FACTS FOR FARMERS!

Southern lands are fertile and productive and are low in price. The rainfall is ample for all purposes, and irrigation is not needed.

The Southern farmer is in close reach of the principal markets of the country and has the best of railway facilities for the transportation of his crops.

General farming shows good returns. The crops grown cover a wide range and yield an abundant harvest. The cereals and grasses thrive. The stock raisers find the South a profitable field. Cattle can be raised at the lowest cost. There are finest opportunities for raising horses, mules, sheep and hogs.

There is a demand for a greater dairy interest in the South. Local markets are good. The conditions are most favorable for the success of the milk producer and butter maker.

Trucking is extensively engaged in along the Southern Railway. Lads especially adapted to this branch of farming may be purchased at low figures and upon good terms. The facilities for quick handling of the crops are first-class and the products reach the best markets of the country in good condition. All fruits are grown in the South. The commercial orchards along the Southern Railway are extensive and the quality of the fruit is unexcelled. The best sections of the south are reached by the

ORIGIN AND HISTORY OF THE BREEDS

The So-Called Spanish Fowl Not an Aboriginal of Spain, But Brought to That Country From Some Point in the East Through the Mediterranean—Taken to England It Was Used Upon the Common Fowls of That Country—By Selection and Restriction the Minorca, Blue Andalusian and Ancona Were Given Established Color Markings and Form—The Rose Comb Black Minorca a Distinct American Production—History of the Sub-Varieties of the Spanish Family.

Paper No. 8—The Spanish Breeds.

Written by Thos. F. Riggs, Associate Editor American Poultry Journal

That group of fowls embracing the White-Faced Black Spanish, Minorcas, Andalusians and Anconas is sought and retained by breeders and fanciers who desire productive egg producers rather than market poultry. The breeds and varieties making up this group are indeed great egg producers. Not only this, the eggs they lay are large and handsome, and in some quarters bring a price in advance of that of market eggs. These fowls are prominent in the yards of fanciers and breeders the world over.

WHITE-FACED BLACK SPANISH.

The White-Faced Black Spanish is the oldest of the so-called Spanish breeds, in fact one of the oldest distinct breeds of fowls known to man. It is a fowl of striking appearance. "The rich, glossy, black plumage, the rather large, five-pointed comb, the long, pendulous white face, gives this early claimant to popular favor distinct individuality among Standard-bred fowls." The Standard weights are: Cock, 8 pounds; cockerel, 6½ pounds; hen, 6½ pounds; pullet, 5½ pounds.

Martin Doyle, 1854, London, writing of the history of the Spanish (so-called) fowls said:

"The Spanish fowl is not an aboriginal of Spain, but was imported into that country either from some portion of the East, through the Mediterranean, or, as has been affirmed, from the West Indies, by Spanish merchants, and subsequently propagated and naturalized in Spain. Thence European countries were stocked. The name is therefore a misnomer. These birds differed from the present Spanish in having a smaller and less white face and darker feet and shanks. We find that previous to the introduction of the bird in question, a diminutive species, known by the name of Manx, was the common class of fowls reared in Spain; these two breeds were crossed together; varieties were thence raised, and the present sub-varieties of the Spanish fowl are partly the result. In Holland, before the naturalization of the Spanish fowl there, a domesticated bird,—in color a dun, or bluish slate—though much inferior to the other, prevailed; but if we carefully observe the variations in this latter class, it becomes evident that such differences are the result of admixture with the primitive blood.

"Of first class specimens, Spain to-day can make but little boast, though from the Netherlands may be obtained birds of greater beauty as to form and feather, and of the highest value as regards quality and breed. And though Holland was originally supplied by Spain, the mixed varieties previously propagated in the latter country were quite sufficient to produce in time a cross and mixture which defies all effort to

detect in them any resemblance to the original stock, unless by a person acquainted intimately with the nature, form, and habits of the birds.

"The Spanish fowl has long been naturalized in Great Britain with great success, and considering the high perfection it has attained, we are justified in asserting, which has often been advanced, that our climate is as perfectly adopted to the genus *Gallus* as any in the world. That the fowls brought from India were primitive breeds, is pretty certain; but that many bearing the name of Spanish, though far from being purely of that breed,—possessing neither their beauty nor good qualities—do in the present day abound, is beyond doubt; yet there are others which, although not literally belonging to the primitive stock, being unquestionably an admixture, are nevertheless upon a perfect footing of equality with it, and if intrinsic value be the criterion of rank, justly deserving by their good qualities the name of Spanish."

When the Single Comb Black Minorcas came upon the boards the White-Faced Black Spanish immediately declined in popular favor, and is to-day bred by but few fanciers, comparatively. It is the belief of the majority of breeders that the Minorca is a stronger, more robust, and more easily raised fowl than the White-Faced Black Spanish, and, also, a better egg producer. This, of course, is disputed by the champions of the Spanish.

THE MINORCAS.

The Single Comb Black Minorca is an English product—that is the Minorca of to-day. They were originally called the Red-Faced Spanish to distinguish them from the original Spanish—the White-Faced. The White-Faced Black Spanish are the basis upon which this Minorca was built. The English *Stock-Keeper*, London, August, 1888, printed a cut of Single Comb Black Minorcas from a photo of an oil painting made in 1810. Mr. J. Harwood, in an article accompanying this photo, said that these fowls were natives of Devon and Cornwall "long before many other breeds were heard of." The hens shown in this cut possess much of the Minorca form of to-day. The comb was exceedingly large and irregular.

Referring to the crosses of the original so-called Spanish fowls in England, Mr. Doyle, further said:

"In England the original stock has met with several crosses, more or less resembling one or the other of its progenitors, and in course of time a name has been appropriated to these varieties, as though each was a separate species. They are Minorcas, Andalusians and Anconas."

Thus we see that the fowls included in this group are nearly related, each tracing back to the White-Faced Black Spanish.

The Minorcas immediately won popular favor in England, and were soon sought by fanciers of the United States. The first movement of any consequence in this direction was made in 1878. Since then the breed has been greatly improved in form and head points. The color in plumage throughout is brilliant black, free from purple. The Standard weights of the Single Comb Blacks are: Cock, 9 pounds; cockerel, 7½ pounds; hen, 7½ pounds; pullet, 6½ pounds.

The Rose Comb Black Minorcas are now one of the most popular and eagerly sought of the new varieties. They were produced by Geo. H. Northup, of New York. Mr. Northup states that none but Minorca blood is in their veins—that they were originally sports from his Single Comb Black Minorcas. They are Minorcas in form and bearing, differing only in that they have a rose rather than a single comb. The Standard calls for weights one pound less than that required of the single comb variety.

The Single Comb White Minorcas have not gained so prominent a place as that held by the Blacks. They are the equal

of the Blacks as egg producers, and it seems strange that they are not more popular. They are of the same weight as the Rose Comb Blacks. They are a beautiful pure white fowl, and must, in the natural course of events, occupy a very prominent place in the poultry world. They are a new variety, comparatively. It is maintained by some that they are a sport of the Blacks. Others hold that they were produced by a cross of the White Leghorn and White Game.

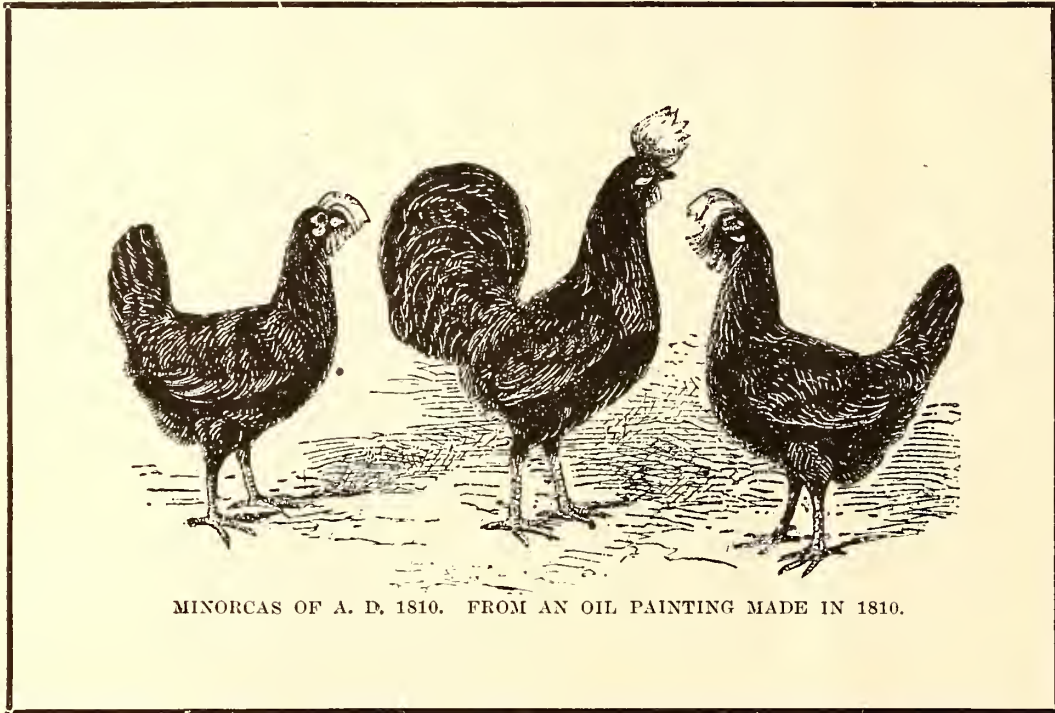

THE ANCONAS.

As has been stated by Mr. Doyle the Anconas are a cross of the White-Faced Black Spanish, or a sub-variety of a cross

throughout, with no tendency to lacing. Shanks and toes yellow or yellow shaded or mottled with black. Wattles red, ear lobes white. Single comb. They are non-sitters, and exceedingly good layers.

BLUE ANDALUSIANS.

The Blue Andalusians, one of the prettiest and most unique of fowls, is also a direct descendant of the Black Spanish. Its origin is like that of the Anconas—the result of the Black Spanish blood being united with that of the common fowl of England in an early day. The Blue Andalusian is a remarkable egg producer. It is somewhat difficult to breed true to

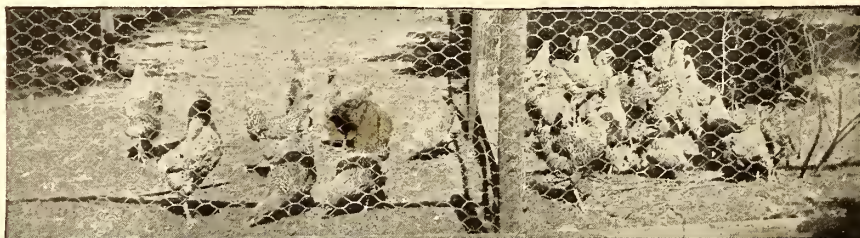

MINORCAS OF A. D. 1810. FROM AN OIL PAINTING MADE IN 1810.

of this fowl, upon English stock of like form. They were produced in England in a very early day, without effort, it would seem, being for many years the common or door-yard fowls of the people. They found friends in later years who undertook to perfect them, to give them established color markings and form. They were brought to this country in an early day, but soon lost their individuality. During the past few years several importations have been made. They are now quite extensively bred in this country. In shape and form the Standard requirements are the same as those of the Leghorn. They are the smallest of the Spanish group, being somewhat larger than the Leghorn. The plumage is beetle-green ground, the feathers tipped with white, evenly mottled

feather, many of the chicks reverting back to the black plumage color of their ancestors. This has led the statement to be made that the Blue Andalusian is the parent of the Black Minorca, but this will not hold good. The Standard weights for the breed are: Cock, 6 pounds; cockerels, 5 pounds; hen, 5 pounds; pullet, 4 pounds. The plumage color is most pleasing, being a clean, even shade of slaty-black, with wing-bows of male blue-black. Each feather on breast of male has a well defined lacing of a darker shade of blue. Tail of male a glossy bluish-black. Single comb with five points.

