AMERICAN POULTRY JOURNAL

LEARN TO RAISE POULTRY PROFITABLY

MASTER this interesting vocation. Do not be content to merely "keep" poultry. Do not stop short of "doing it right." Then the results are bound to be gratifying. If you keep poultry, **make it pay and pay well.** Quit haphazard work and don't trust to luck. Conduct your poultry operations on established, money-making principles. Leave old fashioned methods to the unprogressive. Learn to avoid costly mistakes.

Poultry culture is worth studying. The profits are large and absolutely certain. No other branch of farm industry will pay equally big dividends on the comparatively small investment required. It can be successfully followed by both men and women.

You cannot make a complete success of the work, however, unless you are thoroughly prepared.

Our original correspondence course of instruction is complete in every detail. It clearly explains every phase of the subject from beginning to end. Nothing is left uncovered. Thousands of dollars and years of hard work by some of the greatest poultry specialists in the country have been spent in perfecting it. The authors are men who know what it means to get right out with their fowls and conquer the obstacles which confront poultry raisers. You are not asked to experiment with fine cut theories emanating from an office desk.

The lessons are sent regularly to your home. You can study the course at night and put the principles into practice next morning. The benefits are immediate. The instruction of each student is conducted individually and is made to suit each separate case. Anybody, anywhere, whether beginner or old hand at the business should take a course of instruction with us. The study can be taken up at any time. Our teaching is an unqualified success. We have placed numbers of students in

Good Paying Positions.

We are constantly in receipt of requests from owners of poultry farms, located in all parts of the country, asking us to recommend properly qualified men as managers. Many of these positions pay large salaries, some include a liberal business interest also. Qualify yourself for one of these lucrative positions. We can place you the moment you are ready.

Write for interesting free literature. Do it NOW.

Petersen's Houdans

Reign Supreme at the Nation's Greatest Shows

My record has never been approached by any breeder. In world famous competition, 135 Houdans exhibited. I won 1st cock, 1st and 2d pullet. BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials. BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials. BOSTON, 1905. We won every important prize. 1st and 2d cock, 1st, 2d, 3d cockerels, 1st, 2d and 4th hen, 1st, 2d, 3d and 5th pullets; \$100 champion challenge cup for best male; American Houdan Club Cup for best cock, hen, cockerel and pullet. All shape and color ribbons; gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition. ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdan's Toronto. Also highest honors at Madison Square Garden, Philadelphia, Pan-American Hagerstown. No matter where you want to exhibit, no matter what the competition, I can furnish the winners. Photographs on application. Eggs in season.

REV. C. E. PETERSEN, Pres. Houdan Club, Drawer 12, Franklin, Maine

BENNINGTON'S Royal B. Orpingtons

Win at Gloversville 1st pen, 1st cock, 1st hen, 1st chl., 3d pullet and specials. Remember he breeds his winners and has some fine ones for sale.

Hatch and Brood

AT SAME TIME

Here's a new thing—a complete hatcher and brooder, one machine that performs both of these operations at the same time and does both well. The

METAL MOTHER Brooder-Hatcher

is a long step ahead of all others—the most remarkable invention in the poultry world. With it 2 qts. of oil hatches 50 eggs and broods the chicks—brood one batch while you make another hatch. Our nest system enables you to do this. A time-saving, labor-saving, oil-saving, machine complete for \$7.50. Free catalog—tells how it works. Regular Cycle Hatchers and Brooders at \$5 each are great favorites. Write today. **CYCLE HATCHER CO., BOX 214, SALEM, NEW YORK**

\$7.50

A Remarkable Book About

Incubators

The man who perfected the Racine Incubator is the oldest man in the business. He has spent 24 years on nothing but incubators. Since 1881 he has been constantly testing ideas of his own and others. He has conducted a hatchery, and has made hundreds of tests with different incubators in actual use there.

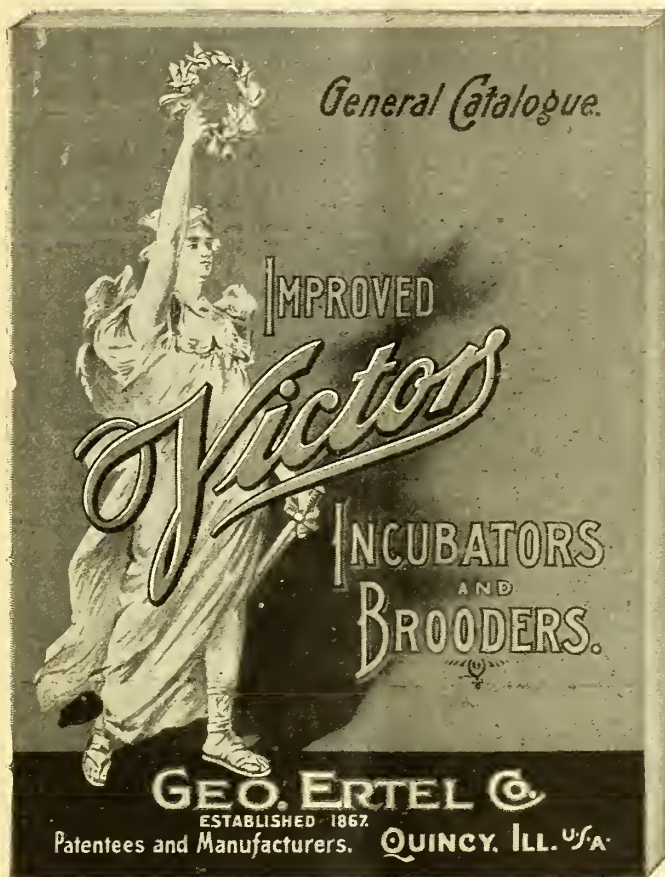

In this way he has learned more than any other man knows about incubators; and he has now put all the facts in a bright readable, interesting book. It tells the secret of success in a fascinating, convincing way. To the man who seeks an incubator, it is by far the best book of the year.

And it tells, too, how the Racine Incubators and Brooders have been developed by a lifetime of patient study. It shows the Racines as they are to-day. You will want this man's machine when you read his book. The book is free—write today for it. **Remember that We Prepay the Freight to any point in the U. S.**

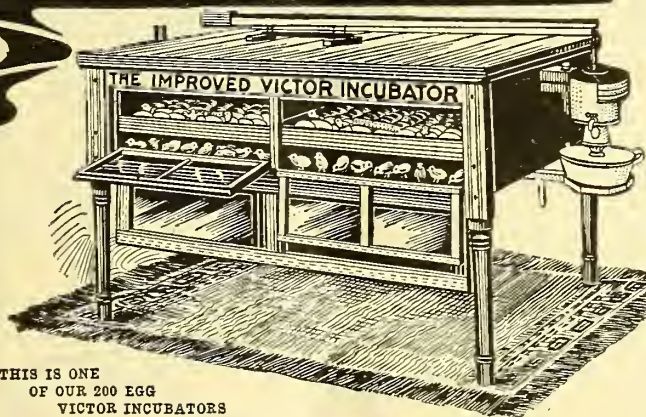

Racine Hatcher Co., Box 26, Racine, Wis.

We have Warehouses at Detroit, Mich., Buffalo, N. Y., Kansas City, Mo. and St. Paul, Minn.

THE VICTOR BOOK

THIS IS THE VICTOR BOOK

THIS IS ONE OF OUR 200 EGG VICTOR INCUBATORS

The 200 egg size is one of the most popular machines we sell. It is beautifully made but there are no useless frills. Every part has its use. Every part is amply strong. It is a machine to be proud of in design and looks. A machine to be satisfied with in operation and results. There is pride and satisfaction in owning the "Victor" kind—the 90 and 95 per cent. kind.

If you are interested in the purchase of incubators or brooders or are desirous of fitting up a new brooder house, you will find chapters in this catalogue of vital interest.

When you get new incubators you want, of course, the best. The same also with the brooder. If any maker is able to overcome the difficulties you meet in operating the machines you have you want to know it. It is as much to your financial interest as it is to your convenience and comfort. We know our machines so well that we have no hesitation in asking you to read our book and then compare our machines with any others. In design, workmanship and efficiency the Victor Incubators and Brooders are just a little ahead. The book tells how and why. May we send it?

Did it ever occur to you that our long experience and continuous operation of the same plant in the manufacture of incubators is of value to our customers? Our machines are not experiments—they are the product of science and practical experience. We buy our lumber far in advance. That used in the construction of machines we are selling this year has been in our yards over two years. It is thoroughly seasoned. Victor Incubators will not warp, twist and crack from the effect of green lumber. We carry a large stock of finished machines and are able to ship promptly at all seasons.

Thousands of satisfied customers scattered all over the country will tell you what the Victor Incubator does. When you write us we will send you the testimonials of people living in your own state and county, perhaps in your own town. Such information is worth something. It is an insurance policy that you will get fair treatment and satisfactory machines from a concern which has earned and is interested in maintaining a reputation for integrity. The guarantee we send our customers is another insurance policy. It insures you the return of your money if our machine is not in every way just what we told you it would be. We pay the freight and guarantee safe delivery. You will find us absolutely reliable. We have been nearly 40 years in business and have built up a reputation which we are not going to jeopardize by unfair business methods. The banks, express companies and commercial agencies will tell you about our financial standing. We shipped, in one day, in regular course of business six carloads of our machines—the largest shipment of Incubators ever made. Could we keep on year after year with constantly growing sales if our machines were not right?

Write us to-day. Just say "Send the Victor Book" and we'll do it. Ask us any questions about chicken raising that may be perplexing to you. We'll answer promptly and cheerfully. Our experts are pretty well posted and it's very few of our correspondents we can't satisfy.

CUT OUT THIS SLIP and MAIL IT TO-DAY BEFORE YOU FORGET

200 Cockerels for sale at \$3.00 each during December.

THIS IS THE 'PHONE FOR FARM FOLKS

In selecting a telephone for the farm line remember that repairs and tinkering cost money and waste time. Use the same judgment that you would in buying a reaper. The cheap telephone, like the cheap harvester, is out of service most of the time. Its talking qualities are not lasting; it soon gets weak, and is liable to cause you trouble all of the time.

Stromberg-Carlson Telephones

are the standard make for rural lines. Other manufacturers claim their instruments are as good—they like to compare theirs with Stromberg-Carlson—but TIME will not bear out their claims. To avoid trouble, expense and disappointment, pay the trifle more and get the telephone with a reputation. Buy the Stromberg-Carlson—you buy satisfaction. Free Book, "How the Telephone Helps the Farmer," tells a lot of reasons why it's the phone to buy; gives full description of every part and piece of a telephone; tells how it's made and illustrates where it's made. Write for the book today. Address **ROCHESTER, N. Y. STROMBERG-CARLSON TELEPHONE MFG. CO., CHICAGO, ILL.**

I D E A L

Just two classes of people go into the poultry business. One class makes a conspicuous failure; the other class makes money, year in and year out. It is not a matter of luck or chance. It is a matter of means and methods—of applying right principles, of using appliances adapted to the work, of following intelligently the way other successful people have found to be right. Will you profit by the experience of others? Your first requirement should be the simple, dependable, self-operating **Ideal**

Incubators and Brooders Sold on 90 Days FREE TRIAL.

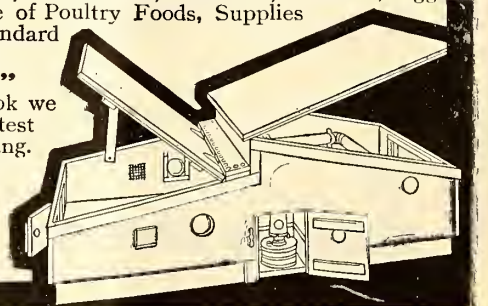

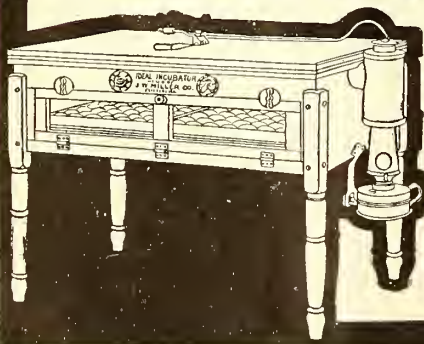

They literally grew out of the experience of "The Man Who Knows" and who had spent a lifetime raising poultry for profit. Since their perfecting they have been tried and endorsed and used by the men who know everywhere. Their heating, ventilating and regulating systems are next to perfection. Machines do it all—same results to the novice as the expert if he gives them just a decent amount of care. Our guarantee is straight-out and iron bound. Full success and satisfaction or money refunded.

You Feed to a Purpose When You Use Miller's Standard Foods.

Close up to hatching and brooding in importance. Each specially prepared for its special need. Foods, Grits, Lice Killers, Remedies, Punches, Egg Testers—in short a complete line of Poultry Foods, Supplies and Appliances. Everything standard and guaranteed.

"**POULTRY FOR PROFIT**" is our 1906 Catalog—greatest book we have ever issued—we think greatest anybody ever issued. Free for asking.

The J. W. Miller Company,
Box 56, Freeport, Ill.

Johnson Says to Tell You That His Incubator Book is Better Than Ever—300 Poultry Illustrations and Chock Full of Information that will Do You Good.

TAKE it from your Uncle Jake that this "Old Trusty" incubator will do to tie to. It was built by Johnson, the Incubator Man, to help you Chicken Raisers out of your troubles—and does it!

You see I have been through the mill, and know, by hard knocks and actual experience, the ups and downs of the poultry business. For I was born on a farm and was raised with the hens, as you might say. I know 'em clean through and through; up one side and down the other, from comb to claws.

I've studied poultry and their ways in sickness and health, summer and winter, under all sorts of conditions, for a good many years now. While I don't know it all, yet I've managed by hard digging to prove a good many things of practical value to every poultry raiser. And you're right welcome to any information I've got. Just ask me some questions. Maybe I can help you.

YES, sir, I know the incubator business right down to the ground. The most important advancements since the first crude machines were put on the market have been made by me. I can truthfully say, without boasting, that Johnson was the first to discover and demonstrate—

- That continuous light is detrimental to egg incubation.
- That danger at hatching time is due to lowering the temperature by opening the door, rather than to escaping moisture.
- That eggs can be moved about during incubation without injury.
- That the chick doesn't breathe until it pips the shell.
- That the air cell makes a back-stop or brace for action for the chick.

I made 50,000 incubators before I perfected "Old Trusty." I put into it all the good, strong points and left out all the mistakes that I had discovered by years of practical experience. So—"Old Trusty" is to-day just about as perfect as an incubator can be made. And that's why, wherever you find an "Old Trusty" user, you'll find a friend of Johnson's.

THE "Old Trusty" is admitted, even by competitors, to be a hatcher of high per cents. It is compact, durable and easy to operate, and while I am not parading the looks, I don't know of a handsomer machine, anywhere.

I have done away with the frail, uncertain top-lever regulators that are always in the way and, instead, have a direct-acting, automatic regulator that is strong and sensitive to one degree. Although there are imitations of this regulator, no other equals it in the vital things of a perfect heat governor. My patent hot water heater over the lamp and the hot water pipe heating system, also the regulator, were made for each other. Just take Johnson's word for it that you can't beat "Old Trusty" on

- Economical use of oil.
- Rapid circulation of warm water.
- Great heating surface in proportion to body of water.
- Even distribution of heat to all parts of the egg chamber.

Last year "Old Trusty" excelled all others on oil economy. This year it adds 20% more oil saving. Side by side, the deeper boiler and improvements in lamp show 20% economy over last year, or 35% gain over other incubators. Last year the average consumption of oil by "Old Trusty" was two gallons and one pint for the 100-egg machine. This year it will not average over two gallons the season through. How's that, Mr. Poultryman?

"OLD Trusty" must sell on its merits. Because it must do what Johnson says, or your money back. I know everybody out here in Clay County, Nebraska. Last year we sold over 400 incubators to our home trade. When Bill Jones comes in for an "Old Trusty," after the sale is made I say to him, like this: "Bill, I appreciate your business and want your good will."

"Take Old Trusty home, run it through the batch, and if you are not perfectly satisfied, unload the machine at the factory, come to the office and get your money back.

"Now, I'm going to be fair with you, Bill, and I want you to be fair with Johnson.

"So, if you don't like Old Trusty, bring it back—don't keep it and curse it."

Not a machine came back, and not a single cuss I ever heard of. And that's the kind of treatment I try to give every customer, whether he is right here, in Clay Center, or a thousand miles away.

My "On trial" plan is as simple and straight as I can make it. I allow one trial batch, with 40 days, after you receive "Old Trusty," to make it in.

If you do not feel certain, after the first batch, a reasonable time will be allowed for a second, or even a third, hatch, if you've got a reasonable excuse.

And then, if you find the machine not up to representation, ship it back, and Johnson will send you your money without a cross word. If you're satisfied, keep the machine.

And, remember that Johnson stands right behind "Old Trusty" with a responsible Five Year Guarantee.

Fair and square dealing is all either of us wants.

FINALLY, let me speak of the "Old Trusty" catalogue. I wrote it myself, and it's a plain, truthful statement from cover to cover, describing my own goods.

If I make comparisons, they are fair and given as my opinions, and I confine myself to the goods and what they do for those who buy them.

I tell you what "Old Trusty" machines do, and prove it by those who use them. I refer you to my neighbors and fellow citizens, and to many other people of known integrity.

I lay the evidence before you, not in a boasting spirit, but with the idea of giving you an opportunity to find out on your own account.

I want to be fair to all alike. Throughout the "Old Trusty" catalogue and all my advertising matter my sincere effort is to be fair.

As a result, my competitors and I are the best of friends.

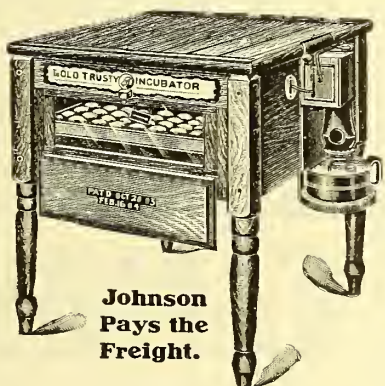

I regard my patrons as a part of my family, and if a reunion was possible, I would like both competitors and patrons to be there.

Sure enough, Folks, we would make it an enjoyable affair.

And Johnson and Mrs. J. would be right in the thick of the fray while the fun was going on.

Make no mistake about that!

The Famous "Old Trusty" Incubator.

Johnson Pays the Freight.

NOW, I want you to send for the "Old Trusty" Catalogue. It's a big 124 page book with nearly 300 illustrations, and cost me a lot of money to get up. But it's all paid for and is free to any one, friend or stranger, who is interested in my bobby,—poultry raising. And I don't care a continental whether you expect to buy an "Old Trusty" incubator or not.

I want you to have the catalogue anyway. I have not attempted to give a full description of "Old Trusty" here.

It's an interesting story, and you'll find it all in the catalogue, with plenty of pictures and diagrams showing you everything you ought to know.

For the time may come when you will be incubator hunting, and if you read this book now, you'll remember "Old Trusty" then, all right.

That's my way of building business and good will for the future. So, sit right down now, while you've got it on your mind, and write for the "Old Trusty" book.

It's worth \$1.00 of anybody's money, but you get it free with Johnson's compliments and good wishes. Just address your letter or postal card to "Incubator Johnson," and ask for catalogue No. 10—it will come at once.

"Old Trusty."

\$7.00 Buys the Best 120-Egg Incubator Ever Made.

\$4.50 Buys the Best 100-Chick Brooder.

Both Incubator and Brooder, if ordered together, cost but \$11.00. Incubator is double walled all over—best copper tank—hot water—self regulating—nursery. Brooder is the only double walled—hot water—brooder ever made. Satisfaction guaranteed. We pay the freight.

Our book, "Hatching Facts" tells all about them. Mailed free. Write for it today. Address

Belle City Incubator Company, Box 27, Racine, Wisconsin.

Do Your Chicks Come Strong Enough to Live?

That's an all important question. If you have had experience with incubators, you know of the fearful losses from weak constitutions. Many die at different stages of incubation, many just as the shell is being pipped, many more in the first 24 hours, and on up to two weeks. Wouldn't you like to operate the one incubator that offers a remedy for all this? That is what you are offered in

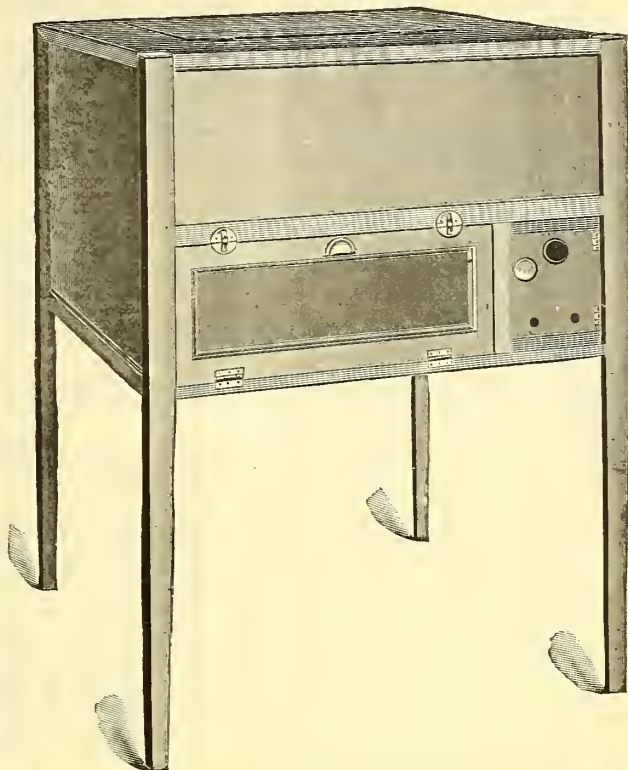

The NATURAL INCUBATOR

The one incubator that is different. It is different in principal, different in materials, different in construction, different in operation, but most of all different in results. It is called the "Natural" because it really does follow Nature's way in principal and action. It has no more draft slides, "ventilator vents" and other "do-funnies" than a hen has. It requires no more "supplied moisture" than a hen does. Because by its unique construction it gives the eggs in the egg chamber fresh air—not through a little round hole, but in exactly the same way that a hen's nest is ventilated. No poisonous gases are kept closely confined in the chamber to kill the chicks. That's why the Natural Incubator not only hatches more chicks than any other, but hatches stronger chicks—the kind that live and grow.

AND THAT'S NOT ALL

The Natural Incubator is stronger, more durable, but lighter and more easily handled than any other incubator, because its walls are made of hard glazed compressed Paper Board—one of the best non-conductors of heat in the world. This material (such as is used for making car wheels, etc.,) does not warp, crack or split under the influence of heat, as wooden incubators are sure to do. It retains the heat better than wood; it is more easily handled than wood; it lasts longer than wood. So well does it retain the heat that a change of 40 degrees in outside temperature does not affect the inside temperature.

The Natural Incubator has a perfect compound heater that diffuses the heat to all parts of the chamber with absolute uniformity, and the most sensitive regulator made. It requires no watching. You owe it to yourself to investigate this machine. The catalogue will explain in detail the why of superiority to all others.

THE STORM KING BROODER

is the fit companion of the Natural Incubator. It is the best mother for young chicks in the world. Winter or summer, they have every chance live and grow. It operates on the same necessary principles as the Incubator. Pure air at all times is even more necessary in the brooder than in the incubator. The Storm King supplies it. It has the natural hen's heat—not hot, dry heat that dries up the blood and makes chicks gasp and pant for air. Its system not only supplies pure air, but plenty of air, all the air chicks get when nurtured under the natural hen. There's no overheating or chilling and it cannot get foul or damp. Look at the cross-section picture below. Note particularly the large fume pipe "D" which carries off every bit of the fumes. Note that the water can is surrounded by a jacket, which prevents chicks from being burned. Note the "mother" which touches and warms the backs of the little chicks and gives them the same feeling of warmth and comfort they get when they nestle under the real mother hen.

YOU CAN MAKE YOUR OWN BROODER

The shape or making of the box is not all-important. It doesn't need to be air tight. The fixtures are the main thing. We sell you these Storm King fixtures just as you see them below. If you are handy with tools you can make a box; or you can place them in any old brooder you may have, and get a better brooder than you can buy elsewhere at any price. Save all the expense of cost, shipping expenses, etc. We send you blue print of plans and every necessary direction. You cannot fail to get everything together right. You will soon see the difference between brooding chicks this way and the hothouse plan. Raising a single hatch will almost pay for the fixtures. Don't fail to look into this better, easier, surer way of raising chicks. Write for the catalogue today and get full particulars.

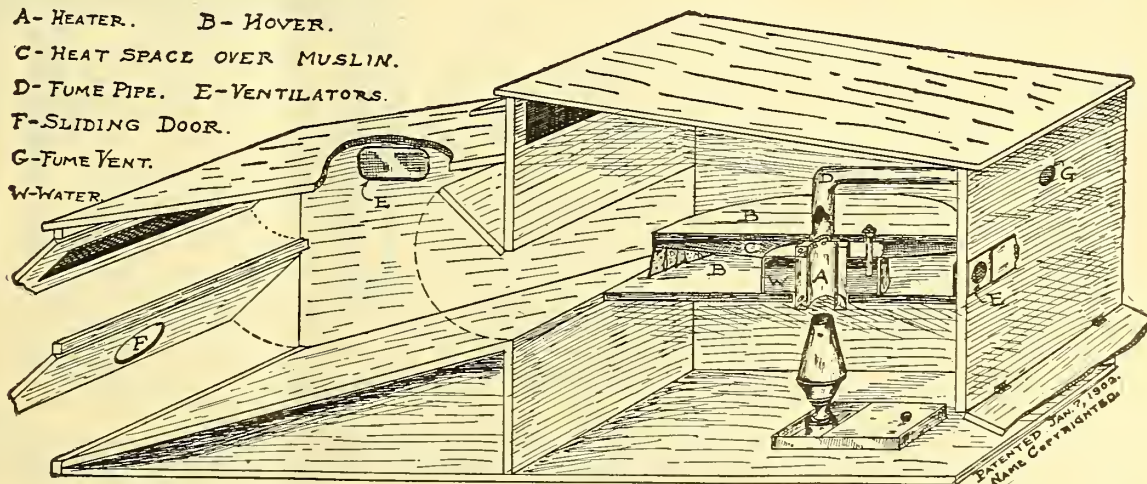

We pay for all freight as far west as the Mississippi River. Purchasers beyond the river pay from the river on. Address

FOR EASY GARDENING.
 Five Hundred Thousand Users proclaim the Planet Jr. farm and garden tools unequalled for dependable service, and true economy of time, labor and money. The line includes Seeders, Wheel Hoes, Horse Hoes, Harrows, Riding Cultivators (one and two-row), Beet and Orchard Cultivators, etc.—15 tools in all. Planet Jr. Seeders are without a rival. They sow all garden seeds accurately, in either drills or hills; open furrows, drop and cover, roll and mark the next row, all at one operation. A regular stand of plants insured and no wasted seed. Planet Jr. No. 12 Double Wheel Hoe is a marvel of usefulness. It enables you to hoe every day two acres of onions or any similar crop and do it faster and better than three men with hand hoes. It kills all weeds and leaves the soil in splendid condition. Farmers as well as gardeners need our 1906 book, which fully illustrates the machines at work both at home and abroad. Mailed Free.

 THE SILVER MFG. CO., SALEM, O.

Let Me Tell You the Special Price On this Genuine 1906 Chatham Incubator

It's this way:
 We are, without a question, the largest incubator manufacturers in the country.
 Our two immense factories enable us to turn out from six to seven hundred machines a day.
 We have these factories equipped with the latest labor-saving wood-working machines possible to secure.
 We have a large capital—and buy first grade lumber in several million feet lots.
 This enables us to produce the highest grade incubators at the very minimum of cost.
Now, we are going after the incubator trade this season with a machine that's way upstairs in quality at a way downstairs price.
 We want to quote you a price on one of these machines.
 You will be agreeably surprised at the price quoted.
 It will be for any machine that you may select from our catalogue, direct to your station, with all freight charges prepaid from one of our 20 warehouse shipping points located in leading cities scattered throughout the country, where we carry complete stocks, ready for immediate shipment, thus insuring quick delivery.
 Our low prices, in connection with our liberal selling plan, is the most liberal offer ever made by an incubator factory, and the proposition is certain to please you.

Only Chatham Incubators will stand such a proposition. Think of it!
We will ship any incubator you may choose from our catalogue, direct to your station, and allow you 84 days free trial on the machine.
 This enables you to take off four hatches, and gives you a chance to prove that the machine is exactly as we represent it to be, and that it will do the work we claim it will do.
 If it does not, you may send the machine back to us at our expense—we will pay all freight charges—and you are not out a penny.
 —Beyond this—we issue a five-year ironclad guarantee with every machine sold, which insures that the machine will not only hatch at the end of the first season but at the end of the fifth season. Chatham Incubators are built on approved, tested scientific principles that have been proved to be correct.
 They have all the improvements possible to make on a machine.
Everything used in the manufacture of the Chatham Incubator is made right in our own factory, with the exception of the screws and nails.
 Chatham Incubators are equipped with reliable Steel and Brass regulators—the most expensive to furnish but good for a hundred years. No cheap, leaky wafer regulators for us.
And this 84 Days Free Trial Offer together with the five-year ironclad

guarantee makes this proposition the most extraordinary ever made.
 Of course, we couldn't afford to hold out such very unusual inducement if we didn't know positively by actual test that our incubators are all we claim, and that they will do all we claim. They are no cheaply constructed machines, to go to pieces or become useless after a few seasons, but are solidly and substantially put together—made to last.
 Chatham Incubators will outlive our guarantee and we know it.
 Don't think of buying 'til you have written us for the rest of this interesting Incubator story. Ask for our new **FREE** catalog at once. It will be money in your pocket to do so. The hatching season is close at hand. Write today to

MODEL
MFD. BY
Chas. A. Cyphers
TRADE MARK

MODEL

Incubators and Brooders

WHY NOT BUY THE GENUINE?

The Model has proven so successful the past two seasons that other manufacturers have taken it as a Model as the name implies, have copied it as far as they could, and are now proclaiming wonderful improvements on their old type of machines. This is flattering to the Model, but hardly so to the public. Such methods may fool some, but can hardly fool many.

What you want is the best—not a weak imitation. The heat, ventilation, and regulation in the Model are balanced up by a master hand. It works automatically and gives results. Send for complete catalogue.

Mr. Chas. A. Cyphers, Buffalo, N. Y.

Lakewood, N. J., Oct. 1, 1905.

My Dear Sir:—We have just finished rounding up our young stock that has been on range, and find we have ended one of the most successful seasons we have ever had. Looking back over the ground, and noting the results from the "Model" appliances and feeds, it makes us say that you have mastered the poultry proposition in every detail. We see no way in which you can better your products. You have our sincere appreciation and kindest wishes for your future success (which is assured), and your "Model" Incubators, Brooders, Foods, etc., will revolutionize the entire poultry business. Yours very truly,
LAKEWOOD FARM CO., A. G. BROWN, Pres.

MY NEW BOOK

"Eggs, Broilers and Roasters,"

An Easy Lesson in Practical Poultry Culture.

A Book of Peculiar Value to all Poultrymen.

It describes the profitable combinations of egg, broiler and roaster farms. It gives the prices paid for eggs and poultry week by week for the past three years. It tells how and when a hatch taken off each week in the year could be most profitably marketed. It shows how you can make \$2.00 on a large winter roaster. It tells what profits can be made with each of the popular breeds, and the costs of production. This valuable work mailed FREE upon request.

I have helped thousands to make money with poultry. My Model Incubators and Brooders are used on the money-making farms. It is my business to teach those who use them to do so profitably. Whether your needs are small or large, I will furnish, without charge, estimates and plans for a complete equipment that will insure success without your spending a dollar uselessly.

**The Way To Succeed
With Poultry**

You must lay the foundation of success by getting the right incubator, the one that you are successful with.

But before you can be absolutely sure of how a machine is going to work in your hands you must try it.

We say to you that the Quincy will give you better results than any other, because we know of the results that it has given every one else who has used it.

But we have let every one else try it first and **that's what we want you to do.**

We can tell you that the Quincy is self regulating, that the arrangement of the heating system is original and far superior to any other and that the ventilation is positive and constant, instead of being left to chance, as in other makes. No cold drafts can possibly strike the eggs.

You ought to know, also, that we have solved the moisture problem in a way that relieves you of all responsibility on that score and insures large, strong hatches.

What you want to know most is how much good these special features will do you when you run the machine. You'll find out by getting

The Quincy Incubator On 90 Days Trial

We build all our machines and make all the parts in our factory, from best material that money can buy for each particular purpose. And these manufacturing facilities enable us to place machines in your hands at prices that no other incubator maker can touch. We guarantee these machines to do all we claim and to satisfy you or you get your money back. Send for our guarantee and read it over. It's worth your while.

Quincy Brooders

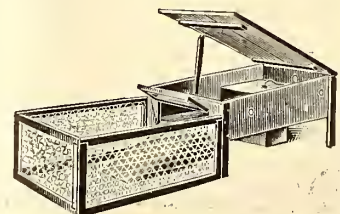

are in a class by themselves because they raise 90% or more of the chicks put in them instead of killing 75% or so as most brooders do. You can't succeed without a good brooder and we say to you **Try the Quincy Brooder for 90 Days** and see how good it is. If dissatisfied send it back and get your money. We mean that and you must realize that under those conditions it would be ruin to us to make false statements. The guarantee binds us.

The Quincy Line of Poultry Supplies and Foods

is the largest in the country and includes only those things that are of real value in adding to the poultry raiser's profit. Send us your orders for Chick Raising, Egg Making and Growth Promoting foods and get the best to be had at the very lowest prices. Every appliance for poultry house and yard.

Our New Catalog illustrates and describes everything the poultry raiser needs just the information you need to get the right start. **Sent Free**, postpaid, to all who want bigger poultry profits and who will mention this paper.

COTTRELL'S ALFALFA MEAL

FOR POULTRY

Fowls give best returns when their feed is appetizing and contains the materials required for the vital and productive processes. One-half the solid matter in the fowl's body and over one-half the solids in an egg consist of protein. One-twelfth of the solid matter in the fowl's body and over one-third of the egg is mineral matter. These substances are necessary for making blood, bone, flesh, feathers and both the shell and its contents. Food supplying protein and mineral matter

Makes Fowls Healthy

and productive, that's why Cottrell's Alfalfa Meal is an excellent poultry food. It is rich in mineral matter and protein which it contains in an easily digestible form. It contains 50 per cent more egg-making material and supplies the food elements which ordinary grains lack. Cottrell's Alfalfa Meal provides green feed the year round and gives grass conditions in mid-winter. It aids digestion, promotes vigorous growth, improves the quality of the eggs and imparts delicate flavor to the flesh. It's worth dollars to the poultryman. If your dealer cannot supply you, write to us direct. 100 lb. sack, \$1.50; 500 lbs., \$6.00 f. o. b. Elgin. Write for free circular.

COTTRELL FEED CO., 17 STATE STREET, ELGIN, ILLINOIS

When you can just as well save money, what's the use of going to needless expense and doing twice as much work as is necessary to get the same or even better results? The best grit for fowls is that which is not only used in the grinding process but which also contains material that can be assimilated by the bird's system and used in nourishing and strengthening the bodily organism.

Pearl Grit

grinds and grinds well—it's a true grit. It grinds to the very last particle—always sharp. It also combines all the essential qualities of shells and grit. No other shell-making material is needed when you feed Pearl Grit to poultry. It contains 60 per cent Calcium Carbonate (lime), 14 per cent of Magnesium, and Iron, Silicon, Sulphur, Aluminium Oxides and other properties which make it an ideal article for the poultryman. It builds up the system; makes strong, prolific fowls and healthy young chicks. It is clean—white—has no dust and no waste. Guaranteed to do just as we say. We'll prove our claims by actual tests, chemical analyses and the testimony of those who use it. A fair trial will convince you that Pearl Grit is the best and most economical grit the poultryman can use. Write for prices. Do it now.

TURNS EGGS INTO MONEY!

The way to get big round dollars out of your egg crop is to use a "Sure Hatch" Incubator. Nearly 60,000 persons, during the past eight years, have bought and are using 80,000 Sure Hatch Incubators, and they have made money with them.

You'll never get the largest possible profit out of your poultry yard unless you use the machine that's guaranteed to out-hatch any other Incubator on the market.

That's what we claim for the "Sure Hatch," and we let you be the judge.

You can try it 60 days, six months or six years and we will take it back if it fails to do the work.

Your profit on the first hatch pays for the machine.

Comparative tests of Incubators, made by a Government Expert, prove that the "Sure Hatch" Incubator hatches the highest percentage of healthy chicks.

It will hatch every hatchable egg, or we give every penny of your money back.

What you want is results—in actual dollars and cents. And that's what the "Sure Hatch" gives, summer and winter, year in and year out.

Our 1906 Sure Hatch has many new improvements. We positively guarantee it to do the hen's work with half the trouble and less expense.

With our new solid copper heater; special non-leaking, non-smoking, non-soot making safety lamp; improved system of self-ventilation; never-failing, simple, self-acting regulator; roomy chick nursery and other valuable features, the "Sure Hatch" runs with half the oil, half the attention and none of the repairing required by others.

It is made of Redwood—won't warp, shrink nor split; is free from knots. Double walled. Asbestos lined. Built for business from the word "go."

In spite of advance in prices of all materials, 1906 Sure Hatches are better than ever. Prices as usual—\$7.50 to \$17.50—according to where you live and size of machine wanted—75 egg to 200 egg capacity.

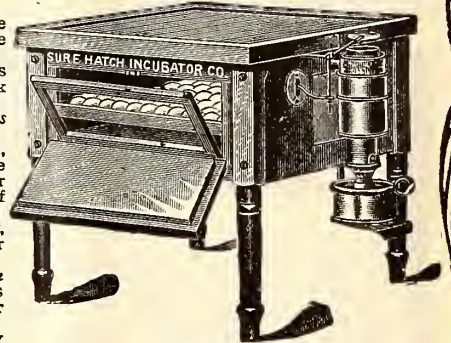

We pay all freight ourselves, right to your railroad station.

Write us today for Free Catalogue and Special Prices on the "Sure Hatch," freight fully prepaid to your railroad station. Catalogue has 100 pages, lots of interesting pictures and valuable information on poultry house plans, hatching, feeding, raising and selling poultry. Worth dollars to you. Send a postal card today and get the book by return mail.

CLAIMS! CLAIMS! CLAIMS!

That is the most incubator and brooder manufacturers fill their advertisements with. And of what earthly use is it when dozens of them are "claiming" the same things. It doesn't help the man, woman, boy or girl who is in doubt one bit. So we don't claim. We simply state facts and then demonstrate

American Incubators and Brooders

are sent out on 90 days trial and if they don't hatch and raise a satisfactory percentage of chicks, send them back and get your money. There's no empty claim about that, and we give a guarantee with each machine that really protects you.

We have the largest poultry machine factory in the world, and we operate the largest standard-bred poultry plant. We have been in the business 20 years and we have learned what's what when it comes to raising poultry for profit.

These are not mere claims either.

Get our catalogue, notice the list of references and investigate for yourself.

Remember this: It will pay you well to do all your investigating before you pay out your money to any one.

American Incubators have all the advantages that any other machines have, only more, because they are built by practical men, men who have been through the mill

We manufacture and sell direct to poultry raisers

The Most Complete Line of Poultry Foods and Supplies in the Country

and everything is priced at the very lowest figure, because our facilities and great volume of business enable us to undersell all competitors.

Our Standard-Bred Poultry Farm is stocked with the largest variety and the finest specimens of pure bred birds to be found anywhere. Fowls and eggs are guaranteed to please or money will be refunded without a word. It's the highest quality at the lowest possible prices that has built up our enormous business.

Our New Catalogue is the best we have ever issued and is full of valuable information. Important poultry questions answered and articles on poultry diseases, also a complete illustrated description of American Incubators, Brooders, Poultry Supplies and Standard Poultry. Sent free, postpaid, for the asking.

FREEPORT, ILLINOIS.

WHY IT PAYS TO BUY RELIABLES

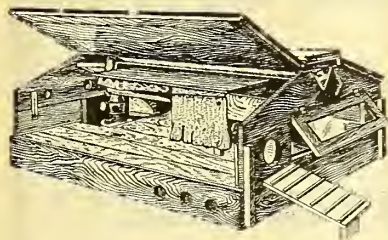

Any user of RELIABLE machines will tell you that for successful hatching and rearing **Reliable Incubators** and **Brooders** are the ones to buy. It's because RELIABLES are RIGHT — built according to right principles and employing correct methods of operation. It is our endeavor to have every machine that leaves our factory as nearly perfect as human skill can make it. Nothing but the best materials are used, and every step in the the process of construction is under the personal supervision of experts in incubator and brooder manufacture. It is this painstaking care and attention which maintains the uniform high standard of our machines. The sectional view here shown gives a good idea of the constructive plan of the **Reliable Incubator**. Notice that provision is made for utilizing all the heat produced by the lamp

combined with the most perfect ventilation. The extra tank in the upper part of the machine not only furnishes a constant supply of fresh, warm air, but radiates sufficient heat from its own surface to maintain the proper temperature even should the direct heat supply be entirely cut off. This **Double Heating System** results in a SAVING OF FULLY ONE-THIRD THE OIL and insures absolutely uniform temperature at all times. The machine is double walled and the space between thoroughly insulated with the best non-conductors of heat known. The top above the tank marked C-B is heavily insulated with four thicknesses of insulation, separated by as many sheets of non-conducting heavy card board with also an extra layer of card board above and below. Through the double glass doors complete observation of the egg-chamber may be had at all times. No COLD AIR can reach the eggs unless the doors of the machine are deliberately opened. It is impossible for eggs to get chilled or to be exposed to draughts or sudden changes of temperature. At the same time the system of ventilation is perfect. All gases and impure air at once pass out of the egg-chamber and it is impossible for any foul atmosphere to remain in the machine. NO ARTIFICIAL MOISTURE is required—there is no bother with water pans, dampened cloths, or wetting down floors. The moisture in a RELIABLE is supplied by the natural method used by the hen. **Our Patent Reliable Regulator** is free from all defects so common to ordinary regulators. It is extremely sensitive and absolutely correct and accurate, responding to the slightest change in temperature. All these features make a machine which is simple and easy to operate, that practically takes care of itself, and has the additional advantage over others in that it

Costs One-Third Less

to run because of its economical methods of operation, requiring less time, less labor and less oil. Producing bigger hatches and more satisfactory results is what puts the RELIABLE ahead of its competitors. A trial is all that is necessary to demonstrate that it makes good all that the makers claim, and that it is a hatcher which will meet the approval of the most critical. Try it and see. Remember it's sold on an

absolute money-back guarantee. If it does not do as we say, we will cheerfully refund your money. **Reliable Outdoor Brooders** combine more good points than any other outdoor brooder made. We make four sizes and two styles—hot water and hot air. We also employ the DOUBLE HEATING SYSTEM in the brooders. They are warmed by top heat exclusively, but the heating apparatus is so arranged that all parts of the brooder are always comfortable. The space underneath the hover having the warmest temperature, and the other portions a different degree, the chicks can never be crowded into cold corners nor bunched in too hot a temperature. The lamp is reached through a small door in the rear, and is in a separate compartment. No fumes can enter the brooding chamber and the chicks are not exposed to cold or storms when it is necessary to attend to the lamp. The hover is located in the middle and egress is possible on three sides, making it impossible for the chicks to crowd or trample on each other. There are at all times two temperatures in the brooder. The material is first-class and durable. The brooders are nicely painted and can be used indoors as well as out. If you are engaged in raising chickens **Reliable Incubators and Brooders** are what you should buy. Write for FREE illustrated catalog and book of poultry information. It tells all about Reliable Incubators and Brooders, and also about THE RELIABLE POULTRY FARM. Get our prices on pure-bred fowls, and eggs for hatching. We make shipments everywhere. 3785 PRIZES WON IN THE LAST 18 MONTHS BY BIRDS FROM THE **GREAT CENTRAL POULTRY FARM**

These prizes were won by birds raised on our farm, hatched in Great Central Incubators and raised in Great Central Brooders. We have many of them on our farm today, with hundreds of others just as good. We know we have the goods and we back them up with our guarantee. We take the risk. We guarantee our shipments to be satisfactory. We practically insure your success. Isn't that fair? We raise nearly every variety of bird that is sold in America. Write us for special information on any breed you are interested in and we will cheerfully respond. Eggs in season from every variety we carry.

GREAT CENTRAL INCUBATORS AND BROODERS

are the surest hatch machine on the market. Results have proved it. We offer you a 30 days' trial free. If the machines are not satisfactory, return them at our expense. Last season we sold hundreds of our Incubators and Brooders on the 30 days' trial proposition, and not one was returned. Send for our large 72-page catalogue of "Poultry that Pays." It contains much information indispensable to the practical poultryman. It gives descriptions and cuts of each of our many varieties of poultry, and also of the Great Central Incubator and Brooder. Send five 2c stamps for mailing.

LABORATORY SPECIALTIES

Cyphers Poultry Remedies are prescriptions of a leading Doctor of Medicine that have received the test of years of successful use. Like all other Cyphers Company products they are prepared with the knowledge that the best ingredients give the best results, and this is more particularly the case with Laboratory Products. There is danger in cheap, carelessly compounded preparations.

Let us impress upon you that back of these goods stands the good name of the Cyphers Company, the experience of an unequalled staff of workers, and several years testimony of the thankful customers who think that the best is none too good for their poultry.

Cyphers Laboratory Specialties cover the case completely. The best way to tell about these things is to give you a list of our **Standard Laboratory Products manufactured by us and guaranteed to possess Pure Ingredients:**

- Full Nest Egg Food
- Fumigating Candles
- Save-All Egg Preservative
- Nodi Charcoal
- Ovinaptol Lice Killing Nest Egg
- Napereol Disease Remedy and Disinfectant
- Roup Cure
- Lice Paint
- Anti-Fly Pest
- Lice Powder
- Poultry Medicine Case containing Ten

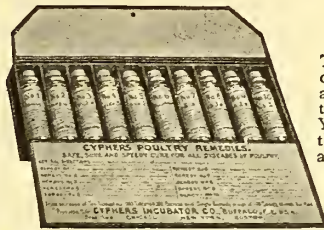

Standard Remedies in vials sold in the case or separately, each vial containing specific remedies respectively for

Catarrhal colds, bronchitis, croup, snuffles, rattling in throat, watery discharge from eyes and nostrils, eye swelling, roup, chicken pox, bumble foot, diarrhoea, cholera, canker, vent gleet, indigestion, liver disease, sour crop, constipation, timber-neck, egg-bound, rheumatism, cramps, worms

Send for our Poultry Supply Catalog. It is free and contains full description of all these goods.

Address nearest office.

Cyphers Incubator Company,
Factory, Laboratory and Home Offices, Buffalo, N. Y.

Cyphers Poultry Medicine Case. Guaranteed Efficacious.

Ten standard poultry remedies in strong, light-tight case. Recommended by the highest medical authorities and used by the regular profession. Remedies are in tablet form and are given the fowls in drinking water. You may avoid a severe and costly scourge by having them on hand. Full directions on each bottle. Guaranteed perfectly safe. Will cure all the common ailments of poultry such as bronchitis, croup, roup, diarrhoea, canker, rheumatism, chicken-pox, etc. Complete set of ten remedies, in a neat cloth-covered case, sent postpaid to any address, \$3.00.

Cyphers Roup Cure.

Cure Guaranteed.

The one certain remedy for roup in all forms. Prevents and cures common colds, discharge from nostrils, "swelled head," canker, etc., in all poultry. Is used by dissolving in fowls' drinking water: they take their own medicine. 50c package makes twenty-five gallons of medicine. Price: small package 50c, large package \$1.00. We pay postage.

Nodi Charcoal Aids Digestion.

Nodi Charcoal is our absolutely pure preparation of common charcoal and is manufactured expressly for poultrymen. It is carefully screened, free from dust and is sold in three sizes—for mash, for young chicks and for mature fowls. Put up in 2 pound cartons and in 50 pound paper lined sealed sacks bearing our trademark. As an aid to digestion Nodi Charcoal is indispensable, especially when fowls are housed during winter months. It keeps them in health by purifying the system. Price, 2 lb. carton, 10c; 50 lb. sealed sack, \$1.25.

Full Nest Egg Food, 60 Feeds for 1 Cent.

The success of this tonic and conditioner has been remarkable. It increases egg production, promotes health, insures vigor in fowls and fertility of eggs. In addition to medicinal seeds, vegetable extracts and mineral salts it contains in a highly concentrated form, the necessary animal food for egg production. Takes the place of bugs, worms and insects in the fowl's diet and the scraps and pepper "mother used to use." It builds up the fowl's system, improves the plumage and increases your profit. Price, 42 ounce carton, 25c; 25 pound pail, \$2.00.

Sold by 2500 Agents. Ask your Local Dealer For It.

ORIGIN AND HISTORY OF THE BREEDS

The Dorking Fowl, Rich in History and Tradition, Spoken of by Roman Writers Long Before the Sun of Civilization Cast Its Light Upon America.—Evidence Tending to Show that the Breed was Taken to England by the Romans.—How the Dorking was Temporarily Set Aside by English Breeders During the Shanghai Craze.—Its Restoration and Final Acceptance as the World's Best Market Fowl.—Orpingtons, How the Various Varieties Were Produced.—Their Position in America.—The Red Caps.

PAPER NO. 5—THE ENGLISH BREEDS.

Written by Thos. F. Rigg, Associate Editor American Poultry Journal

The Dorking fowl, rich in history and tradition, the support of the peasantry in the provinces of Kent, Sussex and Surry, England, long years before the sun of civilization first cast its rays upon America, still the pride and boast of every Briton, occupy a unique position in the poultry kingdom.

This fowl, known to scientists as *gallus pentadactylus*, or five-toed fowl, was described by Pliny, Roman author, A. D. 61; Columella, Roman writer, A. D. 40, and Aldrovandus. It is not at all unlikely that the couple of short-legged hens which Justice Shallow, of Gloucestershire, ordered for the entertainment of Sir John Falstaff, may have been at least closely related to the Dorking.

Ethnological research as to the remote origin of the Dorking has failed in fixing the precise period of their appearance in England. Caesar in his official papers, written while yet an invader of English soil, made mention of the fact that the people of England at that time kept fowls, but only for amusement, as the flesh of fowls as food was prohibited by the Druidical laws. The British at that time were semi-barbaric, and cock fighting was the favorite sport of the people. It is, therefore, very evident that the fowls referred to by Caesar were not Dorkings, for the Dorking most certainly has not come down through the ages from game ancestors capable of satisfying the cock fighters of the days of Caesar, or of the Roman gladiators of that time. It seems to be a fact that the fowls found by Caesar were the offspring of specimens brought to England by the Romans.

Columella in his writings more than two thousand years ago referred to a breed of fowls common in Rome. His description fits the Colored Dorking. He said: "Let them be reddish or dark plumage, with dark wings; let the hens be robust body, square built and full breasted, with upright and bright red combs, and with five toes." Note that all these points are typical of the Dorking. Bear in mind that this was written by Columella more than two thousand years ago. Pliny, A. D. 61, also spoke of a like fowl.

Columella, speaking of the white fowl of this race, said: "Let the white ones be avoided, for they are generally both tender and less vivacious, and also not found to be prolific."

Here we have conclusive evidence that a race of fowls closely resembling the Dorking, if not identical with the Dorking, was bred and prized in Rome before the advent of the Romans occupying England. When the Druidical laws become no longer effective we find fowls being bred and offered for sale as food in

Kent, Sussex and Surry—five-toed fowls, such as Columella described as being common in Rome. This would seem to clearly indicate that the ancestors of these fowls were taken to England by the Romans. This, we think, is the natural conclusion. The name Dorking originated from a town of that name in Sussex. Camden in his *Britannia*, 1610, did not mention the place, and in his map it is shown as a mere village. John Timbs, writing in 1824, said that "fowls were brought long distances to Dorking to be sold. They have five toes." Dorking, while not an important commercial center, was the leading poultry market during those early days, and became celebrated as a fattening station about the middle of the eighteenth century. The great causeway called Stoney street passes through Dorking churchyard. Dorking was destroyed by the Danes and rebuilt by Canute or the Normans.

Writing to an English paper in 1854 M. Furgason stated: "That a breed bearing much resemblance to our Dorkings, both for external appearance and internal qualities, have long been propagated in the town of Dorking (received in the town of Dorking.—T. F. R.) is conclusive. I have before me a list of fowls remitted to market by a farmer living there from June to August, A. D. 1683, as follows:

17 dozen five claws—dead stock.

1 dozen four claws—dead stock.

1 dozen five claws—live stock."

We could quote history at length showing that the Dorking was found by latter day civilization as a distinct breed in England. Whether it was brought to England by the Romans, or whether it was upon its native heath when found in Kent, Sussex and Surry, will ever remain an open question, in all likelihood. But we feel that the statement of Columella, that this fowl was the common fowl of Rome at the time he wrote, long years before it was known to exist in England, affords sufficient evidence to establish the fact that the Dorking was taken to England by the Romans.

Which is the original Dorking, the White or the Colored? This question has been discussed for ages, and is still a burning question with the breeders of these fowls. Martin Doyle in *Domestic Poultry*, London, 1854, said:

"Both the White and Colored Dorkings urge their claim to priority of ancestry in England. Some of the enthusiastic admirers of the White Dorking say that they are a more ancient race than the Colored, and that the Colored are a variety derived from them; whereas the supporters of the Colored Dorking maintain that the White, which are of lesser size, and therefore of an assumed degeneracy, are a deteriorated offspring of the others. If we may venture to offer a conjecture on this abstract point of physiology, we should say that, as in vegetable propagation, white flowers are often found to break or degenerate into colors, although colored flowers do not become pure white.—so, by analogy, the white bird would degenerate into a colored one, though the converse would be unnatural."

That the Colored Dorking should sport a white bird is not at all unnatural.

Among the early importation of Dorkings by American fanciers were the birds received by Dr. Eben Wright, of Boston, Mass., in 1839.

A pair of fawn-colored Dorkings, said to be a cross of White Dorkings and the fawn-colored Turkish fowl, was imported by Dr. P. B. Fagen in 1853. Dr. Fagen was stationed at Fort Des Moines, Iowa, as surgeon in United States Army at the time.

In 1840 Hon. L. F. Allen, of Black Rock, N. Y., imported a number of White and Colored Dorkings.

In 1854 N. C. Day, of Luenberg, Mass., introduced what he called the Black Dorking. It was shown that these birds

were not imported; that they were not Dorkings, but a cross produced in Philadelphia.

DEVELOPMENT OF THE DORKING.

English fanciers very early took hold of the Dorking and began the development of one of the most useful and beautiful fowls ever given to man. The White and Colored varieties alone were preserved, although a few specimens of the old red Dorking are yet to be found. Among the sub-varieties discarded were the Pencilled, Golden, Red Speckled, Grays, and the Muff. No other breed or variety ever had, or since has, gained such a hold upon a people as did these Dorkings in England. As constituted and bred they were the most valuable of all market fowls. Not only this but from a fancier's standpoint they were a creation of rare beauty. All was going well with the Dorking and the men who were breeding them. It seemed as though no other fowl could ever drive them from their place. This was the condition prior to 1850, when the Shanghai craze reached England. The conservative Britons were swept off their feet. They lost their heads as well. The magnificent, the profitable Dorking was put aside, and the crude, ungainly and worthless Chinese intruder fondly embraced. The depreciation of the Dorking was but a natural conclusion of this false step of the English people. The Shanghai was crossed on the Dorking, in the hope of securing a larger fowl, and the demoralization was complete. Yet there were some fanciers more wise, or more loyal to the Dorking than were the whole people, who kept the Dorking intact and with them easily defeated the Shanghai and the Shanghai-Dorkings in the contests for best table poultry. The Shanghai craze lasted but a few years, for the Englishman is a very discerning fellow. The love of the people went back to the Dorking, and from that time these worthy fowls have been very dear to every Englishman.

The Silver Gray Dorking was a latter-day production, being the result of a cross of Silver Gray Game (Lord Hill's Games) on the Colored Dorking and top-crossed with the Colored Dorking. Some breeders resorted to crossing the White and Colored varieties in the production of the Silver Gray Dorking.

STANDARD DORKINGS.

The American Standard of Perfection recognizes the White Dorking, the Silver Gray Dorking and the Colored Dorking. The Silver Gray variety is most extensively bred in America, and by common consent is held to be the most beautiful of the Dorking family. For many years the venerable Henry Hales, of New Jersey, has been a powerful force behind the Dorking in America. Homer Davenport, of New Jersey, a short time ago succeeded in securing in England a few specimens of the old Red Dorking, and will try to perpetuate the variety.

The Dorking male is large, with a broad, low-set body that is rectangular in shape; a long, deep keel and short legs. The female closely resembles the male in shape. The skin and flesh of the Dorkings are white. They differ from most other breeds in having five toes. The Dorkings are fairly good egg producers, not ranking, however, with the most profitable fowls in this respect. It is as a market fowl that the Dorking excels all other breeds and varieties. They are very easily kept, bearing confinement without fault-finding, and are, in all, a very profitable breed.

WHITE DORKINGS.

Standard weights: Cock, 7½ pounds; cockerel, 6½ pounds; hen, 6 pounds; pullet, 5 pounds. In color, pure white in plumage throughout. Shanks and toes, white. Comb, rose.

SILVER GRAY DORKINGS.

Standard weights: Cock, 8 pounds; cockerel, 7 pounds; hen, 6½ pounds; pullet, 5½ pounds. Color of the male: body and fluff, black. Neck, silvery white, a narrow gray stripe extending down the middle of each feather of hackle is allowable. Back and saddle, silvery white. Wings, bows silvery white; primaries black on upper web, white on

lower web; secondaries black on upper web, white on lower web, with black spot at end of each feather. Tail, greenish black. Cock may have a little white at end of tail. Beak white, streaked with horn. Thighs, black; shanks and toes, white. Comb, single, upright, with six well-defined points. Female body color silvery or slaty gray, free from dark marks across feathers; under part of body, gray.

COLORED DORKINGS.

Standard weights: Cock, 9 pounds; cockerel, 8 pounds; hen, 7 pounds; pullet, 6 pounds. In body color the male is black. Wing bows, light straw; primaries, black or dark slate. Secondaries, upper web, black; lower web, white. Tail, black. Beak, dark horn. Comb, single, six points. Body color of the female, dark brown, or black slightly mixed with gray.

OTHER ENGLISH BREEDS.

The Rep Cap is one of the oldest of English breeds. They were originally known by many different names in as many different localities—the Rosetops, Readheads, Carols, Yorkshire Ever-Layers, etc. The American Standard calls for the following weights in Red Caps: Cock, 7½ pounds; cockerel, 6 pounds; hen, 6 pounds; pullet, 5 pounds. The Red Caps are a non-setting breed; are splendid egg producers, and very handsome fowls. They have a rose comb. The ground work color of well-bred specimens is a chestnut bay, with red and black in some sections.

THE ORPINGTONS.

The American Standard of Perfection puts the Orpingtons in the English class, where they properly belong.

The Orpingtons were originated by Mr. Wm. Cook, of Orpington, County of Kent, England. Mr. Cook's first Orpingtons were the Blacks, which he exhibited at the Crystal Palace show, London, for the first time in 1886. Mr. Cook has thus told how he "made" the Black Orpington: Black sports from Barred Rocks bred to Black Minorcas; pullets from this cross mated to Black Langshan males.

Rose Comb Black Orpingtons were produced by breeding black sports from Barred Rocks to Black Minorcas; pullets from this mating were bred to a rose comb Black Langshan male, a sport of the Black Langshan.

A little later Mr. Cook brought out the Single Comb Buff Orpington. They created a sensation, and were immediately accepted by the fanciers and market poultrymen of England. They were soon brought to the United States, and have since found their way to every civilized country in the world. They are a splendid variety, being extra good layers and a good table fowl. How they were created is told by Mr. Cook. He mated Colored Dorking pullets to Golden Spangled Hamburg male. Pullets of this mating were bred to Buff Cochins male.

Single Comb White Orpingtons were produced by mating White Leghorn cock to Black Hamburg females. Pullets of this cross were mated to White Dorking male.

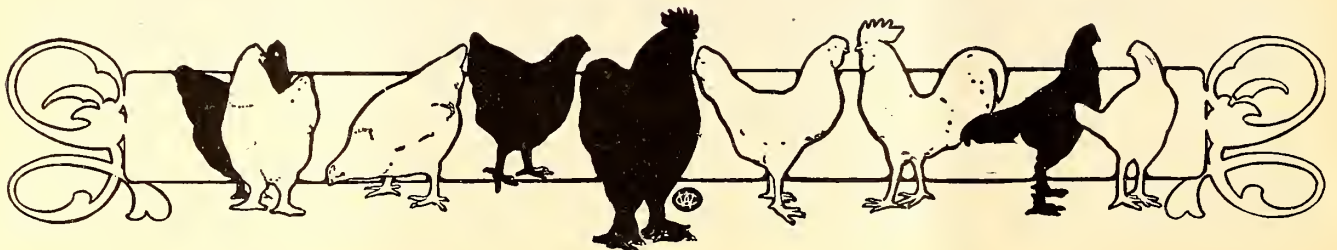

The Rose Comb White Orpington was the result of mating Rose Comb White Leghorn cock to Black Hamburg females, and the pullets thus secured being mated to a White Dorking male.

Diamond Jubilee Orpingtons were produced by using Speckled Dorkings where Colored Dorking was used in making the Buff Orpington. They are as yet far from perfection in color, being a mingling of red, white, black and straw color.

The Spangled Orpingtons are another of Mr. Cook's productions. In color they are white and black.

The American Standard of Perfection at present recognizes only the Single Comb Buff Orpington. Application has been made for recognition of the varieties mentioned here.

Standard weight of Single Comb Buff Orpingtons: Cock, 10 pounds; cockerel, 8½ pounds; hen, 8 pounds; pullet, 7 pounds. Color, rich golden buff. Shanks and toes, white or pinkish white. Beak, white or pinkish white. Comb, single, with five well-defined points.

ADVICE TO THE BEGINNER.

Beginning in a Small Way—"Chicken Fever" and Money
Do Not Make a Good Combination—One Breed,
Bred Right, Should Be the Motto for All Be-
ginners in the Poultry Business—At-
tention to Detail the Keynote
to Success.

Establishing a Reputation—Disposing of the Surplus Stock—
Selecting the Proper Advertising Medium.

If you have seriously considered the poultry business in all its phases, and are satisfied that you have the make-up of a successful poultryman, and you are determined to give it a trial, then go about it in a businesslike manner and thoroughly inform yourself on the theoretical side of the business at least before putting your money into it. If you were going to engage in any other business about which you knew nothing you would consider it good business policy to investigate carefully the probable chances of success or failure before investing your money. It is true you might go into the poultry business and make a success of it without having previously had

for your immediate purpose. As your flock increases you can change to a location better suited for the business. You will have gained in experience and be able to choose more wisely.

Before investing a penny in egg or fowl subscribe for two or three good poultry papers, in fact, as many as you can afford. Also purchase a good book or two on poultry and poultry houses and fixtures. By thoroughly posting yourself on the theoretical side of the business before investing your money you will the better be able to proceed with your eyes open. It will pay you well both in time and money. A false step in the start may cost you dearly in the end. Study carefully what you read, pick the wheat from the chaff, and accept the teachings of long-time breeders.

Do not get the idea into your head that you will stand a better chance of success by taking up several breeds. You would but add greatly to your chances of failure. One breed bred right should be the motto for all beginners in the poultry business. If you are going into the fancy—and it is to the fancier mainly these lines are addressed—it does not matter much which breed you select. If any particular breed takes your fancy more than any of the others, by all means select that breed.

You will need to determine whether to begin with eggs or fowls. I think on the whole it is better to begin with a trio or pen of fowls. It would of course be more expensive to begin with fowls, but by purchasing a trio or pen you would receive

A few brooders full of White Rocks during May at Charles H. Ring's eighty-acre poultry farm, Decatur, Mich.

any experience, but the odds would be against you. Do not misunderstand me. I mean that you should have experience before engaging in the poultry business as a business, with the expectation of making a living from it from the start. Beginning in a small way and building it up to a living basis while you are engaged in some other calling is quite a different thing.

Poultrymen generally may not agree with me, but I am firmly of the opinion that "chicken fever" and money do not make a good combination. The combination does not work well either for the chicken or the money. They both have a way of disappearing in some mysterious manner. This applies of course only to patients that have not had experience in handling both diseases. The idea I mean to convey is that a beginner that has any considerable amount of money is liable to invest his money—to jump in too deep before he has the necessary experience. For this reason a beginner will stand a better show of success if he has a business or profession upon which to depend while he is getting acquainted with his fowls and the best method of caring for them. He will be more apt to go slow on the start.

I assume that you are of this latter class—most beginners with poultry are—and that you are in possession of a small piece of land, the rear of your town or city lot is sufficient

the advantage of having them mated for you by the breeder, which of itself would be a valuable object lesson to you. No one so well knows how birds should be mated to get the best results as does the man who breeds them. He has been many years breeding them up to their high standard, and if he is honest he will give you the benefit of his years of experience in mating your birds. You can at least see and know what you buy, and if they have been line bred for several generations (do not buy any other kind) they will be likely to reproduce themselves. On the other hand if you start with eggs you cannot know what you get until your eggs are hatched and the chicks several months old. Other advantages of fowls over eggs will upon reflection be apparent to you. In any event, whether you purchase fowls or eggs, get the best. Pay a fair price and insist on getting value for your money.

By purchasing fowls in the fall you could get excellent show birds, which would at the same time be good breeders, for a trifle more than you would have to pay for breeders alone. This would enable you to exhibit your fowls at the fall and winter shows, and if successful in winning some of the ribbons your name and fowls would be brought before the public much earlier than they otherwise would.

After you have given your order for fowls (assuming that

you have decided to start with fowls) prepare a temporary place to house them upon their arrival, as they should not be placed in permanent quarters for at least two or three weeks. This will give you time and opportunity to rid them of any possible vermin and to make sure that they have no disease, and also to provide permanent quarters, if you have not already done so. The house need not be an elaborate affair; build it neatly and substantially, with the fixtures as simple as possible. A house suitable for one locality—in the South, for instance—would not be suitable for our northern climate. The details of house construction has no place in this article. You can easily determine the kind of house best suited to your locality. The principal thing is to have the house dry and well ventilated—plenty of fresh air but no drafts. No doubt a curtain front house would give you better satisfaction than a closed house, provided it be otherwise properly constructed.

Before placing the fowls in the new house give it on the inside a thorough coat of whitewash to which has been added a good disinfectant, such as carbolic acid and coal oil, creolin, etc. Thereafter whitewash at least twice a year, and every two or three weeks apply a good lice paint to the roosts and nest boxes. Careful attention to these matters may save you a lot of trouble in the future. You begin the war first on lice and mites; do not wait until they begin it.

If you have sufficient room fence off two yards, one as a runway for the fowls and the other for green stuff. In the latter you can sow rye, oats or grass (clover or alfalfa), and after it has attained sufficient growth turn the fowls in for an hour or two each day. When the soil of the runway becomes contaminated dig it up and sow to grass, using the other yard for a runway. In this way you can keep the yards sweet and clean. This can easily be done while your yards are small, but when you have removed to larger quarters the question of clean yards will become more difficult to handle. For your small yards the fencing can be of a more permanent nature than it is well to build for a large yard. Place the posts from ten to twelve feet apart, and where you do not have fowls in adjoining pens a six-inch board at the bottom with a five-foot wire on top of that will generally be found sufficient, especially for the larger and medium-sized breeds. If some of the fowls go over it you can stretch a wire or two along the top; keep the tops of the posts sharpened. As your flock increases and you are obliged to seek a new location where you will have more room you will find it more satisfactory to make the fencing movable as far as possible. The outside fencing can of course be made more or less permanent, but most if not all of the cross fencing should be so made that you could remove it without much difficulty in order to plow the ground whenever it showed signs of becoming contaminated. Should you be so fortunate as to get a place sufficiently large to enable you to house your fowls on the colony plan the fence question would practically be eliminated.

Now, as to feeding; I would not advise you to worry much over the question of balanced rations. Leave such matters for the experienced poultryman. Feed your fowls a variety of wholesome grain in plentiful quantities, and stick pretty closely to dry feeding for awhile. If desired you can feed a good mash occasionally, say two or three times a week. Keep green stuff before them all the time, such as cabbage, beets, lettuce, turnip tops, etc. Also keep them well supplied with grit, oyster shells and charcoal, and fill their drinking vessels with fresh water two or three times a day. The secret of good feeding is to keep the fowls busy from the time they leave their perches in the morning until they return to them at night. Remember that a busy fowl is a healthy and profitable fowl.

Along toward fall your early hatched chicks will be showing signs of maturity. You will go among them every day and point out those you are going to keep and those you are going to sell. There will be culls, which of course you will sell to the market, and better ones, which you will dispose of as breeders, and still better ones—top notchers, a few—not many, which you will keep for breeding purposes and the show room.

You will now be confronted with the question as to how to dispose of your surplus stock. In the first place, be sure that you have something worth selling, and secondly, let the public know it. To do this it will be necessary for you to advertise. The two principal methods of getting before the public are, exhibiting your stock at shows and advertising in poultry papers. Begin your advertising two or three months in advance of the time when you expect to be ready to deliver stock. Let your neighbors know what you are doing. Remember that a man's reputation is what his neighbors think of him. Do not advertise one thing and sell another. Be honest with your customers. A satisfied customer is the best advertising you can have.

An excellent means of advertising is to exhibit your fowls at the local and nearby shows. Select a few of your best speci-

mens three or four weeks before the show; pen them by themselves—separate into single coops if necessary—and give them extra attention in the way of feed, handling, etc. Study your poultry papers as to the proper conditioning for the show room. Your birds may not win the ribbons—it takes good birds to win ribbons these days, but do not be discouraged, you will receive the advantage of having your birds scored, and their fine points as well as their defects pointed out. This will be of great assistance to you when mating up your pens of next year's breeders. Also you will come in contact with poultry breeders, be given the glad hand with a word of encouragement, and you will go home to your little flock with a firm determination to be in at the winning the next year.

A word more about advertising. A certain measure of your success will depend largely upon the nature of your advertising. Do not advertise in a promiscuous and desultory manner. Select a few of the best and most widely circulated poultry papers and engage space with them by the year. Keep your name before the public all the time; it is the cheapest kind of advertising. If there is any part of the year in which you have nothing to sell let the public know that you soon will have. Do not let the readers of the papers forget you. Change the wording of your advertisement from time to time to suit the condition of your business. Be persistent and customers will come to you.

In writing an article of this kind there are many matters of detail which must necessarily be omitted. For instance, location and amount of ground required, house construction, breeding, incubating and rearing of chicks, feeding, advertising, exhibiting, etc., any one of which, to do it justice, would require several columns of space.

Finally, I would advise all beginners in poultry culture with the expectation of making it a business to combine fruit growing with the poultry business. The combination is an ideal one; each would benefit the other, the returns from the same ground two-fold, which would add greatly to the chances of success.

Tacoma, Wash.

JAMES M. HARRIS.

Securing of Fertile Eggs.

How to Secure the Highest Percentage of Fertile Eggs During the Winter Months—Plenty of Fresh, Pure Air and a Well-Balanced Ration Are Among the Things Necessary.

Frost-Proof Building Not Necessary to the Health of the Fowl—Cleanliness an Important Factor.

The problem of securing the highest percentage of fertile eggs from our breeding stock is one of vital interest both to the fancier and the market poultryman, and in fact to every one who attempts to raise fowls, whether for pleasure or profit.

The subject has received more notice in the poultry press than any one of the other many sides to the poultry business, and still there is the same old story each year, i. e., the low fertility of eggs which are used for incubation, which totals up pretty heavy on the loss side of the ledger.

Not only is it a matter of no small loss to the breeder himself, but it is a very poor advertisement for his business to have complaints along this line. We have been devoting our time to the poultry business for some years, and have given the subject of mating for early incubation careful study, and we believe a thorough test. Our system is no cut and dried set of rules, only common sense principles, and by carefully adhering to this system we have solved the problem of fertile eggs to our own satisfaction at least. We breed nothing but the White Wyandottes and have found them to be all that is claimed for them in the way of utility fowls. As we are in the business for the egg and broiler trade we want the fowls best adapted to the purpose, and think we have found it.

First as to housing our fowls:

A great many breeders advocate the curtain front house with open scratching shed, but we have found that in our severe Canadian winters there is hardly a day but the weather is too severe for fowls to live in an open front shed, where there is always more or less draught; and we find where thermometer stands between 20 and 30 degrees below zero for days at a time that the curtain front house is too cold.

Other breeders go to the other extreme in building with the idea that houses must be frost proof. A building that is frost proof during the winter weather is usually inclined to be damp. Dry surroundings, even if cold, are to be preferred. Our houses are 12x60 feet, built with hip roof with all windows

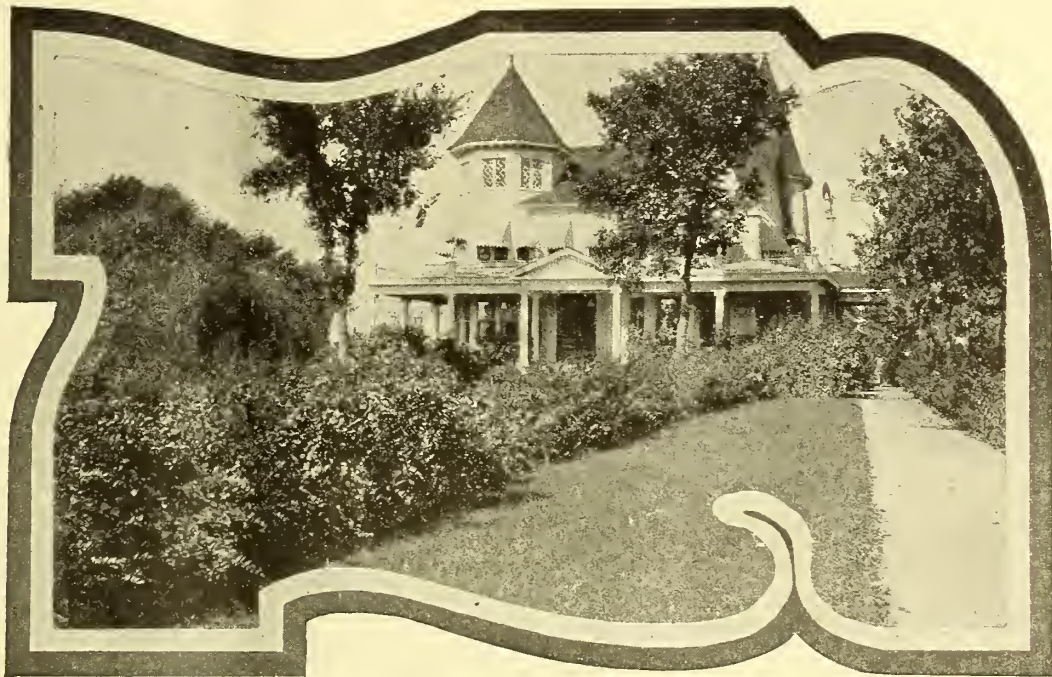

facing south, windows being made to let down from top. House is built of good grade pine or hemlock lumber, roof and outside of building being covered with four-ply ready roofing, with no inside lining. There is no question but this house is cold during the winter, as water in drinking fountains will freeze solid almost any day, but we have never yet had any of our fowls suffer from colds or roup, and have never had a case of frosted comb. An alleyway runs entire length of house, pens being 10x10 feet. House has double floor with felt paper between. Nests are under dropping boards, which are placed parallel with alleyway. A board partition extends some distance above roosts to exclude draughts, while hinged doors allow the gathering of eggs and cleaning of dropping boards from alleyway. During winter months a burlap curtain is dropped before each roost at night.

Our breeding pens are mated about January 1 each year, and in mating we use nothing but the most vigorous birds, and as our aim is to produce a laying strain of high merit we breed from only our best layers so long as we get required shape, size and color. We never mate more than ten females to each male bird, and as we are firm believers in the theory that the male bird is half of the breeding pen we take great care in selecting birds to head our pens. We allow two males for each breeding pen and use each bird one week alternately. A male bird that is not active and vigorous we would not use. We try always to select a male whose dam was an exceptional

will eat, the object being to keep them hungry all day. Steamed cut clover is mixed with mash three days each week. At noon a handful of millet seed is scattered in each pen, and for green food they are fed cabbage or mangels three days each week. Other days they are fed boiled liver or other scrap meat, which we buy from the butcher, and which is minced fine and scattered in litter. Fowls get full feed of wheat, corn or buckwheat fed on alternate nights. Fresh water, grit and oyster shell is kept before fowls at all times.

By a great many this may not be considered a properly balanced ration, but we have found that fowls thus fed are always in good condition. And, furthermore, we secure 85 per cent to 90 per cent fertile eggs from our fowls during the months of January, February and March, and this in a house where the inside temperature very frequently drops below the zero mark. It is an established fact that fowls kept under such conditions produce a much higher percentage of fertile eggs than do fowls kept in warm close houses. If the chicks are the offsprings of hardy parents and are raised under proper conditions they will develop into healthy, vigorous breeding birds. Our young stock is given free range, and roost in tight but well ventilated roost coops or colony houses until the snow flies.

Cleanliness is one of the most important factors which go towards success or failure in the poultry business. Chicks confined in filthy brooders or coops and infested with lice have a very poor start in life, and cannot be expected to develop into

Residence of Mr. David Beidler, proprietor of the Emma B. Poultry Farm, Gurnel, Ill.

good layer, and by mating him to our best laying females it tends to improve the laying qualities of the offspring. At the time we mate up our pens our pullets will have been laying from two to three months, and old birds are well over molt and down to business by middle of November.

After pens are mated a week or ten days we find it a good plan to test eggs from our pens by setting a few eggs from each before filling our large machines or filling orders for eggs. In this way we have an idea as to the condition of our breeding stock, and by the use of trap nests know which birds are laying the fertile eggs.

After our birds, which we intend using for breeders, are put into winter quarters, they are not forced for laying, but are fed such rations as will keep them in good condition and yet have no surplus fat. In order to keep the heavier breeds in this condition in limited winter quarters the watchword is exercise. In order to give our fowls this needed exercise our method of feeding is as follows:

The floor of house is always kept covered with a foot or more of clean dry straw, in which, after fowls have gone to roost, we scatter oats or barley, allowing one handful to three birds. When fowls leave roosts in the morning they get the required exercise to give them warmth, and yet do not get a full feed. About 10 a. m. they are fed a mash composed of equal parts of bran, shorts and ground oats, mixed with warm water or milk if we have it. Fowls are fed only about half what they

what is desired as breeding birds. Whitewash with a liberal addition of crude carbolic acid applied boiling hot makes an excellent disinfectant and is sure death to lice and mites. We apply a good coat of this mixture to the inside of all our buildings spring and fall, thereby keeping them clean and wholesome. Dropping boards are cleaned daily and pens are swept and clean straw added each week. Air slack lime is used on dropping boards, while roosts are painted with coal oil and carbolic acid each week.

This may seem a great deal of what some would consider unnecessary details, but those who would be successful in the raising of poultry must attend to the small duties. It is neglect of these minor details that causes the large leaks in the profits.

In order to secure the fertile eggs during the winter and early spring months it has already been proven that fowls must have a properly balanced ration, this food to be provided in such a way that fowls must exercise in order to secure it, but we believe the side of the question which is mostly overlooked or neglected is plenty of fresh air for the fowls. A great many are under the impression that the warmer the house is during the winter months the better the results. With this idea in view the majority of the poultry houses in the colder climates are constructed with the idea of making them frost proof, but in each case where such buildings are used arises the question of ventilation. Close, stuffy building, without

proper ventilation is, I believe, one of the main causes of breeding birds being in such condition that a good percentage of fertile eggs is impossible.

It is in this respect that our southern cousins have a slight advantage, as they are enabled to give their fowls plenty of fresh air and outdoor exercise almost the entire year. But we believe there are a great many advantages to our colder climate which go far towards making poultry raising a success if the business is properly managed. I feel sure that with the proper care fowls may be forced to produce as many eggs in a locality where winter reigns supreme for from five to six months in the year as in the more even temperature of the South and West. Furthermore, the markets both for live and dressed poultry and eggs are always considerably higher in the North than elsewhere.

But to return to our subject: no matter in what locality we are situated we will find that the success or failure of the business depends to a great extent upon ourselves, in the care we bestow upon our fowls. As we have already stated, it is not merely an experiment with us, but has been tried under all conditions for the past three years, and during this period have not lost a single bird through disease of any kind.

As we make a specialty of winter eggs it is to our best interests to have our fowls doing business during the winter months, and our Dotties have never yet disappointed us in this respect. But let it be remembered, in order to secure fertile eggs, or in fact eggs of any kind during winter months, fowls must be fed a variety or properly balanced ration.

We have all noticed that as soon as fowls are able to leave winter quarters and secure the tender blades of grass or other green food, along with animal food in the shape of bugs and worms, there is an increase in the fertility of the eggs. Therefore I contend that by feeding for this variety and giving fowls plenty of fresh air and exercise we are giving them the proper requisites for the production of fertile eggs in winter.

INCUBATOR MANAGEMENT.

The Use of Incubators in Preference to Sitting Hens—Failures Due to the Misjudgment of the Operator—Selecting the Eggs to Be Incubated—The Proper Temperature at Which to Run the Incubator During Incubation—Testing the Eggs.

The Incubator Overcomes the Difficulties Experienced with the Hen—An Incubator a Profitable Investment.

The manufacture of incubators is a business that is steadily on the increase. A few years ago incubators were thought to be fads, now they are fashion instead. There are indeed some cheap and worthless machines on the market that tend to reduce the faith of the people in incubators, but there are also good machines which will do the work claimed for them. Thousands of these machines are sold each year and yet there is a demand for more. There seems to be no danger of overdoing the business or for that matter any other branch of the poultry industry.

Probably a great many of the failures in the operation of incubators is due more to the misjudgment of the operator than to some fault in the machine. Therefore before you mark a machine as being no good it is generally best to look over the work that has been done with it and see if you are not to blame. Although directions are furnished with the machine, the operator must use some judgment himself. The machine will not run itself when you hold the book of directions up before it and tell it to go. It must be cared for and watched closely if the best of results are expected.

The best location for a machine is in a cellar, because the temperature is generally more even there than in any other place where it could be placed. If it is not convenient to place it there put it where there is as little change of temperature as possible. The room where it is located should be well ventilated. Lamps burn oxygen as well as oil, and will burn considerable air in a short time. Hot water machines should be placed level on all sides. If they were not the water in the tank would not circulate freely. With a hot-air machine, however, this is not necessary.

Some care should be exercised in the filling of the tanks in a hot water machine. If they are filled with cold water they should not be filled full, as the water will increase in bulk as it heats. It is not advisable to fill them with water that is too hot, as you might be obliged to wait for it to cool down before you could get it to working properly. The tanks should be

filled as often as once per week to supply the loss by evaporation. Never let them get low.

The lamps should be filled at least once a day. Some of them, in fact, have to be filled twice. But never let them go more than twenty-four hours unless you are absolutely sure that they will not burn dry before you get ready to fill them. If the lamp should happen to be out all night it would probably destroy the hatch. It is better to fill the lamps in the morning than at night. Then if they work up they can be attended to in the daytime, whereas if they were filled in the evening they might smoke all night and nobody be the wiser. If your lamps have a place on them where water can be kept do not neglect to keep water on them. I have known of lamps getting sufficiently hot to unsolder the bowl from the burner and thus cause great danger. Water on top of the bowl of the lamp or around the burner would prevent this.

The regulator is the most delicate as well as the most important part of the machine. Therefore it is not to be trifled with or handled roughly. It is meant for one purpose only, to regulate the temperature in the incubator, and it should not be used for any other. It should be adjusted before the eggs are put in so that it will hold the temperature at the desired point. After it is once adjusted don't be continually tinkering with it, it will work far better if left alone. Always be sure that the levers which are connected with the regulator do not bind or catch, for if they should it would not only hinder the working of the regulator but might spoil it also.

The eggs that are to be placed in the machine should all be of nearly the same age and should not be too old. If they are not of the same age they will not hatch at the same time, and the hatch will drag along for two or three days until the operator gets out of patience and throws the rest away, only to find live chicks in some of them. Again if they are over two weeks old they are not apt to hatch very well. When ready to be placed in the machine they should be marked on opposite sides as a guide in turning them. A convenient way to do this is to put an X on one side and an O on the other. Then they can be turned from X to O and back again.

After the machine is adjusted at the proper point place the tray of eggs in it and leave it alone. It may require 25 hours for the temperature to come up, but it will come up by that time. After 24 hours remove the eggs and turn them and leave them out to cool for about ten or twenty minutes, according to the outside temperature. Then cool them once a day and turn them twice until the first pip is seen or the first peep heard. It is convenient to cool them when the lamps are filled in the morning, as they can be left out to cool while the lamps are being filled. If your machine is supplied with the so-called turn-over trays you had better get a few hired men to help you turn the eggs. It is hard work for a man and practically impossible for a woman to place one tray above another and flip them over without breaking some eggs. I believe that the safest and easiest way is to turn the eggs by hand.

There seems to be some difference of opinion as to the point at which to keep the temperature within the egg chamber. Some advise keeping at 103 degrees all the time and some say begin at 102 degrees and gradually increase it so that it will be 104 degrees during the last week. The latter method probably has more to recommend it than the former. When the eggs are under a hen the animal heat would increase as the hatch proceeded. And as the hen is the standard of perfection which all incubators try to imitate they should imitate her in this respect also.

But a variation from normal in the temperature will not do any harm if it does not last too long. The temperature could be run down to 95 degrees or up to 110 degrees without injuring the hatch if it were not allowed to remain there too long. The thermometer should be placed so that the top of the bulb is a very little below the level of the top of the eggs. It should also rest against a good fertile egg. Use a good thermometer in your machine. A poor one would cause you all sorts of trouble.

After the eggs have been in the machine for a few days they should be tested and the infertile ones and the dead germs should be thrown out. Some claim that testing is all nonsense, but as the infertile eggs can be used as chicken feed there is at least some saving to it. The eggs should be tested first on the sixth day. Then any doubtful germs can be left in and tested again on the tenth day.

The testing is performed by bringing the eggs before a strong light in a dark room. The infertile eggs will always be perfectly clear. The live germs will appear as dark spots, from which blood vessels can be seen branching out. The weak germs present a cloudy appearance and the dark spot is either very indistinct or invisible. The dead germs appear as a dark spot surrounded by a red ring. This is for the sixth day. The third class may be left in the machine and tested again on the tenth day and those that are undeveloped discarded. The first

and last classes should be discarded at once, while the second class should be left in the machine to hatch.

A good plan for a tester is to make a wooden box about eight inches square and fifteen inches high. Leave off one end so that it may be set over a lamp. Then cut a hole in the opposite end the size of or a little larger than the top of a lamp chimney. Then cut a hole in one side about two inches in diameter directly opposite the flame of the lamp. Tack a piece of leather over this and cut a one and one-half inch hole in it. If you have a lamp reflector cut a hole in the opposite side and place the reflector on the outside over the hole. With this tester you can see into any egg.

I have two different makes of machines and one is a moisture and the other a non-moisture incubator. I have examined them closely and I can find but little difference in the method of ventilation. Both hatch well and I presume they would hatch equally well if I were to use moisture in both or neither of them. If you want to use moisture it is best to put it in an earthenware pan instead of a metal one, for the latter will

A setting hen is unreliable. She is apt to desert the nest any time she feels like it or tramp around on the eggs and break half of them. Even after the hatch commences she is not sure to stick to her duty, but may leave the nest with only about half of the chickens that would have hatched.

An incubator on the other hand overcomes all these difficulties. It will not leave the nest unless the nest chick leaves it. It can also be kept heated up until the last chick is hatched. Then take for example a 120-egg machine. It will hatch as many eggs as nine hens and can be managed quicker and easier. And the oil for the incubator will cost little or no more than the feed for the hens. This may be a strong statement, but it is true nevertheless. And then the chickens when hatched can be all taken care of at once. Meantime the hen instead of wasting valuable time can spend her strength laying.

If the operator will use judgment he will find that he will not be disappointed in his incubator and the results from its use. If it will not work well overhaul it thoroughly and find

POULTRY FARM OF J. C. FISHEL & SON, HOPE, IND. HOME OF THE FISHEL WHITE WYANDOTTES.

rust out. If the climate is very wet then less moisture should be used than in a dry climate. The operator must use his own judgment in this matter. It is best to leave the ventilation of the machine alone. If you put in moisture it should be on about the thirteenth day.

When the hatching time comes if your incubator has a wooden bottom it is best to spread a piece of burlap or a newspaper on the bottom of it so that the chickens can get a firm footing on it. The eggs should not be turned after the first pip is noticed, but should be left in the machine and not touched until the hatch is completed.

If your incubator sets where no light can shine through the door some means must be devised to see the temperature in the egg-chamber. A simple way to do this is to take a glass or tin reflector and hold it so that it will reflect the light into the egg chamber. But do not leave a strong light shining on to the eggs. Under a hen the eggs are in a dark place and they should be in an incubator also.

Although an incubator can imitate a hen in some points it cannot do so in all. But nevertheless it is more advisable to use incubators, although hens were available for the purpose.

out what is the matter. In the end you will decide that one of the most profitable investments you ever made was the incubator.

We want better egg records, and we want better carcasses, but it does not seem to have occurred to the average poultryman that it is far easier and better to secure or increase those qualities in the breeds we have, by proper care and mating, than it is to manufacture something new with the desired traits.

He who aims to make a living by poultry culture, says the *Poultry Messenger*, must be industrious and hard working. But hard work alone will not bring success. Some of the hardest working people in the world make a failure of life. The labor must be well directed—in accordance with a well thought out plan.

Breeding for beauty is all right in its place, says *Farmer's Voice*, but where beauty interferes with utility, is the place to let beauty take second place. There are mongrel hens that lay as many eggs as the most prolific Leghorn, but they cannot be depended on to transmit the tendency to their progeny. This is where the mongrel fails.

PRIZE ARTICLE DEPARTMENT

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communication about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. All articles must be written on one side of the paper only. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

The first prize in the contest this month has been awarded Bertram Moody, Thompsonville, Conn., and second prize to Rev. Louis A. Peirson, Castile, N. Y.

HOW TO SECURE EGGS IN WINTER.

"What! are your hens laying?" is the question often put to me these days by my neighbors who have heard that my hens were shelling out eggs while theirs were not laying any eggs. "What do you feed them?" asked another man recently when I briefly told him the secret of making hens lay when eggs were selling for thirty-five cents in market. Possibly my experience would be of some value to others. Last winter I secured a small incubator and secured hatches, fairly good ones, in March, April and May. My incredulous neighbors saw at once the utility of a good incubator managed carefully. There was no waiting for biddy to make up her mind to set. We had excellent results in raising the chickens, only losing one out of the entire flock of nearly a hundred. They grew rapidly and early in the fall we had fine broilers for market and for the table. Of course the demand was greater than the supply. Then about the middle of November the White Leghorns began to lay two, three and four eggs a day. The news spread through the community. One man said he would take all I could bring him at my own price; a lady telephoned that she would like even a half dozen at a time for an invalid; another man said "that the beauty of an incubator is when you secure early hatches; my pullets won't lay for two months yet." Now for the feeding of the pullets. First I endeavor to be punctual at feeding hours. In the morning, as soon as it is light, I feed them a warm mash of cornmeal, bran and ground oats, with a half teaspoon of cayenne pepper and scraps from the table. Place the mash in thoroughly clean feeding troughs. I keep about fourteen hens and one rooster in a single pen. Do not overfeed or overcrowd the birds is an essential point with me. Never keep two roosters in one pen; keep the hens tame and never frighten them.

Then I throw straw or leaves in the pen, in which is scattered a small amount of cracked corn and buckwheat. This will set the hens to work scratching. Keep them off the roosts and get up a good circulation. I also keep green food before them, such as cabbage, chopped clover or apples. Once or twice a week I secure a piece of waste meat from my butcher, which is a delight to laying hens. Always keep grit before them, such as ground oyster shells or gravel. Occasionally I will empty the coal ashes in one corner of the pen. I take out plenty of warm water in the morning, but be sure that it is not hot. Then I leave them till the noon hour, when I am sure to find some choice eggs in the nests, and what a pleasure to gather them. At noon I again scatter a small amount of cracked corn and buckwheat in the litter, which sets them to scratching again. Be careful that the pullets do not get fat and lazy. Then at night, just at dusk, I feed them corn that is warm, giving them a good liberal amount. To repeat this labor each day requires but little extra time and labor. When I gave this secret of success to a neighbor he said, "It must take a good deal of time." It takes but very little extra time or labor to accomplish the above results, and surely the reward merits the extra effort. Another point which needs emphasizing is that all cracks should be thoroughly sealed that no draught come upon the fowls while sleeping. This will be a great preventive against roup and kindred diseases. The fowls must be kept healthy if you expect any eggs from them. As for vermin and lice incubator hatched fowls are entirely free from them. One more essential thing I want to mention is my dust bath. In a box I place road dust or fine dirt. This is placed where the sun will give it warmth, and the biddies will do the rest.

The hen house should be thoroughly aired and cleaned once or twice a week. The droppings make excellent manure for

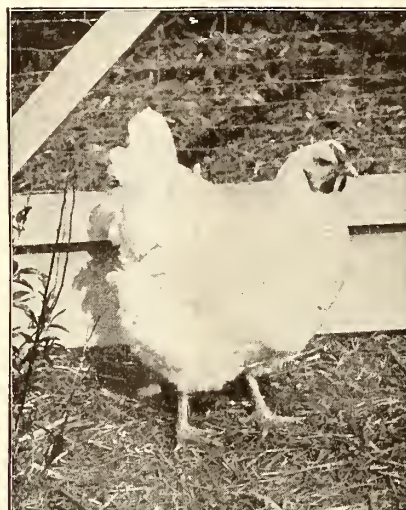

thrifty young trees. I find in following these simple rules that the hen will more than pay for herself; that fresh eggs are indispensable for yourself or the market; that you will derive a certain amount of health, pleasure and satisfaction in caring for them. They need a certain amount of care and attention, that I admit, but the reward will certainly come.
Castile, N. Y. (REV.) LOUIS A. PEIRSON.

KINDNESS TO POULTRY.

One thing that is indispensable in the poultry yard is kindness and gentle handling. There are four kinds of poultry made by kind and unkind treatment. First, those tame from lack of food and water; secondly, those tame from the abundance of food and the gentle handling they receive; third, those wild and suspicious from the lack of food and from the rough handling which they generally receive in many farm yards; fourth, those fed abundantly but kept in continual fear of their master.

When a person goes into the poultry business he considers a good many things, but he does not consider as he should his own disposition and whether he can treat his poultry kindly or not. It is a pleasure to walk into the poultry yard and see the chickens, who look up and then continue their scratching as if no one were near. It is an annoyance, however, to see the chickens fly and run in all directions whenever you come near them, either to look at them or to feed them.

A person who became one of my acquaintances a short time ago had the tamest and most friendly chickens that ever came under my observation. I desired to see what the cause of it was, so one night I paid him a visit just about feeding

WHITE WYANDOTTE HEN.

"Good enough for any show." Bred and owned by J. C. Fishel & Son, the White Wyandotte Specialists, Hope, Ind.

time. I soon found out, then and there, what his secret was, for as I talked with him he scattered two scant quarts of whole corn on the ground to his forty odd chickens young and old. That was a striking case for me, as he kept complaining of the scarcity of eggs, but I said nothing, as I knew him to be an expert poultry man in his own estimation. I am certain that if a man should put two flocks into two houses exactly alike, with the same kind of food, he would find those that he had treated kindly much better than those he had treated brutally, both in egg-producing and for the market.

Many persons think that if a hen is not laying as it should, or if she is resting, that it is not their fault (as it is in nine cases out of ten) but that the grain is not good or the hen is not of a good variety or some other imaginary evil which they are either too lazy or ignorant to remedy.

A hen is not an automobile or wagon, but a being, made by the Creator with feelings and senses and the power to be one of man's most helpful neighbors if she is taken care of and treated kindly.

As a last guard against brutality and the abuse of chickens I will say: "Let a man who goes into the poultry business for profit go into his yards with a heavy footstep and a gruff voice, scaring his chickens away from him, and he will find for himself that he must change his ways or if he does not time will tell."

BERTRAM MOODY.

How to Make Advertising Pay.

Selecting the Proper Medium—Preparing an Advertisement—Individuality and Frequent Change Bring Results—Advertising in Cheap Mediums is a Waste of Time and Money.

There are some people, who are asking "Does advertising pay?" It most assuredly does pay. It is an investment that when carefully and judiciously managed pays well.

Every good business man knows that to advertise in the right way in the right place is to do business. Such men as John Wanamaker, Marshall Field and Montgomery Ward consider advertising a paying investment. They would not spend such vast sums of money for advertising alone if they thought otherwise.

Advertising pays the manufacturer, the wholesale merchant as well as the retail merchant. It pays the business man, no matter what his line of goods is. It pays the poultry man just as well any other business man, when it is properly managed.

The first question naturally arising is how to do it. Go at it just as you would any other business venture; study the question carefully and begin. If you make mistakes profit by them and try again, start with the idea that advertising is an investment and not an expense.

If you have good stock that you know has merit, don't hesitate to let others know about it. There are others who are just as eager to buy as you are to sell but they will not buy of you unless you let them know what you have to sell. If you were the only person who had poultry to sell, it would be unnecessary to advertise. Advertising is necessary owing to the simple fact that "there are others."

When selecting a medium, by all means choose a poultry journal. It reaches the class of people who are interested in the very thing that you have to sell, otherwise they would not be reading poultry journals. Select a paper that you consider reliable and that has a good circulation. Let this point interest and influence you more than the rate charged for space. The cost of an ad is not measured by what it costs you alone but by what it brings. Some advertising is cheaper at \$4.00 an inch than at \$4.00 a page. No reliable paper charges a good rate for its space without having a good reason for doing so. Cheap space may be too cheap in the end. That the best is cheapest in the end is as true in advertising as in everything else. One good paper will bring better results than several cheap ones.

Having selected your medium and arranged for space, do not make the mistake of trying to crowd too much into that amount of space. Too many advertisers are careless in their preparation of an ad; they seem to think all depends on the medium, but not so. Here to, the man behind the gun is an important factor; there are some things for which he alone is responsible. Anyone can attract attention, but it will count for nothing unless attracted in a pleasing manner.

An attractive ad is just as far in advance of a poor one, as the decorated show window is ahead of the one filled with last year's goods and fly paper. An ad should be arranged with a neat border and some white space. Make your ad different from others, have a style about it that is all your own. Do not let it be like a dozen others on the same page; you would not hink of building a house like your next neighbor's. Making your ad just a little different is not at all difficult. Look over the various ads and note which points please you and which do not, then plan your ad as you would a house. Make your copy fit your space in a well balanced manner. If you are too busy for this, you can get someone else to do it for you. There are people who make a business of designing and writing ads and will do it at a reasonable price.

People are constantly on the lookout for something new and different. They will see it and appreciate as quickly in a pleasing attractive advertisement as elsewhere.

Having decided where and how to advertise the next question that confronts you is, when. The best time to advertise is all the time. Spasmodic attempts do not count for much in any line of work; they count for very little in advertising. Of course you will see your first ad but it does not necessarily follow that everyone else will see it nor your second one either. A few people will see one and others will see the next one, etc. It is the keeping everlastingly at it that counts. People think before they buy; some of them have to do a good deal of thinking before spending their money. It is a sure thing that they will not think about your stock unless they know about it. They have no way of knowing what you have to sell and how good it is, unless you tell them, telling them is advertising.

By all means keep before the public all the time. If you advertise only in the Spring, you will not interest the man who prefers to buy in the Fall. It will pay better to use less space and use it continuously than to use a large space occasionally. As I said before, it is easy enough to attract attention, but it is another matter to hold it.

Simply giving people your address and prices will not go far towards convincing them that you have just what they want. Tell them some of the merits of your stock this month and tell them something different next month, or tell them about the same thing in another way. A business bringing ad must interest the people. As you can not interest all of the people all of the time, you must endeavor to interest some of the people all the time. What interests some today may not interest others, but by changing your ad, you may interest next month the very people that you missed this month. How long would you take to read a paper that printed all the same matter each week? Not long I think; you would not be interested in reading that which you had read.

Some people have the idea that when they have sent one copy to the editor all they need do is wait for the rush of orders. If the orders fail to come; it is the fault of the editor and his "old paper." As a matter of fact the editor is just as anxious for your ad to pay you as you are and he will do his part towards making it pay; but it is up to you to furnish the copy. See to it that you frequently furnish a new one but also see to it that you stick to the truth. Truth and success are synonymous terms in this matter. It is not enough to have people read your ads; they must believe them. Truth is always tellable and it will always interest some one. Unfortunately there are occasionally a few advertisers who waver from the truth, but there comes a time when their advertising does not pay. If you tell the truth and keep telling it, people are bound to believe you after a while and your advertising will pay.

Remember that every inquirer may be a customer. He probably will be if answered promptly and courteously. Give him the attention that you would if you were positive his first order would be a big one. Go after and keep after him with the intention and determination of selling to him. Do it in a businesslike and convincing way and if he finds the goods to be as represented his second order may be a big one. If his first deal with you is a square one he will be sure to come again. Not only will he come again, but will bring his friends, and they will, in turn, bring their friends. This sort of an endless chain will be profitable for all concerned. People are always willing to pass a good thing along. Treat your customers so that they will pass your name along instead of "passing it up." Fill each order so that it will be like a luscious peach, complete in itself but tasting like more.

After all advertising is a simple matter; it is simply telling people the truth in an interesting way. Telling it in a convincing, straight-forward businesslike way; telling it often to the right people; changing your language occasionally just as you do your tone of voice to emphasize certain points and avoid monotony. Then treating a customer just as you would like to be treated.

Advertising is a business wonder worker but there are no cases on record telling where it has ever furnished the get-up-and-hustle-a-tiveness for the advertiser. The advertiser, who lacks this element always has time (plenty of it) to tell just how and why he knows advertising does not pay. He, who possesses this necessary requirement is always busy but will assure you that advertising does pay because he has tried it and speaks from experience.

Whether or not your advertising will pay depends to a great extent upon yourself. Go at it with the determination of making it pay and the dollars will be yours.

Astoria, Ill.

(MISS) MARY SHAWVER.

The habitual loafer is a menace to any well regulated poultry farm, and she should be made to do pot service at the very first opportunity. This is *Iowa Homestead's* opinion of the idle hen, and it is a good one, too.

The *Poultry Messenger* says the road to success is through a maze of mistakes and failures. The man who trips and falls and lies sprawling on the ground, bemoaning the misstep that brought him down, is not fit for the chicken business, or for much of anything else. The poultry business would lose half of its attractiveness if people of that stamp could succeed in it.

Among the reasons why many poultry raisers fail to meet with success, when they increase their flocks, the *Baltimore Sun* assigns the following: They fail to increase their accommodations in proportion to the increase in the flock; they fail to recognize the fact that large flocks are difficult to feed so that each individual may secure his allotted share; that various ailments have to be guarded against where large flocks are kept.

Brooders and Brooder Chicks.

A Good Brooder Absolutely Necessary to Success—A Good Brooder Better than Hens—Top Heat Best—Transferring the Chicks from the Incubator to the Brooder—The Chicks Are the Best Thermometer.

Feed and Care of Chicks—Looking After the Details is What Brings Results in Rearing Chicks.

Third Prize Article in our \$50 Prize Contest. Written by Mrs. Denton Cole, Winwood, Pa.

Having had unusual success raising chicks in brooders, I thought it might be interesting and helpful to some of the A. P. J. readers to learn how I care for them. In the first place, *have a good brooder*; it is poor "economy" to try to use a worthless "box" that is only a death-trap to chickens you have succeeded in bringing into life. Besides being expensive, they are a cruelty; it can be nothing less than cruel to hatch a chick and then, through the fault of brooding, allowing it to die. I tried one of these three seasons, and began to think "brooders were a failure." I *know* now they are—some of them! And I know now, too, a *good* brooder is as far ahead of the best of hens as can be. I often point to one of my "wooden mothers" in answer to the question if they are "any good," and say, "I would rather have one of those than the farm full of hens to care for my chicks." But I use lots of hens, too, as I often set only a few eggs at a time, and, too, so far, I have much better *hatches* by hens, and usually allow them to raise the chicks they hatch. I haven't enough brooders as yet to anywhere near raise all my chicks, so I have a chance to compare the two methods of rearing.

Be sure your brooder has top heat, and that there is plenty of light in both brooder and exercising room; also, I believe, lamp under brooder is a saving in oil, and helps to keep the floor comfortable, especially in cold weather. The chick naturally is warmed from *above*—not beneath, nor one side—and the chick naturally has chance for abundance of *fresh air*, so be sure there is plenty of ventilation, which does not mean a draft of air on the little bodies. The first brooder I had was "full of ventilators" in the form of cracks all over it. It had a large heating drum in center *extending to floor*, and no chance for the little nerves on the backs to be warmed and soothed, except under the small pipe leading from lamp to drum, and the poor little chirping, cold things would huddle under that, uttering their pitiful "cuddle me, cuddle me, cuddle me," until they finally gave up in despair, and I would say, "I don't believe brooders amount to much; I *can't* get it warm." Lamp full blaze, and in very cold weather the brooder was brought into the house in the kitchen (I have no brooder house); but I know now what was the trouble, or troubles, with it.

If outdoor brooder, see that there is no chance for cold air to blow under; the kind with raised floor, lamp underneath, and boarded to ground, I believe, is the best; also that if single wall, boards are well matched and grooved so there will be no cracks for cold to enter. There should be abundant heating drum, in the hover, over the chicks, also a roomy and light exercising and feeding room. Cover to hover, hover cloth, etc., should all be removable, and *entire* roof be hinged, to admit of easy and thorough cleaning. I remove glass in exercising room and substitute wire screening, to admit plenty of air. Of course in winter, if kept in a very cold place, this would not do for tiny chicks. I think outdoor brooders do better if slightly protected from wind the entire season, although I have had them this season entirely unprotected, and no bad results, although lamp went out once while I was away, and I was afraid chicks were badly chilled, but saw no ill effects at all. Yes, I remember, too, one rainy night in spring, I heard during the night "cries of woe" from a brooder, so I got up and investigated, and found the lamp out and the shivering little fellows were hunting in all the corners for the missing heat and calling loudly for help. I heard them before they were badly chilled, and next morning all were as lively and hungry as ever.

The brooders must, of course, be carefully and regularly attended to; lamp must be trimmed and filled *every* evening (evening is best, as a newly trimmed and filled lamp gives forth more heat and is needed more at night). The flame must be watched, and rightly controlled; little chicks *must* be kept warm, but they *mustn't* be overheated. The whole floor space must be covered with some absorbent, and chaff is best for the feeding room, to scatter all the small grains

and seeds in. I find dry warmed dirt best for hover, although chaff and sawdust answer very well. The trouble with the latter, if used with very little chicks, is that they are apt to eat it. Have used excelsior, but it soon packs. Sand is recommended by some, but I have never had it to use. Earth is nature's absorbent, cheap, and accessible to all, and little chicks seem to thrive when kept on it, especially to sleep. After each brood has been removed, and especially at end of season, the brooder should be thoroughly scrubbed with hot water, containing sufficient carbolic acid, creolin or some other disinfectant, to be efficacious, scalded and thoroughly dried. Then it is ready for next brood.

So much as to the brooder and its care. Now about the chicks themselves.

I keep the little fellows in the nursery until about 36 hours old. I open the door just a trifle and tie with string, attached to door knob and hung over a tack driven in machine. Incubator chicks, I always notice, are *very thirsty*, and when I see the first hatched hunting for drink, and "cheeping"—they show when thirsty by dipping heads down and trying to "drink" at the same time "weeping" and teasing—I warm some sweet skim milk, put in teacup (with a chink in top edge if possible to find such) invert saucer over it, and quickly turn, and set this just inside the machine, after once or twice dipping the bill of the liveliest in the fluid. He soon learns and the rest "follow suit" in a surprisingly short time. And how the little heads will bob up and down as they utter their contented little "wheat, wheat, wheat!" Did you ever notice how *very* soon a little chick learns a thing? They are anything but stupid. And of all little bright, active *independent* creatures a brooder chick is away ahead. I cannot help but admire their cunning independence. After about 36 hours old I take the chicks in a warm, lined basket, to the brooder, already fixed as I have described, and well heated. I use no thermometer, but try to have the heat about like that from which they have just come. Put them under the hover, in which I have previously sprinkled liberally fine, sharp chick grit. They immediately go to picking this up, and this constitutes their first "meal" (with the milk they have had), and about once an hour or so I put the milk in where they can each get a drink. See that it is fresh and warm, and as soon as all have drunk remove it, to keep it fresh and sweet. (Oh yes! it is trouble, and takes time! but it is results I want, and I get good "interest" on my time and trouble in this way.) I keep watch to see how the tiny babes act to know about the heat, as the chicks themselves are the safest "thermometer." If they "cheep" and huddle, I know they are cold. If they lie down and pant, or if they run frantically about, peeping loudly and lolling, or if they appear restless, I know they are too warm; if they are quiet, appear contented, lie spread out, and well scattered over floor, and sleep most of the time, I know they are *all right*. So in any case I know what to do. Little chicks, like human babes, require sleep and quiet the first few days of their lives; the quieter they are kept for 48 to 72 hours, *anyway*, the healthier and stronger will they be. If they appear hungry at about 48 hours old, and they usually do before this, I sprinkle, usually for their first feed, the coarse siftings from corn meal (that which does not pass the kitchen sieve). This is just right for them, and the healthiest chicks I ever raised are fed this twice a day, with bread crumbs—fed dry—stealcant oat meal, and the finest part of prepared chick feed, alternated twice a day. After the first week they are fed chick feed (it is understood this is one of the commercial foods of fine cracked grains, seeds, etc.) twice a day and fine cracked corn once a day for two weeks, then after that are fed three times a day, on wheat, hulled oats and cracked corn. In the winter I sow a little grass seed, oats, etc., in the window garden, and cut a little of this fine and give them once a day, using the shears for cutting. Occasionally I give a little hard boiled egg—the infertiles from incubator—but I have almost ceased using these for the newly hatched chicks. I find they do much more good fed to those two weeks old, or older; then I cook up those containing full grown chicks also, and feed to the older chicks or the breeding stock. I sometimes, too, make a johnnycake of meal, bran and middlings, with animal meal, and charcoal added—and sometimes eggs—mixed with sour or buttermilk, and use soda, same as for the house. Bake *very* thoroughly! The soft inside is crumbled and fed; the hard outer crust is ground through the food chopper; the coarser particles fed dry, the meal moistened with milk. This is only used occasionally as a relish. I have found it *does not pay to fuss making mashes, johnnycakes, etc.*, except as an occasional relish. I have raised two broods of over 40 each this season with not a single loss, cared for this way, and several others with loss slight. Granulated charcoal should be always in their reach. I prepare it myself, as we burn wood. It is run through the ever useful food chopper (I wish you could

see *all* the uses I put this article to, in my poultry raising); the pulverized is used in mash food or in preparing a "health-powder" I use. Grit must not be forgotten, and fine cracked bone and shell is also good. I sift the regular size of all of these, through two size meshes and use the finest for the tiny ones, the medium for larger chicks and coarsest for fowls. Where milk is not available, water is all right. Sometimes I use both, but I usually notice the water dish is very seldom visited, while the milk fountain is nearly always in use, and how they do drink it! And grow. I have April hatched cockerels weighing now, less than five months old, over five lbs., and not at all fat. March 30th pullets weighing $3\frac{1}{2}$ to 4 lbs. each. The use of milk among young chicks means much extra work, as dishes *must* be kept clean and sweet, but, like all young animals, they seem to thrive on it. I lost quite a number, though, through bowel trouble (all the cases of brooder chicks I had, although many with hens died of it from becoming chilled) by putting brooder directly in sun; the chicks had plenty of chance for shade, but it was too hot under hover, with lamp turned as low as possible, and they *would* go under there and overheat. I am sure this must have been the trouble, although they did not *act* as if too warm. I learned to keep the brooder itself, in hot weather, under a tree. The chicks must have both sun and shade, i. e., a chance to get either at will. Chicks should be kept under

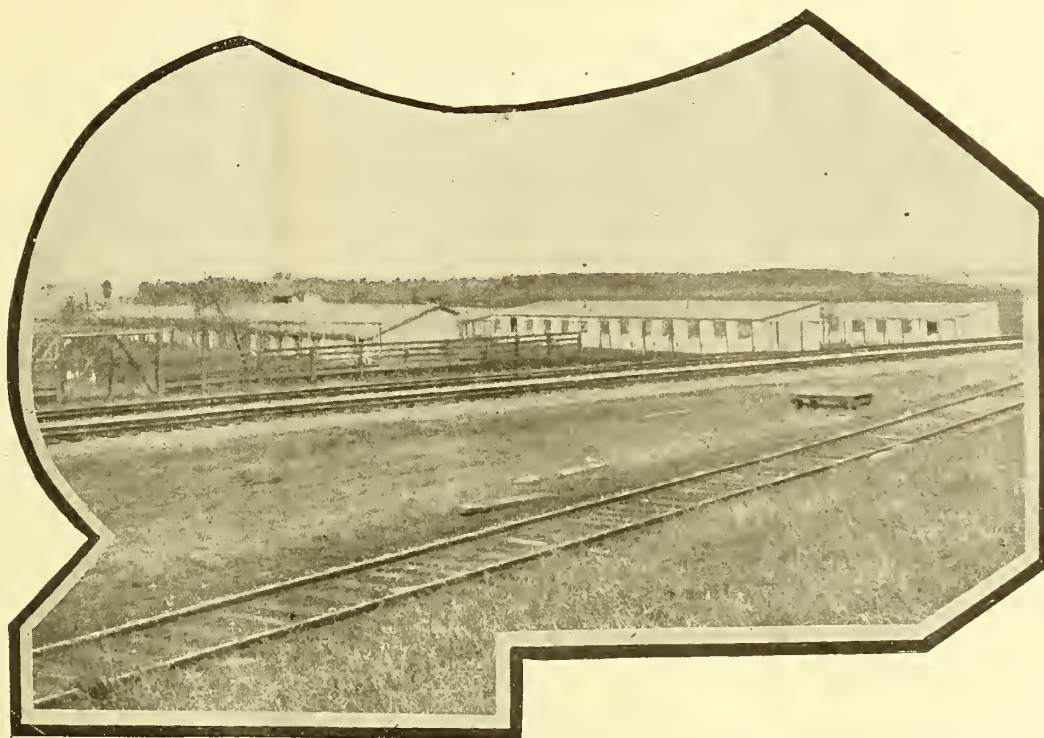

though, to the *right kind* of a brooder, one that broods, and does not kill. It has come to stay, and is a real blessing to the ambitious poultry raiser.

The late William Cook, of England, once said: "It is utility that the keeper of farm poultry has in view. His standard is, or should be, one made up of table qualities, laying powers, and constitutional hardiness. He may attach more or less weight to table qualities or laying powers, according to circumstances, but both must always be kept in view."

The *Baltimore Sun* says a safe cat among chicks is a nine times dead cat. That all depends on how you raise and treat the cats. The writer always keeps about a half dozen cats on his poultry farm, but they were all raised among the chicks, and being well fed, they have no desire to catch chicks.

If you have a man on the farm who merely works for wages, get rid of him. On the other hand, if he takes a live interest in your welfare, he is a treasure, and you should take good care of him.

A good, and at the same time cheap, disinfectant is made by dissolving in five gallons of water, three pounds of copperas, to which is added one pint of crude carbolic acid. Use a

PARTIAL VIEW OF THE EMMA B. POULTRY FARM, GURNEE, ILL.

hover first two or three days, when they may be coaxed in other room, and fed there, in the chaff, and they very soon learn to scratch and hunt for the seeds and grains. If warm weather, they can be let out in small yard and fed and watered outside, after three or four days. Be sure they learn the way back in and will not become chilled. They soon learn to pick the grass, if it is so they can be let out on it, and, after a week or so, I usually allow them free range, except early before dew is off. If grass is too high, and they are liable to get lost, they must be kept yarded until older, but they grow better to be allowed all the freedom possible.

The brooder has many advantages over the hen-mother. It is always ready to hover. It never drags the tired little fellows through the wet and cold until exhausted. It does not eat all the choice food—more than the whole brood takes. It doesn't call the little ones in a flock of older ones, after an imaginary "mouthful" to be trampled and killed, nor "take a notion" to stay out in a storm, or go in out of the wet somewhere where the little wings and legs cannot go, and leave them to drown or chill. But, neither can it dig up your garden or flower beds for delicious (?) worms, or give the warning note of alarm when enemies approach, so the caretaker must see to this part, him—or her—self. All praise

common watering pot and sprinkle the house and yard occasionally with this mixture.

It is impossible to avoid all misfortune. Setbacks come to the most experienced men. But if we carefully note each stumbling block, and will try to get at the bottom of it, the chances are we will soon master the situation.

The Poultry Herald thinks poultry raising is similar to farming, in that it is not so much the number of acres owned, but the number properly handled that gives the profits. Small, well-cared for flocks of fowls always bring the best returns.

It is unwise to breed more than two years from the same male, as there is a danger of weakening by the common degeneration which always results from inbreeding.

"Love lightens labor." This is very true in the poultry yard. Those who love fowls will give them the best of care, and the work becomes a pleasure instead of a hardship.

Well cared for, a man can make a good living with hens, says *Iowa Homestead*. There is no fortune in their keeping, but there is a good, steady occupation.

AMERICAN POULTRY JOURNAL PUB. CO.

GEO. G. BATES, Pres.
325 Dearborn St., Chicago, Ill.

GEO. G. BATES, Editor.

THOS. F. RIGG, Associate Editor.

J. W. BELL, Associate Editor.

Subscription 50 Cents a Year—5 Cents a Copy of all Newsletters. Chicago subscriptions 60 cents (when delivered by carriers). Foreign subscriptions \$1.00.

Look at the date upon your wrapper. Many subscribers write to ask when their subscription expires and many complain because we discontinue sending the JOURNAL at the expiration of the time for which it is paid. The date when your subscription expires is found on the wrapper each month.

AMERICAN POULTRY JOURNAL is the oldest poultry paper in America. It has a national and world-wide circulation. The best writers on poultry matters contribute to its columns. It receives the patronage and endorsement of the foremost representative breeders of standard poultry and manufacturers of poultry appliances in the country.

Advertising rates are sent upon request.

60,000 A. P. J.'s for January, 1906.

State of Illinois, County of Cook, ss.

Chicago, Dec. 22, 1905.

J. G. Budde, secretary and treasurer of Regan Printing House, Chicago, being duly sworn, certifies that the American Poultry Journal has contracted for printing and binding sixty thousand copies of the January, 1906, issue.

J. G. BUDDE,

Subscribed and sworn to before me this 22d day of December, 1905.

BLANCHE ELDER EDDY,
Notary Public.

GUARANTEED SUBSCRIBERS.

To our subscribers the display advertisers of the American Poultry Journal are guaranteed; that is, if any advertiser using display space in these columns is proved to be a swindler, the American Poultry Journal will make good to the subscriber the amount lost. We do not guarantee that men in good standing shall agree in their opinions; we do not guarantee nature against infertile eggs, but we do agree that in case a downright swindler succeeds in swindling a subscriber, we will reimburse that subscriber and publish the rascality of the swindler. We ask, in consideration of this guarantee, that our subscribers, when writing to an American Poultry Journal advertiser, say, in every case, "Saw your ad in the American Poultry Journal." In no case will this be to your disadvantage, while in many cases it may serve you well. In either event we shall be obliged to you.

Our Anniversary.

This is our thirty-seventh anniversary, to which we point with pride. There are very few class or trade magazines in America that can claim this honor, and no other poultry paper.

For over a third of a century the AMERICAN POULTRY JOURNAL has devoted its best efforts to the upbuilding of the poultry business throughout the country, and has probably done more to place the poultry business on the high plane which it occupies today than any other one thing that could be mentioned. It has always been the object of its publishers to give its readers the best and latest information obtainable, and to that end have always engaged the best writers and artists on poultry, and matters pertaining to the poultry industry. It has always been our endeavor to make each succeeding volume better than its

predecessor, and following along this line we have made plans for this year that enable us to say at this time that the AMERICAN POULTRY JOURNAL for 1906 will be far ahead of anything ever attempted by a poultry magazine.

To begin with, our subscription list increased so rapidly during the past year that we were compelled to increase our guarantee to 50,000 copies per month. This is cited to show the rapid increase that is taking place in the poultry business. Never before have our facilities been so great or our opportunities so numerous to give to the poultry public the best and most up-to-date magazine that it has ever been our pleasure to publish. We point with pride to the past twelve issues of AMERICAN POULTRY JOURNAL as containing more practical knowledge for the poultryman than has ever been given in the same period of time by any poultry publication, and we offer this evidence as a reasonable assumption that our promises for the coming year can and will be kept. Each number of AMERICAN POULTRY JOURNAL for the coming year will be full of timely articles and suggestions applicable to the months in which they are published, and each number for 1906 will be actually and unquestionably worth more than the price of a year's subscription. It will be valuable for the reason that each member will give information which will aid the reader in getting more profit out of his fowls; will teach him how to mate his birds for better results; how to run his incubator in a more satisfactory manner; how to advertise his stock to the best advantage; how to prepare his birds for the show room, and much other valuable information that otherwise he would be compelled to learn by expensive experience. A number of regular departments will appear each month in which special work will be explained and made clear by the most prominent and successful poultry men in America. The general reading matter will be of the same high quality, thoroughly up-to-date and reliable at all times. No untried theories will be given as facts, nor will any misleading advice or teachings be allowed to appear in its columns. In short, we wish to impress upon present or prospective subscribers the fact that what is found in the reading columns of AMERICAN POULTRY JOURNAL can be depended upon to be absolutely the most reliable, the latest and most complete knowledge in the poultry world, and it can be accepted and followed with the positive assurance that it will bring the greatest measure of success. The illustrations used in these columns are made by the best artists in the country, thus giving tone to the general appearance of the paper. The same liberal policy toward poultry associations and specialty clubs will be pursued in the future as in the past. Our advertising columns will be given the usual careful attention to see that none but thoroughly reliable and honest advertisers are admitted. It has always been our aim to make the AMERICAN POULTRY JOURNAL so valuable to poultry breeders that they could not afford to do business without it, and our list of 50,000 readers is evidence of how well we have succeeded.

The breeders of Columbian Wyandottes have made application for admission to the standard at the Cincinnati meeting. This application was made in regular form, but through oversight was left out of the list published last month.

American Poultry Association.

The founders of the American Poultry Association were earnest and wise men. To them it was a self-evident fact that an interest entering directly into the economy of every household in the land was worthy of organization. To these men and fanciers it was very plain that the betterment of the poultry of the nation could be advanced more surely and effectually by the organization of fanciers and breeders and by the formulation of a standard of perfection. It was their idea, too, that there should be laws enacted by a governing power defining the rights and privileges of the poultry show management and of the breeders and fanciers patronizing these shows as exhibitors. Hence the organization of the American Poultry Association. Great as was the poultry industry then it was small indeed in comparison to what it is to-day. At that time shows were few, comparatively. It was for the future that the organizers of the American Poultry Association banded. From the very day of the organization of the American Poultry Association the standard-bred poultry interest has grown until to-day it represents, in dollars and cents and the number of people connected therewith, one of the greatest interests in America.

Is it not, therefore, incumbent upon the fanciers and breeders of America to keep the American Poultry Association upon the high plane where our fathers placed it? "Faith of our fathers!" Let us uphold this. It is simply good business policy that every breeder of standard-bred poultry ally himself with the American Poultry Association, and that he should strive to the best of his ability, and to the full extent of his power, to influence the legislation enacted by the Association to the purpose that such legislation shall be at all times helpful to the fancier and to the best interest of all engaged in the business. It is, too, the duty of every fancier so to do because every fancier is benefited and his business influenced and protected by the American Poultry Association.

The time has arrived when the solid, thinking, responsible forces within the American Poultry Association must unite and place the affairs of the Association in proper shape. The truth of this assertion is so apparent and the need of such action so necessary that it is receiving the thoughtful consideration of the forces which must eventually control the Association. The good standing, the welfare, the very life of the Association is at stake. Will the better element within the Association meet the condition and act wisely? We think they will.

The fanciers and breeders throughout the nation are very loyal to the American Poultry Association. There is not a show held in America, in hamlet or city, the management of which, and patronizing fanciers, do not accept without question the law and the regulations formulated by the Association. Each and every poultry judge recognizes as his authority the standard given by the Association. The poultry journals, one and all, hold that the law as enacted by the Association shall govern fanciers in matters regarding many forms of the trade, and that advertisers shall come up to the high standing a worthy member of the association is supposed to adhere to

in all his dealing with customers. In a word, all the forces employed in the standard-bred poultry business acknowledge the power of the American Poultry Association, accept its laws, and recognize the standard it has put forth. This being a fact, ought not the American Poultry Association be the embodiment of wisdom, and should it not as a legislative body be governed entirely by the forces which are very close to the great body of fanciers and breeders—the forces which feel the heart-beats, know the wants and needs of the fanciers and breeders as a whole? This is the condition which should exist. It is the condition that will exist only when the mass of fanciers and breeders realize that from a business and moral standpoint it is their duty to take a hand in the affairs of the Association; that unless they so act the Association which has done so much for them, and for which they have done so little, in the natural course of events will cease to be a power for good and must pass out of existence. The responsibility rests solely upon the fanciers and breeders.

American Poultry Journal for February, 1906.

The February issue of AMERICAN POULTRY JOURNAL will be devoted to a large extent to the Barred Plymouth Rocks and the American Barred Plymouth Rock Club. For this issue we have had designed one of the handsomest covers ever put on a poultry magazine, and will be printed on heavy enameled paper, made especially for this number. We have made arrangements with the foremost breeders of Barred Plymouth Rocks for articles on this variety, and it will certainly be a great treat to our readers to learn just how the different breeders produce the prize winners. There will also be many ideal illustrations of this grand variety.

This edition will also contain as complete a list of Barred Plymouth Rock breeders of the United States and Canada as it will be possible for us to secure. There will also be a complete list of the officers and members of the American Plymouth Rock Club and other matters pertaining to the interests of that organization.

This number of AMERICAN POULTRY JOURNAL will surpass anything ever at-

tempted by any poultry magazine. A mass of most helpful and interesting reading matter will be placed before our readers and no one who is at all interested in Standard bred fowls can afford to miss reading this number. This number of the JOURNAL will not only be larger and better than any previous number, but the edition will consist of several thousand extra copies, and will therefore be of added benefit to our advertisers. Many new ads will begin at this time and there are already many requests from present advertisers for an increase of space. All who desire to use extra space in this special edition should get copy of ads to us as early as possible and thus give us the necessary time to give the proper care and attention to every detail.

Re Clubs.

In the English poultry fancy, if we are posted correctly, there have been breeds and varieties coming and going. Here the Barred Plymouth Rock cannot or has not been displaced, but England's fancy has had her Orpingtons, her Cochins, her Langshans and today has her Partridge Wyandottes. This variety of our early maturing breed is deservedly popular over there. The secretary of the Partridge Wyandotte Club over the pond has been busy the past summer getting out the big club catalog. He has been hustling to increase the membership also, and now claims the biggest list of any specialty club in England. Speaking of secretaries reminds us that a few clubs on this side need enlivening and their secretaries need burying. What's the use of allowing them to take up precious room just to save their general expenses? There are live men in any of the ranks who will serve acceptably and well if placed in office. Years ago the White Plymouth Rocks took a new lease on popular favor because the right men were placed in important offices. The Plymouth Rock Club owes its strength to the work of its chief officer and not to the members of Barred Rock breeders. And the same may be said of the White Wyandotte Club. The Langshans, Cochins, Brahmas, Leghorns and others need champions who can go out and lead, not being led. These breeds are worthy of any kind of a boom the club's efforts may bestow upon them. This winter

Death to Lice

When an article like Lambert's Death to Lice Powder can meet the demands and successfully withstand the tests of over twenty-one years' use, under any and all conditions, and at the same time grow more popular with the buying public year after year, it is mighty good evidence that it possesses that subtle quality, that winning element which makes either men or material stand just enough higher above the rest to be considered the

STANDARD OF ALL.

Lambert's

Death to Lice

would not be the standard remedy it is if it did not do the work better, quicker, safer and surer than anything else. It has earned its reputation for ridding hens, horses, hogs, sheep, cattle, dogs, henneries, etc., from the ravages of body lice by quick, thorough, effective work. It's user has the assurance of success—there's no chance for risk. Why waste time and money on cheap, ineffective, unknown powders?

Why allow your sitting hens to be ruffled, feverish and discontented when "Death to Lice" will keep them cool, quiet and satisfied? The best is always the cheapest—that's Lambert's. A sample 10 cent box will tell. 100 oz. by express \$1.00. It has proved the turning point to profit for hundreds of poultry raisers. Why not for you? Lambert's Death to Lice Ointment for head lice on small chickens is equally effective. Sample 10c post paid.

O. K. STOCK FOOD CO.
D. J. Lambert, V. Pres.
408 Monon Bldg., Chicago

"AMERICA'S BIG FOUR"

"RANKIN'S ROYAL STRAIN" of Barred, White and Buff Plymouth Rocks and White Wyandottes are bred to win and bred to pay; bred for quality in every way. 1700 choice, selected specimens that are line and pedigree bred by the trap-nest system from America's Greatest Sires and Champions. Catalogue, pronounced the nearest, most complete and business-like ever gotten up, sent free, together with most beautifully illustrated 1906 mating list, if you mention A. P. J.

H. P. RANKIN, B. 61, Hartington, Neb.

should see a number of clubs liven up. The times and condition of the fancy are such that goodly efforts of members and officers will be rewarded. If you belong to a club, get busy in the cause.

Show Management.

The importance of proper show management is now being considered very seriously by managers and exhibitors. We will not here attempt an essay upon this very important subject, but will cite a case to the point: The Christian County Poultry Association held its annual show at Taylorsville, Ill., last month. The system of uniform cooping was adopted and strictly adhered to, the exhibition presenting a very attractive appearance. A superintendent was employed who was thoroughly versed in the "art." The secretary (James Hunter) had his books in splendid shape and could be found in his office at any time and all the time. All birds were weighed and all coops tagged the evening before the judge arrived. The judge was able to go to work promptly and had no occasion to stop for the purpose of "looking up matters." All prize cards were put on coops as soon as awards were made. Each and every officer did his duty and only his duty. Each evening a musical or literary program was rendered by the best home talent. All prizes were promptly paid. The hall was kept perfectly clean. The town people and the farmers crowded the big hall every day and evening. The show was a financial success. Here is a whole sermon in a few words on how to manage a poultry show.

Change in Advertising Rates.

We announce a change in advertising rates in AMERICAN POULTRY JOURNAL, to take effect February 1, 1906. The present rates are based on a guaranteed average monthly circulation of 40,000 copies, but owing to the rapid increase in our subscription list were compelled to increase our average guarantee to 50,000 copies per month, and will therefore increase our rates to correspond to this large increase in circulation. All renewal contracts or all new business received prior to February 1, 1906, will be taken at the present rate. Advertisers should take advantage of this at once and reap the benefit of the increased circulation.

Good Business.

The Ontario Agricultural College, at Guelph, is now offering a special short course in practical poultry keeping free of charge to students. W. R. Graham is manager of the college's poultry department, and he should be flooded with students. Then the college or department should make the course so very interesting that students would stay and study longer. Whet their appetites, Mr. Graham, to a fine edge! The course will commence January 8 and last four weeks. There are a dozen colleges of agricultural learning that could profitably give just such a course as this and the wonder of it all is that the poultrymen in the various states where big schools of this class are being supported do not call the attention of the directors to the need. What the agricultural schools in this country need is a thorough shaking up concerning poultry keeping. In-

structors can be obtained at reasonable cost and the great American hen is worthy of more poultry knowledge being given out. If we had a few more good poultry schools there would be a much smaller number of incompetent "poultry managers." Practical poultry keeping is the true basis of all the industry and none of us may learn too much about it. Fanciers, why not use some of our energy to let the colleges know how we feel about it? It will pay.

Kansas Again at the Fore.

"Bleeding" Kansas again asserts its superiority and displays its energy and constant seeking for agricultural and live stock learning by starting out the foremost poultry train of the day. Poultry growing, egg producing, housing and other topics of much timely interest will be the main theme, though a talker on dairying will also give short lectures on the benefits and profits of the improved type of dairy cows.

Professor Erf, of the Kansas Agricultural College, will be the man at the head of this unique educational scheme. The Missouri Pacific is the enterprising road behind it. This Poultry and Dairy Train will start at Lenora, in Norton county, and run to Atchison, taking in all the branch lines leading to the main route. Professors Erf and Miller of the college will talk dairying and poultry, but the heavy lecturer will be our own Theodore Sternberg, late paymaster in the U. S. Army of the Philippines, but now back in the ranks of the fancy and practical poultry workers. He will also explain the practical and fancy points of fowls, including scoring. Nothing will keep Kansas or Kansans down! They are both bound to keep at the fore. Now she has set a mighty good example and other schools and states would do well to follow. Kansas bids fair to become the biggest poultry school in connection with any state agricultural college. Let the good work come!

It Is Growing.

England's utility poultry club holds an annual show where eggs from the various breeds, table fowls classified as to breed and age, poultry appliances such as trap nests, movable and colony houses, drinking fountains, incubators, brooders, egg boxes, crammers, feeders, etc., are on exhibition and prizes awarded. The idea has been taken up here, but without a great amount of energy behind it. And, of course, our displays result in that degree of efficiency. Utility poultry will gradually come into its own, and laying contests are the shortest routes to notoriety. Kansas now plans to hold a contest of fifty or more pens of layers, and breeders should be anxious to enter their best birds. We need more interest and instruction given to utility poultry keeping. And it is growing.

Part of It.

The final test of a fancier lies in his department in the exhibition room. If he is beaten fairly he should "take his medicine," and this without wincing; if he be a big winner he should win modestly. Once we knew a man who won heavily and lost, too. One could find him on his chair near his line of birds talking business and "knitting." He never was off duty. One knew where to

find him and was sure of the same courtesy. Only twice in this breeder's career did he enter protests and then he was right! Too many want to look at things in such a topsy-turvy way. Our fancier we have mentioned built up a business by tending to his own—by working for himself honestly. He did not try to build up his own by tearing others' down. As one judge remarked when asked how an exhibitor should conduct himself, let the showman spat on his hands and keep within his shell. Let the fancier remember that he, too, is on exhibition at the shows and that his deportment determines his reputation among the breeders as "a prince" or grumbler.

A Rock Island Poultry Special.

We had hardly finished our item concerning the Missouri Pacific's poultry train when the news came to hand that the Rock Island was going to run a poultry and dairy special through Nebraska and Kansas to test the worth of it. Prominent western breeders and workers in poultry culture, besides a specialist from the Cornell Poultry School, are to work on the train. Rev. L. P. Ludden, secretary of the Nebraska State Poultry Association, will also work on the train. If the scheme fares well the intention is to carry the work elsewhere on Rock Island lines. Potato specials, seed corn specials, dairy specials, good roads specials—these and others have helped the cause of agriculture mightily, and we all welcome the special that has a lecturer or two on it who can talk poultry intelligently. While mentioning poultry education we might say that the Cornell College of Agriculture's school of poultry husbandry is educating a few men for use in farmers' institute work over the United States. These educators will be employed by the department of agriculture's bureau of animal industry and work where the department sends them. Truly, the cause of good poultry is alive and growing wondrously.

The sales at England's last Crystal Palace show amounted to over \$2,000, with a top price of \$275.00 for Miss Sturts' Black Rose Comb Bantam cockerel. This excels any price for a bantam, we think. The show association gets a percentage of all sales, which makes a good little sum. Just whether or no a bantam or any bird is worth \$275.00 depends on the buyer's need and ability to use the bird after purchase and whether he can afford it. We would like to see a photo of this cockerel.

* * *

From down East comes the news that H. P. Schwab and D. J. Lambert will judge the Barred Rocks at Madison Square Garden. To those who are in the habit of following the awards made by P. H. Scudder this change will seem new indeed. Mr. Purdue will judge Brahmas and Mr. Kirschler the Polish.

* * *

I. K. Felch was selected to judge the Owen Sound, Canada, show, but he took sick quite recently at Brattleboro, Vt., and was for some time in the hospital at Natick. We have not heard how he has progressed, but hope it is satisfactory.

* * *

W. C. Denny will judge the Buff Plymouth Rocks at the Chicago show, Jan. 22-27, 1906, and the Buff Rock Club will meet at Chicago during that time.

CRITICS AND CRITICISMS

What the Leaders are Doing.

A writer in a well-known agricultural newspaper says the Silver Penciled Wyandottes have won the international egg-laying contest two years in succession! This is news to us and shows the ignorance of some agricultural editors. The latter should put competent poultry writers in charge of their poultry departments if they expect to get the facts of the case. This statement is really unfair to the Silver Laced Wyandottes and should be corrected.

The adjourned meeting of the A. P. A. should be dispensed with, as it costs more than it is worth. The expenses of the secretary and president in attending the meeting are heavy and the work to be done is not of a nature that could not be postponed till the annual meeting. Some of these meetings are farces and instances can be given to prove it. If all the adjourned meetings are good for is increasing the list of members, why not dispense with it?

Not long since the Country Gentleman states that a certain new poultry farm expects 7,000 dozens of eggs from 500 hens, or 170 eggs per year per hen. The owner whose manager has put these figures into his head courts failure from the start, as he knows nothing of poultry culture who would make such wild declarations. The manager who tells an owner at the start that 500 hens will lay 170 eggs per year per hen will soon disgust the owner and cause his own removal. The two-hundred-egg hen does not come in bunches or flocks of 500—nor do big flocks attain 170 eggs per year.

"We call the attention of our readers to the proposed changes in the constitution of the American Poultry Association in another portion of this paper. Every poultryman throughout the country, and every member of the association should carefully study these proposed changes and be prepared at the next meeting of the association to cast his vote in a manner that will declare the future policy of the association. It is possible for the association to take up a line of procedure that will increase its influence in all matters pertaining to poultry, and it is quite as easy for them to so hamper the association with unnecessary obstacles as to make it of less value and of considerable less benefit along the lines for the very purpose for which it was conceived and has been kept alive. As the association stands to-day it is simply a vendor of standards, a collector of fees for membership, and an inconsiderate spender of public funds to an enormous amount without a return of value received to those that support it. Its own members and members of the revision committee as well as making use of the illustrations and descriptions for filling the columns of their journals, all of which shows a disregard for the claimed rights of the association, and a willingness to use for private purposes that which either does or does not belong to the association under its copyright."

We thoroughly agree with the sentiment in the forepart of Editor Howard's remarks. Members of the A. P. A. should study the changes proposed and

be ready to vote at the next meeting at Cincinnati. While we also agree that the A. P. A. should do something to increase its influence, we think Brother Howard should point the way in a pertinent suggestion rather than by criticism.

The editor of the Reliable Poultry Journal laments the fact that some of the American breeders of the worthy Black Langshan incline too strongly towards the extreme type of bird well up on its legs. In the East and in the West at the medium to small exhibitions the Langshans exhibited are generally too low, too Cochiny, too short-legged and black. They are not built on the broad and generous lines laid down in our new Standard nor do many of them approach the type we accepted as correct under the old one. Extremists have their place and uses in the evolution of poultry breeding the same as in other vocations—they are of course only overdoing their work and eventually return to the ideal type which the most of us accept. They help to point the way. They put out birds that tone up the flocks of no medium Langshan type. True, we do not desire the so-called "English type" of stilty Langshan, but we want one well up on its legs and big of bone. Editor Curtis selects a photo of the pure Croad strain Langshan hen to illustrate his point of the real type, but he has to give too much explanation of the photo's defects to bolster up the point he tries to make. In Miss A. C. Croad's "History and Characteristics of the Langshan Fowl" her description about fit our present day American ideals, but her photos of males used in her work are not as symmetrical as dozens of our untouched photographs. The Langshan is worthy of more discussion and a wider breeding.

From the present condition of the atmosphere it seems that the proposed changes in the A. P. A.'s constitution and by-laws will be well dissected before voted upon at Cincinnati in regular meeting. The one change that provokes considerable mirth in journalistic circles is that the A. P. A. publish a monthly or weekly official organ. The party who suggests the many changes and ideas is well protected by Secretary Orr from the ridicule of the press, as our secretary refuses to give his name or state of residence. It looks as if the one who suggested the official organ thought that the A. P. A. had more ready cash than it knew what to do with! A complete list of the proposed ideas was published in December issue of this paper. And we suggest that fanciers who like fun in its unintended meaning get next.

Uncle I. K. Felch says that less kicking will be indulged in when big shows are judged by score-card only and cites Boston as a recent instance. He incidentally remarks that fewer disqualified birds will win when the score-card is applied in comparison shows. Uncle Ike stands for the score-card first, last and always—and whenever he can shows up the weakness of the comparison system. He declares that "when judges inform themselves so that they can tell whether a Brahma hen has had her saddle pulled to show her second set of tail coverts, and

cease to give such faked birds the preference, then may we look for better judging in our comparison shows."

Again comes Editor Schureman of *Commercial Poultry*, knocking to be heard. We hear him! He says that unless a man is extraordinarily honest, the plucking of off-colored feathers gives him no twinge of the heart strings. He stands up for no color disqualifications on the ground that in some breeds these are characteristic. If a cut is given off-colored feathers they will be plucked just the same. It is impossible to tell whether one or a dozen or two dozen feathers have been pulled; and it can never be stopped. We cannot agree with him that disqualifying tends to trickery more than a severe cut for the same defect. Even if the Standard said that no off-colored feathers would disqualify, yet made a ruling that other things being equal the specimen showing least off-color should be favored, would not help the trick of plucking at all! And this would be as little as any Standard could say on the subject. We agree with Mr. Schureman that forbidding a practice so universal as plucking is foolish and a waste of printer's ink. Plucking is a thing we will have to endure along with the good we find in the fancy.

Editor McClaskey, of the *Poultry Gazette*, takes a whack at the fakirs in his last November issue, but he does not come out and name the guilty parties. One assumes that he knows these after reading his story of a fakir, and if he does he should be good enough at least to give the names to the Poultry Press Association or his readers.

Down through the South some impassioned appeals for the formation of a Southern Poultry Association are being made. Chief among the promoters is Editor Sledd, of *The Industrious Hen*, who declares that such an association is needed. The grounds on which the new association are to be formed have not been made public—at least we have never seen them definitely stated. The promoters should remember that successful attempts at the formation of organizations of this kind are started best by a full statement of the objects. A platform is needed, as it were. The promoters should remember that the League of Pacific Poultry Associations, which for a year or more was agitated, fell flat when the time arrived for organization and our Southern friends may profit by the lessons it made plain. Since last January never a peep nor cackle has been heard from the New England Club of Poultry Associations, and it is very doubtful if the initial footprints of it still remain. We do not say that the South should use none but Northern judges or buy none but Northern birds; they should cultivate the talent they have at home and make use of it. The South is growing in the fancy. Her breeders and journals and judges prove this, for we see the forging to the fore everywhere. Now, Mr. Sledd, tell us why you need the association. Give us an idea of the platform it will be formed on; then we may discuss it the more intelligently.

SPECTATOR.

WOMAN'S HOME DEPARTMENT.

Mabel Bates, Editor.

With the first issue of the new year, the American Poultry Journal starts this new department for women. This department will not be confined to poultry items entirely, but to all matters pertaining to household economics. We want every woman who reads American Poultry Journal to consider herself a member of this department. If you have a bit of practical knowledge in household matters, an item of experience in raising poultry that will be helpful to others; a favorite recipe, etc., send it along. This is your department, just as far as you are willing to make it.

All communications should be addressed to the Home Department of American Poultry Journal Publishing Company, 325 Dearborn Street, Chicago, Ill.

"OUR WOMEN'S HOME DEPARTMENT."

There are thousands of women readers of THE AMERICAN POULTRY JOURNAL and many women are advertisers and actively interested in the business of raising poultry.

For a long time we have planned a special corner in the A. P. J. for their own, and commencing with this issue we start the "Woman's Home Department," to be edited by Mabel Bates, of Traverse City, Mich. We feel that this department could not be placed in better or more able hands, which her long training in the newspaper field and in similar work as this especially fits her for. She is an ex-president of the Michigan Women's Press Association, of which her mother was founder, some eighteen years ago. She is president of the "Sunshine

Club" for little children, which now numbers over 4,000 members. We soon hope to publish in this department a portrait of her in order that our readers may have a better opportunity to become acquainted.

We earnestly invite women to contribute to this department from time to time not only items of poultry experience, but matters relative to the home and home life, and we want this department so interesting and so closely allied with home interests that we can make it of real value to every woman who reads the department. Such a department as this can be made more successful by the co-operation of our readers, and in that way they can feel that they have a proprietary interest in it.

We want to include in it matters of real benefit to the home life as well as those things in the poultry line in which

the women are interested, and in order to furnish for this department all we have in mind we will make our first offer of a cash prize for the best article written for it by women fanciers.

The first prize to be offered will be a \$10.00 cash prize for the best article on the rearing and feeding of chicks hatched in an incubator, submitted to us before the 20th of January, 1906. We choose this subject because we believe that women, as a rule, are more successful in rearing chicks than men, and we desire them to tell our readers just how they do it. The competition for this prize is open to every woman subscriber of this paper. The articles will be limited to 3,000 words, but each contributor is at liberty to submit more than one article if they choose to do so. Each article must be accompanied by a letter stating that the article is intended for the prize contest in the Women's Home Department, otherwise it will not be entered for competition. We reserve the right to retain all articles sent in and to publish same if so desired, giving the credit to the writer of same. No manuscript will be returned.

As the subject we have chosen is a very interesting and timely one, we trust that full justice will be done it.

OLD-FASHIONED RECIPES.

A farmer's wife, writing for the *Pictorial Review*, gives the following delicious recipes for preparing the common dishes which the "guid mon" relishes far more than those which he contemptuously classes under the head of "fancy fixin's":

Corn Meal Dodgers—If properly made

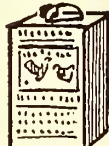

LEE

EGG MAKER

GERMOZONE

LICE KILLER

LEADERS

Lee's Egg Maker

will furnish hens the **incentive** and the **power** to lay more eggs than they would lay under ordinary circumstances. Proper feeding always has and always will produce results, but no poultryman is feeding properly unless he **adds** to the poultry ration the elements that produce the greatest returns in the egg basket. **Lee's Egg Maker** is what the hen would search around and get if she could have access to all manner of food, and is **absolutely guaranteed** to produce more eggs than you could possibly get by ordinary feeding, besides keeping the flock in better condition. A 25c package will prove it. Other sizes 50c, \$2.00 and \$7.00.

Lee's Germozone

The loss of one hen by Roup, Canker, Swelled Head, Cold, Cholera, or Bowel Complaint would be greater than the cost of enough Germozone to keep a good sized flock of hens healthy for two months. Germozone is handy to use and certain in its effect. A little added to the drinking water twice a week is generally all that is necessary. It destroys disease germs, prevents contagion, keeps bowels in good condition. Price 50 cts.

Lee's Lice Killer

The kind to use to rid your poultry and poultry-house of **all** vermin. The liquid preparation that kills both by vapor and contact—goes into the fluff and feathers, into every crack and crevice of the poultry-house and destroys vermin of every description. No dusting, dipping, or greasing. Easy to use—thorough in results.

Price: quart, 35c; half-gallon, 60c; gallon \$1.00.

Geo. H. Lee Co., Omaha, Neb.

these will be wholesome and greatly relished, especially by dyspeptics. Sift one pint of white Southern meal into a bowl and in the center add a rounding tablespoonful of shortening and a pinch of salt. Pour very nearly a cupful of boiling water over the meal to moisten it, and set it aside, covered, for half an hour. Then whip up one egg, white and yolk together, and add two tablespoonfuls of milk. Stir this into the meal, and drop by spoonfuls into a hot greased pan for baking. They resemble meringues when baked, and require a moderate oven. Excellent for breakfast.

Sausage—Let me advise you to have your own sausage grinder and make your own sausage meat, for you are then sure that it will be appetizing, and that the children will thrive upon it. These proportions will be found right: To one pound of lean pork add one saltspoonful of pepper and one teaspoonful each of salt and sage. Mix thoroughly, and when ready to use form into flat cakes like Hamburg steak, and fry in an iron pan. They should be thoroughly done.

Buckwheat Cakes—Be particular to secure the best buckwheat, as much of it is adulterated with corn meal. Pour one quart of cold water into a stone jar or deep crock. Add one teaspoonful of salt and three and three-fourths cups of buckwheat and rub smooth. Add one-half of a yeast cake (compressed) dissolved in a little warm water. Cover and leave in a warm place over night, and the next morning add one-half of a teaspoonful of soda dissolved in boiling water. Mix thoroughly, add two tablespoonfuls of molasses and bake on a soap-stone griddle. If properly made they will be light and delicious. Do not serve them without the accompaniment of maple syrup.

Corned Beef Hash—Select good pieces of the lean beef and free them from gristle. Add to this the same quantity of cold chopped potatoes. Put a lump of butter the size of an egg into the saucepan, add a little boiling water, and when it begins to bubble put in the meat and potatoes with plenty of pepper, but very little salt. Stir occasionally, but do not mash the potatoes. Now, let it stand for a few moments until a crust forms at the bottom. Make it into a loaf shape, loosen it from the bottom with a cake-turner. Place your platter over it, and turn both quickly together. Then serve. A little onion may be grated into the hash, or minced parsley, if liked.

Chicken Stew with Dumplings—If you have an old fowl it will require two hours or more for boiling; a young one, one hour; so time yourself accordingly. Cut up the chicken and set on to boil in cold water. Put one carrot, one-half of a turnip and one onion into a frying pan with one tablespoonful of butter and fry brown. Add a little water, cover and stew until tender, then mash through a colander into the saucepan containing the chicken. A few minutes before serving boil up and drop in the dumplings, made of one pint of sifted flour, one-fourth of a teaspoonful of salt, one heaping teaspoonful of baking powder, and milk enough for a soft dough. Cover, and boil briskly for a few minutes. Remove the dumplings before dishing out the chicken, and serve them on the same platter.

In cooking for economy's sake as well as for the production of wholesome and palatable food, eggs stand pre-eminent.

Pound for pound they are far cheaper and more nutritious than meat, and with eggs in the basket the good housewife need never fear a scanty repast, even should unexpected guests sit at the family board.

BOILED EGGS.

A boiled egg is most digestible when the yolk is thoroughly cooked, though soft, and the white of a custard-like consistency. There are two ways of doing this; in one the eggs are put on in cold water and allowed to come to a boil; in the other they are covered with boiling water and the dish containing them set on the back of the stove, where the temperature will be maintained at that point for ten minutes. If the eggs are preferred cooked in the usual manner, put them in water that is boiling and let them boil without stopping for three minutes if a soft egg is required, four minutes for a medium state of softness and ten minutes if desired hard. A difficulty to be overcome when many eggs are to be cooked at once is that the cold eggs will stop the boiling of the water, and it is impossible to tell when the precise state of "doneness" is reached. To obviate this, cover the eggs with warm, not hot, water and let them stand for two minutes, then remove to the boiling water. They should be lowered into the water with a tablespoon to prevent their cracking. A pinhole through the shell will also prevent it.

CREAMED EGGS.

Hard boil a half dozen eggs, and remove the shells. Make a white sauce as follows: Melt a piece of butter the size of a large egg in a saucepan and stir in two tablespoonfuls of dry flour, letting it cook till it bubbles all over; add two cups of hot milk, stirring it till it is thick and smooth. Cut the eggs in half and arrange on a warm platter; pour the sauce over and serve.

This dish is one of the stock ones used in the family of the writer instead of meat, and it is especially serviceable for dinner on a hot summer day.

FRENCH TOAST.

Dip stale or fresh slices of bread into two eggs, which have been well beaten, and fry in lard or butter to a golden brown. To be a little more economical you may use half milk instead of two eggs. This toast may also be used as a plain dessert, the slices being sprinkled with sugar. Children enjoy it served in this way.

AROUND THE HOUSE.

Silver that is not in constant use will keep bright if wrapped in fine white tissue paper.

A cloth saturated with coal oil will clean a sink, bathtub or basin which has become greasy and discolored from use.

If a spoonful of borax is put into the last water in which white clothes are rinsed, it will whiten them very much. The borax should be dissolved in a little hot water before it is added to the rinsing water.

Residents of country towns and villages whose fire-fighting facilities are limited may, with but little trouble, make an extinguisher that will put out any chance blaze if used at once. All the housewife needs to do is to put three pounds of salt into a gallon of water, and to this add one and one-half pounds of sal ammoniac. This liquid should be bottled, and in case of fire the contents of the bottle should be poured upon it.

If a tablespoonful of vinegar is put into the lard in which doughnuts are fried it will prevent them from absorbing too much fat. One or two teaspoonfuls put into a kettle containing boiling beef or chicken will hasten it in becoming tender. A little vinegar put into stove blacking will make it stick better and prevent dust from flying while polishing.

The state of the irons has much to do with the success of the ironing. When the irons show a tendency toward rusting or black specks, it is time that they are washed in soap suds. Dry them carefully after this washing. Sandpaper is a good thing to have at hand when irons become sticky with starch. Rubbing an iron once or twice across the sandpaper will render it smooth again. If the sandpaper is lacking, dry salt on a piece of paper will answer the same purpose. Flatirons should not be left where the steam of cooking can reach them, as that causes them to rust. Always set the irons away on end rather than flat on the shelf. Those which have once been allowed to grow red hot never retain the heat so well afterward.

Frozen meat will keep any length of time. It undergoes a change, however, and is of the quality of second-rate meat after long staying in cold storage.

