Spokane this year. Black Minorcas and Brown Leghorns are favorites of this section. White Plymouth Rocks have probably captured more prizes than any other variety.

The Washington State Poultry Association is another organization recently incorporated, with a capital of \$1,000, at \$1 per share. J. J. Miller and S. H. Schriener, both of North Yakima, are president and secretary. This association will give a poultry show in North Yakima in December. The Spokane Poultry Association will hold a poultry show early in January.

PAINESVILLE, O.

The eleventh annual exhibition of the Painesville Poultry and Pet Stock Association will be held at Painesville, O., Jan. 9-14, 1907.

As has always been the rule, this will be a score card show. Mr. S. J. Lambert, one of the best known poultry experts, will be the judge.

This association has held ten successful shows, always paying their premiums in full, and the exhibitors as a rule have been well pleased and satisfied with their treatment.

Liberal cash premiums are given on

all varieties. The premium list will be forwarded upon application.

The officers of the association are: President, Dr. O. O. Hausch, Perry, O.; vice-president, Ira M. Crowther, Willoughby, O.; secretary, A. H. Ayer; assistant, F. G. Johnson, Painesville, O.; treasurer, F. C. Crosby; executive committee, H. M. Moseley, Thos. Linton, G. W. Crosby, G. B. McFarland, Lloyd M. Hill, all of Painesville, O.

DELANAN, WIS.

The ninth annual exhibition of the Southeastern Wisconsin Poultry Association will be held Jan. 1-5, 1907; special sales day, Saturday, Jan. 5. The southeastern of Wisconsin has been on the gain ever since its organization. It has held eight consecutive shows and is preparing to make the ninth the best of all.

The judges for 1907 are to be T. M. Campbell, of Darlington, Ind., and E. G. Roberts, of Fort Atkinson, Wis.

For further particulars address the secretary, L. L. Littlefield, Delavan, Wis.

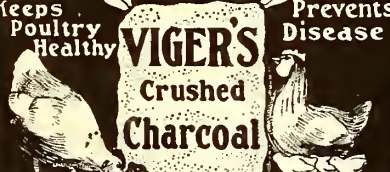

WALDRON, ARK.

Scott County Pet Stock and Poultry Association was organized Nov. 25, 1905, with W. E. Stone, president; J. F. Anderson, vice-president; Earnest Holland secretary and Ben Anderson treasurer. The show will be held Dec. 12-13, 1906, with Geo. W. Brown, Camden, Ark., judge. Earnest Holland, Secretary.

ASHTABULA, OHIO.

The Northeastern Ohio Poultry and Pet Stock Association was organized at Ashtabula, Ohio, June 12. The following officers were elected: W. W.

Keeps Poultry Healthy

Prevents Disease

IT'S THE HEALTHY HEN THAT LAYS THE GOLDEN EGG. Keep your hens healthy by feeding them Viger's Chemically pure Crushed Charcoal, nature's greatest purifier and antiseptic. Viger's Crushed Charcoal will do the following under our iron-clad guarantee:

1. It will keep your hens healthy, strong and in good laying condition, for it cleanses the crop and system of all impurities, naturally and easily, through its great purifying powers.
2. Our charcoal will prevent disease among your fowls. It is a mighty absorbent and will absorb and neutralize all disease germs, impurities and noxious gases.

Remember our guarantee is iron-clad and without restriction. Results or no pay. 3 sizes: Coarse granulated for mature poultry; fine granulated for little chicks; pulverized for soft feed. \$1.00 for 50-pound trial bag. Special prices in quantities. Samples free.

TRADE MARK

Let Me Hand You My Latest Book on Poultry Culture
ABSOLUTELY FREE

I want to send you a copy of this book free. It is a gold mine of practical information for the poultry-raiser. I call it "An Easy Lesson in Poultry Culture," because the lessons it teaches are easy to learn and easy to apply. My object in publishing this book is to point out how dollars in place of cents can be made in producing poultry and eggs for market purposes. It is stated so plainly that the novice can follow the directions and make a success of the poultry business. I especially commend the chapter, "The Back-Lotter" to the city dweller who wants to "try-out" this business before going into it on a large scale. And then I have another book—a good companion for this one—"Poultry Feeding for Profit" that you should have also. It is full of feeding facts that I know, from actual experience, will be valuable to every chicken raiser. It gives feeding methods and information that will be helpful every day, for every fowl on your place—from the little chick "just out" to the old hen you are fattening for market. There is lots of money in the poultry business if you know how to handle chickens right. These two books will give you all the information you'll need—information you can put into practice. You cannot get this information anywhere else. Write today, I will send both books free, and also send my catalog on Model Incubators and Brooders the latest and most successful hatching and rearing machines on the market.

CHAS. A. CYPHERS, 301 HENRY ST., BUFFALO, N. Y.

Do not confuse me with any Company, and be sure to include my street address

Our Brooding System is Successful

IS YOURS? Are you satisfied with the results obtained with the open or covered pipe systems? Do you want to raise more and better chicks? Do you know that the individual lamp brooders are giving better results on a large scale, at a lower operating cost, than pipe systems? It requires less time and labor. The individual requirement for each brood is maintained without disadvantage to the others.

The New Prairie State Brooder No. 5

takes the place of the pipe system. It contains many new and novel features. It is portable, every part instantly accessible, sanitary. Heat is controlled as accurately as any incubator,—two compartments. Lamp will not blow out. It will fit any shape of house, large or small. For early or late broods, soft roasters, broilers, etc. Adapted to the small or the large. If you raise but few for the table or thousands for market, we make brood systems to suit your needs. Send for illustrated descriptive matter, which tells how and why Prairie State Brooding Systems are successful. It is free.

PEARL GRIT

Grit is of vital importance to little chicks. There is nothing in their little crops to grind with when they first enter this world. Unless provided with grit they soon weaken and die. Grit in some form should be given with their earliest food. No. 1 Pearl Grit is especially prepared for little chicks and they eat it readily. It is clean, small, white in color—sharp enough to grind well but not too hard for their delicate organs; furnishes just the right substance to promote rapid, vigorous growth and is just what they require for it nourishes as well as grinds. Try it and see how they grow. The larger sizes of Pearl Grit are splendid for adult fowls and full fledged young birds. It increases egg production—keeps the fowls healthy and prevents "crop-bound" fowls. Poultrymen everywhere use Pearl Grit because it pays. Write for free booklet. Manufactured by **The Ohio Marble Co.,** 209 N. Wayne St., Piqua, Ohio.

ILLINOIS STATE FAIR, SPRINGFIELD, SEPT. 28-OCT. 5, 1906.

The premium lists for the Illinois state fair of 1906 are now being mailed from the office of the secretary.

The aggregate offerings to exhibitors for the coming fair amount to \$55,000, and the very liberal premiums in all departments will, without doubt, bring the largest exhibit ever seen at any state fair. Already applications for space, stalls and pens exceed those of any previous year and by the opening of the fair the accommodations for exhibitors will be taken to the limit in caring for the magnificent display in all departments.

Persons desiring copies of the premium list or wishing space, stalls, or pens should address at once, W. C. Garrard, secretary, Springfield, Ill.

THE NEWARK FANCIERS' ASSOCIATION.

It is likely that no "bunch" of chicken men has grown more rapidly, or come into prominence more quickly, than the Newark, Ohio, Fanciers' Association.

The association was organized in the fall of 1903, and consisted of probably one-half dozen members, and decided to hold the first exhibit, which was done, and about 200 birds were gotten together in December, 1903.

The second exhibit, consisting of about 350 birds, was held in January, 1905, and the third, consisting of 600 birds, was held in December, 1905.

All three exhibits have been a success and have been very instrumental in building up an interest in poultry culture.

Plans are being made for one of the best meetings in the state, to be held Jan. 29 to Feb. 2, 1907, and it is likely that at least 1,000 birds will be on exhibit, besides many other pet stock, such as dogs, rabbits, cats, etc.

The association now numbers about 40 members, and composed of some of the best men in the county, and numbers among its membership farmers, business men, county officials and gardeners, and will meet every obligation in the future as it has in the past.

Ben S. Myers, of Crawfordsville, Ind., has been engaged as judge, and fanciers in reach should not fail to attend, for the time has come when a prize at the Newark show means something. Ed. Larason, Newark, Ohio, Sec'y.

THE NATIONAL WHITE WYANDOTTE CLUB.

The National White Wyandotte Club, with a membership now of over 1,600 active members, is by far the largest poultry specialty club in America. No wonder that as the result of the active and aggressive work of such a powerful organization the White Wyandottes during recent years have forged way to the front and today are leading all other varieties at the largest shows in America. If you are interested in White Wyandottes, or if you wish to know more of this, the most popular variety in the world, or if you wish to join the club, write for full particulars and special offers to the secretary, Ross C. H. Hallock, St. Louis, Mo., and mention A. P. J. when you write.

IDEAL TRAP NESTS SHOW WHICH HEN LAID THE EGG

Questions and Answers

Questions asked by subscribers will be answered in this department only under the condition that the full name and address is signed by the writer.

Editor American Poultry Journal.

Dear Sir:—My old chickens have bowel trouble; droppings are very soft and thin. Some are dark and some are a green color. Have been that way for some time. They have free range and feed wheat night and morning. They are free from lice and have good, dry houses, cement floors, covered with a little dry earth, cleaned every morning. What is the cause of bowels being so loose, and what shall I do to cure it?

Colorado Springs, Colo.

I. S.

Answer:—This is probably caused by a slight derangement of the liver. A little Douglas Mixture in the drinking water will probably overcome this. This mixture is made as follows: Sulphate of iron (common copperas), 8 ounces; sulphuric acid, ½ fluid ounce; 1 gallon of water. To prepare this tonic, place the gallon of water in a jug or crock, and add the copperas. When the latter is dissolved, drop in the sulphuric acid, and when the compound clears it is ready for use. A less quantity may be made in a small bottle, in the same proportions. The mixture is a tonic, which may be given to fowls in drinking water, at the rate of a gill to twenty-five head, every other day. This quantity in the usual dish of water provided for the number named is not too great, as the waste is considerable. It is an alternative, with

antiseptic properties, and is, therefore, a remedy for roup or bowel trouble, as well as a tonic.

Editor American Poultry Journal.

Dear Sir:—Will you, or can you, explain what is wrong with my young chicks? They do well until two weeks old. Then they grow wings and get poor and die. I have had some to live five weeks and not be one bit larger than when they hatch. They develop the wing feathers, but do not develop any body. They have free range. I have S. C. B. Leghorns, Red Games, Plymouth Rocks; besides I have bought eggs from different places, and all chicks do the same. I am now feeding Dr. Hess' poultry food, but it does not seem to do any good. I keep crushed granite and oyster shells before them all the time, but still my chickens up to two pounds are troubled with indigestion. I have been feeding cracked corn, chick food, cornmeal, bread, plenty of sour milk. My worst trouble is they will not grow any body. I have 200 little ones out of about 500 hatched.

C. S. E.

Adamston, Mo.

Answer: The man or woman who can discover the cause and way to prevent this disease can make a fortune in a short time. There are a number of theories and remedies offered, but we

have yet to find one that will do the work. The chick has this disease when hatched; but whether it comes from the parent stock or from improper incubation we are not prepared to say. Neither are we prepared to offer a remedy for it, as there is absolutely no use of giving medicine to little chicks. The diet will have more effect than anything else. By changing the food and feeding sparingly at first you may be able to save a fair percentage.

Editor American Poultry Journal.

Dear Sir:—Will you please answer the following questions in next issue of your journal: First—How many Rose Comb Brown Leghorns could I winter in a house 10x12? The fowls will have free range when the weather will permit. Second—Do you think it necessary to get young cocks to breed to my pullets that were hatched the 5th day of May, or would cockerels that are the same age do to breed from? Third—Could I keep 30 or 40 pullets and three roosters with good results in the same house? The fowls will have free range during the day. Fourth—Is broken glass good grit for chickens?

Madisonville, Ky.

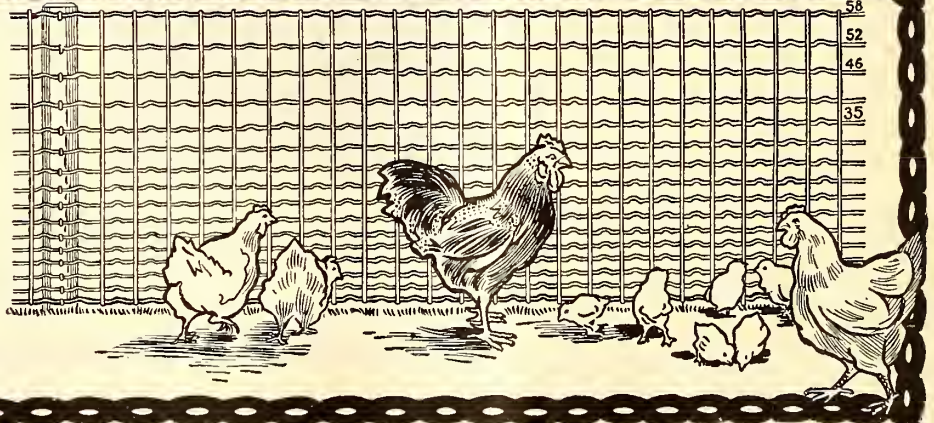

J. G. O.

Answer:—First—Twenty-five, if given the proper care. Second—A male bird 2 years old will give best results. Third—No. Fourth—No.

Editor American Poultry Journal.

Dear Sir:—Will you please answer this question: I have a cock that has been sick for about four weeks; he is all swollen about the eyes and will not eat well, and his bowels do not move well; he also makes a whistling noise in

What's this
We're up
Against?

At Last a Perfect Poultry Fence

The "Pittsburgh Perfect" Poultry and Garden Fence is exactly what its name indicates. It is "Perfect" because made of special steel of our own formula; "Perfect" because heavily galvanized, thus preventing rust; "Perfect" because our electric welding process makes stay and strand wires one piece so that mesh cannot spread to let fowl through; "Perfect" because smallest wires in it are heavier than the wires used by most fence manufacturers for a regular stock fence; "Perfect" because it is the only fence that will not unravel if strand or stay wire is cut.

Don't buy flimsy hexagon poultry nettings; they rust out quickly, won't stand up, and are but makeshifts and disappointments at best. It's "the WELD that HELD" that makes a perfect poultry fence. No top or bottom board needed. Heavy top and bottom wires take their place. Nothing can get through—nothing from the small chick to a mad bull.

THE ONLY ABSOLUTELY "PERFECT" POULTRY FENCE ON THE MARKET.

The price is small—the satisfaction is great.

Thousands of dealers handle the "PITTSBURGH PERFECT" FENCES, from the Extra Heavy Fences for stock to the king of all Poultry Fences.

THE "PITTSBURGH PERFECT" POULTRY FENCE. Has Your dealer got it? If not, write us for catalogue.

Pittsburgh Steel Company, Pittsburgh, Pa.

his throat when he tried to move his bowels. I have been able to keep them open for a little while. I feed wheat and cracked corn, plenty of fresh water and green grass; always have oyster shells before him. G. C. D.

Council Bluffs, Iowa.

Answer:—This bird has a severe cold. Begin treatment with a dose of Epsom salts, 20 to 30 grains. For the swelling around the eyes apply melted lard, to which has been added a small quantity of kerosene oil. Also give the bird a teaspoonful of this mixture twice a day.

Editor American Poultry Journal.

Dear Sir:—I would be pleased to hear from you, through the next issue of your journal, in regard to the following questions: (1) What is line-breeding? (2) What benefits are derived from line-breeding? (3) Are there any books printed giving a thorough explanation of the subject, and where can they be had? (4) What is the best way of ridding the henhouse of lice? S. P. W.

Mount Carmel, Ill.

Answer:—(1) Line-breeding is where a strain of fowls is bred in line year after year without the introduction of new blood, but should not be practiced without a thorough understanding of the subject. (2) It is a question in our mind whether there is any benefit to be derived from this system of breeding, except for show purposes. (3) We don't know of any book on this subject. (4) Whitewash, to which has been added a liberal quantity of crude carbolic acid.

Editor American Poultry Journal.

Dear Sir:—Please answer through your paper and tell me the trouble with my ducks. When six weeks old I had thirty and had lost only one, but since that time I have lost several. They leave off eating, lay around and soon die. Others have their eyes stuck together in the morning. After moistening the lids I can separate them and the duck can see once more and will be all right. F. A. T.

Effingham, N. H.

Answer:—Owing to the fact that you do not say how you feed and care for your ducks we are unable to tell you what to do. The trouble is probably due to the feed and care given them. If young ducks are given proper feed and not allowed too much range there is very seldom any sickness in the flock. You should endeavor to find out the cause of the trouble and remove it. Medicine will be of no avail unless the cause of the disease is first gotten rid of.

Editor American Poultry Journal.

Dear Sir:—Please answer the following question in Journal: I have a cockerel that has been sick for some time. His legs are cracked open above the knees. What is the cause and remedy, if any? C. B.

Horatio, Ohio.

Answer:—Rheumatism. Begin treatment with a dose of Epsom salts, 20 to 30 grains. The following day add 30 to 40 grains of bicarbonate of soda (baking soda) to the quart of drinking water and give 2 to 3 grains of salicylic acid twice a day. Apply camphorated or carbolic ointment to the affected joints.

Editor American Poultry Journal.

Dear Sir:—Please answer in your next issue: If a full-blood Single Comb Brown Leghorn cock is in a pen with six Leghorn hens and six Plymouth Rock hens, would you get full-blood chicks

from the eggs that were laid by the Leghorn hens, and would such breeding cause white feathers in the wings of the Leghorn chicks? C. K.

Deadwood, S. D.

Answer:—You would get full-blood Leghorn chicks and because mated this way would not have any effect on the plumage, provided the male and females were thoroughbred.

Editor American Poultry Journal.

Dear Sir:—I would like, for you to answer the following questions: I have a good big grassy chicken lot and I keep

it and all quarters clean. No lice, only a few, I can see those big ones on the chickens; but I grease them good. You will say they are lice, but I don't see how they can be; but my little ones just die from weakness. Some of them, and others die, I think, from a bowel trouble. I feed them wheat and cracked corn and smaller ones the Cyphers Chick Food, so I don't see the cause. Please tell me what is wrong and give remedy if you can. Mrs. G. H.

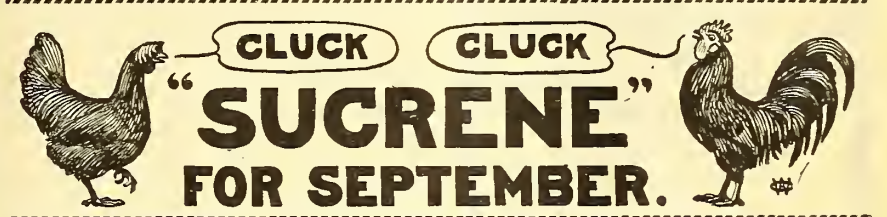

Richmond, Ind.

Answer:—See answer to C. S. E., in this issue.

MINNEAPOLIS CHICAGO

Editor American Poultry Journal.
Dear Sir:—Please answer this in your August issue: I have a B. P. Rock chick two months old that is almost blind. I feed it on chick food and a little cracked corn. What can be the cause?
W. E. G.

Montclair, N. J.
Answer:—The trouble is frequently caused by breeding from diseased stock. There is no remedy for it, and we would advise killing all birds so afflicted.

Editor American Poultry Journal.
Dear Sir:—In your next issue of the Journal please tell me from whom I can get a book on all the diseases of poultry.
D. S.

Bennettville, S. C.
Answer:—From American Poultry Journal Publishing Co., 325 Dearborn street, Chicago, Ill. Price, 50 cents.

Editor American Poultry Journal.
Dear Sir:—Please answer in your journal the following: (1) I have heard of a Douglas Mixture which you make yourself and put in the drinking water. If you know of it please give recipe in your next month's issue.
K. L. B.

Answer:—See answer to I. S., in this issue.

Editor American Poultry Journal:
Dear Sir—As I am a subscriber to your valuable paper I would like you to answer the following questions in your August number if possible:

1. I have a Rose Comb Rhode Island Red chick that is eight weeks old and has not feathered out yet—only a few feathers on the back of its neck. I can not detect any skin disease or anything wrong with it; it eats good and has plenty of free range. What is the matter and what can I do to make the feathers grow out?
2. Rhode Island Reds hatched on April 15; how soon should they begin to lay?
3. How is a good way to break broody hens from setting?
A. E. P.
Ogden, Utah.

Answer—1. This is no uncommon thing with young chickens. The feathers will no doubt develop in due time. 2. In from five to six months. 3. By cooping them up with several male birds.

Editor American Poultry Journal:
Dear Sir—Please answer in the question and answer column of next month's issue of American Poultry Journal the following questions: I have hens which have something on their heads like warts. After three or four days their whole head is covered with them and their mouths get sore. I have been treating their heads with carbolated vaseline and the mouths with sulphur, but it does no good. Please tell me the cause and a good cure, if any?
Centerville, Iowa. J. L. W.

Answer: These fowls have chicken-pox and canker. This is usually the result of the fowls being allowed to roost in damp, filthy quarters. Bathe the affected parts with warm, soapy water until the crusts can be removed without bleeding, after which apply a solution of sulphate of copper (bluestone), a dram to ½ pint of water. For the mouth secure some one of the various cures advertised in these columns.

Editor American Poultry Journal:
Dear Sir—Please answer the following: My hens get all scabby around

the head and their eyes go shut and get full of matter. Their heads get a mass of scabs. Please state the cause and cure. T. C.

Stony Creek, Ont.

Answer: This is what is known as sore head and is usually caused by damp or filthy quarters and poor ventilation. Thoroughly soak the affected parts with warm, soapy water, dry thoroughly with a soft flannel cloth, after which apply carbolic or sulphur ointment. A few treatments of this will usually suffice.

Editor American Poultry Journal:

Dear Sir—In next issue of the American Poultry Journal will you kindly answer the following questions: How much feed in weight should be given daily 100 chicks just hatched, one month old and two months old, confined to runs where everything has to be furnished them? How much feed in weight should be given daily to 100 hens of the Rock or Wyandotte class?

Oakland, Ore. P. A. C.

Answer: This is a question that has been asked by thousands of beginners in the poultry business, and is one that no person can answer accurately. If all chicks required the same amount of food it would be very easy to determine the amount necessary for 100 or 1,000, but they do not, any more than all men, require the same amount. Since the hopper system of feeding has come into use the feed question has solved itself. With this system the attendant fills the hoppers and the fowls will eat as much as they desire and no more, and there is no wasting of feed where a good hopper is used, and in a very

short time any one can tell just how much their flock is consuming per day, week or month. One hundred chicks just hatched would not consume more than four or five ounces of feed per day; at one month, 5 pounds per day would be consumed, and at two months, twice this amount.

Editor American Poultry Journal:

Dear Sir—You will confer a favor on me if you will kindly answer the following questions in the Questions and Answer Department: Do you recommend the extraction of the gape worm by an extractor, or by giving some medicine in water and food? Would it be advisable to have an incubator cellar under brooder house? Can you refer me to the address of the secretary of the S. C. White Leghorn Club? Ringoes, N. J. J. B. G.

Answer: The surest way is to use an extractor. We know of no reason why an incubator cellar would not be all right located under a brooder house. The secretary of the S. C. White Leghorn Club is Irving F. Rice, Cortland, N. Y.

Editor American Poultry Journal:

Dear Sir—Will you please answer through question column: Last spring I bought three Light Brahma cockerels, thoroughbreds, and put them with Brown Leghorn hens—about 45. The eggs do not hatch. Why should they not? Are the cockerels too large to cross with small hens? They appear to be very healthy and lay lots of eggs. Out of 100 eggs I bought from same party, of Light Brahma brand, we tested

out fifty-one as unfertile. When the eggs are broken the white appears to have a milky color, especially at the big end or air chamber. Out of thirty-five eggs left in the full time we got eighteen chicks. They do not appear to be strong, healthy chicks, and several have died. What do you think of so high a per cent of unfertile eggs?

Verndale, Minn. G. B.

Answer: The trouble is no doubt in the male birds. It is a mistake to mate Light Brahmas with Leghorns, as there is no advantage to be gained by such a mating.

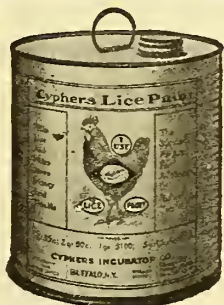

Editor American Poultry Journal:

Dear Sir—Please answer the following through your paper: 1st. When is the proper time to use a poultry marker on chicks? 2d. How many Buff Leghorns, hens and cocks, should I keep in a yard 28 by 68 feet? C. T. S. Littlestown, Pa.

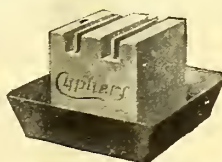

Answer: 1st. Within a week after they are hatched. 2d. About 75.

Editor American Poultry Journal:

Dear Sir—Please answer the following: 1st. If I get three 390 egg incubators and start one every week the year round, if I can get the eggs for them (all B. P. Rocks), can I expect to have 300 two pound broilers to ship every week in sixteen weeks after I start my first incubator; if not, how many? 2d. How big a brooder do I need for 300 chicks? 3d. Will a cement basement with a baseburner stove in it to make it about 60 degrees night and day make a good brooder house? 4th. How old do the chicks need to be

One year, and a copy of the book entitled

200 EGGS A YEAR PER HEN

The demand for this book has been so great that the third edition has been exhausted, and a fourth edition of 5000 copies has just been printed. It tells how to get the greatest number of eggs at the lowest possible cost. Send orders direct to

American Poultry Journal Pub. Co.
325 Dearborn St., Chicago, Ill.

Editor American Poultry Journal:

Dear Sir—Please answer the following questions in your next issue: 1st. We have the W. Wyandotte chickens and have had two of them go light. Is that trouble contagious or constitutional? What is a remedy? 2d. We have a cockerel four months old, a fine bird, that seems healthy, eats well, but in the last few days his comb has turned black. Our chicks have free range. We feed cracked corn, oats and grit; hopper feed altogether. Our chickens are well housed and cleaned every day; use lime freely and spray with carbolic acid and kerosene diluted.

Ohio, Ill.

Answer: 1st. Some of the best authorities on poultry disease claim that this disease is consumption and is contagious, and acting on their advice we always recommend that birds in this condition be killed and the bodies burned. 2d. This bird has liver trouble. Give him one of Carter's Little Liver Pills every day for three or four days. Feed sparingly on soft food only for a week and then gradually put him back on a grain diet.

Editor American Poultry Journal:

Dear Sirs—I write you for some information concerning the care of ducks. I have a number of very fine ducks, and they run on a spring branch close by my home, and the ducks find some small shells known as "periwinkle," which they eat. This shell that they feed on causes them to get weak in the back, and they linger for two or three days and finally die. Can you suggest any remedy for this trouble? If so, please answer in the American Poultry Journal. Thanking you for any information, I beg to remain, Very truly yours,
W. P. H.
Huntsville, Ala.

Answer: We are unable to suggest a remedy in this instance. Will some of our readers please do so?

Editor American Poultry Journal:

Dear Sir—Please answer in query column: What is the matter with my young turkeys, six weeks or two months old? I have had several that were puffed under the wing. Like gas or wind under the skin, and it seemed hard for them to breathe. They have free range, get all the grasshoppers they want, are fed a little grain daily, and the last few days have been getting oats that are ripening in the field. What can I do for them?

Rocky Ford, Colo. Mrs. A. Y.

Answer: The exact cause for this has never been discovered, to our knowledge. The remedy is to prick the skin with a pin and allow the air to escape. If it again accumulates, cut out a small diamond-shaped piece with a pair of sharp scissors and anoint it with vaseline.

before they can be taken out of a heated brooder to a brooder house with 60 degrees all the time? 5th. Will a brooder built six feet wide and one foot off the floor and the length of the building (46 feet), divided into seven rooms, with steam pipes through the whole length make a good brooder for seven 300 flocks with a floor space of 6x20 feet? 6th. Will 20x20 feet accommodate 100 laying hens, when it is heated from the basement by a stove, and a scratching shed (not heated)

HUNKYDORY FARM : PELLA, IOWA

YES SIR, IT'S A FACT

The REMARKABLE INCREASED POPULARITY OF

COLUMBIAN WYANDOTTES

during the past few years clearly indicates they are destined to be acknowledged the premier variety of America's most valued breed. And why? Well, because they have given abundant evidence of being steady, all-the-year layers. Grow with quick vigor—early developing the chubby body characteristic of the Wyandotte breed, and which has given them their unapproachable pre-eminence as the standard commercial fowl of America, and last, but by no means least, their dark hackle and tail contrast pleasantly with the soft whiteness of body plumage.

EGGS FOR HATCHING, \$5 THE SITTING

Next fall I shall have a grand lot of early hatched cockerels and pullets for sale—progeny of carefully selected breeders,

MY WHITE WYANDOTTES

are excellent layers. Eggs, \$3 the sitting; 4 sittings, \$10. Baby chicks, 12c and 25c each. Why not procure new blood from me this year and lay the foundation of a persistent rough weather laying flock—the kind that pays? Send for useful desk blotter—'tis free.

 GENERAL PASSENGER AGENT,
 CHICAGO, ILL.

20x20? 7th. How many flocks should 100 hens be divided into? 8th. How many roosters should they have to bring about good results? 9th. How high is it necessary to have a room for laying hens? 10th. How much profit a month would be safe to figure on from a flock of this kind? H. W. S. Hatton, N. D.

Answer: 1st. This is a question that no one can answer with any degree of accuracy. If you could hatch and rear 50 per cent of the number of eggs put in the machine you would be doing well. 2d. For every 390 egg machine you should have six fifty-chick brooders. 3d. It will answer the purpose, if there is plenty of light and air. 4th. Four to six weeks? 5th. No; this will be crowding them too much. 6th. Yes, but would not advise using artificial heat. 7th. Four. 8th. At least eight males to 100 hens. 9th. From six to seven feet. 10th. The profit all depends on the management and we are not in a position to say what your profits would be.

Editor American Poultry Journal:

Dear Sir—I have some Plymouth Rocks, also Rhode Island Reds, and some of them sit around and seem lazy, and the extreme outer edge of their eyes get a bright yellow. I killed one and it seemed to be poor, but the entrails were covered with fat and its laying organs were covered with a fat-tissue that resembled curdled milk. Its liver was quite large and was light in color, with some dark red spots. The hens eat well and lay regular. Can you tell what ails them? F. R. Fort Steele, Wyo.

Answer: This is liver trouble, probably caused by too heavy feeding. A little Douglas mixture will do them good. The formula for making this will be found elsewhere in this department this month.

Editor American Poultry Journal:

Dear Sir—Please answer in your next issue of the American Poultry Journal these questions: First, will it hurt to breed from a Black Minorca hen the following season if she has been allowed to run with mongrel stock this season? Second, is it a disqualification for a Minorca cock to have eight spikes in his comb? J. J. G. Richmond, Va.

Answer: First, this has been a much discussed question and has never been satisfactorily answered, some claiming one thing and some another. We are of the opinion, however, that it will not injure her breeding qualities. Second, this is not a disqualification, but a serious defect, and will be cut severely.