During the past two years we have seen a few specimens of rose comb Blue Andalusians. They are very crude specimens as yet.

Origin and History of Orpingtons

A Detailed Description of how this Grand Variety of Fowl was Originated by the Late Wm. Cook—How they acquired the Name.

The Single Comb Black Orpington was the first of this Family, followed closely by the various other Varieties.

Written for American Poultry Journal by Percy A. Cook, Scotch Plains, N. J.

The Orpington is the name of a breed of fowls of which there are ten varieties and were all originated by the late William Cook in England, and before many years it is very probable that there will be more bred in this country than any of the other breeds. Some ten years prior to the origination of the first Orpington, in 1886, Mr. Cook saw that there was room for a new fowl, which would lay more eggs than any of the existing breeds, and especially in the winter time, when eggs are scarce, one that could stand a hot or cold climate, a hardy fowl, one to mature early, handsome in appearance and also a fine table fowl, with a good, fine grain of meat.

So it was in 1876 that Mr. Cook started out to produce a fowl with the above qualities; in this he was more than successful, bringing out the Black, White, Buff, Diamond Jubilee and Spangled Orpingtons, each variety having a single and a rose comb, thus making ten, all unequaled by any other breed as an exhibition or utility fowl.

The single-comb varieties are more popular than the rose-comb, and for one starting in the chicken business to make money by selling stock I should recommend the former, as the demand for these is greater; their size is also a little larger than the rose-comb.

The name of Orpington was taken from Mr. Cook's house and also the village about three miles from the residence in Kent, England, this being over five hundred years old.

One of the many great advantages the Orpington breed has is the selection one has as to colors and combs. Each variety is as good as the other for utility purposes, so that one just has to mention their favorite color and comb and there is sure to be an Orpington to suit.

As soon as produced in England they immediately became popular, and before four years were the leading fowls, as they are today, in every land they have been taken to, and they are fast getting to this position in South Africa, Australia, India and on the continent, where several of the agricultural governments have taken them up with great success, distributing them among the farmers to improve the poultry industry. This was, of course, after trying many other breeds, but they found the Orpingtons were far the best. In Australia and South Africa the British government paid the late Mr. Cook and the writer to take the Orpingtons and give advice on all poultry matters, right through these two countries. Americans like the best of everything. This is why the Orpingtons are becoming so popular here. Orpingtons are especially adapted

to this country, where extreme climatic changes are met with; they are practically immune from the changes of the weather and do just as well in the extreme south of this country as in the north.

They possess a tremendous amount of vitality, which is very necessary for a fowl to have in a hot climate, as there are so many ticks, sandfleas, etc., to contend with. I have seen Orpingtons in Africa laying every day and yet covered with these pests and yet the other breeds that were on the farm, numbering some twenty-six kinds, were not giving an egg, and many were dying.

The Orpingtons became popular absolutely on their own merits. If only one pen of them gets into a town their excellent qualities soon become known by others and there will be dozens of pens before long. It is a well known fact that they will live and thrive where other fowls cannot even live. We have experience of that in Central Africa and in parts of India, where it is phenomenally hot.

The same story holds good in the Arctic, as well as the equatorial regions. Hens and pullets have averaged twenty-six eggs each per month during the worst months of the winter at Archangel, in northern Russia, on the White sea, one of the coldest inhabited parts of the world, also the same number of eggs in the northern parts of Canada. Probably the fowls you now keep stop laying when a cold spell of weather comes on. If so, try Orpingtons, and I do not think you will be bothered with this.

Orpingtons are unsurpassed as to their fine table qualities. They have full breast meat, also on the thigh, with good oysters, and the meat is very juicy and of very fine grain. They are usually ready for broilers two to three weeks earlier than other breeds, and although such a large fowl, commence to lay at five months old, if, of course, they are properly brought up. When a number of fowls are kept, one can readily understand why there is so much more profit by keeping Orpingtons, laying at least two months earlier than other breeds. This saves two months'

feed bills. They have come out on top in nearly every laying contest that they have been entered in. When they have room they make good foragers and will pick up half their living. Although a heavy bird they are not lazy, like the majority of the heavy breeds. They also do well in confinement, and the smallest back yard is not too small for them to increase the income of their owner.

The Orpingtons have a distinct shape from other breeds, being short on the leg, with a large body, which is of a blocky appearance and yet has beautiful and graceful curves, and are also very heavy and yet the best layer in existence. Do you wonder they are popular?

I have had cocks weigh 15 pounds and hens up to 12 pounds, but such weights are exceptional, a cock of ten to twelve pounds and a hen eight pounds are large birds. A heavy bird is good as long as there is no excessive fat, as this will reduce the laying qualities. The exhibition birds are just as good layers as the utility stock.

They were taken up by royalty in England and the Royal yards at Frogmore and elsewhere are still stocked with them. Mr. Cook presented several pens to the late Queen Victoria, who was delighted with them, and every year purchased birds from Mr. Cook.

Another very good point in the Orpingtons' favor is the price. The best specimens are worth more than in any other

WILLIAM COOK
Originator of the Orpingtons

breed. Seven hundred and fifty dollars has been paid for quite a few birds and more than this amount refused for some. Many cockerels are sold every year in this country at \$100 and \$200 each and hens and pullets at \$50 and \$100 each. Many people think that such a large amount of money invested in one bird can never pay, but such is not the case. One will get a far better interest on their money than by buying cheaper stock. "The best always pays." A short rhyme in the American Orpington Club catalogue explains the whole situation in two short lines:

"No wonder Orpingtons are in such favor,
The largest income from the smallest labor."

Every breeder that I know of finds the demand for Orpingtons greater than the supply. When asked they all say they have not enough stock to fill their orders with, and that they could sell three times as many if they had them. Surely this will convince one that there is money in Orpingtons. One male can run with eight or ten hens. They are of a very quiet disposition and do not fly around on one coming near them. They make good mothers and are easily broken up if one wants to.

I will now explain how the ten varieties were made and why they possess such good qualities. I will take them in the order that they were originated.

SINGLE COMB BLACK ORPINGTONS.

These fowls are of a beautiful beetle green color, with a bright, metallic luster, which has to be seen to be appreciated. As stated before, Mr. Cook, in 1876, saw that a better breed of fowls was wanted, one that would combine weight, eggs and general usefulness and also a bird of a handsome appearance, so it was in this year that he started out to make his ideal fowl. Mr. Cook had at this time over 3,000 pure bred fowls of different breeds; he noticed that the sports which were black from the Barred Plymouth Rock laid about forty more eggs per year than the Barred Rocks, and also laid a month to six weeks earlier, so he decided to use these as one of his breeds to cross.

The Black Minorcas were very fine layers of large eggs, their flesh was very white and tender, so cocks of this breed were mated to the Black Rock pullets. The Langshan, at that time, was the best winter layer in England, of a brown egg and plenty of them. They were then short on the leg and flesh of a fine grain.

Pullets produced from the two first breeds mentioned were mated to Langshan cocks. It took nine years' careful breeding to obliterate the feathered legs of the Langshan and to make up the birds as his ideal, doing away with the light body of the Minorca and yellow legs of the Rock.

Although Americans, as a rule, have not cared for black fowls, as soon as they see the Black Orpington, they are won over to them at once; they breed more true than any breed in existence and are exceptionally handsome and run a little heavier than any of the other Orpingtons. It was in 1886 that they were first made public. They immediately went to the front as the greatest utility fowl and they still and always will hold this position. The best specimens of this variety fetch more money than any of the others. They have become

very popular in the States and Canada, so much so the prices have risen and one is really fortunate if they are able to secure any at all. They have lots of fine, juicy meat and lay a large, brown egg, skin is white. They have won two years running first prize as the best table fowls, exhibited at the Dairy Show in England, dressed ready for the table.

ROSE COMB BLACK ORPINGTONS.

These were made in a similar way to the single comb, only rose comb Black Langshans were used instead of the single comb. There never existed a breed of rose comb Langshans, but when they were first imported into England from Shanghai, Mr. Cook secured a few specimens and used them in the formation of the R. C. Black Orpingtons. They are not quite so large as the single comb, but equally as good layers. They have a very smart appearance and are more popular than any of the other varieties of the rose comb Orpingtons.

SINGLE COMB WHITE ORPINGTONS.

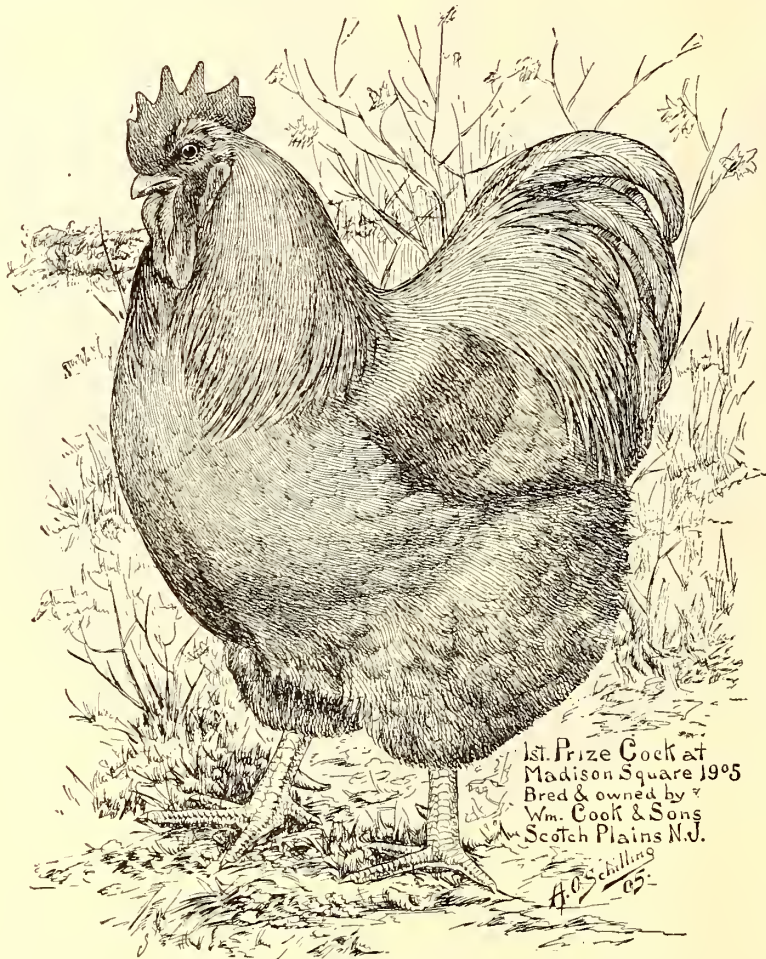

In 1880 Mr. Cook thought he ought to get to work and produce a White Orpington that would come out a few years after the blacks, as all people might not like this color. After several experiments to find out the best way of producing white fowls, he started by mating White Leghorn cocks with Black Hamburg pullets. Most of these pullets from the cross came very white. These were mated to White Dorking cocks, many of the progeny now came blue and barred and it took many years to get the perfect white fowl and to get only four toes, as the Dorking has five. But by 1889 he had them as perfect as possible and introduced them to the public. These, like the Blacks, had an enormous sale, which has always kept up and they are now more popular than ever.