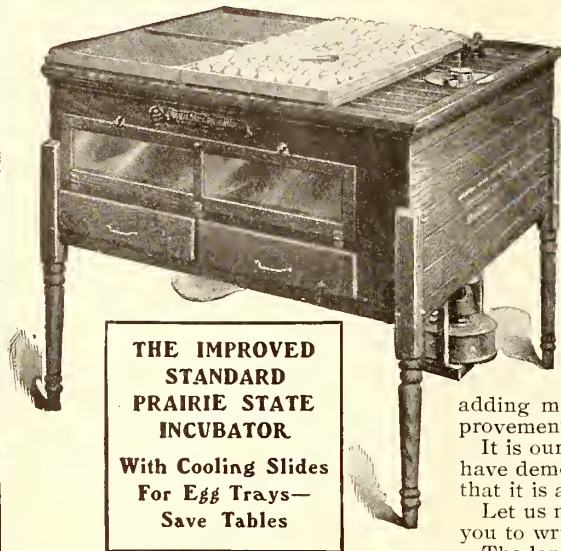

To-Day!

SEND A POSTAL OR LETTER and ask for AMERICAN POULTRY JOURNAL'S 1906 subscription offer.

Never have we offered so much before. For six subscriptions you are allowed over one-third commission, and are given a set of four beautiful colored pictures. These same subscriptions also count in a chance toward winning the \$600.00 Piano; \$100 cash; \$50 worth of Fowls; Incubators; Brooders; Eggs, etc., there being over fifty of these grand prizes. One of our subscribers says, "I do not see how you can afford to do it." But we want subscriptions and lots of them; that is why we are making such liberal offers. Our space is too small here to explain all we give to every one who helps us. We hope every reader, who reads this, will send for the Offer at once. It will be a happy new year for both of us.

Some More New Improvements to Help Poultrymen

THE IMPROVED STANDARD PRAIRIE STATE INCUBATOR
With Cooling Slides For Egg Trays—Save Tables

HOW to hatch the largest percentage of fertile eggs and at the same time produce strong, healthy, vigorous chicks that shall live and grow into profit—that's the problem the incubator maker must solve.

An authority recently remarked that the last six months had seen more new improvements in the poultry world than as many years had seen before. And he might have added with equal truth that the Prairie State people were responsible for most of them.

How well we have succeeded in solving our problem is plainly shown by the table of hatches published below.

Remember we have been showing a new improvement every month for several months back—and we're not through yet—there are more to follow. Our latest, and we think, our greatest, however, is the IMPROVED STANDARD PRAIRIE STATE INCUBATOR with its 10 IMPORTANT NEW FEATURES, every one a vital improvement, adding much of efficiency and convenience to an already good machine—improvements that are attracting the attention of poultry raisers all over the world.

It is our policy, as you know, never to announce a new feature until we have demonstrated BEYOND DOUBT by experiment in numerous actual tests that it is a REAL IMPROVEMENT and not merely a change of model.

Let us mention but three of these 10 DISTINCTIVE FEATURES here and ask you to write for the other 7.

The large size machine is provided with cooling slides on top—as shown in illustration—for holding the egg trays while cooling the eggs, thus disposing of the necessity for cooling tables. Machines are also made right and left—a great saving in room where a number of incubators are operated.

But the most important improvement is the NEW PRAIRIE STATE COMPENSATING REGULATOR—our own patent—three times as sensitive as ever made before, working on knife edges, the main pivot bearing being made of steel.

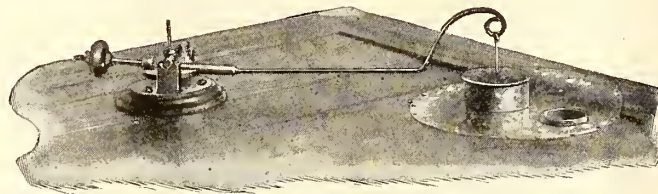

A regulator that is placed above the eggs anywhere from one to three inches, cannot center the heat on a level with the eggs. With a thermometer placed on the eggs, the operator finds that the temperature changes one degree or more for each 10 degrees change outside. In a cellar this would make very little difference, but not everyone has an incubator cellar, and the machines are often operated in an up-stairs room or some outbuilding where the outside temperature is liable to vary from 20 to 40 degrees up and down every day.

Under such conditions the Prairie State Compensating Regulator is the only one that will work successfully.

It is placed partly above and partly below the eggs, and registers the slightest outside change before there is any chance for such change in inside temperature to affect the eggs, thus giving it its compensating feature.

The NEW OPEN BOTTOM makes the New Standard Prairie State a REAL FRESH AIR INCUBATOR, and has certainly solved the fresh air problem. This feature alone stamps this as the best incubator built, and explains the high percentage of hatches that users everywhere are getting. It makes this a peculiarly effective machine for hatching ducks. They do not die in the shell.

Our new Brooders, Universal Hover, Prairie State Jr. Incubator and many other good things we have been presenting in the past few months are all described in separate catalogues, which we will be pleased to send to you if you will write for them. And we will put your name on our mail list so that you will get the new books that are to follow as fast as they are published. Write to-day.

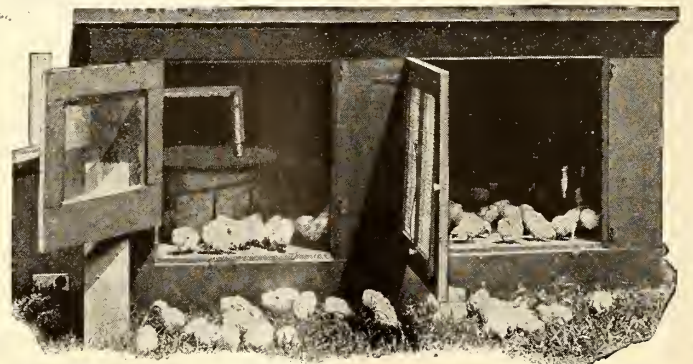

THE IMPROVED PRAIRIE STATE COMPENSATING REGULATOR

Some Hatching Records

It is no extraordinary thing to hear of an incubator hatching 100 per cent hatches—any of them will do that once in a while—but when such high percentages as are reported below are made during an entire season, with large numbers of eggs, commencing in the cold weather and con-

tinuing into the summer, it speaks much for the high efficiency of Prairie State Machines in actual practice:

	Hatches	Per cent

NEW PRAIRIE STATE COMBINATION COLONY BROODER

PRAIRIE STATE INCUBATOR CO.,
468 MAIN ST. . . . HOMER CITY, PA.

Artificial Incubation.

Progress Is Written on Almost Everything—We Are Moving Along with Lightning Like Rapidity—We Cannot Stand Still, It is Either Go Ahead or Fall Back.

The poultry business has long since identified itself with the rushing throng and forged ahead, second to no other vocation. Let us see what has been done. We will for a moment draw the curtain and glance back into the misty past, where we find people hatching eggs in the hot sands of Egypt. It was a rather crude way of doing, yet they brought forth a good many chicks. Their percentage was small. This mode of hatching continued for generations and it is only in late years that the inventive mind of man saw a chance for great improvement, and he has kept at it until today we have before us almost a perfect incubator.

What has caused this great interest in poultry culture? There is but one answer, and that is the poultry press. Nothing will mould the mind so quickly as books and papers they read. We see that quite fully illustrated each election time.

We now have the incubator about as near perfect as it can be made, and now what are its advantages over the hen to the farmer who wants to raise from one to three hundred chickens?

Under the old way the hen sometimes want to set in March, but April is the month they usually begin, so when the farmer hears that familiar cluck he begins to realize that spring has come, so he puts Biddy to work on the fatal thirteen eggs, and then in a week or two another hen has made up her mind to set and thus it goes for two months or more. The hens are setting and bringing off broods of chicks and the farmyard has them in all sizes by the 1st of September. The first ones out are now good, well-developed chickens, but there are only a few of them, the others being too young to lay before spring; so they will be star boarders during the winter. The culls that he will take to market come the same time that the other farmer has them to sell, and so he cannot realize the price that he could have received a short time before.

With the incubator, he starts it whenever he wants to, and when the hatch comes off his hatching is over for that season, as he has one hundred and fifty chicks and that is about the number the farmer usually hatches, if he has them out by April 1st as he ought to, he will have a large flock of laying pullets by October, just when eggs begin to go up in price, and the cockerels will bring him good prices, as he can have them in market long before the other fellow.

The time is not far away when nearly all the poultry will be raised by the incubator; the old hen is too slow for this age. We must have them by the hundred instead of dozens. Nearly every farmer's wife will own an incubator; just the same as she has her sewing machine.

Some theorist will say that I am crazy to make such a statement as that. Fowls must have their hatching season in order to maintain their health. No doubt but that it makes a difference if you keep a hen until she is three years old, but the progressive poultryman of today don't deal in three-year-olds; he gets his chicks

out in March or April and so they are ready to lay by October 1st and to keep everlastingly at it for the next year or until the moulting season comes when she is ready for the market, and a lot more young ones are now ready to take their place, and so the mill grinds on year after year, piling up the dollars for the poultryman.

No one will dispute it that the first year of a fowl's life is the most profitable, then why keep them longer; have the best profit by using pullets all the time, and by selling your old stock before they moult you save a three months' board bill, which takes the profit off from a good many eggs. Many people keep their fowls three and four years, just because their father and grandfather did. They cannot get out of the old rut, but the successful man is the one who is looking for a chance to improve on the old, and in this age of competition and small profits it requires one to be on the lookout all the time.

How often we hear the remark that the business will be overdone. It certainly don't look that way now, when the price for poultry and eggs grows better each year. It was only four years ago that eggs could be bought for seven cents a dozen through the country, but the past two years they have been twelve. That don't look like an overstocked market.

Poultry has enjoyed the same advance—four years ago I paid six cents and this year they are ten and eleven.

The fact is, we are gaining ground and the market reports for the past four years will prove just what I say. As long as prices continue to advance as they have in the past, don't worry about an overproduction. If every farmer in the country had an incubator and raised double the number of chicks the price would not decline on good first-class product. It would be just as it is now. That one-half of the poultry that is sent to market is not worth three cents a pound—if a farmer brought a hog to market in the same condition that lots of poultry is brought in, he could not sell it for soap grease—it will always be so. Some people never will learn anything. That is one reason why the man who has a good article to sell can always find a good market and good prices.

Remember, as a nation we are growing very fast, and we all like a nice tender chick and good fresh eggs, and as long as the price keeps where the masses can buy them (as at present) they will use them so freely that the prices will remain good.

Everyone that starts out in the poultry business will not make a success of it. Just so in every other vocation in life. The wayside is strewn with wrecks; it has

PARTRIDGE COCHINS

The noted New York Madison Square Garden winners. Will spare a few fine exhibition cocks and hens now in fine feather. March and April chicks fit for the early shows. Circular free.

PONY and COMPLETE OUTFIT FREE

ANY BOY or GIRL, 18 years old or less, can learn how they can have my private pet PONY "Bob" with his elegant rubber-tired PONY CART and finely Custom-made HARNESS delivered at their door without a cent of cost. I will pay all transportation charges myself. I do not want a single cent of your money. "BOB" with his PONY CART and HARNESS, just as I shall deliver him, is easily worth \$300.00. I will send you full particulars showing you that there are absolutely no blanks. If you wish the PONY and complete OUTFIT delivered to you, all charges prepaid, address a postal, asking for full particulars how to secure him, to CHARLES E. ELLIS, Pony Dept., 24 North William St., New York City, N. Y.

always been so and always will be so, yet that don't prove that all kinds of business are a failure. The trouble is in the man. Too many begin at the top and work down; about one in ten begin at the bottom and climb up. When I see a young man start with a trio of fowls and a love for them, I am dead sure he will make a success of it, simply because he will gain his knowledge without much loss, and that experience he must have to make a success of the business.

About the second year he buys an incubator, about two hundred size, and for the first lesson he will put in fifty eggs. Now right here is a very important step, viz., are your eggs fertile? He has had enough experience to enable him to have good ones; he has learned how and when to mate his flock to get good eggs; he is not building a house on the sand. He is putting a good foundation under it; a monument that will shine for generations to come.

He has taken the first step right; now comes the second. He puts the incubator in the cellar, because the changes in temperature there are very slight and that is very important to a good hatch, as too much heat makes weak chicks and they soon die.

Start the lamp in the morning and you can look after it during the day and at night you can tell just about how high to have the flame. Run it two days until you have it regulated, so that it will not vary more than one degree, from 102; then put in your eggs; have the ventilators closed and keep them so for a few days; then open a little each day. When the eggs are put in the temperature will run down, but in about four hours it will come up again to its former place.

About the seventh day test the eggs and also note the size of the air space. You should have an egg chart, then you can compare them and in that way you can tell just how much ventilation to give

them. That is the only true way to get a good hatch, as conditions vary so that you are not always sure. One cellar may be very damp and another may be very dry, and one rule would not work the same in both cases, but in an ordinary cellar there is no need of putting water in the egg chamber.

Turn the eggs night and morning and air them once a day. During the last week let them remain out longer, as the chick is so far along that it can stand more cooling and that makes them stronger. To the amateur I would advise him not to throw out any eggs until the twelfth day, as by that time he can make no mistakes. It is now time to raise the temperature to 103 and to continue it to the end of the hatch. On the 18th or 19th day the eggs will begin to show life, as then the chicks begin to break through the shell and some of them will come out, and by the 21st they will nearly all be out and those that do not are not worth the room they occupy, so do not bother with them. After the 18th day do not open the chamber, as no cold air must strike them from that time on until the hatch is over. You can open the outer door to see how the thermometer stands, but do not open the inner glass door.

On the 21st day after the chicks are all dry and lively have a basket or box with an old cloth in it and take the chicks out, put them in the basket, then cover them up and put in the brooder, which should be at 95 to 98. Put in some water for them and fine oyster shell or grit, but no feed until the third day, then sprinkle oat meal (often called pin head oats) or rolled oats, or bread crumbs; let them cut now onto the ground, but have the run small so they cannot go far from the heat until a week old, then they can go almost anywhere, as then they will run to the brooder when they are cold. They are old enough now to eat millet seed and cracked wheat and a little fine cracked corn, but feed that very lightly. A little cold boiled potatoes chopped fine can be given three or four times a week; after they are two weeks old give a mash made of corn and oats ground together and bran equal parts and a teaspoonful of meat meal to twelve chicks. Scald with hot water and let it stand for half hour covered. Do not have it sloppy, but so that it will crumble. Give the mash three times a week. See that they have plenty of green grass in the runway. The best way to make a yard for them is to get some 1 x 2 x 12 strips and make some frames two feet wide and twelve long, and two six feet long, then cover with one inch mesh netting; tack the wire on good and tight; then put the frames together and cover the top with two inch mesh netting, then you have a yard six by twelve feet and your chicks are safe from cats and dogs, and being light you can move it every day. Place one corner of the yard by the door to the brooder and then turn one corner of the wire netting up so that the chicks can run out into the runway.

For the first few nights after the chicks are in the brooder go out and look at them. If they are huddled together and some on top of each other then give them more heat. The sum and substance of the poultry business is, use good horse sense and give it the care and attention that every successful business or professional man gives to his calling.

FRED KEITH.

Lansing, Mich.

THE AMERICAN HEN OUTWEIGHS THEM ALL. STATISTICS PROVE IT.

Get a Buckeye on **FORTY DAYS TRIAL**. As low as \$5, or 200 egg size, \$12.75, or RENT one at \$1 per month. Let rent pay for it, we paying freight, or buy parts and plans and build one. They are self regulating. Guaranteed best work and material, and to hatch every hatchable egg. A town lot is large enough for the business, but a farm is better. Everything the poultryman needs of Best Quality and at Lowest Prices.

WINTER EGGS.

At this time of the year the problem that confronts most poultry keepers is winter eggs and how to get them. We know there are more that don't get them than those that do. Yet to the experienced poultry raiser it is no secret or hard task to have the stock, if it's the right kind, and those that obtain eggs through the cold months have the right kind. Feed will do a great deal toward egg production. Almost any fowl will respond to good feed, coupled with good housing. But to obtain the greatest results in the number of eggs produced, the strain of fowls has an important part, and this is so often overlooked by the beginner. Like begets like to a very great extent, and those that are breeding along the line of great egg production are the ones that are making the most in winter eggs and summer, too. We, some years ago, found that we could not serve two masters and be at the top, by producing show birds and eggs. Not that the birds bred to win at our shows do not lay. They do, and many lay well. But the two, in our opinion, and it's based on experience, can not be combined to be successful with both. Hence, instead of the show room, we aimed for the egg basket. We get show birds now and then, as will the fancier get a two hundred egger. But it's chance. For the fancier did not breed for egg production, nor did we breed for point winners. Our aim is the two hundred egger. When we get her, she in our eyes is to us what the 94 point bird would be to the fancier. Eggs is our goal, the show room the fancier's. So to the beginner we would advise him in starting to either start for the show or commercial. There is no question that

there is a vast difference in the strains of a breed. Birds bred to lay—and lay in winter—will bring better results than those that do not have that characteristic. Again we have had the fact verified time and again that the best laying strains can be made indifferent egg machines if they are not properly fed, and we can add, properly housed. Therefore it is important what we feed and how we feed it. Fowls can be mated that in time, with proper feeding, they will become phenomenal layers, and if at the same time they receive the feed and care they merit, they will not only keep up that record, but will influence it upon future generations. This is not theory. We have year by year on the same lines increased our egg yield, and have no doubt that it will keep on increasing—and in spite of the fact that a prominent poultry editor once wrote that the two hundred egg hen was far and few between. The day is coming that in the yards of those who are working along these lines the two hundred egger will be no uncommon thing. It is natural for the hen to lay, but it can not properly perform this provision of nature if its tissues are wasting away through the neglect of proper food, or if suffering from cold, or weak from poor digestion. In passing it might be well to remember, grains have two missions to perform: To produce fat, to produce bone and muscle. Food: To build up waste tissues, to provide warmth to the body and to furnish strength. Avoid over-feeding, in spite of the fact that some would have us believe that the laying hen can not be overfed and become too fat to produce eggs. Have regular hours the fowls may have exercise. Fresh water, with the chill taken from it at all times, grit, charcoal, and oyster shell

before the fowls at all times. Good, clean grain, such as wheat, buckwheat, millet, corn, Canada field peas, sunflower seed, oats and barley, bran, middlings, meat scraps, alfalfa, cabbage, beets, turnips; these are the feeds we use with results, and results is what all the egg farmers are striving for. Feed right, with the proper strain and housing, no one need fear failure in winter eggs and plenty of them.

J. HARRY WOLSEFFER,
Iolink Poultry Farm, R. F. D. No. 1.
Egg Harbor City, N. J.

The fifth annual show of the Fort Wayne, Ind., Poultry, Pigeon and Pet Stock Association closed December 7th. It was a fine success. The Orpingtons led all other classes in the number entered.

It is estimated by publishers, after years of careful study, that an average of five persons read each copy of a magazine subscribed for. Taking this estimate as a basis, the AMERICAN POULTRY JOURNAL is read by 250,000 each month, or 1,500,000 people during the year.

W. C. Denny, of Ithaca, N. Y., has been selected to judge Buff Rocks at the Chicago show Jan. 22-27, 1906. Mr. Denny judges at Boston and goes direct from Boston to Chicago, and he will also be at the New York Show again. This is a splendid judging record and we can assure Mr. Denny that he will be a busy man during this time.

THE CHICAGO SHOW.

The Tenth Annual Exhibition of the National Fanciers' and Breeders' Association.

The show will be held Jan. 22-27 inclusive, 1906, in the 7th Regiment Armory, 16th street, instead of the Coliseum as previously announced. This change is necessitated by failure of the Coliseum management to adhere to the verbal arrangement made. Extensive repairs have made the Armory equally desirable.

O. Prescott Bennett will judge Buff Wyandottes, White Plymouth Rocks, Partridge Plymouth Rocks, Buff Cochin Bantams, Anconas, Dominiques, Dorkings; E. J. W. Dietz—Exhibition Games, all Bantams except Buff Cochin, Silkies, Sultans, Sumatras; W. C. Denny—Buff Rocks, White Leghorns, Minorcas, Spanish, Crevecoeurs, Favorelles, Frizzles, Malays; W. R. Graves—White Wyandottes; Daniel J. Lambert—Brahmas, Cochins, Ducks, Geese, Indians, Langshans, Orpingtons, Rhode Island Reds, Turkeys, Buekeys, LaFleche, Brown Leghorns, Black Leghorns, Red Caps, Rumpless, Secilians, Russians; Thos. F. Rigg—Andalusians, Silver Wyandottes, Golden Wyandottes, Black Wyandottes, Partridge Wyandottes, Silver Penciled Wyandottes, Hamburgs, Houdans, Javas, Polish, Jersey Blues, Buff Leghorns, Black Leghorns, and H. P. Schwab, Barred Plymouth Rocks.

The Indian Game, Exhibition Game and Game Bantam, Buff Plymouth Rock,

Bronze Turkey, Toulouse Goose, Buff Cochin, White Wyandotte, Plymouth Rock, Rose Comb White Leghorn, International Bantam Breeders, The Light Brahma, The Western Tumbler, The Fantail, Magpie and the Barb and Carrier Clubs will meet in the Association club rooms during show week.

The official premium lists and entry blanks are now being distributed and persons desiring them or any information concerning show matters should apply to secretary Fred L. Kimmey, Room 510, 325 Dearborn street, Chicago, Ill.

ANNUAL MEETING OF INTERNATIONAL BANTAM BREEDERS' CLUB.

The annual meeting of the International Bantam Breeders' Club will be held Thursday, Jan. 26th, at 2 o'clock, in connection with the Chicago show. Every member is urged to be present. Important business will be transacted and officers elected for the ensuing year.

The club makes a number of attractive silver cup and cash offers in connection with this show, which will undoubtedly bring out the largest class of bantams in the country this year. Silver cups are offered on each of the following varieties: Game bantams, Cochin bantams, Japanese bantams, Sebright bantams and

rose comb bantams. In addition the Illinois state cup is offered here for the best display of bantams in any one variety. Forty dollars in gold is also offered on all the standard varieties of bantams. Send to Mr. Fred L. Kimmey, 325 Dearborn street, Chicago, Ill., for a copy of the Chicago show premium list.—Frank W. Radford, secretary, Oshkosh, Wis.

NEW YORK STATE ORPINGTON CLUB.

The New York State Orpington Club will hold its annual meeting at the State Armory, Auburn, N. Y., January 20, at 2 p. m. An elegant silver cup is offered by the club for the best display by any of the club members, also a number of other valuable specials. All state breeders are urgently requested to join, which they may do by sending one dollar with their name and address to Mrs. J. G. Osborne, state secretary and treasurer, Fabius, N. Y.

SOME RESULTS WITH TRAP NESTS.

I have a 200 egg hen that has not laid a fertile egg. The worst looking pullet in my yards is one of the best layers. One of my largest hens lays the smallest eggs. Some hens, after being broken up from broodiness, commence laying again in a few days. Others take two months. Some lay up to 10 eggs in 10 consecutive days. Others always miss a day. The hen or pullet that starts laying early in the winter is also the best spring and summer layer.

POULTRY HOUSE FIXTURES.

The Potter Portable Hennery Outfit and Vermin Exterminator Roost

Within the past few years we have equipped hundreds upon hundreds of poultry houses in every part of the country with our apparatus. Poultrymen of every class use and recommend it, and pronounce our fixtures the most complete, convenient and satisfactory ever put on the market. Do not think of building a new house or refitting the old one until you have secured a copy of our large 30-page catalogue.

The above cut shows but one of the three styles which we make. Outfits are made in 50 different sizes to fit any house. Better send for our catalogue and see what we are offering. Inclose one red stamp if you want it.

\$1500 GIVEN AWAY IN PRIZES

FOR SUBSCRIPTIONS TO THE
AMERICAN POULTRY JOURNAL

EVERYBODY Who Sends in Six or More Subscriptions **GETS A PRIZE**

For six subscriptions you not only get a prize of four beautiful colored pictures, but are allowed over one-third commission. Never before have we given so much to those who help us get subscribers. But this is not all; these six subscriptions count in a chance toward winning a \$600 Piano, \$100 Cash, Fowls, Incubator, Brooders, Advertising, etc. Over fifty of these Grand Prizes given. We cannot describe them here.

SEND FOR THE LIST

A \$600 PIANO FIRST PRIZE

A chance to win this without costing you any money. Notice especially the enormous value of this prize. All our previous efforts to reward the Club Raiser are put in the shade by this magnificent prize. The winner will be especially fortunate, as this piano is one of the celebrated Wing Pianos, known all over the country as one of the best pianos made. We will order it sent direct from the factory to the winner.

IMPORTANT A great many times we let a good opportunity go by and regret it. Don't let this one go by, but send for our offer and see what it is. It's a good chance for new subscribers, and especially good for those who wish to renew their subscriptions.

AMERICAN POULTRY JOURNAL PUB. CO.
325 DEARBORN STREET, CHICAGO, ILLINOIS

HINTS TO THE BEGINNER.

Instructions to the Beginner Whose Ambition Is to Get Prominently Before the Public as a Fancier and Breeder and Establish a Paying Business.

In treating on this subject, I shall give my own experience, so the reader may rest assured the methods have been tested, and I believe you will agree with me that my efforts have met with success.

To begin with, study the different breeds of fowls and your own local conditions, together with the market or markets you wish to cater to. Next I selected from the advertisements in AMERICAN POULTRY JOURNAL columns a line of bred strain winners at our greatest shows for life, bred by a reliable party, and ordered four settings of eggs for April delivery. I set these eggs under four hens, each free from lice, in a separate roomy compartment, providing always fresh water, grit, corn and green feed. As the chicks begin to hatch, I keep the nest free from shells and leave them in the nest from 24 to 48 hours without food or water, when I remove them to a brood coop in the sun on the lawn where the grass is kept clipped short. I feed every two hours during the day bread soaked in new sweet skimmed milk, and give fresh water and milk to drink, together with fine grit. Some breeders advocate a dry diet from the first. I have tried both and found nothing like the above to satisfy the chicks or that would grow

them so well. They will soon begin to eat hulled oats and cracked wheat and corn, which is also fed, but I continue the bread and milk diet as long as I have it, and also give a little fresh ground green bone and meat daily after about three weeks old. This is a very hearty food, especially for young chicks, and should be fed sparingly.

The hen is confined in the brood coop all the time for the first three weeks, allowing the chicks to run in and out at their pleasure on nice days after the dew is off the grass. When they are three weeks old, I let the hen out with her family on nice days to exercise and pick around, shutting them up at night.

One thing that *must* be done is to keep watch for lice, as chickens cannot thrive when bothered by them. I use a powder and a liquid, but do not use any liquid or anything on birds intended for exhibition that will soil their feathers. Move the brood coops to a clean place daily.

When the hen weans her chicks, I place them in a colony house well ventilated and dry, allowing them free range with corn, oats and wheat in a self feeder before them at all times; also fresh water, milk and an occasional feed of fresh ground green bone and meat. I also feed bread and milk if I have it. Keep watch for lice all the time and use lime, whitewash and a liquid disinfectant around the house.

Towards fall, before the chicks begin to mate, separate the males from the females, placing one lot in a large enclosure. This enables them to develop better, and the females in the poultry family as well as among human beings is the cause of many a "scrap" be-

tween the males which might spoil an otherwise good specimen for exhibition. The enclosure I used to separate the sex has been plowed in the spring and planted to sunflowers in hills 3 feet 10 inches apart each way and cultivated during the first part of the summer. The last time I cultivate, I sow to wheat, oats or rye to make green pasture for the chicks, and the sunflowers afford splendid shade, and the best of feed in fall and winter. I also plant a patch of cabbage for winter feed.

In the fall, after the chicks are developed sufficiently, I secure the service of an expert judge to assist me in culling out my flocks, picking out the exhibition specimens and mating up my breeding pens for the next season. The "culls" are sold for market and the rest are transferred to their winter quarters and given the best of food and care to develop for breeding and show.

This house should be roomy and convenient, well ventilated with plenty of sunshine, and have runs for out of door exercise in nice weather. The AMERICAN POULTRY JOURNAL publishes at times full instructions for building these houses. They should also be clean and free from lice. It is very important that everything in and around the hen house should always be kept clean. Before cold weather comes, on a sunshiny day I dip my breeding stock in a warm liquid lice killer if I find any vermin. This is repeated again in the spring, but I use only powder on exhibition specimens. This, however, is used thoroughly and often, handling these birds as much as possible and getting them used to being looked over before show time.

Imported and American Bred Scotch Collie Dogs. Three Grand Litters for Sale. Write today for prices. ❀ ❀

Jones' Line Bred WYANDOTTES

Many of the noted winners already this season have come from my yards; others raised from eggs or stock purchased direct from my yards. Flattering reports coming in every mail. To be prominent in some of the later events buy from the fountain head. I have succeeded in raising more good birds this season than ever before, and can furnish winners for any kind of company. Also line bred breeders mated to produce high-class youngsters that will go out and win for you next season. I have for sale something over

**2000 SILVER, GOLDEN AND WHITE
WYANDOTTES, G. S. & S. S BANTAMS**

No use to look for better; they don't grow them. If you only knew how many of the big show winners came from my yards each season, you would have some idea of the magnitude of my plant and be convinced that

Jones, the Wyandotte Man

furnishes the foundation of more good flocks than any other breeder in the world. That is why my strain is conceded

THE STRONGEST BLOOD LINES ON EARTH

No use for me to try to tell you here how many times they have won and and at how many national shows. It would take half the pages of this paper; but send 4 cents in stamps for my handsome 30-page catalogue, printed in colors and containing many half-tones of the national winners of the world, as well as valuable information on how to mate, feed and care, and many good ideas on poultry production; a book worthy a place in any library. Don't fail to get a copy for the postage.

R. E. JONES, :: "THE PINES"
R. F. D. NO. 5, PADUCAH, KENTUCKY, U. S. A.

in the winter, I feed a warm mash in the morning composed of wheat, bran and middlings and a commercial food mixed with hot milk.

The floor of the pens are covered with clean straw to the depth of about a foot. In this I feed oats, wheat, buckwheat and sunflower seed, the latter thrown in on the head for the fowls to pick the seed out. They are especially good for birds intended for exhibition,

also get much they need from ashes thrown where they can have access to them. Care should be taken, however, to prevent fire. A cabbage is kept hung from the ceiling, affording green food and exercise.

You are now ready to think about exhibiting your birds; live with them as much as possible, study them, handle and keep them tame. You will find it a pleasure or you should not try the busi-

ness using a tooth or nail brush and tooth-picks to get all the dirt out of the creases; dry them and polish with a little sweet oil, and, a flannel cloth, being careful not to soil the feathers. Wipe the feathers off on the dark birds with a flannel cloth dampened and polish with a silk handkerchief. Then I put the birds in an exhibition coop with clean chaff on the bottom and work on them as much as possible. In this way

First Prize Pen Buff Leghorns MADISON SQUARE GARDEN. N.Y. 1905

First prize pen of Buff Leghorns at Madison Square Garden, N. Y., 1905. Owned by B. S. Beuerlein, Mt. Morris, Ill.

as it tones up the birds and adds much to the beauty of the plumage. At night I feed corn warmed and scattered in the litter. Fresh water, milk and grit are kept before them at all times; and fresh ground green bone and meat is fed them two or three times each week. A dust path is always provided for them when confined to the house. They will

ness. Keep them healthy and growing. Select the shows you wish to visit and about a week before these shows begin more carefully to fit your birds. If they are white, wash them thoroughly in soap and water, rinse them clean in bluing water and dry in a warm room near a fire. If your birds are dark, wash and clean their legs and feet,

they become acquainted with their new quarters and are ready for the judge when the time comes; clean the chaff out daily and replace with new.

When it is time to ship your birds to the show, cover the front of the coops with ducking and ship to the secretary or superintendent. You may go yourself if you wish and it will be a good

BLANCHARD'S WHITE LEGHORNS

are no experiment, having been carefully selected and bred for over twenty years. No labor or expense has been spared in building up and perfecting this strain, and while the production of large, pure white, fancy market eggs has been the main object, **standard qualities have not been neglected.** They are large, vigorous, active and handsome. Good winter layers and keep at it all summer. Unexcelled for introducing new blood or as foundation stock. **STOCK FOR SALE both OLD AND YOUNG. Eggs for hatching.** Illustrated circular free.

are the best, and if you were here so we could talk together, and you could see my scientific way of breeding, it would be an easy matter to convince you. Eggs from these heavy tested layers, \$1 per sitting, \$6 per 100. Circular.
H. C. BEEBE, R. 5, CANTON, ILL

schooling. I am glad to say, however, I have always been treated fairly and won first specimens under the best judges in America every time I exhibited and had my birds returned in good condition without being present myself.

As soon as possible after exhibiting, I mate up my breeding pens to furnish eggs for early hatching. This is one of the most important steps for the beginner to take, for the result means success or failure for the coming season. Great care should be taken to breed only from vigorous, healthy stock. A good start in life is due a human being and we are in a position to exercise more control over this matter in the dumb animal world, than in the human world.

Another step the beginner should take about this time is to advertise judiciously in one or more of the best poultry journals. This may be done in the fall when you cull out your flock, if you have good birds to spare, and follow up in the late winter and spring with eggs for hatching. This step is about of as much importance as any the young fancier may take. Your ads should be constructed with care. Tell the truth in them, and when answering inquiries never send out poor birds. Remember a pleased customer is the best advertisement. Be ready to take your birds back if not satisfactory to the purchaser.

In the shipping of eggs much damage may be done to them after they leave your hands and before they reach the purchaser on account of the necessary handling while in transit. In case a customer of mine has had poor luck hatching, I let him make his own terms first, and then if I can possibly see as he does I meet his terms. Put yourself in

his place. You pay a good price for eggs to hatch and they do not hatch well; you are disappointed as he would be. In refilling an order it may be necessary for him to wait until you have filled other orders ahead of his, but in the end it pays to follow the "Golden Rule."

Some people prefer in starting to purchase birds instead of eggs. In case you prefer this method you should, as before stated, decide on your breed and the strain. Then buy good breeding stock; it is better to have a pair of good breeders than a large pen of culls. Many good breeders may be had at a reasonable price in the summer or early fall from the breeding stock used by other parties the preceding year, who have young stock coming on to take their place.

If you meet with failures, as you will, do not feel discouraged but profit by them; find out where you have failed and correct the error. There is much you will have to learn "by experience" that cannot be taught by an article of this kind. It requires hard work, patience and perseverance to succeed in the poultry business the same, as anything else. Don't think when you show that you are going to carry home all the blue ribbons. If the show is a large one and the breed a popular one a great many good birds worthy of a place must go there and return without a prize, but by studying your breed and "living with them," you will soon carry home your share of the plunder.

There is money in the poultry business and money to be had from it if properly handled. Fowls are not unlike the hog, which is often termed the mort-

gage lifter. Their young may be brought forth in the spring, matured and put on the market in the fall at a good price, thus saving expensive housing and feeding during the long winter months, as is the case with the horse or cow, which takes two or three years or more to mature. There is always a market for poultry and eggs at a good price and a flock of matured hens can be made a profitable investment when eggs are high, especially during the winter.

Let me say just a word in conclusion in favor of pure bred poultry. They cost but little more in the beginning, and after you have a good start it costs no more to raise them and they are by far more profitable than "scrubs" for either breeders or market, to say nothing of the pleasure derived in breeding and putting a good article on the market.

JOHN A. BARNUM.

Coldwater, Mich.

SPECIAL NOTICE.

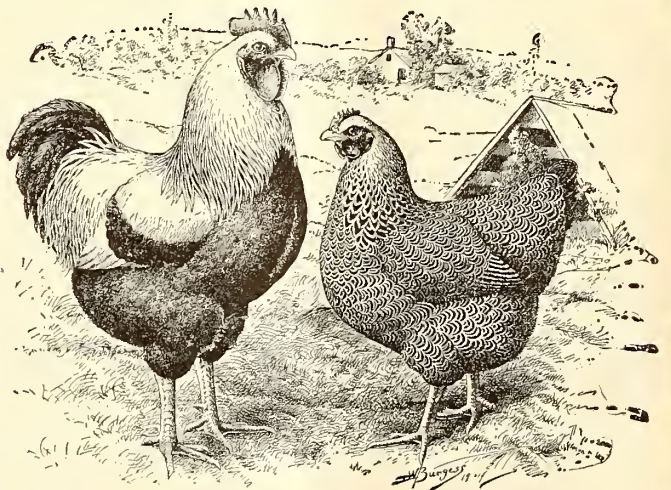

Just as we are going to press we receive word from Mr. Page, of Ackley & Page, Woodstock, Ill., that they have sold all their Pan-American, Chicago, Indianapolis and World's Fair winners to Mr. Simon Beuth, German Valley, Ill. Mr. Beuth has been breeding Buff Wyandottes for over seven years, and now, on his 120-acre farm, has over 1,000 of this breed. By adding the Ackley & Page stock to his already large flock puts him in possession of one of the largest and best flocks of Buff Wyandottes in America. Mr. Beuth is a practical poultryman, and having unlimited range for his stock is able to produce the most vigorous stock.

Silver Plymouth Rocks

THE ONLY FLOCK IN AMERICA

Distinctly of Dark Brahma, Silver Gray Dorking, Mottled Java Origin

READ Mr. W. Theo. Wittman's article on this new breed in the December issue of this paper. Modesty no doubt prevented him from saying that the famous Dark Brahma, Silver Gray, Dorking, Mottled Java cross, originated and belongs to the Exmoor Farms, Lebanon, Pa. A cock and hen from this line was shown by Exmoor Farms at the World's Fair at St. Louis and captured two first prizes. They were admired as wonders of a new breed. For the first time we will book orders for eggs at \$5 per 13 from either pullet, cockerel or single mating yards.

Please Mention This Paper When Writing

EXMOOR FARMS, Edgar A. Weimer, Prop., Lebanon, Pa.

HOW TO CARE FOR FOWLS IN WINTER.

By Providing the Proper Surroundings and Giving the Necessary Feed and Care Fowls Can be Made to Produce a Handsome Profit During the Winter Months.

If we would have a good profit at the end of the year from poultry we should begin by making a profit on the January operations and continuing it each month of the year. To do so the hens must be kept laying and those started up that are not already laying. It can be stated, however, as a patent fact, that all pullets should be got to work laying much earlier than the first of the year, if such a thing is possible. It is much easier starting them laying when the weather is warmer than it generally is in the Northern states at this season.

How shall the hens and pullets be got to laying quickly?

This is the vital question with thousands of people keeping hens. We hear it almost every day and from all sorts of fowl-keepers. It comes alike from the boy who has a half dozen hens or pullets and the farmer with one or two hundred, and it is very likely to be heard from the man who runs an establishment keeping a thousand or more should-be layers.

It is answered in a nutshell by saying that spring conditions must be simulated. Hens lay as naturally in spring as the tree buds and leaves and blooms, or the grass and flowers of the meadow spring again into view in all their verdure.

So on the bleak January days we must do what we can to bring some of the conditions of spring and summer into the fowl house. But how?

Something in this wise. Let the farmer save all the blood, meat scraps and offal from his winter butchering and give it to the fowls. This brings the meat diet about the same as birds find in nature in the insect creation so abundant in summer. I would heat, or parch often,

the corn and wheat, put into this the "cracklings" or remains of the lard rendering kettle and feed warm in morning. Exercise will be given and animal heat and cheerfulness promoted by hunting for part of the grain in the newly picked over litter. The farmer has no trouble in getting the litter, but dwellers in city and village often must lay up a stock of leaves for the purpose. Lawn rakings packed in burlap sacks, only a few of them, if well packed will serve admirably for the purpose.

The city and village fowl-keeper must go in the market and purchase animal food for his hens. But at the present time he has the best of the bargain, for there are many fine meat, grain and mineral preparations sold, which, if used properly, will aid largely in egg production. It is only in the matter of extended range that the farm presents any advantage over the smaller town or city lot.

Keep your critical eye on the flock. Keep the hens in laying condition.

This means that they must be in vigorous health, and have something to form eggs from.

Make a judicious use of the proven condiments and compounds that experience shows will help increase the egg yield or make flesh of greater quantity and better quality.

The days are bright and warm in spring, so the houses the fowls occupy must be warm. No snow or cold drafts should come in at nights through un-stopped cracks, and their drinking water should never freeze. On the farm where the hens often have the run of the cattle sheds to glean for wasted grain, undigested or unmasticated grain, etc., the

exercise furnished by the scratching and turning over the coarse bedding as well as aided by the heat of the cattle, furnishes plenty of heat during the day. It is only at night that they often suffer from cold on account of the open or unlined houses.

It pays to build all winter quarters warm. It pays to arrange the houses so that when the day is bright and the sun shines the fowls will get the benefit of it.

Green food must be given. Hens at liberty will pick the green grass along the sunny banks and by the brook all winter and have green food all the year, excepting when the ground is entirely covered with snow and the brook swollen and frozen over. Good time for the farmer boy to sort over the apples, giving the hens a peck or two of specked ones each day. They will make good returns for a head or two cabbage even though it happens to be a sound one. Sugar beets are profitably grown for the same purpose. I find it takes but a small ground to grow a plenty for a flock of hens. Rich ground for beets, remember. Turnips are appreciated, potatoes will be greedily eaten, pumpkins are all right and easily grown or bought in autumn for two cents each here, and the man who kept a trio of bantams in his room on the sixth floor, grew his green food in boxes in front of a south window—mostly lettuce.

Be prompt, be regular, be keen, be natural in feeding the fowls. The miller has his mill and all its machinery right, then puts in his good grain and by carefully attending to his work produces good flour, meal and chop at will. The flock is the factory, the food is the raw material and if the care is what it should be and must be, if we would succeed in getting returns in winter, January and the succeeding months will find the fowls starting the profit for the year's returns in a pleasing way.

Templeton, Pa. GEO. ENTY.

ADVERTISING, PAST---PRESENT

Advertising of Modern Origin—A Few Facts on Advertising, Gathered by Rev. C. E. Petersen, Franklin, Me.

It is a curious fact that many amongst us generally assume that advertising is an institution entirely of modern origin, possibly because the encyclopedist has given little attention to the subject, and as time begets difficulties in research, we are almost driven to regard the first advertisement with which we are acquainted as the actual inaugurator of a system which now has hardly any bounds. Advertising has, of course, within the last fifty years developed entirely new courses and has become an institution of so great importance that it would hardly be possible to conduct any kind of business without it. Henry Sampson in his "History of Advertising," from which I will quote frequently, says that investigation shows that advertisements were published in Greece and Rome in reference to the gladiatorial exhibitions, so important a feature of the ancient days of those once great countries. That these advertisements took the form of what is now generally known as "billings" seems most probable, and from the way the excavated walls of Pompey looks giving pictures of the gladiators and time of exhibition, Rome must have often looked like a modern country town, when the advent of a circus or other traveling company is first made known. Both the Greeks and the Romans had on their houses a piece of the wall whitened to receive inscriptions relative to their affairs. To give an idea of their style of advertising I will quote one or two taken from the walls of Pompey and written 2,000 years ago.

"N. FESTI AMPLIATI

Familia Gladiatoria. Pugna iterum Pugna. XVI. K. Jvu. Venat. Vela."

That is "The troop of Gladiators of the Odil will fight on the 31st of May. There will be fights with wild animals, and an awning to keep off the sun." Barnum could not have done much better than that.

Here is another: "Traveller go from here to the Twelfth Tower, there Sarinus

keeps a Tavern. This is to request you to enter. Farewell."

Medieval advertising was done by "criers," who would walk through the streets proclaiming the news of the day, and where different kinds of commodities were to be found.

After the inventing of the printing press advertising by hand bills became the custom, but no newspaper was in existence before the reign of Queen Elizabeth, supposed to be issued by Christopher Barker, Her Highness' printer, 1583. This paper was said to be started for the prevention of the fulmination of false reports, but it was more like a succession of extraordinary gazettes, and had by no means the appearance of a regular journal, as we understand the term. Periodicals and papers really first came into general use during the civil wars of Charles the First, and from that period rapid progress was made in journalism and advertising. The first newspaper advertisement was found according to "Notes and Queries," in Mercurius Elencticus of October, 1648. Boston was the first city in America that published a local paper; this was done in 1689.

This survey of the history of advertising gives us to understand that from the earliest times advertising has been a factor of great importance and that the man who says "I can get along without advertising" is a good many hundred years behind the times. The poultry business of today, as far as fancy fowls are concerned, is all transacted through the poultry press, and the man who starts in with breeding fancy fowls as a business by which he may increase his income must not only make provision for first-class stock, good housing, and care, but for a judicious amount of advertising to bring his stock before the public. If he don't know how to frame a taking advertisement, let him get some one to do it whose business it is to do it. Not a single poultry journal that comes to our hands that don't show the lack of common sense in advertising and useless expenditure of good money for that kind of advertisements brings no return. Study the advertisements of the men who are making a success with their variety, but don't fall into the common fallacy of copying them. Don't make statements that you cannot prove to the full satisfaction of a would-be purchaser.

Don't say "The Best in America" and then follow that up by giving prizes won at some unimportant shows, where even there some one else carried off the half of the blue ribbons. Let your advertisements show that you have confidence in your birds, but do it with modesty, remembering that even the Great Napoleon had his Waterloo, for sure as you are born, some day you will come up against a Wellington in poultrydom and you will have yours.

Don't advertise "Eggs for hatching from my famous strain of Plymouth Rocks, 1 dollar for 15." This is ridiculous. Don't use good money to provide amusement for the readers of the JOURNAL.

Don't advertise that you are breeding birds from three or four noted strains. That helps the other fellows, but it don't help you. Then any breeder of much experience knows, that except these strains are kept separate, they are strains no longer, though they might honestly be called pure breeds.

Don't try to say too much in your advertisement when you have only a little space to use; state the prominent features; don't go into detail. You can do that in your circular, or by correspondence. All that your advertisement is supposed to do is to bring you into communication with the would-be purchaser. It is here where the difference between business ability, or no business ability, is best shown. The follow up system may be all right in a measure, but if carried to extremes, will become a nuisance and an annoyance to the would-be purchaser. Answer all inquiries in a courteous, gentlemanly manner, and never answer an inquiry on a postal card. Be very particular in the use of good stationery; there are some people in this world that go by first impressions, and an ill-written letter, on a piece of greasy, finger-marked paper, is no inducement to continue the correspondence. Let me give you this advice also: Enclose a stamped envelope for reply; it pays to do it. You will in most every instance receive it, and you will know the reasons why either eggs or stock was not wanted. Do all you can to make your advertising pay, and the advertisement with your co-operation will give you all possible returns. Always give your customer all that he pays for, and a little more. Have a reputation established for square dealing, which is not only right but another way of advertising your stock. A dissatisfied customer will not increase the volume of a man's business. As your business grows in importance, let your advertisements grow with you. The all-seeing eye of the public follows your every movement. And if you can prove in the show room, in competition with strong birds, that you have as good as any, you will have no lack of patronage if you are breeding a variety that is popular enough to be in demand.

The show room is an absolute essential for continued success. We cannot prosper for very long without it. We must show what we have got. The buying public demands it, and the fanciers are quick to satisfy this demand by being present with their birds at our best shows year after year, but all the business in the world will never give the true fancier the genuine satisfaction that comes to him when in the strongest competition he finds the "Blue Ribbons" attached to the coops containing his birds.

To-Day!

SEND A POSTAL OR LETTER and ask for AMERICAN POULTRY JOURNAL'S 1906 subscription offer.

Never have we offered so much before.

For six subscriptions you are allowed over one-third commission, and are given a set of four beautiful colored pictures. These same subscriptions also count in a chance toward winning the \$600.00 Piano; \$100 cash; \$50 worth of Fowls; Incubators; Brooders; Eggs, etc., there being over fifty of these grand prizes. One of our subscribers says, "I do not see how you can afford to do it." But we want subscriptions and lots of them; that is why we are making such liberal offers. Our space is too small here to explain all we give to every one who helps us. We hope every reader, who reads this, will send for the Offer at once. It will be a happy new year for both of us.

MAKING POULTRY PAY ON A TOWN LOT.

Mrs. E. Hill, Janesville, Wis., Relates How she Started in the Poultry Business.

As I so much enjoy reading of the experience of others along all lines of poultry raising, I will try to give a brief account of our experience. Last season my father gave us three Barred Plymouth Rock hens and their broods of about thirty chicks. We had no coop, so took a dry goods box with wire run attached. In two of these they lived and thrived until November. The cockerels were sold at private trade. All the pullets, 11 in number kept through the winter. In November we purchased three more dry goods boxes for \$2.25 and made a nice warm coop 5x12, one window in south side, roosts across one end with a dropping board underneath, nests under part of it. This for 14 fowls we kept through the winter. We bought a cockerel for this pen.

They began laying the 10th of March and laid until the 10th of the following October, laying 128 dozen eggs and raised three broods of chicks. One hen was killed in midsummer. We set an incubator April 14 of 122 eggs, hatched 77 chicks. Another hatch in May of 94, another on May 29 of 91. We bought some of the eggs. After the chicks were hatched they were placed in a Racine brooder, which has a small run on table and a small run on the ground and still be under cover. We then made wire runs 8 feet long, 2 feet high, and just wide enough to fit close to the brooder with a slide at this end. The openings were made in panels, ends, side and top, so that when done with them for the season they could be quickly unscrewed and stowed away in small space until the next season. These we found very serviceable, as the coops could be moved to fresh grass each day, and the rain and sun soon purified the ground so that they could soon go over the same ground, and with chicks in them one could feel perfectly safe to leave them alone. If a storm came up they would quickly scamper under brooder, as it was so close and was all the mother they knew, and no cats, rats or dogs could get them or at least did not ours. As they outgrew the brooder we made larger coops of dry goods boxes covered with tar roof paper, made a slide drawer for them to rest in and that we could take out and clean thoroughly each day and give fresh bedding. They were also provided with the runs like brooder. If a cold, windy day came I would throw an old carpet over part of the wire run. We hatched 295 chicks, and they lived and thrived well, all but the last hatch that came off the 5th of July. Do not think I would try so late in the season again. The eggs were overheated in the incubator, the temperature going to 109 one time. They hatched well, 91 out of 103 fertile eggs but I think the chicks were weakened by it. Then it being such warm weather I thought they did not need artificial heat, but found they missed the hover of the hen and extra warmth and piled up so as to kill each other. Also left the floor out in brooder on account of warm weather and a sudden rain killed a few by running under, so through carelessness this brood suffered, but I have learned lessons never to be forgotten and trust to do better next

season, but as it is the chicks have paid for incubator, brooder and wire runs, all their feed, and have a nice balance on hand besides the flock of pullets for next year. We have built up a fine private trade for the market fowls. The pullets have been sold to breeders. A want ad in the daily paper brought plenty of orders both for market fowls and the pullets. We use care in dressing fowls. We find that dipping them three times in boiling water, then plunge into cold, makes the young bird pick nicely, then after cleaned place in cold water to "plump," drain and market them at once as they look so nice when just taken from the cold water. Tie neck neatly, tie up in a neat package, placing a card with each, stating whether spring chick or what age, weight and price, and your name and street number, also phone number, if you have one.

Then if a customer wishes to order again you have made it easy for them to do so and also helped to advertise your business.

MRS. E. HILL.
Janesville, Wis.

"POULTRY FOR PROFIT."

The demand of the world today is that a man should know one thing well; and for knowing that one thing well it will give to him abundantly. Truly this is the era of specialization in every branch

of human knowledge. Today, for a man to raise poultry without first grounding himself in science of the poultry business is as absurd as to attempt to relegate the people to a tallow candle for light. And it is recognized by a majority of professional poultrymen.

The AMERICAN POULTRY JOURNAL teaches us to a great extent that a poultryman must be almost as skilled as a scientific person to whom can be entrusted the health and life of his fowls, and to that end a great majority have worked with most astonishing success. In my efforts I will try and make it compulsory that one must be skilled as a poultryman if he wishes to make poultry culture profit.

To profit from your own fowls you must select healthy, vigorous birds as near to standard as possible, to start out with. Then you must have good dry quarters, with plenty of light, good ventilation and warmth if necessary. Cull your birds very, very closely, and mate your fowls the best you possibly know how. Keep your house in a perfect sanitary condition, your poultry free from pests. Also give the poultry fresh water frequently. You will find many valuable articles on feeding in the AMERICAN POULTRY JOURNAL. And I will say if the above mentioned is well done your progress will undoubtedly be that of enjoyment, success and profit.

Anderson, Ind. BURLY JACOBS.

The Gaines' White Plymouth Rocks.

BRED TO WIN—AND DO IT

No more females for sale this season. A few choice cockerels left for sale. If birds fail to please you, simply return them to me at once. I refund your money and stand the transportation charges both ways. I will pay \$50 for a pair, (cockerel and pullet, and you keep the birds. My FREE booklet explains; write for it.

BOX A, HOPE, INDIANA

SILVER PLYMOUTH ROCKS.

A new variety of fowls that is arousing considerable of interest is the Silver Plymouth Rocks. The most enthusiastic proprietor of this new breed is Edgar A. Weimer of Lebanon, Pa., and all readers can be assured that anything Mr. Weimer takes hold of is an assured success. His success as a breeder and his splendid success with Exmoor Farms, one of the greatest poultry plants in the country, all go to the making of a success with this new variety. Mr. Weimer exhibited Silver Plymouth Rocks at the St. Louis show, and has got them to such a point of perfection that he is now booking orders for eggs from either pullet, cockerel or single mating yards. The large ad in this issue of the AMERICAN POULTRY JOURNAL fully describes them, with prices, etc. The article on page 805, December issue of AMERICAN POULTRY JOURNAL, written by W. Theo Wittman, fully explains their origin, and gives a good description of this variety.

THE VALUE OF FEATHERS.

Feathers are very valuable and if they are prepared the right way they will bring in quite a sum of money. Most poultrymen regard chicken feathers worthless and then throw them away. They do not know that they are throwing away about one-ninth of their profits. If they only knew this they would save all their feathers. The markets are always open for feathers and the people who save them are the ones that are making the most profit. All of the money that the poultryman gets from the market for his feathers is clear profit, for the feathers would have been thrown away otherwise. It does not take much more labor to prepare the feathers for market than it does to throw them away. In the course of a few years all the poultrymen who send chickens to market will save all their feathers and this will make the hen much more valuable.

One can pick feathers very quickly if he has made everything handy before him. Catch all the chickens that you are going to kill, and then tie each one's legs. Take them up one by one and open the fowl's mouth and insert a sharp pointed knife in its brain and then turn it around quickly. This will kill the fowl instantly and the blood will flow freely. Start to pick them as soon as you have them all killed. Assort them in two different piles, the body feathers into one and the tail and wing feathers in the other. When you have the feathers picked and assorted, then get two tubs of lukewarm water. Then put the feathers into the water, and give them a good wash and then put them through another tub of rinsing water; then run them through a wringer. Next get some paper and spread it on the floor, and then take the feathers and spread them on the paper. Be sure that there is no wind or you will lose all of them. Dry the feathers in the sun if possible, for they dry much better. Do not put them into the bags until they are dry, because they will get moldy and then they are worthless. When they are perfectly dry get some burlap sacks and pack the feathers in them firmly. They are now ready to be shipped to market. The poultryman should send his feathers to market at certain times, because feathers are higher at certain times of the season.

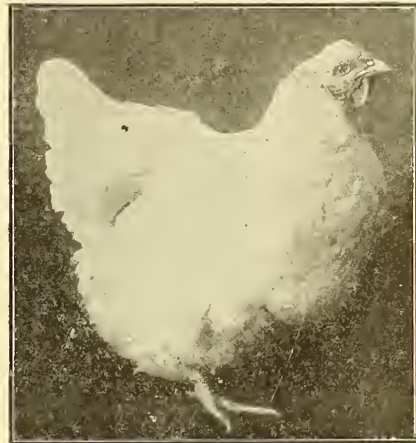

The feathers should be picked while the flesh is warm, otherwise they will

stick and tear the skin. Always assort the feathers before they are sent in, because when they are sent mixed to the dealer, he will charge off a good deal for assorting them, because the body feathers are used for different purposes than the wing and tail feathers. Always wash the feathers before you ship them, because if you do not wash them the dealer will have to. White feathers bring in much more than any other kind and so it pays to keep the white breeds. Never scald the feathers because it removes the oil from them and thus makes them worthless. The feather business is growing each year but thousands of pounds are going to waste and the supply will not be great enough until all the poultrymen shall save their feathers.

CHAS. H. WAGENER.
Fullersburg, Ill.

HOW TO MOULT A WHITE LEG-HORN BIRD.

Here is my way. It brings white feathers quick that stay when you want the birds to moult, say latter part of July. Just get a box 8 inches deep and 12 inches square. Fill it one-third

WHITE WYANDOTTE HEN.
Bred and Owned by J. C. Fishel & Son, Hope, Ind.

full of common oats and set it where the birds can get it when they want it. Of course every two or three days dump them in a little wheat corn and sunflower seed just for a change. In a few weeks you will have the nicest hens out.

H. C. BEEBE.

WINTER EGGS.

Have good stock from well known egg strains, proper houses, keep from over crowding. Feed well and with judgment, good clean feed. Keep chill from the drinking water, charcoal, oyster shell and grit before them at all times, a good dust bath, good litter for exercise. Exercise promotes health. Also keep fowls from mischief. J. HARRY WOLSIEFFER.
Egg Harbor City, N. J.

CORRECTING A BREEDING MISTAKE.

Has it ever occurred to breeders of colored Muscovy Ducks, that they are spoiling the breed by trying to breed in white feathers to conform to the Standard? During the past 20 years I have noticed that the largest ducks were always solid black and I am now going to breed them

black and invite all others to join in.

"Ruth S." score 96 1/2, highest scoring Buff Wyandotte in the world. Bred and owned by Ralph W. Sturtevant, Beloit, Wis.

Mr. Sturtevant makes a specialty of Buff Wyandottes. Besides the winners originated in his own yards, he has purchased winners at World's Fair, Pan-American, Madison Square, Chicago, etc., and has the best flock of Buffs in the West. Judge Ellison, who recently scored his birds, pronounced them the best Buffs that he had ever handled. No birds in his flock show white lobes, greenish tinge on legs, white feathers, or any signs of stubs. Many of his birds score 95 and over up to 96 1/2 points. He has over 500 birds for sale. See adv. in this issue.

SUCCESS WITH BROODERS

Facts and a Few Fancies.

As a breeder of Buff Orpingtons, I want to tell you a few facts and several fancies about brooders and little chicks. Experiences are actual facts, so I give you the benefit of mine.

I should always prefer brooders to hens. I think the health of the chick is much better with a brooder than a hen. So I say brooders always, cleanliness from first to last, careful watchfulness, but don't make it a task, but a pleasure. How much pleasure there is in clean surroundings when some one comes to look at your feathered pets—and one certainly feels mortified and ashamed if your poultry houses and brooders are dirty. Have nothing to inoculate your little fellows with lice, for lice seems to be a disease from one or two causes.

This spring, after we hatched some fine chicks in an incubator, we put them when two days old in the outdoor brooder. Before putting the chicks in, we spread newspapers all over the brooder floor, then sand, grit and chaff. The papers were slipped out every morning, taking with them all dirt and dampness, and if there had been any left over food it would have to come too. Newspapers were then put in, more grit and chaff; the little fellows were busy and happy, and how they did grow. A brooder treated in this way is no trouble to speak of. If you have several, it takes only a few moments with each and they are always sweet and clean.

By the way outdoor brooders are our preference; they can be kept warm at

all times, and then it is impossible for rats to get in—have good roomy ones. I would like to tell you the kind we think best but perhaps it would not do here. From brooder houses put them into colony houses. A hen setting gets run down and too often has lice or mites.

Now I have told you about our good luck with a clean brooder; I will soon tell you what happened from neglect. Sickness prevented us from keeping our brooder up to its standard of cleanliness. Perhaps the dirt helped to breed some lice; anyhow when almost two months old, we found them running around with their wings drooping, and their feathers looked as if a breeze was blowing them the wrong way. Examination showed a nice lot of lice, great big fat lice. Quick work with house powder soon put them out of business, but the chicks got a hackset. We caught each chick and sprinkled it liberally with the powder. We lost three of our little beauties, but we had our experience. A chick getting its feathers is like a child cutting teeth; it has two sieges at it. The larger breeds at about three weeks old is their first time and the easiest; then at about two months old when they are getting their full plumage is the most serious time. The vitality seems low and it is the time when lice will get them if they ever do.

Now does the lice cause them to be sick or does a low vitality, caused by their cutting the big feathers breed the germ lice? A baby when cutting teeth is subject to serious sickness caused by the teeth; its vitality runs low. A kitten when cutting certain teeth has fits. The chick has no teeth but cuts its

feathers, causing a low vitality; it is the critical time with our feathered tribe. If we bring them through that stage we have as good as raised them. So we believe they are more subject to lice when run down, as there is a special drain on their system, such as sitting for old hens, and feathering for the young. The louse breeds because the chick's or chicken's body is in a low condition. Lice is a disease as sure as ousp.

So at the feather cutting age we must not neglect their brooder house, for dirt helps to weaken your chicks. Have you ever looked into a chicken house that the smell would almost knock you down? Could a fowl confined in such quarters be in a healthy condition—no, I think it simply impossible.

Then the feed must be carefully looked after. Don't change too suddenly; when you do change it, give a little of what they are used to with the new feed; they don't take kindly to a change of diet. I am not in favor of whole wheat until they are at least three months old. Our best results have been with chick food and baby chick grit until six weeks old, then a little ground oats and corn just a little damp, also cracked corn. There is nothing like good old Indian corn for plumage and red combs. I know some say don't give too much corn—I don't believe you can. Last fall when our corn was hauled in, all of the little ears were thrown on the ground to the chickens, old and young, more than they could eat.

Our birds went into winter quarters fat, and we never had so many eggs during the winter months as we did last winter. Feed corn mostly with buckwheat and some oats occasionally; also give plenty of clover hay for them to scratch in. Clover is an egg producer and winter eggs are what we want. Many poultry raisers have summer eggs, but not all of them winter eggs. Give corn and have no frozen combs or feet; they will then have feed enough in their bodies to keep Jack Frost at a respectful distance. Corn gives a richer plumage, more gloss. Of course, we must give them a change, but they do not need so much change. Nature ought to be the best teacher and chicken nature does not take kindly to a change of diet. They will eagerly eat green stuff given them at all times, but see them look sideways and maybe walk off when given a grain that they are not accustomed to. We are apt to try to force nature, when things would be better of if left to nature's laws. I tried to feed bread to a special mating of chicks that are doing well on chick food; perhaps they were wiser than I, for they walked off and left it. In breeding we are apt to try and force nature; let her alone when you can. Look at the birds with their beautiful plumage and health.

But if we must force nature, let us have good incubators and above all good large brooders—do not crowd your birds either young or old, clean colony houses airy and cool with protection from cold winds that often blow up suddenly after a severe warm spell.

A few words in regard to cleaning colony houses or poultry houses of any kind. If you do not use droppings boards—after the droppings are all removed, the floor swept clean, getting out all stuff from the corners—have air slaked lime, throw it on perches and plenty under the perches. Don't sprinkle it but throw it, so it will fly all over the house; then shut the door or drop the curtain. The lime flies into the cracks and crevices

THE BEST BARRED P. ROCK HEN IN THE WORLD

"Louisiana," First Prize at the World's Fair

is still in my possession. I have refused \$500 for her. My winnings at the late Missouri State Show are too well known to need special mention. Trios and pens mated for best results. A few settings of eggs to spare. First come, first served.

Mrs. Della Maxwell :: Box 1, Fayette, Mo.

To-Day!

SEND A POSTAL OR LETTER and ask for AMERICAN POULTRY JOURNAL'S 1906 subscription offer. Never have we offered so much be-

fore. For six subscriptions you are allowed over one-third commission, and are given a set of four beautiful colored pictures. These same subscriptions also count in a chance toward winning the \$600.00 Piano; \$100 cash; \$50 worth of Fowls; Incubators; Brooders; Eggs, etc., there being over fifty of these grand prizes. One of our subscribers says, "I do not see how you can afford to do it." But we want subscriptions and lots of them; that is why we are making such liberal offers. Our space is too small here to explain all we give to every one who helps us. We hope every reader, who reads this, will send for the Offer at once. It will be a happy new year for both of us.

AMERICAN POULTRY JOURNAL PUB. CO.
325 Dearborn Street :: :: :: Chicago, Illinois

and if there should be any mites lurking there it will choke up their breathing apparatus completely. Throwing plenty of lime on the floor makes the droppings easy to remove next cleaning time; keeps the droppings from sticking to the boards. If not a board floor, it answers the same purpose on the ground. A little straw sprinkled on top of the lime aids in removing the droppings.

We can save so much hard work by just such little things. After the house is cleaned pour kerosene oil all over the perches, so it will run down on the under side. Now if this is done once a week, I think you will find that you will have good healthy chicks. Of course we must lose a certain percent with the very best of care—but I am sure that your percentage will be small if you have good outdoor brooders. Keep them clean, feed carefully and give plenty of fresh water and when old enough to run out give free range and plenty of bugs to catch; but they are better housed when it is cold and rainy. When too large for a brooder, low perches in a colony house.

For young chicks only a house or department for each age; it won't do to put your small ones with the larger ones for the simple reason that the larger ones trample them, for the little ones will try to crawl under the larger ones. Nature again—nature tells them if they

the lice and inoculate the others. I admit they will go from a sick to a well bird—but think the louse breeds on the one with low vitality.

MRS. FRANCES TALLON.
South Haven, Mich.

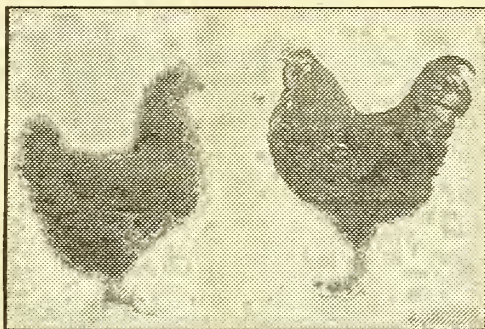

A FEW REMARKS ABOUT COLD STORAGE EGGS.

Now that the cold storage eggs are taking the place of the erstwhile, strictly fresh ones, from the ranch, we hear the usual accompaniment. A murmur of complaint.

Why this universal complaint? Dressed chickens, meats and fruits come out of cold storage in good condition. Why not eggs?

I think those who would care to investigate would find that the majority of cold storage eggs, were bought from the farms, and generally where conditions are not all that could be desired.

In the first place, we find a flock of chickens, anywhere from seventy-five to two hundred, with a poultry house, with room enough for about one-fifth of the flock, with nests inadequate. When the hatching season is over and warm weather advances, a number of hens become broody, with no place prepared to break them up. Or if conditions are better with some flocks, and the broody hens

Pair Black Plymouth Rocks. Bred and owned by J. W. Creighton, Potomac, Ill.

had a mother, she would cover them up with her soft, downy wings. We ought to invent a hen to put in the brooder with wings and soft feathers to take the place of the real mother. There are many things that can be improved and will be—see the progress made in a few years: but with all its shortcomings brooders are better than hens. A brooder keeps them warm and dry, the chicks can come and go as they please; it does not drag them around in the wet. If you have brooder chicks and some with hens, look at the difference; the brooder chicks won't go far in the wet grass, therefore, will not get wet, but those with the hen look almost drowned; she seems to have no sense of the fitness of things nor to know that her babies have not as long legs as she. It is best not to let the little fellows out until the grass has dried off; it does them no good to get wet; they are always better dry.

With the treatment we give, we never have any pasted chicks. I think that more often comes from change of food and colds. A young chicken cannot stand cold, dirt or lice. We have no sick old fowls, therefore, we have no lice. Watch your birds and find out for yourself whether our theory is correct or not. We may be wrong but I cannot bring myself to think so. A sick chicken will breed

are taken care of, but still a scarcity of nests. The laying hens will pile up in the nests and before they get off the nest others will get on, and in either case, if the weather is very warm, the eggs have been in an incubating degree of warmth long enough for the germ to start to grow.

In the evening the eggs are gathered up and carried to the kitchen to remain until Saturday. When a general egg gathering takes place, they are brought from the hay loft, from the old granary, the hollow stump in the orchard, and various other places where biddy fancied a location to build for herself a home-made nest. When they are brought in from all of the recruiting stations they are carried to the store.

The storekeeper is not quite ready to ship. The eggs will have to endure a few more days' warm weather, when finally they are rescued by the cold storage plant.

Is it any wonder there are so many spoilt ones? The wonder is that there are any that are good.

If eggs were gathered in soon after laid, and kept it in a cool place until put in cold storage, it would be quite helpful.

If commission men would pay a few more cents for eggs that were gathered

in twice a day during the warm weather, it would be an inducement to better results. They wouldn't lose anything. The consumer would gladly pay a few extra cents for better eggs.

If knowledge gleaned from a good poultry journal was utilized, it would be far reaching toward ameliorating the conditions.

MRS. F. M. LYLE.

DUSTON'S WHITE WYANDOTTES

It is a fact that my customers have been winning the lion's share of prizes for years, in all the hottest shows, with stock direct from, or bred from my yards. Every breeder of Wyandottes knows this to be so.

Arthur G. Duston, Esq.

La., December 11, 1905.

Dear Sir:—I drop you these few lines to inform you that the cock we bought of you last year was the winner of first prize at Poultry Show, which took place at November 28 to December 1; also one of the hens taking 1st, each scoring 94½. I may show them at, Miss., December 26 to 30, 1905.

They are sure winners. Wishing you success,

....., President and Manager.

Mr. A. G. Duston, South Framingham, Mass.

....., Ga., December 1, 1905.

Dear Sir:—Received the cock all O. K. and am very much pleased with him. Think he is a very good bird.

....., Cal., October 18, 1905.

Mr. Arthur G. Duston, South Framingham, Mass.

Dear Sir:—Yours of the 10th inst at hand. My birds you shipped me arrived in fine condition. They got here last Wednesday. They were only between four and five days on the road.

They seem to be contented with their new home.

I thank you many times for sending me such a good selection. I am more than pleased and feel that you have given me value received.

....., N. J., December 8, 1905.

Mr. Duston.

Dear Sir:—Cockerel arrived last night, and think he is a dandy.

Coates Lodge, Cirencester, England, December 3.

Mr. Arthur G. Duston.

The White Wyandottes arrived here on Friday all safe and in excellent condition. I am very pleased with the birds. I think you have sent me a pair of very good birds, especially the pullet. The cockerel is hardly as large and massive a bird as we see now in England (was not fully matured, but is a comer), but he is none the worse for that.

I am very glad that I am able to write and say I am quite satisfied, as it is so much more satisfactory for both the buyer and seller. Yours truly,

HERBERT PEEL.

....., N. Y., December 4, 1905.

Mr. A. G. Duston.

Dear Sir:—The birds arrived Saturday evening in fine condition. They are O. K. in every way. The cockerel is especially fine, and I expect to raise some grand Wyandottes next year if all goes well.

....., Mass., November 17, 1905.

Dear Mr. Duston:—The hens reached here at nine this morning, and apparently are not a bit the worse for their journey. To say that we are all very much pleased with their appearance is too mild; we are really excited over them. I enclose a check in payment for the birds, but only can offer you my thanks for the care with which you selected them.

....., Tenn., November 22, 1905.

Mr. A. G. Duston, South Framingham, Mass.

Dear Sir:—The cockerel you sent reached me in fine condition several days ago, and is a beauty.

I am well pleased with his appearance and think I have good value for my money.

Why not take a short cut and go to headquarters to the breeder that has made possible the "World's best flocks."

Stock at all times. Eggs \$5 a setting; two settings \$8; three settings \$10; five settings \$15, or \$20 in hundred lots.

ARTHUR G. DUSTON, Specialist
Box 1020, SOUTH FRAMINGHAM, MASS.

CLEANLINESS IN THE POULTRY HOUSE.

It is a disagreeable task at all times to clean out the poultry houses and coops, but, like every other undertaking, much depends on the systematic manner in which the work is performed. The writer has seen persons labor hard all day, in the midst of filth, with shovel and hoe, cleaning the poultry house, and when the job was finished but little appearance of cleanliness was added to it. There is an easy, neat, effectual way of cleaning the poultry house, which, if adopted, removes the dread and disgust of the work, and makes it a pleasure instead of an annoyance. The first consideration is the construction of the floors. Dry dirt will not answer, for the reason that it absorbs the impurities, and the filth can only be removed with the dirt, thus entailing the necessity of changing the entire floor and substituting fresh material. The writer has found the use of the broom to be the cleanest, easiest and best method of removing the droppings, but in order to do so the floor must be hard. Wood is the best material, but a wooden floor is liable to become a harboring place for rats, unless it is well closed underneath, or raised sufficiently to allow a cat or terrier to run in and out under it. When this is done the cold air comes up into the poultry house in winter, and makes the wooden floors objectionable. Cement is better, for it not only prevents vermin from entering, but also the drafts. The cheapest way to make such a floor is to take one barrel of lime, two of sand, one of gravel, one bushel of cement, and two gallons liquid coal tar. Mix the ingredients dry, then add water, and spread evenly on a hard surface which has been graveled. The coal tar may be brought to a proper consistency with coal oil. It keeps away lice, and colors the cement. Let the floor remain undisturbed for twenty-four hours, and add another coating in order to stop the cracks. WM. T. SCHALM.
Sturgis, Mich.

EGGS IN WINTER.

To have eggs in winter you must have the conditions to produce them. Make your hen house seem something like summer time; build to face the south, have south doors and south and east windows, so to let in sunshine as house should be dry and pure as possible.

Air on all nice days and let the sun shine on the roosts.

See that all openings are closed at night that let any draft on the hens when roosting, small breaks or knot holes in the walls should be patched to keep out that little streak of air that tends to disease your hen.

Use two by four inch scantlings for roosts and place them so they can be easily turned over to look for mites that bother only of nights and hide under the roosts and in crevices during the day. Thus it is very important to have planed roosting material. Your hens cannot give you good work in the day if kept from their rest all night.

Make roosts flat, not slanting, and hinge to the wall so as to raise to clean the dropping board. Place dropping board about two and one half feet from floor to give plenty of room and light.

Do not place one sash window too high and prevent light shining upon the scratching floor. A door made of canvas to place in open door way on stormy

days is excellent to give light and ventilation to the hens while exercising, as they should not be turned out on bad days; a muslin front scratching shed attached to the hen house makes a profitable room.

Place dust box, grit and shell boxes, nests and drinking vessels up from the floor to give all space available.

You can bore holes in the sides of your nest boxes and hang them on the walls.

Slant the roof of nests so hens will not roost thereon.

Place dust box so sun can shine on it and keep the dust bath perfectly dry. Keep plenty of litter on the floor and replace often if hens are confined long from cold or stormy weather.

Scatter all your small grain in the litter and keep hens busy, if they get plenty to eat without working they will not pay you for feeding.

You can fill the egg basket,

And make poultry pay,

If you keep hens working

And happy always.

Care of hens is not hard work and is very profitable if you are thoughtful about every condition desirable for the health and happiness of the hen.

Keep your poultry gentle and not allow strange things to come into the hen yard.

Watch for sick hens and remove immediately from flock to a warm, well-ventilated place.

Feed your poultry green foods as cabbage, turnips, beets and onions, also feed meats and dry bran. A warm corn meal mash well seasoned with a little salt, plenty of cayenne pepper and grease fed every few days I find to be egg producing.

With the small grains, wheat, rye, oats and corn, and plenty of clover hay, and judgment in feeding you will be well paid.

Now one thought more before closing, take good poultry papers, and as some writers to the AMERICAN POULTRY JOURNAL have truly said, make it one of your papers, study carefully and put to practice, then success is yours.

Shirley, Ind. Mrs. F. HAZELRIGG.

SILVER PLYMOUTH ROCKS.

The Exmoor Farms, of which Mr. Edgar A. Weimer, of Lebanon, Pa., is proprietor, devotes this month's advertising to the wonderfully interesting new variety of Silver Plymouth Rocks, which is the only flock in America. These birds are distinctly of Dark Brahma-Silver Gray Dorking and Mottled Java origin. Readers of the December issue of the AMERICAN POULTRY JOURNAL have no doubt noticed W. Theo. Wittman's article on this new breed. Modesty, no doubt, prevented him from saying that the famous Dark-Brahma-Silver Gray Dorking-Mottled Java cross originated and belongs to the Exmoor Farms, Lebanon, Pa. The cock and hen from this line were shown by Edgar A. Weimer at the World's Fair at St. Louis, and captured two first prizes. They were admired as wonders of a new breed. For the first time the Exmoor Farms are booking orders for eggs, from either pullet, cockerel or single mating yards.

NATIONAL GOLDEN WYANDOTTE CLUB MEETING.

The National Golden Wyandotte Club will hold its annual meeting at Music

Hall, Cincinnati, January 19, at 7 p. m. A good attendance is desired. Several special premiums will be offered at the show held in that place that week, so be sure to be present and see that your birds are present also.—A. W. Davis, secretary and treasurer, Big Rock, Ill.

A PLEA FOR CLEANLINESS.

How often we see on entering the poultry runs bones, cobs, vegetable peeling and rubbish of all kinds. The house even in worse condition, possibly having been cleaned but once in a year, and hear the owner complaining of poor results. Now give the poultry the same chance that you give your horse and cow. Clean the yard, remove the droppings every morning and watch the effect on birds.

C. C. WOODCOX.

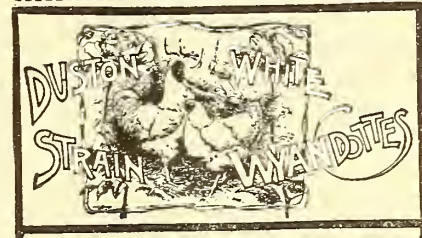

St. Joe, Ind.

Best Fruit Paper Free

PRICE \$1.00 A YEAR

but if you send the names of two friends who grow fruit, we will mail free, three samples of THE FRUIT-GROWER and will tell how to get it and 10 fruit books free Fruit-Grower, 433 S. 7th, St. Joseph, Mo.

I am still giving my customers the above cut for their stationery or advertising work. Any old customer that has not had one, and wants same, can have it by writing for it.

BUY THE NEW LINDSEY

Start right—get in line for best results in hatching and brooding strong, healthy chicks by using the New Lindsey Incubators and Brooders. No smoke, fumes or impure air from lamp go into either incubator or brooder. The only sensible heating system ever devised.

THE NEW LINDSEY is the nearest approach toward all round perfection in incubators yet produced. Cannot fail to give perfect satisfaction. Hatches every fertile egg; uses less oil. Fill the lamp, turn the eggs daily and the Lindsey will do the rest. Self regulating. OUR GUARANTEE—ABSOLUTE SATISFACTION AS LONG AS YOU OPERATE THE LINDSEY or your money back. No time limit. Write for catalogue.

Lindsey Incubator Co., Box E, Fairfield, Nebraska

FEATHERS.

IF YOU WANT NICE FEATHERS BE CAREFUL HOW YOU MATE YOUR BIRDS.

I will tell you how to get rid of black or dark feathers in buff chickens.

At first you may be discouraged, but there are so many discouragements in life. If we hold on with a good grip we finally succeed in gaining our desired end. So with trying to get rid of dark feathers in buff birds. You will be discouraged the first year, but just hold on and see the results the next year.

Too often in Buffs we find brown or almost black feathers in wing and tail, which spoils a true buff. It's more often found in the male than the female bird. Take good even colored Buff hens or pullets and mate them to a very light cockerel, that shows white feathers instead of dark.

When your chicks hatch from this mating you will have a great many very light chicks, but from that mating you will get some good male birds and better females; but there will be a great many that show too much white. Don't be alarmed, that's all right. Your gain is so much more than your loss that you need not mind it, for what cockerels you have good will be golden or lemon buff from skin out; both tail and wings will be yellow, with maybe a few white short feathers in under arm of wing.

Mate these best cockerels to your even colored hens or pullets, or both, the second year, and see the grand results. Even buff under color; wing and tail all a rich buff.

In the second year, as well as the first, there will be some white, but it shows most in pullets, but you have enough good colored pullets, and the cockerels are perfect, or as near so as buff can be.

If we are breeding buff, we want buff, not Rhode Island Reds or cinnamon colored buffs, but beautiful soft even buff.

To judge color we should have lady judges. Men are too often color blind in soft, delicate colors. We don't want yellow brown in buffs, as are too often bred, but soft clear buff from tip to tip is what we should aspire to have. First we must get rid of the brown or black by infusing lighter blood in the strain, then working that down by breeding our best in color, then we get our soft, clear buff that is a pleasure to look at.

Some say they would rather their birds showed dark than white feathers. In some things it's best not to show the "white feather," but in breeding out the dark don't be afraid.

We think we have some ideal birds in color this year by the plan just given.

The first cockerel was very light, with a great deal of white in wings and some in saddle feathers, but good tail. Mated him to pullets first time; from that mating got some more nice pullets, and a decided improvement in cockerels. Discarded the first male bird and used the best even colored cockerels with the hens and pullets, and the result was fine.

Often in examining the under wing of a buff you find both white and brown, even from high priced stock. Now, that don't look well. It takes time, but we can get rid of the dark anyhow, for we have none of the brown in our birds this year. If they show anything it's

light, but we hope to overcome that entirely, and hope as raisers of buffs to have only buff.

FRANCES TALLON.

South Haven, Mich.

"TURNING THE EGGS."

A great many manufacturers advise the use of egg turning devices and pay more attention to these complicated affairs than to the hatching process. Practical experience has taught me not to use the patent egg turner. Turning the eggs is best accomplished by taking the palm of the hands and gently rolling the eggs over and over. It is almost impossible to turn the eggs too much, for every movement of the egg makes a corresponding movement of the chick in the shell, which develops its strength and makes it strong enough to break the shell. Every time you look at the thermometer, gently stir the eggs and you will be well repaid with the result.

Lincoln, Neb. NELLIE G. KINCAID.

TO THE BEGINNER.

Could the beginner be impressed with the fact that by starting with a trio of the best and successfully caring and rearing of the progeny that it would place them in the position which most successful poultrymen attain after five years or more hard work and experience there would be fewer failures.

Mt. Washington, Mo. L. O. BAIR.

"ORPINGTON ITEMS."

Nothing like an Orpington to grow and give largest returns on money invested and feed consumed.

A breed nowadays to merit recognition has to be backed up with true commercial qualities besides beauty.

Why do Orpingtons lays so well? Because their foundation was laid along commercial lines, giving them the long tapering head, prominent eye and alert step of the Standard laying fowl.

Watchung, N. J. A. G. GOODACRE.

WARMTH NOT ESSENTIAL.

On account of being short of room I have a flock of Buff Orpington pullets in a building so open that twice already I have been obliged to shovel snow out

before feeding and during some of the coldest days water has frozen within 15 minutes. Yet in spite of these conditions I never had a more healthy, thrifty lot of pullets. I am feeding them no meat or bone, nothing to stimulate egg production, still they are laying from 1/2 to 2 dozen eggs every day.

Edmeston, N. Y. CHAS. BENNINGTON.

Barker's light brahmas continue to win. Another clean sweep. At the Central Indiana Poultry Association's show, held December 18-23, 1905, they won first, second and third cock; first, second and third hen; first, second and third cockerel; first, second and third pullet; first, second and third pen, in a strong show. Judge Pierce said it was the strongest show of Brahmas he had judged in 1905.

BE A FANCIER!

One pure-bred hen, costing say \$2.00, will in season lay 13 eggs in as many days; these eggs are worth at least \$2.00 for hatching, results: One Pure-Bred Hen pays for herself in 13 days!!!

One mongrel hen, costing say 75 cents, lays 75 eggs in 150 days (that being liberal to the mongrel). They can't be sold for hatching, so they go to the market at one cent apiece. The result is: One mongrel hen pays for herself in 150 days!!!

P. S.—If she hasn't eaten her head off before that time.

Beloit, Wis. MORGAN POULTRY FARM.

C. N. Hansen of Warsaw, Ky., has an ad of great interest to Rhode Island Red breeders in this issue, in which he relates that he was winner of more cash prizes at the World's Fair, St. Louis, than any other exhibitors; also winning every first prize at Madison Square Garden, New York, 1905, also three specials for color and shape. At Chicago, December, 1904, he won every first prize and silver cup for best 10 Reds in show, Rose and Single Comb competing. He won all first prizes at Cincinnati, 1903-1904. Also won first prize at Indianapolis, Louisville, Hamilton and Warsaw; and his stock this year won prizes at New York and Birmingham, Ala., in the hands of his customers. He is now booking orders for eggs.

Edgar G. Simpson, Naperville, Ill., breeder of Barred Plymouth Rocks exclusively, is advertising 300 cockerels and pullets in this issue, bred from Chicago and Naperville prize winners. Don't fail to write him if you want something in this variety at "live and let live" prices. Mention AMERICAN POULTRY JOURNAL.

SINGLE COMB BUFF LEGHORNS

If you are looking for high-class stock and eggs remember that I have purchased the entire stock of the famous Howell Strain. Mr. Howell has been eleven years breeding them to their present high standard, and they have been winning for him and his customers from Maine to California. His last winning was three regular and one special prize on four entries at Madison Square Garden, 1905, including first pen, which the American Fancier said was the best Buff Leghorns in the show, and the old Buff Leghorn exhibitors said it was the best pen ever seen in Madison Square Garden. I have a few cockerels for sale, and will offer eggs at \$3.00 per 15, or \$5.00 per 30 straight. Positively no reduction on larger quantities. See cut of 1st pen Buff Leghorns, Madison Square Garden in this issue.

::

Eldorado, Illinois

EARLY CHICKENS.

There are advantages and disadvantages connected with early chickens.

The disadvantages are, first, that the early eggs do not hatch so well as those laid somewhat later. February eggs are worth considerable more per dozen than March and April eggs. These two facts make the cost of the newly-hatched early chicken much greater than that of the later arrival. If a dozen eggs in February are worth 40 cents and from the dozen but five chickens can be hatched—and the price named is not excessive, while the result obtained as an average is good—each little chicken costs, not counting the food of the setting hen or the value of the labor for attending her, 8 cents upon the day he comes out of the shell. If April eggs are worth but 20 cents a dozen and eight chickens are hatched from each dozen of eggs set, the newly-hatched chicken costs but 2½ cents.

Again, early chickens must have better quarters and better care, which add to the cost of rearing.

And again, February-hatched chickens, even with the best of care, do not, and, as a rule, will not, grow so fast as chickens hatched in April and May. The cold weather, even if it does not stunt them, compels the food to be used for the creation of heat rather than of bone and muscle.

And finally, because of the unsuitableness of the temperature, there is the probability that of chickens hatched early a larger percentage will die than will of those hatched when nature furnishes the environment for rapid and healthy growth.

The greater cost when hatched, the more expensive quarters, the better care needed, the slower growth and the greater mortality are, when combined, somewhat serious disadvantages and cause the cost of the matured specimen to be considerably more than that of one hatched and reared under more favorable auspices.

But there are advantages as well as disadvantages connected with early hatching. Everything is not on one side, like the handle of a jug.

In the first place, in the largest varieties early hatching is almost a necessity, if one desires to have specimens up to weight for early exhibitions or wishes pullets to lay during the late fall and early winter months. A variety which requires eight or nine months for its growth must necessarily be hatched early to get the growth before winter sets in. February eggs mean usually March chickens and two months of the winter are gone on the first day of March.

Again, early hatched pullets will lay in the fall when the old fowls are moulting or recovering from the strain of this process. The eggs thus laid invariably command a good price and the money received therefrom can and should be credited against the extra cost of rearing these early hatched pullets. It is not necessarily unprofitable to pay twice as much for an early as for a late pullet, provided the early pullet will pay back the difference in eggs. The income to be derived, as well as the cost of production, needs to be taken into consideration.

And still again, it is to be remembered that pullets, which will be mature enough to lay at six or seven months of age, will not lay at that age

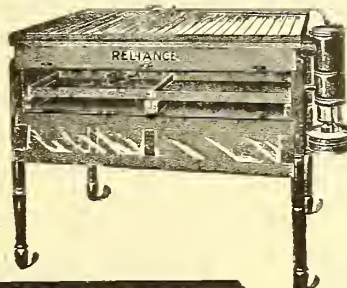

if the period of maturity arrives when the weather is very cold. But if the period of maturity arrives when the temperature is comfortable, as it is usually in September and October, the laying will commence, and once commenced it will not be easily prevented by cold. Cold weather may retard laying maturity—extending the period several months, so that a pullet which naturally would have laid her first egg when six or seven months old, may not lay it until nine or ten months old—but cold weather has less effect upon preventing the exercise of the function of laying when once begun. A pullet which begins to lay in September or October can be pretty safely counted upon to lay through the winter, but if she doesn't begin to lay in the fall the chances are that she will not begin egg-production until the following spring. For winter-laying, when eggs command high prices, early hatching is very necessary.

When to hatch the chickens, therefore, becomes an important problem. What is best for the individual breeder is for him to determine, and the balancing of the advantages and disadvantages is needful for a proper and wise determination of the subject. Whether to hatch early or late or to continue the hatching through the whole season will depend upon what the breeder desires to accomplish, and he alone can properly decide what is for him the best method of procedure.

H. S. BABCOCK.

Providence, R. I.

At Central Missouri Show, November 28 to December 1, 1905, Miller's invincible Langshans, in the strongest kind of competition, won 1st and 3d cocks, 1st, 2d and 3d cockerels, 1st and 4th pullets, 4th hen and 1st pen. Mr. Miller lives in a Langshan country and competition is always strong, and birds must be good to be in it for any place. If our readers want Langshans they should write to Chas. G. Miller & Son, Boonville, Mo.

HOW TO BUILD AN INCUBATOR and BROODER

It's easy with our COMPLETE ILLUSTRATED PLANS. A ten-year-old boy can readily follow them with success. They show you every stage of construction, step by step, in nearly 100 half-tone illustrations. They contain complete specifications for building the famous PEERLESS INCUBATORS AND BROODERS. Every feature is clearly pictured and thoroughly explained, making it possible for ANYONE to build an incubator and brooder possessing exclusive features and advantages which are unequalled by any machine on the market. We supply ALL PARTS not possible for you to make, such as lamp, regulator, tank, heater, legs, door, etc., at a very small cost and furnish the

Plans and our new FREE Illustrated Catalog

which contains our full line of Improved Incubator and Brooder Fixtures and Supplies, including our New

Acme Automatic Lamp and Compound Regulator

with combined damper and flame regulator, which SAVES ONE-HALF THE OIL. No danger from fire; can't overheat; no trimming of wick; regulator controls both flame and damper. Can be attached to any make of incubator or brooder. If your machine is not working right our catalog will tell you how to remedy the trouble.

Salt Lake City, Utah, July 25, '05.

H. M. Sheer Co., Quincy, Ill.

I have built twelve Peerless Incubators from your fixtures and plans. Six I sold to poultry raisers here, and six I run myself. These machines gave good results, never hatched below eighty per cent and as high as 92 per cent. I have up to date 2,156 Pekin ducks and 540 chicks. I don't think I lost over 5 per cent of ducks and chickens hatched. These incubators take very little care. The regulator, when once set, holds the 105 mark from beginning to end, and the lamp is a big oil and time saver. I have orders for

Respectfully yours,
WM. BEDEKER.

4 Peerless incubators now and I want to build two or three more for myself.

100 Egg Peerless Incubator
built from our Plans and Fixtures

Equipped with Acme Compound Regulator and Automatic Lamp. Note combined damper and flame Regulation above

INCUBATOR QUALITY!

MERIT WINS!

We claim eighteen distinct and valuable improvements in the 1906-pattern Standard Cyphers—improvements that enable us to guarantee larger percentages of bigger, stronger and more vigorous chicks and ducklings than can be hatched in any other make of incubator on the world's markets—bar none. **FACTS, based on careful experiments and the signed testimony of persons of known integrity,** are what the poultryman wants who is interested in **THE TRUTH ABOUT INCUBATORS.**

The 1906 Pattern Standard Cyphers.

Last Month we presented sample reports from ten widely separated localities of the United States and Canada, telling of the remarkable and highly satisfactory work done by these latest improved, **Genuine, Non-Moisture Cyphers Incubators** in the hands of well-known, **Foremost Fanciers**; below we present as many condensed sample reports from the proprietors and managers of **America's Largest Practical Poultry Plants** as we have room for in this advertisement which is **Number Three** of the series.

1906 Standard Cyphers Incubators

YARDLEY DUCK FARM.

Ducklings—Broilers—Roasters.

W. H. McCormick, J. C. McCormick, Props.

Yardley, Pa., Sept. 16, 1905.

Cyphers Incubator Co., Buffalo, N. Y.

We are nearly through with this season's work and thought we would write you, thinking you were anxious to know how the two 1906-pattern Standard Cyphers Incubators which you sent us last spring and the thirty-six No. 3 old-style Cyphers machines we bought from you when we started in the duck business three years ago compared in hatches with the 67 new — Incubators we bought of another maker last winter. In our hatches we found that both your styles of machines gave us a better percentage and much stronger ducklings when taken from the incubator and with less mortality while in the brooder. We are very much pleased with your 1906 Standard Cyphers machine and believe it to be the best incubator on the market. With the incubators of your make that we now have and the sixty-seven 1906-pattern ordered from you, we will have more than 100 incubators in use the coming season and shall use the Standard Cyphers exclusively.

Yours truly,

W. H. McCormick & Son

POULTRY DEPARTMENT HARTMAN STOCK FARM.

S. B. Hartman, M. D., Proprietor.

Columbus, Ohio, Sept. 17, 1905.

Cyphers Incubator Co., Buffalo, N. Y.

It is with truth and justice to you when I say the Cyphers Incubator stands alone. Have given two of your 1906-pattern machines a thorough trial and find them a decided improvement over the previous design. Especially noteworthy are the drop-bottom and nursery drawer features. Have operated Cyphers Incubators in large numbers during the past five years and can recommend them above all others I have tried. At present we have 47 Standard Cyphers Incubators in our incubator cellar and on September 11th placed with you an order for 10 more of the 1906-pattern, largest capacity.

Yours truly,

J. B. Hawk, Mgr.

STOFFER POULTRY FARM.

(Incorporated)

DUCKLINGS AND BROILERS.

Capacity, 100,000 Annually.

Harrisburg, Pa., Nov. 3, 1905.

Cyphers Incubator Co., Buffalo, N. Y.

We have made careful and consecutive tests with your new 1906-pattern machines and I believe they are the best incubators on the market today. September 16th, 1905, we took off a hatch that averaged over 90 per cent. and they were all good, strong ducklings. We never before have hatched as large a percentage in August and September with any other machine, or anything near this average at this time of the year with duck eggs—and we have tried all the best known makes of incubators. I feel that you have won a great triumph in your 1906-pattern combination duck-egg and hen-egg incubator and that this machine will very largely benefit all who use it. Our output this season was 70,568 ducklings, by the use of 100 incubators. Of this num-

ber I am pleased to say that six machines were of your improved 1906 type and had they all been of the 1906 pattern I feel confident our output would have been more than 75,000 ducklings. You hereby are authorized to ship us at once 94 of the No. 3 size, 1906 pattern. This will give us 100 of the new machines.

Yours very truly

C. A. Stauffer.

FISHERS ISLAND FARM.

E. M. & W. Ferguson, Props.

Fishers Island, N. Y., Oct. 10, 1905.

Cyphers Incubator Co., Buffalo, N. Y.

We have been using the Cyphers Incubators ever since they were first put on the market, and we have tried them side by side with about all the leading makes of incubators with the result that we have found the Cyphers to be the simplest to operate, requiring less care and attention and always hatching out a much larger per cent. of good, strong, vigorous chicks from the same number of fertile eggs than any other machine. We thought the old Cyphers was about perfect, but after giving your new 1906 machine a thorough trial we must say it is really a great improvement over the old machine and we shall replace all our old machines with the 1906 pattern immediately. The new metal top heater, removable upper and split lower diaphragms are a step in the right direction and prove that you not only intend to be, but are ahead of all competitors.

Yours very truly,

L. O. Burpee, Manager

LEDGEWOOD DUCK FARM.

Norwalk, Conn.

Capacity, 50,000 Annually.

H. P. Brooks, Prop.

G. A. McPetridge, Mgr.

Norwalk, Conn., Sept. 11, 1905.

Cyphers Incubator Co., Buffalo, N. Y.

We have been using the past season 85 of your 360-egg size incubators, including one of the 1906-pattern. This new machine hatched all the fertile eggs except half a dozen or so. Judging by our own experience with the Standard Cyphers, we did not deem it practical for you to improve it, but you have done so and we congratulate you. As above stated we now have in use 85 of your No. 3 incubators and they are giving perfect satisfaction. Your incubators have run like clock work, especially the 1906-pattern machine with the new Thermostat and speaking from many years' experience, both as an incubator manufacturer and operator, I do not see any further room for improvement.

Yours respectfully,

G. A. McPetridge, Mgr.

WEBER BROTHERS.

BREEDERS OF IMPERIAL PEKIN DUCKS.

Annual Capacity, 45,000.

Wrentham, Mass., Oct. 10, 1905.

Cyphers Incubator Co., Buffalo, N. Y.

It gives us the greatest pleasure to testify in regard to the superior hatching qualities of your latest pattern incubator. In our long experience in the poultry business we have had the opportunity to try, and experiment with, every

well-known make of machine on the market, and we have proved to our complete satisfaction that for reliability, uniformity of temperature, simplicity of action and ease of operation, the latest Standard Cyphers Incubator has no equal in the market today. We hope in the near future to have a capacity of 100,000 eggs and no other incubator on the plant but the 1906-pattern Standard Cyphers.

Very truly,

W. E. Lane

WHITE LEGHORN POULTRY YARDS.

Waterville, N. Y.

WORLD'S LARGEST SINGLE-VARIETY FANCY FOWL AND EGG FARM.

Waterville, N. Y., Oct. 10, 1905

Cyphers Incubator Co., Buffalo, N. Y.
For several years past it has been our pleasure to testify to the merits of the Cyphers Incubators. At the close of another successful season we can only repeat and emphasize our former statements. The Cyphers Incubators we are operating have a capacity exceeding 5,000 eggs at one time. During this season the machines have been handled by many different operators—by the men employed regularly upon our plant, as well as by resident students of the Columbia School of Poultry Culture, gaining practical experience here. We find that chicks hatched in your machines are unusually strong and finely developed. The eight new machines of your 1906 pattern did not reach us until late in the season. From our experience with them, however, we should say that they possess all the good points of the old style as well as some in addition. We can honestly say that your incubators have been entirely satisfactory. The heating, ventilating and regulating arrangements have worked perfectly during the whole season.

Very truly yours,

White Leghorn Poultry Yards Co.

EMMA B. POULTRY FARM.

David Beidler, Prop. S. E. Lane, Supt.
WHITE WYANDOTTES AND SINGLE COMB WHITE LEGHORNS.

Bred for Heavy Laying.

Gurnee, Lake Co., Ill., Sept. 28, 1905.

Cyphers Incubator Co., Buffalo, N. Y.
At the close of another hatching season with the Cyphers Incubators I can only emphasize more strongly our complete satisfaction, for the reason that all the hatches were uniform and out of the season's work only three cripples were hatched. As you know we have increased our capacity from 16 of your 360-egg size to 32. Have used

Cyphers Incubators seven or eight years and during all that time have not used any moisture in any shape or form. The results obtained were so much more satisfactory than those from the five others operated on this farm, that we are now using your incubators exclusively.

Yours truly,

S. E. Lane, Supt.

EARL STOCK FARMS.

Geo. M. Woods, Prop'r.

Breeder of

PEKIN AND ROUEN DUCKS, SINGLE COMB WHITE LEGHORNS, WHITE WYANDOTTES AND BARRED PLYMOUTH ROCKS.

New Holland, Pa., Nov. 15, 1905.

Cyphers Incubator Co., Buffalo, N. Y.

I am pleased to report that the two 1906-pattern Standard Cyphers Incubators you sent us late last spring gave entire satisfaction. They seem to be constructed to meet every condition of temperature, are very easy to operate and bring out strong chicks and ducklings. Have decided to install them exclusively at the Earl Poultry Farm and also to equip our new ranch at Leaman Place with them. Find pleasure, therefore, in handing you herewith our order for sixty-five (65) of the No. 3 size—all 1906-pattern, to replace my old style No. 2 Cyphers and thirty-six (36) special duck machines of another make I used last season.

Yours very truly,

E. S. Hillhouse

FORESTLAKES POULTRY FARM.

WORLD'S LARGEST EGG FARM.

Capacity, 10,000 Layers.

FOREST LAKES POULTRY COMPANY, OWNERS.

Browns-Mills-in-the-Pines, N. J., Sept. 26, 1905.

Cyphers Incubator Co., Buffalo, N. Y.

We have used your incubators for the past five years and have found them to be satisfactory in every particular: we think, however, the 1906-pattern is far superior to all previous styles in several respects. The new regulator, for example, is, in our opinion, as near perfect as it is possible for a device of this kind to be and the nursery drawers for taking out the little chicks and ducklings are a great convenience. We have operated as many as 83 of your largest size machines at one time. We would not think of applying moisture in the Standard Cyphers Incubators.

Yours very truly,

George J. Puffer

NOTE: For many other equally strong reports see Complete Catalogue for 1906, now being mailed.

POULTRY FOOD QUALITY.

The Superior Value of Cyphers Company Poultry Foods has been secured by six years of continuous experiments made on this company's farms, supplemented by the use of its food products in the hands of thousands of customers. A JUST PRIDE in the quality of all goods we manufacture is the solid foundation upon which the immense business of this company is built.

Only Safeguard is Comparison

at Kansas City, Mo., this country's chief primary grain market, the largest and best equipped Poultry Food and Alfalfa Mill in the world, having a capacity of eight car-loads per day. Remember, also, that nothing else is made in our big mill—no breakfast foods, no stock foods; therefore, we have no waste products to mix in and "work off" upon the poultry public—our sole customers! In evidence of the quality of grains we use in our food products, we ask poultrymen to compare our foods in the sacks (just as they are sold by us) with the sacked product sold under any other name. **THE TEST IS IN THE SACKFUL**—not in the samples sent out—do not forget that!

SOLD IN SEALED BAGS:

FOR THE PROTECTION OF OUR CUSTOMERS, CYPHERS COMPANY'S HIGH QUALITY, READY-MIXED, BALANCED-RATION POULTRY FOODS AND ALFALFA PRODUCTS ARE PUT UP IN 50 AND 100 POUND SEALED BAGS, BEARING OUR TRADE MARK. CUSTOMERS SHOULD REFUSE ALL BAGS WHICH DO NOT BEAR OUR SEAL, ALSO THOSE ON WHICH THE SEAL HAS BEEN BROKEN OR REMOVED.

\$4.88
AND UP

When we offer you a GEM INCUBATOR AND BROODER we are not offering you cheap machines that nobody ever heard of before, so poorly constructed you cannot use them; we are offering machines with a successful record—with users in almost every community. The

GEM INCUBATOR

has proven its merits by its works. As a hatching machine, it stands 'way up in the front ranks; for ease of operation and convenience, it is 'way ahead of them all. Its REMOVABLE CHICK TRAY AND NURSERY makes it the women's favorite incubator because it is so simple and so easy to keep clean. WRITE TODAY FOR OUR FREE CATALOGUE. It explains our plan of selling direct to you at Factory Prices, cutting out all dealers' profits; tells how successful others have been and how you can make the most money with your Poultry. GEM INCUBATOR CO., Box B, Trotwood, Ohio

ARE YOUR HENS LAZY?

Some of your "biddies" which strut about your poultry yard and which are not even paying their board, it would be a good plan to "axe," or make them quit their loafing. **Tonic Poultry Food** will make them get to work in double-quick time. They like it. For twelve to twenty fowls mix two tablespoonfuls with their feed every day—then watch their laying nests. They will lay regularly, rapidly and nearly double the output of eggs.

Tonic Poultry Food

practically costs you nothing. One extra egg a day will more than pay for a 25-cent package. It is vegetable and bone—is harmless. It contains blood-making, flesh-forming, bone-constructing and egg-building materials—it assists the hen's digestion. Makes her happier, more contented, and develops sweeter flesh; gets her ready for market quicker. Makes brighter combs and in every way improves the appearance and carriage of your fowls. Let us help you. Write us a letter, tell us your troubles. We have a 48-page booklet which is waiting for you. We send it free. Ask your dealer for **Tonic Stock Food**. If he hasn't it, send to us. Write us today addressing Dept. W, and get our beautiful souvenir calendar free. Agents wanted.

Shows, Associations and Clubs.

The Latest News of the Show Room - Announcements of Special and Regular Meetings of Associations and Specialty Clubs—Secretaries are Requested to Send in the Latest News.

MINNESOTA STATE POULTRY ASSOCIATION, 20TH ANNUAL EXHIBITION, MINNEAPOLIS, MINN., JANUARY 23 TO 30, 1906.

Since our last announcement matters have developed so that we can say that this year will be finer and better even than it has been for the past three years, during which time it has grown more rapidly than any other show in America, and with the same percentage of increase for this season, we will stand in a class by ourself.

It is quite apparent to me that the fanciers and breeders do not realize the magnitude of the Minnesota State Poultry Association's shows and that it stands next to the state fair in point of moneys expended for premiums, etc., for the past three years. During the past three years the association has spent in the neighborhood of "twelve thousand dollars" for premiums, etc., and today, through the generosity of the business men of Minneapolis, we have cash enough on hand to insure the payment of every cash obligation for our "greatest of great shows," which will be held in Minneapolis, Jan. 23rd to 30th. We question if there has been another show held during these three years, anywhere, where so much money has been spent to promote the educational features of poultry culture as by our association.

We have seen the so-called other great shows, and can speak advisedly, without casting any reflection, when we say, that for show room attractions we excel any other show. We own the finest single cooping system of any show in the world, which has been greatly added to this year, to keep pace with our growth, and that we can assure single cooping to every specimen entered.

New York and Boston charge an entry fee of \$2.00 for each bird, on which you can win a first premium of \$5.00 and second premium of \$2.00.

Our entry fee is 75 cents per bird, on which we have increased the winnings for this year, so you can win first premium of \$3.00 and second premium of \$2.00, while our set of ribbons from first to fifth have always been the finest issued.

The sportsman's exhibit of Wallace G. Evans world's famous collection of oriental birds and pheasants, shown only by us, will be on a much larger scale than before, being increased by their large collection of snipe, partridges, quail, crane, swan, wild geese and ducks of all varieties, and if room permits, another great and exclusive feature will be added. These latter attractions are attempted by no other show in America and are worth double the price of admission charged for our show.

Our judges this year will be Sharp Butterfield, Theo. Hewes, George D. Holden and Tod Hale in the poultry department and Fred May on pigeons, while Mrs. Frank Rollo Woodruff will superintend and see to the placing of the awards in the lap and toy dog department.

These facts as herein set forth should

bring the breeders and fanciers of the northwest to a realization of the importance of showing with us on the dates mentioned and with us at Minneapolis only.

Genial Ralph Whitney will superintend the receipt, care of the birds while in the show, and the return of same, which is a guarantee that everything along that line will be first class.

Entries positively close Jan. 15th in every department.

G. A. LOTH, Sec'y,
Box 47, Minneapolis, Minn.

WISCONSIN STATE SHOW.

All arrangements for the great Wisconsin State Poultry Show at Oshkosh are now completed, and there is no doubt but what it will be such a large exhibit of high-class birds as to make all Wisconsin fanciers proud of their record. The premium list is out. It is handsomely illustrated with numerous half-tones of interest to all patrons of the show. The prizes are very liberal in all classes. Besides the regular cash premiums, there are ten \$5 gold pieces to be competed for, as well as fourteen handsome silver cups and over three hundred specials. Among the latter is a 120 egg incubator.

Every arrangement has been made for the interests of the exhibitors, both in show room equipment and profitable publicity during and after the show. Judges Chas. McClave and D. J. Lambert will place the awards on poultry, and a feature will be made of the pet stock, dog and pigeon departments. Entries close Jan. 13th, and the show opens Jan. 15th.

We want every interested breeder to have a copy of the premium list. A postal card request will bring one. We know it will pay you to exhibit at "Wisconsin's Leading Poultry Show."

FRANK W. RADFORD,
Secretary.

Oshkosh, Wis.

BOSTON, MASS.

The tenth annual exhibition of the Boston Poultry Association will be held at Mechanic's building, Boston, Jan. 16-20, 1906. There is no poultry exhibition in the country that approaches the liberality of the Boston show in cash premiums and valuable cups, no less than a score of \$100 silver cups being offered for the championship award in the more important varieties. In addition to the regular prizes of \$5 for first and \$2 for second, the Boston show gives \$10 for the best display, \$5 for the best cock and four hens and \$5 for the best cockerel and four pullets in the important classes. In addition to these cash specials the specialty clubs offer a large number of prizes. No regular show in the country has ever approached the magnitude of the Boston fixture. An effort will be made this year not to break the record for entries but for a well balanced show. The idea is to strengthen the weak classes rather than to increase the strong classes. In the pigeon de-

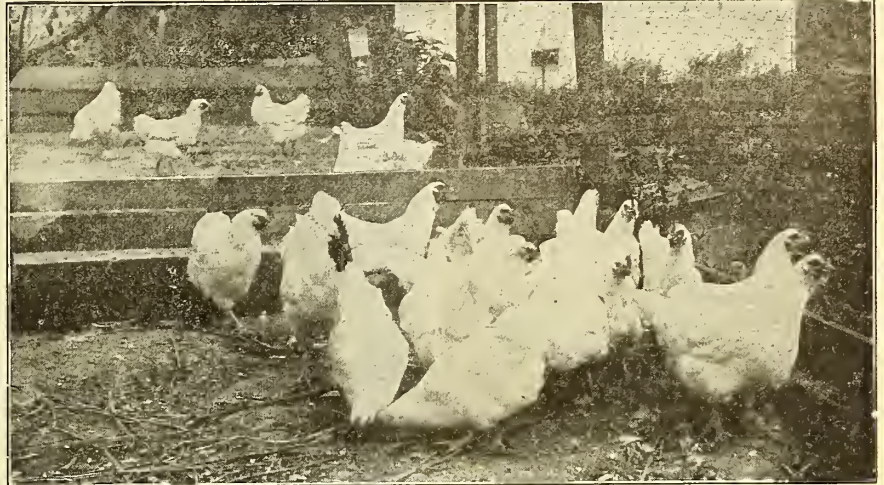

partment a classification is offered that includes about every variety known to the fancier. The cat department will be under the management of the newly formed Boston Cat Club, and the members are striving to obtain the greatest display that has ever been brought together. Nearly 100 valuable specials have been donated to the cat department. In the cavies there has been a renewed awakening of late. These classes will be adjudicated by Miss Jenette Soule of Boston, one of the largest exhibitors in the world. The Boston association is fortunate in having a suitable hall for holding the show. The floor area is about four acres. This fact gives the association an advantage over similar organizations and makes it possible to give the grandest display of poultry appliances and appurtenances ever seen. The general public that is depended upon to support the shows are attracted by the display of appliances and appurtenances equally as much as by the birds. The line bred fanciers even condescend to view this exhibit. Realizing the attractiveness of this display the management last year devoted the best space in the entire building for it. It proved to be the most attractive feature of the show, and this year it is intended to devote even more space to this exhibit. The manufacturers of poultry appliances recognize the value of such an exhibit, and there is a great demand for space this year. It is expected that every incubator worthy of hatching a chicken will be on exhibition. Few persons realize the magnitude of the poultry exhibitions as conducted today, and it will probably surprise many of those who are in touch with these matters that it costs about \$3,000 for each of the five days of the show. Boston is in the very heart of the poultry industry, and so keen is the competition in many of the classes that the novice is gradually being crowded out. For these embryotic fanciers the management has provided novice classes, where no one is allowed to make entries who has ever won a first or second prize in this variety at the Boston show. The list of judges this year includes some of the best known authorities in the poultry world. The judges and the classes that the specialists will pass upon

are as follows: Geo. H. Northup, Raceville, N. Y., S. C. Minorcas; H. J. Manley, Melrose, Mass., Partridge Wyandottes and Partridge Plymouth Rocks and Columbian Wyandottes; C. H. Wheeler, Brighton, Mass., Silver Pencilled Wyandottes; W. R. Graves, Springfield, Mass., White Wyandottes; D. A. Nichols, Shelton, Conn., Cochins and Cochin Bantams; R. Oke, London, Can., Orpingtons, Langshans, Andalusians, Anconas; W. C. Denney, Rochester, N. Y., Buff Wyandottes and Buff Plymouth Rocks; W. H. Card, Bristol, Conn., Polish and water fowl; J. T. Cothran, New

premium lists are ready for distribution, and if you have not received one send your address to the secretary, S. H. Roberts, So. Attleboro, Mass., and he will mail you one.

WHITE WYANDOTTES AT THE CHICAGO SHOW.

The championship White Wyandotte show of the year will be held at the Chicago Coliseum, the week of Jan. 22 to 27, 1906, in connection with the tenth annual show of the National Fanciers' and Breeders' Association. It behooves

One of the nine breeding pens of White Plymouth Rocks at the Phoenix Poultry Yards, Batavia, Ohio.

Rochelle, N. Y., Hamburgs; C. E. Petersen, Franklin, Me., Houdans; Chas. T. Cornman, Carlisle, Pa., Games and Game Bantams; H. B. May, Natick, Mass., Barred Plymouth Rocks; A. Theo. Wittman, Allentown, Pa., Leghorns; G. P. Coffin, Freeport, Me., R. I. Reds; H. Bumford, Waltham, Mass., Brahmas. The all round judges will be Sharp Butterfield, Windsor, Can.; T. F. McGrew, Washington, D. C.; W. B. Atherton, Boston, Mass.; H. S. Ball, Shrewsbury, Mass.; P. Williams, Taunton, Mass., and G. V. Fletcher, Belmont, Mass. The

every person interested in White Wyandottes to make this the largest and best class of White Wyandottes ever gotten together. While it may not be possible to exceed in numbers the large class of over 800 shown at the St. Louis World's Fair, the indications are that we will go way ahead of the class of 485 shown at Madison Square Garden, New York, January, 1905, which is the record of any class at any winter show ever held in America.

In the White Wyandotte class at the coming Chicago show, pens will be en-

A \$1000 ORPINGTON

was defeated at the great Eastern Show in New York, Nov. 13-17, 1905, by one of our **May hatched S. C. Black Orpington Cockerels**. We were also awarded on our **American Bred Orpingtons** in hot competition, including many imported birds, the following prizes: 1st, 2d S. C. Buff Pens, 1st R. C. Buff Cock, 1st Hen, any other variety, 1st Pullet, any other variety, 1st, 2d S. C. Black Pens, 1st S. C. White Cock, 1st Cockerel, any other variety, 1st Pen, any other variety. **Also handsome Tea Service on display.** We have a large number of **Black Cockerels** by same sires as the above winners, and about same ages, for sale. Most of them weigh 9-10 lbs.; all grand in shape, size and color.

Buff Orpington Breeding

has been reduced to a science by us until we are now able to produce the choicest cockerels and pullets from the some matings. **The first prizes** on Pens at Hagerstown, Newark, our Prize Pen at Madison Square, 1st and 2d Pens at the Great Eastern this year, and at Trenton, Hackensack and Herald Square last year were the results of these matings. **Buff Cockerels** of this fine strain, grand shape, free from white, clean shanks and great bone, now ready to ship.

The same standard of breeding is applied to our White and Jubilee Orpingtons. We have the best of all varieties; they win for us and will win for you. Write us for prices. Fine illustrated catalogue sent upon request.

White & Goodacre, BREEDERS EXPORTERS Watchung, N. J.
P. O. BOX 45

VISIT OUR EXHIBIT AT MADISON SQUARE

tered separately, consisting of one male and four females. Birds in pens will not be allowed to compete with birds in single entries, and vice versa.

Mr. W. R. Graves, of Springfield, Mass., who so ably placed the awards at the Louisiana Purchase Exposition, will do the judging at the Chicago show.

The seventh annual meeting of the club will be held Wednesday, January 24th. Every member should endeavor to send a few birds, capture a few ribbons and make a record for himself. Any breeder winning a prize at this great White Wyandotte show will make a record of which he may well feel proud. The entry fee is \$2.00 for each specimen. A premium list and entry blanks may be secured by writing Mr. Fred L. Kimmey, secretary, 325 Dearborn St., Chicago, Ill. Write him for a premium list whether you intend to show or not. A postal will bring it to you.

The following is a list of the cash specials offered by the White Wyandotte Club, to members only, and provided that any member not a life member will use the first \$10.00 won by him in becoming a life member of the club:

Cock, first, \$10.00; second, \$10.00; third, \$10.00; fourth, \$10.00; fifth, \$10.00; sixth, \$10.00; seventh, \$10.00; eighth, \$10.00. Hen, first, \$10.00; second, \$10.00; third, \$10.00; fourth, \$10.00; fifth, \$10.00; sixth, \$10.00; seventh, \$10.00; eighth, \$10.00. Cockerel, first, \$10.00; second, \$10.00; third, \$10.00; fourth, \$10.00; fifth, \$10.00; sixth, \$10.00; seventh, \$10.00; eighth, \$10.00. Pullet, first, \$10.00; second, \$10.00; third, \$10.00; fourth, \$10.00; fifth, \$10.00; sixth, \$10.00; seventh, \$10.00; eighth, \$10.00. Pen, first, \$10.00; second, \$10.00; third, \$10.00; fourth, \$10.00; fifth, \$10.00; sixth, \$10.00; seventh, \$10.00; eighth, \$10.00.

OTTAWA, ONT., CANADA.

The Ottawa Poultry Association held its annual meeting in the Imperial building, Queen St., Ottawa, and elected the following officers: Patrons, Hon W. C. Edwards, Hon. Nelson Monteith, Hon. Sidney Fisher, the Hon. the Minister of Agriculture for Quebec, F. W. Hodson,

live stock commissioner; Hon. Pres., the Right Hon. Lord Alymer; Hon. Vice President, Alderman Saml. Rosenthal, A. G. Gilbert, L. N. Bate; president, Saml. Short; vice president, George Higman; secretary-treasurer, John A. Belford; committee, Geo. Lake, W. Annand, Geo. Collins, Geo. Robertson; auditors, Wm. Garland, A. W. E. Hellyer.

en Wyandottes, pullet, H. Kitcheman; White Wyandottes, cockerel and hen, B. J. Hunt; cockerel and pullet, Geo. Lake; pullet, Saml. Short; cockerel and hen, O. E. Culbert. A very interesting and instructive discussion took place dealing with the Wyandotte, both from a fancy and utility standpoint.

The following spoke during the even-

A colony of White Rocks, June, at Charles H. Ring's eighty-acre poultry farm, Decatur, Mich.

Since the annual meeting there has been one regular meeting, which was held on November 16th in the Imperial building, the subject being Wyandottes. Several fine specimens of the following varieties were exhibited: Buff Wyandottes, cockerel and pullet, Geo. Higman; Gold-

ing, viz.: Lord Alymer, O. E. Culbert, Geo. Higman, Saml. Short, B. J. Hunt, F. C. Elford and Victor Fortier.

The association will meet the first and third Thursday of each month.

JOHN A. BELFORD, Sec'y.
22 Creighton St., Ottawa, Ont., Can.

EGGS ready to ship now: \$5 per 15; \$8 per 30; \$10 per 45.

Bridgewater Poultry Farm, Box A Phone 235 Libertyville, Illinois

A GRAND SUCCESS.

The Sixth Annual Exhibit of the Central Missouri Association was held in Boonville, Mo., on Nov. 28 to Dec. 1. The exhibition was the largest ever held by the association and more breeds were represented than at any previous show. The citizens of the City of Boonville raised sufficient funds so as to make admission free to visitors and a large number of persons were present each day. We believe that where such an arrangement can be made with the citizens of a town where a show is held that it will work to the good of the town and also to the exhibitors. It brings out a larger crowd to see the birds and also to do shopping among the merchants. Judge Heimlich placed the awards and gave general satisfaction but had his hands full in scoring over 700 birds.

CHAS. G. MILLER, Sec'y.

REVISED LIST OF PRIZES OFFERED AT CHICAGO BY AMERICAN BUFF COCHIN CLUB AND BY MEMBERS.

Since the last notice of prizes was sent out additional prizes have been offered. The complete list to date is as follows:

- 1.—A silver cup for the best cock, hen, cockerel and pullet. This cup must be won three times in order to become the property of the winner. It was won January, 1905, by Mr. T. A. Hefner, Cedar Rapids, Iowa. This cup is offered by Dr. J. J. Hare, president of the club.
- 2.—A silver cup to be competed for at Chicago for best and largest display of Buff Cochins, January, 1906. This cup requires to be won once only in order

to become the property of the winner. This cup is offered also by Dr. Hare.

3.—Five dollars in gold for best male bird at the club show January, 1906, decision to rest with the judge of this variety. This prize is also offered by the club.

4.—Five dollars for the best female at the club show, January, 1906, decision to rest with the judge of this variety. This prize is also offered by the club.

5.—\$3, \$2 and \$1 for first, second

First prize hen, score 93½, by James A. Tucker at Chicago show, December, 1904. Bred and owned by John J. Keig & Sons, P. O. Lockport, R. D. No. 6, Romeoville, Ill.

and third on cock, hen, cockerel and pullet.

6.—George E. Winter, West Hampton Beach, Long Island, New York, offers a handsome silk ribbon for first prize breeding pen. Mr. Winter says he will not only give this prize, but expects to

travel nearly 1,000 miles to be at the club meeting, which, as already announced, will be held at the 7th Regiment Armory, Tuesday, January 24, at 2 p. m. This is the sort of enthusiasm that is needed.

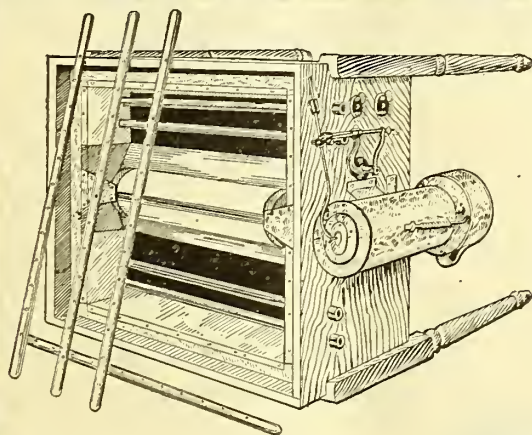

The above prizes are open to competition by club members only. These "specials" are in addition to the regular prizes offered by the National Fanciers' and Breeders' Association. Our specials may also appear in the prize list of the association. E. W. RANKIN, Sec'y.
American Buff Cochin Club.

St. Paul, Minn.

THE WESTERN MADISON SQUARE.

Nebraska's annual state poultry show will be held in the University of Nebraska Armory, right in the heart of Lincoln, Neb., January 15-20, 1906. Luther P. Ludden is secretary and mail reaches him promptly when addressed to Lincoln, Neb. The judges for our coming show are W. S. Russell, W. C. Ellison, Thos. W. Southard, and David Larson, all of whom have the best of reputations in the great poultry country of the West. The association gets a bonus of \$1,000 from the state annually and every dollar is put into prize money. This with our entry and admission receipts makes nearly \$1,800, which insures handsome premiums. Every premium is paid in full before the show closes. E. B. Day is again superintendent and as in the past will devote his time and that of six trained attendants to the closest care of the birds. For western fanciers in Nebraska, Iowa, Minnesota, South Dakota, Kansas, Missouri and Colorado, this show has no equal. It is the best show for selling birds in all the west and we

LOOK INSIDE

Before you buy an incubator or brooder, it is wise to take a look inside the machine. Find out the principles involved and whether or not they are the best for the purpose. When you look inside THE "MANDY LEE" INCUBATOR, you find it is quite different from all other hot air incubators. You find an air-tight, sheet-metal diaphragm, which separates the body of the incubator into two parts, a heating chamber and an egg chamber.

All the hot air used in heating is passed into the heating chamber, then down to the level of the diaphragm and out through the four perforated tubes shown separately in the accompanying illustration. These perforated tubes (3/8 in. in diameter) pass entirely through the body of the incubator and are open at both ends. On the inside of the heating chamber they are perforated on the under side with small holes every two inches, insuring an even distribution of the heating air. None of the air used for heating passes below the diaphragm and therefore is not used for ventilating.

The heating and ventilating are operated independent of each other. The egg chamber may be ventilated to the largest or smallest extent, without regard to the quantity of air used for heating, by means of other perforated tubes above and below the egg tray, the openings of these tubes being controlled on the outside of the incubator by means of swinging caps or dampers that may be opened or closed at will. All these and many other improvements you will find by a LOOK INSIDE. The

"MANDY LEE" Incubators and Brooders

are the results of a demand for better machines. The incubator has been tested by extensive experimental hatches conducted in different climates at various altitudes and never before has there been embodied in an incubator such radical changes and improvements as found in THE "MANDY LEE". In it we have eliminated every element of DOUBT and GUESSWORK and have evolved a machine perfectly adapted to every climate and to all variations of temperature and moisture.

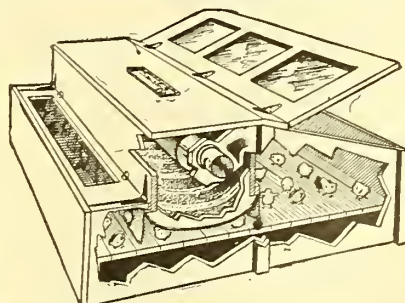

THE "MANDY LEE" BROODER also invites a careful inspection of its interior arrangements—its hover which "snuggles" the little chicks with the warmth of the mother hen with CONTACT HEAT right on their backs, where they like it best. In it chicks are, by a special arrangement, always supplied with pure, fresh air thoroughly warmed before it enters the hover.

The Brooder has a number of other important improvements you have wanted but which you will find in no other. They are fully explained in our new catalogue, together with all the new features of the incubator. You will be well repaid for sending for the catalogue and learning all about them before you buy an Incubator or Brooder. Write for it today—it's FREE.

QUINCY, ILLINOIS

do not charge a fee for it either! The annual banquet will be held in the beautiful banquet hall of the Lincoln hotel. Last year nearly 65 breeders and fanciers enjoyed the feast laid before them. Plan to show at Lincoln and spend a week at the Madison Square of the West! Twenty associations representing all that is good in allied agriculture meet in Lincoln the third week (15-20) in January. Be with us, Mr. Western Breeder, if you want to be down to date. Lincoln's show is a western show and not sectional. It is the big event of the week in all the territory adjacent. Expenses are low, benefits are great. Are you going to ask for the premium list? Remember all of us work to make the Nebraska state show the Madison Square of the West.

A. D. BURHANS, Press Supt.

THE MISSOURI STATE SHOW.

The Missouri state show was the biggest ever held. Every bird was first class and would give the exhibitors at the largest shows a run for their money. Mr. H. P. Mason, of Fayette, the secretary, performed his duties to the entire satisfaction of the exhibitors. Hewes, Rhodes and Emery placed the ribbons. Mrs. Della Maxwell, Fayette, Mo., was the talk of the show and the town as she was there with her Barred Plymouth Rock hen "Louisiana," the first prize hen at the World's Fair, St. Louis, for which she refused \$500 and is considered the best Barred Rock hen in the world. Mrs. Maxwell is one of the best Barred Rock breeders in the world and has never been defeated in any show. She won two firsts, two thirds, two fourths.

Ike Hudnell, Milan, Mo., won 1, 2, 3, 4 cockerel, 4 hen; also on White Rocks 3d cockerel, 2d hen.

Mrs. W. S. Robinson, Fayette, Mo., made a clean sweep with her Buff Plymouth Rocks. Her birds are buff down to the skin, which all Buff breeders are looking for. Mrs. Robinson should enter her birds in Chicago and New York, as they are hard to beat.

Geo. M. Dewey, Keytesville, Mo., won the most, 1 first, 3 seconds, 2 thirds, 2 fourths. Owing to the fact that his birds were over weight, which is a defect of two points per pound according to the new standard, he lost out on some of them.

John A. Shaw, McKittrick, Mo., made some fine winnings: Buff Wyandottes, 1

first, 2 seconds, 1 third 1 fourth. Buff Orpingtons, 1 first, 2 seconds, 1 third. Silver Wyandottes, 2 firsts, 2 seconds, 2 thirds, 3 fourths. In White Wyandottes he had the best colored bird in the show.

J. R. Dempsey, Keytesville, Mo., made the best winnings in Single Comb White Leghorns, 4 firsts, 1 second, 2 thirds. He has a few cockerels to spare. Write quick before they are all sold. His prices are reasonable.

T. E. Applegate, Spickard, Mo., won the governor's silver cup for the ten highest scoring birds on exhibition. Mr. Applegate breeds Single and Rose Comb Brown Leghorns. In his winnings he made a clean sweep. J. BRINKAMA.

BELVIDERE, ILL.

The coming exhibition of the Northern Illinois Poultry Association, which will be given February 5-10 at Belvidere, Ill., will be the biggest and best poultry show ever held by this organization, which has a record of sixteen annual exhibitions behind it, and all of them successful. Geo. D. Holden will do the judging. Bert R. Lucas, Belvidere, Ill., who is the corresponding secretary, will gladly furnish information regarding the premium list and the plans for the show to all inquirers.

THE GREAT TOLEDO SHOW.

The Toledo Fanciers' Association will hold their annual show from Jan. 31st to Feb. 6th, 1906, and from present indications it will surpass all previous efforts.

The Toledo Fanciers' Association comprises a large number of up-to-date fanciers from Toledo and surrounding towns, and all fanciers who are looking for a first-class place to exhibit their birds should not fail to remember that Toledo is in the front rank.

The following list of judges have been selected to place the awards: Hewes, McClave, Meyers, Shepard, Stanfield and Mullinix. This list of judges, together with the fact that the Toledo boys have always paid premiums in full, should appeal to all fanciers who are looking for an honest deal.

The fact that Toledo is a great steam and electric railroad center is also in its favor.

We would be pleased to have all live fanciers, living within a thousand miles, visit Toledo during the show. We can assure them a good time. Come and

COLUMBIAN WYANDOTTES

The Fowl that is creating a sensation all over the World. Remember our three pens at Hagerstown that attracted so much attention are only a small part of our flock. Our two first-prize New York winners, (Teddy and Keystone) have done wonders as breeders. Get a cockerel that will do you much good. No better blood in the world. Pens, trios and pairs for sale. Don't wait till after the great display at Madison Square Garden or you will pay double the price for the same bird. No birds sold for less than \$5. AUG. D. ARNOLD, Box 777, DILLSBURG, PA.

AMERICAN ROSE COMB BLACK MINORCA CLUB.

The American Rose Comb Black Minorca Club will hold its annual meeting at the Cincinnati Poultry Show, Jan. 18th, at 2 p. m. Special premiums will be given in both cash and cups. These are in addition to the regular prizes. This should bring out a large

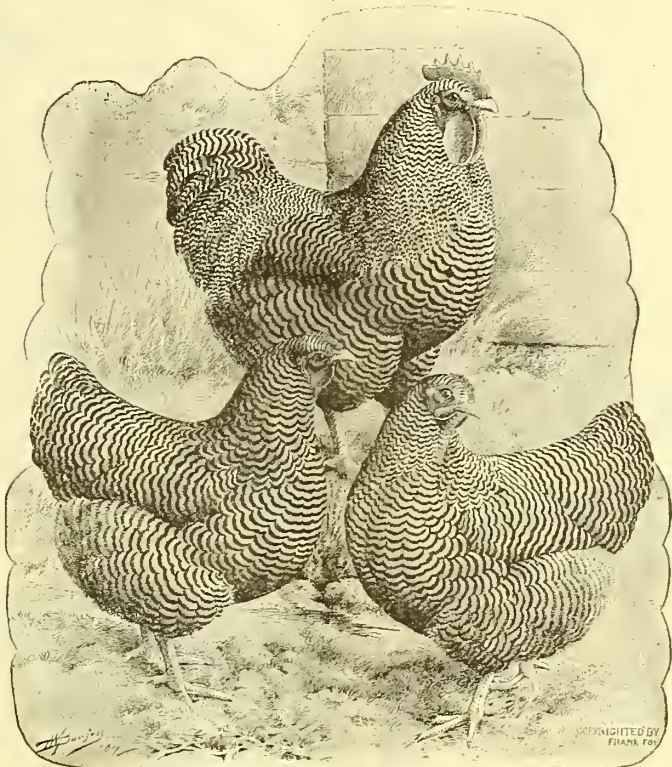

best shows in the State, both from a fanciers and financial standpoint. Over one hundred exhibitors exhibited and about seven hundred birds entered.

Barred Plymouth Rocks, as usual, had the largest number shown.

Cornish Indian Game a close second with fifty-five entries. This being the largest number of this variety shown at any place in the northwest, this ought to be proof that the Cornish Indian is fast growing in popularity.

Large number of Brown Leghorns, both Single and Rose Comb, also all the other varieties of Leghorns and Wyandottes.

Nearly every breed recognized by the Standard were represented, and several that are as yet not recognized, including

A TRIO OF BARRED PLYMOUTH ROCKS.

The accompanying cut of Barred Plymouth Rocks was drawn from life from a trio of Barred Rocks owned by Frank Foy, Crescent Poultry Farm, Des Moines, Iowa.

A visit to the farm showed that these birds are but a fair sample of the quality displayed by the many varieties to be found there.

Mr. Foy is an advocate of line breeding and is perhaps as skilled in this as any prominent breeder now before the public. He has worked for years to secure great egg laying strains together with standard requirements. Mr. Foy is also an old incubator man, having been engaged in the manufacture of them for years. If anyone ever had a chance to try the different kinds of incubators he certainly has. His knowledge is practical, not theoretical.

We cannot do full justice to Crescent Farm in this short space. If our readers will send for Foy's latest poultry book, which thoroughly describes the Crescent Farm, tells all about its stock and gives a large amount of valuable information about the poultry business in general.

This book is worth dollars to any poultry breeder, but will be mailed to any address for 4 cents in stamps by addressing Frank Foy, Box B, Des Moines, Iowa.

exhibit of Rose Comb Minorcas. And all breeders of this popular variety are requested to exhibit.

Applications for membership should be sent to the club secretary before the show. Membership fee, \$1.00.

S. T. CAMPBELL,

Secretary and Treasurer.

Mansfield, Ohio.

A SUCCESSFUL SHOW.

The Oconomowoc Poultry and Pet Stock Association has just closed its first annual exhibition, and to say that it was a success, is putting it mildly; that it was considered by old exhibitors and different poultry judges as one of the

Ciscilian, Buttercups and White Wonders.

All varieties of waterfowl were there in large numbers and were of very high quality. No money or labor was spared in arranging the coops and classifying the birds in the most attractive manner.

The show was fitted throughout with new coops, giving it a most uniform appearance.

Each variety occupying its own section in the show room, making it easy in judging and most attractive to visitors.

Oconomowoc has long been known as the most popular summer resort in the Middle West on account of its beautiful lakes and drives and fine scenery. But it was not until March, 1905, that the poultry fanciers formed an Association

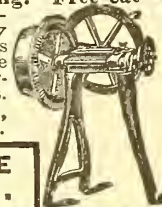

FREE FOR 15 DAYS' TRIAL

We want every poultry raiser, whether he keeps ten fowls or ten thousand, to know the full advantage of feeding fresh cut

green bone to his flock. In order to prepare the bone and have it fresh every day you will need a Bone Cutter. We are going to make it easy for you to get one. We will ship any one of our different size

Dandy Green Bone Cutters

to you without a cent in advance and give you 15 days' free trial so that you may test the machine and test green bone as a money-making feed to increase your egg supply and to improve the health of your birds. We manufacture Bone Cutters exclusively and our prices are the lowest at which a thoroughly reliable machine can be sold. 15 days' free trial plan enables you to learn how honestly and substantially "Dandy" Bone Cutters are built. If after 15 days' use you are entirely satisfied, keep it; if not, we take it back—trial costs you nothing. Free catalog and valuable pointers on feeding poultry—describes the various sizes we make and tells why the "Dandy" will be a money-maker for you. Write for it. STRATTON MANFG. CO., BOX 17, ERIE, PA.

WRITE FOR FREE TRIAL TODAY.

DO YOU WANT TO MAKE MONEY

You can't make money out of poultry unless you keep your flock healthy and in condition to lay and take on flesh rapidly for market.

The man who has sickly looking birds around his yard gives up the business in disgust.

His hens go wheezing and moping around with swollen eyes and rattling throats and every few mornings he finds one of them curled up in some dark corner dead.

And he could prevent all this by simply keeping on hand a package of

Conkey's ROUP CURE

This is the original and only proven safe roup cure. You simply put it in the drinking water and it does the work.

Coming into contact with the membrane of the throat and mouth it kills the germs and that ends the disease.

The first sign of roup may be the death of some of your finest birds. Why not be prepared? A box of Conkey's Roup Cure is a life insurance policy on your flock. We guarantee a cure, so you need take no risk. We will send your money back if your birds are not cured.

This remedy is not only a cure, but it is the greatest preventive of disease you could keep about your place, and the best remedy ever discovered for turkeys and for cankers in pigeons.

Ask your druggist or poultry supply dealer. If they haven't it send direct to us. By mail, prepaid, in 50c and \$1 packages. Agents wanted everywhere.

Book on Poultry Diseases FREE!

Conkey's famous book for poultrymen, telling them how to keep the flocks healthy and profitable, sells for 25 cents.

But if you will send 4 cents to pay postage, and the names of two other poultry raisers we will send you a copy free. Write for it.

GEO. E. CONKEY & CO., 52 Ottawa Bldg., Cleveland, O.

Petaluma Incubator Co., Pac. Coast Agents, Petaluma, California.

with a charter membership of seventy-five members and proposed to make it the center for high-class poultry in the Middle West.

The prizes awarded to exhibitors were numerous and valuable, including silver cups, incubators, cash prizes and many special prizes. The poultry public are invited to exhibit with us and can be assured that their birds will receive first-class attention and will be returned to them in the same condition as received by the Association.

Yours very truly,
THE OCONOMOWOC POULTRY AND
PET STOCK ASSOCIATION.

**NATIONAL ROSE COMB WHITE
LEGHORN SPECIALS.**

For Madison Square Garden Show, New York: Silver cup for the best cock, hen, cockerel and pullet; satin ribbon for the best cock; satin ribbon for the best hen; satin ribbon for the best cockerel; satin ribbon for the best pullet. For Chicago show: Silver cup for the best cock; silver cup for the best hen; silver cup for the best cockerel; silver cup for the best pullet.

Also four ribbons, viz.: second best cock, hen, cockerel and pullet, and several other prizes as per Chicago premium list.

Illinois State Show, Danville—Silver

cup for best cock, hen, cockerel and pullet. Ribbon for best (each) cock, hen, cockerel and pullet.

Indianapolis Show—Silver cup for best cock, hen, cockerel and pullet. Ribbons for best (each) cock, hen, cockerel and pullet.

Cups will be offered to other shows where a number of members will exhibit.

The above for members only. All information regarding the club will be cheerfully given by the secretary, Mrs. F. J. Phillips, 5929 Superior St., Chicago, Ill.

MANITOWOC, WIS.

The Manitowoc Poultry and Pet Stock Association will hold their annual show Jan. 18-24, 1906. Jas. A. Tucker, judge. F. C. BORCHERT, JR., Sec'y.

**ANNUAL MEETING OF AMERICAN
BUFF PLYMOUTH ROCK
CLUB.**

The annual meeting of the American Buff Plymouth Rock Club will be held in Chicago on Wednesday, Jan. 24th, during the Chicago show.

Every breeder of Buff Rocks should make an effort to send an exhibit and compete for the liberal cash specials offered by members of the Club and the Chicago Association.

A premium list with full particulars can be had on request, by addressing F. L. Kimmey, Sec. of the Chicago Show, 325 Dearborn St., Chicago, Ill.

A copy of the Buff Plymouth Rock Club catalogue will be mailed by addressing W. C. Denny, Sec., Rochester, N. Y.

WOOSTER, OHIO.

The American Single Comb Brown Leghorn Club, which will hold its next annual meeting at Cleveland, O., Feb. 1, 1906, offers in connection with ribbons, a \$25 silver cup for best display.

For further information write Scott Billman, Cuyahoga Falls, O., secretary and treasurer.

CANTON, OHIO.

The Canton show is going to be a corker this year for two very potent reasons. First they are giving a liberal premium while nearly all the other associations for miles about are giving ribbons only. And then the members are working hard and all together for success. B. J. Hill will judge. Feb. 1 to 7 are the dates. For particulars write the secretary, Clarence Bruce.

WALDRON, ARK.

The Scott County Poultry and Pet Stock Association was organized at Waldron, Ark., Nov. 25, 1905. The following officers were elected: W. E. Stone, president; J. F. Anderson, vice president; Ernest Holland, secretary, and Ben Anderson, treasurer. A few breeders held a small local show on Nov. 25, with good results, but we expect to have a good one next year.

ERNEST HOLLAND,
Secretary.

DETROIT, MICH.

The Detroit Fanciers' Association will hold their first annual show Jan. 6-12, 1906. Frank Heck and Jas. A. Tucker, judges. Send for premium list to John R. Wood, secretary, 69 Larned St., East Detroit, Mich.

LEIPSIK, OHIO.

The Putnam County Poultry and Pet Stock Association will hold an exhibition Jan. 26, 1906. T. E. Orr, judge. H. S. Enck, secretary.

MATTOON, ILL.

The Eastern Illinois Fanciers' Association will hold an exhibition Jan. 8-12, 1906. Premium list is now ready for distribution, and all interested should send for one at once. C. L. Carney, secretary, Charleston, Ill.

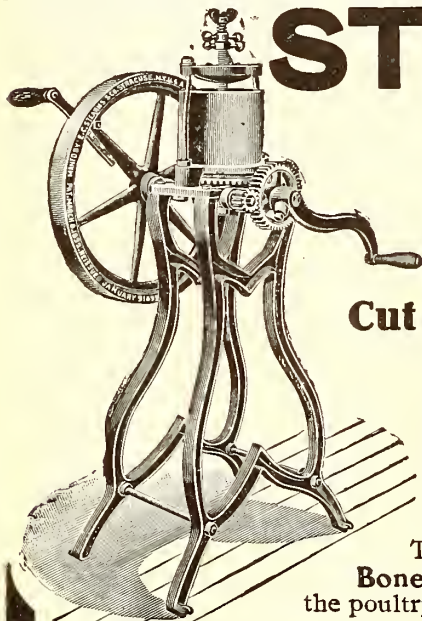

PONTIAC, MICH.

Pontiac (Mich.) Poultry Club will hold their sixth annual show Jan. 16th to 20th, 1906. Premium list now ready; a postal will bring it to you.

D. THOMAS, Sec'y.

GRAND RAPIDS, MICH.

The Grand Rapids Poultry and Pigeon Club, which is composed of the business men of that city, have decided to hold a show, Feb. 13-16, 1906, and have engaged the services of Mr. Jas. A. Tucker as judge. Paul E. Wright, secretary, 559 Madison Ave., Grand Rapids, Mich.

STEARNS BONE CUTTERS

Cut Feed Bills in Half

Green Cut Bone as a poultry food is not only cheaper in first cost but it makes more productive hens than any other food. It saves cost and increases profit.

That is why a **Stearns Bone Cutter** makes money for the poultryman. It means

Eggs—More Eggs—Better Eggs

Stearns Bone Cutters are made in 10 models to suit the needs of any poultry raiser. They work easier, quicker, cleaner than any other bone cutter. The patented steel cutter head *mills* the bone. Unlike other cutters, it neither shatters nor splinters it. Invaluable to owners of large or small flocks of chickens. Our

30 Days' Free Trial

offer will prove the superior advantages of the Stearns Bone Cutters. Write for catalogue and prices.

E. C. STEARNS & CO., Box 5, Syracuse, N. Y.

Don't get Angry

with your razor. It has a temper of its own. It will work well if you use

WILLIAMS' SHAVING SOAP

Sold everywhere. Free trial sample for 2-cent stamp. Write for "The Shavers Guide and How to Dress Correctly."

The J. B. Williams Co., Glastonbury, Conn.

Incubators and Brooders will hatch and brood your chicks, but

STEINMESCH

Extra Quality "Quick Meal"

CHICK FEED

is needed to raise them all—make 'em grow and thrive like a Green Bay Tree. STEINMESCH Chick Feed is a mixture of cracked grains, small seeds—Beef, Bone and Grit. Twenty different kinds, especially prepared for the rearing of chicks, from the time they are hatched until ten weeks old. Feed dry, always handy and ready for use. No waste, always the same. THE BEST, and no higher in price than other feeds.

Price: 100 lb. sack, \$2.50.
Feeds 40 chicks 10 weeks.
Send orders to

EVERYTHING FOR THE FOWL FAMILY

We appreciate the fact that the practical poultryman and the farmer who keeps a few hens are always anxious to increase their profits, and want the best foods and appliances they can get to do that. For over sixteen years we have been handling poultry supplies. We have built our business on the theory that the best is none too good, but that it always pays to sell the best. Our business has grown bigger every year—tangible evidence that we supply high grade goods at reasonable prices, that we deal fair and square, and that our patrons know the advantages of buying everything they need from one house. You will, too, when you get your first order from us. Our catalogue illustrates and describes an immense line of

POULTRY SUPPLIES

as Cut Alfalfa, Clover Hay, Electric Poultry Food, Mixed Grains, Chick Foods, Crushed Oyster Shells, Beef Scraps, Bone and Meat Preparations, Animal Meal, Blood Meal, Ground Charcoal, Grits of all kinds, Egg and Stock Foods, Remedies, Condition Powders, Lice Killers, Insect Exterminators, Spray Pumps, Leg Bands, Chicken Markers, Caponizing Instruments, Thermometers, Egg Testers, Lamps, Nest Eggs, Nests, Egg Boxes and Baskets, Drinking Fountains, Pigeon Supplies, Feed Pans, Clover Cutters, Root Cutters, Green Bone Cutters, Incubators and Brooders, Poultry Houses, etc.—there's nothing you need that we don't have, and our catalogue will be worth money to you. Write for it.

OAKWOOD JOTTINGS

Said a certain preacher to the wife of a fancier, "Haven't you any common chickens just to eat?" This touching inquiry suggests another, which, because of its importance, we give the first place in our Poultry Catechism. "What is the chief end of chicken?" What some ultra-fancier may say concerns us not at present. The great mass of mankind answer as with one voice: "To be eaten." Like cattle and swine, simply to be eaten. Like cattle and swine, then, to be bred along lines which promote flesh forming. An important problem in breeding is the forming of a type that will put on the greatest amount of flesh for a given amount of feed and put as much as may be of that flesh in the parts of the fowl most highly prized. As with cattle and swine specimens of sound constitution and excellence of form should be kept for breeders, and as such are worth many times their value as meat; but by far the greater number will most fittingly find their way to the table. The well bred fowl is not too good to eat. "Have some more of the Wyandotte." "Thank you. I find it excellent."

The time is at hand when an up-to-date farmer, with his Herefords and Poland-Chinas, will not think it fitting to have about his premises a lot of just-any-kind of fowls; when he will take time to think that blood will as surely tell in poultry as in pigs; when he will exercise the same good judgment in choosing his feathered stock that he does in selecting cattle and swine.

Turning the leaves of the National White Wyandotte Club Catalogue for 1904 with an acquaintance, we came upon the picture of a certain hen noted for the number of eggs she had laid. He looked at the picture a moment and finding that she was *only noted for laying eggs* immediately lost all interest in her, and turned to another page, for at Madison Square Garden Wyandottes are judged by appearance, not for performance.

"But," says some ultra-fancier, who has taken the trouble to read this far, "all this utility talk disgusts me. I am interested in the symmetry of combs and the number of their serrations, in distinct barring, in correct lacing, in chalk-white, in smooth yellow shanks or heavily feathered ones. I am for something to show, first, last, and all the time." Well, then, if you are interested in these things and are a skillful breeder you may be in a position to laugh at the mere utility man, for as long as a pearl has a higher market value than a potato so long will there be a demand at good prices for birds of style and beauty.

There is, however, such a thing as a reasonable combining of fancy and utility in breeding which is to the ultimate advantage of both, the setting up of a standard of robust health and rapid growth by the side of the Standard of Perfection in form and feather. This will demand the exclusion of any bird from the breeding pen that lacks in vigor no matter even if he be otherwise fit to show in the fastest company. The blood lines that are important are those of a hardy as well as a prize-winning ancestry. The best bird in the show should also be the best for your purpose if your business is merely that of raising broilers and roasters for the general market.

KEROSENE LAMPS.

**Fires Occur Only Through Carelessness
where Kerosene Lamps are Used
—When Kerosene is Heated
Beyond a Certain Tem-
perature it May
Explode.**

By S. A. McWilliams, M. D.

Who ever saw a kerosene lamp explode? They may have seen kerosene oil flowing and burning. So will oil, gasoline, household gas, etc.

But there is no explosion. Why does fire ever occur where a kerosene lamp is used? Only through gross carelessness and ignorance. If a lighted match be dipped into a saucerful of kerosene, the light will go out, but the kerosene will not burn, because it is cold, because it has not been vaporized.

If kerosene oil is heated beyond 120 degrees Fahrenheit, it gives off an inflammable vapor, which when mixed with confined air may explode.

But a kerosene lamp does not explode, cannot explode when kept cool, because it cannot then cause or form an inflammable vapor.

A kerosene lamp is as safe as a candle; if the wick is trimmed with scissors daily; if the hole through which the wick passes is kept clean and freely open; if the lamp is not filled too full; if the perforations in the disk around the tube are kept clean; if a nail hole is driven through the screw cap which covers the hole through which the lamp is filled; if the lamp is not allowed to smoke; if the wick is not too tight in the wick tube; if the inside edges of the wick tube are not crusted and bent; if cool air is allowed to get around the oil outside and on top of the oil inside the lamp.

Any one can set fire to his poultry house with a lighted match or a lighted lamp.

If a lamp is filled beyond a 1/2 inch from the top, the oil when heated may expand, run over, and catch fire.

If no air can get into an overheated lamp, the burner may melt off and a

large volume of kerosene blaze up and fire the house.

If the tube of the burner is bent, twisted, indented or crusted in such a manner as to press on the wick, and cause it to char and burn down into the kerosene, then the oil becomes overheated and the burner is melted off.

If the flame on rising from the wick strikes any part of the burner, then the metal becomes overheated, the wick chars and burns down into the kerosene, and the burner melts off, and the above result happens.

The very means often taken to prevent a kerosene lamp from setting fire to a poultry house is the direct cause.

For instance, if the kerosene lamp (although perfectly cared for in every other way) is set deep down into a tin pail, boiler or other tight receptacle, the air around the lamp becomes hot, the oil within the lamp becomes hotter, the burner becomes still hotter, with all the dire consequences mentioned above.

If good oil and good horse sense is used a lamp is perfectly safe.

If kerosene oil is kept below 110 degrees, it cannot explode, because it does not generate enough inflammatory gas to catch fire and explode.

No lamp, whether glass or tin, can explode if the air immediately surrounding it does not reach 90 degrees, because the burning lamp, if properly cared for, as above, will not reach 100 degrees, and inflammable vapor cannot be given off from the kerosene unless it is heated beyond 120 degrees.

Remember that the wick should be trimmed neatly and squarely with sharp scissors, and its corners slightly rounded.

Do not rub off the charred wick with nail, stick or finger, because the ashes fill up the tube and perforated holes and prevent the cooler air from entering thereby.

The tube itself must be kept clean and smooth, free from dents, twists or notches.

All air holes around the wick tube must also be clean. The flame must pass up from the wick in the center of the burner without touching the burner or metal at any point.

Most housewives know that a candle does not burn until the wick is heated and a vapor given off.

They also know that a lighted taper will burn in a saucerful of tallow, lard, or kerosene, without setting fire to the adjoining grease, so long as it is kept cool.

Who knows better than the cook, that the grease in the frying pan will not burn (or explode) until it is overheated, and then only the vaporous gas on its surface burns when ignited from the blaze of the fire below.

The plumber or housekeeper who uses gasoline is not afraid of its exploding, because they never see it explode.

The gasoline connected with a gasoline stove is allowed to trickle down from a tank above, into a little cup below, where the vapor rapidly rising from its surface is lighted by a match.

The vapor ignites and burns on top of the gasoline until all the gasoline has vaporized and burned, but there is no explosion.

Some substances are more volatile than others, but in all cases it takes heat to vaporize them, and even then there is no explosion, unless the vapor is confined and ignited.

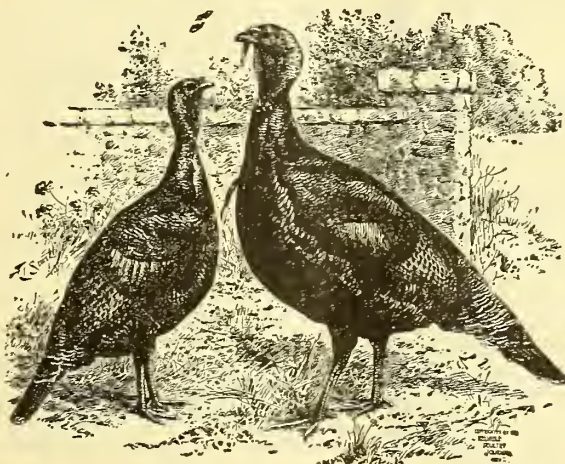

Gasoline or kerosene will not vaporize if kept sufficiently cool, and even if not kept cool the vapor will not explode if mixed with sufficient air.

While repairing street car lines in the city, during the winter, men may be seen with large cans of kerosene oil, pouring it on the flames to thaw the ground, without accident, because the inflammable vapor from the burning oil is not confined.

The foolish maid may try to start a fire in the stove by pouring kerosene on hot cinders and kindling wood. She usually does, but the heated kerosene is vaporized within a closed stove and the inflammable vapor expanding and igniting scatters the stove lids, kindling wood and burning oil all over the maid, setting fire to her clothing and burning her severely.

Just so the careless help who say they know it all can easily set fire to the poultry house, but the intelligent and thoughtful person never.