Editor American Poultry Journal:

Dear Sir—Please answer the following: 1st. Alfalfa meal costs \$1.50 per 100 pounds, with sometimes freight and cartage to run it to nearly \$2 if local dealers don't keep it. Would alfalfa hay at \$12 to \$15 per ton be as cheap or cheaper, supposing hay was \$10 per ton? 2d. I cannot get fowls to eat the meal well. Mixed clear with boiling water and steamed, they will not touch it even when nothing green is growing. In wet mash, if it constitutes one-quarter the ingredients, they eat it poorly. In dry mash they will eat a larger percentage of alfalfa meal than in wet mash, and I always feed dry mashes. Will alfalfa meal in dry mash, the hens

then drinking much water, serve as a green food in dry times? 3d. A Houdan male (eastern), now weighing 14 pounds, took first prize at a prominent show as a yearling cockerel, then 10 pounds, though cut two points for overweight. Would not such a Houdan be more desirable than a standard weight? Wouldn't it make a broiler sooner?

Monterey, Cal. A. N.

Answer: 1st. Your requirements for alfalfa warrants you in purchasing by the ton. It would be much cheaper and better to purchase the alfalfa hay at \$12 to \$15 per ton. 2d. If your fowls will eat it in the dry mash, so much the better, for it is becoming universally recognized that dry mash feeding will give better results than wet mash. 3d. From the market point of view it would be better, but not for show purposes.

Editor American Poultry Journal:

Dear Sir—Please answer in your question and answer department the following: When my chicks come out of the eggs they seem to be all right, but when they are out about a week they will stand around and their wings hang down, and in a day or so they die. I feed cracked corn. Will you please tell me what is the matter with them and what to feed them?

Freysville, Pa. H. D. Z.

Answer: Lice and improper feeding are the causes of your trouble. Chicks

Shipment of Rose Comb White Leghorns to New Zealand by J. A. Leland, Springfield, Ill.

just hatched should not be fed on cracked corn. Cracked wheat, steel-cut oats, milled seed, etc., mixed together would make a far better feed. Any of the prepared chick feeds now on the market will do the work all right. Examine your chicks for lice and use the proper remedies to get rid of them.

Editor American Poultry Journal:

Dear Sir—Please advise me in the columns of the Journal: I have a pullet three months old, Barred Rock, and she acts as though she has a case of rheumatism. When standing the legs give way, shake and tremble, and then sits down and shakes. She is a good feeder and looks fine. What is the trouble?

Montclair, N. J. W. E. G.

Answer: Give a dose of epsom salts, 20 to 30 grains, and the following day add 30 to 40 grains of bicarbonate of soda (baking soda) to the quart of drinking water.

Editor American Poultry Journal:

Dear Sir—Will you please answer the following questions in your July number: 1st. Are chicks hatched by a hen just as well off without the hen after they are three weeks old? 2d. Is it necessary to put grit in coop or feeding pen when chicks have free range, if it is kept in a box close to all the coops? 3d. How much of each should I feed to 150 chicks, feeding wheat in

the morning, cheese at noon and cracked corn at night, and could I give them any better food? 4th. How many chicks three weeks old can roost in rat-proof coops 18 inches wide, 27 inches long and 20 inches high? Mrs. R. K. Monroe, Ind.

Answer: 1st. This all depends on the conditions. Usually they are not. 2d. No. 3d. Just how much to feed you must be the judge of, as the quantity for one flock of chicks would not do for another. Feed only what they will eat up clean, unless you are hopper-feeding. If your present feed gives results, do not change it. 4th. Not more than a dozen should be allowed to roost in a coop this size.

Editor American Poultry Journal:

Dear Sir—I have been raising Black Langshans for two years; had some very fine hens that scored very high. This spring I changed cocks and got a very fine looking bird with all of the high-scoring points from a large flock of Langshans that were great prize-winners. Every chick hatched this year has white on tips of wings. What is the cause and remedy? H. H. C.

Lake Geneva, Wis.

Answer: The fault is evidently in the mating. The only remedy is to breed from only such specimens as are up to standard requirements, or as near as you can get them. A few years of careful mating will show vast improvements in your flock.

Editor American Poultry Journal:

Dear Sir—Kindly let me know through your paper what makes the difference in the yolks of eggs, some being dark and others light? There are a great many people down here who say the light-yolked eggs are not good and will not use them. H. L. G.

Aberdeen, Wash.

Answer: The color of the yolk is usually influenced by the feed. Where the fowls have free grass range the yolks are usually light in color, but where grains are fed almost exclusively the color is much darker.

JUDGES AND JUDGING.

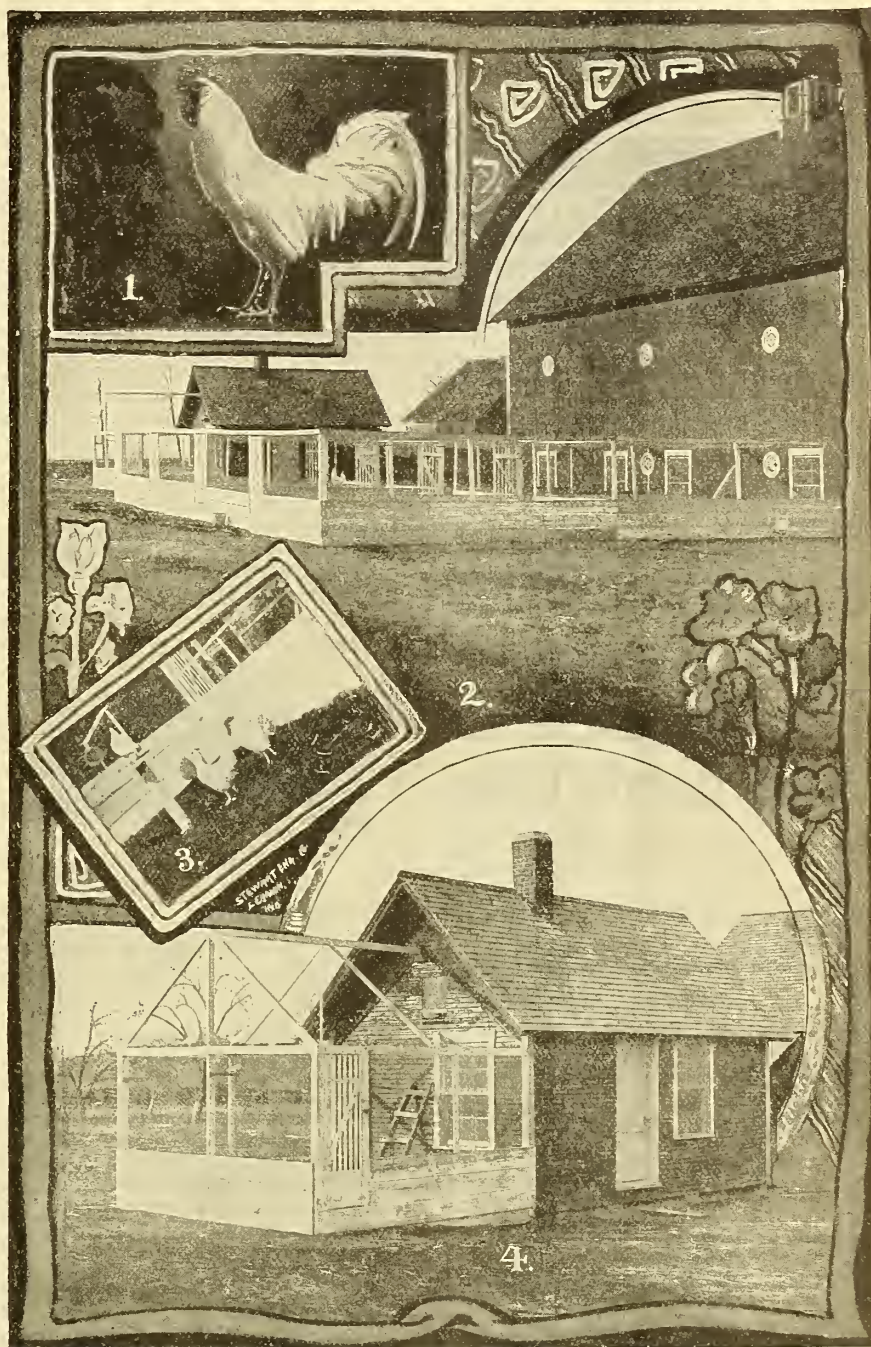

New Judges and What is Expected of Them—
 Why is there not a Judges Association?—
 Would Such an Association be a Benefit?

Written for A. P. J. by D. T. Hehmlich, Jacksonville, Ill.

The numerous plans suggested by exhibitors, editors and poultry judges would, as a matter of course, lead the readers of poultry journals to ask: "Why is there not a judges' association?" The fact that the greater number of old and new judges belong to the A. P. A. should make this an easy matter. The next question would be, "Would such an association bring the majority who make awards more consistently than is done now?" Each works in accord with his system as comprehended and put into practice from the reading of the Standard and a knowledge gained by experience in breeding and handling of the best produced and exhibited at fall and winter shows. There are a few features about present methods where all might, when using the score card, do work in closer accord with "instruction to judges," such as using the symmetry section instead of ignoring it entirely. While it may be true that it's the most difficult to make a discount on intelligently, it should be done so long as the farmers and makers of the Standard so instruct. If it's a bad rule to apply and make consistent, it's strange that some of the best brains of those who are hired by associations to make the awards have not seen fit to ignore it. There is now and then a specimen found where this section can be passed, but it is a rare exception. This being a fact makes it all the more imperative to use it as of equal or of more importance than any other single section that is passed or discounted as perfect or imperfect, according to the Standard description and demands. That "the judges should get together" should be the next move that must take place, so that the older ones may work with greater uniformity and thus be able to instruct the many caudidates coming on, so they may not grope in the dark and dig out their standing to qualify by difficult efforts such as some of the older judges had to contend with. Intelligent and painstaking work no doubt will land many into recognition by associations, but why not make it possible that those who qualify as fit to act be given credentials from which they on their merits stand or fall? True, the fraternity in the show room must sooner or later pass on them, give them support, or pass them up. There are schools of instruction, but such instructions cannot be given by correspondence. Careful study of living specimens in the breeder's yards, the study of laws and facts pertaining to atavism, a thorough knowledge of our Standard, with the ability to apply it intelligently, so that when awards are made they stand in evidence that the best have won—these factors are what make their impress. The next important factor that the aspirant to poultry judgship must learn is a willingness to talk and aid breeders whenever and wherever an opportunity presents itself. Courteous treatment wins favor more readily than a crusty temper. Every year's

experience adds to the knowledge of the breeder; so also should it add to a judge's ability to move carefully and conscientiously apply the Standard. The majority of exhibitors want to know the whys and wherefores of a decision. It should be their privilege to know. There is a lack of confidence in certain sections regarding the score card. For

satisfaction brings about disruption. Self-confidence comes with experience. This experience, backed by a knowledge well grounded on the law as laid down in the Standard, makes others willing to abide by it. There are more men of education taking up the work of poultry culture every year. The show room is where the best is brought

Views on farm of Harmen Bradshaw, Lebanon, Ind., breeder of S. C. White Leghorns. No. 1 is first-prize cockerel, Chicago, 1906. No. 2, breeding house and yards. No. 3 shows pen which produced the winners at last winter's shows. No. 4, cokerel house.

this the judges are to blame where they tolerate suggestions how and what to cut for defects. Where a judge allows this it will put him at sea and his work becomes wabbly. His first judgment, nine times out of ten, is best to rely on. If he makes a mistake that might work an injustice to another he must have the moral courage to make a correction, no matter whom it hurts. Without the confidence of an association dis-

together. It is the arena for the exhibitor and a judge's privilege and duty to treat with fairness all that comes to him to pass on. This makes it necessary that he have knowledge, patience, a sober mind, accuracy in applying his knowledge, patience with the intolerant—clear, cool and positive, as only a sober mind can be. With these qualities and a few others he may be accepted as about right.

CAPONS AND CAPONIZING.

By Charles J. Pilling, Lansdowne, Pa.

What Are Capons?

Capons are aptly termed the "finest chicken meat in the world," for there is nothing growing feathers their equal or superior. A capou is neither rooster nor hen—it is nothing else than a capon. After removing the testicles from the cockerel its nature becomes entirely changed. They take on a more rapid growth, are more tame, awkward in carriage and always exceedingly lazy, take on a very heavy and beautiful plumage, the comb and wattles cease to grow, the spurs do not develop as in the cockerel, and being cast off by both rooster and hen he soon shows a fondness for the society of little chicks.

Best Time to Caponize.

Fowls hatched any time of the year make fine capons; no ill results follow the operation at any time in the year. The bird should be from two to three months old (not over six months) and weigh not less than a pound to a pound and a half. The size is equally as important as the age. April, May, June, July, August, September and October are the months generally taken for caponizing, for the reason that spring chickens arrive at the proper age and weight during these months, also because cockerels caponized then arrive at the

G. P. PILLING & SON, PHILA.
Making Incision.

proper age and weight for market during the months of November, December, January, February, March, April and May, at which time there is the greatest demand for them in the cities and highest prices secured.

Profit in Capons.

Caponize the chicks and you have at once laid the foundation for a handsome profit in a short time to come. Outside of the cardinal points of profit, the simplicity of the operation (when proper instruments are used) recommends itself to everyone. A boy ten years old can readily perform the operation, and anyone can soon become an expert.

To the poultry raiser we would say we know of no source of profit bringing larger returns for the outlay than raising capons, the profit in a great majority of cases being 100 per cent. The question of assured profit is an all-convincing argument in any line and preeminently so to the poultryman whose losses are added to from various unlooked-for sources.

Directions for Caponizing.

From twenty-four to thirty hours before performing the operation, select such cockerels as you intend to caponize (these should be from two to four months old) confining them in a clean, airy coop or room without either food or water. The best time to confine them is at early morning as their long fast will then end about noon of the following day,

at which time the operation is performed. Should the day be cloudy or wet do not caponize them, but let the operation go until you have a bright and fair day. It is necessary that you have all the light possible in the matter. Now after slightly wetting the spot proceed to turn down the feathers from the upper part of the last two ribs and just in front of the thigh joint. Pull the flesh on the

G. P. PILLING & SON, PHILA.
Inserting Spreader.

side down toward the hip, and when the operation is finished the cut between the ribs will be entirely closed by the skin going back to its place.

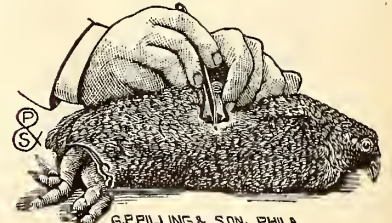

Proper Instruments.

We have laid considerable stress upon having proper instruments in caponizing, and the more we read of the literary effusions appearing in the numerous papers today touching caponizing instruments the more need we feel there is to caution the inexperienced ones. While it is not cruel to caponize, it is inhuman to butcher or to cause unnecessary pain.

Caponizing Is Not Cruel.

A large number of persons hesitate in caponizing, feeling it to be cruel to the bird. To these we wish to bring our experiences in this matter proving to the contrary. This is a greatly mistaken notion, and the operation bestows an unlimited amount of kindness on the bird, even if there were no other considerations or return. The writer has seen cockerels fly at one another time and again, tearing flesh and feathers with beak and cutting with spurs. Before the combatauts could be separated there has been a disfigured comb, probably a blinded eye and a generally cut-up bird. This is the essence of cruelty.

After caponizing, the habits of the bird are entirely changed. Their disposition is quiet and peaceable, habits mild and tending to a solitary life and perfectly contented wherever situated. They no longer chase about the farm spoiling for a fight and running off flesh as fast

G. P. PILLING & SON, PHILA.
Removing Testicles.

as put on. They no longer arouse the whole neighborhood from morning until night with their incessant crowing, but, on the contrary, become models of good dispositions, leading a quiet life that will surely bring large returns to the raiser. An operation that does away with so much inborn evil cannot be considered cruel.

KINDNESS TO FOWL.

Both by reading and experience I have come to realize how much there is to be learned in the management of poultry; and though one may have the care of only a small number of fowls there may be many experiences of interest and opportunities for learning their wants and ways. It is gratifying to notice the improvement in methods of poultry keeping and to see the comfortable pens provided for poultry, when we contrast the conditions of today with those of the olden time when the hens were given quarters in the barn and fed on a little corn, making their nests where they chose in the haymows. Yet no unkindness was intended toward the fowl and their yield of eggs often went far toward the purchase of groceries. But changes for the better have taken place and fowls are provided better shelter, with a variety of food and more intelligently cared for. While poultry books are valuable aids in the care of poultry, giving us helpful suggestions and readily affording us needful information in cases of emergency; we must make use of our own faculties and study the ways and likings of our fowls; and closer acquaintance with them will lead to a better understanding of their wants, nor do I think kindness to the feathered creatures will be misplaced or abused. It seems to me much better to have the fowl come flocking around me than to have them shy, and certainly it is more convenient when there is occasion to catch one.

Among my Rhode Island Reds I have a pullet, which, when small, would get out of the pen with others, and while, at nightfall I would be able to corner and capture the others of the flock with but little trouble, I succeeded in so gaining the confidence of this little creature that she would readily come to me to be put in the pen. She has ever since remained tame, will come and eat from my hand, and sometimes guests in my home are interested in seeing "Little Pet" brought in for a few minutes to give an exhibition of her crumb picking act. A White Plymouth Rock cockerel and three pullets of last season I have made pets of, and they will come to meet me in the most friendly manner and readily eat from my hand. It is indeed a pleasure to watch the gentle creatures enjoying the sunshine when given their liberty on a pleasant day.

We are all liable to make mistakes, and it is well to guard against mistaken kindness; perhaps, in many cases, fowls, and many times young chickens, are sacrificed through injudicious feeding; no pains are thought too great nor can too much be done for the fowl so highly prized. It is well to remember to feed them no more than they will eat with avidity.

Naturally fowls are active and when given a feed which they eat eagerly, and when fed corn or grain if they have to scratch for it in litter, it is no doubt better for their health, and this treatment is a true kindness to them rather than the mistaken kindness of overfeeding.

An important thing in poultry keeping is to afford all the protection in our power against enemies, and these are many. Cats, rats, skunks, hawks and foxes, and I know not what others, seem to be ever ready to destroy; and

it is indeed a tax on the ingenuity of man to guard against these enemies; but, fortunately, we now have wire fence, which is a great help. The hen is a careful mother. I have known one to sacrifice her own life in conflict with a hawk to save her chickens; let us be kind to the hens and chickens and make their runs as safe as possible from all marauders. As a learner and not as a teacher I have written. But I feel confident that kindness to fowls will meet good returns; that our pleasure in poultry keeping will be greater and our profits therefrom increased.

John A. Guilford.

Old Orchard, Maine.

FEEDING.

The poultry keepers "golden rule" should be "neither too much nor too little." Feed your hens at an appointed time and give your fowl as much as they will pick up clean. A little grain now and then through the day will spoil a fowl's digestion, while if a large quantity is thrown down it gets soiled with excrement and causes disease.

A small handful of grain to each bird is sufficient; scatter it around so they will have to scratch for it. Two meals a day is sufficient if the fowl can forage at large and pick up worms, insects and seraps, but three meals a day for fowls kept in confinement.

All poultry like a change of diet and should not be fed day after day on the same food. Fowls will eat nearly anything and they thrive better when their tastes are consulted a little.

Their staple foods are wheat, barley, oats, and in the fall corn and buckwheat should be added, but they are too heating in warm weather. A little hemp is useful in moulting season.

I find that cooked vegetables, cabbage leaves and other green foods furnish a light noon meal.

Potatoes mashed and mixed with meal makes a very nutritious breakfast; potato parings, which are usually thrown away, when boiled are capital for fowls.

Poultry like fruit of all kinds, but decayed and overripe fruit must be avoided, as it induces diarrhoea. You should give your poultry worms and insects when available, but a little meat, such as liver or lights, cut very small, may be substituted, especially now, when eggs are desired.

Hens should always have lime or old mortar in order to furnish material with which to form the egg shell. I find hens like raw egg shells better, but it conduces egg eating unless fed with seraps. Water should be plentifully supplied, fresh and pure, and in the summer time refill the pan frequently. Place all your pans where no snow or the sun's rays can fall on them, as sun heated and snow chilled is injurious.

In collecting table seraps avoid tea leaves, lemon peel, fish bones, meat bones (unless crushed), hard dry crusts of bread, raw egg shells, uncooked potato parings and cabbage stumps, as these are indigestibles.

Fish bones are especially dangerous. I have known cases of "crop-bound" caused by fowl swallowing a piece of fish bone.

A. P. Baxendale.

449 No. Main street, Brockton, Mass., "The Albert."

Amatite needs no coating or painting of any kind, during its entire existence. It contains in itself the elements of resistance to water and air. Instead of merely presenting a smooth surface to receive a coat of paint (which is then the real roof), Amatite itself is the protective material. It needs no further painting or coating of any kind, or at any time. The mineral surface takes the place of that. No trouble, no expense, nothing to think about after the roof is laid.

Write for a sample to the nearest office of the **Barrett Manufacturing Company**, Amatite Department, New York, Chicago, Cleveland, Allegheny, Kansas City, St. Louis, Minneapolis, Philadelphia, New Orleans and Cincinnati.

**Incubator and Brooder Supplies
FIXTURES AND REPAIRS.**

System in Poultry Practice BY JAMES SHACKLETON.

30 Chapters, 147 Pages, One Dollar, Postpaid.

April 10, 1906. Sales to this date in 1906 are vastly greater than in previous years, and are more evenly spread all over the English speaking world. Everybody having fowls need the book, and people who get it tell that to all their friends and acquaintances. It is the only book in any language that does, or ever did, take poultry keeping out of blind guessing into exact methods and constant improvement. Circular free.

The book and American Poultry Journal for one year for \$1.10 new or renewal.

JAMES SHACKLETON, Box A 12, Milburn, New Jersey

WHITE WYANDOTTES!

Rigg's White Wyandottes have been line-bred since 1897—bred for Wyandotte form and color and for egg production.

Shape and color characteristics have been firmly fixed. These Wyandottes are the low-down, blocky kind, in weight exceeding somewhat standard requirements.

Unapproached in size, style and finish, they have never failed to win the coveted prizes in the strongest competition, east and west. Every bird line-bred and pedigreed and sold on approval. Eggs: \$3 per sitting; two for \$5; three for \$7.

HOUDANS

Line-bred since 1874. Acknowledged standard of Houdan excellence in America.

Eggs: \$3 per setting; two for \$5; three for \$7.

THOS. F. RIGG IOWA FALLS, IOWA

Black Minorcas Rose and Single Comb-Britton's Black Minorcas are the best. Write your wants Circular free. **W. W. BRITTON, The Glean Minorca Yards, Box W, Elgin, Ill.**

HADAWAY'S PARTRIDGE WYANDOTTES

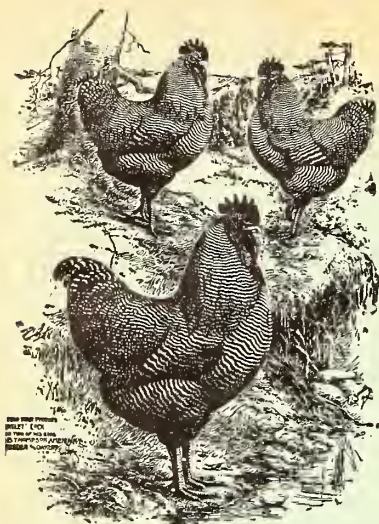

The past season at New York, Boston and Brockton, won nine first prizes out of a possible fifteen, 3 championship cups, five championship gold mounted shields, and numerous other prizes. In order to make room for growing chicks will sell fine breeders and exhibition specimens at half price. Blood tells; buy the best. Send for catalogue.

J. B. HADAWAY 696 N. Main St., Brockton Mass.

1st cockerel at Boston. 1906

Poultrymen, paint the nests, roosts and dropping boards with Pratts Liquid Lice Killer. That's what you need to use now.

A "Ringlet" 1st Prize New York Cock and two of his Sons.

"RINGLETS" Soar Still Higher.

At the Imperial Show of the Nation
Madison Square Garden, New York

E. B. THOMPSON'S BARRED P. ROCKS

Stamped their superiority in the most decisive manner, winning again the Superb Challenge Trophy value \$100, for best cock, cockerel, hen and pullet. This is the third time the "Ringlets" have won the grandest of all trophies, giving them now absolute and final ownership. In this "COLOSSAL CONFLICT" the "Ringlets" lifted the great National Sweepstakes Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. My Barred Rocks won double the number of silver cups and special prizes of any competitor, including the sweepstakes special in gold for best Plymouth Rock on exhibition male or female any variety.

The "RINGLET" World's Record of four years in succession at New York is a page of history. The "RINGLET" World's Record of first on exhibition pen at this great show, three years in succession, is the undisputed champion.

The "Ringlet" clean sweep 1st, 2d, 3d, 4th and 5th prizes on pullets has never been approached at Madison Sq. Garden, and stands alone and unequalled

The "Ringlets" have won at New York—exhibited by me personally—a grand total of 191 prizes. 48 of these are 1sts and specials, being more than double the number of 1st and special prizes won by any competitor in the history of the show.

GRAND STOCK FOR SALE

In any number. Rare bargains in yearling breeders in lots of a trio or 100. Show birds fit to win in the fastest company—600 choice breeding cockerels. Richly illustrated 36-page catalogue on application. It is full of original illustrations of New York winners from life. Eggs from finest exhibition matings. One setting \$5, two settings \$9, three settings \$12, four settings \$15. Address

E. B. THOMPSON, Lock Box 510, Amenia, Dutchess Co., N. Y.

HAWKINS'

ROYAL BLUE STRAIN

Young's Strain S. C. W. Leghorns

I HAVE NO OTHER BREEDS

My strain again for the sixth consecutive year shows its superiority by winning more prizes at Madison Square Garden, N. Y., in the strongest competition ever known, than all others combined: including 17 specials, and again winning the Nat'l S. C. W. Leghorn silver cup. Two weeks later I almost duplicated my wonderful win of last year at Boston by winning 9 prizes on 9 entries against the most prominent breeders of the east. My winnings for 1906, at the world's 2 greatest shows, as follows: NEW YORK: Cocks, 1st, 3d, 4th; cks., 1st, 4th; hens, 2d; pul., 1st, 2d, 5th; pen, 4th. BOSTON: Cocks, 1st, 2d; cks., 1st, 2d; hens, 1st, 4th; pul., 2d, 3d; pen, 1st. This record has never been equaled by any other Leghorn breeder in America. Stock and eggs for sale at all times. 1906 mating list free. D. W. Young, Highland, N. Y. and Ridgewood, N. J. Address

D. W. YOUNG :: RIDGEWOOD, N. J.

JAS. KUGLER, Jr. R. F. D. 1, Frenchtown, N. J.

BIG SUCCESS WITH HOGS.

SOME farmers are more successful with hogs than others. The man that only gets 8 lbs of pork out of a bushel of corn fed to hogs makes only half as much as the man that gets 18 lbs.

The American Swineherd is a specialist and the best authority on the hog industry. The greatest success results from concentrating all efforts upon one line.

Three-fourths of the farmers waste a third of their feed given to hogs because they do not understand the best methods.

The American Swineherd teaches you how to be successful.

How to secure the greatest profits. How to feed, to double the growth and gain over usual methods.

How to keep your hogs healthy, as only healthy ones are profitable.

How to get 18 pounds of pork out of a bushel of corn, and 20 pounds out of a bushel of wheat, fed to hogs.

Prof. Kennedy of the Iowa Agricultural College says: "Your paper is a leader on feeding."

One man writes: "A single instructive lesson in the Handbook on Hog Hygiene saved me \$50 in feeding a bunch of 40 hogs 60 days over the ordinary way of feeding."

It is the best investment I ever made. Every owner of hogs should take advantage of this special offer.

Send us \$1 for two years' subscription to the American Swineherd and it will entitle you to a free copy of the Hand Book on "Hog Hygiene," with trade secrets, recipes, valuable information, etc. If the offer is accepted in ten days we will send you in addition "The Pig Feeders' Manual," worth a \$1 itself.

This equips you for a successful hog business.

STEINMESCH'S EARLY BREAKFAST Mash

Every authority on poultry recommends a morning mash for poultry, especially during the fall and winter months. Our Mash is made up of the very choicest Winter Wheat Bran, and Middlings, Crushed Oats, Linseed Meal, Bone and Beef Meal, Clover Meal, Charcoal, etc. Nothing better for growing and adult fowls; will push the young stock to quick maturity, will help adults through the moult, insuring health and vigor for both. The greatest egg producer ever offered.

A Forcing Feed..A Fattening Feed..A Conditioning Feed
 ALL IN ONE—simply regulate the quantity fed
 PRICE, \$2.00 for 100 lbs. \$1.25 for 50 lbs.

BUFF ORPINGTONS

1906 CHICAGO WINNERS

We won every first and 2d prize in both Single and Rose Comb; silver cup for display. Our world's Fair record, St. Louis, was seven out of ten firsts. Our catalogue gives our other winnings.

J. M. WILLIAMS & CO.

Box B, No. Adams, Michigan

*World's Foremost
White Wyandottes*

won more prizes the past 10 years at leading shows of America than any other strain. Remember, all stock purchased can be returned at my expense if not satisfactory. Have furnished winners for many of the leading shows and have a most promising lot this season.
J. H. JACKSON, Lock Box 88, Hudson, Mass.

THE 1906 RELIABLE

In all the wide field of incubator making, you'll find no better hatcher than this year's Reliable Incubator. Scientifically made, simple in operation, perfectly even temperature, no draughts, no hot spots; USES ONE-THIRD LESS OIL, has double heating system and AUTOMATIC regulation, and is sold on an absolute MONEY-BACK GUARANTEE. No other incubator offered on such liberal terms. W. H. MacLanahan, Columbus, Miss., says, "The machine bought from you gave perfect satisfaction."—Free catalog explains all. Eggs for hatching shipped anywhere.

NORTHUP'S MINORCAS SINGLE AND ROSE COMB

Eggs from 90 grand pens guaranteed to hatch regardless of distance. 23-page catalogue free. 68-page book, "Minorcas, All varieties," history, matting, fitting for show, etc. Fully illustrated, 25 cents postpaid. My S. C. Minorcas have never lost a special for large size, and have won more than 3,000 prizes for my customers in strong competition. My R. C. Black Minorcas have won more 1st and 2d prizes than all competitors combined at Chicago, Boston, Philadelphia and New York.

GEO. H. NORTHUP, Raceville, Washington Co., N. Y., R. F. D. 6

Petersen's Houdans

Reign Supreme at the Nation's Greatest Shows

My record has never been approached by any breeder.
BOSTON, 1900. In world famous competition, 135 Houdans exhibited, I won 1st cock, 1st and 2d pullet.
BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.
BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials.
BOSTON, 1905. We won every important prize. 1st and 2d cock, 1st, 2d, 3d cockerels, 1st, 2d and 4th hen, 1st, 2d, 3d and 5th pullets; \$100 champion challenge cup for best male; American Houdan Club Cup for best cock, hen, cockerel and pullet. All shape and color ribbons; gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition.
ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdan's.
 Also highest honors at Madison Square Garden, Philadelphia, Pan-American Hagerstown, Toronto. No matter where you want to exhibit, no matter what the competition, I can furnish the winners. Photographs on application. Eggs in season.