They possess the same good qualities as the black, great egg production, especially in the bad months of the year. For lovers of white fowls, which are certainly numerous, they are certainly the ideal fowl. They breed very true. There is not room here to go into their merits, but

in the preface of this article most of them may be found. The only difference in the make-up of the Rose Comb White Orpingtons from the single comb is that the rose comb Dorking was used instead of the single comb. The same characteristics are contained in the two varieties, but they are not so popular as the single comb variety.

SINGLE COMB BUFF ORPINGTONS.

Now we come to the most popular variety of the Orpington family, the Buff Orpington, although the Black and White are running them close for this position. Before the Black and White Orpingtons were perfected Mr. Cook was experimenting on a buff fowl. He knew that if he could produce a fowl with the ideal utility qualities and yet in a buff color, that it would be the most popular fowl in the world, and in this he was right. It was in 1885 that Mr. Cook finally started on the buffs and at this time it was a well known fact that he possessed the best laying Buff Cochins in the country, some had laid 41 eggs in 41 days, and were not so broody as most of them were. Before Mr. Cook started to make any

W. P. Willett, East Orange, N. J., was the first Secretary of the American Orpington Club, and is the author of a well written article on Orpingtons in this issue. C. E. Vass, Washington, N. J., imported the first pen of Buff Orpingtons, and was also the first to make an exhibit of this variety in this country. His article in this issue is interesting reading. Wm. Berry Owen, Vineyard Haven, Mass., is Secretary of the American Orpington Club, and proprietor of the Owen Farms. He is the author of an able article on the Orpingtons in this issue.

of the varieties of the Orpingtons he knew exactly what he was going to make and worked until he got it.

He started by mating Golden Spangled Hamburg cocks with Colored Dorking hens of good size and of the best laying strains obtainable. (The Colored Dorking is also known as the Dark Dorking.) Many pullets from this cross came of a reddish brown color. These were mated to Buff Cochin cocks of the marvelous laying strains mentioned above.

Hamburgs were selected because they laid more eggs than any other breed of fowls then in existence and also because of their beautiful and perfect shape. The Dorking was used to get the length of breast bone and fine quality meat. This breed has always been considered the best for table purposes, and when crossed with the Hamburgs made fine layers. Cochins were used for their size and also their good winter laying qualities.

When one considers what had to be done to produce the Buff Orpington, Mr. Cook's perseverance and patience can be well appreciated.

The Hamburg had blue legs, white earlobes and black tail; Dorking had black tail and five toes on each foot; Cochin had yellow legs, with a lot of feathers on same, and yet the perfect Buff Orpington has white legs, free from feathers and buff color throughout.

It was at the Dairy Show in England in 1894 that Mr. Cook first presented the Buff to the public. In all he had a few more than 2,000 first class specimens. All that he could afford to sell were immediately purchased and orders for eggs were booked from the others that wanted them. If he had had three times this number of stock, it would have been an easy matter to sell all.

In the history of poultrydom the advance of the Buff Orpington stands absolutely alone, not another breed can begin to compare with it for popularity and usefulness. I do not believe it will be many years before the Buff Orpingtons are bred more in this country than any other breed. This is certainly saying a lot, but still it will come as it has in every other country.

Single specimens have sold for \$750 each. It is easier to make money out of poultry since the Orpingtons came over here. There is always a ready market for good breeding stock at good prices and it can never be overdone. The Buff Orpingtons have a club devoted entirely to them, as well as the American Orpington Club.

The Rose Comb Buff Orpingtons possess the same good qualities as the single comb, not quite so large, but are becoming very popular.

SINGLE COMB DIAMOND JUBILEE ORPINGTON.

These were brought out in 1897 and at a suggestion of a friend were named the Diamond Jubilee Orpington, as it was then the late Queen Victoria's Diamond Jubilee. These fowls were her late majesty's favorites. They were produced by mating the same breeds together as were used in the making

of the Buff Orpingtons, only a Speckled Dorking (these birds are now extinct, I believe) was used instead of a colored one; this being used last.

Their shape is the same as in the other Orpingtons, although their color is quite unique. It is composed of three colors, as follows: The ground or main color is a rich reddish brown, then a black bar, which is usually beetle green, then tipped with white. The neck and saddle hackle is very pretty, being more of a deep golden color, with a thin black strip in the center and tipped with black and white.

They are very quick in maturing and are becoming very popular among lovers of speckled fowls. They eat almost as good as pheasants, which they resemble somewhat. The rose comb variety is not at all popular, every one wanting the single comb.

SINGLE COMB SPANGLED ORPINGTONS.

Mr. Cook always liked a spangled fowl and after eight years' work produced the Spangled Orpington, in 1898. Dark Dorking cocks were mated to Barred Plymouth Rock hens. This cross gave pullets of great size, but almost black, with very little white in them, and just a little brown in the breast. These pullets were mated to Silver Spangled Hamburg cocks for shape and laying qualities. For some time the cockerels came of a drab color, but eventually this was obliterated and they now breed very true. The rose comb has not become very popular, all the demand being for the single comb. The plumage is a beetle green, with edges of feathers tipped with white. They are great layers and very hardy and people are very pleased with them. If you want to keep the best fowls keep Orpingtons, any of the varieties. PERCY A. COOK.

Scotch Plains, N. J.

THE ORPINGTON FOWL—A LITTLE HISTORY.

How William Cook introduced the Orpington into all parts of the world and how they sprang into popular favor everywhere.

Written for American Poultry Journal by W. P. Willett, East Orange, N. J.

William Cook was an extraordinary man; he was a genius; he was the poultryman of his generation "par excellence," the incentive to make a marked impression on the poultry world was born in him, and at the age of six began to develop and never stopped until he drew his last breath in his beloved England. His is the only name so identified with the breed of fowls he originated that to speak of one is to name the other. Many breeds have been brought out in years past, run a course for a few years, disappeared from sight, and carried the names of their originators with them. Not so with William Cook. His genius lay in not only producing the bird of merit but with patience and perseverance through many years so exploiting

the merit of the bird that all the countries of the earth were forced to acknowledge the superiority of his production. A very notable instance of this is found in the fact that after he had presented his Orpington to the English public in 1886, and while he was busy pushing its merits on the other side of the water, a Mr. Daniel Love, of Massachusetts, imported some of them and exhibited them at Worcester show in January, 1891, winning 1st on cock, 1st and 2d hen, and 2d pullet, and 1st pen. No one else won 1st on pullet, indicating that he was the only exhibitor. The Orpingtons there shown evidently made little or no impression, as they were not advertised by Mr. Love or anyone else, and it was several years before the Orpington made its appearance again, and then at New York. A bird of extreme merit was not recognized simply because it was not properly introduced by an enthusiastic promoter. Quite the contrary with Mr. Cook in his own country. He did not rest a moment easy until the public of England admitted his claim to the possession of the best all purpose fowl ever produced, and when England had done this he took the bird under his arm for a triumphant march around the world. He went with the Orpington to the Continent of Europe, took the prizes offered at the shows, made the people recognize and demand a supply of his Orpingtons. He crossed the Alps to Russia and planted his Orpingtons in a nobleman's farm there, returned

to England, took a fresh start with a cargo of his Orpingtons to Australia, distributed them throughout the land, giving lectures from town to town as he had already done through England and the Continent. Having conquered those countries his ambition was still unsatisfied and he got together his finest specimens for a trip to Africa, and there he bought a farm near the mining districts and stocked it with Orpingtons. He found by these experiments that the Orpington was suited to every clime under heaven, and in every climate and condition it proved every claim he had ever made for it as the best all round poultry in the world. Only one other country remained to conquer, and that was America. A few Orpingtons had found their way over here while he was busy with them elsewhere, their reputation abroad had attracted the attention of a few American and Canadian breeders, who began to get a little enthusiastic over the breed, but it was not until the master mind, hearing of the want of such a fowl in America, came over to the New York Show with some two hundred specimens of his choicest stock, that the craze for Orpingtons began in this country. There were scarcely more Orpingtons in the country when he arrived than he brought with him. But I do not intend in this article to talk about the Orpington breed but about the Orpington genius who developed and exploited the breed. Without the individuality of the man the

breed might have remained in obscurity for many long years without reaching the apex to which it has already arrived. My personal acquaintance with Mr. Cook was most intimate while he was in this country. He was my guest, and a most interesting conversationalist, and what he did not know thoroughly about poultry in all its departments, no other man did. He was an expert in matings to produce results aimed at. It took him some 15 years' steady matings to produce his first Orpingtons, the Blacks, and no one knows how much knowledge acquired before the 15 years went into the final developments.

He could read a hen like a book, knew her every mood and way, could pick out the hen that laid the largest and the smallest number of eggs in a year with absolute certainty. I know this because I use trap-nests the year round, and tested him with many hens. His method was very simple, and easily acquired. He could tell the ails of fowls instant, and killing and dissecting proved his correctness over and over again against the opinion of other experts. How he loved to rehearse the days of old while working his way to the top, his successes, his disappointments, his battles with enemies and successes over them, his triumphant marches with his Orpingtons from country to country, the encomiums he received from Majesty itself for his special favorite variety, the Diamond Jubilee Orpington, how he kept from the European breeders the matings which produced his last and specially made variety for eggs, the Spangled Orpington, and only disclosed the same to his host in America, with what desire for the spread of Orpingtons in America he planted his stock on a farm in New Jersey under direction of his son, and looked forward to doing in the United States what he had done in Europe, Australia, and Africa, inaugurating a course of lectures throughout this country which for usefulness and poultry culture encouragement would not have been surpassed. Mr. Cook reached the maximum of raising some 26,000 fowls on his plant at Orpington, County Kent, England, amassed a handsome fortune, larger by far than any other poultryman in the world ever reached—and has left to the world a breed of fowls that bids fair to make for thousands of breeders in this land a handsome livelihood if not the same fortune. Just think for a moment what he did and see if any man in America ever came near his standard. What breed of fowls originated here was ever exploited all over the world by the originator, going with them into every country? The name of William Cook and his Orpingtons has become a household word, and while he lies quietly beneath the vines of the churchyard his Orpingtons are weaving laurels to his memory wherever they spread.

THE FOWL OF TODAY AND TOMORROW.

What there is in an Orpington to Warrant Such a Title—The Attractive Features of the Fowl for Today and Generations to Come.

Written for American Poultry Journal by A. G. Goodacre, Watchung, N. Y.