BUFF ORPINGTONS

Owing to business changes we shall sell at a great sacrifice one of the best flocks of Buff Orpingtons in this country. They have never been beaten in the show room. At the large Cleveland show our Buffs won five 1sts and three 2ds in hot competition. None will be reserved. Satisfaction guaranteed on every sale. Correspondence solicited.

C. F. BLACKMON & SON - - PAINESVILLE, OHIO

THIS BOOK TELLS

HOW TO MAKE POULTRY PAY

You may have a copy free. It's full of valuable information for poultry people.

Keeping your birds healthy, strong and productive is the secret of poultry profits; proper feeding and right remedies are the two most important factors of success.

Neglected fowls never pay. Birds well cared for produce profit.

If your birds are not profitable, you can make them pay handsomely by using proper foods and remedies such as we prepare specifically for poultry.

The strengthening, healing properties of Harding's foods and remedies condition poultry for the highest degree of productiveness.

HARDING'S UNCLE SAM EGG PRODUCER for winter eggs—25c pkge., express to be added.

HARDING'S ROTT CURE—given in water—never fails—50c and \$1.00, prepaid.

HARDING'S POSITIVE CHOLERA CURE— for Cholera, Diphtheria, Gapes, Diarrhea, etc.—1 lb. 25c; by mail, 40c.

HARDING'S SCALY LEG CURE. The only sure remedy for scaly legs, sores and flesh wounds; an excellent polish for the show room—5 oz. can 25c; by mail, 35c.

HARDING'S ANTISEPTIC LICE OINTMENT for head lice on children, turkeys and little chicks—1 lb. and 25c prepaid.

We guarantee these preparations to prepare you for any emergency; their frequent use keeps fowls in pink of condition. Remember our book, "How to Make Poultry Pay" is sent free—write today. Agents wanted. Terms furnished on application.

THE BREEDING PEN.

There are many persons who advocate that the formation of the breeding pen should be in the early part of the spring, during either the month of February or that of March. Great care, however, should be taken in the housing of the birds, so that they will not feel the effects of the changeable weather which is prevalent at that time of the year. There is one point against the formation of the breeding pen in the early spring, and that is that the change of location often tends to check the production of eggs for a time, which is a very important item to the owner.

There are very few persons, however, who say anything about the time when the breeder should start to pick out his birds, preparatory to mating them together in his breeding pen. This is, perhaps, the most important part of all.

A bird which has been sickly during a part of the winter, or one which was slow in maturing or in some way was not physically sound while growing, and never reached its proper condition, may in the spring partly recover, so that it will appear sound enough to put in the pen and be used to breed from. A breeder of any experience at all would not use such a bird in his pen, for he knows what the result would be. Infertile eggs, chicks dying in the shell or soon after they are hatched, or becoming sickly and stunted throughout life, are some of the most common results.

But if the breeder waits until the spring of the year to form his breeding pen, it is very likely that he will not remember those which have been sickly during the winter, so that he is very apt to pick out some of the birds which are not sound, thinking that they are good enough to breed from.

Such being the case, it is readily seen that the proper time to pick out the birds for the breeding pen is in the fall of the year, when the chicks are shaping out and getting ready to lay. The breeder should pick out about twice the number of birds required for his breeding pen and place them in a separate coop and run. If this is done before they start laying in the fall no evil effects are likely to result from the change in location, whereas it would if done in the spring.

A great deal of attention should be given to this flock, and every bird which shows the slightest defect in health should be immediately discarded. Several birds are sure to show some defects during the winter, and this will reduce the flock so that there will not be more than five or six over the required number by the time spring arrives. The breeder will now be sure that he has sound birds to pick from, and he will be able to devote his entire attention to the picking out of those birds which have the best color and shape of the variety which he breeds.

The marked absence of chicks dying in the shell or soon after hatching, and the healthy appearance of the flock, together with the increased rapidity with which the young stock matures, is sure to make every person who tries it a strong advocate of picking out the birds for the breeding pen in the fall of the preceding year.

"Good As Darling's"

Have you ever been told that when buying poultry foods? It is often said and it is complimentary to us because it recognizes Darling's as the standard. But it is not true. There are no other poultry foods as good as Darling's.

Darling's Beef Scraps

Are 62% Protein

Only 12% is fat. High in protein, low in fat. And unlike all other brands, the quality does not vary. Analysis proves this. That is where we took our stand originally. We have never departed from it. The high quality of Darling's Beef Scraps and all Darling Foods, has led up to the immense sale they have today.

Buy quality when you buy. The ordinary poultry foods are dear in comparison.

THE MONEY BRINGING LIST.

In addition to Beef Scraps and Beef Meal the following are leaders among the Darling Foods. All in 100 lb. bags, f. o. b. Chicago or New York, cash with order.

Box C Union Stock Yards, Chicago.

THE GREAT GRIT QUESTION.

My how the great minds are working on the deep subject. Grit or no grit. One man says: "Did you ever see used grit voided by a hen?" Another asks: "Did you ever peep in and see her use it?" If it is not needed whole tons of it have been wasted.

I say, with emphasis, grit is needed; always has been, always will be, but fowls, are like all animals, they can live for weeks when food and such matters are not as the Creator intended.

Man can take so much poison in his body that it will never decompose and yet live to a good old age. The system shields itself if time is given.

Who will say, man does not need teeth to grind food; yet a person can live many years without teeth, and live well.

Now, let us reason a bit, then to hard facts. All animals have hard-grinders in some parts of their body. Most animals have them in their mouths. Feathered animals use movable ones.

Then, again, why such strong muscles composing the gizzard if it was not used to compress and so reduce the food, the food is softened by the strong juices of the body and does not require the force dry grain requires. All the parts indicate the use as crushers.

Did I ever see stones voided? Yes, indeed, hundreds of them, fully fifteen at one place.

I never saw them used, but often heard them. I often have listened to a bunch of chicks sitting quietly and heard the stones rub one against the other as the gizzard worked. I have taken one in my hand and put my ear near its side and still it worked.

One man says fowls would hurt themselves with such work. They are not so foolish as to push too hard. It is likely if a sharp corner gets in a tender place the gizzard takes a new position. It is likely a little like the food a dog eats. He will eat meat ten times as tough as his stomach but digest it with strong juices. Live flesh protects itself from the hurt.

Mr. Cooper, of Prairie Incubator fame, was a great believer in grit for baby chicks. I heard him tell in Washington, D. C., at the show, that he had stopped chicks dying often by giving them ground glass.

Ever since that I have fed ground glass to my brooder chicks and they do well and I expect to feed it as long as I raise them and I will continue to give it to all ages. Fowls are made to use it and although they can live without it they cannot produce as many eggs or grow as well.

Oyster shells are needed for shell material. This has been ridiculed, too, but when I did not use it eggs could hardly be hauled to town, but after feeding it they would be as strong as could be. Withhold the shells and they were thin again.

W. W. Kulp, Pottstown, Pa.

Black P. Rocks

Twelve years of scientific matings have produced a new variety, jet black, true Plymouth Rock shape. Scorings from Illinois and Indiana State Shows, 91 to 95 points. A desirable amount of stock for sale. Write your wants. Satisfaction guaranteed.

You Save from \$75 to \$200

When you buy a Wing Piano, you buy at wholesale. You pay the actual cost of making it with only our wholesale profit added. When you buy a piano, as many still do—at retail—you pay the retail dealer's store rent and other expenses. You pay his profit and the commission or salary of the agents or salesmen he employs—all these on top of what the dealer himself has to pay to the manufacturer. The retail profit on a piano is from \$75 to \$200. Isn't this worth saying?

SENT ON TRIAL Anywhere We Pay Freight No Money in Advance

We will place a Wing Piano in any home in the United States on trial, without asking for any advance payment or deposit. We pay the freight and all other charges in advance. There is nothing to be paid either before the piano is sent or when it is received. If the piano is not satisfactory after 20 days' trial in your home, we take it back entirely at our expense. You pay us nothing, and are under no more obligation to keep the piano than if you were examining it at our factory. There can be absolutely no risk or expense to you.

Do not imagine that it is impossible for us to do as we say. Our system is so perfect that we can without any trouble deliver a piano in the smallest town in any part of the United States just as easily as we can in New York City, and with absolutely no trouble or annoyance to you, and without anything being paid in advance or on arrival either for freight or any other expense. We take old pianos and organs in exchange. A guarantee for 12 years against any defect in tone, action, workmanship or material is given with every Wing Piano.

Small, Easy Monthly Payments

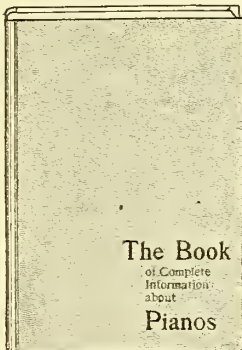

In 37 years over 40,000 Wing Pianos have been manufactured and sold. They are recommended by seven governors of States, by musical colleges and schools, by prominent orchestra leaders, music teachers and musicians. Thousands of these pianos are in your own State, some of them undoubtedly in your very neighborhood. Our catalogue contains names and addresses.

Mandolin, Guitar, Harp, Zither, Banjo—The tones of any or all of these instruments may be reproduced perfectly by an ordinary player on the piano by means of our Instrumental Attachment. This improvement is patented by us and cannot be had in any other piano. WING ORGANS are made with the same care and sold in the same way as Wing Pianos. Separate organ catalogue sent on request.

You Need This Book

If You Intend to Buy a Piano—No Matter What Make

A book—not a catalogue—that gives you all the information possessed by experts. It tells about the different materials used in the different parts of a piano; the way the different parts are put together, what causes pianos to get out of order and in fact is a complete encyclopedia. It makes the selection of a piano easy. If read carefully, it will make you a judge of tone, action, workmanship and finish. It tells you how to test a piano and how to tell good from bad. It is absolutely the only book of its kind ever published. It contains 156 large pages and hundreds of illustrations, all devoted to piano construction. Its name is "The Book of Complete Information About Pianos." We send it free to anyone wishing to buy a piano. All you have to do is to send us your name and address.

WING & SON
350-395 West 13th St., New York

Send a Postal To-day while you think of it, just giving your name and address or send us the attached coupon and the valuable book of information, also full particulars about the WING PIANO, with prices, terms of payment, etc., will be sent to you promptly by mail.

FIRST TWO YEARS IN POULTRY RAISING

Conditions and Surroundings—The Beginning—Our First Experience with an Incubator—The House—Brooder Houses—Feeding and Care—Mistakes which Should be Avoided.

The teaching of our poultry literature is so diverse that it is with considerable hesitancy that I undertake to contribute my mite to the general stream.

And yet perhaps a plain statement of my attempt to become a producer of good chickens may be worth the space it occupies and be of some help to others just beginning to breed poultry.

The past masters in poultry will find little help but perhaps amusement enough to warrant a perusal of this.

Still, the Editor permitting, I am going to give you my first two years, as

time could be given to the care of chickens, but such time as I could spare from my profession. No money to start a large plant and place a man in charge or even hire help only as absolutely required.

Therefore the dollar or cent problem entered into the plans from the first and it is this class of beginners if any that I hope to benefit.

And this is the large class and the one requiring help. The man with plenty to start with and no worry in case of failure would start differently from what I

BUFF PLYMOUTH ROCK HEN.

Cleopatra, first pullet at Chicago, January, 1905. This remarkable pullet has just come through a perfect molt and will be among the fine show hens again this season. Bred, owned and exhibited by the Dearborn Poultry Yards, S. D. Lapham, proprietor, Dearborn, Mich.

that, I believe, is the critical time with the novice.

If a man has the enthusiasm to outlive the unrewarded labor, discouragement and expense of the first two years he is pretty apt to stick at least until circumstances and not discouragement causes him to leave off breeding chickens and then he usually looks forward to the time when he may take them up again.

CONDITIONS AND SURROUNDINGS.

I am a physician practicing in a small town. Not a retired M. D., rich in this world's goods, seeking something to pass the time away and on which to spend money. But a young man (comparatively) in active practice with a large country practice to look after. No stated

did, I am sure, and if he had a genuine love for his birds would stick to it in spite of discouragements till he found his way out. Not so with the man of limited means, in spite of his love for poultry he is very apt to get discouraged and quit, concluding that in spite of the pleasure it affords him he will have to give up his chickens at the end of the first and second year, just as the Promised Land is in sight.

The chicken was taken up in our case for a number of reasons. First, a flock of chickens of one kind is an ornament to every home. Second, to have a recreation to which we could turn and forget for the time being at least the worry and care incident to the professional work.

Third, fresh chickens and eggs, and finally a few dollars' profit.

Our home consists of three lots, each 75x150 feet. Two of them were set in fruit just beginning to produce, the third across the alley from the other two was in blue grass.

I was raised on a farm, but as is usual the chickens were of no particular breed and given over to the care of the women of the household. Since leaving the farm, some twelve years before, chickens had not entered into my life very extensively, save when served on the table occasionally or when my neighbor's chickens devastated our garden, which latter was not likely to stimulate a latent love either for chickens or neighbor, so you can see I was a genuine novice.

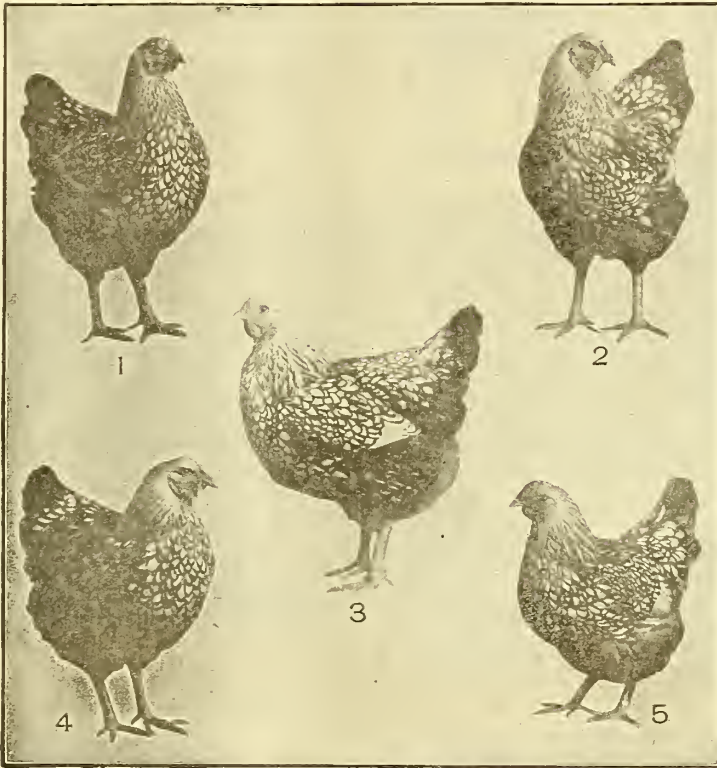

THE BEGINNING.

One winter wife and I decided we could raise a few chickens and have them to eat and have fresh eggs of our own

their praise of the White Wyandottes for utility purposes. And let me say in passing that they have never disappointed me. Other mistakes I have made a plenty and while this is not written to boom one breed above another but with me the White Wyandottes have made good.

The breed selected, the next was to get the goods. I wrote a number of advertisers in the JOURNAL for prices on half dozen pullets and a cockerel. The replies rather surprised me as the prices asked were more than I felt able to pay. And here I believe I made the first serious mistake by not accepting one of the offers.

Next I wrote an advertiser for his price on young chicks just hatched. It was 16 cents each, I believe. I ordered a dozen but the chicks had so far to come that I had little faith. Had they arrived all right I should have ordered

SILVER LACED WYANDOTTE PULLETS.

No. 1, first at Cedar Rapids, Iowa; No. 2, first at Yorkville, Ill.; No. 3, first at Chicago, Ill.; No. 4, first at Traverse City, Mich.; No. 5, first at St. Louis Mo. Bred and owned by A. & E. Tarbox, Yorkville, Ill.

instead of raising our neighbor's chickens, then buying of them as our pocket-book would allow, as we had previously been doing.

So in making up my list of reading matter for the coming year I added a poultry journal to the list and began studying up on poultry.

This was where we fell, for from reading the POULTRY JOURNAL we concluded to go into Standard-bred chickens instead of getting common or scrub stock as intended. Not that it was a mistake by any means.

Having decided to get Standard-bred birds the next point was the variety. There was not a genuine fancier in our vicinity, but there were two farmers in particular that kept White Wyandottes, almost pure, and a talk with them decided me, for both were enthusiastic in

fifty more, but they were all dead but one and it died before I got it home. I wrote him in regard to it but failed to get any answer so after waiting a while began to cast about for some other means of getting a start and finally did it this way.

WE TRY AN INCUBATOR.

A lady in a nearby town offered us her incubator for a little less than cost. It was new, just bought that spring, she had taken off two or three very good hatches with it.

It was one of the most widely advertised cheap incubators on the market and we bought. I believe this was a mistake but will refer to my mistakes later.

The machine bought, we ordered fifty eggs from a breeder in the eastern part of the state and when they arrived put

Sharples TUBULAR CREAM SEPARATORS

Will you buy a bad separator because the agent is a "good fellow?" Some people do. They should read this.

If You Have a Brand New Separator

not a Tubular, put it in the garret. We guarantee Tubulars to make enough more butter than any other separator, and from the same milk, to pay 25 per cent yearly interest on their cost. You test them free side by side. Your decision is final.

Carnegie is using investments paying 6 per cent; here is a guaranteed 25 per cent to you. The waist low supply can—simple bowl—enclosed, self-oiling gears—are found only on Tubulars. Catalog T-205 explains it.

them in and finished filling with Barred Rock eggs, bought of a nearby farmer.

Then began three weeks of waiting and watching. The machine was hard to regulate and like a dishonest man required watching. We did not test out the eggs as we were new at the business, but just tried to follow directions as to temperature, turning, etc.

And at last the three weeks were about up. On the nineteenth day the eggs began to pip and by the end of the twenty-first day all was over and this was the result: Sixty Barred Rock eggs pro-

duced forty-nine chicks, lively as crickets; fifty White Wandotte eggs, for which, express and all, we paid a good price, produced four little sickly chicks that were all dead in less than a week.

Now that part I am unable to explain. The eggs were small, practically all white, not what I had expected, as I supposed they would be large brown eggs. They were carefully handled after arrival. Could hardly have got chilled so late and for the same reason the breeder should have known whether his eggs were hatching well or not. It was so late in

the season that I concluded to quit for that year. Did not even write the breeder of my want of success, but simply charged it up to experience.

I believe this was the most discouraging place in my experience to date. It was the middle of June. We had spent a good deal of money, been to considerable trouble and as a result had not a chick of the kind desired.

Our lives are like a pendulum swinging down among the clouds of discouragement till all hope seems lost, then back up among the stars of hope. So with our chicken experience the pendulum had reached its lowest point and now began swinging upward.

The next day after our hatch, or rather failure to hatch, we received a card from the breeder that he had shipped us one dozen chickens to replace those sent earlier in the season. In a day or two they arrived, eleven of them, alive and hungry. We fixed them a coop and took the best care of them that we possibly could, and how they grew. We fed them corn bread, table scraps and occasionally onion tops chopped fine. Every one of them lived and thrived.

After that we took courage, ordered a dozen more from a breeder in Missouri. Only nine were sent, however, and they were not nearly as white as the others, looked like you had sprinkled coal dust over them. They seemed all right on arrival but all were dead in about ten days so we were left with the first eleven as a result of the first year's work.

Of this eleven, three were cockerels and eight pullets; the three cockerels were disposed of and another bought, also late in the fall I bought four pullets, paying \$1.25 each for them. They were about the same grade as my own so the close of my first year found me with one dozen pullets and a cockerel.

THE HOUSE.

We built us a house that fall, 10x10, fronting south, with large sliding windows in the south, door in the east. Built of drop siding with paper underneath; single pitch, shingled roof; 8-foot front, 5-foot rear. Floor of cement; roosts, nests, etc., removable for cleansing.

This closes our first year's work. Our pullets were late and we did not get an egg till the middle of January.

SECOND YEAR.

After our pullets began laying they kept right at it and by the end of the year had made a fair record. I am not going to tell just what but it was not 200 eggs per hen, but was satisfactory to me.

We fed them cracked corn, oats and wheat mixed and scattered in litter; skimmed milk, table scraps and occasionally a cabbage or turnips, apple and potato parings, etc. Grit and oyster shells in reach at all times. We arranged for them to have all the grain they would eat.

They were kept shut up from the first snow till the last was gone in the spring, except one bright day in February I let them out they took their fill of snow and quit laying for a week. The house was cold as the chickens made short work of the paper lining and the winter was unusually cold, yet almost every day the window was opened a little. Under this treatment, or in spite of it, the chickens were healthy and seemed contented and happy.

The incubator was started about the middle of February and was kept going for four hatches, after which we rele-

A Money Making Book Free

A 64-page book, finely illustrated, that will put you on the right track to make dollars in place of cents out of poultry. A real poultry guide written from 24 years' practical poultry experience and based on facts. A book for beginners or anyone seeking advice on breeding, feeding, rearing and hatching. Contains plans for brooder, colony and poultry houses, yards, poultry farms, etc. It also describes and illustrates Berry's "Biddy" Incubators and Brooders—the successful kind—with all the latest improvements. Also our fine pure-bred poultry, giving prices of different varieties and their eggs for hatching. If you want to make the **most money** from poultry, send for this valuable book, "Profitable Poultry" A postal will do. Do it today.

Box 52, Freeport, Ill.

gated it to the lumber room among other useless material, for in spite of our best efforts we were unable to hatch more than 20 per cent of the fertile eggs. The first hatch was the best, the last two complete failures.

About the time the incubator was to hatch we purchased a second-hand hot water brooder. It was hard to regulate; holding a large amount of water, it was slow in heating and equally slow in cooling, but was a good heater and was satisfactory for the intense cold that we had just after the hatch came off, and with care we did very well with it, possibly because of the small number entrusted to it.

After managing it for awhile we decided what was needed was a regulator so we got a new hot air brooder with a regulator for the second hatch. I should judge it was a good one as brooders go, as I find we have more trouble raising chicks than hatching them, but after using a while had to confess I could find little use for the regulator. In fact, with the regulator we were unable to give the regular temperature with the gradual decline as chicks grow older that most writers think essential. We did the best we could and gave them

realize there was room for improvement. One of the hens under which they were placed proved cranky and finally left her nest, but from the two settings we got two good cockerels and four splendid pullets besides three or four culls, so we were satisfied we got value received for our money.

The brooder houses were placed on the grass lot which provided plenty of range while small, after which they were given free range, and when it became necessary to separate the sexes the males were given this lot with the brooder houses to roost in and the pullets the house (built that summer) and free range.

A few eggs were sold that summer at a dollar per setting, to our neighbors mostly, and all seemed satisfied with them.

FEEDING AND CARE.

I have already given the description of brooder house, etc., and it only remains to give our method of feeding and care. This was simple: Not fed at all for about thirty-six hours, then fed a prepared chick feed of mixed grain; this was fed in litter at first and fed six or seven times a day, whenever the chicks seemed hungry. The number of feeds were gradually lessened until

POULTRY FARM OF L. B. JENNINGS & SON, POLK, IOWA.

plenty of air and exercise and had no sickness or weak chickens.

BROODER HOUSES.

Both brooders were of indoor type so we had to have a brooder house and this is the way we made them. They were 4x6-foot frame of inch lumber cut in strips two inches wide; roof, sides and ends separate, covered with tar paper and put together with hooks. Window and door in the highest side, which was 4 feet high. They were light enough that two men could carry them any place, or taken apart, the work of a few minutes, one man could move them or could be stored away in small space; they were weather proof and free from drafts. The brooder could be moved out and have a colony house of fair dimensions; they were cheap and anyone could build them.

As it soon became evident that the incubator was not a success in our hands we began setting hens. In this we were quite successful, some of them hatching every egg entrusted to their care and proving themselves good mothers.

The only misfortune we had was with two settings of eggs bought at a good figure from a noted breeder, for by this time we had advanced far enough to

at four weeks they were only getting three feeds, and after grass came we were not particular about the litter. After the chicks were a few days old and until grass came we fed them a little chopped onions, cooked potatoes and apple parings and I arranged for them to have all the sweet skimmed milk they wanted.

At from six to eight weeks we changed the feed gradually (aiming to have the change complete by the time they were eight weeks old) to a mixture of cracked corn, oats and wheat.

With this method, whether right or wrong, we had good success. Our neighbors lost many with bowel trouble, while we had none. The chickens grew and thrived in a way that was the envy of our neighbors.

We hatched a little less than two hundred, ten were smothered in a box one stormy night when large enough to fry, a few were drowned while small, about a dozen were stolen at the frying age; we ate what we wanted, gave some away and when the fall round-up came we had somewhat over a hundred.

Of this number about fifty were cockerels that were kept on the grass lot. This lot fronted on the principal street

of the town and proved one of the best advertisements I could have had. They were in plain sight and made an attractive display, attracting everyone's attention and practically sold me out of cockerels by December 1, and this, too, in a country where nine out of ten kept Barred Rocks.

About forty of them were sold as breeders at the uniform price of \$1.00 each. The balance could have been sold the same way but I did not consider them fit so sold them on the market. About twenty of the pullets were sold the same way, the balance were kept.

That summer I added 20 feet to the hen house, same style as the first, divided into two sections 10 feet square; the middle part again divided by netting to be used as a scratching shed. About one-half of the south front was not sided, but covered on the outside with netting and with a cloth curtain to let down over it in stormy weather; it also differed from the other in having a dirt floor instead of cement.

My pullets began laying about November 1 and by December 1 were doing well and I closed the year feeling much better and prepared to go on with the work.

MISTAKES.

I am going to call attention to the more serious mistakes a little more fully than I did in the body of the article. Those mistakes are most important for if we draw our conclusions properly, we should learn by our mistakes how to avoid them in the future. Happy is the man that can learn by the mistakes of others for he can save himself much expense and loss while the majority of us go stumbling blindly along learning in the hard and expensive school of experience.

First: If I was starting again I would undoubtedly buy stock. If not able to get half a dozen good pullets I would get a trio or even a pair, but whatever I got would be good. For if a man deserves the name of a fancier he will not long be satisfied with poor stock or even fair stock.

The trouble is the novice does not know good stock, and a price that seems outrageous for mere chickens when he first begins will seem reasonable after he has got a bit of experience.

Our first chickens seemed fine and attracted all our neighbors, but we had not had them long till we discovered defects. They were not quite large enough, neither were they white enough. While in the light of later experience we are ready to say they were all we could expect for the money paid. Again, we used all we had instead of eating part of them.

As a result of this you find me buying eggs at a high price and paying \$10.00 for a cock to mate with the four pullets hatched from them. In fact, making a complete change of stock. But my critic will say you sold many of your cockerels for breeding at a dollar each. And I say they were worth it to the farmers that bought them. They were better than what they had by far and not one was sold till the purchaser had looked at his bird. But they were not good enough for me and they would not be good enough for you after you had learned your business.

But if you will start with a good trio or get some cheap hens to set you should have not less than fifty birds at the end of the season if you have moderate success.

If not able to get a trio then I would fall back on eggs from a reliable breeder.

Second: I would not invest in a cheap incubator. The one I got was widely advertised, sent out gawdy catalogue filled with pictures and a play of words calculated to deceive the very elect and it was amazing how little so many words could say, how accurately it could describe a thing and yet not describe. Such as double wall with dead air space. It was but double wall air space and all was about 1½ inches.

The first year with care it gave fair satisfaction, after that I suppose it shrunk and the joints opened, at least we could not regulate satisfactorily and in spite of the most careful watching it was a complete failure.

Third: I am not favorably impressed with cement floors. They have many things to commend them, easily cleaned, do not harbor lice and mites, etc., but they are cold and I had a number of my largest birds with enlargement about the feet that I am satisfied was caused by jumping from the perches onto the bare floor, of course they were littered but it will be scratched off in spots. And another thing, the feed is easier found, requires less work than on dirt floors.

CONCLUSIONS.

A well known breeder in a recent article says: "You cannot expect to build up any business on a paying basis." In this I agree with him, yet how many go into chickens expecting to put in three faithful years before returns come in. Not many, I fear, and yet the chicken business is no get-rich-quick scheme, but a sound business proposition well established and on a solid foundation requiring the same business ability and unremitting labor that other business requires and above most others it requires close attention to small details, in fact, without this last it is not likely to succeed.

At the close of my second year's work I was able to demonstrate a margin of profit not large but enough considering the bad start. And I presume that is doing fairly well.

I have pointed out some of my own serious mistakes, yet perhaps there are many more. Some, I know, could be improved on, therefore I will not take it amiss if this be criticized. To be honest, I hope it will be and particularly if some of the masters in the chicken fraternity, men who have spent years in the school of experience, take time to read this I earnestly hope he will also take time to point out the rocks toward which we are steering, for I confess I am still working along the same line.

And perhaps it will benefit other novices in hendom, for, as a rule, if you can guide a man through the breakers of the first two years, he will stay put.

Eggs In Season.**

WINTER EGGS FOR FARMERS.

The winter product of the hens, where they have special housing, feeding and care, is not to be expected at the country farm where some of these are neglected. Writing for the section in which the writer lives, it is true to a large extent that farmers old and young know better how to keep hogs, cattle and horses than poultry. This is true in many cases where they have had to do with poultry all their lives. Great barns for cattle and horses are built by many farmers who let the poultry stock shift winter and summer with grain feeding in cold weather. In December, January and February, the hard winter months in East Tennessee, eggs bring good prices—one dozen sold then being equal in value to two dozen gathered in warm weather. Farmers, however, find that the hens do not lay the eggs. They have very few to sell.

Unless more country farmers can be turned to the special care of poultry for "breeding stock" and be able to sell eggs and fowls at three or four times the prices at the store there cannot be any great improvement in the industry. How to get "eggs" in winter, for sale as gathered, to the nearest merchant, is the great question with many farmers. Who will write in the best circulated poultry journals, with a farm experience, what will best promote this end, among the country people?

As to shows and prizes, so much advertised and commended, it is not probable that the rural people will take much interest. If there is anything in the scientific care of the birds, to be exhibited, then, other things being equal, the more expensively kept birds will be the winners.

The extraordinary prices paid for single birds, which are prize winners, savors a little of the gambling mania among poultrymen. The country farmers who can be reached with such information as will start them on the way to increase the eggs in winter will no doubt take much greater interest in special poultry farming. The industry is in reach of the poorest farmers on our worst farm lands.

The man who lives in a city or large town where great commercial enterprises are set up fails to understand the real situation in the country home. He too often judges of the farmers' condition by the wagon load of produce he brings to market.

The writer feels some confusion of ideas in reading the claims of some writers for pure-bred poultry.

Market eggs are now wanted in all this "midland" country. Leghorns, Wyandottes, Langshans and Cochins, pure or mixed, get idle on egg production when the market man pays best prices. With us the eggs produced cannot be sold for hatching purposes as things now run and any plans of improvement must come within prospective returns from eggs sold on the market.

With this beginning accomplished we may look for increased trade in poultry stock for breeding purposes and a gradual enlargement of the patronage of poultry journals.

FANCY POULTRY BREEDING FOR PROFIT

Forethought, Care and Judgment Necessary to Success—Cotton no Longer King—Quality of Stock of Vital Importance—Advertising one of the Keynotes to Success—Introducing New Blood.

When we realize that the poultry industry ranks among the first great industries of our country, and as one writer has aptly expressed it, "Cotton no longer is King, but must yield his sceptre to the old hen." No apology is needed at the continual repetition in poultry literature the same old story told from different standpoints. We all need encouragement and to be spurred on to greater efforts in whatever branch of this business we are engaged.

To be successful along any line of poultry culture just as much care and forethought must be given, just as wise and judicious expenditure of time and money is required as would be needed to conduct any other business enterprise and make it profitable financially.

There can be money made from common stock, black or yellow legs, single and rose comb. Varied color in plumage does not so materially affect the contents of the egg basket, and any poultry well fattened and carefully dressed will sell in market; but to establish a paying business as a fancier is altogether a different proposition; there are certain requisites absolutely necessary to gain any degree of success.

At the very beginning must be taken into account the amount of capital on hand to invest in the enterprise and then confine the business strictly within limits of resources. If money capital is limited you will need good common sense to invest where every penny will count. The first step to be taken is to secure the best blooded stock that can be purchased for your money. If economy is needed, begin with a packing box for your poultry house rather than with inferior stock. There will be enough work for the fancier to keep his stock up to the standard, without working up to it.

Choose whatever variety pleases, one kind at a time, and stick to it. You must be deeply interested in the work, as the name implies, a fancier is one who likes and desires, you must enjoy your work, your stock of enthusiasm never run out, but never let enthusiasm run away with your judgment.

Infinite patience is needed, as there will be innumerable difficulties to surmount, a critical public to please and often impossible to satisfy. A fancier cannot be a law unto himself, but must aim for perfection, according to the standard of poultry excellence. A course of study in poultry culture will be a great help by correspondence, if no other opportunity offers; take plenty of poultry magazines and read them carefully.

Is it necessary to repeat over and over again to give your fowls the best of care? A fancier certainly cannot afford invalids in his flock where every bird counts. Keep your conscience clear of criminal neglect; a sick chicken is a miserable object and reflects on your care in some way. Avoid vermin—spray and whitewash, dust your birds at least once a week in hot weather and do not forget it in cold; it is the only safe way. Also shun damp, ill-smelling houses if you respect the health of your flock.

As I am writing for beginners in the

work, I feel the necessity of insisting on particular attention to details. Feed a balanced ration following some one selected from the many used by our best breeders. As you go in your work, you can vary it according to your own judgment and the needs of your own special birds. Often you will find certain numbers of your flock a bit fussy in their eating and need a special diet even when in good health. Do not forget charcoal and grit with a good supply of the latter commodity for yourself, plenty of sand also. Give a liberal supply of fresh water, green stuff, ground bone and meat when required.

Study the color scheme, as yellow legs and red combs depend on the feed somewhat. Be careful in dusting your birds after moulting not to mar the beauty of plumage, especially exhibition birds.

This line of business is no get-rich-quick, no soft snap; you must make haste slowly. Be ever on the alert to work up a first-class reputation that will tell in the future. Get yourself before the public just as soon as you have good stock to sell, but you must wait until you know you have what an intelligent public demands in your line. If, by experience, you have gained an idea, pass it along to those who will be glad of it. Through the poultry journals you know how eagerly we look for words of advice and encouragement month after month from writers in whom we have learned to have confidence.

Make up your mind to spend a certain amount in advertising and do not ask for return stamps for information; it savors so much of quackery. First-class business men know enough to enclose stamps, and the other sort are always with us as a thorn in the flesh that we must endure. The present fad of souvenir cards can be turned to good account by the fancier by having favorite birds, bits of home scenery and the like photographed on postals and use through the mails when needed as advertising medium. Also take them to the poultry shows; you may sell or give away the cards as in your judgment seems best.

Visit as often as possible other poultry plants and experimental stations, gain knowledge from every source; in multitude of counselors there is wisdom; be in season and out of season to gain information. As your flock increases do not fail to introduce new blood when needed. If you go into line breeding, you will find it a real science and concentrated effort needed to carry the work on as it should be. It needs great courage to cull systematically, and in your line of work it is imperative and where every feather counts it must be done closely and carefully. Finally, I say in all seriousness, be as up-to-date and reliable as you can with your flock. Also be straightforward, honest and upright in your business dealings.

You have a long, hard road before you, uphill work and many discouragements. Let your aim be high, as your work, if done conscientiously, is ennobling, giving the poultry world something better than they ever have had before.

Success is sure to come, if you do not grow faint-hearted by the way. "Screw your courage to the sticking point and you will not fail."

INSTRUCTIONS TO THE BEGINNER.

A Logical Course to Pursue to Gain the Desired End—It is Not a "Get-Rich-Quick" Proposition—Start Right and Success is Almost Assured—Join the American Poultry Association.

Poultry Raising as a Side Issue—Operating an Extensive Plant—A Satisfied Customer the Best Kind of Advertising—One of the Foremost Industries of the Country.

It should be the ambition of every amateur poultry fancier to establish a substantial, paying business and to gain a national reputation; a reputation which would be a credit to himself and to the poultry fraternity at large. Only by close application to his work and by honest, sincere, effort can he hope to succeed.

Before entering upon his poultry career, the beginner should make an intelligent study of the subject and determine upon the logical course to pursue to gain the desired end. One of the greatest mistakes that can be made is to rush blindly into the business without having given the subject previous thought or consideration. Most of the failures in the poultry business can be traced directly to this one cause. By many, the poultry business is considered a get-rich-quick proposition. It is this class of people who invest their all in a poultry plant and expect it to earn a fortune for them in a short time. The fortune fails to materialize and, as a result, ninety-nine per cent of them quit the business in disgust. For years these somewhat numerous failures have retarded the advancement of the industry. With all the modern facilities at hand, the beginner who starts right will invariably make a success.

The amateur should be ever ready and willing to learn. He should seek advice of those who are reliable authority on all matters pertaining to the poultry industry. The excellent literature published in the interests of poultrymen affords

valuable information which otherwise could be obtained only by years of practical experience. By a careful inspection of poultry plants owned by successful breeders, one may gain knowledge of inestimable value. The beginner can learn much by attending any first-class poultry exhibition. Here he will have the opportunity to converse with men of practical experience. Each variety of standard bred fowls may be closely studied and their relative merits compared.

The beginner, who intends to engage extensively in the poultry business, should spend two or three years in experimenting with a small number of fowls; caring for them according to approved methods. In this manner he will gain a knowledge that will be of value of him when he establishes a plant of larger proportions. He can try new theories and determine their worth to his own satisfaction. The best methods used in caring for fowls must be varied under certain conditions. The amateur, who experiments with a small flock has the opportunity to learn the best manner in which to care for fowls in his immediate vicinity.

The poultry business may be successfully run as a side issue if it is engaged in on limited scale. The number of fowls which the working man can care for will depend entirely upon the time which he can devote to them. Many of the large poultry plants of today were started as side issues; the owners having met with success gradually enlarged them until they attained such proportions that they

demand their entire time and attention.

To operate an extensive poultry plant requires considerable capital. The person who engages in the business with a view of making it earn his livelihood should be prepared to meet any possible contingency. In estimating the amount of capital which is necessary to invest, one must consider, besides the original outlay, the running expenses together with the cost of living during the time the plant is being put on a paying basis.

The relative chances of success for the variety or specialty breeder is a topic which gives rise to many arguments. The veteran poultry fancier may successfully handle several breeds of fowls, but the novice should start with but one. By carefully studying his chosen fowls, he can gain a better knowledge of how to mate, raise and care for them than if his time was divided between several varieties. In selecting a variety of fowls, one which is popular with the public should be chosen. A poultry fancier with an established reputation may succeed in pushing a new or unpopular breed to the front, but the beginner will find it to his advantage to take up a variety for which there is a demand.

After having determined upon the variety of fowls that he intends to breed, the beginner should make a careful study of their characteristics and standard requirements. When he becomes qualified to pass judgment on the qualities of fowls, he should make his first purchase of stock. His success or failure in the fancy poultry business depends to a large extent upon the quality of his foundation stock. It is also highly important that these birds and each succeeding generation be mated according to the best scientific principles. Having good foundation stock to start with and using systematic line breeding, a strain of ideal birds can be established.

The combination of fancy and market poultry will always prove a successful one. In establishing a strain of fowls, it is a great advantage to combine the utilitarian with the standard qualities. The poultryman can build up a private trade with customers and dispose of all his surplus products at fancy prices by guaranteeing his eggs to be strictly fresh and by putting his fowls in prime market condition.

Every amateur fancier should become a member of at least one of the numerous poultrymen's organizations. The American Poultry Association, which is national in scope, controls to a large extent the fancy industry. It publishes a "Standard of Perfection," the only authorized guide to correct judging of fancy poultry. The object of this Association, as set forth in its constitution, is for the perfection of the "American Standard of Perfection," and for the consideration and discussion of all matters of a national character regarding the poultry interests at large. The breeders of all the popular varieties of fowls have separate organizations called "Specialty Clubs." The object of these clubs is to advance the interests of the variety of fowls which they represent. The poultry fancier, who joins any of these poultry organizations will gain a prestige that will be of value to him. Besides the American Poultry Association and the various Specialty Clubs, there are a host of local organizations devoted to the betterment of the poultry industry. They hold annual shows and each year succeed in

Be Progressive ^{AND USE} Superior Trap Nests

Read this testimonial from Mr. Fishel and write today for our new 1906 illustrated catalogue, the finest Trap Nest catalogue ever issued. It's free.

MR. J. A. BICKERDIKE, Hope, Ind., Nov. 28, 1905.

Superior Trap Nests, Millersville, Ill.

MY DEAR SIR:—The Trap Nests reached me O. K. and I thank you for promptness in filling my order. I have been in the poultry business for nearly 30 years and this is the best Trap Nest I ever saw, in fact, is the only one I ever thought enough of to buy. I intend to install these I have bought as soon as I get my matings made up for the coming season. I beg to remain
Yours very respectfully, [Signed] U. R. FISHEL.

J. A. BICKERDIKE, — "The Trap Nest Man" — Box A, Millersville, Ill.

enlisting a large number of recruits in the poultrymen's ranks.

If the beginner has been fairly successful in the first year of his poultry career, he may decide to enter some of his best birds in a fancy poultry exhibition. Before doing so, however, he should consult one who is qualified to pass judgment on the merits of his fowls. Then, if it is deemed advisable to enter his stock in a show, he should set to work with a determination to win. He should read some of the valuable instructions on show preparation, and, if possible, obtain advice of some veteran breeder. In fitting his birds for the show, he should try to put them in the best of condition, but should employ none of the methods known as "faking." By carefully complying with all the requirements of the Association, he will preclude all possibility of being debarred from competition. If it is possible, the owner should accompany his birds to the show. He will then have the opportunity to personally care for them. If he fails to win any of the coveted "blues" he should take defeat in a philosophical manner and acknowledge the superiority of his competitors' stock; but, if he is fortunate enough to win, he should accept his victory modestly.

When the breeder has increased his business to such proportions as will justify him offering his stock to the trade, he should plan an advertising campaign. To the amateur, who intends to build up a large trade in fancy stock and eggs, the continuous advertising plan is indispensable. If the beginner is unable to write a strong advertisement, he should engage the services of a professional ad writer. The best ad is one stated in a clear, concise, businesslike manner. When selecting the medium which he intends to use, the advertiser should consider the class of readers whom he intends to reach. In comparing the rates of various poultry papers, the sworn circulation of each should also be considered. The person whose advertising experience has been limited, will find a most valuable aid in any of the best monthly advertising magazines.

While correct advertising is a great aid to the fancier in disposing of his stock, the use of good stationery is by no means a secondary consideration. The sole duty of the advertisement is to put the buyer into communication with the seller. The advertiser must then consummate the deal. The fancier who uses good stationery will create a favorable impression on the minds of his prospective customers. His circulars, letter heads, envelopes, etc., should be of the best style and quality and should be gotten up in a neat, attractive, businesslike manner. Judicious advertising, supplemented by superior stationery will bring satisfactory results every time.

When building up a trade in fancy poultry, the amateur should bear in mind this motto
"A satisfied customer my best advertisement."

In describing his stock to a prospective customer, he should give a correct, unprejudiced description of it. He will gain trade by guaranteeing his birds to be exactly as represented. In filling an order for fancy eggs, he should send out strictly fresh eggs from a vigorous, healthy breeding pen. Then, if they fail to hatch, he can truthfully say that it was due to causes beyond his control. The poultryman who uses honest, straightforward business methods and gives

every customer a "square deal" will gain a reputation of which he will be proud.

The poultry business today ranks among the foremost industries of our country. Fifty years ago, its present dimensions were scarcely thought of. Many of the seemingly insurmountable obstacles which confronted the pioneer poultrymen have entirely vanished. The business has been put on a scientific

basis. The derision and contempt in which the poultryman has so long been held has all but disappeared; the public has been forced to respect his vocation. Thousands have embarked in the poultry business. The men who remained and conquered all difficulties have invariably made a success. The amateur should emulate their example.

THE RHODE ISLAND RED FOWLS.

The Coming Meeting of the A. P. A. at Cincinnati, Ohio—The Blunder in the Standard—Proper Shade of Buff for this Variety.

The old time-worn saying "Every dog has its day" is very applicable to the poultry fraternity, as ever since the introduction of the original Brahmans and Cochins there has been a succession of new breeds each holding the public attention for a longer or shorter time, according to the real merit of the breed.

No one that is at all posted will deny that the Rhode Island Reds are having their day now, and judging from their unprecedented popularity, which is founded on the fact, that they are not only a handsome fancier's fowl, but are also a business fowl in every sense of the word.

Nearly all successful commercial poultry establishments are breeding the fowls of medium size and the Reds belong to this class, which, together with their hardiness, rapid growth, and great winter laying qualities, place them among the Standard breeds that will always remain popular and be bred year after year in larger numbers.

That the breed will stand acquaintance is convincingly proven by the fact that in the neighborhood of Little Compton, R. I., where the breed originated many years ago, there is practically no other fowl raised today, and there they are raised in large flocks purely for eggs and meat and if they did not answer the purpose better than any other breed they would have been dropped long ago.

Judging by my daily mail the United States is full of people that want to know more about this comparatively new breed, and I advise anyone interested in the breed to correspond with all of the clubs that are promoting the interests of the breed. The interests of the two varieties are well looked after by three strong clubs, namely, the Rhode Island Red Club of America, W. J. Drisko, secretary, Somerville, Mas., which has fostered the breed from its infancy until it has reached manhood and been admitted to the Standard of Perfection and known the world over as the "Greatest Utility Fowl."

The club's year book, "Red Hen

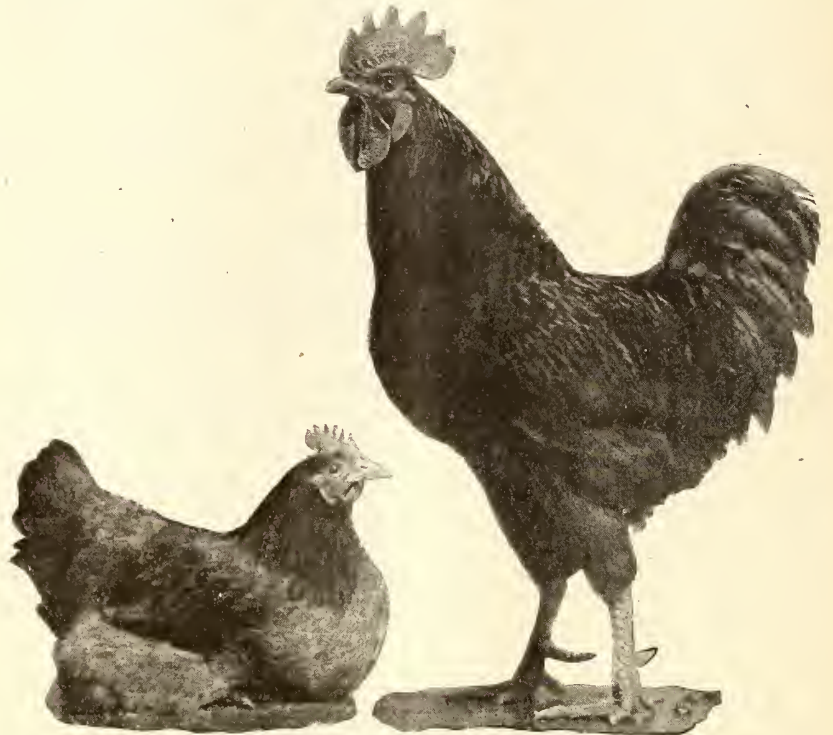

Tales," will be sent to any address on receipt of 6 cents postage.

The National Single Comb Rhode Island Red Club of America, Geo. D. Wilcoxson, secretary, Freeport, Ill., has made remarkable growth during the past summer and bids fair to eclipse the old

F. D. Baerman, secretary, Dunellen, N. J., represents the Rose Comb Red breeders and their recent work at the last meeting of the A. P. A. has done much to attract public attention to these new breeds.

Rhode Island Reds have been one of the chief subjects of conversation whenever a group of poultry men get together. That Secretary Baerman is working loyally for the interests of his favorite breed no one will doubt for a minute.

It is hoped that the coming meeting of the A. P. A. at Cincinnati, O., will

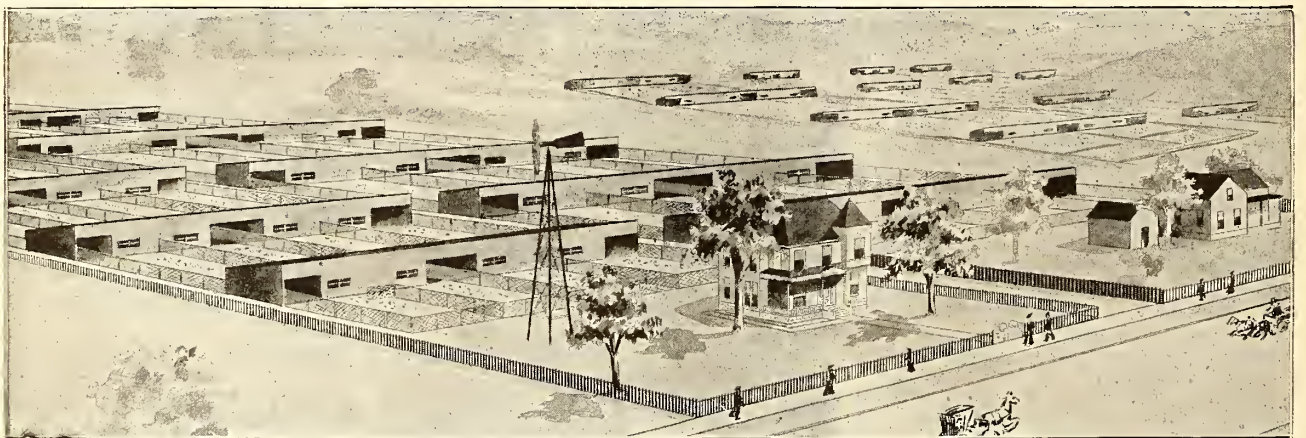

PAIR S. C. RHODE ISLAND REDS.

club in membership in the near future.

This club has just issued their first bulletin which will hereafter be published regularly in the interests of the breed and anyone interested should send for it, as it is free.

The American Red Club of America,

be able to settle all questions under dispute satisfactorily to all parties as all three clubs will probably be well represented and then the right of the matter can be found out and an ideal established that the breeders all over the country can breed to without any fear

Crescent Poultry Farm, Frank Foy, Proprietor, Des Moines, Iowa

"Money in Poultry" is the title of our new 84 page thoroughly revised and illustrated book which tells how to make it; also how to feed, breed and grow and market your poultry for best results. Plans for houses; diseases and cures; how to kill lice and mites. This book probably gives more reliable information about the poultry business drawn from actual experience than any book of the kind published. It contains many illustrations. It tells all about raising poultry for profit; feeding for eggs, broiler raising, artificial incubation and contains many valuable and interesting articles. Illustrates and describes the largest pure-bred poultry farm in the country. It also describes and illustrates 30 leading varieties of pure-bred fowls, and the Frank Foy Incubators and Brooders, and quotes extremely low prices on fowls, eggs, Incubators and Brooders. Mailed to any address for four cents in stamps. Address

FRANK FOY, : : Box B, : : DES MOINES, IOWA

of its being changed every few years. Besides the question of name for the Rose Comb variety the question regarding the ticking in the hackle of the females is causing considerable discussion, many claiming that having it in the females when the males should not have it, will necessitate double mating which is a detriment to any breed. On the other hand, some of the oldest breeders claim that the Standard requirements of both sexes will come to a large percentage from a proper single mating, as their

which is to be the ideal specimen, and then all pull together and live up to it. It is a hard matter to describe in words the beautiful shades of rich brilliant red that make up the plumage of the ideal Red male, and it is to be regretted that judges differ so much in different sections of the country.

It is an open question as to which is the proper shade of red, that is whether it should be lighter, or darker, but my private opinion is that it is to the interest of the breed to keep as far away

S. C. R. I. RED.

experience has proven, and that the ticking is a characteristic marking of the breed and distinguishes it from the common buffs. The blunder in the Standard requiring black wing coverts on males and females is purely a misprint as it should read flight coverts black.

When the leading breeders of the country meet together the subject can be sifted down to the right of it and let the questions be decided once for all

from the buff shade as possible and still have the brilliant, lustrous, cherry red, harmonizing from head to sickle feathers, with the females of even color matching the breast of the males and then we have a color that no other breed in the poultry fancy can compare with, and one that will arouse the admiration of anyone no matter whether they are lovers of poultry or not, and one that will not show soil.

EDWARD T. DE GRAFF.

CHAMBERLAIN'S PERFECT CHICK FOOD MAKES WINNERS.

From North, South, East and West come reports of the grand results accomplished where Chamberlain's Perfect Chick Feed has been fed to young chicks, and, if the stock foundation is present, prize winners are always produced. The firm whose letter we are permitted to copy below are widely known as the originators of the Wilber's Gem strain of Single Comb White Leghorns, and what they state will go far with poultry keepers who do not know of the excellent qualities of Chamberlain's original products:

W. F. Chamberlain, St. Louis, Mo.

Dear Sir: It is a pleasure to state that we had five entries at the Alabama State Fair this year, 119 birds competing, taking three firsts, one tie and one second. At the Banner Show at Charleston, S. C., this month, with 3,000 birds in show, with six entries (no cocks) we tied for first on pullets, with second on pen, with score of 188; took silver cup for best pen in class and special ribbon; also ribbon for best Leghorn cockerel. We have used your Perfect Feeds, etc. for years and have found them more than satisfactory in actual results; in fact, they do more than you claim for them, hence we rear our youngsters on your chick feed only.

With best wishes for your continued success, we are, yours respectfully,

WILBER BROS.

Petros, Tenn., Nov. 28, 1905.

H. H. & E. M. Coburn showed a string of seventeen birds at Flint show, judged by Orr. They won twenty-two ribbons, thirteen firsts, five seconds and one third and three specials. Orr paid their birds several high compliments. Their Silver Pencilled cockerel had a perfect wing and their first Silver Pencilled hen was about perfect in shape. He also said their Columbias were fine and large. Their two hens scored 93½ and 93 and first pullet 94½, second pullet 94. These, and more show birds that will be shown at various shows, will be in their breeding pens for egg trade. They show four high scoring Rose Comb Black Minorcas. Their first cockerel scored 94 and will head one of their pens. There were 800 birds at the show, and the association did all it could to make it pleasant for exhibitors. A banquet was also given in honor of Judge Orr.

The January number of Scribner's Magazine contains one of Kate Douglas Wiggin's most amusing stories, "Phillippa's Nervous Prostration." In its course it describes a modern sanitarium, with its daily routine of prepared foods, massage, rest and meditation. The theme furnishes Mrs. Wiggin with the very best opportunity for the display of her marvelous talent for making fun. Incidentally it develops two charming love stories. The illustrations, by May Wilson Prestou, catch the humorous spirit of the story delightfully.

This is to certify that I have sold Orville D. Chinn, cock bird that took first prize as cockerel at Chicago show, January, 1905.

H. D. SCHREITER.

Mr. A. J. Lawson, secretary and treasurer Cleveland Poultry Association, Cleveland, Tenn., says: "I don't see how a chick could possibly die in the 'Mandy Lee.' It's the only brooder ever manufactured. Catalog free.—Geo. H. Lee, Omaha, Neb.

F. W. Owens, Richwood, Ohio, breeder of Buff, White and Barred Plymouth Rocks and White and Buff Wyandottes, is offering bargains on cockerels in these varieties this month. Look up his ad elsewhere in this issue and write him for particulars. Mention AMERICAN POULTRY JOURNAL.

THE BADGER STRAIN

For the next 60 days I will sell my this year's breeders at half their value. Are you going to get some of this grand strain? First come first served. Get my prices for either cockerel or pullet mating. Please write just what you want.

C. A. STROHM Burlington, Wis.
 State Sec. American Ply. Rock Club.

S. C. B. Leghorns

A number of scored pullets and some choice cockerels for sale this month.

Paul T. Hobart, Roscoe, Ill.

RHODE ISLAND REDS

A few fine cockerels, hens or pullets for sale at moderate prices, from the original Tripp Macomber stock. Write

WALTER SHERMAN CITIZEN FARM NEWPORT, R. I.

CUT CLOVER

The green feed for winter eggs. Write for interesting prices.

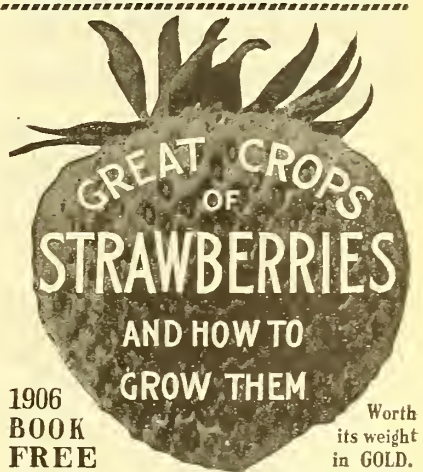

H. T. ROGERS & CO. : Box 91, Ransomville, N. Y.

SHOEMAKER'S BOOK ON POULTRY

and ALMANAC for 1906 contains 234 pages, with many fine colored plates of fowls true to life. It tells all about chickens, their care, diseases and remedies. All about INCUBATORS and how to operate them. All about poultry houses and how to build them. It's really an encyclopedia of chickendom, and no one can afford to be without it. Price only 15c.

C. C. SHOEMAKER, Box 577, FREEPORT, ILL.

1906 BOOK FREE Worth its weight in GOLD.
 The Book that beats them all because it tells how big crops of big fancy strawberries can be grown every year and how to pick and pack them for big prices. It tells the poultryman how to combine strawberries with chickens and double his profits. It keeps Experienced Growers posted on new discoveries in plant breeding and latest cultural methods. It takes beginners through a complete course of instruction; tells just when and how to do everything to get Big Results, and how to start a Profitable Berry Farm with little capital. Beautifully illustrated with photo-engravings. Don't order your plants until you read this book. It is free.
 R. M. KELLOGG CO., BOX 325 THREE RIVERS, MICH.

PROMOTER STRAIN White Wyandottes

are the big, blocky, pure white, and stay white kind that win wherever shown. A cockerel of this strain will improve your flock. I have some good ones for sale. Also choice pedigreed Collier pups.

J. H. Vanden Bosch Jr. R. D. 7, Auburn, N. Y.

AUTOGRATS OF SHOW ROOM AND UTILITY...

Black Minorcas—W. P. Rocks

Make a sweeping win at late New York Madison Square Garden Show. Four 1sts, two 2ds, including 1st and 2d pens on Minorcas and four 1sts, including 1st pen on Rocks. Grand total eight 1sts and one 2d out of possible 10 1sts in largest and strongest classes each variety ever shown in Garden. Grand chicks and pullets line-bred direct from the winners after September.

Greystone Poultry Farm, Yonkers, N. Y.

White and Barred Rocks.

Partridge and White Wyandottes, Mammoth White Holland Turkeys and Imperial Pekin Ducks. Our birds are winners at Chicago, Cleveland, Indianapolis and Illinois State Shows. We have three yearling and two young toms at \$5 each. No females. Eggs \$2.50 per 15, \$5 per 40. Turkey eggs \$5 per 12. Write your wants. We guarantee satisfaction or return money.

Stryker Bros. Box 204, Plainfield, Ill.

Your Fowls Have Roup

They are dying. You're discouraged. You're losing money.

How to prevent treat and cure **FREE**

M. E. Sullivan, Quincy, Ohio

Silver Wyandottes

Two big Chicago shows—eight first prizes. Stock to spare at right prices. Eggs for hatching. Write for particulars.

W. H. MILLARD, Genoa, Ill.

White Wyandottes
Cockerels only. Some good ones.
The K. G. Poultry Yards
Circleville, Ohio

THE IMPROVED CHAMPION LEG BAND

Aluminum or copper, two sizes, adjustable to fit any fowl. Held by double lock. They can't lose off. Initials, 10 cents per 100 extra. Also Pigeon Bands.

THE SUPERIOR
is securely locked; can't lose off; six sizes. State breed and sex. Price, postpaid, either kind, No. to suit, 12, 15c; 25, 30c; 50, 50c; 100, 80c. Sample for stamp. Circular free.

T. CADWALLADER, Box 502, Salem, Ohio

We manufacture **WORLD SAFETY IN-CUBATORS AND BROODERS**, and sell them on 60 days trial and 6 years guarantee. Our machines have numerous improvements not found on other machines. We are headquarters for all kinds of Poultry Supplies. If you are in need of clover or alfalfa, the nice pure green kinds let us send you samples and prices. We have an interesting proposition to make to all who raise poultry. Send today for our new Catalogue. It contains full information about our proposition and we mail it postpaid.

WORLD STOCK AND POULTRY SUPPLY CO.

IN THE FARMER'S POULTRY-YARD.

With poultry, whether you raise the fowls for pleasure or profit, or both, each month brings with it new duties and cares which must be done just then and through small in themselves go far to make a successful whole.

Let us begin with the first month of the year. After the long rest of the molt, it is now time for you to stir your hens to industry in the egg-producing line, since one dozen eggs in January is worth three when everybody's hen is turned into an egg machine.

I will give you a few ideas on a system of feeding which is within the range of all farmers since my article has nothing to do with the high-tone fancier, who houses his birds in palaces and gives them as constant care as one might bestow on a baby. Those I want to help in these short talks are the farmers, or rather the farmers' wives, who depend upon old biddy to clothe the children or add to her own toilet or to the comfort of the house.

In the first place, see that your "chicken house" is as warm as can be made without too much expense. Have the "men folks" on some leisure autumn day haul dirt all around the building to the height of about one foot, then close up all the cracks with any old lumber which may be found around. Farmers have a knack for that kind of carpentry. The result is not very ornamental, to be sure, but the hens don't care, and on the farm where the margin for profit is very limited every cent counts.

The house once fixed, see to your scratching shed for snowy weather. This can be made as cheap as one wishes. Roof and walls of willow branches nailed to poles, a deep bedding of straw with grain scattered in this now and then, will help keep the hens warm, active and contented.

Now for my system of feeding, which is inexpensive, yet which does the work of filling the egg basket as well as the more elaborate method followed by the fancier.

During the day cook up such things as small potatoes, onions, apples, cabbage or even alfalfa leaves, in fact anything that not being marketable would go to waste. While cooking add good seasoning of red pepper—a teaspoon to a quart—and let boil. Every morning feed this mush to your hens as soon as you get up, give warm water and if the day is pleasant, let them run until night in wheat field, orchard or meadow and trust them, they will scratch for themselves. In the evening a good meal of heated corn, wheat, barley or oats, or all four mixed, and there you are. Your chickens are contented and express that contentment in eggs which more than pay for their feed and care. As green food give small heads of cabbages now and then, sugar or stock beets and all the skimmed milk you can spare, this milk to be warmed in cold weather.

By the adopting of this simple system I have been able to make my hens lay in winter, not as much as in summer, of course, but at their present price of 30 cents a dozen fully enough to pay for all feed bills of the idle ones.

ADRIENNE ROUCOLLE.
Fort Collins, Colo.

W. A. Porter, R. R. 5, Streator, Ill., breeder of Barred Plymouth Rocks, made a creditable showing. His first prize cock bird was a fine specimen. He has a few fine cockerels and pullets to sell. His birds are of a very fine barring and Mr. Porter certainly knows how to breed first class Barred Plymouth Rocks.

GREIDER'S FINE CATALOGUE
of Standard bred poultry for 1906, printed in beautiful colors, contains Fine Chromo, illustrates and describes 60 varieties. Gives reasonable prices for stock and eggs, tells all about poultry, their diseases, lice, etc. **This book only 10 cents.**
B. H. GREIDER, RHEIMS, PA.

BOURBON RED TURKEYS.

No doubt there is no fowl raised on the farm that should yield a greater profit for capital, time and feed invested than the turkey if properly cared for. While our turkey is a stranger to many we are glad to introduce them to the public as a "peace maker" and a domestic fowl carrying all the qualities of a turkey and surpassing many varieties as a table fowl and being heavy red in color with white wings and tail he never fails to attract attention wherever shown and when your neighbor's turkeys come over and mix with your flock you can always pick your own, do not have to pull hair with that neighbor for possession of one certain tom that went away with the flock. We boast of them being the most domesticated of all turkeys, and by this we do not mean they sit around by roost or feed pen all day and wait from one feed for the next one, but are industrious, chasing hoppers and picking seeds about the farm, and never once have I seen them over one-half mile from the house. As regular as the school children come home from school those turkeys come home to roost, and we do not have to chase all over the neighborhood to round up our turkeys (like a Texas ranger rounding up his cattle) to find how many have escaped the turkey's enemies during the season that can now be put on the Thanksgiving or Christmas market. While our turkey is not a Standard variety I am endeavoring with the best means at my command to get names of breeders of Bourbon Red turkeys that we may get together, form a Bourbon Red Turkey Club, outline description that we may breed uniformly, and then we may be able to get in the Standard, then I feel sure our turkey will be the leading turkey and everywhere known. Would be glad to correspond with anyone interested in the advancement of this grand and noble bird.

MINNIE M. B. BROWN.

APPLETON CITY, Mo., Aug. 10, 1905.
Editor AMERICAN POULTRY JOURNAL.

Dear Sir: In the December number of your paper you, on page 846, say that "Buff Turkeys and what some people call 'Bourbon Reds' are one and the same. The Standard only recognizes the Buff Turkeys." Now, while it is a fact that the Standard recognizes only the "Buff" yet I say that it should recognize also the "Bourbon Reds" as a special variety of turkeys. Why do I say this? Just simply because they are as separate and distinct as the Bronze and the Narragansett, and I think the Bourbon Red are more beautiful, larger

and more gentle than the Buff, and just to glance at a pair one can tell the difference. I know, because I have both breeds, distinct, and raise them side by side. Commenced this to prove for myself whether or not there is any similarity, and there most positively is a wide difference, and that in favor of the Bourbon Red, and as the turkey judge at the Universal Exposition at St. Louis 1904 said: "They should never be exhibited as the same," and as another prominent judge said: "There is plenty of room for both." Now, Mr. Editor, if you do not believe they are distinct and separate varieties come and visit our poultry plant and I will show you the difference.

MRS. MINNIE M. B. BROWN.

The committee of revision of the Standard at their meeting in Buffalo seem to have thoroughly considered this question. The sub-committee on turkeys brought in a report, describing the color of the turkeys as "red." The report was accepted. At a subsequent session a letter was received from Mr. J. A. McIntosh, ex-president of the Buff Turkey Club. In it he requested that the color description be "Pure Buff throughout." We now quote from the stenographic report of the proceedings of the committee.

"Mr. Sewell: I move that we reconsider the color of these birds."

"Mr. Pierce: I do not believe that we have any right to change those red turkeys, as red and buff are quite different."

"Mr. Hewes: As one of the committees upon turkeys I think I suggested that proposition. I have been interested in turkeys, more or less, I believe for twenty years, and this buff turkey proposition has been up during that time, and during all the twenty years I have never seen a buff turkey, and until we get more light I say let the red go. We have had red turkeys under the name of buff, but they were not buff."

"Mr. McClave: We simply changed that color in the Standard from buff or light chestnut to red."

"Mr. Curtis: When we called them red turkeys we went a great deal further away from their actual color than buff was. Red may be twenty different things, but I do not think any of the committee ever saw red on a turkey."

"Mr. Curtis: I move as an amendment to that motion that we refer the report on red turkeys back to the committee."

"Mr. Hewes: This committee has acted to the best of their ability and according to their best judgment, and refuse to act on that committee again. You have accepted our report once."

"Mr. Curtis: I move you, then, as a further amendment, that the chair appoint a committee of three."

"Mr. Orr: I second the motion."

"Chairman: You hear the motion."

"Mr. Heck: I ask you to excuse me from acting on this committee."

"Chairman: All right; Messrs. Curtis, Sewell and Orr."

"REPORT OF COMMITTEE ON TURKEYS."

"Mr. Orr: The committee recommends that the Standard for buff turkeys be left as heretofore."

"Mr. Orr: I move its adoption."

"Motion seconded by Mr. Curtis."

"Mr. Hewes: At the Pittsburg show there were some ten or fifteen red turkeys, not buff, and that exhibit of turkeys shown there under the name of

Bourbon Reds was our reason for changing from buff to red; to take in some quality that will in a measure fit the word or description that we made out. Now I have been judging poultry over fifteen years, and during that time I have worked in all of the western and middle states and in connection with other business have visited every state in the Union; have made all points from ocean to ocean, from Gulf to the Lakes, and I want to see one single section of that bird that can honestly be called buff. I will certainly oppose this motion; buff does not fit it. The red does not convey the right meaning, but as they have been taught to read it as red in the poultry world, I think the term answers every purpose."

"Mr. Pierce: I was at the Cincinnati show this winter and I also saw there an exhibit of turkeys which I believe were called Bourbon Reds. I took particular pains to examine them; there was quite a large exhibit of them and I am like Mr. Hewes—I have never seen a buff turkey yet."

"Mr. Curtis: As I understand it, this committee is in favor of calling them the buff turkeys and reducing the weight two pounds all around. The only man in America that has taken any interest in it one way or the other was a member of the Buff Turkey Club. Mr. Orr says he is a man of good repute, he speaks as from experience as a man who knows a prize and thinks something of buff turkeys. No one has asked that these turkeys be changed to red turkeys; there is not a member of the committee who can describe them as red; they have been called buff turkeys ever since I knew them and I think it would be very unwise and show very poor judgment to desire to change these turkeys from buff to red."

"Mr. McClave: I would suggest that we return and place the old color that originally stood in the Standard plumage pure buff throughout, wings being a lighter shade."

"Mr. Orr: I second the motion. I understand that it is to remain as it has been heretofore in the Standard, without change."

"Motion carried."

We do not wish it to be understood that we have given the entire discussion of the committee, but enough to show that in many localities the red turkeys have been placed in poultry shows as buffs. So common had this practice become that the committee were on the point of changing the buff turkey Standard to fit the Bourbon Reds.

While it seems as if the buff and the red are the same breed, yet there is no doubt there may be strains of the reds and buff that differ very materially in color, weight and other characteristics. Is not Mrs. Brown right in saying "they should never be exhibited as the same?" Should not the buff turkeys be buff and red turkeys be Bourbon Red? To again quote Mrs. Brown, "There is room for both." We commend the movement she has started for a "Bourbon Red Turkey Club." Breed the variety so that it will have the necessary breed characteristics for admission to the Standard.

M. M. Smith, Farmersville, Ill., has some choice Barred Plymouth Rocks for sale. His birds are the barred-to-the-skin kind. Any one in need of some choice birds should address him early before the best are gone. His winnings are too well known to need any mention.

EGGS IN SEASON

M. M. Smith, Farmersville, Ill.

HINTS TO THE BEGINNER.

Trying to Operate an Incubator for the First Time—Do Not Get Discouraged Over Failures—Don't Start in the Poultry Business With Every Breed There Is, Take One Breed and Make a Success of It.

Before giving any hints to anyone interested in raising poultry on a small scale, I should like to tell you of my first early experience in raising chicks.

You know anyone (who is energetic—not lazy) can take care of a flock of hens, for through the summer season, if one lives on a farm, they will scratch most of their living out of old mother earth, take a frequent dust bath, which they will hunt up for themselves on the edge of some little cradle knoll, sing all day around the barns and repay you by laying plenty of eggs, or later, bringing up a little family to take their place another year, as you will find best results are given by keeping very few, if any, hens over that are more than a year old. This rule, however, does not refer or hold good in regard to the master of a flock, Mr. Rooster. They give better results shown in a vigorous lot of chicks when two or more years of age, and should not be related to your pullets kept for breeding.

My first experience was a laughable one, trying to operate an incubator for the first time, although at the time it brought a few hasty, never-to-be-forgotten tears to my eyes. It happened in this way: The chicks were due to arrive on Monday morning in the brand new 200-egg incubator, and so carefully had I tended it, that even the children were supposed to walk lightly as they inspected it at a safe distance, for fear of sudden jars, you know. Well, Sunday, the day before the downy little fellows were due (I had it all pictured out in my mind how beautifully soft and downy 150 of them would look just out of the shell a few hours, for, of course, after such careful tending we thought, John and I, 150 out of 200 eggs would be a very conservative estimate.) I was getting ready for church, that Sunday morning of which I speak, and John in his kind-hearted way thought he would turn the eggs alone. We had been in the habit of turning them by means of the extra egg tray each time. Well, I started to come downstairs with those dear little prospective chicks in my mind—just 24 hours off—when I heard a crash and John's exclamation: "For Heaven's sake, Margaret, don't come down just yet." I rushed down, as you may guess, to see 200 eggs one mass of ruin on the floor and John in the midst of them saying: "It's a darn shame, Margaret, but my hands slipped some way, or the tray slipped—anyway I'm awful sorry about it." I think, if I remember rightly, I laughed a little and cried a little, but anyway, John fixed it all up by giving me \$10, saying: "Well, little woman, try it over again and I'll promise never to dash all your fond dreams of the poultry business again."

There were five or six of the eggs which seemed all right, no cracks, so we put them carefully back into place and the next morning one poor little cripple came out—quite smart. So de-

termined was I to raise one chicken at least from that big setting of eggs, that it really lived for a good many days, but I think that chicken succumbed at last from too much attention and care.

Please pardon me for wandering from the text too far, but I wanted you to know the first experience and trials of a beginner.

First of all, do not get discouraged over failures. Read your poultry journals religiously. They are up-to-date and educators. Put into practice whatever appeals to your surroundings and ideas most. I wish to state that in give my methods of just how success has come to me, would not interest the large poultry plants, as it is to the beginner I hope to give points to help. Keep thoroughbred fowls if you cannot keep more than a dozen. As soon as you learn to operate successfully one incubator, buy another. Try this for a season, then the following year still another. This will give you three to operate, together with say fifty hens or even a less number to help out on the hatching process.

Now, my dear readers, and I fancy you are mostly women, like myself, anxious to earn a hundred or two dollars for spending money all your own. I am going to tell you just how I run my small poultry plant, hoping you will gain some courage and helpful hints to assist you in time of need.

I have three incubators, all hot air machines. After trying them all over the house, even in the spare bedroom, I decided the cellar was the proper place, and experience has proven it. The temperature is more even there, and the machines are undisturbed by children, pet dogs, wagging up against them, or family pussy, who doesn't hesitate to take a quiet nap on top of your very best machine. I set them three times, once in April, once in May and once again to come out the early part of June. Northern Maine is not very warm, even the last of May, hence the reason for setting eggs no earlier than April. You who live in a warmer climate would have a great advantage in this respect, as I find my early April chicks take the shine all off the June chicks. I buy cheap eggs, usually 20 cents a dozen, for the last setting. Out in the country where hens run at large, the eggs prove very fertile. These I keep to kill for the home table and market, as none but your thoroughbreds should be kept for breeding. Just here, I wish to say, don't be afraid of spending a little money each spring for fancy high priced eggs to hatch. In this way, you can constantly improve your flock and surprise yourself by raising prize-winners. Barred, Buff and White Plymouth Rocks, I keep exclusively, as they are handsome, quick to mature and good layers—an all-around fine fowl.

The first three weeks of chick life is the hardest to get them safely by. Do not feed any sloppy food, as I killed more that way than any other, bringing on bowel trouble, as it did. Three or four times a week I find it is an excellent plan to put five or six drops of carbolic acid in a tin pail holding say five or six quarts of water. This keeps their crops sweet and you will have very few cases of bowel trouble, which you know is so fatal to young chicks. When they are ten days old and still at that delicate time I feed prepared

chick food in three inches of clover chaff right in the runway of the brooders to keep them active and growing. Fresh water, charcoal and fine grit or sand is always before them, always keeping in mind that your brooders must be kept clean.

If you once get thoroughly interested in poultry raising, it will grow upon your fancy and you will dream of it at night and day, dream in your waking hours until it almost becomes a hobby. Success is sure to crown your efforts before you realize it.

There is one thing I have found out which does not pay. If you wish fertile eggs for hatching, and it takes a great many when the season arrives, do not force your hens to lay with those fancy egg-producing mixtures advertised for that purpose. It weakens the oviducts and infertile eggs or weak germs are the result in your incubators. If you are planning on selling all the eggs you can in the winter season, not caring to raise many chickens, in that case, it might be thought practical. Do not be afraid to put out a little money on your small poultry venture. What I mean is first of all a good warm house to keep them in through our long cold winters. Warm enough to keep the combs from being frost-bitten. In northern Maine eggs for three months in winter bring from 40 to 50 cents per dozen, and with the thermometer dancing around 35 degrees for days at a time, do you wonder that we build warm hen houses? I have one long house 50x12 feet in width with five windows (double for winter) facing the south. There are three separate compartments for the three varieties of Plymouth Rocks, along the north side of which runs a passage way the entire length of building. A door which is held in place by a button lets down the hinges, and gives access to the eggs from the passageway from each compartment. The nests should be raised at least 11 or 12 inches above the floor, so Miss Biddy cannot walk along, spy a freshly-laid egg and immediately step in and proceed to eat it up. Watch your flock and all egg-eaters, overfat fowls and lazy hens that lay a small number of eggs in a year's run; dispose of either for the market or home consumption. I have expended within a year \$60 for improvements in the way of incubators, brooders and fancy fowl eggs; in fact broadened out considerably. Seven years ago I started with one dozen fullblood Plymouth Rocks and a hen house 10x12 feet. What I have been able to accomplish, thousands of other women can do. One prominent poultry man, who has become rich within the past ten years, says, and very truly: "Don't start in the poultry business with every breed there is. Take one breed and make a success of it." Of course, we do not all think alike in regard to the merits of different breeds of thoroughbred fowl. Many prefer the Asiatic breeds and others the strictly American fowl. But this we know—our American breeds have reached such a high standard of perfection, due to our many hustling and energetic poultrymen, that none need say—I find no fowl to quite suit my fancy. Really all can be pleased and satisfied.

One more subject I wish to consider before closing. Remember first of all after one has hatched a lot of chicks the half is not done; in fact you have

just started for from now on the returns for your work depends on how many chicks you rear. It has been properly stated over and over again in our AMERICAN POULTRY JOURNAL—any one can hatch chickens, but it takes brains and work to raise them.

Regarding temperature of brooder—experience has taught me that more chicks are killed by overheating than by chilling. To substantiate the statement, just take a few chicks and try to rear them in a box with nothing but a jug of hot water for them to get warm against, and see if you cannot raise nearly every one of them. As soon as the chicks are large enough, say four weeks of age, I change the feed to whole wheat, rolled oats and cracked corn; this food is fed them until nearly matured. It is an excellent plan to keep granulated charcoal before the chicks at all times, if you wish to see them stretch their wings and legs and grow every day. Around each outdoor brooder is a 2-foot mesh netting fence, the yards being about 20 feet square. One reason for having these yards is to have the chicks under control in case of sudden rain; also they never mix up and one size is by itself. Let your motto be: "Eternal vigilance is the price of success," and you will be the proud owner of a handsome and paying flock of thoroughbred poultry.

MARGARET B. STEVENS.

Presque Isle, Me.

The International Stock Food Company of Minneapolis, Minn., has secured the services of Judge W. C. Ellison, late of Pewaukee, Wis. He has had a great deal of practical experience in all branches of the work, and has done a great deal of practical work on large and small scale. He has been editorially connected with three of the leading poultry journals, having charge of their Question and Answer Departments. For the past five years he has done creditable work in the show rooms, having judged some of the most principal shows in the United States. Mr. Ellison's record as a fancier and breeder and judge is an enviable one. He has built up a splendid reputation for honest and fair dealing, and we feel sure that in securing his services they have added a valuable man to their poultry supply department. With Mr. N. C. Sprague's twenty-five years of experience with their incubators and brooders, and with Mr. Ellison's experience with fancy poultry they feel they are able to give their trade better attention than any other concern in the country.

The Streator, Ill., poultry show was a grand success. There were 700 birds of a very fine quality on exhibition. Arthur M. Barackman, the poultry supply man of Streator, Ill., made a creditable exhibit of "Mandy Lee" incubators and brooders, in fact everything needed for the poultry yard. His low prices on all supplies made him many friends, and 65 cents per 100 pounds on grit should find him many customers.

S. N. Tremper, Millbrook, Ill., White and Buff Wyandotte breeder, won second hen and second pullet on White Wyandottes, second pullet, fourth hen on Buff Wyandotte. He entered only five birds in a class of forty-seven. His whites are the stay-white kind stock, scoring 94 points by Shellabarger. He has about 150 birds to sell at reasonable prices.

GREAT AMERICAN POULTRY FARM,
Dept. 10, Brodhead, Wis.

EARLY HATCHED PULLETS AS LAYERS.

It is well known that there is a regular rise and fall in the prices of eggs, which are highest about Thanksgiving to Christmas, and lowest about May and June. The highest prices being due to the scarcity of eggs at the time, the old hens having not commenced laying since the molting season, and the larger portion of the pullets too late hatched to commence laying until

spring, the pullets can be forced to laying easier than the old hens at the time when eggs are high, simply by hatching them six to eight weeks earlier in the spring. It is true that it is not the pullet's nature to lay in the fall. It is her nature to commence laying the first of May, bring forth her brood the first of June the same as our pheasant and quail. Therefore if she is hatched in March she will commence laying in October or November if she is properly cared for. It is plain

that the greatest profit from eggs is made by producing them when eggs are bringing the highest prices. If the pullets are got to laying in the fall they can by proper housing, care and food be kept laying all winter, and they will lay in the spring with most any kind of food and care because, as I have said before, "it is their nature." It ought to be noted that there is a good price paid in the city market for strictly fresh eggs which decidedly increases the profits of the egg farmer, and the best price is paid for eggs that are marketed every day or two, or, at the very latest, twice a week. Of these "strictly fresh" eggs there is never an oversupply excepting in the spring, when "nature" puts everybody's hens to laying. We all want the goodly profits that come from successful egg farming, and we can share in them if we will set our incubators so the chickens will be hatched in time to bring the pullets to full maturity by natural growth in October.

PLANE'S SINGLE COMB WHITE LEGHORNS

Have proven themselves worthy to be shown in any competition, customers all over the country getting the benefit of their careful breeding. Don't fail to get his prices and description of birds before purchasing elsewhere. Orders for exhibition receive the most careful attention. Score cards furnished if desired. Send for catalogue. Incorporated.—Capitalization \$10,000.00.

C. H. MANLEY, President M. M. MANLEY, Sec'y.-Treas.
H. E. MILLER, V-Pres't C. F. WHELLER, Supt.

We were obliged to cancel many hundreds of orders last season in consequence of our dependence upon other breeders for eggs. We propose to alter this by raising our own breeding stock for the season of 1906. An ideal farm has been secured for this purpose and to stock this with first-class breeders we are now issuing

500 Shares, Par Value \$10, for \$7.50

In addition to the interest, which can be estimated at least 10 per cent each share will entitle holder to

100 White Wyandotte, B. P. Rock or S. C. B. Leghorn Chicks

Delivery early in season of 1906.

Shares payable \$1.00 per share on application. \$4.00 per share on allotment, \$2.50 per share on delivery of chicks.

Early application is necessary, as Lists will only remain open two weeks, and not more than Five Shares will be allotted to one person. Each share will be worth \$20 at least in season. Address the Secretary.

St. Johns Hatchery Company

ST. JOHNS, MICHIGAN

Every man that breeds a particular variety breeds it because he thinks it the best, whether breeding for eggs or broilers. Throughout the Eastern States are many egg farms, but at the rate eggs are going up every year I think that egg farming will be the principal business sooner or later. As to the breed for eggs, there is not much difference between the American and Mediterranean breeds. In New York, New Jersey and Pennsylvania the Leghorn and Minorca are kept to a large extent on account of the premium that is paid at these markets for white-shelled eggs. The New England States, on the contrary, prefer and pay a premium on the brown-shelled eggs, therefore the American and Asiatic breeds are kept. Whatever the breed may be, pullets are preferable to the old hen for fall and winter laying. If the Mediterranean breeds are kept the pullets should be hatched the first of May. If the Americans or Asiatics are kept they should be hatched the last of March.

Rush, Pa. ARTHUR R. WILCOX.

Mrs. F. A. Hargrave of Richmond, Kan., is a breeder of exceptionally fine Mammoth Bronze turkeys and Barred Plymouth Rocks. She has some nice Barred Plymouth cockerels, ranging in score from 89 to 91 points and a few 92, and a nice lot of yearling hens and a few pullets. She can mate in pairs, trios, peus or larger numbers if desired. She has some choice Mammoth Bronze Turkey Toms, weighing from 27 to 29 pounds, which she will sell at a very reasonable price, and are show birds that will win and breed winners. They are great big boned and bodied fellows that will develop Mammoth turkeys like their sire, an 18-months-old, 36-pound bird. Her stock has won a number of state show and Kansas City premiums. At Southeastern Kansas Show, Garuett, Kan. (Rhodes, judge), November, 1905, she won on Barred Plymouth Rocks first pen, second cockerel, first cock, second cockerel, first pullet, first trio on Mammoth Bronze turkeys on four entries. Mrs. Hargrave has had nine years' experience and we know that she will give our readers satisfaction.

Larmer's Buff Rocks

40 cockerels 91 to 94 by Rhodes. None better. Write for show record and prices.

ROBT. LARMER : : RAVENWOOD, MISSOURI

A NEW GAME.

All nations have their different games, but Japan appears to lead both in the number and in their practical value. Most of the games of Japan have an educational effect upon the child or adult who plays, and following up this principle the Pratt Food Company of Philadelphia have published a game which is not only very amusing but also instructive. It is called "The Wheel of Success or Happy Pratt," and is 15 inches square, printed in three colors and played with dice and counters which are furnished with the game.

Japanese children never ask their parents how to play a game which is placed in their hands. They always work the rules out thoroughly, then start in and play. The rules of "The Wheel of Success" are such that they can be easily followed. Our readers will greatly enjoy this game, for it is amusing, exciting and instructive. We advise you to get it at once; you can secure it free from the many dealers who handle Pratt's Foods and Veterinary Remedies, or it will be sent to you direct if you send 10 cents in silver or stamps to Advertising Department, Pratt Food Company, No. 130 Walnut street, Philadelphia, Pa.

The Chicago Poultry Supply House, Lakeside building, Chicago, Ill., has bought the entire stock of W. J. Gibson, consisting of Cornell incubators, Peep-day brooders, all shelf goods, etc. This makes them one of the largest poultry supply houses in the country. This stock will be sold at a large reduction of original prices. Send for catalogue and prices and mention AMERICAN POULTRY JOURNAL.

A NEW POULTRY BOOK.

Especially Written and Designed for the Beginners—Sent on Approval.

The book treats at length on the great profits in poultry culture, citing many cases where splendid incomes have been made from this fascinating business. It is a well established fact that there is big money in poultry culture. There are thousands of men and women who are earning princely incomes from it, while there are many more thousands who are making a snug little income every year conducting it as a side issue. To make from \$100 to \$1,000 clear profit every year, just in the spare moments, is no small matter with most people. And yet there are thousands who are doing this very thing raising poultry, and this same thing can easily be accomplished by anybody who will conduct it in an intelligent manner. It is just for this latter class that this book has been designed and by following its simple instructions success will be sure and the profits large.

SENT ON APPROVAL.

We want every beginner to read his book and we are willing to send it free on ten days' approval to every man, woman or boy interested who will take the trouble to write to us for it. In order to assist our readers to get this book on approval we print the following coupon, and advise our novice friends to fill it out, cut off, and send it today: Congress Park Poultry Yards, Congress Park, Ill.

Enclosed find 4c in stamps for which please send me on approval, your new book, "Successful Poultry Culture for Pleasure and Profit." If I want the book I agree to send you 50c for it. If I don't want it, I agree to return it to you within 10 days.

U.S. STANDARD JONES OF BINGHAMTON

JONES HE PAYS THE FREIGHT

Every up-to-1906 poultryman should watch closely the weight of the poultry he sells as well as the feed he buys. We make scales especially designed to weigh the dressed poultry and also the bags of feed. To keep up with the procession the poultry raiser must keep tally of the increase in weight when cramming for market. JONES scales will give him absolute proof of the comparative feeding value of the various rations. We make every size of scale from the smallest postal balance to the largest hay, stock, and wagon scale. Our forty years experience as scale builders enables us to furnish the JONES high grade scale at the lowest possible price. For particulars and delivered prices JONES HE PAYS THE FREIGHT write, **JONES OF BINGHAMTON, Box 363, Binghamton, N. Y.**

BIG SUCCESS WITH HOGS.

SOME farmers are more successful with hogs than others. The man that only gets 8 lbs of pork out of a bushel of corn fed to hogs makes only half as much as the man that gets 18 lbs.

The American Swineherd is a specialist and the best authority on the hog industry.

The greatest success results from concentrating all efforts upon one line.

Three-fourths of the farmers waste a third of their feed given to hogs because they do not understand the best methods.

The American Swineherd teaches you how to be successful.

How to secure the greatest profits.

How to feed, to double the growth and gain over usual methods.

How to keep your hogs healthy, as only healthy ones are profitable.

How to get 18 pounds of pork out of a bushel of corn, and 20 pounds out of a bushel of wheat, fed to hogs.

Prof. Kennedy of the Iowa Agricultural College says: "Your paper is a leader on feeding."

One man writes: "A single instructive lesson in the Handbook on Hog Hygiene" saved me \$50 in feeding a bunch of 40 hogs 60 days over the ordinary way of feeding. It is the best investment I ever made."

Every owner of hogs should take advantage of this special offer:

Send us \$1 for two years' subscription to the American Swineherd and it will entitle you to a free copy of the Hand Book on "Hog Hygiene," with trade secrets, recipes, valuable information, etc. If the offer is accepted in ten days we will send you in addition "The Pig Feeders' Manual," worth a \$1 itself.

This equips you for a successful hog business.

AMERICAN SWINEHERD

Como Bldg., Chicago, Ill.

THE TRUE FANCIER**What Constitutes a True Fancier—
The Variety to Adopt—Advantages of Being a Specialist.****The Fancy Poultry Industry Still in Its Infancy—
A Constant Demand for Better Birds.**

To be a true fancier should be the great aim of every breeder of Standard-bred poultry. Each breeder has his likes and dislikes, which is very natural. Some fancy the American classes. Some the Asiatics, others the Mediterranean classes. Some fancy the parti-colored varieties, some the solid colored varieties, and others prefer the white varieties; yet some fancy them all, and, I think, honestly admire them all. As for myself I will be frank enough to say that the White Plymouth Rocks was a case of love at first sight with me. I greatly fancied them from the start, and have found no reason to change them for any other. I realize the great advantage in breeding just one variety, therefore I have specialized on White Plymouth Rocks. I admire well bred birds of any variety, but there is only one that I truly fancy. If I fancied some other variety more, I should have them. I am well aware that all the Standard-bred varieties are of merit, and no true fancier of any variety (though it may not be very popular) has failed to make just as much money, and get just as much pleasure out of breeding his chosen pets as he would have made had he bred perhaps a more popular variety.

A breeder may fancy some one variety more than any other, and still come far short of being a true fancier. A breeder who has, by good judgment and good matings, brought before the poultry public a strain of excellent merit, and perhaps won many of the most coveted prizes in some of the best shows in the land, and, above all, the honor of owning the best bird or birds in their classes, has certainly done a great good to the fancy, as far as that goes, and he must have been a fancier or he could not have produced such birds from his matings, and put them in the show room in the best possible condition. When a breeder has accomplished that he is recognized by the Fraternity, and has won the confidence of at least a great number of persons who are in the market for the variety that he breeds, who also expect to be treated fairly.

Then a breeder, after accomplishing this (his trade has perhaps grown to large proportions, because of his great winnings, and judicious advertising), and because he has the confidence of the people, and cannot raise enough high-class birds to supply the demand, will then fill orders with birds that should never be sold with their head on, because there is money in it, and that is what I am in the business for, I think has come far short of making his stand as a true fancier. True, there is just lots of new beginners who do not know the Standard requirements of the breed or variety that they buy. They trust wholly to the honesty of the breeder with whom they place their order.

Many times a breeder could easily palm off a bird far inferior to what the customer expected, but by so doing he not only hurts his own business in the course

of time, but he is doing a great injustice to the fancy at large.

What I call a true fancier is one who is in the business because he loves the business, and the variety that he breeds, and if he were ever depending on the business for a living would not, under any consideration, make any business transactions which would hurt his reputation as a breeder, or in any way depreciate the variety which he is making his specialty, and loves the fancy too much to let a little money influence him to the hurt of the fancy in general.

A breeder who loves the fancy and is generous enough to work for the interest of the fancy in general need not worry about his own interest, for he is working right in line with them, or, in other words, to work to the interest of the fancy in general is to work to one's own interest. Fancy poultry culture today is but in its infancy, however it is making a healthy growth. Some seem to think that it will not be long until business is overdone, and a fancy bird will not be worth much more than the common sort. I think the only change that is likely to take place will be that the poultry-buying public will constantly demand better birds at better prices and birds from good blood lines, and the consuming public will demand a better class of table eggs, and a better class of table fowl at better prices. I think that if each fancier has at heart the interest of the fancy in general it will grow, and grow, and grow, and the only ones that will have to go out of business will be the breeders who will not give their customers value received in return for their money.

BURTON J. HOLT.

Pella, Iowa.

THE GUINEA FOWL IN THE POULTRY YARD.

Since I have been a reader of the AMERICAN POULTRY JOURNAL I have not seen any advertisement of this fowl for sale or any mention of it by correspondents.

A neighbor near by has a flock of Pearl Guineas and has raised them for several years. They are larger than chickens, except the large Plymouth Rock hens.

The eggs are much smaller than hens' eggs but perhaps stronger in substance. They, like turkeys, require 28 days for incubation. The same price is paid for the eggs by our stores as hen eggs, but the merchant would prefer not to buy them.

These fowls lay eggs for three months continuously, beginning about April the first. In East Tennessee these fowls were formerly very common. They are so watchful that any intruder about the place causes them to give the alarm. They serve a good purpose in alarming the chicks when the hawks come. Their danger signal is their sharpest note and can be heard a mile away very often.

They are great foragers and on an ordinary farm with small flock of poultry may be depended on to get their own food and find a place to roost.

They are fast runners and high flyers when much scared. The flesh is not so good for table use as that of the chicken, but the writer remembers to have eaten some in bygone years, with fair relish. As an interesting specimen of the poultry world in the domesticated field this species is certainly worthy of notice and scientific study.

95 PER CENT. UNDER TRYING CIRCUMSTANCES.

STEINMESCH FEED AND POULTRY SUPPLY CO.
Salesroom and Office 309 Market Street.
St. Louis, Mo., Nov. 14, '05.

Cornell Incubator Mfg. Co., Ithaca, N. Y.
Gentlemen:—It gives us pleasure to report that after a most thorough test, under conditions really trying, we have just taken off a 95 per cent. hatch from a Cornell 1906 Incubator.

This incubator was operated in our office and shifted around three or four times in moving desks, etc., and yet, as stated, we hatched 95 per cent. of the fertile eggs.

With this record we can consistently sell and recommend the Cornell 1906 Incubators and we hope also to make a record selling your Incubators and Brooders. Yours very truly,

STEINMESCH FEED AND POULTRY SUPPLY CO.

Henry Steinmensch
Pres.

IT IS PERFECT.

RIDGE CREST POULTRY AND FRUIT FARM.
C. W. KENDALL, PROP.

Wheeling, W. Va., Oct. 3, '05.

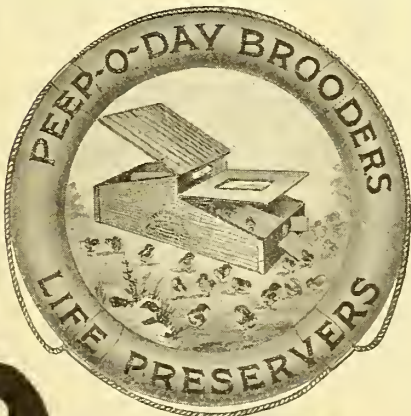

Cornell Incubator Mfg. Co., Ithaca, N. Y.
Gentlemen:—I do not make a practice of advertising other people's goods, but when I find an article that is perfect for the purpose intended, it is a pleasure to recommend it to others.

Your incubator lacks but two things:—feathers and cluck—if it had those two the "old hen" would have to go out of the hatching business. Someone used to advertise the "wooden hen;" you could honestly call the Cornell Incubator "The Caretaker of the Golden Egg," for it will hatch more and better chicks than any machine or hen that I am acquainted with.

In closing let me say that the packing and shipment of your goods insures safe arrival at either Eastport, Me., or Hong Kong, China. Yours respectfully,

C. W. Kendall

Don't Wait! You Save Money With Jaeger's Standard Egg Preserver

The best preparation on the market. It is easy to use, absolutely safe. It is an odorless, tasteless, colorless, non-poisonous fluid, and is used and endorsed by poultry raisers everywhere. One gallon makes sufficient solution to keep 100 dozen in perfect condition for ten months, and the eggs keep as fresh as the day they were laid. Price, 1 gallon, \$1. Cash with order; money refunded if not satisfactory. Order today. Address

OTTO JAEGER MFG. CO. 402 Summer St., Buffalo, N.Y.

MICA CRYSTAL GRIT DOES THE WORK

It is no experiment, having been used successfully for twelve years and is the highest grade article of its kind in use.

Necessary proportion of mica, quartz, iron, magnesium.

Regulates digestion by properly assimilating the food, a process absolutely necessary to health and productiveness in poultry.

Food not assimilated is food wasted. Mica Crystal solves the problem and makes the poultry industry profitable.

Without grit the feathered tribe cannot be healthy or productive. This is a well demonstrated fact in nature. Ignorance of it has cost millions. Grit is to fowls what teeth are to other members of animal creation. Mica Crystal never loses its sharpness. It is the best.

Let us prove the truth of what we say by filling a sample order for you.

**DARLING & CO., Agents,
Chicago, Ill.**

SALE OF WHITE ROCKS.

For ten years P. B. Harshman of Sullivan, Ill., has bred White Rocks, but on account of too much other business that occupies his attention, he has concluded to sell out his stock. The old readers of AMERICAN POULTRY JOURNAL know very well the fine quality of stock Mr. Harshman has always bred. He has some very fine birds now, with several prize winners. This is a splendid chance for any one wanting to purchase a well established strain of White Rocks, and it is an added bargain, as all will go at a sacrifice. Letters of inquiry should be addressed to P. B. Harshman, Box 117, Sullivan, Ill. These White Plymouth Rocks must absolutely be sold and will be sold in a short time, so the first orders will be sure to close them out, and we suggest that breeders write at once in order to secure this bargain.

EXPERIENCED POULTRYMAN WANTED.

Dr. C. F. Applegate, superintendent of Mt. Pleasant State Hospital at Mt. Pleasant, Iowa, wishes to secure the services of an experienced poultryman to take charge of a large poultry farm connected with this institution. Salary will depend on the man and his experience. Address Dr. C. F. Applegate, mentioning the name of AMERICAN POULTRY JOURNAL.

Wilber Bros. of Petros, Tenn., won on S. C. White Leghorns at Charleston, S. C., as follows: 1st pen, 1st, 3d hens, 1st, 2d cockerels, tied 1st pullet, 2d pullet, special silk ribbon best male in Leghorn class and \$25 silver cup for best pen in the Mediterranean class.

W. A. Hayes, Monmouth, Ill., is advertising eggs from a very choice pen of Columbian Wyandottes in this issue. This variety of Wyandottes is becoming very popular. Better write him and mention AMERICAN POULTRY JOURNAL.

In our report of the winnings on Orpingtons at the Great Eastern Show last month we stated that Miss G. Wiedemann won first prize on Black Orpington hen. This was a mistake, as William Cook & Sons won first and third on hens of this variety.

Wilber Bros., of Petros, Tenn., won at Charleston, S. C., Nov. 24-30, on Single Comb White Leghorns in the grandest collection ever brought together in the South, including birds from the East, West, North and every southern state, as follows: 1st and 2nd cockerels; 1st and 3rd hens; tie 1st pullet; 4th pen, scored 188, and best pen in Mediterranean class, two cups and two special ribbons. They entered no cocks.

The January Century begins the year with no letting down of its standards of illustration. The colored frontispiece is "The Sewing-room," by Anna Whelan Betts. Also in color is the printing, with decorative designs by Beatrice Stephens, of the old English religious lyric, "Yet if His Majesty, our Sovereign Lord." There are four insets in tint, one Albert Steiner's drawing for Mrs. Ward's novel, another Daniel Chester French's group of "America." Of the pages in black and white, of special interest is a portrait of Thackeray, published for the first time, from a photograph of the crayon drawing from life by E. Goodwyn Lewis.

In a very interesting letter from S. D. Lapham of Dearborn Mich., the Exclusive Buff Plymouth Rock Breeder, he writes that he thinks, without doubt, he has one of the finest equipped plants in the west, having everything convenient and compact. His buildings are provided with steam heat and electricity, and he has a fine water system. He has one of the finest brooder houses in Michigan, and has just completed his new underground incubator cellar. Another feature added to his plant, something out of the ordinary, is a new show hall, 14x65 feet, fitted with uniform cooping, 6x50 feet, where he will show and train his valuable birds for the large shows. His Buff Plymouth Rocks are better than ever before, and he has an unlimited number of them. He will exhibit in New York, Chicago and Boston, and will go there personally, and from now on will devote his entire time to his plant. He will be glad to make the personal acquaintance of the breeders at these shows. He feels that he has always been handicapped heretofore to show in the large cities, when previously his time would not permit him to be with his birds.

Premium Stock Poultry Yards

Fertile EGGS 15 for \$1

COILED SPRING FENCE COMPANY
Box 82 Winchester, Indiana.

GEO. M. LEFFEL'S BARRED PLYMOUTH ROCKS.

Geo. M. Lefel, of Springfield, Ohio, commences yearly advertising in AMERICAN POULTRY JOURNAL in this issue. It is hardly necessary to introduce Mr. Lefel to old subscribers, but to the new ones we will say that Mr. Lefel's Barred Rocks have been prize winners for sixteen years under twenty judges. It is no unusual thing for Mr. Lefel's birds to take the majority of all prizes offered at a show and in large shows. It is needless to say that Mr. Lefel's stock is better this season than ever, for he is a breeder who is never satisfied, but is constantly working to increase his variety.

He recently had a visitor from North East, Pa., who was at his yards only two hours when Mr. Lefel sold him 85 birds, and he states that he never fails to sell to visitors if they come to buy, as he has so many to select from. This is certainly a good recommendation for his birds. Mr. Lefel has raised 1,700 birds this year and they have made fine growth. He has 800 cockerels set to one.

The Otter Creek Poultry Farm Co., Box A, Watertown, N. Y., are advertising this month a special cockerel sale of S. C. Black Minorcas, Barred Plymouth Rocks and S. C. White Leghorns. This is too good a chance for readers of AMERICAN POULTRY JOURNAL to miss.

J. H. Doane, of Gouverneur, N. Y., originator of the Adirondack strain Black Minorcas, is coming out stronger this year than ever. He now has nice lot of good stock, and while he does not wish to dispose of many females he has some strictly high-class cockerels to dispose of that will aid in building up flocks for other breeders. The fact that Mr. Doane aims to increase his amount of stock to 300 breeders shows how business is going with him, and that he is prepared to fill orders at once. Mr. Doane has been an advertiser in AMERICAN POULTRY JOURNAL for many years, so it is hardly necessary to introduce him to the old readers, but to the new readers we will say that his farm range Black Minorcas have long been accepted as the best of stock and winners in any show room.

POISON.

As far as shaving soap is concerned common soap ought to be marked poison. Shaving is a special process and demands a special soap. If your face has been poisoned with cheap soap, if it burns and smart and itches, stop using the poison and use real shaving soap—Williams' Shaving Soap will cool and smooth your face and make shaving pleasant. The J. B. Williams Co., Glastonbury, Conn., offer in another column of this paper to send you a free trial sample. "For the sake of your face" read their ad.

AN OFFER TO FRUIT GROWERS.

We received an announcement the other day that might interest our readers. The *Western Fruit Grower* has a plan whereby any one interested may secure a year's subscription to that splendid paper and get ten valuable fruit books absolutely free. The regular subscription price is \$1.00 a year, but they will mail sample copy for three consecutive months to all who request it. It requires no effort to get these copies for three months absolutely free, and by sending in a few subscribers one may add the following valuable books to their library without one cent expense:

Propagating Trees and Plants, A Treatise on Spraying, How to Grow Strawberries, The Home Garden, Packing and Marketing Fruits, A Book About Bush Fruits, Growing Grapes, Hints on Pruning, Apple Culture, with a Chapter on Pears, Success with Stone Fruits.

Any one sending one new subscription to the *Fruit Grower* will get one of these books free, postage paid, and by sending in ten subscriptions one can get all of the books and the *Fruit Grower* for a year.

Just write Brother Johnathan, care of the *Western Fruit Grower*, St. Joseph, Mo.

H. Murray Conner of Castana, Iowa, breeder of Barred Plymouth Rocks, has an important announcement in his ad this month. He has a fine lot of Barred Rocks this year, bred from the finest prize winning stock from the pens of Wales and Richardson. Mr. Conner has never failed to win the blue ribbon when he was exhibiting his stock at the best shows. He has 200 fine birds of the best blood to select from.

Establishes The Standard.

The Oriental Limited of the Great Northern Railway a Marvel in Train Equipment.

The hardship and deprivations of an overland trip in the early days of the Northwest are known to all who read. In this early day a trip across America meant tenfold the danger that a trip around the world means today. What wonderful changes have been wrought and what was considered a hardship fifty years ago, which few could combat, is today a pleasurable pastime—something to anticipate, something to delight.

Immeasurably more so is this the case since the Great Northern placed in service their regal train, "The Oriental Limited." The fact must be considered that in undertaking a journey of several thousand miles the ease and comfort with which it can be accomplished is the first consideration. In the contemplation of a journey the traveler selects that means of transportation which affords him the quickest, easiest and most comfortable trip. It is no exaggeration to state that the "Oriental Limited" is the fulfillment of inventive genius in train equipment. Few people realize the care bestowed, the complicated, smoothly working mechanism which makes the whole a thing of beauty and perfection in the art of transportation.

"The Oriental Limited" is made up of a locomotive of the most advanced and powerful type, elegant day coaches, seating eighty-four people; new tourist sleepers, which have been such a feature of the Great Northern overland trains; new dining cars; palace sleeping cars; and, what is a decided innovation in transcontinental train equipment, a compartment observation library car.

OBSERVATION BUFFET LIBRARY COMPARTMENT CARS.

These cars are the first of their kind to be used on transcontinental railways. They are the embodiment of comfort and convenience and typify the height of inventive genius in car building. In the construction of the cars the purpose in view has been to furnish the traveling public with every comfort and luxury

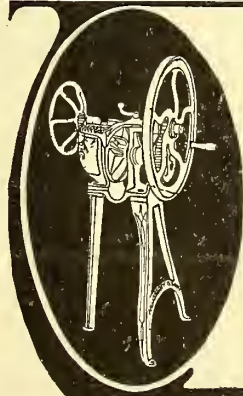

which they could secure at a first class hotel or at their club. Ease, elegance and excellence is the combination sought in the building of these cars. The observation rooms are finished in vermilion wood and the chairs are upholstered in green leather, the remainder of the furnishings being in harmony with the general color scheme. The card room is finished in English oak with green leather seat coverings. The four state rooms, which are unusually roomy, are finished in mahogany, coco, vermilion and tonquin, while the furnishings are olive, reddish rose, green and maroon plush, in the order named. The drawing room is finished in mahogany and all furnishings are golden brown plush.

The rear half of these cars is devoted to the observation room, handsomely furnished with easy chairs, writing desks, etc. Wide plate glass windows afford an unobstructed view of the surrounding country. Those who enjoy being in the open air will find comfortable seats on the protected rear platform.

Current periodicals, a branch of the Booklovers' library and the latest newspapers obtainable at starting point and en route are provided in these cars. This car also contains a spacious card room with a well stocked buffet, nicely furnished and pleasingly arranged for the comfort and convenience of the passenger.

Luxurious in appointment, well nigh perfect in mechanical construction, complete in every detail from headlight to rear end lantern, there is nothing left to be desired. The operating force will at once appeal to the passenger, for the selection of the attaches from conductor to porter is made with a view to their adaptability. The placing in service of "The Oriental Limited" has been done with a view not only to retain travel but create it. That this end is accomplished is an assured fact to any one whose pleasure it is to make a journey across the continent on America's most comfortable overland train.

FEED FOR EGGS

Cut your poultry feed bill in two, double your egg production, have a healthy, vigorous flock by getting an Open Hopper

Humphrey GREEN BONE AND VEGETABLE Cutter

guaranteed to cut more bone, in better condition, in less time and with less labor than any other. It is the original and only real open hopper machine, operated by one hand, and cuts as fast or as easily as you like. No screws or split nuts to wear out; no springs to adjust; easily kept clean. Used and endorsed by successful poultry men everywhere.

We charge nothing extra for a **Free Trial** if you want it. For new catalogue send your name to

HUMPHREY, White St. Factory, JOLIET, ILL.

The Humphrey Rapid Clover Cutter cuts finer and more rapidly than any other, and makes the best poultry food. Ask about it.

More Eggs - Less Feed

COCHIN BANTAMS *Black, White and Buff.*

Seven first prizes at Madison Square, 1904.

DR. WILLIAM Y. FOX, Taunton, Mass.

Keeps Poultry Healthy **VIGER'S** Crushed Charcoal Prevents Disease

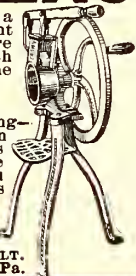

Chemically pure, keeps poultry strong, healthy and in good laying condition. Corrects wrong feeding. Not a drug, but Nature's own purifier. Coarse or fine granulated, also pulverized for soft feed. 50-lb. trial bag \$1.00; special price for quantities. Samples free. Viger's Coal & Wood Co., 434 20th St., Detroit, Mich.

HELP YOUR HENS

and they will pay you a handsome profit. Feed Cnt Green Bone - get more eggs when eggs are worth money - in winter. The

CROWN BONE CUTTER

cuts the bone right for feeding - easily, quickly, evenly. Green bone is largely protein - hens need it to make eggs. A bone cutter may be just what you need to turn your poultry loss into poultry profit; at any rate it will pay you to write for FREE catalog and see how cheap you can buy THE BEST BONE CUTTER BUILT. Wilson Bros., Box 600, Easton, Pa.

Union Lock Poultry Fencing

PICKETS LOCKED IN CABLES

Can't slip, but stretches perfectly to fit uneven ground. Fine meshes at bottom for little chicks. High as you want it, 1 to 7 ft. A poultry fence for all fowls that does not sag.

We sell direct to Farmers and Poultrymen. Prompt Shipments at Factory Prices. Mills in Connecticut, Illinois, California. Write for catalogue.

CASE BROS., 28 Main St., Colchester, Conn.

For Only 75 Cts.

We Send

AMERICAN Poultry Journal

One year, and a copy of the book entitled

200 EGGS A YEAR PER HEN

The demand for this book has been so great that the third edition has been exhausted, and a fourth edition of 5000 copies has just been printed. It tells how to get the greatest number of eggs at the lowest possible cost. Send orders direct to

American Poultry Journal Pub. Co. 325 Dearborn St., Chicago, Ill.

THE COUSINS INCUBATOR.

The Cousins Incubator Company, of Warren, Pa., commenced this month advertising the Automatic incubator, which they claim to be nearer automatic than any incubator in the world, and has more valuable original features and is guaranteed to hatch more strong healthy chicks with less attention and less oil than any machine on the market. Every one of their machines is equipped with the Cousins Automatic Egg Turning Tray, which can be used in any incubator, turning all sizes of eggs alike and holding them in proper position.

J. B. Hadaway, of Brockton, Mass., again won at the great Brockton show the \$100 club championship cup of America for the best two Partridge Wyandotte males and four best females, having won the cup now twice in succession in exceptionally strong competition.

He also won at Brockton as follows on Partridge Wyandottes: 3d cock; 1st, 3d and 5th hens; 1st, 3d and 5th cockerels; 1st, 2d, 3d and 4th pullets, and 1st pen; special for best ten birds in American classes; special for best colored female; special for best penciled female; special for female with best colored legs, and special for male with best comb.

THE UHL BROODER.

This brooder is one of the most practical brooders ever built and is the idea of one of the most practical men I ever knew in the poultry business. He has no time to build it this year, and as he had many inquiries for the above brooder he has turned the manufacturing over to me.

It is built low to the ground. It has the most practical heat of all others.

It will be built of "poplar" lumber, tongue and groove. It will have two coats of paint and oil.

Any one contemplating purchasing a brooder should write for circular and price list. Manufactured by C. A. Thompson, New Washington, O.

S. C. Rhode Island Reds owned by the De Graf Poultry Farm, Amsterdam, N. Y., won the following prizes in a very strong class of Reds at Gloversville, N. Y.: 1st and 3d cocks, 1st hen, 1st and 2d cockerels, 1st and 3d pullets, 1st and 3d pens, and special for best exhibit of both Rose Comb and Single Comb Rhode Island Red exhibit.

Mr. Scott Billman, who has long been a patron of the AMERICAN POULTRY JOURNAL, informs us that he has purchased a home, located on the Akron, Kent & Ravenna street car line, and will establish a poultry plant thereon. All letters hereafter should be addressed to Cuyahoga Falls, Ohio, R. F. D.

Mr. J. E. Laudon, Berwyn, Ill., breeder of Buff Wyandottes, commences a yearly ad with us this month. We had the pleasure of examining some of Mr. Laudon's stock a short time ago and we must say that we have never seen better or more even buff birds. If you are looking for something in this variety write him for prices and particulars.

The Otter Creek Poultry Farm Company, Watertown, N. Y., are having a grand cockerel sale this month, offering S. C. Black Minorcas, Barred P. Rocks and S. C. White Leghorn cockerels at bargain prices. Write them and mention AMERICAN POULTRY JOURNAL.

The Miles Medical Co., of Elkhart, Ind., will send a Weather Record and Temperature Chart published by them to the readers of AMERICAN POULTRY JOURNAL who will write for same, mentioning name of AMERICAN POULTRY JOURNAL.

C. L. McFerren of Belleville, Ohio, expresses his appreciation of AMERICAN POULTRY JOURNAL and his confidence in its permanency by sending a five years' contract. Mr. McFerren has been breeding fancy poultry for ten years, and expects to keep on indefinitely. He has shipped stock and eggs from Maine to California with perfect satisfaction, also stock to Auckland, New Zealand, from which he received a flattering testimonial. This year he has a choice lot of White Plymouth Rocks, the "Stay White Kind," all the time, also some S. C. Buff Orpingtons of the kind that are hard to get and White Indians. His stock is all the direct progeny of New York and Chicago winners, and he guarantees satisfaction or money refunded. His stock is all scored.

40 BREEDS Fine, pure bred chickens - ducks, geese and turkeys northern raised, hardy and very beautiful. Largest poultry farm in the Northwest. Fowls, eggs and incubators at low prices. Send 4c. for fine 70-page, 11th annual poultry try book. R. F. NEUBERT, Box 844 Mankato, Minnesota.

LIGHTNING **WHITEWASH SPRAYER NO. 28** Whitewash your poultry houses and stables easily, rapidly, with the "Lightning" Whitewash Sprayer. Kills lice and vermin. Can't clog. Also for spraying trees, washing wagons, etc. Double action pump. Sprays 30 ft. high. Has 3 1/2 ft. heavy hose, extension rod, brass nozzles, steel stirrup, hall valves. All brass, \$3.50; Galvanized Iron, \$2.50. Cash with order. Exp. paid. Agents wanted. D. B. SMITH & CO., UTICA, N. Y.

300 BUFF ROCKS

I have that many choice "Nuggets" for sale this season, as I will not show this year. If you want winners or breeders I can fill the order. Largest winner at World's Fair, also State Cup winner. Satisfaction guaranteed.

H. P. MASON Buff Rock Specialist FAYETTE, MO.

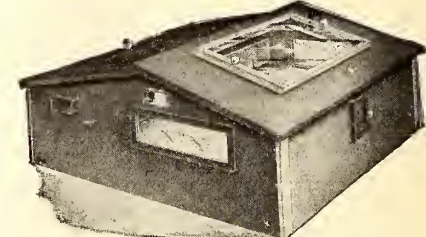

HOGLE'S COMPOUND SPONGIA TABLETS

Prepared especially for the prevention and cure of **ROUP** The Most Effective and Easily administered Remedy.

A combination of several homeopathic remedies - calculated as a whole to effect cures of the different forms of Roup, each one of the remedies contained in the Tablets affecting one or more of the different forms, and none of them conflicting with the others. Thus the Tablets as a whole can be used with beneficial effect on any case of roup that has not reached a stage that is incurable. 35c. per box postpaid; 3 boxes, \$1. Liberal discount to agents and supply dealers.

W. N. Hogle
1029 Benson Ave. Evanston, Illinois.

Rouses' Perfection Brooder

Price, \$7.50. Catalogue free. Simple, convenient, practical. W. L. Rouse, Manufacturer, 137 La Salle St., Chicago, Ill. Chicago Poultry Supply House Distributor, 647 Lakeside Bldg., Chicago, Ill.

COILED SPRING FENCE

Closely Woven. Can not Sag. Every wire and every twist is a brace to all other wires and twists full height of the fence. Horse-high, Bull-strong, Pig-tight. Every rod guaranteed. **30 DAYS FREE TRIAL** and sold direct to farmer, freight prepaid, at lowest factory price. Our Catalogue tells how Wire is made - how it is galvanized - why some is good and some is bad. Its bristful of fence facts. You should have this information. Write for it today. Its Free. **KITSELMAN BROS.,** Box 295 MUNCIE, INDIANA.

Official diploma of gold medal awarded Cyphers Incubator Company at St. Louis World's Fair, May-December 1, 1904.

GOLD MEDAL AWARDED CYPHERS INCUBATOR COMPANY.

Herewith is presented a half-tone reproduction of the official diploma for Gold Medal awarded the Cyphers Incubator Company, Buffalo, N. Y., at the St. Louis World's Fair, May 1-December 1, 1904, also an illustration of a Gold Medal awarded the same company at the Lewis-Clark Exposition, Portland, Ore., May 1-Nov. 1, 1905, on the genuine Standard Cyphers Incubators and three-apartment indoor and outdoor brooders.

Free catalogue of these Gold Medal incubators and brooders will be mailed promptly to the address of each subscriber to AMERICAN POULTRY JOURNAL who will ask for it, name this paper and send the addresses of two neighbors who are interested in poultry for profit. The 1906 catalogue of the Cyphers Incubator Company is entitled "Poultry Raising Made Easy and Profitable." This new and handsome book consists of 228 pages, 8x11 inches in size, and contains a large amount of valuable information, including six chapters on poul-

try raising for profit, the raising of broilers, roasters, capons and ducks for market, poultry keeping on the farm, photographs of America's leading and successful poultrymen and illustrations of many of the largest poultry plants in the world.

Write for free copy today and be sure to mention AMERICAN POULTRY JOURNAL.

Awarded Cyphers Incubator Company at Lewis-Clark Exposition, Portland, Ore., May 1st-Nov. 1st, 1905.

S. A. HUMMEL'S FREE CATALOGUE.

S. A. Hummel, of Freeport, Ill., is now sending out his 1906 free catalogue. This is a beautifully illustrated catalogue and gives the prices of forty varieties of land and water fowl and eggs that Mr. Hummel handles. He is a breeder and shipper of the leading varieties of the standard breeds of fancy poultry and has stock for sale at all times and eggs in season. One strong point in Mr. Hummel's dealing with poultrymen is that he endeavors to retain the patronage of his old customers and sell to them year after year, which is one of the strongest endorsements of the reliability of poultrymen. He makes a specialty of turkeys, ducks and geese as well as all popular breeds of fowls and also manufactures a very fine insect powder. All readers of AMERICAN POULTRY JOURNAL should address their letters of inquiry to S. A. Hummel, Box 52, Freeport, Ill.

ACKLEY & PAGE CLOSING OUT SALE.

On the back outside cover page of this issue will be found the announcement of the closing out sale of Ackley & Page, Woodstock, Ill. This firm has the largest plant in the country devoted to the breeding of Buff Wyandottes, and they have probably produced more prize winners than any other breeder. Since 1902 their birds have won wherever shown and at the World's Fair

in St. Louis in 1904 they won 1st and 2d cock, 3d hen, 6th cockerel and 6th pen in one of the strongest classes of Buff Wyandottes ever got together. At Chicago in January, 1905, they won 1st and 5th cock, 1st hen, 1st pullet, 3d and 4th cockerel and 1st pen; also special cup for best colored female. All these birds, together with their offspring, are now offered for sale at bargain prices. Any one who will purchase all the stock will be given the good-will and business free. This is a good opportunity for some one to get a well established business and one that has been well advertised at a price that is only about one-half what the stock would bring if sold in the usual way.

CERTIFICATES OF SALE.

This certifies that I have this day sold to B. S. Beuerlein without a single reserve my stock of Buff Leghorns. This sale includes the cream of all the fine breeders I ever bred. Mr. Beuerlein is a highly esteemed young business man of Mount Morris, N. Y., and knows just how to treat a customer right. I shall assist him two years in mating his stock so that eggs or birds from him will be as good as I could have furnished. WM. L. HOWELL. Geneseo, N. Y., Sept. 22, 1905.

Dr. H. F. Ballard has moved from Chenoa, Ill., to La Moille, Ill., where he has resided for twenty-three years. He will continue to furnish fine stock and eggs from his Partridge, Buff and Black Cochins and Bearded Silver Polish.

Tired Nervous

When you feel languid, tired, nervous and irritable, your vitality is low—your supply of nerve energy exhausted, and your system running down for lack of power,

The organs of the body are working poorly, or not at all, and you are not getting the nourishment needed. This soon impoverishes the blood and instead of throwing off the impurities, distributes it all through the body. This brings disease and misery.

Feed the nerves with Dr. Miles' Nervine, a nerve food, a nerve medicine, that nourishes and strengthens the nerves, and see how quickly you will get strong and vigorous.

"My wife suffered with nervousness previous to a recent attack of typhoid fever, but after her recovery from the fever, she was much worse, and could hardly control herself being exceedingly nervous when the least excited. She was very restless at night, and never had a good night's rest. She also suffered much from nervous headache. Dr. Miles' Nervine was recommended by a friend. After the first three doses she had a good night's rest, and at the end of the first week's treatment she was wonderfully improved. Continued use of Nervine has completed her entire cure."

OTTO KOLB, 1021 Cherry St., Evansville, Ind. Dr. Miles' Nervine is sold by your druggist, who will guarantee that the first bottle will benefit. If it fails, he will refund your money.

Miles Medical Co., Elkhart, Ind

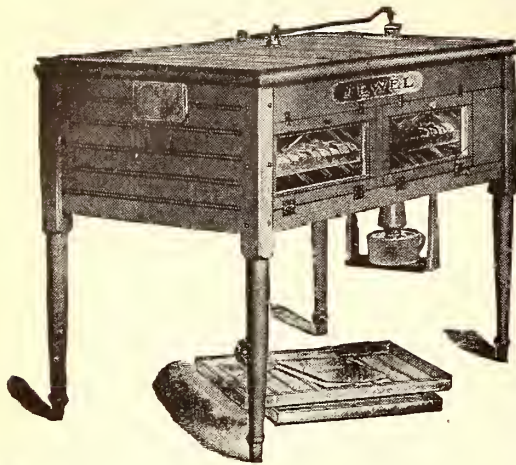

POULTRY REVIEW

is just what its name implies—a review of the best articles from over a hundred poultry and farm papers. In this progressive age poultrymen haven't time to read ten articles to find one of some practical value. We do the skimming and give you the cream. Also has original articles that tell what to raise, how to raise it and how to get best prices for everything raised. Send 25 cents for a year's subscription. Sample copy 5c; stamps taken. POULTRY REVIEW, SALEM, NEW YORK

100 Envelopes 3 1/2 by 6 1/2 inches, an extra thick, strong, smooth, hard slick white writing surface, and 125 Letter heads, 8 1/2 by 11 inches an extra heavy, hard, slick, fine smooth, pure white writing paper. All artistically printed to your order and illustrated with latest new Standard cuts of your choice breed of fowls, postpaid for \$1.00. Better printing at the price was never done. I'll please you. Make all money orders payable to me at Big Clifty, Ky.

J. R. HUDSON, HARDIN SPRINGS, KY. We have saw samples of Mr. Hudson's printing, it is very nice and he is perfectly honest—EDITOR.

The "Jewel"

With Its Equal Heat

Has already attracted the attention of many of the best experts. It is a fact none dare dispute that repeated claims have been made "that there never has been a small machine built, and there never would be one holding more than four or five dozen eggs that did not vary from one to one and a half degrees in the extreme parts of the hatching chamber. It has also been openly admitted that if the eggs were left in one position in such machines the vitality of the chicks would suffer much from it." It must now be admitted that the statements quoted have been incorrect.

The "Jewel" uses Flat Trays, located on a Dead Level, and the Corners, Sides, Ends and Center Heat Absolutely Even.

ALL MUST ADMIT that a correct heat and a correct ventilation combined are absolutely necessary to establish an equal heat in the egg chamber. The average square incubator will show a variation of from one to five degrees in the several parts of the egg trays. Why use a thermometer at all unless it registers the heat as it exists in all parts of the machine? When a tray full of eggs is placed under such unequal conditions in the egg chamber, what can be expected in the way of results? **THE PRIME VALUE OF EQUAL HEAT IS PROOF OF CORRECT VENTILATION.** Ventilation, rightly applied, is of greater importance in successful incubation than any other principle involved. The value of a machine is in imparting the right kind of vitality to the chicks, which permits them to be raised. This should be preferred to the large percentage of hatches claimed by many. It should not be the question as to the number of chicks that can be hatched, but the number that can be raised. In this The Jewel is Without an Equal.

We Furnish Proof That Proves

STATE OF MINNESOTA, }
COUNTY OF HENNEPIN } ss

The undersigned came personally before me and being duly sworn, each for himself says:

That at the invitation of the International Stock Food Company, they were present at the International Building, East Minneapolis, Minnesota, on the 11th day of November, 1905, witnessing the testing of a 360-egg Jewel Incubator having flat or level trays. Thermometers placed in the ends, sides and center registering the same heat. After this test, all the thermometers were tested in warm water and all found to register equally.

GEORGE LOTH, Secy. Minn. S. P. A.
Z. M. COLE, Breeder of W. P. Rocks.

CLIVE H. OWEN, Breeder Wyandottes.
C. L. SMITH, Judge of Court.

LAWRENCE HOPE, Ex-Pres. M. S. P. A.
L. B. RICH, Sanitary Poultry Co.

Subscribed and sworn to by each of the above named, this 11th day of November, A. D. 1905.

ROBERT CHRISTENSEN, Notary Public, Hennepin Co., Minn.

¶ Is it necessary to say more when such proof is given to substantiate the claims made for the Jewel? It is the greatest step taken in advance in building incubators. JEWEL BROODERS are leaders in their line; easy to operate, require less oil for heating than any other known machine. In sanitary arrangements they have no equal. JEWEL BROODERS are equipped with the only detachable heater ever used in brooder building. No other machine has these special features; they are only to be found in the Jewel.

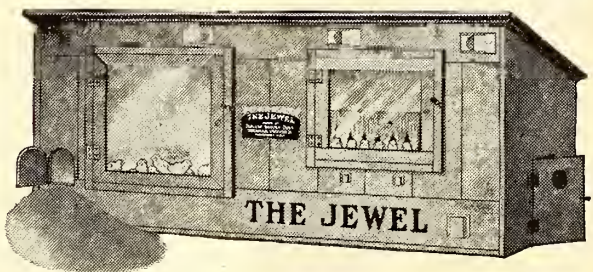

POULTRY SUPPLY Dept., International Stock Food Co.

MINNEAPOLIS, MINN.

GENTLEMEN:—We write you in regard to your Brooder which we have been operating for eight weeks. We put 65 chicks into it eight weeks ago and have not had one die, and they are more developed than any lot we have raised this year (for their age). The heating arrangement is simply immense.

Very truly yours,
SANITARY POULTRY CO., Per L. B. Rich.

¶ Never in the history of incubator and brooder building has there been such radical changes made along all lines as is true of the Jewel. They are representatives of a new standard. JEWELS in every sense of the word. Our stock of poultry supplies is the largest and most complete in America. We handle no inferior goods, but the best the market affords. A copy of our large Illustrated Catalogue and a picture of a Fishel bird mailed free. Address

The POULTRY SUPPLY DEPT., Box E

Questions and Answers

Questions asked by subscribers will be answered in this department, only under the condition that the full name and address is signed by the writer.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—A friend of mine had some pure-bred White Wyandotte chickens, and having sold his farm, left his hens with a neighbor, who had all sorts of chickens. How long after he puts these hens by themselves with a White Wyandotte rooster will he get pure Wyandotte eggs? 2. How long are eggs good for setting? For instance, I wish to start a pure line from eggs (White Wyandottes) under common hens. As I am not able to tell just when those hens will be willing to set and I have to send two days' journey for eggs. 3. My neighbors have Leghorns. I want White Wyandottes. How high a fence and what kind will I have to get to keep those chickens from mine; they fly over a 4 ft. fence now without touching pickets. Mrs. B. C.

Gray's River, Wash.

Answer:—1st, about three weeks. 2d. Eggs should be set as soon after laying as possible, but will hatch well up to two weeks and even longer. 3d. A six-foot wire fence, with a small wire stretched on top of this, will usually stop Leghorns from flying over.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer in the Question and Answer Column of next month's issue the following: 1st. I feed my fowls in a scratching room or shed, which has considerable dust and some slacked lime in it mixed with the litter. Does this dust and lime injure the fowls in any way? 2d. How many fowls should

roost in a roosting room 8x18 feet, having a yard for outside range 150x180 feet? S. P. H.

Cobden, Ill.

Answer:—1st. Yes, if there is too much dust it will bring on bronchial troubles. 2d. From 30 to 50, according to variety.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer the following questions through the JOURNAL, and if possible tell me what to do to cure my chickens. I have the Black Langshans. The disease commences next to the foot, starting with a kind of scab and gradually extending to first joint. The leg gets as hard as a bone and grows quite flat. Have tried coal oil combined with carbolic acid, but with no effect. I keep my house clean and have a good dry run for them. D. H. S.

Grangeville, Idaho.

Answer:—Scaly leg. Wash the legs with warm water and apply sulphur ointment.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer the following question in your next issue. If a male is put in a pen with two females a half of each day, will the eggs be fertile? Also, how long should he be placed in a pen before setting the eggs?

Toledo, Iowa.

C. M. R.

Answer:—By putting the male bird in the first half of the day the great majority of the eggs will be fertilized. The

male bird should be placed in the breeding pen at least two weeks before the eggs are to be used for hatching.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—I have the Barded Plymouth Rocks. Every morning when I remove the droppings boards from the house I notice that the droppings have red or blood streaks through them, and that the droppings are often of a watery nature. Can you tell me what best to do for this trouble; also what could be the cause of the same? Kindly advise me how much charcoal and beef scraps should be fed to each hen and how often. Is it a good plan to feed it in the mash? G. F. S.

Cumberland, Md.

Answer:—This is sometimes caused by a lack of grit or green food. Give plenty of cabbage and keep grit before them at all times. A little charcoal fed in the soft feed two or three times a week is sufficient; or it may be placed in a hopper where they can get it any time. Beef scraps may be fed in the mash or placed in the feed trough by itself, about a tablespoonful to each bird three or four times a week.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Will you please answer the following questions in your Question and Answer Department: How early may chicks ordinarily be hatched and not molt in fall? How long ought chicks to be left in a brooder after hatching? Is the following a good laying food: 100 lbs. bran, 100 lbs. corn, 100 lbs. oats, 75 lbs. animal meal, 25 lbs. linseed meal.

N. Granville, N. Y.

J. B. W.

Answer:—This is difficult to tell. Have had late May chicks molt in fall. If weather is cold chicks should be kept in brooder until well feathered out. Your formula for laying food is very good,

Many Women

depend largely upon their poultry for pocket money. They often double this pocket money by feeding green bone fresh cut. It will make their hens lay more eggs, make more fertile eggs, better hatches, earlier and heavier broilers and heavier market birds, because it is rich in protein and all other egg elements. Don't you want to make more pocket money this way? Just let us send you a

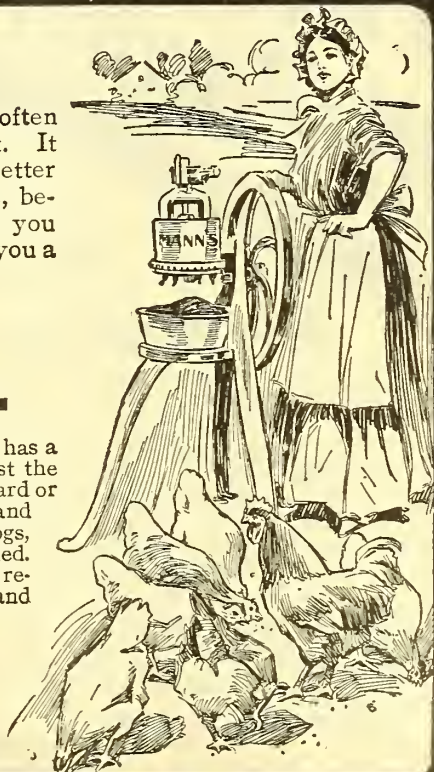

MANN'S Latest Model Bone Cutter.

Be sure and get a Mann's because Mann's is the Bone Cutter that has a patented self-governing feed that produces uniform pressure against the knives and adapts the cutting to your strength, whether the bone be hard or soft. Mann's is the one that cuts all the bone with the adhering meat and gristle into clean, fine food, without slivers or chunks and it never clogs, stalls or makes waste. Mann's has large open cylinder, easily cleaned. Mann's is durably built, will last practically a lifetime and requires few repairs. Don't you think Mann's is the Bone Cutter you want? Try one and prove it to yourself. No money in advance.

SENT ON 10 DAYS FREE TRIAL.

Send today for our catalogue and free trial offer.

F. W. MANN CO., BOX 56, MILFORD, MASS.

except you should cut out the bran and put in wheat, and leave out the linseed meal and add buckwheat. This should be thoroughly mixed and fed whole, not ground and fed as a mash.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer in your next issue: 1st. How many hens can I keep (to a profit for eggs) in a shed coop 6x20 ft, confining them entirely to this place? 2d. If hens waded in snow does it check egg production? 3d. What is the average feed per day per hen (in ounces), let it be what kind it may?

Kalamazoo, Mich.

F. H. E.

Answer:—1st. Not more than a dozen. 2d. No. 3d. Six ounces.

We would like to have our readers, who have fowls troubled with Bumblefoot, write us their experience and what they know about this trouble. What is the cause of this disease and what is its cure? Can anyone answer the question: What is Bumblefoot?

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Being a subscriber of the AMERICAN POULTRY JOURNAL, the writer would be pleased to have the following questions answered: Do the feathers of White Plymouth Rock pullets have a creamy or straw-like color when first coming in and turn white after? The pullets I have are May hatched, and their feathers coming in have a creamy cast. I have been told this circumstance is common, but wish to have authoritative information. Would the grain fed them have any effect on the plumage? I also fed fresh meat and alfalfa meal, each three times a week alternately. The grain I mixed as follows, in quarts:

Oats 96, corn 32, wheat 32, barley 32, millet 8, kaffir corn 8, rye 8, buckwheat 8. Of course, grit and oyster shell are before them always, also water. Can you find any fault with this formula?

Also, one pullet seems to have small "warts" on her comb. What are the causes and remedy, if any? W. E. W. Shrewsbury, Mo.

Answer:—Very frequently the feathers of white chickens have a creamy appearance, which gradually disappears as the bird gets older. Some breeders claim that the feeding of yellow corn will cause this. At any rate it is caused by too much oil in the quill of the feather. Your feed mixture is very good and should give good results in the development of your birds. Your description of the "warts" on comb of pullet is too indefinite for us to give an intelligent answer. This may be chicken pox and it may be some permanent growth which would disqualify the bird for either show or breeding purposes.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Will you kindly answer the following through your paper: Had a bantam hen get sick last summer. She would eat all right, but stood around drooping. The skin seemed to crack open and became very hard. It seemed to be the worst on joints, particularly the wings and legs. The disease did not seem to be contagious, as she was with a number of other fowls for a time and none of them caught it. Kindly tell what the trouble was. F. R. H. Wichita, Kan.

Answer:—This is what is known as Scabies. This is caused by a small mite which collect around the base of the feathers. The treatment for this disease

is not very difficult, but must be persisted in until a cure is effected. The following ointment will do the work: Flower of sulphur, 1 dram; carbonate of potash, 20 grains; lard or vaselene, ½ ounce. This ointment should be rubbed over the affected portions of the skins and the parts adjacent.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please let me know through your "Question and Answer Department" what was the cause of eggs not hatching good from my Barred Rocks. Some eggs hatched strong chicks, others had chicks in the shell as small as a little bird. H. S. Canarsie, N. Y.

Answer:—This is due to several causes. Lack of green food will sometimes cause it; also lack of meat. Very frequently it is caused by having too many hens with the male bird, or lack of vigor in the male bird. Unless we know under what conditions your poultry is kept we cannot tell the exact cause.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Will you please tell me in your next JOURNAL what is the matter with my ducks. They run at large and have a big pond of water. The water is fresh for there is a windmill pumping in it all the time and I feed them regularly. The trouble seems to be that they cannot get their breath. They hold their mouths open most all the time, and for some reason are unable to eat. They die in about a week. Please let me know the cause and cure for it. J. B. M. Scrofford, Kans.

Answer:—You allow your ducks too much range and they really run themselves to death. Confine them to smaller

There's Money in Poultry

Not everybody makes it, but not everybody uses good judgment in outfitting for the business. Don't expect to make money out of poultry if you cannot hatch dependably, at all seasons, in all climates, under all conditions, upwards of 90% of your fertile eggs. Not all incubators will do this. Show your good judgment by selecting one that will.

Raising all the chicks you hatch is just as important. Just any sort of a box for a brooder will not do. See to it that you get the best possible substitute for the hen to mother your chicks.

You will start out right in the poultry business and go a long ways toward assuring your success if you outfit with

SUCCESSFUL Incubators and Brooders.

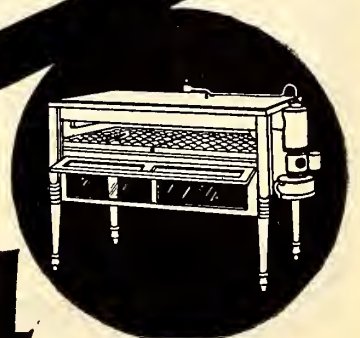

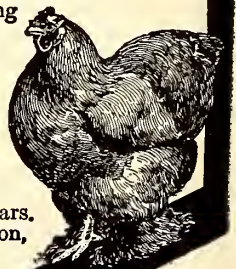

They are machines that have been proven. Many thousands have been in use for many years. They can be relied upon for uniform good results. Every user testifies to their perfect self-regulation, their dependableness and their uniform good results under all conditions.

Successful Incubators and Brooders for years have been, and now are, sold with the positive guarantee that, under like conditions, they will hatch as many and as strong, vigorous chicks from a given number of eggs, and will brood as many to maturity, as any other incubator and brooder in the world.

This guarantee protects you. Start right with proper machines. Incubator and Poultry Catalogue Free. Booklet, "Proper Care and Feeding Small Chicks, Ducks and Turkeys," 10c. 50c poultry paper one year, 10c.

DES MOINES INCUBATOR CO.

We have a full line of poultry supplies,
poultry and eggs.

**SUCCEED
WITH A
SUCCESSFUL**

quarters and give them plenty of fresh water to drink; but keep them away from the pond for a while. They must also be supplied with plenty of coarse sand and good wholesome food.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—I would like to ask a few questions concerning goslings. We have lost quite a number of them the past season with a kind of peculiar disease.

The goslings were hatched in May by geese, and were at large with them having half of the farm to run over. Farm consists of 157 acres. They were fed occasionally on a ground feed consisting of two parts bran, 1 part shorts (wheat) and one part of chop feed, baked. At the age of about four weeks one at a time would become light, look pale, droppings be thin and white, unable to hold the head steady, and die in from 2 to 4 days, after showing first symptoms, would keep on eating to the last.

Richwood, O.
K. W.
Answer:—The trouble with your goslings is that they were allowed too much range and really run themselves to death. For best results goslings should be confined to limited quarters and not allowed in water until they are feathered out. The book entitled "Ducks and Geese" would be of valuable assistance to you. Price of this book is 50c; for sale by us.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer the following question through your POULTRY JOURNAL. I noticed a young cockerel moping around the yard whose wattles and comb were pale; on picking him up I found him very light and upon opening found a piece of solid flesh in his bowels, weighing one pound and a quarter, about the shape of a kidney, with fat on one side.

Pawtucket, R. I. P. J. T.
Answer:—This was a tumorous growth, probably caused by an injury of some kind. Cases of this character are very rare and there is no remedy for them.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer in your next JOURNAL: Will Buff Plymouth Rock cockerels that have white in their wings do to breed from? My pullets are nearly clear, a little black in some of them, no white. I bought of a man that I thought would send good birds, but what he sent I call very poor birds.

Avalon, Wis. Mrs. M. D. U.
Answer:—If the cockerels are good in all the other sections and pullets are exceptionally strong in wings, they will do for breeders.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Will you please tell me in Question and Answer column what kind of ducks is the heaviest, and how much they will weigh, each, when full grown?

St. James, Minn. O. J. S.
Answer:—The Aylesbury and Rouen are the heaviest ducks. Standard weight of these is drakes 9 lbs., ducks 8 lbs.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—As a subscriber and reader of your most valuable paper, I would like to ask through your Question and Answer Department what in your opinion ails two of my chicks. They were hatched the 1st of September; at six weeks old they began to drop their wings and hold them out from their side in the position of a hen when overheated the wings growing worse and worse as they grew older until now the elbows nearly

touch in front of breast. They are perfectly healthy and eat well and are the largest of the flock.

A. J. C.
Clinton, Iowa.
Answer:—We are unable to say. Will some of our readers please answer this?

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—I would like to ask you a few questions concerning the Hamburgs, which I would like to have answered in next issue of your journal. I have read in a poultry book that their constitution is tender, while in another book it said that they are hardy. What do you think is right? What is the standard weight for them? Are their chicks as easy to raise as Leghorns? Will Hamburg pullets lay eggs in winter in a warm house?

W. A.
Lombard, Ill.
Answer:—We have always found the Hamburg a very hardy and vigorous fowl. The Standard does not give any weight for the Hamburg. We have always found the chicks full of vigor. Hamburgs will lay in the winter if given proper feed and care.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Will you please answer the following question: What is the difference between "single" and "double" mating?

O. C.
Lindenwood, Ill.
Answer:—To answer this in full would take more space than we have in this department. Briefly it means that you must mate one pen to produce good pullets and another pen to produce good cockerels. This system of mating applies more strictly to the parti-colored varieties than to the solid colored ones.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer the following in your JOURNAL: Please give me a cure for rattling in throat. I have four old hens and sixteen of their pullets. Could I put the pullets with the hens and mate to the cock that was with the hens last year (or the pullets' father)? They are line bred strain.

B. P.
Evansport, O.
Answer:—Your fowls have evidently got a bad cold. Melt a piece of lard about the size of an egg, after which add a tablespoonful of kerosene oil. Give a teaspoonful of this mixture to each bird twice a day for three or four days. Also rub some of the mixture on head and throat. Read article on line-breeding in our December issue.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer the following question through your POULTRY JOURNAL. I have a young white Plymouth Rock cockerel and an old Plymouth Rock hen which when going around the yard will walk on their legs, from their knees to the foot. They do not seem to be sick for they eat as hearty as any of the rest. Please be kind enough to tell me what the trouble is and a remedy for the same.

D. H.
Merritton, Ont.
Answer:—Rheumatism. This is usually caused by damp quarters. Begin treatment with a dose of Epsom salts 20 to 30 grains. The following day add 30 to 40 grains of bicarbonate of soda (baking soda) to the quart of drinking water and give 2 or 3 grains of salicylic acid twice a day. Apply camphorated or carbolic ointment to the affected joints.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please state in your columns which is the best way of heating incubators, by hot water or hot air?

Sespi, Cal. Mr. N. A. P.
Answer:—We cannot, in justice to our advertisers say which we believe is the best. Both systems are used very successfully.

SUCCESS INCUBATOR

A wonderful hatching machine. We want you to try it and will make it easy for you to do so. We will send one freight paid, and give you **60 DAYS' FREE TRIAL**—time enough to take off two good hatches. If it doesn't suit you, if it doesn't hatch right, send it back. Could we make such an offer if we did not know what the "SUCCESS INCUBATOR" will do for you? Write for free illustrated catalog. American Brooder Co., Box 97, Racine, Wis.

A Hen Lays

TWO EGGS EVERY THREE DAYS

And makes lots of money for her owner. That's an easy possibility. You can have a whole flock of that kind. It's a matter of selection—weeding out the poor and selecting the good layers, and building up.

THE WALTER HOGAN SYSTEM

teaches you how to do this. It enables you to weed out from pullets the ones that never will make good layers. Select cocks that will and those that will not breed laying pullets. You retain the good stock, market the poor. Any one can practice this system and put his flock on a paying basis—double his egg yield the first year. Correspondence invited Prospectus free.

The Walter Hogan Company,
17 National Bank Bldg., Fergus Falls, Minn.

THE Angle Lamp

OUR PROPOSITION is to send you a light which, burning common kerosene (or coal oil), is far more economical than the ordinary old-fashioned lamp, yet so thoroughly satisfactory that such people as ex-President Cleveland, the Rockefeller, Carnegies, Peabodys, etc., who care but little about cost, use it in preference to all other systems.

We will send you any lamp listed in our catalog 59 on thirty days' free trial, so that you may prove to your own satisfaction that the new method of burning employed in this lamp makes common kerosene the best, cheapest and most satisfactory of all illuminants.

Convenient as Gas or Electricity

Safer and more reliable than gasoline or acetylene. Lighted and extinguished like gas. May be turned high or low without odor. No smoke, no danger. Filled while lighted and without moving. Requires filling but once or twice a week. It floods room with its beautiful, soft, mellow light that has no equal. Write for our Catalog 59 and our proposition for a

30 DAYS' FREE TRIAL.

Do it now—right away. It will tell you more facts about the How and Why of good light than you can learn in a lifetime's experience with poor methods.

The Angle Mfg Co., 78-80 Murray St., New York.

HEALTHY TREES Honest in quality. Grafted Apples & Budded Peaches. 4c, Budded Cherries, 15c each; good varieties. Concord Grapes, \$2 per 100; Black Locust and Russ Mulberry, \$1 per 1000. We pay freight. Complete catalog free. Galbraith Nurseries, Box 17, Fairbury, Neb.

Standard Bred Practical Poultry. Removal sale of extra quality stock at practically your own prices. Buff Orpingtons, S. C.; Buff Wyandottes, R. I. Reds, S. and R. G.; India Runner Ducks. Description, circulars and prices on request. A. E. GREEN CO., Morgan Park, Ill.

\$3 a Day Sure Send us your address and we will show you how to make \$3 a day absolutely sure; we furnish the work and teach you free, you work in the locality where you live. Send us your address and we will explain the business fully, remember we guarantee a clear profit of \$3 for every day's work, absolutely sure. Write at once. 10,000 YOUNG MEN WANTED

To qualify for positions as **RAILWAY BRAKEMEN, FIREMEN,** At Salaries from \$60 to \$125 a Month We teach you by mail the Standard Rules and Modern Methods employed by leading railroads and assist you to a position when you are qualified. Schools conducted by prominent railroad men and endorsed by railroad managers who want our students. The greatest field today for young men in railroading. Our course is intensely interesting and fits you for immediate employment and promotion. Many positions now open. Begin at once. Write for catalogue today. **THE WENTHE RAILWAY CORRESPONDENCE SCHOOL, DEPT 121 FREEPORT, ILL.**

HEAT KEPT RIGHT

The HATCH-ALL just keeps up an even 103 degree heat each hour, each day, until 21 days are counted — then the shells begin to crack and a high percent of lively chicks start out to live, grow and make money for you. The

HATCH-ALL INCUBATOR

owes its success to its unique and practical ventilation and heating systems; to its triple walls; and most of all to its "no-worry" regulator, which keeps the heat in the boiler at an even blood-heat average. 12 oz. copper boiler can't rust or leak. The easily removed chick trays make cleaning easy. Write us now, get our free catalogue, and learn how to lay up chicken money.

A Little Journey to the Home of M. M. Johnson, Incubator Man

An Account, in a Small Way, of a Big Success; all
Through Honest Work and a Good Article,
That is Worthy of Record.

By a Representative of AMERICAN POULTRY JOURNAL

When it was decided that I visit the factory of the Old Trusty Incubator out in Clay Center, Nebraska, and get acquainted with the well known incubator man, M. M. Johnson, I was indeed glad to start. My little journey was going to be instructive to me as well as to the readers of this paper. I had long wanted to know how an incubator was made and see the man Johnson at home. I wanted to talk to his neighbors and have them tell me what it was about the man which had done so much to bring his incubator and himself before the poultry raisers of the country. I found out that all the people in his home town swore by the machine that was turned out of his factory and all did what they could to build up the business he has so well under way. When you find a man who has been successful at his chosen work and one whose neighbors take a great interest in, it is generally a pleasure to visit him. This has been true of the many little pilgrimages which it has been our lot to make in the last few years among the poultrymen of the west.

The one thing that I had noted in the advertising from the Old Trusty factory

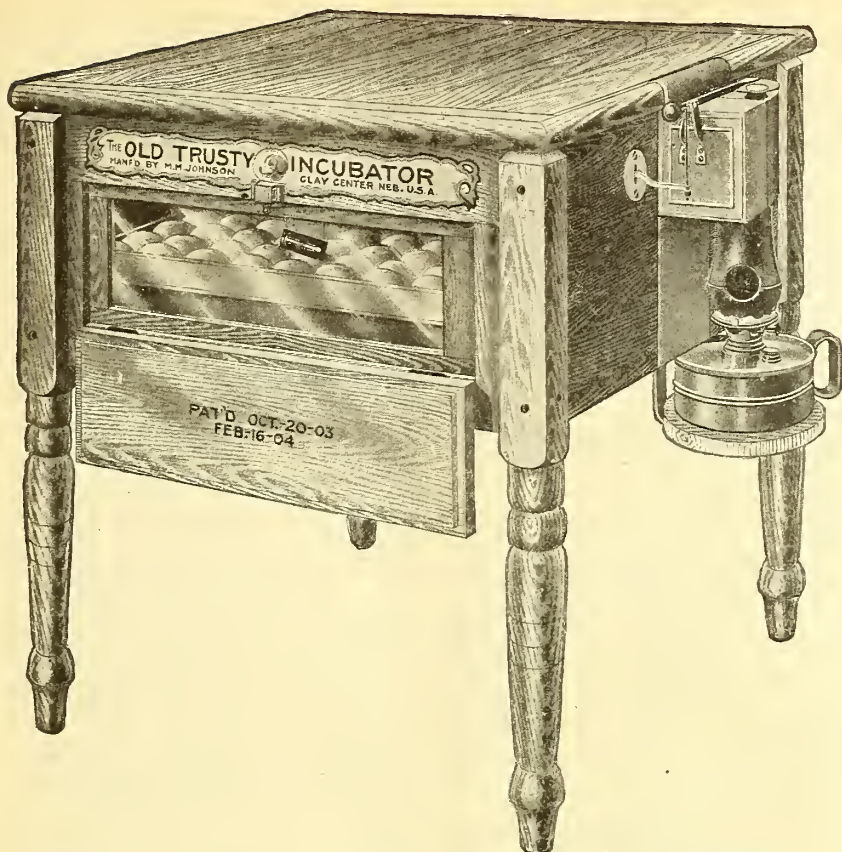

This is M. M. Johnson, Incubator Man, Clay Center, Neb., Maker of the Famous Old Trusty.

was that there was a personality behind it. Some one was responsible for this and of course it was Mr. Johnson himself. I have talked with some of the best financiers of the west who were acquainted with this man and they all declared him to be a man of strong personality; one who put the best there was in himself into the business of making good incubators and satisfying the many customers that he made from one season to the next. There are a lot of chicken breeders who are finding that it pays to get close to their customers by tending strictly to their own knitting and letting the other fellow care for his own; that it pays to get in touch with the people that you are trying to serve. And to this last clause we attribute a very large amount of the phenomenal business that Mr. Johnson is doing.

The Old Trusty business has been built up solely on the reputation of the machine for good work. It goes from the factory built to make money for those who will use it with a grain of common sense; it will not do to cook cabbage in; it will not do to use for a plaything or pumpkin husker or gum drop, but if you are wanting an in-

The above picture shows a goodly crowd of Old Trusty's factory and office crew. The Old Trusty is a good incubator because the folks that make it all work together.

And this is Old Trusty! Solid, sure, gentle and kind—with a good machine. The pay-for-itself-hatcher; that's what its users call it.

incubator that will do to take into the family to make your poultry more profitable than put your faith in Old Trusty. I could go ahead and fill pages with the merits of this incubator but I cannot add one word that will make more convincing the truth. These photos are the bread and meat that should be taken into account in the purchase of an incubator; they prove all and more than is said of the Old Trusty.