PLEASANT HILL POULTRY FARM : Box A, Pana, Illinois

\$7.90 FOR OUR 100 EGG HATCHING WONDER INCUBATOR

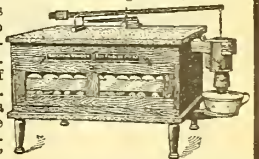

Delivered, in U. S. east of Rockies, or with Brooder, making complete outfit only \$11.50

The 100-egg Hatching Wonder has triple case, large aluminum-coated tank, double-jacketed heater and our Victor Regulator. The lamp has a big bowl, wide burner and stout metal chimney. Ventilated egg chamber with double glass in door contains movable egg-tray with nrrsry below. The machine is 26 inches long, 21 inches wide and 14 inches high. In addition to this substantially built incubator, all delivered at any railroad station east of the Rocky Mountains, we have a modern lamp and automatic regulator. The \$7.90 price includes a thermometer, funnel and book of instructions, telling how to get the best results from the incubator, all delivered at any railroad station east of the Rocky Mountains.

If the Brooder is ordered with the Incubator the price of both is only \$11.50 delivered anywhere in U. S. east of the Rockies. The price of the Incubator delivered west of the Rockies is \$9.50 and the Incubator and Brooder together \$14.75.

Better write us today; we will ship promptly on receipt of your order. Money returned if not as represented.

If you want a larger machine write for our 80-page "Victor Book"

Will You Let Us Place a Tolman Range in Your Home on ONE YEAR FREE TRIAL?

We want to prove to you, at our risk, in your own home, without any obligation on your part whatever, that Tolman Ranges are absolute range perfection and that one in your home will cut the fuel bill and housework in half. Let us explain to you how we sell direct to you from our factory at

ACTUAL WHOLESALE PRICES

and thus save you \$15 to \$40 profits of middlemen and dealers. We give with every range a TEN YEAR GUARANTEE, which is as broad and binding as we can make it.

WE CLAIM THAT TOLMAN RANGES ARE THE ONLY RANGES MADE WHICH POSSESS ALL THESE FINE POINTS OF MERITORIOUS PERFECTION.

Isn't This What You Want When You Buy a Stove or a Range?

1. The range that will bake, heat and endure.
2. The range that is REALLY economical.
3. The range which turns the gases and smoke into BAKING HEAT.
4. The range that has an OLD ESTABLISHED REPUTABLE manufacturer behind it.
5. The range that will LAST THE LONGEST.

The riveting, the mounting, the finishing are all done BY HAND, by skilled workmen, under the personal direction of our PRESIDENT. We guarantee that there is not a better range made today, and few AS GOOD.

Is it not worth a minute's time and a postal card to send for our catalog, which tells all about this liberal special offer. Our catalog shows over 100 different styles and sizes of Wood Cook Stoves, Heating Stoves, Steel Ranges, etc. We are making many other liberal offers for the summer months. Are you interested? If so,

No. 9.

ORIGIN AND HISTORY OF THE BREEDS

The Ornamental Bantams Represent the Highest Type of the Fanciers' Skill in Plumage Color Production Ever Given to the World—The Sebright Bantams the Most Beautifully Garbed of all Domestic Fowls—Originated by Sir John Sebright, of England, Nearly One Hundred Years Ago—Brahmas, Cochins and Other Breeds of Standard Fowls in Miniature—American Fanciers Prominent in This Work.

Paper No. 16—Ornamental Bantams.

Written by Thos. F. Riggs, Associate Editor American Poultry Journal.

The following varieties of ornamental Bantams are recognized by the American Standard of Perfection:

- Sebrights, golden and silver.
- Rose-Comb, black and white.
- Booted White.
- Brahmas, light and dark.
- Cochins, buff, partridge, white and black.
- Japanese, black-tailed, white, black.
- Polish, bearded white, buff laced, non-bearded.
- Standard weights are as follows, in ounces:
 - Sebrights—Cock, 26; cockerel, 22; hen, 22; pullet, 20.
 - Disqualifying weights: Cock, 30; cockerel, 26; hen, 26; pullet, 24.
 - Rose-Combs—Cock, 26; cockerel, 22; hen, 22; pullet, 20.
 - Disqualifying weights: Cock, 28; cockerel, 24; hen, 24; pullet, 22.
 - Booted—Cock, 26; cockerel, 22; hen, 22; pullet, 20.
 - Disqualifying weights: Cock, 28; cockerel, 24; hen, 24; pullet, 22.
 - Brahmas—Cock, 30; cockerel, 26; hen, 26; pullet, 24.
 - Disqualifying weights: Cock, 34; cockerel, 30; hen, 30; pullet, 28.
 - Cochins—Cock, 30; cockerel, 26; hen, 26; pullet, 24.
 - Disqualifying weights: Cock, 34; cockerel, 30; hen, 30; pullet, 28.
 - Japanese—Cock, 26; cockerel, 22; hen, 22; pullet, 20.
 - Disqualifying weights.
 - Polish—Cock, 26; cockerel, 22; hen, 22; pullet, 20.
 - Disqualifying weights.

It can be said in all truth that the most beautiful, exquisite, delicate and refined plumage color production given to any fowl is that in which the fancier has garbed the Silver and Golden Sebrights. Sir John Sebright, of England, originated these varieties of Bantams. Mr. Harrison Weir, in writing of the work of this eminent fancier, says: "It is seventy years (now more than eighty years—T. F. R.) since Sir John Sebright conceived the idea of producing a bantam, hen-tailed, without the pointed hackle, back or saddle feathers, which should have instead those of an obovate form, gold color, with a complete black lacing throughout."

The following from the Poultry Chronicle, London, 1854, tells the story:

"The last object that Sir John Sebright aimed at was to improve the Bantam to a clear, blue-legged (shanked), pen-

ciled (laced) bird, with proud, erect carriage. To effect this Sir John about five and forty years ago obtained a buff-colored Bantam hen (possibly that then known as the Nankin) at Norwich. She was very small, indeed, with clear slate-colored legs. On the same journey he purchased a cockerel rather inclined to red in color, destitute of sickle feathers, with a heu-like hackle (this bird, an aged friend of mine told me, was a henny game, for he knew the person from whom it was bought; this, no doubt, had the permanent effect of making the Sebright hen-tailed), and (at Watford) a small hen resembling a Golden Hamburg. After this by drafting for five or six years he gained the very penciled (laced) feathers he so anxiously sought by in-and-in breeding for about twenty years. He afterward had a white cockerel from the zoological gardens from which he developed the Silvers."

Color of male and female Golden Sebright bantam: Surface throughout rich golden yellow, each feather evenly and distinctly laced all around with a narrow edging of glossy black. Undercolor, dark slate; comb, rose.

Color of male and female Silver Sebright Bantam: Surface throughout silvery white, each feather evenly and distinctly laced all around with a narrow edging of glossy black. Undercolor, slate; comb rose.

The Rose-comb Black Bantam is a Black Hamburg in miniature—in fact, they are identical with the Standard Hamburg except in size.

The Rose-comb White Bantam are White Hamburgs in miniature.

The Booted White Bantam is one of the oldest breeds of domestic fowls. It was originated in England. The wings are long and extend out behind the body. Both shanks and toes are heavily feathered, the hock plumage full and extended; comb, single; plumage color, white throughout.

The Light Brahma Bantam was originated by Mr. Entwisle, of England. They are a Light Brahma in miniature. Mr. D. Lincoln Orr, of New York, the foremost breeder and most successful exhibitor of these fowls in America, voices the sentiment of the whole fraternity when he says that the Standard weights of the breed are too low, and that it is practically impossible for the most skilful breeder to produce stock the majority of which will be within Standard weight, and at the same time possess the required vigor of the breed. Mr. Orr and his co-workers will ask the American Poultry Association to raise the Standard weights on cock and hen, at least.

Dark Brahma Bantams were produced in America and England, the breeders on either side working independently. Later Mr. Entwisle, of England, and Mr. Newton Adams, of America, engaged in a united effort to improve the stock by crossing their two strains. The world's best specimens carry the blood of these two strains.

The original Buff Cochin Bantams came from China about 1860 and were known as Pekin Bantams. They were a deep dark shade of cinnamon, the male being reddish-brown. The shanks were green. By constant care in selection the race was improved until now the Buff Cochin Bantam is a duplicate in color and form of the Standard Buff Cochin.

The Partridge Cochin Bantams were given to the world by Mr. Entwisle, of England, the first production being the result of a cross between the black and buff varieties. T. F. McGrew, of New York, in 1895 imported a pair from England. He used them in connection with small Standard-bred Cochins of the Partridge variety, and thus laid the founda-

tion upon which rests the best specimens of the variety now found in America—or the world, for that matter.

The Black Cochin Bantams also originated in England. American fanciers took hold of them and by judicious mating, often with Standard Black Cochins of small size, soon established the variety as to size and shape and coloring.

A. P. Groves, of Pennsylvania, claims to have originated the White Cochin Bantams. They were sports of his Standard-bred White Cochins. They are now well established.

We would naturally expect the Japanese Bantams to have a marked individuality. This is the case. They are small; the body and tail are upright and carried so as to touch one another; The wings are large and carried low; the legs are very short.

Wings and tail of the black-tailed variety are black and white; body white. The White Japanese Bantam is white in plumage color throughout; the black variety is solid black.

The Bearded White Polish Bantam is a miniature production of the Standard Polish fowl of the same color.

are good table fowls, and as egg-producers the equal of the Plymouth Rocks.

The Javas.

The controversy as to the origin of the Black Java still remains unclosed. Mr. J. Y. Bicknell, for years a breeder of this fowl and who is conceded to be authority in all pertaining to the breed, has very decided opinion as to the origin of these fowls. In 1882 he wrote as follows to the American Farmer:

“About thirty years ago (1852) a family living in Missouri came into possession of three eggs from the yard of a celebrated doctor, who delighted in the ownership of a few fine fowls called Javas. The doctor would neither sell the progeny nor consent to having it grace the yards of his neighbors. His coachman ‘borrowed’ the three eggs above mentioned, and from them the American Javas have all descended. They were first brought into Dutchess county, New York, about twenty-five years ago (1857) by a family removing thence from Missouri. About fifteen years since (1867) they were brought into Orleans county, New York,

AMERICAN POULTRY ASSOCIATION REORGANIZATION COMMITTEE.

Reading from left to right, upper row: George D. Holden, Grant M. Curtis, F. D. Baerman, Theo. Hewes, H. B. Donovan, J. H. Sledd, Thomas F. Rigg, Lester Tompkins, D. Lincoln Orr. Lower row: H. V. Crawford, Fred L. Kimmey, Mr. Kimmeys' grandson, and T. E. Orr.

The Buff Laced Polish Bantam carries the same plumage color as does the Standard Buff Laced Polish fowl.

The non-bearded varieties are the same as the Standard varieties, but carry no beard.

Paper No. 17—Dominiques and Javas.

The Rose-comb American Dominique is the oldest distinctively American race of fowls. When the Dominique and Java blood was united, and as a result the Barred Plymouth Rock produced, the offspring took the place formerly held in popular esteem by the parents, and in a few years this parent stock became very scarce.

It is held by some writers that the American Dominique, which is known to have existed in America since civilization began, is the result of a cross between Hamburgs and stock held commonly by the early settlers in New York, the Hamburgs having been brought here by the Dutch. This is a reasonable theory, for the Dominique has the rose comb of the Hamburg, and the short shanks and long, flowing tail as well.

The Dominique has the plumage of the Barred Plymouth Rock. Standard weights: Cock, 8½ pounds; cockerel, 7½ pounds; hen, 6½ pounds; pullet, 5½ pounds.

A few breeders have kept this noble old race intact. They

by the same family, where the birds have been bred in large numbers ever since.”

Most breeds of fowls are made of crosses. When one type is decided upon we must keep clear of foreign blood to retain that type. All crossing, whether by one or more breeders, must be from the original stock. This is just what has been done with the Black Javas. Their manifest vitality strikes us forcibly at first sight. Until three or four years since they have been bred in comparative obscurity, yet have been noted for their large size, quick maturity, hardiness and beauty. Their color is a rich, lustrous black, with a beautiful green shading; comb, single; shanks, black, approaching willow, free from feathers; the bottom of the feet is always yellow, corresponding with the color of the skin.

At the outset let it be understood that Javas are not of foreign origin, but are an American fowl and deserve an American name. Our American Javas have characteristics of their own, differing from any other known breed, clearly demonstrating that they are indebted to no other recognized variety for their existence.

The Mottled Java is a counterpart of the Black, except that its plumage is mottled white and black. It is the result of a cross of a Black Java and a large white hen, the cross having been made in 1872.

Standard weights of the Javas: Cock, 9½ pounds; cockerel, 8 pounds; hen, 7½ pounds; pullet, 6½ pounds.

Paper No. 18—Silkies, Sultans and Frizzles.

The Silkies are the novelties in poultrydom. They are unlike any other breed or race of fowls. Their plumage is of a peculiar formation, being webless and of a silky texture. In build they are short, with feathered legs and broad backs. The crest should be compact and full, falling backward behind comb. The comb is strawberry in form, nearly round, having a lumpy appearance. Tail small, main feathers having a silky fringe-like appearance. Face and comb color, dark purple. Wattles and earlobes, purple or liver color. Plumage, pure white.

Silkies were originally found in China, Japan and India.

The Sultans.

The Sultan fowl is a native of Turkey. In 1877 Geo. O. Brown, of Maryland, received a number of these fowls direct from Turkey. These were the first of the kind brought to America. Describing these specimens Mr. Brown says:

"The two cocks were stylish, broad-breasted and broad-backed. They had large, globular crests, composed of short, broad feathers, and the hens had the same. The tails were large, the legs and the toes being heavily feathered. They had prominent hock feathering."

The Sultan in appearance is a Booted Polish. Their full crest, mnff and beard, together with vulture-hocks and profuse shank and toe feathering, gives them a peculiar and odd appearance.

Of late years some breeders have resorted to the use of Polish blood, it being most difficult to secure fresh blood of the pure Sultans.

The Frizzles.

Another very odd and peculiar appearing fowl are the Frizzles. The feathers curve backward and upward at the ends. In plumage color the Standard of Perfection allows black, white, red or bay, but the color in a specimen must be solid. The comb must be single.

The Frizzles can boast of no royal blood. They have been known by all ages of which we have account. But few, comparatively, are bred in this country. They are about the size of the Wyandotte, and are excellent egg producers and market fowls.

THE EGG—FOR HATCHING TRADE.

A Veteran Breeder Tells of His Experience, and States Some Truths Which Should Be Considered by Buyer and Seller Alike—Where the Responsibility of the Breeder Ceases—The Duty of the Buyer.

Written for American Poultry Journal by J. W. Morse, Raymond, N. H.

I am going to give some few experiences I have had buying and selling eggs for hatching. Had I time to look over my files of letters covering the time from 1872 to 1906, a period of thirty-six years, I am sure I could do much better. I have carefully preserved all the letters I have ever received, kicks and praise alike, and while I love to overhaul the good letters, I believe I always avoid reading the kicks. I have often wished that some of our big fanciers when publishing testimonials would publish the kicks. Some of the kicks are so very unreasonable and unbusiness-like; but every fancier, big and little, if he sells eggs for hatching is sure to get the kicks. Like the rain, kicks fall on the just and the unjust alike.

Some time since—either the last of April or first of May—I shipped a setting of eggs to a customer in Indiana, and received word from him stating that the box came badly smashed and out of fifteen eggs nine were broken, and asking me what I proposed doing about it. Not one word of fault was found with box or packing—in fact, he stated that the box must have been very roughly used. Now, here was a case where the express company was plainly at fault. It had taken this box of eggs under a printed contract, agreeing to transport this box of eggs to my customer in Indiana, charging its own price—probably a pretty stiff price—for the service. The men in the express company's service are supposed to be careful and painstaking, yet they did not use care in transporting this box of valuable eggs. Whose fault was it? I claim that it was clearly the express company's fault; and yet my customer held me responsible. Well knowing from past experience just how futile it might be to prove to my customer that it was not my duty to make good for the expressman's carelessness, and believing that the easiest way is always the best, I sent him nine more eggs to take the place of those broken in

transit, and received an abusive, insulting letter because I did not send fifteen eggs. Now, if we look this trade over we will see that my customer and I were perfect strangers. He first trusted me by placing his order with me, accompanied by the cash. I fulfilled my part really when I packed in a suitable box fifteen fresh eggs of the variety he ordered, delivered in good condition to the express company, properly directed. Just there my duty to my customer ended. For the rough handling of the box and breaking of eggs my customer should have looked to the express company. I certainly was not responsible; but when I sent nine eggs to take the place of the nine broken I tried to show my customer that I intended treating him square and right. But when he wrote me an insulting and abusive letter it only led me to doubt his word and to think that he might have lied to me to get more eggs.

Last month I received an order from a customer in Maryland. The eggs did not hatch well and, after quite a correspondence, I found that he had put them in a second-hand incubator, said incubator having been bought and sold several times and always had proved a failure. I wrote him

H. A. Emmel, Mars, Pa., originator "Gibraltar Victor" strain Light Brahmas, S. C. Buff Orpingtons and S. C. Brown Leghorns, and one of his crack Light Brahma cocks, "Butler Chief," winner of first prize at Butler, Pa., 1905. (T. E. Orr, judge, said he was the best Light Brahma cock (with but one exception) that he saw or handled in all his travels during the show season of 1904-1905), and winner of first prize at Harrisburg, Pa., 1906. This photo was taken in June at close of breeding season and does not give the bird justice, as his plumage was considerably damaged, he having headed the breeding pen. An offer of \$50 was refused for this bird.

that if he would sell or throw the old incubator away and purchase one of some reliable make, I would duplicate his order at half price.

About the funniest thing in the egg line happened in 1899 and is too good to be lost. I give my customer's letter in full, as it explains itself:

"Last spring I sent you an order for four settings of Golden Wyandotte eggs. I received the eggs. They came through in good order. I set them and got forty-three chicks. Was very careful of them and raised every one. So far, so good. Now is where the fun comes in. When they got big enough so I could tell the sex I found I had forty cockerels and three pullets. Don't you think that rather strange? I wanted to get a little flock of them. They are so handsome; I like to see them around. Will you sell

me six pullets, and at what price? Did not believe it possible to tell the sex of an egg before setting."

Now, in reading the above letter you will notice two things—the hatch was good, but I presume no man living can convince my correspondent but that I can pick out eggs that will hatch males or females. The idea is absurd; it is simply an impossibility. No man living or ever lived has the power to determine the sex of an egg.

This reminds me that when I was a boy it was believed by old farmers in my section that the long eggs hatched roosters and the round eggs pullets, and I remember my father sending me to a neighbor for a setting of eggs and telling me to be sure to get eggs that would hatch pullets. But it is simply an impossibility. Many fanciers would give good money to possess knowledge which would enable them to select eggs that would hatch pullets or cockerels just as they wanted them. I certainly know I would give a good bunch of money. It would simplify the business. The broiler raiser then would simply call for eggs to produce cockerels and the egg raiser for pullet eggs. It cannot be done any more than we can tell the sex of the child before it is born. But

subjected to the tender mercies of one or more express companies. If we let biddie alone and let her steal her nest under some shady juniper bush, she generally brings off a good brood, hatching every egg nearly always. But you should note that they are nearly always her own eggs and have not been handled or disturbed. The least we handle eggs intended for hatching, the better. Nor can it be truthfully claimed that a hen setting on the ground will always do better than anywhere else. I have known hens to steal their nests away up on the hay under the eaves and successfully compete with the biddie who stole her's on the ground under the shade of the juniper bush. In fact, if let alone the hen understands her business; it is only when man meddles and steals her eggs and dictates to her as to where and how she can set and what eggs she shall have and how many that she becomes very unreliable.

Then very many eggs are purchased every season to be set in incubators, oftentimes to be run by those who have had no experience and who set them in all sorts of places, from cellar to attic, and watch and fuss over them, and when the day of judgment comes—the twenty-first day—fly at the

A flock of four months old laying pullets on the Bonnie Brae Poultry Farm, New Rochelle, N. Y.

it shows how quickly a customer is apt to blame the breeder for any mishaps. Yet I suppose it is human nature. The hatching of eggs is really a lottery. Sometimes hens that really seem to be good setters are not. They have not the vitality. I have often had two hens setting side by side—one would hatch nearly every egg, the other none or two or three chicks. Yet I cannot bear down too hard on those who every year place orders for eggs with the fanciers. Many of them are of moderate means and cannot afford the price which fine stock commands, for very few good specimens of any of our popular varieties sell for less than \$5 each, and when eggs can be bought for \$3 to \$5 per fifteen the new beginner—and oftentimes not so new, either—is disposed to try his luck. If he does get his eggs through the hands of the express company in good shape and gets six to ten chicks, he is lucky and his investment pays well, for if he raises a fine trio or more he is well repaid if he is reasonable. But oftentimes he expects too much. I once had a customer write me a fault-finding letter because he only got thirteen chicks from fifteen eggs. He thought he should have got fifteen chicks; that every egg should have hatched. Needless to say, he was entirely green. Yet I remember that when I was green I always had great expectations when purchasing so-called fancy eggs, and commenced counting my chickens even before the eggs arrived. But, indeed, we can't do that even at home; never when eggs have been

unfortunate breeder who has foolishly (if he knew) sold him the eggs.

On the whole the egg business is very much complicated by ignorance and self-conceit and perhaps some dishonesty. But after thirty-six years' experience buying and selling eggs I am convinced that the ranks of fancy poultrymen contains as large a per cent of honest, fair men as in any other line of business, and I honestly believe most of them would be pleased to have every egg they sell hatch. Why not? It would be a great ad and bring business, and business brings money.

A great many buy eggs, a setting or two, expecting to raise the prize-winners that will beat them all at Boston, New York and other big shows. If these misguided people would only be reasonable and first endeavor to win honors at local and smaller shows, work up, stick to it like grim death; if they could only know how many years the old veterans had been struggling and striving for those blue ribbons, how much money those winners cost, the whole inside history of the birds, how long they had been line bred, what capital, work and pains, I think they would be surprised. But it looks so dead easy. It is really only to be done by patient, steady work or money. Let us buyers and sellers of fancy eggs more fully and honestly understand each other, and we shall get along better. Let's both be reasonable—men and women.

A LITTLE LIGHT BRAHMA HISTORY.

Some Strong Arguments in Favor of This Grand Old Variety—An Appeal to Breeders of This Variety to Wake Up and Sound the Praises of Their Chosen Breed—Early Experience With the Light Brahma.

Written for American Poultry Journal by C. P. Nettleton, Shelton, Conn.

Why is it that with all the Lt. Brahma breeders in the country (there must be close to 1,000, as I have the names of more than 500) that so very few of them take the time to write an article on that grand old breed of fowls, the Lt. Brahma?

There must be some of them that are good at writing, well read and informed on this wonderful breed of fowls that could write out an article that would do them justice.

If they have not been held up as a pure breed of fowls in America, as long as any breed we have today, they certainly are not far from it, as the most of our present day breeds have come on the stage since the Lt. Brahma as the original fowls that produced the present day Lt. Brahmas.

We all know the original Brahmapootras were not exactly like the present day Brahma.

Breeding and selections have made them what they are today, the aristocrat of the poultry yard.

Wake up, Lt. Brahma breeders, and let us hear you sing their praises from the Atlantic to the Pacific. All other breeds of fowls, or at least most of them, are having their praises sung far and near by breeders who were not born when the Lt. Brahmas first came into notice.

Had it not been for the Lt. Brahma blood that has helped to make some of these new breeds of the present, we never would have had them.

It is the strong blood of the Brahma that gave these new breeds the vigor and stamina they possess.

There is no breed today that will furnish as large a per cent of exhibition birds as the Lt. Brahma.

None better for the amateur breeder who wants a few birds as a pastime than the Lt. Brahma.

None—no, not one single breed—that will stand confinement and do as well as the Lt. Brahma.

None that are better foragers than the Lt. Brahma if given their liberty.

None that will produce as many pounds of meat for food consumed as the Brahma.

Not one breed that makes a rooster that can compare with a well fed Brahma pullet.

None that lays eggs that will weigh as many ounces per dozen as the Brahma.

None that stands extreme cold better than the Brahma.

Their early origin is somewhat a matter of doubt, still it is a well known fact that the original first fowls that produced the present day Brahma were brought off a vessel in New York harbor by a Mr. Knox, of Hartford, Conn., in 1847, and taken to Hartford for Nelson H. Chamberlain, who was related to Mr. Knox.

It was claimed at the time that the vessel from which these birds were taken was from India, but this statement cannot be verified. At that time no one was interested enough to look up their birthplace.

This pair of birds were bred by Mr. Chamberlain in 1848 and produced some very light and some dark birds, also some showing a buff color.

I can recall in my early experience with Brahmas some of the females showing a tendency to buff color; also an occasional single comb.

I well remember that in the early seventies I had one pair chicks in my yard that were single-comb. I let them grow to maturity and exhibited them that year at our state poultry show, held in Hartford. Of course I won first prize there being no competition.

They were the last single-comb Brahmas I ever saw.

Some of the earlier poultry premium lists gave prizes for both pea and single-comb Brahmas.

Some of the early Lt. Brahma breeders advertised that they bred only the pea-comb Brahmas.

Mr. C. C. Plaisted, of Hartford, Conn., bred these fowls many years ago, and I am indebted to him for some of the early history of the Brahmas.

The early fowls of this variety were called Brahmapootra. Dr. John C. Bennett gave them the name, as it was claimed these fowls came from the vicinity of the Bramepootra river, a river in India emptying into the Bay of Bengal.

After looking over several of the older works on fowls, notably T. B. Miners, I am of the opinion that these fowls, the Lt. Brahmas, did come from the section of country in India on the Brahmepootra river. This spelling of the name

of this river is given as correct by Hon. Geo. Thompson, of England, a noted traveler and historian of that time.

We have to take the statements of people living at that time as facts in regard to the origin of this breed of fowls as they saw them at that time.

Some of these statements we can verify as facts, and must take the statements of such men of that time as Chas. Knox, Nelson H. Chamberlain, Virgil Cornish, Dr. Bennett and others as facts, because they were all men of integrity, and after reading their writings of that time we can come to but one conclusion in regard to the origin of the Lt. Brahma—that is, that the Chamberlain birds were the original first pair from which all the present day Lt. Brahmas sprung. The Chamberlain strain of birds were bred by different parties in New England at that time, notably Dr. John C. Bennett, F. D. Hatch and V. Cornish, and others found their way into the southern and western states, also to England. The first Lt. Brahmas sent to England were from the Dr. Bennett stock. They were selected by C. C. Plaisted in 1852 and sent to Mrs. Hosier Williams Eaton, Mascot, near Shrewsburg, England.

N. C. Gwyne, M. D., of England, writes Dr. Bennett as follows:

“Dear Sir—I have been so charmed with accounts sent me by Mrs. Hosier W. Eaton of her Brahmepootra fowls, and with your description in the Northern Farmer, which Mrs. Eaton received from you and sent to me, that I am resolved if possible to possess myself of a pair of these birds.”

Then Dr. Gwyne says he has sent a Bank of England note, equal to \$24, for a pair of these chicks, and if that is not enough he will send more, but he must have a pair of these chicks.

Mr. C. C. Plaisted, who selected these fowls sent to Mrs. H. W. Eaton from the Bennett stock, still lives in Hartford, Conn., although well along in years.

Breeders of New England more than any other section are entitled to the credit of keeping the Brahma blood pure.

Among those of earlier times still living who bred the Lt. Brahma are Messrs. Felch, Williams, Plaisted, Flecher and others, while probably the most noted breeder of Lt. Brahmas among those who have passed away stood E. C. Corney. Mr. Corney did much for the Lt. Brahma while he lived.

There is one phase of the Lt. Brahma of the past that I have often looked for in articles on Lt. Brahma history, but failed to see any mention of, that is the Chas. Lees stock, of Philadelphia, Pa.

In 1868, Christmas week, there was held the first poultry show in Philadelphia. In company with Mr. F. Sterling, of Bridgeport, Conn., an amateur breeder like myself of Lt. Brahmas, I visited the show. I also showed a few birds, but no Brahmas. There were a few other New England breeders and exhibitors there, being unable to recall their names at present, but no Lt. Brahmas were exhibited from New England. There were over 200 Lt. Brahmas entered, all being from the vicinity of Pennsylvania.

Mr. Chas. Lees, a resident of Philadelphia, exhibited some Lt. Brahmas and carried off the bulk of the prizes, to which he was certainly entitled. Although his birds were of a different type from the New England Brahmas, I admired them much, as did others.

That show brought Mr. Lees' birds into notice, and I am sure several New England breeders bought birds from him, thinking to improve their stock.

The Lees birds were a little coarser, larger frame and well-spread tails.

The New England Brahmas at that time did not carry what we call today a spread-tail, but a tail more like a capital letter A.

Mr. Lees had only a small yard for his Brahmas, but he raised some very fine birds, and I know other New England breeders besides myself who bought stock of Mr. Lees at a good figure.

The Lees birds, crossed with my own, increased the size of my stock, many of the cock birds weighing fourteen pounds and some more. The Lees birds as shown at Philadelphia at that time had a more massive appearance—broad saddle, full deep breast, good length of back and full, well-spread tails, clear white where they should be white. There is no doubt in my mind that the Lt. Brahma cock found in Fulton Market, New York, in the early seventies and bred by Mr. Estes, who then sold their progeny to Mr. T. Williams, was the Lees strain of Lt. Brahmas.

The stock of the Fulton Market bird was very large, and I have always been of the opinion he was a Lees bird.

If I remember right, I think the Fulton Market dealer claimed he was imported, which I very much doubted.

PRIZE ARTICLE DEPARTMENT

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communication about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. All articles must be written on one side of the paper only. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

The first prize in the contest this month has been awarded Henry J. Weiss, Milwaukee, Wis., and the second prize to L. H. Phinney, Orange, Mass.

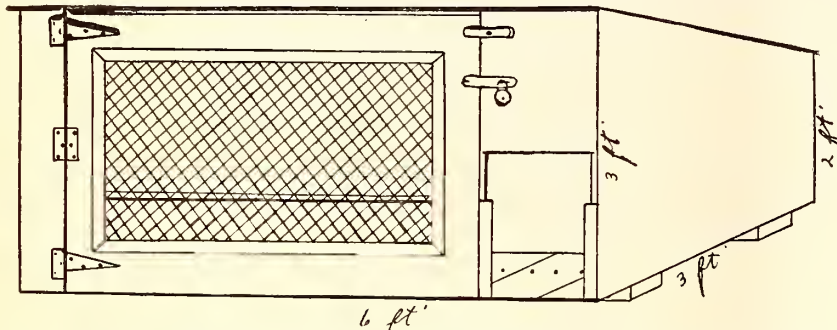

A LOW PRICED POULTRY HOUSE AND WINTER FEEDING.