This title is peculiarly becoming to the bird whose advent to this broad continent we are now reviewing; true, we can't drift far back into history to draw from a distant past a record that at once ensures patriotic love and devotion in the future; we have got to that milestone where everything stands on a business basis, and thus we ask ourselves, is this for today and tomorrow? Not, so and so paid well so many years ago. No, that is not characteristic of the American people. In this article we will try and learn what there is in an Orpington to warrant such a title, look into their business capacity, then let us take into consideration the views of the true fancier, one not seeking profit so much as the pleasure of breeding and caring for a pure breed of poultry, one whose hen-house and yard is his or her recreation ground, an instinct that appeals far more strongly than mere dollars and cents. We hear startling rumors about the Orpington fowl, and we must say in justice to our good friend, W. P. Willett (for a good joke got out in the poultry papers about this gentleman, 200 egg hens, and Wall street rumors), that these did not originate in the vicinity of his office; for instance, we are told in the *Canadian Poultry Review* that J. W. Clark, President of Canadian Buff Orpington Club, is importing from England S. C. Buff from a strain with a record of 250 to 282 eggs per year each, this will startle them even at the Maine State Station; this is really something interesting for Professor Gowell to consider. We might further suggest a cross with his record-breaking Rocks, but hardly dare hazard a guess at the results of such high scorers. Still results would warrant the experiment, as it is an accepted fact that judicious out-crossing tends to create greater egg production, and further, it is stated that breeding from pullets the daughters of pullets will likewise increase egg production, so here we could have a real live egg

DR. PAUL KYLE
FLUSHING, L. I., N. Y.

A. G. Goodacre, Watchung, N. J., is a member of the firm of White & Goodacre, Orpington specialists, and the author of the article in this issue entitled "The Fowl of Today and Tomorrow." Dr. E. P. Cunningham, Goshen, Ind., is president of the National Single Comb Buff Orpington Club and the author of an article in this issue that is worthy of perusal. Dr. Paul Kyle, Flushing, L. I., N. Y., is president of the Kyle Institute for boys, an Orpington enthusiast and an able writer on this variety.

contest in the hands of an expert, and lead up to a *maximum egg production*. Well, so much for sensation No. 1, now No. 2 swings around more towards the South Pole, though severely north of that remote region (there has been such a sand (?) storm since the automobile races down south that the writer's mind is a little hazy as to the party and location), however, in that extraordinary publication, *The Orpington Poultry Journal*, an Orpington cockerel is credited with a weight of twelve pounds in a period much short of twelve months, we naturally felt flat after our record of nine pounds at six months with an April 16th hatched Black cockerel; we know the editor of that publication cherishes heavy weights, and we have seen birds in his yards rather of the ostrich order; if he told us they weighed fourteen pounds we of course would believe him, but personally we don't believe in such very heavy weights and consider our standard about right.

Now we have seen reports from other countries, particularly Australia, of the remarkable egg yields of Orpingtons; we have had pullets laying at five months and four days, and have heard of an instance where a pullet laid at three months and twenty days, but this latter is not desirable.

We know that Orpingtons will attain very heavy weights, even old cocks weighing sixteen pounds, but heavy weights are objectionable not only because fowls take longer to mature, but also because hens and pullets weighing nine and ten pounds are much poorer layers than those running six and a half to eight pounds, it is claimed the Orpington is an exception. The writer, however, believes this fowl to be a better layer than other setting breeds, but from experience can only state that the above recognized fact is also true of an Orpington, the lighter weight hens lay more eggs and are less subject to disease; moreover, whilst on this subject will say that the tight feathered birds are much better layers, more active, and weigh a good deal more than they look; heavy feathering in all breeds of fowls is characteristic of smaller egg production. This is particularly true of Black Orpingtons.

Now having touched on some of the extremes in Orpington-culture we will proceed to discuss the attractive features of the fowl for today, and generations to come.

The S. C. Black Orpington, produced some twenty years ago, has been so much improved of late with a view to an exhibition fowl that as a show bird it is hard to outrank by any breed however much others ante-date in origin this monarch of our modern shows; a true show specimen will present a massive, well rounded body, the male standing on rather short legs, well rounded out in breast, a feature so many are lacking in, the fluff back of thighs nicely rounded out to balance breast, the tail should not be too pinched, as seen in many of the imported birds, the massive neck with abundant hackle needs a fairly full tail to make the bird poise right, and the back should be medium long, with broad saddle, a short V back is considered objectionable, also one too long with heavy tail carried away out like the first that came to this country; we

are safe in saying that no finer shaped Orpington ever stood in a show coop than the 1st Madison Square Black cockerel 1906; but recently out from England. He was a wonder in conformation, and set Orpington "dreamers" thinking hard. Take a Black Orpington cock with a large "shoe-button" eye and there is something magic about his appearance, with that superb green sheen that glitters in the bright sunlight that seems to compel the casual observer to stand and admire him, this variety seems the most captivating to our show visitors or when seen in their home quarters; unfortunately the supply in hens and pullets is not at all equal to the demand at present in America. The S. C. Black and S. C. White have just been admitted to the American standard at the recent Cincinnati A. P. A. meeting.

The Buff are now well distributed, and no doubt about it, they and the White are a very valuable acquisition to poultry breeders in general, are thoroughly practical fowls, great layers and capable of producing a large quantity of the choicest meat at small cost, the R. C. varieties are also deserving of recognition, and are, if anything, even better layers.

To see the Buff Orpingtons at their best is to have them on a nice green run after a brilliant sunset; the after-glow seems a particularly fitting light for a large, massive buff fowl, or to have a bunch of thick set buff cockerels standing on the snow-covered ground on a bright winter's day is a delightful feast to the fancier; such pleasing contrasts all help to weld the chain that binds the fancier to Orpington-culture; why visitors stand in amazement and exclaim that they never saw such beautiful fowls before; then we have the rich blended and showy Jubilee, true, not admired by all, yet those who take them up are loud in their praise, remarkable growers, they all say. We had a July 6th hatched cockerel that early in November weighed six pounds; most persistent layers—why, ours have been out all winter in a small, cold and airy colony coop, with just bags thrown over the wire screen windows—no glass at all—yet some fourteen laying give their nine and eleven eggs per day even when the mercury is hovering down near zero; certainly they have great powers of endurance and are wonderful foragers, with very full breast meat. Our shows have been very fertile fields for spreading the Orpington ever since their first sensational appearance *in force* at Madison Square in 1903. The truth of the matter is that the Orpington has sterling merits at the back to warrant so many taking them up; a fowl of prominence for years to come, and a joy to generations yet unborn; a bird that fills the eye, being in several colors, to suit the tastes of all, the most remarkable exhibition bird ever brought to this country, taking Champion Trophies for best bird in show, also the coveted specials for whitest bird in show. Certain it is that 1906 has opened with remarkable Orpington progress; then again when we look at their egg-yielding capacity, we are continually receiving letters of how they surpass other well known breeds of excellence, and as growers all admit they are

leaders. In conclusion, let us analyze some of the statements made depreciating this breed, jealousies will crop out, and the poultry field is no exception; but some whom the writer has talked with have had good cause for complaint, and no doubt in the run on Orpingtons, careless bred and poor-any-way stock has been shipped out. One man says the Black are poor layers. Our answer is that he has got a poor strain, probably full feathered exhibition stock bred for that requisite only. This variety have been leaders in the Australian egg competition several times, and we have found them great layers. Another party says Orpingtons lay small eggs. Well, so do the other breeds. We have hens and pullets laying eggs 29 ounces, 32 ounces, and even more to the dozen, but we consider such eggs too large in a commercial way. There is again a great deal in a strain, but our experience is they compare very favorably with other breeds; others complain of them as getting broody. Well, so do the other breeds, but an Orpington is easily broken up and returns to laying in remarkably short time, and as winter layers they far surpass the other varieties. Then some of course complain of white shanks. Why, what do the White Wyandotte or Rock breeders do if their birds are off in leg color, why, color them up with butter color, so can

ADVANCE OF WESTERN ORPINGTONS.

IN GENERAL.

We have but John Bull to thank for the very meritorious Orpingtons. And we would thank most any one who would hand us a breed as worthy as they! Though the Orpington is largely a fancier's and breeder's fowl to-day, its very excellencies are sure to bring it into desirous repute with practical poulterers and farmers. Here in the West where good things are received with arms extended the Orpington is living up to and over the many things told of and written concerning its qualities. When a breed is shouted from house tops and press and its enthusiasts find the virtues recounted of it in all particulars true, it will surely go forward—and this is what can be conscientiously said of this premier fowl of England's poultry fancy.

No breed has captivated a poultry public so quickly as this bird; none has ever before brought surprises beyond expectations; and from the forward conning tower of this breed now navigating the almost boundless sea of hendom, all looks particularly inviting. To substantiate this last rather laudatory phrase I will point to the fact that at nearly every show in the West there have been strong classes of Orpingtons while other breeds which are older and very good, too, have been shown in far less numbers. Some of the breeds and varieties of highly profitable table and laying fowl are not known in the shows of the West to-day, generally speaking. It will do no good to name these fowls whose merits are deserving yet whose popularity is on the slow and sure wave. The strength of the Orpingtons can best be judged by the shows and by the announcements of breeders appearing in the farm and poultry press. Look under the heading of "Breeders' Cards" in the columns of the poultry publications at your immediate command and compare the number of breeders of Orpingtons with breeders of varieties known here for a half and a quarter century! This shows the fancier that good Orpingtons will be in demand from within the ranks of this bird's enthusiasts. The array of breeders and champions of a fowl makes it that much more in demand.

The Orpington stands firstly on a general purpose basis—this perfectly assuring popularity and increasing numbers of admirers when the general purpose qualities are within reach of the breed so cleverly pushed to the fore by its fanciers. The good size, clean legs, vigor and huskiness of chicks, easy growth and early maturity for a fowl of such generally massive proportions, all commend it. The fancier, and the poultry keeper who demands a fowl of better than general worth, all appreciate the excellence of the Orpington qualifications I have mentioned. These are the rocks with which the foundation of the Orpingtons' advancement is built. On such a foundation any fowl could ride to immediate favor!

I have very carefully inspected every class of Orpingtons in the shows visited in the West during the past two show seasons. My criticisms of the breed and suggestions to breeders will all be based on birds I have handled and flocks, both large and small, well known and obscure, carefully looked over since the wonderful exhibition at St. Louis in the fall of 1904.

Beginning my well meant criticisms with the styles of Orpington heads I would say that color of eye should be a point in the careful breeder's yards that needs no betterment. Eyes, beak and legs should never be cut for color, and if the foundation of any flock is laid in the right blood and carefulness of mating and selection is practiced, these points will care for themselves. Many consider the comb to be of prime importance in head points. The comb is generally noticed first by judge or buyer if he knows Orpingtons and it should be good—as the Standard gives it. The western fanciers have been prone to begin at the very bottom with considerable cheap stock which goes right on in turn producing more cheap stock. This means poor combs unnumbered. Good combs are a matter of having them originally on the males used in the foundation of the flock, and then a careful inbreeding gives the blood a prepotent quality that influences good combs. This matter of inbreeding has to do with the perfections and imperfections of the whole male or males, or females, used to found the flock. The combs of the Buffs seem to be the poorest of the three varieties out here, which include the Whites and Blacks. Perhaps this is owing to the multiplicity of Buffs bred and shown, and naturally noticed, against the few specimens of Blacks and but a few more of the Whites.