From the time the Old Trusty is cut down in the big redwood forests of California and its copper dug from the deepest mines nothing but first class work is put into its construction. Good labor, skilled in assembling the incubator, careful mechanics who take a pride in their work, the best of material and ideas on incubator construction that are proved to be of worth by use in a hundred positions and localities, in fact a most severely tested machine—these are all that is put into Old Trusty. Whatever else you meet that points toward this incubator has more or less of Mr. Johnson's personality in or behind it. The aim is to make an incubator and brooder that will satisfy all who are looking for a machine which will hatch a goodly number of chicks (all hatchable eggs, if you like) and do it well. Mr. Johnson proved to me that over 99 per cent of his patrons the past season gave him unsolicited letters of complete satisfaction with the Old Trusty Incubator. And out of 12,000 of his brooders sent out the past two years but seven were returned, this means that the Old Trusty brooder can and does raise chicks; that it's the friend of the poultry raiser who has used brooders but found them wanting. Brooding chicks is a hard proposition, they say? Let them get a few Old Trusty brooders and begin again. A trial will convince you that they can do as good work for

you as for the hundreds who are pleased to have their pictures in the catalogue and the thousands who have written Mr. Johnson that they are worthy of being trusted with baby chicks. Of the four returned incubators two came back be-

cause they were damaged in shipping and two because of a misunderstanding. A fifth one to be returned would not be accepted by Mr. Johnson because it was purchased by one who was directly connected with a competitor. Mr. Johnson holds himself personally responsible for the guarantee that is back of his brooders and incubators. And this guarantee is so brief and easy of comprehension that any one can thoroughly understand it. A guarantee, says Mr. Johnson, entirely separate from a catalogue, is made to take the responsibility off the claims used to induce purchase in the catalogue. This is only worth lighting a pipe with, said he.

There are a big lot of Old Trusty users—a whole army of them, and a still bigger army of friends of its users who have seen it do the work. We asked Mr. Johnson how many incubators he sold the past season and he said "Here are the books. You can count up my orders for yourself. I could claim sixty thousand sales, or more, but the books will show you exactly the number of sales, and then you'll know the truth." There were forty-one orders on a page and we soon figured out that 60 per cent of them were for two or more incubators or an incubator and brooder; then we figured up the number of pages and arrived at the correct number of individual sales. These amounted to 17,340 and besides these there were 4,084 machines sold to agencies making a total of 21,349 incubators and brooders for the season. Last year about 13,000 machines were sold. Pretty nice increase of business, wasn't it? We quote facts not big estimates!

Mr. Johnson was the popular priced incubator manufacturer and some publishers declare him to be the first who ever used half-tones for incubator advertising. His business has grown entirely on his own efforts. Eleven years

This hatch of 58 Pekin ducks, 31 Bronze turkeys, 20 White Langshans and 16 Guineas was made in one machine at the one hatch by Mrs. D. H. Burk, Webber's Falls, Ind. Ter.

ago he landed in Clay Center without a full purse, in fact twice the familiar thirty cents was his working capital and to-day he owns his business, factory, a good brick store building, and a nice but modest home. All earned by ceaseless work and honest methods. His neighbors know him and he can get all the credit necessary, and if a man's neighbors trust him, he is generally a good fellow to do business with. He does nothing in a half way spirit, it never pays, he says. Notice his advertising! He takes good sized, though not extravagant, space. Many spend more. Whenever he discovers a good advertising medium he stays by it.

Fully 60 per cent of his orders come from poultry people and farmer's wives who have seen the Old Trusty at work in their neighbor's homes bringing off big hatches of hearty chicks. If Old Trusty once gets into a community and has half a chance to hatch, it will sweep all before it. A large measure of Mr. Johnson's success he attributes to the enthusiasm of Old Trusty users. Their praise of the product of his busy factory is so strong that their friends get his catalogue and then buy for themselves. Old Trusty users have sent him over a hundred thousand names of prospective customers. Mr. Johnson has no secrets of business. All Clay Center knows how much business he does and how his customers like his business methods. If you call on him you can see the books for yourself; you can count the orders; you can see how big a force of clerks and office help handle the letters that come in great stacks daily. If you want to look over ten thousands of testimonials that are filed away in his office, they are there for your sight. Mr. Johnson will make you welcome and instead of a big, pompous man in white cravat and spats with checked trousers, you'll be surprised to find an everyday man, plain, hardworking, pushing things everywhere. He does not fear competition at all. Really, he welcomes it! "Competition,"

says Johnson, "only makes the man afraid who doesn't put out an incubator and brooder that can successfully withstand it." His output is more than equal to it! Old Trusties are repeaters—orders come repeatedly from the same community.

Numerous branch houses make it unnecessary for a large stock to be carried at the factory. Decks are always clear for action at the factory. By keeping the factory always at work he lessens the cost of insurance and saves freight by shipping in carload lots. From the warehouses at Eugene, Oregon; Portland, Oregon; Los Angeles, California; St. Joseph, Missouri; Wichita, Kansas; Council Bluffs, Iowa; Peoria, Illinois; and Guthrie, Oklahoma, he can always ship machines quickly to purchasers. This saves much time and annoyance. The factory is a model of its kind and accommodates more mechanics than many others of like size. Not even any lumber is stored at the factory it being in sheds provided for that purpose.

A fifty by fifty, three story building is being constructed near the factory for the manufacture of Old Trusty chick foods. Mr. Johnson wants to put up a chick feed he can conscientiously recommend. He knows that raising the chicks is the hardest part of a chicken man's work; he understands that a good chick feed is the one that will carry the chicks safely past the danger line that is crossed during the second and third week of a chick's age. He has been experimenting very carefully for the past few seasons and has arrived upon some chick food facts of his own. He raises some chicks of his own each year. His wife operates successfully an Old Trusty and she is a careful poultry raiser as well. Indeed, she gave the machine the name! And this is undoubtedly one of the links in the chain of Old Trusty's success. To return: Mr. Johnson believes that a brooder no matter how good must be supplemented with a few cupsful of careful hen-sense. This includes feeding of

baby chicks, but as so few beginners thoroughly understand the correct feeding of newly hatched youngsters, he is going to help them in their feeding. This is exactly as I have found the man, ever willing to help his patrons win a fair measure of the profits from poultry. He gives more than value received to his customers. He wants it heaped up, pressed down and running over. The real valuable poultry information in the new catalogue cannot be estimated in dollars and cents though it is of much worth to every reader.

I have begun this story of Old Trusty in the middle, then gradually worked to the beginning, then I started again at the end and worked to the middle. This is because the enterprise was so large that I could not comprehend it at a glance. I have known Old Trusty's maker for a number of years but never met him before. He is a sort of a farmer he believes in poultry, cows, bees and fruit, and a little less hard work when a living and more can be made that way. Says he, a big farmer cannot make more profits than a small farmer even if he does have lots of land, and he is right about it too. Johnson is a man everybody likes. My little journey to Clay Center has more than been profitable to me because I learned a thing or two about chickens and incubators.

To sum up the reasons of Old Trusty's and Johnson's success I would say:

His incubator will do what he says it will.

With ordinary care it will last many years.

It is built honestly and more than worth the money,

One gets perfect satisfaction or their money back.

Personal attention to the details of his business are why no kicks are heard from patrons.

A good incubator and brooder, and an honest man to deal with are what the reader will find if he once does business with M. M. Johnson.

INTERNATIONAL EGG LAYING CONTEST

To encourage a series of systematic experiments and thus find the best way to feed hens to increase their egg production, the *International Stock Food Co.*, has inaugurated a Great Egg-Laying Contest. Men and Women, Boys and Girls everywhere who keep hens for profit will take an active interest in this Contest and should enter and take part in this investigation. To make the Contest absolutely fair to all we have divided the prizes into two classes—No. 1 for boys and girls under 17 years; No. 2 for men and women. The young and inexperienced will therefore compete only with others in their own class and may win a \$10 prize. It's worth your while to enter this Contest and try for one of these

CASH PRIZES FOR BEST EGG RECORDS

We hope to bring out in the contest a vast amount of valuable information on the great subject of feeding for eggs and to get it in tangible shape to use as a future guide for all who keep hens and sell eggs. "*International Poultry Food*"—1200 feeds for 25c—is a medicinal preparation, made of roots, herbs and seeds. Mixed in small quantities with the regular feed it stimulates the appetite, keeps the chickens healthy and accomplishes remarkable things in increasing the egg supply. We want to find out the *very best* that it will do, and are willing to pay you well to help us to determine that point. Will you do it? Write for full information, entry and record blanks and beautiful book, "*Money in Poultry*," all free. Mention this paper and we will send free also a beautiful picture, in 6 colors, of the famous *Fisher \$500 Rooster*—you'll think enough of it to frame it. If your dealer will not supply the "Food" order direct from us.

"INTERNATIONAL LOUSE KILLER" QUICKLY RIDS POULTRY OF LICE

WEALTH PRODUCERS.

80,000 Sure Hatch Incubators and Brooders Are Earning Money for 60,000 People.

To the man or woman studying over ways and means of earning money on small capital, poultry raising offers greater attractions than almost any other field.

It takes the merest fraction of an hour each day if one has a reliable incubator, and the cost of the standard machine, "The Sure Hatch," made by the Sure Hatch Incubator Company, of Clay Center, Nebraska, is very reasonable.

They sell their 100-egg machine (which by the way has an actual capacity of 120 eggs) for \$10, in most localities, and not only prepay the freight on it but they will ship it on Sixty Days' Trial. We have carried the advertising of the Sure Hatch Incubator Company for a number of years and hundreds of our readers have purchased their machines.

On every hand we hear only words of praise for the Sure Hatch.

The 1906 Incubator has been greatly improved. It has a patent Safety Lamp that is entirely free from the drawbacks of ordinary incubator lamps. The burner is made with a special flame slot that does not spread the flame, while the one-piece large flue is a decided advantage over the ordinary kind that often open at the seams and cause serious trouble.

Being surrounded by a water jacket, every bit of the lamp's heat is utilized, making the Sure Hatch Safety Lamp a great oil saver.

Both the tank and pipes of the hot water heating system are made of heavy copper and there are 138 square inches of heating surface.

Important improvements have been made in the Ventilation System, which keeps the eggs constantly in warm fresh air, the foul air escaping through vents at the bottom of the egg chamber.

In every way the 1906 Sure Hatch is a triumph of inventive effort.

Last year's Sure Hatch sales were phenomenal. Over 20,000 were sold, making the grand total now in use over 80,000 machines!

The sales of Sure Hatch Brooders were also very large, while the demand for Sure Hatch Chick Feed increased several hundred per cent.

The company guarantees its machines for five years, and so great is its confidence in the 1906 Sure Hatch that it also guarantees it to outlast any other make of machine on the market.

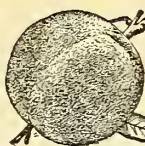

The guarantee of the Sure Hatch Incubator Company is backed by its entire wealth and integrity, which, during eight years of business, has never been questioned. Our readers will be interested in the new Sure Hatch Catalogue and Poultry Manual.

A copy of this valuable book can be obtained by addressing a postal card to the Sure Hatch Incubator Company, either Box 66, Clay Center, Neb., or 30 East Washington St., Indianapolis, Ind. Those wishing to engage in poultry raising for profit will find it a safe guide.

Arthur R. Probst, Pomeroy, O., breeder of "Ringlet" Barred Rocks exclusively, seems to be meeting the demands of his customers in a most satisfactory manner, as the following testimonials as well as many others conclusively prove: "Dear Sir: The Barred Rocks arrived in fine condition and certainly are aristocrats of the variety. They have been much admired by all I have shown them to."—Kansas City, Mo. "The cockerel arrived O. K. yesterday and wish to thank you for the selection. He is indeed a fine fellow and I am more than pleased with him. I appreciate your fair and honest treatment."—Ligonier, Ind. Mr. Probst has spared no expense in keeping up the high standard of his flock, and as a result has some very fine birds to offer, and as he guarantees satisfaction it would be well to see his ad on another page and write him before placing your order.

"Your Brooder is head, neck and shoulders above all. Nothing but 'Mandy' Lees for me," says Jas. Brown, Scottsdale, Pa. It's the right kind. Catalog free.—Geo. H. Lee Co., Omaha, Neb.

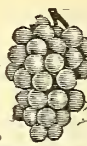

E. M. Quay of Columbia City, Ind., anticipates a nice business this season. He has a nice bunch of young stock, and will be in good shape to supply customers with first-class stock.

THIS OUTFIT SAVES

1 THE OIL
2 LABOR

Your incubator is costing you double the time and attention it should. For instance, filling and trimming your lamp twice daily, regulating the flame several times, burning 2 gallons daily where one should do the work, and do it well.

And All Annoyances

ACME AUTOMATIC LAMP AND COMPOUND WAFER REGULATOR

will effect a saving of one-half the oil, one-half the time and care and one-half the cost of operation. The Combined Damper and Flame Regulation shuts off oil consumption when heat is not needed. Lamp holds over one gallon oil. Top lifts off like bucket cover, makes filling easy. No funnel needed, no spilling and wasting oil. Safely filled while in operation. Automatic valve keeps oil always same height on wick, insuring a uniform flame. Cannot be upset. Acme mineral fiber wicks do not burn or char, and require no trimming. Acme Burners are air cooled and cannot overheat, absolutely safe, no danger of explosion or fire. No smoke, no soot, no offensive odor. Can be operated in any part of the house. Acme Compound Wafer Regulators are sensitive and accurate to a fraction of a degree, and positive in their action. Require but one ADJUSTMENT, no further attention. The only patented Thermostat. Look for patent label; none genuine without it. All infringements will be vigorously prosecuted. Made up in various styles to fit any Incubator or Brooder. Style B, here shown, enters end of machine. Has powerful crank action. Adapted for both damper and flame regulation. Other styles for damper only. Both lamp and regulator are easily attached to any Incubator or Brooder. We make them up to fit your machine. Sold separately or together. The operation of an Incubator and Brooder becomes a profitable pleasure, when equipped with this outfit. Our catalogue gives full details and illustrations, together with our complete plans for building the FAMOUS PEEBLES INCUBATORS AND BROODERS. SENT FREE FOR THE ASKING. Write today. Address

H. M. SHEER CO., DEPT. G, QUINCY, ILL.

"CONTINUOUS" HATCHER

Continuous means that this hatcher hatches chicks every day. Simply start it going, do your part and it works indefinitely, testing out eggs, taking out chicks, putting in fresh eggs don't stop its work for a moment. We accomplish this remarkable result by a new system of construction so simple and yet so effective that one "Continuous" Hatcher turns out as many chicks in a given time as several ordinary incubators. It need never rest. And it's not as much bother to run it as the ordinary kind, while the results are more sure. In the building of this hatcher new ideas have ruled and have actually simplified the machine until the beginner with a "Continuous" Hatcher gets as good hatches as an "old hand" with any other machine. Our new catalog explains how this wonderful machine is made and how it works continuously—it will interest you—you'll wonder why you did not think of it before. Write for free copy.

L. H. EDWARDS - R. R. 1, Owasco, Ind.

A GENTLE REMINDER

that, if you have not yet taken advantage of this splendid combination offer, it will be unwise to delay further. **Farm-Poultry**, the greatest of all Eastern poultry papers, has two distinctive qualities that have added thousands of readers to its list who appreciate what is really good and essential in poultry journalism. They are

FIRST: Its system, which has made possible the great series of "FIRST LESSONS IN POULTRY KEEPING" at present appearing in its columns, and which will be continued during 1906. This innovation has been discussed and highly endorsed by the foremost poultrymen and poultry publications everywhere.

Second: Its fairness, as manifested by printing show reports *in full*, giving the name, address and winnings of each and every successful exhibitor, whether he is an advertiser or not. Its readers are entitled to all the news—not only a portion of it.

Add to these its "Editor's Question Box"—its complete current market reports—its wealth of miscellaneous writings on incubating, housing, raising, feeding, marketing and exhibiting poultry—and you have in **Farm-Poultry** what authorities claim to be the "best poultry paper in the world." It is issued twice a month—1st and 15th—and the price is 50 cents a year, but for a limited period we make a

SPECIAL OFFER

of **Farm-Poultry**, **American Poultry Journal** and **Reliable Poultry Journal**, all three papers one full year for only one dollar.

You will find this one of the most satisfactory, most profitable, most inexpensive investments you have ever made. Send all orders and remittances to

FARM-POULTRY PUBLISHING CO. - BOSTON, MASS.

N. H. I. Cock—"Hello Sonny! why don't you grow up!"
Artificial—"O Pa, I will never be a cock like you. I was in a sweat box and had the chills and fever before I was born."

With the Hen On Your Side

you can beat the world raising chicks. Manufacturers of heated boxes are finding it out. They're coming round to Siems' way.

SIEMS USES THE HEN
 —IN HIS—

Natural Hen Incubator.

She's a part of it—a big part. He gets mother instinct, mother faithfulness, mother care, and best of all, mother results.

ALL THE DIFFERENCE IN THE WORLD between Siems' plan and any other incubator made. It's because Siems uses the hen. 200 egg size costs only \$3.00. Agents wanted. Send for our catalogue. It is FREE. Address

NATURAL HEN INCUBATOR COMPANY,
J. F. Siems, Patentee, Box 4, Columbus, Nebraska.

COLLINS' RELIABLE POULTRY REMEDIES Roup Cure, 25c. Cholera Cure, 25c. Diarrhoea Cure, 25c. Poultry Tonic, 25c. Cond. Powder, 25c. Cure Guaranteed.

Poultrymen, my remedies are backed by professional services. Convince yourself of the unequalled qualities they possess by giving me a trial order, and if they do not prove superior to any you have used I will cheerfully refund your money. I know positively from practical experience and unsolicited testimonials from users, that these remedies will meet every duty required of them with never failing results. Accept no substitute, as there is none just as good. Agents wanted, liberal inducements. Send stamp for descriptive Circular.

Mfg. by **C. J. COLLINS & Co.** Hartford, N. J.

SMITH'S S. C. White LEGHORNS

None better anywhere for exhibition or laying purposes. To make room for young stock will sell this season's breeders at bargain prices. 300 hens and several choice cocks. Here's a chance to secure fine breeding birds at much less than actual value. Young stock now ready for shipment. Write your wants. **S. E. SMITH, BOX 101, NORWICH, N. Y.**

Winners at NEW YORK ST. LOUIS

This is it.

SHAW'S CONVENIENT LEG BAND

pleases everybody. You'd discard any other marker made and use it if you saw it. Send for free sample.

It Snaps On. It stays; it's aluminum; it has large raised figures; it's easy to read. Prices: 12 bands, 20c; 30 for 45c; 60 for 75c; 100 for \$1.00. I'll send you letters from poultrymen who know, with samples if you ask it. **H. O. SHAW, Box 103, GRINNELL, IOWA.**

Wyckoff's S. C. White Leghorns

Acknowledged everywhere the world's greatest laying strain; unequaled in standard qualities. Without question the most profitable strain of poultry in America today. 1000 extra choice yearling hens mated with grand, strong, early hatched cockerels must be sold at once to make room. They are the ideal breeding matings for season of 1906, and we will make special inducements in prices to early purchasers. When writing for prices and catalogue please state plainly just what is wanted. Address

WYCKOFF'S FARM, - - - Aurora, Cayuga Co., N. Y.

\$300

If you are looking for a brooder that is a success from the start, that will enable you to have enough of them to properly care for your chicks, and will not cramp your purse, that is easy to clean, and one that applies the heat direct to the backs of the chicks. Send for free catalogue to the

PERFECT BROODER SHOP . . . CELORON, NEW YORK

System in Poultry Practice BY **JAMES Shackleton.**

30 Chapters, 147 Pages, One Dollar, Postpaid.

May 1, 1905. Sales of this book since Sep. 1, 1904—eight months—are larger than for preceding 18 months. It is meant to appeal to common sense and evidently succeeds, for increase is chiefly in places where it has gone before. California always took more than any other state, and now takes more than any other three. Canada has many and now takes more than any state but California. Even Australia takes many. This book has been sold in every state of the Union, except two southern states, and Alaska. In Canada, Newfoundland, P. E. Island, New Brunswick, Nova Scotia, Quebec, Ontario, Manitoba, Assiniboia, Alberta, British Columbia and Vancouver Island. In Cuba, Hawaii, Philippines. In England, Belgium, Germany, Australia, New Zealand and China. It is meant to be of equal value in every climate, for whatever purpose fowls are kept, and evidently is so regarded. Sales are increasing rapidly everywhere. Enthusiastic testimonials are plentiful.

The book and American Poultry Journal for one year for \$1.10, new or renewal.

JAMES SHACKLETON, Box A 12, Milburn, New Jersey

HOUDANS!

Rigg's HOUDANS have been line-bred since 1874. It is a thoroughly established strain, unapproached in size, style and finish. Acknowledged by all breeders to be the standard of Houdan excellence in America. Large of size, extremely vigorous and wonderful egg producers. Have won more prizes in the show room than all other strains combined. Exhibition and breeding stock at prices representing their value. A positive guarantee given in each case.

WHITE WYANDOTTES

The demand for White Wyandottes has been so heavy that at this early date we are sold out of surplus stock. The breeding stock we have retained for the coming season are White Wyandottes as White Wyandottes should be.

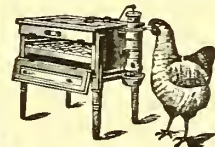

THOS. F. RIGG IOWA FALLS, IOWA

Raising Poultry As a Side Line

There is money in raising poultry for the market. As a side line it fills in many unprofitable hours and pays handsome dividends the year round. You can start without a feather and select enough pullets from the first season's hatching to lay all the eggs you need for the next season, or you can market them as broilers at a good round price.

THE Wooden Hen

\$12.80

will start you. It is a 200-egg hatcher that will hatch every fertile egg put into it. No need to pay high prices for incubators that won't do as well. This time-tried hatcher is invaluable to the experienced poultry man or the beginner. Write for free catalogue and full information how to raise incubator chicks.

GEO. H. STAHL, Quincy, Ill.

Little Gem HATCHERIES

Cost only 30c each, and over 60,000 successful poultry raisers are now using them. This girl hatched 179 chicks in them last year and RAISED 151. Interesting catalogue free. **F. GRUNDY, Poultry Expert, Morrisonville, Ill.**

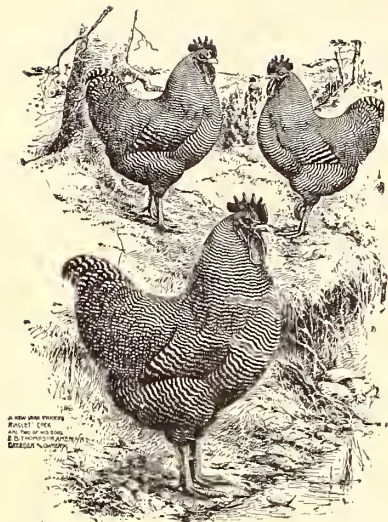

TRAP NESTS

Show which Hen laid the Egg 1900 The "Ideal" is King. 1906

Cost small. No freight. Circular will interest. Write to "the originator of practical trapnesting."

F. O. WELLCOME

Yarmouth, Maine.

A "Ringlet" 1st Prize New York Cock and two of his Sons.

"RINGLETS" Soar Still Higher.

At the Imperial Show of the Nation
Madison Square Garden, New York

E. B. THOMPSON'S BARRED P. ROCKS

Stamped their superiority in the most decisive manner, winning again the Superb Challenge Trophy, value \$100, for best cock, cockerel, hen and pullet. This is the third time the "Ringlets" have won this grandest of all trophies, giving them now absolute and final ownership. In this "COLOSSAL CONFLICT" the "Ringlets" lifted the great National Sweepstakes Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. My Barred Rocks won double the number of silver cups and special prizes of any competitor, including the sweepstakes special in gold for best Plymouth Rock on exhibition male or female any variety.

The "RINGLET" World's Record of four years in succession at New York is a page of history. The "RINGLET" World's Record of first on exhibition pen at this great show, three years in succession, is the undisputed champion.

The "Ringlet" clean sweep 1st, 2d, 3d, 4th and 5th prizes on pullets has never been approached at Madison Sq. Garden, and stands alone and unequalled

The "Ringlets" have won at New York—exhibited by me personally—a grand total of 87 prizes, 36 of these are 1sts and specials, being more than double the number of 1st and special prizes won by any competitor in the history of the show.

GRAND STOCK FOR SALE

In any number. Rare bargains in yearling breeders in lots of a trio or 100. Show birds fit to win in the fastest company—600 choice breeding cockerels. Richly illustrated 36 page catalogue on application. It is full of original illustrations of New York winners from life. Eggs from finest exhibition matings. One setting \$5, two settings \$9, three settings \$12, four settings \$15. Address

We Can Teach You How to RAISE POULTRY PROFITABLY

If your poultry isn't paying as it should, you are making costly mistakes. Our Course of Instruction will quickly teach you how to make any place (large or small) pay from 25 per cent. to 50 per cent. profit. Your knowledge and ours combined will make you successful.

The individual home lessons, delivered regularly at your very door, are prepared by practical Poultrymen who have by actual experience mastered the problems which worry nine-tenths of all poultry raisers. You get no theoretic instructions. After a little study you can discover your errors and overcome them. The instructions are easy to understand and follow, and big paying results are sure.

If you want to qualify yourself as manager of a poultry plant and accept one of the

Many Lucrative Positions

we have open on our records, our Course of Instruction will soon make it possible. Poultry Culture is not drudgery when rightly conducted. It is a healthful, profitable, enjoyable vocation for man or woman.

Write for interesting free literature at once. Ask for circular showing some of the good paying positions we have open for competent men.

COLUMBIA SCHOOL OF POULTRY CULTURE, Box 196, Waterville, N. Y.

BUFF ORPINGTONS

World's Fair Winners

at the largest poultry show ever held, with the strongest class of Buffs ever brought together, we won seven out of a possible ten firsts. This duplicates our Chicago record, where for four years we have won more firsts than all competitors combined. Circular free.

ONE HUNDRED

Barred and White Plymouth Rocks

And White Wyandottes for sale at a bargain if taken in July and August. All first-class breeders from 1904 and 1905.

D. T. HEIMLICH - Jacksonville, Ill.

ASPETONG FARM POULTRY YARDS

White Wyandottes and S. C. W. Leghorns

won wherever shown. At Kingstown, N. Y., we won 1st and 2d cock, 1st and 2d cockerel, 1st, 2d, 3d pullets, 1st pen. White Wyandotte eggs for hatching \$2.00 per thirteen; Single Comb White Leghorns \$1.50 per thirteen.

Address J. J. ANTHONY, Mgr. NEWBURG, NEW YORK

CHAS. E. THOMPSON & Co.

LYNNFIELD CENTER, MASS.

Box 9

Rhode Island Reds

White Wyandottes

Barred Rocks

Rose Comb White Leghorns

Eggs \$1.00, \$2.00, \$5.00 a setting; \$6, \$10, per 100

Utility and prize winning stock. Strong, vigorous, standard weight birds, bred for egg production and the show room. Won sixty premiums this season. Seed for catalogue, which gives full description of matings. R. I. Red Standard free. Large lot of \$3 cockerels. Prize winners at higher prices.

LITTLE CHICKS

I am now booking orders for thoroughbred chicks of seven different breeds: S. C. Brown and White Leghorns, Barred, Buff and W. P. Rocks, White Wyandottes and R. C. R. I. Reds. The chicks I sell are the prize winning kind. The eggs used sell at from \$2 to \$3 per sitting. Don't hesitate; let me hook your order at once. Write for my 1906 circular which tells all about them. I am also selling The Cycle Hatcher and Brooder, the best and the only ones of their kind on the market. They are made entirely of metal, strictly fire-proof, and have hydro safety lamps that can't smoke nor explode. This hatcher is next to the hen; it hatches more chicks and stronger ones than any other machine. The price is \$5 for a short time to introduce this wonderful Hatcher.

CHAS. E. MURBACH, : 879 N. Leavitt St., Chicago

Barred P. Rocks and Silver Wyandottes

WINNERS AT DUNLAP, IOWA, DECEMBER 26th TO 29th, 1905

B. P. Rocks, 1st cockerel, 1st, 2d, 3d pullet, 1st pen and two specials. No cocks or hens entered. Our open faced Silver Wyandottes won in good competition three 1sts, five 2ds, two 3ds and two specials. We solicit correspondence, as we can furnish choice stock for breeding or exhibition purposes at reasonable prices for quality. Eggs \$3 per 15, \$5 per 30.

Petersen's Houdans

Reign Supreme at the Nation's Greatest Shows

My record has never been approached by any breeder.

BOSTON, 1900. In world famous competition, 135 Houdans exhibited, I won 1st cock, 1st and 2d pullet.
BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.
BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials.
BOSTON, 1905. We won every important prize. 1st and 2d cock, 1st, 2d, 3d cockerels, 1st, 2d and 4th hen, 1st, 2d, 3d and 5th pullets: \$100 champion challenge cup for best male; American Houdan Club Cup for best cock, hen, cockerel and pullet. All shape and color ribbons; gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition.
ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdan's.
Also highest honors at Madison Square Garden, Philadelphia, Pan-American Hagerstown, Toronto. No matter where you want to exhibit, no matter what the competition, I can furnish the winners. Photographs on application. Eggs in season.

REV. C. E. PETERSEN, Pres. Houdan Club, Drawer 12, Franklin, Maine

BENNINGTON'S Royal B. Orpingtons

Win at Gloversville 1st pen, 1st cock, 1st hen, 1st chl., 3d pullet and specials. Remember he breeds his winners and has some fine ones for sale.

Chas. Bennington, Edmeston, N. Y.

LANGSHANS---AMERICAN REDS

Two silver cups at one show. Cockerels and eggs for sale.

SUNNY SIDE POULTRY FARM :: ADRIAN, MICHIGAN

ADUE BILL GOOD FOR 50¢ WORTH OF FREE SEEDS
 We will also send, if you write AT ONCE for our 1906 catalog, one packet of a Rare Variety and one Fine Rose Bush that will bear beautiful roses this year. Enclose with your request a dime or five two-cent stamps to pay packing and postage and all will be sent to your address prepaid. You can then select any packet seeds you wish from catalog to amount of due bill. You can also see the many new things we have catalogued this year in addition to our regular high-grade, pure-bred Farm and Garden Seeds, which give universal satisfaction because they grow good crops. Sit down and write for catalog now—lest you forget.
A. A. BERRY SEED CO., BOX 55, CLARINDA, IOWA

Make Money In the New Country Southwest
 Right now you can make money in the Southwest. We can tell you where and how.
 It is truly a wonderful country, and the fact is being emphasized more and more as its development progresses.
 The farmer receives cash for his product and makes more money acre for acre than can be made in the East or North on land that costs very much more. The merchant or manufacturer makes greater profits on his investment, be it large or small, and the value of the land or other investment is increasing coincident with the rapid growth of the country.
 You can find a satisfactory location, and whether you want to engage in stock raising on grazing land in Texas, fruit raising in Arkansas, banking in Kansas, general farming in Oklahoma or merchandising in any one of the hundreds of growing towns on the Rock Island lines we can give you information that will save you a great deal of investigation and narrow down the field to a point where you can give it personal examination.
 We do not profess to be able to decide for you, but we have complete data as to prices of lands, raw materials, markets, fuel, crops and other facts bearing on the prosperity of each locality. Describe your needs and preferences and we will place this fund of information at your service.
 Write us frankly about your plans and ambitions (or use coupon) and we will give you a prompt reply. **Do it today.**

Let Me Tell You the Special Price On This Genuine 1906 Chatham Incubator

YOU see we make more Incubators than any other concern in the world.

We have two immense factories, equipped with every modern labor-saving wood-working device.

We buy high grade lumber in tremendous quantities and at low prices.

Years of experience and trained skill enable us to make the very best incubators at the very lowest cost.

Our output is larger than any other three concerns in the world put together.

We turn out from six to seven hundred machines a day.

And this year we are after the trade with an incubator of up-stairs quality at a down-stairs price.

To prove to you that it is all we claim, we let you try it 84 days FREE.

We will send you the incubator, you can take off four hatches, and, if the machine isn't exactly as represented, send it back at our expense. You don't owe us a penny.

We take all the risk—stand all the expense.

Could we make you a fairer offer than this?

But we don't stop here. We give a direct iron-clad guarantee good for five years, with every incubator we sell.

We couldn't do this with a cheap machine. Only CHATHAM INCUBATORS will stand it. And they will out-last the guarantee.

For they are made from the best materials and put together to stay.

They are strictly up-to-date—have every improvement brains and ingenuity can suggest. We make everything about them in our own factories, save the screws and nails.

Chatham Incubators are fitted with Steel and Brass Regulators—the best that money can buy. No cheap, leaky, wafer regulators with our incubators.

Heaters—lamps—all are strictly first-class. You cannot get such incubators anywhere else at any price.

THE MANSON CAMPBELL CO., Ltd.,

Try It 84 Days FREE

Will you write today for our special proposition?

We want to send you our FREE Catalog and tell you the rest of this interesting incubator story.

You may find it astonishing, but every word of it is absolutely true and it will certainly please you.

We are ready to quote you a price on any incubator you may pick out. Shipped, charges prepaid, direct to your station from one of our big branch warehouses.

We carry complete stocks in leading cities and can make prompt shipments and immediate deliveries. Just write your name and address on a post card and mail to us today.

We will send you the FREE Catalog with full descriptions and information about Chatham Incubators.

And the Special Bargain prices we guarantee will surprise and delight you.

BUY THE NEW LINDSEY

Start right—get in line for best results in hatching and brooding strong, healthy chicks by using the New Lindsey Incubators and Brooders. No smoke, fumes or impure air from lamp go into either incubator or brooder. The only sensible heating system ever devised.

THE NEW LINDSEY is the nearest approach toward all round perfection in incubators yet produced. Cannot fail to give perfect satisfaction. Hatches every fertile egg; uses less oil. Fill the lamp, turn the eggs daily and the Lindsey will do the rest. Self regulating. OUR GUARANTEE—ABSOLUTE SATISFACTION AS LONG AS YOU OPERATE THE LINDSEY or your money back. No time limit. Write for catalogue. Lindsey Incubator Co., Box E, Fairfield, Nebraska

THE Victor BOOK. Tells About Our Machines. They are made from carefully selected and seasoned lumber. Every piece going into the machines constructed this season has been in our yards for two years. We are not a new concern compelled to buy green lumber and make it into machines next day. Our incubators will not check and warp and crack and be useless after the first hatch. They are built for service and will be found in use year after year. We put a good, honest weight of copper into our boilers and tanks. Our doors fit and close tightly. Our regulator regulates. Our lamps burn clear and brightly. When you get the Victor you get the best—if it's any other you may be buying trouble. Write us today. Can Any Incubator Do More Than This? Sammitville, Ind., Nov. 3, 1905. GEO. ERTEL CO., Quincy, Ill. Gentlemen—I want to say that the incubator I bought of you hatched every egg and raised every chick. You can guess how well they are doing when I tell you that at six weeks old their average weight is 16 ounces; S. C. B. Leghorns at that. I shall want a large incubator and several large out-door brooders in a short time. Thanking you for past favors, I am, Respectfully, JOHN R. BOYD. GEO. ERTEL CO., ESTABLISHED 1867 QUINCY, ILL.

Notice to Poultry Raisers!

Before you buy your 1906 incubator be sure and get our big "Old Trusty" Book. 124 large pages. 300 illustrations. Straight, every-day chicken sense in every line. It costs a lot of money to make, but it's *free to you*, if you're at all interested in chicken-raising. It will help you a lot whether you buy "OLD TRUSTY" or not.

Johnson Pays the Freight.

A Personal Letter from M. M. Johnson

I honestly believe that I am offering chicken raisers the very BEST VALUE in incubators and brooders that they can obtain anywhere.

And I'll tell you WHY.

In the past two years I've sold more than 30,000 "OLD TRUSTIES"—every last one of 'em ON TRIAL, and I want to say to you that with very few exceptions they have all STAYED SOLD.

NO OTHER INCUBATOR IN THE WORLD EVER MADE SUCH A RECORD IN SO SHORT A TIME.

Now, I don't claim that "OLD TRUSTY" is the ONLY good incubator but I DO claim, and I'm right here to back up the claim, that "OLD TRUSTY"

- is sold on a fairer plan
- is better built
- takes less oil
- requires less attention
- hatches larger percents
- produces stronger chicks
- and is the most ECONOMIC incubator you can buy.

I want to PROVE these claims to you.

If the book doesn't convince you, get "OLD TRUSTY" on a 40, 60 or 90 days' trial, and let it PROVE ITSELF.

What do you say?

Write me anyway.

Very truly yours,

M. M. JOHNSON,
Incubator Man.

YOUR SUCCESS In Hatching Chicks

depends upon the kind of incubator you buy. You can't afford to make a mistake; you can't afford to take the say-so of Mr. Blame-it-all or Mr. Blow-Hard; you can't afford to experiment with new or untried experiments. *You want to be sure.* How can you do it? Well, the *best* way is to *try the machine.* If it isn't well-built, if it doesn't do good work; if it is hard to control and operate, *send it back.* That's the fair way. That's our way. We give you a

40, 60 or 90 DAYS' TRIAL ON

Old Trusty

It's the easiest to operate because it runs itself.

You may take off one hatch—two hatches or three hatches—until you are satisfied it's the incubator you want.

We know you *will* be satisfied, for we don't care where you look, you can't find a *better* incubator.

It's made of California red-wood—double walls throughout, with dead-air space between—matched and joined like a piece of fine furniture.

The copper pipe heating system (covered by two patents) is the *only* system that gives a perfectly *even* radiation of heat to all parts of the egg chamber.

The regulator is without question the most simple and positive of any regulator made. Unlike others it is *below* the top of the machine and is not in the way. It is counter-balanced within itself and does not ever need *readjusting*. It is attached and connected when shipped.

But we do not intend to describe "Old Trusty" in detail here.

Get our book and see the why's and wherefore's for yourself.

We invite comparison with any other incubator made—in *construction*—in *dur-*

ability—in *hatches*—in *strength of chicks*—in *economy of oil*—in *ease of operation*.

Remember this is the incubator founded on 13 years experience in building incubators *largely* for *inexperienced users*. We have been compelled to make them *automatic*—self-regulating and next to self-operating. We guarantee that no incubator will give you so little trouble—no incubator will cost so little for oil—no incubator will give you better results. Get the book and see.

We Save You Money.

Don't think you need pay two prices in order to get a good machine.

We have knocked the spots off high prices.

We will sell you *direct* and save you money.

We *pay the freight*, and having distributing houses all over the country, we can fill your order *promptly* and at a *low price*, no matter where you live.

Send today for catalogue No. 43. You'll be glad.

\$7.00 Buys the Best 120-Egg Incubator Ever Made.

\$4.50 Buys the Best 100-Chick Brooder.

Both Incubator and Brooder, if ordered together, cost but \$11.00. Incubator is double walled all over—best copper tank—hot water—self regulating—nursery. Brooder is the only double walled—hot water—brooder ever made. Satisfaction guaranteed. We pay the freight.

Our book, "Hatching Facts" tells all about them. Mailed free. Write for it today. Address

Belle City Incubator Company, Box 27, Racine, Wisconsin.

Do Your Chicks Come Strong Enough to Live?

That's an all important question. If you have had experience with incubators, you know of the fearful losses from weak constitutions. Many die at different stages of incubation, many just as the shell is being pipped, many more in the first 24 hours, and on up to two weeks. Wouldn't you like to operate the one incubator that offers a remedy for all this? That is what you are offered in

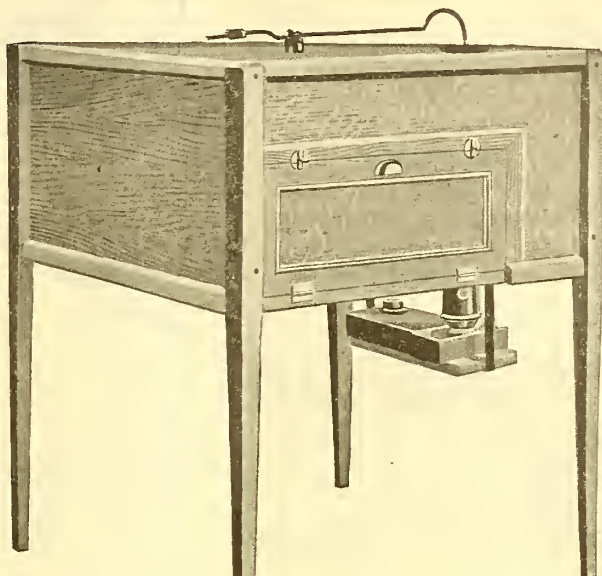

The NATURAL INCUBATOR

The one incubator that is different. It is different in principal, different in materials, different in construction, different in operation, but most of all different in results. It is called the "Natural" because it really does follow Nature's way in principal and action. It has no more draft slides, "ventilator vents" and other "do-funnies" than a hen has. It requires no more "supplied moisture" than a hen does. Because by its unique construction it gives the eggs in the egg chamber fresh air—not through a little round hole, but in exactly the same way that a hen's nest is ventilated. No poisonous gases are kept closely confined in the chamber to kill the chicks. That's why the Natural Incubator not only hatches more chicks than any other, but hatches stronger chicks—the kind that live and grow.

AND THAT'S NOT ALL

The Natural Incubator is stronger, more durable, but lighter and more easily handled than any other incubator, because its walls are made of hard glazed compressed Paper Board—one of the best non-conductors of heat in the world. This material (such as is used for making car wheels, etc.,) does not warp, crack or split under the influence of heat, as wooden incubators are sure to do. It retains the heat better than wood; it is more easily handled than wood; it lasts longer than wood. So well does it retain the heat that a change of 40 degrees in outside temperature does not affect the inside temperature.

The Natural Incubator has a perfect compound heater that diffuses the heat to all parts of the chamber with absolute uniformity, and the most sensitive regulator made. It requires no watching. You owe it to yourself to investigate this machine. The catalogue will explain in detail the why of superiority to all others.

THE STORM KING BROODER

is the fit companion of the Natural Incubator. It is the best mother for young chicks in the world. Winter or summer, they have every chance live and grow. It operates on the same necessary principles as the Incubator. Pure air at all times is even more necessary in the brooder than in the incubator. The Storm King supplies it. It has the natural hen's heat—not hot, dry heat that dries up the blood and makes chicks gasp and pant for air. Its system not only supplies pure air, but plenty of air, all the air chicks get when nurtured under the natural hen. There's no overheating or chilling and it cannot get foul or damp. Look at the cross-section picture below. Note particularly the large fume pipe "D" which carries off every bit of the fumes. Note that the water can is surrounded by a jacket, which prevents chicks from being burned. Note the "mother" which touches and warms the backs of the little chicks and gives them the same feeling of warmth and comfort they get when they nestle under the real mother hen.

YOU CAN MAKE YOUR OWN BROODER

The shape or making of the box is not all-important. It doesn't need to be air tight. The fixtures are the main thing. We sell you these Storm King fixtures just as you see them below. If you are handy with tools you can make a box; or you can place them in any old brooder you may have, and get a better brooder than you can buy elsewhere at any price. Save all the expense of cost, shipping expenses, etc. We send you blue print of plans and every necessary direction. You cannot fail to get everything together right. You will soon see the difference between brooding chicks this way and the hothouse plan. Raising a single hatch will almost pay for the fixtures. Don't fail to look into this better, easier, surer way of raising chicks. Write for the catalogue today and get full particulars.

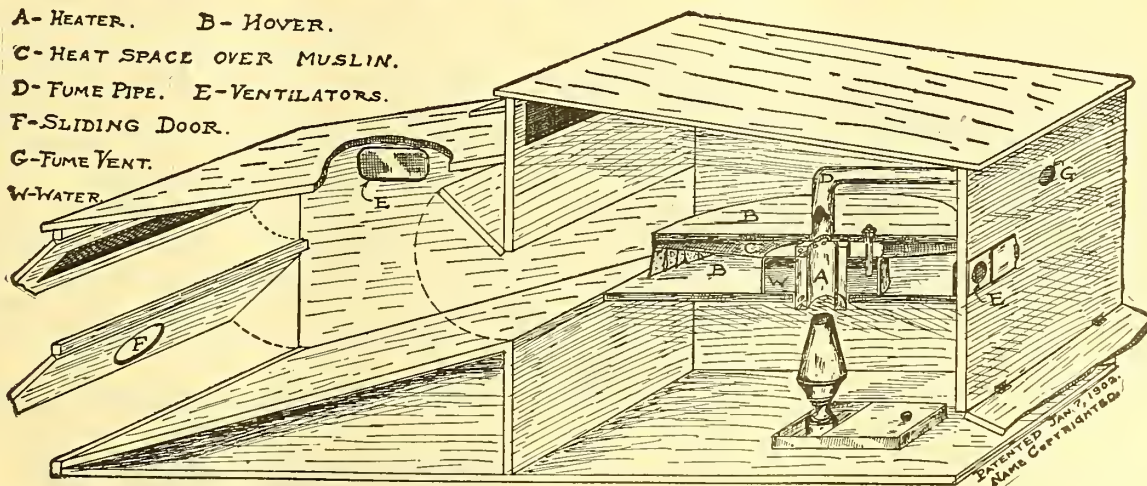

We pay for all freight as far west as the Mississippi River. Purchasers beyond the river pay from the river on. Address

Planet Jr. Tools

No. 12 Double Wheel Hoe **No. 4 Combined D.M.**

are known and used the world over, because they make **Planting, Hoeing and Cultivating** easy. Our new 1906 catalog describes and illustrates Seeders, Wheel Hoes, Harrows, Riding Cultivators (one and two-row,) Sugar Beet and Orchard Cultivators, etc. **No. 4 Planet Jr.** is the most popular combined tool made. A perfect seeder, wheel hoe, weeder, cultivator and plow. Sows seed in continuous rows or in hills 4, 6, 8, 12 or 24 inches apart. Easily changed and is useful at every stage of the garden work. **No. 12 Double Wheel Hoe** will enable you to hoe every day two acres of onions or any similar crop and do it faster and better than three men with hand hoes. It runs either astride or between the rows and kills all weeds. **OUR 1906 CATALOGUE** shows many garden scenes at home and abroad that will interest you. Be sure and get it.

S. L. ALLEN & CO., Box 1107T, Philadelphia, Pa.
 We mail it free on request.

I Have a Secret

DO YOU WANT TO KNOW HOW THE WALTER HOGAN SYSTEM WILL DOUBLE YOUR EGG OUTPUT?

Then Write Me Today

ISN'T that something desirable?

The principal reason you keep chickens is to get the eggs they lay. Whether you keep one hen or a hundred, you want to get the best possible returns.

That is the purpose of the Walter Hogan system of selection and breeding.

I guarantee that anyone who will intelligently use it, will shortly be getting double the eggs he is getting now.

I don't mean in the summer time or at any particular season. I am talking about the disposition and ability of the hens to lay, and I mean all seasons.

There is no magic about it.

It's just applying plain, common-sense treatment and care and rules to egg getting.

Everybody knows hens are not all equally good layers. Most people know that some hens are constitutionally unfitted to lay at all. There are all kinds of hens: some good layers, some medium, some poor, some don't lay at all.

The Walter Hogan system teaches you to pick the good layers.

You can do this unerringly. By marketing the non-layers and the medium and poor layers, your flock will soon be composed only of the best layers.

Direct to WALTER HOGAN, care of

THE WALTER HOGAN CO., 17 National Bank Building, Fergus Falls, Minn.

There is no reason why you should not have a flock of all good layers rather than one that averages fairly well or poor.

It's all in the selection.

All lies in your ability to tell characteristics on sight. Then to weed out the weaklings and to retain only the best.

The Walter Hogan system makes these things so plain that no one can fail.

It goes further than mere selection of laying hens. It enables you to—

—Select pullets that will make good layers.

—Select cocks that will breed layers.

—Mate breeding cocks and hens with strong laying characteristics and thus develop the ideal laying flock.

Are not these things worth while?

They go to the root of the business of egg getting. They mean getting the most possible out of every flock instead of running along in a haphazard way.

Remember, I have no "laying foods" or "forcing foods" or egg making nostrums to sell.

If you want your hens to live up to their possibilities, just write for my free book which gives particulars.

A Better Mother Than Any 20 Hens And You Can Try It 60 Days FREE

HOW many chickens could 20 hens hatch and take care of in a season?

How many eggs could those same hens lay in that time?

Figure it up.

And this smallest size Sure Hatch Incubator will give you 75 chickens to a brood (if all your eggs are hatchable) and you can hatch four broods in three months.

That's 300 chickens.

Yet these Incubators can be bought for \$7.50 to \$17.50 each, according to size and where you live.

And you don't have to take our word or anybody's "say so" for what they are.

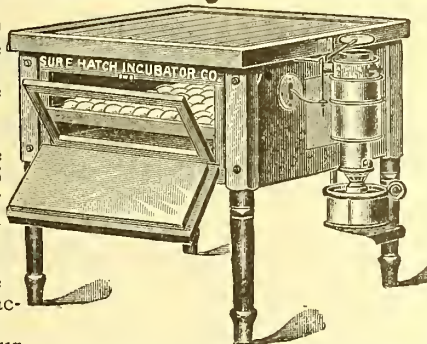

For we will send any Sure Hatch Incubator we make on 60 day's trial, and you can see for yourself, right in your own home, just what it will do.

We don't even ask you to pay the freight. We will pay it ourselves and, if you don't find the Sure Hatch all we have claimed, box it up and send it back at our cost. You don't owe us a cent for anything.

That's fair and square, isn't it?

We make this remarkable offer because we know what Sure Hatch Incubators will do. We know they will hatch every hatchable egg put into them. We want you to know it.

Sure Hatch Incubators are the best value to be had anywhere at any price.

We couldn't sell them at the figures we quote if we didn't deal direct with you, even though we do make them by the tens of thousands.

The U. S. Dept. of Agriculture recognizes the good qualities of the Sure Hatch by referring to it in Farmer's Bulletin No. 236, as "a first-class hatching machine."

The red wood we use is bought in big lots—good straight grain, well seasoned lumber, all of it. No knotty, wet stuff gets past our inspectors. Split pieces are thrown out. This means no warping or shrinking or getting out of shape when the lumber is worked up. Sure Hatch Incubators are made with double walls—asbestos lined. Result—heat in, cold out.

The heater is a solid copper one—with a safety lamp that is really safe. It doesn't smoke and make more soot than heat. We don't use any of that kind. And Sure Hatch lamps don't smell. There is no danger of your first chicks being smothered by an odor that would choke a horse if you use a Sure

Hatch. This Incubator is less expensive to operate and requires less attention than any other made. Our regulators are absolutely reliable—automatic, self-acting and never fail. They watch the temperature more carefully than you could do it yourself.

The ventilation is self-operating. There is no "moisture" monkey business with the Sure Hatch. And when we say you can try it 60 days, we don't mean that our interest ceases when we get your money. The Sure Hatch is always on trial, if you want to put it that way. For, if any of our Incubators go wrong in 60 days, or 6 months, or 6 years, we want to know it. We stand ready to make good any fault of ours at any time and always.

And the Incubators we now offer you are this year's pattern. They are right up to the minute—guaranteed to have everything a today's Incubator should have to make it hatch chickens.

We haven't any last year's stock to work off. Sure Hatch Incubators are full money value. If you don't find them so, you can get yours back whenever you say.

You can't buy Incubators like the Sure Hatch from ordinary mail order houses at any price.

Nor can dealers sell you anything as good no matter how much they charge.

Send for our big one hundred page FREE Catalog. It is filled with facts worth dollars to every poultry raiser—illustrations, Poultry House plans, and information about hatching, feeding, raising and marketing poultry. It includes suggestions that will put money in your pocket.

A post card with your name and address brings the book postpaid with prices on Sure Hatch Incubators delivered prepaid at your Railroad station.

This is a chance you can't afford to delay taking advantage of. Write today to

No better birds anywhere. Bred for utility as well as show purposes. Stock for sale at all times.

FRANK J. HICKS - Onarga, Illinois

BIG SUCCESS WITH HOGS.

SOME farmers are more successful with hogs than others. The man that only gets 8 lbs of pork out of a bushel of corn fed to hogs makes only half as much as the man that gets 18 lbs.

The American Swineherd is a specialist and the best authority on the hog industry.

The greatest success results from concentrating all efforts upon one line.

Three-fourths of the farmers waste a third of their feed given to hogs because they do not understand the best methods.

The American Swineherd teaches you how to be successful.

How to secure the greatest profits.

How to feed, to double the growth and gain over usual methods.

How to keep your hogs healthy, as only healthy ones are profitable.

How to get 18 pounds of pork out of a bushel of corn, and 20 pounds out of a bushel of wheat, fed to hogs.

Prof. Kennedy of the Iowa Agricultural College says: "Your paper is a leader on feeding."

One man writes: "A single instructive lesson in the Handbook on Hog Hygiene saved me \$50 in feeding a bunch of 40 hogs 60 days over the ordinary way of feeding. It is the best investment I ever made."

Every owner of hogs should take advantage of this special offer:

Send us \$1 for two years' subscription to the American Swineherd and it will entitle you to a free copy of the Hand Book on "Hog Hygiene," with trade secrets, recipes, valuable information, etc. If the offer is accepted in ten days we will send you in addition "The Big Feeders' Manual," worth a \$1 itself.

This equips you for a successful hog business.

\$300 Profit per Acre

I grow millions of plants. My experience covers over 14 years of practical experience raising nursery stock of leading varieties and I speak with assurance. MY HANDSOME NEW CATALOG overflows with practical information valuable to every fruit grower. Send for it before you buy. It tells all about my high grade stock of fruit and ornamental trees, farm and garden seeds; and general nursery stock. Write today.
W. N. SCARFF, New Carlisle, Ohio.

The Way To Succeed With Poultry

You must lay the foundation of success by getting the right incubator, the one that you are successful with.

But before you can be absolutely sure of how a machine is going to work in your hands you must try it.

We say to you that the Quincy will give you better results than any other, because we know that it is built right and because we know of the results that it has given every one else who has used it.

But we have let every one else try it first and that's what we want you to do.

We can tell you that the Quincy is self regulating, that the arrangement of the heating system is original and far superior to any other and that the ventilation is positive and constant, instead of being left to chance, as in other makes. No cold drafts can possibly strike the eggs.

You ought to know, also, that we have solved the moisture problem in a way that relieves you of all responsibility on that score and insures large, strong hatches.

What you want to know most is how much good these special features will do you when you run the machine. You'll find out by getting

The Quincy Incubator On 90 Days Trial

We build all our machines and make all the parts in our factory, from best material that money can buy for each particular purpose. And these manufacturing facilities enable us to place machines in your hands at prices that no other incubator maker can touch. We guarantee these machines to do all we claim and to satisfy you or you get your money back. Send for our guarantee and read it over. It's worth your while.

Quincy Brooders are in a class by themselves because they raise 90% or more of the chicks put in them instead of killing 75% or so as most brooders do. You can't succeed without a good brooder and we say to you **Try the Quincy Brooder for 90 Days** and see how good it is. If dissatisfied send it back and get your money. We mean that and you must realize that under those conditions it would be ruin to us to make false statements. The guarantee binds us.

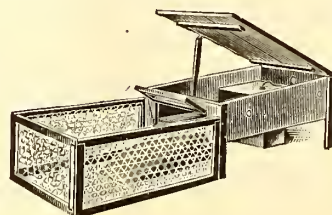

The Quincy Line of Poultry Supplies and Foods

is the largest in the country and includes only those things that are of real value in adding to the poultry raiser's profit. Send us your orders for Chick Raising, Egg Making and Growth Promoting foods and get the best to be had at the very lowest prices.

Every appliance for poultry house and yard.

Our New Catalog illustrates and describes everything the poultry raiser needs and points out the way to succeed with poultry. It contains just the information you need to get the right start. Sent Free, postpaid, to all who want bigger poultry profits and who will mention this paper.

Quincy Incubator Co., Box 54, Quincy Illinois.

COTTRELL'S ALFALFA MEAL

FOR POULTRY

Fowls give best returns when their feed is appetizing and contains the materials required for the vital and productive processes. One-half the solid matter in the fowl's body and over one-half the solids in an egg consist of protein. One-twelfth of the solid matter in the fowl's body and over one-third of the egg is mineral matter. These substances are necessary for making blood, bone, flesh, feathers and both the shell and its contents. Food supplying protein and mineral matter

Makes Fowls Healthy

and productive, that's why Cottrell's Alfalfa Meal is an excellent poultry food. It is rich in mineral matter and protein which it contains in an easily digestible form. It contains 50 per cent more egg-making material and supplies the food elements which ordinary grains lack. Cottrell's Alfalfa Meal provides green feed the year round and gives grass conditions in mid-winter. It aids digestion, promotes vigorous growth, improves the quality of the eggs and imparts delicate flavor to the flesh. It's worth dollars to the poultryman. If your dealer cannot supply you, write to us direct. 100 lb. sack, \$1.50; 500 lbs., \$6.00 f. o. b. Elgin. Write for free circular. COTTRELL FEED CO., 17 STATE STREET, ELGIN, ILLINOIS

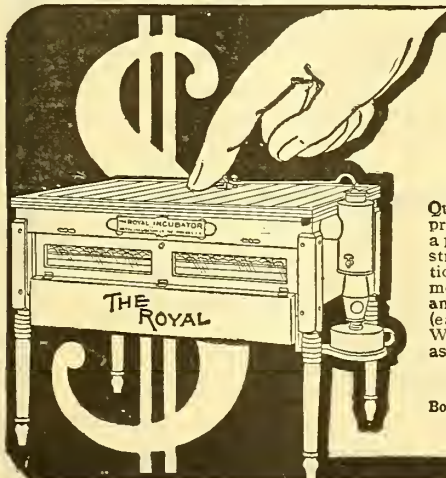

To-Day!

SEND A POSTAL OR LETTER and ask for AMERICAN POULTRY JOURNAL'S 1906 subscription offer. Never have we offered so much before.

For six subscriptions you are allowed over one-third commission, and are given a set of four beautiful colored pictures. These same subscriptions also count in a chance toward winning the \$600.00 Piano; \$100 cash; \$50 worth of Fowls; Incubators; Brooders; Eggs, etc., there being over fifty of these grand prizes. One of our subscribers says, "I do not see how you can afford to do it." But we want subscriptions and lots of them; that is why we are making such liberal offers. Our space is too small here to explain all we give to every one who helps us. We hope every reader, who reads this, will send for the Offer at once. It will be a happy new year for both of us.

THE IMPROVED CLIMAX INCUBATOR 1906

Never before in the history of incubator manufacture has a hatcher been made that has so many points of real merit as the IMPROVED CLIMAX INCUBATOR possesses. Our AUTOMATIC REGULATOR AND SAFETY VALVE is one of these improvements especially desirable and effective. It is positive, regular and automatic in its action, keeping the heat within a ½ degree of the temperature it is set for. We guarantee it for active service for ten years, and replace it FREE if it fails to work properly during that time. No incubator built will hatch a larger per cent of the fertile eggs; stronger or brighter chicks. It is constructed to eliminate trouble and guesswork, and it actually does it. The case is made of black ash finished in golden oak; the interior is lined with wood fiber board, made especially for the CLIMAX, which never warps, splits, shrinks or swells—no open joints to let heat escape; heat is kept right where it is needed.
 We sell CLIMAX machines and specialties direct to you; have no agents or middlemen, so you save 25 to 35 per cent on what you buy from us and get better goods and the maker's guarantee.
 We want to send our new catalog to you. It describes the CLIMAX AIRING SYSTEM and many other recent inventions. Write today.
THE CLIMAX INCUBATOR & BROODER CO., BOX 201 GASTORLAND, N. Y.

60 Day's Free Trial
 Allows you ample time to prove by more than one test that all we claim for the CLIMAX is true. If you don't find it so, send the machine back within the 60 days. We will refund your money without question and pay freight both ways.

CLAIMS! CLAIMS! CLAIMS!

That is the most incubator and brooder manufacturers fill their advertisements with. And of what earthly use is it when dozens of them are "claiming" the same things. It doesn't help the man, woman, boy or girl who is in doubt aire bit. So we don't claim. We simply state facts and then demonstrate

American Incubators and Brooders

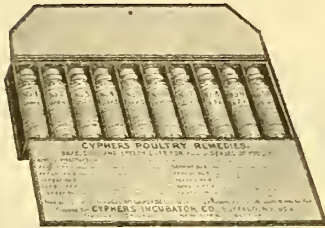

are sent out on 90 days trial and if they don't hatch and raise a satisfactory percentage of chicks, send them back and get your money. There's no empty claim about that, and we give a guarantee with each machine that really protects you.
 We have the largest poultry machine factory in the world, and we operate the largest standard-bred poultry plant. We have been in the business 20 years and we have learned what's what when it comes to raising poultry for profit.
 These are not mere claims either. Get our catalogue, notice the list of references and investigate for yourself. Remember this: It will pay you well to do all your investigating before you pay out your money to any one. American Incubators have all the advantages that any other machines have, only more, because they are built by practical men, men who have been through the mill.
 We manufacture and sell direct to poultry raisers

The Most Complete Line of Poultry Foods and Supplies in the Country

and everything is priced at the very lowest figure, because our facilities and great volume of business enable us to undersell all competitors.
 Our Standard-Bred Poultry Farm is stocked with the largest variety and the finest specimens of pure bred birds to be found anywhere. Fowls and eggs are guaranteed to please or money will be refunded without a word. It's the highest quality at the lowest possible prices that has built up our enormous business.
Our New Catalogue is the best we have ever issued and is full of valuable information. Important poultry questions answered and articles on poultry diseases, also a complete illustrated description of American Incubators, Brooders, Poultry Supplies and Standard Poultry. Sent free, postpaid, for the asking.

Cyphers Full-Nest Egg Food Makes Hens Lay

The success of this reliable tonic and conditioner has been remarkable. It increases egg production, promotes health, insures vigor in fowls and increases the fertility of eggs. In addition to medicinal seeds, vegetable extracts and mineral salts, it contains in a highly concentrated form the necessary animal food for egg production, taking the place of bugs, insects and worms in the fowl's diet. An increase of eight eggs a month will pay for a 42-ounce package of Full-Nest Egg Food, and as one package contains

1,500 Feeds for 1 Hen 10 Feeds for 150 Hens 150 Feeds for 10 Hens

it will be seen that it is the cheapest egg producer on the market. The name of the Cyphers Incubator Company is proof that it is the most reliable. It represents

60 FEEDS FOR ONE CENT.

Besides being an unexcelled egg producer, it is a concentrated meat food possessing tonic preparations which promote good health and fine condition. It stimulates and invigorates, but unlike other tonic foods it also builds up the system and keeps it up. For growing chicks Full-Nest Egg Food is the best substitute for insect life. You need it at this season when you begin to hatch your chicks and rear them because insect food is out of season or unobtainable.

Price, 42-ounce carton, 25 cents; 25 pound pail, \$2.00.

Send for our Free Poultry Supply Catalogue giving full description. Address nearest office.

Farm Telephones

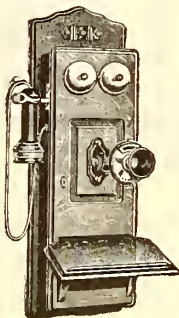

How they Help the Farmer

If the telephone really helps the farmer he is the man who ought to know the "how" and "why." We have recently published a book full of telephone facts for farmers, which every farmer in the country ought to read, whether he intends to buy a telephone or not. It will be sent FREE to all those interested who will take the trouble to write for it. This book tells how and why the telephone helps the farmer and his family, and why the modern farm equipment is not complete without a telephone. The telephone is a time-saver - consequently a profit-maker. Simply reading this book, "How the Telephone Helps the Farmer," will certainly convince any farmer that he is missing much he ought to enjoy if he is trying to do without a telephone in his home. It describes very interestingly the best telephone for the country home-

Stromberg-Carlson Telephones

Tells just how each part from the case to the most important part is made; illustrates the various parts and shows by a very practical and complete description and explanation the duty and requirements of each; tells why we make them with such care, and exposes the secrets of the construction of cheap telephones; shows why they can be sold cheap, and why they should never be used on farm lines. It shows why Stromberg-Carlson telephones will outwear any other farm telephone made and how we produce an instrument that practically will never get out of order. Cheap telephones are invariably out of service just when you want them most; they quickly lose their talking qualities and are a constant source of annoyance and expense, simply because they are not made right. The principle of operation is just the same in a cheap telephone as in a good one - the difference all lies in the construction, the better materials used, and the greater care and skill employed in the making. We would like to have you read this book. Simply drop us a postal card asking for 81-G, "How the Telephone Helps the Farmer," and we will send it to you by return mail. Do it today before it slips your mind.

IT PAYS TO BUY THE GEM

Here's a chance to test the best at a saving price. With our perfected selling plan you take no risk. Direct from our factory to you means a money-saving of the middleman's and dealer's profits, and you get the maker's guarantee. Time tested and fifteen years' proven success record place the

GEM INCUBATORS AND BROODERS

away up in the front row. Such is the verdict of the thousands of satisfied users throughout the land. The REMOVABLE CHICK TRAY AND NURSERY A VALUABLE FEATURE

a convenience to be had only with a GEM—so handy to clean after each hatch—together with many other exclusive points of advantage to lessen your labor and increase your profits. All explained in our handsome illustrated FREE catalogue. Send for it now. Learn all about the GEMS—why it pays to use them.

Gem Incubator Co., Box B, Trotwood, Ohio

Good Galvanizing

is what gives wire fence long life. Some manufacturers say their fence is made of extra heavy wire, and therefore resists the action of rust longer. What a confession! If the wire were properly galvanized there would be no rust for many years. When rust once begins, it will destroy even a heavy wire in a few seasons. The practical way, therefore, is to use wire of a size sufficient to give ample strength to the fence and to protect the wire from rust by good galvanizing. We have special arrangements with a large manufacturer of galvanized wire to have our representative always on the ground at the wire mill to see to the proper galvanizing of our wire and to reject all wire not properly galvanized. "Steel for strength, and galvanizing for protection," is our motto.

Construction. Advance Fence has the continuous stay. Our stay is not cut at the top or bottom, or anywhere else, but runs continuously up and down across the fence and without an end for many rods. Thus, we preserve and utilize all the strength of the wire used, about half of which is wasted in fences with cut stays. Our fence has the most perfect provision for expansion and contraction, caused by changes in temperature. It can be stretched over uneven ground without the slightest difficulty.

Buy Fence Direct from the factory. It is cheaper, and so much more convenient. We offer a line to select from several times as large as that carried by the best dealers—26 styles and heights of fence and 24 styles and sizes of gates, besides stretchers, etc. This enables you to get a fence exactly suited to your requirements, which alone may effect quite a saving for you.

Thirty Days Free Trial. Place your order with us for what fence you need and try it. If you do not like it, and it is not just as represented in every particular, you can return it to us at our expense, and we will return your money. That's what we call a fair proposition. We could not make it, if we were not sure Advance Fence would please you.

We Prepay Freight to any steam railroad station in the United States, on 40 rods or more. Thus you know beforehand just what your order will cost you delivered at your door. We guarantee the safe delivery of your shipment by the railroad company.

Write today for our Free Fence Book and Wholesale Delivered Prices.

**HUSKY
HEALTHY
HEARTY**

HATCH-ALL CHICKS ON TOP

There's a reason why the chicks hatched in a HATCH-ALL INCUBATOR are "husky," hearty, healthy. Because: (1) The whole inside can be removed and thoroughly cleaned after each hatch; (2) it is easy to keep the temperature at a hen's blood heat continually through the hatch, with no liability to overheat and consequent smothering of chick; (3) ventilation circuits of the

HATCH-ALL INCUBATOR

deliver fresh, warm oxygen direct from outer air. This means that it is both a life-generator and a life-preserver. All the droppings from a preceding hatch can be completely removed because of the easily removed chick trays for perfect cleansing and disinfection. The HATCH-ALL has table top, copper tank, triple walls, tight joints; doesn't get "creaky" or separate at the corners. No frigid corners or high heat centers because the HATCH-ALL regulator holds the temperature in its sure grip. The HATCH-ALL is a money-coiner for the wide-awake poultry raiser. Send in next mail a request for our catalogue. It's free for the asking. It will teach you how to make more money on poultry.

2 IN 1

You don't have to feed any other shell-making material when you use Pearl Grit. It grinds—it makes shell—it's a double purpose grit, guaranteed absolutely to take the place of shells and grit combined. It nourishes and renews the bodily organs and furnishes shell material at the same time the grinding process is going on. It makes strong, healthy, prolific fowls. This is why

PEARL GRIT

is the most economical grit for poultry. It combines all the essential qualities of shells and grit. Chemical analysis shows 60% Calcium Carbonate (lime), 14% Magnesium, besides Iron, Silicon, Aluminum Oxides and other shell-building, muscle-making, egg-forming and feather-growing material. **Pearl Grit** retains its sharp grinding qualities to the finest particle; strengthens the bones and sinews of young chicks; has no dust and no waste—a clean, sharp, nutritive grit. By using **Pearl Grit** you accomplish **two objects at once**. Get twice the results with half the labor and for one price. It's a money saver and a profit maker. Write for prices.

The Ohio Marble Co., Sole Mfrs., 209 N. Wayne St., Piqua, O.

Our Remarkable Incubator Book

First of all, get the best book ever written on Incubators. No matter what other makers you write for a catalogue—write us too. We will send you the best book of all—written by the man who knows most about incubators.

The book is our catalogue—that is why we send it free. But it is more than a catalogue. It tells all that an Incubator should be, and why.

It is so clear that you will understand the subject as well as the man who wrote it. It is interesting—fascinating. You will read it from beginning to end.

The man who wrote the book has spent 24 years in perfecting Racine Incubators and Brooders. He tells of the first machine he made—in 1881—and the mistakes in it. He tells how he tested one machine after another in his own hatchery. How he gradually learned ways to better them.

He tells of tests he has made with all other good machines—of their good points and their weaknesses. Yet he is courteous and fair. He condemns no machine that is honest.

He tells you points to look out for—what claims are unfounded, and why. He tells it in such a way that you know he is right. His book is a complete education on incubators. When you read it you will be a good judge of your needs, and able to avoid a mistake.

The writer of this book is the maker of Racine Incubators and Brooders. He has made these remark-

able machines the perfect affairs that they are.

The book will describe them to you. It will tell how he developed them, hatched with them, watched them and improved them, month after month, for 24 years.

No man or woman can read this book without wanting the Racine Incubator. You will choose the machine made by the man who knows so much about them.

That fact, above all, is the reason why you should read it. The Racine is, by twice over, the best Incubator yet made. It is the machine that needs the least attention—that regulates itself. It is guaranteed to produce larger average hatches than any other incubator. It is sent on trial to those who wish it, and is sold under warrant to everybody. A million dollars are behind our guarantee.

The Racine will cost you less than any other machine you would care to buy, and we prepay the freight on it anywhere.

But first get the book. Write for it now before you forget it, and before the books are gone. It will tell you all about hatching chicks, and how to make an incubator pay.

Warehouses at Detroit, Buffalo, Kansas City and St. Paul.

Racine Hatcher Co., Box 26, Racine, Wisconsin.

\$1500 GIVEN AWAY IN PRIZES

FOR SUBSCRIPTIONS TO THE
AMERICAN POULTRY JOURNAL

EVERYBODY Who Sends in Six or More Subscriptions GETS A PRIZE

For six subscriptions you not only get a prize of four beautiful colored pictures, but are allowed over one-third commission. Never before have we given so much to those who help us get subscribers. But this is not all; these six subscriptions count in a chance toward winning a \$600 Piano, \$100 Cash, Fowls, Incubator, Brooders, Advertising, etc. Over fifty of these Grand Prizes given. We cannot describe them here.

SEND FOR THE LIST

A \$600 PIANO FIRST PRIZE

A chance to win this without costing you any money. Notice especially the enormous value of this prize. All our previous efforts to reward the Club Raiser are put in the shade by this magnificent prize. The winner will be especially fortunate, as this piano is one of the celebrated Wing Pianos, known all over the country as one of the best pianos made. We will order it sent direct from the factory to the winner.

IMPORTANT A great many times we let a good opportunity go by and regret it. Don't let this one go by, but send for our offer and see what it is. It's a good chance for new subscribers, and especially good for those who wish to renew their subscriptions.

Parks' Bred-to-lay Barred Rocks

are the oldest strain of bred-to-lay Plymouth Rocks in America. Selected and bred for their superior egg records since 1889 until I now have a strain that does not contain an occasional 200-egg hen, but many of them. My whole flock of 135 choice breeding fowls averaged 198 eggs each in one year. This record has never yet been equaled by any other breeder of Barred Rocks. I breed for quality, using trap-nests to cull out all poor layers as well as eliminating all fowls that do not come close to the Standard of Perfection in other points. Our choice Cockerels will greatly improve your flock. \$4 and \$5 each. Eggs for hatching, from my best breeders, \$2.50 per 15; \$6 per 45; \$12 per 100. Incubator eggs, \$3 per 45; \$6 per 100; \$55 per 1000. Catalog free.

Catalog free. **Wilber Bros., Box B, Petros, Tenn.** State Vice-President National S. C. White Leghorn Club.

PEKIN and MUSCOVY DUCKS

Squab breeders in imported Mowaines and Homer pigeons. White Wyandottes, S. C. W. Orpingtons, White Holland and Bronze Turkeys. All varieties pheasants, pigeons, domesticated and wild water-fowl. Prices right. No circular. Write your wants. **THEODORE BAKER, Jr., Box 111, Hartsdale, N. Y.**

BARKER'S LIGHT BRAHMAS

A clean sweep at the recent Illinois State Fair, in the largest show of Brahmas ever held there, winning 1st cock, 1st, 2d and 3d hens, (in a ring of 35.) 1st and 2d cockerels, 1st and 3d pullets and 1st and 2d pens. At ten winter shows and fall fairs of 1905, including three states, we have won 1st breeding pen every time. At 12 shows in 1905 we won 106 prizes. We have the birds that can win. 300 fine breeding and exhibition birds for sale, with strong color, the true Brahma shape and good leg and toe feathering. Also breeders of exhibition Black Langshans. Birds and eggs for sale.

I. N. BARKER & SON - - BOX A, THORNTOWN, IND.

Superior Trap Nests

**NOT FAILED ONCE
A Boon to Poultrydom**

J. A. Bickerdike, Cedar Lake, Ind. Received the Trap Nests all right, and have given them a 30-day trial, and they cannot be beat. We trap on an average of one hundred hens a day and they have not failed to work once. They are so simple to operate that it is no trouble at all. We will place an order for a hundred more in a short time. If this letter will do you any good in print, we feel as though you deserve it, for to put such a trap nest on the market is certainly a boon to poultrydom.

THE COUSINS INCUBATOR

THE WONDER OF THE 20th CENTURY

THE PEER OF ALL HATCHING MACHINES

NEARER Automatic than any incubator in the world, and has more valuable original features and is guaranteed to hatch more strong healthy chicks with less attention and less oil than any machine on the market. Every machine equipped with the Cousins Automatic Egg-Turning Tray.

If you already have incubators you cannot afford to be without the Cousins Tray, the only practical turning device ever invented. It turns all sizes of eggs alike and holds them in proper position. It saves time, increases the hatch, and obviates all danger of breaking the eggs. Made to fit any machine. Thousands in use. Catalogue free.

KING'S BARRED ROCKS WIN AGAIN

At the greatest of all Illinois State Shows, Danville, Ill., Jan., 1906. In competition with birds from the best breeder's yards in the United States, a class of 200 Barred Rocks, conceded the best quality ever exhibited at an Illinois State Show, the triumph of two years ago repeated, another world's record made, 1st and 4th cocks, 1, 2, 3, 4 hens, 1, 2, 3, 4, ckls., 1, 2, 3, 4, pullets, 1, 2, 3 pens and all specials offered on this variety. These winnings, with the scores given, should be sufficient evidence of who is breeding some of the best Barred Rocks in the country. If you are in need of a ckl. to head your pen please remember I have them; brothers to these winning ckls., also brothers to these winning pullets that will start you toward the King Row. Don't ask me to describe the birds you need, but tell me what you want. I can surely select to suit your requirements. Eggs from the grandest matings of my life only \$6 per setting, \$35 per 100. Buy from a breeder who breeds, mates, and breeds from his prize winners if you want the best. Send for mating sheet and prices to the Barred Rock Specialist.

O. L. KING - Walnut Grove, Ill.

MODEL

Incubators and Brooders

are the only Incubators and Brooders made by me. They embody all my latest improvements, and are made under my direct supervision. Do not become confused in the name and accept a weak imitation. It is no one part that makes a successful hatcher, but a nice balance needs to be secured in the heating, regulation and ventilation to produce the successful and profitable results.

LIBERTYVILLE, ILL., NOV. 20, 1905.

MR. CHAS. A. CYPHERS,

DEAR SIR:—We have used the Model Incubators and Brooders and are now using these machines exclusively. We have tested them side by side with all the _____ Company's machines of the latest pattern, and find the Model far superior, as its ventilating system insures a strong, healthy lot of chicks, so essential to rearing chicks on a large scale. Yours very truly, CLEMENT & FISK.

MY NEW BOOK

“Eggs, Broilers and Roasters”

An Easy Lesson in Practical Poultry Culture. A Book of Value to all Poultrymen.

It gives the prices paid for eggs and poultry week by week for the past three years. It describes the profitable combinations of egg, broiler and roaster farms. It tells how and when a hatch taken off each week in the year could be most profitably marketed. It shows how you can make \$2.00 on a large winter roaster. It tell what profits can be made with each of the popular breeds, and the costs of production.

It shows what can be done with

A Leghorn Egg Farm,
A Leghorn Egg and Broiler Farm,
A Wyandotte Egg Farm,
A Wyandotte Egg and Broiler Farm,

A Plymouth Rock Egg Farm,
A Plymouth Rock Egg and Roaster Farm,
Twelve months with Broilers,
Twelve months with Roasters.

This valuable work mailed FREE upon request.

My Model Incubators are used on the money-making farms. Model methods are money-making methods. I have helped thousands to make money with poultry. It is my business to teach those who use my Incubators and Brooders to do so profitably. Whether your needs are small or large, I shall be glad to advise with you.

FACTS FOR FARMERS!

Southern lands are fertile and productive and are low in price. The rainfall is ample for all purposes, and irrigation is not needed.

The Southern farmer is in close reach of the principal markets of the country and has the best of railway facilities for the transportation of his crops.

General farming shows good returns. The crops grown cover a wide range and yield an abundant harvest. The cereals and grasses thrive. The stock raisers find the South a profitable field. Cattle can be raised at the lowest cost. There are finest opportunities for raising horses, mules, sheep and hogs.

There is a demand for a greater dairy interest in the South. Local markets are good. The conditions are most favorable for the success of the milk producer and butter maker.

Trucking is extensively engaged in along the Southern Railway. Loads especially adapted to this branch of farming may be purchased at low figures and upon good terms. The facilities for quick handling of the crops are first-class and the products reach the best markets of the country in good condition. All fruits are grown in the South. The commercial orchards along the Southern Railway are extensive and the quality of the fruit is unequalled. The best sections of the south are reached by the

WHY IT PAYS TO BUY RELIABLES

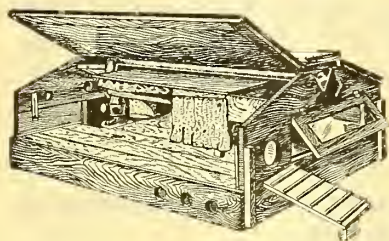

Any user of RELIABLE machines will tell you that for successful hatching and rearing **Reliable Incubators** and **Brooders** are the ones to buy. It's because RELIABLES are RIGHT — built according to right principles and employing correct methods of operation. It is our endeavor to have every machine that leaves our factory as nearly perfect as human skill can make it. Nothing but the best materials are used, and every step in the the process of construction is under the personal supervision of experts in incubator and brooder manufacture. It is this painstaking care and attention which maintains the uniform high standard of our machines. The sectional view here shown gives a good idea of the constructive plan of the **Reliable Incubator**. Notice that provision is made for utilizing all the heat produced by the lamp

combined with the most perfect ventilation. The extra tank in the upper part of the machine not only furnishes a constant supply of fresh, warm air, but radiates sufficient heat from its own surface to maintain the proper temperature even should the direct heat supply be entirely cut off. This **Double Heating System** results in a SAVING OF FULLY ONE-THIRD THE OIL and insures absolutely uniform temperature at all times. The machine is double walled and the space between thoroughly insulated with the best non-conductors of heat known. The top above the tank marked C-B is heavily insulated with four thicknesses of insulation, separated by as many sheets of non-conducting heavy card board with also an extra layer of card board above and below. Through the double glass doors complete observation of the egg-chamber may be had at all times. No COLD AIR can reach the eggs unless the doors of the machine are deliberately opened. It is impossible for eggs to get chilled or to be exposed to draughts or sudden changes of temperature. At the same time the system of ventilation is perfect. All gases and impure air at once pass out of the egg-chamber and it is impossible for any foul atmosphere to remain in the machine. NO ARTIFICIAL MOISTURE is required—there is no bother with water pans, dampened cloths, or wetting down floors. The moisture in a RELIABLE is supplied by the natural method used by the hen. **Our Patent Reliable Regulator** is free from all defects so common to ordinary regulators. It is extremely sensitive and absolutely correct and accurate, responding to the slightest change in temperature. All these features make a machine which is simple and easy to operate, that practically takes care of itself, and has the additional advantage over others in that it

Costs One-Third Less

to run because of its economical methods of operation, requiring less time, less labor and less oil. Producing bigger hatches and more satisfactory results is what puts the RELIABLE ahead of its competitors. A trial is all that is necessary to demonstrate that it makes good all that the makers claim, and that it is a hatcher which will meet the approval of the most critical. Try it and see. Remember it's sold on an absolute money-back guarantee. If it does not do as we say, we will cheerfully refund your money. **Reliable Outdoor Brooders** combine more good points than any other outdoor brooder made. We make four sizes and two styles—hot water and hot air. We also employ the DOUBLE HEATING SYSTEM in the brooders. They are warmed by top heat exclusively, but the heating apparatus is so arranged that

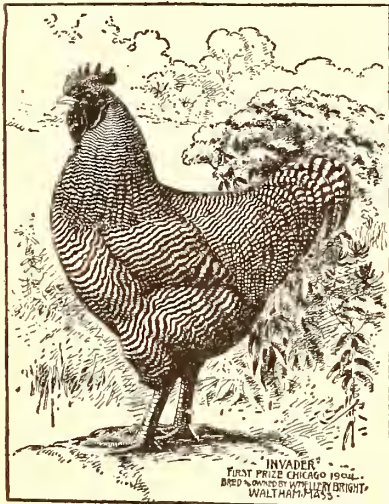

ners nor bunched in too hot a temperature. The lamp is reached through a small door in the rear, and is in a separate compartment. No fumes can enter the brooding chamber and the chicks are not exposed to cold or storms when it is necessary to attend to the lamp. The hover is located in the middle and egress is possible on three sides, making it impossible for the chicks to crowd or trample on each other. There are at all times two temperatures in the brooder. The material is first-class and durable. The brooders are nicely painted and can be used indoors as well as out. If you are engaged in raising chickens **Reliable Incubators and Brooders** are what you should buy. Write for FREE illustrated catalog and book of poultry information. It tells all about Reliable Incubators and Brooders, and also about THE RELIABLE POULTRY FARM. Get our prices on pure-bred fowls, and eggs for hatching. We make shipments everywhere. Address **Reliable Incubator and Brooder Co., Box A-1, Quincy, Illinois, U. S. A.**

ORIGIN AND HISTORY OF THE BREEDS

The French Fowls, or Those Which Have Long Been Conceded to France, Comprise a Very Interesting and Useful Family—The Houdan the Most Widely Known and Extensively Bred by American and English Fanciers and by the People of France—The Original Stock Coarse and Faulty in Comb and Crest—Facts Regarding the Introduction of the Present Houdan Comb—Some History Regarding Its Making and Introduction—Standard Requirements of the Different French Breeds.

Paper No. 7.—The French Breeds.

Written by Thos. F. Rigg, Associate Editor American Poultry Journal

The French people, largely peasant proprietors, and noted for their small economies, have always given more attention to market poultry than have any other people. The people of France consume more poultry per capita than do any other people. We should, therefore, expect the characteristic breed of a nation devoting so much time and care and thought to poultry to possess certain valuable qualities in a high degree, and this is certainly the case with the Houdan, Crevecœur and La Flech. The Houdan is the most prized market fowl of these very particular and exacting Frenchmen.

THE HOUDAN.

Much has been written regarding the origin of the Houdan fowl that is not of value. The truth is that to-day no man can bring forth facts as to when, where or how the Houdan was first bred, or by whom so bred. The commonly accepted theory is that the Houdan is the result of a cross of the Dorking and the Polish. We do not believe this to be the case. During the thirty-four years that we have bred Houdans we have not seen any trace of Dorking blood crop out in the stock. Surely the blood of the Dorking, strong and thoroughly established, would have shown itself in some way in the stock during all these years if such blood had been used in the foundation of the Houdan.

Doyle, in his book, "Domestic Poultry," 1854, refers to the "Muff Dorking" as a fowl having existed in England more than two hundred years ago. His "Muff Dorking" had crest and beard and five toes, as does the Houdan of to-day. It is not at all unreasonable to contend that here we have the original Houdan, although this position is not at all secure.

Monsieur P. Megnin thus speaks of the Houdan, perhaps of the fowl referred to by Doyle:

"The essential characteristics of the Houdan are a mixed plumage of black and white, a half crest and five toes on each foot. This indicates that they are derived from the common five-toed fowls that existed in the time of Columellus, and which

are still met with in the north of France and Belgium, and the old race of the Caux."

The "Book of Poultry," London, England, 1853, thus describes a fowl similar to the Houdan of 1850-1860:

"The Normandy fowls are entirely speckled in black and white; they have a small, erect top-knot, drooping backward like a lark-crest. The plumage of the male is much darker than that of the hen. In shape they are lengthy, but become contracted toward the tail. The cock's tail is of great length; his comb and wattles are of large size. The chickens are very peculiar, having at first perfectly black backs and white breasts; but they gradually become speckled, like the old birds. They have five claws, and the skin of the leg is pied black and white. This, however, turns to a blue leg with a whitish foot in the adult birds."

Here, too, it would seem, we find something which would warrant us in claiming definite knowledge of the early Houdan.

This we do know, that for more than two hundred years the Houdan has been the leading market fowl of France, the breed taking its name from the small town of Houdan. This fowl is thus described by Mr. Ch. Jacque in his *Le Poulailler*:

"This bird has short, thick legs, and a round, well-proportioned body, large head, small top-knot, falling backward. It is bearded and has five toes on each foot. It is a good-sized fowl, weighing, when fully grown, cock, six pounds; hen, four and one-half to six pounds. The plumage should be speckled white and black, and straw color. The comb is the most remarkable part of the bird. Comb: Triple, transversely in the direction of the beak, composed of two flattened spikes, of long and rectangular form, opening from right to left like two leaves of a book, thick, fleshy, and irregular at the edges. A third spike grows between these two, having somewhat the shape of an irregular strawberry, and the size of a long nut. Another, quite detached from the others, and about the size of a pea, should show between the nostrils and above the beak."

The American history of the Houdan began in 1859, when Mr. J. D. H. Armstedt, of Philadelphia, brought over from France five head of the stock. The following year, and before breeding this stock, Mr. Armstedt moved to Kentucky and, unfortunately, lost the male bird. A number of importations were made in 1863-4-5. Among the early importers was Dr. J. F. Simonds, then of Iowa Falls, Iowa, now a resident of Riverdale, Maryland. In 1872 Dr. Simonds sold his entire flock to Dr. James Rigg. Wishing to secure from him the facts regarding this stock, we wrote Dr. Simonds. His letter in reply is as follows:

RIVERDALE, A.D., June 26, 1905.

Mr. Thomas F. Rigg, Iowa Falls, Iowa.

Dear Sir: I have your inquiry of the 24th inst., relative to the Houdan fowls I sold to your father, Dr. James Rigg, in 1872.

The Houdans I brought to Iowa Falls in 1865 were imported from France in the spring of that year by a Frenchman who had worked for my father in Vermont. This man returned to his old home in France in the autumn of 1864, and by a special agreement brought me a trio of Houdans when he returned the next year. He shipped them to me by express from New York. This fact was burned into my memory by an express bill of \$9.50.

The Houdan did not prove to be a good sitter, and as we had no incubators then, I hatched all their eggs under other hens; but they were the best layers I had. I had one sitting

of 15 eggs all hatch in the "extempore" incubator. A Houdan hen stole her nest on the south side of an old straw stack, near the top, and I suppose the gentle bottom heat resulting from the slowly decaying straw of the stack, supplemented by the direct sun rays, afforded as perfect an incubator as can be made. At all events, I don't know any that can hatch more than 100 per cent.

J. F. SIMONDS.

The first Houdans to be shown in America were exhibited at Worcester, Mass., in 1867.

The Houdan of to-day is a far different bird from that described by Jacque and those shown at Worcester. The huge, ungainly comb has been displaced by the neat V-shaped comb; the small "top-knot" has given place to a large, compact and beautiful crest; the size of the fowl has been increased; the plumage has been made a thing of beauty, evenly and regularly mottled black and white.

To Dr. James Rigg is due the credit and the honor of producing and giving to the world the V-shaped comb in the Houdan. As stated, he secured by purchase the Dr. Simonds stock in 1872. In December, 1874, he exhibited V-shaped comb Houdans at Dubuque, Iowa. These were the first Houdans ever shown with this comb and the first produced.

The late B. N. Pierce (who introduced the score card system of judging in the west) officiated as judge at the Dubuque exhibition. He did not take kindly to the V-shaped comb, holding that while a Houdan with such a comb presented a far better appearance than one with ill-shaped, strawberry-like comb, the latter comb was the true Houdan comb. The following letter will here prove interesting:

CORNING, IOWA, January 10, 1875.

Dr. James Rigg, Dubuque, Iowa.

Dear Sir: I have your letter of the 3rd inst. As I said to you in the show room in Dubuque, I greatly admire the V-shaped comb you have produced on the Houdans, but I am not yet prepared to advocate its adoption by breeders of Houdans. I am a stickler for breed characteristics, and while I believe the present Houdan comb is too large, and that it should be reduced in size and shaped up, I do not want to see the form entirely done away with. I think a neat leaf comb would best fit the Houdan. Yours respectfully,

B. N. PIERCE.

Mr. Pierce lived to see the V-shaped comb introduced by Dr. Rigg accepted by all American breeders of the Houdan, and adopted by the American Poultry Association.

We can state as a positive fact that neither Dr. Simonds nor Dr. Rigg used any Creve blood in the flock from whence came these V-shaped comb Houdans. The charge was made that Dr. Rigg did use Creve blood in his production of the V-shaped comb. A number of years later Daniel Pinckney produced some birds with the V-shaped comb. It was owing to the efforts of Capt. James E. White that this style of comb was adopted by the American Poultry Association and made the Standard comb.

To Dr. Rigg, Daniel Pinckney, James E. White, Mr. Butters and Mr. Aldrich is due the credit of establishing the Houdan of to-day. The Rigg strain has been kept intact during all these long years by the writer of this paper. The Pinckney stock has become scattered, Mr. Pinckney retiring from the

active fancy a number of years ago on account of advanced age. Capt. White is now an official of the United States government in Washington, D. C., and his strain has become extinct. The Aldrich-Butters strain was long ago allowed to become but a part of the common blood of the Houdan family.

The Houdan is a most excellent table fowl. The Houdan carries more breast meat than the Dorking, Plymouth Rock or Wyandotte. The flesh is of the finest quality, being well developed in the finer parts of the body. They are good layers of large white eggs, are non-sitters, and are very hardy as chicks and fowls.

The Standard of Perfection calls for the following weights: Cock, 7 pounds; hen, 6 pounds; cockerel, 6 pounds; pullet, 5 pounds. Plumage color of the Houdan, distinct black and white. The glossy black feathers should be tipped with white in the proportion of about one tipped feather to three solid black feathers. Color of shanks and toes, pinkish white, mottled or shaded with lead color or black. Flights and secondaries of both sexes and tail coverts of male are irregularly edged with white, especially at base of tail. Black to predominate.

THE CREVECOEUR.

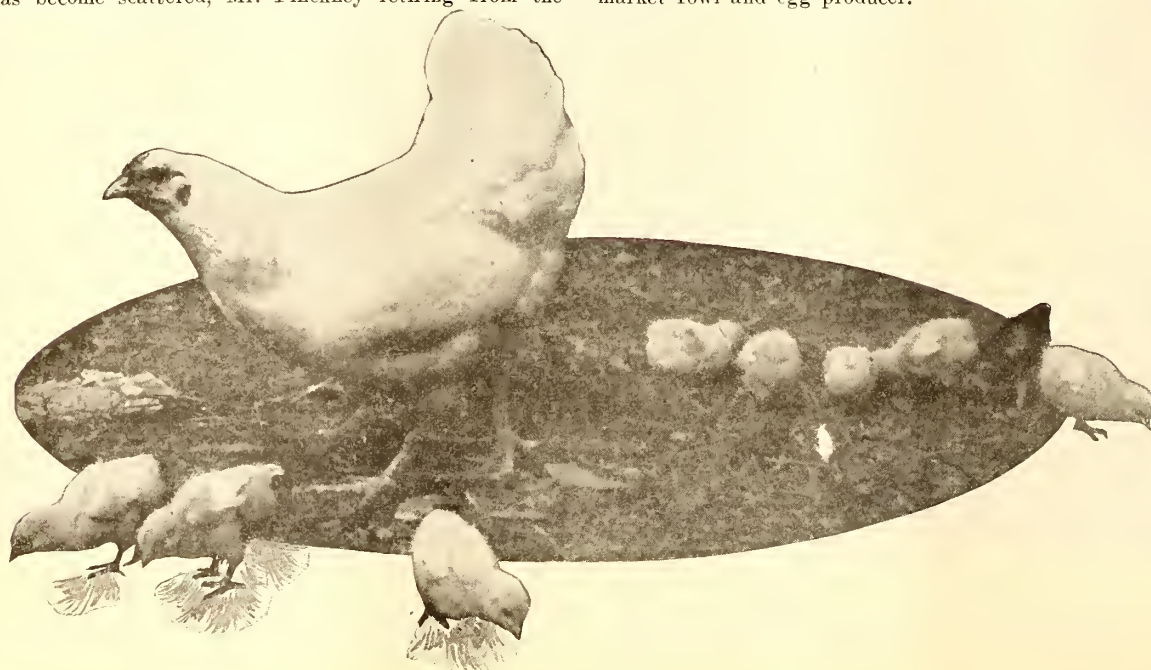

This is one of the oldest of the French breed. In France it is known as the Picardy breed, and takes its name from the village of Crevecoeur, in the Department of l'Oise. The breed has not taken a strong hold on the American fancy, and but comparatively few are to be found in the country. They are a handsome and useful fowl. In plumage color a solid rich, glossy black throughout. Crest, large, regular and black. Comb, V-shaped. Standard weights: Cock, 8 pounds; cockerel, 7 pounds; hen, 7 pounds; pullet, 6 pounds.

THE LA FLECHE.

These fowls have been called the "devil of the poultry yard." They are not deserving of this, although they do present a striking and somewhat fierce appearance with their long, large and powerful bodies, large comb and solid black dress. They are a cross of the Crevecoeur and Black Spanish. The Standard weights are: Cock, 8½ pounds; cockerel, 7½ pounds; hen, 7½ pounds; pullet, 6½ pounds. They are one of the best of market fowls, the quality, texture, quantity and flavor of the flesh being unsurpassed. Color of plumage, black throughout. Shanks and toes, black and lead color.

THE FAVEROLLES.

The Faverolles were produced in France a few years ago, the original birds being a cross of the Houdan and Dorking. They were taken up by English fanciers and boomed with vigor. Mr. J. B. Thomas, Jr., of Connecticut, imported a number of these birds in 1891. The original Faverolle was a salmon-colored bird, cocks weighing from 7½ to 8 pounds; cockerels, 6½ to 7½ pounds; hens, 6 to 7 pounds; pullets, 5 to 6½ pounds. They have the fifth toe of the Houdan and Dorking, and the beard of the Houdan. Within a short time we have been given the Ermine, the Black and the Blue Faverolles. The Ermine resembles in color the Light Brahma, and this suggests its origin. The Black Faverolle is not unlike the Black Langshan in color, and the Blue Faverolle carries the cross of the Blue Andalusian. The Faverolle is a good market fowl and egg producer.

BARRED PLYMOUTH ROCKS.

Some Experiences in Mating Barred Plymouth Rocks—
Barred Plymouth Rock Quality—As a Utility
Fowl—Getting Together—Matters
of General Interest About
this Variety.

(From the American Plymouth Rock Catalogue.)
BY BRADLEY BROS., LEE, MASS.

How to successfully mate Barred Rocks is not a really new subject, but it is nevertheless an important one, because the

V. W. Bradley, of Bradley Bros., Lee, Mass., who has charge of all correspondence and shipping.

BRADLEY BROS.

These brothers were born amid the grand old Berkshire Hills, on the ancestral farm. The younger (smooth-faced) was born in 1868; the older (with beard) in 1864.

E. A. Bradley, of Bradley Bros., Lee, Mass., department of advertising, printing and photography.

result of the season's work depends upon the manner in which this is done.

Some twenty years ago, when, as amateurs, we were very desirous of learning how to breed show birds and eagerly welcomed any information on the subject, Mr. Felch, in an article in the "American Poultry Yard," wrote somewhat as follows: "I sell my 92 to 94 point birds for an income because they bring a large sum of money, and use for my breeders the 88 to 92 point specimens. By my superior skill in mating I raise from them just as good exhibition birds as my customers can from the high scoring ones that I sold them. But to do this I must raise a much larger number of birds than they."

It made us wish he would inform us just how to mate the inferior birds with superior skill to produce the much coveted winners.

Now, we may not tell just how to successfully mate Barred Plymouth Rocks, but will give some hints from which the amateur can work. His success will depend first upon his skill, and second upon that other quality with which all Plymouth Rock breeders have to reckon—namely, luck.

On the subject of mating B. P. Rocks, chapters one and two have been most thoroughly and instructively written, their special topic being, "The Single and Double Systems of Mating." Chapters three and four in the series, were it possible to write them, would be equally as valuable and instructive. Under the head of matings we note first, the "High Average System" of mating in which nearly all of the progeny is expected to be of that description. But the very highest type of individual show birds often come from other matings. The "high average system" of mating, however, is the dependence of the fancier, and forms the foundation of success. It is made on the plan of putting the best looking and most valuable breeders of both sexes together, and doing this year after year if possible.

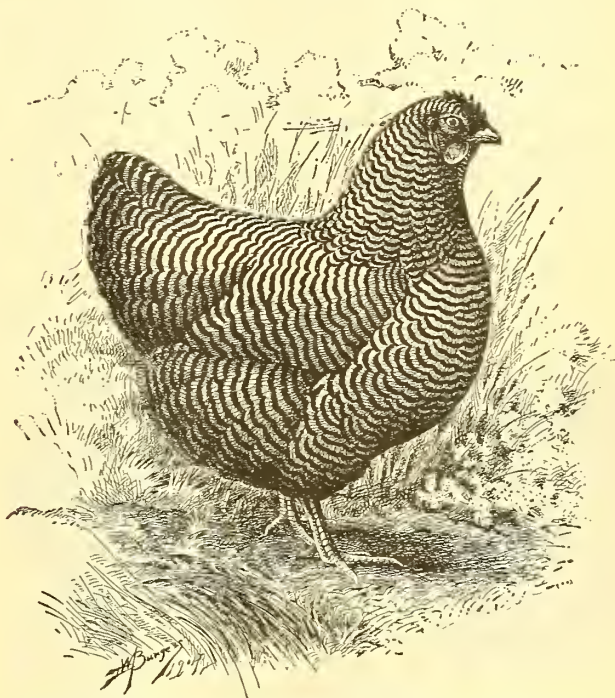

Then there are the "Experimental Matings" on which we must frequently depend for the production of the "wonder specimens" to improve our high average matings. For continued advancement by means of the high average system, would be uncertain work without the occasional breeding in of a wonderful bird to aid the result.

In experimental matings the keeping of pedigrees is doubly necessary, to know exactly the sire and dam of the chicks, also the ancestry for several generations, because often a certain defect may persevere in one sex only and not appear at all in the other. For instance a poor comb in a cockerel mating, may appear only in the female progeny and rarely or never in the cockerels. And by knowing this surely, we can take great advantage of the fact. This is a hint which offers to the investigator untold opportunities for advancement.

Some further hints may be illustrated from experimental matings which we ourselves have made.

Some years ago, our best "Grandson's Brother" male which had been straight bred from generations of New York winners, and without a break in the quality of his pedigree, produced from a particularly fine hen, a cockerel which promised to be a first winner at New York show. As he developed, he became considerably too long in body. He matured at about 9½ pounds weight, and but for this defect was truly a delight to the eyes of any one seeking the very best. Both his parents were beautiful in symmetry and his sire was line-bred for that quality. We mated him to symmetry-bred females, but after much consideration, being uncertain of results, decided that others of our matings would give our customers better satisfaction, and for this reason did not ship many eggs from this yard. The progeny in the fall, however, showed it to be a surprisingly successful mating—one of the very best we ever made. It produced only a few long-bodied males and the general average was rare. From then till now this has been one of our truest breeding lines. The reason for the success of this mating is found in the fact that, knowing the exact ancestry, we could mate so as to overcome the defect. Although the particular male never won at the New York Show a great number of his descendants have won first place honors at that and other National Shows.

Another instance of mating: From one of our richest cockerel lines we saved the best two cockerels for breeding, intending to use one in case accident deprived us of the other.

Winner of second prize at World's Fair, 1904. Bred and owned by Mrs. Anna L. Day, Fillmore, Ind., R. R. 2, Box 1.

We preferred No. 1 because he had the quality of doubly strong and regular underbarring, a quality in which the breed was sorely lacking, and one which we wished to strengthen in our own flock. The other male was a little higher scoring, but in under color had a good amount only. We raised largely for two years from male one, and only a small number each year from male two, our customers getting the larger portion of the eggs from pen headed by No. 2—the higher scoring male. Male one gave us then and ever since the results we wished, advancing our strain in strong under-barring. But this improvement, as often happens, was made at somewhat of a sacrifice in immediate results. He produced wonder specimens but not the high average. His brother, No. 2, was one of the closest breeders we ever owned, producing from the dozen chicks or so we raised each year (our customers having the balance of the eggs), two or three first national winning cockerels and these were strong in under-barring. But in the long run, and breeding with many years in view, our course in favoring the doubly under-colored male was the wiser, and the results of the years since then has proved this.

The highest scoring specimens have their defects. Some of these are very certain to breed, others are quite as apt not to show in the progeny. The same is true of the good qualities. And by knowing from experience which will breed and which will not, we can often make a hit. In this, however, the law of exceptions shows itself.

Many years ago we had a well-bred cockerel, wonderful in his rare qualities, but possessing one bad defect. We planned to kill him, but, taking the advice of an old breeder, we used him in a small mating, selling no eggs therefrom, to see whether the defect would breed or not. Almost every chick showed it, and we marketed the whole flock. Some years after another cockerel appeared, a bird of wonderful excellence and strong in the qualities in which the whole breed was decidedly lacking. He possessed, however, this same defect, though in a slight degree only.

Again we made the experiment, but the results were so disappointing that we threw up this entire line.

Years later, through patient and long-continued work, we had one of our families nearly to our ideal. It lacked just one male more to furnish the keystone in the arch which we had been so many years building. There seemed to be one bird on the place, and only one, which possessed the qualities which were needed, and, better yet, he was bred for generations for just these qualities. But he had the same defect noted before, and in a considerable degree. We smiled to ourselves and said: "We think not." But as experienced breeders, one after another in visiting our yards, desired a price on this bird, seeming very anxious to take him, defects and all, we finally yielded and made a small mating with him. Now note the results: The male's defect did not breed at all. The fine qualities did everything we had hoped. The family at once sprang into prominence, furnishing its full share of first place national winners, and not only that, but breeding also a high average. And this line, the result of years of upbuilding, has proved to be one of the four or five on which we can depend and which do not disappoint us.

CONCLUSIONS.

The mating which succeeds may be called a success.

The best way to know just what a mating will produce is to try it.

Hold to the true and tried methods of mating, but do not hesitate to try an occasional experiment.

Keep pedigrees. It is easier to know what to do next, if one knows what has already been done.

FARM MANAGEMENT OF BARRED PLYMOUTH ROCKS.

O. L. KING was born 1860, grew to manhood on the farm and was engaged in general farming and stock raising up to the time of reaching his majority; was early interested in our then very common flock of barn yard fowls, but duties on the farm were such that he could not give them the attention he believed they deserved. After going in business for himself he decided to take up some one of the standard varieties, and Light Brahma seemed to about fill the bill. After breeding them for several years with fairly good success he decided to try the Black Langshan, and later added the Barred Plymouth Rock. The few years he handled the three breeds together are well remembered; they surely worked well together; about this time a change of location was made necessary and he found he had too many breeds on his hands; consequently he disposed of two breeds and retained the Barred Rocks, and he has never regretted his choice. The ten years he has made this breed his specialty he has had his share of trouble and

disappointments; but having started in with the determination of breeding some of the Best Barred Rocks in the world, he kept his best eye on the "Ideal" and kept going; the results are that he has built up a trade for his product that more than equals his productions, and while he may not have reached the height of his ambition the quality of the stock he is sending out as a rule gives good satisfaction and his record in the show room is well known to the readers of the AMERICAN POULTRY JOURNAL.

As the editor has given me the above text I will endeavor to handle it to the best of my ability in this short article.

To begin at the beginning, a cage is very essential before you catch the bird, therefore a suitable house should be provided for the comfort of the fowls. As a rule the average farmer's poultry house is the poorest building on the farm and is seldom more than 10x16 feet floor space; about one-third large enough to accommodate the fowls forced to roost in it the year round. For the average farmer who keeps 100 hens throughout the winter I would suggest a house 12x40 feet and it would be none too large; this house should of course front the south, with five-foot side walls, roofed both ways; the doors should be in the east end, three good sized windows in the south side and one in the west end for ventilation in warm weather. The interior of the house can be arranged to suit the tastes of the owner. A house this size will comfortably house all the fowls carried over the winter, even when they must be confined to the house for weeks at a time in severe weather. The young stock should be taught to roost in the house as early in the fall as possible; the cold rains in the early fall, while the young stock are yet short in feather, is sure to bring on colds and if not given prompt at-

tention will develop into roup, the most dreaded disease that poultry is heir to. On many farms the poultry house door is never closed during the winter. This may be well enough so long as the ground is bare, but as one can never tell what a night may bring forth it is a very sensible plan to close the door nights after the winter starts in earnest, and if the morning is cold and wet or snowing they will enjoy a feed of grain as well indoors as they will outside in the storm, and if made to work for their feed by throwing it in several inches of straw, they are much better off than if allowed to run to the corner and fill themselves with corn and then stand around in some corner until hunger drives them back to the corner. For best results in winter eggs I would not give the hens free range, especially if there is much corn where they can help themselves. Corn is one of the very best feeds, but should be fed with other grains, such as oats and wheat. Oats is one of the very best feeds for laying hens that I know of. The hens should be carried through the winter with the object in view of getting fertile eggs in the spring. While I advise the purchasing of breeding males early, I do not approve of the idea of allowing them with the females all through the winter. Two or three weeks before eggs are wanted for setting will insure a larger percent of fertile eggs, and chicks will come much stronger; two males for every 25 females is about right.

Provide plenty of good sharp grit and oyster shell at all

KING LEE.

First Prize Cock, Chicago, 1904. Owned by R. E. Haeger & Co., Algonquin, Ill.

times; never neglect the drinking water. This is important—winter and summer. Use good common sense in handling your poultry, as with any other business, and they will pay larger returns for the money invested than any other farm product.

The breed most adapted to the farmer or village fancier is the Plymouth Rock, and the variety, the Barred. If given a half a chance they will furnish eggs the year round, and when dressed for table or the market have no equals. They have justly gained their popularity as the best all-purpose fowl, the farmers' choice. Breeders of other varieties of this breed, as well as breeders of other well known breeds, have long tried to dethrone the Barred Plymouth Rock and force their favorites to the front by claiming that the double mating system was a handicap to the farmer; lately a few of the standard or single mating advocates of Barred Rocks have taken a hand and advise the farmer to purchase new blood only of a breeder who makes but one mating. This is all wrong and an injustice to the breeders who have helped to bring the Barred Plymouth Rock up to so near perfection in shape and plumage color. So long as the present standard governs, the double mating advocates will have decidedly the best of it in the show room.

While there may be a few farmers in the more remote sections of our country who do not understand the difference in

the two methods of mating, they are growing less each year; the many poultry journals now published practically cover the entire country and I will venture to say that there are a very few farmers who are growing poultry that are not a subscriber to one or more of these journals. The farmers of today are not as ignorant on this subject as many are led to believe; they read and understand that the double mating breeders are far in advance in the production of high class stock, and while they may not now be largely interested in a bunch of fancy feathers, the day is not far distant when the farmer will be a specialist in one or the other of the two lines of breeding, and the breeder who has tried to make a hit with his standard mating will be compelled to change his method of mating or go out of business, consequently I would suggest to the farmer who is raising a few chickens for meat and eggs to give the Barred Rock a trial; buy your breeding stock of a specialist who is using the double mating, become a specialist yourself by breeding one or the other lines exclusively, and in a few years an exceptionally fine flock will result, and without any especial attention except to purchase new breeding males every year or two, and always from the same line of breeding.

Where early chicks are the object in view I would hatch with incubators and raise them in a brooder; later in the season I would prefer the setting hens as they are less trouble. While the farmers in general have plenty of grain that can be utilized for chick food, I am most positive that a much larger per cent of chicks can be raised to maturity if fed on some of the prepared foods now to be had on the market, up to six weeks old. While there are thousands of chicks raised annually on the corn meal diet exclusively, the mortality among them caused by bowel trouble would more than pay the extra cost of good feed.

Another point I would like to impress on the average farmer is the necessity of good, comfortable coops for the growing chicks. As a rule this branch of the business is turned over to the farmer's wife and there is nothing more discouraging than to go to the coops after a hard rain and find the chicks all wet and some of them drowned. The number of chicks lost each season by a leaky coop, rats and other "varmint" will more than pay the cost of good coops. I have sold many a setting of eggs where a good hatch was reported, when later on was informed that they were drowned or the rats got them. This is poor business and all uncalled for, as water-proof coops, so arranged that "varments" cannot get the chicks at night, can be made at a very small expense. Keep the chicks dry, in good, comfortable, well ventilated coops during the hot summer months; provide them with good feed and plenty of pure, fresh water at all times and my word for it, they will grow while you sleep.

O. L. KING.

Walnut Grove, Ill.

BARRED PLYMOUTH ROCKS THE BEST.

THE Barred Plymouth Rocks, as I have found them, are first beautiful to look upon, so symmetrical and the even, nice barring with bright red comb and wattles, rich yellow legs, feet and beak, makes an ideal bird. Their fine points all combine to make

them one of the most beautiful of all birds. As one cannot live by beauty alone we will look along the line for their useful qualities. We find them excellent table fowls; as broilers they are easily grown to the broiler size in a

short period of weeks, for we do not have to reckon by months as they grow so quickly and are always nice, plump and fat, although of a rustling nature, they are a contented, happy chicken to grow and keep fat and in good condition for the table at any time. From broilers' age to full maturity their carcass presents a neat appearance, skin yellow, flesh light, rich and fine flavored. As layers they cannot be surpassed. Taken the year round they lay every month—winter as well as summer. This is a most excellent quality. How many of the different laying breeds of poultry can claim the one good quality—eggs—every month of the year? This is enough to allow them a seat in the front row. Some claim for their fowls winter layers, others summer layers, but it can be said of the Barred Plymouth Rocks all the year round layers. Yes, they become broody, but are easily broken of wanting to set if taken off the first day they remain on the nest. Catch them and put them in a small yard where there is plenty to eat but no nests. Soon they will forget their setting and be singing and scratching. Should you desire to raise a brood of chickens the Plymouth hen is an ideal setting hen. Give her fifteen eggs in a nicely prepared nest and she will cuddle the

eggs under her with confidence and she will not break them either, for she is not restless nor easily frightened, so can be cared for and fed and no fear of her leaving her nest and the eggs to chill and spoil, but sticks to her nest and eggs until all are hatched, for Barred Plymouth Rock eggs hatch well. Then she is a true mother; seldom is there one that weans her chicks until they weigh nearly two pounds. This alone makes them much sought after for hatching and raising chickens. How many broods of chickens are ruined because the hen left them so soon? When little chickens get their feathers and until they are completely feathered they need the mother hen to brood and lead them. They are more contented not to have to watch for danger so they grow so much faster if the mother hen goes with them until well feathered. The Barred Plymouth Rocks are a healthy chicken. They range over a big lot of ground if they have a chance to, and have good appetites, so must be well fed if one wishes to gain best results from them. They are easily fed, are fond of most all grains and vegetables. If carefully cared for and fed regularly they do not become too fat. The hens will give excellent returns in egg production for two years and will lay more than their cost of keeping the third year, and when they come to market they weigh so heavy one is sure to be pleased with the returns. If the poultry buyer has been buying mixed stock he is sure to weigh them and look the crate of chickens over and weigh them again, for they seem to be weighing so much.

It pays best to keep them pure bred. No cross breed chickens ever paid any one. One variety is enough for one person. Give them all time and money and they will be a success.

The Barred Plymouth Rocks, one of the oldest breeds of poultry, are as much sought for as ever. It seems they are the leaders, for never yet has there been enough raised to go around. How many times we order stock when we cannot get any? All are gone, so we then must take eggs, for one must have some stock next year and eggs are a good way to get new stock. Then we have more of a chance. May the Barred Plymouth Rocks ever, as now, be found in the front row.

Abilene, Kan.

MRS. J. B. JONES.

WINNING A PLACE IN THE SHOW ROOM WITH BARRED PLYMOUTH ROCKS.

Dr. O. P. Bennett was born at Orland, Ind., July 4, 1868. Was educated at the Orland High School and Michigan State Normal School. Studied medicine when 20 years old and graduated at the Chicago Homeopathic College in 1889 and the College of Physicians and Surgeons in 1890. Commenced practice in Chicago, where he remained until 1896, when he removed to Mazon, his present home. Dr. Bennett has taken an active interest in politics, has been chairman of the Grundy County Central Committee for three terms and served a term in the legislature in 1901, where he assisted in securing an appropriation for the Illinois State Poultry Association.

He commenced breeding fancy fowls in 1898, when he raised many of the standard varieties. In 1890 he devoted himself exclusively to the Buff Plymouth Rocks, showing them extensively in New York and Chicago, where he always won more than his share of the ribbons. In 1902 he took up the Barred Plymouth Rocks exclusively. In a few years he has established an enviable reputation with them. He has judged at some of the largest shows, including Boston and Chicago. Along with his Barred Rocks he finds time to breed Shetland ponies and Scotch Collies, having some of the best of these money can buy.

There can be but few if any more difficult tasks before a fancier than the "winning of a place in the show room with Barred Plymouth Rocks," and this is obviously true for many reasons.

First. There is perhaps no fowl more difficult to breed standard requirements than this variety, for their plumage is made up of two distinct and opposite colors, which must be accurately arranged in narrow parallel bars across each feather and each feather so arranged in connection with every other as to produce a "ringlet" effect. Just contemplate for a moment what this means and you will understand something of the difficulties in producing exhibition specimens of this variety.

Second. There is no variety of fowls in which the competition is so keen or exacting as in this one. It is true that occasionally they are surpassed in numbers by some other variety, but taking the shows all over the country together, they are far in the lead.

Third. They are in the hands of strong men, who spend both time and money perfecting them. What variety can boast of a Bright, Latham, Bradley, Smith, Welles, Thompson, Gardner, Hawkins, Richardson, Russell, Wales, King, Norval, Palmer and many other fanciers who are equally well known. Contemplate who you have to show against in order to win and you can easily appreciate the difficulties in your way.

Fortunately for us, the fanciers who have brought this va-

riety to such a high standard, are liberal men, who are not only anxious to increase the number of fanciers in this variety, but who are willing to give them a helping hand by furnishing them with high class specimens from which one can start a strain of their own. They are also willing to give the beginner all the information they possess to assist him in handling them properly. In this way in a short time one can win a place in the show room which would otherwise take him many years.

When you have decided to enter the fancy and wish to make your mark, it is necessary for you to make the proper start. By doing so you may save years of thought and labor. This can be done by starting with the *best*. Scrimp in number of eggs and birds bought rather than in quality. All will tell you the best is none too good and progress is certainly slow enough with these. Only a limited number of exhibition specimens can be raised from the very best pen obtainable.

When you have made your start be determined to raise quality rather than quantity. A few good birds are more desirable than many ordinary ones. As has been well said, there is something about the poultry business that leads a man to desire to keep four times as large a flock as he can accommodate.

There is only one road to run in securing a place in the show room and that is: first, start with the best; second, raise the best; third, show the best. If you will do these three things and keep persistently at it, your success is assured.

Mazon, Ill.

DR. O. P. BENNETT.

BARRED ROCKS AS A MARKET FOWL.

The admirers of the many different breeds and varieties of fowls may laud their favorites to the skies if they wish, but the real test of value is the egg basket and the open market. And right there the Barred Plymouth Rock occupies the top round of the ladder. I have raised Barred Rocks twenty-four years, not for fun nor for ornament, but for plain dollars and cents, and I know a few things about them that makes me feel slightly acquainted with them. Just at the present time I am not in the business so hard as I used to be. Why? Because I'm no longer wrestling with a mortgage. Barred Rocks scratched it off my domain, and then scratched a little pin money into my exchequer, and I am privileged to take things a little easier.

the real test of value is the egg basket and the open market. And right there the Barred Plymouth Rock occupies the top round of the ladder. I have raised Barred Rocks twenty-four year, not for fun nor for ornament, but for plain dollars and cents, and I know a few things about them that makes me feel slightly acquainted with them. Just at the present time I am not in the business so hard as I used to be. Why? Because I'm no longer wrestling with a mortgage. Barred Rocks scratched it off my domain, and then scratched a little pin money into my exchequer, and I am privileged to take things a little easier.

When I began raising poultry for profit, twenty-four years ago, I asked a man who handled a good deal of poultry what was the best market chicken. Without a moment's hesitation he said "Plymouth Rock." That was the bird I wanted to do business with. A few days ago I asked a man who handles many thousands of chickens every year what is the best market fowl. Almost before I had the question in words he said "Plymouth Rock." That's the bird for anybody who wants to get ahead in the world to do business with today.

I will admit that while I was doing a leading business in Barred Rocks I also carried little side lines in other breeds, one at a time, for the purpose of comparison. I was after cash, and my object in testing other breeds was to ascertain whether any of them were better cash getters. Up to the present time I have not found one that is. Possibly one may be produced during this century, but it is not on deck at this writing.

It will be noted that I have been vastly more interested in the Barred Rock from a utility than a strictly fancy standpoint, but I want to say that the standard shaped Barred Rock is a mighty good utility bird. The nearer one gets to the standard the better market bird he has, and I notice that people who are raising Rocks for market are getting more particular about shape and color. They are not hunting for fancy under color, but they want good surface color and that, after all, is what makes the good looking bird. Good surface barring, good shape, nice looking comb, and full size are what the business poultry raiser wants. He looks for these

first, then for big bone (shanks) and "yaller" legs. To one hundred and sixty-two people who came seeking good breeding cockerels I said: "There are 100 points in a perfect Rock. Now give me your idea how they should be divided." Averaging the "ideas" as stated by them I have the following: Size 20, shape 15, color 20, comb 20, shanks (bone they call it) 20, minor points 5. Most of these people had never heard of the Standard of Excellence, but they thought the "main points" of a Rock should be divided as above.

The Barred Rock is, by long odds, the leading breed in this state. And my experience has satisfied me that the poultry raisers of the state would, on the whole, be better off today if it were the exclusive breed. A leading dealer said to me: "All yellow skinned dressed chickens go into the Plymouth Rock grade, the highest of all. All others go into the second grade." Another said: "The Plymouth Rock sets the price on chickens. It would be money in my pocket if my patrons would raise Plymouths only." Can anybody see a nice bunch of young Rocks on the market, or anywhere else for that matter, without admiring them? They are the right color to look clean, the right shape to look meaty, they catch the buyer and broiled, roasted, fried or in pot-pie they never disappoint him. The Barred Rock is the great corn belt bird. There's where we find him at his best, and there he is the most profitable bird that crows or cackles.

In the matter of egg production I have found that the incubating instinct can be almost entirely bred out of the

ROSE LEE.

Tie First Pullet, Chicago, 1904. Owned by R. E. Haeger & Co., Algonquin, Ill.

Barred Rock. I have had hens to lay as high as 278 eggs in one year. But I do not think it is best to breed this instinct out of the breed for the sake of exclusive egg production. It is not at all difficult to bring the Barred Rock up to a yield of 200 to 240 eggs a year by proper selection and without eliminating the incubating instinct. I have found it most profitable to have two strings to one's bow when seeking profit from poultry raising. Give a hen the same care an incubator must have and she will hatch 15 to 30 chickens. Give the brood the same care that they must have in a brooder and all of them can be raised. When the task is ended she will if properly cared for go on with the production of eggs.

I would like to give the double mating system the rasping it needs, but while the standard calls for the sort of coloring it now does one cannot blame the fanciers who are seeking cash prizes at the shows for employing the only method by which winning colors can be produced. But I want to advise the market poultry raiser to fight shy of breeding stock produced by that system. It is not what the market poultry raiser needs because it does not produce its like. What he wants is even colored birds, and he cannot get them by introducing males produced as double mating cockerels are.

The person who wants to raise poultry for the largest measure of profit can safely tie his fortunes to the Barred Rock. If he manages right he will have no occasion to regret his choice.

Morrisonville, Ill.

FRED GRUNDY.

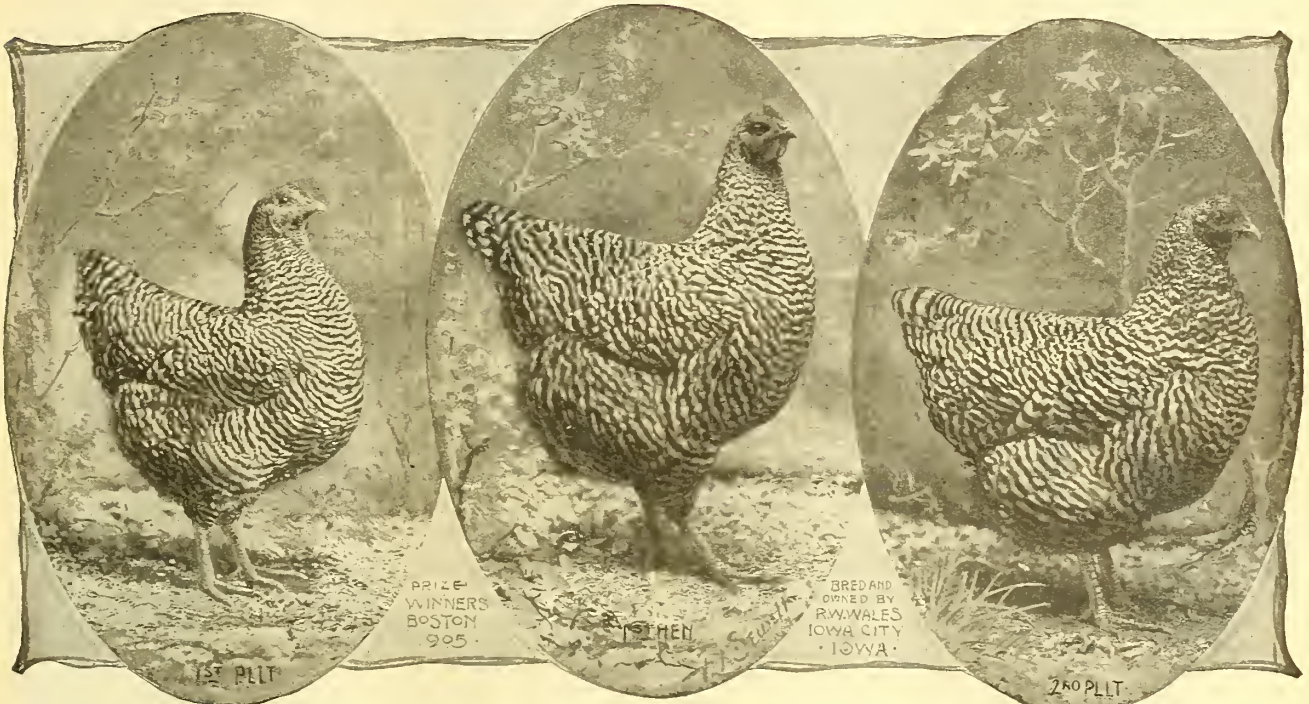

BARRED PLYMOUTH ROCK QUALITY.

Written by M. S. Gardner, Pres. American Plymouth Rock Club.

Madison S. Gardner was born at Philadelphia, Jefferson county, N. Y., forty-three years ago. He began to manifest an interest in chickens at a very early age; in his own words, "about the time I began to walk." But the first birds that he could properly call his own were a pair of Shanghais given him by his grandfather on his fifteenth birthday. No doubt these birds received good care at his hands, for next year the same relative encouraged the boy in the poultry business by presenting him with a trio of light Brahmas. The germs of "chicken fever," thus early imbibed, soon developed into a chronic case of that persistent but never fatal complaint; and from that time to the present he has been continuously engaged, to some extent at least, in the poultry business. Within the last twenty-five years Mr. Gardner has bred more than twenty different varieties of chickens, but has devoted the last ten years of his work to the development of his strain of Barred Plymouth Rocks exclusively, and it is as a Barred Rock breeder that his name has become familiar to the poultry fraternity. Very soon after deciding to concentrate his efforts upon a single variety Mr. Gardner began to exhibit his Barred Rocks at some of the best shows in the East, and has continued the practice yearly, with the exception of two seasons when this was made impossible by sickness, up to the present time. His success as an exhibitor has often been chronicled in these columns and his many

there will contradict me, I am sure, when I say that no other breed or variety has shown greater improvement in the last ten years. The average quality at New York was marvelous. The eight winning birds could have been taken from each class and removed from the Garden, and there would have remained a collection equal to any ever seen before in any show-room in the East. A prominent New England breeder has in his possession some feathers taken from a first prize male at Madison Square—I think in 1896. A comparison of these feathers with those of the winning birds at New York this winter is interesting. The feathers from the 1896 winner show broken bars, irregular spacing, poor under-color, and smutty surface. Yet the bird from which they were taken was considered a wonderfully good one ten years ago. A bird of that quality could not now win a 20th place at New York. This shows the great advancement in the quality of this variety. To one who knows how hard it is to produce good birds of any parti-colored variety, this great improvement tells of the amount of hard, painstaking work done by the breeders who have contributed most to the development of the Barred Rock.

Ten or fifteen years ago the females of this variety, even in the best shows, were very coarse in barring, and showed

Few western breeders would have the hardihood and enterprise to gather with their choicest specimens at the great Boston show. That Mr. R. W. Wales, of Iowa City, Iowa, could establish the fact that intelligent breeding in any part of our broad land will be repaid with success in just that degree which

Mr. Wales' first prize Boston hen is well shown in the above group. An excellent show type, with enough ruggedness and vigor to stand the wear of the trip and showing neat head and fine limbs which is of correct elevation and shape. The breast full and body banded with straight bars, several sections quite "ringy," and the gave indication of a fine individuality in an unbroken line of good ones.

First pullet to the left is a proud young thing that had evidently modeling. She is one that will improve with a few weeks' of age. color and was emphasized at the end of each feather with a good

Second pullet, also owned by Mr. Wales, will suit those who It may be her carriage that emphasized this type, but she was of head—they all had this quality—and under-color that made you

to venture into competition with the old breeders of Barred Plymouth Rocks that gather with their choicest specimens at the great Boston show. That Mr. R. W. Wales, of Iowa City, Iowa, could establish the fact that intelligent breeding in any part of our broad land will be repaid with success in just that degree which it earns.

An excellent show type, with enough ruggedness and vigor for her size, good breadth of shoulder and nice rise of back to tail, deep, wings nicely carried. Her plumage throughout is strongly ringed with straight bars and strong, precise barring all through under-color ones.

caught the judge's eye for her fine, ringy barring and up-to-date modeling. The straight, ringy barring throughout went deep into the under-snappy tip, a point not always found on light pullets.

look for strong, straight barring and bodies of a rather long order. the form that makes large hens. We spoke of the hen's neat like them still better when you looked into them.—F. L. Sewell.

and important winnings at the greatest eastern poultry shows have suggested the most appropriate of nicknames, "Madison Square" Gardner.

Three years ago Mr. Gardner removed his poultry business from Philadelphia, N. Y., to Auburn, N. Y., forming a copartnership with Mr. D. M. Dunning, of that city, under the firm name of Gardner & Dunning. The poultry plant of Gardner & Dunning is admirably located just within the city limits, having the advantages alike of country space and city facilities, and is equipped with excellent buildings and all conveniences for up-to-date poultry raising. And here, among fruit trees and garden plots, their birds which were so much admired at the recent New York Show were raised. Under Mr. Gardner's efficient management the business of the firm has steadily grown, and Gardner & Dunning have established a wide reputation, not only for skillful breeding and high quality of stock but also for fair and honorable dealings.

At the annual meeting of the American Plymouth Rock Club held at Madison Square Garden, January 3, 1906, Mr. Gardner was elected president of this largest of poultry associations—a striking proof of the esteem in which he is held by rival breeders and exhibitors.

No breeder who visited the recent Madison Square Garden Show and saw the wonderful exhibit of Barred Plymouth Rocks

but little of that ringy effect, now so noticeable in the winning birds. In male birds the hackle-barring was very irregular and poor. Now the best males show hackles that are beautiful in the extreme—so ringy and clear-cut is the surface and so regular and straight the under-barring.

A word of warning in this connection may not be out of place. There is a tendency on the part of some judges to give too much weight to under-color. When called upon to decide between a bird with a beautiful clean surface color and one stronger in under-color, but not so clean in surface, other considerations being equal, I believe the bird with the clear, clean surface should be given the preference. While good under-color and strength of bar are desirable, yet it is the surface that is conspicuous in the show-room and the breeding pen, and a bird that is unattractive in general outward appearance should not be given the blue ribbon solely on account of being "barred to the skin."

The wonderful improvement in Barred Plymouth Rocks is not confined to color and barring; shape has come in for its

share of attention. The low-tailed, broad, deep-breasted birds now seen in the show-room are very unlike the long-legged, narrow birds, with tails carried almost perpendicularly, that were so common but a few years since. For a number of years after the writer became interested in Barred Plymouth Rocks a majority of the breeders seemed to ignore shape to a great extent, in the wild scramble for fine barring. Judges gave first prizes to the narrowest barred bird, even if in shape it had no resemblance to the ideal. There has been a marked improvement along this line and with most judges in the East shape is now given due consideration. This is most encouraging. No judge should place a ribbon on a bird of poor shape just because it is well barred, or on a bird with beautiful yellow legs and beak, but poor in color and barring. All sections should be carefully considered and the bird that averages best in both shape and color should win over one phenomenally good in color but poor in shape. I have seen a judge so carried away by remarkable barring in a bird as to completely overlook a poor comb, bad legs and Wyandotte shape. Cases of this kind have not been infrequent and have started many a young breeder on the wrong track. It is a matter of vital importance to the breed that we have at our leading shows competent judges who will be governed by the instructions found in the new standard and not by their own fads and fancies.

As bred to-day the Barred Plymouth Rock is the model utility bird and the chief attraction of the show room. At the recent Madison Square Garden show "Barred Rock Alley" was so thronged with visitors from morning till night that it was almost impossible to pass through it, showing conclusively that popular interest in this breed is steadily growing, keeping pace with the increase in numbers and improvement in quality. I fully believe that the next ten years will see still greater progress made in breeding this variety and a much greater demand than has yet been known for Barred Plymouth Rocks of quality.

M. S. GARDNER.

Auburn, N. Y.

PLYMOUTH ROCKS.

BARRED Plymouth Rock are the most popular of all varieties of poultry, the barred variety being most generally known. They need no introduction, as their history dates back over a quarter of a century, being generally conceded that the breed originated from a cross of the American Dominique male and Black Java female primitively, thus explaining the strong tendency of the Barred Rock females to degenerate to their black ancestors and the males to resemble their nearly white forefathers when permitted to thus de-

generate through neglect of scientific breeding. There is no variety, the product of American skill and science in breeding, that we can put upon the market of the world with so much pride. None others are greeted with such favor by foreign fanciers as our Barred Plymouth Rocks. They stand acknowledged without a peer or any equal as a general purpose fowl. They thrive anywhere, develop rapidly, making plump, juicy broilers at eight to twelve weeks old, making them an ideal market fowl, a general favorite alike of farmers, townspeople and fanciers, who breed this variety more extensively than all other breeds combined.

When bred for standard markings and attained with a fair degree they are a representative of dollars and cents, a reality that can be banked upon as certain as any other values of commerce, as they have all the combined requisites of general utility; one that never deserts its post nor shrinks a duty. Little wonder that their name is National. Their increasing demand stimulates the true fancier's ambition to raise larger numbers and finer quality than at any preceding year.

The Barred Plymouth Rock almost universally predominate numerically at our American shows, choice specimens of which command higher prices than most any other variety or breed, which proves the popularity of their sterling merits. New breeds come and go, but the substantial qualities of the Barred Plymouth Rocks are indelible. To mate them to produce exhibition winners is quite a study indeed, which is truly fascinating for variety. "There's no excellence without labor." My observation and experience lead me to believe that as a rule the finest exhibition cockerels are the result of the mating of a standard colored male, as high scoring as possible, with medium dark but closely and clearly barred females. The black, metallic bars in cockerels should be avoided; the light bars should be clear and straight. The finest pullets are

products of a mating of prime exhibition hens and a male of fine exhibition type in most respects, but somewhat lighter, as the progeny of a former but similar mating as ancestral mating will reproduce itself. For example, the cockerel used for a pullet mating should be one whose dam was a prime high scoring hen. Such a one can safely be expected to produce much finer pullets than one of equal individual merit but from an ordinary hen. The same is true of a cockerel mating. Only males should be used as breeders that were sired by first-class cockerels. The new standard requires more closely barred individuals, which makes the perfect feathering of the Barred Rock worthy the study of an artist. In breeding fine specimens the fancier can find a wide and broad field in which to display his greatest skill and genius.

MRS. J. T. WOODFORD.

Wichita, Kans.

BARRED PLYMOUTH ROCKS AS A UTILITY FOWL.

Written by J. R. Boyce, Sec-Treas. Canadian Barred Plymouth Rock Club.

J. R. Boyce, London, Canada, secretary and treasurer of the Canadian Barred Plymouth Rock Club, stands among Canada's leading Barred Rock breeders, and is one of the few poultrymen in Canada who have been engaged in the business for twelve years. Mr. Boyce has one of the most compact poultry plants that can be found in Canada. He has a plot of ground of several acres, consisting of nice sandy loam, and on it he has about seventy fruit trees planted. His buildings cover about 2,000 square feet of ground and are all modern and up to date, situated about a mile west of Canada's Forest City, London. It is a known fact that the city of London contains more poultry fanciers than any other city or town in Canada. Mr. Boyce is a thorough fancier and is always one of the largest exhibitors and winners of this most popular breed at Canada's greatest shows, and he thinks there is no other breed equal to Barred Plymouth Rocks, for if you

want him during a show you will find him in Barred Rock alley.

The Barred Plymouth Rock stands without an equal as a utility fowl. They thrive anywhere, are quick growers and make plump, juicy broilers at eight to ten weeks old. They are a great favorite among market poultrymen, who breed this variety more extensively than all other pure breeds combined. They make excellent layers all the year round, and as a fancier's favorite they have reached a popularity never before known. The Barred Rocks are nearly always the largest class at our best shows, and choice specimens command a higher price than any other American breed, which goes to prove their high merit. New breeds come and go, but the sterling qualities of the Barred Plymouth Rock becomes more and more indelible. For a person who wishes a utility fowl, one that never deserts its post in the show room or on the table, I think the Barred Plymouth Rock fills the bill nearer than any other breed. They are always ready to work, rain or shine. They are medium in size and if correctly fed are always in good condition after eight or ten weeks old. Their early maturity adapts them especially useful for broiler use. They will lay as many eggs as any other breed, and if rightly cared for are a credit to any man's yard.

THE PLYMOUTH ROCK.

A. V. Meersch's Idea and Knowledge of This Useful Breed of Fowls, Specially Written for America Poultry Journal's Special February Issue.

ABOUT the time that fancy poultry were being violently attacked as not only useless but as likely to spoil the stock of fowls throughout the countries, and when it was doubtful whether they would survive the abuse heaped upon them, the Plymouth Rock arrived upon the scene. We Americans with our usual cleverness had manufactured the bird, and it was claimed that not only was it a fancier's fowl, but that it was unequaled for usefulness by any of the mongrels so loudly praised by some of our poultry members. In 1873 the Plymouth Rock made its first appearance in public, and its size, shape and workmanlike look at once created a most favorable impression. There has always been a good old fashioned predilection amongst poultry keepers for cuckoo colored fowls. The barred grey and black of the newcomer, therefore, met

with general approval. It was, however, known to have a great reputation as a layer and a table fowl. So these qualities combined with the handsome plumage were just the properties desired by the farmer, the poulterer and the consumer, as well as by the fancier.

When the Plymouth Rock was bred, it was found that her reputation was by no means overstated. It proved to be a most hardy and vigorous fowl. The chickens grow quickly and soon attain maturity. The hens lay a nice-sized, colored egg, are not affected by frost and cold, and though good sitters and mothers are not everlastingly broody. They are good foragers and small eaters. They furnish more meat at less cost than many so-called table varieties. In the table poultry classes they are frequent winners and are used with much benefit to cross with other breeds. Being tame and quiet they are well suited to those small poultry keepers who have only a limited space, and there is the additional advantage that they are poor flyers and thus easily kept within bounds. Their color also is well adapted to towns and does not easily show smoke dirt. It is by no means unusual for black chickens, especially pullets, to be bred from barred Rocks, but this does not show that their parents are not of high class.

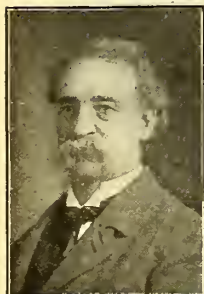

The Buff Plymouth Rock was subsequently introduced, to meet the fashion for buff fowls. The majority of birds first seen were all of American manufacturing and were originated by a cross between the barred Plymouth Rock and the Rhode Island red. The Buff Rock is bred as closely as possible to the type and shape of the Barred Plymouth Rock. It is a particularly good layer of good-sized brown eggs, but the hens, like most of the buff varieties of fowls, often become broody. The rich yellow buff, the shade so much admired, is rather difficult to produce, there being a tendency for the red color to be too prominent.

There is also a white Plymouth Rock and a prominent, well flourishing American club exists of it. The white Rock is a particularly useful fowl which was produced from the Barred Rock and still sometimes throws barred chickens. This variety is now coming into great favor; in fact the classes for white at the leading shows are as well filled as those of the barred birds. It is much easier to breed, as there is no trouble with markings, and it is in every respect a valuable addition to our stock of poultry.

A. V. MEERSCH.

Poughkeepsie.

THE ORIGINAL PLYMOUTH ROCKS.

Mr. Geo. O. Brown, Parkville, Md., was one of the early breeders of Barred Plymouth Rocks and his name is closely identified with the early history of this variety. There is probably no breeder in the country today that is better qualified to write on the original Barred Plymouth Rocks than he is. Mr. Brown has always been an enthusiastic fancier and breeder and a few years ago was elected president of the American Poultry Association, which position he filled with credit to himself and to the association. At the present time he is breeding White and Barred Plymouth Rocks on his farm at Parkville, Md., and associated with him in the enterprise is his son, who is also a great admirer of the Barred Plymouth Rocks.

Compared with the original or supposed ancestors, the Barred Plymouth Rock of the present day is, to use the characteristic terms of the period, "a bird that is different." The "originals" are certainly varied in their markings as well as in their origin. A poultry book published in Philadelphia in 1864 by Robert Jeunings, V. S., describes the then so-called Plymouth Rock as follows: "This name (Plymouth Rock) has been given to a very good breed of fowls, produced by crossing a China cock with a hen, a cross between the fawn-colored Dorking, the Great Malay and the Wild Indian.

"At a little over a year old the cocks stand from thirty-two to thirty-five inches high and weigh about ten pounds, and the pullets from six and a half to seven pounds each. The latter commence laying when five months old and prove themselves very superior layers. Their eggs are of a medium size, rich and reddish-yellow in color. Their plumage is rich and variegated; the cocks usually red or speckled and the pullets darkish brown. They have very fine flesh and are fit for the table at an early age. The legs are very large and usually blue or green, but occasionally yellow or white, generally having five toes on each foot. Some have their legs feathered, but this is not usual; they have large and single combs and wattles, large cheeks, rather short tails and small wings in proportion to their bodies.

"They are domestic and not so destructive to gardens as smaller fowls. There is the same uniformity in size and gen-

eral appearance at the same age of the chickens as in those of the pure bloods of primary races." Compare the above description with that of the present-day Barred Plymouth Rock. However, there seems to be some of the present day Rocks that occasionally produce reminders of their very remote ancestors. The earliest record I find of the exhibition of Plymouth Rocks was at Boston, Mass., November 15 and 16, 1849, over half a century ago. The report is from the *Boston Cultivator*. Under the head of "Fowls Produced by Crosses of Various Breeds and Varieties," report says: "Under this head the committee would mention, as worthy of notice, the *Plymouth Rock Fowl*, so-called, bred by Dr. J. C. Bennet, of Plymouth, and presented by George P. Burnham, of Roxbury." No description was given of the fowls. In the standard, published in 1875, among the disqualifications of Barred Plymouth Rocks was "splashes of white in the breasts or backs or reddish or brassy feathers in the hackles or saddles of cocks, or in the necks of hens." In describing the plumage of necks of cocks, "color of plumage, bluish gray, each feather distinctly penciled across with bars of darker blue"; of the hen, neck, "bluish gray, nicely penciled across with dark blue bars and free from splashes of red, white or black feathers." Breast of the cock, "bluish gray the feathers penciled across with lighter bars than on the neck hackle and running nearly straight across the feather." Breast of hen, "bluish gray, each feather distinctly penciled across with dark bars." In all sections of the plumage the requirements call for "dark bars." The standard weight for 1875 was, cocks 10½ pounds, hens 8½, cockereels 9, and pullets 7 pounds.

It is hardly necessary to go into details regarding the origin of the Barred Plymouth Rock of today, telling how it contains Java and Asiatic blood, etc., as that has been threshed out over and over again in many controversies. Like the noble Light Brahma the Barred Rocks have held their popularity, won or earned by their combined excellence of beauty and utility. Years ago they were the leading class at the Madison Square Show, and in 1906 history again repeated itself. They are today more generally disseminated throughout the United States than any other pure breed.

Parkville, Md.

GEORGE O. BROWN.

EXHIBITION REQUIREMENTS OF BARRED PLYMOUTH ROCKS.

This subject is one of great interest to the breeders of this variety, because with the demands that are embodied to-day in a strictly first-class specimen of this variety, in male or female, the breeder cannot exhibit what ten years ago would have been considered almost perfect. The fancier and artist, who in a great measure are the critics and developers of Barred Rocks to a higher degree of beauty, in form, color and correctness of barring, these also must be the educators to the average breeder as to what it requires to exhibit the best specimens, in best form and condition, to win in the show room. Thus we have changed many features that are and must be essential as foundation to success in the yards and show pen. First, every feature from comb to toe nails are to-day carefully scrutinized and weighed, both as individual features approaching requirements as demanded by the revised standard of perfection and as breeding factors at the head of a pen, or of individuals used as breeders among the females. The cutting for overweight will tend to keep this variety close to standard demands. This will mean a closer adhering to correct shapes and size, also keeping ever in mind exhibition requirements, which as a rule are found in best bred specimens, such as comply nearest to standard demands. Such specimens are readily recognized by all experienced breeders of this variety. A compactly built cockerel of type and form as presented in the standard; at least this type must be represented in some of a male's make-up, either in comb, head, neck, back, tail, breast, body and legs. A comb with a good base tapering uniformly, with some or all the spikes perfectly divided, and in length of proper proportion to give character and balance as it sits on a head. Where the beak is short, stout, with a face whose appendages of wattles and earlopes are of fine quality and proper size, with eyes of deep orange red, set in the center of such a head and look proudly and intelligently at you, ready to give voice in tone deep and loud, "I am America's greatest production in hendom." Let such a head be on a neck where the demarcation is well defined, as the neck feathers raise and form the bell-like hackle plumage, fully filling out over a broad back, that in length and width is blended out over a tail neither carried to high or in length too long, too short or too spread, to mar the harmony of the upper parts, which make this variety a distinct type, presenting characteristics that when bred for by breeders of all the other Rock varieties give them name and fame. The breast and body should be broad and deep, so that there may

be no angles as they sit upon and between legs that set well under the middle of the body, well apart, with shanks in size and shape conforming to proper length, every toe straight, strong and well spread. Such specimens are usually met with coming from the yards of breeders who have carefully studied what is meant by "the best type."

The color, barring, spacing and shades are where the best win out over those that come from hit or miss matings. There are two methods of matings from which our best and highest scoring exhibition specimens come, the one where best males are produced, where the male with clear cut parallel barring, fine and bright in color of neck, hackle, deep, straight throughout the entire plumage, free on surface from smudge, brassiness and in under color, no cotton white, a male whose plumage proclaims him as bred from a noble dam, whose plumage throughout in both shades of "grayish white and bluish black," with a dark tip on every feather and the spacing of the barring equally divided, at least down to the sixth bar in neck and back feathers. This type of barring in rightly bred females give us the most desirable exhibition males and enough females that by judicious mating reproduce enough females in character of color and barring to equal the merit of their dams without using such as come too dark on surface (such should be culled out as unfit). "The pullet bred." What do

will readily be given recognition as the best and most desirable type in color and barring, and more closely approach the ideal as presented in the standard. D. T. HEIMLICH.

CLIPPINGS FROM PLYMOUTH ROCKS.

Examine a flock of twenty varieties of fowls and you will find the Barred Rocks, in amount of flesh, next to the game, and you can grow them in one-half the time, and the Rocks will lay twice as many eggs. The Barred Rocks are the hardiest chicks in the flock; wet or dry, they will stand all weather and come out on top.

Let the professors wrangle; keep the grit and shells before the fowl. Whether it grinds the food or grows the feathers it is very necessary. Don't be afraid to feed plenty of good yellow corn; you cannot get a bird under a year old too fat to lay. More fowls are cut for being under weight at the shows than for being too heavy, and when too fat to lay they are about right to eat. Poultry will neither grow nor lay without plenty of food, that's certain, and there are more underfed than overfed fowls running around this world. Free range on grass land, a pan of corn, another of beef scrap, also one of grit and shells, with plenty of water, gives me my best birds, both in size and barring. Fine cracked corn for little chicks,

GARDNER & DUNNING POULTRY FARM, AUBURN, N. Y.

we mean by this? This: A female whose sire was narrow and well barred, in color several shades lighter than the cockerel bred males, as described above, who was from a large hen; in plumage, color standard, with clear or almost clear yellow legs and beaks, with as many of the other good and desirable qualities, such as comb, eyes, size and shape right. From such matings, when line bred, come the highest scoring females with the male progeny tending to breed lighter or legitimately, reverting back to the lighter ancestors, and that to-day bar them as unfit exhibition specimens, but from cockerels thus produced (if only those are used that show correctly barred plumage, fine combs, deep orange red eyes and rich yellow legs and beaks) no harm is done, and the exhibition points maintained in their breeding, so that when their female progeny are bred to males of stronger dark barring the tendency will be to fix characteristics that in the near future will be in demand, namely: the bringing together the best produced from standard matings of both methods, and producing a Barred Plymouth Rock from single matings that

coarser for next size and whole corn for the largest.

Should you hatch in an incubator, after the weather becomes warm try giving the chickens to setting hens to bring up. Slip a few chicks under them at night. If they take them well in the morning give each enough to make a brood of not over twelve; ten is about right.

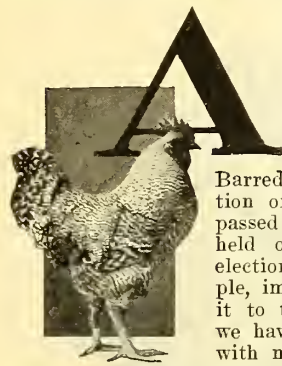

Take a sprayer and a can of lice paint and give the roosting places a good soaking once a month. The chicks and fowls can clear themselves of other lice, but the red mit is a most industrious and persistent chap. Remember every drop of blood he gets comes out of your pocket. *Chicks must be well raised to be well barred.* Don't blame the man who sold you the eggs for the poor lot of birds you get if you did not properly care for the chicks. At one of the leading shows a few years ago I stood admiring a pen of grand Rocks, a man came along and said, "Isn't it strange I paid that chap his price for eggs and I got nothing; he comes here and wins all the prizes." I found his birds were not raised right.

P. JACKSON.

THE AIM OF THE AMERICAN PLYMOUTH ROCK CLUB.

Written by H. P. Schwab, Secretary American Plymouth Rock Club.

H. P. Schwab, Rochester, N. Y., is to-day one of the shining lights in the Barred Plymouth Rock world. To use his own words, he grew up in the chicken business. His father, being a great lover of poultry, always kept a large flock. In 1883 he purchased his first Rocks, and at that time also bred S. C. Brown Leghorns and Partridge Cochins. The latter were dropped for Black Minorcas, and since 1890 he has bred nothing but Barred Plymouth Rocks. In January, 1897, he was elected secretary of the American Plymouth Rock Club at Toronto, Canada, and has served in that capacity ever since. At that time the club membership was 129; to-day they have 1,286 members. During his term he has issued five editions of the catalogue. During the past five years he has judged at seven of the leading shows, East, West and South. In January, 1905, he judged the breeding pens at New York, and in January, 1906, at New York, at the greatest Rock show ever held (489 birds competing) he judged the cocks, pullets and pens, and, according to reports, will again judge this great show in 1907.

ABOUT fifteen years ago it occurred to some few breeders to join interests, as it were, and organize a poultry specialty club or association, and, they off-hand laid, as the foundation of this organization, its aim, as follows: "The fostering and improvement of the Barred Plymouth Rock and the protection of its members." To-day we have passed our fifteenth birthday and have held our fifteenth annual meeting and election of officers. The aim, though simple, implies much, and we willingly leave it to the world to judge how faithfully we have followed the same, for we point with much pride to our accomplishments and ask, Who can deny us this?

The results achieved are really astounding, and we can well imagine that they are of infinite pleasure to the surviving organizers, for no doubt their fondest hopes have been met, and in this, if in no other way, they have graciously endeared themselves to the fraternity.

The American Plymouth Rock Club is the "original" poultry specialty club, and to Mr. Geo. O. Brown, E. B. Thompson, Philander Williams, J. T. Bicknell, A. C. Hawkins, etc., the full credit of organization belongs. Mr. Brown was elected the first president and for several years held this office, while Mr. Thompson was the club's first secretary and he also served with distinction for some years. Their row to hoe was a difficult one, and it was only by persistent efforts that they succeeded in getting the breeders interested and inducing them to enroll. But I am, as usual, wandering from my subject, and will, if desired, at some future time give a complete early history of the club, including the progress and changes made, etc.

As has been stated, the aim of the club is the fostering and improvement of the breed and the advantage and protection of its members. This is the real foundation upon which we stand, and as time has passed some other aims and opportunities have presented themselves, which have been adopted and which have proven of especial advantage to the members, for we believe in broad, wholesome ideas. We do not claim all the credit for the improvements made in the past fifteen years in the breed, but we as an organization do claim the larger share for such with good taste, for this work, if not wholly accomplished by the club as an organization, was at least accomplished by some of our members with the club aid and support.

How we have for years fostered the breed is history. We have been steadily pegging away year after year, and with our annual catalogues have educated prospective breeders and have been the means of adding thousands to the Barred Rock standard. The effect of this work has been far reaching, and the results are evident to the most skeptical. Ask those who own membership and who have wisely advertised the fact for proof of this. Note the real live interest taken in the club work by a majority of our 1,200 members. It is one thing to interest the breeders and quite another to retain them. Here is where you have to show them.

The protection of members has, I am happy to say, been a very light task, and in my seven years as secretary have had but two or three calls to adjust some matters that at their best were simply misunderstandings. At this day it has come to pass that the regular breeder is pretty well posted; they know their wants and get them.

The Ideal Club cuts, although very expensive, have been issued and improved at four different times. In these by portraying the standard shape and the required barring we consider we have done one of our grandest works in education. No personal interests could sustain such expensive work, and

it is only possible through organization that such benefits can be handed the breeders gratis in illustrated form or at a very small cost as an electrotype for their own use.

The annual catalogues have contained from year to year articles of instruction in selecting, mating, breeding, judging, etc., that have been commended by the poultry press, and all breeders, large and small alike. The demand for these catalogues has been beyond our expectations, and the future editions will have to contain upwards of 10,000 copies to supply the demand by the generous support given the club. We mail these catalogues free to all interested persons for 4 cents postage.

To sum up: We are proud of the breed, the club and its membership. We have faithfully striven for its success and that of all the members. We have earned and ask the aid and support of every interested breeder and fancier in the Barred Plymouth Rocks. We have a variety that every breeder can, no matter where located, bank on. If you are in the fancy and want the highest grade fancy article, or if your specialty

First Prize White Plymouth Rock Pullet at Illinois State Fair, 1905. Bred and owned by U. R. Fishel, Hope, Ind.

should be eggs (winter and summer), broilers or roasters, we have that quality in prime excellence in the Barred Rock. Some other varieties under some certain conditions may be as good, but none are better. Their quality is the standard by which others are compared. We believe enough in their quality to claim that they would have just the same been the leaders of all varieties of poultry even without the aid of this club and its work, and we also believe that the breed and the poultry industry has been greatly improved by our work, and we see ahead more opportunities, whose accomplishment depends greatly upon receiving the universal support due.

In this article I cannot ignore the poultry press. No industry is better represented by its press than that of poultry. I also wish to state that what I have said and claimed for this organization also applies to my best knowledge to other specialty clubs. All have the welfare of standard bred poultry at heart, and one and all are fully deserving the aid due them by the breeders. Let the word be "organization," and let every one do his full duty.