Let me say at the outset that after reading the elaborate descriptions of poultry houses in the various poultry journals, I am almost ashamed to send in the account of the house I want to describe to you.

It may be, however, that among the readers of this Journal there are some who wish to know how to construct a practical, low-price poultry house, and this article is written for their benefit.

The house which I am about to describe is 12 feet long, 7 feet wide, 7 feet high in front and 5 feet high in rear. It is designed to accommodate fifty brooder chicks, twenty head of laying stock, or a breeding pen of one male and fifteen females.

The house rests on cedar posts or old railroad ties, put in the ground below the frost line and sawed off eight inches above the surface. There are six of these posts, three on each side, and where old railroad ties are used the whole

cost of the foundation is 20 cents. On these ties are laid two main sills and four cross sills, each 2x4, spruce. The plates are 2x4 stuff, but the other timbers in the frame—posts and rafters—are 2x3.

After the building is framed the floor is laid. This is double, and between the upper and lower floor tar paper is used. The covering to the frame is then put on, and over the boards tar paper is tacked. This to be covered with Neponset red paper. All the boards in the frame are hemlock.

When the rafters are put on they are sawed off flush with the plate, and when the sides are boarded the boards are brought up so that they cover the ends of the rafters and also the edge of the roofing boards, making an absolute tight joint. Tar paper is then laid over the roof boards, and a double course of shingles laid along the lower edge of the roof. [It also can be tinned and painted with a coat of tar.] The object of this course of shingles is to throw the water from the roof away from the house. The roof is then covered with tar paper, carefully put on and allowed to project a few inches at the end. This flap will be eventually turned in and held in place by the finish.

The house is supposed to face the south. There are two windows, one on the south side and one on the east side. There is a door on the south side and a panel in the rear which can be raised and lowered at will to leave the hens go into the yard. After the house is finished it receives two coats of good paint, which preserves the wood and makes it last much longer.

Interior Construction.

The interior of the house is of the simplest construction. I have learned from experience to have as little furniture

in a house as possible, and that many of the things advertised are not at all needed. The house as I have said faces the south. The roosts, instead of being in the rear, are in the west end, away from all possibility of draughts. The roost platform is two and a half feet above the floor, and is constructed of dry matched pine boards, which I get from old dry goods boxes. The roost platform is three feet wide, which enables me to place my perches one foot apart, and one foot from the back and one foot from the edge of the platform. The nests are cracker boxes, which you can get from the grocer at about 5 cents apiece, and are under the roost platform. For bath tub there is nothing better than a sugar barrel sawed off one inch above the first body hoop, and filled with sifted ashes. The water dish is kept on a little shelf at the left of the main door, and I have found nothing better than a small sized beer keg sawed in half for a water trough. Hanging against the wall is a self-feeding box for grit, charcoal and oyster shells, which is never allowed to become empty.

This house is used for scratching, dusting, feeding and for all other purposes of the hen, therefore it must be cleaned every day. Make it a practice to clean it every morning, clean off the droppings board and to renew the litter frequently. In the scratching time keep cut straw—screenings which can be obtained from the mill for about 15 cents per bag—or marsh hay cut real fine, which can be obtained for about \$3 per ton, is very good to have the hens scratch in. At other times sand or sifted ashes are very good.

Material to Be Used.

- 500 feet hemlock boards.
- 60 feet matched pine for doors, trimmings, etc.
- 100 feet frame windows.
- 500 feet tar paper (heavy).
- 100 feet paroid.
- Locks and hinges for each door.

Feeding in Winter.

Early in the morning, water, slightly warmed in coldest weather. [Remember that if anything fed too warm, the fowl is liable to get the pip.] A very sparing ration of whole grain is then scattered in litter on floor, wheat, cracked corn, buckwheat and oats about equal parts, not half as much as they would eat. Next comes green food of some kind, pumpkins, cabbages, apples or mangel wurzel beets.

We feed any of these, but prefer the mangels, as also do the birds. These are simply cut in halves and laid on the floor or in troughs.

The birds are thus kept busy scratching for grain in the litter, picking at the green food and running to the water pan. This exercise warms them more effectually and is more beneficial, we believe, than is a warm mash fed in the morning.

About eleven o'clock we feed a warm mash composed of ground oats, wheat bran and corn meal, about a half ounce a day prepared meat for each fowl and half this quantity old process oil meal, all mixed thoroughly while dry. About two quarts clover, cut in one-eighth inch lengths, for each one hundred hens is put in pails, boiling water turned on and then covered over for a few minutes to steam. The clover and hot water is then turned in the mash box and skimmed milk added. The whole mash is then mixed with a shovel until all is moistened, never sloppy, and fed in troughs; all the birds will eat up quickly. Every few days we use boiled and mashed vegetables in the mash instead of cut clover. Along in the middle of the afternoon we feed the mixed whole grain again in litter, all we think they can eat, and if a little is left the birds go to work for it early in the morning.

Grit, oyster shell and charcoal is before them at all times. Hoping the above will fulfill your requirements, I am,
Milwaukee, Wis. HENRY J. WEISS.

FALL WORK AND CARE.

Another season has arrived, bringing its work with it, and much of it is work that cannot be neglected. A little inattention now, perhaps in some seemingly unimportant detail, may be the cause of serious trouble later.

The early hatched chicks are now nearly or quite as large as the adult birds, and require as much room, especially at night. Do not allow them to crowd into some small coop, where they sleep packed like sardines, unless you are breeding for wry tails and crooked backs. If there are no vacant pens in the poultry house in which they may

be placed, large dry goods or piano boxes may be used to good advantage, and with a little labor may be made into serviceable and durable roosting coops.

Many advise making these coops without floors, but in my opinion a coop with a low roost and no floor is a standing invitation to skunks and other "varmint" to dine at our expense. In the accompanying drawing is shown a coop of this type, which provides plenty of room and fresh air and is absolutely varmint proof.

Floor is nailed on 2x4 pieces running lengthwise of coop, thus raising floor from ground, and preventing dampness. The floor fits inside coop, end walls resting on ends of 2x4's. Roost is placed eight or ten inches from floor, and should not be less than three inches in width. Do not place roost near wall of coop, as wry tails are often caused in this way. Owing to the large door in front this coop is easily accessible for cleaning or whitewashing. A drop curtain of cloth or canvas may be used to cover front in stormy weather.

Coop shown in drawing is six feet in length by three in width, three feet high in front and two feet in rear, but of course the size depends upon the boxes and other material at hand.

Do not delay whitewashing the interior of hen house later than this month. Select a warm day for the work, and apply as early in the day as possible, so that fowls will not be compelled to sleep in a damp house. The wash should be applied hot, and if mites are present add one-half ounce of crude carbolic acid, well shaken up with one pint hot water to each bucket of wash, or fumigate house with burning sulphur. Apply a coat of whitewash to the interior of all coops and brooders before storing them for the winter.

Give the pullets and hens as much range as possible. If you have a piece of land from which potatoes or other vegetables have been taken put a roosting coop and flock of fowls in it. If necessary enclose it with a temporary fence of wire netting tacked to light posts. The weed seeds and grubs eaten by the birds will not trouble you next year.

Give the breeding cockerels a range by themselves if possible, and feed a ration that will cause growth of bone and muscle. The adult birds are now coming through the molt, and therefore will stand heavier feeding without putting on flesh, as surplus food will be used to produce feathers. Give sunflower seed or other food of an oily nature two or three times a week; green cut bone or meat scrap can also be used to good advantage. Give a little powdered sulphur and salt in mash once or twice a week to both young and old stock.

It is a good idea to examine the birds occasionally at night. If any are found on the roost with empty crop feed heavier the next night; if empty crops are still found look for symptoms of disease.

Watch the birds closely. Learn to note actions and condition and feed accordingly.

And remember that the winter egg yield will depend greatly upon the care—or the lack of it—given the birds at this season.

L. H. PHINNEY.

Orange, Mass.

HEAT IN BROODERS.

A Comparison Between the Hen and the Brooder—Are the Chicks Given Enough Heat in the Brooder.

Written for American Poultry Journal by Mrs. Frances Tallon, South Haven, Mich

This subject of heat in brooders is one not entirely understood. I think that we are a little afraid of heat. We do not use as much in our brooders as the hen gives them. Of course in a brooder the air in the whole room is warm. One night as I shut up the chicks for the night—a warm summer night—in the brooders, I put in screens to keep out rats, and there was no artificial heat, thinking perhaps that even then they would be too warm on a hot night. I went from them to some hens that are doing service as brooders and found every chick that could get under the hen snugly tucked under—and they say a hen registers 103. Some chicks are quite large, but all seem to want the mother heat at night. I am watching this and find that as long as they stay with the hen she hovers them. Now, do we chill our brooder chicks? Would it not be best while they do not sweat to follow the "hen" warmth and give our brooder chicks a little heat while they are in it. We are considered a little "off" if we have heat in our brooders

after it gets warm weather. They say, oh! your chicks will be too tender. How about the chicks at 103. After this housing by the hen was so forcibly brought to my mind I put the chicks in the scratching department, it being one of those grand ones that has a pipe there with less heat than the hover part, then lit the lamp, turning it low, so that it gave them heat; even then I do not think it was like the heat of a hen. Little chicks take cold easily, then your chick dies; no use to doctor a little chick—I mean for amateurs—that has a cold; in fact, about the time you notice the cold it's dead. I can't help but compare the work between brooders and hens with chicks. The chicks in a brooder having no one to teach them to the contrary, and thinking that their attendant is the "whole thing," are ready to go in and be shut up for the night. But go to the hens with chicks; you drive her in one side of her coop; but the time you get there she has run out and over to the other side; then she sets up an alarm and the chicks run like an owl was about to swoop down and devour them. When she has given you this kind of exercise for five or ten minutes you get her in. If there are two or three more to go through the same performance, by that time you declare you will never set another hen, tired, hot and—yes, cross. Often she will run into every coop but her own; contrary, yes. I suppose it's because she is a female that it comes so natural. I know that incubators and brooders save many steps that have to be taken with hens. But we will all persist in setting a hen or two. Sometimes

WHITE PLYMOUTH ROCK HEN.

This hen has made the phenomenal laying record of 63 eggs in 63 consecutive days. Bred and owned by Victor D. Caneday, Taylor's Falls, Minn.

some choice eggs are laid before our incubator comes off and we put them under a hen. Some say, oh! we have so much better luck with hens that we use both. It's the condition of the eggs, not the hens.

There is quite a good deal said this year about eggs not being fertile, and a good many questions asked. No one seems to know why. I should say it was because of the open winter that hens and pullets laid too many eggs before hatching time. Our eggs were fertile, but some were hard to hatch at the last, took one, and two, even three days overtime; chicks all right when they came. I believe a solid cold winter is the best all around for poultry; less roup, fewer lice and the chickens are better contented; better results in general; perhaps not so many winter eggs, therefore for the egg producer alone not so satisfactory, but for the breeder much better. We do not want our breeding stock exhausting themselves before incubating time. We want all of the vitality for the young stock. Our hens and pullets should not lay until time to start the incubators. But if it's an open winter we cannot prevent it. Hens to lay good, strong, fertile eggs for breeding should have three months' rest. Pullets should be full grown and strong. We use care about our breeding of other stock, why not of poultry? We are asked every day, do your hens lay; if we say no, then the breed is put down as no good. Every one is pushing their hens for winter eggs when they expect to sell eggs for breeding. The winter layers should be kept separate and no eggs sold from them for early hatching, until they have a rest, a recruit. Fowls seem less understood than any other stock. Why?

GUARANTEED SUBSCRIBERS.

With each subscriber to our publication we positively guarantee, while his subscription lasts, that no advertisement is allowed in our columns unless we believe that any subscriber can safely do business with the advertiser, and we agree to make good any loss which any such subscriber may sustain by trusting any such advertiser who may prove to be a deliberate swindler; but we do not undertake to adjust trifling differences between subscribers and responsible advertisers. To take advantage of this guarantee, written complaint must be made to the publisher within two weeks from the date of any unsatisfactory transaction, with proofs of the swindle and loss, and within two months from the date when the advertisement appeared, and the subscriber must prove that in writing to the advertiser he said, "I saw your advertisement in the American Poultry Journal."

The Worth of Laying Tests.

Down in Australia the laying competitions are running full blast, the feed being turned in one end and the eggs coming from the other. Australia is developing some heavy laying birds and strains of birds and we can well begin to initiate her at this time. We have our poultry industry built on a sand foundation of beautiful feathers, and these are luxuries to the great class of fanciers who buy, who drop the hobby at the first signs of Prosperity's wane. Australia seems to be building her foundation solidly. Egg laying hens, anti-eggless hens, will always be worth hard cash and can lay eggs and lots of them in close times as well as good. They will always be worth money as breeding birds because like the heavy butter making cow they will be able to pay a handsome profit as well as something for their keep. Going on down in Australia

at this writing are something like a dozen laying competitions and pedigree breeding is at its zenith. Real, live, two hundred-egg hens are plenty and the value of each hen is increasing as an egg producer. There are fifty breeders in Australia who are receiving as much for their eggs per setting from their heavy layers as our best American breeders do for their birds' form and feathers. The point sticks out like a sore thumb and if you like you may hang your hat on it.

That Judges' Association.

We note that D. T. Heimlich has again broken into print and asks the judges who want to effect a judges' association to meet at the Illinois state fair, September 29 to October 5. Mr. Heimlich points out the value of Springfield, Ill., as being centrally located and having a goodly number of choice birds on exhibition annually. We are indeed pleased to know that Mr. Heimlich is making a strenuous effort to effect an organization of the poultry judges which will get them together to make a beginning. Mr. Heimlich says that without organization the judges may expect the just and unjust criticism that is annually brought forth from many quarters. We hardly see how criticism will be avoided if the judges organize. The work of each judge is what will be criticised and popular opinion will decide which of those who officiate inside the duster each winter is the more expert. Mr. Heimlich is right when he says that the intelligence of the average exhibitor is up-to-date.

R. R. Slocum Appointed.

The appointment of R. R. Slocum to be poultryman of the Department of Agriculture in the Bureau of Animal Industry has been made under Civil Service rules. Eighty-eight applicants for the position took the examinations that were held in the various places. It was anticipated that a good many hundred more than the number that took the examination would present themselves before the examining committee. The salary of \$1,200 per year was probably not attractive enough to draw a large entry. Mr. Slocum is a graduate of the Cornell University and for a good length of time has been an assistant of Professor Rice who is at the head of the poultry department of the Cornell school. It looks as if the Bureau of Animal Industry had awakened to the importance of the poultry business and were going to appoint a number of experts to take charge of the governmental end of the work.

Auburn Specialties.

News about the coming Auburn, N. Y., show is not scarce even in these the dog days of the season. Now that it has been decided that the old guard of poultrydom, the American Poultry Association, will meet in Auburn, all the henists and breeders in the woods about the city are doing what they can to help the show. Auburn doings are interesting doings to the poultry world at large when the A. P. A. is a guest of honor. One item that interests the readers of fancy journals concerns the entry of M. S. Gardner, fancier, chickenist, breeder and judge, into the arena as an all round judge who will offer his services to the

various associations. Mr. Gardner has been humorously dubbed "Madison Square" Gardner because his initials fit it and because of his fondness for that show itself.

Big Flocks of Turkeys.

A short time ago over eleven hundred turkeys were driven to market in a single flock in Texas. This goes to prove that Texas is something of a poultry state after all. But one turkey of the eleven hundred was lost during the long drive and this one was a gobbler that flew off the only high bridge on the road. Of course he landed in the river and was drowned. One old-time poultryman says that he once saw three thousand turkeys in a single flock being driven along one of our national roads and that following them were wagons enough to carry six hundred geese. At evening this big flock would be driven into a well fenced field and fed on corn when they would go to roost in the trees. The geese were unloaded and permitted to graze to their great joy. By the time this huge flock reached market they were in good shape for dressing.

Hawaiian Poultry Matters.

From the Fanciers' Monthly we learn that poultry keeping is on the go in Hawaii. One of Honolulu's poultry enthusiasts has written a book on tropical poultry culture. Mr. Seabury is the name of the author. He has been prominent in poultry matters there for years past and is one of the pillars in the new poultry association. Many birds are being sent to the Hawaiian islands from Australia, California and other parts of the United States and it is not far in the future when American poultry journals will have to devote some space to their show reports and news. Several successful shows are being held there each winter and we would advise poultry judges who have a fondness for the briny deep voyage to strike up an acquaintance with the leading Hawaiian associations.

About Poultrywomen.

The Australian woman does not seem to be very far behind her American cousin in things poultry. One can count the names of a dozen women who are using big display space in Australian poultry journals and who are receiving from \$3 to \$10 per setting for eggs for hatching. Not only this but many women are breeders of heavy laying strains of fowls and have entries in the big government laying contests. We believe that the Nebraska woman, Mrs. Hansell, started the ball rolling for women to enter laying contests, as she exported to Australia many a heavy laying Brown Leghorn to enter the contests. Many a woman is the cause of her husband's success in the showroom—but we never hear of her! She's behind the game, however, and is a power in herself, too.

German Poultry Education.

In a recent issue of the American Fancier, published down in little old New York, we note that there is a school of poultry culture in Germany that has attained considerable distinction. It is located near Dusseldorf, wherever that

is. This school is a subsidized school which not only gives poultry instruction to a goodly number of beginners but which operates a poultry farm and makes experiments as to the practical value of the various breeds, feeds, and methods of management. We understand that they are using trap-nests and other up-to-date appliances and impedimenta. A goodly number of American breeds are being used on this farm and we may have more to say about it in the near future as the school is about to issue a bulletin of its work.

Another Victim.

Chicken thieves should hang! So think those who lose a few good birds. The latest recruit to the ranks of the thieves' victims is D. Lincoln Orr, and on a large poster he is now circulating he offers \$50 reward for the arrest and conviction of the parties who raided his hen-roosts and stole a large bunch of his best chicks on the night of July 24. He reports all his early hatched Wyandotte cockerels stolen—a deep loss and one that cannot be replaced. Mr. Orr is doing all he can to recover these birds and find the guilty ones. As a rule, thieves are glad to pass by the coops of the fanciers as toemarks often excite suspicion of the buyers. Every fancier can in some way mark his chicks and this with open air coops padlocked and a couple of noisy dogs generally keep the thieves off.

Be More Explicit.

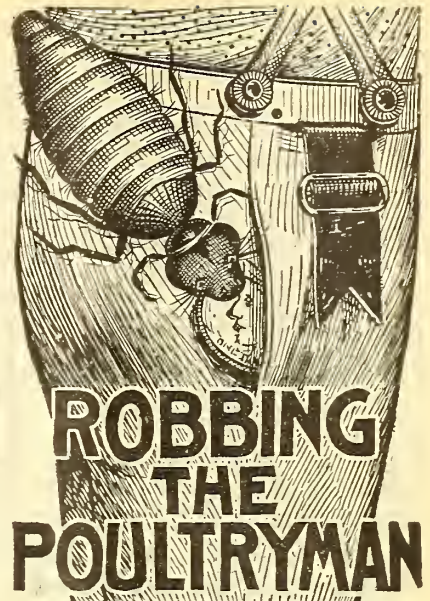

I suppose that people who write for the poultry papers do so for the benefit of their less informed brethren and especially for beginners. Now if this is the case why can't they be a little more explicit. For example, one writer says, "To raise little chicks get some good prepared chick food," etc. Now how is a beginner to know which is good and which is poor. Why could he not have said I have had good success with this or that make? That would not be saying there was no other kind that was good; but the beginner would not be afraid to invest in the kind that had been tried and found to be all right. Of course, the editor of a paper cannot be expected to discriminate against his advertisers by recommending any one make. A well known Colorado breeder in speaking of lice says, "I get the strongest liquid lice killer and add one half kerosene and thoroughly spray my henhouses at least once a month." Why could he not have told what kind of lice killer he used. About a year ago I saw an article about whitewashing poultry

houses. The writer says, "Get a good spray pump and go over your henhouses at least four times a year." So I looked over the ads in the poultry papers and finally ordered one that was warranted to do good work, price \$2.50. When it came I put in a half a day on a small house and got it partly covered, while I was completely covered. I then ordered another, price \$3.00. This proved to be a little better than the first, but not at all satisfactory. I told my trouble to a local hardware man and he said he could get me a pump for \$4.50 that he would guarantee to do the work. I told him to order it. When it came I prepared some whitewash and found it worked fine, but it came near destroying my domestic happiness. It happened in this way: I had just got nicely to work when my wife came out dressed for making some calls, to see how the new pump worked and incidentally to ask me how I liked her new bonnet. Now just as she got to the door of the henhouse a small piece of unslacked lime got in the nozzle and completely shut off the flow; I put on all the force I could but it would not start. Now, I did not know that there was a valve in the bottom of the pump that held the pressure in the hose till it was released through the nozzle so I innocently pointed it directly at my wife and asked her to insert a hairpin in the end and remove the obstruction. She said she was afraid she would soil her gloves but I assured her there was absolutely no danger. Words fail to describe the scene that followed. The hairpin had barely entered the aperture when the whitewash gushed out with a force that would have carried it over a two-story barn and as my wife was directly in front of it she got the full benefit. Her dress, which was of some soft dark brown material looked like polka dot calico and the hat—well, I have never seen it from that day to this. Fortunately she wore glasses, which in a measure, protected her eyes, but luckily for me enough got in them to blind her for a few minutes and by the time she could see I had my face drawn down to a funeral soberness. but it was no use for she believed then and I think she does to this day that I did it on purpose. For some reason she postponed her calls and when we are talking over the poultry business the subject of whitewashing is not mentioned. Now, the man that wrote that article was in no way responsible for this incident, or rather accident, but if he had told what make of pump to buy what a lot of expense and trouble it would have saved me. As I was saying this pump proved entirely satisfactory. I can in three hours go over my ten houses in good shape. It is made by the Carr Mfg. Co., of Kansas City, Mo. I have been struggling for four years to get started in the poultry business, have learned a great deal from poultry papers, especially the American Poultry Journal, but how much easier it would have been for me if the writers had not left so much to be guessed at.

Please be more explicit!
Pueblo, Colo. S. W. BARTLETT.

Sell all cull and surplus cockerels as broilers, which bring a good price by July. We sold ours at 28 cents a pound.

Separate the large chicks from the smaller ones and give the little fellows a chance to catch up.

Every louse on your poultry is a robber. The longer you let them work the more money you are out of pocket. Stop them with Lambert's Death to Lice—the old favorite louse and vermin killer. Saves time because it does the work quickly; saves money because it saves fowls, saves you from bankruptcy because it turns loss into profit.

Get Death to Lice

It never fails to do the work. It is made in powder form for sprinkling, as a liquid for spraying, or as an ointment for head lice on young chicks. Lambert's Death to Lice is certain, safe and sure—a louse killer, and a profit maker.

WHAT HOBBS THINKS OF IT.
Ellenburgh Center, N. Y. March 7, 1905.
Mr. D. J. Lambert,
Aponaug, R. I.

Dear Sir:
Your Death to Lice is worth its weight in gold to any man who keeps poultry. It is fine for setting hens and the chickens grow strong.
(Signed) WILL HOBBS.

See that the name and picture of "Lambert" is on the cans. Ask your dealer for Lambert's Death to Lice. 100 oz. package \$1.00. Sample mailed postpaid, 10c.

REPORT ON REORGANIZATION.

The Committee of Fourteen, Appointed at Cincinnati to Revise the Constitution and By-Laws of the American Poultry Association, Gives the Matter Careful and Thorough Consideration—The Finding of the Committee Is for a Complete Reorganization of the Association—All Officers to be Elected by the Membership by Mail—Annual Meetings to be Held in August Each Year—Executive Board Reduced to Fifteen Members—The Association to Have a Permanent Home—Annual Meetings Held in Same Place Three Years Consecutively—A Commissioner to Conduct All Elections.

Written by Thos. F. Rigg, Associate Editor American Poultry Journal.

Members to elect all officers by mail.
Annual meetings to be held in August in same place for three consecutive years. Members to decide place of meeting by ballot by mail.

Membership to consist of the following classes: Life, Associate, Club, Society and Branch.

No branch can embrace a territory greater than six states, nor can it be smaller than one state or province.

Executive board reduced from 120 to 15 members, to be elected by members by ballot by mail.

Judges to be licensed. Association shall

of the committee two members from whom great help was expected were unable to be present, namely, William F. Whiting, of Massachusetts, and Henry Berrar, of California.

Twenty-one formal sessions of the committee were held, at Mount Clemens, Mich., Aug. 7 to 15, some of these extending well toward midnight, and at every hour when the general committee was not in session various sub-commit-

Colony House on the Golden Kennels and Poultry Farm, Chatham, Ont., Canada.

revoke license where judge is incompetent or dishonest.

Secretary-treasurer to receive a salary of \$1,500 a year. Must give his undivided time and attention to the duties of the office.

The American Poultry Association, at its annual meeting in Cincinnati last January, appointed a committee consisting of fourteen members, whose duty was to revise the constitution and by-laws of the association. This committee consisted of the following named well and favorably known gentlemen:

Fred L. Kimmey, Illinois, chairman; George D. Holden, Minnesota; Grant M. Curtis, New York; T. E. Orr, Pennsylvania; N. V. Crawford, New Jersey; H. B. Donavan, Canada; Henry Berrar, California; J. H. Sledd, Tennessee; Wm. F. Whiting, Massachusetts; D. Lincoln Orr, New York; Theodore Hewes, Indiana; Thos. F. Rigg, Iowa; Lester F. Tompkins, Massachusetts; F. D. Baerman, New Jersey.

Very much to the regret of the others

tees were hard at work shaping up material for general discussion.

Sub-committees were appointed as follows:

Branch Organizations—Rigg, Curtis, Hewes, Donavan, Crawford, T. E. Orr.

Incorporation—Baerman, Crawford, Kimmey.

Standard Revision—T. E. Orr, Rigg, Tompkins.

Rules Governing Shows—Crawford, Hewes, Curtis.

Duties of Officers—Baerman, Holden, D. L. Orr, Holden, Kimmey.

New Breeds—T. E. Orr, Tompkins, Rigg.

Licensing of Judges—Hewes, Rigg, Curtis, Tompkins, Kimmey.

Duties of Secretary-Treasurer—Crawford, Tompkins, Hewes.

Duties of Executive Board—Baerman, Holden, Sledd.

Rules and Regulations—Crawford, Curtis, Hewes.

Duties of Finance Committee—Kim-mey, Curtis.

Election of Officers—Curtis, Kimmey, Baerman.

Duties of the President—Curtis, D. L. Orr, Rigg, Donovan.

Fred L. Kimmey, chairman, presided ably and fairly at all sessions of the committee.

RECOMMEND NOT TO INCORPORATE.

For more than twenty years there has been more or less talk regarding the scheme of incorporation by the American Poultry Association. The membership has been divided in opinion as to the wisdom of the step, but it has been evident that at all times a majority was in favor of incorporation. Several legal opinions have been rendered, but these opinions have been at variance, and not at all satisfactory. The report of the committee, consisting of F. D. Baerman, Fred L. Kimmey and H. V. Crawford, as submitted to the committee is as follows:

(1) An unincorporated association cannot be incorporated so as to absolve the association and transfer its property and rights to the new corporation without the unanimous consent of its members, no mere majority having the right to work such dissolution and incorporate.

The association cannot be deprived of its right to the name by which it has been known, excepting upon the same unanimous consent, and a court of equity will restrain the use of such name without such consent.

(2) Upon incorporating, if it were possible to secure the necessary consent of the members, it would be difficult to keep out undesirable members, and after their admission practically impossible to expel members; whereas in the unincorporated association the association is the absolute judge of the qualifications of members and may provide in the constitution for expulsion of any member for any cause that may be stated therein, or in any manner therein provided.

One authority holds that a member of a corporation who has a pecuniary interest in the corporation may not be expelled except for some heinous offense making him unfit for the society of honest men, and that even then he must first have been convicted by the law of the land.

(3) The utter confusion prevailing among the various state laws regarding corporations makes it almost impossible to know what rules to follow in the various jurisdictions; whereas the unincorporated society is usually amenable in each jurisdiction alike to the usual rules of business customs and can invoke the same for its protection.

(4) After incorporation obligations would increase in many ways. For one thing, an office must be kept in each state where business is done; and in most states the privilege of doing business must be paid for; and if the laws of a state are not followed that state sometimes holds members as partners, who will have to answer for the acts of corporation officers having much greater latitude of incurring liabilities than officers of an unincorporated society.

(5) Where the state under which incorporation was secured gives the right to vote by proxy and to transfer stock no rule of the association can intervene to prevent these practices.

(6) All the trouble of being driven into the hands of a receiver, and many

AMMATITE
MEANS SATISFACTION

A building covered with Ammatite is prepared to stand all kinds of weather—winds, rainstorms, hailstorms, hot weather, cold weather.

In addition it is an excellent fire retardant. You have secured the *very* best Ready Roofing you can buy for the money when you invest in Ammatite.

It doesn't shrink, crack, buckle, creep or rot. It's the up-to-date Ready Roofing for up-to-date farm and factory buildings, warehouses, etc.

3 FEATHER AND FATTENING FOODS 7

The profit of fattening fowls depends entirely on the feeds used. You must get them to market in the best possible condition and in the shortest possible time, if your profits are to be worth while. Foods that shorten the feeding period are therefore profit producing foods, that it will pay you to know all about.

Midland Poultry Foods solve the feeding and fattening problem for the poultryman by furnishing a scientifically prepared, balanced ration that gives quick and sure results.

No. 3 is the great fattening and finishing food for early broilers and for fattening hens for market. A complete balanced ration—you need add nothing but grit and green stuff. It will put on a pound of flesh in 21 days at a cost of 6½ cents. Feed it as mash, wet, but not sloppy—all that your birds will clean up three times a day and your bank book will look better to you.

No. 7 for fattening ducks—puts on juicy, tender flesh fast—the kind that gets top-notch prices. Ducks eat it with great relish, and the profit pays you big for the feeding. **Midland Duck Foods** Nos. 5, 6, 7, 8, 9, have made many duck farms money-producers that were failures before. The big duck raisers wouldn't be without it. You ought to feed it—a test will convince you.

No. 4 the wonderful egg and feather food that egg-raisers and fanciers use. It shortens the moulting period four weeks—will therefore put your hens in healthy condition, and ready to lay by early fall. **No. 4** makes eggs—lots of them. It also adds the brilliant, beautiful plumage to show birds that fanciers love to see—puts them on exhibition in all the glory and gloss that carries off the blue ribbons. More **No. 4** is fed to show birds and egg-layers than of any other food on the market. With it you can actually control, to a wonderful degree, the egg production of your fowls. You can have eggs to sell when eggs are like golden nuggets. Try it and see.

Grenadier Meal—the great milk-fattener, produces very choice meat—sweet, tender, juicy. This is the food the fatteners of Boston, Chicago, Philadelphia and New York use to fatten the fowls that please the fastidious tastes and strain the purses of these great cities. Milk-fattened poultry is a great luxury. The demand for which is constantly growing. You will find it's a profit producer for you, if you feed it right.