Color is a matter that each breeder must decide for himself and there is but one way to arrive at it if you are in doubt. Visit the shows and learn the peculiarities of the various judges. Have as many buff breeders comment on your birds as possible, but note well the likes and dislikes of the judges.

PARTRIDGE WYANDOTTE.

Bred and owned by Dr. N. E. Mitchell, Marshalltown, Iowa.

the market poultry man if a customer prefers to eat yellow-legged chickens. Why don't they want yellow-legged turkeys?

Now we want to be thoroughly consistent when we discuss these matters; individual birds and certain strains of all fowls have serious defects, whether it be too large combs, poor laying qualities, weak constitutions, etc.; yet one individual or a certain strain should not condemn a breed; the breed as a whole and the varieties of that breed are what we should judge by; what we claim of the Orpington is that it is superior as a commercial fowl, being a better layer than the other setting breeds, and the most rapid grower of any; a bird with a very strong constitution, the finest of show birds and a quick seller; as a table fowl commanding more cents per pound on quality of meat; now popular the world over, at home, in all climates; yet susceptible to improvement as all breeds, and it is our duty in devotion to the Orpington fowl to keep strictly along sensible lines of breeding, adding greater strength to those broad foundations that bind us not only to the fowl of today, but to hand down that which shall prove acceptable for those to follow, the fowl for generations yet unborn.

Breed two or three shades of color and you catch the judge where he is doting—if you know what he dotes on and his desires! This looks well on paper—but in a few breeders' yards I can prove my facts. Judges are as liable to color-blindness as any of us. They are made out of the same pot of clay, have the same weaknesses and hobbies, and faults and queer ideas, hence are as apt to be as color ignorant! Learn their weaknesses, I repeat. The fancier who gets beyond the common lot makes use of all these small ideas. One does not need to show and meet defeat to learn the prominent judges' ideas of buff color. He can learn them by study and attendance at the shows. But he must test the value of his learning by giving it a tryout in the show-room.

Western Orpingtons are not quite as broad, deep and full as the type set before us by the artists of both this country and England. Sewell, whose delineations of Orpingtons have done so much to establish our American ideal, has really a bit overdrawn the birds but we can pardon his artistic sense and love for the neat and trim, well rounded bird of this breed. Not all of his sketches seem to be thus overly rounded. Comparing his work to that of Andrews, the Sewell of Mother England, Ludlow and another Britisher or two, we must confess a liking for Sewell's illustrations. Ludlow's sketches are so far overdrawn that were it not for the concave back lines and featherless feet and legs, they could almost be accepted as being Cochins. They are too beautifully plumaged. Andrewes' sketches are to me a bit stiff. The best illustrations Sewell has given us are his clever retouchings of photographs—but these are hardly ideal. They are wanting that gentle sweep of gracefulness that he gives his ideals or free drawings. Orpington breeders and judges will be glad to see his new illustrations for the Standard. We have not as yet met a really acceptable ideal for American breeders and have contented ourselves with a composite of the beauties of several sketches and illustrations before us. Give us U-shaped backs and full feathering but make this shapeliness generous and full, not small nor massive. We desire a medium boned fowl, not woody and stiff, nor weak and delicate. Give us a cleanness of head; comb, square and firm and serrated evenly and in size proportionate to the specimen. We must have breadth of body and depth and a fullness of plumage that is more profuse than Rock or Wyandotte. But let us have no more Cochin blood in the breed to obtain it. We would lose an essential part of our foundation if we admitted more Cochin characteristics to the breed. Some critics might declare that in breeding these birds up to our ideals even from within the confines of the breed that we would lose practical qualities as a result of the strife for shapeliness! About this I cannot write with authority; but if it should be in a degree true, we can add from the introduction of a heavy laying female as much new life and blood as necessary. This is indeed practical.

The Orpington club is doing needed and good work in its efforts to get the breed to the front. If the many Orpington interests are kept intact under one general governing body the breed will flourish more than if a number of organizations with the same end in view are struggling against each other. The Orpington club should be a representative body, not sectional or devoted to a variety.

ORPINGTON BREEDING.

Undoubtedly I shall fail to cast any new light on the breeding of Orpingtons though as a class poultry breeders are lame in their working knowledge of the principles of breeding and mating. In this day of Orpington advancement remember that the best buyers are breeders and that a few good birds are worth many only "fair." Mate a cock or fully developed cockerel to hens for best results. The choicest bunch of males I have seen this year were sired by a cockerel of very sound, deep color (buff) to three three-year-old hens, all full sisters, and one the dam of the cockerel to which they were mated. These hens were sired by a good male and their dam held her color after moulting; she also transmitted this characteristic to her chicks, hence the three hens were almost priceless. Both the deceased Mr. Cook and Mr. Lewis Wright advised the use of a male sound in color, free from any trace of white and with as little black as possible, his general color to be two shades or thereabouts, darker than Standard. To this male mate the exhibition hens. Did you ever note that the deep, almost "baggy" hens produced the heavy, low, rounded cockerels? All English breeders detest high Orpingtons, hence lowness of body to a certain point is very desirable. In the breeding of Blacks, deep, greenish color is best. An abundance of shade and some sulphur will put the sheen on the plumage at showing time. Avoid extremely bad faults in all of your breeding birds. Use pair, trio and pen matings and keep pedigrees accurately always. Their value is apparent when one begins the selection of birds to stay in the flock. Western Whites are generally poor in type and it will be some time before they are as

near perfection as their buff sisters. Washing of plumage adds much to exhibition fitting of any fowl and in this regard Orpington fanciers can learn valuable lessons. Range, shade, abundance of feed and cleanliness are the essentials to rearing.

Withiu the next five years the advancement of western Orpingtons will be wonderful. Only time can prove this; but the fact that westerners are more and more coming to see that the value of close application in the breeding of poultry is the one huge essential to success, makes me feel safe in my prophecy.

SPECTATOR.

BUFF ORPINGTONS.

The First Importation of this Variety—First Exhibited in this Country in 1898, at Mount Gretna, Pa., by C. E. Vass, Washington, N. J.

Written for American Poultry Journal by C. E. Vass, Washington, N. J.

When the poultry show was in progress at Madison Square Garden it was hard to realize, on seeing the large and attractive class of "Buff Orpingtons" that were on exhibition, that it was but eight years ago that I imported the first pen of this beautiful variety of fowls ever brought to this country. But facts are indisputable, and March, 1898, marked the advent of the Buff Orpington on American soil.

When I first embarked in the fancy, I took up the Buff Rocks, and it was by chance that I picked up an English poultry journal and read of the Orpingtons which were creating a furor in England. I began correspondence with a successful breeder of this variety and never have regretted the fact that I introduced the breed to the fanciers of this continent.

It is not my purpose in this article to go into statistics, as figures make dry reading. I have kept records of pens and individuals as regards their prolific laying and in a future article may give some of these records.