H. P. SCHWAB,
Secretary and Treasurer American Plymouth Rock Club.

There is nothing better for a recently contracted cold than a one-grain quinine pill given each night for three nights in succession.

LET'S GET TOGETHER.

The concerted movement to bring out larger and better entries of Barred Plymouth Rocks, which, starting in New York has spread half way across the continent, is assured of a measure of success. That this variety is more generally kept among all classes of poultrymen than any other there can be no doubt. That some other variety of fancy fowl can and does occasionally out-number our favorites in the show room in certain sections of the country reflects upon the general popularity of Barred Plymouth Rocks. The explanation is simple and easily understood. It is due to the undeniable fact that the poor qualities of a Barred Plymouth Rock are more apparent than those of any rival. Let a Barred Plymouth Rock have a defect and it is noticeable even to those who have but a limited experience in the show room. Unless the color is the clearest and brightest, unless the toes are the strongest, and unless the heads, legs and forms of these birds

are not settled on what they should exhibit. The breeders as a whole know their own minds perfectly well, but we find it difficult to get acquainted with a judge's ideas. This should not be and would not if these professional adjudicators would consistently demand an all-around bird. The majority of our ribbon hangers are looking for something *great*—great. The prize-winner to them should be something different from anything they have ever seen. Something brilliant and grand. So it is that a grand wing, an extra straight boned neck often makes an ordinary specimen win. Shape and fundamental qualities are more often than not forgotten. I have often wondered if it would not be a bold and good move to put a peacock, a bronze turkey or a grey call duck before one of these want-to-see-something-different-from-what-I-see-every-day-cranks. It will require some such radical measure as that to stop the mad course that some of these deep thinkers are pursuing.

Some few years ago it took a veritable whirlpool of fuss to

Second Pen Cock Madison Square Garden, 1906. Owned by Rock Hill Poultry Farm, Ossining, N. Y.

are excellent they appear to be common sort of specimens, whose very general appearance shakes any confidence that the would-be exhibitor might have had in his growing stock.

But with this hindrance is it necessary for us to be outnumbered at any of the large shows? Should we not reap the full benefit of the efforts that the American Plymouth Rock Club and its individuals are making? If we do not, why not?

I believe the solution of the problem lies in getting the breeders to agree upon what they want and then selecting judges that will agree with the breeders. The fact is that the smaller breeder, the one who shows a few birds, is afraid to come out. The reason for this is that the judges vary in type and color so greatly that only those who can show good specimens of three or four types and shades dare take the chance. It is strange. This variety has been exhibited thirty-five years or more and to-day the most experienced breeders

get the attention of the judge. It made no difference whether the bird was Tobin bronze or royal flush blue so long as he had 79 bars to the feather. The judges of those days said that bars made a Barred Plymouth Rock and nothing except bars seemed to be essential.

Some years later reason seemed to prevail and good all-around specimens won for a number of years at our largest shows. Of late years it seems to be agreed that the yellowish and bronze birds are not to be considered; also that birds of even color only are considered. That is that a bird should be as near the same color in neck, back and saddle.

At two large shows this season this supposed general understanding was either forgotten or ignored. Bronzy, yellowish and crocky tailed birds certainly won high place at both shows.

Now then, let us get together. Let us take the clear, bright, clean cut barred specimens. Above all things let us cut heavily

for brassiness or yellowish tinges; let us avoid the bronzy and rusty birds, and the dull dingy females just as we do the washed out ones. Let us get bright, clear colors that have the snap in them and let us get bars with two sharply defined edges. Let us stand for these things and there will be no boom in other varieties and other breeds, but business in the old Barred Rock will be on the hum and our alleys will be the longest in all the shows.

Waltham, Mass.

POSSIBILITIES IN BARRED PLYMOUTH ROCKS.

E. B. Thompson, Amenia, N. Y., has been breeding Barred Plymouth Rocks for the past 27 years. He started with what was known as the Gilman strain, which were large in size, blocky in shape, with barring quite wide and coarse. The following season he bought the best eggs he could find in the country and from this foundation built up his celebrated "Ringlet" strain. During all these years his whole time has been devoted to improving and breeding his strain and his fame has become world-wide, and his sales of Barred Rocks run up

E. B. THOMPSON, AMENIA, N. Y.

into the thousands, and he has sold a single bird for \$300 and a few years ago sold 75 birds to one customer for \$3,000. For him the poultry business paid from the beginning. He attributes his success to concentration of thought and energy upon the one variety, and to hard work and liberal advertising. In the exhibition room the Thompson Ringlets always win their full share of the prizes and the Barred Plymouth Rock breeder does not live who especially courts the privilege of exhibiting his birds in competition with those of Mr. Thompson.

THE possibilities in Barred Plymouth Rocks can only be measured by the possibilities in other branches of man's work. The world moves fast and the achievements of the past ten years as a guide one can only prophesy in imagination what the next same number of moons will develop.

Barred Rocks are on a high and solid pedestal—from a beauty standpoint and from a utility and practical standpoint. They have held this eminence more than a quarter of a century and their popularity

is based on qualities as enduring as the immortal rock whose name they bear.

They are unsurpassed layers to-day, but from an egg-producing standpoint the Barred Rocks can be developed to produce more eggs than any breed that sets and rears its young. This can be done by setting the eggs from the best individual laying hens, marking the chicks and using these pullets and cockerels the next year for breeding. This system followed a few years and the egg records of the breed will be wonderful. In size the breed can be grown as large as the market demands.

In standard requirements of fancy prize-winning points we now produce elegant birds that bring out admiration at the shows from fanciers of the breed. These winning birds that come so close to the standard of perfection cause the Barred Rock world to pause. However, these present-day winners fascinate and are admired no more than the fanciers of twenty years ago admired the winners of that time. Every period has its limit of perfection for that period, but energy and ambition always declare there shall be improvement.

The great horse Dexter was the idol of horsemen, and it was then thought the limit of speed had been reached; his per-

formances of that time were the wonder of the world. In quick succession came the long list of trotters till the great Maud S. held the world's record so long. A few men with far-reaching imaginations spoke in low tones that some day a horse would be bred to go a mile in two minutes. The words of these men were listened to as the vaporings of a mind that is going. Yet in the rapid advance of breeding skill the two-minute mark was reached and lowered.

Barred Rocks can be brought by fine graduations to a feather that will make the present-day winners no more to be compared with those of ten years hence than a tidal wave of Mount Pelee to a ripple against the base of the Statute of Liberty in New York harbor.

The standard of perfection must from time to time be subject to change along with the growth of our ideas of the beautiful and our ability to reproduce these ideas in the living bird. We have produced some individual specimens that it will be hard to match for a long time. The same as in men—Washington, Webster and Lincoln and McKinley—each the greatest of his time and up to the present.

The way to go about improving and perfecting our favorites is by skillful and scientific mating of the best birds to be obtained. Blood lines must enter largely into account in breeding and mating as well as individual excellence. The best illustration I can give of producing top-notch prize-winning "ringlets" is the cockerel mated pen at the late New York show, which won the American Plymouth Rock Club's special prize for best pen mated to produce exhibition cockerels. My patrons who visited the show saw in this pen a living illustration of the science I am forcing to perfect this breed. The cockerels heading my first and second prize exhibition pens were produced in this way.

Barred Rock fanciers and breeders, while in love with their sterling qualities, utility and exhibition, do not fail to recognize good things in other breeds and many of them. We extend the glad hand to all new breeds and wish them success in their endeavors to attract popular favor and reach that level where their merits must place them.

Barred Plymouth Rocks are surely American favorites; they are so strongly fortified by splendid qualities and actual worth that we fear no successful competition from any other breed, good though the breed may be.

I am sure the Barred Rock breeders of this country and Canada fully appreciate the good the American Plymouth Rock

C. H. LATHAM, LANCASTER, MASS.

Club is doing. The club is extending its influence every year and its possibilities are as great as the breed it represents. To Mr. H. F. Schwab, the secretary, the club owes much of its increasing prosperity and growth; he has been devoted to its progress and worked hard for its increasing influence.

I find by the records that the club is now fifteen years old, having been founded in my office in December, 1890, by Mr.

Geo. O. Brown, of Baltimore, and myself, and organized at Charleston, S. C., in January, 1891, the month following. The club has had a continued growth until now it has become an organization of Barred Plymouth Rock fanciers aggregating a larger membership than any specialty club in America.

I believe all the Barred Rock breeders of the land are mindful of the strong endorsement and the good the AMERICAN POULTRY JOURNAL is doing in making this issue of one of the foremost poultry papers a number devoted to this preëminent breed.

Amenia, N. Y.

E. B. THOMPSON.

BARRED PLYMOUTH ROCKS.

For beauty and utility there is no question but that the Barred Rocks are far in the lead today. As a breed for the beginner in the breeding of fancy poultry they stand away ahead, being the most interesting from the time they begin to feather until they are fully developed. There is something about good Barred Rocks that is very fascinating and once you get the Barred Rock fever it will stay with you for a long time and you will be willing to have it stay, for you can enjoy yourself looking at good ones and will go a long way to look at a choice lot with that bright, snappy, bluish color and those golden legs and beaks, which should be on all high quality Barred Rocks. I have bred almost all varieties of poultry, but have never found any of them as fascinating and as profitable as the Barred Rock. I have had my friends visit my plant and they would sit for hours under the shade of a tree in August and September admiring the ringy beauties on the lawn. Of course, they were called "chicken cranks," as I think they call all chicken fanciers who are lovers of fine poultry and more of it.

Livingston, N. Y.

FRANK D. HAM.

WHY I BREED BARRED ROCKS.

Robert E. Haeger was born 1875 on Spring Brook Farm, near Algonquin, Ill., where he resided with his parents until 1895, when he moved into the city of Algonquin. His father was an extensive breeder of blooded horses and cattle, and it was only nature for Robert to follow in the footsteps of his father in the blooded stock line. The first of this for him to do was to purchase a pen of Plymouth Rocks in the spring of 1883. With the occasional purchase of a male bird for fresh blood the business ran along on the farmer's style until Robert began to think of improving his flock by the purchase of a \$10 cockerel, but this suggestion was met by a strong disapproval from his parents. But he couldn't settle down with that idea in his head, so by figuring he managed to save the money himself and then ordered a \$10 cockerel from the East. Remember that this high-priced bird was brought home from the expresse office in the night and turned loose in a pen so as not to arouse any suspicion as to his being a stranger. The results from this bird were very Haeger Barred Rocks. From that time on they have been exhibited nearly every season. In 1895 he moved to the city and embarked in the cattle business and auctioneering, in which he has an extensive trade, besides looking after his poultry, which occupied one acre of ground in the city. For pleasure one acre was large enough for a few chickens, but the growing demand for good Rocks forced him in February, 1904, to move his chickens to a seventeen-acre farm one mile from the city, where is now established the Barred Rock headquarters, which means good birds and plenty of them.

Perhaps I cannot fully explain to the readers my ideas on this subject, but my first experience with this variety was in a farmer's way, or in other words, for practical purposes.

I had tried the Brahmas, Langshans and Leghorns, and all were found wanting, but in the Plymouth Rocks I found the fowl that combined size, vigor, eggs and market qualities. But just to raise them for market and not for fancy is where a person misses the real pleasure, for certainly there is no breed where you think you have got something and just as quick find you have nothing. It was just this very thing that spurred me on to breed this variety and kept me wanting to breed them better for there is always room for improvements. Many times I have been asked "Why don't you breed some variety not so popular? Everybody breeds Barred Rocks. Why don't you breed a solid colored variety? They are easier to breed good." To those questions I say "What is not worth trying for is not worth having." Just so in Barred Rocks, there is always room for more good birds and a good one never has to go begging for a buyer. Thanks to the popularity of the breed. The more breeders we have the more

Togo 2nd, score 92, sired by Togo, he by Marshal Nye 3rd, Jr., a winner of 1st at Rochester, 1904, and a breeder of winners. Bred and owned by E. M. Buechly, Greenville, Ohio.

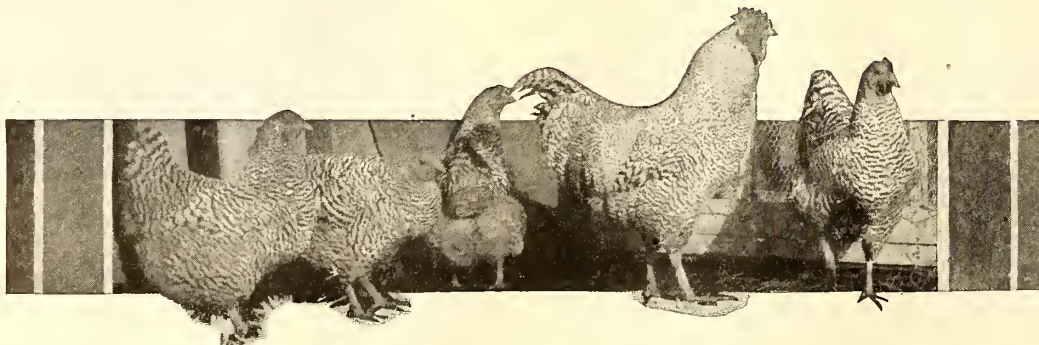

buyers we are bound to have. Anybody may take a pair of black chickens and produce winners, but when it comes to this variety it takes birds of the right breeding and properly mated to produce winners, for, dear reader, it's a study in itself. Therefore, when you do produce the good ones you feel as though you were well paid for your time and pains and, best of all, is the financial end as there is no variety that commands the real high prices and quick sales on top notch birds as the Barred Rocks. In fact our experience has taught us that the demand for good birds is far in excess of the number being produced annually.

Some new variety jumps to the front, but only for a few days and then they settle back to the rear.

The popularity of an old established breed is evidence in itself as to what the public thinks and as to what I think of the Barred Plymouth Rocks—the king of the poultry yard.

Algonquin, Ill.

R. E. HAEGER.

THE CARE OF YOUNG CHICKENS.

Some Sound Advice on the Rearing of Chicks, Given by a Farmer's Daughter, who has had Practical Experience.

I think the greatest trouble why people who make the attempt of raising chickens for profit fail is because they do not understand the proper care which the little chicks require from the time they are hatched until they are about three weeks old. Sometimes they die so fast it is enough to discourage any poultry keeper. All this is unnecessary, as it is entirely due to improper care and feed, and sometimes lice.

I am a young girl, having lived on a farm all my life. As I grew up I noticed that the chicken department of the farm did not pay as well as several other departments. Why it did not pay was all due to mismanagement. I took hold of the work myself and made it pay. I found it pleasant and interesting, but requiring plenty of patience, tact and time. As one of my neighbors answered me when I remarked that her chicken equipments looked so nice: "Yes," she said, "but then you know I live in the chicken coops all summer."

The first step to success is to have the brood properly hatched. Be sure the eggs are fresh when set, then when the weather is not freezing, and the hen gets off for her feed, let her stay as long as she wants to. When the weather is freezing, a little more care must be taken. A light woolen

This Hen bred and owned by Mrs. J. B. Jones, Abilene, Kans.

cloth may be laid over the nest in her absence. All her wants should be supplied, including food, water, grit and a convenient dust bath. Some hens require to have their feed once every day; others every two or even three days. When I first undertook the work, I could get no more than six or eight chicks from a dozen eggs. Now I invariably get eleven or twelve.

When the chickens are hatched, remove them to a clean, warm nest; put two or three in first, then the hen, then the rest of the brood. In this way there will be none of them killed by the hen stepping on them. All these minor details bring success to the beginner. This nest should be made in an individual coop; an old barrel will do, or the little triangular affair, or a box high enough for the hen to stand up in. On the floor should be an inch of dry earth, and the front should be open enough for the little ones to run in and out at pleasure. In the cold weather this little coop should be in a sunny building; in the warm weather it should be out of doors, facing the south. These little coops must be kept clean, and if there is any suspicion of lice put a little kerosene oil on the down at the back of the chicken's head.

Give the first meal in from twenty-four to thirty-six hours, afterwards three times a day. The best food is corn meal baked and broken fine; also oat meal and wheat middlings and stale bread soaked and wrung out, then crumbed fine. All food must be placed on a clean board. Green food is also required. They will pick the young grass when it is

growing, but for a winter supply green clover must be gathered during the summer and dried. In the winter this can be chopped fine, boiling water poured on it, let cool, and the chickens will eat it readily. A little raw cabbage or turnip chopped fine also serves for green food. They want all they can eat up clean at a meal, to promote growth. Sometimes the food packs in the crop, then the chick will lose his appetite, droop and die. If it is noticed that one is not eating, this is generally the cause. In the evening catch the chick, rub his crop well with lard, put him under the hen; in the morning he is almost certain to be well; if not, repeat the treatment. If a large number is affected, feed entirely on soaked bread until they are well. When they come out for the first meal in the morning, if the crop is empty, they are all right. Always keep them supplied with fine sand. After three weeks, uncooked food may be given entirely.

Fair Haven, Conn.

L. A. MALONEY.

SUCCESSFUL ADVERTISING.

Advertising is one of the essential points in the poultry business. It is a very timely subject and any one that has embarked in the poultry business should learn to advertise successfully. No one can carry on the poultry business successfully if he does not advertise. Any one that can advertise successfully is accomplishing a great thing. There are many different things to remember in advertising. Preparing the copy and selecting the paper are the two main points towards successful advertising. There are many other things to be considered, but the latter two are the main ones.

One cannot be too careful in making up the copy. No words should be used that have no meaning. They must all be paid for and the advertisement sounds better without them. Never crowd an advertisement, because it looks like if you wanted to get the whole advertisement on one line. A catchy advertisement is the one that brings the results. Any one glancing over a page can not help but see a large display advertisement. The name of the breed should also be in large type, because the buyer can then tell at a glance if it is the breed that he wants. The whole thing, in a few words, is to say what you have to sell in such a few words so that the buyer can tell at a glance if it is what he wants.

Selecting the paper is another very important thing. It is of no use to advertise in some paper that has a small circulation and has its subscribers in a certain part of the country. One should select a paper which has a large circulation and that has its subscribers all over the country. One would be wise in selecting a paper like the AMERICAN POULTRY JOURNAL. One should advertise continuously and never stop at intervals, because if you want the people to patronize you, you must advertise month after month so that they can get acquainted with you. One should always change his advertisement every few months, because the same advertisement month after month looks like if you were trying to sell the same old stock. If one has to pay a little extra in a good paper like the AMERICAN POULTRY JOURNAL, it does not matter, for the returns will be much greater. Do not get discouraged if you do not receive any orders at first, but keep on advertising as the other prominent breeders once did, and you will succeed in the end. If a person inquires about your stock, be sure and write him immediately, and if you do not hear from him again, write him again, explaining to him why he should buy of you, and assure him that you can save him money. Always be honest with your customers. Always give them their money's worth, and then every customer will be pleased with his stock, and then he will tell his neighbors and friends about his bargain, and they also will order of you; but if you do not treat him right, he can do lots toward spoiling your trade. I think this old saying applies especially to the poultry business: "Treat others as you want them to treat you."

CHAS. M. WAGENER

Fullersburg, Ill.

A simple way to distinguish the sex of Guinea fowls, is to compare wattles; those of the male are double the size of those of the female.

Remember, there is no effect without a cause. If matters do not go exactly right on the farm, look up the reason and apply the remedy.

"Bad luck" is nothing more than a penalty for mismanagement. Before you begin to complain, it would be better to investigate.

Fowls are naturally of a hardy nature. They can be kept so by breeding only from the strongest and most vigorous birds, and never inbreeding.

SPASMODIC ENTHUSIASM.

In order to reach a high degree of success in any line of business, whatever that line may be, it is necessary for those so engaged to devote not only their time, but their strongest energies and closest attention to that business. And if this is done, it is surprising what may be accomplished.

Any man who has reached these conditions is sure to be successful in his undertakings, and failures will be an unknown quantity.

This will be found equally as true in the poultry business as in any other vocation.

There is a great difference between what some people might call being successful and reaching that high degree of success.

This is very noticeable among different classes of farmers. There is a certain class who make total failures at farming, though they may have begun under very favorable circumstances.

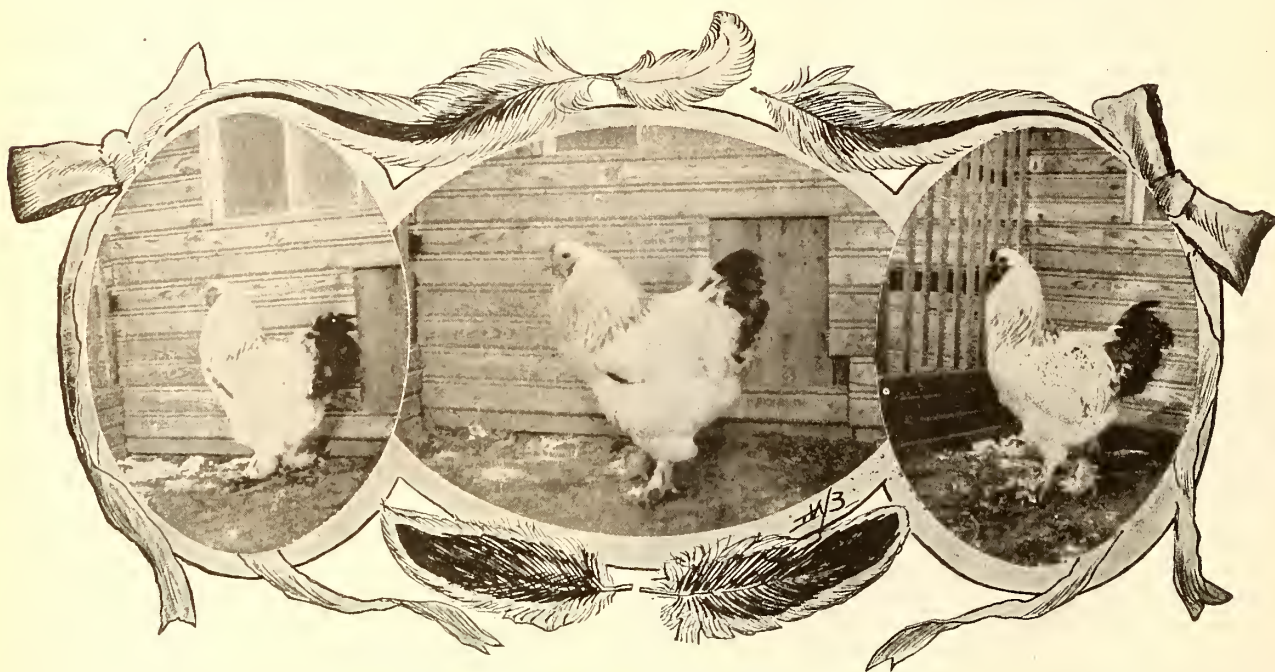

Then there is another class who perhaps has inherited a good, comfortable farm home, and by hard work and tight

the small chicks; disease comes and thins their ranks, and when the next season has rolled round they have made no advancement.

This is what we might call "spasmodic enthusiasm," and always leads to failure and misfortune.

Then, in order to attain success in the poultry business, we must carry our enthusiasm with us throughout the entire year—not for a few weeks now and then, but for fifty-two weeks every year.

We must have a peculiar liking for the work. To such an extent that we will find more enjoyment in looking after the wants of the poultry, and keeping everything in order, than we will in sitting around the fire on a cold winter's day, or on a store box in front of the corner grocery when the sun is shining warm in the springtime. Do not think because there are so many failures among beginners in the poultry business that you cannot make a success of it; for you certainly can if you are made of the right kind of material and have the staying qualities. But if you are lacking in these essentials, and have formed the idea that profitable poultry keeping consists simply of feeding hens, and gathering eggs,

LIGHT BRAHMAS, AS BRED BY HY J. BARNETT, WINAMAC, IND.

squeezing manage to support the family and keep the farm clear from mortgage. A great many people will look at this kind of a man and call him successful. But this is not the kind of success that I have in mind.

Any man who is endowed with health and strength and good, sound judgment should be able to make a good living, to say the least, for himself and family, with his bare hands. And the man who has several thousand dollars invested should certainly do more than this.

The young man who can buy a farm, provide a comfortable living for his family, and pay a few hundred dollars off the mortgage each year, never losing his enthusiasm until the last dollar is paid, has, in my estimation, reached a high degree of success. It is the duty of every able-bodied man, while yet in the prime of life, to make some provision for the time when misfortune and old age shall overtake him, which time is sure to come, though it may look a long way off to us at present.

Failures are no uncommon occurrence among beginners in the poultry business. There is perhaps no other occupation which requires more stick-to-it-ive-ness, united effort of brain and muscle, and constant enthusiasm, to make it a financial success, than poultry raising.

I dare say there are but few who will read this article who have not at some time seen those who, at certain times, perhaps during the show season, break out into spasms of enthusiasm, and so long as they are in the midst of excitement, and in an atmosphere of enthusiasm, everything goes all right, and they make some wonderful resolutions.

But in course of time they lose interest, their resolutions are forgotten, they begin to neglect their poultry, especially

then my advice would be to let it entirely alone, and engage in some other employment for which you are better qualified.

WILL CLARK.

If the drippings of the fowls are not in normal condition, give a teaspoonful of soda water (bicarbonate) to each afflicted bird. In making the water use three heaping teaspoonfuls of soda to a pint of water. Follow with a one-grain quinine pill each night for three nights in succession.

While we are opposed to give a well fowl medicine, we can see no reasonable excuse for allowing the first symptoms of sickness to develop into disease.

PRIZE ARTICLE DEPARTMENT

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communication about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. All articles must be written on one side of the paper only. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

The first prize in the contest this month has been awarded H. M. Barthwick, Boulder, Colo., and second prize to Mrs. Frances Tallon, South Haven, Mich.

FIND THE CAUSE.

When anything goes wrong about the poultry yards find the cause. If the eggs are infertile and do not hatch, if the chicks die off, if the hens get sick or do not lay, in fact, if anything happens that is not as it should be, stop and find the cause of it as soon as possible that you may remedy it and avoid its happening a second time.

Some people talk about "luck"; they have "bad luck" with raising the chicks; they "never have any luck" trying to get winter eggs; they have "bad luck" here and "good luck" there, and to hear them talk one would think the poultry business was all "luck," good or bad, mostly bad. But this is not true. Everything in this world follows the laws of cause and effect. A certain cause produces a certain effect, and every effect of any kind is produced by a certain definite cause or causes. This is as true with poultry as with anything else; and what is more true, most of the causes in the poultry business are well within the control of man. It is true that weather conditions and the peculiarities of heredity cannot be completely controlled by him, and that sometimes a hen becomes "ornery" even with the best of care, and it may be that one may call this "luck"; but on general principles "luck" is a term which does not belong to a poultryman's vocabulary. Everything has its cause, most of these causes are within one's control, and the chief business of the poultryman is to arrange the proper causes that will produce the desired effects—good stock, healthy birds, full egg baskets. In just the proportion that he is able to know and control the causes, in that proportion will he attain success.

To illustrate: I had a letter from a friend recently who said he had lost 150 half-grown chicks "from a cause yet unknown." Too many poultry keepers have such losses and are too shiftless to try to remedy them. They make the same mistakes year after year and wonder why they do not prosper. It is only by stopping the little leaks that one can succeed; and to do this he must study carefully each case as it comes up that it may not happen a second time. Study your fowls; talk with your friends and read your poultry literature, and you will usually find the cause.

Sometimes there are several causes and one has to look carefully. If you do not find that one method helps out try another. One friend told me he didn't believe it paid to try for winter eggs. He had tried it one winter, building an expensive, double-boarded house, warm in every way, but the eggs didn't come; and he concluded that winter eggs didn't pay. On questioning him further I found that among other things he had twice as many hens in the house as he ought to have had, which was sufficient reason for no eggs. He had arranged one cause to produce eggs, but had failed in others. If changing one cause does not produce the desired effect try another, and keep on studying and trying until you do get the desired effect. It may mean a little time and trouble, but it pays. Do not think your hens are "doing about good enough;" do not be satisfied until they are doing all that can be expected from them. Do not stop studying cause and effect and changing methods until you can hatch and raise as large a percentage of good chicks as is possible to do, until your hens lay as well or better than the best, or until your profits reach the highest mark. It pays to go into the business for all it is worth.

Boulder, Colo.

H. M. BARTHWICK.

DON'T KICK.

We all like to win at a poultry show, but it's impossible for every one to do so. I was in a position this winter at a poultry show to see a good deal that was "doing" at an

exhibition. It was the first show of the organization, and the judge was highly spoken of, in fact one of the prominent poultry judges.

Birds were brought there in all kinds of condition and coops, in most first class. Some did not expect to win anything, so they said, looked happy and rather expectant during the first days of the show, but after the judge had finished and gone you could tell as soon as you saw a face whether he was a winner or not.

Observation has shown me that we win firsts at one show; at another, equally as good and as well conducted with as popular judge, we get second or third. May be judges' tastes differ in color, or the condition of the bird is not quite as good, but it is certainly through no malice of any one. One might as well take their medicine and look pleasant as to go around with a frown. No one can always be first prize winner. He may have a bird that always has, because it is rugged, stands all kinds of weather and shipping.

Change makes a great difference in the looks of fowls. We breed S. C. Buff Orpingtons, and they look 90 per cent better at home in their own pen, in their own home surroundings, where they are happy and contented. If it is comparison you often loose if your bird is wild. Even by score card your best bird may loose a sickle feather or the comb get scratched in getting them cooped; so many little things may occur that you do not expect. Now do not let us kick if we do not get the prize we thought we ought to have. It does no good to any one. It don't add one to your score card or to your looks. Your friends who have worked hard for this show are hurt,

First prize White Wyandotte pullet at Eldorado, Ill., Feb. 10, 1905. Owned by Warren Sloan, Eldorado, Ill.

and you may have indigestion by letting your temper get the best of you.

Better say: "Well, I'll just try it at some other place." Now if the kicker should and the bird or birds meet the same fate, then what? But usually the kicker kicks and broods over his own loss, never tries to see if he is right or the other fellow.

Some one else never does as we would do, but are often afraid to take hold and help by giving his advice and help, by giving his ideas when things are being done, but waits until it's all over, then says: "I could have done better than that." Well, why didn't he? It's a little like putting flowers on the remains of a friend from whom he had withheld them in life.

We must have shows and birds to show or we will never get before the public. Shows and advertising are our only way to success. If we are to kick at everything who is going to get up these shows? If no judge suits why just bury yourself alive and let those who can be pleased, even if disappointed, have your standing room. We would rather have one smiling helping face than fifty frowns.

The judges place is no sinecure. He may feel that he would like you to win, but he has a conscience, and—well—he has marked the other fellow higher than you. Maybe he don't know yours from any one else's. I think they seldom, if ever, do until after the scoring is done. Then certainly he gave you fair play. It is only one man's judgment, as I have heard practical men say. Anyhow, if you feel that it's not been good, try another, but don't kick. Be a good fellow. Help the world to move along smoothly. Don't put ties across the track to wreck the train, but keep it going along; add your strength of mind to the other's judgment and keep the ball a rolling, and see the many happy hours you will have to your credit.

GUARANTEED SUBSCRIBERS.

To our subscribers the display advertisers of the American Poultry Journal are guaranteed; that is, if any advertiser using display space in these columns is proved to be a swindler, the American Poultry Journal will make good to the subscriber the amount lost. We do not guarantee that men in good standing shall agree in their opinions; we do not guarantee nature against infertile eggs, but we do agree that in case a downright swindler succeeds in swindling a subscriber, we will reimburse that subscriber and publish the rascality of the swindler. We ask, in consideration of this guarantee, that our subscribers, when writing to an American Poultry Journal advertiser, say, in every case, "Saw your ad in the American Poultry Journal." In no case will this be to your disadvantage, while in many cases it may serve you well. In either event we shall be obliged to you.

Harrison Weir Dead.

Harrison Weir, known to every English fancier, breeder and judge, and to thousands of Americans, passed away peacefully on the fourth of January at the hale old age of 82. Mr. Weir has lately been engaged in writing or helping compile the Poultry Book, issued by a large firm in New York. It took him twenty years to write "Our Poultry and All About Them." He was a splendid writer on poultry, an excellent illustrator of poultry works and journals, an author of wonderful ability when writing of English animals, cage birds and pets. Mr. Weir was the originator of the Crystal Palace cat show, a very prominent judge for many years of both pets and poultry. He is best known as a poultry writer, fancier, breeder, judge. As a journalist Mr. Weir was one of the original staff of the London News. For

many years he was connected at various times with the London Field, Poultry and other periodicals not closely akin to the poultry and live stock press. For some time he was a designer of racing cups for London's largest silversmiths. All who knew this kind and loving soul knew its sterling worth and of its kindness. Those of us who have met him are well aware that his influence was ever for good and the trend of his thoughts uplifting. Mr. Weir is one of the few who have helped the dignity and blessed the fellowship of the fancy for his having lived among us. Nature was kind enough to leave him 'mongst us to a ripe age and then lift his beautiful and tender soul to herself. Weir was one of whom it may be said that we are better for his having lived.

More Poultry Education.

The Young Men's Christian Association of Portland, Oregon, are giving a series of short courses in practical courses and one of these will be devoted to poultry culture. A six weeks' course with two lectures per week will be the one taken. Among the subjects handled in this term will be incubation and brooding, chemistry of poultry foods, diseases of poultry, dressing and marketing, exhibiting and preparing, forages for yarded fowls, poultry advertising and care of inquiries. C. D. Minton, editor of the *Northwestern Poultry Journal*, will have charge of the course, and Professor Pernot, Frank Lecktenby, F. H. Page, Judge Ladd, Professor James Withycombe, Mr. Chapman and A. R. Badger, all high in the business on the coast, will give the lectures. The course will conclude with a visit to a big plant near Portland, where methods and general poultry management will be studied. This is a good idea and the second course of the kind to have been given, the first being successfully tried in Boston, according to our friend John H. Robinson. We shall look for further remarks on this course by the *Northwestern Poultry Journal* and then give them to our readers. Poultry education is a thing we can use much of—and the more dished up the better the industry will become.

Where Our National Bird Gets Its Name.

A French writer has recently prepared a bulletin for his home government on the turkey, telling where the turkeys originally came from and giving other interesting information concerning the hatching, breeding, and rearing of these strictly American fowls. The turkey is unquestionably an American bird and not Turkish, Indiana, or Asiatic. All the domestic varieties of turkeys are derived from the wild species formerly plentiful in Ohio and the Missouri Valley, and still found in small flocks from Kansas south to Yucatan. It is said by historians that the Mexicans had begun to domesticate the birds when Cortez was going through their country. Cortez declares that he discovered them in the famous Montezuma's gardens. The Spanish sailors who took the first fowls to the old world believed them to be a sort of pea fowl related to the European variety. The Spanish called them Indian peacocks in honor of the Indian country which it was thought that Columbus had discovered. When turkeys

were carried into France they were called Indian fowls, according to this French writer. They appear to have originally come about 1520 in the vessels of merchants touching Spain on voyages to and from Turkey and the Levant, hence they were supposed to come from Turkey and Asia. The legal difficulties of trade with Spain doubtless made their importers prevaricate in saying that they were from Turkey instead of from Spain, hence the English market men gave them the name of turkeys. In England they at once found favor with lovers of fowl flesh. Turkeys for a long time were very cheap in England after once introduced. In 1550 they cost about four shillings each, while cranes and swans, which were also used for big banquets and spreads at the king's board, were ten shillings each. A book of directions for rural work published in Paris in 1578 contains rules and suggestions for the breeding and rearing of turkeys, which book shows a very accurate knowledge of their peculiarities. It has been said that a prophet is without honor in his own country, but the turkey seems to have been at least an exception to this old saying, inasmuch as he has become a national bird with special honors in his own country, at least during the holidays.

Give Us More, Brothers.

Some of us may do more than our share, but no one of us can do much for the good poultry and more of it idea. On the thirteenth day of December, the Connecticut board of agriculture threw its whole session into one grand poultry school and experience meeting. Mr. A. F. Hunter, well known to many fanciers and breeders, gave a fine lecture on dry feeding of fowls from babyhood to maturity. In his talk Mr. Hunter gave his own experience and that of others whom he is familiar with. Later in the day, Mr. T. F. McGrew, talked to a full opera house on the origin and development of poultry. He is one who can hold his listeners because of the interest he himself takes in it. The value of such lectures as these cannot be overestimated, especially when they are delivered to such audiences as greeted Mr. Hunter and Mr. McGrew. The fact is that we need more of this kind of meetings. Real revivals and awakenings in things poultry cannot hurt the poultry interest. And the most lamented fact is that we have too few talkers and lecturers who are capable enough to think and talk on their feet before intelligent audiences. The government and the experiment stations have none too soon gone to work to give us poultry educators. We can use them all.

Imperial Visitors.

About the most noted visitors that have ever entered the portals of any poultry exhibition, be it large or small, were the Imperial Chinese Commissioners, representing the blood of royalty and other excellencies of the mammoth empire of the Orient, who during the week of January 19-20 visited the Nebraska state poultry show at their only inland stop of great importance in their trip across the American soil. The viceroy of China in his own country is rather more of a power than ordinary among us believe, and incidentally he is one of the Imperial Commissioners who are

studying American methods and occidental ideas. At Lincoln, Nebraska, this commission halted on their transcontinental journey long enough to be the guests of his excellency, John H. Mickey and Hon. D. E. Thompson, lately appointed minister to Mexico. The commission visited the meetings of allied agriculture and the corn and poultry exhibits. The Langshans and Chinese geese, both white and brown, were instantly recognized by the visiting orientals; and a wag made the remark that the geese as quickly recognized the famous Chinese commission! Be this as it may, the commission were wondrous pleased with the incubators in operation and the brooders at work caring for the chicks. They avowed their purpose of introducing better poultry and hatching machines into the celestial empire, which, thanks be unto Confucius, was taking more rapid strides in the uplift of agriculture. At Lincoln the commission visited the state farm and saw its live stock feeding and growing methods, which interested them greatly. Most western poultrymen are farm owners, hence the week of allied agriculture in the capitals of Kansas, Nebraska, Iowa and Missouri is as great in importance as the state fairs. Nebraska welcomed the Celestials.

A Toast—That's All.

Some one has said that after the novice graduates through the various grades of hen culture and spends enough years to attain the title of breeder, that his work and study is only a stepping stone to the breeding of Barred Plymouth Rocks. After being called to our attention we easily found that many instances supported it. There seems to be a fascination in the study, mating, rearing of Barred Rocks that gets hold of a fancier more deeply as the seasons pass. Then the desire to get among the giants, to work until one of them, to compete with them, matching honest skill in breeding and exhibiting, gets a-hold and never releases its grasp. Wherever fowls are

known the name Plymouth Rocks is familiar and in thousands of instances no other name has been heard. The novice who begins with a solid colored breed looks down the Barred Rock aisle and longs for a seat among the mighty, the pillars of poultrydom! Getting the bars square across the feather, shaft and all, breeding them down deep to the hide and through the under color, and in males an even colored surface from hackle to tail—this makes it but a test of the skill the breeder encompasses. Others come and go—but the Barred Plymouth Rock and its army of breeders, fanciers and followers will go on forever. May their shadows grow denser, their barring go deeper, evenner and snappier, and their hold on the fancy go ever forward.

Strengthening the American Poultry Association.

The ultimate effect of the legislation enacted by the American Poultry Association at the annual meeting held at Cincinnati last month ought to be far reaching, and of great good to the association. This meeting was controlled and the legislation directed by that element which stands for progress along businesslike, wise and conservative plans. It was the purpose of a majority of the members present to enact legislation which would result in placing the association upon that high plane where it belongs. The association is so officered that the executive will be a unit in pulling for the proposed betterment.

For the first time within years the association's treasury contains a nice sum of money. There is no indebtedness. The possession of money gives a wise man courage, and places in his hands the sinews of war. The association is better prepared, because of the possession of this money, to extend its usefulness. We believe that a wise business policy will be pursued. Because the association has a surplus in

DEATH TO LICE

powder is the safest and most certain louse killer on the market. There is no getting away from it. Perfectly harmless to the user but sure death to vermin and lice. They cannot live were it is. Can be sprinkled on from the can or used in liquid form for spraying roosts and perches. Lambert's Death to Lice

Makes Poultry Pay

better dividends by keeping fowls in clean, cheerful condition.

THE BEST HE EVER USED
BATH, N. Y., SEPT. 23, 1904.
D. J. LAMBERT,
DEAR SIR:—

I have used the powder a long time and call it the best thing I ever used. A louse can't live where you use it.

ORIS BARNES.
Put it in the nest when you set your hens and get more chicks. Make the other hens contented. Sprinkle the powder in the fluffy feathers of your layers and spray the roosts with Death to Lice Liquid. Kill head lice on young chicks with Death to Lice Ointment. It's safe and sure. Prices, 100 ozs. \$1.00; large sample 10c. "Pocket Book Pointers," Free.

The O. K. Stock Food Co.,
408 Monon Bldg., Chicago, Ill.

"AMERICA'S BIG FOUR GREAT AMERICAN HENS"

The hens that lay, the hens that weigh and the hens that pay. "Rankin's Royal Strain" of "America's Big Four"—Barred, White and Buff Plymouth Rocks and White Wyandottes, are bred to win and bred to pay; bred for quality in every way. 1200 choice selected specimens that are line and pedigree bred by the trap-nest system from America's greatest sires and champions. Catalogue pronounced the neatest, most complete and business-like ever gotten up; sent free, together with most beautifully illustrated 1906 mating list if you mention A. P. J.

H. P. Rankin, B. 61, Hartington, Neb.

O. K. ROUP CURE

should be kept constantly on hand by every poultry raiser. It is not safe to be without it. Promptly cures Roup, Canker, Colds, Catarrh, and will reduce swelled head and eyes in a very brief time. Save yourself loss by preventing disease in your flock. Mailed postpaid for 50c.

THE O. K. STOCK FOOD CO.,
408 Monon Bldg., Chicago, Ill.

the treasury is no cause why it should be expended ruthlessly.

The appointment of a committee, composed of the president, secretary and twelve members of the association, for the purpose of revising the constitution and by-laws of the association, is, perhaps, the most important action taken at the Cincinnati meeting. This committee is composed of men of ability and experience. It will be their purpose to report to the annual meeting a constitution and by-laws which will allow the American Poultry Association to extend its scope of authority and usefulness. "Do not these things in my name" is an order which will be issued by the association to a large number of persons now connected with the poultry business—and the command will be enforced.

In a word, the American Poultry Association is to be reorganized to meet the demands of the times and that it may completely represent the great industry for which it stands.

Lewis Wright Killed.

Mr. Lewis Wright, the widest known writer on poultry subjects in the world, was killed by a fast express train while he was crossing the line of track in the village of Saltford, Bristol, England. Mr. Wright was sixty-seven years of age and resided at the Tunnel House, Saltford, for a large number of years. For the past four years he held the chief position on the editorial staff of Messrs. John Wright & Co., which firm his father founded. Mr. Wright's "Book of Poultry," published over thirty years ago, did more to encourage the breeding of poultry scientifically than any other one publication. He also wrote "Wright's Practical Poultry Keeper" and a work on pigeons and one on rabbits. During the late sixties and seventies he was one of the foremost poultrymen known and the leader in England. He has been connected with England's leading poultry journals at various times. In 1901 he finished his "New Book of Poultry," which is the biggest and most thorough poultry work ever done by one man. The latest piece of work to come from his pen is the Poultry Club's Standard, just recently issued. Thousands of the readers of Lewis Wright's works and occasional articles thought him dead, but this was largely because of his very retiring disposition and conservatism. The English speaking world has lost a long and ardent poultry champion in Mr. Wright. He will be mourned by many who knew him and not soon forgotten. The works he gave to the fraternity will live forever.

Club Catalogues.

We are in receipt of an annual catalogue of a specialty club, with a request to announce it.

This we will do, but we cannot refrain from making some comment upon it, even at the expense of bringing down upon our heads the perhaps well-intended criticism of those who are responsible for the getting out of this catalogue. If representatives of any special variety of standard fowls could but realize the advantage of good printing and a handsome catalogue and the corresponding disadvantage and harm to the club, and practically the throwing away of money to get out a poor job of printing, they

would pay more attention to using the same amount of money and produce a good job that would be a credit to the club, and advance the interest of the variety that it represents. In this day of good printing there is absolutely no excuse for a specialty club putting out a poor job of printing that looks as though it came from a blacksmith shop instead of a job printing office.

These may be strong words of condemnation, but they are well-meant, and given for the deliberate purpose of stirring up the printing committees of specialty clubs to use better judgment in the production of a catalogue, largely upon which the success or failure of a club may depend.

Repeating what we said before, the same amount of money judiciously expended with a printing house that can do good work will accomplish wonders for a club.

We are not representatives of any job printing house.

The Season's Supply and Demand

Throughout the West the opinion among judges and breeders, is that there are no screamers in Barred Rocks this season, which makes a greater than usual demand. Some few declare that the crop was blighted, frost-bitten or damaged by heavy spring rains. Others say that one or two who go on year after year producing good ones have the usual number which, of course, only sharpens the appetite as there are not enough to go 'round. As a rule every early show has its plums, or pippins, as they are called this season—but so far exhibitions have failed to produce what is generally accepted as being better than the results of the last. Who can grow them year after year reaps the big reward in scant season. Barred Plymouth Rocks above the average seem to be a standard commodity and prices are always up. The same feed that makes a growthy, healthy scrub will make a good Plymouth Rock, or an exhibition bird of any other variety. No matter what the breed, the demand for toppers is always ready to take them at the producer's price; all of which goes to clinch the saying that there is money in the hen-house. The demand is for better breeders; for men who can use sense and brains to produce good birds every year. They need not own a farm, or invest ought but their skill. Getting money out of the hen-house is but first getting knowledge and well tilled brains to produce something worthy of a hen-house. Have no fear that the demand will ever die—the only thing to kill it would be no supply!

Geo. D. Holden, who retires from the presidency of the American Poultry Association July 1, 1906, and by virtue of his holding and the constitution becomes chairman of the advisory board for the ensuing year, won the confidence, esteem and respect of all members present at the Cincinnati meeting by reason of the able, fair and generous attitude he assumed as presiding officer. He handled this large, earnest and at times threatening meeting with the skill of a trained parliamentarian, with an eye singly to the good of the meeting. Once when some member questioned a ruling by the chair Mr. Holden said: "That may not be a correct parliamentary ruling, but it is right. I propose to give every man and measure in this meeting full justice." The character of the man was

here shown, and the statement was most vigorously applauded. Geo. D. Holden is one of the men whose connection with the American Poultry Association has made it strong. As president of the association he gave an able, fearless and productive administration. In entering upon the duties of his new office he does so with the well wishes and support of every member of the association which he has hitherto so well served.

* * *

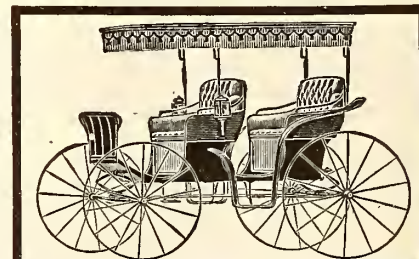

In England the "Christmas Annual" habit has been developed to such an extent that it is a necessity. The Christmas issues of the *Stock-Keeper* and other poultry journals is something gorgeous. They call a loft of pigeons a stud. The same name is given to a poultry farm's breeding birds. "He has a fine stud of Orpingtons," is a common expression. These big Christmas numbers are replete with halftones of the largest breeders' best birds, houses, flocks and give in their texts the important histories of all the fancy world. Americans are behind when it comes to Christmas numbers.

* * *

California is a great poultry state, but they are slow at turkey raising. At least this is the inference one would draw from the press dispatch dated at Waco, Texas. The wire says that carloads of dressed turkeys were passing through Waco on their way for the holiday trade in the big cities of California. What's the matter with California and turkey raising?

* * *

About December 20, 1905, Mr. John Wilkinson and wife, of England, sailed for our shores with a strong lot of Orpingtons for a well known American fancier. These birds were intended for exhibition at New York, but we have not as yet heard the particulars. Mr. and Mrs. Wilkinson sailed on the "Saxonia" and it is said arrived safely with their birds. We will give our readers news of this coup later.

CRITICS AND CRITICISM'S

What the Leaders are Doing.

Here is a statement of the facts as seen by a Britisher and published in *The Stock-Keeper*, of London, headed "Wanted—A Governing Body":

"On all sides it is admitted that the poultry fancy needs regeneration; everywhere there is an earnest desire for strong government; from all quarters comes a cry for genuine reform. The Poultry Club should hold in the poultry world the same position that the Kennel Club does in the canine world. It is a truism to say that the present position of affairs in dogdom is entirely due to the years of work done by the committee of the Kennel Club, and it ought not to be beyond the powers of the poultry fancy to secure similar good government. At present every club and every man in the poultry fancy is a law to himself; everywhere dissatisfaction walks supreme. The fancy is split up into innumerable cliques, which all work for their own ends; pressure of all kinds is put upon judges to prevent them from doing their duty honestly; exhibitors who study anything but their own selfish ends are the exception and not the rule. The reform must come from the fancy itself. If the large breeders, professional and amateur, show committees, and all who have the future of the fancy at heart, would pull themselves together and cooperate loyally to strengthen or reform the powers that be, they might, in the near future, constitute a powerful, capable, and disinterested body, which would deal fearlessly with the evils now rampant in the fancy. Is it too much to expect that the fancy will produce some "village Hampden" to right the wrong? We are practically at the end of the show season, and if those who protest loudest are really desirous of ending the present unsatisfactory state of affairs, let them pull themselves together, and give the poultry world the government it so sorely needs."

To say that the A. P. A. is the only poultry organization having its troubles is making the situation humorous. England's Poultry Club has its advantages and disadvantages. The one bad feature that impresses me is that no color or other disqualifications are known. Lately in looking over an English poultry weekly I saw quite a discussion concerning the feathered legs and feather pits being on an important winner at one of the larger shows. These were on a hen belonging to a clean legged breed. She was good in color and large, so said the judge, and the stubs did not hurt her. The Americans may be glad to have a rigid set of disqualifications—they are our only protection in buying; especially to the amateur do they become of great value. To remove disqualifications lets us to a lower plane of quality immediately and gives a better chance for hobby judging. More pulling together by the fancy in general would help matters. We see small shows, judged by the old Standard and weight not considered, all of which tends to create differences. One law, and that law obeyed by breeders and show committees would help some, too. Specialty clubs are in a better position than ever to make their own standards. If a club is managed on a broad basis, breeders of

that club's hobby will go by its decrees. If the White Wyandotte club made its own standard, no birds at small shows could compete for its ribbons under any other, and this would even up the quality of judging considerably. Judges will understand my point—so will showmen.

Editor Sledd, of the *Industrious Hen*, has been elected fellow poultryman to the University of Tennessee and will give a large portion of his time to the establishment of a school of poultry husbandry. Other states could have the same interest manifested by the agricultural college of their states if their fanciers would get together before the regents of the school. Mr. Sledd says:

"An effort will be made to so organize and administer the department that every farmer and breeder in the state will be better fitted by its establishment. Not only will the editor have ample opportunity to

the whole country over. I heard the wail he set loose in New York way out here in Indiana! Mr. Lamon lays all jokes aside and suggests that judges do more to lead the Standard than the Standard does to lead the judges! That's worse than more of it, Mr. Lamon. Our judges really do get pretty far apart between themselves and *with* themselves at times. He says that old breeders will learn a thing or two as well as novices, if the judging down at New York is not more consistent during the next half decade than during the past one. He declares that a few have given up the breeding of these idols of a poultry nation because of the latitude a judge allows himself in placing awards. All this on the color of royal zebra! For one I am anxious to see his article in the *American Fancier* challenged and otherwise digested. Further, they have as much trouble with their judging back in

BARRED PLYMOUTH ROCK PULLET.

This cut shows the wings of a pullet bred by M. M. Smith, Farmersville, Ill.

search into the causes of and the remedies for the diseases to which chicks are subject and the relative value of food relations as they relate to profitable egg production but he will have the support of the faculty of the Experiment Station in all of its departments. This will enable him to give the most accurate and latest information to his readers in all lines of work in which our breeders and our farmers are interested. The addition of a poultry department to the work at the Experiment Station is a recognition of the value of that industry and has been in contemplation for some time. Now it is an accomplished fact and every effort will be made to make the department of value to those interested in poultry culture and keep it fully abreast with the other departments of the institution."

Harry Lamon, known as a general hen crank and genial fellow chickenist, laments the poor Barred Rock judging

the effete East as elsewhere. He brings out a point or two that all judges could well ponder over: Consistency and judging by the Standard. He wants the interpretation of the Standard and not the interpretation of a judge's ideas.

I. K. Felch declares that the new standard for White Wyandottes hurts the variety because it states that the specimens nearest standard weight be given the preference. He says that better stamina, bigger eggs and growthier stock is all sacrificed in the effort to breed too close to the standard size. He says the rule to make the birds nearest weight winners or given preference is to aid the little birds! He further states that the breeder who does not have a big per cent. of his birds grow over weight is a far-to-the-rear faucier and that it would be much better if all breeders could grow overweight birds.

SPECTATOR.

FOR NOVICE AND AMATEUR.

Reasons Why the Barred Plymouth Rock Attracts the Attention of the Amateur and Experienced Breeder.

The American poultryman is loath to let go the love of his heart—the noble Barred Plymouth Rock. Other countries may have this love for a spell, or that love for a season, but we go on in the same old rut with the same grand old fowl that has always held the sceptre of power, carried the crown and occupied the throne with such grace and elegance. "Why," I hear you ask, "does the interest in this fowl never wane, its splendor never cease to exist and its lovers' ranks grow?"

I'll tell you. It present opportunities; it makes reputations and smashes them, too! It carries those to fame who understand and use the possibilities it presents, and drags in the dust the mantle and toga of those who look lightly on the breeding of this idol of a hen crazy public! We will never get over our love for the Barred Plymouth Rock. To have produced one screamer is a feat; to have succeeded in producing both males and females means that sooner or later the poultry world will find it out; and then back to the tall grass slink the wolves that have been prowling about the door. I have watched breeders come and some go, but have never heard of, seen, nor felt a glutted market in the line of tip-top, real high-class Barred Rocks. And we need never fear an over-supply. Not enough amateurs and novices put themselves wholly into the work to ever become breeders. And then we must have too many good breeders to overstock the market. Too many amateurs and novices become discouraged before even making a creditable start. They do not understand the principles of breeding any class or species of live stock; hence by not undertaking a thorough course of study at the beginning they welcome failure from the first. No one who knows anything about the producing of good Rocks will tell or can tell another about it. If he can tell it he will not, for fear that another learns it; if he would tell it he cannot, for language fails him, as it

were. 'Tis ever so in all things—and the jolly old world wags on; that's all.

The production of Barred Rocks is a science—and a delusion. For when one thinks he has the secret of mating and breeding safely hidden away within a secretive breast, he uses it—only to find that he doesn't know near as much about it as he thought he did. Ask a Latham, a Hawkins, a Bright, a Gardner, a Thompson, a King, a Bradley, a Schwab, a Shellabarger, a Palmer or a Tibbetts, if I am not right!

The amateur does not as a rule study his Standard. He does not study the breeders' methods who are succeeding. He is prone to rely on self. And how natural this. I gather my deductions in the show-room and 'mongst fanciers. Did you ever go into any show-room where no one was found who did not thoroughly understand his birds? I see them in every show I attend in more classes than one. As long as any fancier does not know what a good bird consists of, that long will he be without the knowledge that is the foundation of all breeding and breeders. Who can produce an ideal bird or one approaching the ideal when he has no ideal in mind? Can a builder construct a house when he knows not what his plans are? Can a judge award prizes satisfactorily if he does not know the requirements of the breed and variety under consideration? The Standard *cannot* be applied or interpreted in as many ways as it is. The many interpretations of the Barred Rock Standard are something we should be ashamed of. The breeders who met in their little committee room knew when they formed the Standard what they wanted for a basis of judging, or for perfection. They are breeders who have given time, study, brains and a goodly part of life to the acquiring of this knowledge.

Only today I have been talking with a fancier of five years' work at mating Barred Rocks, and, bless me, he could not tell the value of the various sections as the Standard gave it. This is not necessary to the mating of them, but it is essential to a working knowledge of scoring and judging as it's done in a majority of the shows today. He was a hobbyist for color and though he had a half dozen good specimens to show for

the year's work not one of them had size, type or breed characteristics that would give them a shadow of a chance before the judge. He did not know a Barred Plymouth Rock when he saw it. That's my guess.

When breeders, fanciers and judges give their Standards more study the various types of Rocks will disappear and one will not see a lighter bird winning here and a darker one there. There is but one type of Rock as given in the Standard, and that is the correct one. Learn it if you would know Plymouth Rocks. This discrepancy in judges' interpretations of the Standard causes a tottering of confidence in the fancier and breeder; hence they should get together more and more as the show seasons pass.

Failure to know the Standard makes one novice want a dark cockerel. And to get it he throws distinctness of barring to the four winds. Another amateur says I like to exhibit under Judge So-and-So because he likes a dark pullet if she is not smutty, and her barring does not run together underneath. This fancier doesn't know what he's talking about, either. The Standard calls for narrow, parallel, regular, sharply defined bars that are dark, so dark that they only stop short of a positive black. These bars are to be on a plumage of grayish white. The spacing of the dark bars on this grayish white plumage is to be regular. I know a few judges who work by the Standard!

To illustrate more fully the point of this little preachment let me relate the story of a visit to one of the West's fancier's yards the past summer. This fancier had for five years or more been breeding from a recognized strain of Rocks. He considered that his males were too light a couple of years ago, so he purchased a crack cockerel and was going to do things—which showed him how easy it was to undo many things. He did not know what a good breeding female was, but he made up a pen for this bird, nevertheless. The result was just what the breeder reached before he reads my story of the result. His females were not dark enough, barred deep enough, nor male bred, or "cockerel bred," if you will have it that way. The cockerels from the mating were not as good as the sire—this goes almost with-

"NONPAREIL"

BARRED PLYMOUTH ROCKS

ARE BETTER THAN EVER

DEAR SIR:—The eggs purchased from you last season gave me the best stock I ever obtained, and I have bought eggs from nearly all the leading breeders. Yours truly, CHAS. J. TRUMP.

Salt Lake City, Utah, January 12th, 1906.

For years they have been one of the leading exhibition strains. We satisfy our customers in every sale, and if you are in need of exhibition or breeding birds we can satisfy you. Catalogue free. Eggs for hatching \$3.00 per 13, \$5.00 for 26.

SCHWAB BROS. - ROCHESTER, N. Y.

out saying. They were dark hens, thought the fancier; weren't they dark enough? I guess not; and for three years they had been getting lighter and lighter. Last spring a judge came to his place to help in mating, etc., and consequently sold three or four cockerel producing hens to the fancier. When they arrived, the first inclination was to send them back, but on second thought he penned them up with the cockerel the judge had selected, 'way out in the orchard. The best cockerels he ever raised came from the mating and I sent three buyers to these yards! This coming spring the dark pullets from this mating will be bred to their sire and the two best cockerels to the four cockerel bred hens. And this fancier is beginning to get an insight into the breeding of Barred Rocks. He

requires an accurate knowledge of the Standard, be the variety whatever it may. But no fancier needs more teaching on the fitting of show birds than the Barred Rock fancier; I say this taking the Rock fancy as a whole. In most every show from the big provincial exhibitions down to the local exhibit we can easily find too many poor birds. There is no reason for the showing of some, yes, thousands, of the washed out cockerels, dark, smoky pullets and general barn-yard barring that is often met. Ignorance of the demands of both Standard and breeder are the reasons for some of that low quality stock. We see a man here and there who will not accept the judge's score. His bird is medium light; is openly barred and poor next the skin. Probably he is worth 85 to 87½ points out of

Silver Wyandotte wing, showing the perfect laced wing bar and perfect secondaries and primaries, as bred by Jones, The Wyandotte Man, Paducah, Ky. Every male that heads a pen this seas on will be like above.

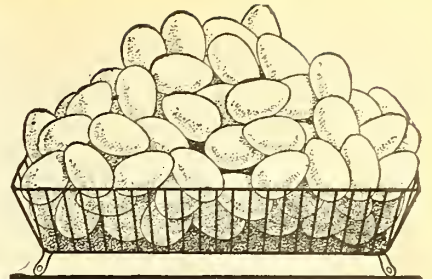

has found out that he knows nothing of Barred Rocks and he's studying to learn.

One source of failure on the part of the novice is his breeding his cockerel bred pullets or hens to a male from a strain that may not nick well with his hens. Very seldom does a mating of two highly inbred fowls of different strains prove a perfect nick. If your cockerel bred pullets are dark enough to produce good cockerels don't go outside the strain you are breeding to find a suitable male. More often the going away from certain blood lines means a clashing of blood than it does a gentle mingling. This will be found equally true in the breeding of exhibition pullets. Follow the lead of the big lights in hendom when new blood is needed and introduce it through the female.

The fitting of any bird for exhibition

the possible 100. Another says he does not breed the dark, closely Barred cockerels because all the demand is for light birds. (This remark was really made by a man who claimed to have bred Rocks for ten years or longer.) Of course he did not show the dark, closely barred birds—he couldn't produce them. And this is the way it goes.

No breeder can learn too much about his Standard or the demands of the Standard of his fowls. A judge remarked to me the other day that he was surprised to see so few new Standards among the officers of the various exhibitions! Learn your Standard—do not commit it to memory—know it in every detail. When the rank and file begin to learn the requirements of a breed, then will the breed prosper in their hands. SPECTATOR.

The seventeenth annual exhibition, New York Poultry, Pigeon and Pet Stock Association, in historic Madison Square Garden, January 2-6, was in number of entries and quality of stock, the largest and far away the best and most important show ever held by this, America's most popular and best patronized poultry association.

The figures above given tell something of the magnitude of this exhibition. Its magnificence cannot easily be described. The arrangement of the Auditorium of Madison Square Garden is ideal for the purpose of which it was used during the time of which we write. There is abundance of room, the great glass panels admit an abundance of light, the balconies afford space for the overflow entries and constitute a promenade where the visitors from the elevated points can secure a grand view of the entire show.

It is indeed a remarkable record which the association has to its credit. It is annually patronized by more exhibiting fanciers than is any other like association. Here the leading fanciers of practically every state in the Union meet and enter a contest, the findings of which most interest all the fanciers of the nation. If the seal of approval be placed upon a breeder's stock at the New York show, that stock is eagerly sought everywhere, so that the commercial value of a winning here can hardly be estimated.

Standing in the balcony, looking down upon the more than 6,000 head of fowls on exhibition, the thoughtful person caught some idea of the magnitude and importance of the Standard-bred poultry industry of America. Hundreds of specimens among those thousands represented the highest and best types of their kind yet produced by the fanciers and their commercial value amounted to thousands of dollars.

NEW YORK POULTRY SHOW

MADISON SQUARE GARDEN

JAN-2-6 1906

NEW YORK

Written by Thos. F. Rigg, Associate Editor AMERICAN POULTRY JOURNAL.

The management has been reduced to a science and a system. The right thing is done at the right time. There is no complicated machinery to get out of order and thus cause confusion. All awards are promptly posted.

We think one of the most remarkable features of this great show is the indomitable will, the wonderful executive ability, the ability to be absolute master of the situation, the power to handle the thousand and one annoying and perplexing details, possessed by Mr. H. V. Crawford, secretary and manager.

BARRED ROCKS.

Cocks, 46; Hens, 60; Cockerels, 106; Pullets, 87; Breeding Pens, 35 (175 birds); Display Pens, 1 (10 birds). Total, 484.

Cocks—Grove Hill Poultry Yards, 1-5; Bradley Bros, 2; Thompson, 3; Gardner & Dunning, 4.

Hens—Gardner & Dunning, 1-2; Latham, 3-5; Bradley Bros., 4

Cockerels—Bradley Bros., 1-5; Gardner & Dunning, 2-3; Grove Hill Poultry Yards, 4.

Pullets—Latham, 1-4; Gardner & Dunning, 2; Grove Hill Poultry Yards, 3; Bradley Bros., 5.

Pens—Thompson, 1-2; Gardner & Dunning, 3; Latham, 4; Welles, 5.

No other class in the great show attracted so much attention as did the Barred Rocks. Such a condition in Barred quarters had not existed for a great many years. Here were 484 Rocks, and the magnitude and quality of the display was something wonderful. Never before have the "Big Eight"—Thompson, Hawkins, Bradley Bros., Latham, Bright, Gardner & Dunning, and Welles—been in the pit at the same time at New York. This fact was sufficient to cause interest to center in the Barred Rock quarters. Some time ago word was sent out by the management of the National Barred Rock Club that it was the duty of every member to "stand up at New York and be counted." The "Big Eight" and a large number of other members responded, hence the best and largest showing of this variety ever made. The atmosphere was full of bars (and trills). All was expectancy. When the findings of the judges were made known, it was seen that the "Big Eight" had gathered all the regular and special prizes—every one of them. Then there was rejoicing within the fold. It was indeed a wonderful Barred Rock showing.

The National Barred Rock Club specials were won as follows:

Champion male, \$25.00—Bradley Bros.

Champion female, \$25.00—C. H. Latham.

Best display, \$25.00—Gardner & Dunning.

Second best display, \$15.00—C. H. Latham and Bradley Bros.

Third best display, \$10.00—E. B. Thompson.

Best pen mated for breeding exhibition males, \$15.00—E. B. Thompson.

Best pen mated for breeding exhibition females, \$15.00—Bradley Bros.

For best shaped male, \$10.00—E. B. Thompson.

For best shaped female, \$10.00—Gardner & Dunning.

For best colored male, \$10.00—Grove Hill Poultry Yards.

For best colored female, \$10.00—C. H. Latham.

The National Barred Rock Club specials were won as follows:

To the best Barred Plymouth Rock Cock, Hen, Cockerel and Pullet, the Club's National Silver Loving Cup, value, \$50.00—Gardner & Dunning.

For first prize Cock, \$10.00—Grove Hill Poultry Yards.

For second prize Cock, \$10.00—Bradley Bros.

For third prize Cock, \$10.00—E. B. Thompson.

For fourth prize Cock, \$10.00—Gardner & Dunning.

For fifth prize Cock, \$10.00—Grove Hill Poultry Yards.

For first prize Hen, \$10.00—Gardner & Dunning.

For second prize Hen, \$10.00—Gardner & Dunning.

For third prize Hen, \$10.00—C. H. Latham.

For fourth prize Hen, \$10.00—Bradley Bros.

For fifth prize Hen, \$10.00—C. H. Latham.

For first prize Cockerel, \$10.00—Bradley Bros.

For second prize Cockerel, \$10.00—Gardner & Dunning.

For third prize Cockerel, \$10.00—Gardner & Dunning.

For fourth prize Cockerel, \$10.00—Grove Hill Poultry Yards.

For fifth prize Cockerel, \$10.00—Bradley Bros.

For first prize Pullet, \$10.00—C. H. Latham.

For second prize Pullet, \$10.00—Gardner & Dunning.

For third prize Pullet, \$10.00—Grove Hill Poultry Yards.

For fourth prize Pullet, \$10.00—C. H. Latham.

For fifth prize Pullet, \$10.00—Bradley Bros.

For first prize Pen, \$10.00—E. B. Thompson.

For second prize Pen, \$10.00—E. B. Thompson.

For third prize Pen, \$10.00—Gardner & Dunning.

For fourth prize Pen, \$10.00—C. H. Latham.

For fifth prize Pen, \$10.00—C. H. Welles.

WHITE ROCKS.

Cocks, 30; Hens, 38; Cockerels, 52; Pullets, 45; Breeding Pens, 21 (105 birds); Display Pens, 1 (10 birds). Total, 280.

Cocks—Owen Farms, 1; McQuilliand, 2; Burrough, 3; Fairbanks, 4; Kahle, 5.

Hens—Rock Hill Poultry Farms, 1-3; McQuilliand, 2; Owen Farms, 4; Hillson, 5.

Cockerels—McQuilliand, 1-3-5; Peapack Farm, 2; Strong, 4.

Pullets—Owen Farms, 1-4; Peapack Farm, 2-3; Rock Hill Poultry Farm, 5.

Pens—Gray & Chalker, 1; Rock Hill Poultry Farm, 2; Bliss, 3; McQuilliand, 4; Owen Farms, 5.

There were strenuous times in the White Rock wards also. A battle was going on over there, in which were engaged the generals and the men of the rank and file. There were represented many of the leading breeders and exhibitors of White Rocks. Reputations were at stake; hopes were being held in check; ambition was causing men to be restless and anxious. Each exhibitor realized that a winning in any class here meant much, and that he was in the strongest kind of competition. It was a splendid array of White Rock quality and company, of which any man had a right to be proud.

BUFF ROCKS.

Cocks, 14; Hens, 16; Cockerels, 35; Pullets, 33; Breeding Pens, 6 (30 birds). Total, 128.

Cocks—Owen Farms, 1; Exmoor Farms, 2; Lapham, 3-4; Benedict, 5.

Hens—Jonas Hayer, manager, 1; Pensyl, 2; Exmoor Farms, 3; Latham, 4; Owen Farms, 5.

Cockerels—Tuttle, 1-3; Edgewood Farm, 2; Owen Farms, 4; Pensyl, 5.

Pullets—Tuttle, 1-4; Pensyl, 2; Fox, 3; Bohman, 5.

Breeding Pens—Fox, 1-2; Lapham, 3; Edgewood Farm, 4; Hamm, 5.

A large and very creditable display of this beautiful variety of the Rock family. We think the greatest improvement seen in Buff Rocks is in color of wings and tails of males, and in the cutting down of size and the overcoming of coarseness in combs. Some exceptionally fine specimens were shown.

SILVER PENCILED AND PARTRIDGE ROCKS.

Silver Penciled Rocks—Cocks, 7; Hens, 10; Cockerels, 7; Pullets, 16; Breeding Pens, 3 (15 birds). Total, 55.

Cocks—Rock Hill Poultry Farm, 1-2-

3; Columbia Farm, 4; Haslet & Son, 5. Hens—Rock Hill Poultry Farm, 1-2-4; Exmoor Farm, 3-5.

Cockerels—Rock Hill Poultry Farm, 1-2-3; Exmoor Farm, 4-5.

Pullets—Rock Hill Poultry Farm, 1-2-4; Exmoor Farm, 3-5.

Breeding Pens—Rock Hill Poultry Farm, 1-3; Exmoor Farm, 2.

Partridge Rocks—Cocks, 5; Hens, 6; Cockerels, 9; Pullets, 4; Breeding Pens, 1 (5 birds). Total, 29.

Cocks—Kahle, 1; Hillcrest Farms, 2; Meiskey, 3; Ainsler, 4; Van Sire, Jr., 5.

Hens—Ainsler, 1; Kahle, 2-4; Hillcrest Farm, 3; Van Sire, Jr., 5.

Cockerels—Kahle, 1-3-5; Schofield, 2; Wyckoff, 4.

Pullets—Kahle, 1-2; Van Sire, Jr., 3. Breeding Pen—Hillcrest Farm, 1.

These two varieties possess unusual beauty, and, as their blood lines are entirely new, they are very hardy and prolific egg producers. They created a sensation and were more than well received.

WHITE WYANDOTTES.

Cocks, 41; Hens, 51; Cockerels, 71; Pullets, 64; Breeding Pens, 21 (105 birds); Exhibition Yards, 3 (30 birds). Total, 362.

Cocks—Rock Hill Poultry Farm, 1-5; Havemeyer, 2; Dillugham, 3; Ocean Side Poultry Yards, 4.

Hens—Nixon, 1; Elm Poultry Yards, 2; Picturesque Poultry Farm, 3; Ocean Side Poultry Yards, 4; Elm Vale Poultry Yards, 5.

Cockerels—Rock Hill Poultry Farm, 1; Porter, 2; McGrann, 3; Owen Farms, 4; Havemeyer, 5.

Pullets—Owen Farms, 1-2; Elm Vale Poultry Yards, 3; Mrs. Turner, 4; Davenport, 5.

Breeding Pens—Havemeyer, 1; Rock Hill Poultry Farm, 2-3; Owen Farm, 4; Jackson, 5.

As pretty and fair and earnest a contest as was ever enacted in the famous old Garden, the ring wherein the strong men of White Wyandotte fame have for years decided the issue of so much importance to them and to the fancy generally. It was a most magnificent display of this very popular variety of the Wyandotte family. Here they were—Havemeyer, Owen Farms, Rock Hill Farm, Elm Vale Farms, Davenport, Orr, Keeler, Ocean Side Farm, Gedney Farm, and a very large number of other breeders of note. Here they placed their choicest specimens and like the true fanciers they are calmly awaited the decision of the judges. The favored few who won are to be congratulated. It was in each case a great victory. The quality of the winning specimens was something

nearing perfection. Many extra choice specimens were among the large number of birds which could not be placed. The White Wyandotte will retain its firm grasp on public approval and appreciation if the type such as won at New York be preserved. No higher praise can be paid the New York winners and the men who bred them than this.

COLUMBIAN WYANDOTTES.

Cocks, 11; Hens, 11; Cockerels, 21; Pullets, 22; Breeding Pens, 10 (50 birds); Exhibition Yard, 1 (10 birds). Total, 125.

Cocks—McIntosh & Burgess, 1-4; Arnold, 2-5; Andruss, 3.

Hens—Richardson, 1; Andruss, 2-3; Arnold, 4; Corey & Keift, 5.

Cockerels—Brayton, 1; McIntosh & Burgess, 2-3; Arnold, 4; Thompson, 5.

Pullets—Arnold, 1; Andruss, 2-4; Richardson, 3; Davis, 5.

Breeding Pens—Arnold, 1-2-4; Orr, 3.

No other variety is going forward at such a rapid clip as are the Columbian Wyandottes. In our report of the Hagerstown show last fall we stated that "the Columbian Wyandotte is booming in the east, and we may expect

MADISON SQUARE GARDEN, NEW YORK CITY.

which prevents as
well as cures. Order
it to-day.

a large display of them at the New York show." But we were not expecting to see 125 head of these new candidates for public favor cooped in the Garden. The exhibitors were enthusiastic in their praise of these fowls, and their enthusiasm had the effect of making Columbian Wyandotte sentiment very general. They are a beautiful bird—the pure white and black in plumage making a pretty contrast. Then, too, they are full of utility, as any new breed or variety is very apt to be. The winners and others in the classes were well marked throughout. We believe that time will deal kindly with the Columbian Wyandotte.

PARTRIDGE WYANDOTTES.

Cocks, 25; Hens, 31; Cockerels, 27; Pullets, 28; Breeding Pens, 7 (35 birds). Total, 146.

Cocks—Doolittle, 1; Sites, 2; Hartman Stock Farm, 3; Macomber, 4; Rock Hill Poultry Farm, 5.

Hens—Doolittle, 1-2; Hadaway, 3-4; Macomber, 5.

Cockerels—Sites, 1; Hartman Stock Farm, 2; Leach, 3; Jackman, 4; Macomber, 5.

Pullets—Jackman, 1; Hadaway, 2-3; Hinz, 4; Wyckoff, 5.

Breeding Pens—Rogers & Packard, 1; Hadaway, 2; Wyckoff, 3; Hartman Stock Farm, 4; Macomber, 5.

Partridge Wyandottes always come out in large numbers at New York. It was the old fight again between the east and the west, and each section has good winnings to its credit. The Partridge Wyandotte is very popular, more so, it would seem, in the east than in the west, and good specimens demand big price. It was the opinion of all competent to judge that the showing here of this variety was the best so far made. Shape has been greatly improved, and we no longer see the over-large Cochinchina-shaped Partridge Wyandottes, which were so common a few years ago.

SILVER WYANDOTTES.

Cocks, 11; Hens, 10; Cockerels, 12; Pullets, 16; Breeding Pens, 4 (20 birds). Total, 69.

Cocks—Fisher, 1; Van Alstyne, 2; Crandall & Son, 3; Chase, 4; Alden, 5. Hens—Fernwood Farm, 1-4; Van Alstyne, 2; Beckett, 3; Chase, 5.

Cockerels—Steinmesch, 1; Matthies Bros., 2; Shick, 3; Chase, 4; Fisher, 5. Pullets—Shick, 1-3-5; Beckett, 2; Robinson, 4.

Breeding Pens—Jodrey, 1; Chase, 2; Davis, 3; Fernwood Farm, 4.

Silver Wyandottes were a fairly large class, and among them were some exceptionally good specimens in hens and pullets. The west and the east met in friendly competition here, as well as in a few other classes. There seems to be a growing sentiment in the east that the breeding for such wide-open lacing as we now have will cause serious trouble if continued. The winners here were all of the wide-open type, as they are in the west.

GOLDEN WYANDOTTES.

Cocks, 8; Hens, 10; Cockerels, 10; Pullets, 7; Breeding Pens, 3 (15 birds). Total, 40.

Cocks—Brundage, 1-3-4; Van Sire, Jr., 2; Smith, 5.

Hens—Old Mill Poultry Yards, 1-4; Brundage, 2-3; Mary N. Poultry Farm, 5.

Cockerels—Brundage, 1-3; Keller, 2-5; Smith, 4.

Pullets—Mary N. Poultry Farm, 1-3; Brundage, 2-4; Keller, 5.

Breeding Pens—Brundage, 1; Keller, 2; Mary N. Poultry Farm, 3.

A small class but no lack of quality. The perfected Golden Wyandotte of today is a thing of beauty. Here were found a number of the most prominent breeders, which means the quality of the birds shown was of the best.

BUFF WYANDOTTES.

Cocks, 6; Hens, 7; Cockerels, 9; Pullets, 10; Breeding Pen, 1 (5 birds). Total, 37.

Cocks—Fernwood Farm, 1; Clayton & Freeman, 2; Harrison, 3; Delberten Farm, 4.

Hens—Scott, 1; Harrison, 2; Preusser, 3; Delberten Farm, 4; Pensyl, 5.

Cockerels—Scott, 1; Bell, 2; Pensyl, 3; Preusser, 4; Edgar, 5.

Pullets—Bell, 1; Edgar, 2-3-4; Clayton & Freeman, 5.

Breeding Pen—Edgar, 1.

Buff Wyandottes, once one of the most prominent classes here, dropped down to 37 head, all told. The breeders represented have not only kept their stock up to the high point reached a few years ago, but have improved form and shape greatly. There were a number of very superior specimens here shown.

SILVER PENCILED WYANDOTTES.

Cocks, 6; Hens, 4; Cockerels, 8; Pullets, 7; Breeding Pens, 2 (10 birds). Total, 35.

Cocks—Wyckoff, 1; Fernwood Farms, 2; Eastman, 3; Richardson, 4; Benson, 5.

Hens—Wyckoff, 1-4; Eastman, 2; Fernwood Farm, 3.

Cockerels—Benson, 1; Cushner, 2; Robinson, 3; Wyckoff, 4; Summit Hill Poultry Farm, 5.

Pullets—Eastman, 1; Exmoor Farms, 2; Wyckoff, 3.

Breeding Pens—Wyckoff, 1.

There is progress being made constantly in these fowls. Now we find them, as a rule, up to Standard weight, whereas a short time ago it was common to find but few approaching the desired weight. There has been a betterment in color markings, too.

BROWN LEGHORNS.

Single Comb—Cocks, 17; Hens, 26; Cockerels, 39; Pullets, 51; Breeding Pens, 6 (30 birds). Total, 163.

Cocks—Grove Hill Poultry Yards, 1-2-3-4; Homeyer, 5.

Hens—Grove Hill Poultry Yards, 1-2-3; Exmoor Farm, 4; Brace, 5.

Cockerels—Brinkerhoff, 1; Bacon, 2; Grove Hill Poultry Yards, 3-5; Exmoor Farm, 4.

Pullets—Grove Hill Poultry Yards, 1-2; Tuttle, 3; Exmoor Farm, 4-5.

Breeding Pens—Bacon, 1; Grove Hill Poultry Yards, 2-3; Exmoor Farm, 4; Rosemary Farm, 5.

Rose Comb Brown Leghorns—Cocks, 11; Hens, 12; Cockerels, 17; Pullets, 12; Breeding Pens, 4 (20 birds). Total, 72.

Cocks—Lidell, 1; Pierson, 2-3; Welch, 4; Kulp, 5.

Hens—Kulp, 1-2-3-5; Inches, 4.

Cockerels—Lidell, 1; Bacon, 2-5; Pierson, 3-4.

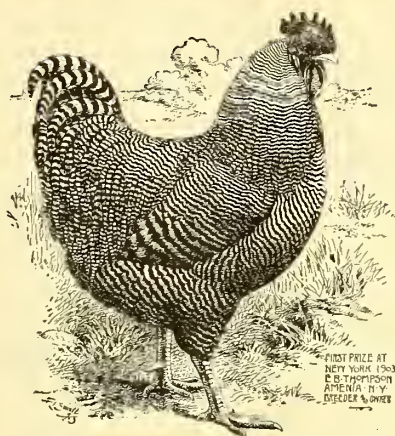

Pullets—Pierson, 1-2-4; Lidell, 3; Inches, 5.

Breeding Pens—Kulp, 1; Pierson, 2; Lidell, 3.

One of the largest, best and most important classes in the exhibit. Here we found the "new and revised edition" of this beautiful fowl, the standard requirements, difficult as they are

"RINGLETS"

ARE THE IMPERIAL BIRDS

First Prize "RINGLET" Cock at New York

THE THREE MOST SUPERB Barred Plymouth Rock Exhibition Pens on either Hemisphere were exhibited by E. B. THOMPSON at the recent New York Show, Madison Square Garden, January, 1906; winning first, 2d and three special prizes on Pens; the Harding Challenge Silver Cup for best Pen, and the American Plymouth Rock Club's grandest special prize for best pen mated to produce exhibition cockerels.

My first prize Silver Cup Pen was stamped with the seal of "Ringle" Perfection."

These three "**Ringle**" **Exhibition Pens** were the most striking feature of the most wonderful array of Barred Rocks the annals of time record. They represent the **cream of my long and rich experience**. The sun never before shown on Madison Square Garden when the great building held three such **matchless exhibition pens**; they were the triumph of the Fanciers' art.

My "**Ringle**" **cockerel** at New York winning the American Plymouth Rock Club's special prize for best shaped male is a perfect "Apollo," the **Ideal Barred Rock male** of the New Standard of Perfection.

The "**Ringle**" **breeding pen winning the Club's great special** offered for best pen mated to produce Exhibition Cockerels was declared to be the very acme of skill in mating, a revelation in the science of **Barred Rock cockerel breeding**. Matings made up of such birds as these and their blood must produce the great winners for next season's shows and future years:

EGGS from the best at usual prices; one setting \$5, two settings \$9, three settings \$12, four settings \$15. Many of the winners at the most important shows this season and for years back were from "**Ringle**" **eggs**.

Richly illustrated 36-page catalogue upon request; it is full of illustrations of **New York winners from life**. Elegant exhibition and breeding birds for sale in any number. Address

E. B. THOMPSON, Lock Box 510. **Amenia, Dutchess Co., N. Y.**

SEE MY AD ON BACK COVER PAGE

regarding color, having been met by a number of the exhibitors. In males the winners and a few others were of the best of color, the hackle and saddle requirements standing out prominently. In females the evenness of color, and of breast color was marvelous. It was a magnificent showing of Brown Leghorns.

WHITE LEGHORNS.

Single Comb—Cocks, 32; Hens, 39; Cockerels, 52; Pullets, 50; Breeding Pens, 20 (100 birds). Total, 273.

Cocks—Young, 1-3-4; Coates, 2; Elm Poultry Yards, 5.

Hens—Elm Poultry Yards, 1; Young, 2; Rock Hill Poultry Farm, 3-4; Hallock, 5.

Cockerels—Young, 1-4; Elm Poultry Yards, 2-5; Rock Hill Poultry Farm, 3.

Pullets—Young, 1-2-5; Elm Poultry Yards, 3; Wyckoff, 4.

Breeding Pens—Wyckoff, 1-2; Elm Poultry Yards, 3; Young, 4; Smith, 5.

Rose Comb White Leghorns—Cocks, 7; Hens, 8; Cockerels, 13; Pullets, 12; Breeding Pens, 3 (15 birds). Total, 55.

Cocks—Rocky River Poultry Co., 1-2-3; Ensign, 4; Porter, 5.

Hens—Rocky River Poultry Co., 1-2-4; Bonnie Brae Farm, 3; Meadow Vale Farm, 5.

Cockerels—Rocky River Poultry Co., 1-3; Bacon, 2; Wood, 4-5.

Pullets—Snow Flax Farm, 1; Rocky River Poultry Co., 2-3-4; Ensign, 5.

Breeding Pens—Rocky River Poultry Co., 1-2; Bonnie Brae Poultry Farm, 3.

The greatest collection of White Leghorns, both as to numbers and quality, ever found in an America show. A large number of the most prominent breeders and successful exhibitors were

here competing, and it will be seen that a winning in this case means much—very much. It is simply out of the question to attempt here to give a pen picture of the many exceptionally good Whites cooped. It was a contest long to be remembered, and will go down in history as a most important battle of the leaders.

S. C. BLACK LEGHORNS.

Cocks, 6; Hens, 11; Cockerels, 8; Pullets, 11; Breeding Pens, 2 (10 birds). Total, 46.

Cocks—Osborne, 1-3; Exmore Farm, 2; Wyckoff, 4.

Hens—Mosher Bros., 1; Wyckoff, 2; Davis, 3; Exmoor Farm, 4; Osborne, 5.

Cockerels—Osborne, 1-3; Davey, 2-4; Exmoor Farm, 5.

Pullets—Osborne, 1; Wyckoff, 2; Davis, 3-4; Davey, 5.

Breeding Pens—Exmoor Farm, 1 (other pen winnings not obtainable).

There is a revival of interest in the Black Leghorn, a very beautiful and useful bird. The difficulty to secure yellow shanks has been largely overcome. Here were shown specimens nearly perfect in this respect. It is to be hoped that this variety will take the place it deserves to occupy.

S. C. BUFF LEGHORNS.

Cocks, 14; Hens, 12; Cockerels, 18; Pullets, 16; Breeding Pens, 6 (30 birds). Total, 90.

Cocks—Brace & Cornish, 1; Peer, 2; Jefferies, 3; Cornwall, 4; Wyckoff, 5.

Hens—Wyckoff, 1-4; Peer, 2; Hamm, 3; Brace & Cornish, 5.

Cockerels—Brace & Cornish, 1; Hiney, 2; Cornwall, 3; Peer, 4-5.

Pullets—Davey, 1; Wyckoff, 2; Campbell, 3-5; Brace & Cornish, 4.

Here, too, was shown great Leghorn quality. Nearly one hundred specimens faced the judge, and among them were some of the best ever produced or shown. It would seem as though the breeders of the Buff Leghorn have attained practically perfection of color, so far as surface coloring is concerned. Undercolor yet needs some attention.

LIGHT BRAHMAS.

Cocks, 8; Hens, 12; Cockerels, 18; Pullets, 16; Breeding Pens, 6 (30 birds). Total, 84.

Cocks—Klee Bros., 1; Shaw, 2; Nettleton, 3; Rollins, 4-5.

Hens—Rollins, 1-2-3; Shaw, 4-5.

Cockerels—Rollins, 1-2-3-5; Nettleton, 4.

Pullets—Rollins, 1-3-4-5; Shaw, 2.

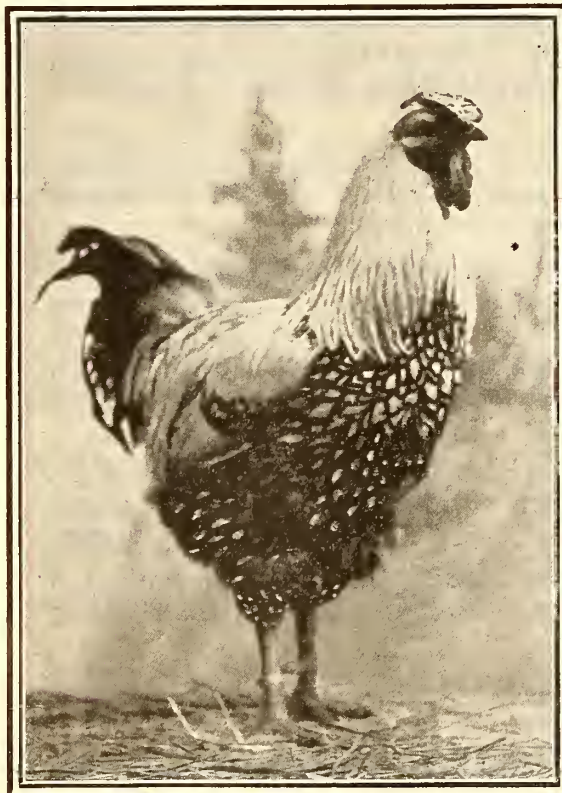

Pens—Klee Bros., 1; Balch & Brown, 2; Vail, 3; Nettleton, 4-5.

In numbers and quality one of the strongest classes shown at the Garden for years. It is pleasing to note the revival of interest in the grand old breed—one of the best and most beautiful of fowls. The winning birds were of extra fine quality. Nettleton, Shaw, Rollins, Klee and others who have kept the Brahma in place, fought out here a hot battle. The Cochized type of Light Brahma, which has been winning too often in the east, did not receive recognition at the hands of the judge in this case. This is certainly a good thing for the breed.

WHITE COCHINS.

Cocks, 4; Hens, 5; Cockerels, 4; Pullets, 5; Display Pens, 1 (10 birds). Total, 23.

All prizes to Anderson, except 1st hen and 5th pullet, which went to Clayton & Freeman.

FROM OCEAN TO OCEAN From Great Lakes to Gulf

My latest winnings at the greatest show ever held in the South, Nashville, Tenn., Jan. 1-6, 1906, where they had an entry of 2000 birds and competition very keen.

JONES, "THE WYANDOTTE MAN"

exhibited 28 birds and won 27 ribbons, including every first in the classes but two, and every second but one, making a clean sweep of first, second and third prizes in each class.

THE STRONGEST BLOOD LINES ON EARTH

have been winners the country over—the far East, the far West, the snow bound North and the sunny South. They are bred to win in any climate, bred to lay in any season; they are the business fowl of the world.

SILVER, GOLDEN AND WHITE WYANDOTTES

The pride of American production. I have the best lot of birds I ever raised.

2000 HEAD OF LINE-BRED BIRDS FOR SALE

Mated in pens, trios, pairs, or a line-bred male that will improve your flock, at prices that are in the reach of all.

EGGS FOR HATCHING

My pens are mated up and I am booking orders for eggs at \$3 for 13, \$5 for 26, \$15 per 100.

Send 6c in stamps for a copy of my handsome 36-page catalogue, printed in colors, with 60 beautiful illustrations of the winners of the world; a book worthy a place in any library; full of valuable information.

Six litters of beautiful marked Collie puppies, highest breeding the world produces, at low figures, quality considered.

R. E. JONES : The PINES
R. F. D. No. 5 :: PADUCAH, KY., U. S. A.

If a number of exhibits of Cochins like that here made could be put on in different parts of the country, this variety would certainly regain its old-time popularity. A well-bred and well-shown White Cochin is an exceedingly attractive fowl. The quality of the winning specimens was good. Shape and full feathering has been secured, and in all Cochin characteristics the Whites are now equal to the Buffs and Part-ridges.

BLACK COCHINS.

Cocks, 2; Hens, 2; Cockerels, 3; Pullets, 1. Total, 8.

Hech, cock, 2; hen, 2. Peoples, cock, 1; hen, 1; cockerel, 2. Millard, cockerel, 1-3.

The Blacks still lack Cochin finish. There seems to be but little interest taken in this variety. Its friends must unite and give it more attention if they really desire to preserve these fowls.

PARTRIDGE COCHINS.

Cocks, 6; Hens, 5; Cockerels, 5; Pullets, 4; Breeding Pen, 1 (5 birds); Display Pens, 1 (10 birds). Total, 35.

All prizes awarded Geo. W. Mitchell, other than 5th hen, 5th cockerel and 1st pen, which went to Hartwell.

One of the most pleasing and attractive exhibits in the show. The winning specimens were marvels of Cochin creation, and the plumage markings something wonderful. The first and second cockerels were pronounced by the judges to be the best ever shown at the Garden. The winning pullets were exquisitely marked, and of the most sought Cochin shape. This exhibit will do much for the good of this variety. We are informed that a strong organization was being formed for the purpose of placing the merits of these fowls more prominently before the public.

BUFF COCHINS.

Cocks, 6; Hens, 7; Cockerels, 6; Pullets, 9; Pens, 1 (5 birds). Total, 33.

Cocks—Oakland Farm, 1-2; Wyatt, 3; Ball, 4; Graham, 5.

Hens—Wyatt, 1; Oakland Farm, 2-3; Curry, 4-5.

Cockerels — Oakland Farm, 1-4; Wyatt, 2-3; Ball, 5.

Pullets—Wyatt, 1-3; Oakland Farm, 2-4; Ball, 5.

Pen—Lynhurst Poultry Yards, 1.

Nothing quite equals a full-feathered Buff Cochin as a show bird. This fact was again demonstrated here. Oakland Farm, Wyatt and Ball made a fine showing of these autoerats of the feathered tribe. The national Buff Cochin Club is doing good work, and this exhibit will be of great benefit to the Buffs and their friends.

DARK BRAHMAS.

Cocks, 3; Hens, 3; Cockerels, 2; Pullets, 3. Total, 11.

Cocks—Williams, 2-3; Leach, 1.

Hens—Williams, 1-3; Leach, 2.

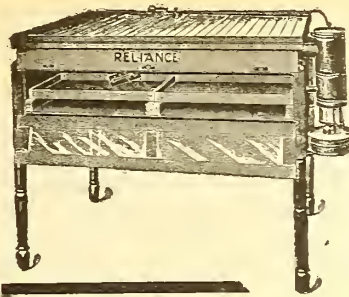

Cockerels—Leach, 1; Williams, 2.

Pullets—Williams, 1-3; Leach, 2.

To the fancier viewing the Dark Brahmas here the question naturally arises: "Why are not these fowls more popular." Nothing shown, nothing in all fowl creation, is more beautiful than a clear-cut, steel-gray, dark Brahma. And yet but few people, comparatively, want them. The specimens here shown were of exceptional quality.

BLACK LANGSHANS.

Cocks, 5; Hens, 7; Cockerels, 6; Pullets, 6; Breeding Pen, 1 (5 birds). Total, 29.

HOW TO BUILD AN INCUBATOR and BROODER

It's easy with our COMPLETE ILLUSTRATED PLANS. A ten-year-old boy can readily follow them with success. They show you every stage of construction, step by step, in nearly 100 half tone illustrations. They contain complete specifications for building the famous PEERLESS INCUBATORS AND BROODERS. Every feature is clearly pictured and thoroughly explained, making it possible for ANYONE to build an Incubator and Brooder possessing exclusive features and advantages which are unequalled by any machine on the market. We supply ALL PARTS not possible for you to make, such as lamp, regulator, tank, heater, legs, door, etc., at a very small cost and furnish the

Plans and our new Illustrated Catalog FREE

which contains our full line of Improved Incubator and Brooder Fixtures and Supplies, including our New

Acme Automatic Lamp and Compound Regulator

with combined damper and flame regulator, which SAVES ONE-HALF THE OIL. No danger from fire; can't overheat; no trimming of wicks; regulator controls both flame and damper. Can be attached to any make of incubator or brooder. If your machine is not working right our catalog will tell you how to remedy the trouble.

Salt Lake City, Utah, July 25, '05.

100 Egg Peerless Incubator built from our Plans and Fixtures

Equipped with Acme Compound Regulator and Automatic Lamp. Note combined damper and flame Regulation above

4 Peerless Incubators now and I want to build two or three more for myself. Plans and catalog are free. Address **H. M. SHEER CO., Dept. G, Quincy, Ill.**

Cocks—Deturk, 1; Remington, 2-4; Keasbey, 3; Gensemer, 5.

Hens—Remington, 1-4; Dakin, 2; Gensemer, 3; Keasbey, 5.

Cockerels—Remington, 1-3; Cundell, 2-5; Keasbey, 4.

Pullets—Remington, 1-2; Cundell, 3; Keasbey, 4-5.

Breeding Pen—Remington, 1.

Black Langshans were once one of the leading classes at Madison Square—in the days when Robinson and Kirby and Gray were giving them attention. A well-bred Black Langshan is a beautiful thing and the breed has much quality as a utility fowl. In the east there appears to be but little interest now taken in the breed. Splendid specimens were here shown.

S. C. BUFF ORPINGTONS.

Cocks, 21; Hens, 23; Cockerels, 39; Pullets, 39; Breeding Pens, 14 (70 birds). Total, 192.

Cocks—Owen Farms, 1-3; Willow Brook Farm, 3; White & Goodaere, 4; Vass, 5.

Hens—Owen Farms, 1-4; Worthington Poultry Yards, 3; Hooker, 2-5.

Cockerels—Owen Farms, 1-2; Willow Brook Farm, 3-5; Cook & Sons, 4.

Pullets—Owen Farms, 1; Willow Brook Farm, 2-4; Geduey Farm, 3; Bradley & Co., 5.

Breeding Pens—Gedney Farm, 1; Willow Brook Farm, 2-3; White & Goodaere, 4; Sherwood, 5.

Here was a battle royal, leading breeders of this now exceeding popular variety meeting with large strings of extra choice birds. Improvement in the color of these fowls is very marked. Shape has not been neglected and the class as a whole was one of great merit.

S. C. BLACK ORPINGTONS.

Cocks, 16; Hens, 17; Cockerels, 16; Pullets, 16; Breeding Pens, 8 (40 birds). Total, 89.

Cocks—Willow Brook Farm, 1-2-3; Cook & Sons, 4; Owen Farms, 5.

Hens—Willow Brook Farm, 1-2; Sherwood, 3; Owen Farms, 4; Cook & Sons, 5.

Cockerels—Owen Farms, 1-2-4; Cook & Sons, 3-5.

Pullets—Owen Farms, 1-4; Willow Brook Farm, 2-5; Woodstock House Co., 3.

Breeding Pens—Willow Brook Farm, 1; Owen Farms, 2; Cook & Sons, 3-4; Sherwood, 5.

A magnificent class. Here we have the best and most desired Orpington shape and form. In this respect the Blacks are a wonderful creation. They have the stamp of utility so strongly upon them as to attract the attention of all breeders and fanciers. Great interest was manifest in this variety. Exhibitors informed us that the demand for stock was becoming greater daily. The winning specimens were something heretofore unapproached in quality.

S. C. WHITE ORPINGTONS.

Cocks, 7; Hens, 13; Cockerels, 11; Pullets, 12; Breeding Pens, 6 (30 birds). Total, 73.

Cocks—Willow Brook Farm, 1-2-3-4-5. Hens—Willow Brook Farm, 1-2-3; Owen Farms, 4-5.

Cockerels—Willow Brook Farm, 1-2-3-4; Cook & Sons, 5.

Pullets—Cook & Sons, 1; Hyner, 2; Willow Brook Farm, 3-4-5.

Breeding Pens—Willow Brook Farm, 1; White & Goodaere, 2; Cook & Sons, 3; Glenbrecken Farm, 4; Owen Farms, 5.

A splendid showing for a new variety of fowls, which have the White Rocks and White Wyandottes as direct competitors. The White Orpington has a characteristic all its own and distinct from that possessed by the Rocks and Wyandottes, and seems to appeal strongly to the taste and fancy of a very large number of fanciers. They are sure to become very popular and to occupy a prominent place in the fanciers' yards and the show rooms. The winners were typical Orpingtons in form and shape and as white as snow.

S. C. R. I. REDS.

Cocks, 37; Hens, 13; Cockerels, 24; Pullets, 39; Breeding Pens, 6 (30 birds). Total, 143.

Cocks—Tompkins, 1-2; Green & Co., 3; Walking, 4; Reade, 5.

Hens—Reade, 1; Tompkins, 2; Seaman, 3; De Graff Poultry Farm, 4; Chapin, 5.

Cockerels—Chapin, 1; Seaman, 2; Reade, 3; Tompkins, 4; Westerman, 5.

Pullets—Reade, 1; Tompkins, 2; Seaman, 3; Chapin, 4; Wadsworth, 5.

Breeding Pens—Tompkins, 1; De

Graff, 2; Seaman, 3-5; Wadsworth, 4.

Is there something about Rhode Island Reds that charges the atmosphere with elements of strife? There "was something doing" in the Red alley, all the time. The hen awards were placed, taken down and replaced by another judge, two or three changes being made. The classes were large and many of the most prominent eastern breeders were competing. The Reds are being toned down in color very rapidly, and now present in the show room a very uniform appearance as to color. This was a large and strong class.

R. C. R. I. REDS.

Cocks, 13; Hens, 14; Cockerels, 25; Pullets, 19; Breeding Pens, 8 (40 birds). Total, 111.

Cocks—Tuttle, 1-3; Anderson, 2; Baerman, 4; Garrison, 5.

Hens—Tuttle, 1-4; Westerman, 2; Anderson, 3; Baerman, 5.

Cockerels—Awards not obtainable.

Pullets—Tuttle, 1-2-3-4; Anderson, 5. Breeding Pens—Tuttle, 1; Baerman, 2-3-4; Anderson, 5.

Men who were prominent in the fight so bitterly waged by the American Reds-R. C. R. I. Red factions here competed against one another, and for the time being a truce was declared and observed. The R. C. class was very strong and brought out what are perhaps a number of the best birds of this variety yet produced.

CORNISH INDIAN GAMES.

Cocks, 8; Hens, 15; Cockerels, 13; Pullets, 15; Breeding Pens, 3 (15 birds). Total, 66.

Cocks—Kirby, 1-2; Oakland Poultry Farm, 3; Willis, 4; Clayton-Freeman, 5.

Hens—Kirby, 1-2-3; Willis, 4; Oakland Farm, 5.

Cockerels—Kirby, 1-3-5; Oakland Farm, 2; Kienzle, 4.

Pullets—Oakland Farm, 1; Kirby, 2-3-4-5.

Breeding Pens—Carpenter, 1-2; Clayton & Freeman, 3.

Lovers of the Indians who have been mourning because of a lack of public interest in the breed should take courage. The showing here made was certainly one that attracted much attention and did much to give lovers of the breed renewed courage. There was the old-time quality in many of the speci-

BLANCHARD'S WHITE LEGHORNS

are no experiment, having been carefully selected and bred for over twenty years. No labor or expense has been spared in building up and perfecting this strain and while the production of large, pure white, fancy market eggs has been the main object, **standard qualities have not been neglected.** They are large, vigorous, active and handsome. Good winter layers and keep at it all summer. Unexcelled for introducing new blood or as foundation stock. **STOCK FOR SALE both OLD AND YOUNG. Eggs for hatching. Illustrated circular free. NONE BETTER ANYWHERE AT ANY PRICE.**

mens cooped, and the numerous Indian breeders in attendance had a love feast.

S. C. BLACK MINORCAS.

Cocks, 10; Hens, 16; Cockerels, 31; Pullets, 27; Breeding Pens, 7 (35 birds). Total, 119.

Cocks—Hilldorfer, 1-5; Trethaway, 2; Klee Bros., 3; Story, 4.

Hens—Klee Bros., 1-5; Hilldorfer, 2; Trethaway, 3; Billard, 4.

Cockerels—Trethaway, 1-3-5; McGrawn, 2; Billard, 4.

Pullets—McGrawn, 1; Trethaway, 2-3; Koehler, 4; Story, 5.

Breeding Pens—Trethaway, 1; Klee Bros., 2; Poplar Grove Farm, 3; Thompson, 4; Story, 5.

Always a large class, and this season larger and stronger than ever before. It was a contest between several of the leaders, with the reliable Geo. H. Northup acting as referee. To describe the winning birds would be to describe Black Minorcas falling but little short of Standard requirements. All agree that the first cockerel is the best colored cockerel of his class ever shown at Madison Square.

ROSE COMB BLACK MINORCAS.

Cocks, 9; Hens, 7; Cockerels, 9; Pullets, 9; Breeding Pens, 1 (5 birds). Total, 39.

Cocks—Northup, 1-4-5; Lindenwood Farm, 2; Collins & Son, 3.

Hens—Northup, 1-2-4-5; Collins & Son, 3.

Cockerels—Northup, 1-2; Lindenwood Farm, 3; McKittrick, 4; Collins & Son, 5.

Pullets—Northup, 1-2-5; Lindenwood Farm, 3; Collins & Son, 4.

Breeding Pen—Northup, 1.

The extensive advertising given this variety caused the exhibit to be inspected by crowds daily. There has been a marked improvement made in the shape and head points of the Rose Comb Blacks within the past two years. Combs have been reduced and shaped up; size of body secured; shape attained. Now the Rose Comb Black is of true Minorca shape and form, and the Hamburg-like comb has disappeared.

S. C. WHITE MINORCAS.

Cocks, 3; Hens, 4; Cockerels, 6; Pullets, 6. Total, 19.

Cocks—Clark, 1; Dunsmore, 2; Meiselbach, 3.

Hens—Meiselbach, 1-2; Clark, 3; Dunsmore, 4.

Cockerels—Clark, 1; Caverly, 2; Moonan, 3; Dunsmore, 4-5.

Pullets—Meiselbach, 1-2; Caverly, 3-4; Dunsmore, 5.

A small class, containing several specimens of exceptional merit. This is another variety of useful and beautiful fowls which the public does not fully appreciate.

HOUDANS.

Cocks, 8; Hens, 11; Cockerels, 4; Pullets, 3; Breeding Pens, 1 (5 birds). Total, 31.

Cocks—Morris, 1; Palmer & Son, 2; Porter, 3; Park View Yards, 4.

Hens—Morris, 1; Park View Yards, 2; Jones, 3; Glen Brook Farm, 4.

Cockerels—Porter, 1; Jones, 2; Glen Brook Farm, 3.

Pullets—Porter, 1; Jones, 2.

Never a strong class at New York, and this season no exception to the rule. No specimens of extra quality were shown, many birds lacking woefully in size. The average was good.

S. S. HAMBURGS.

Cocks, 7; Hens, 7; Cockerels, 6; Pullets, 6. Total, 26.

Cocks—Oak & McNeil, 1; Wolfe, 2; Ketterer, 3; Paine, 4-5.

Hens—Oak & McNeil, 1; Paine, 2; Wolfe, 3; Van der Maas, 4; Revere, 5.

Cockerels—Oak & McNeil, 1; Tunncliffe, 2; Paine, 3-4; Van der Maas, 5.

Pullets—Paine, 1-2-4; Oak & McNeil, 3; Tunncliffe, 5.

Always a pretty and attractive exhibit at Madison Square. The winning cock and cockerel were pronounced the best ever shown in America—and that means much. The "Dutch everlasting layers" are still very dear to the hearts of many breeders and always delight show visitors.

W. C. B. POLISH.

Cocks, 7; Hens, 14; Cockerels, 7; Pullets, 11; Breeding Pens, 2 (10 birds). Total, 49.

Cocks—Peapack Farm, 1-3; Seely, 2; Helferich, 4-5.

Hens—Peapack Farm, 1; Seely, 2-3; Bliss, 4; Helferich, 5.

Cockerels—Peapack Farm, 1-4; Helferich, 2-3; Seely, 5.

Pullets—Seely, 1-2; Helferich, 3-4; Peapack Farm, 5.

Breeding Pens—Peapack Farm, 1; Bliss, 2.

This ornamental and useful variety is always a strong class here, the competition being very strong, bringing out the best the country affords. The winners and a number of unplaced specimens were of great merit, having wonderful crest development.

LIGHT BRAHMA BANTAMS.

Cocks, 7; Hens, 7; Cockerels, 6; Pullets, 7; Breeding Pens, 5 (25 birds). Total, 52.

Cocks—D. Lincoln Orr, 1-5; Ward, 2; Hayden, 3; Hillson, 4.

Hens—Orr, 1-4; Hillson, 2-3; Condon's Yards, 5.

Cockerels—Orr, 1-2-4; Heinrichs, 3; Hayden, 5.

Pullets—Condon's Yards, 1; Orr, 2-5; Blunk, 3; Hillson, 4.

Breeding Pens—Hillson, 1; Orr, 2-4; Ward, 3; Heinrichs, 5.

One of the most attractive exhibits in the Garden. Breeders informed us that they are handicapped by the weight requirements in the Standard. The best Light Brahma Bantams are now above standard weight. The truth is they are as small as they can be made and still retain the breed characteristics. In the interest of the variety there should be a change regarding weights.

DARK BRAHMA BANTAMS.

Cocks, 4; Hens, 3; Cockerel, 1; Pullets, 2. Total, 10.

Cocks—Blunk, 1; Porter, 2-3-4.

Hens—Blunk, 1; Porter, 2-3.

Cockerel—Porter, 1.

Pullets—Porter, 1-2.

Beautiful creations, possessing the required Dark Brahma coloring, with breed characteristics fully developed.

RUFF COCHIN BANTAMS.

Cocks, 7; Hens, 6; Cockerels, 9; Pullets, 9; Breeding Pens, 5 (25 birds). Total, 56.

Cocks—Jehl, 1; Crandall & Co., 2; Rock Hill Farm, 3; Homeyer, 4; Smith, 5.

Hens—Smith, 1-2; Rock Hill Farm, 3; Crandall & Co., 4; Jehl, 5.

GARDNER & DUNNING'S

BARRED PLYMOUTH ROCKS

WIN THE AMERICAN CHAMPIONSHIP

At Madison Square Garden, N. Y.; Jan., 1906, in a class of nearly 500 Barred Plymouth Rocks, the most magnificent collection ever seen in America, all the prominent Eastern breeders competing, we won twice as many 1st and 2d prizes as any other exhibitor; the National Sweepstakes Cup, offered by the American Plymouth Rock Club for the best cock, hen, cockerel and pullet, and the \$25 gold championship special for best display.

We were the only exhibitors winning in every class—cock, hen, cockerel, pullet and pen, and in the contest for best display won 26 points, our nearest competitor only 14. We won 10 regular premiums and 10 special prizes, including the \$10 gold special for best shaped female in the show.

During the last seven years we have exhibited five times at Madison Square Garden, winning twenty 1st and 2d prizes, or more than any two of our competitors have won during that time.

Choice breeding and exhibition birds for sale at reasonable prices. Eggs from the same matings that produce our winners. Write for catalog and mating list, giving record of winnings, description of stock, prices, etc.

GARDNER & DUNNING, M. S. GARDNER Manager Auburn, N. Y.

Cockerels—Rock Hill Farm, 1; Rosse Bros., 2; Smith, 3-5; Crandall & Co., 4.

Pullets—Jehl, 1; Smith, 2-4; Oak & McNeil, 3; Crandall & Co., 5.

Breeding Pens—Rock Hill Farm, 1-5; Homeyer, 2; Proper, 3; Jehl, 4.

Here a great deal of interest centered, and men contended for the ribbons as eagerly as in what would seem to be more important classes. Everywhere the Buff Cochin Bantams are large classes. Here the quality is always the best.

PARTRIDGE COCHIN BANTAMS.

Cocks, 5; Hens, 5; Cockerels, 3; Pullets, 5. Total, 18.

Cocks—Diffenderfer, 1; Kilpatrick, 2; W. R. Graham, 3; L. P. Graham, 4; Elmwood Farm, 5.

Hens—W. R. Graham, 1; Blunk, 2; Diffenderfer, 3; Elmwood Farm, 4; L. P. Graham, 5.

Cockerels—L. P. Graham, 1; Diffenderfer, 2; Elmwood Farm, 3.

Pullets—Diffenderfer, 1; Jones, 2; L. P. Graham, 3; Kilpatrick, 4; Elmwood Farm, 5.

One of the most pleasing productions made by fanciers. The beautiful color markings of the Standard Partridge Cochin is here intensified and the result is very pleasing.

WHITE COCHIN BANTAMS.

Cocks, 10; Hens, 10; Cockerels, 3; Pullets, 4. Total, 27.

Cocks—Crandall & Co., 1; Smith, 2; Oak & McNeil, 3; Collins & Son, 4; Condon's Yards, 5.

Hens—Smith, 1; Collins & Son, 2; Crandall & Co., 3; Peters, 4; Gray Bros., 5.

Cockerels—Helm, 1; Gray Bros., 2; Collins & Son, 3.

Pullets—Murman, 1-3; Helm, 2; Gray Bros., 4.

The White Cochin Bantams are profiting by reason of the public demand for white fowls, and are now enjoying a boom. They are indeed very handsome.

BLACK COCHIN BANTAMS.

Cocks, 9; Hens, 14; Cockerels, 6; Pullets, 8; Breeding Pen, 1 (5 birds). Total, 42.

Cocks—Condon's Yards, 1-2; Glenbrook Farm, 3; Kilpatrick, 4; Crandall & Co., 5.

Hens—Condon's Yards, 1; Crandall

& Co., 2; Fitch, 3; Glenbrook Farm, 4; Kntschbach, 5.

Cockerels—Condon's Yards, 1; Crandall & Co., 2; Kntschbach, 3; Lincoln, 4.

Pullets—Condon's Yards, 1; Kntschbach, 2-4; Crandall & Co., 3; Lincoln, 5.

Breeding Pen—Proper, 1.

It appears like inconsistency for fanciers to give the Standard Black Cochin but little attention and to lavish much attention upon the bantams of this variety. Yet this is the condition that exists. But the B. C. Bantam is such a pretty and attractive bird that no one can be blamed for loving it. Here are shown specimens of almost perfect requirements. The competition was very strong.

ROSE COMB BLACK BANTAMS.

Cocks, 6; Hens, 9; Cockerels, 9; Pullets, 11. Total, 35.

Cocks—Oak & McNeil, 1; Young, 2; Trethaway, 3; Murman, 4; Condon's Yards, 5.

Hens—Trethaway, 1; Condon's Yards, 2; Oak & McNeil, 3; Collins & Son, 4; Young, 5.

Cockerels—Miss Weiners, 1; Oak & McNeil, 2-4; Mitchell, 3; Kennedy, 5.

Pullets—Oak & McNeil, 1-3; Miss Weiners, 2; Young, 4; Kennedy, 5.

This is a class that always brings out strong competition at New York, among a few breeders who give this variety special attention. America now produces the best to be obtained in these Bantams, and their owners were here represented.

SEABRIGHT BANTAMS.

Golden.—Cocks, 6; Hens, 9; Cockerels, 6; Pullets, 8; Breeding Pens, 2 (10 birds). Total, 39.

Cocks—Oak & McNeil, 1; Proper, 2-3; Crandall & Co., 4; Davenport, 5.

Hens—Proper, 1; Condon's Yards, 2; Crandall & Co., 3-4; Oak & McNeil, 5.

Cockerels—Duval, 1; Proper, 2-5; Oak & McNeil, 3; Crandall & Co., 4.

Pullets—Duval, 1-3-4; Oak & McNeil, 2; Proper, 5.

Breeding Pens—Proper, 1-2.

Silver.—Cocks, 4; Hens, 4; Cockerels, 5; Pullets, 8; Breeding Pens, 2 (10 birds). Total, 31.

Cocks—Oak & McNeil, 1; Proper, 2-3; Van Buren, 4.

Hens—Proper, 1-3; Oak & McNeil, 2; Duval, 4.

Cockerels—Proper, 1-4; Duval, 2; Oak & McNeil, 3; Glenbrook Farm, 5.

Pullets—Proper, 1-3; Oak & McNeil, 2; Van Buren, 4; Glenbrook Farm, 5.

Breeding Pens—Proper, 1-2.

Strongly appealing to the love and instinct of the fancier. Undoubtedly the most marvelous color production yet given the world by the poultry fanciers. Of exquisite beauty and jaunty of form, the Seabright Bantams are the admiration of all. The quality of the winners and of a number of others in the classes was superb.

GAME BANTAMS.

B. B. Reds.—Cocks, 11; Hens, 11; Cockerels, 18; Pullets, 13; Breeding Pen, 1 (5 birds). Total, 58.

Cocks—Havemeyer Bros., 1-4; Hermitage Yards, 2; Crowe, 3; Welch, 5.

Hens—Price, 1; Havemeyer Bros., 2; Columbia Farm, 3; Short Hills Farm, 4; Hermitage, 5.

Cockerels—Hermitage Yards, 1; Price, 2; Short Hills Farm, 3; Havemeyer Bros., 4-5.

Pullets—Havemeyer Bros., 1-3; Short Hills Farm, 2; Crowe, 4; Hermitage Yards, 5.

Breeding Pen—Short Hills Farm, 1.

Red Pyle.—Cocks, 6; Hens, 5; Cockerels, 8; Pullets, 9. Total, 28.

Cocks—Hermitage Yards, 1; Columbia Farm, 2; Witmyer, 3; Havemeyer Bros., 4; Condon's Yards, 5.

Hens—Havemeyer Bros., 1-3; Hermitage Yards, 2; Witmyer, 4; Condon's Yards, 5.

Cockerels—Havemeyer, 1-4; Hermitage Yards, 2; Witmyer, 3; Short Hills Farm, 5.

Pullets—Havemeyer Bros., 1-3; Columbia Farm, 2; Hermitage Yards, 4; Jones, 5.

The Game Bantams shown at New York are acknowledged to be the pick of the cream of the country. Here we found some marvels of quality.

BARRED ROCK BANTAMS.

Cocks, 4; Hens, 8; Cockerels, 3; Pullets, 3. Total, 18.

Cocks—Latham, 1-2; Shaylor, 3.

Hens—Shaylor, 1; Latham, 2-3.

Cockerels—Latham, 1-2; Shaylor, 3.

Pullets—Shaylor, 1; Latham, 2-3.

At the Great Chicago
Wyandotte Show, Jan.
22-27, 1906, we won

SIX PRIZES

Including

First Pen

The most coveted prize

UNEQUALED SHOW RECORD of Clement & Fike's White Wyandottes

1905	1905	1905
Iowa State Fair A clean sweep; every prize offered. 118 birds.	Wisconsin State Fair Every first. Lost only two prizes. 94 birds.	Illinois State Fair Every first; lost only 4 out of 15 prizes. 115 birds.

This victory never approached, and never attempted by any White Wyandotte breeder in the World, and places **Our Strain Greatest on Earth.** 3000 Birds For Sale. Exhibition specimens, fit to win anywhere. Great Cockerel Sale now on.

EGGS ready to ship now: \$5 per 15; \$8 per 30; \$10 per 45.

Bridgewater Poultry Farm, Box A Phone 235 Libertyville, Illinois

It would appear, considering the great popularity of the Barred Plymouth Rocks, that a miniature creation of the breed would be very taking. Yet such is not the case, and the Barred Rock Bantam is evidently not to be a popular favorite.

COMPLETED AWARDS.

Other than those given under heads of breeds and varieties:

Pile Leghorn—Wyckoff, 2 cock, 1-3 hen; Peer, 5 hen; all other awards to Exmoor Farms.

White Langshans—All to Heuer.

Blue Andalusians—Quackenbush, 1 cock, 3 hen, 1-2 cockerel, 2-4 pullet; Banner Poultry Yards, 1 pen. 1-2-4 hen, 3-4 cockerel, 1-3 pullet.

W. C. B. Polish (Plain)—All to Millview Farm.

Buff Laced Polish—All to Mier.

Golden Polish, Bearded—Mier, 1 cock, 1 hen; Watchung Yards, 1 cockerel, 1 pullet.

Golden Spangled Hamburgs—Oak & McNeil, 1 cock, 1 hen, 1 cockerel, 1 pullet; Ketterer, 2 hen.

Golden Penciled Hamburgs—All to Oak & McNeil.

White Dorkings—All to Hales.

Crevecoeurs—All to Oak & McNeil.

La Fleche—All to Oak & McNeil.

Silkies—Sites, 1 cock, 2 hen, 1 cockerel, 1 pullet; Blunck, 2 cock, 3 hen; Keller, 3 cock, 1 hen; Top Notch Yards, 2-3 pullet.

B. B. R. Games—Mudge, 1 cock, 2 hen, 2 cockerel; Fairbank, 5 hen, 2-3 pullet; Glasgow, 1 hen, 1 cockerel, 1 pullet; Greenman, 3-4 hen, 4-5 pullet; Gifford, 4 cockerel.

Brown R. Games—Clark, 1 cock, 1 hen; Dunn, 1 cockerel, 1 pullet.

Silver Duckwing Games—Kienzle, 1 cock, 3 hen; Blunck, 1 hen; Greenman, 2 hen, 1 pullet; Clark, 1 cockerel, 2 pullet.

Golden Duckwing Games—Blunck, 2 hen; Greenman, 1 hen, 2-3 cockerel, 2 pullet; Kienzle, 1 cockerel, 1 pullet.

Red Pile Games—Glasgow, 1 cock, 2 pullet; Kienzle, 1 hen, 2 cockerel, 1 pullet; Milford Yards, 1 cockerel, 3 pullet.

Birehin Games—All to Kienzle.

Old English Games—All to Brevoort Yards.

Anconas—Mier, 1 cockerel; Mains, 2 cockerel, 1-2 pullet.

Faverolles (Salmon)—Phelps, 1-4 cock, 2-4 hen, 4-5 cockerel, 3-4 pullet; Porter, 5 cock, 3-5 hen; Wis-acre Yards, 2-3 cock, 1 hen, 2-3 cockerel, 1 pullet; Ritchie, 1 cockerel, 2 pullet.

Lakenfelders—Phelps, 4 cock, 2 hen, 1 cockerel, 2 pullet; Ford Bros., 1 cock, 3 hen, 2 cockerel, 3 pullet; Schmidt, 2-3 cock, 1 hen, 1 pullet.

Pekin Ducks—S. S. P. Farm, 1-2 cock, 1-3 cockerel, 1-2 hen, 2-5 pullet; Meadow Farm, 3 cock, 3 hen, 4 pullet; Sites, 4 cockerel, 1 pullet; Evans & Son, 2 cockerel, 2 pullet; Bonnie Brae Farm, 2 cockerel.

LAYERS.....EGGS FOR HATCHING.....WINNERS

S. C. Black Minorcas, Barred P. Rocks and S. C. White Leghorns. Eggs from high scoring exhibition pens 13 for \$3, 26 for \$5. Eggs from heavy laying general purpose matings, on free farm range, \$5 per 100. Don't forget our \$3 cockerel sale; they are the best in the world for the money. You can't get better blood, and we guarantee satisfaction. **OTTER CREEK POULTRY FARM CO., Box A, Watertown, N. Y.**

WE WIN!

at the late Madison Square Garden Show, New York, in the S. C. Buff, Black and White Orpington classes as follows: 7 firsts, 9 seconds, 6 thirds, 4 fourths and 3 fifths, and these in the strongest classes of Orpingtons ever put together, there being 370 birds competing. We also won the most prizes of any breeder in these same classes. We have the stock and established winning breeding lines, but buying high-grade stock and eggs cannot safely be done upon the strength of the mere argument a breeder has room to advance in his advertisements. Now we want you to send for our catalogue, testimonial book and a very elaborate mating list, describing over forty different breeding yards and prices of eggs from same. Do not be fooled or misled by mis-advertising, but come to the fountain head to get your start.

WILLOW BROOK FARM
W. L. Davis, Prop. Box A, BERLIN, CONN.

**..... JEFFERSON'S
WHITE ROCKS AND WHITE WYANDOTTES**

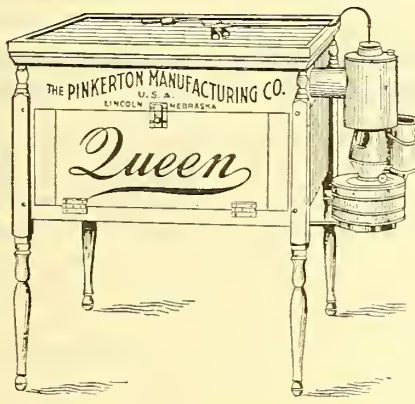

Have won 16 firsts at Chicago Shows in two years. His Rocks won 1st cockerel and 1st pullet three times in succession. His Wyandottes are the only ones that ever won 5 firsts at a Chicago Show. Eggs: \$5 per 15, \$8 per 30 and \$10 per 45.

J. L. JEFFERSON, :: Box A, DES PLAINES, ILL.

QUEEN INCUBATORS

ARE THE BEST IN THE WORLD

A STRONG STATEMENT BUT A STRAIGHT FACT

“QUEEN” INCUBATORS are the only perfectly ventilated machines made—they are guaranteed to hatch the highest percentage of chicks from fertile eggs. Don't be satisfied with the so called “just as good” incubators when our superior machines cost no more.

“QUEEN” Incubators and Brooders have won first prize wherever exhibited and they will win success for all who use them. BEFORE YOU BUY ANY INCUBATOR WRITE FOR OUR CATALOGUE. It tells lots of things worth knowing. It's free if you ask for it.

Pinkerton Manufacturing Company
BOX 20 . LINCOLN, NEB.

Rouen Ducks—Morris, 1 cock, 1 hen, 2 cockerel, 1 pullet; King, 1 cockerel, 2 pullet; Baerman, 3-4-5 cockerel, 3-4 pullet.

Indian Runner Ducks—All to Farrer. Cayuga Ducks—All to Kessler.

Muscovy Ducks—Carpenter, 1 cock, 2 hen; Birdsall, 2 cock, 3 hen; S. S. P. Farm, 3 cock, 1 hen; Meadow Brook Farm, 4-5 cock, 4 hen.

Alsburys Ducks—All to Morris.

B. R. Game Bantams—Havemeyer Bros., 1 cock, 2 hen, 1 cockerel, 1 pullet; Witmyer, 2 cock, 3 hen, 2 cockerel, 3 pullet; Condon's Yards, 1 hen, 3 cock; Jones, 3 cockerel, 4 pullet.

Golden Duckwing Bantams—Havemeyer Bros., 1 cock, 1 hen, 2 cockerel, 1 pullet; Hermitage Yards, 2 cock, 1 cockerel, 2 pullet; Jones, 3 cockerel.

Silver Duckwing Game Bantams—Havemeyer Bros., 1 hen, 2 cockerel, 1 pullet; Rowedder, 4 cock, 3 pullet; Witmyer, 2 cock; Jones, 3 cock; Dunu, 5 cock; Condon's Yards, 1 cock; Stowe, 2 hen, 1 cockerel, 2 pullet.

Birchen Bantams—Havemeyer Bros., 2 cock, 2 hen, 2 cockerel, 2 pullet; Hermitage Yards, 1 cock, 1 hen, 1 cockerel, 1 pullet; Short Hill Farm, 3 hen.

White Game Bantams—Pollock, 2 cock, 3 hen; Jones, 3 cock; Havemeyer Bros., 1 cock, 1 hen, 1 cockerel, 1 pullet; Condon's Yards, 4 cock, 2 cockerel, 3 pullet; Short Hill Yards, 2 pullet.

Bronze Turkeys—Cornell, 1 cock, hatched prior to 1904; all other awards to Salisbury.

White Holland Turkeys—All to Worthington Poultry Yards.

Slate Turkeys—All to Mrs. Sara A. Little.

Toulouse Geese—King, 1-3 gander, 1-2 goose; Lewis, 4 gander, 3 goose; Farrer, 2 gander.

Emden Geese—King, 1 cock, 1 cockerel, 1 hen, 1 pullet; other awards to Glenbrecken Farm.

Chinese Geese—King, 1 gander; Glenbrecken Farm, 1 goose.

For the best display of eggs by one exhibitor, not less than six varieties, each to be named, Meadowbrook Poultry Farm.

Black Wyandottes—Cocks—Mahr, 1; Myers, 2.

Hens—Sites, 1-4; Mahr, 3; Weed & Son, 5. Cockerels—Weed & Son, 1-5;

Sites, 2-3; Myers, 4. Hens—Sites, 1-4; Myers, 2; Mahr, 3; Weed & Son, 5. Pullets—Weed & Son, 1; Sites, 2-3; Myers, 4. Breeding Pens—Myers, 1-2.

CHICK FEED
The Standard Poultry Supplies of the World. The ONLY Original Dry Chick Feed.
Sold Everywhere. Please write for prices and name of nearest Agent.
W. F. CHAMBERLAIN, (The Perfect Chick Feed Man.) ST. LOUIS, MO.

FOR SALE BY W. W. Barnard & Co., Chicago, Ill.; A. G. Brown, Springfield, Illinois; S. B. Stewart, Omaha, Nebraska.

3785 PRIZES WON IN THE LAST 18 MONTHS

BY BIRDS FROM THE GREAT CENTRAL POULTRY FARM

These prizes were won by birds raised on our farm, hatched in Great Central Incubators and raised in Great Central Brooders. We have many of them on our farm today, with hundreds of others just as good. We know we have the goods and we back them up with our guarantee. We take the risk. We guarantee our shipments to be satisfactory. We practically insure your success. Isn't that fair? We raise nearly every variety of bird that is sold in America. Write us for special information on any breed you are interested in and we will cheerfully respond. Eggs in season from every variety we carry.

GREAT CENTRAL INCUBATORS AND BROODERS

are the surest hatch machines on the market. Results have proved it. We offer you a 30 days' trial free. If the machines are not satisfactory, return them at our expense. Last season we sold hundreds of our Incubators and Brooders on the 30 days' trial proposition, and not one was returned. Send for our large 72-page catalogue of "Poultry that Pays." It contains much information indispensable to the practical poultryman. It gives descriptions and cuts of each of our many varieties of poultry, and also of the Great Central Incubator and Brooder. Send five 2c stamps for mailing.

ARNOLD'S COLUMBIAN WYANDOTTES

WIN AT MADISON SQUARE GARDEN, NEW YORK, 1906

Columbian Wyandottes the sensation of the show. Here were found all the leading breeders of the East, with 141 of the best Columbian Wyandottes to be found. When we found 10 Pens of great quality in the class, all our best birds went into the pens with the following results: We won 1st 2d and 4th pens, also winning 2d cock and 1st pullet, (22 pullets competing.) At the St. Louis Exposition we won 1st pen; at the great Hagerstown Fair we won 1st, 2d and 3d pens; at Madison Square Garden we won the following specials on Columbians, (having won in all classes.) Special for best collection, special for 3 best cocks, hens, ckls., pullets and pens; also gold special for best Wyandotte, any color, offered by Spratt's Patent. Our 1st prize cockerel, (son of Teddy), was considered by all judges and breeders the most remarkable Columbian Wyandotte male ever seen. Stock and eggs for sale. No birds sold for less than \$5. Eggs, \$20, \$10 and \$5 per 15; 10 chicks guaranteed.

The Best in The World

We try each season to prove to you our claim of the above assertion to be facts, and for many years have surely done so, as our winnings at all the large shows in the past have surely done so. Our last exhibit was at the

Great A. P. A. Cincinnati Show

January 16th to 20th, 1906, our winnings were as follows: 1st, 2d, 3d, 4th and 5th cock, 1st hen, 2d, 4th, 5th cockerel, 1st, 2d, 5th pullet, 1st, 2d, 4th and 5th pen, Silver Cup for best display, Silver Cup for whitest bird in the show, and eleven other special prizes. These winning in a class of 140 White Rocks.

Fishel's White Plymouth Rocks

always win, which proves our matings each season are a success. These winnings, under the New Standard, goes to show our birds are line bred and are the stock you want to breed from to get birds of standard requirements. If you need male birds for new blood, or want foundation stock for a flock, I beg you to remember I have something like four thousand SELECTED BREEDERS yet to sell. Something like 2000 choice cockerels to select from. You cannot afford to buy stock with no blood lines behind them when you can secure Fishel birds at same price. Send three 2-cent stamps for my 48-page catalogue, it explains all. Remember your order will have my personal attention.

EGGS \$5.00 per 15
 \$15 per 50
 \$25 per 100

U. R. FISHEL :: Box A, Hope, Ind.

SMITH'S STANDARD - BRED LAYERS
are prize winners at the Big Shows; St. Louis World's Fair, Madison Square—1903, 1904, 1905, 1906—and everywhere. Strong proofs that these **Single Comb White Leghorns** are from the greatest exhibition strain. Choice breeding and exhibition stock. Eggs for hatching \$1.50 and \$2 per 15; \$6 per 100. Specials from New York winners \$5 per 15 eggs. Order now or write us your wants. Smith's Valley View Farm, J. E. Mapes, Mgr., Norwich, N. Y.

TWELVE Apple Trees, price 7 to 15 cents each. **Asparagus**, two year plants 75c per 100; \$4.50 per 1,000. **Grape Vines** and fruit plants at low prices. **Roses**, a large collection of hardy varieties; also our **Live-for-Ever Pink Roses** 10c to 20c each. **35 per cent saved** by buying direct from the grower. Let us price your list of wants. Green's Catalog, also copy of Green's Big Fruit Magazine free. Write, Green's Nursery Co., 43 Wall St., Rochester, N. Y.

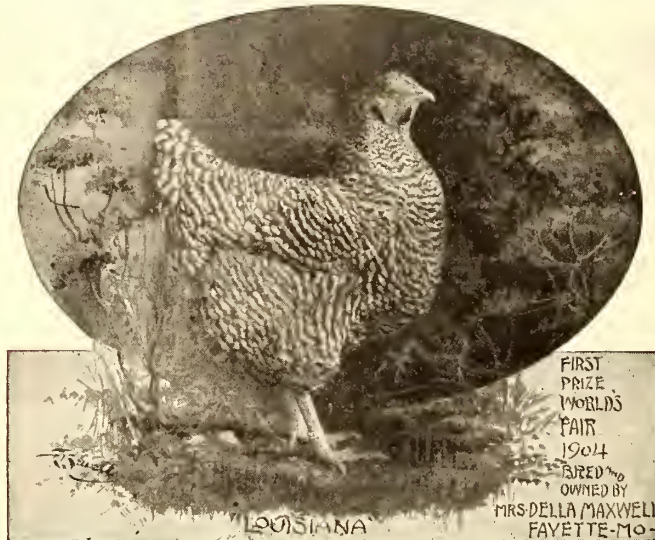

HARDING'S BABY CHICK FOOD

NO GRIT. There is no better food for little chicks. After 10 years' test it leads all competition. It contains nutritious grain, granulated beef scrap, bone, charcoal, seeds and other health-giving, strength-imparting substances. Perfectly balanced and carefully mixed. A builder of flesh, bone and feathers. Especially prepared for little chicks, pigeons and caged birds. Develops youngsters into profitable fowls. The most economical food made. Try it. 50-pound bag, \$1.50; 100-pound bag, \$2.50.

Harding's Granulated Milk A pure milk food for poultry—wonderful egg producer and one of the richest protein foods known—has absolutely no waste—a tissue builder, egg maker and growth producer. Write for my free book "How to Make Poultry Pay." Sent free. George L. Harding, Box 333, Binghamton, N. Y.

MAPLE GROVE POULTRY YARDS

WHERE THE WORLD'S FAIR WINNERS WERE BRED, AND STILL BREEDING GOOD ONES

"LOUISIANA," 1st prize hen at World's Fair, is still in my possession, also her mother and sisters and their offspring of 1905. I have shown at 7 out of 9 of the last Mo. State Shows and have won more 1st prizes at the 7 shows than all competitors combined. Won \$15 cash special at Sedalla for the best pen in the American class; also the \$75 Challenge Cup 2 years in succession for the 2 best cocks, 2 best hens, 2 best cockerels and 2 best pullets. At St. Louis World's Fair, 1st hen and 5th breeding pen. In the Missouri exhibit at same time, 1st hen, 1st pen and 4th cock. At Mo. State Show, 1905, 1st pullet and 1st cock; lost 1st hen and 1st pen by ¼ lb. overweight, which is no bad defect. At Moberly, Mo., 1905, 1st, 2d hen; 1st, 2d, 5th pullet; 2d cock; 1st, 3d pen; won \$75 Trophy Cup in 1903. I am better than ever prepared to sell first class breeders at reasonable prices. All birds have free access of a 300-acre farm, are vigorous and healthy; my stock is noted for size and sound color in plumage, also the finest laying strain that can be had. M. B. Turkeys, unequalled in size and plumage, Pekin Ducks and Scotch Collie Dogs, eligible to registry. Eggs in season, from show birds, \$5 per 15; from the good yards, \$3 per 15; M. B. Turkey eggs, 50c each. Will duplicate eggs at half price when less than 8 hatch. Satisfaction guaranteed. Write your wants to

GATHERED IN THE AISLES.

1906! The largest and best—7,690.

We tip our tile to you, Mr. Crawford.

The skillful handiwork of T. Farrer Rackham was a pleasing feature.

"Uneasy rests the head that wears a crown." Some members of the "Big Eight" were wondering for a time if they would be able to retain that head apparel.

Practically 500 Barred Rocks! A magnificent showing.

The fiercest battle was fought in Barred Rock place. But the conflicts which raged for a time at White Wyandotte point and White Rock corners will go down in history as something more than skirmishes.

In the three leading classes it was a battle of the giants and some heretofore very strong men met defeat.

One of the most pleasing and surprising features was the large showing of Columbian Wyandottes. About six years ago a Massachusetts breeder brought out fowls of this kind. He called them clean-leg Brahmas. The public would have none of them. Now breeders are fighting like mad to get hold of them. Prices are ranging exceedingly high for the few specimens on the market. There is, as this fact illustrates, a great deal in a name, and much in the character of the men who take up a breed, so far as the welfare of a breed is concerned.

The first Columbian cockerel was purchased by that true fancier and genial gentleman, J. F. Van Alstyne, Niverville, N. J., for \$200. And the bird is cheap at that price. He is a magnificent specimen.

D. W. Young, Ridgewood, N. J., made a remarkable winning in S. C. White Leghorns. His 1-3-4 cocks, 1 cockerel, 1-2-5 pullets, 2 hen and 4 pen is a record to be proud of.

Chas. L. Seely showed a string of extra choice W. C. Black Polish. He was a heavy winner.

Fate was exceedingly kind to Mr. M. S. Gardner, of Gardner & Dunning, Auburn, N. Y. He was elected president of the National Barred Rock Club. While the meeting was handing out this honor to him the Barred Rock judges were placing winning ribbons on his firm's birds. The winning of the firm

in Barred Rocks is a signal victory. They won more points than any other exhibitor. Their first and second hens, second pullet, second and third cockerels, fourth cock and third pen were birds of exceptional merit. Consider carefully what it means to make such a winning.

Harry M. Lamon, Center Moriches, N. Y., was welcomed back as an exhibitor by all. Harry showed a string of cracking Barred Rock. He promises to repeat his work of taking down a lot of blue ribbons. And he will do it. He is now in good shape to take care of his old friends and customers.

E. E. Vanatta, of Vandalia, Mo., had a number of his superb S. C. White Leghorns on exhibition. The quality was of high order and the birds attracted much attention.

First and second pens, in competition with 35 pens of the best Barred Rocks ever shown in the world, is a record that will, in all probability stand for years to come. This is the pen winnings of E. B. Thompson, of Ringlet fame, and Amenia, N. Y. We made a careful examination of the birds constituting these pens. Here we found a remarkable condition. The females were wonders in barring, and the males of exceeding worth. Mr. Thompson's first cockerel mating pen attracted an immense amount of attention. It was a great pen of birds. The Ringlets continue annually to soar higher.

The National Minorca Club elected officers as follows: President, Geo. H. Northup, Raceville, N. Y.; vice presi-

dent, J. P. Hilldorfer; secretary and treasurer, Frank McGrann, Lancaster, Pa; directors, R. W. Baker, St. Louis, Mo.; C. J. Andruss, Canandaigua, N. Y.; H. W. Billiard, Brooklyn, N. Y.; C. A. Thompson, Milrose, Conn.

Fred Harris, Worthington Poultry Yards, Elmsford, N. Y., made a clean sweep with his White Holland Turkeys. They were the modern magnificent White Hollands.

Gardner & Dunning won a prize in every class—the only exhibitor in Barred Rock to turn the trick.

Henry Steinmesch, St. Louis, Mo., was represented by a number of his choice Silver Wyandottes. He won first cockerel on one cockerel entry.

Note the S. C. B. Minorca killing made by Arthur Trethaway, Wilkesbarre, Pa. His first prize cockerel is conceded to be the best colored Minorca male ever shown at Madison Square. His stock is of exceeding merit, and Arthur is on the square, all the time.

Geo. H. Northup, as usual, took about all there was to be had in Rose Comb Black Minorcas. Mr. Northup judged the S. C. Blacks, hence was not an exhibitor in that class. He has given the fancy a beautiful and valuable fowl in the R. C. B. Minorca, and his stock still stands as the acknowledged standard of excellence of the variety. No better man or more true fancier in all the world than Geo. H. Northup.

Stanley Trethaway is surely a "chip off the old block." He showed for the

first time at the Garden and won with two birds entered, first hen and third cock, in R. C. B. Bantams. Keep your eye on that boy.

Bradley Bros., Lee, Mass., more than sustained their world-wide reputation. They made phenomenal winnings with their magnificent Barred Rocks, as will be seen by an examination of the regular and club awards. Their champion male is a wonderful Barred Rock. In all the classes they showed stock strong in shape and magnificent in color.

Grove Hill Poultry Yards, Waltham, Mass., showed the best colored male Barred Rock ever exhibited at New York. This bird is indeed a wonderful specimen. Grove Hill Rocks were very strong in all classes, as will be seen. In S. C. B. Leghorns their winnings were something to make a new record. Grove Hill Brown Leghorns are always expected to do a lot of winning, and they do it.

The American Light Brahma Club elected officers as follows: President, C. P. Nettleton, Shelton, Conn.; vice-president, C. I. Balch, Manchester, Conn.; secretary-treasurer, John Rumbold, Baltimore, Md.

John B. Hadaway, Brockton, Mass., whose Partridge Wyandottes are admitted by all to be as good as the best, made a splendid showing, and was a heavy winner.

C. H. Latham, Lancaster, Mass., does not propose to allow any one else to win first pullet at New York. Mr. Latham prides himself on the merit of

BOSTON SHOW

As usual, no exception to hundreds of others held in all parts of the country, my strain of

White Wyandottes

were in on the ground floor. All kinds of money offered for stock hatched from my eggs. My matings this year are better than ever, and you, my reader, stand in line for some results if you order eggs from me. Stock for sale at all times. Write your wants and send for the catalogue.

ARTHUR G. DUSTON
Box 1020, S. Framingham, Mass.

NO.
1**Labor-Saving Foods**

Midland Poultry Foods are complete foods, each for a specific purpose. Each accomplishes what it is designed to do in a natural way because it supplies

to the fowl the elements Nature would if the fowl ran at large in a wild state. They are labor-saving because they are complete in themselves and do not need any additions. You do not have to add to them. You do not have to expend a moment's labor grinding bone, shell or smashing up old crockery to make Midland Foods complete. You do not have to study or experiment—that's all been done by our expert chemist. In feeding poultry, to get the highest percentage of profit, it is essential that the ration be adapted to the age and condition of the fowl. No one feed will do for all fowls—there's a Midland Food adapted to the little chicks, the laying hen and every fowl on your place. That's the money-saving advantage of **Midland Poultry Foods**. That's why every poultry raiser needs them. They are

Money-Saving Foods

because they are complete—you don't have to buy bone cutters, shell mills and a lot of other things to prepare the feed your fowls need. They are just right for the purpose and accomplish their work in an economical way. Midland Food costs you very little more than any good grain, and it is 100 per cent better, if you are after RESULTS. No. 1 is for young chicks, to be fed until they are ten days or two weeks old, when No. 2 should be given them until they are four or five months old or about maturity. Then to fatten and finish them for market No. 3 is exactly what you want. No. 4 is the great egg and feather food—makes hens lay in a natural way by supplying them summer feed conditions—makes feathers and puts birds in show condition in a short time. There's an advantage in **Midland Poultry Foods** that you cannot get in any other. There is absolutely no waste or loss. You can always feed for a special purpose and make a profit. That's why they are

NO.
2NO.
3**Money-Making Foods**

Every ingredient is there for a purpose, and it is in just the proper proportion to work in harmony with every other ingredient. It has taken years to perfect these foods.

They are the life-work of one of the best organic chemists in this country. They are Labor-Saving, Money-Saving, Money-Making Foods, because they do the work quicker, cheaper and better than any other poultry foods made. You are not feeding in the dark—by guess; trusting to luck; but you are positive that you'll get just the results you are feeding for, and get them at a profit to you. Midland Foods are guaranteed to do all that we claim they will and to solve the problem of scientific poultry feeding. Sold by leading dealers everywhere, or supplied direct from the factory. Write for prices, and our booklets, "**The Science of Poultry Feeding**" and "**Poultry Fattening Perfected**." Either book will be worth a good many dollars to you in increasing the returns from your poultry pens, but we send them FREE if you write.

his female line, a line greatly appreciated by all Barred Rock breeders. Note his other winnings. As secretary of the committee of the National Barred Rock Club to get out a big display at New York Mr. Latham performed splendid service.

C. H. Welles, Stratford, Conn., showed a line of his very choice Barred Rocks. His winning pen contained rare good birds. Mr. Welles' stock is always in the winning.

Willow Brook Farm, Berlin, Conn., made some exceptional winnings. In S. C. B. Orpingtons they made nearly a clean sweep. In Buffs they were prominent winners. Mr. Davis, the whole-souled manager, is a fancier and gentleman who will have nothing but the best.

It was a magnificent showing of magnificent stock that was made by Rock Hill Poultry Farm, Ossining, N. Y. The farm is a "quality" farm

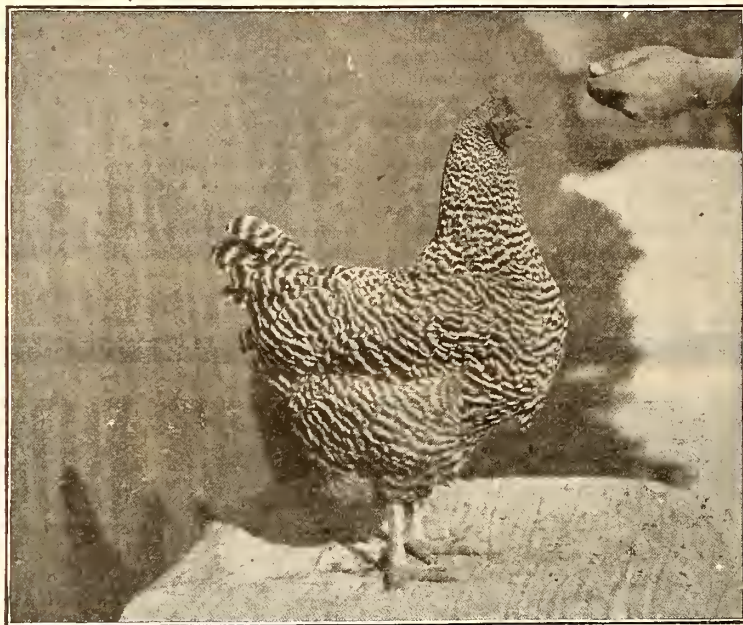

Commercial Poultry, Inland Poultry Journal, Poultry Husbandry.

Gedney Farm, White Plains, N. Y., was strong in White Wyandottes and S. C. Buff Orpingtons. The quality of Gedney Farm products, poultry as well as cattle, is of the highest order.

D. Lincoln Orr, Orr's Mills, N. Y., made nearly a clean sweep with his Light Brahma Bantams. "Link" has been breeding the leaders for a number of years. He entered one pen of Columbian Wyandottes and won third place.

August D. Arnold, Dillsburg, Pa., made a great showing with his Columbian Wyandottes. His first pen was the admiration of all. The cockerel heading this pen is a most magnificent specimen. Mr. Arnold, as will be seen, took several prizes in the open classes.

Frank C. Van Alstyne, Kiverville, N. Y., was a winner in Silver Wyandottes. His second cockerel was much

Cockerel-bred hen, bred and owned by Gardner & Dunning, Auburn, N. Y., sister of first New York cock, 1904.

—not quantity. Their winning White Wyandotte cock and cockerel were the admiration of all fanciers. In Buff Cochins Bantams they showed a number of winning birds. This farm is determined to adhere very closely to quality and to make that the first consideration.

Rocky River Poultry Company, Chicago, Ill., came and conquered. In one of the largest and strongest classes ever cooped in America they won a signal victory. These people are Rose Comb White Leghorn specialists and have quality to burn. Besides winning several prizes in the open classes they brought in two silver cups and other club specials. Note their extensive winnings.

The following poultry journals were represented: Reliable Poultry Journal, American Poultry Advocate, American Poultry Journal, Poultry Success, Farm Poultry, Poultry, Pigeon News, Feather and American Fancier, Poultry Tribune,

His second cockerel was much liked by all Silver breeders present. Mr. Van Alstyne is particularly strong in Silvers. He is going in for Columbians, too, and is starting with the best stock he can secure, regardless of price.

Nate K. Cornwall, Thamesville, Ontario, Canada, had a string of his quality Buff Leghorns on show. As usual he won his share of prizes.

W. A. Doolittle of Sabetha, Kan., who annually sends some Partridge Wyandottes to either New York or Boston, or both shows, won first and second hen, and first cock, in the strongest kind of competition. He never fails to secure some of the prizes. It's the kind of stock he has.

The American Orpington Club elected officers as follows: President, W. L. Davis, Berlin, Conn.; vice president, C. E. Faber, Plainfield, N. J.; secretary, Wm. Barry Owen, Vineyard Haven, Mass.; executive committee, above-

named officers and Dr. Sherwood, Poccantico Hills, N. Y.; A. G. Goodacre, Watchung, N. J. The following named gentlemen were appointed club judges: Richard Oak, London, Canada; Frank W. Gaylor, White Plains, N. J.; M. F. Delano, Vineyard Haven, Mass.

Exmoor Farms, Lebanon, Pa., made a remarkable winning in S. P. Plymouth Rocks. They showed some remarkable specimens of this most beautiful variety. In their other varieties they were remarkably successful. It will be of interest to read the prize lists and note this firm's large winnings.

Incubators, brooders, etc. Cyphers Incubator Co., Buffalo, N. Y.; Prairie State Incubator Co., Homer City, Pa.; Chas. A. Cyphers, Buffalo, N. Y.; Star Incubator, Bound Brook, N. J.; Empire Incubator Co., New York, N. Y.; the Russ Brooder, by Excelsior Wire & P.

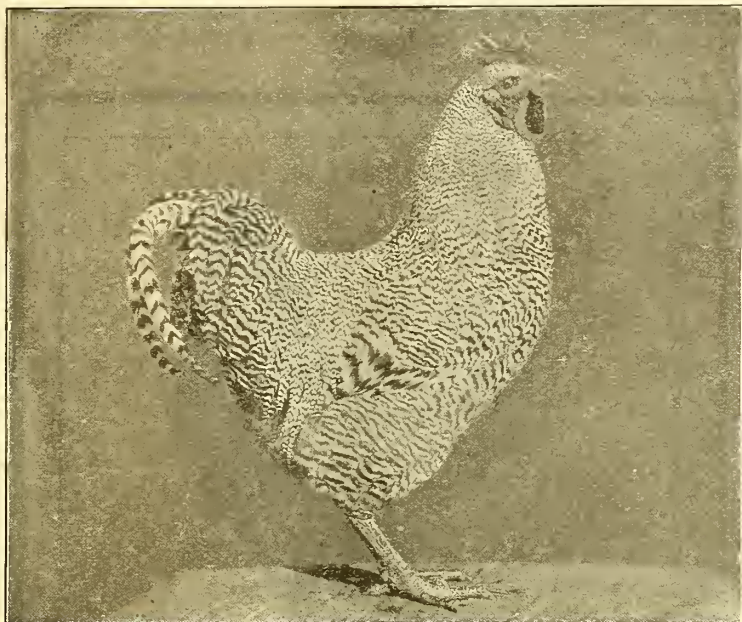

exhibitors of White Wyandottes. He has some grand good stock and will improve it this season.

W. B. Richardson, Hazelmore Farm, Knightsville, L. I., showed some magnificent Columbian and S. P. Wyandottes and R. C. R. I. Reds. As usual, he was in the winning.

John L. Dakin, Roxbury, Mass., was strong in White Wyandottes. This strain has size and form to nearly perfection. They are White Wyandottes through and through.

R. A. Tuttle, Center Moriches, N. Y., added numbers and quality to the Buff Rock exhibit. He showed some grand specimens, both as to color and shape.

E. G. Wyckoff, Ithaca, N. Y., who is doing much to popularize the beautiful Black Leghorns and the Pile and

Pullet-bred male, sire of some of Gardner & Dunning's winning females at Madison Square, 1906.

S. Co., New York, N. Y.; Cornell Incubator Co., Ithaca, N. Y.; Perpetual Hen Co., Trenton, N. J.; Geo. L. Harding, Binghamton, N. Y.

Elm Poultry Yards, Hartford, Conn., had one of the largest and best collections of fowls of their breeds. In White Leghorns, Rocks and Wyandottes they were very successful winners. No firm has more good stock than these fair-dealing people.

H. J. Blanchard, Groton, N. Y., who yearly brings a large string of S. C. W. Leghorns to New York, had birds of his usual high quality on show. Among his winnings is the National Club special for cock bird.

Adolph Blind, Elmhurst, L. I., N. Y., should be prepared another season to make it interesting for his fellow

Duckwing Leghorns, made a large and pleasing display of these varieties. They were the center of attraction in Leghorn quarters. Mr. Wyckoff has secured England's best of these varieties and with his fancier's love, his ability and his resources he will surely place them in the position they belong.

Wilmount Farm, Mamaroneck, N. Y., came in with a number of their extra choice White Wyandottes. This firm is very strong in this popular variety.

White & Goodacre, Watchung, N. J., showed a number of their superior S. C. Black Orpingtons.

A. C. Hawkins, Lancaster, Mass., was not a heavy exhibitor. Mr. Hawkins made some important sales prior to the New York show—and some of the birds were winners, of course.

AMERICAN PLYMOUTH ROCK CLUB.

Report of the Annual Meeting Held at Madison Square Garden, New York City, January 3, 1906---Election of Officers---Constitution and By-Laws.

The annual meeting of the American Plymouth Rock Club was held at Madison Square Garden, January 3rd. In the absence of President W. S. Russell, E. B. Thompson presided.

Secretary Schwab stated that Mr. Russell had written him that he wished to see some other member elected to the presidency.