Midland Poultry Foods are the only real scientific poultry rations that are sold—each are for a specific and single purpose. We tell you which feeds meet your needs best. Write for our two free books "The Science of Poultry Feeding" and "Poultry Fattening Perfected." They tell the whole secret.

YES SIR, IT'S A FACT

The REMARKABLE INCREASED POPULARITY OF

COLUMBIAN WYANDOTTES

during the past few years clearly indicates they are destined to be acknowledged the premier variety of America's most valued breed. And why? Well, because they have given abundant evidence of being steady, all-the-year layers. Grow with quick vigorousness—early developing the chubby body characteristic of the Wyandotte breed, and which has given them their unapproachable pre-eminence as the standard commercial fowl of America, and last, but by no means least, their dark hackle and tail contrast pleasantly with the soft whiteness of body plumage.

EGGS FOR HATCHING, \$5 THE SITTING

Next fall I shall have a grand lot of early hatched cockerels and pullets for sale—progeny of carefully selected breeders.

MY WHITE WYANDOTTES

are excellent layers. Eggs, \$3 the sitting; 4 sittings, \$10. Baby chicks, 15c and 25c each. Why not procure new blood from me this year and lay the foundation of a persistent rough weather laying flock—the kind that pays? Send for useful desk blotter—'tis free.

other inconveniences, are practically inoperative in the unincorporated society.

(7) If members are desirous of limiting personal liability, which is sometimes incurred in unincorporated associations, that might be done, to some extent, by constitutional provisions prescribing such liability, both of officers and members; and providing for reimbursement of those members who have suffered any loss on account of the society.

(8) It is not necessary to incorporate for the purpose of holding property, real or personal. Even realty can be held in joint ownership by the members, or trustees in their behalf. These trustees may even receive gifts and legacies for the use and benefit of the association.

Some states, notably Michigan, provide for the formation, without capital stock, of corporations "not for pecuniary profit," and incorporation under such a statute would seem to obviate the objections above set out in the matter of expelling undesirable members; yet, at the best, such a corporation would be restricted in its activities, and perhaps in transactions in other states the members would be held individually liable to as great an extent as in the present organization. Furthermore, even in Michigan a "poultry and pet stock" corporation must have a capital stock of a par value of not less than \$25 per share, making it apparent that the expression "for pecuniary profit" has a very limited application. Also, it is to be noted that a corporation organized under this act dies by limitation in thirty years.

Because of the foregoing considerations, and in the belief that the purposes and objects of the American Poultry Association can best be carried out by the unincorporated society, your committee is compelled to report adversely on the advisability of incorporating under existing law.

Report of the committee was accepted and adopted, Mr. Crawford of the committee stating that it is his purpose to further investigate the matter.

The two most radical changes that will be recommended to the Auburn meeting comprise, first, the method of voting for officers, which will be by mail, the election to be conducted by an election commissioner, who is the only officer to be elected by the general association. He will have entire charge of calling for nominations for the various officers and places of meeting. Having received these nominations he will classify them and resubmit the five leading candidates for each office and place to each member of the association in order that such member may record his choice by a formal mail ballot. The final canvass of the vote so taken is subject to review by a board of review appointed at the next annual meeting before the certificates of election are issued. This method of election, giving every member of the association a voice in the affairs of the association, whether it is possible for him to be present at the annual meeting or not, and to have his vote recorded and announced in advance of the annual meeting, will, it is believed, greatly add to the interest each member will have in the workings of the association, and will stimulate rather than repress his desire to be present at said annual meeting and have a voice in its deliberations and proceedings.

The place of meeting will thus, instead of being selected by the executive committee, be designated by the members of the general association by mail vote. It

SEABOARD AIR LINE RAILWAY

is recommended that for the first three years after the adoption of the new constitution, should the association decide to adopt it, the meetings be held in the same place, and that a change of place of holding the meeting be not oftener than once in three years.

It is further recommended that the annual meeting be held during the month of August and separately and independently from any poultry show; and that a poultry institute in connection with the annual meeting may be held that will have sufficient drawing power to bring many members into attendance who have heretofore neglected the annual meetings.

The second important change recommended is the reduction of the executive committee, now to be called the executive board, from a body of 120 members, to one consisting of the president, two vice-presidents, secretary-treasurer and nine members, each elected to serve three years, three dropping out each year, and in addition one member from each branch organized under the provisions of this constitution. As no two members of the executive board can be elected from the same state, the representative power of the association will be widely distributed.

Some changes in the membership of the association are recommended. The life membership remains as heretofore. Club, associate and society members, each entitled to one vote, shall be established and are provided for.

It is recommended that branch memberships be organized in various sections of the country. No branch can embrace a greater territory than six states or provinces, nor can it be smaller than one state or province. To these branch associations when properly organized will be

delegated much of the work of the general association; and it is believed that especially in the outlying districts much greater interest in the workings of the association will result. For every five members of the general association found in the membership of a branch an additional vote in the affairs of the general association will be given; and while its individual members will still retain their

received; but all the rights of the present list of annual members will be preserved to them, and it is believed that a majority of the present annual members will before the adoption of this constitution convert themselves into life members.

The duties of the finance committee remain as at present, but this committee will present formal reports to each an-

Combination roosting room, scratching shed house on the farm of Sass Bros., Ancona, Ill., the noted White Plymouth Rock breeders.

individual votes, if they should not be present at the annual meeting the delegate of their branch will thus represent them and their wishes. One-half of the entire membership fee sent in to the general association will be returned to the branch for use by them in encouraging poultry interests within their own territory.

Annual memberships will no longer be

received through the executive board which appoints the finance committee from within its own membership.

The president, as now, will be chairman of the executive board, and will be required to countersign all checks issued by the secretary-treasurer. He shall call a meeting of either the executive board or of the general association on the written demand of five members of

Granite ROOFING

TRADE MARK

This great pier was roofed seven years ago with Granite Roofing. At the present time it shows no signs of wear, and is expected to give excellent satisfaction, without attention or repairs, for at least ten years longer.

Unlike the ordinary ready roofing, which is adapted only for temporary buildings and sheds, Granite Roofing may be economically used on all kinds of structures. Its unusual weight, 140 lbs. to the roll, gives to this roofing unparalleled durability. It can be laid by any one who can handle a hammer. Granite Roofing has a surface of stone, thoroughly imbedded into its composition, which makes it fireproof and takes the place of the paint or coating. Send for free Sample and Booklet, and learn about this best of all roofings.

Let Me Hand You My Latest Book on Poultry Culture ABSOLUTELY FREE

I want to send you a copy of this book free. It is a gold mine of practical information for the poultry-raiser. I call it "An Easy Lesson in Poultry Culture," because the lessons it teaches are easy to learn and easy to apply. My object in publishing this book is to point out how dollars in place of cents can be made in producing poultry and eggs for market purposes. It is stated so plainly that the novice can especially commend the chapter, "The Back-Logger," to the city dweller who wants to "try-out" this business before going into it on a large scale. And then I have another book—a good companion for this one—"Poultry Feeding for Profit" that you should have also. It is full of feeding facts that I know, from actual experience, will be valuable to every chicken raiser. It gives feeding methods and information that will be helpful every day, for every fowl in your place from the little chick "just out" to the old hen you are fattening for market. There is lots of money in the poultry business if you know how to handle chickens right. These two books will give you all the information you'll need—information you can put into practice. You cannot get this information anywhere else. Write today, I will send both books free, and also send my catalog on Model Incubators and Brooders the latest and most successful hatching and rearing machines on the market.

CHAS. A. CYPHERS, 301 HENRY ST., BUFFALO, N. Y.

Do not confuse me with any Company, and be sure to include my street address

STEEL ROOFING PER 100 SQUARE FEET \$1.50

FIRE WATER AND LIGHTNING PROOF

Most economical and durable roof covering known. Easy to put on; requires no tools but a hatchet or a hammer. With ordinary care will outlast any other kind. Thousands of satisfied customers everywhere have proven its virtues. Suitable for covering any building. Also best for ceiling and siding. Fire-proof and water-proof. Cheaper and more lasting than shingles. Will not taint rain-water. Makes your building cooler in summer and warmer in winter. Absolutely perfect, brand new, painted red two sides. \$1.50 is our price for our No. 15 grade of Flat Semi-Hardened steel roofing and siding, each sheet 24 inches wide and 24 inches long. Our price on the corrugated, like illustration, sheets 22 inches wide x 24 inches long \$1.60. At 25 cents per square additional we will furnish sheets 6 and 8 feet long. Steel pressed brick siding, per square \$2.00. Fine Steel Beaded Ceiling, per square \$2.00. Can also furnish standing seam or "V" crimped Roofing. **WE PAY THE FREIGHT TO ALL POINTS EAST OF COLORADO** except Oklahoma, Texas and Indian Territory. Quotations to other points on application. Satisfaction guaranteed or money refunded. We will send this roofing to any one answering this advertisement C. O. D., with privilege of examination if you will send us 25 per cent of the amount of your order in cash; balance to be paid after material reaches your Station. If not found as represented, you do not have to take the shipment and we will cheerfully refund your deposit. Ask for Catalog No. W-126. Lowest prices on Roofing, Eye Trough, Wire, Pipe, Fencing, Plumbers Doors, Household Goods and everything needed on the Farm or in the Home. We buy our goods at sheriff's and receiver's sales.

CHICAGO HOUSE WRECKING CO., 35TH & IRON STREETS, CHICAGO

the executive committee. Nothing in the proposed constitution prohibits the reelection of the president.

The duties of the secretary-treasurer will remain as at present, with others specified, such as furnishing a certificate of membership to present any incoming members of the association. He must deposit in banks to be approved by the finance committee the funds of the association in the name of said association; these funds to be divided into (1) a current fund, from which may be paid the current expenses of the association; (2) an emergency fund, or investment fund, which cannot be drawn upon except by order of the general association for a specific purpose; and no indebtedness can be created by the executive board beyond the amount of the current fund on hand at the time.

The annual report of the secretary-treasurer is to be made to the executive board, and shall become a part of the annual report of the executive board to the general association. The executive board shall meet one day in advance of each annual meeting and submit a complete report of its transactions during the fiscal year ending June 30 previous.

The salary of the secretary-treasurer is to be \$1,500 per year; and since his duties are greatly enlarged, requiring him to be absent from the office much of the time, he is allowed an office assistant or stenographer at a salary of \$10 per week. All letters received by him as secretary-treasurer, and also copies of all letters written by him, must be kept on file. He must devote his entire time and attention to the duties of his office and be under the direction of the executive board. He may be removed for cause at any time by the executive board, and the salary for the unexpired portion of his term forfeited.

It requires eight members of the executive board, and fifteen members of the general association, to constitute a quorum. The executive board must use its best endeavors to increase the life, associate, club and branch membership of the association.

A committee of three, which it shall appoint, may distribute diplomas and medals to members of the association through branch associations and associate members.

The executive board shall have power to license judges, whether of long experience or amateurs; but shall have full power to suspend or disqualify them and recommend to the general association when it is deemed advisable to revoke their licenses. It shall cooperate with branch associations in avoiding conflict of dates of holding poultry shows, and shall arrange for poultry conventions and especially for an annual poultry institute in connection with the annual meeting.

The executive board is to appoint a standing revision committee that shall from year to year receive suggestions as to needed changes in the Standard. One year previous to the issuing of a new revision of the Standard such needed changes are to be presented to the general association, at which time an enlarged revision committee may be appointed.

The Standard is to be revised once in five years and not oftener. In the meantime no change can be made except the correction of evident mistakes. The executive board shall have power to fill vacancies that occur among officers of the association or in the standing or special committees, and shall safeguard

the interest of the association at all times, especially during the intervals between annual meetings.

The fiscal year of the association shall close on June 30, and the books of the secretary-treasurer must be audited within one month of that time, so that their correctness may be certified and the details of the secretary-treasurer's work brought before the general association at its annual meeting through the executive board.

Any member of the general association may be suspended or disqualified from showing by the executive board, and on the recommendation of the executive board to the general association expelled from the association.

The admission of new breeds to the Standard of Perfection will hereafter be more difficult, as no new breed can be admitted except at the time of the revision of the Standard, which is once in five years.

Many of the existing provisions of the by-laws are transferred to the constitution. The by-laws elaborate more fully than heretofore the duties of the officers and executive board. The regulations for shows held under the auspices of the American Poultry Association are very complete, and protection of the honest exhibitor against designing exhibitors or unscrupulous judges is assured; for example, any one exhibiting a bird that does not absolutely belong to him, or which has been "faked" in any way, may be disqualified from exhibiting at any American Poultry Association show. Any judge found guilty of collusion with an exhibitor may be disqualified from

judging any American Poultry Association show. Any judge found to be incompetent may be disqualified and his license revoked.

A list of licensed judges shall always be available through the secretary-treasurer's office for the use of associations; and a list of lecturers competent to dis-

on part of judge must put same in writing and file a copy of same with the secretary of the show association, one copy with judge accused and one copy with the secretary of the American Poultry Association.

Membership.

Membership in this association shall

White Plymouth Rock females as bred by Sass Bros., Ancona, Ill.

cuss poultry topics shall also be available for the use of branches, institutes and conventions.

As at present provided a two-thirds vote shall be necessary for the adoption of this constitution or for any changes that may be suggested hereafter.

Any exhibitor wishing to file a protest on the ground of fraud or incompetency

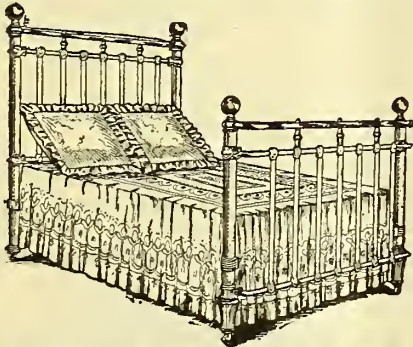

be one of the five following classes:

Life.—Individual membership shall be for life, for which a fee of \$10, payable with the application, shall be charged. The applicant shall be eligible to all rights and privileges of membership immediately following his election by the executive board.

society organized for the purpose of giving annual poultry exhibitions may become an associate member upon application, accompanied by a fee of \$10, when said application is approved by the executive board, and shall be entitled to one representative and one vote at the meetings of this association. Associate members shall be amenable to the rules and regulations of the American Poultry Association governing poultry associations and shows.

Club.—Any specialty club organized in the interest of any breed or variety of standard-bred poultry may become a member of this association upon application, accompanied by a fee of \$10, when said application is approved by the executive board, and shall be entitled to one representative and one vote at meetings of this association.

Society.—Any society organized in the interests of poultry culture in general may become a member of the association upon application, accompanied by a fee of \$10, when said application is approved by the executive board, and shall be entitled to one representative and one vote at the meetings of the association.

Branch.—Any state or province, or any district composed of any combination of adjoining states or provinces not exceeding six in number, may be organized into one branch association subject to the constitution and by-laws, rules and regulations of the American Poultry Association. The membership of branch associations shall be made up of life, associate or society members of the American Poultry Association. Each branch association through its properly accredited representative, who must be a member of the branch association, shall be entitled to one vote at the meetings of the American Poultry Association for each five of its members who are life, associate or society members of the American Poultry Association but are not present at roll call.

Messrs. Kummey, Hewes and Rigg were appointed a committee to edit and classify the report, copies to be supplied all members of the committee.

It was voted that the secretary send out, in printed form, the official findings of the committee, this to be sent to every member of the association at the time of sending out other official notices, at least sixty days before the time of the annual meeting, in Auburn, N. Y., January next.

CLEVER WAYS TO TEST ROOFING.

The cleverest scheme we have seen for putting out samples of roofing is that of the manufacturers of Paroid and Neponset roofings.

They have put in their dealers' stores door mats made of the Paroid Roofing itself and it is one of the best ways we have seen to prove the toughness and durability of Paroid.

Samples of Neponset are put out in the shape of a cone-shaped cup and the directions on the outside read "Fill this cup with water and you will see that the water evaporates but never soaks through Neponset."

We suggest that all of our readers who are interested in roofing send to F. W. Bird & Son, East Walpole, Mass., and ask for their samples to make your own tests.

This same firm is sending out a 48-page book of plans for all kinds of farm and poultry buildings. Send 4 cents in stamps to cover postage and mention our paper.

The Bay Ridge Poultry Farm, of Jamesville, N. Y., makes a specialty of Blue Andalusians, and has some fine ones in breeders and young stock. They also have some Partridge Wyandottes that are way up in quality and can dispose of fall breeders and young stock in this variety.

WE WANT NAMES.

We want you to send us the names and addresses of from ten to twenty-five persons living in the United States, each one having twenty-five hens or more. You can send us the names from any number of different post-offices. If you will send us these names we will send you **TWO BEAUTIFUL COLORED PICTURES FREE**. These pictures are reproductions of the most celebrated paintings in the world, and they are of high quality, and we know that you will be pleased and delighted with them; no pictures will be given for a list of less than ten names.

We want to send a free sample copy of a special issue of the HOME MONTHLY (The National Poultry Journal), to a lot of poultry raisers who are not now taking our paper and for that reason we want these names.

Send us immediately a list of at least ten poultry raisers and we will mail you, postpaid, **ABSOLUTELY FREE, TWO REPRODUCTIONS OF THE WORLD'S FAMOUS PICTURES**, beautiful colors, size 15x20 inches. Address: THE HOME MONTHLY, 20 North William St. New York.

BREED ONE VARIETY ONLY.

An Argument in Favor of Breeding One Variety Only—A Paying Flock of Rhode Island Reds—A Breed of Fowls With a 300-Egg Record.

Written for A. P. J. by Anna Lembke, Griswold, Iowa

That is my style. I am convinced if more of the poultry breeders would handle less varieties of fowls and raise more birds than the standard calls for there would be less complaint from the purchasers. Poultry breeders will make mistakes as well as any one else, but when you order one variety and get another (not saying anything in regard to the express and the three weeks' incubation of the eggs), why the next time you will decide to send to a reliable breeder who keeps only one variety, and then there will be no mistake. And again you order Rose-Combed, and if the Breeder has both Rose and Single Comb you are liable to get both, as it is almost impossible to keep the two varieties separate. Now I know the above to be true from experience. About ten years ago I decided to enlist in the poultry business for profit as well as pleasure. The Light Brahma was my ideal chicken at that time and I raised them exclusively for five years. When I started with them I purchased one dozen hens from a Light Brahma breeder; paid him 50 cents each. The hens had about as many black feathers in their back and fluff as they had white ones. Of course, I didn't know any different, so I secured a poultry magazine and studied the breeds. So I visited a number of poultry shows. I didn't know what the standard called for. I picked out sev-

eral pairs and pens from my flock and took them to the poultry shows, and to my great surprise I won first, second, third and fourth on cockerels and about as many premiums on my pullets and hens; so that gave me encouragement to raise better birds, and when I was ready to say good-bye to my flock of Light Brahmas I had as good a scoring flock as could be found in the West. There was

is what we want. They are built of the "stuff" that takes for the following reasons: They are as hardy as an oak, and almost free from disease. They lay as many eggs in winter as in summer; have yellow skin; free from dark pinfeathers, which is so much objectionable in dressed poultry. They are plump and are built almost the same size all the way up. They are neither too large nor

View on the poultry farm of J. F. Van Alstyne, Niverville, N. Y., breeder of Columbian and Silver Wyandottes.

one drawback to them—they were too heavy for a farm chicken, especially if you kept hogs and you gave them farm range, as the hogs would soon learn to kill chickens. I have lost enough on that one account to start a fair bank account. So I studied the history of all the different breeds of chickens and finally decided the R. C. Rhode Island Reds was "the one" for the farmer as well as the fancier both for eggs and flesh, and that

too small. Their meat is juicy and sweet. They make the finest broilers and are quicker from the shell to the broilers than anything else that comes from an egg. They are beautiful in color and shape. The "Reds" in their makeup have the persistent and remarkable impressionable coloring of the Malay and Cochin, the activity of the Leghorn, the docility of the Asiatics, and the vigor and the productiveness of the farm.

BLANCHARD'S WHITE LEGHORNS

are no experiment, having been carefully selected and bred for over twenty years. No labor or expense has been spared in building up and perfecting this strain and while the production of large, pure white, fancy market eggs has been the main object, **standard qualities have not been neglected.** They are large, vigorous, active and handsome. Good winter layers and keep at it all summer. Unexcelled for introducing new blood or as foundation stock. **NONE BETTER ANYWHERE AT ANY PRICE. STOCK FOR SALE, BOTH OLD AND YOUNG.** Illustrated circular free.

WE WIN!

At the late Madison Square Garden Show, New York, in the S.C. Buff, Black and White Orpington classes as follows: 7 firsts, 9 seconds, 6 thirds, 4 fourths and 3 fifths, and these in the strongest classes of Orpingtons ever put together, there being 370 birds competing. We also won the most prizes of any breeder in these same classes. We have the stock and established winning breeding lines, but buying high-grade stock and eggs cannot safely be done upon the strength of the mere argument a breeder has room to advance in his advertisements. Now we want you to send for our catalogue, testimonial book and a very elaborate mating list, describing over forty different breeding yards and prices of eggs from same. Do not be fooled or misled by mis-advertising, but come to the fountain head to get your start.

GARDNER & DUNNING

M. S. Gardner, Mgr. : AUBURN, N. Y.

More than what the famed Faverolle is to France, the Rhode Island Red is to America. In richness and harmonious blending of tint there is nothing in domestic fowls to equal the color of the best Rhode Island Red males. They thrive on lowlands as well as on high and dry lands, which also makes them desirable. They have proved a match as layers at any time of the year for any mere "egg machines" that were tried against them, and as winter layers they were peerless. I made a very small start in the Reds four years ago; purchased eggs from a friend, but later I purchased eggs from the East from one of the greatest Rhode Island Red breeders in the United States, and each year I send to eastern breeders for eggs from their best pens, often paying enormous prices for them. I always use the toe marker to know where my finest birds come from and I have secured some magnificent birds in this way and have bred some winners for my own use as well as for others who purchased eggs and stock of me.

I fear my article is getting too long, so I will give you an account taken from my day books showing the success I had with my little flock of Rhode Island Reds. March 1, 1905, to March 1, 1906, I started with 47 hens and 3 cockerels. During March, April, May and June of that year I gathered 3,600 eggs. Of these I sold for hatching 1,444, for which I received \$103. I used 868 eggs for my incubator and setting hens. Those I valued at \$69.26. The remainder of the eggs—practically 107 dozen—were marketed or used in the home kitchen. Valuing them at 15 cents per dozen, they were worth \$16.05. This gives us a total income for eggs during the months mentioned of \$188.31. July, August and September, 1,800 eggs, or 150 dozen, at 15 cents dozen, \$22.50. October, November and December, 2,430 eggs, 201½ dozen, 22 cents dozen, \$44.55. January and February of this year, 1,559 eggs sold at \$5 per 100, or for a total of \$77.95, making a total of \$333.31. In addition to the income from eggs from my flock during the year I sold 63 cockerels for \$92; 95 pullets, \$82, and 30 chickens, 40 cents each, \$12. I still had left for my breeding pens 58 pullets, valued at \$2 each, \$116; 4 cockerels, \$10 each, \$40; 16 pullets (show birds), valued at \$15 each, \$240, and one 96-point cockerel, valued at \$75, and 15 cockerels, \$1 each, \$15. From this it will be seen that the total amount received for eggs and stock amounted to \$1,005.31; amount spent for feed, etc., \$100, leaving a credit balance to my flock of \$905.31. Placing a value on my breeders (47 hens and 3 roosters) of \$110, would make the account complete—\$1,005.31. My flock this season far exceeds anything of the past, as I have spared no time and money to bring my flock to the front, and I secured the best eggs that money could buy to introduce the best blood (of the "Reds") into my flock, and I have combined the three greatest laying strains in America, viz., De Wolf, New Improved and Red Bird, and I think before many years rolls around I can furnish a breed of chickens with a 300-egg record that will astonish the world's breeders. I am not so much for fancy points, etc., as I am for a chicken that will fill all demands, and I think we have it in the Reds, "America's greatest invention." Other breeds have some good qualities, but the Rhode Island Reds possess them "all."

**WEST VIRGINIA STATE FAIR,
WHEELING, W. VA., SEP-
TEMBER 5-15, 1906.**

The poultry at this fair is one of the leading attractions, and from early morning till the gates close in the evening there is a continual stream of people passing through the Poultry building; the old, the young, the rich, the poor, all visit the poultry show and admire the beautiful, useful birds; and well they might, for who is it that does not make use of the product of poultry in some way? It has become almost as necessary to their existence as the clothing they wear. While we do not have quite as large an exhibit of poultry as some state fairs do, the quality is not surpassed anywhere. Our entries run from 1,400 to 2,000, and by strict rules we allow no sickly or diseased birds on the grounds. We have made a practice for years of instructing our judges to give no specimen a premium that would not be able to score above 80 points, although there might be no opposition. The premiums are awarded by comparison by the most expert judges obtainable, regardless of cost. We have an ideal poultry building that will take care of 3,000 birds. We place a double row of coops through the center, facing 10-foot aisle on either side, with room between coops for attendants to pass through when building is crowded; also one row on each side of building with space between coops and wall for attendants to pass, making four rows of coops and two aisles. The building is high and a space of three feet on each side under the roof is left open for ventilation. Each end of the building can be opened up in daytime by large doors; entire building can be closed up at night to keep damp and draft off fowls. Each exhibitor is allowed space inside of building to cook and sleep if he wishes. Building is closed each evening and guarded by a watchman, insuring the safety of the exhibitor and his stock. Exhibitors make their entries in the poultry building and receive a statement of their winnings on the last day of the fair, which is paid the following week, always in full. We try to take good care of our exhibitors and have everything as convenient as possible for them. They mail their letters, receive their mail, buy their supplies, all without leaving the building. We feel the poultryman is worthy of the best treatment we are able to give. We pay premiums on all varieties recognized by the American Standard and allow space for exhibits of new varieties or novelties. No entry fee charged. We expect the coming poultry show to be the best yet held on the grounds.

J. D. Rice,
Supt. Poultry Dept.

A VISIT TO THE ROCK HILL POULTRY FARM AT OSSINING, N. Y.

While on a trip through the eastern states during July we decided to pay a visit to the Rock Hill Poultry Farm, which is under the direct management of Mr. F. M. Corey, who is so well and favorably known in the poultry world. And we were both surprised and pleased at the wonderful showing Mr. Corey has made on this plant in one year's time. "Rock Hill" is appropriately named, as practically the whole farm is one huge mass of

rock, and one year ago this was entirely covered with trees and underbrush; but under the management of Mr. Corey this has nearly all been cleared away and in its place are scattered innumerable colony houses, brood coops and laying houses for the accommodation of the large number of birds they are raising this season. At the time of our visit there were over 3,000 head of young stock being cared for on this place, consisting of S. C. White Leghorns, White and Partridge Wyandottes, White and Silver Penciled Plymouth Rocks and Buff Cochin Bantams, and in all our travels we did not see a more promising lot of young birds.

Mr. Corey is an advocate of the colony house system for raising young stock, and scattered over the thirty-five acres of territory of which this farm consists were forty up-to-date colony houses and fifty brood coops, each one having its full quota of thrifty young fowls.

We were prevailed upon by Mr. Corey to stay over night, that we might get a good view of the chickens in the morning, and the sight we witnessed the next morning when the birds were liberated was worth going miles to see. Imagine, if you can, three thousand birds, the great majority of which are snow white, liberated at one time, shortly after sunrise, and you will have

pictured in your mind's eye one of the most beautiful sights ever beheld by man. A goodly number of the young stock were pretty well advanced toward maturity and Mr. Corey is figuring on showing a big string this fall and winter, and if he makes the record he did last winter he will certainly need all of the 3,000 birds to fill his orders.

The latch-string is always on the outside at the home of Mr. Corey and visitors are always assured of a hearty welcome from both Mr. and Mrs. Corey.
Jas. W. Bell.

The fowls and chicks should have plenty of fresh cool water this month. It will help them in their growth.

The young stock will need more room this month than last. See that it is provided for them.

Clement & Fike, Libertyville, Ill., the noted White Wyandotte breeders, have just issued a very handsome catalogue which contains many half-tone illustrations of their prize winners; also a general description of their stock. This catalogue should be in the hands of everyone interested in White Wyandottes. Send for it and mention American Poultry Journal.

R. W. Townsend, Salem, Ohio, manufacturer of "The Monarch" lice and mite exterminator, is advertising in this issue. Write him for circular and other information and mention American Poultry Journal.

EMMA B POULTRY FARM, D. BEIDLER, Prop., Box A, GURNEE, ILL.

WOMAN'S HOME DEPARTMENT.

Mabel Bates, Editor.

This department will not be confined to poultry items entirely, but to all matters pertaining to household economics. We want every woman who reads American Poultry Journal to consider herself a member of this department. If you have a bit of practical knowledge in household matters, an item of experience in raising poultry that will be helpful to others; a favorite recipe, etc., send it along. This is your department, just as far as you are willing to make it.

All communications should be addressed to the Home Department of American Poultry Journal Publishing Company, 325 Dearborn Street, Chicago, Ill.

SAVING VS. WASTE.

Small things often leave vivid impressions, and the editor of this department remembers seeing years ago a sign, placed in a conspicuous place over a contribution box, which originally read, "Many a mickle makes a muckle." Some wag had erased part of a letter so that it read, "Many a nickle makes a muckle." As she grew older and began to take the responsibilities of housekeeping upon her shoulders the adage often returned to her, transposed to fit her individual case. It is astonishing how many little things are allowed to

go to waste in almost every home, which if given a little thought could be turned to good use. It is not so much what we spend as what we save, that counts. The bits left in the serving dishes at the family dinner are often, even in families in straightened circumstances, thrown away because there is not enough of any one thing to make another serving. These same scraps, if mixed with a little thought, will give an appetizing soup course, preceding the meat of the following day, or if they are of the sweet variety can be developed into a pudding by the addition of an egg, a little milk and a few raisins. In fact, there is

scarcely anything which cannot be used again, so disguised that it will not seem like a left-over. What is true of food is equally so in all the departments of the household. Next month an "Experience Corner" will be started in this department, and readers of the magazine are requested to send in contributions. Every one has some method of economizing, some dainty dish that is a favorite in her family, some hint in the way of sewing or general housekeeping which she has worked out for herself.

Let us pass these along and make this corner a help to others, and in turn receive a benefit ourselves, through the labor and money saving hints which are "passed along" from one to another. If you want to receive help along any line mention it. Some one can give the solution to your problem.

THE MEAT THAT NEVER FAILS.

The packing houses may rage and the people imagine many vain things; the ice may melt and the meat man fail, but the chicken raiser is still placid when unexpected company comes. While most city people consider chicken a luxury to only be indulged in occasionally, the woman on the farm or with a chicken yard always has this delicacy at her

J. R. LAMPSON :: Mexico, Mo.

command, and yet she almost invariably serves it in one of three ways, stewed roasted or fried, and after a while it begins to pall upon the appetite. There are many simple and delicious ways in which it can be cooked, which are no more work, and in some cases take even less time than by the former method. The next time you have chicken for dinner try one of the following:

Smothered Chicken—Cut and prepare chicken as for a stew, and cook it in water for an hour unless it is very tender. Lay the pieces in a baking pan, salt and pepper them, add a few slices of onion, which will not flavor the meat but will remove all strong taste. Dredge with flour, add bits of butter, and nearly cover with boiling water. Bake in a covered tin until tender, place on a platter and make a rich brown gravy from the juices in the pan, adding flour and butter bubbled together, and if possible a little cream or rich milk.—Mrs. F. G. Boyd, Chicago, Ill.