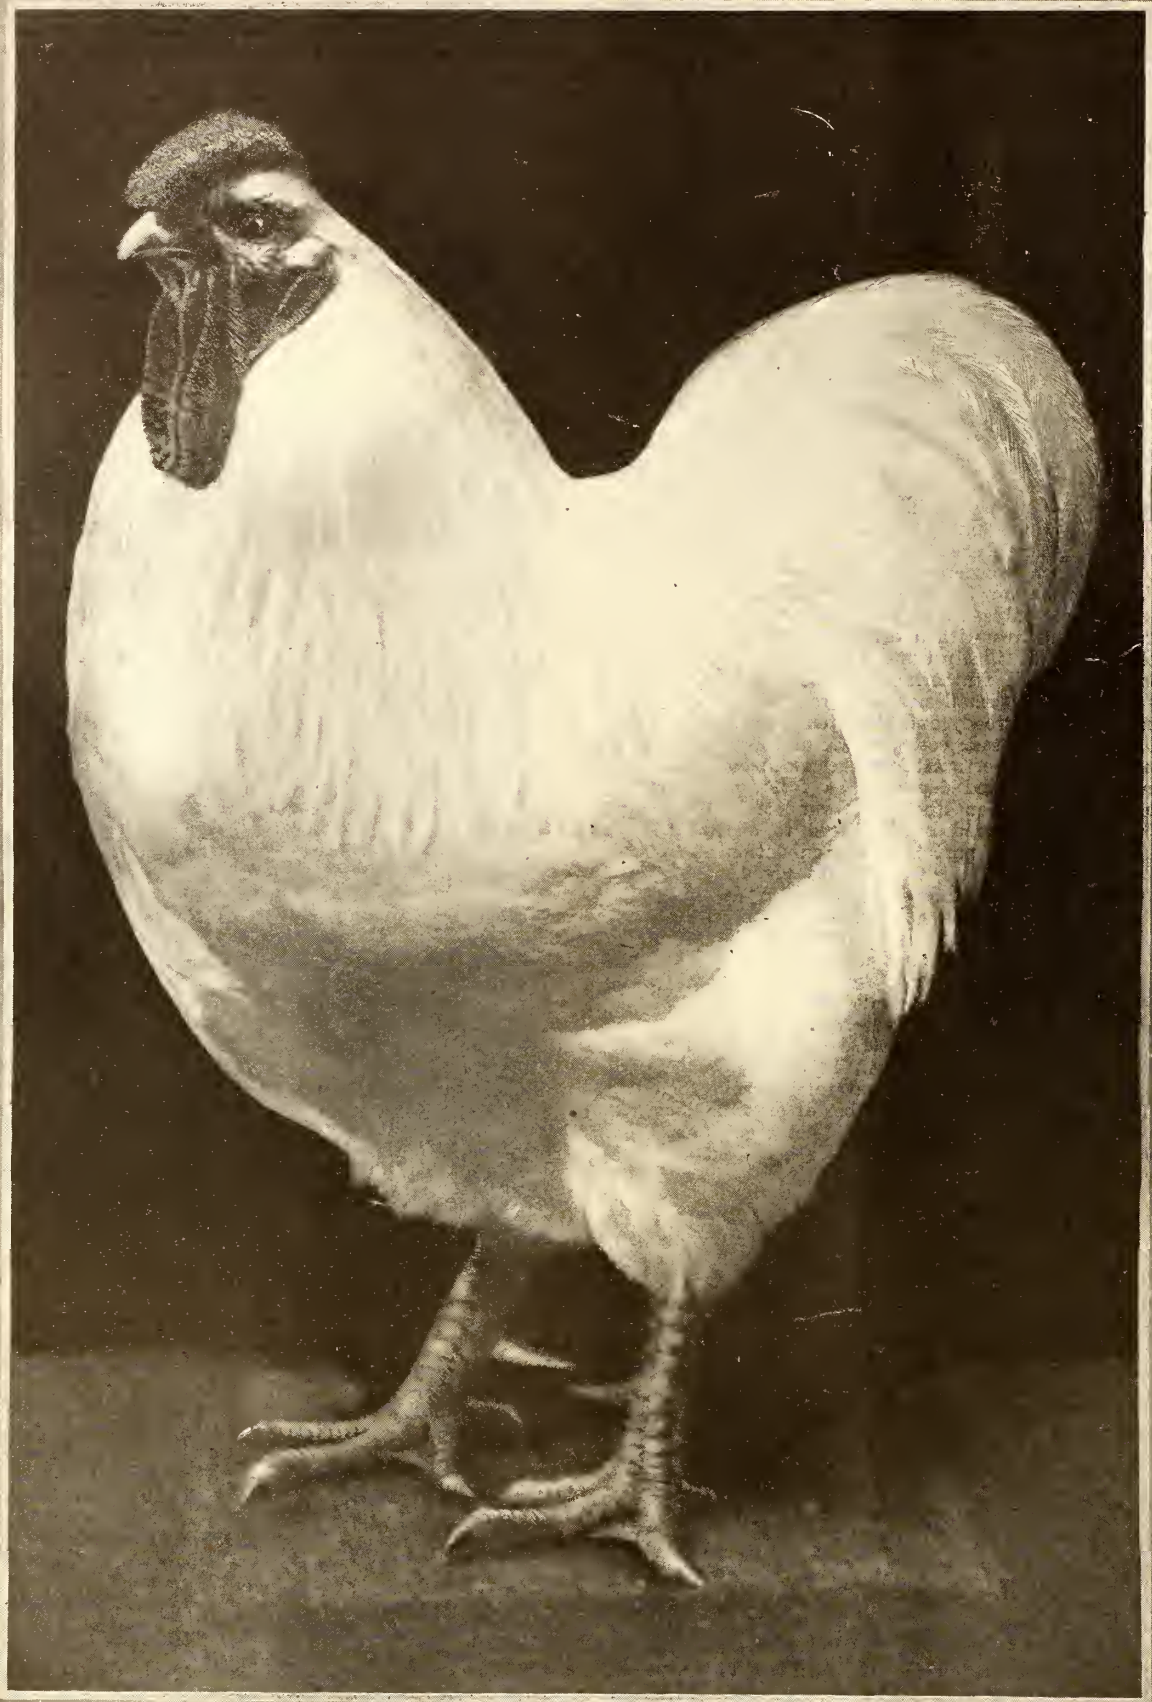

It is a matter of history that among animals, as well as men, it is a case of the survival of the fittest. Natural historians give us evidence of the fact that at one time the earth was inhabited by animals such as the mastodon, iethiseanians, and other monstrous beasts which are now extinct. Rome was at one time the greatest power in the world, yet today she is but a memory, why? Simply because the Romans were pushed into the background by reason of the superiority of another race. That is explanatory of the tremendous popularity the Orpington has enjoyed since they were introduced to the breeders of America.

I well remember that upon writing a descriptive article relating to the breed and sending it to a leading poultry journal of this country some time after I had become acquainted with the merits of the variety, it was returned to me with the statement that the editor would not print it, as in his estimation it would hurt some of the older breeds, never realizing that if the breed was what I claimed for it, it would take more than his paper to keep it down; subsequent events have proven that I was right. There is an old adage that you can't keep a good man down, and this will apply to a breed of fowls as well.

The Orpington as a utility fowl cannot be approached when considered from all viewpoints, as an egg producer, I have never had a breed that could equal them in this respect the year round, and as a table fowl they stand pre-eminent and alone among all the breeds, native or foreign. The meat is of much finer texture than any American product, sweet and toothsome, a nicely fattened Orpington makes a dish fit for a king.

When caponized they grow to enormous size and unlike most American breeds, they do not lose the fine texture of the flesh, and grow to full size very rapidly. As a fancier's fowl there can be no question as to their popularity when we consider the great advance in entries at the large shows of the country. In 1898, I exhibited the first Orpingtons at Mt. Gretna, Pa., ever shown on this side of the old herring pond. I had on exhibition four entries, two males and two females; that was but eight years ago. This year there were 192 birds entered and competing for honors; nothing further need be said about their popularity as a fancier's fowl. There is nothing to marvel at in their rapid advancement, their massive frame and beautiful golden buff color coupled with a symmetrical shape, low comb and large brown eye, present to the poultryman a very pleasing picture, which is what appeals to the fancier.

When a proposition has appealed to the eye by its beauty, to the stomach by its toothsome and to the pocketbook by its prolificness it comes as near to perfection as we can expect down here on earth and that is what I claim for the

BRIDGEWATER III.

Winner of two first prizes at Chicago, and now heads one of the best pens in the yards of Clement & Fike, Libertyville, Ill.

Orpington, as nearly perfect a breed as it is possible to secure, a breed that for fancy or utility is unsurpassed, a breed that will respond to efforts to improve it in color of plumage or shape, a breed for novice to take up with as it is but yet in the inception. I have bred the Orpington exclusively for eight years and have never regretted taking them up. I do not propose to go into detail in regard to the standard of excellence. I have given that consideration in previous articles; now I will again refer to their origin as that is so thoroughly well known. Origin is easily traced, destiny never, but it is my opinion that judging from the history of what has passed since their introduction to American breeders, that the Orpington in ten years will be the leading class at our large shows and may even be the means of bringing about an Anglo-Saxon alliance.

ORPINGTONOLOGY.

The Shining Lights in America's Hall of Fame—The Merits of the Orpington—The Black Orpingtons will be Record Breakers in America.

Written for American Poultry Journal by Fred Harries, Elmsford, N. Y.

I may not be qualified to speak with authority on my subject, so will not take a text but simply a few personal facts, and having bred Orpingtons and won with them ten years ago I may lay claim to have a smattering of knowledge of the breed and its doings.

Everyone who reads the poultry papers are aware of the origin of the breed and who was the originator and that it was a bird that found favor at the first. It also increased in favor as time went on and the improvement has taken place by the several men who have spent time and money for its development and although everlasting credit is due to the late Mr. William Cook for originating so grand a fowl, we must not forget to give credit and honor to those men who have improved the original, notably the late Joseph Partington in Blacks and Mr. Whitfield in Buffs. The Blacks owe their position in England today to Mr. Partington more than any other man and only to take a glance back for a few years, when he died, and to see at his dispersal sale his champion Black cock selling for over eight hundred dollars, is surely something we shall all be able to remember him by, as it was probably the highest price ever realized for an Orpington and when we see that the late Mr. Cook himself bid up to this amount, although he did not secure him, we may be sure that the bird was worth the money. Mr. Whitfield has certainly done as much for the Buffs, although they took on at once and their admirers today in England are legion. While writing about the men who had upheld the breed in England, nameiy, Cook, Partington and Whitfield, let us in America add our hero's name to the honor roll, as surely no man has given time and money to any bird than Wallace P. Willett. The Orpington in America today owes its position to Mr. Willett more than any other person that is interested in the breed and although Mr. Willett is now resting on his oars (let us hope is only temporary, as he is still breeding them), we must accord him a place in our "Hall of Fame" as the pioneer of American Orpingtonology. So much for biography; let us pass on and look at our breed today. Our competitors say there is a boom on and the bottom will soon drop out. It was the same thing in England ten years ago, but today they are still the most popular fowl over there. Why? Because the Orpingtons have merit. They make a splendid table fowl and are good layers of nice sized eggs. They are a farmer's and a fancier's fowl. They have a massive, striking appearance. They can be kept confined and will do well and they can be left to run and will also do well. They have a nice, low comb, which stands a severe winter, even in the coldest latitudes. They can be kept in a yard with a four-foot fence, whereas to keep any other fowl that will lay as well you must have a seven-foot fence. This item counts with a farmer or fancier. They are very tame and best of all they produce the goods. I have kept them in a pen by the side of Leghorns and found that they lay just as many eggs as the Leghorns did and in the Australian and English laying competitions the Orpingtons are always well up to the fore. In England they are first and I think in the last report of the test in the Kansas Experimental Station they were the leaders and the two hundred egg Orpington is not an impossibility.

As to their table quality the standard weights will give any one an idea of what they are expected to produce, and it has been proved that they will go over that weight very often. Mr. Goodacre has several black cockerels that weighed nine pounds at six months and these birds were not hatched until April. Let the farmer's wife who has care of the fowls figure

this us for herself and then see what breed will give her the most money for herself and if she has culls or any other breed let her weigh them and if not up to standard weights of Orpingtons my advice to her is to sell enough of what she has on hand and invest same in a setting of Orpington eggs from a good breeder and at the end of six months she will be satisfied that the Orpingtons are "it," and her new dress will certainly be in sight. There has been some talk about the detriment, so called, of having white legs and thus being handicapped in the market among so many yellow legged breeds. In the open market this may be so as the buyers have to undergo a system of education, but if you have a good, private trade, as I have, you will soon find out that your Orpingtons will command a better price than your yellow shanked bird, as with a white leg go the delicately tinted skin, and this is very thin and it also makes more white meat, which is sought for the country over by breeders and market men alike. Of course the Blacks have black legs, but if you cut those legs off and make it ready for the table the cook will not say a thing, as it helps her, and the juicy flesh on the bird will soon bring it into such great favor with the epicure that the Blacks will be demanded, and right here let me say that the Blacks are going to be the record breakers in America, where a black fowl has never become popular. They are admitted to the standard now so look out ye buff breeders and keep your feet to the line. I was talking to a very prominent breeder of another breed of fowls whose name is known from one end of this land to the other in poultry circles, as he is a judge and secretary of one of the leading specialty clubs, and he said that he was certainly struck with the Blacks, and if the time should come when his variety began to wane he would lose no time in getting into Black Orpingtons, and between you and me, he will lose no time in getting there as it is, only the fact will be kept quiet for personal reasons. The massiveness of the Blacks act as a magnet and the breeders of the other varieties must keep in mind that our ideal in shape is the Black and we must bring the others to this shape and not the Blacks to the others' shapes. Blacks still command the highest price; for instance, it was well known at the Garden that McBarry Owen paid \$750 for his winning Black cockerel. This will prove conclusively that it is a fancier's fowl as well as the farmer's ideal. I must now draw this paper to a close, although it is with pleasure you write about your hobby, the editor may not think there is much pleasure in finding space for it. So now Mr. or Mrs. Novice, if you are thinking of starting in to keep fowls for a hobby, remember that a hobby that pays will give more interest than any other, so combine business with pleasure and breed Orpingtons.

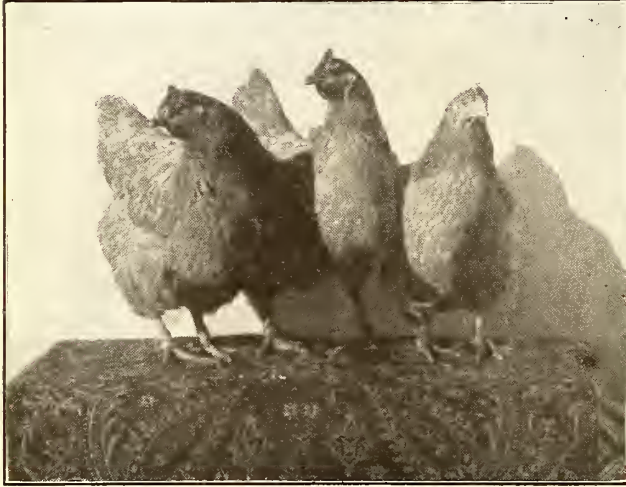

ORPINGTONS AND THE PROFESSIONAL MAN.

The Orpington an Ideal Fowl from the Standpoint of the Fancier—Orpingtons as Winter Layers and General Purpose Fowls.

Written for American Poultry Journal by Dr. E. P. Cunningham, Goshen, Ind.