M. S. Gardner, Auburn, N. Y., was elected president, and H. P. Schwab, Rochester, N. Y., re-elected secretary-treasurer.

Vice-Presidents—E. B. Thompson, J. F. Crangle, D. T. Heimlich, O. J. Easton, B. S. Davis, E. L. Miles, T. L. Norval.

Executive Committee—A. C. Smith, C. H. Welles, A. C. Hawkins, Chas. McClave, F. W. Richardson, M. F. Delano, C. H. Shaylor.

Honorary Vice-Presidents—E. A. Kegley, F. J. Marshall, J. Y. Bicknell, E. M. Durham, Philander Williams, Wm. Ellery Bright, W. S. Russell, Miss Cora A. Rickards, Mrs. R. Waldron, Mrs. R. Montross, Mrs. C. A. Damon, Mrs. E. J. George, W. B. Alexander, H. P. Rankin, F. B. Zimmer, S. S. Noble, A. B. Shaner, C. H. Latham, W. E. Richmond, Ross Moore, L. N. Cobblestick.

Honorary State Vice-Presidents—A. H. Gregory, California; C. F. Kenney, Connecticut, C. J. Devlin, Canada; R. W. Wales, Iowa; G. R. Norris, Illinois; E. S. Aldridge, Indiana; J. O. McBurney, Kansas, R. C. Bradley, Michigan; G. O. Brown, Maryland; Victor Bradley, Massachusetts; Dr. J. T. Dewey, Missouri; C. C. Randleman, North Carolina; R. G. Bates, North Dakota; M. S. Gardner, New York; John Engel, Jr., New Jersey; O. E. Miles, Ohio; A. W. Marburger, Pennsylvania; C. W. Gribble, Texas; G. F. Lawrence, Vermont; H. W. Illman, Washington; G. E. Greenwood, Wisconsin; N. S. Beardsley, Minnesota.

Committees were appointed to solicit subscriptions to be offered in the name of the club at New York, Boston and St. Louis, as follows:

New York Show: Wm. Ellery Bright, chairman; C. H. Latham, secretary; E. B. Thompson, C. H. Welles, W. C. Gehring, M. S. Gardner; A. C. Smith, A. J. Widmer, C. Shaylor.

Boston Show: A. C. Hawkus, chairman, Victor Bradley, A. C. Smith, H. Nicholson, Albert Stover, D. J. Lambert, C. H. Welles, E. H. Hillis, G. E. Brundage.

W. W. Henderson was appointed chairman of the St. Louis committee and authorized to name the other members of the committee.

CONSTITUTION.

ARTICLE I—NAME.

This organization shall be known as the American Plymouth Rock Club.

ARTICLE II—OBJECTS.

The objects of this club shall be the fostering and improvement of the Plymouth Rock Fowl, and the protection and advantage of the membership of the club.

ARTICLE III—OFFICERS.

The officers of this club shall be a president, seven vice-presidents, a secre-

tary-treasurer, and an executive committee. The executive committee shall consist of the president, vice-presidents and secretary-treasurer and not more than seven other members. There shall be a state vice-president in each state having ten or more members, to be elected by the state members at the state meetings, and a state secretary to be appointed by the president. The terms of all officers shall be for one year.

ARTICLE IV—MEETINGS.

The annual meeting of this club shall be held at such time and place as a majority of the executive committee shall decide, and, when convenient, it is recommended that the place of meeting be the same as that selected by the American Poultry Association. Special

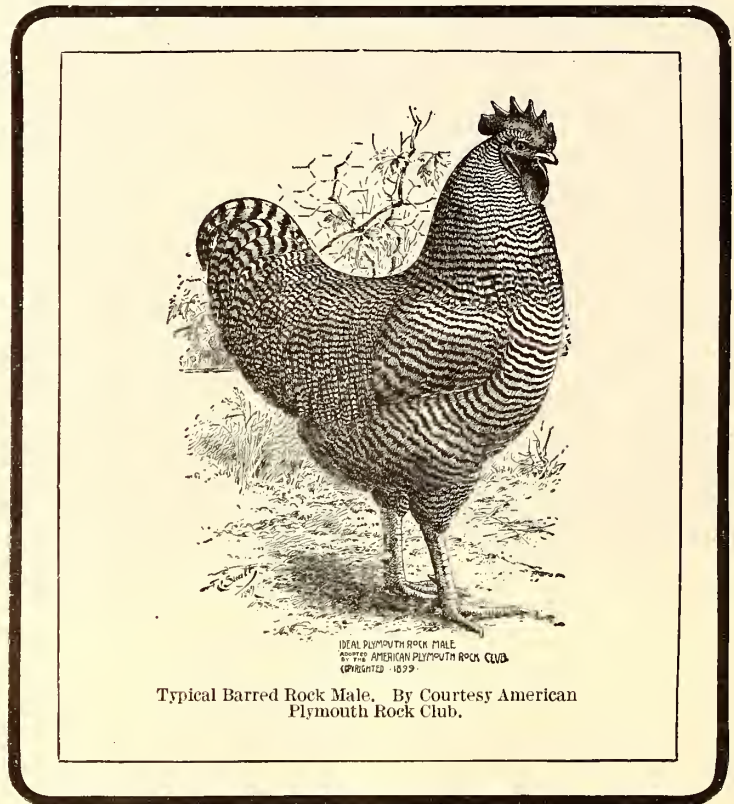

members without the payment of an initiation fee or annual dues. Paid up life membership cards will be issued at \$10 each.

ARTICLE VI—ELECTION OF OFFICERS.

The officers of this club shall be elected by ballot at the annual meeting. Vacancies in office, from whatever cause arising, shall be filled by appointment of the executive committee, and the appointees shall hold office until the next annual meeting.

ARTICLE VII—DISCIPLINE.

Any member of this club who is found guilty of falsely representing his stock, or being dishonest in his transactions, may be expelled by a three-fourths vote of the members present at any regular meeting. But, before any such action is taken, distinct charges must be pre-

Typical Barred Rock Male. By Courtesy American Plymouth Rock Club.

meetings of the club may be called by the president, authorized thereto by a majority vote of the executive committee, upon the written request of any ten members of the club, at the time and place specified in said written request; but said written request must be received by the president not less than twenty days before the date of the special meeting.

ARTICLE V—MEMBERSHIP.

The members of this club shall consist of all who are approved by the executive committee, and receive a two-thirds vote of members present at any regular or special meetings of the club, and who shall pay an initiation fee of one dollar and annual dues of fifty cents thereafter. Ladies interested in the Barred Plymouth Rock may become mem-

ferred in writing, a copy of which must be sent to the person accused, and full opportunity be given to him to refute the charges. The person making the charges will be expected to sustain them by competent evidence, and any member making charges against another without probable cause for so doing may be suspended or expelled by a three-fourths vote of the members present at any regular meeting.

ARTICLE VIII.—AMENDMENTS.

This constitution may be amended by a three-fourths vote of the members present at the annual meeting; provided that said amendment was offered at the preceding annual meeting, or notice of the intended amendment has been given in writing to the secretary, and by him sent to all the members of the club at least

M. S. GARDNER,
President American Plymouth Rock Club, Auburn, N. Y.

sixty days before the time of the annual meeting.

BY-LAWS.

ARTICLE I—THE PRESIDENT.

The president shall preside at all meetings of the club and of the executive committee, and shall call special meetings, as provided in Article IV of the constitution.

ARTICLE II—THE VICE PRESIDENT.

The vice presidents, in the order of their election, shall perform the duties of the president in his absence, or in case of his inability to act.

Section 2. The state vice president shall call and preside at the state meetings, said call to be issued not later than November 1st each year.

ARTICLE III—SECRETARY AND TREASURER.

The secretary and treasurer shall keep the minutes of all meetings of the club, conduct its correspondence, receive all initiation fees, annual dues, and other

whether a special meeting ought to be called or not; shall determine whether the secretary and treasurer be required to give bond, and in what amount; shall fill vacancies in office, and shall have the general charge and oversight of all other business of the club which is not specially designated to be performed by the officers.

ARTICLE V—ARREARS.

Any member who shall be in arrears for one year shall not be entitled to vote, and may be suspended, in the discretion of the club, by a two-thirds vote of the members present at the annual meeting. If suspended, he can be restored to membership only by the payment of all arrears and by a two-thirds vote of the members present at any regular meeting of the club, or a like majority of the executive committee in case arrears are paid and application for restoration is made at a time when any

COMBINED FOWL HOUSE AND SCRATCHING SHED.

In poultry keeping one needs a suitable building, properly located, so that it is dry and will be much warmer in the winter. I will give a brief description of mine, which I think is very handy and cheap and answers the purpose very well. The first thing I did was to pick out my location. Then a man with a scraper and team piled up about 15 inches, which made a fine place to start the building. The building is 14 feet wide and 36 feet long, 5 feet high in the back and 7 feet in the front. This is divided in three pens; each pen is 12x14 feet. I find ample room for twenty-five Wyandottes in each pen.

The front is made in doors, two doors to each pen and a window in each door and a window in the east and also one in the west. The doors are kept open through the day, except when very windy and stormy. I have burlap curtains on the inside, made from the sacks that I buy bran in, which are always in place when doors are open, so my fowls are never out in winter, beginning with the first snow till the last snow is gone. I find in my experience that doors are necessary, especially in windy days, as curtain will flap more or less and that is harmful to fowls if you want eggs.

The burlap curtain should be on a frame and hinge at the top, so when the doors are closed it can be raised out of the way, then you will have plenty of light from the window in the door.

The north wall is lined with two-ply tar paper, also part of the east and west side. The dropping boards are 20 inches from the ground, 32 inches wide and 10 feet long. Eight inches above come two 2x4, 10 feet long, rounded at the top, which make very good perches. I have a burlap curtain on frame, which is let down on cold nights. Each room is furnished with nests made on a bench 10 feet long, 10 inches wide; divide in nests 8x10 inches, in front a 3-inch board; the top is boarded also; the back also, except the last board on the top, which is hinged, which makes it handy to get the eggs; these nests are placed under the dropping board.

I use one gallon syrup pails for grit and oyster shell. I cut one-third around about 3½ inches from the bottom, and push the upper part in about 2 or 3 inches; have the cover on the pail. I find this alright for beef scrap and bran by nailing an old pan on the wall to catch what drops; these pails are up so the litter will not get in them.

The dust box is 14 inches high, with pegs on the four corners to run wire around to keep them from roosting on it.

A cage is provided for a crock with water. A strong cord is nailed to the roof to hang a cabbage for the fowls to pick at, with feed trough and plenty of litter. This completes my fowl and scratching shed, of which I am proud. This building faces the south and is in a plum orchard, a row for each pen.

MARY E. SCHATZLEY.

Wheatfield, Ind.

J. M. Detwiler and Geo. J. Gleason, Dunlap, Ia., have a combination ad in this issue. Mr. Detwiler has been breeding Barred Plymouth Rocks for a number of years and has a large farm on which his fowls have unlimited range, thus insuring vigorous breeding qualities. Mr. Gleason makes a specialty of Silver Laced Wyandottes and birds of his breeding always win wherever shown. Write them for prices and particulars and mention AMERICAN POULTRY JOURNAL.

Typical Barred Rock Female. By Courtesy American Plymouth Rock Club.

moneys belonging to the club, and disburse the same, upon a voucher signed by the president, which shall serve as his receipt for the same. He shall also give bond, when so required by the executive committee, with sufficient sureties, in such an amount as the said committee may determine. He shall also make an annual report to the club of its membership and finances.

Section 2. The state secretary shall call for vote for state meeting place at which the state prize cup is to be offered. At least three shows are to compete. This vote is to be taken before October 1st each year.

ARTICLE IV—THE EXECUTIVE COMMITTEE.

The executive committee shall examine into and pass upon all applications for membership, reporting favorably or the reverse, as may seem best to the members of the club; shall determine

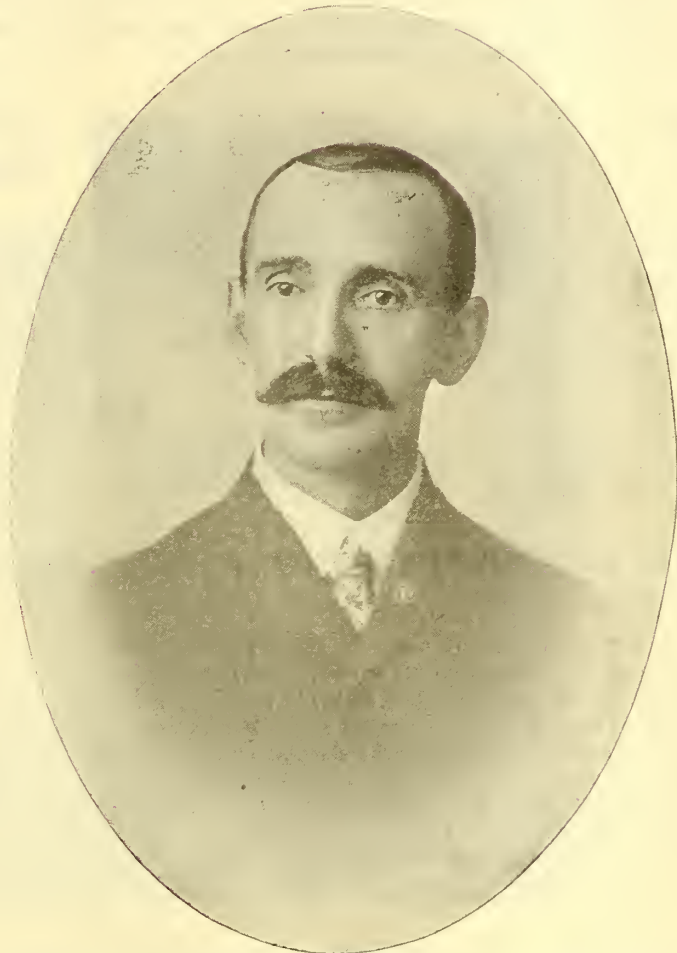

regular meeting is not near at hand.

ARTICLE VI—ORDER OF BUSINESS.

1. Calling to order.
2. Reading minutes of previous meeting.
3. Receiving applications for membership.
4. Report of committees.
5. Election of officers.
6. Election of members.
7. Unfinished business.
8. New business.

ARTICLE VII—AMENDMENTS AND SUSPENSIONS.

These by-laws may be amended or suspended at any regular meeting by a three-fourths vote of the members present; provided all amendments to the same shall be in writing, and notice thereof shall be given in the call for the meeting.

H. P. SCHWAB,
Secretary and Treasurer American Plymouth Rock Club, Roches-
ter, N. Y.

THE JEWEL INCUBATOR IS IN A CLASS BY ITSELF.

It is the first and only machine ever built that heats equally. From year to year every manufacturer has tried to reach the same point, but has failed. Would-be experts have claimed that it was impossible to build an incubator holding more than 50 or 60 eggs with *flat trays* that did not vary from 1 to 1½ degrees in the extreme parts of the hatching chamber. They also claimed that if the eggs were left in one position in the tray they would suffer from it. *We agree with them. The eggs would suffer.* "THE JEWEL" has all flat Trays located on a dead level and the Corners, Sides, Ends and Center, Heats Absolutely Even. No Other Incubator Can Do It.

IT IS EASY TO IMITATE

And it will only be a question of a short time when manufacturers of cheap incubators will claim equal heat, or anything else that will give them a new point.

"THE JEWEL" is the new leader in this important step, and infringements will be prosecuted.

THE IMPORTANCE OF EQUAL HEAT

Is not hard to understand. Every Egg has an equal chance to hatch. The *Average Incubator* varies from 1 to 5 degrees and because of this evil failure results. This one feature of "THE JEWEL" is worthy of especial attention. Cheap incubators can never have *Equal Heat*. It is impossible.

HIGH CLASS PROOF OF EQUAL HEAT.

STATE OF MINNESOTA, } ss
COUNTY OF HENNEPIN, }

The undersigned came personally before me, and being duly sworn, each for himself, says:

That at the invitation of the **International Stock Food Company**, they were present at the International Building, East Minneapolis, Minnesota, on the 11th day of November, 1905, witnessing the test of a 360-egg Jewel Incubator having flat or level trays. Thermometers placed in the ends, sides and center registered the same heat. After this test, all the thermometers were tested in warm water and all found to register equally.

GEORGE LOTH, Secy. Minn. S. P. A.

Z. M. COLE, Breeder of W. P. Rocks.

CLIVE H. OWEN, Breeder Wyandottes,

C. L. SMITH, Judge of Court.

LAWRENCE HOPE, Ex.-Pres. M. S. P. A.

L. B. RICH, Sanitary Poultry Co.

Subscribed and sworn to by each of the above named this 11th day of November, A. D., 1905.

ROBERT CHRISTENSEN,

Notary Public, Hennepin County, Minn.

It is not reasonable to expect satisfactory results from a machine unequally heated, but it is reasonable to expect to hatch stronger chicks from the **Jewel**, because of its proper construction. Cheap incubators and cheap brooders cannot contain the features brought out in the **Jewel**, and it should not be expected. **Jewel** Incubators and Brooders offer the farmer and farmer's wife the best opportunity to make money from their poultry because they succeed where other incubators have failed. Prominent men who endorse our machines would not lend their names for recommending any article unless it was all it was claimed to be.

The **International Stock Food Company** guarantee every Incubator and Brooder they build. They guarantee them to produce better results, and make more money for their operators than any other machine known.

Our catalogue contains a great deal of useful information on Poultry Culture and gives a complete description of our line of Incubators, Brooders and Poultry Supplies.

CARE OF BROODER CHICKS.

Rearing Incubator Chicks in Florida—Teaching them to drink—Plenty of Fresh Air Necessary—The Proper Feed to Keep them Growing.

As the weather is ideal for rearing chicks here (Florida) during the fall, winter and spring I use outdoor brooders altogether. When the chicks have all been hatched in the incubator, I remove the tray, leave the door open a little and reduce the heat until it gets to about 95 degrees, and keep the chicks in the incubator until 24 or 36 hours old. The brooder I have thoroughly cleaned and disinfected, put one inch dry sand on the floor with an inch of cut clover on that. Light the lamp the day before the chicks are to be put in, having the brooder thoroughly warm and dry and heated to 90 degrees. Put the chicks in the brooder in the morning, not putting more than fifty in one brooder, and seat-

outside door open, according to the temperature outside. As they grow older, I give more ventilation, keeping it comfortably warm under hover. The second day I feed chick feed three times by scattering it in the clover and give water three times. Also on the second day I let them out in the exercising room, watching that they do not stay out to get chilly. The third day, I let them out of the brooder in a very small enclosure; that is, if the sun is shining and there is no wind blowing. The third day and after I feed four times a day, putting the feed in the clover as long as the chicks are confined to the small yard, and keep water before them at all times. The water is given them in small fountains which are kept very clean.

I make the yard a little larger every day for several days and then give them a yard about 20x40 feet, and keep them in the yard until old enough to put in colony coops. I keep the brooder where the sun can shine in it, and take out the hover and sun that every day. When chicks are a week old, I clean out the

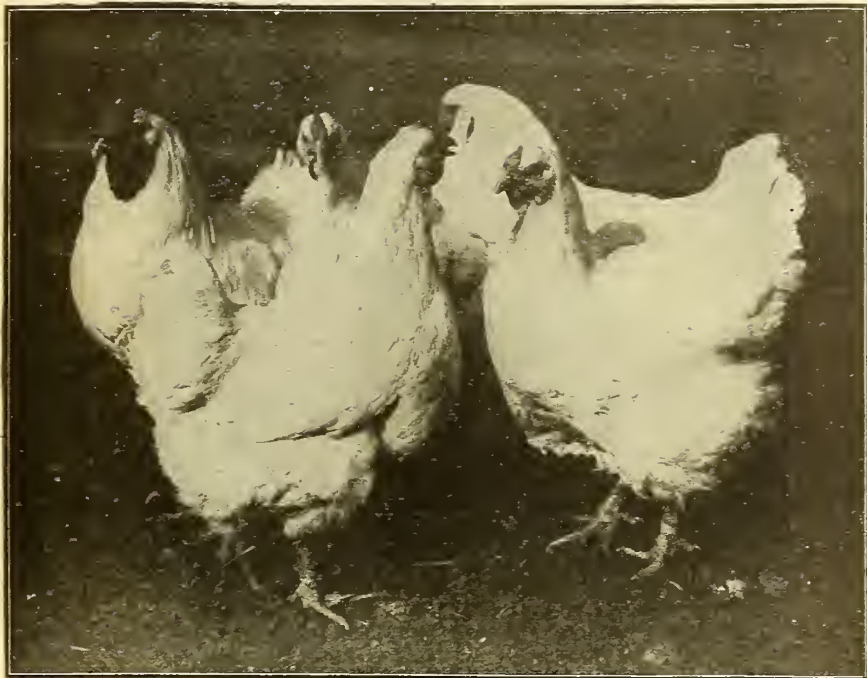

they will be contented. A chick needs to be well fed and kept comfortable. Give them a chance to sit in the shade when they want to. It is the nature of a chick to want to be on the move most of the time; and a well fed chick will exercise enough for good health and growth if given plenty of room. They should not be stuffed, and on the other hand they should not let be too hungry either. They should be kept growing right along, and to do that they need lots of food. It is better, where they have plenty of room to keep feed before them all the time than to let them go hungry. I generally keep the grain scattered in the grass where they can find it if they are hungry enough to look for it. When two weeks old, I begin giving them one feed a day of mash, using any scraps I may have with water in which vegetables have been cooked; and sometimes boil vegetables for them and thicken it to a crumbly mass with equal quantities bran, shorts and meal with one-tenth cotton seed meal and salt to taste. They soon learn to like it and will refuse grain for the mash.

When about seven weeks old, I put them in colony coops. Have had splendid success raising brooder chicks; raise at least 95 per cent of all strong chicks, and they grow very fast. I am careful not to let them get wet at any time while they are brooder chicks, always getting them shut in before a rain, and do not let them out on the wet grass. I attribute my success to good care and the feeding of dry chick feed the first few weeks. The conditions here in Florida for raising chicks are perfect. There are not more than half a dozen days during the season that chicks have to be shut in the brooder all day, and the sun shines nearly every day in the year.

Raising chicks with brooders is far superior to raising with hens. The brooder is ready to hover the chicks at all times. They get all the feed given to them; there is no hen to eat up the expensive chick feed. A brooder full of chicks is as easily cared for as a hen with a brood. There is no danger of the chicks wandering off and being caught by hawks, cats, etc. In case of a shower coming up, one does not have to look all over the place for the hen and chicks; they are in their yard and can be got under shelter in a few minutes. The brooder method is by far the best in every way. I will never go back to the hen method of rearing chickens. I raise a great many more of the chickens with brooders than with hens. A hen will drag her chicks around too much sometimes. When the chicks are reared without hens they are not compelled to keep on the move; they can rest when they feel like it. I prefer brooders for rearing chicks.

Mrs. W. H. MILLER.

Wauchula, Fla.

WHITE WYANDOTTES.

One of Ira C. Keller's (Prospect, Ohio) winning pens of White Wyandottes at the World's Fair. Mr. Keller exhibited four pens of White Wyandottes, and three of them won out of the ten prizes offered. He was the only exhibitor that won more than one premium in this class. This speaks strong for his stock. He is always a heavy winner at the largest shows of America.

ter a little dry chick feed and grit in the clover. I leave them to their own sweet will for an hour or so and then give them some water in a small fountain. By dipping the bills of a few in the water they soon learn to drink and that teaches the rest. I leave the water there until I think they have all had a sip and then I take it away. In the middle of the afternoon I sprinkle a little more chick feed in the clover and in an hour or so give them another drink. I am very careful to see that they all get under the hover the first two nights, also careful to keep the heat to about 90 degrees for the first few days. After that I keep the heat so the chicks are comfortable. If they lie with the heads outside of the hover the heat is about right. Keep it plenty warm under the hover and give lots of fresh air. After the chicks are a week old, I leave the

brooder, and clean every other day thereafter.

The principal feed is dry chick feed with an occasional feed of bread crumbs, chopped meat, etc. When a week old, I begin giving a feed a day of green food chopped fine, cabbage, onions, lettuce or any greens I may have. When they are about three weeks old, I let them eat grass if there is any, and quit giving chopped greens. After a week old, I keep beef scraps, charcoal and grit before them all the time. We have very little natural shade as yet, so I make a slanting frame and cover with boards for shade. I give them yard room so that they can keep busy most of the time.

The secret of success with brooder chicks is to keep them contented, feed plenty of the right kind of feed and give them plenty of exercising room and

3,600 EGG INCUBATOR

A Mammoth Incubator Constructed by the Cyphers Incubator Co., and Now in Successful Operation on their fifty acre Poultry Farm, Near Buffalo, N. Y.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—We take the liberty of enclosing herewith press proofs of two half-tones made from photographs, showing front and rear exterior views of a 3,600-egg capacity compartment or mammoth incubator, as constructed by this company at Buffalo, and which, in enlarged and improved form, is now in successful operation in a specially built, 16x40 ft. incubator cellar, on the Cyphers Company's fifty-acre poultry farm, located in the suburbs of Buffalo.

This big hatching machine may rightly be said to be the invention of Mr. Charles E. Adair, who is employed in our experimental department, although it embodies, in each separate compartment, the essential principles of the genuine Standard Cyphers incubators, as covered by patents owned by the Cyphers Incubator Company. Mr. Adair has devoted the greater part of the last ten years to the invention of incubators, brooders and other poultry devices, during which time several patents have been granted on his inventions. He was the first and original inventor of the improved type of toggle thermostat used in the 1906-pattern Cyphers incubators, all styles and sizes, the basic patent for which is owned by this company.

This mammoth incubator is not a new project with the Cyphers Company. Plans were made by this company six years ago to erect a 5,000 to 10,000-egg capacity incubator at Wayland, N. Y., repeated mention of which was made in our annual catalogues.

Mr. Adair's smaller machine holds 3,600 eggs and after it was in full working order and had proved that each compartment was under proper control, letters patent were applied for and authority given for the erection of a still larger machine on this company's poultry farm. A special incubator cellar was built to receive this large machine, with ample room to test ten to fifteen No. 2 and No. 3 Standard Cyphers Incubators (our regular portable machines) in the same apartment, under like conditions, and this 11,700-egg capacity so-called mammoth incubator is now in operation there, subject to inspection by interested persons who obtain at our office a letter of introduction to the resident manager of the farm.

The series of compartments of this big incubator is a multiplication of the Standard Cyphers, built end to end. Each compartment is supplied with either two or four trays, holding respectively 200 or 100 eggs (total capacity of each compartment 390 to 400 eggs) and any single compartment, or any number of compartments, can be operated independently of the others. Each compartment is regulated and ventilated independently of the others, and ample moisture, drawn from the outside air, is supplied independently to each compartment, thereby retaining the non-moisture principle of the patent-diaphragm, Standard Cyphers. A single upright tier of compartments, or a row taken horizontally, can be operated separately. If a machine, for example,

consists of sixteen compartments, each having a capacity of 390 eggs, compartments 1, 7 and 15, or 2, 9, 13 and 16, or any other combination from one to sixteen, can be run independently of the others.

As to whether or not this big machine will work successfully in different parts

chine, now that we appear to have the regulation of temperature, the ventilation and the automatic supply of moisture under practically perfect control.

Interested persons will ask, To what use will they put these big incubators?

First of all, they bid fair, in our opinion, to be adopted on large commercial plants. The two machines built and tested thus far by this company have been operated, one with gas, the other by the use of hard coal. The Cyphers Incubator Company has contracts for erecting one of these mammoth incubators on the plant of the White Leghorn Poultry Yards, at Waterville, N. Y., where the Columbia School of Poultry Culture is located; also on two of the largest duck ranches in the country—one near the Atlantic Coast

Front view of one end of Cyphers Incubator Company's Mammoth Incubator. Can be built to hold an unlimited number of eggs. The machine now in operation on the company's poultry farm has a capacity of 11,700 eggs.

of the world, under the widely varying conditions that artificial incubation must contend with, we feel prepared to say that not much doubt remains in our mind. If it is conceded that the portable Standard Cyphers Incubators will hatch satisfactorily, then little room is left for doubt as regards this compartment ma-

where the atmosphere is heavily charged with moisture, and the other at an inland point among the foot-hills of the Blue Ridge Mountains, where the air is more rare and much drier, as a rule. Within the year, therefore, we expect to have a number of these big machines in operation and a trusted employee will assist

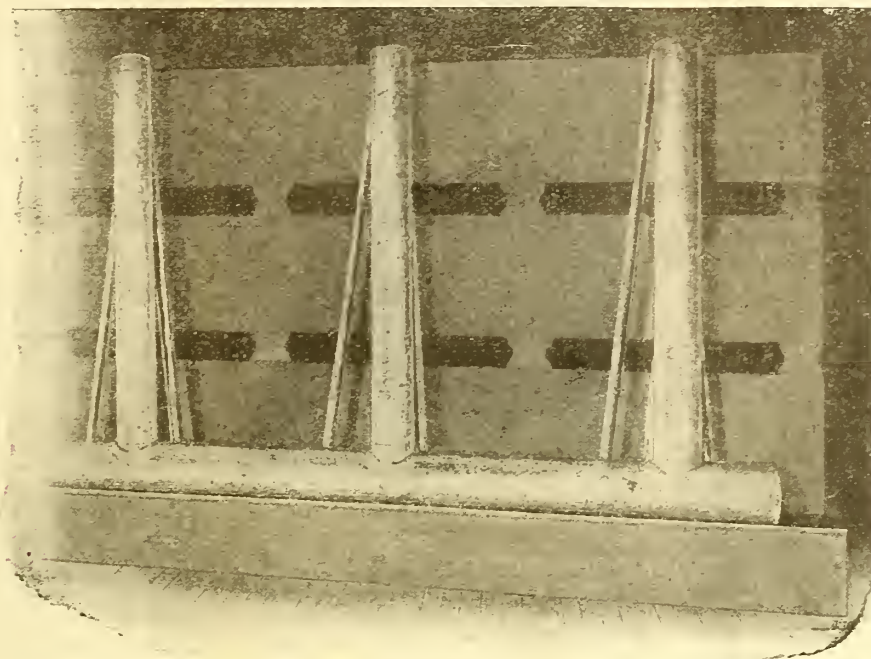

in running each machine, with the object of making a study of the local conditions, of keeping accurate records and reporting results in each case, under the different conditions found to exist.

Our next class of customers we expect to find among enterprising poultrymen located in prosperous agricultural sections of the United States and Canada where fowls and eggs are produced in considerable quantities for market. It

and baskets, returned to each farmer and villager the chicks due him from the eggs supplied for hatching.

Now if you will give a few moments' thought to the possibilities of the day-old chick business, and will put two and two together, I am sure you will catch the full idea of this "new departure." When it is an established fact that newly-hatched chicks can be delivered, with perfect safety in handy boxes or bas-

tory" at or near the county seat of every county in every state in this country and Canada, where agricultural products, including poultry and eggs, form a chief source of local wealth. Later on each thickly settled neighborhood may well have a "hatchery" of this description. Then the average poultry keeper on the farm or in the village will own brooders or a brooding house in which to raise the chicks, but will have the

Rear view of one end of Cyphers Incubator Company's Mammoth Incubator. Can be built to hold an unlimited number of eggs. The machine now in operation on the company's poultry farm has a capacity of 11,700 eggs.

was said of old that there is nothing new under the sun, and we are not prepared to contest the point as regards this big incubator. No doubt you are aware that in ancient times the Egyptians and Chinese built immense eccaleobions or hatching ovens, each one holding thousands of eggs; also that men with donkeys and wicker baskets journeyed over the nearby country, collecting eggs to be hatched at so much apiece in an eccaleobion that was announced to start on a given day. Later these same collectors, with their donkeys

kets, not only to the passing farmer or farmer's wife who drives by on the right day in wagon or buggy, but that it has been shown conclusively, times without number, both in this country and Europe, that day-old chicks can be shipped a distance of one thousand miles or more, arriving safe and sound—here we are brought face to face with an opportunity that certainly invites earnest attention.

Nothing, so it would appear, exists to prevent the erection of a large "incuba-

hatching done in one of these large public machines.

Pardon me for going into this matter at such length, but it is a subject to which we have given much thought of late, because of our desire to see the poultry business placed upon a broader and still better foundation, in all its branches.

Very truly yours,

CYPHERS INCUBATOR CO.,
G. M. CURTIS, Prest.

Buffalo, N. Y.

Paroid Roofing

Poultry Houses Roofed for Good. Are you looking for the ideal roofing and siding for poultry houses and farm buildings? The owners of the farm on which the above illustration was made, have found it. They are the largest duck raisers in the world, and are but one of the thousands of poultrymen, farmers and others who use

PAROID ROOFING

for roofs and sides in preference to all other roofs. They have found it the most economical because it is the most durable and satisfactory. Paroid is made of extra strong felt, with extra saturation, which makes it water proof, spark and cinder proof, cold and heat proof, gas and acid proof. Extra tough, extra durable. Light slate colored—contains no tar—does not crack, run nor taint rain water. Any one can lay it in any kind of weather.

Send for Sample. The strongest argument is to see a Paroid roof that has been laid a few years. The next best thing is to see a sample. Send us your name today and we'll send a free sample and name of nearest dealer. Enclose a 2c stamp and we'll send new book of complete plans for poultry and farm buildings.

(Established 1817) Originators of the Complete Roofing Kit in every roll. **F. W. BIRD & SON, Makers, East Walpole, Mass., Chicago, Ill.**

THE CINCINNATI EXHIBITION.

More Than Two Thousand Birds of Extra Good Quality Cooped in Music Hall—A Good Representation of the Leading Breeds and Varieties—The Largest and Warmest Showing of Rhode Island Reds Ever Made—The Good Work the Cincinnati Association Is Doing—News Notes of the Show.

Written by Thos. F. Rigg, Associate Editor A. P. J.

One of the most patronized, best managed and enjoyable shows of the season was that held by the Cincinnati Poultry and Pet Stock Company, incorporated, in Music Hall, Cincinnati, January 16-20. There were on exhibition about 2,000 head of poultry, several hundred pigeons and a large showing of pet stock. The cooping was well done, and the management throughout was of the best. Thoughtful consideration was given to the interest of every exhibitor.

The management of this association proposes to build up one of America's best and most important animal shows in the city, on the Ohio. And we want to here predict that they will do so.

Thos. J. Foy, secretary, won the esteem of all fanciers present. Foy is a clean-cut, level-headed, aggressive man who accomplishes things. Nowadays the world puts a premium upon the value of the "men who do things." A pleasing personality, a disposition to give every man a little more than he is entitled to, a desire to make every

exhibitor happy, a determination that all shall be on the square all the time, Mr. Foy is indeed an ideal working

Thos. J. Foy, Secretary Cincinnati Poultry Association.

secretary. He is a very busy man, managing a mercantile business of several hundred thousand dollars annually, yet he finds time to give his poultry

and this show organization much attention.

Charles A. Aull was a most obliging superintendent, and it was remarked by many fanciers that things were kept in the very best of working order by Mr. Aull.

The management gave notice that next season the show would be made more attractive to exhibiting fanciers.

AMONG THE EXHIBITORS.

U. R. Fishel, Hope, Ind., had a string of his "Best in the World" White Rocks and made practically a clean sweep in strong competition. His winnings were: All prizes on cocks, first hen, 1-4-5 cockerels, 1-2-5 pullets, 1-2-4-5 pens.

Mr. S. T. Campbell, Montrose Farm, Mansfield, Ohio, was in attendance all week, and took a prominent part in the American Poultry Association meeting. He made a fine showing with his R. C. Black Minorcas. His winnings were: 1-2-3 cocks, 1-2-3 hens, 1-2-3 cockerels, 1-2 pens. Mr. Campbell also won first pen Columbian Wyandottes.

Lester Tompkins, Concord, Mass., made a great killing with his Rhode Island Reds. There were more than 300 Reds. He won as follows: 3-4 S. C. cocks, 1-2-3 hens, 1-3-4 cockerels, 1-2-3 pullets. Rose Combs: 5 cock, 1-5 hens, 1-4-5 cockerels, 4-5 pullets.

E. C. Allison, Hope, Ind., won as follows in Buff Rocks: 1-2 cocks, 2-3 hens, 1-3 cockerels, 1-4 pullets.

J. P. Hildorfer, Allegheny, Pa., captured the following prizes with his S. C. Black Minorcas: 2-3 cocks, 3-4 hens, 1-4 cockerels, 5 pullet.

MONEY MAKERS

FOR

POULTRY MEN

LEE

LEADERS

Lee's Egg Maker

A hen's appetite is varied. At large she will put a variety of food into her interior rivaling a seven-course dinner, and the beauty of it all is she needs it to repair the waste and furnish elements necessary to produce the daily egg. Lee's Egg Maker furnishes exactly the same elements, only the hen does not consume her energy and vitality in chasing her quarry to earth. It's right there at hand—proper food in proper proportion for the production of egg and shell. Not a food in itself, but is fed in connection with the regular food ration. No matter what you feed in the way of grain or mash Lee's Egg Maker is vitally essential to greater egg production. We guarantee that no matter what your egg production is now, a daily ration of Lee's Egg Maker will add sufficient to the egg supply to pay the cost of the Egg Maker, cost of labor of adding it to the feed, and give a profit of not less than 100% on such cost. Price 25c, 50c, \$2.00.

Lee's Germozone

The Poultry Medicine. A little of it in the drinking water twice a week destroys disease germs and insures healthy fowls. A bowel regulator. The best cure for Roup, Colds, Canker, Swelled Head, Bowel Complaint, etc. All inflammation yields readily to treatment with Germozone. Price 50 cents.

Lee's Lice Killer

The sure exterminator of Lice, Mites and all vermin, without the disagreeable work necessary with other preparations. A liquid that kills both by vapor and contact. No handling, dusting, dipping, or greasing. Ask for LEE'S—and be sure you get it. Qt., 35c; ½ gal., 60c; 1 gal., \$1.00.

GEO. H. LEE CO., OMAHA, NEB.

Makers of "Mandy Lee" Incubators and Brooders. Catalog FREE.

shows good White and Golden Wyandottes. His winnings were: Golden—2-4 cocks, 3-4 hens, 1-2 cockerels, 3-4 pullets, 1-2 pens.

D. P. Shove, Fall River, Mass., won as follows with his S. C. R. I. Reds: 2 cockerel, 4 pullet.

C. N. Hansen, Warsaw, Ky., was in the winnings with his Reds, as is his custom. He secured 1 cock, 4 hen, 5 cockerel. Note, also, his special winnings here given.

Henry Steinmesch, St. Louis, Mo., whose S. L. Wyandottes have been winning in all leading shows for years, had a few birds on exhibition. He won as follows: 2 pen, 3-4 hens, 1-4 pullets.

Eugene Sites, Elyria, Ohio, received the following winnings to his credit: 2 S. L. Wyandotte cockerel, 1 cockerel, 1 pullet Columbian Wyandottes.

J. C. Fishel, Hope, Ind., won as follows with his "World's Best" White Wyandottes: 4 cock, 1 hen, 1 cockerel, 5 pullet, 3 pen.

Orion E. Michael, Dayton, Ohio, showed a string of his well known and well liked S. C. B. Leghorn.

The K. G. Poultry Yards, Circleville, Ohio, made a very favorable impression with a string of grandly bred White Wyandottes and Barred Rocks.

Arthur R. Probst, Pomeroy, Ohio, captured the coveted prize of first Barred Rock cockerel.

Carver & Avey, Columbia City, Ind., showed a number of their winning Partridge Wyandottes. They won as follows: 1 cock, 2-4 hens, 1-2 cockerels, 2-3 pullets, 1 pen.

The display of more than 300 head of Rhode Island Reds was the feature of the show walks. The New England contingent was there in a body and everything was Red, Red, Red! The club offerings (and the winnings) in Reds were as follows:

House Rock Poultry Farm, Wollaston, Mass., \$5 for best R. C. Rhode Island Reds. Lester Tompkins, Concord, Mass., silver cup for best display Rhode Island Reds, \$5 for best single comb Rhode Island red hen, \$5 for best single comb Rhode Island pullet, \$5 for pen single comb Rhode Island reds, \$5 for best rose comb Rhode Island hen, silver cup for best S. C. R. I. Reds, from National R. I. R. Club; \$2.50 for best R. I. Red female, \$5 for

best R. I. Red pen. C. N. Hansen, Warsaw, Ky., \$5 for best S. C. Rhode Island cock, \$2.50 for best S. C. Rhode Island male. Phil Caswell, Newport, R. I., \$5 for best R. C. Rhode Island Red cock, \$5 for best R. C. Rhode Island Red pullet. U. R. Fishel, Hope, Ind., \$25 silver cup for best white fowl washed with Ivory soap, silver cup for best display of White Plymouth Rock, \$10 for best White Plymouth Rock cock, \$10 for best White Plymouth Rock hen, \$10 for best White Plymouth Rock pullet, \$10 for best White Plymouth Rock pullet, \$10 for best White Plymouth Rock hen. J. F. Defandorf, Garret Park, Md., \$10 for best White Plymouth Rock cockerel.

Special prizes awarded by Rhode Island Red Club of America: C. N. Hansen, Warsaw, Ky., silver cup for best S. C. Rhode Island Red male; Lester Tompkins, Concord, Mass., silver cup for best R. C. Rhode Island Red male; club ribbon for best shaped S. C. R. I. Red female; club ribbon for best colored S. C. R. I. Red female; club ribbon for best shaped R. C. R. I. Red male; D. P. Shove, Fall River, Mass., club ribbon for best shaped S. C. R. I. Red male; House Rock Poultry Farm, Wollaston, Mass., club ribbon for best colored S. C. R. I. Red male; Phil Caswell, Newport, Rhode Island Club ribbon for best shaped R. C. Rhode Island Red female; club ribbon for best colored R. C. Rhode Island Red female; Ed A. Ward, Cincinnati, Ohio, state silver cup for best display Rhode Island Reds from Ohio.

National Single Comb Rhode Island Red Club Specials: Lester Tompkins, Concord, Mass., \$25 silver cup for best cock, hen, cockerel and pull; special ribbon for best shaped S. C. R. I. Red female; special ribbon for best colored S. C. R. I. Red female; D. P. Shove, Fall River, Mass., special ribbon for best shaped S. C. R. I. Red male; House Rock Poultry Yards, Wollaston, Mass., special ribbon for best colored S. C. R. I. Red male.

A. H. Asche, of Princeton, Ill., won at Bureau County Poultry Association, Princeton, Ill., Dec. 13-16, 1905, as follows: Black Langshan, 1st, 3d cockerel, 1st pullet, 3d, 4th hen, with eight entries. White Langshan, 1st, 2d cockerel, 1st pullet, 1st, 2d hen, with six entries. Shellabarger and Rapp, judges.

BRADLEY BROS.' BARRED ROCKS.

There is probably no strain of Barred Plymouth Rocks that is better or more favorably known in this country than that produced by Bradley Bros., Lee, Mass. This firm has been breeding Barred Plymouth Rocks for over twenty years, and during all that time have had but one object in view, and that was to produce the best Barred Plymouth Rocks possible, and to say that they have succeeded in putting it mildly. They produce the birds that win and produce winners for those who buy them. For the past seventeen years Bradley Bros.' Barred Plymouth Rocks have won over 25 per cent more first prizes at New York shows than any other strain has been able to win during that time, which proves that their strain is the foremost in America.

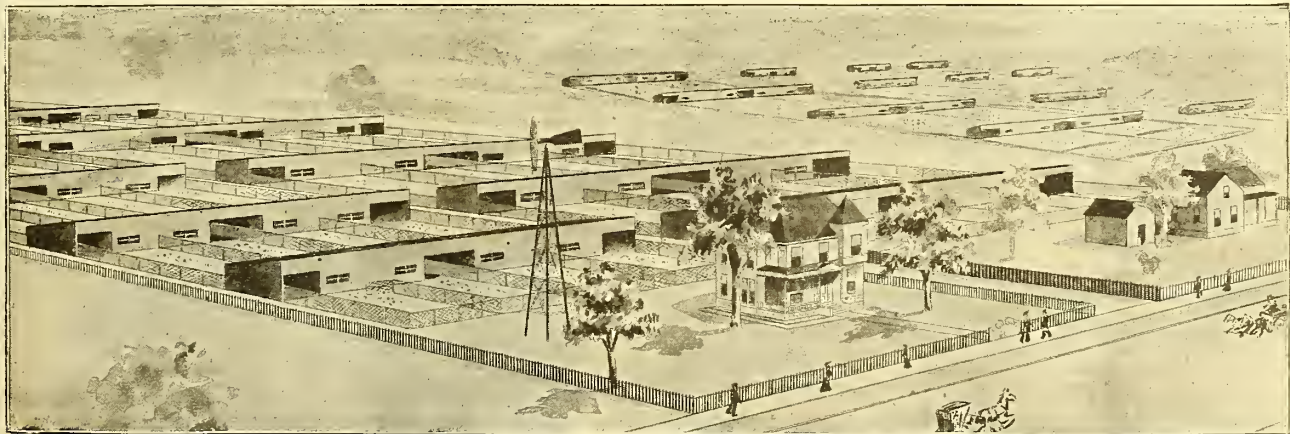

They have a very extensive poultry farm, located in the midst of the Berkshire Hills, where they raise thousands of their favorites every year, and their system of mating is so accurate that the percentage of good birds is something to be wondered at. Out of a flock of nearly 2,000 birds which we had the pleasure of looking over last fall, we failed to find a really poor bird, and the cockerel line was simply grand.

At the late New York show, where there was one of the largest classes of Barred Plymouth Rocks ever brought together in this country, the much coveted prizes of first and second cockerel were captured by this firm; and also grand championship for best cockerel; also first for best pen mated for breeding exhibition pullets, and several other prizes.

The full-page frontispiece in this issue of the champion cockerel at the late Madison Square Garden Show will give our readers an idea of the quality of stock produced by this firm.

The sales of Bradley Barred Plymouth Rocks extend all over the world, showing to what extent their fame as breeders of this variety has become known.

G. F. McClellan & Sons, Groveland, Ill., won at Illinois State Show, Danville, Jan. 1-6, 1906, as follows: Frst, 2d, 3d, 4th adult Pekin drake; 1st, 2d, 3d, 4th adult Pekin duck; 1st, 3d young drake; 2d and 4th young drake; 1st, 2d, 3d, 4th young gander; 1st, 2d, 3d, 4th young goose; 2d and 3d adult gander; 2d, 3d, 4th adult goose; 2d and 3d old tom Bronze turkeys. George Hyle, judge.

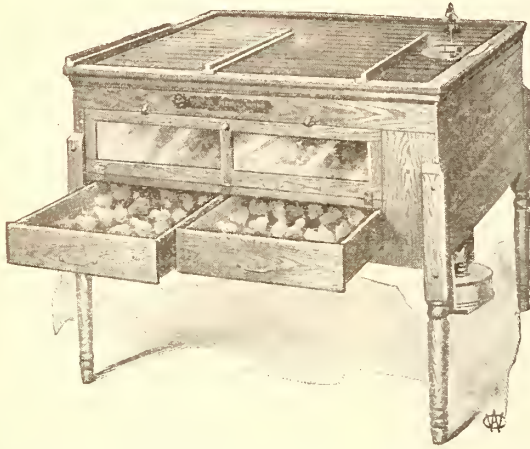

Crescent Poultry Farm, Frank Foy, Proprietor, Des Moines, Iowa

"Money in Poultry" is the title of our new 84-page thoroughly revised and illustrated book which tells how to make it; also how to feed, breed and grow and market your poultry for best results. Plans for houses, diseases, and cures; how to kill lice and mites. This book probably gives more reliable information about the poultry business drawn from actual experience, than any book of the kind published. It contains many illustrations; tells all about raising poultry for profit; feeding for eggs, broiler raising, artificial incubation and contains many valuable and interesting articles. Illustrates and describes the largest pure-bred poultry farm in the country. It also describes and illustrates 30 leading varieties of pure-bred fowls, and the Frank Foy Incubators and Brooders, and quotes extremely low prices on fowls, eggs, incubators and brooders. Mailed to any address for four cents in stamps. Address

FRANK FOY, : : Box B, : : DES MOINES, IOWA

Prairie State Combination

Hen Egg and Duck Egg Incubator

THIS MACHINE is constructed with an extra deep egg chamber, and nursery drawers, adapting it especially to the requirements of duck raisers. It may, however, be used equally as well for hatching broilers and soft roasters during the season.

The cooling slides on top of the machine make cooling tables unnecessary. The machines are made *rights and lefts*, and may therefore be put in solid blocks of four, reducing the room required for operating to the minimum—a very economical and convenient arrangement in the way of saving space and for those who are engaged in shipping newly hatched chicks to their customers.

And this, by the way, is a growing and very profitable industry which is fast taking the place, among many producers and fanciers, of selling eggs by the setting. The little chicks are placed in light wooden boxes, in cells which are bored full of holes for ventilation. The top is covered with burlap, and the chicks are covered over with soft, downy feathers—a waste product in many establishments. Thus packed they will ship safely almost any distance. This plan is better for the producer, and better for the buyer, in many instances, than buying eggs for incubation, and Prairie State machines enable you to hatch chicks that will bring much better prices than to sell the eggs.

Mr. Hallock, one of the largest, if not *the* largest, duck grower in the United States, has been a user of Prairie State Incubators for a great many years. You can imagine the extent of his operations when we tell you that he used between sixty and seventy carloads of grain in feeding his stock last season. His letter below shows the durability of the Prairie State Incubators. After eighteen years of use, he asserts they are still doing good work. He has never found an Incubator that will surpass the Prairie State for hatching ducks:

BROOKSIDE FARM
Center Moriches, L. I.

A. J. HALLOCK, PROP.

Speonk, Long Island, Jan. 8, 1906.

Prairie State Incubator Co., Homer City, Pa.

Dear Sirs:—Your new model machine was received a few days ago; will fill it with eggs next week and hope to find it an improvement over the old model and hatch every egg. When I wish it may be better than the other I do not mean to infer that the old model is not good, because I know that the old machine is hard to beat.

I used my first Prairie State in 1888, and have used them continuously since that date. Last year I used one hundred and thirty Prairie States. Have never had a fire and do not recollect of having any machine smoke seriously.

The machines that were purchased 18 years ago are doing as good work now as they did then, and to all appearances are good for many years more.

Last season there were a number of hatches that averaged

two hundred and forty ducklings to the machine. I usually have from five to ten machines hatch at a time.

Yours truly,

J. Hallock

What the Prairie State has done for Mr. Hallock it will do for you. Write for catalogue of the new Improved Standard Prairie State Incubator and learn about the improvements that make it a better machine than ever.

How to Make Your Own Brooder A Piano Box Will Do

The *Universal Hover* may be attached to any size or form of Colony house, mushroom house, small portable building, or a piano box, and make almost as good a brooder as money can buy.

Piano box brooders with *Universal Hovers* inside, are being used at the Connecticut Agricultural College Experiment Station at Storrs, Conn. Prof. Graham's testimonial tells with what results:

THE CONNECTICUT AGRICULTURAL COLLEGE

CHARLES K. GRAHAM

Instructor in Poultry Industry and
Poultry Manager

Storrs, Conn., Dec. 11, 1905.

Prairie State Incubator Co., Homer City, Pa.
Gentlemen:—I am well pleased with your *Universal Hovers*. They are giving excellent results, and, I think, come a little nearer perfection than any other brooder I have seen.

Yours very truly,

C. K. Graham

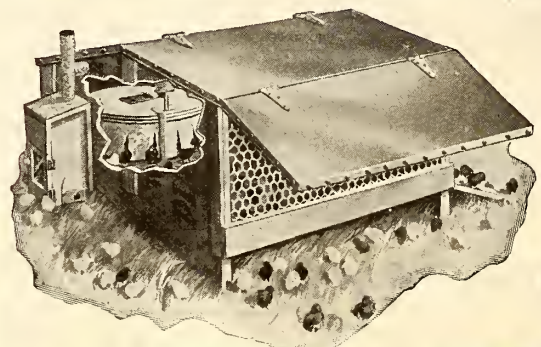

The use of the *Universal Hover* is almost boundless. During the summer season four or five broods may be successfully started in a piano box or Colony house, the same heating device being transferred from one to the other. During the winter it may be used in the winter brooder and make one of the finest individual brooders for the purpose that has yet been offered the poultryman. Our new Brooder Book, *free*, tells how to use the *Universal Hover* half a dozen ways to save you money and raise better chicks.

We have recently published *six valuable books* on how to increase poultry production. Every poultry raiser should have one or all of these books—they are *free* if you will write—and we will put your name on our mail list so that you will get others, now in course of preparation, also *free*, as fast as published. Write today.

Prairie State Incubator Co.

ECHOES OF THE NEW YORK SHOW.

BY J. BRINKAMA.

The different varieties of Orpingtons were well represented; the quality was the best ever shown. As we expected, the best winnings were made by the Willow Brook Farm, Berlin, Conn. Winnings: Single Comb Buff Orpington, cock 2, cockerel 5, pullet 2-4, pen 2 and 3; Single Comb Black Orpington, cock 1-2-3, hen 1-2, pullet 2-5, pen 1; White Orpingtons, cock 1-2-3-4-5, hen 1-2-3, cockerel, 1-3-4, pullet 3-4-5, pen 1. Send for their fine illustrated catalogue giving description of their stock. They have at present writing 2,500 birds to select from. They make a specialty of supplying breeding birds and utility stock for the largest farms and estates all over America.

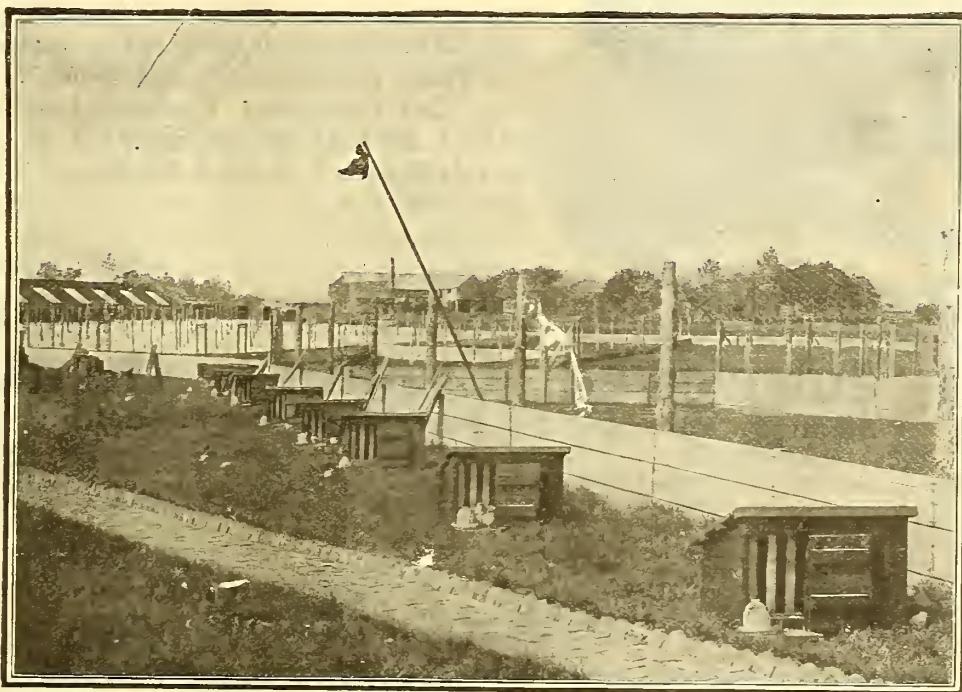

for which he refused \$100, was the best I have ever seen. Mr. Richardson has quite a number of birds for sale, and is now booking orders for eggs. Any one interested should address Hazelmere Poultry Farm, W. B. Richardson, prop., Knightsville (Cranston), R. I.

Our friend Mr. Geo. A. Barrows, Groton, N. Y., the noted Single Comb White Leghorn breeder, was there with a grand lot of birds; his late winnings are too well known to require particular mention. His birds are grand in shape, grand in color, and grand in egg qualifications.

Robert A. Tuttle, Center Moriches, L. I., N. Y., surprised a great many of the old timers. He is one of the foremost breeders of Buff Plymouth Rocks, entering only 5 cockerels and 5 pullets, winning 1st and 3d cockerel, 1st and 4th

Mr. Keller sold quite a number of birds to the Japanese government. Owing to the fact that Mr. Keller did the judging, he did not show his Partridge Wyandottes. His winnings at Madison Square Garden, 1905, are too well known to require mention.

The awards on White Wyandottes were so ably placed by Mr. Ross C. H. Hallock, of St. Louis, that during our entire week's visit at the show we did not hear a single word of dissatisfaction among the exhibitors. The winners were all magnificent birds, and fifteen or twenty ribbons would not have been sufficient to include all of the really good specimens in each class. Only once in the history of the Madison Square Garden shows have there been more White Wyandottes on exhibition than at the show just closed. Owing to the fact

View on Willow Brook Farm, Berlin, Conn., showing brood coops for hens after taking them off the setting boxes. They have about 100 of them scattered over the farm. They are provided with a door and a wire slide to use at night. The cover also slides off to enable them to be cleaned readily.

Among the White Wyandotte breeders I had the pleasure in meeting Mr. John L. Dakin, Roxbury, Mass. Owing to the fact that he sold some of the prize winners, he did not exhibit for competition. He sold one pen for several hundred dollars. He tells me he has 5 more cockerels to dispose of.

The Wilmont Farm, Mamaroneck, N. Y., Will Brown, manager, made a creditable showing. Their recent winnings will be found in another column. Their White Wyandottes are the stay-white kind which all breeders are looking for. Mr. Brown, the manager, is one of the best poultry men in this country. They have 1,000 birds to select from. Eggs for hatching at all times. They also breed Mammoth Bronze turkeys.

Adolph Blind, Elmhurst, L. I., N. Y., had one pen of White Wyandottes on exhibition which looked as even in shape and color as peas in a pod. Mr. Blind is now booking orders for eggs.

W. B. Richardson's display pens of Single Comb Rhode Island Reds and Columbia Wyandottes were the talk of the show, purely marked and fine in shape. His first price Columbia Wyandotte hen,

pullet. His birds are exquisite in every respect.

Mr. Harry Lamon, Center Moriches, L. I., N. Y., one of the foremost Barred Plymouth Rock breeders in this country, was there every day making his headquarters in Barred Rock alley. It is needless to say that we were glad to meet congenial, honest Harry.

Regarding incubators, Mr. L. P. French, president of the L. P. French Co., Stoughton, Mass., was there exhibiting his incubators and brooders. His incubators are made on an entirely new theory, and judging from the hatch he made he has solved a great problem. His brooders have a great many new features. Send for his catalogue, as space will not permit a full description.

F. W. Richardson, Hicksville, Ohio, was a visitor for a few days. Mr. Richardson is a noted Barred Rock breeder. Owing to the distance he did not make an exhibit. However, we expect to see him at the Chicago show.

F. A. Keller, Pigeon, Pa., placed the awards on the Partridge Wyandottes, which was entirely satisfactory to every-body concerned. It will be remembered

that Mr. Hallock placed the awards he did not show this year. His winnings at Madison Square Garden last year are too well known to need mention.

1906 WINNERS

My Barred Rocks were winners at Illinois State Fair, Oct., 1905, Illinois State Show, Danville, Jan. 1-7, 1906; also Bloomington, Jan. 10-16. A few fine cockerels for sale. Eggs \$2.50 per 15 from four grand matings. Second cockerel and second pullet.

EXPERT TESTIMONY!

FARMERS' TRIBUNAL!

This is what the State and Dominion Agricultural Colleges and Experiment Stations are. They were established and are conducted at government expense, for purposes of public instruction, for the benefit of the whole people, and are in charge of experts, of men of known integrity, of men who have made a careful study of their work and who have VALUABLE REPUTATIONS TO SUSTAIN.

The 1906 Pattern Standard Cyphers.

Can You Believe, Reader, that the professors of agriculture and directors of the poultry departments of these government-supported institutions would **PUBLICLY ENDORSE**, over their own signatures, the **Genuine Patent-Diaphragm, Non-Moisture, Self-Regulating and Self-Ventilating Cyphers Incubators** if they **WERE NOT AS REPRESENTED** by us, or would not do the work claimed for them? The fact that **BEGINNERS** as well as experts can succeed, on the first trial, with the Standard Cyphers Incubators is abundantly proved by the sample reports presented herewith:

Latest Improved Cyphers Incubators Strongly Endorsed By Government Poultrymen.

THE CONNECTICUT AGRICULTURAL COLLEGE.

Rufus Whittaker Stimson, A. M., B. D., President.

Storrs, Conn., July 11, 1905.

Cyphers Incubator Co., Buffalo, N. Y.

Your incubators have been in use here since 1897, and I have found them simple for the students to handle and at the same time reliable. The regulator can be depended upon at all times, and I have had good hatches when the room in which they were working was below freezing as well as when it was from 75 to 80 degrees above zero. What I consider one of the strongest points of your machines is their ease of operation. We have no difficulty in initiating our students into the management of them.

Yours truly,

R. W. Stimson
Poultryman.

MONTANA AGRICULTURAL EXPERIMENT STATION.

F. B. Linfield, Director.

Bozeman, Mont., Sept. 21, 1905.

Cyphers Incubator Co., Buffalo, N. Y.

Cyphers Incubators have been used at the Montana Agricultural Experiment Station for five or six years and we have found them to work satisfactorily without the introduction of moisture. This goes to prove that even for this dry climate they are non-moisture machines. In the matter of ventilation the Cyphers requires no extra care. The control of temperature in these machines may be said to be as near perfect as human skill, combined with limited expense, can provide. The Cyphers Incubators we are operating have given us most excellent satisfaction and I believe fully come up to your claims.

Very truly yours,

F. B. Linfield

UNIVERSITY OF MINNESOTA.

Northwest Experiment Farm.

Wm. L. Liggett,
Director.

T. A. Hoverstad, Gus. Walters,
Superintendent, Poultryman.
Crookston, Minn., Sept. 12, 1905.

Cyphers Incubator Co., Buffalo, N. Y.

Your 1906-pattern Standard Cyphers Incubator is a great improvement over your old machines—the drop-bottom helping the ventilation materially. The thermostat is more sensitive and the egg-trays hold more eggs. Furthermore, our tests prove that the 1906-pattern hatches a larger percentage of chicks than your older patterns did earlier in the season. The new machine did not vary one degree in temperature during the entire hatch and we used only about one pint of oil per day to run it. Cyphers Incubators have been used at this station as long as the poultry department has been established. We have found them to be non-moisture machines and also self-ventilating, as claimed. I do not see how your regulator could be improved upon. It works to perfection. Your standard incubators hatch the

strong, healthy kind of chicks that live and grow after being put into the brooder. We have found them to be as represented and they do the work required of a first-class incubator.

Yours truly,

Gus. Walters

WEST VIRGINIA

AGRICULTURAL EXPERIMENT STATION.

J. H. Stewart, Director.

Horace Atwood, Asst. Agriculturist.

Morgantown, W. Va., Sept. 11, 1905.

Cyphers Incubator Co., Buffalo, N. Y.

I have used Cyphers Incubators at this station for several years, and have found them durable incubator that will do the work required of a high-grade machine. During the past five or six years we have raised one thousand or more chickens annually, and in this work we use by preference the Cyphers because it is so simple, so accurate and so reliable. We have made two hatches in your new-pattern (1906) machine. This pattern is, in my judgment, a material improvement over the older forms on account of the larger air space in the incubating chamber; the increased facilities for giving additional ventilation when considered desirable and the new regulator which is extremely sensitive and accurate. The chick drawers are also a decided improvement. We ran the machine with the drop bottom down to the floor and so far as we were able to detect the ventilation was perfect.

Yours truly, *Horace Atwood*

DOMINION OF CANADA.

Department of Agriculture. Central Experiment Farm.

Wm. Saunders, Director. A. G. Gilbert, Poultry Manager.
Victor Fortier, Asst. Poultry Manager.

Ottawa, Can., Sept. 14, 1905.

Cyphers Incubator Co., Buffalo, N. Y.

It is with very great pleasure that I give you my opinion of the Standard Cyphers Incubators, different patterns of which we have had in operation for several years past. In all cases we have found them as represented, being easy to operate and sure in results. Both my youngest son and daughter have operated the 60-egg size with success.

The 1906 pattern Cyphers you sent for trial in the fore part of the season, is certainly an improvement on previous designs. The regulator is particularly sensitive and the temperature is kept up with the most gratifying regularity. It is bound to take a place in the front rank as a simple-to-operate and sure-in-results incubator. There is no better. It is a credit to your enterprise. We leave the machine from evening to morning with perfect confidence. Provided the germs of the eggs are strong, the Cyphers Incubator will certainly do its part most satisfactorily.

Yours faithfully,

A. G. Gilbert

BOOKER T. WASHINGTON'S GREAT SCHOOL.

Tuskegee Agricultural. Geo. W. Carver, Director, Department and Industrial Institute. Tuskegee Institute, Ala., Sept. 29, 1905.

Cyphers Incubator Co., Buffalo, N. Y.
In response to your letter of recent date, I beg to say that we have used Standard Cyphers Incubators for four years or more and have found them practically non-moisture and perfectly self-ventilating. They have given us uniform satisfaction, and, what is better, we can raise the chickens. Chickens hatched in your incubators seem unusually strong and healthy. I might say, too, that these chickens have been hatched by persons not skilled in the business, simply students.
Yours truly,

Geo. W. Carver

ONTARIO AGRICULTURAL COLLEGE.

G. C. Creelman, B. S. A., M. S., President. W. R. Graham, B. S. A., Manager and Lecturer. Guelph, Can., Sept. 13, 1905.

Cyphers Incubator Co., Buffalo, N. Y.
We have every confidence in your machines and always feel that the eggs are safe when in the Cyphers. It is a pleasure to operate an incubator when the chicks hatched from it are so strong and healthy. We have used the Cyphers Incubators for six years, during which time the machines have worked very satisfactorily. The regulation of the Cyphers is as good as one could ask for. Regarding your 1906-pattern, I may say that we have found this machine to be very satisfactory indeed. I think this new machine is a great improvement upon those made by you in former years.
Yours truly,

M. B. Graham

THE UNIVERSITY OF MAINE.

G. M. Gowell, M. S., Orono, Maine, Dept. of Animal Industry. Orono, Maine, Sept. 11, 1905.

Cyphers Incubator Co., Buffalo, N. Y.
We began using our first Cyphers Incubator six years ago, and now have eight of the 360-egg size. These machines do all you claim for them, and with a very small amount of care and labor. No one can ask for a machine that is more easily handled, or for one that will give better results. Having had considerable experience with incubators, will say I regard the Cyphers as the best of any I have used. I began the use of incubators years ago, with the hot water jug as the medium of heat, and every change has

seemed to me for the better since then, until now we have the Cyphers that comes very near perfection. We shall buy more of your machines next winter, because they are the best of any kind we have tried.

Yours truly, *G. M. Gowell*

THE NATIONAL FARM SCHOOL.

Jos. Krauskopf, D. D., President. John H. Washburn, Ph. D., Director. Isaac E. Gage, A. B., Supt. Poultry Dept. Farm School, Pa., May 27, 1904.

Cyphers Incubator Co., Buffalo, N. Y.
We have had great success with your incubators. We run the machines here for purposes of instruction, and when one boy is proficient another takes the machines. The Cyphers is, in fact, a non-moisture machine; we have supplied no moisture at all during the season. The machine is self-ventilating and can be depended upon. The regulator of the Cyphers is perfect, if given proper treatment. Even with green boys to run it, we have found it most satisfactory and easy to control. I can, have and will recommend the Cyphers Incubator to my friends with utmost sincerity.
Yours sincerely,

Isaac E. Gage

AGRICULTURAL EXPERIMENT STATION

of the North Carolina College of Agriculture and Mechanic Arts. J. S. Jeffrey, Poultryman. West Raleigh, N. C., Sept. 17, 1905.

Cyphers Incubator Co., Buffalo, N. Y.
I cannot tell you how long we have been using your incubators, as they were here when I came, three years ago. They continue to give the very best satisfaction, both as to percentages hatched and percentages of chicks raised. I have never used moisture in any of your machines and have had good hatches with them under widely varying conditions. The 1906-pattern machine you sent us, was, as you know, lost in transit and arrived too late to be tried last spring, but I appreciate the many improvements added to it, and believe that when tried it will sustain the reputation your machines have made and that the improvements will justify the claims you make for them.
Yours truly,

For reports from Agricultural Colleges and Experiment Stations of Massachusetts, New York, South Carolina, Rhode Island, Arkansas, Ohio, New Hampshire, Michigan, South Dakota, New Zealand, Australia, etc., etc. see complete catalog for 1906, pages 138-153 inclusive.

American Poultry Association Meeting.

One of the Largest and Most Important Meetings of the Association Ever Held—Legislation Controlled and Directed by Wisdom and Caution—Action Taken to Enlarge the Scope, Authority and Usefulness of the Association—Committee Appointed to Revise the Constitution and By-Laws—Petitions for Auxiliary Branches to Be Given Careful Consideration.

The American Reds Go Out, the R. C. R. I. Reds Come In—Secretary-Treasurer's Salary Increased to \$600.00 Per Annum—Grant M. Curtis Elected President—T. E. Orr Re-elected Secretary-Treasurer—The Proceedings.

Written by Thos. F. Rigg, Associate Editor American Poultry Journal.

President—Grant M. Curtis, Buffalo, N. Y.

Secretary-Treasurer—T. E. Orr, Beaver, Pa.

The 1906 annual meeting of the American Poultry Association, held at Cincinnati, Ohio, Jan. 18-19, was in point of attendance, interest shown and results accomplished the most important meeting the Association has held in years. All sections of the country were well represented. That earnest, responsible element which stands for the upbuilding of the association and the great interests it represents controlled affairs throughout. The "voice of the people" was given careful, thoughtful consideration, each and every petition presented being fully considered.

The intent and purpose of a majority of members present was clearly defined—to place the American Poultry Association upon that high plane where it belongs and to make it truly representative of the Standard-bred poultry interests of America. And no meeting heretofore held

has given the Association such a "boost" as it received in Cincinnati.

The constitution and by-laws are to be revised by a committee consisting of men selected because of their fitness for the important place to which they have been assigned. This means that the Association is to be brought nearer the people. It means that the interests of the industry everywhere are to be better protected.

THE PROCEEDINGS.

The meeting was called to order at 10 a. m. Thursday by President Geo. D. Holden. President Holden said: "I wish to congratulate the American Poultry Association that we have assembled here today a meeting representative of the association. Here we have members from each and every section of the country. This means that the affairs of the association will be very carefully and very intelligently considered. One of the chief purposes of the American Poultry Association is the giving to the fanciers the Standard of Perfection. Since its first issue the Standard has been revised along lines representing the greatest progress of the different breeds and varieties. The latest Standard is by far the best ever issued, and it is to be made still better. It has been intimated that evil influences have been at work to undermine the association; that some new association could better represent the interests of the breeders and fanciers. It is impossible for any new organization to safeguard the interests of the fanciers and breeders as well as the American Poultry Association has and will. No new association would long be free of the influences which it is claimed now attach to the present association. Humane nature is not yet free of defect, and always has and undoubtedly always will be governed to some extent by the promptings of self-interest. The membership of the American Poultry Association contains representative men—business men, professional men—men representing our country's best citizenship. The protection of the American Poultry Association is the loyalty of its members."

President Holden requested Secretary Orr to read a communication signed by Chas. H. Harker and Henry Barrer, ask-

ing for the authority to organize the Pacific Coast Advisory Board to A. P. A. delegates of far western states. Mr. Holden said that while in attendance at the adjourned meeting of the association at San Francisco, Cal., he (and Secretary Orr) learned to better appreciate the position in which the enthusiastic members, living in the far-distant states found themselves. As a rule the attendance of the annual meetings of the association is made up of near-by members, and the interests of the western coast states must naturally be somewhat neglected. He recommended that at the proper time this communication receive careful consideration.

The following named members of the association answered to roll call:

Connecticut—R. C. Tuttle.

Indiana—U. R. Fishel, Sid Conger, Theo. Hewes, J. A. Kohl, C. E. Spangh, S. B. Lane, S. B. Johnston, J. W. Burgess, C. J. Fishel, G. M. Johnson, E. C. Allison, J. Hornell, Max Pierce, Wm. Tobin.

WHY THE SHAUB IMPROVED BROODER

should be used by every farmer and poultryman. Because its system of heating and ventilation is so nearly perfect that it practically raises all the chicks placed in it. Requires less time and attention yet rears more chicks.

The heat is supplied after "Nature's method" from the top and center of the chamber. The chicks naturally select the temperature they need, thus avoiding leg weakness and bowel complaints so common in bottom-heat brooders. The Shaub is well ventilated and it is impossible for gas or smoke from the lamp to get to the chicks. The brooder is well constructed and arranged so you can divide your broods into small flocks, avoiding the danger of overcrowding, so frequent with poorly arranged brooders. Can be used as an indoor or outdoor brooder.

Mrs. LeRoy England, Rising Sun, Md., raised 140 out of 150 chicks in a Shaub Improved Brooder. The Shaub Brooder will rear 95 per cent of your chicks successfully and give you perfect satisfaction. Write for catalog and prices.

M. O. SHERER, M'F'G. Box 101, Louisville, Ohio.

Gape kills more chicks and growing fowls than any other disease. Of all poultry diseases it has been the most obstinate and one of the most destructive. The gape worms are bred by the wet weather, damp ground and low land, and these worms get into the throats of your chicks and the chicks die. That spoils your chances of a successful year. The very location of the disease—in the windpipe—makes it difficult to reach and destroy the worms.

Conkey's Gape Cure

puts an end to them. A positive preventive and cure of this disease. It comes in the form of a powder and is mixed with the soft feed. It kills the worms and makes the chicks feel good. It will instantly stop the progress of the disease in your flock. A cure guaranteed. If your chicks are not cured you can have your money back. Do not take chances. Get a package from your dealer or druggist, or by mail, 50c, postage prepaid.

OUR FAMOUS BOOK ON FOWL DISEASES. A practical book of information on how to keep the flock healthy, for only 4c in stamps to pay postage, and the names of two other poultrymen. (Usually sells for 25c.)

**BUILT
LIKE A
NEST**

**THE
AXFORD
ROUND INCUBATOR**

**30
YEARS
SUCCESS**

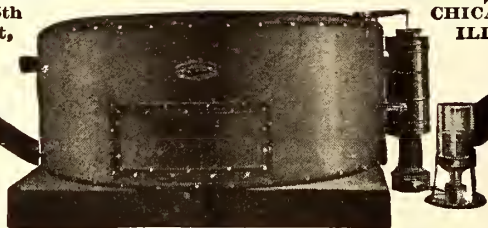

is built different from the ordinary box affair.

Thirty years of successful work is pretty strong evidence that these machines are built on correct, natural and scientific principles. Many improvements and valuable features have been recently added to this hatcher until today it comes the nearest to perfection of all incubators. The Axford is a round machine, "built like a hen's nest," insuring uniform distribution of heat to all parts of the egg chamber—has no cold corners. Its system of ventilating constantly supplies the interior of the machine with pure fresh air at the proper temperature. The heat regulator is perfect and when once regulated, it requires no further attention. There's no sitting up nights to watch the lamp or regulator on an Axford—they run themselves. Write for catalog of Axford Machines and Poultry Supplies today.

AXFORD INCUBATOR COMPANY,

Street,

CHICAGO,
ILL.

DO YOU WANT Your Chicks To Live?

"Why,—Of Course!"

THEN, you should do your part. I know that the Brooder you buy is absolutely safe.

For there's no use hatching chicks, unless you can raise them successfully. When they sicken and die, don't try to shift the blame.—

Don't say, "My chicks died of Bowel Complaint."

Because that would be only a half truth, at best.

The whole truth, if it could be determined by Coroner's verdict, would read—
"Murdered by Mismanagement!"

But how can you know that the Brooder you buy is safe?—

—And will prove a Life Preserver, instead of a Death Trap?

Well, the sensible thing to do is to select the Brooder with the best record.—

—The Humphrey Pure Air Brooder, which proves in actual every day use that it raises the highest per cent of strong, healthy chicks. There is no "guess-work" about this Brooder!

It is built just right to do the work,—and does it!

There's a reason. * * *

What is the one most important thing to a human being?

Fresh air,—isn't it?

For Oxygen, the element that makes air "fresh" is the life sustaining principle.

Oxygen is vitally necessary to the life, strength and health of every living thing.—

HUMPHREY, Troop Street

—Not excepting those fluffy yellow chicks of yours, Mr. Poultryman.

And any Brooder which fails to give 'em a properly heated supply of pure fresh air, is a failure.

Yet, how many brooders do fail right at this point.

Just catch a whiff of the air in an ordinary brooder, and you will no longer wonder why so many chicks die.

They are literally smothered to death—
And they die from—Lack of Oxygen!

No cold air enters the Humphrey Pure Air Brooder direct,—there is no possibility of a draught.

The fresh air supply comes in from below, entering through a drum which surrounds the lamp flue.

This air is thoroughly heated before it enters the lower chamber, and after gently circulating to all parts, passes out through the vents at the top. No matter how many chicks are in the brooder, the air is always pure and sweet.

Is it any wonder that with this perfect system of ventilation, the Humphrey Pure Air Brooder saves 90% and upwards of the chicks you hatch?

Why shouldn't it?

Our Free Brooder Book explains more about this famous brooder. It tells of the automatic heat regulation, perfect sanitation and economy of operation. Send for it today and investigate fully the claims we are prepared to prove for the Humphrey Pure Air Brooder.

Factory, JOLIET, ILLINOIS.

edition of the Standards all are sold but about 2,800. These will be sold within three months and it will be necessary to issue another edition. Report accepted and approved.

J. P. Hilldorfer recommended that the association offer cups to be competed for by members of the various specialty clubs which are members of the association.

Secretary Orr favored the giving to each member a handsome certificate of membership. On motion the secretary was authorized to carry into effect this recommendation.

Sid Conger asked for a detailed financial statement by the treasurer.

Treasurer Orr said he would be glad to give such a report, but the rule was adopted two years ago that the finance committee makes an auditing of the treasurer's book July 1st annually. Hence he did not come prepared to make such a report at this time.

President Holden appointed the following committee to name executive officers (members of executive committee): Theo. Hewes, Thos. F. Rigg, Henry Steinmesch, Lester Tompkins and T. E. Orr.

On motion adjourned until 2 p. m.

THURSDAY AFTERNOON SESSION.

The committee appointed to name members of the executive committee and finance committee reported as follows:

FINANCE COMMITTEE.

Grant M. Curtis, Buffalo, N. Y.

U. R. Fishel, Hope, Ind.

C. H. Latham, Lancaster, Mass.

EXECUTIVE COMMITTEE.

California—Charles R. Harker, San Jose; Henry Berrar, San Jose; Wm. H. P. Burbridge, Los Angeles; J. C. Williams, Fruitvale.

Connecticut—George W. Mitchell, Bristol; J. B. Thomas, Jr., Simsbury.

District of Columbia—George E. Howard.

Georgia—J. K. Ottley, Atlanta.

Illinois—Frank Heck, Chicago; Frank B. White, Chicago; J. C. Pratt, Chicago; H. H. Fike, Prairie View; F. L. Kimmey, Morgan Park; O. L. McCord, Danville; Dan Robertson, Palmyra.

Indiana—Ben S. Meyers, Crawfordsville; S. B. Lane, Spiceland; U. R. Fishel, Hope; W. C. Pierce, Indianapolis; Sid. Conger, Shelbyville; W. Lan-nius, Greengburg.

Iowa—W. S. Russell, Ottumwa; Thos. F. Rigg, Iowa Falls; Fred H. Shellabarger, West Liberty.

Kansas—W. A. Doolittle, Sabetha.

Kentucky—M. W. Norris, Lexington; Geo. G. Lindsay, Newport.

Maryland—Geo. O. Brown, Baltimore; Jene B. Riggs, Baltimore.

Massachusetts—Philander Williams, Taunton; Henry S. Ball, Shrewsbury; William F. Whiting, Holyoke; Lester Tompkins, Concord; C. M. Bryant, Quincy.

Michigan—F. W. McKinzie, Concord; James Tucker, Concord; George S. Barnes, Battle Creek.

Minnesota—E. W. Rankin, St. Paul; E. H. Smith, Duluth; E. S. Person, Zumbrota; C. L. Smith, Minneapolis.

Missouri—Henry Steinmesch, St. Louis; P. E. Johnson, Kirkwood; W. W. Henderson, Bridgeton; C. A. Morton, St. Louis.

New Jersey—George Purdue, East Orange; A. L. Sparks, Swanton.

New Hampshire—A. F. Pierce, Winchester.

New York—Dr. C. J. Andruss, Canandaigua; C. C. Depuy, Syracuse; E. B.

Zimmer, Gloversville; F. B. Thompson, Amenia; C. E. Howell, Elmira; T. F. McGrew, New York City; J. H. Drevenstedt, Johnstown; Frank Gaylor, White Plains; George H. Burgott, Lawton Station; W. C. Denny, Ithaca; E. G. Wyckoff, Ithaca; Henry Trafford, Chenango Forks; Chas. A. Cyphers, Buffalo; Prof. James E. Rice, Ithaca; E. H. Knapp, Fabius; W. F. Brace, Victor; Dr. A. H. Phelps, Glenn Falls.

Ohio—Ira C. Keller, Prospect; Fred E. Pile, Cleveland; Julius Frank, Akron; C. R. Haswell, Circleville; F. C. Shepherd, Toledo; T. S. Campbell, Mansfield; E. C. Reed, Columbus.

Ontario—R. Oke, London; Sharp Butterfield, Windsor.

Pennsylvania—A. F. Cooper, Homer City; A. P. Groves, Philadelphia; J. P. Hildorfer, Allegheny; Charles T. Cornman, Carlisle; Fred Cook, Beaver; E. A. Weimer, Lebanon; W. H. Mazon, Castle Shannon.

Rhode Island—Daniel Lambert, Apponaug.

South Carolina—Dr. S. T. Lea, Hodges; Theo. E. F. Holzouser, Columbia.

South Dakota—J. N. Crow, Mitchell.

D. L. Orr, Orr's Mills, N. Y.; Charles McClave, New London, Ohio; Dr. F. D. Kendall, Columbia, S. C.; Dr. E. A. Kegley, Cedar Rapids, Ia.; Allen Bogue, London, Ont.

Report of committee accepted and approved.

President Holden appointed a committee to which was referred all proposed changes in and amendments to the constitution. The committee: Grant M. Curtis, Theo. Hewes, D. Lincoln Orr, F. D. Baerman, Lester Tompkins, T. E. Orr. Committee instructed to report at this meeting.

ELECTION OF PRESIDENT AND SECRETARY-TREASURER.

President Holden announced that the next thing in order was the election of president.

J. P. Hildorfer nominated Eugene Sites, of Ohio. Seconded by F. C. Shepherd.

F. D. Baerman nominated Fred L. Kimmey.

Henry Steinmesch, of Missouri, said he wished to place in nomination the name of a man known to every poultryman at home and abroad; a man who has made a name for himself by doing

View on the Barred Rock Farm of R. E. Haeger & Co., Algonquin, Ill.

Wisconsin—E. G. Roberts, Ft. Atkinson.

Nebraska—W. H. Bushnell, David City.

West Virginia—J. B. Garvin, Charleston.

At large—R. H. Peck, Cozard, Neb.; Wm. E. Bright, Waltham, Mass.; F. J. Marshall, Atlanta, Ga.; D. T. Heimlich, Jacksonville, Ill.; Henry Hales, Ridgewood, N. J.; D. A. Nichols, Shelton, Conn.; John Smith, Spokane, Wash.; Dr. U. B. Aldrich, Fall River, Mass.; J. C. Fishel, Hope, Ind.; T. A. Hefner, Cedar Rapids, Ia.

VICE PRESIDENTS.

W. R. Wooden, Battle Creek, Mich.; Geo. V. Fletcher, Belmont, Mass.; Eugene Sites, Elyria, Ohio; Theo. Hewes, Indianapolis, Ind.; John C. Crothers, St. Louis, Mo.; M. F. Delano, Vineyard Haven, Mass.; F. L. Sewell, Buchanan, Mich.; Allen Bogue, London, Can.; J. Y. Bicknell, Buffalo, N. Y.; William McNeil, London, Can.; August D. Arnold, Dillsburg, Pa.; Dr. Benj. McInnes, Charleston, S. C.; H. V. Crawford, Montclair, N. J.; James P. Kerr, Biltmore, N. C.; George G. Bates, Chicago, Ill.

ADVISORY BOARD.

Geo. D. Holden, Owatonna, Minn.;

things. "I believe our association at this time needs the services of this strong, able, resourceful man—Grant M. Curtis, of New York."

Fred L. Kimmey, in seconding the nomination of Mr. Curtis, said: "It is not necessary for me to say anything regarding Mr. Curtis. He is known to you all as a strenuous man. No one spent more time and money, nor did better work on the revision of the Standard and preparing for the publication of the illustrated Standard than Mr. Curtis. The demand for his election to the presidency comes a spontaneous movement by those who have the best interest of the association at heart."

Grant M. Curtis—"I second the nomination of Fred L. Kimmey. He performed more and better work on the revision and publication committees than any one else. If it is a debt of honor you wish to pay, pay it to Fred L. Kimmey."

Fred L. Kimmey—I am not a candidate.

Theo. Hewes—I wish to second the nomination of Grant M. Curtis. He is a man who does things. Let us all drop all personal quarrels, bury the hatchet and go in for the best man.

Barred Rocks

EXCLUSIVELY Nonpareil Strain

HAZELMERE POULTRY YARDS. Knightsville, Cranston, R.I.

The Automatic Poultry Feeder, Water Fountain and Young Chick Protector

We are on hands for the season of poultry raising with our labor-saving, money-making device. We sold one feeder, fountain and protector combined last year to each third inquiry, and not one was returned, though our guarantee grants that privilege with money refunded. We will be fair with you. This invention goes on its own merit or it don't go. Write for free catalogue, it will tell you all about it. Ordering in quantities gives you a commission. E. H. TURNER & CO. Box 424, Tipton, Ia.

S. T. Campbell, of Ohio—I second the nomination of Grant M. Curtis. No other man of this association has the desired qualities in detail as has Mr. Curtis. He is a go forward, all the time. The association will not have to push him. He will push the association.

C. N. Hanson, of Kentucky; Mr. Sites is fully competent.

President Holden—The American Poultry Association is competent in having candidates of such worth. Gentlemen, prepare your ballots. I appoint Fred Cook and F. W. McKenzie as tellers.

The vote: Curtis, 39; Sites, 19, Kimmey, 6.

Eugene Sites—I move you, Mr. President, that the nomination of Mr. Curtis be made unanimous.

Mr. Kimmey—I second that motion.

Motion prevailed. Prolonged cheering.

Grant M. Curtis—I ought to feel better than I do. My appreciation is unbounded. As one who believes in results I hope we will be able to accomplish something during the coming year. I will do the fair thing by all. I could not afford to do less. Self interest, since the world began, has been a pretty good basis to work upon. All I have has been made in the poultry business. There must be no north, no south, no east, no west. Our association has a better chance than ever before to accomplish something. We now have money in our treasury. Money is what puts sinew of courage into men's hands. The recommendations made by Secretary Orr are sound. I suggest that a committee of five or seven be appointed to take up this work. I will be glad to sacrifice time and money in this work. I appreciate the honor you have bestowed upon me. I will do all I can to deserve that honor.

President Holden—The whole fraternity should be congratulated upon the election of Mr. Curtis.

J. S. Crowthers, Missouri, nominated T. E. Orr for secretary-treasurer.

Sid Conger, Indiana, nominated Theo. Hewes.

C. A. Morton, of Nebraska, seconded nomination of T. E. Orr.

J. D. Baerman—I wish to say that the report that T. E. Orr is responsible for the amendments which have been criticised so freely is not true. I alone am responsible for the offering of these amendments.

D. Lincoln Orr, New York, seconded nomination of T. E. Orr.

Frank W. McKenzie seconded nomination of Theo. Hewes.

Frank B. White, Illinois—I believe we have come to a stage when personal friendship, personal animosities, should be laid aside. I wish to nominate a man who has not the ill will of many members, who is not a newspaper man, who has abundant means of support, a man of splendid ability. I take great pleasure in nominating Fred L. Kimmey.

The result of the first ballot was: Orr, 30; Hewes, 27; Kimmey, 7.

As no candidate had received a majority vote a second ballot was ordered,

Second Prize Pullet Wisconsin State Show, January, 1906. Bred and owned by King Bros., Oshkosh, Wis.

and resulted as follows: Orr, 33; Hewes, 32.

In announcing the election of Mr. Orr, President Holden said, we have a team, one with the strength of a draft horse, the other with the speed of a race horse.

ROUTINE BUSINESS.

The following specialty clubs were admitted to membership:

American White Plymouth Rock Club; National Rose Comb R. I. Red Club, C. M. Bryant, secretary.

F. D. Baerman—I do not wish to further split the American Poultry Association. Without laying aside any of my

convictions, still maintaining that throughout it all I was right, I wish to withdraw my petition for the admission to the Standard of American Reds and move that the R. C. R. I. Reds be admitted to the Standard under that name. (Prolonged cheers.)

The motion to thus admit the R. C. R. I. Reds was unanimously adopted.

President Holden—This removes this very unpleasant matter from our further consideration.

Adjourned until 7:30 p. m.

ADMISSION OF NEW BREEDS.

The matter of the admission of new breeds was taken up and referred to a committee consisting of Fred L. Kimmey, Dr. Wilcoxon and Thos. F. Rigg.

Committee reported that Columbian Wyandottes be admitted. That shape be same as for other Wyandottes; that color be same as that of the Light Brahma; that black in the web of feathers in back of female not to disqualify, but to be considered a serious defect. Report of committee adopted.

S. C. White Orpingtons were, upon report of committee, admitted.

S. C. Black Orpingtons were likewise admitted.

Mr. F. M. Delano withdrew the petition for the admission of the Jubilee Orpingtons.

Rose Comb Buff Leghorns were admitted.

It was voted that hereafter the report of the secretary-treasurer to the annual meeting be in writing.

On motion of D. Lincoln Orr a committee of three was appointed to arrange for the proper placing of new breeds (those admitted here) in the Standard and to correct errors appearing in present edition of Standard. The president appointed as that committee Grant M. Curtis, Fred L. Kimmey, T. E. Orr.

Grant M. Curtis called attention to the fact that in the new Standard the Dark Brahma female was too large. Also that the artist had, by mistake of measurement, made the shanks of the White Wyandottes longer than those of the White Rocks. He wished the association to cloth the committee with authority to correct the errors. The desired authority was given the committee.

M. F. Delano, representing the Orpington Club of America, said that every Orpington breeder blushed with shame when looking at the S. C. Buff Orpington cuts in the Standard. He wished to empower the committee with authority

GENUINE GOLD PLATED WATCH

A PRESENT
FOR YOU!

Do you want a full-sized Stem Winding, Stem Setting Watch—an absolutely accurate Time Keeper, (Warranted) beautifully engraved, as illustrated, Genuine Gold Plated Case? If you want one as a present, then send your name and address. It will cost you **NOTHING**, **NOT ONE CENT OF YOUR MONEY IS REQUIRED**—simply a little of your time. Write to-Day ADDRESS

S. ASHLEY, Supply Agent, Dept. B A,
182 East 127th Street, NEW YORK

to call for competitive drawings of this breed for cuts to be used in the next edition of the Standard. Referred to the committee with power to act.

Adjourned till 10 a. m. Friday.

CHANGES IN CONSTITUTION AND BY-LAWS.

The committee on changes in constitution and by-laws held a meeting at the Palace Hotel at 8 a. m. Friday, and reported as follows to the association meeting called at 10 a. m. Friday.

That hereafter the secretary publish the proceedings in pamphlet form, suitable for binding.

That the secretary edit the proceeding for publication subject to the approval of the president and first vice president.

That at each annual meeting the secretary-treasurer make a report of the business of the preceding year, showing receipts and expenditures since last auditing of his account.

That the salary of the secretary-treasurer be \$600 per annum, beginning Jan. 1, 1906.

That the association recommend that the matter of forming auxiliary branches

C. M. Bryant offered a resolution thanking Mr. Baerman for the very generous and unselfish position he had taken regarding the American Reds—Rose C. R. I. Red matter. Cheers followed the offering of Mr. Bryant's motion, which was unanimously adopted.

Mr. Delano reported that the committee on charter had been advised that the association could not secure a national charter for the reason that the association was engaged in selling the Standard.

On motion of Mr. Curtis the matter was referred back to the committee with instructions that the committee report at next meeting on state as well as national charter.

The secretary was instructed to hereafter sell Standards at 80 cents each in lots of twelve or more. He was instructed to refuse to sell Standards to any journal or other publication which offered Standard in any clubbing list or other combination at less than \$1.50 per copy, retail.

The committee having Standard corrections in hand was authorized to submit the word "flights" in place of "wing covets" in color description of R. I. Reds.

Secretary Orr was instructed to issue call for vote on place of holding 1907 meeting not later than March 1st, the vote to close April 1st. It was voted that no invitation to meet with an association not a member of the American Poultry Association be considered, unless at the time of issuing the invitation the association so doing legally applies for membership in the American Poultry Association.

F. D. Baerman moved that the undercolor of R. I. Reds, now described as "red as salmon," be changed to "red or reddish buff."

This called forth much discussion. On motion of Theo. Hewes it was decided that specimens of R. I. Reds be brought before the meeting for inspection. Dr. N. B. Aldrich was appointed a committee to select the specimens. Dr. Aldrich

requested that Thos. F. Rigg aid him in making the proper selections. Mr. Rigg was instructed to do so.

The committee brought before the meeting a Rose Comb cockerel and two S. C. hens. Members made a careful inspection of the undercolor of these specimens, representative of the Reds, and decided to make no change in undercolor description.

Mr. Baerman moved that Standard weights of R. I. Red hens be changed to 7 pounds, and pullets to 6 pounds. Motion defeated.

Theo. Hewes extended an invitation to the association to meet with the Indiana State Fanciers' Association, in Indianapolis, Ind., first week of February, 1907.

Frank W. McKenzie gave like invitation on part of the Michigan State Fanciers' Association, Detroit.

A resolution by S. T. Campbell thanking the Cincinnati Poultry & Pet Stock Co. for the splendid entertainment of the Association members was unanimously adopted.

The Standard description of the newly admitted R. C. R. I. Reds is the same as that for the Single Comb variety as to shape, color and weights. The comb description is as follows: For the male: Rose, low, firm on the head, top oval in shape and surface covered with small points terminating in a small spike at the rear. The comb to conform to the general curve of the head. For the female: Rose, low, firm on the head, much smaller than of the male and in proportion to its length narrower. Covered with small points and terminating in small short spike at the rear.

F. D. Baerman offered the following resolution, which was unanimously adopted:

"Resolved, That we, as members of the American Poultry Association, go forth from this room pledged to assist in every way that is proper and right President Curtis in his efforts to do for the good of the association.

Adjourned.

Vesta, one of the Barred Rocks in the breeding pens of E. M. Buechly, Greenville, Ohio. Sired by Oseo B., a sire of 1st prize winning pullet of 1904, and having for dam 1st Rochester pullet of 1904.

or leagues, such as petitioned for by the Pacific coast members, be favored.

That the duty of revising the constitution and by-laws be referred to a committee of twelve, and the president elect and secretary-treasurer elect; that this committee meet at call of chairman some time next summer and prepare a report which shall be submitted to the annual meeting in 1907.

The recommendations of the committee were accepted and approved.

On motion of S. T. Campbell this important committee will consist of the following named gentlemen:

- Fred L. Kimmey, Illinois, chairman.
 - President elect Grant M. Curtis, New York.
 - Secretary T. E. Orr, Pennsylvania.
 - H. V. Crawford, New York.
 - Geo. D. Holden, Minnesota.
 - D. Lincoln Orr, New York.
 - Thos. F. Rigg, Iowa.
 - Lester Tompkins, Massachusetts.
 - F. D. Baerman, New Jersey.
 - Theo. Hewes, Indiana.
 - H. B. Donavan, Canada.
 - Henry Barrer, California.
 - Wm. F. Whiting, Massachusetts.
 - J. H. Sledd, Tennessee.
- On motion adjourned until 3 p. m.
CLOSING SESSION.
Met pursuant to adjournment.

Your Hatch Will Be Right if your Thermometer is Right

HOEHN RED CROSS THERMOMETERS

An Incubator Thermometer is small in bulk and in price, but it is the most vital part of an incubator. It is the heat that hatches, but to hatch right the Thermometer must be right. It makes little difference what make of incubator you use, if your Thermometer is accurate and you keep the temperature at 103 degrees. To be absolutely safe, use the

The bulb rests upon the eggs so that the Thermometer gives you the temperature you want to know. It is easy to keep this at 103 degrees, because this point is emphasized by a narrow point. The black metal frame with white graduations and figures makes it easy to read. These Thermometers are all well seasoned and accurately tested before being shipped. Send 75 cents for a sample Thermometer (prepaid) or ask for catalog illustrating other styles. This catalog is free. It answers your questions about Incubator Thermometers.

THE R. HOEHN CO.

SURE CURE FOR RUPTURE SENT ON TRIAL

Brook's Appliance is a new scientific discovery with automatic air cushions that draws the broken parts together and binds them as you would a broken limb.

It absolutely holds firmly and comfortably and never slips, always light and cool and conforms to every movement of the body without chafing or hurting. I make it to your measure and send it to you on a strict guarantee of satisfaction or money refunded.

and I have put my price so low that anybody rich or poor can buy it. Remember I make it to your order—send it to you—you wear it—and if it doesn't satisfy you, you send it back to me and I will refund your money without question. The banks and the postmaster here will tell you that is the way I do business—always absolutely on the square and I am selling thousands of people this way for the past five years. Remember I use no salves, no harness, no lies, no fakes. I just give you a straight business deal at a reasonable price.

C. E. Brooks, 982 Brooks Bldg., Marshall, Mich.

Success with the Chicks

Don't depend upon how many you hatch but upon how many you raise. Many fine hatches of a hundred chicks leave you with but a dozen scrawny little birds after a few weeks. You know why.—Cholera, Indigestion, Bowel Trouble, Diarrhoea, Dysentery, Sour Crop. These are the things that knock a poultryman's profit.

CONKEY'S CHOLERA CURE

will positively cure and prevent all of these diseases. We know it. We guarantee it. We'll give your money back if we don't prove it. Get a package of Conkey's Cholera Cure from your Druggist or Poultry Supply Dealer, or send direct to us. It is equally good for turkeys, chickens and pigeons, old and young. Price 50c per box post paid.

Our new 48 page book on poultry diseases sells for 25c., but if you answer this advertisement and send the names of two other poultry raisers and 4c in stamps to pay postage, we'll send you a copy free.

POULTRY BREEDING THAT PAYS.

Careful Breeding will Result in Uniform Quality—The Trap Nest Coming into Universal Use and is a Great Help to the Fanciers.

The breeding of pure bred fowls is today one of the most interesting and profitable rural pursuits that can be taken up, when the proper study and care is taken in the selection, mating and care of the birds. It is not necessary for one to handle large numbers in order to make a good profit from them, for it is not so much the number of fowls one has, as it is the quality of the flock that insures both profit and satisfaction to their keeper.

The flocks of pure bred fowls of just ordinary quality are numerous almost everywhere and there are a great many flocks of birds which contain some pretty fair specimens of their variety, but the flocks of really choice uniform quality

no stone unturned in their endeavor for a flock that is of the highest uniform quality. The careful breeder has a hold on his customers for stock and eggs for hatching that brings them back year after year for the necessary additions to their breeding pens or to help fill out their string of exhibition birds for the shows, and it is this kind of customers that give the careful breeder the satisfaction and pleasure that he seeks in the business as well as the necessary profit. To the true fancier there is almost as much pleasure in learning of the good results his customers obtained from his strain of fowls as for him to note the success of his matings among the chicks raised in his own yards. It

BUFF PLYMOUTH ROCK MALE.
Bred and owned by E. C. Allison, Hope, Ind.

are far from being common in any section of the country, for such quality is the result of great care in the selection of the birds that make up the breeding pens each year and a system of breeding that enables the breeder to locate the individual bird which produces for him the best quality and show the strongest inclination to a uniform type of the variety that is being bred.

The breeder who is careless in mating up his birds and who is satisfied to continue breeding stock of only ordinary quality year after year is having a harder time to dispose of his surplus stock than is the man or woman who continues year in and year out to leave

doesn't add to the careless breeder's pleasure or profit to find that he has sent out a bird which has proved a poor breeder and caused the purchaser a serious loss on account of the poor quality of the chicks produced, but this is the natural result of careless mating and breeding even of the best stock.

To obtain the highest uniform quality possible every individual specimen in the breeding yard must be carefully studied and mated so as to have the chicks come stronger in the points that the parent stock is weak in and have the strong points of the parents intensified in the offspring. To be in any degree certain of this result the parentage and breed-

ing of the fowls making up the breeding pens must be known with certainty for several generations back, for it is a well known fact that a comparatively poor specimen of the best breeding will produce good birds, where a very fine appearing bird of indifferent breeding will nearly always produce stock that is disappointing to one looking for the highest uniform quality in his flock. The bird of individual merit with a pedigree that includes the best selected specimens of the flock for several generations is the one that improves the quality and increases both the pleasure and profit of the poultry keeper.

The trap nests now on the market enable the poultry breeder to have the same knowledge of the breeding value of his fowls as the horsemen and stockmen do of their thoroughbred horses and cattle, and without this knowledge the

ger of any serious step backward is practically eliminated, because the results of every individual hen's work in the breeding yard is known with a certainty and when a hen is found to give results not satisfactory, it is a simple matter to throw her and all of her chicks out and have no further trouble from that source. But the breeder who has not this knowledge of each hen's product may continue to find year after year the same defects cropping out without knowing which females in his yards are responsible for them.

The trap nest, while giving the breeder an accurate knowledge of the pedigree of each individual, will also enable him to select for his breeding yards the hens which are the most prolific layers and the hens which lay the nicest eggs, and then by using the cockerels that are sons of some of the best layers, the

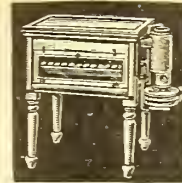

A perfect laced body and hock. The best body and hock lacing ever produced is found on the birds that head the pens of Jones The Wyandotte Man, Paducah, Ky. This season every bird a winner and as near standard as have been produced.

horses and cattle of today would not show the remarkable development and improvement in speed and production that they do. It is the careful mating of specimens of which the breeder has an accurate knowledge of the pedigree to enable him to properly estimate the value of the specimen's individual merit that insures success and makes rapid progress towards his ideals a possibility. This holds good in any branch of live stock breeding and only the careless breeder will ignore it. With a good practical trap nest system the poultry keeper can keep accurate records of the pedigrees of every chick he raises and know just what hens give him the best chicks each year. In this way the poor producers may be quickly weeded out and the best breeders and their progeny take their places, and in a very few seasons' breeding, cause a remarkable improvement in the general quality of the stock raised. With pedigree breeding the dan-

persistent laying habit can be quickly established in his strain and make them doubly valuable to his customers, for the ultimate purpose of keeping poultry is for what they will produce in eggs and meat.

The work involved in the use of good practical trap nests and an accurate pedigree system is not at all impractical for the great majority of those who are giving the matter of poultry breeding any very serious attention, for it is not necessary to keep records of the birds through the entire year to accomplish this result, in fact, it is better that the hens are not allowed to lay heavily during the winter months when they are to be used for breeders early in the spring, as it is quite generally conceded that the hen that lays moderately or little or none during the few months just preceding the breeding season will generally give the best results in strongly fertilized eggs and rugged, vigorous chicks of the

MORE EGGS-LESS FEED

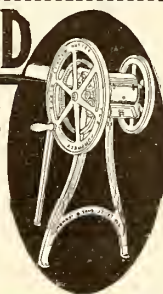

By feeding green bone you can save enough money to buy a **Humphrey Green Bone and Vegetable Cutter**

besides doubling your egg yield. It's the only open hopper bone-cutter; simplest made; only three working parts; nothing to get out of order; no springs to adjust. Sold on a positive guarantee to cut more bone, in less time, with less labor and in better shape than any other bone cutter, or your money back.

Free Trial if you want it. Send to-day for handsome poultry hook. Address,

HUMPHREY, White St., Factory, JOLIET, ILL.

The HUMPHREY RAPID CLOVER CUTTER cuts more rapidly, more easily and finer than any other. Ask about it.

YOUR NEIGHBOR'S CHICKENS

Look over the fence today and compare your chickens with your neighbor's. Purchase a package of **Tonic Poultry Food** and look over the fence in a week. There will be a mighty big difference in your favor between your hens and your neighbor's. It is a rapid conditioner for fowls. It is made especially to promote active digestion and assimilation. The egg-building ingredients in **TONIC POULTRY FOOD** are selected especially to immediately act upon the sensitive egg-forming organs and work with benefit to the whole structure of the hen's body. It contains the elements that make flesh, egg and bone.

TONIC POULTRY FOOD

is not injurious, but is vegetable and bone and makes fowls larger, promotes the rapid development of young chicks and helps to prevent and cure poultry diseases. Experienced poultrymen testify that it is a preventive of chicken cholera, roup, gapes, etc.

TONIC POULTRY FOOD increases the winter percentage of eggs. Hens that usually lay from 12 to 15 eggs per month will increase the number to about 15 to 24. Cost per package 25c.

Tell us your problems—we will gladly instruct you promptly how to get finer flavored fowls and more eggs. At the same time we will send our free 48 page catalog. Write today. Address Dept. 10. Ask your dealer for Tonic Poultry Food. If he hasn't it, send to us. Souvenir calendar free. Agents wanted. Look for our Trade Mark on every package.

TONIC POULTRY FOOD

HITS THE SPOT

TRADE MARK

born to live type. I make a practice of keeping egg records of my fowls during the breeding season and find that it gives me all the information necessary to enable me to breed a splendid laying strain of highest uniform quality in Standard points, without running the risk of getting poor fertility from the eggs in the spring and weakened chicks that are hard to raise, by breeding from hens that have been forced to lay heavily for a long time previous to using them as breeders.

The little extra trouble and time involved in the care of a thoroughly practical nest and pedigree system is small indeed compared to the satisfaction and ultimate profit to be reaped from such careful work in the breeding yard. Most of the eggs can be gathered and recorded when attending to the other routine duties among the fowls and to be successful one must be much among their fowls anyway, although when sufficient nests are installed it is not really necessary to visit them oftener than every hour and a half or two hours during the part of the day they lay most of their eggs. The morning and evening work will enable one to attend the early and late layers and a trip at about ten, twelve and two o'clock will be about all that is necessary to accomplish the work of gathering and marking the eggs.

Pedigree breeding with the use of trap nests is occupying the attention of the best breeders all over the world and without question is the coming system for the production of the best in Standard and practical qualities of the different breeds of domestic fowls. The strain that produces highest uniform quality is the one that pays best, not the one that occasionally produces a choice specimen, but the average quality of which is far below what might be desired for good breeders. Uniformity when found in conjunction with the best quality it a point that all fanciers are striving for and it can be best and most easily attained by having an accurate knowledge of the breeding value of every specimen used in the breeding pens. There are many breeders of pure bred fowls who are compelled to sell their breeding stock at less than an average of two dollars per fowl because of the poor average quality of the birds raised each season, while others who have by careful selection and a system of pedigree breeding been enabled to produce a strain of uniform quality and individual merit, have no trouble in selling their surplus breeders at an average price of five dollars or more per fowl. It is quality the buying public want and in the great majority of cases they are willing to pay a good fair price to the man or woman who will produce the goods they are looking for. The breeding that pays is the breeding that in the largest degree produces the quality that the purchaser is after and careless methods cannot fill the bill.

DON'T KILL THE LAYING HEN

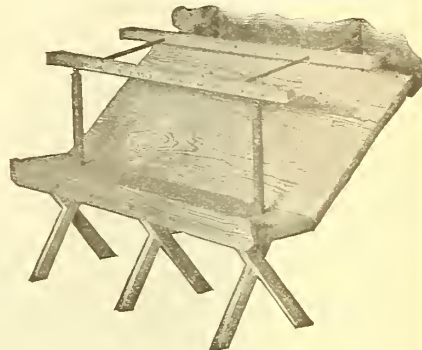

LEARN THE SECRET OF KNOWING HOW TO SELECT THE LAYING HEN.

THIS INFORMATION WILL ENABLE YOU:

- 1st. How to avoid killing the hen that is laying.
- 2d. How to pick out the hen that is not laying.
- 3d. To know about how far advanced the hen is toward the laying point.
- 4th. How to avoid wintering hens that are not likely to be good winter layers.
- 5th. To know how to select the hen having strong laying powers for breeding purposes.
- 6th. How to know the hen that has entirely lost her power of egg production.
- 7th. To know how to sort out the hens in summer or fall that have ceased laying for the year.
- 8th. How to know the hen that has become weakened in her laying powers.
- 9th. To know how to buy hens in the early winter that will make good winter layers, and dispose of them at a large profit after receiving their crop of eggs.
- 10th. How a very close estimate of the number of eggs the hen lays in a week or month may be made without the use of the trap nest.
- 11th. How overfeeding before egg development has started, tends to reduce the egg production.
- 12th. How, When and Why the laying hen should be educated.
- 13th. How to arouse and stimulate the laying organs of the hen.
- 14th. How to know the pullets that will make, and are, strong layers.
- 15th. Roup, and how it affects the laying organs of the hen.

POULTRY HOUSE FIXTURES.
THE POTTER PORTABLE HENNERY OUTFIT AND VERMIN EXTERMINATOR ROOST.

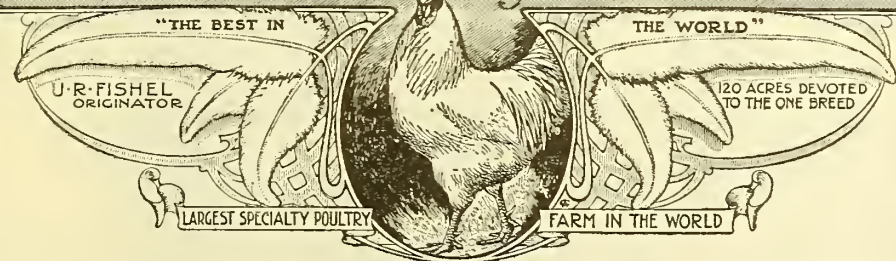

Within the past few years we have equipped hundreds upon hundreds of poultry houses in every part of the country with our apparatus. Poultry men of every class use and recommend it, and pronounce our fixtures the most complete, convenient and satisfactory ever put on the market. Do not think of building a new house or refitting the old one until you have secured a copy of our large 30-page catalogue.

The above cut shows but one of the three styles which we make. Outfits are made in fifty different sizes to fit any house. Better send for our catalogue and see what we are offering. Inclose one red stamp if you want it.

HIS LETTER

"FISHELTON" THE HOME OF Fishel's White Plymouth Rocks

Mr. Thos. F. Potter,
Downers Grove, Ill.

HOPE, INDIANA, Oct. 23, 1905.

My Dear Sir:-

I am more than pleased with the value of your system of telling the laying hen. I would not take fifty dollars for the information you gave me in fact it is so valuable to any poultryman that it can not be reckoned in dollars. I have been in the Poultry business all my life and never knew how to tell a hen that was laying (unless I saw her lay the egg) or one that would lay soon or one that would not lay at all. No Poultryman can afford not to know this system and really every farmers wife should know it so as when they sell their hens they would not sell the one that was laying eggs every day. Trusting you will be well paid for your discovery so valuable to us all I beg to remain

Your Friend,

U. R. Fishel

INCUBATORS AND THEIR MANAGEMENT.

Advice on Management of Incubators and the Advantage of Their Use, Even Though Hens Are Available for the Purpose.

The difficulty that is experienced in procuring broody hens when needed should direct special attention to the advantages to be derived from the use of incubators. Artificial incubation is a subject of great importance to all who are interested in profitable poultry keeping. So much improvement has

tained. The instructions must be carried out carefully, particular attention being paid to the heat registered in the egg drawer. There are some people who do not understand how to read a thermometer and it is essential that this very simple matter should be mastered. A most important point in successfully hatching is that the eggs must be quite fresh, and not only fresh, but they must in the cold weather not be allowed to get frozen before being collected from the nests. When eggs are placed under a hen to be hatched, they may be three weeks or a month old and yet turn out a large percentage of chicks; but for using in the incubator they should not be laid longer than a week.

which the machine is kept. One successful hatcher finds that from half an hour at the commencement to an hour up to the date when hatching is due, brings the best results, though this is longer than is recommended by some of the makers.

Excess of heat, improper ventilation and sudden noise and vibration are bad; if they do not destroy the chicks in the shell, they often cause crippled young ones. The main features to be observed are to place the incubator where there is a fairly even temperature with ventilation without draught, to use fresh eggs from well-matured fowls, and to turn the eggs without jarring the egg drawer. A little patience is required, and there may be a first

First Prize Pen Buff Leghorns MADISON SQUARE GARDEN. N.Y. 1905

We publish the above illustration in order to correct an error in our January issue. We gave the address of Mr. B. S. Beuerlein as Mt. Morris, Ill., when it should have been Mt. Morris, New York.

This illustration is of the first prize pen of Buff Leghorns at Madison Square, New York, 1905. Owned by B. S. Beuerlein, of Mt. Morris, New York.

been made of late years in perfecting incubators that there is no doubt as to whether this method of hatching can be relied upon. The old machines were frequently a failure, and those who tried them without success have in many instances not only refused to give the new ones another trial, but have done their best to restrain others from using them; nevertheless incubators are now finding their way into all parts of the States. The clear directions, too, that are sent out with the machines make it easy to understand the working.

When purchasing an incubator it is necessary to try it for a few days before putting in the eggs and to first see if the proper temperature can be main-

Upon first placing the cold eggs in the drawer, it will be observed that the temperature will fall for a time, but will soon rise again. The eggs will require turning; the directions usually are that they should be turned half round each time twice a day. Some skilled breeders have found it better to turn them so that the eggs are not exactly in the same position in the drawer two days following. With this object they turn them about one-third at a time, taking care that in the process the egg is not shaken, or as little as possible. The eggs must also be aired daily. Opinions differ as to the length of time for which they should be allowed to cool; this should depend a good deal upon the temperature of the room in

failure. But incubators are such a boon that few who take the trouble to use them intelligently are ever afterward without a machine (or more). They are the greatest assistance, and all who keep fowls in any quantity, and who desire their birds to be profitable should certainly obtain an incubator, price of which brings them within the reach of most poultry growers.

In artificial incubation such an advance has been made in perfecting it that providing a small amount of intelligence and common sense is displayed the present machines can be worked successfully. There are many makes of incubators, each naturally claiming to be the best and to hatch 100 per cent of the fertile eggs trusted into it.

There are tank machines and hot air machines, but the novice need not allow himself to be confused by the conflicting statements of their respective admirers. There are many good ones of each class, procurable, too, at most moderate prices, so that all those people who wish to grow early chickens for the table as well as breeders of fancy poultry, that takes a good many months to mature, will find an incubator a most profitable investment and a special boon at the time of year when broody hens are almost unobtainable.

The directions sent with all the machines are not difficult to follow. One matter that puzzles the beginner is that of testing the eggs in order to ascertain the fertile and the unfertile ones. There is no way of knowing this until the eggs have been submitted for a time to the heat of the incubator; it is advisable to wait at least four days before examining them, though with practice this period may be considerably reduced. One of the egg testers procurable from most of the incubator makers should be used. Each egg must be held in front of the aperture in the tester; a bright light having been placed at the back and the egg turned gently around with the fingers. If the egg is fertile the germ will present the appearance of a circular spot

Third Prize Cockerel Wisconsin State Show, January, 1906. Bred and owned by King Bros., Oshkosh, Wis.

floating at the top of the egg; when held sideways this spot being surrounded by a clouded substance showing small blood vessels. An unfertile egg will appear clear as if freshly laid; an unadled egg looks darkish and there is no sign of any blood vessels. Brown or tinted eggs are more difficult to tell than white ones. It is as well for a beginner to have a new laid egg at hand so as to be able to compare with the others.

The necessity of turning the eggs has occasionally been questioned; experiments have been made to test this and they have proved that if the eggs are not turned the embryos almost invariably die in the course of the second or third week of incubation. When the eggs are not moved the lining membrane next to the shell becomes adherent to the yolk. This adhesion usually

FRANK B. SMITH, 57 Vermillion St., Danville, Ill.

exercises pressure on the extremity of the yolk and prevents its absorption into the abdominal cavity, thus leading to the death of the chick. The turning of the eggs, therefore, is supposed to stimulate the movements of the embryo and the prolonged contact of the same parts of the lining membrane with the yolk. The directions usually are that the eggs should be turned around half-way each time, twice a day.

There are some persons, who purchase incubators, and yet do not understand anything at all about them. The great number of machines that are now in the market are strong evidence of the popularity of artificial hatching. Hundreds of incubators are now used in all parts of the States, and we may say in all parts of the globe; yet there are many farmers in the country as well as cottagers and others, who derive profit from their fowls, who have not as yet adopted this mode of hatching much to their own disadvantage. The old machines were undoubtedly frequently a failure, but now they are such that with reasonable care a satisfactory result is bound to be attained, and their

First Prize Cock Wisconsin State Show, January, 1906. Bred and owned by King Bros., Oshkosh, Wis.

moderate prices are every reason for their forming part of the stock in trade of the poultry keeper, who hatches chickens in any number.

Some of the requisites for satisfactory hatches are that the temperature should slightly vary between the commencement and the end of the process, but the machine being placed where there are no violent shocks, avoid excess of heat and all vibration, as if these latter do not destroy the chicks in the shell, it will often cause crippled young ones.

After a little experience the capabilities of any machine will be understood. People who hatch a large number of chickens differ in various details in their opinion; for instance some do not allow the temperature in the egg drawer to exceed 103 degrees up to the sixteenth day, after which they reduce it to 101 degrees for the remainder of the time. The amount of airing the eggs are to receive daily is another detail in which many instances is a good deal varied. From ten to thirty minutes is the time usually advised in the morning and another period of a few minutes later in the day. Some experienced hatchers allow more air than this, particularly toward the end of the incubating period, when they give upward of an hour. It would not, however, be

"There are three things essential to raising good poultry: AMERICAN POULTRY JOURNAL, RELIABLE POULTRY JOURNAL and FARM-POULTRY. I would not miss a single issue." GEO. REEDER, Louisa, Ky.

wise for the beginner to try any experiments of this nature, but to follow closely the first rules laid down for his guidance. The incubator makers are as a body practical men and give all necessary directions, but easy as these directions are they cannot supply brains as well as incubators, so in case of failure, the operator must consider well where he is in fault.

From the experience of many practical poultrymen, it is safe to say that too much stress is laid on ventilation and moisture by the manufacturers and not sufficient temperature. The usual directions are to keep the temperature in the incubator at a certain point, usually about 103 degrees, from the beginning to the day of hatching. This is certainly contrary to nature as we find it in the mother hen, for it stands to reason that her body will not be at so high a temperature when she first sits on the eggs as later. Indeed the hen often gets feverish along the last few days before the eggs begin to hatch and the temperature must be very much greater at that time than during the first week she was on the eggs.

When the eggs are first placed in the incubator with the outdoor temperature ranging from 20 to 30 degrees, the machine should be set that temperature cannot reach more than 100 or 102 degrees at the most. This should be the highest temperature for the first ten days, and not more than 103 degrees should be allowed at any time thereafter until the hatch. The incubator should be attended to three times a day, and this is often enough if the machine is good and the proper care is given it at the periods named. Morning and night the lamps should be cared for, trimmed and filled. At noon, the warmest portion of the day, moisture should be supplied from the tenth to twelfth day according to directions. Some incubator makers recommend to commence moisture on the fifteenth day only. The writer of this has used incubators with great success, always hatching from 60 to 90 per cent of all fertile eggs. They were originally kept in a cellar, but of late years, is keeping them in a place built specially for their convenience; the incubators always being well regulated before the eggs are placed in them.

After the chickens are hatched then the hardest part comes, especially for early hatched chicks which is a subject of brooders, a subject repeating the word to which I shall enter also a competitive article for these prizes offered.

The prejudice that has existed in many places with regard to incubators I find is gradually dying out, so much so that they may be met in all sorts of remote parts of the country. They will be still more largely used in our next future time. I can see it come.

It should from the outset be understood that an incubator will not hatch at all unless it is properly managed. The experienced often cannot get on at first with the very machine with which they subsequently succeed marvelously well.

It has sometimes been stated that chickens hatched artificially are more delicate and more difficult to bring up than those hatched by the hen. This, however, is not the case; in fact, many who employ both methods are of the opinion that if there is any difference the strongest, hardiest chicks are those brought out by the incubator. One im-

portant matter that the novice must learn is to keep the heat at an even temperature according to the standard of the machine.

In a trial with a machine it will be found that the heat at first will be perhaps 104 degrees or under 101 degrees, then either the weight on the arm must be readjusted that raises the cap on the chimney of the lamp, or the escape valve be altered according to the machine. It does not do to select eggs of doubtful age from nests that have been stolen by hens in out-of-the-way places. I must not omit to say that the time allowed for turning the eggs will also much depend upon the room in which the incubator is kept, as to its heat, although no hard and fast rule can be agreed upon. In turning eggs I generally place a pencil mark upon them to assist me. The incubator should on no account be interfered with except at the regular time for turning the eggs, and it should not be opened needlessly or the heated and moistened air will escape. With a little patience, perseverance and application of ordinary intelligence, though there may be failure at first, success is sure to come. All who rear chickens in any numbers should certainly not be without one or more incubators.

When the natural or ordinary way of incubation is adopted, vexatious delays often occur owing to the scarcity of brood hens. Even if a large number of fowls are kept, there will be very few hens perhaps wanting to sit during cold and wintry weather; valuable time is thus lost and sittings of eggs that have been carefully saved may be wasted,

because no broody hens are to be had.

Assuming that broody hens can be obtained, they sometimes have a knack, particularly if the setting is valuable, of breaking some of the eggs and jeopardizing the whole lot. When the hen does bring off the brood, she will stand about the coop at times, perhaps when there is a piercing wind blowing, the chicks having to wait exposed to the cold until it pleases her to sit down and allow them to nestle under her. In fact, the broody hen is at the best a most foolish, senseless creature, doubtless well meaning, but a continual source of anxiety during the whole twenty-one days of incubation, and later on as well.

With a reliable incubator there is no trouble of this sort, provided freshly laid fertile eggs are procurable. There must be carelessness on the part of the person who attends to it if there is not a satisfactory hatch. In addition to the advantage to those who rear chickens from using an incubator, a good number of machines are nowadays sold to people who do not keep fowls, but who make money by simply buying eggs, hatching them and selling the chickens as soon as they are hatched. These tiny chicks will travel long distances packed in light wooden boxes. They are best sent off so as to get through most of their journey during the night. The incubator takes up very little room and can be placed almost anywhere, a cellar doing well, because the temperature therein is equal; or in an empty room, so long as the door is opened and closed quietly.

WOMAN'S HOME DEPARTMENT.

Mabel Bates, Editor.

With the first issue of the new year, the American Poultry Journal starts this new department for women. This department will not be confined to poultry items entirely, but to all matters pertaining to household economics. We want every woman who reads American Poultry Journal to consider herself a member of this department. If you have a bit of practical knowledge in household matters, an item of experience in raising poultry that will be helpful to others; a favorite recipe, etc., send it along. This is your department, just as far as you are willing to make it.

All communications should be addressed to the Home Department of American Poultry Journal Publishing Company, 325 Dearborn Street, Chicago, Ill.

This article was awarded the \$10.00 prize for best article sent in for the Woman's Home Department. A large number of very meritorious articles were received, many of which will be published in these columns in the near future.

THE REARING AND FEEDING OF CHICKS HATCHED IN AN INCUBATOR.

It is an old, but profitable saying, "Well begun is half done." This is what I know to be a fact in regard to rearing and feeding chicks hatched in an incubator.

When the chicks are ready to leave the incubator the temperature of the room in which the incubator stands should be 90 or 95 degrees F.

This does not allow the little fellows to become chilled, while being transferred to an indoor brooder, which is about the same temperature and is heated in such a way that ventilation is good and the warmth falls from above on the backs of the chicks.

There should be a comfortable hover, so that the weaker ones may go to a warmer place if they wish.

Keep the temperature about the same for two days, and then gradually lower it a little each day, until it reaches 75 degrees F.

After putting the chicks in the brooder as directed, allow them to rest and be as quiet as they please, for twenty-four hours at least; then give them a drink of fresh water and see to it that each one gets a swallow or two.

This is very essential to their future health, as it cleanses the stomach and bowels before any food is taken. It is an excellent preventive of all kinds of bowel trouble.

After this is done scatter a small quantity of some good chick food among the dried clover, which has been strewn on the floor of the brooder.

I use Cyphers' Chick Food, because it contains everything in the line of food, as well as grit, which the young chick requires for the first two weeks of its life.

This should be given them at regular intervals, about every two hours, and it should be scattered very thoroughly in the dry clover. This keeps them busy. If this food and plenty of fresh water, with a clean, dry brooder is given the chicks for the first two weeks after they are taken from the incubator, they will thrive, and I dare say that not one chick will die with bowel trouble. At least this has been my experience.

On the first day of the third week

begin to feed them a little meat scrap, twice a week, and lower the temperature one degree, if it is not freezing weather. Put a little sand on the floor under fresh, clean, dry clover, and use a little coarser food, such as Cyphers' Scratching Food, once a day; but keep the chick food in the litter also, as there will be some chicks that will not eat the scratching food.

An onion tied so that the little fellows

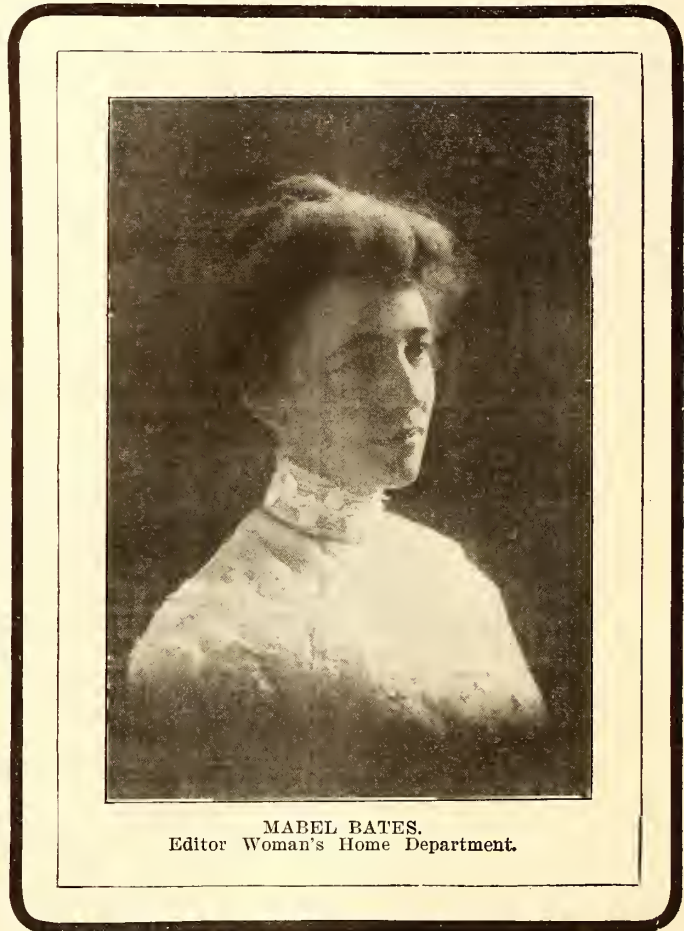

and warm. If it is warm enough to let the chicks out, change the runs every other day. However, give them plenty of clover and onion with a little chopped cabbage once or twice a week.

See to it each night that the chicks are warmly housed and comfortable.

When the chicks are getting their feathers, it is a very good idea to feed more meat scrap and a warm mash food with a little sulphur mixed in the food, while dry. This helps them to grow their feathers and keeps the digestive apparatus in good condition.

An excellent mash food can be prepared by mixing equal parts of ground oats, corn, and wheat bran and fine middlings; if mixed with milk or water, thoroughly wet without being sloppy. A little linseed meal is particularly helpful mixed with this food. The grain ration should consist largely of cracked corn, whole wheat and some oats.

The chicks should not be crowded while kept in the brooder, and should be removed to larger quarters when five weeks old. They should then, as at all times, be kept clean, dry and warm. They should not be fed as often and care should be taken not to feed too much. Keep clean straw in the litter, so that they will have to scratch in order

MABEL BATES,
Editor Woman's Home Department.

can pick it, serves as a pastime and disinfectant. If it can't be fed this way, chop it fine and scatter with the feed.

At the beginning of the third week remove them to an outdoor brooder and keep it thoroughly warmed, about 73 degrees F.; if not zero weather. If it is keep it 75 degrees F.

Have the brooder in a sunny place and where the cold wind will not strike it, if possible. Keep it clean, well ventilated

to find their grain food.

In regard to egg production, when incubator chickens are fed and reared this way, it is much easier to produce good layers by rearing and feeding the chicks without the hen than by leaving them with her.

In June, 1904, I had a hatch of chickens, which were fed and cared for just as those hatched by the hen, except that she brooded them.

Feed this much
at **OUR RISK**

THIS IS THE MONEY BACK LINE

**SELECT THE FEED YOU WISH TO TRY AND GO
AHEAD AND USE IT.**

Then watch for **RESULTS**. If the Results don't come, just tie up the bags and write us. We will **REFUND EVERY PENNY OF YOUR MONEY**, and tell you where to send the remainder at **OUR EXPENSE**.

RESULTS are what tell the story—not theories. Anyone can figure out on **PAPER** what this or that combination or formula will do, but in practice, the results are **NOT THERE**.

You simply spend your time and money testing, and **YOU LOSE**—for every extra egg you **MIGHT HAVE GOT AND DIDN'T GET** is that much actual loss.

But you needn't test any more—we have done it for you, and have done it with **Hens and Chicks** and not with a lead pencil.

Anyone could have done what we did, and perhaps could have won equal success, if they had had all the different grains to work with, and all the different mills to thoroughly grind and mix these grains, as we had, if, in addition, they were willing to spend time and money in patient testing, testing, testing, as we have done, till **PERFECTION** was reached.

It was a long, weary task to produce a feed which would cause a hen to produce the most eggs of which she was capable, day after day, year after year, winter and summer, without a halt, and yet keep healthy and vigorous every misure.

And another to produce a feed which caused young chicks to come up to maturity in 60 to 90 days.

The means were simple enough—just three different elements prepared differently and in different combinations until success was achieved—that's all.

First, clean, thoroughly ripened, perfect grains and seeds, without dust or smut,—15 or more kinds.

Second, sweet, tender Alfalfa tops and leaves, perfectly green and well cured.

Third, untainted lean meat, dried while fresh.

There is no medicine or condiments in Purina Feeds and they are not cheapened, as most feeds are, by the addition of grit, which can be bought at one-fourth the price.

And the testing of these materials in hundreds of combinations was simple, too, but exhausting to our patience and to our bank account.

But these years were well spent. There is no guesswork or "we think" about our Feeds now. We know what they will do—**EVERY TIME**.

And now we want you to know, too.

Not by figuring percentages and analysis after us to see if our **ARITHMETIC** is right.

But by trying our Feed on Your Own hens and chicks—the same as we did—and **WATCHING THE RESULTS COME**.

And remember—it won't cost you a penny to do this, for if our feed doesn't do the business—doesn't do all we claim and more—then **WE LOSE**, not you, for we will willingly return every cent of your money, and you have had the feed for nothing.

How to Make the Free Test.

Purina Feeds are sold through dealers in 100-lb. Bags at the following prices, except in far away territory.

- PURINA CHICK FEED.....\$2.50
- PURINA SCRATCH FEED..... 2.00
- PURINA MASH..... 2.50
- PURINA ALFALFA MEAL..... 2.00

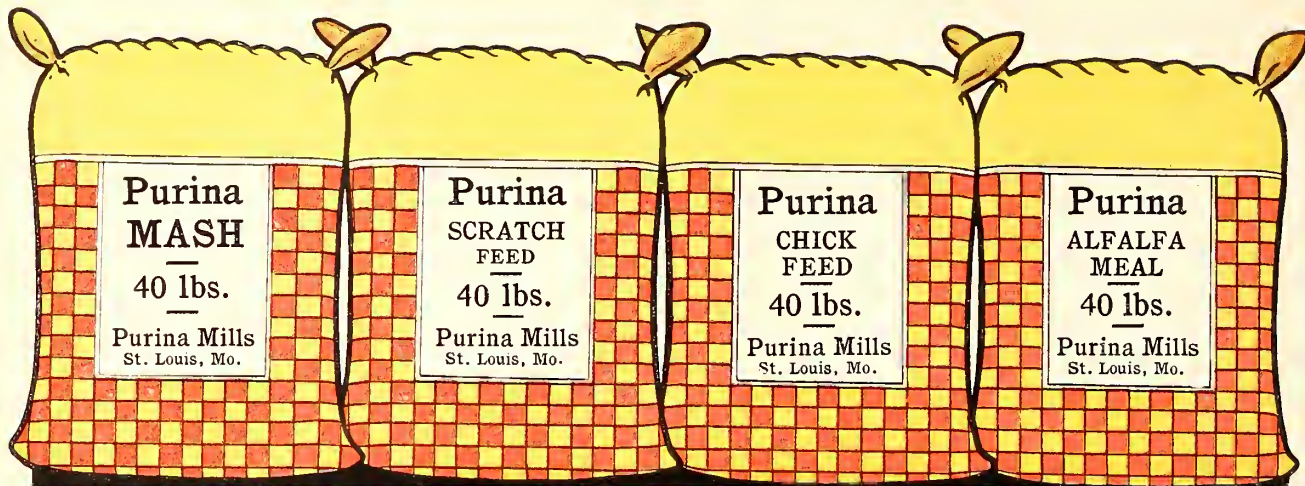

For the Free Trial we have put up all of the above Feeds in special 40-lb. bags, each bag having a **MONEY BACK** line printed one-quarter the way from the top. You can use down to the line on each of these four 40-lb. bags at **OUR RISK**. Make your choice from the above list of Feeds. When you have decided on which Feeds you wish to try, fill in the order blank (other side this sheet), pin **\$4.00** to it, and mail the order to us. This \$4.00 is a special price for **THIS ONE ORDER ONLY**, and is good for just one order from one man. As soon as the order reaches us the Feed will be sent at once **FREIGHT PREPAID**, except in far away territory.

When it reaches you, go right ahead and feed your poultry according to directions on each bag, and keep a **RECORD OF RESULTS ON EACH FEED USED**. If you have a large number of hens, better set aside a certain number and feed Purina Feeds to them only. Do this for 30 days, or until you have reached the **MONEY BACK LINE** on each bag. Then make a "before and after using" comparison. If the feed has done all and more than we claim for it, and you are **PERFECTLY SATISFIED**, the \$4.00 is ours at the end of 30 days. If you are dissatisfied with the Results in any way, just **SAY SO**, and back will go the \$4.00 to you, without question or quibbling, with instructions where to send the remainder of the feed at **OUR EXPENSE**. This is as fair and liberal an offer as we know how to make. You take no risk for the great **PURINA MILLS**, the largest of the kind in the world, stand behind every promise.

We have a book, **THE PURINA STANDARD POULTRY FEEDER**, which tells fully how our Feeds are compounded and prepared, and **HOW TO USE THEM**, also much valuable information on poultry and poultry raising. If you would like this book, just ask for it, and we will send it **FREE**.

Particulars on
OTHER SIDE

The incubator chickens laid in December and continued to do so until late in the summer, while those hatched and reared by the hen were of the same stock and two weeks older, did not lay until late in the spring.

In conclusion, I would say systematic feeding, clean quarters, judicious economy and thought mixed with much common sense, in caring for chickens, insures success.

Consider how they are constructed. Know the fowl, be interested in it and its surroundings, and the results will pay one hundred fold.

I have had 98 per cent hatches and by doing for the chicks, as I have tried to direct you, I have been very successful, never losing over ten chickens. These did not die from disease; but from accidents.

MRS. A. C. GREENLEE.
Ashtabula, Ohio.

HOME DUTIES.

Co-operation is coming to be the universal watchword. Have you ever tried it in the home? What is good in larger business enterprises should certainly prove of value in the most important one of all, the making of the homes which form the keystone of the nation. There are countless little ways in which the busy house-mother can simplify her work, and at the same time make the entire family feel that they have a share in the brightening of each day and the lessening of its duties. This is especially needful if she is not only the home-maker, but has outside responsibilities, such as the care of a large flock of chickens, as have the majority of the readers of this department.

Perhaps the secret of the ease with which this can be accomplished lies in the old saying which you have probably heard from your mother or grandmother many times, "Make your head save your heels, child;" Get the boys and girls interested in keeping things up as they go along. Teach them that a moment of care when they unwrap a package, in folding the paper and laying it in its proper place, and winding the string on the ball will save many minutes of valuable time for some one later in the busy day. A book put back on its proper shelf, soiled clothes put in a bag in the closet instead of thrown upon the floor, hats and coats hung on their individual nails, a basket of kindling brought in when some one has an errand near the wood pile, all of these seem too little to matter, when done by different members of the family, but they will aggregate an hour or more of hard work for the mother, if they are all left for her to do. Whose fault is it if the boys and girls are careless? Surely not theirs if they have never been taught. Would not this beginning of the new year be a good time to inaugurate a change, and set up a co-operative household?

SIMPLE HOME REMEDIES FOR BURNS.

Burns are such frequent and painful accidents, says a writer in a recent household magazine, that simple home remedies which are immediately available are among the things which every housekeeper should know.

Scrape or grate a raw potato quickly and bind the pulp into a poultice on the burn. Or make a paste of cooking soda and water, and bind this on the burn. Both these remedies are cooling and will draw out the fire. If care is

taken the blister will not break. The water in the blister helps to form a new skin and should be kept as long as possible.

It is a splendid plan to keep a bottle of linseed oil and lime water on a shelf where it can be quickly procured in case of a burn. This is a well known remedy, though not as cooling as the first mentioned.

A STUDY OF SCRAPS.

Who has not looked with dismay upon the wreck of the roast of mutton which has served for the Sunday dinner and appeared as cold meat on the ensuing "wash day"? There is perhaps a pound of scraps left on the bone, which are too good to throw away and yet do not seem enough for a meat dish if warmed up in the remaining gravy. Of course there is hash, but that is always a "last resort," and besides, John doesn't like hash and is not afraid to say so. Have you ever tried this method? Scrape every morsel of meat from the bone, crack the latter, cover it with

The first prize cockerel of Missouri State Poultry Show, 1905. Bred and owned by J. R. Sampson. Scored 93%. My winnings at Missouri State Poultry Show in December were 1st on hen, where I defeated the Louisiana 1st prize hen at World's Fair and also the World's Fair 1st prize pullet; she was showed at state show as a hen; I defeated her. My winning at the Missouri State Poultry Show was 1st hen, 2d cock, 2d, 3d and 4th pullet and 2d on breeding pen. I breed B. P. Rocks exclusively and have for twenty years.

cold water and let it simmer' on the back of the stove four or five hours. There should be a cupful of good, strong broth at the end of that time. Strain it and thicken with a tablespoonful of flour and one of butter which has been bubbled together, season with pepper, salt and a little tomato catsup, or the half cupful of canned tomatoes left from yesterday's dinner, stir into it the cold mutton, which has been cut in small bits, and a handful of dried bread crumbs, strewing some of these on top. Put it in a buttered baking dish and bake until the surface bubbles. If you want to give a finishing touch which will be sure to be appreciated, break enough eggs on the top to serve the family, pepper and salt them and add tiny bits of butter, and set back in the oven until the eggs have

set. And if John and the children do not like the result—well, they will be a difficult family to please!

This is but one out of many ways in which scraps can be utilized and pennies saved. Each one of the readers of this department has some recipe which she has invented along this line. Will you not pass them along for the benefit of the other readers?

A HINT WORTH TRYING.

Those who have kept a small, uncorked bottle of kerosene inside the clock case where it will evaporate slowly find that it evaporates just rapidly enough to keep the clock bearings oiled, and saves many a visit to the clock repairer.

TO CLEAN COAT COLLARS.

A housekeeper who has tried gasoline with more or less effect, using a cloth and working hard to avoid leaving a dirty looking ring in place of the spot, invented a new method which worked perfectly. She took an old toothbrush and dipped into the gasoline. A few vigorous rubs and the spot departed as if by magic. This can be used on velvet as well as cloth collars.

TO REMOVE SPLINTERS.

When a splinter of wood gets lodged beneath the nail and it would be torture to dig it out, try putting on a poultice of common yellow soap and sugar mixed into a soft paste with a silver spoon and put on a soft, clean rag. Tie it around the nail where the splinter is lodged and in the morning the bit of wood will be seen nearer the top of the nail, often sticking right out so that a slight pull is all that is necessary to remove it.

FILLINGS AND ICINGS FOR CAKES.

The following icings can be used with any good layer cake recipe. The one given this month in another column for Nut Cake, will always be found satisfactory, and even a novice can make it successfully.

Maple Sugar Icing—This is especially good for black fruit cake and is made as follows: To one cup of grated maple sugar add four tablespoonfuls of water and boil until brittle when dropped into cold water. Remove from the fire and pour immediately in a fine stream upon the beaten white of one egg, beating it constantly while doing so and until cold.

Caramel Filling—Two cupfuls brown sugar, one-half cupful sweet cream, butter size of an egg, one tablespoonful vanilla added after other ingredients have boiled until thick. Beat hard while it is cooling and spread immediately between the layers.

Walnut Caramel Filling—Use recipe just given and after taking from the fire add one cupful of chopped walnut meats.

Butter Scotch Filling—Boil together one cupful of brown sugar, one of New Orleans molasses, one-half cupful of butter and two tablespoonfuls of vinegar. When nearly done, add a pinch of soda. Beat it hard after taking it from the fire.

Uncooked Fillings—Put the unbeaten white of one egg and a tablespoonful of water, milk or cream in a dish and stir in confectioner's sugar until the required thickness. Add flavoring at the beginning. An infinite number of variations

can be made by using a few drops of coloring matter, the grated rind and juice of an orange or lemon instead of the water, coconut, chocolate grated and melted, or dry powdered cocoa, nut meats, chopped raisins, etc. Like the small boy who ran away from home for life, and returned, repentant, within two hours, before his mother had missed him, and who remarked gravely, "I see you keep the same old cat," you can use "the same old cake" and by the use of a little wit in making a variety of icings no one will ever recognize it as an old, familiar friend, while you will earn a reputation in your home and among your friends as a cook of marvelous experience and infinite variety.

DON'T SPARE THE BUTTER.

At this time of the year many of the heat producing foods which would be anything but healthy fare in the summer are to be recommended. Among these nothing is better or more easily procured

than butter. Butter is so common a commodity that people use it and seldom think what value it possesses. But the delicate cream fat is as valuable as the more expensive cod liver oil for weakly, thin people, without the expense attached to the latter and more disagreeable article. It is frequently recommended by doctors, who advise its use, spread thickly on thin slices of bread. Butter is a carbon and all excess of it is stored up as fat in the body. It gives energy and power to work to those who eat heartily of it, so it is not economy to spare the butter at the dining table, even among healthy people. In many farm houses cream is seldom if ever served and butter is given sparingly, in order that larger quantities of the latter may be sold in the nearby cities. But this is the poorest kind of economy, and those who are liberal in the use of these articles at their own tables will find they are getting good value in the increased health and happiness of the entire family.

A FREE BOOK—WORTH HAVING.

There is a free book called "How to Save One-Half" sent out by the H. M. Sheer Company, Quincy, Ill., that tells exactly how to construct high grade incubators and brooders from the very first mark of the pencil up to the adjusting of the regulator preparatory to setting the eggs. Every detail of construction is shown clearly in a series of over eighty half-tone photos arranged in the order of each consecutive operation. This book is especially valuable to "beginners" and tells them how to avoid mistakes and failures in hatching chicks artificially by selecting reliable apparatus. It is a condensed encyclopedia for every poultryman—big, little, amateur or the "old hand."

This book also explains the life work of Mr. Sheer, the well known incubator specialist, inventor of the Acme Automatic Lamps and Acme Automatic Regulators and Thermostat. He has spent eighteen years in perfecting these and other incubator and brooder appliances, until he is now a re-architect.

The H. M. Sheer Company are the largest exclusive manufacturers of incubator and brooder supplies in the country. All this phenomenal business has been built up during the last few years because of the unvarying quality of the Sheer products. Painsstaking efforts have resulted in world-wide recognition and in making Sheer goods the standard.

Incubator users, provoked by the cranky actions of their regulators or lamps, should not consign their machines to the scrap heap. Write for this catalogue and see how many a man has saved his incubator and got big hatches by following Mr. Sheer's advice.

YOUR CHICKEN HOUSE RATIONS:

Investing in hens means investing in experience. It may be dearly bought or very cheaply purchased. Hens are easily kept if their food rations are suitable. Yet no matter how good the food, no matter how careful and systematic the care, if they do not have proper grit—hen's teeth—to grind up the horny food portions, they will pine away and die.

Many make the mistake of thinking that any kind of stones will "do" for hens. There is where they are getting dearly bought experience. Experienced poultrymen all over the country are finding that Mico Spar Cubical Grit makes an ideal grinder for hens and chicks.

Mico Spar Cubical Grit never loses its sharp edges till all dissolved; it prepares the tough portions of food for digestion and assimilation; it helps to make hardy, healthy, happy hens. Their droppings show good digestion; they lay a goodly proportion of large eggs. Mico Spar Grit is never lost in the litter, because it shines and sparkles. Hens see it easily and choose it in preference to other grits. Consequently not an ounce is wasted. It contains all the elements for flesh and egg building; lime, soda, aluminum, magnesia for shell, and iron for yolk. The International Mineral Company, Boston, Mass., 120 Tremont street, sell Mico Spar in 100-pound bags for a cent a pound. Dealers and poultry supply houses have it. The free circular answers your questions.

Absolute control of the circulation of air in the egg chamber is only one of many exclusive features about the 1906 "Mandy" Lee incubators. It's the hatching kind. Catalogue free.—George H. Lee Company, Omaha, Neb.

C. F. Limbeck, breeder and shipper, Ossian, Iowa, says: "The 'Mandy' Lee is easily the best brooder I have ever seen or used. I have not lost a single chick in it." It's different from others. Catalogue free.—George H. Lee, Omaha, Neb.

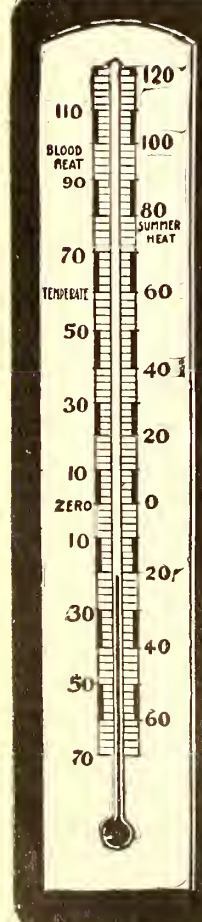

H. C. Beebe, of Canton, Ill., writes that one of his customers, W. A. J. Hall, of Mangum, Tex., won on his Single Comb White Leghorns a 2nd and 3rd prize. Also another customer, Ed. Harrington, of Viroqua, Wis., wrote Mr. Beebe that a judge from Sparta, Wis., saw his S. C. White Leghorn cockerel and pronounced him to be the best cockerel he had seen this fall.

BEAUTY STRAIN S. C. White Leghorns

are the best Leghorns, being the World's Fair winning strain, as well as extra good layers. It's your loss to pass these pure white beauties by when hunting stock or eggs. I will positively give what you order. Eggs from prize pens, \$2 per 15, \$5 per 45; from heavy tested layers, \$1 per 15, \$3.50 per 50, \$6 per 100. A few pure white cockerels. Circular free.

H. C. BEEBE, :: R. 5, Canton, Ill.

When the Mercury is Low and Eggs are High— 

This month and next is when egg sellers make their money. It pays to feed egg making material. More than

60% Protein in Darling's Meat Products

and they run exceedingly low in fats. They make the eggs come. Guaranteed fresh, sweet, pure, free from taints.

Darling's Laying Food
(The Egg Producing Mash)

is a scientifically prepared food. Right ingredients, rightly proportioned, to facilitate egg making in winter. No other food will so quickly make profitable layers of your flock.

Darling's high class products are put up in 100 pound bags. The following leaders are f. o. b. Chicago or New York, cash with order:

Laying Food.....	\$2.00	Scratching Food.....	\$2.00
Forcing Food.....	\$2.00	Chick Feed.....	\$2.50
Mica Crystal Grit.....	.65	Oyster Shells.....	.60

Darling's latest catalogue is an unerring guide to feeding for best results. Write for it, also for our special pamphlet, "Fill the Egg Basket."

GIVING ATTENTION TO DETAILS

BY REV. C. E. PETERSEN.

That the housing of poultry needs a good deal of attention is generally taken for granted, and yet for all that we believe that a good many more poultry houses of faulty construction are built every year, than the information given about the subject in our poultry journals would warrant, and yet it will be well to say that a good deal of the detail given cannot be carried out in all places, and would not even be advisable, if it could.

But there are a number of essentials that must be embodied in every plan, be the plan for an expensive or an inexpensive structure.

It seems that personal likes or dislikes are taken into consideration, rather than the comfort of the fowls, and if it suits the proprietor, and looks well, it matters little whether it suits the fowls or not, and many a pretty little affair we have seen in the way of a house intended for poultry that was absolutely unsuitable for the purpose it was built, many of the essential parts left out, that should have been first of all taken into consideration.

We do like neat and attractive buildings of all kinds, and where the expense of building is of minor importance, there is no reason why a poultry house cannot be constructed so as to be all it ought to be so far as the comfort and convenience of both poultry and the poultry keeper are concerned, and at the same time an attractive building.

As it is not our intention of giving detailed building plans in this article, but rather principles that cannot be set aside in the building of a poultry house, the following well attested facts will be of use.

1. The location should be dry. If the ground is not dry naturally it should be made so by digging out the site, and then fill it in with a coarse gravel that will provide good drainage. Damp, muddy ground means unsanitary conditions, productive of disease, and a cold, damp situation means few or no eggs in winter.

2. A southern exposure of the building, means a warm building, as it is exposed to the greatest amount of the sun's rays during the cold winter months, and the quarters will be more cheerful, and a singing hen generally means a laying hen.

3. Windows in the building that can be opened and closed as easily as in a dwelling house; they should never be nailed in, though it is quite often one of the mistakes made.

4. Everything in the house in the way of fixtures so placed (if possible) that all the floor space will be available for scratching material for the hens to exercise in.

5. Build as low as it can be constructed so work can be done inside of it without danger of bumping the head of the poultry keeper, as a low house is kept warm easier than a high one, too much air space is just as bad as not enough, as it makes the house cold, and the heat coming from the hens cannot warm the air sufficiently.

6. Make the house easy of access, save all the steps you can, that is having it located near your dwelling if possible, better for you, and better for the hens, particularly in the winter. We are now

speaking to the man who keeps a few hens for his pleasure.

HEN COOPS.

A hen coop is a common and interesting object in the poultryman's grounds, but a very few of them are made as serviceable as they should be, built in a good many instances on the principle of "anything will do," a very poor affair offering neither shelter nor protection to the hen and her brood.

Now the great essentials of a hen coop are that it should offer complete shelter from rain; adequate shelter from the coldest winds, without ever being retentive of foul air; be proof against ordinary vermin; provide a convenient means of feeding the chickens without their being robbed, either by their own mother or by any other bird or animal by which they may be surrounded; and which may be very easily removed to fresh ground without carrying any taint with it.

Such a hen coop may very easily be constructed, even out of a packing case, by any one who has even a slight acquaintance with tools, and the time taken in the making of such a coop will pay the maker many times over in the saving of numerous chicks, that otherwise would be lost, and the improved growth and general health of the chickens.

We are thoroughly convinced that in the proper care of the young stock, much future trouble, and many disappointing failures are saved, as all the attention given to proper feeding will be counteracted by improper cooping, for when foul air and fetid odors are taken into the system every night, all the care given in the day time will be of little use; how often have we seen young birds hanging around outside a coop filthy and foul, reluctant to enter until driven into it, and in this miserable apology for a shelter closed up for the night, and we may say, that a coop may be cleaned out so far as the droppings go and yet be foul, and unhealthy, in every essential.

THE YARDING OF FOWLS.

If the fowls are to have constant liberty, or what is generally called free range, no yards are required, but, if the fowls are intended to be shut up during any part of the year, especially as is the case where the birds are penned for breeding purposes, a yard is a necessity, and the larger it is the less attention the fowls will require.

This last essential is not often enough taken into consideration, and in a very short time the fenced in yard will be fouled by the fowls, and grass at a premium, and where best results are to be desired, the yard should be as large as will give a constant supply of green food to the birds inclosed in it.

Quite a small yard will do if the fowls are allowed a free ramble during some part of each day, and where land is scarce, with very great care as to cleanliness, and variety of food, especially green food. Fowls have been kept in good health, in constant confinement, with only ten square feet of yard room for each fowl, but that implies an amount of labor and attention that very few poultry keepers would care to bestow on their poultry, but which would be absolutely necessary to success in limited quarters, yet there are many of our most successful breeders of fancy fowls, that are raising them in very limited quarters, but love for the business makes work easy and success sure, where others lacking this great incentive would fail.

**DUCKS
and
Dollars**

The easy dollars that duck-raisers make are the extra dollars that the right kinds of food make for them. Intelligent duck feeding is immensely profitable. The foods presented below are the best known for ducks and all kinds of fowls.

**HARVEY'S
Mixed Grains**

is a combination of cereals in proper proportions and is the result of extensive experimenting. Has been on the market several years and has become very popular among poultry-raisers - furnishes the variety of ration that fowls need; makes healthy, hardy stock - an all-the-year feed at a price cheaper than you can buy the grains and mix them yourself.