Chicken Pie, Southern Style—Have ready chicken previously cooked. Make a short baking powder biscuit dough and line a deep tin. Put the seasoned chicken in, add bits of the soft dough in the form of dumplings, cover with the chicken broth or a thin gravy, and place over all the top crust. Add boiling water through a slit in the crust from time to time, as the gravy cooks away.—Mrs. A. L. Williams, Denver, Colo.

Three Chicken Dainties for Special Occasions—Chicken consomme for the first course at a luncheon or dinner is made by cooking a chicken in sufficient water to have a quart of broth when done. Cool and remove the fat and strain. Boil up with a couple of tablespoonfuls of tapioca, and by the way, if possible, get "one minute tapioca," which cooks perfectly clear in ten or fifteen minutes without soaking. Flavor with celery salt, onion if desired, salt and pepper. For a hot day serve this ice cold. In cold weather it is better if a cup of rich milk or cream is added to the hot broth at the last minute before serving. Chicken fritters are something a little out of the usual order of things. Make a thick white sauce by bubbling together a tablespoonful of butter and two of flour. Add a pint of milk and cook in a double boiler, adding a little onion juice, salt and pepper, celery salt and a little mustard. Just before taking from the fire add a beaten egg. Mix with finely chopped chicken and let it get perfectly cold. It is better if made the day before using. Make in rounds or any preferred shape with the hands before cooling. When ready to use, dip in beaten egg, cover with fine bread crumbs and cook in deep fat. If possible, have a wire basket for this, place the fritters in it, and they will not break as they are apt to do if dropped in the fat. One of the finest meat dishes for a small company is chicken mousse. For this mince cold chicken rather fine and let it harden in small mounds or in a square tin, pouring over it the chicken broth in which has been heated sufficient gelatin to make a jelly. When cold turn out of the individual moulds, or if in a tin, cut in small squares. Serve on a lettuce leaf with a little whipped cream dressing over it. For the dressing, which, by the way, is one of the finest I have ever tried for all kinds of salads, and for mixing with minced meat for sandwiches, take one cup of milk and heat it in a double boiler. Stir

QUEEN OF HATCHERS

TRY IT! Test its superior heating system at home for 90 days and if you are not satisfied that the Missouri Queen Incubator is the most practical and successful hatcher, return it at our expense. L. C. KNORR, 1212 14th Ave., Detroit, Mich.

FACTS FOR FARMERS!

Southern lands are fertile and productive and are low in price. The rainfall is ample for all purposes, and irrigation is not needed.

The Southern farmer is in close reach of the principal markets of the country and has the best of railway facilities for the transportation of his crops.

General farming shows good returns. The crops grown cover a wide range and yield an abundant harvest. The cereals and grasses thrive. The stock raisers find the South a profitable field. Cattle can be raised at the lowest cost. There are finest opportunities for raising horses, mules, sheep and hogs.

There is a demand for a greater dairy interest in the South. Local markets are good. The conditions are most favorable for the success of the milk producer and butter maker.

Trucking is extensively engaged in along the Southern Railway. Lands especially adapted to this branch of farming may be purchased at low figures and upon good terms. The facilities for quick handling of the crops are first-class and the products reach the best markets of the country in good condition. All fruits are grown in the South. The commercial orchards along the Southern Railway are extensive and the quality of the fruit is unexcelled. The best sections of the south are reached by the

ROSE AND SINGLE COMB

Fifteen fine pens for 1906; no pens scoring less than 91 points. Orders taken for young show stock now.

Olentangy Poultry Yards - Charles C. Reid, Mgr. - Delaware, Ohio

ferred to sticky cake, when served with ice cream. The following recipes are a little different from the usual run:

Hermits—Cream one-third cupful of butter, add two-thirds of a cupful of sugar, next one-third cupful of raisins, one egg well beaten and two tablespoonfuls of milk. Mix and sift one-half teaspoonful of cinnamon, and one-

two cupfuls of flour in which one-half cupful of fine oatmeal, two teaspoonfuls of baking powder and one teaspoonful of salt have been mixed and sifted. Toss on a floured board, roll, cut in shape and bake on buttered sheets in a moderate oven.

Cocoonut Cream Cookies—Beat two eggs until light, add one cupful of sugar

ter or knife first in flour. Bake on a buttered sheet.

Peanut Cookies—Cream two tablespoonfuls of butter, add one-quarter cupful of sugar and one egg well beaten. Mix and sift one teaspoonful of baking powder, one-quarter teaspoonful of salt and one-half cupful of flour; add two tablespoonfuls of milk, one-half cupful of finely chopped peanuts and one-half teaspoonful of lemon juice. Drop from a teaspoon on an unbuttered sheet one inch apart, and place one-half peanut on top of each. Bake twelve to fifteen minutes in a slow oven. This will make two dozen cookies.

A CORRECTION.

In the recipe for sponge cake given last month the type read, "Add one cup of hot water slowly, heating all the time." This should read, "Beating all the time." Old cooks will readily note the error, but the correction is given for the benefit of those who are not so familiar with recipes, and always follow the cook books verbatim.

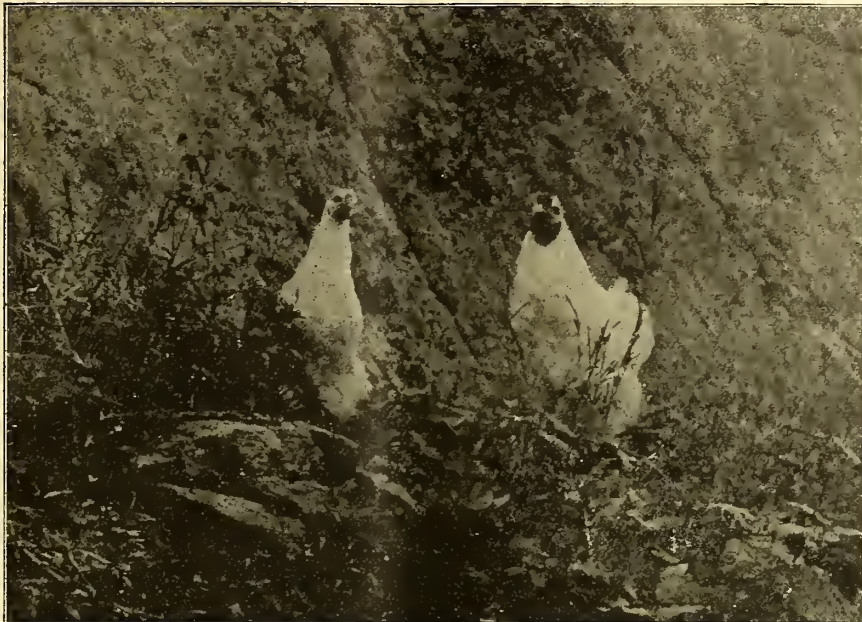

June hatched chicks need extra care if they fully mature before cold weather sets in.

Early shows will soon be here. Are you going to be prepared for them?

FEEDING FOR EGGS.

Mr. Russell Miller writes: "Fall is the time I get my hens in condition to lay eggs in winter. I begin early to feed them on Purina Mash, which is a mixture of Alfalfa, meat scrap, middlings and other proteins—all of which are good egg material. As a result, my hens begin laying early and keep it up all through the season when 'new laid' eggs are bringing fancy prices. Purina Mash is made by the Purina Mills, and the advantage in feeding it is that you get a feed made up of the right ingredients in right proportions to produce most eggs. Then you save all the fuss and bother of buying different feeds and mixing them yourself. The Purina Mills have facilities for measuring and mixing that insure uniformity all the time. I can buy it cheaper than I could mix it myself. I also find it pays to feed my laying hens Purina Scratch Feed every day in the year."

Your dealer can get you Purina Poultry Feeds in "checkerboard" sacks, absolutely guaranteed, from the PURINA MILLS, St. Louis, Mo., Acme Milling Co., Portland, Ore., or The Tillsong Co., Tillsongburg, Ontario.

A pair of four months old White Wyandottes on the Rock Hill Poultry Farm, Ossining, N.Y.

quarter teaspoonful each of clove, mace and nutmeg, two teaspoonfuls of baking powder and one and three-quarters cupfuls of sifted flour. Add to the first mixture. Chill and roll out as if making ginger snaps, but a little thicker.

Oatmeal Cookies—Beat one egg until light, add one-quarter cupful of sugar, one-quarter cupful of thin cream and one-quarter cupful of milk. Then add

gradually, one-half cupful of shredded cocoonut, one cupful of thick cream and three cupfuls of sifted flour, in which three level teaspoonfuls of baking powder and one-half teaspoonful of salt have been mixed. Chill. Toss on a floured board, pat and roll one-fourth inch thick, sprinkle with cocoonut, roll in lightly, then cut out in small rounds, diamonds or triangles. Dip cut-

PAROID ROOFING

—The only roofing sold on a money-back guaranty. Read our trial offer.

YOU want when you build or repair, the very best roofing that you can get for your money. We are confident that Paroid is the best, and all we ask of you is that you try it.

BUY one lot of Paroid; open it; examine it; apply it to your roof, and if then you are not satisfied that you have the best ready roofing in the market, send us your name and address and we will send you a check for the cost of the roofing and the cost of putting it on.

We know Paroid is the best, and we feel sure it will satisfy you because it is the best. This is why:

The felt—the foundation of the roofing—we make ourselves in our own mills, (established in 1817). Ninety years experience has taught us how to make it. We know it is right. We take no chances, as do other manufacturers who buy their felt wherever they can get it cheapest.

We soak this perfect felt in a compound of our make—the result of years of experience—which renders every fibre of it—through

and through—absolutely water-proof. Remember, not dipped but soaked.

We coat this water-proofed felt on both sides with a smoother, thicker, tougher and more elastic coating than is on any other roofing on the market.

An examination will convince you of this. Don't take our word for it, but compare a sample of Paroid with other makes.

Freeze the samples and try to bend them! Paroid will be as flexible as in warm weather while others will break and crack.

You can feel and see that Paroid is more flexible, tougher, smoother, stronger, more durable and more sightly than any other.

But that's not all. Paroid is not only the best ready roofing made, but the method of laying it is best.

In every roll you will find a complete roofing kit including our patented caps.

The caps are square and so give larger binding surface.

They are water proofed on both sides, and so cannot rust and work loose and cause leaks as all other caps do.

You get these caps only with Paroid.

The best piece of felt—the most thorough saturation—the toughest and most flexible coating—and the only rust-proof cap—

Do you wonder that Paroid lasts the longest, in all weathers and under all conditions! Will you try it on our money-back guaranty?

Send for samples and see for yourself. If your dealer will not supply you, send to us direct. We pay the freight.

F. W. Bird & Son, 13 Mill Street, E. Walpole, Mass., 1413 Monadnock Bldg., Chicago, Ill.

CUT OUT AND MAIL THIS TODAY.

Please mail me your book of plans for farm buildings and samples of Paroid. I enclose 4 cents for postage.

LACROSSE, WIS.

Probably no poultry show in the northwest will attract more high-class birds than that to be held at LaCrosse, Wis., by the LaCrosse Progressive Poultry Association. This will be a show that means more than the ordinary scoring bee or local exhibition, because it represents the poultry and pet stock fanciers of western Wisconsin, one of

standard poultry of the western part of the state and the eastern part of Minnesota.

The LaCrosse Progressive Poultry Association has over 100 active members and more will be added before the show opens next winter. It is hoped by the committees that have this matter in charge to increase the membership to 200 by that time. Another feature of the LaCrosse "bunch" of poultry fan-

A pair of favorites at the home of E. B. Barnett & Son, Michigantown, Ind.

the richest poultry sections in the northwest. LaCrosse is the metropolis of this section of the country and poultrymen for hundreds of miles around gather at the shows here annually, not only for the purpose of exhibiting their own stock but for the purpose of purchasing standard-bred stock with which to improve their flocks. That means that LaCrosse is the natural market for

ciars is that they are hospitable and visitors who come to the LaCrosse show will not only be given an opportunity of seeing top notchers in the feathered tribe but in point of entertainers as well.

The big LaCrosse show will be held at LaCrosse, January 11 to 16, and James A. Tucker, of Concord, Mich., will act as judge. Put this show on

your list early. For additional information address E. H. Hoffman, Secretary, LaCrosse, Wis.

MISSOURI STATE FAIR.

The Missouri State Fair, among the first expenditure for equipment, erected a poultry building of brick and stone and metal roof and concrete floors, 80 x120 feet, and supplied with coops sufficient for 4,000 birds. This was thought to be large enough for all time to come, but the first season it was filled with birds, and the exhibit continued to increase until last season we were compelled to abandon it and build another with double the capacity. Last season this was filled.

The board of directors this season are offering special premiums for Missouri birds in addition to the classes which are open to the world. This will bring out a large exhibit from pens of Missouri breeders that have not heretofore patronized the fair, and we are expecting the largest display of fowls ever made west of the Mississippi river. Our present building is 100x180 feet, is of brick and stone, tile roof, concrete floors, with offices, judges' rooms, closets, water and sewerage.

The poultry industry in this state is an item of considerable importance, perhaps surpassing that of any other state in the Union. The labor commissioner in a recent report states that the value of poultry and poultry products shipped from stations in Missouri, and not including what was consumed on the farms and disposed of at nearby markets for home consumption, amounts to \$37,000,000 for 1905. With a poultry output of this magnitude and in view of the great display we have had heretofore we will be surprised if we do not have a record-breaking poultry exhibit.

This fair will be held at Sedalia, Mo., September 29-October 5, 1906. J. R. Rippey, Secretary.

COLUMBUS, OHIO.

The poultry exhibit at the coming Ohio State Fair, to be held in Columbus, September 3, 4, 5, 6 and 7, gives

Carbolineum Wood Preserving Co.,
122 Reed St., Milwaukee, Wis.

promise of surpassing the one of last year when over 3,000 birds were on exhibition. The poultry building on these grounds is an imposing brick and glass structure, located in close proximity to the live stock buildings, and with its splendid equipment of coops and pens, arranged in tiers that the various classes can be shown collectively; the excellent provision for light and ventilation, and the general arrangements for passing through the building, has called forth high praise from fanciers in all sections of the country.

The premium list provides classes for the most important varieties of standard birds, with uniform premiums throughout.

In addition to the poultry exhibit, one section of the building is reserved for incubators and brooders in operation and for poultry yard appliances generally.

TEXAS STATE FAIR.

The Texas State Fair will be held October 13-28, 1906. The association has under construction a new poultry building which will be occupied at the coming fair. It will cost \$6,000 and have coops for 5,000 birds. A section of it will be fitted up for the display of pet animals.

The association is making a special effort to bring out a large display of pigeons. The homing pigeon associations of Texas and the neighboring states and territories have interested themselves in a series of races during the fair, and these promise to be very interesting.

The Southern Poultry Association is taking unusual interest in our show this year, the officers of which were consulted touching the plans of the new building and its equipment.

There are already more birds in sight for the coming show than we ever had on the grounds during any two or three preceding years put together. Sydney Smith, Secretary, Dallas, Tex.

ILLINOIS STATE FAIR.

The poultry exhibit at the Illinois State Fair, which opens at Springfield on September 28 next, promises to be the greatest exhibit of poultry ever seen at a State Fair, and the handsome building erected for housing the poultry exhibit will be crowded to the doors. The Illinois State Fair offers approximately \$1,300 in premiums for poultry and the classification has been thoroughly revised for the coming fair. The exhibit of incubators and brooders will also be very extensive this year as almost every manufacturer of the same has applied for exhibit space.

Parties desiring premium lists should address W. C. Garrard, Secretary, Springfield, Ill.

SOUTH DAKOTA STATE FAIR.

The prospects for the poultry exhibit at this fair were never brighter, as the interest in fancy poultry is having a boom in this vicinity and everything goes to show that this department will show a big advance over former years and the poultry department will have cause to rejoice in this year's development. This exhibit will be held at Huron, S. D., September 10-15, 1906. Bayard E. Beach, Secretary.

RACINE INCUBATOR

The practical, serviceable kind. Our remarkable Incubator Book, written by a man who devoted 24 years to nothing but incubators, is free to all who ask for it. Racine Hatcher Co., Box 26, Racine, Wis.

THE AUBURN SHOW.

At the annual meeting of the Auburn (N. Y.) Fanciers' Association the following officers were elected:

President—Philo B. Adams.
First Vice-President—W. Walner.
Second Vice-President—Mrs. A. E. Pierce.

Secretary-Treasurer—J. H. Scott.
Recording Secretary—Earl Williamson.

Superintendent—H. Roy Bush.
Directors—Philo B. Adams, M. S. Gardner, Louis Siem, J. H. Scott, J. W. Lee, John Clark, J. L. Carpenter, W. H. Gifford, A. E. Pierce.

The following well-known judges will place the awards at the forthcoming show, January 8-13: T. E. Orr, Thomas F. Rigg, Eugene Sites, H. J. Quilhot, W. C. Denney, Andrew Riddell, C. W. King, M. S. Gardner.

This association, which will entertain the members of the American Poultry Association during the week of the show, is making every effort to induce all progressive breeders to exhibit stock. The Empire Cooping Company

this the best exhibition yet held by the association. This association is now one of the strongest in the west, having an active membership numbering nearly 100 and growing rapidly.

BROOKVILLE, PA.

The Jefferson County Agricultural

H. ROY BUSH,
Superintendent Auburn Fanciers' Association, Auburn, N. Y.

and Driving Park Association will hold their annual poultry exhibition September 4-7, 1906. H. A. Emmel, Mars, Pa., Judge. Syl. Truman, Secretary.

WISCONSIN STATE FAIR.

The poultry department at the Wisconsin State Fair has come to be one of the best patronized and attractive of

J. H. SCOTT,
Secretary-Treasurer Auburn Fanciers' Association, Auburn, N. Y.

will coop the show. This means that all cages will be new and of the most convenient make-up, as well as the most handsome coop now in use. The regular premium money is allowed in most liberal measure. The various specialty clubs are offering unprecedented inducements to their members to bring out stock.

F. E. Dawley will conduct a poultry institute during the week. The best institute speakers have been engaged for the work, and this will afford a rare treat for the visiting poultrymen. The watchword is "On to Auburn."

WINNEBAGO, MINN.

The Blue Earth Valley Poultry Association will hold its third annual exhibition at Winnebago, Minn., December 11, 12, 13 and 14, 1906, and it promises to be a hummer. Judges D. E. Hale, William B. Klein and S. W. Raddue will place the ribbons. A large number of "top notchers" from a distance are promised for this exhibition, and the officers, who are all substantial and progressive business men as well as experienced fanciers, are determined to make

M. S. GARDNER,
One of the Directors of the Auburn Fanciers' Association, Auburn, N. Y.

that meeting. A liberal list of premiums is offered both for chickens and other farm fowls and also for pigeons.

This season nearly \$2,000 is offered in premiums in this department. The judging of poultry has for several years been done by Mr. Sharp Butterfield, Windsor, Ont.

The fair for the present year will be held in Milwaukee September 10 to 14.

SEED MERCHANTS
MINNEAPOLIS CHICAGO

Premium list, etc., can be obtained of John M. True, Secretary, Madison, Wis.

TRENTON, N. J.

The poultry department of the Interstate Fair will be under the direction of the Fanciers' Poultry Association of New Jersey, and will be held September 24-28, 1906. They are offering between \$200 and \$300 in gold specials, besides cups and numerous other valuable premiums. The Trenton Fair is one of the largest in the east and the attendance is always enormous and there is every reason to believe that the show will be a successful one and one at which the fanciers will do well to show a few of their best birds.

BLOOMINGTON, ILL.

The Bloomington Poultry Association, at their last meeting changed their show dates to December 27-January 2. This is the fifteenth annual show and promises to be the largest and best ever given in the city. They have secured the services of O. L. McCord, who will tie the ribbons at this show. Percy R. Buffham, Secretary.

RIMERSBURG, PA.

The Rimersburg Driving Association will hold their second annual poultry show September 18-21, 1906. H. A. Emmel, Mars, Pa., Judge. This show promises to be the equal of any early fall show held in the state, with competition open for all. P. G. Schlauch, Secretary.

GEORGIA STATE FAIR.

The poultry exhibit at the Georgia State Fair, at Atlanta, Ga., October 10-20, 1906, gives promise of surpassing that of former years and the prizes will be most liberal. For further information address the secretary, Frank Welton, Atlanta, Ga.

CLEVELAND, OHIO.

The next annual exhibit of the Cleveland Fanciers' Club will be held January 14-19, 1907. Thomas F. Rigg, Charles McClave, Eugene Sites and T. E. Orr, Judges. F. L. Gruhl, Secretary, 9902 Woodland avenue, S. E., Cleveland, Ohio.

EVANSVILLE, IND.

The Evansville Poultry and Pigeon Association will hold its second annual show January 7-12, 1907. S. B. Johnston and George Ewald, Judges. H. J. Reimer, Secretary, 113 Heinlein avenue, Evansville, Ind.

SHARON, PA.

The Sharon Poultry Club will hold its annual show the second week in January, 1907. H. A. Emmel, Mars, Pa., and —, —, Judges. John S. Leslie, Secretary.

PORT HURON, MICH.

The International Fanciers' Association will hold its show January 14-18, 1907. Charles McClave, F. W. Travis, J. J. Lynn and George Asman, Judges. Robert S. Taylor, Secretary.

HOW TO GET MORE EGGS

The richer your land the bigger will be your crop. The richer your poultry food is in egg making properties the more eggs you will get. That's natural. Just feed them **Harvey's Electric Poultry Food** and see the egg basket fill fuller and quicker. It's rich in egg making elements. That's why. Send for catalog of Everything for the poultryman. Do it today.
Harvey Seed Co., 30 Ellicott St., Buffalo, N. Y.

LIGHTNING

WHITWASH SPRAYER NO. 28
Whitewash your poultry houses and stables easily, rapidly, with the "Lightning" Whitewash Sprayer. Kills lice and vermin. Can't clog. Also for spraying creeps, washing wagons, etc. Double action pump. Sprays 20 ft high. Has 3 1/2 ft heavy hose, extension rod, brass nozzles, steel strapping, ball valves. All brass, \$3.50; Galvanized iron, \$2.50. Cash with order. Exp. paid. Agents wanted.
D. B. SMITH & CO., UTICA, N. Y.

HARDING'S LICE KILLER

This is not a cheap, common powder put out by wholesalers under any name. It is a guaranteed Lice Killer, manufactured and vouched for by undersigned. Call for Harding's Lice Killer and insist that it be given you. If your dealer cannot furnish it, write to me and get the genuine. 1 box 25c, by mail 40c. 50c and \$1.00 sizes express to be added.
Geo. L. Harding, Mfr., Box 333, Binghamton, N. Y.

Leg Bands
The World's Best

Smith sealed, Climax, Double Clinch, and Eclipse for Poultry; Double Clinch Seamless and Open for Pigeons. Samples of any kind for stamp. Write for our catalog of Poultry Necessities, including Fountains, Anti-Louse Roost Brackets, Chick Markers, etc. Ask your dealer for our goods.
Keyes-Davis Co., Ltd.
502 Hanover Street, Battle Creek, Mich.

Success with the Chicks

Don't depend upon how many you hatch but upon how many you raise. Many fine hatches of a hundred chicks leave you with but a dozen scrawny little birds after a few weeks. You know why.—Cholera, indigestion, Bowel Trouble, Diarrhoea, Dysentery, Sour Crop. These are the things that knock a poultryman's profit.

CONKEY'S CHOLERA CURE

will positively cure and prevent all of these diseases. We know it. We guarantee it. We'll give your money back if we don't prove it. Get a package of Conkey's Cholera Cure from your Druggist or Poultry Supply Dealer, or send direct to us. It is equally good for turkeys, chickens and pigeons, old and young. Price 50c per box post paid.

Our new 48 page book on poultry diseases sells for 20c., but if you answer this advertisement and send the names of two other poultry raisers and 4c in stamps to pay postage, we'll send you a copy free.

LITITZ, PA.

The fourth annual exhibition of the Lancaster County Poultry and Pigeon Association will be held December 25-29, 1906.

THE AMERICAN WHITE ORPINGTON CLUB.

The American White Orpington Club, an organization devoted to the interest and betterment of White Orpington fowls, was organized on February 15 with a membership that comprises nearly all of the prominent breeders of these fowls in the country. The plans that the club has outlined cannot help but be of benefit to all White Orpington breeders, and the club wishes to have the name of every breeder of these fowls on their roll of membership. The dues are \$1 per year, or \$10 life membership. They issue a neat certificate of membership and have as their officers breeders of the highest integrity. The officers are:

President—W. L. Davis.
Vice-President—Dr. U. G. Murrell.
Secretary-Treasurer—F. S. Bullington.
Executive Committee—C. E. Vass, E. L. Cook, Knowles, Young & Co., W. L. Davis, F. S. Bullington.
State vice-presidents are as follows:
Iowa—Mrs. Clara Morrison.
Illinois—J. W. Eastes.
Minnesota—Lester G. Tubbs.
Kentucky—Mrs. J. P. Herring.
Michigan—Derr, Shattuck & Co.
Ohio—Miss L. J. Campbell.
Colorado—J. H. Woltzen.
New York—Jonas Hayner.
Massachusetts—M. F. Delano.

Write Us To-day

and ask for information about the Potter System of selecting laying hens. The greatest discovery of the century in the poultry world. A simple and natural method of picking the layers and non-layers in your flock. It is the only scientific and satisfactory manner of telling just which hens are laying or will soon lay. The knowledge contained in our booklet "Don't Kill the Laying Hen" is worth dollars to every poultry raiser. Write and learn how you can get it free, and how to make more money on your poultry.

DON'T BUILD

that new hen-house or think of fixing up the old one until you have secured our large, new 64-page catalog on poultry-house fixtures. The biggest and best ever issued; over 50 illustrations, showing hen-house fixtures in three styles and twelve sizes. No poultryman can afford to be without this book. You can have complete, convenient and sanitary fixtures in your house. You can save time, labor worry, and money in your poultry work if you will use judgment in fitting up your house.

Our catalog tells you how to keep free forever from those pests, lice and mites. It has cost us hundreds of dollars, but we send it to interested poultrymen for a 2-cent stamp to cover postage. Write today for free circulars on the Potter System and our new catalog. They will please and interest you.

Those desiring membership should send their names, mentioning this paper, to the secretary-treasurer, F. S. Bullington, Box 328, Richmond, Va.

The American R. C. B. Leghorn Club will offer a beautiful diploma for best collection of Rose Comb Brown Leghorns shown by a member anywhere at poultry shows in the United States, Canada or Mexico. Secretaries will please state in their show catalogue that membership blanks can be had by writing the secretary, Fred Alger, Waukau, Wis.

A GOOD PLACE TO SHOW.

Adrian, Mich., will on September 24 to 28 be a busy place. The Southern Michigan District Fair will hold their twenty-sixth exposition at that time and place.

The Poultry building, a new one, is one of the best anywhere—large, well lighted, capacity for 2,000 fowls and fitted with Empire cooping.

Cash premiums are offered on single birds, cock, hen, cockerel and pullet; also on pen (one male and four females), and display (not less than ten birds), in each variety.

Pigeons are listed at great length and always occupy a prominent position here; dogs, nearly the entire recognized list.

A silk ribbon won here is recognized as worthy of a high place, as only the best professional judges place the awards.

It is not necessary that you personally come, although we would be pleased to have you present. We will see that all are well cared for.

For further information or premium lists address J. E. Holyoke, Superintendent Poultry.

Here is a new idea and one that will work for good: The Dodge county, Nebraska, poultry association has gone to the expense of getting a big car to haul all its members' birds down to the Nebraska state fair the first week in September. These birds will be fed and fully cared for by a committee which has been appointed. There will be almost 400 birds to go from Fremont, Neb., alone and as this city of 10,000 is the seat of government of the association it will be correct to call it the Fremont idea. Why cannot other counties everywhere afford the experiment? It will be good advertising for county and individual as well, and bring out a bigger and better state fair display than ever.

Readers of American Poultry Journal who contemplate going into the poultry business will do well to correspond with James A. Burkhart, Smithsburg, Md., as he writes us he is compelled to almost entirely close out his fine flock of S. C. White Leghorns, which are of the celebrated Purity Strain, and this strain of fowls do not belie their name, as they are pure white. For egg production he feels that they cannot be surpassed and their showroom record proves that they are always in the winning wherever shown. Mr. Burkhart makes the very fair offer to ship for half the purchase money with order and balance C. O. D., and if not satisfied will refund money upon receipt of fowls.

Those of our readers interested in the manufacture or sale of exhibition poultry coops might be benefited by reading in this issue the ad of the People's Poultry & Pet Stock Association, of Fort Wayne, and correspond with their secretary.

FEEDING SUGAR TO POULTRY AND FARM ANIMALS.

This is a practice as old as the hills and the name of the man who is responsible for it has been forgotten for centuries.

The instincts of animals, however, remain for ages, and the same motive that prompts animals to travel for miles to obtain salt from some available lick is alive in them today. Many of the plants on which wild animals graze have a small quantity of sugar in them, and in this manner they obtain the small amount necessary to satisfy their needs. Our domestic animals, not being allowed to seek the sugar-bearing plants, are obliged to go without it, except when some one playfully offers them a bit. You have doubtless noticed how greedily horses eat it; they will follow one about hoping to get enough to satisfy their craving.

This action in time attracted the attention of some scientific fellow, who fed sugar to his poultry and farm animals, and noted results. He got the results, but could not stand the expense, he substituted molasses, found it answered as well as sugar and was cheaper. From that time on the feeding of sugar was taken up and many have written much on the subject.

Some years ago the idea was conceived of compounding a balanced ration of grains and molasses, but experiments finally convinced that the same could neither be sent out ready mixed with the raw molasses nor use artificial heat to dry it. Continued research, however, finally developed a process of turning the molasses into sugar in a granular dry meal form, that was a new one, and the process was patented. This done, the rest was easy and today there are thousands and thousands of tons of Dairy, Horse and Poultry Feeds being used with great profit to the feeders.

The value of sugar in a dairy feed has been advertised and brought before the notice of the public more extensively in the past few years than that of poultry feed. This does not, however, in any way reflect on the value of this ingredient for chickens, as experiments have already shown that sugar in the proper form when mixed with a perfect balance of other grains of known value, is a great saving for the poultryman as well as increasing the profits. It is a wonderful egg producer and builder of bone, flesh and feathers. Another important feature of sugar feeding is the flavor of meat which it imparts to the flesh of the bird, making a rich juicy meat which commands a premium price on any fair market.

Extensive experiments have been made with a feed of this nature for ducks and turkeys. On the duck farm the birds are ready for market in from ten to eleven weeks after leaving the shell, and as the cost of the feed is no greater than other rations used, a great saving is readily recognized.