Not every professional man can own and manage a farm where he may act the character of a gentleman farmer during the hours he is free from the duties of his calling. The professional man who is so fortunate as to be able to live in a well-appointed farm home and meet his professional business engagements in a nearby town or city is a man whom scores envy and would imitate if they could. Many a city dweller dreams of the old days when he lived on a farm or when as a boy he visited grandfather's country home and for the time lived in a veritable boy's paradise. No matter how utterly impracticable his ideals of country life may be the dreamer longs to try his hand at gardening or raising poultry or both. If figures do not lie he is positive that he has solved the problem of raising poultry. It looks solved on paper. There is probably nothing more misleading than poultry figures when the figuring is done by one who has had no practical experience in the business. Vacation trips to the country or to the lake resorts are frequently eye-openers for the would-be farmer. In some unlocked for place he happens upon a flock of well-cared for poultry and immediately the bee in his bonnet begins to buzz. Encouraged by the sunny view of the business given by the proprietor of the birds in the hope of making a big sale, the dreamer is tossed into the air by the promise of the profits in the business and immediately on his return home he purchases a tract of land on the outskirts of the city without considering the lay of the land just so it is in the country. He closes up his already profitable business and seeks a poultry supply house, where he invests his all in incubators, brooders and other supplies, and in large quantities of poultry supposed to be pullets and

yearling hens. These last are usually bought of the bee starter, and are usually selected without regard to variety on some one's recommendation that he has made a profit in raising that variety. Our dreamer is not satisfied with a pen or two of birds, but pen after pen of different breeds. The result is he gets undersized pullets or a lot of old barren hens. Incubators and brooders are all ready and he figures by a certain time he will have several hundred young chickens. He waits for his hens to lay and buys and feeds everything he hears about, but they do not lay. And so he meets his first disappointment with the excuse that his house is new and so on. He finally buys eggs and having good incubators gets a fine hatch, in fact many more than he expected, and he has his brooders full to more than their capacity. His chicks apparently do well for a time, but after while they seem to

Three first prize Buff Orpingtons at the Minnesota State Poultry Show. Owned and bred by G. A. Gibson, Hector, Minn.

mope around. Some die and those that survive do not grow. He feeds everything under the sun and works early and late. Other people are marketing their squab broilers and early fryers, but the beginner has a lot of long-headed, slim, sickly-looking things with a bad cold and he pulls his hair and wonders why. He blames his brooders, the man from whom he bought his eggs, in short, every one except the guilty party. It does not appear to him that perhaps he was to blame in the very beginning, maybe first in the selection of an unsuitable variety of chickens. Next he plunged into something on a big scale that he knew absolutely nothing about instead of buying a pen of birds from a reliable breeder or even buying several settings of eggs and using his own hens with which to do his incubating the first year, and at the same time watching his broods and studying the natural conditions and thoroughly familiarizing himself with what nature demands. Finally when he knows just what to do and how many to put into a brooder (not over twenty in a one hundred-chick size is far better than fifty) he has exhausted his savings and gives up in disgust or gets next to the business and comes down and consults nature. The amateur learns the various conditions and works up step by step until he makes a success. In the poultry business, as in any other business, a man must learn the elementary principles. The beginner who in a small way takes his start by watching and breeding in a natural way, if he buys eggs from a reliable breeder, usually makes a success in a measure the first year, because he has stock hatched from matings that were made scientifically and from line bred birds. To simply put together what you get from the first year's work does not mean that the second year's stock will be as good as the first, but you are on the right road and by culling closely and associating yourself with other breeders you cannot help but make a success. One of the principal things to be considered by an amateur is the selection of a breed which should be one that possesses as nearly as possible all the essential qualities that go to make up a general purpose fowl. I have bred many varieties of poultry and I must say that the Single Comb Buff Orpington comes as near filling the bill and a little nearer than any other breed I know of. They are our latest importation from England and are all and even more than is claimed for them. Until I took up the Single Comb Buff Orpington I was continually looking for a breed that was better than anything I ever bred. I have raised nearly all the popular varieties, but the Buff Orpington is far superior in every respect. From the standpoint of the fancier the breeder who is looking for something beauti-

ful can find none more steady than the Orpington. They are the largest smooth leg variety. I have had specimens that weighed fourteen pounds and then were not overly fat. The buffs attract more attention in the show room than any other variety. Few, if any, possess more beautiful plumage. However, the Orpington is not only more beautiful than any other breed, but they possess utilitarian qualities that endear them to any breeder, even though he may be prejudiced. They are without doubt the best winter layers we have to-day. I have hens and pullets that commenced to lay in October that are still at it with scarcely a day off. The pullets commence to lay as young as four and a half months old, and if given half a chance will continue through the entire winter. They make the best setters and mothers. My experience is that the Orpington will moult earlier and in less time than any other breed. They have a wonderful constitution and the process of moulting does not affect them as it does other breeds. As a table bird the Orpington is as good as the best. They have in a large measure the qualities of the Dorking, the greatest of all English fowls. The young Orpington will acquire a coat of feathers as early as any of the Mediterranean classes, and they can be put on the market at least a month earlier than almost any other variety. From actual tests in my yards the Orpington, under the same conditions, outgrew the Barred Rocks just one-half. At all times the young Orpington has a respectable coat of feathers and does not run half the season naked. As foragers the Orpingtons stand next to the turkeys. They are not lazy in the least, and if one desires to feed them in the morning when they are on free range one must get up early. While they are an active bird they stand confinement as well as any other breed. In fact they will live and do as well in any climate as any other variety. I cannot see how any man who intends to raise poultry for the market can raise any other. Their bodies are long and deep and being exceptionally early developers one can get his poultry on the market in a shorter time and with less feed and hence can make a greater profit. When one raises the buff Orpington one combines all the essential qualities of a general purpose fowl—hardiness, early maturity, grandest of layers and pronounced by experts to be the greatest of all table fowls. There is no greater evidence that the above is true than the fact that there has never been a breed of fowls from the time the first one was imported into the United States up to the present day that has swept the country from coast to coast as has the Orpington. You cannot fool the average American much. If the Orpington was not the best why have thousands discarded other breeds and taken them up. Less than two years ago I helped to organize the National Single Comb Buff Orpington Club, and now we have

S. C. BLACK ORPINGTON HEN.
First at Cincinnati, Ohio, January, 1906.
Owned by O. A. Bogardus, Warsaw, Ky.

over three hundred members. The club is dependent upon the Orpington to make good what we claim for it. I have never yet heard of any one who has discarded the Orpington for any other breed, but I know of hundreds who have discarded other breeds for the Orpington. Few, very few, breeds sell for the high prices which the Orpington commands, and while there are thousands and thousands bred in the United States each year yet the supply is not equal to the demand and never will be. I predict that in ten years the Orpington will stand in popularity ahead of any other standard variety. If you breed any of the varieties of Orpingtons you should join their respective clubs, and do not forget if you breed Single Comb Buff Orpingtons that you should have membership in the National Single Comb Buff Orpington Club.

THE ORPINGTON IN ENGLAND.

An Impression of the Orpington Fowl Received During Nearly Eight Years Sojourn in England.

Written for A. P. J. by Wm. Barry Owen Vineyard Haven, Mass.

The time at my command is not sufficient for me to write an article on the history of the Orpington, much of which I have learned during a residence in England nearing eight years, and all such information has been received directly from the most prominent and oldest breeders of this fowl now living, some part of which information probably has never yet been published. I shall simply endeavor in this communication to give you my impression of the Orpington as I received it during several years of attending the largest poultry shows in England, and many, if not most of, the largest breeding establishments.

To-day in England, at the Alexandria palace, where between five and six thousand poultry would be shown in the open classes, it would invariably happen that the largest class in the show would be the Orpington breed. In fact, year after year, they fully outnumber the class represented by any other breed two to one. Naturally when I first became aware of this fact the question was immediately asked by me, Why is the Orpington fowl so unusually popular? After interviewing breeder after breeder I was met with the universal report, that as a quick growing, early maturing bird, with fine, juicy, white meat, large size, good shape and well-colored plumage, combined with its great laying qualities, make it the most profitable and satisfactory fowl ever introduced in England.

Early Maturing.—Chickens well hatched of the Orpington breed commence to grow rapidly from the start and when they are three months old often weigh three and one-half to four pounds. They will easily take on a pound a month for the next four or five months, and almost all of a flock will grow beyond the average which is required by the American Standard, say nine and one-half pounds for a cockerel. The pullets also come to maturity in about four months, and very frequently, out of a flock of one dozen, eight to ten will be laying by the age of four and one-half months. This is truly remarkable in a breed which grows to such large size.

Good Feeders.—Every poultry lover is delighted when his flock shows a strong, healthy appetite, always ready to eat anything and everything that is put before them. From my own observation and experience I can say that no breed of fowl can surpass the Orpington in this respect.

Grand Shape.—I do not think every one would agree with the devotee or Orpington enthusiast as to the shape of the bird being superior to any other. Other varieties are more symmetrical, finer in outline, like the Leghorn, or possessing, for instance, the wonderful curves of the Wyandotte; but when one examines closely the outline of the true typical Orpington he finds a depth from the top of the back to the hock, which indicates a large frame, possessing tremendous possibilities for meat development. This is also as true when the length of the keel is noticed. The shape seems to combine very largely the excellencies of the Plymouth Rock and the Cochin, but with a character and type all its own. As every one knows now the Orpington is bred in five varieties: Buff, black, white, jubilee and spangled. The buff, according to the American Standard of Perfection, is the same shade of color as the other breeds of buff fowl, for instance the Plymouth Rock, Wyandotte or Leghorn. It may be interesting to state, however, that the standard color in England is rather different than in America, the trend being to select show birds of somewhat darker buff color than would be accepted as the standard in America. The reason which they urge for this is also worthy of note, that in order to produce birds of good even top color, as well as of a strong under color, it is both desirable and necessary to have a strong, fairly deep color in the male heading the pen. The Black Orpington is certainly among the richest colored birds of any breed in the world, the requirement being a brilliant greenish black, glossy and shining in the sun with wonderful iridescence. The jubilee is a parti-colored fowl, the major portion of the bird being of a bright mahogany color, to many judges and fanciers one of the richest hues shown in any breed. This is combined with a strong greenish black, intermingled with a pure white. The jubilee is descended largely from the old Sussex fowl, which have been bred for over fifty years, and in consequence the jubilee fowl breeds very true. The Spangled Orpington is black and white in color, about one-third white.

Great Layers.—All of the points above being granted in favor of the Orpingtons they would not have made the position which they have in England, where all the people are

utilitarians to a very large extent, were it not for the fact that as layers the year round the Orpingtons cannot be excelled. They lay a fair-sized heavy dark brown egg.

Profitable.—These points of excellency all taken together make the Orpington breed one of the most profitable to the farmer and to the householder. After all, the fowl that will reach maturity the earliest, grow to the largest size and produce the largest quantity of eggs must be the breed which, in the course of time, will stand at the front in the show room and consequently be deservedly called the most popular fowl. This future I believe the Orpington will attain in America.

BUFF ORPINGTONS.