**CUT ALFALFA
HAY**

is considered an absolute winter necessity for laying hens. Keeps the egg production up, and will make money for you at the time when egg money amounts to nothing - when eggs are at top notch. Young pullets begin laying several weeks earlier when regularly fed Cut Alfalfa Hay. Old layers do better work and do it easier on such a feed.

**HARVEY'S
Electric Poultry Food**

works like magic - fine for morning washes; builds bone and muscle, and keeps young stock growing. As an egg-increasing feed it's a sure money-maker. A little experimenting with Cut Alfalfa Hay, Harvey's Mixed Grains and Harvey's Electric Poultry Food in combination will convince you that you need to go no further in the search for the best there is. Free illustrated catalog of an extensive line of foods, grits, supplies, etc., sent on request. Let us send you one.

**Harvey Seed
Company**
30 Ellicott
Street
Buffalo
N. Y.

Another one of the essentials for success is to provide plenty of shade in the runs. It matters not, however large the yard may be, if lacking the cool, inviting shelter of some shade trees, it becomes comfortless to the fowls, and the

hot, stuffy house is made use of, as better than nothing, and it is not an agreeable sight to see a lot of panting fowls in the summer time, when a shade might have been arranged outdoors, that would have afforded protection from the hot

sun if shade trees were on the place.

We write about this matter intentionally at this time of the year to warn some of the many beginners in the business that will start in keeping a few hens next spring, and who are already planning the house, and its location, and a few hints at this time of the year will not be out of season about this important matter.

STEADY ADHERENCE TO SOME DELIBERATELY PLANNED SYSTEM.

In the rearing of poultry, as well as in most other pursuits in life, the best results will be obtained by following out a well planned system of caring for, and feeding, the poultry, however unpretending that system may be.

"Regular as clock work" has a greater bearing so far as success in poultry keeping is concerned than in any other business, regularity never forgets anything, and slipshod ways and manners of care and attention to the comfort of the fowls have no part with it.

Have a system of feeding, and stick to it; go slow in making any changes in the amount and contents of the daily rations, except it is absolutely necessary, where a wrong system of feeding has been indulged in. Poultry do not take kindly to sudden changes in feeding, and sometimes a change of grain will work disaster to egg production, and stop a whole flock from laying for days at a time till they get themselves adjusted to the new regime of feeding.

Make the change slowly, that is, mix in a little of the new grain to be used in the usual rations that have been fed, and no bad results will follow; this is not generally known, but it has again and again caused the often seen query, "Why don't my hens lay?" Again, have a system of feeding, and stick to it, and the best results will be obtained.

Again, have a regular time to feed, any time is no time, and no good results can possibly be derived from irregularity in the feeding time; good grain fed any time you please, will give poorer results than a poorer grade of grain fed at regular hours.

This part of the system is valuable where the object is, to succeed with poultry.

Have one day in the week in which all the boxes containing shell, grit, charcoal, etc., are to be attended to, scratching material changed, dust bath renewed with dusting material.

Have another day in which all the fowls in each pen are to be handled after they are on the roost, to get an idea of the condition of the birds.

Get a Perpetual Year Book, note down the temperature, the egg yield, fertility, what you fed one pen, and what you fed another pen, note the results, etc., etc., anything of interest; such a system of keeping tab on what is doing, will only take a few minutes each day, and in a few years make a valuable record, and at a glance you will have before you past conditions, and results on the same page of the Perpetual Day Book.

Have a system in breeding, note down results as to the outcome of different matings; do nothing blindly in this much important matter; the much discussed topic of how to line breed, might be answered in three words, "System in Breeding," for that is really all it is, and without it, success in breeding fancy fowls cannot be secured; system in all things means easy and generally successful work, so try it this coming year and you will be delighted over results.

The Gaines' White Plymouth Rocks.

BRED TO WIN—AND DO IT

No more females for sale this season. A few choice cockerels left for sale. If birds fail to please you, simply return them to me at once. I refund your money and stand the transportation charges both ways. I will pay \$50 for a pair, (cockerel and pullet, and you keep the birds. My FREE booklet explains; write for it.

E. H. GAINES, Prop.,

GAINES' POULTRY YARDS,

GAFFNEY, S. C.

WE WANT NAMES

We want YOU to send us the names and addresses of from ten to twenty-five farmers living in the United States, each one having five cows or more. You can send us the names from any number of different post-offices. If you will send us these names we will send you FOUR BEAUTIFUL PICTURES FREE. These pictures are reproductions of the most celebrated paintings in the world, and they are of high quality, and we know that you will be pleased and delighted with them; no pictures will be given for a list of less than ten farmers.

We want to send a sample copy of the special dairy issue of the RURAL HOME to a lot of farmers who are not now taking our paper and that is the reason we want these names.

Send us immediately a list of at least ten farmers and we will send you, ABSOLUTELY FREE, FOUR REPRODUCTIONS OF THE WORLD'S FAMOUS PICTURES. Address THE RURAL HOME, 20 North Williams Street, New York, N. Y.

I HAVE FOR DISPOSAL
OVER 1,500 BIRDS
Strictly High-Class Exhibition and Breeding Stock

If you contemplate making a purchase of
Buff Plymouth Rocks
I can certainly please you, as I have hundreds of others.

If you are at all in doubt, and if you desire any information regarding my stock, prices, etc., WRITE ME, and I will cheerfully, freely and frankly advise you.
MY SOUVENIR BOOKLET ON REQUEST

ADDRESS:
S. D. LAPHAM, Dearborn, Mich.
LOCK BOX 89. MENTION THIS JOURNAL.

HANSEN'S WORLD CHAMPION

RHODE ISLAND REDS

Winners of more cash prizes at World's Fair than any other exhibited. Won every first prize at Madison Square Garden, N. Y., 1905. Also three specials for color and shape at Chicago, December, 1904, won every first prize and Silver Cup for best ten Reds in show, Rose and Single Comb competing. Also won all first prizes at Cincinnati, 1903 and 1904; Indianapolis, Louisville, Hamilton and Warsaw. They have this year won prizes at New York and Birmingham, Ala.; also in hands of my customers. Eggs now booked at \$3, \$5 and \$10 per setting.

BUFF WYANDOTTES

World's Fair, St. Louis, Pan-American, Madison Square, New York, Chicago, Milwaukee, Hagerstown, Middletown, Ohio State, Wisconsin State, Syracuse, Cincinnati, Cleveland, Dayton, Indianapolis, Edgerton, Lake Geneva, Rockford, Delavan, etc., winners are in my yards. Birds scoring from 90 to 96 1/2 points. Rare bargains in yearling males. Over one hundred extra fine hens, many solid buff. Hundreds of grand young stock for exhibition and breeding purposes. If you want the best write me. Satisfaction guaranteed.

RALPH W. STURTEVANT, LOCK BOX B 22, BELOIT, WISCONSIN
BUFF WYANDOTTE SPECIALIST

AN APPRECIATION OF GENERAL MARION.

Great as he was as a soldier, he was equally great as a man. No contemporary, not even Washington, was more lovable. In quickness of sympathy, purity of life, rectitude of intention, he was near to perfect righteousness. His temper was sweet, his humor quick, keen and refined, and he was as abstemious as a hermit. No private consideration ever dimmed for one moment his sense of justice. His heart flamed at every wrong. "The Knight of the Revolution" he has been called, and indeed never did christening mediæval sword smite kneeling neophyte with more courageous heart, or purer soul or more exalted purpose.—Lynn Tew Sprague in *The Outing Magazine* for January.

FOR POULTRY RAISERS.

Everybody with a flock of chickens ought to be making money these days, and it is safe to say that they are doing so—if their fowls are healthy and in a generally thrifty condition. But that's just the trouble—thousands and thousands of folks who have poultry are losing good profits every day because they will not take the trouble or do not know how to help the fowls do their best work. Unless people make a specialty of poultry they fail to realize its money-making possibilities, and therefore neglect the flock shamefully.

Suppose your poultry is only a side issue; you might just as well get all there is in it as not. The first step toward success is to know how to keep your fowls in perfect health, how to prevent diseases and cure them. And there is no reason why everyone should not be able to do this. We know of one book at least that will make the poultry raiser master of any situation that might come up in the way of chicken troubles, and it is offered free because there is a little advertising in it. The title of the book is "Poultry Diseases," and it is issued by the well known firm of G. E. Conkey & Co., of Cleveland, O. But it is not all about diseases. It gives valuable instructions regarding the building of poultry houses, gives receipts for balanced rations and the best method of feeding, talks on in-

ubation and brooding, and tells how to select eggs for hatching. In fact, it is a complete guide to the best success with poultry, showing how to avoid all troubles and setbacks. There is not a poultry disease in the dictionary that it doesn't explain and tell the causes of, how to discover by symptoms and how to treat. Now, when anyone who keeps poultry can get such a book as this free, by simply asking for it, there is no excuse for ignorance regarding the fundamental principles of profitable poultry keeping.

We are sure that many of our readers would derive much benefit from having this reference book handy and would advise them to send a postal to the G. E. Conkey Co., Cleveland, O., requesting a copy and stating that they saw this liberal offer in AMERICAN POULTRY JOURNAL.

EGGS IN WINTER.

One expert says: "There are several ways to secure eggs in winter. However, there is no cheaper way than by feeding green bone. Use a mash for an evening meal; during the day feed wheat in litter, thus making hens work for it. Feed twice a week all the fresh ground bone they will clean up; give them comfortable quarters to roost in, and my word for it, you will get eggs when eggs are high."

That's a very simple recipe proven times without number, and the fact is just as well established that anyone with ten or more hens needs a bone cutter with which to prepare the ground bone fresh as they feed it.

The Dandy Green Bone Cutter, made by the Stratton Manufacturing Company, of Erie, Pa., will help you get eggs in winter. It's a machine that you really cannot afford to do without if you raise poultry for profit. Green bone is a cheap feed, good for every fowl in your flock. It's cheap because the bone from which you prepare it costs you nothing; the machine prepares it for feeding in a very few moments, requiring but little effort to operate it, and the increase in the egg supply quickly pays back the cost of the machine.

In another column of this paper is an advertisement for the Dandy Green Bone Cutter, telling how they send it on fifteen days' free trial, also offering to send free

a beautiful catalogue full of valuable suggestions on feeding. It will pay you to write the manufacturers for the catalogue and to order a machine on trial. There is no question about the advantages of feeding green bone and the fifteen days' trial enables you to find out the many good qualities of the machine before you need buy it. Kindly mention this paper when you write.

In a letter from Mrs. Della Maxwell, of Fayette, Mo., she writes that she lost first two premiums at the recent Missouri State Show on account of overweight of her Barred Plymouth Rocks, which she does not consider a bad effect, as all of her customers want size as well as fine plumage. Her stock is noted for its great egg-producing qualities, and she is not afraid to put them against anybody's Leghorns when it comes to laying. She has a large amount of good stock for sale, especially cockerels, which she will dispose of cheap if purchased at once. Her stock is noted for size and sound color; is farm raised and very vigorous, and an illustration of one of her birds can be found in her attractive ad in this month's issue.

She was a prominent winner at the St. Louis World's Fair exhibition, and she is breeding some grand birds from "Louisiana," her first prize hen at World's Fair which is still in her possession, also its mother and sisters and their offspring of 1905. She has shown at seven out of nine of the last Missouri state shows, and has won more first prizes at the seven shows than all competitors combined. She also won the \$15 cash special at Sedalia, Mo., for the best pen in the American class, also the \$75 challenge cup two years in succession, for the two best cocks, two best hens, two best cockerels and two best pullets at St. Louis World's Fair. Her winnings have been so numerous that it would take a long list to publish them all, and we refer readers to her ad in this issue for further particulars.

In the description underneath the illustration of Silver Wyandottes belonging to A. & E. Tarbox, Yorkville, Ill., in our January issue, we stated that No. 4 took first prize at Traverse City, Mich., when it should have been Kansas City, Mo.

IDEAL

Just two classes of people go into the poultry business. One class makes a conspicuous failure; the other class makes money, year in and year out. It is not a matter of luck or chance. It is a matter of means and methods—of applying right principles, of using appliances adapted to the work, of following intelligently the way other successful people have found to be right. Will you profit by the experience of others? Your first requirement should be the simple, dependable, self-operating Ideal

Incubators and Brooders Sold on 90 Days FREE TRIAL.

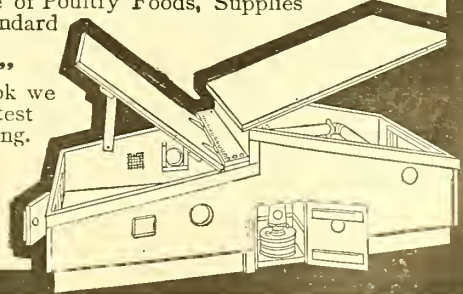

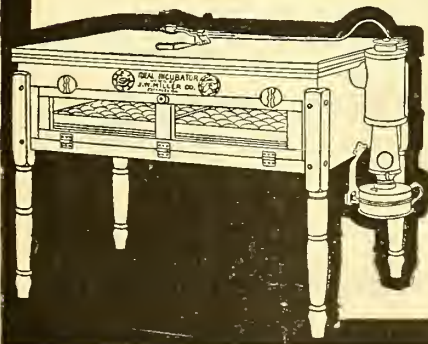

They literally grew out of the experience of "The Man Who Knows" and who had spent a lifetime raising poultry for profit. Since their perfecting they have been tried and endorsed and used by the men who know everywhere. Their heating, ventilating and regulating systems are next to perfection. Machines do it all—same results to the novice as the expert if he gives them just a decent amount of care. Our guarantee is straight-out and iron bound. Full success and satisfaction or money refunded.

You Feed to a Purpose When You Use Miller's Standard Foods.

Close up to hatching and brooding in importance. Each specially prepared for its special need. Foods, Grits, Lice Killers, Remedies, Punches, Egg Testers—in short a complete line of Poultry Foods, Supplies and Appliances. Everything standard and guaranteed.

"POULTRY FOR PROFIT" is our 1906 Catalog—greatest book we have ever issued—we think greatest anybody ever issued. Free for asking.

The J. W. Miller Company, Box 56, Freeport, Ill.

BETTER EGGS.

Poultry keepers are always striving to increase the egg output of their fowls. That's a wise thing to do, for the supply, while large, does not begin to equal the demand, which is getting greater every day. But as you are endeavoring to increase the quantity you should not forget that you can also improve the quality.

Cut green bone is a recognized egg increasing food. It not only increases the quantity of egg but it improves the quality as well; keeps the hens healthy and improves the condition of every fowl that eats it.

Progressive poultrymen recognize cut green bone as one of the very best egg making foods; they feed it and get more eggs—better eggs. If you have hens that are not doing their share toward supplying this great demand for eggs you should feed them green bone. It tones up their system, furnishes just the elements they need for making eggs and keeps them busy and profitable.

The Standard Bone Cutter cuts green bone just right for feeding. It feeds the bone to the cutter automatically and is a simple, substantial machine that turns loss into profit. The bones you throw away ought to be fed to your hens. Write to the manufacturer, the Standard Bone Cutter Company, Milford, Mass., for their free catalogue, prices and original trial plan. They guarantee their machines in every respect. Hundreds of them are in daily use by large and small poultry raisers in all parts of the world. Kindly mention this paper when you write.

DOLLARS FROM BONES.

One of the greatest sources of profit on the farm is the chicken yard, for with proper care and feeding chickens can be made to "pay for their keep," and give a goodly sum to the profit side of the ledger, too. "Feeding for eggs" has become a slogan, and a pertinent one. For the man who "feeds for eggs" will assuredly get them.

There is no better food to increase egg production than properly cut green bone. The old method of smashing a bone with a hammer is obsolete. With this method the bone was simply shattered—splintered. Large fowls refused all but the smallest pieces, and the little chicks were unable to pick any but the finest particles. To obviate this E. C. Stearns & Co., of Syracuse, N. Y., have perfected a number of models of green bone cutters which are undoubtedly the best and easiest working bone cutters on the market today. The patented steel cutter head mills the bone, cutting it fine enough for all size chickens to pick up. As it does not splinter the bone but cuts it, every particle is made available for the use of the fowls.

They will gladly mail a copy of their catalogue to readers of this paper.

A MAIL ORDER SPECIAL.

Every business man, and especially those interested in any kind of mail order advertising, should read the December number of *Judicious Advertising*, Chicago.

This was a mail order special and contains articles by authorities well known in the advertising field, giving much practical information concerning mail order methods.

By the way, this is a handsomely printed publication and its illustrations and comments are practical object lessons to every man interested in the growth of his own business.

One article in particular is of universal interest, treating the much mooted question of "Position" and written by no less an authority than Charles Austin Bates.

HAPGOOD PLOW COMPANY.

The Hapgood Plow Company, of Alton, Ill., announce that they are the only manufacturing company in the world in their line selling direct to the consumer at wholesale prices. They employ no agents or middlemen, and they handle plows, harrows, sulkies, rakes, sewing machines, buggies, etc. AMERICAN POULTRY JOURNAL readers who are interested in farm implements should write these people for a catalogue, addressing 100 Front street, Alton, Ill.

The thirty-sixth annual catalogue of the Seed Company, Des Moines, Iowa, is at hand, and fully up to its previous standard, and anyone loving flowers and needing seeds should write for a copy.

Kaye's S. C. Black Minorcas

The great laying and exhibition strain. First prize winners at Chicago, Dec. and Jan. shows for three consecutive years. A limited number of cocks, cockerels, hens and pullets for sale. Eggs \$3 per 15, two settings Black Minorca Club.

Box 218, Mazon, Grundy Co., Illinois

FARM TELEPHONES.

The open winter that we are having are golden days for the farmer who wants to get a telephone line started in his community.

Now, when his neighbors are beginning to recall the hard winter of a year ago and to look about for comforts for the time when they will be almost shut in again, the man who has something to offer which will keep the entire family in close touch with their neighbors, their physician, grocer and afford them all the social privileges of townspeople, should have no trouble in getting their cooperation in the building of a telephone line.

The cost of building a line is very small. A good line can oftentimes be built at an expense of from \$25 to \$30 for each subscriber.

It is very important that a reliable telephone, one that can always be depended upon, be chosen.

Valuable information on the building of lines and selecting of telephones can be secured free of charge from advertisers in this paper.

We would advise that anyone who is interested in this subject, write for booklets at once.

Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., who advertise in the AMERICAN POULTRY JOURNAL, agree to send free, if the name of this publication is mentioned, a booklet fully describing their telephones, giving information on the building of lines.

In this new booklet they have tried to show, by going pretty thoroughly into detail, why the Stromberg-Carlson telephone is better than any other and worth the difference in price that they ask for it.

They realize that a good many farmers are getting pretty shrewd in regard to the selection of a good telephone and a good many of them are, as they say, from Missouri, and "have to be shown." They say that Stromberg-Carlson have more telephones in farmers' homes than all the other makes combined, so it goes without saying that they must be built pretty well.

They are at the present time building a switchboard for the Kinloch Long Distance Telephone Company of Missouri, St. Louis, Mo., which when completed will be the largest switchboard in the world. This is a matter that will not, perhaps, interest the farmer very much, because, perhaps, it is too far off from their needs. It does, however, show that even when it comes to very large and important installations, Stromberg-Carlson usually get the order; in fact, they always do if the party insists on quality of apparatus.

They have also in the last few months installed at Columbus, Ohio, the largest toll board ever installed by any independent operating or manufacturing company.

All telephones are getting to look very much alike from the outside, and they say a great many of the small concerns have no hesitancy about copying their styles, etc., and while many of them infringe on their patents, it is not worth while for them, in some cases, to pay any attention to them, because they are not worth bothering with. It is interesting to note to what extent some of these small companies will do in the way of copying their material. One small company deliberately copied a large number of their illustrations and used the text of their booklet, verbally, word for word. Things of this kind will reflect upon the party resorting to such tricks and in the long run will do them much injury.

They are now manufacturing all of their telephone apparatus in Rochester, N. Y., where they have one of the most modern factories in the country, it all being located on one floor, covering nearly eight acres of ground. The factory is constructed with what is known as a saw-toothed roof, which gives the very finest of lighting facilities, which is an important thing in this work—the manufacture of delicate instruments.

They carry in their Chicago factory, which they now use as a warehouse, a very large number of telephones in stock. They usually carry anywhere from 20,000 to 30,000 telephones in stock, so that they are in position to ship promptly from this office throughout the west and to handle the eastern territory from the Rochester factory.

Hinsdale Poultry Farm, of Hinsdale, Ill., won at Downers Grove and Naperville, Ill., Dec. 15 and 16, 1905, Jan. 9 to 13, 1906, as follows: White Wyandottes—First cock, 1st hen, 1st cockerel, 1st pullet, 2d pen. White Leghorns—First cockerel, 1st hen, S. C. Buff Leghorns—First cockerel, 1st, 2d pullet. Maunder and Lambert, judges.

SINGLE COMB BLACK MINORCAS

GET THE BEST At Madison Square Garden, N. Y., 1906, I won 1st and 5th cock, 2d hen. At Cincinnati, Ohio, 1906, 1st and 3d cock, 1st and 4th pullet. May I not be favored with an inquiry for stock or eggs?

CLIFTON POULTRY FARM AND KENNELS
JOS. P. HELLDORFER BOX 1, ALLEGHENY, PENNSYLVANIA

SINGLE COMB BUFF LEGHORNS

If you are looking for high-class stock and eggs remember that I have purchased the entire stock of the famous Howell Strain. Mr. Howell has been eleven years breeding them to their present high standard, and they have been winning for him and his customers from Maine to California. His last winning was three regular and one special prize on four entries at Madison Square Garden, 1905, including first pen, which the American Fancier said was the best Buff Leghorns in the show, and the old Buff Leghorn exhibitors said it was the best pen ever seen in Madison Square Garden. I have a few cockerels for sale, and will offer eggs at \$3.00 per 15, or \$5.00 per 30 straight. Positively no reduction on larger quantities. See out of 1st pen Buff Leghorns, Madison Square Garden in this issue.
B. S. BEUERLEIN, Mt. Morris, New York

Special Sale of Light Brahma Cockerels

Farm raised and very vigorous. My sixteen years' experience in breeding Light Brahmas enables me to produce nothing but the best. Forty choice cockerels for sale. Every bird guaranteed to be as represented. Write at once if you want something good.

JNO. F. WOODS, Owensville, Indiana :: R. F. D. 19, UTILITY FARM

R. C. B. Minorcas

High grade young stock for sale. Hatched before May 1st, 1905. Cockerels, \$5.00 each. Pullets, \$3.00 each. Write for descriptions.

WM. F. WEINRICH - Main and Clay Sts., St. Charles, Mo.

Miller's Black Langshans

AGAIN VICTORIOUS. At the sixth Annual exhibition of the Central Missouri Poultry Association in a class of exceptionally fine birds, our birds won 1st and 3d cocks, 1st, 2d, 3d cks., 4th hen, 1st, 4th pullets and 1st pen. Last year we won all of the firsts in two state shows and all but one in another. Two years ago in a class of 209 Blacks at the Kansas State Show, we won 1st and 2d cock, 1st cockerel, 2d hen and 2d pen.

LEFFEL'S BARRED ROCKS

Sixteen Years of Prize Winning Under 20 Judges

At Springfield, Ohio, 1890 to 1903, my birds won all prizes offered on Barred Rocks and all sweepstakes over all varieties—2,700 fowls competing each year.

At Springfield Fanciers' Show, I AGAIN WON EVERY PRIZE offered on this variety with birds scoring to 94½.

At Dayton and Cleveland, in tremendous competition, I ALSO SWEEPED THE BOARD, one of my 1st prize cockerels scoring 95 by I. K. Felch. I challenge the world to beat this record. Better this season than ever. I am willing for my stock to go on approval. Write for bargain prices on breeding stock. Circular free.

GEO. M. LEFFEL :: :: SPRINGFIELD, OHIO

THE DANDY LINE TO SUCCESS

Includes a complete line of simple, serviceable, sensible, sanitary poultry appliances—everything to successfully raise chickens "from the egg to the exhibition coop," for pleasure and profit. This month we show the only Sanitary Exhibition Coop made. It has a removable floor and top, roll curtain front and is a beauty for the show room. Write for price at once. The new 1906 Portable Poultry House and Yard Combined. The new 1906 Dandy Incubator, Soap and Dandy Jr. and Dandy Special Incubators. Get on the "Dandy Line" and reach success. Send for new catalog, it will save you money, time, chickens, will help you to raise more and better chicks. Write today.

Excelsior Barred Rocks

Are again crowned with victory at the great Chicago Show, 1906, winning 1st and special on cock, on a bird that deserves the title of

BEST IN THE WORLD

At Kansas City, 1905, in hot competition, I won 1st, 2d, 4th, 5th cockerel, 3d, 4th, 5th pullet, 3d cock and 1st and 2d hen. 500 birds to select from. Best quality of eggs in season.

W. W. BYWATERS - Camden, Point, Mo.

ALLISON'S BUFF P. ROCKS

Winners Wherever Shown

At the great American Poultry Association Show, Cincinnati, Ohio, January, 1906, I won 1st and 2d cock, 2d and 3d hen, 1st and 3d cockerel, 1st and 4th pullet. I have a few choice birds for sale. Send for my 1906 Egg Circular. An inquiry will be appreciated.

E. C. ALLISON, Box 5, Hope, Ind.

AGAIN THEY WIN.

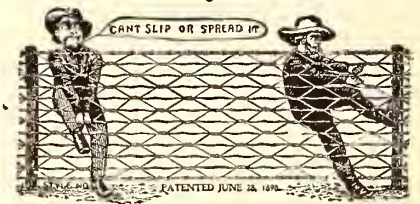

The latest winnings credited to the already long list of prizes taken in all sections of the United States by Jones' Wyandottes was made at Nashville, Tenn., Jan. 1-6, 1906, where the best of the central United States met in a show that was a credit to the poultry industry. Nashville is to the South what Chicago is to the North, what New York and Boston are to the East, the meeting place of the central East, West, North and South, and while this was Nashville's first attempt for several years, they pulled off a show equal to any of the much larger cities, they had an entry of 2,000 birds and all classes well filled.

R. E. Jones, The Pines, Paducah, Ky., won on his Wyandottes as follows:

Silver Wyandottes—Cocks, 1st, 2d, 3d; hens, 1st, 2d, 3d; cockerels, 1st, 2d, 3d; pullets, 1st, 2d, 3d; pens, 1st, 2d, 3d.

Golden Wyandottes—Cocks, 1st, 2d, 3d; hens, 1st, 2d, 3d; cockerel, 3d; pullets, 2d, 3d; pens, 1st, 2d, 3d.

Gold special for best collection of Silvers, also special for best collection in Wyandotte classes.

The above cut shows a thoroughly stock proof fence made by Kittselman Bros., Muncie, Ind. They have been manufacturing and selling fence direct to the farmer at wholesale prices for eighteen years. They have yearly increased factory and output to supply the ever increasing demand for their Self-Regulating Coiled Spring Fence and now employ over 500 people in their wire mill and fence factories. This fact not only says their fence gives good satisfaction but that they have also given their customers a "square deal" in every respect. They make farm, poultry, hog and ornamental yard fence. Ship it anywhere on thirty days' free trial, freight charges prepaid, to be returned at their expense if it don't please you in every way. Their 40-page catalogue tells all about them and their fence; how wire is galvanized, why some is good, some bad; tells how to stretch fence, how to set posts and gives much other useful information. Write them a postal today, mentioning this paper, and they will send their catalogue free.

"About this time," as the almanac says, look out for seed catalogues, and the first of the season to reach our desk is from the old reliable Iowa Seed Company, of Des Moines, Iowa. It is a large book illustrating and describing hundreds of the most desirable varieties of farm, garden and flower seeds, plants, etc., including all the most desirable novelties from various parts of the world. Quite a number of the most important items are shown in their natural colors and the front cover illustrates a cluster of the most beautiful roses. The farm seed department has especially attracted our attention, as it contains many descriptions of improved varieties of corn, oats, field seeds, etc. The entire book is written in such a practical way that we are convinced that it will prove of much benefit to farmers, gardeners and flower lovers everywhere. The publishers inform us that they will be glad to send a copy of same free to any of our readers who request it.—*Iowa Homestead.*

W. J. Wheeler, of Worcester, Mass., won at Providence, R. I. Poultry Association, Dec. 5, 6, 7, 8, 9, 1905, as follows: Black Red Game, 1st on cock, hen and pen; Brown Red Game, 1st on cock, hen, cockerel, pullet and pen; Golden Duckwing Game, 1st on cock, hen, cockerel, pullet and pen; Silver Duckwing Game, 1st on cock, hen, cockerel, pullet and pen; Red Pyle Game, 1st on cock, hen, cockerel, pullet and pen; Birchen Game, 1st on cock, hen, cockerel, pullet and pen; Black Game, 1st on cock, hen, cockerel, pullet and pen; White Game, 1st on cock, hen, cockerel, pullet and pen; Cornish Indian Game, 1st on cock, hen, cockerel, pullet and pen; White Indian Game, 1st on cock, hen, cockerel, pullet and pen; Malery Game, 1st on cock, hen, cockerel, pullet and pen; Sumatra Game, 1st on cock, hen, cockerel, pullet and pen; Pekin ducks, 1st on old and young; Rouen ducks, 1st on old and young. H. S. Ball, judge.

FEED YOUR POULTRY GRASS AND GRASSHOPPERS ALL WINTER.

Or, in other words, green food, and meat, the kind the busy hen finds for herself, on the farm, or in a good range, if these could be picked up in midwinter, or even in the warmer season in the average "run" or chicken yard.

Then the hen might profitably be left to "balance" her own ration. But they can't. In the winter and in the average chicken yard, even in summer, the hen gets what you give her, and that is practically all.

And, further, a hen might balance her ration to suit her tastes and inclinations, but not to suit your purpose. If she's an overfat hen, a lazy hen, she'll select a fat, lazy ration, for lazy results. She'll gobble all the corn she can get out of the raw grains you give her. If she's a nervous, fussy hen, she'll gobble all the wheat—she'll crave lots of meat—and exercise herself to a frazzle looking for it.

If you let her have her own way. A hen is no more than human after all. We must remember that the modern hen doesn't work under natural conditions. Let her alone, and she'll find a natural ration for a natural hen—but it won't be a profitable hen. The natural instinct of the natural hen is to eat to live—enjoy life—lay a few eggs in the brooding season, and let it go at that. The 200-egg hen we are all looking forward to is not a natural product—she's a machine. And a machine must have the right raw material to turn out the desired product. You wouldn't feed cordwood into a nail-making machine, would you? Neither can you expect a hen to make great quantities of eggs out of fat-making corn, stale bread, etc.

Nature is all right—you give a hen the right material and she will turn out plenty of results; but you must direct nature—feed a sufficient surplus of a natural egg-making food to enable her to produce that surplus of eggs beyond the natural supply, which you are after.

Now, the Purina Mash System is valuable in that it forms a reliable and profitable basis for the rest of the feed system.

It is uniformly balanced with the special view to egg making—its guaranteed analysis, 17 per cent protein and 5.5 fat, is a trifle narrow, purposely so on account of the universal tendency to feed such grains, vegetables and other material as will widen the ratio. Now, if you start with a wide ratio and then continually widen it further, don't you see that you are persistently "getting off the egg road?"

The beauty of Purina Mash is that it compels the hen to eat a sufficient amount of wholesome, nourishing, egg-making material—she has no choice—but, it is so rich in color and smell, so succulent, so appetizing, that it is not a hardship but a rare treat. It is so thoroughly digestible that it slips into her system quickly, gets right down to business in making eggs, without making the production any drain upon her vitality. Then with the egg question settled, it is a simple matter for her to "scratch for herself," eat enough grain, pick a bug here and a seed or blade of grass there, to keep her body in healthy, nourished condition—keep her contented.

For easy illustration, you might say, the mash is for the egg—the grain, scratch feed, etc., for the hen.

The difficulty in mixing your own mashes is that you have no uniform basis—your table scraps, for instance, are not the same in quantity or quality, and they are largely water and starch, which reduces the proportions of grain actually fed. You start with a wide ration in your mash, and supplement it with a wide ration in your grain feeds. You cannot estimate, with any assurance, from day to day what proportions of muscle, bone, fat, feather and egg making materials you actually are feeding. How can you count with certainty on definite results? Purina Mash is sound, sweet, unadulterated grain material—a little meat (choice beef scraps) and sufficient green food in the tender, succulent tops and tendrils of nutritious alfalfa, finely ground by our own special process, uniformly mixed by machinery. No adding of this or that necessary. Purina Mash will relieve your mind of worry by giving the hens at least one perfect, complete, properly balanced ration, one good square meal for the day, and with this as a foundation, you can't go far wrong the rest of the day. Then the hen can be safely relied on to "balance" her own ration.

If she needs a little more corn, or a little less wheat, or a bit of "grass and grasshoppers," she will select it from your other feedings or hunt them out by foraging. If she selects a little extra protein, it will do no harm—if a trifle more than she really needs, it will be stored up

for future use, and she will eat less of it next day. If she don't pick up quite enough egg-making material, she still has that one square meal to fall back on; she can't go far wrong. The point is—give her that one square meal, one perfectly balanced ration, every day, as a basis to work on, and she'll do the rest.

Purina Mash, Purina Scratch Feed, Purina Alfalfa Meal, Purina Fattening Feed, Purina Baby Chick Feed, are all sold in 20-lb., 40-lb. and 100-lb. checkerboard bags by the half ton, ton or carload. They are cheaper per pound of actual nutrition and per results than any other feed, dry grains or prepared foods you can buy. Of course you won't know this until you try them—will you do it? Ask for the "Purina Standard Feeder."

Write us for particulars. PURINA MILLS, B Street, St. Louis, Mo.

Pacific Coast orders filled by Acme Mills Co., Portland, Oregon; Canadian orders by The Tillson Co., Ltd., Tillsonburg, Ont.

THE GREATEST SALE OF NOTED PRIZE WINNERS EVER RECORDED.

Mr. Simon Beuth, of German Valley, Ill., recently purchased all the noted prize winning Buff Wyandottes of Ackley & Page, Woodstock, Ill., including all their Indianapolis, Pan-American, Chicago and St. Louis World's Fair prize winners, together with the business and good will.

Mr. Beuth, who has been breeding Buff Wyandottes for the past seven years, had already established an enviable reputation as a breeder of this variety, and by the purchase of this well established business places himself in the front rank and certainly makes him the leader of this grand breed.

Mr. Beuth is located two and one-half miles south of Seward Station, on the Illinois Central Railroad, and his farm consists of 120 acres, thus assuring his stock unlimited range, which has enabled him to produce birds of unusual vigor.

Mr. Beuth has made arrangements whereby he will devote his entire time to the breeding of Buff Wyandottes, and the coming season intends to raise several thousand of these golden beauties.

He now has for sale over 1,000 head of young stock, many of which are sired by noted prize winners, and as he doesn't believe so much in fancy prices as he does in quality of stock, our readers should get in communication with him at once, and get some of the good things he has to offer. He is also offering eggs at "live and let live price." When writing him address German Valley, Ill. See his ad on outside back cover of this issue.

MORE CHICKEN MONEY.

Every man, woman and child who raises chickens hopes to make their poultry pay, and anything which will help them to make more money ought to interest them.

It is a fact that good incubators and brooders will do that. They are as necessary to the success of the chicken business to-day as good eggs and good management. Of course, you can make a small success without them, but if you want to build up a business that will be really profitable you won't hesitate long to adopt them, because the machines will enable you to make two dollars where you make but one by the old hen method.

But there are so many makes of machines that the beginner hesitates to buy for fear he will not get the right ones or will not be able to operate an incubator successfully. Just to meet this condition and help you over this difficulty, the American Brooder Co., Racine, Wisconsin, propose to sell you either a Success Incubator or Success Brooder, or both, on 60 days' free trial. This will enable you to try the machines fully before you buy them, and to know for yourself how simple, effective and easy they are to operate and how they will help you to make more chicken money. Write to them for their catalogue and full information about the 60 days' free trial before you buy.

M. E. Sullivan, of Quincy, Ohio, won at Sidney Poultry and Pet Stock Association, Sidney, Ohio, Jan. 11, 12 and 13, 1906, as follows: First, 2d, 3 hen; 2d cock; 1st pullet; 2d pen; 2d display. WHO STOLE THE BUTTER?

A farmer owned a herd of milch cows that yielded him an average of 400 pounds (about 200 quarts) of milk per day. It was average milk, being 4 per cent butter fat. In other words, the 400 pounds of milk his cows gave him daily contained 16 pounds of butter fat. This farmer had had his milk tested, and knew it contained that amount of butter fat. He churned every three days and knew the cream from three days' milk should yield 48 pounds of unsalted butter. But it didn't. Instead of getting 48 pounds, he rarely got more than 25 or 26.

Who was getting that cream? His wife thought somebody might be stealing it, so he put a lock on the milk house door. That didn't help matters any. He was puzzled.

He had a first-class milk house, used the best system of deep setting, and couldn't see where that cream went. He let his milk stand until almost sour before he skimmed it, thinking it might cream better. But that didn't help matters any—simply spoiled the skimmed milk for calf feed. Up to that time he had thought he had a perfect system of skimming. But he knew that 48 pounds of butter fat was there, because he had had his milk tested; but he could not make as much butter as he should.

He grew suspicious of his cans. It seemed to him that something was wrong with his cans. He asked his hardware dealer about it. This was the answer

bular Cream Separator is a machine we can, and are glad to, heartily recommend.

FREE INFORMATION IN POULTRY RAISING FOR PROFIT.

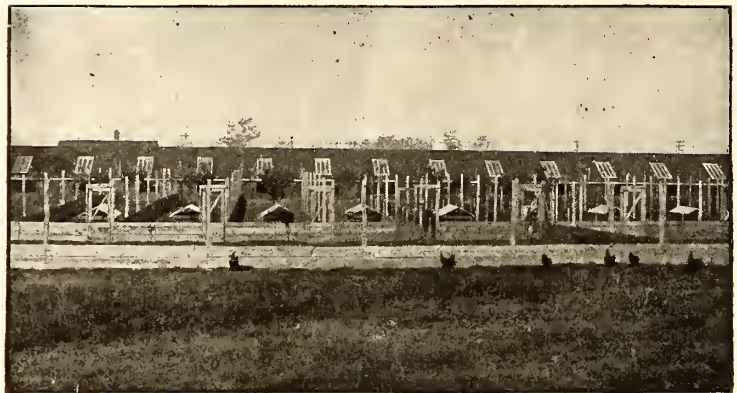

The Sure Hatch Incubator Company, having offices at Clay Center, Neb., and Indianapolis, Ind., occupy a position of great importance in the poultry raising industry, and their business keeps them in touch with 60,000 people who are operating Sure Hatch Incubators with profit.

Their knowledge is practical, not theoretical, and for the past few years they have been sort of clearing house for information on poultry topics.

An experienced poultry raiser gives his entire time to answering questions and helping people to get started right getting more money out of their poultry.

Suppose, for instance, you are about to build a poultry house. You can write to this company and get a complete plan for just the size house you want to build, showing just how to go about it, so as to avoid expensive mistakes and have an up-to-date building. Not a cent is accepted for this work.

If you want to learn the latest scientific methods of testing and handling eggs, raising poultry, feeding, protecting from vermin, etc., etc., this company will give you correct information—the boiled-down results of its experience, the Sure Hatch Incubator Company and its army of patrons.

A view on Willow Brook Farm, Berlin, Coun., showing breeding yards; also showing shade in each yard for the extreme hot weather they have in the East.

he got: "Look down your calves' throats." He asked the hardware man what he meant. The hardware man replied: "You have been robbing yourself—been feeding about half your butter fat in your skimmed milk. Your cans are good enough, as cans go—but cans don't do the business. They depend altogether on the force of gravity to do the skimming, and gravity is not strong enough. Half of the butter fat remains tangled up in the skimmed milk, and it takes a force a whole lot stronger than gravity to get it out."

"What will do it?" the farmer asked. "Centrifugal force, as applied in the Sharples Tubular Cream Separator," was the reply.

This hardware dealer was an agent for the Sharples Tubular Cream Separator, and loaned this farmer a Tubular for a free trial. The farmer took the Tubular home, used it three days, churned 47 3/4 pounds of unsalted butter from the cream it extracted out of three days' milk, and sent a check to the hardware dealer in payment for the machine. He had been robbing himself, and did not know it. He had been making six-cent veal out of butter fat the Tubular would have enabled him to get 25 to 35 cents a pound for, when he could have made just as good veal out of oil meal costing but two cents a pound. The kindness of the Tubular agent in lending him a Tubular for a free trial enabled him to find the loss and stop it—making a gain for him of about 8 pounds of butter per day.

All Tubular agents are just as accommodating. Any one of them will lend you a Tubular for a free trial. If you do not know of any Tubular agent near you, we suggest that you write to The Sharples Separator Co., of West Chester, Pa. If you will ask for catalog No. 205, they will not only send you the catalog, but refer you to their nearest local agent. The Tu-

Of course, if you ask this man to recommend an Incubator, he will advise you to buy a "Sure Hatch," but you are under no obligation to do so unless your own judgment tells you that it is the most simple, practical and successful machine.

We will say this for the Sure Hatch: it is the best selling machine on the market, and that fact in itself is mighty good evidence that it "makes good."

In 1906 Sure Hatch has a number of improvements which greatly increase its efficiency. It is sold on 60 days' trial, and it is guaranteed by the company to out-hatch any incubator on the market.

This is a pretty stiff guarantee, but the company is financially strong, and its methods are open and aboveboard, so you can test the Sure Hatch without running any risk whatever.

If it doesn't do the work they claim it will, you simply get your money back without any "seesawing."

In addition to the free instruction, the Sure Hatch Catalogue and Poultry Manual can be obtained free, by addressing a postal to the Sure Hatch Incubator Company, Box 6, Clay Center, Neb., or 35 East Washington St., Indianapolis, Ind.

Any of our readers who are desirous of purchasing a great egg-laying strain of fowls would do well to correspond with Joseph A. Burkhardt, Smithsburg, Md., breeder of "Purity Strain" S. C. White Leghorns. He says he has eight of the best pens he ever mated for eggs for hatching and six of these are mated especially for egg production and two are made up of all prize winners, first prize pullet at Hagerstown, 1904, having laid 232 eggs. He guarantees to give to his customers just what he would like to receive himself if he were the buyer. See his ad elsewhere.

THE MAN WHO PERFECTED THE NATURAL HEN INCUBATOR.

Most of the readers of this paper have heard of the one incubator which uses the hen in the hatching process. Naturally they will be interested in the man who has perfected this hatching plan which does, in fact, "follow nature's way," a plan which differs radically and entirely from any other now on the market.

We are reproducing herewith a photograph of the inventor and patentee of this ingenious plan, Herr Johann F. Siems. As will be seen by his name, Mr. Siems is a German. Born in the Fatherland, he came to this country and settled near Columbus, Neb., where for many years he has been engaged in working out his incubation theories. Being a practical poultryman, his Natural Hen Incubator represents a growth. He had a hearty enthusiasm for poultry raising to begin with. Combining with this an inventive genius and an inherent German disposition to do things in the best way, and particularly to perfect a better, surer, more economical way of hatching chicks, the novel means employed in the Natural Hen Incubator resulted. Mr. Siems' plan was first used by himself. Then was employed by neighbors and poultry raisers near home, who had learned of the novel hatching scheme. Today it is to be found in use in all parts of this country and in many foreign countries, including Australia, New Zealand, etc.

There are various reasons why the Natural Hen Incubator is taking such a fast hold with poultrymen. First, it has the hen hatching instinct, which, of course, is unerring. Again, one person can absolutely operate it as well as another. Success does not come alone to the poultry geniuses or experts, but to all. And the cost is only a trifle of what other incubators cost. For instance, an incubator of 200 egg size on the Siems' plan costs but \$3. Results, simplicity of operation and low cost are the whole thing in incubators. The Siems' Natural Hen has them all.

Anyone interested in this plan of hatching which is fast coming into use everywhere should look up Mr. Siems' advertisement elsewhere and write to him at the address there given.

BERRY'S GOLDEN RULE POULTRY FARM, CLARINDA, IOWA.

This is the first season for this firm. It has assumed the poultry business recently conducted by Mrs. Berry, in connection with the A. A. Berry Seed Co. It has been a breeder of thoroughbred poultry for a number of years, and heretofore has made Plymouth Rocks its specialty.

Under the new management this company is offering stock and eggs from eighteen of the leading varieties of poultry. It also manufactures and sells the new "BIDDY" incubators and brooders, a machine with some new features that are both labor and money savers. This company also carries a full line of poultry supplies.

Orders for anything in the poultry line will receive prompt and careful attention, and be filled to the entire satisfaction of the customer. We strongly advise all those who are interested in poultry and incubators to write for this firm's valuable book, "Profitable Poultry," which will be sent upon receipt of 3 cents in stamps to pay postage. See the ad on another page; it will pay you to read it. Address Berry's Golden Rule Poultry Farm, Clarinda, Iowa.

Wilber Bros., Petros, Tenn., won at Atlanta, Ga., Dec. 15-20, 1905, on their S. C. White Leghorns as follows: First and 2d cockerel, 2d and 4th pullet, 1st pen.

\$100.00 IN CASH

Was won by Vanatta's S. C. White Leghorns at St. Louis World's Fair. At Chicago, January, 1904, I entered three cockerels in class of fourteen and won 1st, 3d and 5th cockerel. Choice breeding and exhibition cockerels, hens, pullets, trios and pens for sale cheap. E. E. VANATTA, R. F. D. 8, Vandalia, Mo.

BUFF WYANDOTTES

Large flock to select from. The result of ten years' careful breeding of Chicago, Detroit, Cleveland and New York winners. Fine breeders from flock of youngsters for sale at reasonable prices. Show birds that win in strong competition. To obtain the best look for stock from a long line of winning specimens. Years of success with the variety will insure the best of results to purchasers.

Buff Rocks that are unexcelled. Indian Runner Ducks, the money makers.

W. R. WOODEN - - - Battle Creek, Mich.

"Conner's Ringlets"

SOAR HIGHER. I have 250 Barred Plymouth Rocks, bred from the finest prize birds from the pens of WALES & RICHARDSON'S best birds, whose ancestors won the best prizes in New York and Chicago Shows. If you are looking for fine, choice birds, address me before you buy.

H. MURRAY CONNER, Castana, Ia.

Barred Plymouth Rocks The Blue Ribbon WINNERS

Three hundred cockerels and pullets for sale, bred from Chicago and Naperville prize winners. If you want something to improve your stock at a price that any one can afford to pay, I can supply you. Write for prices and description.

EDGAR G. SIMPSON - - - Naperville, Illinois

Bateman's Black Langshans

Won at World's Fair, 2, 4 cock; 7 hen; 2 ekl.; 6 pullet; 2 pen. Won more Illinois special prize money than all other exhibitors combined. Won 1, 3 cock, 4 hen, 2 cockerel, 1 pullet, 1 pen in the state. Have won largely at Chicago repeatedly. At December 1904 show, won 1, 4, 5 cocks; 1, 2 hens; 1, 2, 3, 4 cockerels; 1, 2, 4 pullets; 1, 2 pens; Silver Cup for best display. Exhibition or breeding stock for sale.

POULTRY SUPPLIES

of every description. Prairie State, Empire State and Star Incubators and Brooders Drinking Fountains, Wire Netting, Spray Pumps, White Washing Machines Powder and Liquid Lice Killers, Roup and Cholera Cures, Condition Powders, Egg Foods, Oyster Shells, Beef Scraps, Dog Cakes and Medicines, and everything necessary for breeding poultry and pet stock. Our immense illustrated catalogue gives complete list. It is free; send for one.

Excelsior Wire & Poultry Supply Co., Dept. O, W. V. Russ, Prop., 26 & 28 Vesey St., N. Y. City

BUILD IT YOURSELF

Of course you can build your own Incubator and it will hatch as perfectly as any factory-made machine on the market, and you **SAVE HALF THE COST**. This means two machines for the cost of one; or an incubator and brooder, both for less than the cost of an ordinary machine alone. How? Get Our New Book "How to Make and Save Money with Incubators and Brooders." It explains how you can build incubators and brooders and gives full directions for operating them. The New Idea Incubator is built from plans we furnish you. The only tools you need are a saw and hammer. Hundreds have built them and are making money. We sell you at wholesale parts like Tank, Lamp, Regulator, etc. Thus you get a complete machine at less than half price. Get the Book! Read all about the plans. See photographs of Incubators and Brooders built from our plans. This book will save you many dollars. Write to-day.

CHANNON, SNOW & CO., Dept. C, QUINCY, ILL.

BE ON THE SAFE SIDE

There is no earthly use of having chicks die when a remedy is within the reach of all. A 50c box of **HARDING'S SUC.**

CESSFUL ROUP CURE furnishes sufficient medicine to save the entire flock. Placed in the drinking water, fowls take their own medicine. No waste - no loss. This is a guaranteed cure, or money refunded. Have either a 50c or \$1.00 box of **HARDING'S SUCCESSFUL ROUP CURE** constantly on hand. If your dealer hasn't it in stock, send direct to the manufacturer. Price 50c and \$1.00, postage prepaid. Agents wanted. Send for free book, "How to Make Poultry Pay." Write today. **GEO. L. HARDING, BOX 333, BINGHAMTON, NEW YORK, U. S. A.**

RHODE ISLAND REDS

GREATEST WINNINGS OF THE SEASON

At the great A. P. A. Show, Cincinnati, 1906, I won on Single Comb Rhode Island Reds, four 1sts, three 2ds, five 3ds, two 4ths. On Rose Comb, two 1sts, three 4ths, four 5ths and special for best shape and colored female in Single Comb. Also three silver cups. **Send for free circular.**

LESTER TOMPKINS :: CONCORD, MASS

A HANDSOME INCUBATOR BOOK.

The Diehl-Schilling Co., Easton, Pa., have recently published a very handsome new catalogue describing their well known Keystone Incubators and Comfort Brooders. The book brings out all the new features of the machines and tells why they are better now than ever before. If you need a new incubator or brooder it will pay you to get this book before you buy. The manufacturers will gladly send it free if you will kindly mention this paper when you write for it.

A VALUABLE CHEAP CHICKEN FEED.

Cut green bone is a very valuable cheap feed for chickens. Fed regularly, in right quantities, it improves the health and increases the productiveness of the fowls.

But it should be made fresh every time it is fed for best results. A bone cutter will enable you to prepare it fresh every day at slight cost and with very little bother.

If you will write to Wilson Bros., Easton, Pa., they will send you their catalogue free, listing a fine line of bone cutters suitable for a flock of a dozen hens, or for a big chicken ranch. It will pay you to feed green bone. Write for the catalogue today.

LUCKY STARS.

We do not believe that there is any element of luck in the hatching and rearing of chicks. But we do believe that Star Incubators and Brooders are "lucky stars" to own, from the reports users everywhere are sending the manufacturers of these justly popular machines.

The new Star catalogue is full of reasons why results are so satisfactory, and tells why users are able to get such "lucky hatches." If you intend buying an incubator or brooder you'll want to read this book before you buy. Write to the Star Incubator & Brooder Co., Bound Brook, N. J., for a copy—they'll send it free if you will mention this paper when you write.

Mr. Elbert S. Linville, Shelbyville, Ind., is nicely situated on a good pike, high and dry, in a lovely shady woodland pasture, and his good buildings, nicely kept yards, and clean houses and coops, show that Mr. Linville takes care of the little things and that is what counts far more in the poultry business than anything else. Mr. Linville does not have all of this for naught, for they make the chicks keep them, not them keep the chicks. Mr. Linville has been making a specialty of eggs for market, and they guarantee fresh eggs and have regular customers that pay them a handsome profit over the regular market prices. They use the S. C. Brown Leghorns or their egg machines, and they have some good ones, too, and besides the Brown Leghorns they breed W. Wyandottes and Black Langshans of high quality. They score from 90 to 95½, and if any one is in need of stock or eggs, don't fail to write Mr. Linville, as you will be treated right

and get what you buy, and he will spare a few eggs from his best pens; so better speak quick.

Sunny Side Poultry Farm, Adrian, Mich., won at Lenawee County Poultry, P. & P. Stk. Assn., Adrian, Mich., Jan. 2 to 8, 1906, as follows: Black Langshans: 1st cock, 92¾ and 89; 1st, 2d and 3d hen, 94½, 94, 94; had eight other hens above 91; cockerels, 1st, 2d, 3d, 93¾, 91¾, 91, last not up to weight, would score high; pullets, 1st, 2d, 3d, 93½, 92¼, 91, all cut on weight—too young; won two silver cups, one on Langshan cock, hen, cockerel, pullet and pen, and won other in sweepstakes with

First Prize Barred Plymouth Rock Cockerel Wisconsin State Show, January 15-20, 1906. Bred and owned by King Bros., Oshkosh, Wis.

birds handicapped 1 point against R. I. Reds, having 21 that scored 90 after being cut one point; won 1st and 2d pens, 187¾, 184.68; 36 Langshans in class; Tucker, judge.

In American Reds won 2d cock, 92¼; 3d hen, 86½; 2d cockerel, 90¼; 2d pullet, 91½; 2d pen, 182.68. Won following specials: Second grand sweepstakes prize, silver cup, for largest number birds scoring 90 or more, with Langshans; won second on best pen in show, on Langshans; won 3d on best cock, hen, cockerel, pullet and pen in show scoring 559.25 against 561.18 of first winner; won best Langshan hen special; 2d on best 10 birds in show, score 933.75, against 947.50 of first winner.

We find upon our table today a new catalogue of fruits, plants and vines, also of ornamental trees, plants and vines, issued

by Green's Nursery Company, Rochester, N. Y. This catalogue has a fine lithograph cover, embracing many of the rare fruits introduced by this firm. The fruit department embraces nearly 112 illustrations. The ornamental catalogue attached to the other contains 84 new photo-engravings, mostly taken by C. A. Green, of ornamental trees, plants and vines growing upon his own place. Mr. Green makes a special push this season of apple trees, standard and dwarf pear trees. Red Cross Currant, Loudon red raspberry, and Champion peach are leading specialties in this beautiful catalogue, sent free to all on application.

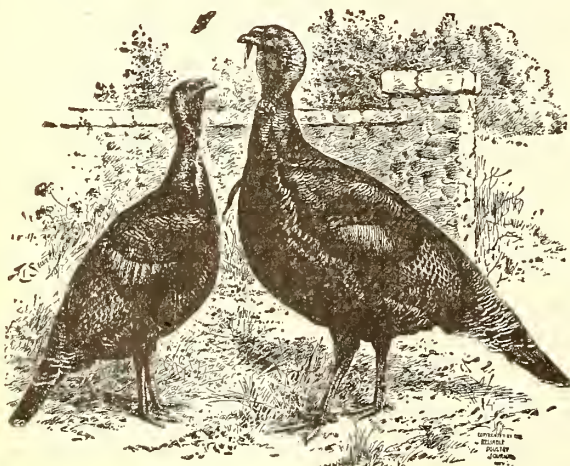

H. C. Beebe, of Canton, Ill., the Single Comb White Leghorn breeder, does not exhibit very much himself, but his stock has won some very fine premiums in the hands of his customers. One of these is Etta B. Middleton, of Assumption, Ill., who won recently as follows: First cockerel, 1st pen, 3rd pullet. The cockerel scored 94 and the pullets that she entered scored from 91¾ to 92½, the latter winning 3rd prize. The best pullet got its plumage soiled while in the coup and was cut one-half on condition. She seemed to think that the cockerel was cut too much on shape, but he scored 1½ points above the 2nd cockerel. One of the pullets has just begun laying, and undoubtedly they will improve with age.

Chas. F. Thompson & Co., Lynnfield Center, Mass., won as follows on their Rhode Island Reds, Barred Plymouth Rocks, White Wyandottes and Rose Comb White Leghorns: Athol, Mass., three 1sts, one 2d; Peabody, Mass., three 1sts, one 2d; three 1sts, two 2ds; Brockton, Mass., one 1st, one 2d, two 3ds; Falmouth, Mass., three 1sts, two 2ds, one 3d, three specials and Championship Ribbon; Leominster, Mass., one 1st, one 2d, one 3d, two 4ths, two specials; Beverly, Mass., five 1sts, six 2ds, four 3ds, one 4th, six specials. Made twenty-two entries at Beverly, won twenty-two ribbons with average score of 93½.

Great Rose offer by one of our advertisers. It is not often that a seed firm makes such a liberal offer as that of the A. A. Berry Seed Co., Clarinda, Iowa, found on another page of this paper. They are sending to our readers a beautiful Rose bush, a packet of vegetable seed and their fine seed book, all for 10 cents, which covers the cost of packing and postage.

This firm is one of the big seed firms of the country, and handles a very extensive line of field, garden and flower seeds. They are perfectly reliable, and will make good. They are seed growers—Mr. Berry, who has always been a farmer, still lives on a farm—and some of their warehouses are located on their extensive farms. Send to-day for their great offer.

The Hunkydory Farm, Burton J. Holt, superintendent, Pella, Ia., are advertising their superior White Plymouth Rocks in this issue. Don't fail to write them for prices on eggs and stock and other information. MENTION AMERICAN POULTRY JOURNAL.

BRONZE TURKEYS

I am happy to say I have reared this season more and better Bronze Turkeys than ever before. At

Great St. Louis World's Fair

my Turkeys won fourth Old Tom, first, second, third, sixth and seventh Young Tom, first, second, fifth and sixth Hen, first, fourth, fifth and seventh Pullet, and SILVER CUP for BEST DISPLAY. This in competition with the best Bronze Turkeys in the world, for we know there never was such a display of Bronze Turkeys as was shown at St. Louis. At

Madison Square Garden, New York, '05

I exhibited eighteen birds, winning EIGHTEEN PRIZES; two firsts, five seconds, six thirds and five fourths. What better proof can I give you as to the excellent quality of my Turkeys? I have something like

Four Hundred For Sale

Splendid breeding Toms both old and young, Pairs, Trios, Breeding Flocks and Exhibition Birds—any way to please you. Send a 2-cent stamp for Turkey Catalog.

MRS. U. R. FISHEL, Box A, HOPE, IND.

The above photo shows the man that invented the Automatic Poultry Feeder Fountain and Protector. This new device undoubtedly has great merit for the purpose for which it is offered. The cut on another page will give readers some little idea of the device. It is certainly a useful article in the poultry yards; protects the young chicks from the encroachment of the larger birds while feeding, keeping their feed and water clean and sweet and allowing them access to the same at any time. The water fountain is a particularly happy idea, being a can within a can, insuring an even, cool temperature. Any kind of feed, almost, can be used in the feed hoppers, and the chicks take their feed protected from the weather, there being a roof over the feeding apartment. It is not an expensive article, and will pay for itself in a short time in the saving of labor and feed. Write Messrs. Turner & Co. in regard to price and particulars, etc.

Joseph Jefferson, one of the best-loved American actors, is the subject of the leading paper in the February number of *Scribner's Magazine*, by Francis Wilson, the well-known actor, who knew him for many years. These reminiscences are full of anecdote and story, giving Mr. Jefferson's opinions about the arts of acting and painting, and his own recollections of distinguished men in many vocations. The article in this number deals particularly with Rip Van Winkle—its origin and development as a play, with amusing anecdotes about Mr. Jefferson and his experiences while playing it. There are also pleasant glimpses of Jefferson as a painter, and his views and preferences for various artists.

F. C. Bailey is now located at Coldwater, Mich., where all correspondence should be addressed. Chestnut Grove Orpington Farm, at Reading, Mich., Mr. Bailey's former address, is still owned by the Baileys and will continue to raise Buff, Black and White Orpingtons for F. C. Bailey and on a larger scale than ever before. As Coldwater is on a main line shipping facilities will be much better. All favors will have the right attention. Mr. Bailey did not show this season and reserved his best birds for breeding pens, from which he will sell eggs at right prices.

We are in receipt of a book entitled "Eggs, Broilers and Roasters," published by Chas. A. Cyphers, of Buffalo, N. Y., author of "Incubation and Its Natural Laws." This is a book of 64 pages and cover, beautifully printed and full of valuable facts, and is in fact, as it states, "An Easy Lesson in Practical Poultry Culture." This book concludes with a nicely illustrated description of the MODEL Incubators, Brooders and Poultry Houses, manufactured by the author, Chas. A. Cyphers, of No. 301 Henry street, Buffalo, N. Y.

Henry T. Reed, of Camp Point, Ill., won at Mt. Sterling and Macomb, Ill., as follows: At Mt. Sterling, Ill., Nov. 28 to Dec. 1, 1905: First cockerel, 92; 1st pullet, 95; 2d pullet, 95; 1st hen, 92½; 2d hen, 90; 1st pen, 185. D. T. Heimlich, judge. At Macomb, Ill., Dec. 6 to 11, 1905: First cock, 93; 1st hen, 94; 3d hen, 92½; 1st pen, 187; 1st cockerel, 92; 1st pullet, 95½; 2d pullet, 94¾; 3d pullet, 94¾; 3d pen, 185. Chas. McClave, judge. Light Brahma class.

THE AMERICAN HEN OUTWEIGHS THEM ALL. STATISTICS PROVE IT.

Get a Buckeye on **FORTY DAYS TRIAL**. As low as \$5, or 200 egg size, \$12.75, or RENT one at \$1 per month. Let rent pay for it, *we paying freight*, or buy parts and plans and build one. They are self regulating. Guaranteed best work and material, and to hatch every hatchable egg. A town lot is large enough for the business, but a farm is better. Everything the poultryman needs of Best Quality and at Lowest Prices.

A 6 ft. by 3 ft. Iron Roof Colony House, complete, for \$5.75. Foods with no Grit in them. A 25c package Buckeye Chick Starter will save you dollars.

THE DELINEATOR FOR JANUARY.

The *Delineator* begins the New Year with an attractive cover and a display of all that is new in the fashion world, to say nothing of the many features of literary excellence. Of particular interest is an article by Postmaster-General Cortelyou, describing woman's place and share of work in the postal service. The article in the "Safe Food" series is devoted to a discussion of the real value of glucose as a food product. Cecilia Loftus gives her impressions of "Ophelia," a character in which she has acted with success, and N. Hudson Moore writes of "Old-Fashioned Beds."

The above cut is a reproduction of the front cover of the Cyphers Incubator Co.'s 1906 catalogue. For a number of years these people have put out a catalogue which was full of valuable information to the poultryman, besides being a work of art, but the one for this year is far ahead of anything ever attempted by them before.

Size of book, 7 1/2 x 10 inches. Weight of book, one pound. Number of pages, 228. Size of edition, 120,000, including foreign edition. Number of photographic illustrations, 546.

This year's complete catalogue contains the following named chapters, made up of reliable and interesting information:

- Chapter I, "Profitable Use of Incubators."
- Chapter II, "Raising Chicks in Brooders."
- Chapter III, "Incubators and Brooders on the Farm."
- Chapter IV, "Squab Broilers, Broilers, Roasters and Capons for Profit."
- Chapter V, "Profitable Egg Farming."
- Chapter VI, "Duck Growing for Profit."

Under these headings the matter is of the same general high standard as is always put out by these people. Every reader of this journal should add a copy of this book to their library.

King Bros., Oshkosh, Wis., the Barred Plymouth Rock specialists, made the following winnings at the State Show, Oshkosh, Wis., Jan. 15-20, 1906: First, 2d, 3d and 4th cocks; 1st, 3d and 5th cockerels; 2d and 5th pullets; 3d and 4th hens; 1st and 3d exhibition pens. Specials: \$50 silver loving cup, put up by the Barred Rock breeders for the highest scoring exhibition pen. We also own a \$10 gold special for finest display of Barred Plymouth Rocks.

Wm. W. Caswell, of No. 25 Broad street, New York, made winnings on White Wyandottes as follows at the New York Show, held November, 1905: Fourth cockerel, 2d pen, 5th hen.

Paterson, N. J.: First pen, 1st cock, 2d, 5th cockerel, 1st, 2d pullet, 1st 5th hen. Silver cup, any variety. Wyandotte special, any white variety, and six specials.

Rutherford, N. J.: Second, 3d cock, 1st cockerel, 1st, 2d pullet, 5th hen. Silver cup for display. Points to count: Second pen, six specials.

O. L. King, of Walnut Grove, Ill., won at the recent Illinois State Show at Danville as follows on his Barred Plymouth Rocks in a class of 180: First, 4th cock; 1st, 2d, 3d, 4th hen; 1st, 2d, 3d, 4th cockerel; 1st, 2d, 3d, 4th pullet; 1st, 2d, 3d pen; sweepstakes for highest scoring pen; also for ten highest scoring females and largest display. This is a duplicate of what he did two years ago at the State Show.

Mrs. Milton Thiel, of Hebron, Ind., won at Lake County Poultry, Pigeon and Pet Stock Association, Crown Point, Ind., Dec. 27-30, 1905, as follows: On Buff Cochins, 1st on cock, 1st on hen, 2d on hen, 1st on cockerel, 1st on pullet and 2d on pullet; African geese, trio, two 1sts and one 2d; Toulouse geese, trio, one 1st, one 2d and special. **W. C. Pierce, judge.** Six in Buff Cochins, three in African geese, three in Toulouse geese.

W. W. Kulp, of Pottstown, Pa., won at Trenton, N. J., 1st and 3d White Wyandotte cockerels.

Hagerstown—Rose C. Whites, 1st and 5th cockerel, 4th pullets.

Wyomissing, Pa., Dec. 19 to 24—First, 2d and 3d Rose C. Brown cockerels, 1st, 2d and 3d Rose C. Brown hens; 1st S. C. White cockerel; 1st S. C. White cock; 1st cockerel, 1st pullet, 1st pen and 2d cock White Wyandottes; \$10 silver cup best exhibit. **Cornman, judge.**

Brent & Eddy, Oconomowoc, Wis., won at Oconomowoc Poultry and Pet Stock Association, Oconomowoc, Wis., Dec. 11-16, 1905, as follows: Cornish Indians, 1st, 2d cockerel, 1st pullet, 2d hen and 2d pen (our entry as follows: Four cockerels, four hens and one pullet); 52 birds in class, mostly young stock. **White Wyd., 1st cockerel, 1st, 2d pullet, 3d hen, 1st pen and silver cup for highest scoring pen solid colored varieties; 44 birds in class. We had entered 16 birds. Frank Heck, judge.** Fifty-two in Cornish Ind. class; 44 in White Wyandotte class.

Kline & Anderson, of Macon, Ill., won at Macon County Poultry Show, Decatur, Ill., Dec. 12 to 16, 1905, as follows: On Barred Rocks, 1st, 2d, 3d on pullets; 1st, 2d on cockerel; 1st on hen; 3d on cock; 1st, 2d on pen. **Partridge Cochins, 1st, 2d on cock, 1st, 2d, 3d, 4th on hens; 3d on cockerel; 1st on pen. First on Embden geese, 1st on Pekin ducks. Lane, judge.** One hundred and forty in Barred Rock class, 20 in Partridge Cochins class.

Mrs. W. S. Robison, of R. 3, Fayette, Mo., won at Central Missouri Poultry Association, Boonville, Mo., Nov. 27 to Dec. 1, 1905, as follows: First cock, 1st hen, 1st pullet, 1st pen, 2d cock, 2d cockerel, 2d pullet, 3d cockerel, 3d hen, 3d pen, 39 in Buff Rock class; **D. T. Heimlich, judge.**

At Missouri State Fair, August, 1905, won 1st cock, 1st hen, 1st cockerel, 1st pullet, 1st pen, 2d hen, 2d pullet, 1st for 5 best birds any breed, with over 3,000 birds competing; **C. A. Emery, judge; 50 in Buff Rock class.**

J. E. De Long, of Morning Sun, Ia., won at New London Poultry and Pet Stock Association, New London, Ia., Dec. 6, 7 and 8, 1905, as follows: First and 3d Barred Rock hens; 2d cockerel, Barred Rock; 1st pen, Barred Rock; 1st special highest scoring P. R. on Barred hen; 1st Buff Orpington hen, 1st Buff Orpington cock. **A. L. Pedrich, judge.** Barred Rock and B. Orpington classes.

Otter Creek Poultry Farm Co., Watertown, N. Y., won at Jefferson County Fair, Watertown, N. Y., September, 1905, as follows: Hen, 1st, 2d, S. C. Black Minorcas; cockerel, 1st, 2d, S. C. Black Minorcas; pullet, 1st, 2d, S. C. Black Minorcas; cock, 1st, 2d; hen, 1st, 2d, Barred P. Rocks; cockerel, 1st; pullet, 1st, 2d, Barred P. Rocks; cock, 2d; hen, 1st, 2d, S. C. White Leghorns; cockerels, 1st, 2d; pullet, 1st, 2d, S. C. White Leghorns. **Lamon, judge.**

D. C. Raymond, South Framingham, Mass., won at Concord, N. H., December, 1905, as follows: On Barred Plymouth Rocks, 1st, 3d hen, 2d cock, 3d pullet. **R. C. R. I. Reds, 1st, 2d cockerel, 3d cock, 1st hen, 1st, 2d pullet. S. C. R. I. Reds, 1st hen, 1st, 3d pullet, 3d cockerel. Silver cup for best R. I. Red female, and all the specials for shape and color in both B. P. Rocks and R. I. Reds.**

Chapman & McQuillande, of West Hartford, Conn., won at Madison Square Show, January, 1906, on White Plymouth Rocks as follows: First, 3d, 5th cockerels, 2d hen, 4th pen, the Henry Grover cup for best pair, and the Ivory Soap special cup for best white bird in the show.

Mr. J. Holt, Pella, Ia., won as follows at the Pleasantville, Ia., Show, held Dec. 25 to 30, 1905, on White Plymouth Rock: First cock, 1st hen, 4th cockerel, 1st, 3d and 5th pullet, 2d pen, 1st ten. The third prize cockerel was also the best shaped male in the Rock class, including Barred, Buff and White.

CHICAGO SHOW

JAN. 22-27, 1906

Written by Thos. F. Rigg, Associate Editor American Poultry Journal.

The tenth annual exhibition of the National Fanciers' and Breeders' Association held at Seventh Regiment Armory, Chicago, January 22-27, was far and away the largest and the best of the many successful shows given by this association. Those in a position to correctly judge were earnest in their expression that in quality of stock, attendance, and appearance of exhibition hall this show was the equal of any held this season. Exhibitors report many sales at record-breaking prices. As a sales show Chicago long ago acquired an enviable reputation. The breeders of the west desire the best stock and will have it.

The association has announced that the dates for the eleventh annual exhibition will be January 23 to 31, 1907, Sunday excepted, when the doors will be closed. This arrangement whereby the show opens in the middle of the week will be of great advantage and convenience to breeders in shipping their birds.

Breeders of New England, the far west, the south and the middle west joined in the competition which in every class was very keen. It was a quality show, throughout.

In the more popular classes the entries were very large, many leading exhibitors being represented.

The show was splendidly cooped, and the floor arrangement throughout was such as to give the exhibition a very pretty and attractive appearance. The management, with its usual consideration of all interests, effected an arrangement best suited to the wishes and welfare of the exhibitors and the

convenience of the visiting public.

Barred Plymouth Rocks.

Schwab, Judge.—Attracted by the commercial value of an exhibit at the Chicago show and by the very liberal premiums offered by the association and by the Barred Rock Club of America, breeders made the showing here one of the largest and strongest collection of Barred Rocks ever seen in Chicago. There was splendid quality in every class. Upon the whole there was improvement evident. We think more improvement has been made in males during the past five years than in females. This, no doubt, for the reason that the males have not been of the quality of the females, as a whole.

Buff Rocks.

Denny, Judge.—Here a number of leaders battled for the ribbons. It was a grand showing of this popular variety, and some of the best Buff Rocks ever shown in America were here shown. The modern Buff Rocks are very different from the birds of this variety exhibited a few years ago. Shape has been nearly forfeited. Color has been established and head points greatly improved. No better Buff Rocks have been shown in America this season than some cooped in this exhibition.

White Rocks.

Bennett, Judge.—Rather a small number of this very popular variety but quality of the best. The male birds were extra choice, and among them were a number of specimens which held the attention of White Rock breeders throughout the show week. Here, too, we note great improvement in shape and head points.

White Wyandottes.

Graves, Judge.—White Wyandottes are always a large and strong class at the Chicago show, and this year exceptional merit was in evidence all along the line. Judge Graves pronounced the showing one of the best ever made, east or west. A number of breeders who produce the winning kind of whites were in competition. A winning secured in this contest means much.

Silver Laced Wyandottes.

Rigg, Judge.—It is a matter of record that the largest and best showing of Silver Wyandottes in America is annually made at the Chicago show. More Silvers are exhibited here than at New York and Boston combined. The quality is of the very highest. No such showing of Silver females has ever before been made in America. They were superb in finish. The males were extra choice. All in all it was an exhibition of Silvers that will be long referred to as something most pleasing.

Golden Wyandottes.

Rigg, Judge.—A number of the most prominent breeders and exhibitors of this variety were represented. The Golden Wyandotte is now thoroughly established in its place as one of the most popular varieties of the Wyandotte family. Good progress has been made in late years in color. There is yet room for some improvement in shape. The qualities of the Golden here shown were of high order. There were a number of exceptionally fine specimens.

Partridge Wyandottes.

Rigg, Judge. We always expect to see Partridge Wyandottes out in full force at the Chicago show, and in this are not disappointed. This exhibit is always one of the features of the show. This season the quality shown was of the very best. Some of the specimens were marvels of color. The competition was very strong.

Buff Wyandottes.

Denny, Judge.—Here a number of battles were fought. It was a large class of Buff Wyandottes of exceptional worth. There was scarcely a poor specimen in the whole lot, and many unplaced birds are strong enough to be shown with the best in America.

Buff Cochins.

Lambert, Judge.—Here were Wyatt, Hefner, Potts, Leitch, Curry, Thiel, each a leader, battling for the favorable decision. It was a large showing of this, by many considered the greatest of all exhibition fowls. It

KEELER'S WHITE WYANDOTTES

"THE WORLD'S GREATEST STRAIN"

Winning for the past ten years in my own and my customer's hands in the largest and hottest shows in America, including the World's Fair, St. Louis, the Lewis and Clark Exposition, Chicago, Indianapolis, Philadelphia, San Francisco, and Washington, D. C.

Do You Want White Wyandotte Eggs

from pens headed by full brothers to the second cock, World's Fair, 1st cock and 1st hen, Lewis Clark Exposition, 1st cockerel, San Francisco, 2d cockerel Indianapolis, sons of the 1st and 2d pullets, Indianapolis, and 1st hen at Cleveland.

Do You Want White Wyandottes

with low curving, nicely corrugated combs, red eyes, nice arched necks, broad backs, short, well spread tails, deep, round, broad breasts, bright yellow legs and beak, the large silvery white—stay white—kind, that score from 94 to 96? Then buy eggs from me. My 1906 illustrated catalogue, one of the finest poultry catalogues issued, free for the asking. It tells you all about them. Send for it today.

EGGS \$3 per fifteen, \$5 per thirty, \$15 per hundred.

Charles V. Keeler - Box 4810, Winamac, Ind.

is agreed that here was made the best showing as to quality seen in Chicago for years. In numbers, too, this exhibit is a leader. It was an exhibit that will be of lasting benefit to every breeder represented, and to the breed.

The Leghorn Classes.

Lambert, Rigg and Denny, Judges.—Practically all the varieties of the Leghorn were represented. While there is no falling off in the numbers of Single Comb Browns and Single Comb Whites shown, there has been a steady increase in the numbers of Rose Combs, each variety, placed on exhibition. The Rose Comb Whites have been coming with a rush for the past three years. This is the condition in the east, also.

S. C. Browns: As usual, there was a large showing of this variety. The quality was of the best.

S. C. Whites were a large class, and it is always a battle royal at Chicago in which a number of leading breeders engage. This means lots of quality.

S. C. Buffs were of extra good quality. Buff Leghorn breeders long ago perfected color markings in their stock.

Rose Comb Whites were a strong class in numbers and quality.

Rose Comb Browns were of high order and some of the best specimens shown for years were here cooped.

The Orpingtons.

A good showing of these now exceedingly popular fowls. Single Comb Buffs were, as is usual, the largest class. There were some very choice specimens shown.

Single Comb Blacks were the next largest class. The Blacks are now having a very healthy boom.

Single Comb Whites, which are now in great demand, were represented by some of the best specimens ever shown in America. The class was strong throughout.

Rose Comb Blacks, Rose Comb Buffs, Rose Comb Whites and Spangled were also shown. These newer varieties are attracting much attention.

Black Langshans.

Black Langshans always present a solid front at the Chicago show. This season the entries were numerous and the quality very choice.

Other Breeds and Varieties.

Light Brahmas were not numerous, but a number of rare good specimens were shown. "The good old Light Brahma" is still a favorite with many fanciers.

There was a very nice showing of Cornish Indians. This season, the country over, Cornish Indians have made an effort to get back to the place once occupied—that of one of the most popular exhibition fowls.

Hamburgs were a small class. The Blacks were exceptionally good.

Minorcas were not as large classes as usual. Single and Rose Comb Blacks and Single and Rose Comb Whites were

shown. In each class the quality was very good.

Rhode Island Reds, Single and Rose Comb, made up important classes. These varieties are now very popular and are represented in great numbers at all leading shows. Some very fine specimens were shown.

But few **Columbian Wyandottes** were shown, but what was lacking in quantity was made up in quality.

Partridge Cochins were a small class, with some very good specimens.

White Cochins were represented by fine specimens of merit.

Game Bantams of all breeds and varieties were well represented.

Ducks, Geese and Turkeys made up a large and interesting class. Some of

W. L. DAVIS,
Proprietor Willow Brook Farm, Berlin,
Conn.

the best **Bronze Turkeys** ever shown here were on exhibition.

SHOEMAKER'S BOOK ON POULTRY

AND ALMANAC FOR 1906.
 There is nothing in the world like it. It contains 224 large pages, handsomely illustrated. A number of most beautiful colored Plates of Fowls true to life. It tells all about all kinds of **Thoroughbred Fowls**, with life-like illustrations, and prices of same. It tells how to raise poultry successfully and how to treat all diseases common among them. It gives working plans and illustrations of convenient Poultry Houses. It tells all about

Incubators and Brooders.

It gives full instructions for operating all kinds of Incubators. This chapter is marvellously complete and worth dollars to anyone using an Incubator. It gives descriptions and prices of Incubators, Brooders and all kinds of Poultry Supplies. In fact, it is an encyclopedia of chicken and will be mailed to anyone on receipt of only 15 cents. Your money returned if not pleased.
C. C. SHOEMAKER, Box 577, FREEPORT, ILL.

POULTRY REVIEW

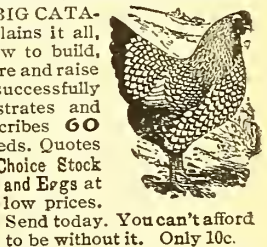

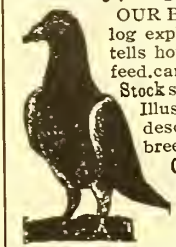

is just what its name implies—a review of the best articles from over a hundred poultry and farm papers. In this progressive age poultrymen haven't time to read ten articles to find one of some practical value. We do the skimming and give you the cream. Also has original articles that tell what to raise, how to raise it and how to get best prices for everything raised. Send 25 cents for a year's subscription. Sample copy 5c; stamps taken.

ABOUT THE SOUTH

"About the South" is the name of a 64-page illustrated pamphlet issued by the Passenger Department of the

Illinois Central R. R. Co.

in which important questions are tersely answered in brief articles about Southern Farm Lands, Mississippi Valley Cotton Lands, Truck Farming, Fruit Growing, Stock raising, Dairying, Grasses and Forage, Soils, Market Facilities and Southern Immigration along the lines of the Illinois Central and Yazoo & Mississippi Valley railroads, in the States of Kentucky, Tennessee, Mississippi and Louisiana.

Send for a free copy to J. F. Merry, A. G. P. A., I. C. R. R., Dubuque, Iowa.

Choice Pickings in the YAZOO VALLEY

"Choice Pickings in the Yazoo Valley" is the title of an illustrated 36-page pamphlet describing the railroad lands in the famous Yazoo Valley of the Mississippi, on the line of the Yazoo & Mississippi Valley Railroad, and showing what has been accomplished by the large number of settlers successfully established there. For a free copy, address E. P. Skene, Land Commissioner, I. C. R. R. Central Station, Park Row, Chicago, Ill.

Information concerning rates and train service to the south via the Illinois Central can be had of agents of connecting lines, or by addressing
A. H. HANSON, G. P. A., Chicago, Ill.

BLACK LANGSHANS—Jesse T. Bate-

TUBULAR Starts Fortune

If you had a gold mine would you waste half the gold? Dairies are surer than gold mines, yet farmers without separators only half skim their milk. Tubular butter is worth 25 to 35 cents. Cream is worth one cent fed to stock. Are you wasting cream?

Sharples TUBULAR CREAM SEPARATORS

Like a Crowbar

Tubulars are regular crowbars—get right under the trouble. Get the cream—raise the quantity of butter—start a fortune for the owner. Write for catalog U-205

THE SHARPLES SEPARATOR CO.
WEST CHESTER, PA.
TORONTO, CAN. CHICAGO, ILL.

CLOSING OUT

my entire lot of Barred and Buff P. Rocks, including my winners at the late Rushville show, and other shows. Mammoth Pekin Duck winners for two years at state fair. Satisfaction guaranteed. Dr. Heady, Alto, Ind.

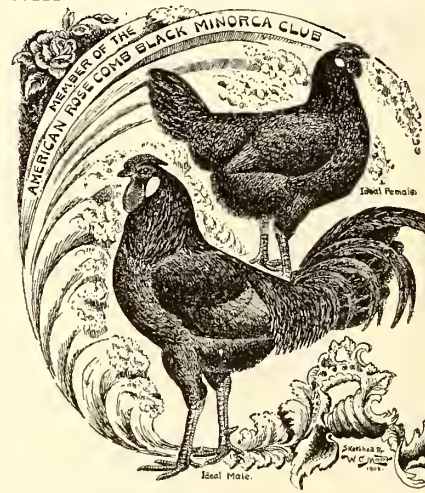

S. C. B. Orpington and Silver Wyandotte eggs for hatching from birds scoring 90 to 95 points. Quality guaranteed.

J. STROUD 7941 Cornell Ave., Chicago, Ill.

I am still giving my customers the above cut for their stationery or advertising work. Any old customer that has not had one, and wants same, can have it by writing for it.

Everything for the Poultryman

Send for our 1906 Catalogue.

Ready for mailing January 15th.

SHOW ROOM NEWS AND GOSSIP.

Well done again, Mr. Kimmey!

The management in every department is to be congratulated. Everything moved along nicely, from the beginning to the end.

Incubator manufacturers, food supply houses and other allied industries evidently fully appreciate the opportunity afforded for advertising at the Chicago. They took all the space they could secure and asked for more.

Dr. O. P. Bennett, Mazon, Ill., made a killing in Barred Rocks. His winnings were second cock, first and fourth cockerels, first and second pullets, first and fifth pens; championship male; best colored male and female; best display; three silver cups; sixteen cash specials. His first cockerel is one of the best Barred Rock males ever shown. His best winning birds throughout are the kind so much desired by fanciers but so seldom produced.

C. P. Nettleton, Shelton, Conn., was present with some of his superior Light Brahas. He won practically every first.

Henry Steinmesch, of St. Louis, was a visitor. Of course he carefully inspected the Silver Laced Wyandottes. Mr. Steinmesch has successfully shown at New York and other prominent shows this winter.

The National Buff Cochins Club elected officers as follows: President, J. J. Hare, Whitby, Ontario; first vice-president, T. A. Hefner, Cedar Rapids, Iowa; second vice president, Leslie Parlin, St. Paul, Minn.; secretary, E. W. Rankin, St. Paul, Minn.; treasurer, Lee Potts, Thorntown, Indiana.

Palmer & Son sold five head of Barred Rock birds shown for \$125.

Dr. Mighell, Marshalltown, Iowa, viewed the exhibit for two days. He was especially interested in Light Brahas, Partridge and Columbian Wyandottes. The doctor knows good ones when he sees them and breeds lots of them.

It was voted by all that Supt. Eddy is the right man in the right place.

T. A. Hefner, Cedar Rapids, Iowa, won as follows in Buff Cochins: First cock; first, third and fourth, hens; second pullet; third cockerel; first pen. American Cochins Club's cup for best cock, hen, cockerel and pullet.

Judge W. S. Russell spent a day at

the show. Breeders are always glad to meet "Billy" Russell.

Chas. S. Brent made a nice showing of his winning Cornish Indians. Among them were some magnificent specimens.

Theo. Ambrosius, always a winner in White Wyandotte aisle, made a very handsome showing of his grandly bred stock. Note his extensive winnings. The writer took great pleasure in awarding him the silver cup for best display of Wyandottes, any variety. He was also a winner in Pekin ducks.

Jesse T. Bateman made a rare winning with his Black Langshans. He always shows this kind of stock.

Nate K. Cornwall made a clean sweep with his S. C. Buff Leghorns.

In S. C. Brown Leghorns Fred Alger made many winnings.

F. A. Lord showed the champion S. C. B. Leghorn hen, besides making other important winnings.

In R. C. Brown Leghorns W. H. Wiebke made a very creditable showing. His first cock is one of the best R. C. B. Leghorns ever produced.

Rocky River Poultry Farm made many winnings with their R. C. W. Leghorns.

A. B. Kaye showed the champion S. C. B. Minorca cockerel, a magnificent specimen.

J. M. Williams & Co. made a very large showing of their popular Orpingtons, among them many extra choice birds. Their winnings were extensive.

In S. C. Black Orpingtons, C. S. Beyers was very successful. First cockerel is a bird "one in a thousand."

W. W. Bywater received congratulations upon his winning the championship cock special. He showed a large number of extra good Barred Rocks.

A. Le Due showed the quality of Barred Rocks he produces, securing first and special hen.

F. D. Palmer & Son had on exhibition a string of their good Barred Rocks. They sold fine females for \$125.

R. E. Haeger showed a number of Barred Rocks, making many winnings, again demonstrating the quality that has made him a winner so many years in the Chicago shows.

S. D. Lapham made nearly a clean sweep in Buff Rocks.

Chas. H. Ring secured many prizes with his White Rocks. Among his winnings is Ivory Soap special.

Mrs. Charles Jones showed three Bronze Turkeys, winning two firsts.

B. F. Hislop made a fine showing of Bronze Turkeys, making several winnings.

W. F. Lord made extensive winnings with his Buff Wyandottes.

Simon Beuth took full share of the winnings in Buff Wyandottes. He has recently purchased the Ackley & Page stock and business.

Ralph Sturtevant showed a number of his choice Buff Wyandottes, winning several prizes.

In Golden Wyandottes A. W. Davis showed a number of magnificent birds. He made extensive winnings.

A. & E. Tarbox always strong in S. L. Wyandottes showed a number of extra choice birds, and won, as usual.

W. A. Doolittle won many prizes and specials with his Partridge Wyandottes. John B. Hadaway won the coveted special for best colored Partridge Wyandotte male, besides other prizes.

Ira C. Keller was a winner in White Wyandottes. His second pen was much admired.

The following supply firms and manufacturers were represented: Chicago Poultry Supply House, A. I. Root Co., T. F. Potter Co., Prairie State Incubator Co., Vaughan's Seed Store, Cyphers Incubator Co., Chas. A. Cyphers Incubator Co., Jewel Incubator and Brooder Co., Oxford Incubator Co., O. K. Stock Food Co., J. W. Miller Incubator Co., West Disinfecting Co., Cottrell Feed Co., Ruberoid Roofing Co., Standard Bone Mill Co., Geo. H. Lee Co., Geo. W. York Co., Cornell Incubator Manufacturing Co., Banta Incubator Co.

Poultry journals: AMERICAN POULTRY JOURNAL, Reliable Poultry Journal, Poultry, Commercial Poultry, Inland Poultry Journal, Successful Poultry Journal, American Breeder and Feeder, Poultry Keeper.

The annual meeting of the National White Wyandotte Club was held with about 30 members of the club present. Mr. W. R. Graves, of Springfield, Mass., presided. The treasurer reported a cash balance of \$577.56, and his report showed 1,442 members to be in good standing with all dues paid to Oct. 1, 1906. The members voted to allow the Executive Committee to make the best arrangements possible with any poultry publication to get out the next annual club catalogue. The office of state vice-president was abolished and in its stead the office of state secretary established, and the duties of the state secretary discussed. It was decided to take a vote by mail for the place of holding the next annual meeting. After a very enthusiastic meeting the following officers were elected:

President, W. R. Graves, Springfield, Mass.; vice-president, H. H. Fike, Libertyville, Ill.; secretary and treasurer, Ross C. H. Hallock, St. Louis, Mo.; executive committee, Theo. Ambrosius, Collinsville, Ill.; Chas. McClave, New London, Ohio, and Chas. V. Keeler, Winamac, Ind.

Mr. J. L. Jefferson, Box A, Desplaines, Ill., breeder of White Plymouth Rocks and White Wyandottes, was at the Chicago show all week. Owing to the fact that Mr. Jefferson had such big demands and sold a great many prize winners for the different shows and that he received all honors necessary last year, he did not show his grand birds this year. He has a few first-class exhibition and breeding cockerels for sale and he is now booking orders for eggs. Anyone interested in good stock should send for his illustrated circular.

Ambrosius' W. Wyandottes

Look up my show record for the past three years that will convince you that I have the winners.

Winnings at Chicago, January, 1906

White Wyandottes

First Cockerel,
Third Cockerel,
Third Pullet,
Second Hen,
Five Specials,
Two Silver Medals.

Pekin Ducks

Second Cock,
Third Hen,
Second Cockerel,
Fourth Pullet.

Egg circular will be ready to mail on February 15th.

THEO. AMBROSIUS Collinsville, Ill.

WILLIAM ELLERY BRIGHT STILL VERY MUCH 'IN IT' WITH HIS S. C. BROWN LEG-HORNS.

Three years ago William Ellery Bright's S. C. Brown Leghorns won the President's cup at Madison Square Garden for the third successive time. From that time until the present Mr. Bright has allowed his competitors a free and clear field at Madison Square. This year Mr. Bright felt that he should be represented again. He did not fancy certain rumors that he was getting out of Brown Leghorns and into Barred Rocks exclusively. (The term "exclusive" applies only to the farms upon which they are kept. The Brown Leghorns as well as the shipping houses and office being about one-half a mile from the Barred Rock farm.)

To stop the circulation of these reports Mr. Bright entered the field again as a Brown Leghorn exhibitor, with more than his usual success. The Grove Hill entries won first, second, third, fourth on cocks (four Grove Hill birds exhibited); first, second, third on hens (four exhibited by B. H.); third, fifth on cockerel; first and second on pullets, and second and third yards. Well enough.

J. N. Williams & Co., North Adams, Mass., won on S. C. Buff Orpingtons 1st and 2d cock, 1st, 2d, 3d and 4th cockerel, 1st, 2d, 3d hen, 1st, 2d, 4th pullet; Rose Comb Buff Orpingtons, 1st cock, 1st and 2d pullet, 1st, 2d pullet, 1st and 2d hen, 1st pen; Single Comb White Orpingtons, 1st cock, 1st and 3d hen, 2d and 3d cockerel; Rose Comb White Orpingtons, 1st and 2d cock, 1st and 2d cockerel, 1st and 2d hen, 1st and 2d pullet; Rose Comb Black Orpingtons, 1st cock, 1st and 2d cockerel, 1st and 2d hen, 1st and 2d pullet, 1st pen; S. C. Black Orpingtons, 2d cock, 1st and 2d hen, 2d and 3d cockerel.

Mr. Charles McClave, New London, Ohio, made the best exhibit with his Chinese geese and Mammoth Bronze turkeys, winning twenty-seven first, one third, five special prizes on thirty-one entries. Mr. McClave won the \$25 for best display. He breeds Wyandottes, Plymouth Rocks, Leghorns, turkeys, all standard varieties of geese and ducks. He has the oldest poultry farm in Ohio. Mr. McClave is one of the best judges in this country and has always judged the Chicago except this year. This is owing to the fact that he was one of the exhibitors. He issues a neat little booklet which should be in the hands of every lover of poultry. Send for one; it is free.

Charles H. Ring, of Deatur, Mich., won his usual share of the ribbons on his White Rocks, showing ten birds and taking nine prizes, including the coveted 1st pullet and 1st pen. He was awarded the silver medal, certifying his winning of \$100 challenge cup for best display. He will have eggs for hatching from pens containing these winners as well as his 1st prize winners at Detroit, after February 1. He sends a large illustrated catalogue for the asking.

We were very much pleased to meet the nestor of Light Brahmas, Mr. C. P. Nettleton, Shelton, Conn., at the Chicago show. Mr. Nettleton has been breeding Light Brahmas for thirty-seven years, and has never been defeated in any show, no matter how hot the competition. As was expected, he won out again at Chicago, winning 1st cock, 1st hen, 1st, 2d, 3d, 4th cockerel, 1st, 2d, 5th hen. This has never been equaled by any Light Brahma breeder at the Chicago show. Mr. Nettleton also breeds White Cochins, winning four first prizes.

The Sunflower Poultry Co., of Morganfield, Ky., write that they have a large flock of finest White Plymouth Rocks and over a thousand extra good S. C. B. Leghorns to sell. They are mating up their pens and they find much surplus stock in their way, and readers can secure good bargains by writing them and mention the AMERICAN POULTRY JOURNAL.

The Dabbert Poultry Farm, Box A, Wheaton, Ill., breeders of Barred Plymouth Rocks, inform us that they have a few cockerels and pullets for sale. Anyone interested in first-class stock will be well paid by corresponding with them; or better, to take a trip out to their beautiful farm. To get there from Chicago take the Chicago & North-Western railway or the Aurora, Elgin & Chicago electric line, connecting with the Metropolitan Elevated.

G. M. Knebel, from far away Waco, Tex., commences a yearly ad in this issue, describing his Single Comb White Leghorns. The time is past when breeders imagine that distance is any bar to purchasing stock and eggs and that good stock cannot be raised in the south. Mr. Knebel's catalogue is a very attractive and complete affair finely illustrated, and every White Leghorn breeder should send for a copy.

Mr. E. A. Rush, 46 Acoit avenue, Grand Rapids, Mich., was another grand success at the great Chicago show, 1906, winning six prizes out of seven entries. His 2nd prize hen is a very fine specimen. This bird attracted more attention than any other Leghorn in the show.

W. W. Bywater, Camden Point, Mo., showed some rare specimens in Barred Plymouth Rocks on exhibition at the Chicago show. He won 1st on cock bird. This bird was admired by all who passed along in Barred Rock Alley. Mr. Bywater has about 300 birds to select from. Send for his circular.

At the big Auburn, N. Y., Show, January, 1906, J. H. Vanden Bosch, Jr., of Auburn, N. Y., won special on his first prize White Wyandotte cock for the handsomest bird in the show, and the judges state he was one of the best White Wyandottes ever shown. He has refused \$100 for this bird on several occasions, which clearly shows that he is a "hummer."

E. D. Pierson, of Addison, N. Y., won on his Rose Comb Brown Leghorns at Madison Square Garden, New York, January, 1906, eight regular prizes and six specials, winning more prizes than any other competitor.

H. C. Beebe, of Canton, Ill., won on his Single Comb White Leghorns at Canton, Ill., January, 1906, as follows: 2d and 3d cock. He exhibited twenty hens and pullets and all scored from 90 to 95½.

W. H. Millard, of Genoa, Ill., won on Silver Wyandottes at the Chicago show, January 22-27, 1906, as follows: 1st, 3d, 5th cock; 1st, 4th hen; 1st, 3d, 5th cockerel; 2d, 3d pullet; 1st pen.

George S. Barrows, of Groton, N. Y., won on S. C. White Leghorns at Auburn, N. Y., January 19-22, 1906, as follows, in best competition: 1st, 3d cock; 1st, 2d hen; 2d cockerel; 2d, 3d pullet; 1st, 2d pens (young). Also five specials.

J. N. Young, Henry, Ill., won on Barred Plymouth Rocks at the Marshall County Poultry Breeders' Show. Heimlich, Judge, first cock, tie fourth cockerel, first and third pullet, second pen.

The K. G. Poultry Yards, of Circleville, Ohio, won at Lancaster, Ohio, as follows: First cock, hen, cockerel, pullet and pen. First pullet at Ohio State Fair. White Wyandotte class.

Thos. P. Smith, Hoopston, Ill., won at Illinois State Show, Danville, Jan. 1 to 6, 1906, as follows: First, 2d cockerel, 2d pullet, 3d cock, 1st, 4th pen. W. C. Pierce, judge. Eighty-six in White Wyandotte class.

J. W. Creighton, Potomac, Ill., won at Illinois State Poultry Association, Danville, as follows: First on cockerel, 2d on cockerel, 1st, 2d, 3d, 4th pullets, 1st, 2d, 3d, 4th hens; 1st, 2d pen. Heck, judge. Black Plymouth Rocks.

F. M. Malone, of Cayuga, Ind., won at Illinois State Poultry Show, Danville, Ill., Jan. 2, 1906, as follows: Second cockerel, 2d hen, 2d pullet, 2d pen. Pierce, judge. S. C. R. Island Red class.

J. E. Langdon, Berwyn, Ill., won at Downers Grove Poultry Club, Downers Grove, Ill., Dec. 15 and 16, 1905, as follows: First cockerel, 1st pullet, 4th pullet, 1st pen, two specials for best male and female Buff Wyandottes.

Percy R. Buffham, of Bloomington, Ill., won on his Barred Plymouth Rocks at Bloomington, Ill., Jan. 10-13, 1906, as follows: First cock, 1st hen, 3d cockerel, 2d, 3d, 4th pullet, 1st pen.

J. R. Lampion, Mexico, Mo., won on his Barred Plymouth Rocks at the St. Louis Poultry Show, Jan. 8-13, 1906, 2d on pullet, score 93, by Butterfield. He had only two pullets entered.

Wilber Bros., of Petros, Tenn., won on White Leghorns at the Great Nashville (Tenn.) Show, Jan. 1-6, 1906, as follows: First pen, 1st pullet, 95½; 1st hen, 95; 2d hen, 95; five grand specials.

C. S. Byers, Hazelrigg, Ind., won at Indiana State Fair, Indianapolis, September, 1905, as follows: S. C. Black Orpingtons, S. C. Buff Orpingtons, S. C. White Orpingtons; thirteen firsts, twelve seconds, ten thirds. O. L. McCord, judge.

F. C. Tabor, of Worcester, N. Y., won at New York Poultry, Pigeon and Pet Stock Association, Madison Square Garden, January, 1905, as follows: First cock, R. C. B. Leghorns.

At the Warren County Poultry and Corn Association, Monmouth, Ill., I entered seven Columbian Wyandottes and won 1st on cock, 1st on cockerel, 1st, 2d, 3d and 4th on pullets.

W. A. HAYES.

Wisecres Poultry Farm, of Croton-on-Hudson, won at Madison Square Garden, New York, January, 1906, as follows: First hen, 1st pullet, 1st pen, 2d and 3d cock, 2d and 3d cockerel. Salmon Faverolles. Seven entries only and won seven prizes.

F. C. Tabor, Worcester, N. Y., breeder of Rose Comb Brown Leghorns, is advertising eggs from his 200-egg strain in this issue. Any of our readers who are looking for something in this variety should communicate with him.

Mrs. Anna L. Pinkerton, formerly of Lincoln, Neb., is now located at Inglewood, Cal., near Los Angeles.

Didriksen's Rose and S. C. Black Minorcas won 12 premiums at World's Fair, St. Louis, including 1, 2 and 3 Rose Comb cockerels, winners at Chicago and other large shows. Eggs from World's Fair mating, \$5 per setting; regular pens \$3. Stock for sale. A. DIDRIKSEN - Whitewater, Wis.

FLOOD'S ROUP CURE

GUARANTEED

Simply put the cure in drinking water, and the fowls take their own medicine. **Flood's Roup Cure** will cure colds, roup and canker in chickens, turkeys and pigeons. 50c and \$1.00 per package, post paid. A 50c package makes 50 gallons of medicine. If your fowls are sick, write us their symptoms and we will tell you their ailments and how to cure them. **Flood's Roup Cure** only manufactured by

W. H. FLOOD, 7509 Woodland Ave., Cleveland, O., U. S. A., Dept. A.

Stock for sale at all times.

WM. P. DYKES, Ridgewood, New Jersey

THE BOSTON SHOW

The Tenth Annual Exhibition of the Boston Poultry Association was one of the Most Successful Ever on Record for that Place.

This year there was the largest entry of any show held in Boston, with the exception of one year.

The judging was all completed Tuesday night, and, owing to the dark day, the judges labored under great difficulties. We think to all, considering the light, the judging was of complete satisfaction.

And, to end up the judging day, all were made merry by the exhibitors' banquet, held at the Copley Square, at which nearly 150 exhibitors were present. After lunch all enjoyed the short entertainment and the remarks made by T. F. McGrew.

Large crowds thronged Mechanics' Pavilion every day of the show, the

lacked in numbers they made up in quality.

A very fine collection of Wyandottes in all classes.

The Rhode Island Reds made a good showing in both single and rose comb.

The American Dorking Club brought out some very fine Dorkings.

There was a grand display of Orpingtons in all classes, the Willow Brook Farm showing thirty-six head and winning their share of the awards. The Jordan Farm won the \$100 Ivory soap cup for the whitest bird in the show with their first prize White Orpington hen.

In Brown Leghorns we have another big class; some fine birds in both open

Black Minorcas were all good, in both single and rose comb varieties.

In Blue Andalusians there was one of the largest classes we have ever seen shown in this variety, the females having extra good lacing.

The Black Spanish were all good. J. W. Warrington, of Cornwall, Canada, brought over a few that cleaned up all the firsts offered and a nice lot of specials. His first prize cock bird was grand, having the best face we have ever seen on a Spanish.

A large class of Polish and Hamburgs. Canada being well represented in these varieties.

In Cornish Indian Games there were some excellent specimens. Henry A. Kerby was the large winner, winning every first, second, third and fourth offered, a record that can't be broken.

There was a nice display of Standard and Pit games.

The Turkeys and Water Fowls were good in number and quality.

The Bantams were all together on the stage in the main hall, and with the excellent decorations the little fellows made a very pretty display. The classes were full in most all varieties.

There was a large entry of Pigeons and some very nice specimens were brought out.

WM. O. JENNINGS.

LIST OF AWARDS.

BRAHMAS—Light, cock, 1 J. W. Shaw, 2 H. N. Rollins, res C. W. Bixby, vhc P. Williams, hc J. L. Kerr, c G. V. Fletcher; hen, 1 2 vhc c H. N. Rollins, res hc J. W. Attend To Your Renewal.

Many thousand subscriptions to the AMERICAN POULTRY JOURNAL expire this month, and we would ask as a favor that the matter be attended to at the very earliest date possible. Sometimes our subscribers wait to be personally notified by mail of the date of expiration. With such heavy work as falls upon our subscription department at this time of the year, it is impossible for us to write each one, so we would thank our patrons to attend to their renewals promptly without waiting for any special notification. The date on the wrapper of your paper will show to what time you are paid. "Jan. 06.," for instance, means that you are paid to January, 1906. Subscription offers will be seen on various pages of the Journal.

Special Offer If five send in their subscriptions together, we will give a cut price of 35c each, and to the one who gets up the club we will also send a set of four beautiful colored poultry pictures, including the "Yard of Chicks."

New Subscribers This offer holds good for both renewals and new subscribers.

American Poultry Journal Pub. Co.
325 Dearborn St., Chicago, Ill.

rainy weather making but little difference.

Spratt's Patent fed and cooped the show.

In all the Asiatic classes there were large entries, with the exception of the White Langshans, in which there were only four birds shown. And to head the American varieties there was a class of sixty-eight Barred Rocks. The first prize cock bird was a "star" in all respects, good shape and excellent barring; he was owned by Haldie Nicholson, of Leominster, Mass. Mr. Nicholson was in it for eight prizes on fourteen entries. There was 127 entries all told in the White Rocks. The Owen Farm succeeded in winning the \$100 champion challenge cup for the best White Rock male, winning both first cock and first cockerel. The Buffs made a good showing but not so many in number as the Whites, but where they

and novice classes. The first prize cockerel in the novice class was a beauty, excellent carriage and good striping, with strong back color; would easily win a place in the open class. He was owned by C. E. Witty, of Marathon, N. Y.

Our friend D. H. Young won every first prize but one in the S. C. White Leghorn class, losing the first pullet.

The R. C. White Leghorns were very light, the Snow Flake Farm being the largest winners. The Orchard Bank Farm won six ribbons on two entries, winning four of the National R. C. White Leghorn Club specials; their second prize cockerel was very good in shape, but lacked a little in color, owing to the condition of his feathers.

The Buff Leghorns were all good in color; the first prize cock bird was extra good in shape and color. Owned by A. & B. Shilling, of Rochester, N. Y.

Gilliatt, c W. B. Richardson; pullet, 1 vhc The Millet Farm, 2 C. C. Hartwell, res Briggs Bros., hc Curtiss Poultry Farm, c Richardson.

Buff, cock, 1 M. Fall, Jr., 2 res J. P. Keating, vhc D. B. Eddy, hc E. Nason; hen, 1 J. A. Ashline, 2 E. R. Breman, res Keating, vhc Eddy; cockerel, 1 M. Fall, Jr., 2 Ashline, res Mrs. B. M. Kerlin, vhc Eddy, hc T. Briant; pullet, 1 Ashline, 2 M. Fall, Jr., res Eddy, vhc Keating, hc T. Briant.

Partridge, cock, 1 H. L. Hunton; hen, 1 R. G. Buffington, 2 Hunton; cockerel, 1 Hunton, 2 Buffington; pullet, 1 Hunton, 2 Buffington.

Silver penciled, cock, 1 Exmoor Farm; cockerel, 1 E. F. Bruson; pullet, 1 2 res Exmoor Farm, vhc Bruson.

Write for our catalog of up-to-date Poultry Specialties.

Keys-Davis Co., Ltd.,
Dept. B, Battle Creek, Mich.

Electric Regulator

This Regulator Keeps Temperature Right Day or Night

The vital point in artificial incubation is absolute control of the temperature of the eggs in the egg chamber of an incubator. In order to accomplish this correctly, the regulator must be operated directly from the temperature of the eggs themselves instead of trying to keep the temperature of the air surrounding the eggs in the incubator at a certain degree.

THE UNIVERSAL REGULATOR

is the only regulator on the market which absolutely controls the temperature of the eggs during the entire period of incubation, forming an electric connection through the mercury in the thermometer at 103 degrees. It will fit any incubator, and once started never requires adjusting. You can leave an incubator, fitted out with a Universal Regulator, all day and all night and feel sure that the temperature will be kept just right. Write for circular

CORNELL

"Follow the Flag"

The Best Incubators

Above everything an Incubator should have ability to hatch healthy, vigorous chicks—the kind that live and make profitable growth.

It is poor satisfaction to hatch chicks if they will not live, much less, if they do not rapidly make bone, flesh and feather.

The actual percentage of stock raised to maturity is what you should be most interested in.

For instance you will find there is more profit in hatching 80 and raising all of them, than to hatch 100 and have only 80 at the end of the season.

The first 80 will contain the prize winners, the early layers and the kind that the marketman pays the highest price for—the profitable kind.

The second 80 will be the slow growing ones, liable to disease, the kind that you and your customers do not want—the unprofitable kind.

What is the cause?

Healthy chicks can only be obtained when all conditions of incubation are accurately supplied. It is essential that the cubic contents, the ventilation, the heating, the regulating, the capacity and every part of each Incubator be balanced one with another.

The Incubator that is perfectly correct in all the fundamental principles, the one in which every step in the construction is based on knowledge, practical experience and put together by skillful workmen, will not only produce healthy chicks, but will hatch the largest number.

It is the "knowing how" gained by long experience and the "doing" for which we have a reputation that has resulted in the perfection of the **Cornell Incubator for 1906.**

You see we planned this Incubator so it is practically automatic; five minutes attention night and morning is all the care it requires.

The regulation is automatic, being absolutely controlled by our quadruple action all-metal thermostat.

The **Cornell moisture lamp and elastic ventilation** system permits the furnishing of a supply of pure warmed air of exactly the right humidity, to produce the maximum number of vigorous chicks, in the extreme cold or warm weather, in the arid climate of such States as Colorado or New Mexico, or in sections where there is great humidity, as on Long Island or in Florida.

No trouble in hatching duck eggs with this system.

There is no danger from fire as the laminated asbestos heater jacket provides absolute safety—the entrance of the heater into the Incubator, also, is protected by asbestos board.

The Regulator Arm is out of the way of interference, beneath the Table Top, an exclusive feature of Cornell construction.

No tools of any kind are necessary in setting up the machine, as the legs are attached in the same manner as piano legs and the all-metal lamp-support is easily slipped in place.

In construction, design and finish the Cornell is easily in the lead.

We have taken advantage of every valuable feature that has been introduced in Incubator construction up to the present time, and we offer you the most successful, most dependable, most practical and best finished machine being made today.

If the selection of any article of Chick Machinery is more important than another, it is the choice of a Brooder.

Upon it depends, more than any other one thing, the success of your investment in poultry.

THE BEST IS THE PEEP-O'-DAY.

It has been made and sold since 1892.

The Government Poultry Farms and the most successful Poultrymen all over the world use, and strongly recommend, the Peep-O'-Day as the best Brooder made. They recommend it to everyone who raises poultry and who desires to make the most profit.

No other Brooder has received such flattery,—that of imitation,—as the Peep-O'-Day. It has served as a pattern and a model for the majority of Brooders.

But does it pay to get the imitation when the genuine costs no more?

Can you afford to take chances in getting any the but best? If you do, you will find it expensive; that your profits will not be as large and you will be disappointed at the end of the season.

Read a letter received from an experienced Poultryman:

Rossville, Staten Is., N. Y., Dec. 9, 1905.

Cornell Incubator Mfr. Co.,
Ithaca, N. Y.

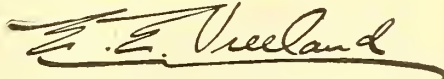

Gentlemen:

My experience with the Cornell Incubator last season was such that I shall discard the few ———— Machines we have at the farm and replace them this spring with Cornells.

We have found that we can hatch stronger and better chicks with your machine. I used to think that the percentage of hatch decided the success of an Incubator, but four years experience has taught me that the liveability of the chicks is the real vital thing.

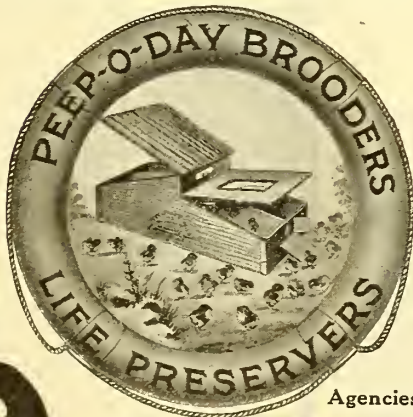

Two years ago I visited the famous Lakewood farm and found Brown using a steam heated Brooder House and just starting in with Peep-O'-Day Brooders. I tried your Brooders myself and today we use nothing else. About two weeks ago I was down to Lakewood again, and to my surprise found the steam heated house had been entirely fitted with Peep-O'-Days. It is the best Brooder built, according to my experience.

Very truly yours,

Have you heard of our new Peep-O'-Day No. 6?

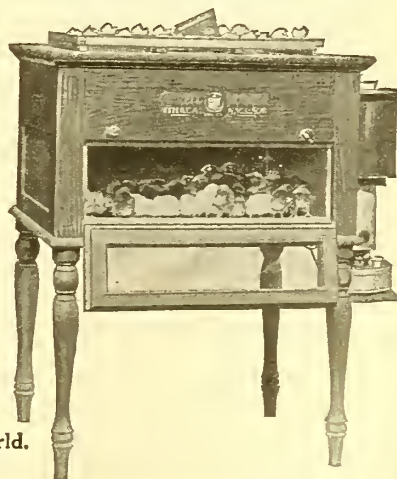

OUR NEW CATALOGUE just from the press, contains illustrations and a detailed description of our Incubators, Brooders and Practical Poultry Supplies. It will pay you to send for it, because it is **FREE FOR THE ASKING** if you mention this paper and address

OF INTEREST TO THE HOUSEWIFE.

In the February *Delicator* there is much of housewifely interest. Isabel Gordon Curtis' helpful household serial called "The Progress of a Housewife," touches upon the kitchen and its utensils. Delicious recipes for onions and cakes and desserts are supplemented by an interesting and instructive article on "Meat and Its Uses," and the pages of Illustrated Cookery are extremely suggestive. Gardening and house furnishing are other topics of particular interest in the home.

Frank B. Smith, of Danville, Ill., the Buff Plymouth Rock specialist, at the Illinois State Show, at Danville, Ill., exhibited 42 grand Buff Plymouths, on which he won: First and 5th cock, 1st, 3d cockerel, 5th pullet, 2d, 4th pen, 1st display.

He also won eleven premiums at Catlin, in December. His exhibit at the State Show won universal admiration, and his winnings were well deserved. He has a fine lot of young and old birds to select from, which cannot help but make winners.

This office has been favored with a booklet from the Gillette Safety Razor Co., of Boston, Mass., which is a beautiful piece of advertising done in colors, fully describing the Gillette Safety Razors, and including an illustrated humorous poem on the experiences of a man who had used the old style razors for years, describing his difficulties and his ultimate happiness when he began to use the Gillette razor. This will be sent to any of our readers who will write for it, mentioning the AMERICAN POULTRY JOURNAL.

At Auburn, N. Y., Poultry Show, in a class of 125 Reds, De Graff Poultry Farm, of Amsterdam, N. Y., won on S. C. Rhode Island Reds the following: First and second pen, old; first pen, young; second cock, first hen, first and second cockerel, first and second pullet, and all club ribbons, besides New York State "Club Cup" for best exhibit of Reds and Association Cup for best exhibit in American class. This makes five large shows that Reds owned by De Graff have taken five first straight, besides first pullet, second pen, fourth hen, fourth cockerel, fourth cock at Madison Square Garden. Illustrated catalogue and mating list free for the asking.

Ira C. Keller, Prospect, Ohio, won at the Cincinnati show, Golden Wyandottes: Cock, second, fourth; hen, first, third, fourth; cockerel, first, second; breeding pen, first, second, and three silver sups and all cash specials. Japanese Silky: Cock, first; hen, first; cockerel, first; pullet, first. Golden Sebright Bantam: Cock, first; hen, second; cockerel, first. Silver Sebright: Cock, first; hen, first; cockerel, first pullet, first. Write him, P. O. Box 75.

Geo. M. Dewey, Keytesville, Mo., won most of the ribbons and specials at the Missouri State Show December, 1905. Owing to the fact that overweight is a defect according to the new Standard he had to be satisfied with one first, three seconds, two thirds, two fourths. His birds are pure white; in fact, he had the whitest birds in the show. He has a few birds to spare.

Mrs. F. A. Hargrave, of Richmond, Kan., is a breeder of S. C. B. Leghorns, M. B. turkeys and Barred Plymouth Rocks. She has made some splendid winnings at the Eastern Kansas Show, also the Kansas State Show, and is making a specialty of selling eggs from these varieties, and will also sell Barred Plymouth Rock eggs in large lots for incubators.

W. R. Turnbull, of Waverly, Ill., won at Illinois State Show, Danville, Ill., Jan. 1-6, 1906, as follows: Black Langshan, 4th cock, 2d and 4th cockerel, 4th hen, 3d pullet, 2d and 4th pen. S. C. Buff Orpingtons, 1st cockerel, 2d pullet and 2d pen. J. A. Tucker and W. C. Pierce, judges. One hundred and twenty-seven in Langshan class, 35 in Orpington class.

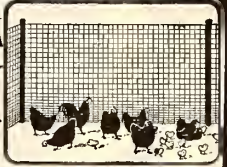

S. M. Ratcliff, Kingman, Ind., won at Illinois State Poultry Show, Danville, Ill., Jan. 1 to 6, 1906, as follows: First hen, 3d cock, 4th pullet. Frank Heck, judge. Fifty-one in Rose Comb Brown Leghorn class.

Wisecares Poultry Farm, Croton-on-Hudson, N. Y., made seven entries on Salmon Favorolles at the late Madison Square Garden Show, New York, and won seven prizes. Write them for prices and particulars and mention AMERICAN POULTRY JOURNAL.

FROM CHICK TO EGG

A most interesting little poultry book that tells the way Uncle Charlie feeds and the kind of feed he uses. Free if you write, ALFAFA FEED CO., 1532 Farm St., Omaha, Neb.

Mills in Connecticut, Illinois, California. Write for catalogue.

CASE BROS., 28 Main St., Colchester, Conn.

Incubators and Brooders will hatch and brood your chicks, but

STEINMESCH

Extra Quality "Quick Meal" CHICK FEED

is needed to raise them all—make 'em grow and thrive like a Green Bay Tree. STEINMESCH Chick Feed is a mixture of cracked grains, small seeds—Beef, Bone and Grit. Twenty different kinds, especially prepared for the rearing of chicks, from the time they are hatched until ten weeks old. Feed dry, always handy and ready for use. No waste, always the same. THE BEST, and no higher in price than other feeds.

Price: 100 lb. sack, \$2.50. Feeds 40 chicks 10 weeks. Send orders to

Steinmesch Feed & Poul. Supply Co. 301 Market St., St. Louis, Mo.

HENS TIRED?

Don't use the axe yet. They need EGGE—the LUCKY BRAND EGG BUILDER. Put EGGE with their feed daily. Watch 'em. Watch the laying nests. See the eggs grow in numbers. You'll be surprised.

Some of the hens you said were "no good" will lay twenty-two eggs a month. Why? Because EGGE is just fitted for hens. Makes their food digest better. They'll be lively, bright-eyed, more vigorous. Their flesh is delicious—their eggs good size. They're money-makers for you and the cost but a small fraction of the profit.

Your dealer sells EGGE. Our free, illustrated book tells how cheap you can feed EGGE. Write for it, tell us your hen troubles, and enclose 2 red stamps for generous sample. Prices: 25c, 50c, \$1, \$3.50 a can.

American Stock Remedy Co., Box 100, Quincy, Ill.

Oakwood Poultry Farm, T. E. Applegate, Prop., Spickard, Mo., made the following winnings on Leghorns at the Illinois State Show, Jan. 1-16, 1906: Rose Combs won 2d and 3d cockerel, with tie for 1st, 2d and 4th hen and 1st pen. Kansas State Show, Jan. 9-13, 1906, won all 1sts, 2ds and 3ds, in strong competition. Write for prices and particulars and mention AMERICAN POULTRY JOURNAL.

Mr. B. S. Hume, French Village, Ill., the White Wyandotte specialist, breeds the winners in this variety. Note elsewhere in this issue the grand winning he made at the show of the St. Louis Fanciers' Association, St. Louis, Mo., last month. If you are looking for something good write him for prices and particulars and mention AMERICAN POULTRY JOURNAL.

Chas. Staaff, Peapack, N. J., is advertising some choice Barred Plymouth Rocks for sale in this issue. He bred the winners at Trenton, N. J., and the Great Eastern Show, New York City. His prices are right and so is his stock. Write him for particulars and mention AMERICAN POULTRY JOURNAL.

Clarence C. Woodcox, St. Joe, Ind., won at People's Poultry and Pet Stock Show, Ft. Wayne, Dec. 11-16, 1905, as follows: First, 2d and 3d hen, 1st and 3d pullet, 1st and 2d cockerel, 1st pen; no cock bird exhibited. T. E. Orr, judge. Forty-seven in S. C. Buff Leghorn class.

We have received a new catalogue for the season of 1906, issued by S. L. Allen & Co., of Philadelphia, manufacturers of agricultural implements. There are many readers of the AMERICAN POULTRY JOURNAL interested in agricultural implements, and we suggest that everyone so interested send for one of these catalogues.

Mrs. A. J. Colvin, Pearl, Ill., whose ad appears elsewhere in this issue, is offering this month a bargain to you which should be a special inducement to buyers who are in need of first class Barred Rocks, White Wyandottes and Bronze turkeys. Intending purchasers should take advantage of this opportunity.

We are in receipt of a new catalogue just issued by J. A. Bickerdike, the Trap Nest man of Millersville, Ill. This is well illustrated and describes fully the SUPERIOR TRAP NESTS which Mr. Bickerdike manufactures, and this will be sent to any of the AMERICAN POULTRY JOURNAL readers who will write for it.

Emil H. Mueller, of Boonville, Mo., won at Kansas State Poultry Association, Topeka, Kan., Jan. 8-13, 1906, as follows: Second cock, 1st, 2d and 3d hen, 1st cockerel, 2d pullet, 2d and 3d pen. Adam Thompson, judge. Houdans. He had 10 birds on exhibition.

George M. Kline, of Downers Grove, Ill., won on White Wyandottes at Downers Grove as follows: First, second cockerel; second, third hen; third pullet; first pen. At Rockford (Ill.) Show, first Barred Rock cockerel on one entry, his bird being in competition with the best stock ever gotten together in Northern Illinois.

Mr. E. H. Gaines, Gaffney, S. C., won at Atlanta, Ga., Dec. 15 to 20, 1905, on White Plymouth Rocks as follows: First and 2d hens, 4th cockerel; also American White Plymouth Rock Club's special silk ribbon for the best White Plymouth Rock hen at the Atlanta show.

J. B. Bennett, of Ringwood, Ill., won at Zion City Poultry Association meeting, Zion City, Ill., Jan. 2 to 4, 1906, as follows: Cockerel, first and second; hen, first and second; pen, first, on six entries White Wyandottes. Theo. Hewes, judge.

J. B. Bennett, of Ringwood, Ill., won at the Lake Geneva Poultry and Pet Stock Meet, Lake Geneva, Wis., Jan. 9 to 14, 1906, as follows: Hen, first; pullet, third; pen, second. Frank Heck, judge. Forty-two in W. Wyandotte class.

Geo. W. Mitchell, of Bristol, Conn., won at Madison Square Garden, New York, Jan. 2-6, 1906, as follows: Partridge Cochins: Cocks, first, second, third; hens, first, second, third; cockerels, first, second, third; pullets, first, second, third. David H. Nichols, judge.

S. N. Tremper, breeder of Buff and White Wyandottes, has moved from Milbrook to Sandwich, Ill. Our readers will please make a note of this.

Exhibition Barred Rocks, White Rocks, White Wyandottes

My birds were winners this season at Kansas City; 1st at Missouri State Fair, 1st at Missouri central show, 1st at M. and F. fair and other leading shows. At Kansas City my 3d prize ckl. tied 1st but lost on weight. He was conceded to be the cleanest colored bird ever shown here. My breeding yards are all headed by winners, and most of the females have won in different shows. Eggs at \$3 per 15, \$5 per 30.

T. E. QUISENBERRY - - - Slater, Missouri

MAAS' WHITE LEGHORNS

In the largest class ever shown in the West, viz.: Kansas City, 1906, I won 1st pen. On cockerels pullets and hens I won as many premiums as all others. I have bred my flock to be the greatest layers of large white eggs. I have also added all of Jno. Tucker's stock to my flock. Choice cockerels from \$1 to \$3. EGGS from choice matings \$2 per fifteen.

ROBERT MAAS, R. F. D. 4, Kansas City, Mo.

SEIP'S BARRED ROCKS

Seip's Pride holds the record of winning 1st at Kansas City in 1903, 1904, 1905, and 2d in 1906 as cock bird. 1905 I won 1st, 2d, 3d pullets and 1st and 2d cock, 3d hen. In 1906 I won 1st and 4th hen, 2d ckl., 1st and 5th pen. Am offered \$50 for 2d cock. Stock at reasonable prices. EGGS \$3 per fifteen, \$5 per thirty.

B. F. SEIP - - - Cameron, Mo.

KNEBEL'S S. C. W. LEGHORNS WINNING HIGHEST HONORS AT WORLD'S FAIR, 1904

In the greatest competition the world has ever seen, over 400 S. C. White Leghorns competing for honors, with the result that I won more prizes on cockerels including 1st prize, than any other exhibitor. Also more prizes were awarded to pullets of my strain than any other strain. My matings for 1906 are better than ever. Eggs for hatching \$3 for 15, \$5 for 30, \$8 for 50, \$14 for 100. Eggs sent safely any distance.

G. M. KNEBEL - - - Box A, Waco, Texas

ROSE LAWN POULTRY YARDS

Barred and White Rocks, Single Comb Brown Leghorns, Rose Comb Rhode Island Reds, have won more premiums in the past five years than any breeder in Colorado. EGGS \$2 per thirteen, or twenty-six for \$3, \$7 per hundred.

H. S. GARLINGHOUSE, Prop. - Canon City, Colorado

BUFF COCHINS

Winners at Marshalltown, Webster City and Iowa State Show. Males scoring to 94½. Females scoring to 95½. A few choice breeders for sale.

HARRY EARLY Liscomb, Iowa

McClure's Barred Rocks

Always win at America's great shows. I have for disposal over 500 birds, strictly high-class exhibition and breeders. If you contemplate making a purchase of Barred Plymouth Rocks I can certainly please you, as I have hundreds of others if you are at all in doubt; and if you desire any information regarding my stock and price write me and I will cheerfully and freely advise you. Place your order early. I am now booking orders for spring delivery. Send for prices and egg circular.

G. A. McCLURE, Box 200, Winchester, Ky.

HAWKEYE BOY
First at Mason City, Ia.

Hawkeye Strain Barred Rocks

Bred for Exhibition. Mated for Exhibition

Winning When Exhibited

I do not lie more than other liars; but this strain lays as many eggs as any so called utility strain, and this line is fancy. Stock birds for sale. Eggs \$5 per 15. Illustrated catalogue free. Homer and fancy Pigeons. Persian (Angora) Cats.

MATT W. BALDWIN

:::

SIoux CITY, IOWA

Shows, Associations and Clubs.

The Latest News of the Show Room—Announcements of Special and Regular Meetings of Associations and Specialty Clubs—Secretaries are Requested to Send in the Latest News.

EMPORIA, KAN.

The thirteenth annual exhibition of the Lyon County Poultry Association was a success from every standpoint. We had 423 birds entered, besides a large class brought in to sell, which would have made 500 or more on exhibition. They came from all over the county and adjoining counties, and was the finest display ever seen in Lyon county. All premiums were paid in full and some money left in the treasury for next year. The old officers were re-elected for another year.

D. M. MAY,
Secretary-Treasurer.

THE FRESNO POULTRY AND P. S. ASSOCIATION'S SEVENTH ANNUAL SHOW.

The show was the best one of the kind ever seen in this city. There were three hundred entries. The Barred Rocks easily led in numbers, next being S. C. White Leghorns, with Buff Leghorns and Buff Orpingtons following. There were six hundred paid admissions the first day, and no falling off in the attendance up to the last night at 10 p. m. of the four days' show. The coops were all arranged in rows one tier high and the

light was of the finest. Each bird was equally displayed to the satisfaction of all exhibitors as well as to the public. The turkeys on exhibition attracted much attention, for it is very rare that birds so near the standard of perfection in this class get into the show room.

There was a large display of various makes of incubators and chick feeds, also all kinds of chicken appliances, which was interesting to poultrymen as well as the sight seeing public.

The judging was done by R. J. Venn; the other judge, Mr. B. M. Woodhull, was prevented from attending on account of sickness in his family. The ribbons were all up on the morning of the opening of the show, and special prizes and money were all delivered to winning exhibitors before the close of the show. Due credit for the fine show and its good management must be given to H. H. Holland, president, and Geo. R. Andrews, secretary, for they have worked hard both early and late to make the show a success, and I can truthfully say, after being one of the judges at six of the Fresno poultry shows held in the past, that we have never had one before in this city that was near so good.

R. J. VENN.

OCONOMOWOC, WIS.

The first annual show at Oconomowoc, Wis., was held Dec. 11-16. There were about six hundred birds on exhibition, including many very fine specimens. The Asiatic class was very small; no Cochins, only one pair of Langshans and a very few Light Brahmans.

Barred Rocks, fine lot, about seventy in all. First cock very light in under color; hens good, cockerels very good, some underweight; pullets good. White Rocks extra good. Buff Rocks, first cockerel had very much white in wings and tail. Silvers, goldens and partridge very small exhibit. White Wyandottes, about fifty. Buff Wyandottes, very fine lot, including World's Fair and Chicago winners. American Reds, only a few, but they were excellent. Rhode Island Reds, large display, many very fine birds.

S. C. B. Leghorns, 1st cock very beefy comb, hens fair, cockerels fair. R. C. B. Leghorns, good lot. White Leghorns, small exhibit. Buff Leghorns, very good, both old and young. Minorcas, good. One pair W. C. Black Polish, excellent. Buff Orpingtons, cock and hens good. 1st cockerel very red, good shape; 2d cockerel, imported bird, excellent even buff in color. One pit game hen scored 94½. Cornish Indians, about sixty fine birds. Bantams good. Very few turkeys, ducks and geese. The pigeon show was excellent; many very fine birds.

RALPH W. STURTEVANT.

Beloit, Wis.

HAUBSTADT, IND.

The Wabash Valley Poultry, Pigeon and Pet Stock Association of Indiana

BRADLEY BROS.' WIN BARRED PLYMOUTH ROCKS

SIRE OF THE FIRST PRIZE AND CHAMPION MALE AT NEW YORK, 1906

Forty-two winning males at New York Shows have been bred by us the last seventeen years. The last eight years thirty birds bred by us have sold for \$100.00 or more each, or that price refused.

AT NEW YORK SHOW, 1906, in a class of nearly 500 Barred Plymouth Rocks, representing all the largest breeders, **we won** as follows:

THE PRIZE OF PRIZES of the entire Show: **First on Cockerels;** American B. P. Rock Club's special for **Champion B. P. Rock Male;** The best record on **Cocks and Cockerels;** also on **Cockerels** alone; also Spratt's Gold Special for **best Plymouth Rock Pullet or Cockerel,** any color, Spratt's fed; Special for **Best Pen Mated** for breeding **Exhibition Pullets.**

FOR SEVENTEEN YEARS birds that **we bred and raised** have won at New York Shows more first prizes by over 25 per cent. than any other exhibitor has won on any stock; 25 per cent more first prizes on Exhibition Pens, and double the number of first prizes on Cockerels; also nearly three times the number of first prizes on Males that any other exhibitor has won on stock not our breeding.

N. B. The foregoing facts are compiled from actual records carefully kept.

500 Breeding Birds of our best lines for sale at \$3 to \$25 and up. Choice Pens of fair birds, \$20 to \$40.

EGGS from Best Pens and Best Pens only, \$7 per 13, \$20 per 39, \$48 per 100. \$250 was refused for a Cockerel and Pullet hatched by two customers from eggs we sold.

FREE--Large Circular; America's best, illustrated; 22 pictures of New York show winners; also new testimonial sheet. Send for it.

BRADLEY BROS., B. 909 Lee, Mass.

WE BREED OUR WINNERS. EVERY ONE OF OUR WINNERS AT NEW YORK WAS OUR BREEDING, PURE

closed its nineteenth annual exhibit at Haubstadt, Ind., the week of December 18-23, 1905. Although the weather was somewhat against us, raining every day from Tuesday to Friday, the attendance was good. On Thursday many visitors came up from Evansville. The exhibition proved a grand success from every standpoint. We had stock on exhibition from Akron, Ohio; Manchester, Ill., Vincennes, Evansville and many other points in the southern part of the state. There were about 500 head of poultry, also turkeys, ducks, geese, pigeons, Belgian hares, fancy cats and canaries on exhibition. The fanciers in this section displayed a great deal of enthusiasm in getting exhibits out.

When it comes to attractions, the old Wabash valley can put them up. This exhibition proved one of the grandest score card shows ever given in this section of the state, and all exhibitors expressed themselves as being well pleased with the results of the show.

Ben S. Myers, of Crawfordsville, Ind., held the exhibits down to the fine points in scoring. His decisions gave universal satisfaction.

The premium awards were fine ribbons, in several colors, each color representing a prize; also special ribbons and cash sweepstakes.

The association has selected the dates of January 7-12, 1907, for its twentieth annual exhibit. This was done on account of many fanciers claiming that they could not attend the shows when given the week before the holidays or during the holiday week, the association concluded to try a later date.

Judges having these dates open will do well to communicate with the secretary, D. T. MacClement, Evansville, Ind.

TROY, MO.

The Lincoln County Poultry Association has decided to hold a show in Troy, Mo., January 26 and 27, 1906; Rapp, judge. ABE STEPHENS, Sec.

DECATUR, IND.

The annual exhibition of the Adams Co. Poultry and Pet Stock Association will be held in Decatur, Ind., Jan. 31, Feb. 1 and 2, 1906. Judge S. B. Lane has been secured for the coming year. Catalogues can be had by writing to S. S. Magley, secretary, Decatur, Ind.

ST. LOUIS POULTRY SHOW.

St. Louis pulled off one of the most successful shows in its history Jan. 8-13. The idea of having a show was abandoned on account of lack of suitable hall. Judge W. W. Henderson, Henry Steinmesch and R. F. Thompson got together and decided to have a show anyhow. Messrs. Henderson and Steinmesch guaranteed the premiums and Mr. Thompson superintended the show. There were over 700 birds on exhibition, and Sharpe Butterfield, of London, Ont., placed the prizes. There was strong competition in all the classes, and general satisfaction with the awards.

PLEASANTVILLE, IOWA.

Our recent show was a great one in point of quality. In numbers we did not have what we expected. But we would rather have quality than quantity. There were 690 entries. The number was much limited because of the poor railroad accommodations of place

A CARLOAD OF LUMBER FOR \$100.00

At this price we will furnish you 12,000 feet of lumber from THE FIFTY MILLION DOLLAR LOUISIANA PURCHASE EXPOSITION. The lumber is offered at this extremely low price because we want to quickly dispose of the odds and ends of miscellaneous lumber which we have for delivery. This is not in specified sizes. It consists of an assortment of 1 inch stuff, Flooring, Sheathing, Boards, 2 inch stuff from 2x4's to 2x10's and 12's; also timbers, if desired, from 4x4 to 2x12. It is all in lengths from 3 to 9 ft. We cannot accept orders for portions in specified sizes, but will fill orders for specified quantities of either the 1 inch or 2 inch stuff or timbers. \$100.00 is F. O. B. cars Exposition, St. Louis. This material is suitable for many purposes. In lots of instances it will work in just as good as though it came in full lengths. It is mostly all best Southern Pine. We will select with as great care as we possibly can. If you want us to figure on lumber in specified widths and lengths send us Your Lumber Bill for Our Estimate, and we will make you extremely low prices. Save 50 to 60 per cent. We have all kinds of lumber for every purpose. We can furnish it promptly and correctly. Now is your time to put into execution your long needed improvements. You may never again find such an opportunity to buy lumber at a very low price.

A Money Making Book Free

A 64-page book, finely illustrated, that will put you on the right track to make dollars in place of cents out of poultry. A real poultry guide written from 24 years' practical poultry experience and based on facts. A book for beginners or anyone seeking advice on breeding, feeding, rearing and hatching. Contains plans for brooder, colony and poultry houses, yards, poultry farms, etc. It also describes and illustrates Berry's "Biddy" Incubators and Brooders—the successful kind—with all the latest improvements. Also our fine pure-bred poultry, giving prices of different varieties and their eggs for hatching. If you want to make the **most money** from poultry, send 3c for this valuable book. Do it today.

BERRY'S GOLDEN RULE POULTRY FARM, Box 74, Clarinda, Ia.

To-Day! SEND A POSTAL OR LETTER and ask for AMERICAN POULTRY JOURNAL'S 1906 subscription offer. Never have we offered so much before. For six subscriptions you are allowed over one-third commission, and are given a set of four beautiful colored pictures. These same subscriptions also count in a chance toward winning the \$600.00 Piano; \$100 cash; \$50 worth of Fowls; Incubators; Brooders; Eggs, etc., there being over fifty of these grand prizes. One of our subscribers says, "I do not see how you can afford to do it." But we want subscriptions and lots of them; that is why we are making such liberal offers. Our space is too small here to explain all we give to every one who helps us. We hope every reader, who reads this, will send for the Offer at once. It will be a happy new year for both of us.

where show was held. Oskaloosa gets the show next December. Then we will have quantity as well as quality. We are expecting at least 5,000 birds at our next show. J. R. Hoover was reelected president and C. W. Phillips reelected treasurer. A. B. Adams was reappointed secretary and E. W. Freel was reappointed superintendent. The leading classes were Barred, White and Buff Rocks, Partridge and White Wyandottes and Black Langshans. The surprise was the number of Partridge Wyandottes, 4th class in point of numbers, 64 entries.

A. B. ADAMS, Secy.

Altoona, Iowa.

ELGIN, ILL.

The seventh annual exhibition of the Elgin Poultry Association was held Jan. 1 to 6, 1906, in the new Coliseum, and was a decided success, both in a financial way and in quality of the exhibits. There were 940 birds on exhibition, and nearly every variety was represented by choice specimens.

Among the most prominent and attractive exhibits were those of the Buff and White Wyandottes, Black Minoreas, Black Langshans, White, Buff and Barred Rocks. The Leghorn and Hamburg classes were well filled with many birds of rare quality. Among the many good sales made was that of a Buff Wyandotte cockerel for \$75. Chas. McClave placed the awards, and the fact that this was the fourth time he had acted in this capacity at Elgin is evidence of the general good satisfaction he gives to the exhibitors. The show room is large, well lighted and ventilated, and is not excelled as an exhibi-

tion room, and would be a credit to Chicago.

The association is composed of a bustling lot of members, and their shows have always been among the best in the state, and Elgin being so well located as regards railroads and is also so well and favorably known throughout the world for its watches and dairy products, as well as many other manufacturing enterprises, that it would seem that it is the logical place to hold the next state show. And we would urge the management of the Illinois State Poultry Association to well consider Elgin's claims before deciding on the location for the next state show.

Barrington, Ill. F. L. WATERMAN.

ONTARIO PROVINCIAL WINTER FAIR, GUELPH, ONT., CANADA.

To whom it may concern:

I beg to inform the public of my first official visit to this Annual Fair.

This is certainly a great and wonderful educator, and I believe that the average agriculturist of that great province and also adjoining ones realize what that noble government is doing for them. It is impossible for me to take the time to describe the whole fair, while I would heartily like to. Again I say a *gigantic educator*.

I will undertake in a brief way to give a description of the classes I had the honor of passing upon.

I particularly wish to say first how the entire exhibit of poultry was handled, and when I tell you that the worthy gentleman, A. P. Westervelt, Secy., and his assistant, that genial gentleman, Dr. A. W. Bell, both of Toronto, handled

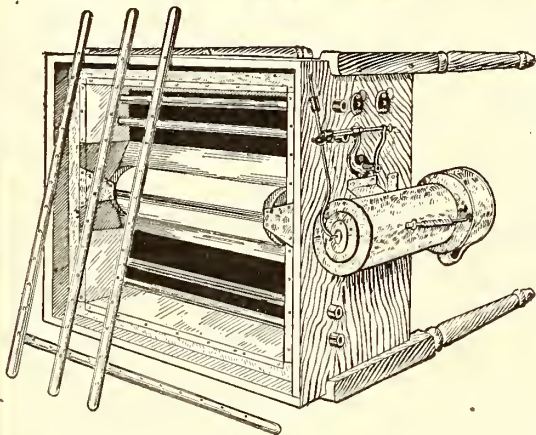

the same; to those who are personally acquainted with them it would be useless to say more. However, I wish to say that the management was of the highest order; not an error and every bird in its place. No questions were necessary, and if there should have been any, that genial gentleman John Saunders was always ready and knew every exhibit of that great entry of over 3,400 birds. Truly a marvel in every sense. Order, quality and condition. Why do not more of our boys this side take this show in? Because they have never visited it. If they would, they would be on hand annually.

Still a word for the exhibitors in my classes; gentlemen in every channel. Never before have I ever judged classes of this quality and magnitude without the least interference of a single exhibitor whom you may imagine when they were showing under such competition were exceedingly anxious to know their fate. Not a word, not a whisper until I had finished my classes, when I was more than pleased to answer each and all of their courteous questions. I assure you it was a pleasure.

THE BIRDS.

S. C. White Leghorns. 1st cock an elegant bird, a very easy winner in his class; white, typical and a grand bird. 2nd, also a very fine bird, good type, but not as good in head. The balance of the class were all birds of merit, following closely the first and second. Hens—We find a grand bird in the first, a trifle pinched in tail, grand head (for a hen) and fine in color. The 2nd, also a very fine bird, but not quite as typical, and the balance right up close to these birds. Many other good ones, too. Cockerels—

LOOK INSIDE

different climates at various altitudes and never before has there been embodied in an incubator such radical changes and improvements as found in THE "MANDY LEE". In it we have eliminated every element of DOUBT and GUESSWORK and have evolved a machine perfectly adapted to every climate and to all variations of temperature and moisture.

THE "MANDY LEE" BROODER also invites a careful inspection of its interior arrangements—its hover which "snuggles" the little chicks with the warmth of the mother hen with CONTACT HEAT right on their backs, where they like it best. In it chicks are, by a special arrangement, always supplied with pure, fresh air thoroughly warmed before it enters the hover.

The Brooder has a number of other important improvements you have wanted but which you will find in no other. They are fully explained in our new catalogue, together with all the new features of the incubator. You will be well repaid for sending for the catalogue and learning all about them before you buy an Incubator or Brooder. Write for it today—it's FREE.

GEO. H. LEE COMPANY

1191 HARNEY ST.,

OMAHA, NEBRASKA

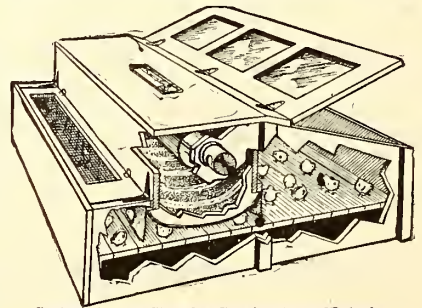

Before you buy an incubator or brooder, it is wise to take a look inside the machine. Find out the principles involved and whether or not they are the best for the purpose. When you look inside THE "MANDY LEE" INCUBATOR, you find it is quite different from all other hot air incubators. You find an air-tight, sheet-metal diaphragm, which separates the body of the incubator into two parts, a heating chamber and an egg chamber.

All the hot air used in heating is passed into the heating chamber, then down to the level of the diaphragm and out through the four perforated tubes shown separately in the accompanying illustration. These perforated tubes (3/8 in. in diameter) pass entirely through the body of the incubator and are open at both ends. On the inside of the heating chamber they are perforated on the under side with small holes every two inches, insuring an even distribution of the heating air. None of the air used for heating passes below the diaphragm and therefore is not used for ventilating.

The heating and ventilating are operated independent of each other. The egg chamber may be ventilated to the largest or smallest extent, without regard to the quantity of air used for heating, by means of other perforated tubes above and below the egg tray, the openings of these tubes being controlled on the outside of the incubator by means of swinging caps or dampers that may be opened or closed at will. All these and many other improvements you will find by a LOOK INSIDE. The

"MANDY LEE" Incubators and Brooders

are the results of a demand for better machines. The incubator has been tested by extensive experimental hatches conducted in

Sectional View Showing Construction of Interior.

A grand lot. The first a gem. Really the only outstanding fault was the blade of his comb. A grand typed bird and white with the very best of coop manners. 2nd was also a fine bird, not quite as typical, but, no doubt, needed more coop training. The 3rd, 4th and 5th were all birds of high order. Pullets—Another grand class. 1st a gem in her class. White and was in the best of condition and a true typed bird. Truly a grand one. The whole class was the kind that the lover of the Leghorn is pleased to feast his eyes upon.

S. C. Brown Leghorns. Cocks—First, the only outstanding bird fairly good condition and a good colored bird. The balance of the class fairly good. Cockerels—In this class we find some wonders. First, second and third have that strong family resemblance (no doubt, brothers) the first a grand typed bird with the very best of color as were the 2nd and 3rd. Fourth and fifth were also fine birds and show their breeding. Hens—1st and 2nd, two exceptionally fine birds. The first only wins over the 2nd on account of condition. A week or so later, these awards would be reversed. The balance of the class fairly good. Pullets—Four good ones. The first, a grand colored bird and is somewhat undeveloped, not letting her show for what she is really worth, a bird of high order. The second a fine bird, trifle more shafty, is more fully developed. The third will win over the second a week or two hence, but is undeveloped, but will be better in color. The fourth is also a fine bird but with a trifle more shafting than first and third.

S. C. Black Leghorns. The finest I have ever had the pleasure of handling, for the size. Truly a wonder in cocks and cockerels. Grand type and were all the winners and when I say grand type in Black Leghorns that means something, for you who breed Blacks know that type has been a hard fight. The females were also of a very high order, and in fact the winners were all representative birds.

R. C. White and Brown Leghorns. While these classes were small compared with the Single Comb, they were made up of some very fine birds, not quite equal in type to the Single Comb varieties. The Whites being a little the strongest, some very fine cocks and cockerels were shown in the winners.

GEO. H. BURGOTT.

Lawton's Station, N. Y.

FLORIDA STATE POULTRY ASSOCIATION.

The Florida State Poultry Association was organized at Tampa on Nov. 21st, 1905, with 36 members. Dr. E. P. Guerant, of McIntosh, is president; C. Fred Ward, of Winter Park, vice president; Mrs. W. H. Miller, Wauchula, secretary and treasurer. We are making a big effort to bring the subject of poultry and everything pertaining to poultry culture before the people. We have the best climate in the U. S. for raising poultry, and the industry is as yet in its infancy. There has been a great change for the better within the past year. And we will help to make a greater one in the next year. We are advocating the breeding of standard bred poultry and advising the people to raise more poultry, as the demand for poultry and eggs is great. Our purpose is to stimulate the industry in every way we can. We are getting out a catalogue for the purpose

of advertising our association with a view of interesting the people in the association enough to cause them to join us. We wish to make this the largest poultry association in the south. We are for pure bred poultry and more of it.

MRS. W. H. MILLER, Secretary.
Wauchula, Fla.

A NEW POULTRY ASSOCIATION.

The Northern Wisconsin and Michigan Poultry Association was organized Dec. 13th, 1905. Fifty Marinette and Menominee fanciers were present. Considerable interest and enthusiasm was manifested on the part of the members. As the name signifies, the membership will ultimately include all poultry fanciers in the northern peninsula. The object of the association is to encourage the raising of standard bred poultry, promote the interest of those engaged and hold winter shows. The following officers were elected: President, A. A. Diamond, Marinette, Wis.; vice president, W. J. Ryan, Menominee, Mich.; secretary, W. C. Coffman, Marinette, Wis.; treasurer, R. W. Edling, Menominee, Mich. Membership fee is \$1. Make application to W. C. Coffman, secretary, Marinette, Wis.

American Rose Comb Brown Leghorn Club catalogue now ready. Membership blanks, constitution, by-laws, rules and regulations, all free. Write the secretary for them. FRED ALGER.

Waukau, Wis.

TO THE MEMBERS OF THE AMERICAN POLISH CLUB AND ALL OTHERS INTERESTED IN THE POLISH FOWLS.

At an early date our club will issue a new, complete and up-to-date catalogue, which will contain a list of officers for 1906 as well as a full list of all members of the club in good standing. The annual meeting of the club will be held at Pittsburg, Pa., on Thursday, Feb. 22nd, 1906, at 2 p. m., during the week of the great Pittsburg show. A good attendance of members is desired, as election of officers for 1906 takes place at that time. If unable to be present, please advise the secretary at an early date, as to your choice for officers, who will see that your vote is cast as directed. All members who possibly can should exhibit their Polish at this show, as the club will offer a fine list of specials open only to club members. If you are not a member of the club send in your \$1.00 at once and become one, in order that you may compete for the club specials, and also that your name may appear in the new catalogue. New members are coming in right along, so why not get in the push. If any member feels like donating a special for the Pittsburg show, the same will be thankfully received, and due credit given the donor. If you have any offer to make let me have it at once.

M. V. CALDWELL, Sec. and Treas.
Lectonia, Ohio.

"Rankin's Royals" or "America's Big Four."

A Visit at the Great Northwestern Poultry Yards of H. P. Rankin, Hartington, Nebraska---One of the Largest and Most Up-to-date Plants in the West.

BY EDITOR.

It was with a feeling of pleasure, not unmixed with curiosity, that we were enabled a short time ago to drop our editorial pen for a few days and enjoy a visit at "The Great Northwestern Poultry Yards" and "Rankin's Valley Farms" at Hartington, Nebraska, with the proprietor, Mr. H. P. Rankin, originator and breeder of the famous "Rankin's Royal" strain of Barred, White and Buff Plymouth Rocks and White Wyandottes, for we had heard and read many items of interest emanating from this spot and we wished with our own eyes to see and our own ears to hear what real progress had been accomplished in poultry culture.

Therefore, to state the fact that we were agreeably surprised in more ways than one, would be putting it mildly indeed, not that there was any immense expenditure placed in fancy buildings, costly equipment and needless contrivances, for we found such was not the case, but no one can visit this plant and not be struck with the imperative facts, that though not a dollar has been wasted, no expense whatever has been spared to insure comfort and healthful surroundings in any kind of weather at all seasons of the year, and that an investment has been made to establish all practical and unquestionable labor saving devices with no nook or corner overlooked or left as dead capital, but that all has been put in condition and shape to insure its full contribution with returns along both practical and scientific lines.

Exceptionally located, in the very heart of the North American continent, surrounded by thousands and thousands of acres of the most fertile lands in the world, Mr. Rankin has the advantage of the cheapest of all grain and alfalfa markets at his very door.

As our train was rolling, mile after mile, over these great snow white stretches of country, dotted more thickly every year with thriving, prosperous towns, snug farm houses and well stocked farms, the question had come to us, into how many of these homes does interest in Standard bred poultry manifest itself. No answer was attempted, but when we saw Mr. Rankin's splendid birds and well established plant we knew that another had discerned the growing demand and was ready and prepared to supply the best of stock at reasonable prices.

Long delayed winter winds from the ice-bound north were holding high carnival with the snow covered earth the next morning after our arrival, but the outlook from the windows, of the long, neat, comfortable looking buildings which enclosed "Rankin's Royals" in their winter quarters, was too tempting to deter us any time whatever from accepting the invitation of our host to visit the birds at their early morning breakfast.

Well wrapped, we sallied forth, prepared to withstand any degree of cold, but on entering the east door of the first long continuous house we found our surroundings so comfortable and cozy

that we felt we could easily stand it in our shirt sleeves. Fresh pure air was in abundance and that usual presence of a real hen-house smell was noticeably absent.

We could not help realizing the foregoing facts at once, but when our eyes fell upon the unusually fine "Blue Coated" exhibition females cawing, singing and scratching in the deep bright straw, we straightway forgot all about the weather and lost ourselves in admiration.

Mr. Rankin gathered up bird after bird, showing their extra good combs, beaks, legs and eyes, with shape and size that any Rock breeder might be

with 5 and 6 far above the average. Then we reached pen 7, headed by "King Blue Coat I," a cock bird coming three years old, yet retaining that deep rich standard blue color and straight across barring, to the skin in every section, with a deep red eye that shows no fade and never will. Mr. Rankin claims that this bird has produced as many real high-class show birds with breeding qualities to match, as any bird ever produced to date of this variety and what we saw in the next five pens was proof enough for us. His mates all possessed sharp, ringy barring, with the strongest and richest of undercolor; all had exceptionally good combs and eyes of the deepest red.

"King Blue Coat II," in pen 8, a son of "King Blue Coat I," is a true chip from the old block, and his pen in individual merits is fully equal to pen 7. The next two pens, 9 and 10, were close up in the same qualities, and 11 and 12, hard to surpass.

From here we proceeded to the second breeding house, meeting Mrs. Rankin at the door on her morning rounds of re-

H. P. RANKIN, HARTINGTON, NEB.

proud of and displaying wing after wing of clean marbled barring, with no trace of smut or muddy color, but it was not until we went over with care their mate, "King Greycoat I," a superbly handsome cock bird, with light, even colored barring, looking for one feather not barred to the skin, which Mr. Rankin promised to eat if found, but which we failed to see, that we understood where the undercolor came from which shows so richly in his daughters.

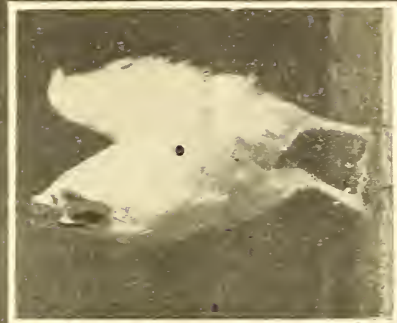

Each of the three breeding houses are divided into twelve pens, which are designated by numbers. Stepping into pen 2 we found duplicates of pen 1, with the exception of perhaps a trifle closer barring in the females and the cockerel. "King Greycoat II," having somewhat better head points than his sire, with a comb as nearly perfect as any breeder may expect to get.

Pens 3 and 4 were exceptionally fine,

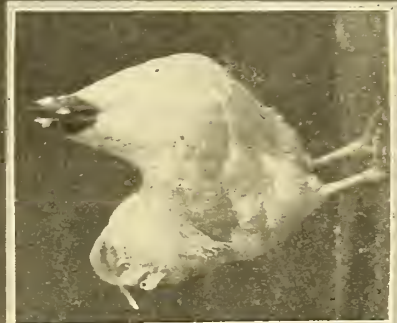

leasing the trap-nested hens with her egg basket almost filled with nice, well shaped eggs, all marked, both with the pen number from which they came and the leg-band number of the hen that laid them. Passing in we came to the White Plymouth Rocks, with "King Cotton I" heading pen 14, who is a true son of the famous first prize cockerel at Madison Square Garden, N. Y., 1904, which was pronounced as near a perfect bird as has ever been produced and sold in his yearling cock form for \$500. "King Cotton I" is as near a duplicate of his famous sire as could possibly be found, and his get, especially his sons, show him to be fully his sire's equal as a breeder. His mates, all rich with the famous blood, are either tested and proven breeders or the kind and type Mr. Rankin has found to produce the very highest class show and breeding males. Only females of the new Stand-

ard and winning type, such as are fit to show in any competition reign supreme in pen 15, and their mate, "Prince Cotton III," a son of second cock at Rochester, N. Y., 1903, and the sire of most of the high class females is a proven breeder of the highest merit. Pen 16 is headed by "Prince Cotton I," a brother to the \$500 cock bird, with mates of about the same type as those in pen 14. Pen 17 contains females of the type and quality found in pens 14 and 15, being about equally divided, and is headed by "King Cotton II," the best son of "King Cotton I," a show bird of the highest type, as was his sire and grandsire. Pen 18 is of the same class, with 19, 20 and 21 almost as good.