The molasses or sugar has 80 per cent of the nutritive value of corn, but is far more valuable as a feed stuff owing to its effect on the system of the bird fed. It aids in the digestion and assimilation of all the feed eaten during the day and keeps the fowl in a healthy condition, avoiding the necessity of using condition powders and medicated condiments of the one hundred and one varieties in vogue.

Within the next twelve months it is conservative to say that the poultryman

who is in the business for profit will find, after making a test for himself, that the proper amount of sugar in the feed for his poultry will be the source of greatly increased profits and healthier fowls.

W. W. Page.

Philadelphia, Pa.

A VALUABLE FREE BOOK FOR THE DAIRYMAN.

A new 24-page book is being given away by the Sharples Separator Company, of West Chester, Pa., which takes up the subject of business dairying and the science of making cows pay.

Wasted food is wasted money, as every dairyman and farmer knows. To thoroughly understand what foods make muscle, blood and milk, and what foods pro-

duce heat and fat, is to have the secret of successful dairying. "Business Dairying" tells in a practical way what foods are best for the dairyman to feed and why. It also touches on the care of milk and cream, butter making, churning, working and packing, as well as how much milk for a pound of butter. The selling value of cream is another point taken up, and how wastes can be turned to profit. A close study of "Business Dairying" will reveal many ways to the intelligent dairyman for cutting off losses and improving every opportunity to save. Another feature of the book is "Stable Hints and Suggestions," and the value of manures.

While the practical experience of dairying is usually and best confined to the local conditions, there is enough valuable information in "Business Dairying" to more than pay for the time and trouble in writing for it.

The points to be observed in judging

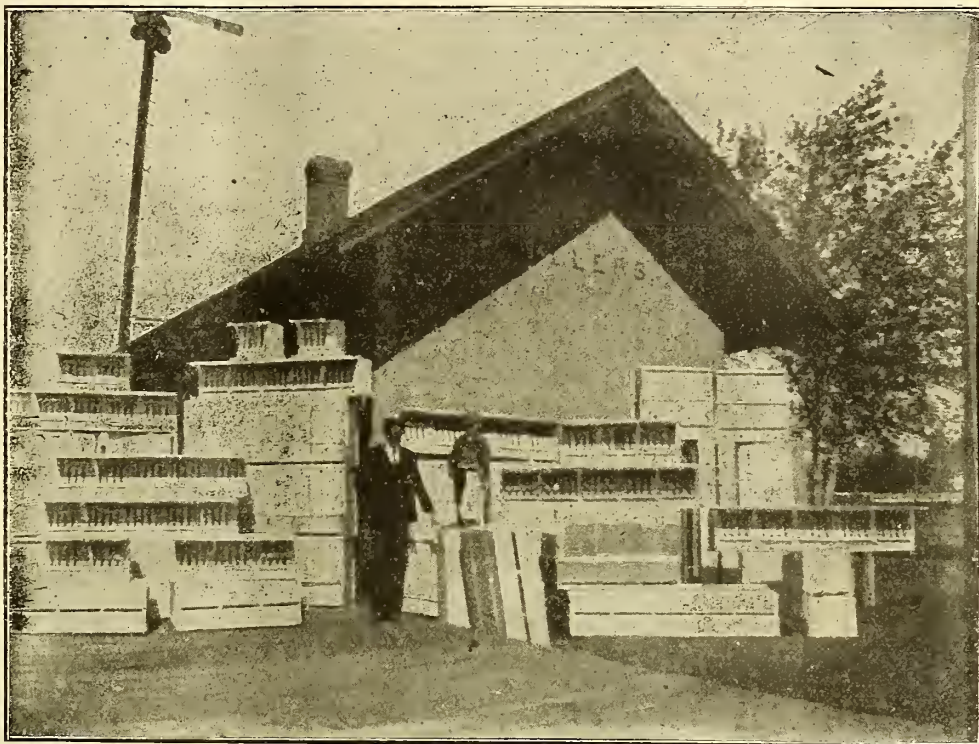

A HEAVY-WEIGHT ROOFING.

Granite Roofing is unique in the fact it weighs 140 pounds to the roll, or nearly double the weight of the ordinary three or four-ply. It is a more permanent and substantial covering than the ordinary roofing, being especially valuable for railroad and factory use where the areas are very large and cost is an important consideration.

and is fireproof. No work of this kind is required, and when the roof is once laid you can leave it to itself with perfect confidence that it will not need to be touched for the next ten or fifteen years. A sample and a book full of proofs of its reliability may be had free on request. Address Eastern Granite Roofing Company, New York, Chicago, St. Louis.

William K. Lewis, Dry Ridge, Ky., is offering some of his choice Buff Wyandotte breeders at bargain prices. He wishes to dispose of these to make room for a pen of Diamond Jubilee Orpingtons. Any of our readers who are looking for bargains in Buff Wyandottes should correspond at once with Mr. Lewis.

We have received from the American Milling Company, of Philadelphia, manufacturers of Sucrene poultry feed, a copy of the souvenir issue of their "Sucrene" magazine.

This cut shows one shipment of Superior Trap Nests. This shipment went to seventeen parties in nine states, viz.: Illinois, Indiana, Iowa, New York, New Jersey, Rhode Island, Pennsylvania, Kansas and Oklahoma.

A part of them went to U. R. Fishel, the White Plymouth Rock specialist, Hope, Ind. Included in this shipment was 100 Superior Trap Nests for the equipment of a large poultry farm in Oklahoma.

duce heat and fat, is to have the secret of successful dairying. "Business Dairying" tells in a practical way what foods are best for the dairyman to feed and why. It also touches on the care of milk and cream, butter making, churning, working and packing, as well as how much milk for a pound of butter. The selling value of cream is another point taken up, and how wastes can be turned to profit. A close study of "Business Dairying" will reveal many ways to the intelligent dairyman for cutting off losses and improving every opportunity to save. Another feature of the book is "Stable Hints and Suggestions," and the value of manures.

While the practical experience of dairying is usually and best confined to the local conditions, there is enough valuable information in "Business Dairying" to more than pay for the time and trouble in writing for it.

The points to be observed in judging

Granite Roofing is not, however, a high-priced roofing, and is easily within the reach of everybody who wants to protect a shed or farm building in a thorough manner. Its stone surface makes painting or coating entirely unnecessary. Moreover, it is easily laid and is proof against fire. Sample will be sent free on request by postal to the makers, Eastern Granite Roofing Company, New York, Chicago and St. Louis.

FREE SAMPLE OF GRANITE ROOFING.

There are many stone-surfaced roofings on the market now, but they are all more or less successful imitators of Granite Roofing. This was the first roofing which put on its weather surface a permanent coating of fine stone. The advantage of the stone surface lies in the fact that it makes unnecessary the usual coating or painting,

They expect soon to publish an issue devoted to testimonials of poultry feed customers, which will be fully illustrated. They state that they issue about 100,000 of these little magazines, which will give some idea of the magnitude of their business.

Banner Molting Powder will assist your hens through the molting period quickly and get them to laying early. Try it. Write Excelsior Wire & Poultry Supply Company, 26-28 Vesey street, New York City, and mention American Poultry Journal.

J. N. Young, Henry, Ill., the Barred Plymouth Rock specialist, reports that he has a fine lot of young stock coming on, and will be in shape to take care of all his old customers and many new ones the coming season.

Keeps Poultry Healthy **VIGER'S** Prevents Disease
Crushed Charcoal

WE WILL MAKE YOUR POULTRY HEALTHY.

This is no idle boast. Our assertion is backed by an iron-clad guarantee. We manufacture Viger's Chemically pure Crushed Charcoal, the greatest poultry conditioner on earth. We guarantee our charcoal to keep your hens healthy, in good laying condition, free from digestive disorders and all diseases of the Crop. Why? Simply because Chemically pure Charcoal, through its great absorbing powers, will positively renovate and cleanse the system of all impurities, noxious gases and disease germs.

For \$1.00 we send you a 50 lb. trial sack. Feed it to your fowls. If it does not do as we say, we will refund your money immediately.

3 sizes: Coarse granulated—for mature poultry; fine granulated—for small chicks; pulverized—for soft food. Samples free. Special price in quantities.

Viger's Coal & Wood Co., 434 20th St., Detroit, Mich.

Questions and Answers

Questions asked by subscribers will be answered in this department only under the condition that the full name and address is signed by the writer.

Editor American Poultry Journal.

Dear Sir:—Being a subscriber of the American Poultry Journal, would be pleased to have you answer a few questions in your next issue. Last spring I sent to Freeport, Ill., to a prominent breeder of fancy poultry and got a trio of Buff Leghorns. Now, first, I want to know about mating my pullets for best results this coming year. Should I send to the same parties for my roosters or to a different firm? Second—What age should the roosters be to mate with the pullets? Third—If a bird has had the cholera and got apparently entirely well, will it ever have the same disease again? Marysville, Cal. E. R. G.

Answer:—If you wish to establish a strain of your own you should get your breeders from the same parties. The male bird should be two years old. It is not at all likely that a bird will have the cholera the second time.

Editor American Poultry Journal.

Dear Sir:—Will you please answer the following questions in your September number? 1. How many chickens can you keep in a house 7x14? 2. Will blood-poisoning kill a chicken if not taken care of? 3. What is the best cure for lice? 4. How long will it be before pullets raised in January will lay? 5. How long

is a hen useful for laying? 6. What breed of hens raise young chicks best? A. V. H.

Sag Harbor, Long Island, N. Y.
Answer:—1. Twelve to fifteen. 2. Yes. 3. Plenty of whitewash and lice killer. 4. From four to six months. 5. The average is about three years. 6. No particular breed that we know of. This all depends on the individual hen.

Editor American Poultry Journal.

Dear Sir:—Please answer the following questions in the Journal: I have a White Wyandotte cock, two White Wyandotte hens and some Black Spanish. What will be the color of the chickens from the black hens? Will the Wyandotte chickens be pure? Do chickens that have a large run need meat? Is cow liver a good meat food? How long will beef scraps keep? Is an alfalfa field a good place to raise chickens? Is tar paper good for lining a poultry house? Lawrenceburg, Ind. M. C.

Answer:—The color of the chicks from the Black Spanish eggs will probably be mottled. The Wyandotte chicks will be pure. For best results fowls need meat, no matter how large the run is. Liver is fine for fowls, and especially for laying hens. We do not know how long beef scraps will keep, but we have had them

on hand for two or three months during cold weather. An alfalfa field makes a good run for poultry. There is nothing better than tar paper for a poultry house.

Editor American Poultry Journal.

Dear Sir:—I would like to have you tell me what is the matter with my young pullets. Their combs are pale and do not want to grow, but the chicks are the largest in the yards. Please tell me what to do, in the next Journal. F. L. Rockville, Conn.

Answer:—A little raw meat two or three times a week will help develop the combs of your pullets; but if your fowls are perfectly healthy otherwise the combs will brighten up in due time. It may be that lice are sucking all the blood out of your young pullets. This will cause the combs to turn pale very quickly. Better examine for lice and give them a good dust bath.

Editor American Poultry Journal.

Dear Sir:—Will you please answer in your September Journal this question: I have a cock about two years old and at times he can't crow, and I would like to know what is the matter with him and what to do for him. D. W. St. Louis, Mo.

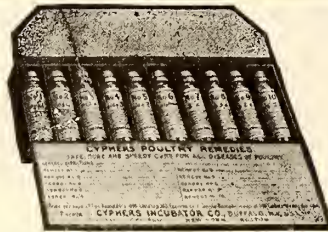

Answer:—We are unable to form any idea as to the trouble, as you do not give us enough detail. If the bird is healthy and vigorous otherwise we would not advise you to attempt to doctor him for this.

Editor American Poultry Journal.

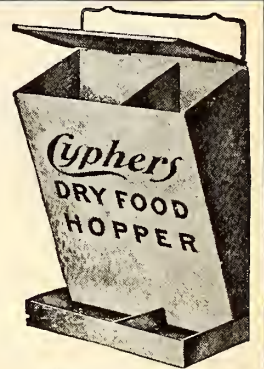

Dear Sir:—Would be pleased if you would answer the following question in

50 cents each; \$4.75 dozen.

Cyphers Poultry Remedies for all diseases of Fowls.
Single Vial 40 cents. Case complete \$3.00.

the next issue of your Journal: I have Barred Rock pullets and cockerels, four months old, and have already separated them. At what age should pullets be before put with different cockerels, and state the age cockerels should be to obtain best results. G. A. S. Butler, Pa.

Answer:—Unless you desire eggs for hatching it is not necessary to put the males with females at any time. When you are ready to do your hatching you can then mate your birds. Male birds should be at least one year old for best results.

Editor American Poultry Journal.
Dear Sir:—Will you please answer the following questions: 1. How many Buff Cochin Bantams could I winter in a pen 5x12? 2. How many times a day should hens be fed? 3. What is the standard weight of a Buff Cochin hen and cock? Calais, Me. L. W. E.

Answer:—1. Fifteen to twenty. 2. Three times. 3. Cock, 11 pounds; hen, 8½ pounds.

Editor American Poultry Journal.
Dear Sir:—Please answer in your question and answer columns the following: 1. Would you advise using trap nests if one could not visit the nests only at morning, noon and night? 2. My chickens have a notch in their breast-bone which fits on the roost, which is round; is there any remedy except new roosts? J. C. K. Gloversville, N. Y.

Answer:—1. No. 2. This is caused by allowing the chicks to roost too young. Provide roosts that are not round; 2x2 scantling, with sharp corners trimmed off, make good perches.

Editor American Poultry Journal.
Dear Sir:—Please answer, in your September Journal, the following question: How many fowls (White Wyandottes) will a house 12x25 hold, half of which has double floor space? Coshocton, N. W. F. W. R.

Answer:—Fifty fowls can be handled very nicely in this space, if given proper care and feed.

Editor American Poultry Journal.
Dear Sir:—In my August Poultry Journal I find that C. S. E. has trouble with chicks. The trouble is that they were fed the improper food and were fed before forty-eight hours old. Lodi, O. Mrs. L. L. Williams.

Editor American Poultry Journal.
Dear Sir:—Will you please answer in next month's issue of Journal: What is the trouble with my young chicks, as they do well until about two weeks old and then get what I think is diarrhoea, and die in a few days? Can you tell me what is the matter with them and a cure for same? Mrs. M. T. Loquin, Pa.

Answer:—You fed your chicks too soon after they were hatched and did not feed them the proper feed. During the hatching season every year we give instructions to our readers how they should feed and care for their young chicks, and where these instructions are followed very little trouble is experienced.

Editor American Poultry Journal.
Dear Sir:—Will you please answer the following through your paper: 1. Is whitewash good to keep down insects in the coops and houses? 2. Please give a

formula for making it. 4. How often should it be applied? R. O. C. Springfield, Mo.

Answer:—1. Yes; there is nothing better, especially when a little crude carbolic acid is added. 2. Slake a half

bushel of lime in boiling water, after which strain it to remove all sediment. Add two pounds of sulphate of zinc, one pound common salt and a half pound of whitening thoroughly dissolved. Mix to proper consistency, with skim milk if

To Insure Jellies and Preserves

Your jellies and preserves will keep perfectly if you seal each glass or jar, with a thin coating of Pure Refined Paraffine. Easiest way in the world to keep fruit, and the surest. Simply pour a little melted paraffine over the contents of the glass, or, if it is a jar, dip top *in* melted paraffine.

PURE REFINED PARAFFINE

is odorless, tasteless, acid-proof, and will positively exclude outside air from fruit jars, or jelly glasses. Useful in numberless ways—in the laundry, when ironing, to make wood tubs harmless to butter, as a wood filler, a floor wax, etc.

Sold in cakes of about one pound weight by all dealers—full directions with each cake. Write for attractive little folder telling about Pure Refined Paraffine and its many uses.

STANDARD OIL COMPANY.

Long Brooder House PLANS SENT FREE

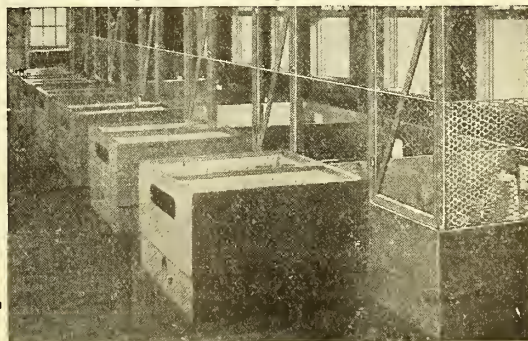

We furnish without cost, complete plans when desired for remodeling old brooder houses, or building new ones. Write and tell us what you want to do and we will send you plans free, and give you any advice you desire.

New Prairie State Brooder No. 5

This is the most economical and successful indoor brooding device ever offered poultry raisers, and is particularly adapted to long brooder houses. Not only possesses all the points claimed for a pipe system,—that of overhead heat with cool floor,—but it does not have any of the disadvantages of such a system. The New No. 5 Prairie State Brooders are perfectly sanitary, from the fact that every part is instantly accessible and removable, and may be taken out of doors and purified in the sun. This feature, together with perfect ventilation, eliminates diarrhoea and other germ diseases that carry off so many chicks, the cause of which is the irregular heat and poor ventilation with the unsanitary conditions usually found in the pipe brooder.

As arranged in Long Brooder House

The busy poultryman will appreciate this brooder as a labor-saver. The upper case is instantly removable, permitting the entire base of brooder to be cleaned with a broom. The lamp, chicks and feeding may also be attended to from the alley. In fact, it is not necessary to enter the pen to care for the brooder. Tell us your troubles and write for further information.

Prairie State Incubator Co.
468 Main Street, Homer City, Pa.

Lost Strayed or Stolen—One Cow

That is about what happens each year for the man who owns five cows and does not use a Tubular cream separator. He loses in cream more than the price of a good cow. The more cows he owns the greater the loss. This is a fact on which Agricultural Colleges, Dairy Experts and the best Dairymen all agree, and so do you if you use a Tubular. If not, it's high time you

did. You can't afford to lose the price of one or more cows each year—there's no reason why you should. Get a Tubular and get more and better cream out of the milk; save time and labor and have warm sweet skimmed milk for the calves. Don't buy some cheap rattler-crap thing called a separator; that won't do any good. You need a real skimmer that does perfect work, skims clean, thick or thin, hot or cold; runs easy; simple in construction; easily understood. That's the Tubular and there is but one Tubular, the Sharples Tubular. Don't you want our little book "Business Dairymen," and our Catalog A.205 both free? A postal will bring them.

Men and women of every age are making big salaries with us. Work honorable, easy and agreeable at home. We want some one in your neighborhood. Are an old established firm. Write to-day. Big money for you. **ROYAL MANUFACTURING CO.** Box 1851 Detroit, Mich.

possible, and if not use hot water. Add a half pint of crude carbolic acid. Stir in thoroughly a half pint of liquid glue and apply the wash while hot. 3. Two or three times a year; the oftener the better.

Editor American Poultry Journal.

Dear Sir:—Please tell me through your paper (1) what disease my young turkeys have. Their heads and eyes are swollen and they have knots on both sides of their noses. The swollen parts are a clear pink color. The turkeys afflicted in this way eat very greedily. Please state a remedy if possible. 2. How can I distinguish a goose from a gander in a flock of gray geese and how many ganders should I keep in a flock of fifteen geese? Mrs. M. B. Cowgill, Mo.

Answer:—1. This is caused by a severe cold and sometimes develops into roup. Procure some one of the various roup cures advertised in these columns and use as directed. 2. The voice of the female is coarse and the male has a thicker neck and a general masculine appearance. One gander will sometimes do

A famous Single Comb Buff Leghorn cock bird. The sire of more than twenty prize winners. The kind that is used by Peter S. Hurt, Thorntown, Ind. This bird won first at Illinois show, 1906, and first at the following shows in 1905: Central Indiana Show, Indiana State Fair, Lebanon, Terre Haute, Frankfort and Crawfordsville.

for two or three geese, but geese generally mate in pairs and better results will be obtained in that way.

Editor American Poultry Journal.

Dear Sir:—Will you kindly answer through your columns the following: 1. How many turkey hens may be mated with one male? 2. What is the best feed for turkeys for the first few weeks after hatching? E. N. Littleton, Colo.

Answer:—1. From eight to twelve, according to the vigor of the male. 2. For the first few feeds they should have soft feed to which has been added sand; after a few days they may be fed ordinary chick feed.

Editor American Poultry Journal.

Dear Sir:—There is something going through my fowls that I am at a loss to understand, or to find a remedy for. The eye will commence swelling and finally swell shut, making it impossible for the bird to see. I at first thought it was roup, but have used a good roup cure both as a tonic and as an eye wash, but it does not seem to relieve it. In

your questions and answers, will you kindly tell me what this is, and a cure for it? G. L. D. Cobden, Ill.

Answer:—This is evidently roup in an advanced stage. Fowls in this condition are not worth doctoring, for they would not be suitable for breeding purposes should you succeed in apparently curing them.

Editor American Poultry Journal.

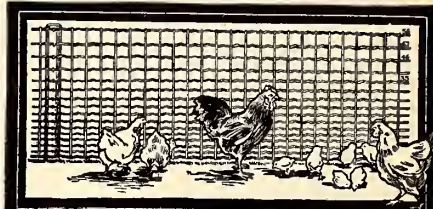

Dear Sir:—Will you or some one tell me in your valuable paper, the American Poultry Journal, what is the matter with my gobbler? He rattles in his throat as if it was full of phlegm. Would like to know what I could give him to help him. Mrs. O. H. Plainview, Minn.

Answer:—Your gobbler has bronchitis, brought on by a cold. Inhalation of steam, or vapor from boiling water in which hops or a small quantity of carbolic acid has been placed, is beneficial. Give with the food two grains of black antimony twice a day.

W. P. H.—The only remedy for your ducks is to keep them away from those shells. Pumpkin seeds and shells, whole, will kill ducks, I have found by sad experience. Mrs. J. Barfoot. Dolliver, Iowa.

Editor American Poultry Journal.

Dear Sir:—Please advise, in questions and answers department of your next issue, cause and treatment for hens ill with the following symptoms: Bird will stand around and will not eat much, if any, and seems to separate from flock; breathes hard and keeps working its vent

AT LAST A Perfect Poultry Fence

The "Pittsburgh Perfect" Poultry and Garden Fence is exactly what its name indicates. It is "Perfect" because, made of special steel of our own formula; "Perfect" because heavily galvanized, thus preventing rust; "Perfect" because our electric welding process makes stay and strand wires one piece, so that mesh cannot spread to let fowl through; "Perfect" because smallest wires in it are heavier than the wires used by most fence manufacturers for a regular stock fence; "Perfect" because it is the only fence that will not unravel if strand or stay wire is cut.

Don't buy flimsy hexagon poultry nettings, they rust out quickly—are disappointments at best. It's "the WELD that HELD" that makes a perfect poultry fence. No top or bottom board needed. Heavy top and bottom wires take their place. Nothing can get through.

The Price is Small—the Satisfaction is Great

Thousands of dealers handle the "PITTSBURGH PERFECT" FENCES, from the Extra Heavy Fences for stock to the king of all Poultry Fences.

PITTSBURGH PERFECT

Pittsburgh Steel Company
PITTSBURGH, PA.

all the time; discharge is watery, and have noticed quite a little phlegmy substance to it at times. In color it is blackish green and sometimes mixed with yellow, and the odor is rank. Picked up sick bird by the legs and head down and she vomited a whitish watery substance. I cured one bird by pouring dry slaked lime in vent and dosing with pills of turpentine and flour. Have tried this on the one ill now, but she does not get any better or seem to get worse. Would you advise keeping such a bird with the healthy ones?
C. C. M.

North Olean, N. Y.

Answer:—Indigestion is the trouble. This is usually caused by a lack of grit. Lice will also bring about this condition. A fowl in this condition is not worth doctoring and we would advise cutting its head off. Give your fowls plenty of grit and charcoal and this trouble will be avoided

Editor American Poultry Journal.

Dear Sir:—Please answer in your next issue the following questions: Is it absolutely necessary to have different mat-

ings in S. C. Brown Leghorns, one to breed the cocks from, the other the hens, or can you breed both male and female to the standard requirements from the same mating? I am a beginner and do not want to start in with stock that takes so many different matings to get the standard requirements.
J. C. R.

Mineral, Va.

Answer:—In order to get the very best specimens possible it is necessary to practice the double mating; but same is true in nearly all varieties.

Editor American Poultry Journal.

Dear Sir:—Please answer the following in your September issue: 1. What breed of chickens are best for capons? 2. Is the hopper mode of feeding better than the hand feeding? Is it not more expensive, and do not the fowls become too fat? Is it better for young chickens than for old ones?
G. F. O.

Boxley, Ind.

Answer:—1. We cannot recommend any one breed as being better than another for this purpose. 2. Hopper feeding is coming into general practice, espe-

cially in the east, and is claimed to be less expensive than the hand feeding. It is also a great labor and time saver, and fowls will not become too fat. It is equally good for both young and old stock.

Editor American Poultry Journal.

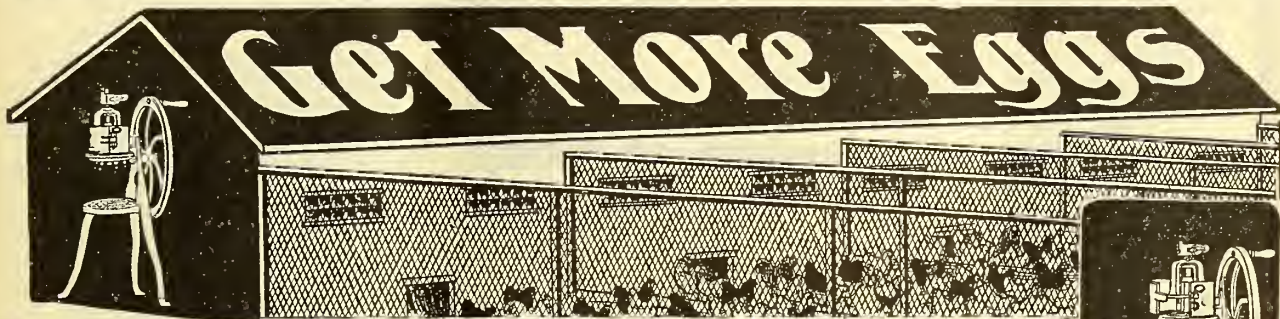

Dear Sir:—Please answer the following in your question and answer column: What are the following birds worth: scoring 95 should sell for at least \$25; W. C. Polish, W. Leghorns? Are they worth \$2.50 to \$4 each? What is stock worth scoring 95?
F. H.

Butler, Pa.

Answer:—Birds scoring 87 to 90 should sell for \$2 to \$10, and a bird scoring 95 should sell for at least \$25; but this all depends on the breeding and variety. The score does not always govern the price.

Editor American Poultry Journal.

Dear Sir:—I would like you to answer the following questions in your September number: 1. Is there a way of keeping hens from setting? 2. I was trying

EVERY atom of matter that the hen puts into an egg, must come from the food she eats. She can't get it in any other way.

So, it is perfectly clear that if you expect to get more eggs, you must give the hen materials to make eggs from—food containing more of the elements that enter into egg making, in an easily digested form.

There is no room for argument there

But what kind of food is that? Where will we find it?

Well, it so happens that not only the egg, but the greater part of the fowl's body—bone, muscle and feathers, is made up of what the professors call "protein."

Unfortunately, it also happens that protein is found in only small quantities in the grains and vegetables usually fed to fowls, but in exceedingly large quantities in animal matter or food.

That explains why fowls of all sizes and ages, from the youngest chick to the oldest rooster, love worms and bugs above everything else.

They crave animal food, because Natural Instinct teaches them that they need it for growth, development, vitality and egg-making.

* * *

Of course your hens cannot get worms and bugs in winter or when they are confined to close quarters.

You, therefore, must give them this protein food in some other form, if you hope to get the best results from your flock.

You can get this protein in its most digestible form—most nearly like the worms and bugs your hens love so much,—by simply taking the trimmings from your butcher's block, the bones of beef, pork or lamb with gristle and meat adhering to them.

They make a perfect substitute—not only because they contain the same food elements as the worms and bugs, but also because, in its fresh, raw state, it is as easily digested and as greatly relished as are the worms and bugs.

In effect it is not something that is "almost as good," but it is identically the same.

It "balances the ration" by supplying what is lacking—or is very scarce, in the grain you feed.

It has more than four times the egg-making value of grain and is rich in the elements needed for making bone and muscle and so promoting rapid growth and developing as well as improving the vigor and vitality of the entire flock.

That is why fresh-cut raw bone—doubles the egg yield by giving the hen egg-making material in its most easily digested form;

—makes more fertile eggs, produces larger hatches and livelier

Don't be persuaded, however, that "bone meal" or so-called "beef-scrap, can take the place of raw bone.

It is the *live* worm the hen craves, not a dried up carcass, and it is raw, fresh animal food that does her the most good and is the most easily digested.

If dried, or cooked or embalmed or preserved it naturally loses a large part of its value.

Neither should you class raw bone with the advertised "poultry foods" or "condition powders" made from secret formulae, for which such extravagant claims are made. Your hens do not need these compounds or medicines to make them lay, if they have the right kind of materi-

To prove to you what it will do we will send you any size or style of Mann's Latest Model Bone Cutter

that you may select from our catalogue on

Ten Days Free Trial

(No money in advance)

You simply select the machine you want to try—and we send it to you. No red tape, no "deposit," no money in advance.

If it does what we claim it will do, you buy it.

If not you return it at our expense.

Can we make you any fairer offer than that?
* * *

You will find that Mann's Bone Cutter turns easily, cuts rapidly and produces better poultry food than any other

It turns more easily than any other because its self-governing feed automatically adjusts the cutting to your strength, so that any one can use it.

It makes better poultry food than any other because it cuts not only all green bone, but also all adhering meat and gristle—wasting nothing and leaving no chunks or slivers.

Its open hinged cylinder takes large bones and can be easily kept clean.

It is strong and durable and requires few repairs.

But try it and see—that's the way to tell.

Send Today for Catalog and make your selection of machine for trial. We will do the rest.

TEN DAYS FREE TRIAL

No Money in Advance.

MANN'S

LATEST MODEL Bone Cutter.

chicks, because it makes hen and cock more vigorous, fuller of vitality, so that the eggs have more life in them;

—develops earlier broilers and layers and makes heavier market fowls, because it promotes growth by supplying the elements most needed for making bone and flesh and muscle;

—makes red combs, bright eyes and glossy plumage, because it gives the fowls that variety of ration so necessary to their health and well being.

No matter what line of poultry raising you are in, fresh cut raw bone will help you get better results and make more money.

And the beauty of it is, it costs you but little more than the labor of cutting it.
* * *

al in their food.

Neither do they need the ready mixed foods whose composition you don't know, and which you would consider extremely expensive if you did know their ingredients. You buy them "on faith;" you don't know what is in them.