Glancing through the next wire screened partition door from pen 21, we saw that we had arrived at the Buff Plymouth Rocks, and we found in pen 22 "King Gold Dust II," a handsome golden beauty, buff through and through, a show bird of the highest quality, with good low five point comb and all other true Rock qualities; a grandson of that most famous of all Buff Rocks, "Gold Dust Jr.," who was the sire of "Gold Force," the famous \$300 cockerel and more first prize winners at New York than any other Buff Rock male ever bred. His mates are all rich with this high priced blood and of the highest breeding type. The best ten show females of this variety it has ever been our pleasure to see in one pen, were in 23 looked after in lordly manner by "King Golden I," a tested breeder of highest merit, whose sire headed second pen at Madison Square Garden in 1903 and won first at Cambridge, Mass. Pens 24, 25 and 26 showed nearly as high quality, with pens 27 and 28 not far from it.

"King Dodo I," of the popular White Wyandotte variety, had possession of pen 29. This bird as a fully developed and rounded out cock bird is probably as good a show bird as was ever produced, having scored 94½ when not fully developed by I. K. Felch, who said "he can be improved at least two points." His mates are of the kind Mr. Rankin has found will breed the highest possible type of exhibition show and breeding males; pen 30 contained females of beautiful and graceful curves, such as Mr. Rankin shows in his illustrations, headed by "Prince Cotton II," the sire of most of his mates and a son of the famous cock bird that headed first prize pen at New York in 1904. Pens 31 and 32 are of the same type as those in 29, and 33 and 34 are much like pen 30, with 35, 36 and 37 mated to produce good birds, good breeders and good layers.

As we emerged through the door of the third and last house which is built on a somewhat higher elevation than the first two houses, we passed into a pasture covered in season with a heavy blue grass sod and adjacent to orchards of cherry, plum and apple trees, which affords excellent and abundant early green food and is the home of all young stock for the first sixty to eighty days of chick life. Here, running from north to south, with fronts facing in a southeasterly direction, stand eleven portable colony brooder houses. Mr. Rankin attributes his unusual success in raising strong, well constituted stock, largely to his thoroughly and well equipped brooding system. This certainly displayed a marvel of simple construction and convenience. Going on the principle, that fresh air is and must be the well spring

of all constitutional vigor, he has improved and reconstructed the best brooding contrivances he has been able to secure, until at present there is no part of his system, but what gives evidence of his own thought and handiwork to a greater or less extent. And right here we may say that no one thing impressed us more forcibly and favorably at this plant than the individuality, originality and adaptability of the proprietor.

To be capable of adjusting conditions to meet one's wishes, of creating such as are not at immediate command and in keeping in close touch with all lines and departments of a many sided business, is a gift not given to all men and wherever met with in most cases is the road to success without fail.

The barns, granaries, storehouses, machine house, carpenter shop, etc., are built compactly together in about the center of the plant. The greater part of our morning had been spent in the breeding houses and as old King Sol had made good use of his beaming countenance in moderating the weather, Mr. Rankin remarked that he thought it would be wise to complete our examination of these buildings before dinner and devote the afternoon to a sleigh ride to the "Valley Farms." Turning our steps this way, we could not help but speak of the admirable situation of all the buildings on their high elevation overlooking the pretty little town of Hartington and the excellent natural drainage afforded by the lay of the land.

Arriving at the barns, we first inspected the alfalfa filled hay-mows and great bins containing a variety of grains which are used in the balanced ration fed, for Mr. Rankin has his own milling plant for grinding all food stuffs. Adjoining the barns and within easy reach of the food supplies is the machine house and feed cooking rooms. Here a large gasoline engine furnishes power for the milling plant, bone cutting, alfalfa cutting, water pumping, wood working machinery, etc.

The carpenter shop, piled high with lumber, shipping coops and egg baskets, stands close to the power and machine house and a few steps farther a large storehouse is filled with brooders, colony houses, beef scrap, charcoal, grit and all kinds of poultry supplies. Lack of space will not permit us to describe the hundred and one conveniences, mostly simple in themselves, that lessen the labor and show system in all the work.

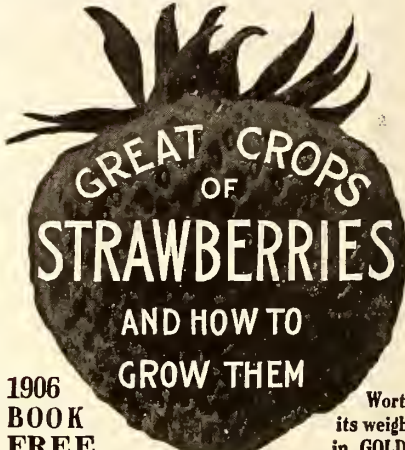

The incubator cellar and egg rooms, both of which were very interesting, are in the basement of the residence. The egg and packing room contains five revolving egg cabinets, each with a capacity over over 1,000 eggs, and all other material used for the packing. Adjoining it is the incubator cellar, equipped with four large incubators holding around 1,500 eggs, and all was in readiness for the first hatch, which was to be started within a few days.

The sleigh ride to the farms and back was thoroughly enjoyable, reminding a busy city man of the pleasures of his boyhood days. The "Rankin Valley Farms" lay north and south of the public highway in a most beautiful and fertile valley. Angling through the farms is the main Bow creek, a tributary of the Missouri river, getting its name from the trend of its course and winding its way into this stream is a smaller one, rising just beyond the border of the farms and coming almost wholly from the good old Mother Earth of Mr. Ran-

kin's land by means of hundreds of springs in size from the finest trickle to the flow of a six inch tile. These, together with their grassy banks, shaded by natural timber and adjacent to fields of corn and grain, make ideal conditions for the best development of strong, sturdy and vigorously constituted flocks.

In the evening the rapidly passing time was spent at the residence in the office, receiving an explanation of the methods followed in handling the heavy correspondence with attendant office duties of such a business and chatting of the many opportunities open to the sincere, practical fancier today.

Mr. Rankin is so earnestly interested in every feature of his work, that our closest attention was held until long after the wee small hours of the night, and as we stepped on our train, after bidding him good-bye in the cold grey dawn of the next morning, it was with the conviction that we left behind us one of the strongest and most faithful friends of "America's Big Four," or the so popular Barred, White and Buff Plymouth Rocks and White Wyandottes, together with a feeling of satisfaction that our anticipations in regard to the Great Northwestern Poultry Yards had been fully realized.

1906 BOOK FREE Worth its weight in GOLD.

The Book that beats them all because it tells how big crops of big fancy strawberries can be grown every year and how to pick and pack them for big prices. It tells the poultryman how to combine strawberries with chickens and double his profits. It keeps Experienced Growers posted on new discoveries in plant breeding and latest cultural methods. It takes beginners through a complete course of instruction; tells just when and how to do everything to get Big Results, and how to start a Profitable Berry Farm with little capital. Beautifully illustrated with photo-engravings. Don't order your plants until you read this book. It is free.

R. M. KELLOGG CO., BOX 325 THREE RIVERS, MICH.

TENERIFFE Canary Grass

A wonderfully productive grass from the Canary Islands. Succeeds in all parts of America from Florida to Manitoba, even in sections where Millet fails. Produces an immense crop of hay as well as a large and very profitable seed crop which can be sold at a high price there being practically no limit to the demand. Is used for feeding birds and poultry and also makes a fine grade of flour. Our seed is especially desirable for sowing here. Special introductory price per large pkt, 10c, lb. 35c, 3 lbs. 90c, postpaid, with full directions for growing.

Free to Farmers. We want every one to try it and if you will mention this paper in writing us we will send a sample of the seed free together with a copy of our large illustrated catalog of Farm and Garden Seeds.

IOWA SEED CO., DES MOINES, IOWA.

THE PERFECT MAP OF THE WEST.

A new edition roller map, 60 by 40 inches in size, showing the United States from the Great Lakes to the Pacific Coast. All railroads are shown in different colors and characters. All geographical points west of the Missouri River and practically all east thereof are included. The most complete reference map of the West ever published.

It ought to have a prominent place in every office and business house. Copies sent free for 25 cents (stamps will do) to pay transportation, etc. Address P. S. Eustis, Passenger Traffic Manager, 209 Adams St., Chicago, Ill.

The plodding farmer may be slow, but in the end, in his race with other lines of industry that seem to hold out brighter promises, he always seems to come out as did the patient tortoise in his race with the hare. The latest illustration of this comes from Colorado, a state which only a few years ago was dazzling the world with the riches of its gold and silver mines.

The annual reviews of Colorado's progress show that in 1905 the state produced the greatest amount of gold of any year in its history, a total of \$29,000,000. But in the same year, the grain and potatoes, hay and other produce from Colorado farms aggregated more than \$40,000,000 in value. Silver was higher in value than for several years, and the production of this metal in

Second Prize Rose Comb Brown Leghorn cockerel at Madison Square Garden, 1906. Owned by F. C. Tabor, Worcester, N. Y.

Colorado rose to \$11,000,000, but the combined product of the orchards and sugar beet patches beat the total of silver by \$1,500,000. Five million dollars' worth of lead was marketed, which is just about equal to the value of the fat lambs shipped. The whole value of the product of the metalliferous mines of the state was \$43,000,000. The products of the farms aggregated more than \$70,000,000.

More money is being invested in agricultural projects in Colorado than in the development of mines. Reservoirs and canals originally planned for placer mining have been diverted to irrigation, and the next few years seem like to see the area of highly productive farming lands in the state more than doubled. The "man with the hoe" seems to have secured a start over the man with the hammer and drill, which the latter will never be able to overcome, unless some very remarkable new discoveries of mines are made.

B. S. Hume, of French Village, Ill., won at St. Louis Fanciers' Association, Jan. 8 to 13, 1906, as follows: First, 2d cock, 1st, 2d cockerel, 1st and 2d pen, in White Wyandottes, 125 birds in competition; Butterfield, judge.

W. W. Kulp, Pottstown, Pa., won as follows at Madison Square Garden on his Rose Comb Brown Leghorns: Cock, 5th; hens, 1st, 2d, 3d and 5th; pen, 1st.

Mitchell's Barred Rocks.

At Kansas City show, January, 1906, Kansas City King, my first prize cockerel was the leading attraction. Ma Belle, 2d prize hen. My lines of breeding for five years have proven winners and heavy layers. My breeding pens, from which I sell eggs, are headed by prize males and consist of show females. EGGS at \$3 per 15, or \$5 per thirty.

TRY IT Before You Buy It

We have a new and unique plan whereby every poultry raiser in the land may try the "DANDY" GREEN BONE CUTTER at our expense. It won't cost you a cent. Simply write us. We'll explain our plan and tell you how you may have

15 DAYS' FREE TRIAL

of any size "DANDY" that you want. This 15 days' free trial will give you ample time to test it and in every way satisfy yourself that it is just the machine you need to make your poultry more profitable. Green bone will make you lots of easy money and the "DANDY" will prepare the bone easily and quickly. It will cut it so that your chickens can get the greatest possible good from it. Cut Green Bone is a highly concentrated food containing all of the elements that hens need to make them lay lots of eggs. Feed it to your hens; they will amply repay you with a big increase of eggs in winter when eggs are high. The money you spend for a "Dandy" will come back to you very quickly in the increased number of eggs. We don't ask you to take our word for what the "DANDY" will do for you. We only ask the chance to send you one and let you try it before you buy it. Will you do it? If so, write today for free illustrated catalog and full information. Ask about our free trial plan. P. B. HARSHMAN.

Sullivan, Ill.

The poultry from Gen. E. R. McAlpin's poultry farm at Ossining, N. Y., F. W. Corey, manager, won thirty-four ribbons at the late New York Show. By winning best display of White Wyandottes there, they gain an enviable record in this most popular variety, having thus won best display at every place shown this season, namely: Syracuse, Hagerstown and Madison Square Garden.

They also claim to have the best Silver Penciled P. Rocks, winning on them in strong competition at the New York Madison Square Show, first, second and third cock, first, second and third cockerel, first, second and fourth hen, first, second and fourth pullet, first and third pens. Their Partridge Wyandottes, White Plymouth Rocks, White Legborns and Buff Cochins Bantams all landed some ribbons and were among the best. Look up their advertisement and send to them for an illustrated catalogue.

Mr. Robert Larmer, of Ravenwood, Mo., won on his Buff Plymouth Rocks at Kansas City last week as follows: One entry of one pen, first pen, Missouri State Club cup for best pen, also Association cup for best buff bird in the show, and three club ribbons for best shaped female and best surface colored male and female. At St. Joe, same week, on six birds, first, second, third hen, score 94½, 94, 94; first, second pullet, score 94½, 93¾; first cockerel, score 94½; first pen. The judges of these two shows pronounced them the best birds so far this season that they have scored.

Carver & Avey, of Columbia City, Ind., won at the recent Cincinnati Ohio Poultry Show, in a large and full class of Partridge Wyandottes, as follows: First cock, first, second cockerel, first pen, second, third pullet, second, fourth hen; Gold Special for best cock, hen, cockerel and pullet. These people have a fine flock of Partridge and Silver Penciled Wyandottes, and their matings for egg trade will be finer than ever. Their winnings this year simply repeat the great success they have had for years in the show room.

Our old friend, Mr. M. M. Smith, of Farmersville, Ill., has informed us that he will dispose of all of his Buff Plymouth Rocks and will hereafter devote all of his time to the Barred Plymouth Rocks and Illinois Snow and Elds yellow dent seed corn. Uncle Mathias, as the boys call him, is a breeder of high standing. Anyone interested should write him and no doubt will get fair treatment. His winnings of the 1905 Illinois State Fair and other shows are too well known to need any mention. His Rocks are barred down to the skin.

Dr. C. J. Andruss, Canandaigua, N. Y., won at Madison Square Garden, Jan. 2 to 6, 1906, as follows: Third cock, second and third hen, second and fourth pullet. Eugene Sites, judge. One hundred and twenty birds in class. At great Rochester Show, Jan. 8 to 13, Rochester, N. Y.; First and second cock, first and second hen, first, second and third cockerel, first, second and third pullet, first pen, and all specials. H. J. Quilhot, judge. Columbian Wyandottes. Also at Rochester, I won on Buff Orpingtons first and second hen, second pullet, fourth cockerel and first pen.

The printed and engraved matter used by poultry breeders and fanciers has of late undergone quite a change for the better. There is a marked improvement in the general appearance and "get up" in circulars, letter heads, etc. The Caxton Engravers and Printers, of Chicago, have a good claim upon this state of affairs, owing to the high standard their work is setting. The artists as well as the printers producing their goods seem to have great knowledge as to what is proper in this line of work. We heartily recommend our patrons to them.

Mr. F. H. Wells, proprietor of Oak Lawn Poultry Yards, Deer Park, L. I., N. Y., breeder of Barred Plymouth Rocks and R. I. Reds, commences a yearly ad with us this month. He is advertising eggs from his prize winning matings. Write him for prices and particulars and mention AMERICAN POULTRY JOURNAL.

Questions and Answers

Questions asked by subscribers will be answered in this department, only under the condition that the full name and address is signed by the writer.

What Is Bumblefoot?

We would like to have our readers, who have fowls troubled with Bumblefoot, write us their experience and what they know about this trouble. What is the cause of this disease and what is its cure? Can anyone answer the question: What is Bumblefoot?

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer in Question and Answer column of next month's issue of AMERICAN POULTRY JOURNAL, the following: I have some Barred Plymouth Rock chickens which I have been feeding in a scratching room having in it considerable dust, which has evidently brought on bronchial trouble, as the fowls, and more especially the cockerel, breathe very hard upon the slightest exertion. The cockerel can be heard breathing ten or twelve feet away, but all eat heartily and are seemingly in perfect health. Tell me what the trouble is, also remedy for curing same.

Cobden, Ill.

S. P. H.

Answer:—Bronchitis is inflammation of the mucous membrane of the trachea and bronchial tubes. The most frequent cause of this disease is exposure to dampness, to cold, to draughts of cold air, and to sudden and extreme changes of temperature. It may also result from the inhalation of irritating vapors, dust and other foreign substances. The first thing to do is to remove the cause. Begin treatment by placing the affected birds in a comfortable, dry and reason-

ably warm place where they will not be subjected to draughts of air, but where the ventilation is good. Give soft and cooling food, such as stale bread, or a mixture of bran and middlings moistened with milk. Inhalation of steam, or vapor from boiling water in which hops or a small quantity of carbolic acid or creoline has been placed, is beneficial. Give with the food two grains of black antimony twice a day. A small quantity of flax seed steeped in hot water makes a demulcent drink that often gives great relief; and, in the absence of this, honey or gum arabic may be added to the drinking water with advantage. In the early stages it may sometimes be checked by giving ten drops of spirit of turpentine in a teaspoonful of castor oil and repeating this dose after five or six hours.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer through columns of journal, cause and cure of "Pip" in chickens, or rather that is what it is called here. A hard scaly needle-like formation gets on end of tongue and unless this is removed chicken will droop, not eat (cau't pick up anything) and sleep till it dies.

Freeport, Fla.

T. H. B.

Answer:—Pip, or inflammation of the mouth, is a rare rather than a common disease. This disease arises from any form of local irritation or injury which is sufficiently serious or long continued to set up inflammatory action. The

common treatment, which consists of tearing the dried epithelium off the tongue before it has entirely separated by the natural process, is cruel and injurious, often leading to the death of the bird. In case of simple drying of the mouth, it is sufficient to moisten the tongue with a few drops of equal parts of glycerine and water. In case there is redness of the membrane, or if the epithelium is beginning to separate, or if a deposit has formed, add twenty grains of chlorate of potash to each ounce of the mixture. An excellent remedy for such cases is made by dissolving fifteen grains of boric acid in an ounce of water. Both of these solutions are harmless and may be freely and frequently applied. When the epithelium is separating it should be kept moistened with the glycerine mixture and its detachment may be somewhat facilitated by loosening it with a pin or the point of a penknife, but great care should be exercised, the sensitive tissues should not be touched and no blood should be drawn. If properly treated this disease remains localized and is of slight importance.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Will you please answer the following question in February issue of AMERICAN POULTRY JOURNAL.

I am thinking of changing location, and in case I do I wish to commence the making of an "Ideal poultry farm," one city block in extent—300x300 feet—plant to accommodate about 100 hens and other accommodations I would have to have to be able to raise five to eight hundred chicks a year, chicks to run on home ranch until two months old, then taken to out-of-town farm to roam at large until about Oct. 1.

Residence to be located in south east corner of block.

MANN'S LATEST MODEL BONE CUTTER

is always a profitable investment, no matter how small your flock may be, because green bone with the adhering gristle and meat when fresh cut, get what you want. More eggs, more fertile eggs, healthier, heavier market birds and earlier broilers. When you buy a Bone Cutter, you want the best for your money.

Mann's BONE CUTTER

is doing good work all over the world. It don't wear out and call for repairs because it is made right. Mann's, with its hinged open hopper, its automatic self adjusting feed and its specially tempered knives will keep your flock supplied with the best poultry food known, without your losing your temper or wasting time. The food that comes from the Mann's is always green and fine, and the birds never get over being eager for it. We could tell you a lot of other things about Mann's Bone Cutter, but we've got a better way.

We'll ship one to you on 10 days free trial

and let you try it on your own place. No fuss, no quibbling, no money in advance. This is an absolutely free trial with no strings to it. If the machine doesn't do everything we say, ship it back at our expense, after giving it a thorough test.

SEND FOR CATALOG FULLY EXPLAINING OUR FREE TRIAL OFFER.

F. W. Mann Co., BOX 56, Milford Mass.

Would you advise me to put incubator cellar under residence?

I am thinking it would be a good plan to have the west side for incubators and have windows about 2x2 feet 3 feet apart the entire 28 feet of the east side of residence, windows to come level with the outside ground or in four or five inches of the ground. The cellar proper not commencing until some 4 or 5 feet from the outside wall, this would act as a shelf for the brooders to set on and would be on the level with the outside ground and being near the roof of cellar the temperature would be highest there, and the attendant in looking after chicks would not be compelled to stoop to tend to lights or clean brooders, as the brooders are four feet from the cellar floor.

1. Would you think this a good plan?
2. Would the inside run of 6x6 be enough run for chicks of three weeks?
3. Would that many windows in east side make it hard to regulate the temperature?
4. Where 100 hens are to be kept on block 300 by 150 feet would you advise single houses or long houses ten hens and cock to pen? F. J. O.

Kiowa, Kans.

Answer:—The basement or cellar of a residence is a good place for incubators, as temperature is usually very easily regulated. And your plan as outlined above is a good one. 2. This all depends on the number of chicks put in a space 6x6. 3. Would advise the use of double windows. These will keep out both heat and cold and enable you to keep an even temperature. 4. One long house, divided into several rooms, will be more convenient and results will be the same under proper management.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Have built me a new brooder house and ceiled it up part way on the inside. Would you consider it advisable to fill in between the walls with soft coal ashes? Do you think it would gather dampness and rot the boards? J. B. D.

Winnebago, Ill.

Answer:—Would not advise the use of ashes for filling the walls, as ashes will draw dampness very quickly. By ceiling the house properly on the inside and leaving a three or four-inch air space between the walls you will get better satisfaction than where walls are filled, although some people recommend the use of cinders for this purpose.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Being a subscriber of AMERICAN POULTRY JOURNAL the writer would be pleased to have the following questions answered: I have a Golden Wyandotte cockerel that has white in his earlobes and white in his wings. Will he be good to breed from, and also as a show bird? E. E. H.

Cumberland, Md.

Answer:—Where the earlobe is one-half positive white it is a disqualification. White in the wings is also a disqualification. The bird in question is fit only for table use.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—I would like to ask the question to be answered in your next JOURNAL. Why don't you have more advertisements from Kansas for eggs and poultry? I only see three or four places from that state. I would like to know if any of the prepared chick

feed is good for young turkeys under six weeks old. Mrs. R. W.

Carmen, O. T.

Answer:—There are a number of good breeders in Kansas, but they do not do very much advertising. We are unable to tell why. We have never used the prepared chick feed for turkeys, therefore we are not in a position to answer your question.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—I have a hen house 10x16 and free range. I want to raise chickens for eggs only. How many hens would you advise keeping and what breed for winter eggs? I. M.

Ft. Smith, Ark.

Answer:—With proper ventilation and free range you can keep about 50 laying hens in a house 10x16. Any one of the non-setting varieties will answer for your purpose.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Will you please answer in your next issue of the AMERICAN POULTRY JOURNAL the following questions:

1. Which is the best way to ship live poultry to market?
2. Which is the best way to market turkeys, dead or alive?
3. What is the difference in the price per pound of turkeys dead and alive?

Bartlesville, Ind. Ter. W. T. N.

Answer:—1. Ship in crates, by express. 2. In cold weather, it is best to market turkey dead, with the head, feet and wings left on. 3. From 3 to 6 cents per pound, depending upon the supply and demand.

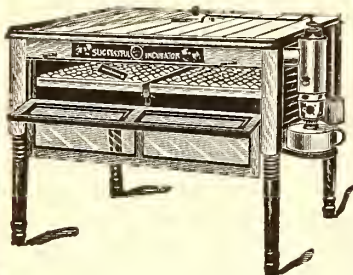

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer in the

If You're In Earnest

about poultry raising, outfit with approved incubators and brooders. All the failures come from people who go at the poultry business in a half-hearted way and try to "get along" with most anything. You'll not fail if you use

SUCCESSFUL

Incubators and Brooders

No one ever failed who really gave them a fair trial. They are record hatchers and brooders, not experiments or makeshifts. For many years they have been hatching more, stronger and better chicks

and raising more of them to maturity than any other machines made. They consume least oil, take least attention, are

MOST RELIABLY SELF-OPERATING

and produce uniformly best results under all conditions. We have the proof for every one of these statements. Write us for it. Incubator and Poultry Catalogue FREE. Booklet, "Proper Care and Feeding Small Chicks, Ducks and Turkeys," 10c. 50c poultry paper one year, 10c.

DES MOINES INCUBATOR CO.

Department 1, DES MOINES, IOWA.

We have a full line of all poultry supplies, standard bred poultry and fine eggs, listed at lowest prices in our free catalogue. Send for it.

Question and Answer column of next month's issue the following: Will chickens hatched in March or April molt the same year? Will they molt before they lay?

New Castle, Pa. C. M.

Answer:—Not always. This depends upon the care given and whether they have been "forced" or not.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Will you please answer in your next paper the following: Is fresh blood good for chickens and how should it be fed. I want to plant all of my poultry runs on sun flowers next summer, where can I get the seed?

Morgantown, N. C. G. E. P.

Answer:—Fresh blood is good for laying hens. Feed about 2 oz. to each fowl, three times a week. Sunflower seed can be obtained from any of the seed houses, a number of whom are advertisers in these columns.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—As I am a new beginner, I would like you to answer a few questions for my benefit—First—How many hens can I winter in a coup 12x16, 7 ft. high south side sloping to 5 ft. north side? Second—What color of eggs do the following breeds of chickens lay: Barred and White Plymouth Rocks, Light Brahams, Golden Silver, and White Wyandottes, and Rhode Island reds? Third—Are the following ingredients a good mash and how many chickens will it feed: 1 peck of boiled mashed potatoes, same of turnips, 1 bu. of fine cut clover, 4 lbs. of beef scraps, 4 oz. pulverized charcoal and 1 pk. of cornmeal? Fourth—Will a coop made of 1 in. boards on outside, 1/2 in. on inside, 4 inches apart packed between boards with straw and covered with 3-ply roofing felt paper, dirt floor, be warm enough to winter chickens in?

Buffalo, N. Y. W. H. S.

Answer:—1st. Fifty fowls can be wintered in a house of this size; but better results will be obtained with half this amount. 2d. Brown. 3d. Any mash that will give results in egg production is good. The amount specified will feed about 250 birds. 4th. Yes.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Kindly answer in your next issue of the JOURNAL the following: I have a Barred Plymouth Rock hen that all the feathers on her neck just above her breast have come off. The skin seems dry and hard. She is apparently healthy and eats well. Kindly tell me what the trouble is and what to do for it. What is the difference between Barred Plymouth Rocks and "Ringlets" Barred Plymouth Rocks or is there any. Are the Ringlets darker colored than the others?

Niantic, Ill. F. M. D.

Answer:—This is caused by what is known as the depluming mite. A few applications of lard and sulphur thoroughly rubbed into the skin will usually effect a cure in a short time. There is no difference between Barred Plymouth Rocks and "Ringlets" Barred Plymouth Rocks. This is merely the name of a certain strain.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Being a subscriber to AMERICAN POULTRY JOURNAL I would be pleased to have you answer the following questions in your February issue: What is the cause of my fowls going blind or

nearly so. The first one went blind in September and some since molting. They have not had colds or roup and were healthy apparently. They have had good care and housing. They eat well and otherwise seem to be all right, but some of them look pale about the eyes. The eye fades in color and the pupil seems to get smaller and smaller. I had quite a dose of head lice this fall. Would they affect the eye and blind them? What can I do for them? They are my old stock.

I have a cockerel that goes around with its body nearly straight up and acts as though something is the matter with his crop. Has been this way for two months and I can't find a mark of injury on him. He eats well and is apparently healthy. What caused this and what can I do for him?

Oelwein, Ia. O. O. H.

Answer:—We are unable to answer above. Will some of our readers please answer.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—As I am a reader of your AMERICAN POULTRY JOURNAL, I would like to have some information, in your next issue. Whatever is the matter, when chicks are dead in the shells in the incubator at hatching time.

Newton, Kan. Mrs. S. P. B.

Answer:—This comes from various causes. One of the most frequent is lack of vigor in the male bird. Another cause is lack of moisture and proper ventilation in the incubator. Sometimes it is a combination of all these. In other cases, the eggs were kept too long before being placed in the incubator. Eggs should be incubated as soon as possible and not allowed to lie around for two or three weeks.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please tell me through your "Question and Answer Department" if I feed my chickens right? I have 28 Barred Plymouth Rocks and for breakfast I feed a mixture of wheat, oats, barley, cracked corn and millet seed, in all about 2 1/2 quarts, little more wheat than anything else, and for supper the same thing except there is more whole corn than any one other grain. For dinner I feed, I think, between 3 and 4 quarts of mash made up of table scraps, such as dry bread soaked, potatoes, meats, vegetables, etc., which I thicken with bran, also have sour milk and green cut bone; my pullets were hatched in May, and between November 1st and December 22, I did not get one egg, but since then I have got 4 eggs in 6 days. Am I feeding too heavy, or not enough to produce more eggs. My coop is warm, with lots of light and dust box, oyster shells and charcoal and fresh water handy, board floor with about 3 inches of chaff, leaves and straw mixed. Thanking you in advance for an answer, I am,

St. Paul, Minn. J. H. K.

Answer:—You have your fowls on a starvation ration. You should feed at least six quarts of feed to that number of mature birds. Try it and watch results.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Kindly state in next month's issue if celery is good for chickens, chopped fine and mixed in morning mash. I have a large number of Plymouth Rock roosters whose feathers hang long and silky, not like the

EXHIBITED AT
MADISON SQUARE GARDEN,

SUCCESS INCUBATOR

A wonderful hatching machine. We want you to try it and will make it easy for you to do so. We will send one freight paid, and give you **60 DAYS' FREE TRIAL**—time enough to take off two good hatches. If it doesn't suit you, if it doesn't hatch right, send it back. Could we make such an offer if we did not know what the "SUCCESS INCUBATOR" will do for you! Write for free illustrated catalog. American Brooder Co., Box 97, Racine, Wis.

Buy Poultry Supplies from YOUNG

Every thing for the poultry raiser. Incubators, Brooders, Feeders, Tonic, Powders, Wire Fences, Leg Bands, Egg Boxes, Gape Worm Extractors, Bone Cutters, etc. Instead of sending to one place for an incubator and to another for a bone cutter or a chicken food, buy all your supplies from one place. It's more convenient, and besides you save money. Let us send you a copy of our Poultry Supply Catalogue. You'll be surprised how much money you can save. Don't forget to also ask for a free copy of **Young's Great Seed Catalogue**. It contains a choice collection of vegetables, flowers, bulbs and plants; also gives special directions for successful cultivation. Whatever other catalogue you may have, be sure you get a copy of Young's.

THE Angle Lamp

OUR PROPOSITION is to send you a light which, burning common kerosene (or coal oil), is far more economical than the ordinary old-fashioned lamp, yet so thoroughly satisfactory that such people as ex-President Cleveland, the Rockefeller's, Carnegies, Peabodys, etc., who care but little about cost, use it in preference to all other systems.

We will send you any lamp listed in our catalog 59 on thirty days' free trial, so that you may prove to your own satisfaction that the new method of burning employed in this lamp makes common kerosene the best, cheapest and most satisfactory of all illuminants.

Convenient as Gas or Electricity
Safer and more reliable than gasoline or acetylene. Lighted and extinguished like gas. May be turned high or low without odor. No smoke, no danger. Filled while lighted and without moving. Requires filling but once or twice a week. It floods room with its beautiful, soft, mellow light that has no equal. Write for our Catalog 59 and our proposition for a

30 DAYS' FREE TRIAL.
Do it now—right away. It will tell you more facts about the How and Why of good light than you can learn in a lifetime's experience with poor methods.

Times Building New York City

hens; they are six months old and weigh 7½ pounds. Can I use them for breeding in the month of March with hens past one year. MRS. E. W. S.

Bayonne, N. J.

Answer:—A little celery mixed in the soft feed is very good for chickens. It will be all right to use your young roosters for breeding with hens this spring.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please let me know through 'AMERICAN POULTRY JOURNAL' the cause of my chickens having something like blood boils on their combs and a remedy. I bought a hen and cockerel a year ago; I had to kill the cockerel this spring, his head got so bad. His toes came off at the first joint. The young from him have got the blood-boils on their comb. G. W. H.

Abvord, Tex.

Answer:—Your description of the trouble with your fowls is too vague for us to give a positive answer; but we are of the opinion that they are afflicted with scabies. This is caused by filthy and damp surroundings and is contagious. Thoroughly disinfect your premises with a ten per cent solution of carbolic acid. Give your fowls a tablespoonful of sulphur to every five birds, in their soft feed, three times a week. Wash the affected parts with warm, soapy water and after drying thoroughly with a soft flannel cloth apply carbolated vaseline to the sores. Frequent treatments of this character will soon eradicate the disease.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer in your paper the following, and oblige: I have a hen that is troubled with some kind of gathering on roof of mouth and on tongue. It seems to be a white blister. She swells up in the throat when she breathes something like in case of roup. What is the trouble and what is the remedy? I feed mornings mash of bran and middlings; other feeds mixture of corn, oats and buckwheat about one-third each. W. J. H.

Monon, Ind.

Answer:—Canker or ulcerated sore mouth. Get some of Harding's or Conkey's Canker Cure and use as directed.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—I would like to say through this column that I have a Plymouth Rock hen which crows like a young rooster. What accounts for this, and is such a hen profitable to keep? Some people say it is a bad sign to keep it. Are flat sticks better for making a roost than round ones, and about how wide should they be? F. F. B.

Lancaster, N. Y.

Answer:—We do not believe that a hen which shows such masculine tendencies will prove profitable as a breeder. The best perches are made from 2x2 stuff, with the sharp edges trimmed off.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer in the next number of the AMERICAN POULTRY JOURNAL: Would you advise breeding from pullets hatched April 17, started to lay middle of October. L. J. S.

Sheboygan, Wis.

Answer:—These will no doubt make excellent breeders.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer the following in your next issue: How many

Barred Plymouth Rocks can be kept on 10 acres of land? How much would it cost to feed them for one year if all the feed was bought? J. H. C.

Council Bluffs, Ia.

Answer:—From one to five thousand; cost would be from 80c to 90c per fowl.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Is this feed right for 28 hens per day: Morning, quart of scalded oats; noon, one-half gallon mash; night, corn, one quart. There has been two soft shelled eggs found in the nest; cause? H. O. C.

Zanesville, O.

Answer:—This is a starvation ration. This number of hens should have at least six quarts of feed at each meal, especially during the winter months. The cause of soft shelled eggs is usually the lack of proper shell material. The fowls should be supplied with plenty of grit and oyster shells at all times.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Being interested in the raising of pheasants for practical purposes, I take liberty to ask the following questions: 1. What variety is the best utility bird? 2. What kind of feed do pheasants require? Please answer the above in the "Questions and Answers" column of the AMERICAN POULTRY JOURNAL. R. H. S.

Jersey Shore, Pa.

Answer:—As the writer has never had any experience in the rearing of pheasants, he is unable to answer the above questions. Will some of our readers please do so.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer through the columns of your paper: 1st. How much would it cost and how many acres of land would be required to buy and run a poultry farm and keep about 500 to 600 fowls. If one or two men were to run it. How old must young White Leghorn hens be before they will begin to lay? 2d. I killed a hen a week ago and found on the left of her back 3 hard balls the shape of eggs, one a little larger than the other. What was the cause? J. J. A.

So. Kaukauna, Wis.

Answer:—1st. This would all depend on how much the land was worth. From ten to twenty-five acres would be required. An investment of \$2,500 would probably be sufficient for the first year, or until the profits commenced to come in. 2d. From five to seven months. 3d. We are unable to say.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—We have in this country a disease called limber neck, which has in late years about taken the place of chicken cholera. What is it? What causes it? Are there any remedies to prevent recurrence on same premises year after year? It kills turkeys also.

Washington College.

Answer:—A great deal has been said in these columns during past two years about this disease. It is a hot weather disease and is caused by the fowls eating maggots out of dead fowls or animals that have been allowed to lay around on the premises until they become rotten. It is only when the weather is extremely warm that these maggots have this effect upon the fowls that eat them. When the temperature gets above ninety it causes a poison to accumulate in the dead carcass, and the maggots absorb this poison, and the eating of these pois-

Heart Weakness.

Dr. Miles' Heart Cure has made many hearts well after they have been pronounced hopeless. It has completely cured thousands, and will almost invariably cure or benefit every case of heart disease.

Short breath, pain around heart, palpitation, fluttering, dizzy, fainting and smothering spells should not be neglected. Take Dr. Miles' Heart Cure and see how quick you will be relieved.

It cannot make a new heart, but will restore a sick one by strengthening the heart nerves and muscles, relieving the unnatural strain, and restoring its vitality.

"I had a very bad case of heart trouble. For six months I could not work. Last July I was plowing corn and feeling bad all day; in the afternoon in plowing one row I had to lay down, or fall down, three times. My heart throbbed as though it would burst through, and I had difficulty in getting my breath. I purchased a bottle of Dr. Miles' Heart Cure, and before I had used half of it I could lay down and sleep all night. Previously I had to get up from five to ten times a night. I have taken several bottles, and my heart is as regular as clock work. I feel like a new man, and can work considerable for an old man, 84½ years old."

H. D. MCGILL, Frost, Ohio.

Dr. Miles' Heart Cure is sold by your druggist who will guarantee that the first bottle will benefit. If it fails he will refund your money.

oned maggots causes limberneck. Remove the cause and there will be no limberneck.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer these questions in your next issue of AMERICAN POULTRY JOURNAL: Have a B. P. Rock hen which hoists her neck and crop as if something was stuck in same. Has been this way for about 6 months, and can do nothing for her. Comb is pale and she is getting poorer all the time. Have noticed in last two weeks that two or three more of the hens and several of the pullets and cockerels are doing the same thing. These birds have plenty of good wholesome food and free range; also well ventilated houses. I want to know what is the cause of this, the remedy, and if it is contagious. W. E. W. Essex, Ill.

Answer:—There is something wrong with your method of caring for your fowls, but unless we have more detailed information we cannot say what it is. Perhaps you do not feed them enough, which causes them to eat too much dry grass and this become clogged in their crops. Examine their crops in the morning, and if they are not empty it will show where the trouble is. If the crop is full in the morning it shows there is a stoppage and unless relieved the fowl will starve to death. To relieve this condition pour warm water down the throat and gently work the crop between your fingers until it becomes soft; then hold the bird head downward and work the stuff from the crop through the throat and mouth. A tablespoonful of sweet oil will very often relieve this condition.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—As I am a subscriber to your most excellent journal. I will greatly appreciate an answer through your Questions and Answers department the following questions: (1) I have one Barred Plymouth Rock pullet that cannot get up on perch beam. Whenever it begins to look up its head begins to twist and turn in all kinds of ways, and it begins to turn around in first one way and then another way. Otherwise it is perfectly alright. (2) Will eggs be good for incubation from one year old pullets, that is, to get good strong breeding stock from same. (3) Will my Barred Rocks that are brothers and sisters do well mated for best results; they are the E. B. Thompson strain in their purity. (4) Will turnip roots be all right for vegetable food along with cabbage? (5) Does broken crockery and granite rock broken up fine do as well for grit as the grits advertised? (6) Will chickens do as well to start from beginning to feed night and morning as to feed three times a day? I have nearly 100 young chickens that have only been fed night and morning, and they seem to do extra well; in fact, I never saw chicks do better. E. W. F. Ellisville, Miss.

Answer:—1st. This is a muscular disease for which there is no cure. Would advise you to kill her. 2d. Yes, if mated to a good vigorous cock bird. 3d. Read article on line-breeding in December, 1905, issue of AMERICAN POULTRY JOURNAL. 4th. Yes. 5th. No. 6th. This is a much discussed question, many claiming that twice a day is often enough to feed fowls; but we claim that better results will be obtained where they are fed three times a day.

Little Gem HATCHERIES

Cost only 30c each, and over 60,000 successful poultry raisers are now using them. This girl hatched 1769 chicks in them last year and RAISED 1751. Interesting catalogue free. F. GRUNDY, Poultry Expert, Morrisonville, Ill.

**MICA CRYSTAL GRIT
DOES THE WORK**

It is no experiment, having been used successfully for twelve years and is the highest grade article of its kind in use.

Necessary proportion of mica, quartz, iron, magnesium.

Regulates digestion by properly assimilating the food, a process absolutely necessary to health and productivity in poultry.

Food not assimilated is food wasted. Mica Crystal solves the problem and makes the poultry industry profitable.

Without grit the feathered tribe cannot be healthy or productive. This is a well demonstrated fact in nature. Ignorance of it has cost millions. Grit is to fowls what teeth are to other members of animal creation. Mica Crystal never loses its sharpness. It is the best.

Let us prove the truth of what we say by filling a sample order for you.

**DARLING & CO., Agents,
Chicago, Ill.**

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Last year I had some little chicks and their toe nails turned black and would continue to decay until their little toes would drop off close up to their feet, and others their toes would just drop off. Will you tell me what caused it and what I can do to prevent it? I had some hens that went drooping about and when I caught and examined them I found under their breast that the skin was yellow and crusty, just as though they had been baked over the fire. I would like to know the cause and if there is any remedy for it. I see in your paper where sunflower seeds are highly recommended for feed. It is impossible to get them here where I live, and I have tried to raise them, but I cannot. Is cracked peanuts just as good as sunflower seed? I can get plenty of them.

Matoaca, Va.

Answer:—The trouble is in your parent stock. The only thing for you to do is to dispose of all your present stock and start with entirely new blood. Peanuts are very fattening and should be fed sparingly.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Will you please answer the following questions in your next issue: How many brooders does it take to run an incubator? Please give information on hopper feeding. I have had bad luck with soft feeds and poultry books. I wish to follow AMERICAN POULTRY JOURNAL all the way through. I am going to start all over again. Am going to try Buff Orpingtons. Would you advise pullets or hens? What would make the best breeding pen? How many young ones can I raise on a lot 120x120? Is crude oil good for use in a poultry house? How many nests for a dozen hens? What is good for diarrhoea? How much green bone to young and old chickens? How often can I feed meat? How can you tell when a chicken has worms?

Butler, Pa.

Answer:—The number of brooders depend upon the size of the incubator and the number of chicks hatched. Fifty chicks to a brooder is plenty. We do not believe in hopper feeding. Soft feeds are good if mixed properly. Pullets, mated to a good vigorous cock bird, will give good results. On a lot 120x120 you can raise 150 to 200 birds, with proper care and attention. Crude oil will keep lice away. Half dozen nests will be sufficient for a dozen hens. Boiled rice, seasoned with cinnamon, is good for diarrhoea. Two ounces of green bone three times a week for mature stock; one-quarter this amount for chicks. By examining the droppings you will be able to determine whether fowls have worms or not.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer the following: 1st. Do you think that the White Orpingtons will lay as many eggs as the Leghorns? 2d. Does the color of the Orpington make any difference in the laying qualities. 3d. I have a very fine B. P. Rock cockerel; two months ago he was sick, his comb turned almost black; I gave him coal oil and rubbed his wattles and comb with vaseline, and it cured him. Do you think he will be all right to breed from the coming season? Kindly tell me what was the matter with him and cure. 4th. How many Orpingtons can I keep in a coop 8x12,

and a run 25x30 ft. for best results?

Gt. Falls, Mont.

J. H. T.

Answer:—The White Orpingtons are good layers and under proper conditions will probably lay as many eggs as the Leghorns. 2d. The color has nothing to do with the laying qualities. 3d. This was probably caused by a slight derangement of the liver. A change of diet will very often remedy this and is better than medicine. It does not pay to doctor fowls unless it is a very valuable specimen. 4th. Twelve to fifteen.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Will you please answer in your next journal, in the Question and Answer department, the following questions: (1) I had a Partridge Cochins rooster whose comb turned purple. I thought it was liver complaint. I gave him one of Carter's Little Liver Pills each day for three days; the third day the comb was turning red, and the fourth day the rooster died. I cut him open and found the liver to be quite healthy, but the kidneys were purple and looked like a bunch of peas. Could you please explain? (2) I also had a Barred Plymouth Rock hen whose comb was purple. I doctored her for two weeks with Carter's Little Liver Pills, and applied vaseline and kerosene to her comb, but it still remained purple; I killed her, cut her open, and found the following: Liver a very pale yellow, heart very soft and flabby and when laid on a board it was quite fat; found a number of small eggs in hen. Would you please give name of trouble and cure.

Great Falls, Mont.

W. G. T.

Answer:—1st. This is no doubt liver trouble, and the fact that his comb was regaining its natural color proves that the pills were having the desired effect. But complications set in which evidently settled in the kidneys and caused the death of the bird. Cases of this character are rather rare and very difficult to cure. 2d. This is also liver trouble, which goes to show that there is something wrong with your system of feeding. Where fowls are given the proper feed, care and exercise, diseases of this character are practically unknown. Try to find out where you are at fault and remedy same; it will be easier and cheaper than doctoring.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—I imagine it is rather an unusual thing for you to receive a communication from one who has never owned a chicken, and it may seem presumptuous for me to ask you to take the time to read this, but I can't suppress a desire to congratulate you on your very excellent magazine for January. Farm papers, and I suppose poultry papers, used to be full of very undesirable advertising and were cheap in every way and hardly fit to be in the home. Your magazine and the majority of the poultry papers are certainly very valuable additions to the literature of today. They are not merely "time passers," but are instructive and are undoubtedly doing a grand work.

This isn't what I started out to say at all, but it simply flowed off the pen.

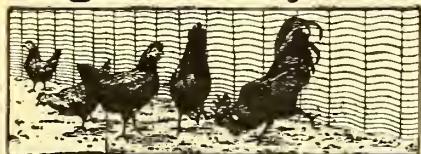

I would like to see your January number in the hands of every one who has the chicken fever. The very able article by Mr. Jas. M. Harris is the one I would like every wouldbe poultryman to read. I have a bad case of the chicken fever. I subscribe to five poultry journals. (I can hear the old timers say, "What on

THIS OUTFIT SAVES

1 THE OIL
2 LABOR

Your incubator is costing you double the time and attention it should. For instance, filling and trimming your lamp twice daily, regulating the flame several times, burning 2 gallons daily where one should do the work, and do it well.

And All Annoyances

ACME AUTOMATIC LAMP AND COMPOUND WAFER REGULATOR

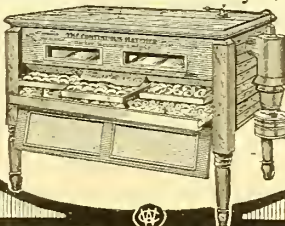

will effect a saving of one-half the oil, one-half the time and care and one-half the cost of operation. The Combined Damper and Flame Regulation shuts off oil consumption when heat is not needed. Lamp holds over one gallon oil. Top lifts off like bucket cover, makes filling easy. No funnel needed, no Spilling and Wasting oil. Safely filled while in operation. Automatic valve keeps oil always same height on wick, insuring a uniform flame. Cannot be upset. Acme mineral fiber wicks do not burn or char, and require no trimming. Acme Burners are air cooled and cannot overheat, absolutely safe, no danger of explosion or fire. No smoke, no soot, no offensive odor. Can be operated in any part of the house. Acme Compound Wafer Regulators are sensitive and accurate to a fraction of a degree, and positive in their action. Require but one ADJUSTMENT, no further attention. The only patented Thermostat. Look for patent label; none genuine without it. All infringements will be vigorously prosecuted. Made up in various styles to fit any Incubator or Brooder. Style B, here shown, enters end of machine. Has powerful crank action. Adapted for both damper and flame regulation. Other styles for damper only. Both lamp and regulator are easily attached to any Incubator or Brooder. We make them up to fit your machine. Sold separately or together. The operation of an Incubator and Brooder becomes a profitable pleasure, when equipped with this outfit. Our catalogue gives full details and illustrations, together with our complete plans for building the FAMOUS PEERLESS INCUBATORS AND BROODERS. SENT FREE FOR THE ASKING. Write today. Address

H. M. SHEER CO., DEPT. G, QUINCY, ILL.

"CONTINUOUS" HATCHER

Continuous means that this hatcher hatches chicks every day. Simply start it going, do your part and it works indefinitely, testing out eggs, taking out chicks, putting in fresh eggs don't stop its work for a moment. We accomplish this remarkable result by a new system of construction so simple and yet so effective that one "Continuous" Hatcher turns out as many chicks in a given time as several ordinary incubators. It need never rest. And it's not as much bother to run it as the ordinary kind, while the results are more sure. In the building of this hatcher new ideas have ruled and have actually simplified the machine until the beginner with a "Continuous" Hatcher gets as good hatches as an "old hand" with any other machine. Our new catalog explains how this wonderful machine is made and how it works continuously—it will interest you—you'll wonder

why you did not think of it before. Write for free copy.

HACKER INCUBATOR & MFG. CO.

3101 N. Jefferson Ave., St. Louis, Mo.

earth does a man who doesn't keep chickens want with five poultry papers?") Here is the point. I am going to keep chickens. I have been reading poultry literature for the past two years, but have not been situated so that I could keep chickens. I was very much tempted about a year ago to give up my business and go into chickens on an abandoned plant, but on sober second thought I gave up the idea. This spring I expect to move to a small town where I can keep half a dozen chickens. That is my idea of the proper way to start, thanks to the good advice of the poultry press. I want to keep either White or Buff Plymouth Rocks. Is there any choice for a beginner? Would it be advisable to start with mongrels until sufficient experience had been gained to handle the better stock? I am determined to keep pure breeds if I only have a trio.

I certainly have the theory down fine, and if I ever develop into a poultryman it will be due to the little investment I have made in the poultry papers.

Just one point more and I am done. I see advertised a number of times in the poultry papers, you give a column and a half to it in the current issue on your editorial page, the joining of the American Poultry Association, but I have yet to see the method of joining, the requirements, or the dues or fees required in order to become a member. Perhaps poultrymen generally know this, but I imagine there are numbers of "would be's" like myself who would like to be enlightened.

Thanking you for the privilege extended to subscribers which enables us to ask questions. P. D. S.

Philadelphia, Pa.

Answer:—You will find the White Plymouth Rocks more easy to breed; that is, the percentage of good-colored birds will be greater. Would not advise any one to start with mongrels. Start with pure bred stock or none. Any one desirous of becoming a member of the American Poultry Association should make application to the secretary, Mr. T. E. Orr, Beaver Falls, Pa. The membership fees are \$2 for yearly members or \$10 for life membership. All applications for membership are acted upon at the annual meetings of the associations.

Cornell Incubators and Peep-O-Day Brooders

A Visit to the Cornell Incubator Factory at Ithaca, N. Y., Where They Manufacture Everything for the Poultryman.

Written by Jas. W. Bell, Associate Editor AMERICAN POULTRY JOURNAL.

After many earnest solicitations from the managers of this concern we decided to make a visit and see for ourselves just how they put together the Cornell Incubator and of what kind of material it was made. We arrived at the factory in the midst of a snowstorm, on Monday, Jan. 9, 1906, and were welcomed by Mr. Denny, in that warm, whole-souled fashion that is so characteristic of him. After a short sojourn in the business office we started on a tour of inspection through the factory accompanied by Mr. Denny. And what a hive of industry we found.

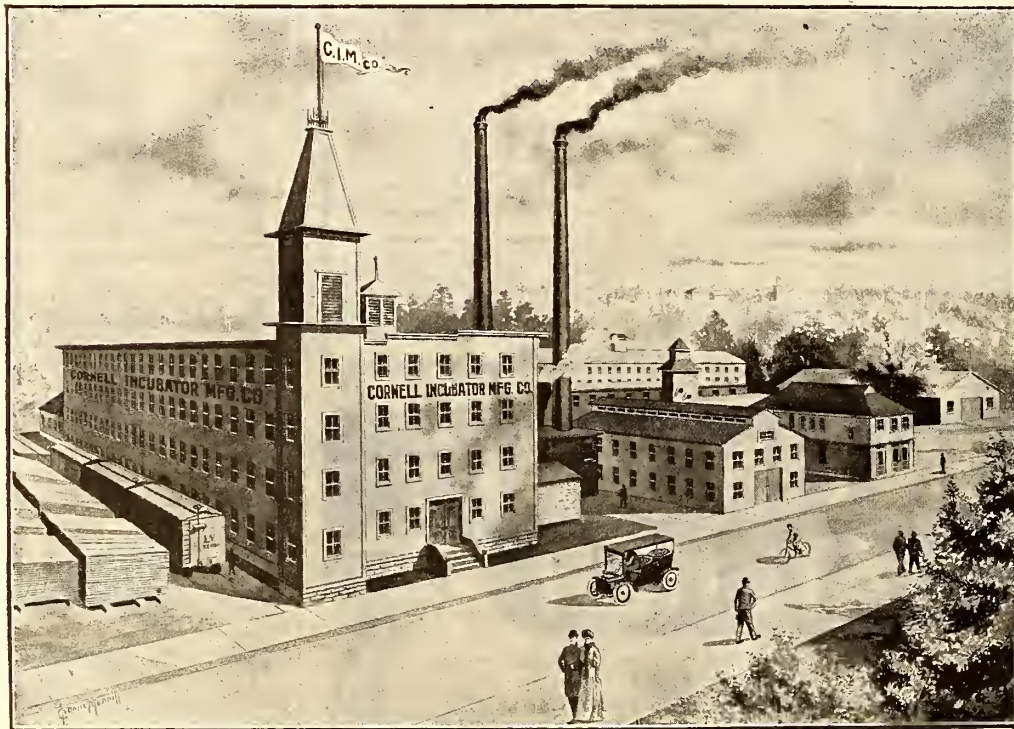

that no confusion is possible and the work moves along as though operated by clock-work.

Starting on the first floor of the factory, which is a long room, and contains the larger machinery, where the rough lumber is dressed, cut into the proper sizes and the numerous parts fitted together, from here we were conducted to the second floor where the assembling of the incubator is done, and it is here where we saw the process of incubator building in its different stages. From here we went to the finishing room on the

is a large two-story building, the first floor of which will be used as a store room for poultry supplies and the second floor, which at the time of our visit was being very highly finished in Georgia pine, will be used for the general offices of the company.

A GENERAL OUTLINE OF HOW THE CORNELL INCUBATOR IS CONSTRUCTED.

The Standard Cornell Incubator is a machine built for business—one that will give perfect results to the market poultryman who is using Incubators as a means to a livelihood as well as the ama-

VIEW OF THE CORNELL INCUBATOR FACTORY AT ITHACA, N. Y.

From basement to roof we traveled, and everywhere we found an army of men busily engaged on some section of an incubator or brooder. On the ground floor we saw the rough lumber coming in and on the top floor we saw the finished machines being crated ready for shipment. Here we found a set of men turning the legs for the incubators, and there another set of men joining the sides and ends of the machine and a little further another set of men putting on the bottoms, and still another section where the packing is put in. It seemed to us like an endless chain. But everything is so systematized

fourth floor, and here we watched the process whereby the splendid finish is put on for which the Cornell incubator is noted. But the outside appearance is not all there is to this machine, for the interior finish is of the same high standard and nothing but the very best of materials are used in their construction.

The utmost pains is taken with every part of the Cornell incubator to insure that every part is made and put together in the very best manner possible, and no part is slighted in the least. From the factory, we went to the new office building which is now nearly completed. This

teur breeder who is operating them for pleasure.

It is constructed on correct principles and embodies a balanced system of Heating, Regulation, Ventilation, Circulation and Supplied Moisture. Each individual part of this system is perfect in itself for the specific purpose intended, but it is essential that each part be inseparably connected one with the other in order to enable the whole to perfectly perform the act of incubation.

Cornell Incubators and Peep-O-Day Brooders have been shown at a number of the leading exhibitions throughout the

country, and have been awarded first prizes in actual experience with the following exhibitions:

Lewis & Clark Centennial Exposition, Portland, Ore., Oct. 26, 1905—Gold medal for incubators, brooders and poultry supplies; gold medal for best incubator in operation. *Our hatch was 90 per cent.*

Chestnut being a hard wood takes a handsome natural finish. Each machine is given a coat of paste filler, well rubbed and dried, then two coats of shellac and finally a heavy coat of wax rubbed to a satin finish. It makes a rich, handsome machine, considerably more expensive to finish than varnish, but possesses the great advantage of looking well in-

against a rabbit in the case of the incubator the glass front of the Cornell Incubator is as secure against the cold as any other part.

THE THERMOSTAT.

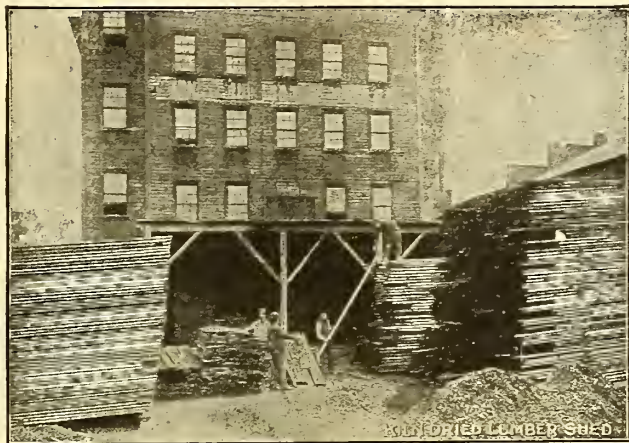

The quadruple action all metal Thermostat is composed of four leaves of zinc and two of steel. The construction causes all of the movement to be carried direct to the center, where it is delivered without loss of friction to the connecting rod, which precisely controls the heat in the hatching chamber. It is as sensitive and accurate as a Thermometer and positively indestructible. Comparative tests have proved that it excels any similar device that has ever been invented.

THE HEATER.

The Fire and Smoke Proof Heater of the Cornell is made of heavy galvanized iron, double seamed, flanged and riveted at all the joints. To properly stay and keep the metal walls in place, cast iron collars securely peened around the connecting pipes are used. The Heater is placed at one side of the Incubator, entirely clear of it, with the lamp 7 inches distant from the woodwork. The direct heat from the lamp flame does not pass into the hatching chamber, but is separated by double metal walls composing the lamp chimney, the fresh air intake and the escape flue. The lamp fumes and gases are discharged into the outer air through the last named, and cannot gain access into the incubator. The entire heater is encased by a laminated asbestos jacket 2¼ inches thick.

THE LAMP.

The Automatic Moisture Lamp is one of the exclusive features of the Cornell Incubator. It is made of heavy galvanized iron with an interior perforated ring half the diameter of the bowl, which braces the top and bottom and does away with the "bellows action" when pressing the lamp against the heater. There is a double top with moisture pads which automatically supply moisture into the egg chamber when required. It is securely held in place by an all metal lamp support.

KILN DRIED LUMBERUSED IN CORNELL INCUBATORS AND BROODERS

Dryden Fair, Dryden, N. Y., Sept. 19-22, 1905—First on incubators; 1st on brooders.

Elmira Fair, Elmira, N. Y., Sept. 18-22, 1905—First on incubators; 1st on brooders.

Poughkeepsie Fair, Poughkeepsie, N. Y., Sept. 26-29, 1905—First on incubators; 1st on brooders.

Hagerstown Fair, Hagerstown, Md., Oct. 9-13, 1905—First on best incubator in hatching; 1st on best incubator selling for less than \$40; 1st for best brooder selling for \$5 or less.

Richmond County Fair, Dongan Hills, S. I., Sept. 4-9, 1905—First on incubators; 1st on brooders.

Westchester County Fair, White Plains, N. Y., Sept. 18-23, 1905—First on incubators; 1st on brooders.

Danbury Fair, Danbury, Conn., Oct. 2-7, 1905—First on incubators; 1st on brooders.

LUMBER.

After experimenting with soft pine, Georgia pine, redwood, oak and chestnut, the Cornell Incubator Company finally adopted chestnut for the outer case, for the reason that when thoroughly seasoned and kiln dried it holds a glue joint better than any other lumber and is not affected by humidity or extreme heat.

The best grade of first class Virginia Chestnut, 1 inch thick, dressed down to 7/8, is used in making the panels and are put together with extra long tenons and mortises and carefully glued. It is impossible for the Cornell to spring a panel or open a joint in damp locations or in tropical climes.

The design of the Cornell embodies several exclusive features. One of the most noticeable and most important is the Patented Table Top which affords the operator clear surface upon which to place the eggs when turning or cooling them. It absolutely protects the Regulator Arm and its sensitive mechanism from outside interference.

Another feature is the piano fitting legs, which are readily attached and adjusted without tools or trouble.

definitely, as a mar or scratch may be readily rubbed out with a soft cloth.

INSULATION.

The double walls of the case are packed with cotton batting that has been made light and fluffy in a specially constructed picking machine. The top of the machine is protected by a laminated cotton batting and straw board packing. Layers of cotton batting alternating with sheets of heavy straw board laid tier after tier, snugly filling the entire space, form an insulation so effective that air cannot circulate through or around it and carry away any of the heat. The thorough system of packing and insulation makes it possible in an emergency to operate

SHIPPING DEPARTMENT.

the Cornell in an open shed, even during severe weather.

The front of each machine is provided with a Compound Door, both complete in every respect and screwed one onto the other with an air space between them. The edge of each door is fitted with felt so as to render it air tight all around, and as each door fits closely

THE CORNELL NURSERY.

The Cornell Nursery for chicks is situated immediately below the egg tray. As soon as released from the shell the chicks move forward attracted by the light and fall to the burlap frame and find a snug comfortable resting place until the hatch is cleaned up, when they are ready to be taken to the Brooder.

PRICE OF STANDARD CORNELL INCUBATORS.

No. 0 Standard Cornell Incubator, 64 hen eggs, 52 duck eggs, \$14.00.

No. 1 Standard Cornell Incubator, 128 hen eggs, 105 duck eggs, \$20.00.

No. 2 Standard Cornell Incubator, 232 hen eggs, 200 duck eggs, \$29.00.

No. 3 Standard Cornell Incubator, 364 hen eggs, 300 duck eggs, \$37.00.

THE CORNELL INCUBATOR.

THE PEEP-O-DAY BROODER.

Here also is manufactured the celebrated Peep-O-Day Brooder, a brooder that does the work and does it right, and the demand for this brooder is something enormous, and it is used from the Atlantic to the Pacific. The Peep-O-Day has been on the market for fifteen years and is used and recommended by nearly every Government Experiment Station and successful poultryman the world over. The Peep-O-Day brooder is one of the best and always has been one of the best since its conception. Thousands of unsolicited testimonials from the four corners of the world conclusively prove it, and it is strongly guaranteed by the Cornell Incubator Company.

In construction the Peep-O-Day Brooders are roomy, cheerful, convenient and carefully put together and are made in many different patterns and styles. All are equipped with the Peep-O-Day Lamp of malleable iron. This is the one dependable brooder lamp that has been invented to this date and it does perfect work under the most trying and adverse circumstances.

Next in importance to the incubator for hatching the chicks is the brooder which is to be their home the first weeks of their lives, and many poultrymen believe that right brooding is even more important than the incubating, they having found it easier to hatch chicks than to successfully carry them through the first period of infancy. Fully realizing the importance of this part of the work of chick raising, the Cornell Incubator Company bought the right, title and good will of the business of the "Peep O'Day" brooder, considered by its many thousand users to be the best and most common-sense brooder ever put upon the market. The fact that one of the foremost practical poultrymen in America, Prof. Gowell of the Maine Experiment Station, thinks them the best and is using forty (40) of them at the Experiment Station and sixty (60) additional on his own private poultry farm is the strongest kind of endorsement of their good qualities, and on occasion of a recent visit to him Prof. G. told us

he would purchase twenty (20) more Peep O'Days next spring for his own farm, making 120 in operation upon the two farms under his management.

The Peep O'Day was "right" when the Cornell Incubator Company acquired it, and they have continued to manufacture it along the same lines. They have added substantially to the patterns

carefully milled and securely put together with screws and cement wire nails. A coat of shellac, one coat of priming and the best quality of lead paint is used in finishing each brooder.

The cast and sheet metal parts are of the best material and japanned so as to effectively withstand the weather.

A perfect system of heating and ventilation provides the chicks with a mild, temperate, diffused heat under the hover; ample ventilation without draft in all parts of the brooder and correct warmth in the exercising room.

EASY TO CLEAN.

The Hover Casting is the only part that is stationary in the brooder chamber of the Peep-O-Day. The Exercising Room is free from all obstruction, making it easy to clean—a very important consideration when a large flock of chicks is to be cared for.

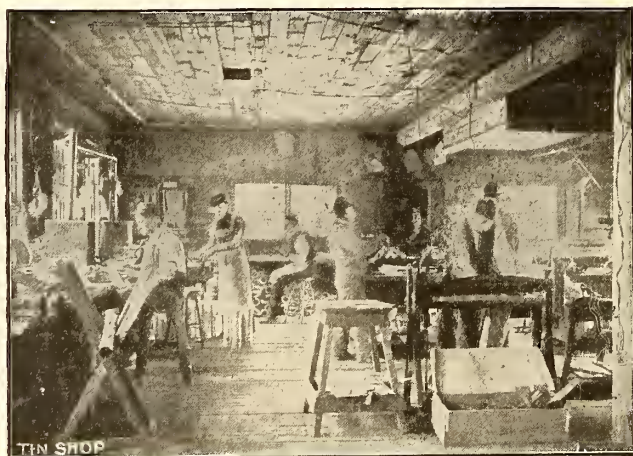

THE LAMP.

The Peep-O-Day Lamp is composed of two distinct parts—the oil fount of malleable iron comes in one solid piece and the lamp slide made of heavy sheet iron. The oil fount and the lamp slide are bolted together by means of screw collars. The neck of the oil fount, which fits into the burner, passes through an opening in the lamp slide provided for the purpose. When the lamp is complete and in position in the brooder, the slide acts as a floor as well as the outer wall of the lamp chamber which contains the burner only. The oil fount is exposed to the currents of outer air which continually circulate around it. This is the reason that the Peep-O-Day lamp is superior to every other device that has been invented for the purpose.

HEATING AND VENTILATION.

The system of heating and ventilation insures a continuous supply of fresh, warmed air to the chicks in the Brooder. The air enters through openings on either side below the floor of the brooder and over a metal diaphragm into which is peened the brass dome which forms the top of the lamp chamber. The pure, fresh air passes over the metal dia-

made, the newest being the 1905 Peep O'Day Outdoor Brooder and Colony House combined. This is convertible from a brooder within a "colony" house, with a sun-parlor apartment, to a movable colony house, it being built upon runners which facilitates its being drawn to fresh ground from time to time. In addition to the ever popular Peep O'Day the Cornell Company manufacture the "New Homestead" brooder, into which they have grafted some of the Peep O'Day excellencies, making it rank a close second to that brooder in point of good work done. The Peep O'Day Portable Poultry Houses, in three different patterns, have proved to be a popular addition to the line of poultrymen's goods, and when fitted up with the feed troughs, Peep O'Day

CORNELL INCUBATOR CO.'S TIN SHOP.

cage water fountains, nests, roosts, etc., of the Cornell Company's manufacture are complete in every particular and ready for occupancy.

LUMBER.

Selected, one inch, sound, white pine lumber, tongued and grooved, is used in making Peep-O-Days. The lumber is

phragm, is gradually warmed, finally acquires the proper temperature when it comes in contact with the heated dome, then rises into the hover casting and is uniformly diffused through a perforated metal cylinder into the circular hover. Should the hover temperature be too high the warmed air finds its exit through

openings in the cone register, which acts as a thermostat and is controlled by a slight turn of the hover; on the other hand, should the temperature be too low, close the register and the warmed air is retained under the hover. This perfect system of heating avoids warm spots in the brooder and prevents the chicks from crowding.

POULTRY FEEDS AND APPLIANCES.

The Cornell people manufacture everything for the poultryman from an incu-

nell company is another great boon to the poultryman. The Cornell "Feed-Saver" is something that should interest every poultryman, for it is not alone a feed-saver, but a money-saver as well. The Cornell Drinking Fountains, the Grit and Shell Boxes and many other useful and helpful articles for use in the poultry yard are the product of this large factory.

They are also handling a full line of poultry feeds, such as chick feed, laying

AMONG THE BREEDERS AT KANSAS CITY, MO.

At the Kansas City, Mo., Show, held January, 1906, the first prize Barred Plymouth Rock cockerel, belonging to E. E. Mitchell, No. 39 Agney street, Kansas City, Mo., was the leading attraction. He also won second prize hen. His lines of breeding for five years have produced winners and heavy layers, and his breeding pens from which he sells eggs are headed by high prized males and consist of show females.

Robert Mass, Rte. 4, Kansas City, Mo., won on his White Leghorns in the largest class ever shown in the West, at Kansas City Show, January, 1906; won first pen on cockerels, pullets and hens. He won as many premiums as all others. He gives special attention to producing the greatest layers of large white eggs. He has recently added all of John Tucker's stock to his flock.

The enviable record in Barred Plymouth Rocks of winning more prizes in the last twelve years in his own and his customers' hands than any other western strain is claimed by C. O. Bailey, of Camden Point, Mo. He has never shown a bird that he did not breed, as he states in his ad his "Queen of the West" holds the highest score of any hen ever shown. His record on pullets at Kansas City, 1906, has never been approached, as follows:

Second, third, fourth, fifth, sixth. The second losing to the first on a tie, his birds being overweight.

T. E. Quisenberry, of Slater, Mo., breeds Barred and White Rocks and White Wyandottes. His birds were winners this season at Kansas City, and he secured first at Missouri State Fair, at Missouri Central Show, at M. & F. Fair and other leading shows. At Kansas City his third prize cockerel tied first but lost on weight. He was conceded to be the cleanest colored bird ever shown there. He pays great attention to his breeding yards and has headed them all by winners and most large females that won in different shows.

M. W. Jones, of Lees Summit, Mo., made a record on his White Langshans at the big Kansas City Shows. In 1903 he won first, second, third, fourth, fifth, sixth pullets. In 1905 all firsts but one. In 1906 a clean sweep, winning all firsts and \$25 silver cup for highest scoring bird. George Wales pronounced this the finest exhibit of White Langshans ever shown.

R. F. McCully, of Lees Summit, Mo., classes his Andalusians and Barred Plymouth Rocks as egg machines, and he has made fine winnings with them at Kansas City, January, 1906, as follows: First, second, third hens, first, second, third cockerel, first, second, third, fourth pullet. His matings are especially fine at the present time.

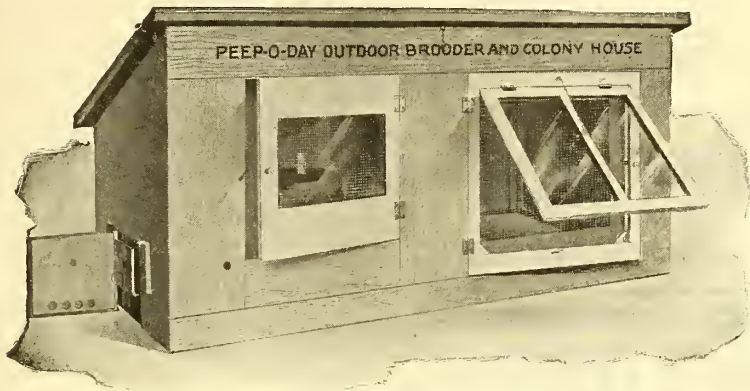

B. F. Seip, of Cameron, Mo., calls his Barred Plymouth Rocks "The Seip's Pride," and they are well entitled to this name. Mr. Seip holds the record of winning first at Kansas City, 1903, 1904, 1905 and second 1906, as cock bird. In 1905 he won first, second, third pullet, first and second cock, third hen. In 1906 he won first and fourth hen, second cockerel, first and fifth pen. He was offered \$50 for the second cock.

SALE NOTICE.

Owing to my continued poor health, I am compelled to give up my poultry business, temporarily at least. Therefore I have this day sold to Messrs. Robertson and Hollaud, New London, Iowa, my entire stock of Barred Rocks and Single Comb Buff Orpingtons, with the good will of my business. This sale includes my fine Barred Rock hen, pronounced by good judges to be one of the best if not the best hens in the West; also my other prize winners at the Iowa State Show, Monmouth, Ill., and New London, Iowa, shows all this winter, and as I know these gentlemen to be reliable men can say to any who wish to buy stock or eggs of either of these breeds if you will write them you will be treated fairly, and I can recommend them and their stock in in every way. Yours truly,
Morning Sun, Ia. J. E. DE LONG.

The Morgan Poultry Farm, of Beloit, Wis., has issued one of the finest catalogues, describing their Single Comb Buff Leghorns, that has ever come to our office, and every lover of these fowls should send for a copy.

James P. Carter, of Shelbyville, Ind., is one of the breeders of the United States that breeds America's greatest production, Barred Plymouth Rocks, exclusively. At the Indiana State Fair, 1904, he won first, second pullet, second cock, first pen.

PEEP-O-DAY OUTDOOR BROODER AND COLONY HOUSE.

bator to a leg band, but space will not permit us to enumerate them all here; but we do desire to call our readers' attention to some of their more recent inventions, one of them being their three-compartment dry-food hopper, the front and feeding-tray of which is made of sheet iron and should last a lifetime. An admirable feature of this food-hopper is a hinged cover (also of sheet iron) which shuts off the feeding tray entirely. This should be seen to fully appreciate its worth. The trap-nest made by the Cor-

feed, scratching feed, animal meal, beef scraps, etc. They also manufacture lice killer, put up in both powder and liquid form. In fact everything that the poultryman requires is manufactured or handled by this enterprising concern and a day put in looking over their plant is a day well spent and is an educator for anyone.

Their new catalogue has just been issued and will be sent to anyone asking for it, if the AMERICAN POULTRY JOURNAL is mentioned.

BIG WINNINGS AT CHICAGO.

Theo. Ambrosius, Collinsville, Ill., the noted breeder of White Wyandottes, won, as usual, at the great Chicago show. His first-prize cockerel was the talk of the show, most fanciers pronouncing him almost perfect. In color this bird is perfect from the quill to the tip of the feather—the best shaped cockerel in the whole show, without any exception. His second prize hen was marvelous in shape and color. Taking his exhibit as a whole, it was never beaten in any Chicago show. He also won third cockerel, third pullet, sixth cock, five specials and two silver medals. The display was great; his birds looked as even as peas in a pod. His last year's winnings are too well known to need any mention. Mr. Ambrosius is one of our people. Any one sending to him for stock or eggs will be honorably treated. He is well equipped to fill all orders and money has not been spared to bring his flock to the highest standard. Send for his egg circular and mention the AMERICAN POULTRY JOURNAL.

bird at any price. One of the noted judges made the remark that this bird was the best he had seen this season. His other winners are almost as good. Mr. Bradshaw is one of the oldest White Leghorn men, therefore his former winnings, especially his winnings at the World's Fair, are too well known to need any mention. He has a farm consisting of 160 acres, well adapted to poultry. Anyone interested in fine stock or eggs should write Mr. Bradshaw.

A. W. Davis, Big Rock, Ill., breeder of Golden Wyandottes, won the following at the Chicago show, January, 1906: First, third and fourth cock, second, third and fourth hen, second cockerel, second and fifth pullet, first and third hen. His first-prize cock bird was a very fine specimen. Space will not permit to describe this grand bird. The females in his pen were so even in shape and color that it would be hard to decide which one was the best. Mr. Davis is an old breeder, honest and responsible. Any one interested should write him.

H. S. Garlinghouse, of Canon City, Colo., won at the recent show held in Denver, Colo., on his S. C. White Leghorns as follows: First cockerel, first pen, second cock, second, third, fourth hen, third pullet, and fourth pen. On Barred Plymouth Rocks: Fourth cock, fourth cockerel, fifth pen. On Barred Plymouth Rocks: Second pullet, third cock, third cockerel, score 95; fourth hen and fifth pen, in a class of 170 birds. Also Chamber of Commerce \$50 cup for best pen of S. C. Brown Leghorns.

Mr. Harmon Bradshaw, Lebanon, Ind., made the best winnings at the Chicago show, namely, first, third, fifth cockerel, first and second pullet, third hen, first pen. Mr. Bradshaw was offered a large sum of money for his first prize bird, but owing to the fact that he wants this bird for one of his own breeding pens he would not sell this

ROYAL BLUE BARRED ROCKS

Young's Strain S. C. White Leghorns

I HAVE NO OTHER BREEDS

My strain again for the sixth consecutive year shows its superiority by winning more prizes at Madison Square Garden, N. Y., in the strongest competition ever known, than all others combined, including seventeen specials, and again winning the National S. C. W. Leghorn silver cup. Two weeks later I almost duplicated my wonderful win of last year at Boston by winning nine prizes on nine entries against the most prominent breeders of the East. My winnings for 1906, at the world's two greatest shows, are as follows:

New York Cocks, 1st, 3d, 4th; cockerels, 1st, 4th; hens, 2d; pullets, 1st, 2d, 5th; pen, 4th.

Boston Cocks, 1st, 2d; cockerels, 1st, 2d; hens, 1st, 4th; pullets, 2d, 3d; Pen, 1st.

This record has never been equaled by any other Leghorn breeder in America. Stock and eggs for sale at all times. 1906 mating list free. D. W. Young Highland, N. Y. and Ridgewood, N. J.

Address D. W. YOUNG RIDGEWOOD, N. J.

Eight Prizes at Chicago S. C. WHITE LEGHORNS EXCLUSIVELY

At the great Chicago Show, Jan., 1906,

I won first, third and fifth on cockerel, first, and second on pullet, fifth on cock, third on hen, and first on pen. Stock for sale.

EGGS \$3.00 Per 15; \$5.00 Per 30

**HARMON BRADSHAW
BOX A, LEBANON, INDIANA**

FERTILITY OF EGGS AND HOW TO GET THEM.

Do Not Feed Cheap or Damaged Grain
—Give a Variety of Feed and Make Them Scratch for It—Do Not Force Egg Production With Patent Medicines—Mating the Breeding Pen
—Give the Breeders All the Room Possible.

My general rules for obtaining fertile eggs are never breed a bird that has or had roup rheumatism or throat trouble; breed only from strong, healthy birds, standard size, weight and color. My specialty is White Wyandottes, and I am a Fuddy-Duddy about them. I never feed cheap or damaged grain, it is dear at any price. Clean your bone cutter after use each time; in hot weather especially. Always get fresh bones, never use any left-overs. Weigh your birds occasionally. When they are laying their heaviest you may have to increase their feed; I do if they get light weight. Give a variety of feed and make them scratch for the most of it. Do not forget to water regularly. Clean

Prize winning Barred Plymouth Rock hen, bred and owned by F. M. Dabbert, Wheaton, Ill.

dropping boards every morning. Give them clean litter twice a month at least. Keep down the lice.

Do not force egg production with patent medicines or egg producing stuff. This is no knock at those things advertised, but not for the breeders. Do not neglect them for a day. Do not forget their green food or steamed clover. Do not overcrowd. Do not use a male or female too young. Follow these rules and you will be happy, for the chicks will come out good and strong.

Many reasons are given as to the cause of poor hatches, after a long, severe winter. I start in the fall to get my birds in shape for the breeding season. I am one of the kind who takes the lantern about 9 o'clock at night to see if everything is all right, and if all are on the roost, and my wife says to see that their heads are all turned one way, as it makes them look better.

As soon as the old birds are through moulting I commence to feed them for eggs. I feed oats in the morning, a quart to 8 or 10 females, and one male in a litter of straw. At noon I feed a mash two-thirds bran and one-third

middlings, with cut clover that has been steamed by pouring boiling water over it. I use the liquor from the clover to mix the mash, and then sometimes I mix the clover with the mash. I generally feed the mash before I eat my dinner, and then after dinner I put the clover in their feed trough. I also scatter a quart of corn and wheat mixed about half and half of each in their litter. If the weather is very cold I omit the wheat and feed corn only. I find that feeding in a straw litter that it lasts longer than leaves, and they will work it from one end of the scratching shed to the other, looking for the small grains. I feed millet seed mixed with their corn and wheat, two or three times a week for a change. I keep grit and charcoal before them all the time; they eat almost as much charcoal as grit. I take the fine charcoal from the bottom of the box and mix it about once a week in their mash. I feed green cut bone twice a week at noon, but do not feed potato peelings. I cut up onions and turnips for a change from cabbage. I hang a head of cabbage up for them to work on and keep busy; they usually eat it stalk and all. I do not feed this in one day, but as a good cook would get up her meals. I keep them guessing as to what their next meal will be. I do not overfeed them one day and let them go hungry the next. I change the water twice a day.

I commence this treatment about the first of November, young and old alike. I only use strong, healthy birds to breed from, and have not lost one from disease after maturity for over two years. I used to separate the males from the females after the breeding season was over, but do not any more, as I find the males are not so cranky after the first of July until cold weather sets in, and the fertility of my eggs are as good as when I separated them. I use cockerels only that have attained their full growth, and try to use them with hens in their second year. There are very few barren hens among my White Wyandottes, or I have found very few in the last ten years I have been breeding them. Some of them get rather fat, but I do not see but what their eggs are as fertile as some that are a little under weight. I weigh my birds occasionally during the breeding season. I think it is a good idea to see if one is feeding enough or not.

Now, to the breeding pens. I generally mate them up the last of January or first of February. I give as few as six to an old bird, say in his third year. I give him good strong pullets, commencing to lay their second clutch of eggs. Experience has taught me a pullet not forced for egg production is a better breeder at this time than one just commencing to lay. Some breeders or writers claim the late matured pullet is the best for a breeder; for me the one that has matured early and has proved herself a winter layer. I put 8 or 10 hens with a strong, vigorous cockerel, and I am very seldom wrong when I gauge his starning or ability. I know what his sire stood and so expect the same from him. As to a hen being in condition, too much is laid at the door of condition. If a hen is well and has not been doped with condition powders or nostrums to force her to lay unnaturally, I claim when she commences to lay she is in condition to breed, and if her eggs were fertile last

STAY WHITE WYANDOTTES

that have won more prizes at NEW YORK AND BOSTON than any other strain. I have been offered \$500 for my 1st Prize Cockerel at New York 1904. My 1st Prize Pen at Boston 1905 was the admiration of all White Wyandotte fanciers.

EGGS from the whitest and best breeding pens: 1 setting \$5; 2 settings \$8; 3 settings \$10. For the best White Wyandottes write. (Ad on back cover).

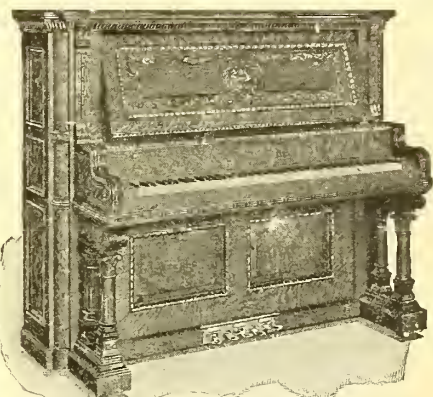

A. C. HAWKINS : Lock Box 25, Lancaster, Mass.

WING PIANOS

Are Sold Direct From the Factory, and in No Other Way

You Save from \$75 to \$200

When you buy a Wing Piano, you buy at wholesale. You pay the actual cost of making it with only our wholesale profit added. When you buy a piano, as many still do—at retail—you pay the retail dealer's store rent and other expenses. You pay his profit and the commission or salary of the agents or salesmen he employs—all these on top of what the dealer himself has to pay to the manufacturer. The retail profit on a piano is from \$75 to \$200. Isn't this worth saving?

SENT ON TRIAL
Anywhere We Pay Freight
No Money in Advance

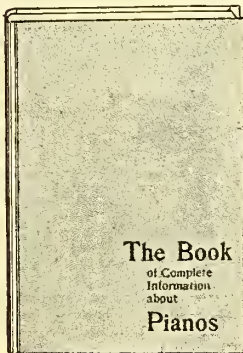

We will place a Wing Piano in any home in the United States on trial, without asking for any advance payment or deposit. We pay the freight and all other charges in advance. There is nothing to be paid either before the piano is sent or when it is received. If the piano is not satisfactory after 20 days' trial in your home, we take it back entirely at our expense. You pay us nothing, and are under no more obligation to keep the piano than if you were examining it at our factory. There can be absolutely no risk or expense to you.

Do not imagine that it is impossible for us to do as we say. Our system is so perfect that we can without any trouble deliver a piano in the smallest town in any part of the United States just as easily as we can in New York City, and with absolutely no trouble or annoyance to you, and without anything being paid in advance or on arrival either for freight or any other expense. We take old pianos and organs in exchange. A guarantee for 12 years against any defect in tone, action, workmanship or material is given with every Wing Piano.

Small, Easy Monthly Payments

In 37 years over 40,000 Wing Pianos have been manufactured and sold. They are recommended by seven governors of States, by musical colleges and schools, by prominent orchestra leaders, music teachers and musicians. Thousands of these pianos are in your own State, some of them undoubtedly in your very neighborhood. Our catalogue contains names and addresses.

Mandolin, Guitar, Harp, Zither, Banjo—The tones of any or all of these instruments may be reproduced perfectly by an ordinary player on the piano by means of our Instrumental Attachment. This improvement is patented by us and cannot be had in any other piano. WING ORGANS are made with the same care and sold in the same way as Wing Pianos. Separate organ catalogue sent on request.

You Need This Book

If You Intend to Buy a Piano—No Matter What Make

A book—not a catalogue—that gives you all the information possessed by experts. It tells about the different materials used in the different parts of a piano; the way the different parts are put together; what causes pianos to get out of order and in fact is a complete encyclopedia. It makes the selection of a piano easy. If read carefully, it will make you a judge of tone, action, workmanship and finish. It tells you how to test a piano and how to tell good from bad. It is absolutely the only book of its kind ever published. It contains 156 large pages and hundreds of illustrations, all devoted to piano construction. Its name is "The Book of Complete Information About Pianos." We send it free to anyone wishing to buy a piano. All you have to do is to send us your name and address.

WING & SON
350-395 West 13th St., New York

Send to the name and address written below, the Book of Complete Information about Pianos, also prices and terms of payment on Wing Pianos.

Send a Postal To-day while you think of it, just giving your name and address or send us the attached coupon and the valuable book of information, also full particulars about the WING PIANO, with prices, terms of payment, etc., will be sent to you promptly by mail.

WING & SON, 350-395 West 13th St. New York

Cut out this coupon and mail to us after writing your name and address at bottom. We will promptly mail book and other information.

season, then you can count on them being good this year; that has been my experience. But if a male has been overworked his first year in the breeding pen, then you can look for few fertile eggs and weak, puny chicks. What I mean by overworked is too many females to one male. I have noticed of an evening, just before they go to roost, that the male as a general thing will serve every female that is laying in his pen. Now, if he has 15 or 20 females that is too much for a bird in the American class. Of a morning is when he plays favorites, in the evening never to my notion or observation. So much in the breeding pen depends on one's success or failure to produce as good stock or better the following season. I never use a bird with crooked toes or back, no matter how good it is other ways. I try to use birds that I can take out of the pens any time and take them to the show and they would score in 90 or better, and have done it time and again. This shows I keep them in condition. When possible I

BLACK ORPINGTON COCK.

Winner of first prize at Madison Square Garden, New York, 1905. Owned by Willow Brook Farm, Berlin, Conn.

get fresh horse manure in March and April to let them dig in, but never throw their feed in it. It seems to be an invigorator to them; they never seem to tire of it. It has properties that are thrown off and inhaled by them. Working in it seems to increase their appetite (not that mine ever need one, they are always ready for their feed). I throw it in one corner of the scratching shed and put up a board so they cannot mix it with their litter. I only use this two months in the year. If it dries out too much I sprinkle it in the evening, just enough to moisten it.

I never use any patent egg producers or powders to fertilize the eggs; that is the male's work. If the shells are thin, I put oyster shells in with their grit, but when I use clover I never have any trouble with soft-shelled or thin-shelled eggs. I pick the females as near alike as possible and take a male that is strong in points where they may be weak. I find this gives the best results. My White Wyandotte females' legs or shanks seem to tend to small bone, so I always pick a cockerel with heavy boned shanks. Some want

DID YOU KNOW THAT THE WHITE ROCKS

That have won the big prizes and sold for the big prices at the NEW YORK show for fifteen years were the product of my strain! They were descendants from sports from the ROYAL BLUE BARRED ROCKS and inherited the winning habit that made the ROYAL BLUE STRAIN FAMOUS. I can sell you eggs and birds that will produce the

Kieffer Pears are the money bringing kind. Plums, Cherries, Grapes, Asparagus. Seven million Strawberry Plants grown on new soil. Well rooted and free from insects.

All stock guaranteed to arrive in fine condition everywhere. Send for free catalog in colors.

Harrison's Nurseries, Box 65, Berlin, Maryland.

Every up-to-1906 poultryman should watch closely the weight of the poultry he sells as well as the feed he buys. We make scales especially designed to weigh the dressed poultry and also the bags of feed. To keep up with the procession the poultry raiser must keep tally of the increase in weight when cramming for market. JONES scales will give him absolute proof of the comparative feeding value of the various rations. We make every size of scale from the smallest postal balance to the largest hay, stock, and wagon scale. Our forty years experience as scale builders enables us to furnish the JONES high grade scale at the lowest possible price. For particulars and delivered prices JONES HE PAYS THE FREIGHT

write, JONES OF BINGHAMTON, Box 363, Binghamton, N. Y

a heavy and some a light bone. I try to breed a medium shank. I never use a male with the least bit of white in ear lobes, and a female must be very good if I use her if she has any white in ear lobes.

As to feed having anything to do with the coloring of feathers is in my opinion, "Nit," for birds bred and raised in the same yards, fed the same feed and get the same care. One will show brassiness and others will not turn to amount to anything, and some males will hold their color in the hottest sun. This is one of the hardest defects to overcome in a white bird. Last year I had a female that had a single comb, but was a beauty in shape and size, but her feathers on back and wings, in the sun, looked like steel and brass mixed. Now those feathers made their appearance in her last molt. She was the only one out of 84 young ones that was this way, so it could not have been the feed, but a freak of nature. Always use as white a male as possible, for I think it is in the blood as much as anything; the brassiness I mean.

Now for the housing, that depends on the space one has and how many birds one wants to keep for breeding and how many surplus cockerels and pullets to fill one's orders for January

and one male should be 10x16. If one is crowded for space, he can have a dropping board 18 inches from the floor fastened to the back wall of the house and have a burlap curtain to drop down over the front of roosts in zero weather, and have scratching shed and roosting room all in one. With a canvas drop curtain they will have all the ventilation they need. I use a self feed grit and shell box; they do not waste so much. I feed the mash in a trough and scrub it out occasionally. I have had only to replace one setting of eggs in the last three years, and have not received any complaints, so they must be pretty good. One woman wrote this spring that she got twenty-eight out of thirty eggs and was so sorry

the other two did not hatch.

My birds are never on the ground until the last of March or first of April. Then I let them out in their runs, which has been all cleaned up before they are let out in them. It does them no good to be out in the snow and cold, and it checks the output of eggs. Sow oats or rye in the runs before you let them out, if possible. It helps to purify the ground. Rye is the best, as it is not so liable to rot in the ground as oats. Have your runs as large as possible.

I am writing from back yard experience on city or town lots. One must be clean about the premises or failure is his.

I also breed best prize winning White and Golden Wyandottes, White and Brown Leghorns, Turkeys and Waver Fowls. Largest poultry farm in Ohio. At the late Chicago show won twenty-seven firsts, one third and six specials on thirty-one entries. Write

CHAS. McGLAVE New London, Ohio

First prize Golden Wyandotte pullet at Chicago, January, 1905. Owned by A. W. Davis, Big Rock, Ill.

and February. Give the breeders all the room possible; give them plenty of light and air. I use a canvas drop curtain on south side of scratching shed and am in no hurry to roll it up in the morning when the weather is cold; if it is very cold I do not roll it up at all. They do not huddle up in a corner, but work in the litter and get an appetite for their dinner.

The dust box is an important fixture. I sieve some coal ashes and mix it with road dust and Persian insect powder, and they dust themselves better and more often than I can. Use only enough of the ashes to lighten the road dust. It does not dirty their plumage as much as when too many ashes are used. Have your dust box where the sun will shine on it in the afternoon. I find they wallow more in it in the afternoon than in the morning.

The scratching shed for eight or ten

Classified Ads.

Under this heading ads will be inserted for five cents per word each month for less than three months, three cents per word for three months or longer. Changes in copy allowed every three months. Numbers and initials count as words. Commencing with the January, 1914 issue, all ads will be inserted under **classified headings**. No ads accepted at less than an average of 50 cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Copy for classified ads should reach us by 19th of month preceding date of issue. Write your copy plainly, as upon this the correctness of your ads largely depends. AMERICAN POULTRY JOURNAL is furnished every advertiser during the time his ad is running. **Forty thousand per month.** We guarantee an average monthly circulation of 40,000 copies of AMERICAN POULTRY JOURNAL. When placing your ads remember that advertisers of Classified Ads get better returns from AMERICAN POULTRY JOURNAL than from any other poultry journal—none excepted.

On writing any of these advertisers mention A. P. J. It helps you and doesn't hurt us.

RING'S WHITE ROCKS AND WYANDOTTES

are still winning the cream at the big shows. Fourteen first prizes last season at Chicago, Detroit and Lansing, including four firsts at Chicago on five entries of White Rocks.

DETROIT, 1906, White Rocks won 1st and 2d cockerel, 1st, 2d, 3d and 4th pullet, 1st and 3d hen, 2d cock and 1st pen in hottest class ever shown in Detroit. Also A. W. P. R. Club Cup for best display, and Ivory Soap Cup for best white bird, won by 96 point pullet. White Wyandottes won 1st hen, 2d and 4th pullet, 3d ckl., 2d pen. This winning quality is in the blood. Try some of his stock and eggs, it will pay you. Eggs after February 1st.

CHAS. H. RING, :: R. F. D., Decatur, Mich.

Member Advisory Board, American W. P. R. Club :: State Vice-President, National W. W. Club

DOOLITTLE'S Partridge Wyandottes

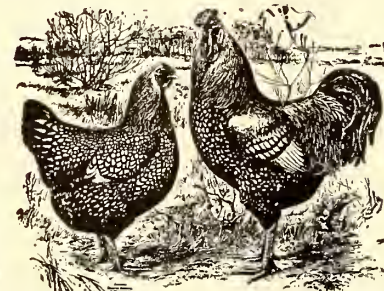

They always win. On three adult birds entered at Madison Square Garden, N. Y., a telegram from the secretary says first cock, first and second hen. These probably carry with them two \$50 championship silver cups and four silver medals.

At World's Fair, 1904, eleven prizes on ten entries, including all but one possible first. Let others magnify their winnings as they may, the fact remains they have always lead; they will always lead.

Birds for sale at reasonable prices for line bred champions. The handsomest and most complete catalogue to date, with color plates and telling how to mate and breed Partridge Wyandottes, mailed for 10 cents in postage stamps.

W. A. DOOLITTLE The Partridge Wyandotte Man SABETHA, KANSAS, U. S. A.

1906 CATALOGUE FREE

DAKIN'S W. WYANDOTTES

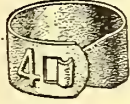

PREMIER STRAIN OF STANDARD TYPE

Bred and raised more winners of the very highest awards at New York (Madison Square), Boston, Chicago and St. Louis than any other. This is a fact. Some know it—you ought to. You can't get good results from cheap inferior stock, that's sure. Limited number of stock, and eggs for hatching.

JOHN L. DAKIN

ROXBURY, MASS.

This is it.

SHAW'S CONVENIENT LEG BAND

pleases everybody. You'd discard any other marker made and use it if you saw it. Send for free sample.

It Snaps On. It stays, it's aluminum; it has large raised figures; it's easy to read. **Prices:** 12 bands, 20c; 30 for 45c; 60 for 75c; 100 for \$1.00. I'll send you letters from poultrymen who know, with samples if you ask it.

H. O. SHAW, Box 103, GRINNELL, IOWA.

To-Day!

SEND A POSTAL OR LETTER and ask for AMERICAN POULTRY JOURNAL'S 1906 subscription offer. Never have we offered so much before.

For six subscriptions you are allowed over one-third commission, and are given a set of four beautiful colored pictures. These same subscriptions also count in a chance toward winning the \$600.00 Piano; \$100 cash; \$50 worth of Fowls; Incubators; Brooders; Eggs, etc., there being over fifty of these grand prizes. One of our subscribers says, "I do not see how you can afford to do it." But we want subscriptions and lots of them; that is why we are making such liberal offers. Our space is too small here to explain all we give to every one who helps us. We hope every reader, who reads this, will send for the Offer at once. It will be a happy new year for both of us.

325 Dearborn Street :: :: Chicago, Illinois

System in Poultry Practice

BY JAMES Shackleton.

30 Chapters, 147 Pages, One Dollar, Postpaid.

May 1, 1905. Sales of this book since Sep. 1, 1904—eight months—are larger than for preceding 18 months. It is meant to appeal to common sense and evidently succeeds, for increase is chiefly in places where it has gone before. California always took more than any other state, and now takes more than any other three. Canada has many and now takes more than any state but California. Even Australia takes many. This book has been sold in every state of the Union, except two southern states, and Alaska. In Canada, Newfoundland, P. E. Island, New Brunswick, Nova Scotia, Quebec, Ontario, Manitoba, Assiniboia, Alberta, British Columbia and Vancouver Island. In Cuba, Hawaii, Philippines. In England, Belgium, Germany, Australia, New Zealand and China. It is meant to be of equal value in every climate, for whatever purpose fowls are kept, and evidently is so regarded. Sales are increasing rapidly everywhere. Enthusiastic testimonials are plentiful.

The book and American Poultry Journal for one year for \$1.10, new or renewal.

JAMES SHACKLETON, Box A 12, Milburn, New Jersey

WHITE WYANDOTTES!

Bigg's White Wyandottes have been line-bred since 1897—bred for Wyandotte form and color and for egg production.

Shape and color characteristics have been firmly fixed. These Wyandottes are the low-down, blocky kind, in weight exceeding somewhat standard requirements.

Unapproached in size, style and finish, they have never failed to win the coveted prizes in the strongest competition, east and west. Every bird line-bred and pedigreed and sold on approval. Eggs: \$3 per setting; two for \$5; three for \$7.

HOUDANS

Line-bred since 1874. Acknowledged standard of Houdan excellence in America.

Eggs: \$3 per setting; two for \$5; three for \$7.

THOS. F. RIGG

IOWA FALLS, IOWA

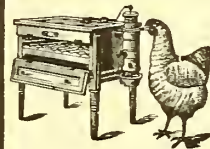

200 Chicks Like This

will soon develop into two-pound broilers worth \$60 in any market, or will form the nucleus for a large poultry farm. Any man or woman can make good money the year round raising poultry. It's just a question of getting started. You don't need expensive grounds or buildings.

A warm cellar or garret—a little patch of ground and

THE

Wooden Hen

\$12.80

is all that you need to begin with. This 200-egg incubator will more than pay for itself with the first hatch. The wooden hen costs much less and is better than dozens of high-priced hatchers. It will hatch every fertile egg. Write for free catalogue and full information regarding the care and growth of incubator chicks.

GEO. H. STAHL, Quincy, Ill.

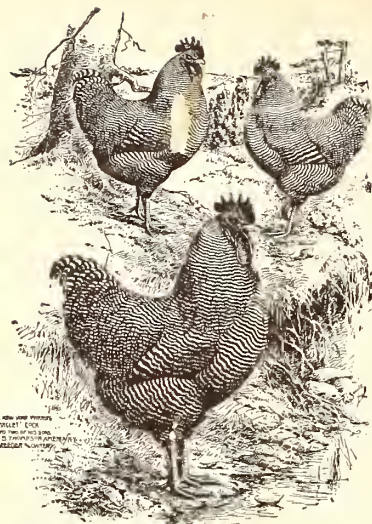

A TIME TO BE WISE IS ROUP TIME, ITS HERE

Don't think it will care for itself. It will take care of your whole flock if left alone. Don't fool with unreliable remedies.

DEATH TO ROUP Will Kill ROUP

It has been on the market eighteen months without a single report of failure. It's guaranteed to cure. Enough for 30 gallons for 50c. postpaid. Supply agents wanted. Write for booklet.

M. E. SULLIVAN :: :: Box L, QUINCY, OHIO

A "Ringlet" 1st Prize New York Cock and two of his Sons.

"RINGLETS" Soar Still Higher.

At the Imperial Show of the Nation
Madison Square Garden, New York

E. B. THOMPSON'S BARRED P. ROCKS

Stamped their superiority in the most decisive manner, winning again the Superb Challenge Trophy, value \$100, for best cock, cockerel, hen and pullet. This is the third time the "Ringlets" have won this grandest of all trophies, giving them now absolute and final ownership. In this "COLOSSAL CONFLICT" the "Ringlets" lifted the great National Sweepstakes Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. My Barred Rocks won double the number of silver cups and special prizes of any competitor, including the sweepstakes special in gold for best Plymouth Rock on exhibition male or female any variety.

The "RINGLET" World's Record of four years in succession at New York is a page of history. The "RINGLET" World's Record of first on exhibition pen at this great show, three years in succession, is the undisputed champion.

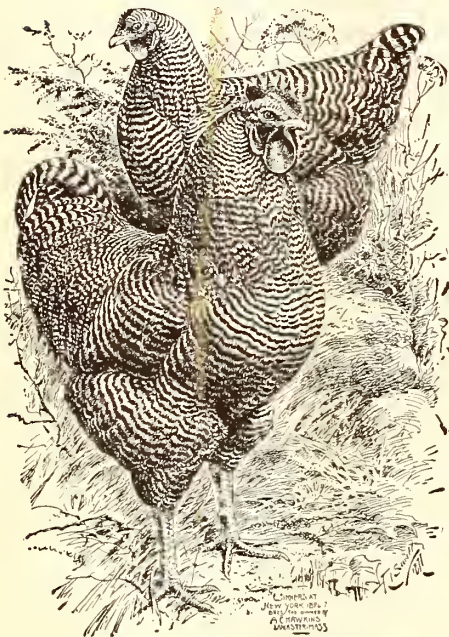

The "Ringlet" clean sweep 1st, 2d, 3d, 4th and 5th prizes on pullets has never been approached at Madison Sq. Garden, and stands alone and unequalled

The "Ringlets" have won at New York—exhibited by me personally—a grand total of 101 prizes. 48 of these are 1sts and specials, being more than double the number of 1st and special prizes won by any competitor in the history of the show.

GRAND STOCK FOR SALE

In any number. Rare bargains in yearling breeders in lots of a trio or 100. Show birds fit to win in the fastest company—600 choice breeding cockerels. Richly illustrated 36-page catalogue on application. It is full of original illustrations of New York winners from life. Eggs from finest exhibition matings. One setting \$3, two settings \$9, three settings \$12, four settings \$15. Address

VOL. 37 MARCH 1906 NO. 3

AMERICAN POULTRY JOURNAL

Published monthly by American Poultry Journal Pub. Co., 325 Dearborn St., Chicago, Ill.
Geo. G. Bates, Pres. and Editor. 5c a copy; 50c a year.

LEARN TO RAISE POULTRY PROFITABLY

MASTER this interesting vocation. Do not be content to merely "keep" poultry. Do not stop short of "doing it right." Then the results are bound to be gratifying. If you keep poultry, **make it pay and pay well.** Quit haphazard work and don't trust to luck. Conduct your poultry operations on established, money-making principles. Leave old fashioned methods to the unprogressive. Learn to avoid costly mistakes.

Poultry culture is worth studying. The profits are large and absolutely certain. No other branch of farm industry will pay equally big dividends on the comparatively small investment required. It can be successfully followed by both men and women.

You cannot make a complete success of the work, however, unless you are thoroughly prepared.

Our original correspondence course of instruction is complete in every detail. It clearly explains every phase of the subject from beginning to end. Nothing is left uncovered. Thousands of dollars and years of hard work by some of the greatest poultry specialists in the country have been spent in perfecting it. The authors are men who know what it means to get right out with their fowls and conquer the obstacles which confront poultry raisers. You are not asked to experiment with fine cut theories emanating from an office desk.

The lessons are sent regularly to your home. You can study the course at night and put the principles into practice next morning. The benefits are immediate. The instruction of each student is conducted individually and is made to suit each separate case. Anybody, anywhere, whether beginner or old hand at the business should take a course of instruction with us. The study can be taken up at any time. Our teaching is an unqualified success. We have placed numbers of students in

Good Paying Positions.

We are constantly in receipt of requests from owners of poultry farms, located in all parts of the country, asking us to recommend properly qualified men as managers. Many of these positions pay large salaries, some include a liberal business interest also. Qualify yourself for one of these lucrative positions. We can place you the moment you are ready.

Write for interesting free literature. Do it NOW.

Petersen's Houdans

Reign Supreme at the Nation's Greatest Shows

My record has never been approached by any breeder.
BOSTON, 1900. In world famous competition, 135 Houdans exhibited. I won 1st cock, 1st and 2d pullet.
BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.
BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials.
BOSTON, 1905. We won every important prize. 1st and 2d cock, 1st, 2d, 3d cockerels, 1st, 2d and 4th hen, 1st, 2d, 3d and 5th pullets; \$100 champion challenge cup for best male; American Houdan Club Cup for best cock, hen, cockerel and pullet. All shape and color ribbons; gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition.

ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdan's.
 Also highest honors at Madison Square Garden, Philadelphia, Pan-American Hagerstown, Toronto. No matter where you want to exhibit, no matter what the competition, I can furnish the winners. Photographs on application. Eggs in season.

REV. C. E. PETERSEN, Pres. Houdan Club, Drawer 12, Franklin, Maine

BENNINGTON'S Royal B. Orpingtons

Win at Gloversville 1st pen, 1st cock, 1st hen, 1st chl., 3d pullet and specials. Remember he breeds his winners and has some fine ones for sale.

To-Day! SEND A POSTAL OR LETTER and ask for AMERICAN POULTRY JOURNAL'S 1906 subscription offer. Never have we offered so much before. For six subscriptions you are allowed over one-third commission, and are given a set of four beautiful colored pictures. These same subscriptions also count in a chance toward winning the \$600.00 Piano; \$100 cash; \$50 worth of Fowls; Incubators; Brooders; Eggs, etc., there being over fifty of these grand prizes. One of our subscribers says, "I do not see how you can afford to do it." But we want subscriptions and lots of them; that is why we are making such liberal offers. Our space is too small here to explain all we give to every one who helps us. We hope every reader, who reads this, will send for the Offer at once. It will be a happy new year for both of us.

Mr. Weaver tells a way to make \$645 on chickens in five months

Wichita, Kan., March. 23, 1905
 Gentlemen: Beg to state, that with the five 150-Egg Sure Hatch Incubators I purchased, I have made seven hatches, hatching 4,200 chicks, doing this within five months, from Jan. 1st to June 1st. Out of the 4,200 chicks, I marketed at 12 weeks old, 3,360 broilers that averaged me 32 cents each, bringing \$1,075.00.
 The entire expense of raising, feeding and marketing, aggregated \$430, leaving me a net profit of \$645. This is the only way of profitably raising chickens for the market, I remain,
 Yours truly,
 (Signed) **E. FULTON WEAVER.**

Can you beat this?
 Think of \$129.00 profit to each Incubator in five months.
 The Sure Hatch is the only Incubator that will make it.
 Will you let us prove this to you?
 Will you send for our big **FREE** Catalog, select the Incubator you wish and let us ship it to you on 60 Days **FREE** Trial?
 We will prepay the freight and you can use the Incubator right in your own home two months and see for yourself what it will do.
 Then if you don't find it as we have represented, box it up and send it back at our expense. Don't pay a cent.
 Couldn't make you a more generous offer than that—could we?

We take all the risk because we know what Sure Hatch Incubators will do. Over 80,000 are in use today.
 And they are hatching every hatchable egg put into them.
 We make Sure Hatch Incubators to hold 75 to 200 eggs to a hatch. Price \$7.50 to \$17.50, according to where you live.
 You can't get such value anywhere else at any price.
 We can give it because we deal direct with you and make more Incubators than any other concern in the country.
 It takes two great establishments to take care of our trade.
 We buy redwood in big lots at bottom prices.
 Nothing but the best goes into Sure Hatch Incubators.
 They are made with double walls— asbestos lined. Which means—heat kept in and cold kept out.
 The heater is solid copper, with a real safety lamp. One that doesn't smoke and smell, and make more soot than heat.
 Sure Hatch regulators are automatic and never fail. They watch the temperature more carefully than you could yourself.
 The Incubators we offer today are this year's pattern—right up to the minute—with every modern improvement you need to hatch chicks.
 You can't get such Incubators from ordinary mail order houses at any price.
 Dealers can't sell you anything as good no matter how much they charge.
 Our big **FREE** Catalog is worth dollars to every poultry raiser. It is full of facts,—illustrations, Poultry House plans, and data on hatching, feeding, raising and marketing your poultry.
 It contains information that will put more money in your pocket.
 A post card with your name and address brings it post paid.
 Send today.

Paint Without Oil

Remarkable Discovery that Cuts Down the Cost of Paint Seventy-Five Per Cent.

A Free Trial Package and a Big Book Telling All About Paints and Paint-Making are Mailed Free to Everybody Who Writes.

A. L. Rice, a prominent manufacturer of Adams, N. Y., has discovered a process of making a new kind of paint without the use of oil. He calls it Powderpaint. It comes to you a dry powder and all that is required is cold water to make a paint weatherproof, fireproof and as durable as oil paint. It adheres to any surface, wood, stone or brick, it spreads and looks like oil paint and yet only costs one-fourth as much. For many purposes it is much better than oil paint and is indispensable to every property owner.

Write to Mr. A. L. Rice, 551 North St., Adams, N. Y., and he will send you a free trial of his new discovery, together with color cards and his valuable book on Painting, all free. This book lets you into all the secrets of paint-making, exposes fake paints, tells you what kind of paint to use for different purposes and shows you how you can save and make a good many dollars. Write today and the book and free trial of Paint will be sent you by return mail.

and What It Will Do

BUY THE NEW LINDSEY

No Time Limit on Our Guarantee

Start right—get in line for best results in hatching and brooding strong, healthy chicks by using the New Lindsey Incubators and Brooders. No smoke, fumes or impure air from lamp go into either incubator or brooder. The only sensible heating system ever devised.

THE NEW LINDSEY is the nearest approach toward all round perfection in incubators yet produced. Cannot fail to give perfect satisfaction. Hatches every fertile egg; uses less oil. Fill the lamp, turn the eggs daily and the Lindsey will do the rest. Self regulating. OUR GUARANTEE—ABSOLUTE SATISFACTION AS LONG AS YOU OPERATE THE LINDSEY or your money back. No time limit. Write for catalogue.

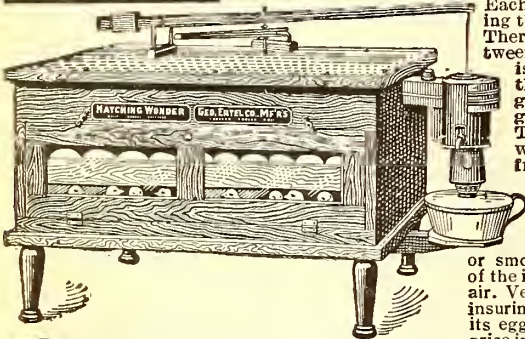

Lindsey Incubator Co., Box E, Fairfield, Nebraska

\$7.90 FOR OUR 100 EGG HATCHING WONDER INCUBATOR

DELIVERED anywhere in U. S. east of the Rocky Mountains, \$11.50

Or with the BROODER, making a complete outfit, for only \$11.50

The 100-egg Hatching Wonder is 26 inches long, 21 inches wide and 14 inches high. It has triple walls, triple top and triple bottom scientifically constructed to hold the temperature necessary within the incubator for the least expenditure of oil, regardless of how cold the air outside. It has a large aluminum-coated tank and heater so that in this as in all our other machines we have the benefit of a circulation of hot water, which cools slowly and cannot be quickly heated too hot. Each machine too is fitted with our regular Victor Regulator, which has a record of maintaining the temperature of 103 degrees for the 21 days of incubation without appreciable variation. There is an outer covering of metal around the water chamber of heater with an air space between, and this double jacket makes a tremendous difference in the oil consumption. Nothing is too good that can be made in the way of a lamp burner and the very best is included in this outfit. A big lamp bowl doesn't need filling so often and is less apt to burn out if forgotten for a few hours—a big wide burner means heat—a big stout metal chimney doesn't get broken, and that means a saving in expense. All these things the Hatching Wonder has. They are the vitals of an incubator. Lamp, heater and tank provide the circulation of heat which means life to the chicks that are to come. An ample supply of hot water passes up from the heater over into and through the tank, and becoming gradually cooler drops back to the heater where it is warmed and again put in circulation. Such an incubator is a living mother, with the lamp the stomach, the heater the heart and the water the blood circulated over and around the chamber in which the eggs are to become baby chicks. Below the egg chamber with its movable tray is a nursery for the care of the newly hatched chicks—taking them off of the tray containing the hatching eggs so that they do not interfere with or smother the piping chicks. The double glass in the door permits of the inspection of the interior of the incubator without the necessity of subjecting either eggs or chicks to drafts of outside air. Ventilation is provided for by air inlets in the vicinity of the hot water passage into the tank, insuring a constant supply of warm fresh air. In addition to the substantially built incubator with its egg tray and nursery, aluminum-coated tank, heater, lamp and automatic regulator, the \$7.90 price includes a thermometer, funnel and book of instructions, giving valuable hints as to the raising

of young chicks, besides telling how to get the best results from the incubator, all delivered at any railroad station east of the Rocky Mountains.

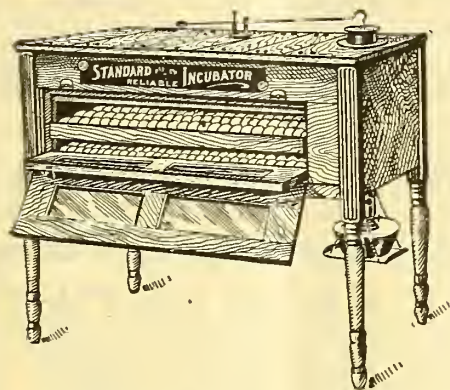

If the Brooder is ordered shipped with the incubator, the delivered price of both is only \$11.50. Brooder cases are made warm and tight and dry. The lamp and metal work are of the same quality as go into the Incubator. Ventilation and ease of cleaning are carefully provided for. In every way the Brooder is a fit companion to the Incubator. The purchaser of one of these outfits at \$11.50 for a 100-egg Incubator and Brooder, delivered anywhere east of the Rockies, has a bargain in chicken raising machinery never before approached. Better write us to-day and have your ready to start up just as soon as possible. We have made up a large stock of these machines in anticipation of this special offer, and are in position to ship promptly on receipt of your order. Remit in postoffice or express money order or bank draft, and if these machines are not just as we represent them, you may send them back and we will return the full amount you paid.

If you want further information, write for our large illustrated catalogue "The Victor Book," testimonial sheets and order blank. A postal will do, only do it to-day before you forget.

NOTE: The price of the Improved Hatching Wonder Incubator delivered west of the Rockies is \$9.90, and the Incubator and Brooder together \$14.75.

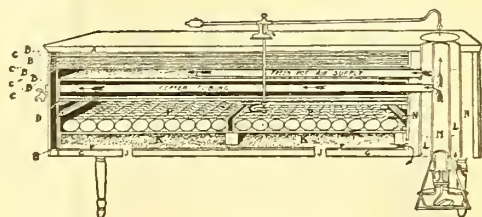

GEO. ERTEL CO., QUINCY, ILL. Established 1867

WHY IT PAYS TO BUY RELIABLES

Any user of RELIABLE machines will tell you that for successful hatching and rearing **Reliable Incubators** and **Brooders** are the ones to buy. It's because RELIABLES are RIGHT — built according to right principles and employing correct methods of operation. It is our endeavor to have every machine that leaves our factory as nearly perfect as human skill can make it. Nothing but the best materials are used, and every step in the the process of construction is under the personal supervision of experts in incubator and brooder manufacture. It is this painstaking care and attention which maintains the uniform high standard of our machines. The sectional view here shown gives a good idea of the constructive plan of the **Reliable Incubator**. Notice that provision is made for utilizing all the heat produced by the lamp

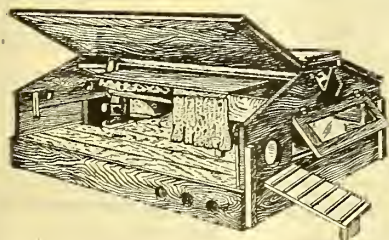

combined with the most perfect ventilation. The extra tank in the upper part of the machine not only furnishes a constant supply of fresh, warm air, but radiates sufficient heat from its own surface to maintain the proper temperature even should the direct heat supply be entirely cut off. This **Double Heating System** results in a SAVING OF FULLY ONE-THIRD THE OIL and

insures absolutely uniform temperature at all times. The machine is double walled and the space between thoroughly insulated with the best non-conductors of heat known. The top above the tank marked C-B is heavily insulated with four thicknesses of insulation, separated by as many sheets of non-conducting heavy card board with also an extra layer of card board above and below. Through the double glass doors complete observation of the egg-chamber may be had at all times. No COLD AIR can reach the eggs unless the doors of the machine are deliberately opened. It is impossible for eggs to get chilled or to be exposed to draughts or sudden changes of temperature. At the same time the system of ventilation is perfect. All gases and impure air at once pass out of the egg-chamber and it is impossible for any foul atmosphere to remain in the machine. No ARTIFICIAL MOISTURE is required—there is no bother with water pans, dampened cloths, or wetting down floors. The moisture in a RELIABLE is supplied by the natural method used by the hen. **Our Patent Reliable Regulator** is free from all defects so common to ordinary regulators. It is extremely sensitive and absolutely correct and accurate, responding to the slightest change in temperature. All these features make a machine which is simple and easy to operate, that practically takes care of itself, and has the additional advantage over others in that it

Costs One-Third Less

to run because of its economical methods of operation, requiring less time, less labor and less oil. Producing bigger hatches and more satisfactory results is what puts the RELIABLE ahead of its competitors. A trial is all that is necessary to demonstrate that it makes good all that the makers claim, and that it is a hatcher which will meet the approval of the most critical. Try it and see. Remember it's sold on an

absolute money-back guarantee. If it does not do as we say, we will cheerfully refund your money. **Reliable Outdoor Brooders** combine more good points than any other outdoor brooder made. We make four sizes and two styles—hot water and hot air. We also employ the DOUBLE HEATING SYSTEM in the brooders. They are warmed by top heat exclusively, but the heating apparatus is so arranged that all parts of the brooder are always comfortable. The space underneath the hover having the warmest temperature, and the other portions a different degree, the chicks can never be crowded into cold corners nor bunched in too hot a temperature. The lamp is reached through a small door in the rear, and is in a separate compartment. No fumes can enter the brooding chamber and the chicks are not exposed to cold or storms when it is necessary to attend to the lamp. The hover is located in the middle and egress is possible on three sides, making it impossible for the chicks to crowd or trample on each other. There are at all times two temperatures in the brooder. The material is first-class and durable. The brooders are nicely painted and can be used indoors as well as out. If you are engaged in raising chickens **Reliable Incubators and Brooders** are what you should buy. Write for FREE illustrated catalog and book of poultry information. It tells all about Reliable Incubators and Brooders, and also about THE RELIABLE POULTRY FARM. Get our prices on pure-bred fowls, and eggs for hatching. We make shipments everywhere. Truth About Nebraska

Our new book contains 48 pages and cover, is illustrated throughout, and has a large and accurate map of the state. There is in it a fund of valuable information for every person seeking a new location.

Send a stamp to-day for a copy. Read it! Study it! You'll find it well worth while.

P. S. EUSTIS,
 109 "Q" Building,
 Chicago.

Pat

GREYSTONE BLACK MINORCAS AND WHITE PLYMOUTH ROCKS

made a sweeping win at Madison Square Garden, 1905; eight 1sts out of a possible 10, a record never equaled at the Garden. Grand Central Palace: seven 1sts, five 2ds; Rochester, 1904: four 1sts and nine regular and specials on Rocks alone. Boston, 1906, gold special; largest win on both varieties; 20 other regular and specials and cup. Eggs, \$3 and \$5 per 15. Stock for sale.

GREYSTONE POULTRY FARM, F. H. DAVEY, Mgr., YONKERS, N. Y.

GOLDEN BRONZE TURKEYS

EGGS from my Chicago and Pan-American stock, winners in the hottest competition, \$1 apiece. Felch stock of Barred Rocks, three dollars for thirteen. Chester White hogs and pigs for sale; pedigrees furnished.

MRS. CHAS. JONES - Paw Paw, Illinois

WHITE WYANDOTTES

What our breeding pens consist of—INDIVIDUAL MERIT with each bird. The kind that do win and will win in the hottest shows in the country. All of our prize winning males head our breeding pens, not descendants of winners, but actual winners at St. Louis World's Fair, Chicago, Boston and New York, are in our yards for 1906. Send name for our new catalogue, which will soon be received from the printers.

A Rare Opportunity For Fanciers.

We have decided to dispose of our entire flock of S. C. White Leghorns, to give us more time to develop and push our strain of White Wyandottes.

370—PULLETS FOR SALE—370
Wyandotte Eggs \$3 and \$5 per 15

Emma B. Poultry Farm Box A, Gurnee, Ill.

1500 Head of America's Best Wyandottes

Golden, Silver and Whites That Are Up To Date

No strain wins so heavy at America's great shows as the Keller strain. Our birds have won 300 premiums at Madison Square Garden, N. Y., since 1891. They won 36 premiums at the World's Fair, and hundreds of premiums at many other great shows, and are winning today for our customers through the world. If you are after up-to-date birds, blue-bred for 20 years, that are bred to lay as well as for the show room, I can supply you with either fine show birds or fancy breeders mated in any number to suit, at reasonable prices. We also breed on the side, for pleasure, Sebright Bantams, Jap Silkies, Belgian Hares, Berkshire Hogs, all imported stock. Eggs from our finest matings, one sitting, \$3, two sittings, \$5, \$18 per 100. Our free circular tells all about our fine stock.

ABOUT THE SOUTH

"About the South" is the name of a 64-page illustrated pamphlet issued by the Passenger Department of the

Illinois Central R. R. Co.

in which important questions are tersely answered in brief articles about

- Southern Farm Lands,
- Mississippi Valley Cotton Lands,
- Truck Farming, Fruit Growing,
- Stock Raising, Dairying,
- Grasses and Forage, Soils,
- Market Facilities
- and Southern Immigration

along the lines of the Illinois Central and Yazoo & Mississippi Valley Railroads, in the States of Kentucky, Tennessee, Mississippi and Louisiana, including the famous

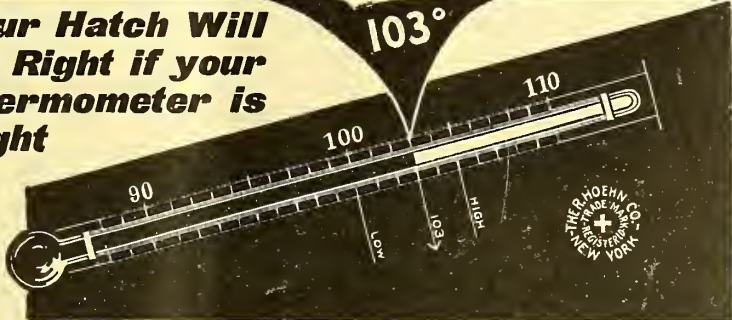

YAZOO VALLEY

of Mississippi.

Send for a free copy to J. F. MERRY, General Immigration Agt., I. C. R. R., Manchester, Iowa. Information concerning rates and train service to the South via the Illinois Central can be had of agents of connecting lines, or by addressing

S. G. HATCH, G. P. A., Chicago, Ill.

**Your Hatch Will
Be Right if your
Thermometer is
Right**

An Incubator Thermometer is small in bulk and in price, but it is the most vital part of an incubator. It is the heat that hatches, but to hatch right the Thermometer must be right. It makes little difference what make of incubator you use, if your Thermometer is accurate and you keep the temperature at 103 degrees. To be absolutely safe, use the

HOEHN RED CROSS THERMOMETERS

The bulb rests upon the eggs so that the Thermometer gives you the temperature you want to know. It is easy to keep this at 103 degrees, because this point is emphasized by a narrow point. The black metal frame with white graduations and figures makes it easy to read. These Thermometers are all well seasoned and accurately tested before being shipped. Send 75 cents for a sample Thermometer (prepaid) or ask for catalog illustrating other styles. This catalog is free. It answers your questions about Incubator Thermometers.

BIG SUCCESS WITH HOGS.

SOME farmers are more successful with hogs than others. The man that only gets 8 lbs of pork out of a bushel of corn fed to hogs makes only half as much as the man that gets 18 lbs.

The American Swineherd is a specialist and the best authority on the hog industry.

The greatest success results from concentrating all efforts upon one line.

Three-fourths of the farmers waste a third of their feed given to hogs because they do not understand the best methods.

The American Swineherd teaches you how to be successful.

How to secure the greatest profits.

How to feed, to double the growth and gain over usual methods.

How to keep your hogs healthy, as only healthy ones are profitable.

How to get 18 pounds of pork out of a bushel of corn, and 20 pounds out of a bushel of wheat, fed to hogs.

Prof. Kennedy of the Iowa Agricultural College says: "Your paper is a leader on feeding."

One man writes: "A single instructive lesson in the Handbook on Hog Hygiene saved me \$50 in feeding a bunch of 40 hogs 60 days over the ordinary way of feeding. It is the best investment I ever made."

Every owner of hogs should take advantage of this special offer:

Send us \$1 for two years' subscription to the **American Swineherd** and it will entitle you to a free copy of the Hand Book on "Hog Hygiene," with trade secrets, recipes, valuable information, etc. If the offer is accepted in ten days we will send you in addition "The Pig Feeders' Manual," worth a \$1 itself. This equips you for a successful hog business.

AMES PLOW COMPANY. 64 MARKET STREET, BOSTON, MASSACHUSETTS

The Most Satisfactory Light.

The Angle Lamp is not the only method of lighting your home but taken all in all, it is the most satisfactory.

For while it floods your room with the finest, softest and most restful light, making your home more cosy and inviting, it requires almost as little attention as gas or electric light, is as simple and convenient to operate as either and actually costs less to burn than the ordinary troublesome old style lamp.

Our Catalogue \$9 (sent free on request) explains how this new principle applied to burning common kerosene has so completely done away with all the smoke, odor and bother of ordinary lamps that such people as ex-Pres. Cleveland, the Rockefellers, Carnegies, Cookes, etc., who wouldn't think of using ordinary lamps, have chosen

—THE—
Angle Lamp

for lighting their homes and estates in preference to gas or electricity, gasoline, acetylene, or any other method of lighting.

This catalog tells how the special Angle burner and the shape of the glassware (see above illustration) give combustion so perfect that the Angle Lamp never smokes or smells whether burned at full height or turned low; why the lamp is lighted and extinguished like gas; the advantage of having the under-shadow of other lamps done away with completely, also why the Angle Lamp burns 1/3 to 1/2 less oil than any other for the same amount of light. And then offers you a

30 Days Trial. And it does more—gives you the benefit of our ten years experience with all lighting methods. Before you forget it—before you turn over this leaf—write for catalog '59' listing 32 varieties of The Angle Lamp from \$1.80 up. **THE ANGLE MFG. CO., 78-80 Murray St., New York.**

HERE'S THE GREATEST INCUBATOR BARGAIN.

THIS 230 EGG Royal Incubator \$12.75
FREIGHT PREPAID ANYWHERE

East of the Rocky Mountains.

Quality and price—two things that "talk." You can't get a better incubator than the Royal at any price. It is built right, strong, substantial, will last a lifetime, and is guaranteed to hatch as large a percentage of fertile eggs as any incubator in the world. It is not a "cheap" incubator, but is strictly high-grade in every respect. Easy to operate; automatic control of heat; perfect ventilation. **ONE TRIAL HATCH FREE**, if you want it. Your money back if not satisfactory. Don't pay more for a smaller incubator; don't buy a poorly constructed, go-to-pieces incubator; don't buy any incubator until you have investigated our remarkable offer. Remember, **WE PAY THE FREIGHT**, (east of the Rockies). We guarantee the incubator under a bank bond; we give you a fair trial. We save you about half the cost and guarantee better results than incubators give costing twice as much. It will surely pay you to investigate. Write to-day for special offer:

FREE Handsome Catalogue of incubators, brooders, poultry supplies, poultry foods, eggs for hatching and standard bred poultry from our own farm.

Book on "Proper Care and Feeding of Young Chicks, Ducks and Turkeys," 10c. 50c Standard Poultry Paper 1 year, 10c.

ROYAL INCUBATOR CO., Drawer 80, DES MOINES, IOWA.

WRITE TODAY AND SEE FOR YOURSELF THE BARGAIN WE OFFER.

POULTRY CUTS
 Latest and best. Our new Catalogue shows all varieties. Send for it today. I also breed **Barred Plymouth Rocks**. Eggs in season. **CHAS. L. STILES, 921 Mohawk St., Columbus, O.**

HALLOCK'S W. WYANDOTTES
 Have best show record of any in America. Write for free circular.
ROSS C. H. HALLOCK,
 6314 Clifton Ave., St. Louis, Missouri.

Buff Rocks!
PURE NUGGETS
 In three leading shows in 1905 won 15 first premiums. Eggs from these and other prize winners at \$3 per 15, \$5 per 30. Good ones at \$1 and \$2 per 15, \$1.75 and \$3.50 per 30. No culls. Incubator eggs from same blood \$4 per 100. Write for mating circular.
MRS. W. S. ROBISON, R. 3, Box 1, Fayette, Mo.
 Member American Buff Rock Club.

S. C. BLACK MINORCAS
R. C. BUFF ORPINGTONS
 Eggs \$2 to \$5 per sitting; \$5, \$8 and \$10 per hundred. Stock for sale at all times.
Rosedale Poultry Farm
 G. M. SHOOK, R. F. D. 16, Box 19, Valley Park, Mo.

LINVILLE BLACK LANGSHANS
WHITE WYANDOTTES
S. C. BR. LEGHORNS

Winners wherever shown. Every bird in pens a winner, or scores 90 to 95½ points. Eggs from best matings, \$3 per 15, \$5 per 30. Write for mating list containing our winnings and matings. Don't Delay.
E. S. LINVILLE, R. 5, Shelbyville, Ind.

GEDNEY FARM POULTRY YARDS
S. C. B. Orpingtons, S. C. B. Minorcas, Cornish Indian Games, White Wyandottes

We breed our winners and can sell you stock that will enable you to do the same. We made a clean sweep at Albany, N. Y., on our Buff Orpingtons, winning all regular prizes except one third. We also won 8 specials, including silver cup for best display, all varieties competing. At Madison Square Garden we won first and American Orpington club special on pen and third pullet. Over 200 layers to furnish eggs from. A few good cockerels to spare. Satisfaction guaranteed.
FRANK W. GAYLOR, Mgr., White Plains, N. Y.

THE IMPROVED CLIMAX INCUBATOR
1906

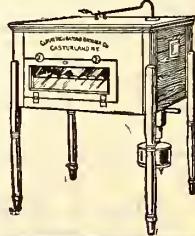

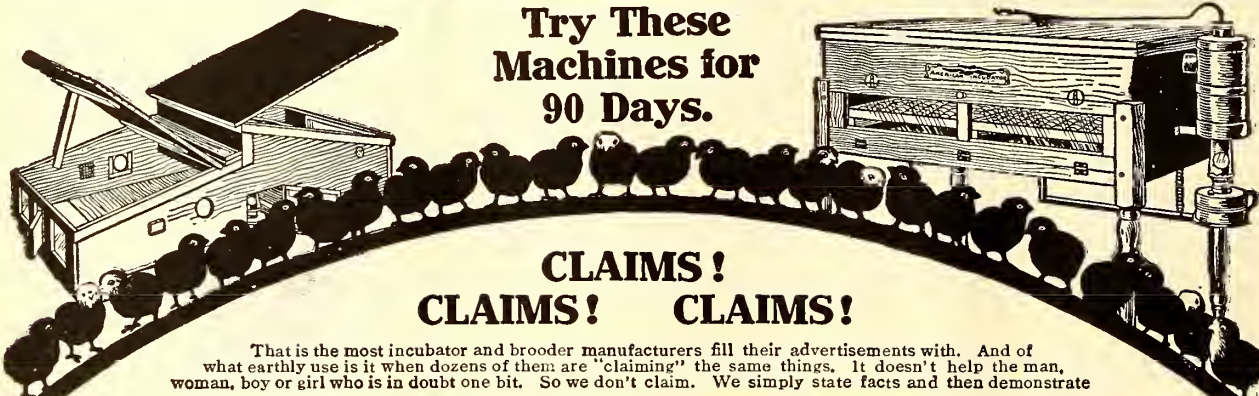

Never before in the history of incubator manufacture has a hatcher been made that has so many points of real merit as the **IMPROVED CLIMAX INCUBATOR** possesses; points that incubator users will appreciate. Our **AUTOMATIC REGULATOR AND SAFETY VALVE** is one of these improvements especially desirable and effective. It is positive, regular and automatic in its action, keeping the heat within a ½ degree of the temperature it is set for. We guarantee it for active service for ten years, and replace it **FREE** if it fails to work properly during that time. No incubator built will hatch a larger per cent of the fertile eggs; stronger or brighter chicks. It is constructed to eliminate trouble and guesswork, and it actually does it. The case is made of black ash finished in golden oak; the interior is lined with wood fiber board, made especially for the **CLIMAX**, which never warps, splits, shrinks or swells—no open joints to let heat escape; heat is kept right where it is needed.

We sell **CLIMAX** machines and specialties direct to you; have no agents or middlemen, so you save 25 to 35 per cent on what you buy from us and get better goods and the maker's guarantee.

We want to send our new catalog to you. It describes the **CLIMAX AIRING SYSTEM** and many other recent inventions. Write today.

THE CLIMAX INCUBATOR & BROODER CO.,
BOX 201 **CASTORLAND, N. Y.**

60 Day's Free Trial
 Allows you ample time to prove by more than one test that all we claim for the **CLIMAX** is true. If you don't find it so, send the machine back within the 60 days. We will refund your money without question and pay freight both ways.

Try These Machines for 90 Days.

CLAIMS! CLAIMS! CLAIMS!

That is the most incubator and brooder manufacturers fill their advertisements with. And of what earthly use is it when dozens of them are "claiming" the same things. It doesn't help the man, woman, boy or girl who is in doubt one bit. So we don't claim. We simply state facts and then demonstrate

American Incubators and Brooders

are sent out on 90 days trial and if they don't hatch and raise a satisfactory percentage of chicks, send them back and get your money. There's no empty claim about that, and we give a guarantee with each machine that **really protects** you.
 We have the largest poultry machine factory in the world, and we operate the largest standard-bred poultry plant. We have been in the business 20 years and we have learned what's what when it comes to raising poultry for profit.
 These are not mere claims either. Get our catalogue, notice the list of references and investigate for yourself.
 Remember this: It will pay you well to do all your investigating **before** you pay out your money to **any one**.
 American Incubators have all the advantages that any other machines have, only more, because they are built by practical men, men who have been through the mill.
 We manufacture and sell direct to poultry raisers

The Most Complete Line of Poultry Foods and Supplies in the Country

and everything is priced at the very lowest figure, because our facilities and great volume of business enable us to undersell all competitors.
Our Standard-Bred Poultry Farm is stocked with the largest variety and the finest specimens of pure bred birds to be found anywhere. Fowls and eggs are guaranteed to please or money will be refunded without a word. It's the highest quality at the lowest possible prices that has built up our enormous business.
Our New Catalogue is the best we have ever issued and is full of valuable information. Important poultry questions answered and articles on poultry diseases, also a complete illustrated description of American Incubators, Brooders, Poultry Supplies and Standard Poultry. Sent free, postpaid, for the asking.

Address, **AMERICAN INCUBATOR COMPANY, Box 10, FREEPORT, ILLINOIS.**

Plane's S. C. White Leghorns

Swept the board again at the Northern Illinois show. The highest scoring pen in 1200 birds, also \$35 silver cup for best cock, cockerel, hen and pullet in the show. This is the kind you want.

JOHN C. PLANE, Belvidere, Ill., Member National Single Comb White Leghorn Club

Our Partridge Cochin Matings

Are by far the best and most extensive we have ever had, and **Are Absolutely Unexcelled.** EGG orders booked now at \$3 and \$5 per setting of 13 straight. Small amount of good breeding stock for sale at attractive prices. Circular on request.

ELMDALE FARM, C. L. DUFFIELD, Prop. :: :: Room 11, Commercial Bldg., Marshalltown, Iowa

1897--ORPINGTONS--1906

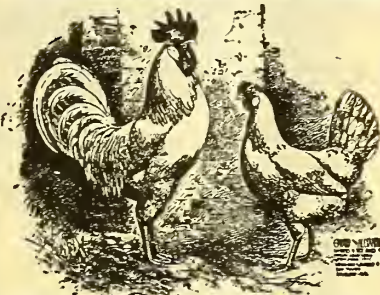

America's center of Rose Comb Whites (Western Home Orpington Farm.) I also handle S. C. Buff and White Orpingtons. Winners at Chicago, St. Louis World's Fair, Madison Square Garden, etc. Stock in season. Catalogue free. Eggs \$3 per 13. Phones, Bell 376 R, Union 846 Red. J. W. EASTES, Importer, Breeder and Exporter, Box D, Galesburg, Ill., U. S. A.

EGGS! EGGS! EGGS!

From prize winners, Barred Rocks, Ringlets direct, White Wyandottes and Mammoth Bronze Turkeys. I have exhibited my birds in five shows this season, winning twenty-six firsts out of thirty-three. My mating this year is far the best I have ever owned. Chicken eggs \$2 per fifteen, \$3.50 per thirty, \$8.00 per hundred. Turkey eggs \$8.00 per ten straight. Write for new catalogue.

Warren Sloan, R. 4, Eldorado, Ill.

Young's Strain S. C. White Leghorns

I HAVE NO OTHER BREEDS

My strain again for the sixth consecutive year shows its superiority by winning more prizes at Madison Square Garden, N. Y., in the strongest competition ever known, than all others combined, including 17 specials, and again winning the Nat'l S. C. W. Leghorn silver cup. Two weeks later I almost duplicated my wonderful win of last year at Boston by winning 9 prizes on 9 entries against the most prominent breeders of the east. My winnings for 1906, at the world's 2 greatest shows, as follows:
 NEW YORK: Cocks, 1st, 3d, 4th; ckl., 1st, 4th; hens, 2d; pul., 1st, 2d, 5th; pen, 4th.
 BOSTON: Cocks, 1st, 2d; ckl., 1st, 2d; hens, 1st, 4th; pul., 2d, 3d; pen, 1st.
 This record has never been equaled by any other Leghorn breeder in America. Stock and eggs for sale at all times. 1096 mating list free. D. W. Young, Highland, N. Y. and Ridgewood, N. J.

Address **D. W. YOUNG RIDGEWOOD, N. J.**

Ambrosius' W. Wyandottes

Look up my show record for the past three years that will convince you that I have the winners.

a Farmer Says

Some good words about our Booklet on Farm Telephones.

“ Sweet Valley, Pa., Aug. 15, 1905. Stromberg-Carlson Tel. Mfg. Co., Gentlemen:—Your booklet reached me safely. You have many valuable and timely suggestions, and I only hope that it may find its way into every locality that does not have the advantage of telephone service. **THERE IS NO ONE THING AT THIS TIME DOING MORE TO BRING THE FARMER ON AN EQUAL FOOTING IN BUSINESS, EDUCATION AND CULTURE, WITH HIS URBAN BROTHER, THAN THE TELEPHONE.**

As we have two well constructed, thoroughly equipped, successfully operated telephone lines in this locality, one known as the Lake and Lehman Telephone Co. and the other The Farmers Telephone and Supply Co., I can do no more than to wish you success. Sincerely yours, **A. E. Lewis.** ”

What Mr. Lewis says about the value of the telephone in the Farm Home is seconded by all farmers after they have once enjoyed the privilege of telephone service.

We have several booklets which will tell you how to get a telephone line started in your community and how to buy telephones and construction materials to the best advantage. Ask for our booklet 81-B, "How the Telephone Helps the Farmer." We will send you a copy by return mail.

STROMBERG-CARLSON TEL. MFG. CO. Rochester, N. Y. Chicago, Ill.

Good Galvanizing

is what gives wire fence long life. Some manufacturers say their fence is made of extra heavy wire, and therefore resists the action of rust longer. What a confession! If the wire were properly galvanized there would be no rust for many years. When rust once begins, it will destroy even a heavy wire in a few seasons. The practical way, therefore, is to use wire of a size sufficient to give ample strength to the fence and to *protect* the wire from rust by good galvanizing. We have special arrangements with a large manufacturer of galvanized wire to have our representative always on the ground at the wire mill to see to the proper galvanizing of our wire and to reject all wire not properly galvanized. "Steel for strength, and galvanizing for protection," is our motto.

Construction. Advance Fence has the continuous stay. Our stay is not cut at the top or bottom, or anywhere else, but runs continuously up and down across the fence and without an end for many rods. Thus, we *preserve and utilize* all the strength of the wire used, about half of which is wasted in fences with cut stays. Our fence has the most perfect provision for expansion and contraction, caused by changes in temperature. It can be stretched over uneven ground without the slightest difficulty.

Buy Fence Direct from the factory. It is cheaper, and so much more convenient. We offer a line to select from several times as large as that carried by the best dealers—26 styles and heights of fence and 24 styles and sizes of gates, besides stretchers, etc. This enables you to get a fence *exactly* suited to your requirements, which alone may effect quite a saving for you.

Thirty Days Free Trial. Place your order with us for what fence you need and try it. If you do not like it, and it is not just as represented in every particular, you can return it to us at our expense, and we will return your money. That's what we call a fair proposition. We could not make it, if we were not sure Advance Fence would please you.

We Prepay Freight to any steam railroad station in the United States, on 40 rods or more. Thus you know beforehand just what your order will cost you delivered at your door. We *guarantee* the safe delivery of your shipment by the railroad company.

Write today for our Free Fence Book and Wholesale Delivered Prices.

Advance Fence Co., 1369 Old St., Peoria, Ill.

HUNKY-DORY FARM

PEARL

To produce eggs, molt quickly, and grow rapidly, poultry need grit that grinds and nourishes at the same time—not simply any old pulverized substance that comes handy—this "broken crockery" talk is all bosh. They must have Silicon for feathers, Calcium Carbonate (lime) for shell, Sulphur for eggs and the other vital elements for the fowl's system.

PEARL GRIT supplies all these and is an excellent grinder—clean, white and sharp with no dust or waste. A nutritive, double-purpose grit, combining the elements of shells and grit. "Throw Pearl to poultry and watch results." Write today for free booklet, analysis and prices. Address

PRESIDENT NATIONAL RHODE ISLAND RED CLUB

A Remarkable, Fascinating, Capable Book About

Incubators

The Best Book of the Kind Ever Written—Sent Free.

We issue a book about incubators and brooders which is—by all odds—the best book ever written about them.

It is for the man who intends to buy, and who wants to know what kind is best, and why. Written by the man who knows.

The writer of this book has spent 24 years making incubators. He made one of the first incubators known. He has spent the best part of his life in perfecting them.

He is a poultry raiser, too; and he has experimented in his hatchery with every good incubator made. He has made hundreds of tests, and made them in a way that counts. The book tells you the results of all sorts of experiments.

The ordinary incubator catalogue is a rather dull affair. Claims are made without the reasons for them. The next catalogue you read disputes those claims, and makes others. You know less what you want than you did when you started.

Our Incubator Book deals with the subject broadly. It tells what features are good, and why. It tells what features are wrong, and gives reasons. The man who

reads it learns as much about incubators as the man who wrote it knows.

And it is all told so briefly, so clearly, so interestingly that the book is fascinating.

The book is issued, of course, to sell Racine Incubators and Brooders. The writer of the book is the man who makes them. The book is our catalogue, too.

But the book isn't biased. It deals with the subject fairly. It does not denounce other makers. It is written with the thought that when you see how much this man knows about incubators you will want the machine which he makes.

We have learned that when a man knows as much about incubators as he should know before buying, he invariably selects the Racine. Our sole object is to tell you the facts, and to so tell them that you will know them as facts.

We are willing then to abide by your judgment.

The Racine Incubators and Brooders are the final results of this man's 24 years of invention. They embrace all that his ex-

periments have proved to be best. They avoid all that he has found to be wrong.

We want you to read what this man says about incubators, and then judge if you want him to make one for you.

The Racine—despite its perfection—sells for less than any other good incubator. The reason lies in our factory facilities, and the immense number we make. It is sold on approval, and our guarantee is backed by more capital than is behind any other incubator concern in America.

Let the book tell you the rest.

Permit us to urge in your interest that you send for this book. No matter how many other incubator catalogues you get, by all means get this one, too. You will find it worth more to you—in a practical way—than all the others combined.

Without it you may make a costly mistake and not know it. With it you will know too much to go wrong.

Send no money for it—not even a postage stamp. It is free to you. But—for your own sake—don't neglect to get it.

Racine Hatcher Co., Box 26, Racine, Wis.

Warehouses:—St. Paul, Minn., Kansas City, Mo., Buffalo, N. Y., Detroit, Mich.

\$1500 GIVEN AWAY IN PRIZES

FOR SUBSCRIPTIONS TO THE
AMERICAN POULTRY JOURNAL

EVERYBODY Who Sends in Six or More Subscriptions **GETS A PRIZE**

For six subscriptions you not only get a prize of four beautiful colored pictures, but are allowed over one-third commission. Never before have we given so much to those who help us get subscribers. But this is not all; these six subscriptions count in a chance toward winning a \$600 Piano, \$100 Cash, Fowls, Incubator, Brooders, Advertising, etc. Over fifty of these Grand Prizes given. We cannot describe them here.

SEND FOR THE LIST

A \$600 PIANO FIRST PRIZE

A chance to win this without costing you any money. Notice especially the enormous value of this prize. All our previous efforts to reward the Club Raiser are put in the shade by this magnificent prize. The winner will be especially fortunate, as this piano is one of the celebrated Wing Pianos, known all over the country as one of the best pianos made. We will order it sent direct from the factory to the winner.

IMPORTANT A great many times we let a good opportunity go by and regret it. Don't let this one go by, but send for our offer and see what it is. It's a good chance for new subscribers, and especially good for those who wish to renew their subscriptions.

KING'S BARRED ROCKS WIN AGAIN

At the greatest of all Illinois State Shows, Danville, Ill., Jan., 1906. In competition with birds from the best breeder's yards in the United States, a class of 200 Barred Rocks, conceded the best quality ever exhibited at an Illinois State Show, the triumph of two years ago repeated, another world's record made, 1st and 4th cocks, 1, 2, 3, 4 hens, 1, 2, 3, 4 ckls., 1, 2, 3, 4 pullets, 1, 2, 3 pens and all specials offered on this variety. These winnings, with the scores given, should be sufficient evidence of who is breeding some of the best Barred Rocks in the country. If you are in need of a ckl. to head your pen please remember I have them; brothers to these winning ckls., also brothers to these winning pullets that will start you toward the King Row. Don't ask me to describe the birds you need, but tell me what you want. I can surely select to suit your requirements. Eggs from the grandest matings of my life only \$6 per setting, \$35 per 100. Buy from a breeder who breeds, mates, and breeds from his prize winners if you want the best. Send for mating sheet and prices to the Barred Rock Specialist.

Leffel's Barred Rocks

Are Known Everywhere as one of the Finest Strains in the World

?? ? **WHY?** ?? ?

Because they have an unbroken record during the past fifteen years at the leading poultry shows and under twenty-one judges.

At Dayton, Ohio, December, the largest show ever held in the state, 129 specimens of Barred Plymouth Rocks being shown. 1st on cockerel, score 95; 2d on pullet, 1st on breeding pen 188½, 1st special breeding pen; also sweepstakes prize for the best cockerel in the American class. 1st cockerel scored 95 points, highest score ever given by I. K. Felch, Judge, Natick, Mass.

At Springfield, Ohio, Dec. 30 to Jan. 4, won 1st cock, scored 93 points and cut one for frozen wattles and broken feathers in tail; 1st and 2d cockerels, 1st and 2d hens, 1st, 2d and 3d pullets, 1st, 2d and 3d breeding pens. Such a record is seldom ever made, especially in modern times when the cream of the country was there. I won all specials on Rocks competed for, Charles McClave, Judge, New London, Ohio.

At Springfield Fanciers' Association, Dec. 27-30, I won all prizes offered on Plymouth Rocks. Cocks, 92, cockerels 94, 94, 93½, 93, 92½, 92. Hens, 94½, 94, 93½, 92½, 92. Pullets, 94½, 94½, 94, 94, 94, 93½, 93, 93, 93, 92. Breeding pens, 1st, 188½; 2d, 187½; 3d, 186½. J. F. Marshall, Middletown, Ohio, one of the World's Fair judges. My birds have never failed to win 1st on cockerel. I have never failed to win 1st on pen in any show when they have been scored.

LATER—Cleveland, Ohio, Dec. 11th, won all money prizes. I challenge the world to beat this record, 1st and 2d cocks scoring 92 points each, 1st hen 94, 2d hen, 93½, 4th hen 92½. Also won 1st, 2d and 3d cockerels, scoring 94½, 93 and 92½, respectively; 1st, 2d, 3d and 4th pullets, scoring 94, 93½, 93 and 92½, respectively. Also won 1st breeding pen, 188½ points; 2d breeding pen, 185½, Mr. L. G. Jarvis, Guelph, Canada, was judge.

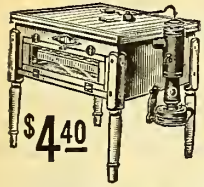

I have finer birds this year than ever before, and more of them. Send for circular giving full list of winnings, also price of stock and eggs

NOW IS THE TIME TO BUY AN INCUBATOR

Won't you be one of the "wise ones" and write for our catalogue which tells of the merits of the

"QUEEN"

The only perfectly ventilated incubator made—the one that has taken first prize wherever exhibited—the one that will hatch from 85 to 100 per cent of the eggs. "We say 'QUEEN' Incubators are best." Don't take our word for it though—ask someone who uses our machine. We'll tell you of someone right in your neighborhood who has a "QUEEN."

Write today. Our catalog contains information valuable to all poultry raisers. IT IS FREE.

Pinkerton Manufacturing Co.
BOX 20 - LINCOLN, NEB.

A telephone means more to the farmer than he realizes in a social way and in matters that have to do with the management of the farm home. But the real worth is in the ability of the farmer to do more business by doing it quicker, by making sales when he could not be informed otherwise, without a 'phone. For instance, the circus contractor wants to buy hay, 'Phone Brown, he's got hay, says a bystander, so the contract goes to Brown.

THE FARM PHONE IN THE FARM HOME

"EACO" farm 'phones never miss. You can call up any subscriber no matter whether his receiver is on the hook or not, provided all the 'phones on the line are equipped with our X. P. Condensers. Our book explains how this is done and many other good features of our farm 'phones. All "EACOS" are handsomely made, compact, strong, and cannot get out of order if properly used. Our new book "How to Buy a Farm 'Phone," will interest every farmer who wants to succeed. Write for it today, it's free.

STILL THEY COME!

I BREED S. C. WHITE LEGHORNS EXCLUSIVELY

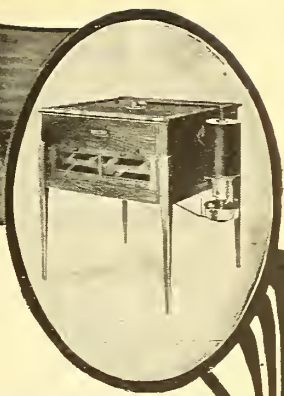

MAYHEW—1st at Chicago, 1898.
1st at Indianapolis, 1899.

AT THE Chicago Show, Jan. 1906, in a strong class, I won 1, 3, 5 chl., 1, 2 pul., 1 pen, 3 hen and 5 cock.

Now, at Indianapolis, Feb. '06, I won 1 cock, 1 hen, 1, 2, 3, 4 chl., 1, 2 pul. and 1 pen. There were more S. C. W. Leghorns at Indianapolis than Chicago. Eggs: \$3 per 15; \$5 per 30. Also have some choice stock for sale.

This cut shows how I "used to do it." One next month will show the way I am "still doing it."

Harmon Bradshaw, Box A, Lebanon, Ind.

MODEL

Incubators and Brooders

Are the **only** Incubators and Brooders **made by me**. Look for the above **Trade Mark**, and accept no imitations. The **"Model"** Incubators are guaranteed to **out-hatch** any other make. Catalogue free. Prompt shipments guaranteed.

MATTITUCK, L. I., JANUARY 29, 1906.

MR. CHAS. A. CYPHERS,

DEAR SIR:—I suppose you would like to hear the news of my great success with the Model Incubator. I have my first hatch off from five No. 2 Models. Out of one thousand fertile eggs I got nine hundred and fifty-two chicks. I also have six other machines of other makes, and out of twelve hundred and seventy eggs I received only thirty per cent. Very truly yours, A. W. SILKWORTH.

"Eggs, Broilers and Roasters"

Is the Title of My New Book. It is an Easy Lesson in Practical Poultry Culture.

It gives the prices paid for eggs and poultry week by week for the past three years. It describes the profitable combinations of egg, broiler and roaster farms. It tells how and when a hatch taken off each week in the year could be most profitably marketed. It shows how you can make \$2.00 on a large winter roaster. It tells what profits can be made with each of the popular breeds, and the costs of production.

It shows what can be done with

A Leghorn Egg Farm,
A Leghorn Egg and Broiler Farm,
A Wyandotte Egg Farm,
A Wyandotte Egg and Broiler Farm,

A Plymouth Rock Egg Farm,
A Plymouth Rock Egg and Roaster Farm,
Twelve months with Broilers,
Twelve months with Roasters.

This valuable work mailed **FREE** upon request.