How much better to use raw bone, and mix your own ration, using the cheapest grains and yet being sure that you have the best and most economical of all rations.
* * *

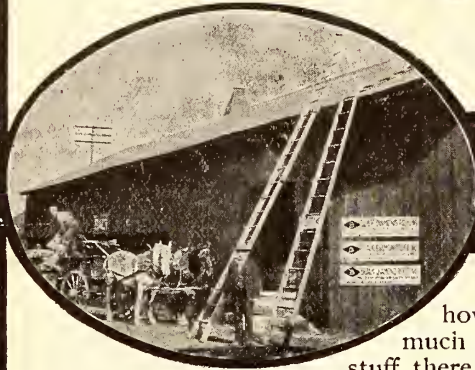

Of course the bone must be properly cut, but that is easy with

Mann's Latest Model Bone Cutter

ROCHESTER, N. Y. CHICAGO, ILL.

to feed my chickens the mixture as given in your handbook (ration for laying hens)—oats, corn meal, wheat middlings, clover meal, meat meal, made into a crumbling mash, but they will not eat that; will you tell me what to give them? 3. Will oats have to be scalded before feeding to hens? E. E. H.
Colorado Springs, Colo.

Answer:—1. There is no way to prevent a hen from becoming broody, but by putting her in a pen with two or three male birds and not giving her any nesting material she will soon get over the desire to set and will start laying again. 2. They will eat it if you do not feed them anything else for a few days. 3. Cooked oats makes a good feed, but they can also be fed dry.

Editor American Poultry Journal.

Dear Sir:—Will you please answer the following questions through your paper: What is meant by utility stock? Would a single comb or a clean legged variety with stubs or sprigs be called utility stock, or must it be a bird not disqualified by the standard? Is poultry subject to the disease called tuberculosis? If so, what are symptoms of disease?

Cresco, Iowa. R. W. W.

Answer:—Utility stock is that portion which is not up to show requirements, but not disqualified birds. All disqualified birds should be marketed, as they are unfit for breeding purposes. Yes, fowls are subject to tuberculosis. The symptoms are numerous. Sometimes it is a running sore on some part of the body, leg or foot; other times the fowl will lose flesh very rapidly and at the same time eat more than any of the other fowls in the flock. There is no cure for this disease and the fowls should be killed and burned to keep the disease from spreading.

Editor American Poultry Journal.

Dear Sir:—Please answer the following questions in your Journal: 1. Do you consider a cement floor for the roosting pen of a poultry house sufficient or do you advise using it for the scratching shed also? 2. How many R. I. Reds can I keep in a building 12x18, roosting pen 7x12? C. C.

Selma, Ind.

Answer:—1. Where possible a cement floor should be used, as it is very easily cleaned and disinfected. 2. Twenty-five.

Editor American Poultry Journal.

Dear Sir:—The question of C. S. E. and Mrs. G. H. in August number of American Poultry Journal can be answered, and for their benefit and other readers who will take time to read will probably find the way to overcome the trouble with their young stock in the future. Last year I hatched 175 chicks and lost 104 from the same trouble, which caused me to experiment in the following manner: I built a small house, 5x12 feet, 8 feet to ridge, three windows to the south, board floor, high enough so as to allow the air to pass underneath. This house I made into pens 3x3, with a 2-foot walk next the wall; outside pens of the same size (3x3), by 2½ high, with board floor and tar roofing, into which I fed Petaluma chick feed exclusively, using sweepings from haymow for scratching material. The mother hen, being confined inside, was fed on corn, wheat and oats, Douglas mixture in drinking founts every third day; pens cleaned every day; free use of carbolic acid and coal oil, and I have thus been able to rear 96 per cent of all chicks

hatched, keeping them on the board floor for four weeks, and I think from the looks of my White Wyandottes, which were hatched from the same stock as those of last year, I feel well repaid for my expense and trouble. Hoping this will be of some use to the many poultry lovers and wishing American Poultry Journal and all its readers success in the future.

Frank L. Waidele.

Richmond, Ind.

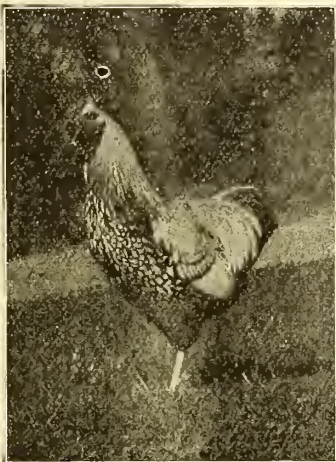

F. O. GROESBECK VS. CITY OF HARTFORD.

One of the questions to be settled by the courts which is attracting the general attention of poultrymen and especially the breeders of fancy poultry through Connecticut is the case of F. O. Groesbeck, proprietor of Elm Poultry Yards, Hartford, Conn., who sues the city of Hartford to recover value for fowls killed by unknown dogs which entered Mr. Groesbeck's enclosure by tearing through wire fences in the rear, then through wire doors in coop where two lots were penned separately. The loss felt most was that of a White

patrons of E. P. Y. from coast to coast. Earnest, conscientious breeding for years (since 1892) has given results, and for the reward when buyers come they view the specimens offered, make selection of ones wanted, pay the price and feel satisfied, possibly thinking at the time that it was more than they intended to put into same, but when in strongest competition they win the coveted blue over all others there is the feeling of confidence in the seller and compared with first prize winners in equal competition price paid was with-in keeping. Now the city, while the law in black and white reads the owner of any poultry, etc., shall be paid according to its value, etc., in case of loss by dogs, and when presenting claim for value it was cut down to market price of fowl on the block and for the value, suit is brought claiming if a horse valued at \$5,000 was injured in accident settlement would not likely be made basing same on value of any \$50-horse. There never has been a test case made of such a case, parties losing

poultry, sheep, etc., from dogs have put up with settlement offered, and it is with the end in view of settling according to reading of the law that the suit is made, and while the expense of suit is no small item it will place for all time the relation of damaged individuals to the towns. In this state the dog tax is \$1.15 for males, \$5.15 for females. The collection of dog taxes is enforced strictly and the funds seldom drawn on for damages. Of course, the owner of a dog, if known, is liable for the damage of his dog, but if unknown, as in this case, it comes on the town. Connecticut is noted for the high quality stock produced each year, probably more fine show specimens coming from this one state than any two other states. The fanciers are many, whose enthusiasm runs high. The results of this suit will not only affect the poultrymen, but live stock breeders in general.

Results of the suit will be given American Poultry Journal readers later through the columns of this paper.

SILVER WYANDOTTE MALE.

Owned by J. F. Van Alstyne, Niverville, N. Y.

Wyandotte cockerel, being a very probable winner for any of the big shows for the 1907 season, besides possessing exceptional development and great strength of color his breeding was on strictly show lines, his father being Mr. Groesbeck's second prize cockerel at New York, full brothers of which have sold for \$75 to \$150 each, under guarantee to win, and the females all possessing great development such as one only experienced in the show room requirements, knowing winners, would reserve for matings where settings sell readily at \$10 per twelve eggs. These females running to lines of ancestors who produced such as first and second White Wyandotte pullets at World's Fair, St. Louis, 1904; first White Wyandotte pullet at New York, January, 1904; first White Wyandotte pullet at New York Grand Central Palace, December, 1905; second White Wyandotte hen at Madison Square Garden, January, 1906; first and championship pullet at Boston, January, 1905; several daughters of the second White Wyandotte hen at World's Fair, St. Louis. In addition to above mentioned, the breedings include blood lines of his winners at Philadelphia, Newark, Springfield, West Haven and for the

For Only 75 Cts.

We Send

AMERICAN Poultry Journal

One year, and a copy of the book entitled

200 EGGS A YEAR PER HEN

The demand for this book has been so great that the third edition has been exhausted, and a fourth edition of 5000 copies has just been printed. It tells how to get the greatest number of eggs at the lowest possible cost. Send orders direct to

American Poultry Journal Pub. Co. 325 Dearborn St., Chicago, Ill.

CLASSIFIED ADS.

Under this heading ads will be inserted for six cents per word each month for less than three months. **Four cents per word each insertion for three months or longer.** Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under **classified headings.** No ads accepted at less than an average of 50 cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Copy for classified ads should reach us by 15th of month preceding date of issue. Write your copy plainly, as upon this the correctness of your ads largely depends. **AMERICAN POULTRY JOURNAL** furnishes every advertiser during the time his ad is running. **Fifty-five thousand per month.** We guarantee an average monthly circulation of 55,000 copies of **AMERICAN POULTRY JOURNAL.** When placing your ads remember that advertisers of Classified Ads get better returns from **AMERICAN POULTRY JOURNAL** than from any other poultry journal—none excepted.

On writing any of these advertisers mention **A. P. J.** It helps you and doesn't hurt us.

All Copy for Classified Ads Must Reach us by the 15th of the Month.

System in Poultry Practice BY JAMES SHACKLETON.

30 Chapters, 147 Pages, One Dollar, Postpaid.

April 10, 1906. Sales to this date in 1906 are vastly greater than in previous years, and are more evenly spread all over the English speaking world. Everybody having fowls need the book, and people who get it tell that to all their friends and acquaintances. It is the only book in any language that does, or ever did, take poultry keeping out of blind guessing into exact methods and constant improvement. Circular free.

The book and American Poultry Journal for one year for \$1.10 new or renewal.

JAMES SHACKLETON, Box A 12, Milburn, New Jersey

WHITE WYANDOTTES!

Bigg's White Wyandottes have been line-bred since 1897—bred for Wyandotte form and color and for egg production.

Shape and color characteristics have been firmly fixed. These Wyandottes are the low-down, blocky kind, in weight exceeding somewhat standard requirements.

Unapproached in size, style and finish, they have never failed to win the coveted prizes in the strongest competition, east and west. Every bird line-bred and pedigreed and sold on approval. Eggs: \$3 per sitting; two for \$5; three for \$7.

HOUDANS

Line-bred since 1874. Acknowledged standard of Houdan excellence in America. Eggs: \$3 per setting; two for \$5; three for \$7.

THOS. F. RIGG IOWA FALLS, IOWA

Illinois Central R. R. Co.

in which important questions are tersely answered in brief articles about

**Southern Farm Lands,
Mississippi Valley Cotton Lands,
Truck Farming, Fruit Growing,
Stock Raising, Dairying,
Grasses and Forage, Soils,
Market Facilities
and Southern Immigration**

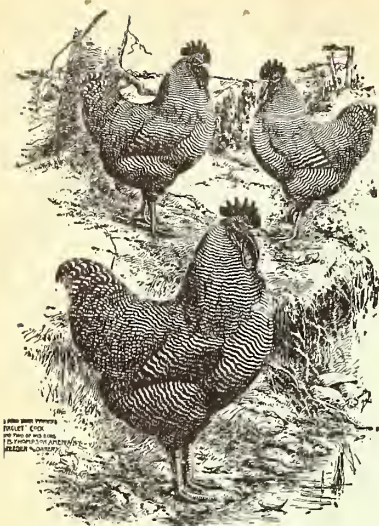

along the lines of the Illinois Central and Yazoo & Mississippi Valley Railroads, in the States of Kentucky, Tennessee, Mississippi and Louisiana, including the famous

YAZOO VALLEY

of Mississippi.

Send for a free copy to **J. F. MERRY, General Immigration Agt., I. C. R. E., Manchester, Iowa.** Information concerning rates and train service to the South via the Illinois Central can be had of agents of connecting lines, or by addressing

S. G. HATCHE, G. P. A., Chicago, Ill.

A "Ringlet" 1st Prize New York Cock and two of his Sons.

"RINGLETS" Soar Still Higher.

At the Imperial Show of the Nation
Madison Square Garden, New York

E. B. THOMPSON'S BARRED P. ROCKS

Stamped their superiority in the most decisive manner, winning again the Superb Challenge Trophy value \$100, for best cock, cockerel, hen and pullet. This is the third time the "Ringlets" have won this grandest of all trophies, giving them now absolute and final ownership. In this "COLOSSAL CONFLICT" the "Ringlets" lifted the great National Sweepstakes Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. My Barred Rocks won double the number of silver cups and special prizes of any competitor, including the sweepstakes special in gold for best Plymouth Rock on exhibition male or female any variety.

The "RINGLET" World's Record of four years in succession at New York is a page of history. The "RINGLET" World's Record of first on exhibition pen at this great show, three years in succession, is the undisputed champion.

The "Ringlet" clean sweep 1st, 2d, 3d, 4th and 5th prizes on pullets has never been approached at Madison Sq. Garden, and stands alone and unequalled. The "Ringlets" have won at New York—exhibited by me personally—a grand total of 101 prizes. 48 of these are 1sts and specials, being more than double the number of 1st and special prizes won by any competitor in the history of the show.

GRAND STOCK FOR SALE

In any number. Rare bargains in yearling breeders in lots of a trio or 100. Show birds fit to win in the fastest company—600 choice breeding cockerels. Nicely illustrated 36-page catalogue on application. It is full of original illustrations of New York winners from life. Eggs from finest exhibition matings. One setting \$5, two settings \$9, three settings \$12, four settings \$15. Address

HAWKINS'

ROYAL BLUE STRAIN

PLYMOUTH ROCKS

BARRED, WHITE AND BUFF.

WYANDOTTES, Silver White and Buff.

Have won more prizes at New York, Boston, Washington, and America's greatest shows than all others.

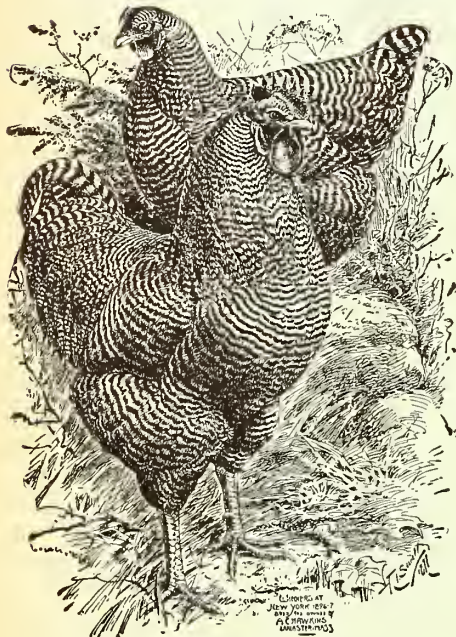

My matings this season are the best I ever owned.

At New York, in the largest show of Barred Rocks ever seen, 451 Birds, I won 1st, 2d, 3d and 4th Cockerels; 1st, 2d and 3d Pullets; 1st and 3d Cocks; 1st and 2d Hens; 1st and 2d Breeding Pens. My other varieties are of the same high quality. Hundreds of choice exhibition and breeding birds at honest prices. EGGS from Prize Matings: One setting, \$5.00; two settings, \$8.00; three settings, \$10.00; five settings, \$15.00. \$20.00 per 100. Catalog of America's finest Plymouth Rocks and Wyandottes free.

Young's Strain S. C. W. Leghorns

I HAVE NO OTHER BREEDS

My strain again for the sixth consecutive year shows its superiority by winning more prizes at Madison Square Garden, N. Y., in the strongest competition ever known, than all others combined, including 17 specials, and again winning the Nat'l S. C. W. Leghorn silver cup. Two weeks later I almost duplicated my wonderful win of last year at Boston by winning 9 prizes on 9 entries against the most prominent breeders of the east. My winnings for 1906, at the world's 2 greatest shows, as follows: NEW YORK: Cocks, 1st, 3d, 4th; cks., 1st, 4th; hens, 2d; pul., 1st, 2d, 5th; pen, 4th. BOSTON: Cocks, 1st, 2d; cks., 1st, 2d; hens, 1st, 4th, pul., 2d, 3d; pen, 1st. This record has never been equaled by any other Leghorn breeder in America. Stock and eggs for sale at all times. 1906 mating list free. D. W. Young, Highland, N. Y. and Ridgewood, N. J. Address

Eggs from 30 grand pens guaranteed to hatch regardless of distance. 28-page catalogue free. 68-page book, "Minorcas, All varieties," history, matting, fitting for show, etc. Fully illustrated, 25 cents postpaid. My S. C. Minorcas have never lost a special for large size, and have won more than 3,000 prizes for my customers in strong competition. My R. C. Black Minorcas have won more 1st and 2d prizes than all competitors combined at Chicago, Boston, Philadelphia and New York.

GEO. H. NORTHUP, Raceville, Washington Co., N. Y., R. F. D. 6

Petersen's Houdans

Reign Supreme at the Nation's Greatest Shows

My record has never been approached by any breeder.

BOSTON, 1900. In world famous competition, 135 Houdans exhibited, I won 1st cock, 1st and 2d pullet.
BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.
BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials.
BOSTON, 1905. We won every important prize. 1st and 2d cock, 1st, 2d, 3d cockerels, 1st, 2d and 4th hen, 1st, 2d, 3d and 5th pullets; \$100 champion challenge cup for best male; American Houdan Club Cup for best cock, hen, cockerel and pullet. All shape and color ribbons; gold special. Such records prove the superiority of Petersen's strain of Houdans and denies competition.

ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdans of Philadelphia, Pan-American Hagerstown, Toronto. No matter where you want to exhibit, no matter what the competition, I can furnish the winners. Photographs on application. Eggs in season.

MISS ALICE M. HEDGES

PLEASANT HILL POULTRY FARM : Box A, Pana, Illinois

\$7.90 FOR OUR 100 EGG HATCHING WONDER INCUBATOR

Delivered, in U. S. east of Rockies, or with Brooder, making complete outfit only \$11.50

The 100-egg Hatching Wonder has triple case, large aluminum-coated tank, double-jacketed heater and our Victor Regulator. The lamp has a big bowl, wide burner and stout metal chimney. Ventilated egg chamber with double glass in door contains movable egg-tray with nursery below. The machine is 26 inches long, 21 inches wide and 14 inches high. In addition to this substantially built incubator, with its egg-tray and nursery, aluminum-coated tank, double-jacketed heater, modern lamp and automatic regulator, the \$7.90 price includes a thermometer, funnel and book of instructions, telling how to get the best results from the incubator, all delivered at any railroad station east of the Rocky Mountains.

If the Brooder is ordered with the Incubator the price of both is only \$11.50 delivered anywhere in U. S. east of the Rockies. The price of the Incubator delivered west of the Rockies is \$9.90 and the Incubator and Brooder together \$14.75.

Better write us today; we will ship promptly on receipt of your order. Money returned if not as represented.

If you want a larger machine write for our 80-page "Victor Book"

RINGLET BARRED Plymouth Rocks

Five hundred grand breeders and show birds fit to win in strong competition. Our birds have won the leading prizes at state shows for ten years. At the Wisconsin State Show, Jan., 1906, in a class of 300, our birds made nearly a clean sweep, winning more prizes than all our competitors combined, a record positively unapproached by any other breeder east or west. We sell as good a bird for \$5 as you can buy of any other breeder for \$10, our \$8 and \$10 birds can't be duplicated for less than \$20 to \$25, our \$15 and \$20 birds would positively cost you \$50 in the east. Send us your order. We guarantee our statements by paying return charges and refunding your money cheerfully if what we send you does not please you.

Most any White Plymouth Rock breeder can produce one or two prize winners from his season's matings, but to prove the excellent qualities of a strain of fowls it requires a record such as

U. R. FISHEL'S WHITE PLYMOUTH ROCKS

made at Indiana State Fair, Sept. 10-14, 1906; viz.: First prize cock, cockerel, hen, pullet and breeding pen. Second price cock, cockerel, hen pullet and breeding pen. Third prize cock, cockerel, hen, pullet and breeding pen. Had there been any more prizes offered on White Rocks we surely would have captured them. My exhibit was pronounced by judges and breeders to be the best exhibit ever shown by a White Rock Breeder.

The Indiana State Fair, 1906

was the largest fall poultry show ever held, therefore it took lots of quality to win. I have something like TWELVE THOUSAND BIRDS TO SELL and am anxious to figure with you, knowing I can give you better quality

U. R. FISHEL :: Box A, HOPE, IND.

Built Right-Works Right

The 1906 Standard Reliable Incubator is the product of nearly a quarter century of successful incubator building. The principles of its construction have been successfully demonstrated beyond question. They are in accord with the most advanced scientific and practical ideas and the most direct and simple application of the laws of successful incubation

The 1906 Reliable Incubator

has many features you ought to know about. The double heating system which, besides being more economical and using one-third less oil for heating, preserves absolutely uniform temperature and supplies perfect ventilation. There are no draughts, no hot spots, no cold air but a steady even degree of heat that produces successful hatches every time. Remember our positive guarantee goes with every Reliable incubator. If it doesn't do as we say we'll refund your money—we know it's reliable because it's right. Send for free catalog. Pure bred poultry and eggs from Reliable Farm. Shipped everywhere. Get prices. OTHER TRAP NESTS HAVE COME AND GONE, BUT "THE SUPERIOR" HAS COME TO STAY

FROM JONES, "THE WYANDOTTE MAN."

J. A. Bickerdike,
Millersville, Ill.

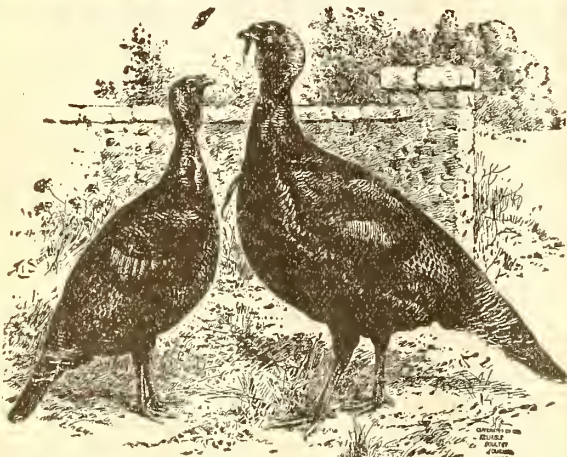

Paducah, Ky., U. S. A.,

Dear Sir:—I received the trap nests in good shape, and for the man that wants to follow up pedigree breeding they are the best thing on the market, the only sure way of telling which hen does the laying or which hen produces the winners. There are several trap nests on the market, some have come and some gone, but your nest is the best thing that has been produced to my knowledge. It is perfect in every detail.

Wishing you the success due your invention, I am Yours very truly, R. E. JONES.

We are breeders at Pleasant View Poultry Farm of White Plymouth Rocks and White Holland Turkeys. Catalogue free. Address

MRS. ANNA L. DAY, - R. R. 2, Box 1, Fillmore, Ind.

Roup Comes With
Fall Weather

You can't afford to have this destructive and highly contagious disease raging among your fowls. Its sure signs are coughing, sneezing, running at the nose. Don't wait for the signs. An ounce of prevention is worth a pound of cure.

Be prepared with the infallible remedy.

Conkey's Roup Cure

- kills the germs, purifies the blood, builds up general health;
- is guaranteed to cure roup in all forms—if it fails to satisfy you your money will be cheerfully refunded;
- is given in the drinking water—fowls take their medicine without knowledge on their part or trouble or inconvenience on your part.

50c and \$1.00 boxes, either of dealers or direct from us, prepaid. 50c box makes 25 gallons medicine.

Sold by Druggists and Poultry Supply Houses.

Beware of Imitations. Unscrupulous people have imitated the shape and size of our box, our label and our advertising. That's the best testimonial that could be given

to the superiority of Conkey's but it's hard on the user. See that you get the real thing instead of the imitation. Insist on "Conkey's."

Other Conkey Remedies.

Keeps Poultry Healthy

VIGER'S
Crushed
Charcoal

Prevents Disease

IT WON'T COST YOU A RED unless you find Viger's Crushed Charcoal all we claim for it—the greatest poultry conditioner on earth. It keeps hens in perfect laying condition and corrects all troubles due to wrong feeding.

Here's our proposition: Send us \$1.00 and we will send you a full-sized 50-pound bag. Unless it does all we claim for it, we will refund your money immediately upon request. Three sizes (same price for all).
Coarse granulated—for mature poultry. Fine granulated—for small chicks. Pulverized—for mixing with mashes and condition powders.

There's nothing fairer than this. You be the judge. Write us today for samples. Special prices in quantities.

VIGER'S COAL & WOOD CO., 434 20TH ST., DETROIT, MICH.

DO YOUR CHICKENS FLY OVER THE FENCE?

Neher's Wing-Hobble is a positive preventive. Your birds absolutely can fly no higher than they can jump. The most unique and novel device ever invented. You can't afford to be without them. Send today for sample; 10 cts. silver. Name size wanted. \$1.00 per dozen, prepaid.

THE NEHER MFG. CO., :: E-1325 West 38th Street, Los Angeles, California

10,000 CHICKENS Raised With 36 Universal Hovers

Here is some more evidence of the wonderful adaptability of Prairie State Universal Hovers. During the past season W. R. Curtis & Co., on their famous Niagara Farm, at Ransomville, N. Y. successfully raised **Ten Thousand and Chicks** with thirty-six Prairie State Universal Hovers. They have used as many as four hovers in one house, transferring them to other houses after the chicks no longer require them. Messrs. Curtis further state that during the rush season it was necessary to place in some houses as many as three hundred chicks, and the greatest loss in any of these instances did not exceed ten chicks. Can you conceive of a more economical and successful manner of rearing chicks?

Poultry-raisers are taking their heating apparatus out of other makes of brooders and installing in their place Prairie State Universal Hovers. We are

One of 40 Colony Houses used on Niagara Farm -fitted with Prairie State Universal Hovers

at present remodeling brooding houses on large poultry plants, taking out expensive pipe systems that have proven unsuccessful and installing our modern brooding devices.

Think of this if you want to raise more chicks next year. Let us plan your brooding system for you now. Do not hesitate because your wants are not great, our systems fit the greatest or smallest plants and are as profitable for the little fellow as for the big one. Remember we positively guarantee our Brooding Systems. Write for our catalog, it shows the way and the why.

PRAIRIE STATE INCUBATOR CO.
468 Main Street, Homer City, Pa.

A Scientific Discovery

The Potter System of Selecting Laying Hens

DO YOU KNOW how you can have \$2 profit, not a \$1 loss, on every hen you keep?
How to breed only laying hens?

- How to select your laying hens?
- How not to kill your laying hens?
- How to mate your birds for best layers?
- How to save feed and labor and money?
- How to keep the layers and kill the non-layers?
- How to tell the drones and the barren hens?
- How to select the best laying pullets?
- How to stimulate the hen's laying organs?
- How to estimate the number of eggs a hen will lay in a week or a month?
- How to keep fewer hens and make more money?
- How to keep your fowls and their quarters free from mites and lice?
- How to hatch chicks that will make laying hens?
- How to make poultry pay every month in the year?

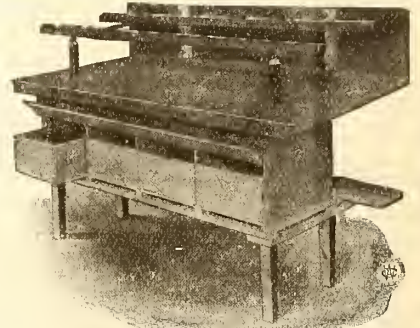

DO YOU

want to make more money on your poultry? Do you want to be able to pick the layers from the loafers in your flock? Decide for yourself whether you need the valuable information we are offering. Thousands of poultrymen are using the Potter System to their profit and advantage. So can you. Write today for free circulars telling about it.

Don't kill a hen in this condition but learn the secret of selecting the laying from the non-laying hens.

DON'T BUILD THAT NEW HEN-HOUSE

or think of fixing up the old one until you have secured our large new 64-page catalog on poultry house fixtures. The biggest and best ever issued; over 50 illustrations showing hen-house fixtures in three styles and twelve sizes. No poultryman can afford to be without this book. You can have complete, convenient and sanitary fixtures in your house. You can save time, labor worry and money in your poultry work if you will use judgment in fitting up your house.

OUR CATALOG

tells you how to keep free forever from those pests—

LICE and MITES. It has cost us hundreds of dollars, but we send it to interested poultrymen for a two-cent stamp to cover postage.

WRITE US TODAY

for free circulars on the **POTTER SYSTEM** and our new catalog. They will please and interest you.

The "Top - Notch" Machines

Why You Can Save Money

If you are going to buy an incubator, a brooder, a portable house, or any other poultry supply within the next six months, I want to urge that you consider the special offer I am making to induce you to buy *NOW*.

I have the Ideal line for 1907 all ready for you—and it is better than ever.

In January, February and March, I know that I will have more business than I can take care of without working my shipping force night and day. That has been our experience every year since we began making and selling the Ideal.

I'm mighty glad to have that business and we don't mind the hard work, but I would like to *spread the trade over a little longer period*.

I want to get my customers started to buying *earlier* in the season—so that I can take better care of their orders, and not have to rush them so in the shipping.

In order to get you to do this—to order *now* and help relieve the rush of the late winter, I am willing to make a *sacrifice in price* that I know will appeal to every careful buyer.

Note the prices quoted above, and then decide if you do not want to *save that money*. You can't make \$5 or \$10 easier. Get my catalog.

Very truly yours,
J. W. MILLER.

Don't think for a minute that the machines and supplies I offer you belong in the "cheap" class.

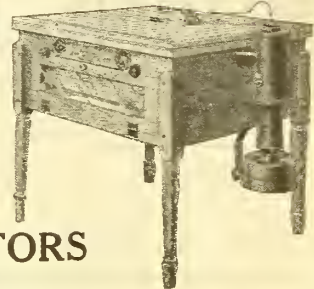

They do not. I give you my personal guaranty that the

IDEAL INCUBATORS AND BROODERS

for 1907, are in construction—in materials used in making them—and in results obtained, the peer of any incubator or brooder ever made.

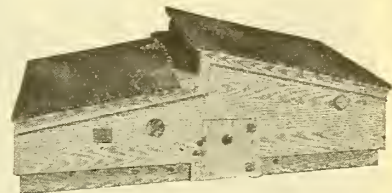

Their plan of construction is the result of 25 years experience in poultry raising on the famous Millhook Poultry Farm. They are founded on *Experience not Theory*, and they give results which astonish poultrymen. We give you a strong and binding guaranty and we *know* you will be satisfied.

We have paid especial attention to brooder construction and have made poultry raising easy.

"Best," the General Verdict.

Ancona, Ill., July 5, 1905.
I have set my Incubator four times this season, and have a nice lot of strong, healthy chicks. I would not dispose of it for double of its cost, if another one just like it could not be bought. Everybody around here thinks it a wonder, and my opinion is the same. I will get a larger one next year.
FRANK SANDERS.

Complete Line of Poultry Supplies

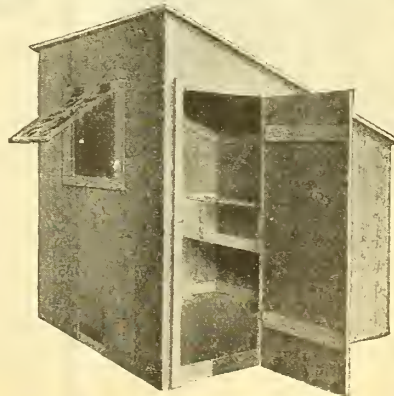

We manufacture and sell everything needed for poultry raising—Special Poultry Rations—Poultry Remedies—Lice Killers—Brood Coops—Bone Cutters—Drinking Fountains, etc. Let us quote you prices on what you need.