The Orpingtons can hardly be called a new breed, although comparatively unknown in this country till within the past few years, yet they have certainly attained wonderful prominence and popularity all over the United States and Canada, and also over many foreign countries as well. Mr. Cook claimed that when he set out to originate the Orpington he wanted to make a bird better in laying qualities and for market than any in existence, and he succeeded, for they are superb for the table, their meat being of a very juicy, fine grain, with large, plump breasts and fine bodies throughout. Bred to standard requirements as near as possible, the Buff Orpington cannot be surpassed for a general purpose fowl, and there is no denying the fact that they promise to outrival the much prized Buff Plymouth Rock and Wyandotte in egg production and popular favor as well. They are hardy and good winter layers of rich, brown, medium sized eggs, and are also the best of mothers when allowed to incubate. The chicks are strong and active and grow rapidly and develop early, with good care, and are great foragers if allowed to roam. They have few equals in some ways and no superiors in others. The buff variety is most generally bred as their color tone offers an attraction to fanciers that is hard to resist. One cannot pass a flock of them without stopping to admire them, their rich golden buff color, contrasting with the green grass on the lawn, making them very attractive. Both male and female should be of a rich, deep, clear buff, uniform in shade throughout, except the tail, which should be a deeper buff or coppery bronze. The under color is the same as the surface except it is a lighter shade and should extend to the skin. The rich golden shade, so much admired, is rather difficult to produce, there being a tendency towards a red or darker shade. The only way to improve our favorites is by mating together the very best birds we can obtain. Now, fellow Buff Orpington breeders, suppose we all try to let people who read the poultry journals know that the Buff Orpington amounts to something, both for utility or fancy poultry, and see how soon the demand for our favorites will increase and never stop till they occupy the place they should, as the most desirable general purpose fowl raised today.

MRS. J. G. OSBORNE.

Fabius, N. Y.

SINGLE COMB BUFF ORPINGTONS.

I wonder how many are familiar with the beautiful as well as profitable S. C. Buff Orpington?

The early maturity of pullets and their laying qualities is not to be disputed, and a beautiful flock of gentle chickens must be more of a pleasure than a wild, unsightly lot, their soft, fluffy plumage is a thing of beauty. When you get beauty and utility combined it seems as though you had about reached the top of the ladder, besides ranking with the first as egg producers. Their table qualities cannot be excelled and I do not think equaled by any fowl bred in America. When dressed the skin being flesh colored—not white or blue—looks clean and inviting, and when roasted nine out of ten could not tell but what they were eating turkey, for the meat is tender, fine and deliciously flavored. And the size makes you think you have a square meal anyhow. Then the person who picks them will give them a vote of thanks for there are no nasty dark pin feathers sticking fast; they pick so nice and clean. Then, again, the feathers will prove a great profit, being soft, fine and fluffy; some are almost like goose feathers and nicer than duck feathers. I have known women who cooked yellow chickens, because they looked so greasy and tough, to wash them with soap and water before cooking them to make them white and clean. You don't have to do that with an Orpington. No one in England eats yellow fowls. They must have flesh colored ones. The grand Orpingtons were bred in England for that purpose, but being a good egg producer our thrifty Americans have got them here—and to stay. The other breeds will have to look after their laurels.

THE LADY AND HER ORPINGTON ALLEY

A Combination That Has Made a Winning in California—Both Are Admired and Respected—How the Chicken Business is Handled on Orpington Ranch.

Written for American Poultry Journal by Mrs. O. H. Burbridge, Los Angeles, Cal.

"The Lady" feels very flattered to appear in the AMERICAN POULTRY JOURNAL with the Orpington notables, and I am sure "her Orpington alley" would express the same feeling if they were not so busy filling egg orders to make up for lost time in the show rooms this season. I made a very modest start in Orpingtons not many years ago, having but two trios to tell the utility qualities before I made more extensive purchases. These trios were very fine ones and the chicks were so much hardier, stronger and better suited to California conditions of climate and soil than some others I was experimenting with that I sold all the other birds, named my place Orpington Ranch and started in earnest to fill the place I desired among Orpington breeders in the West. I sent to the big Eastern breeders for eggs, three English and one Scotch breeder also, and carefully toe marked the little fellows so I would know to whom to credit some especially fine birds. I purchased a trio of each of the five varieties from their originator to compare my stock with and entered the fifteen purchased and fifteen raised by myself at the San Francisco 1903 show. I took twenty-nine ribbons and a silver cup and met with older breeders in Buff, Black and White Orpingtons, but took first hen and first pullet, third cockerel (my Eastern cock was disqualified), third hen and second pullet in Buff Orpingtons; I took first cock, first cockerel, first and second hen, first and second pullet in both Black and White Orpington and all awards in Diamond Jubilee and Spangled Orpingtons. As might be imagined these winnings so stimulated my interest in the breed that I exhibited in all the Western shows and made a splendid record in all of them. I found I could not handle so many breeds and do justice to myself, so sold the Diamond Jubilee and Spangled and now devote my time to the Buff, Black and White. I was able, through a friend in England, to purchase some magnificent stock a little over a year ago in these three colors, and have bred some of this year's winners for myself and a number of my customers through careful mating of only my very best. My policy has always been to discard everything but the best and I think the present high standing of my stock is a result of that rule. I have always obtained good prices for stock and eggs, my best eggs bringing twenty dollars a dozen and booked away ahead at that. I am often asked which of the three colors I like the best and I always answer: "If I knew, I'd discard the other two." I was lucky in obtaining some of the famous Partington Black Orpingtons, two males, eight females, and when I look at them I think, "Well, after all, I will sell the Whites and Buffs and be known as a specialist breeder of the Blacks." then I pass on to the White and Buff pens and they are so handsome and so much larger and cobbier than any others I see that I think they are too fine to spare, and so I reckon I shall always breed the three colors. I have over a hundred fine pens on the home ranch and my orders are so much greater than the supply that each year I am obliged to send back almost as many checks as I keep; and let me tell you that is pretty hard to do. My houses and runs are cheaply but comfortably built. I have the water so arranged that the whole place can be watered by turning on one faucet for each section of fourteen pens; I have a covered trough in each yard,

where green food can be kept moist and fresh. The nest boxes all open on an alley where I can gather the eggs from two rows of pens at a time, thus saving opening and closing twenty-eight gates. In this climate the houses can be built very cheaply, only providing against draught. My first house and the run with two twelve-inch boards on bottom and chicken wire six feet high, nest boxes sufficient for eight or ten hens, trough for green food and all other conveniences costs just fifteen dollars. The next one not quite so much, owing to the partition in house and yard. My houses are lined with tar paper and have burlap doors, thus giving plenty of fresh air and no draught; in fact, there has been absolutely no sickness on Orpington Ranch since I studied our climatic conditions and built for them. I have purchased lately a thirty-acre ranch near Los Angeles for the pens that I have mated up for incubator lots. I have hundreds of inquiries as to poultry

raising in California and find that many Eastern and Northern breeders have the false idea that in southern California roup and lice make poultry raising extremely hard and unprofitable. I do not think it is any more work here than anywhere else to keep the birds and houses free from vermin. It is no easy thing in any climate and should be systematically handled. I never allowed them to get a start on my ranch and roup is largely a matter of improper handling and filth. Any up-to-date poultry rancher, if healthy, untainted foundation stock is obtained, can prevent roup by cleanliness and proper housing. One can establish a poultry ranch in California for very little money because the buildings can be so inexpensively constructed. Wheat costs a little more here than in the East, but a crop can be grown any month in the year of almost any kind. I allow two houses and runs to each pen of breeding birds. One I sow to wheat, rye, barley or any other good green food and in from two to three weeks it is high enough to let the birds in, when I sow the yard left vacant. In this manner I keep my birds well supplied with green feed, keep the ground sweet and wholesome and in this country we can do it every month in the twelve. My ranch is wholly for fine eggs and breeding stock. I find the Orpingtons one of the biggest money makers of any of the breeds. I get from \$10 to \$125 a trio for my birds and my cheapest eggs are \$15 per one hundred and run as high as \$20 a setting, as I said before. The Orpingtons are very popular in California. I could handle 5,000 more if I had the room for them. I run 1,200 breeders and am generally booked up by the time the fall and early winter shows are over. I cleared \$5,000 my first year, but of course, was obliged to work hard and do some advertising to accomplish this result. I established a fattening plant and obtained the services of a Sussex fatterer to manage it for me. I had all the ranches sell me their culls, paying two cents over market price for all the breeds, my only stipulation being that they should be clean and healthy. I had the formulas used to fatten the birds for the London and French markets and after three weeks in the fattening crates was able to get from thirty to fifty cents a pound for all that I could produce. My plant had a capacity of 5,000 birds a month, but the demand far exceeded the supply. California needs thousands more poultry raisers. There is always a good market for market eggs and poultry as well as the fine stock and it will be many years before the home market will supply the state. I then established my magazine, *The Pacific Fancier*, and am making it a California proposition, running it to a great degree for the beginner in poultry raising, although, of course, I have a big subscription list among the old breeders. Although I have many irons in the fire my Orpington Alley is my first love, and I think any one who has raised the big, dignified beauties must agree that they are money makers from the start. They make the most delicious meat of any fowl, take on flesh in the fattening crates quicker than any other

MRS. O. H. BURBRIDGE,
Los Angeles, Cal.

breed, lay when very young—four and a half months in many cases—furnish the eggs when most desired in this country, i. e., the winter months, and can always be sold for breeding purposes at high prices. Since my first show in December, 1903, I have won over four hundred ribbons and fourteen beautiful cups and this year did not compete in two of the largest California shows on account of having so many of my customers desirous of showing and fearing that with their smaller flocks they would not have quite as good a chance if Orpington Ranch competed. I found it a very good plan and think some of the other big breeders might do well to think it over for next year. I fear this article runs much more to "The Lady" than "Her Orpington Alley," but there are so many others in the East to tell the characteristics of the breed that I thought the readers of the AMERICAN POULTRY JOURNAL might like to hear what could be done in California and by a woman at that.

ORPINGTONS THE PERFECTION OF NATURE.

An Admirer of the Buff Orpington Gives a Few of the Many Reasons Why he Prefers the Orpington to any Other Variety.

Written for American Poultry Journal by Dr. Paul Kyle, Flushing, Long Island, N. Y.

In my opinion there is no more handsome a fowl in existence than an Orpington, particularly the single combed buff. The Buff Orpingtons were first exhibited in this country at the Madison Square Garden Poultry Show in January, 1899. When I saw them I was so charmed with this new breed that I bought a trio, and ever since have been keeping Buff Orping-

S. C. WHITE LEGHORN.

Third prize cockerel Madison Square Garden, New York, January, 1906. Owned by Rock Hill Poultry Farm, Ossining, N. Y.

tons and have tried to improve them in color. I am fully convinced that Orpington hens are the best all around fowl; they are good winter layers and fine table birds. Personally I prefer the buff fowl to the other four varieties of the Orpington family, because I am especially fond of the color, which in my estimation is the finest for a chicken and the most difficult to breed. Surface color alone is not sufficient for me. I am determined to raise chickens that are buff to the skin. After six years of patient trials and many disappointments I have succeeded in having at least one hen, one pullet and one cockerel that are buff to the skin. The hen won first prize at the November show in 1905 in New York, the pullet second prize.

The other varieties are the white, the black, the jubilee and the spangled. The black Orpington, it seems to me, is a better fowl for general utility than her sister the buff, because she is a more industrious layer and grows faster and accumulates more meat in a shorter time. I kept a pen of fifteen black Orpingtons for one year and thus speak from experience. However, as I dislike the color black I sold them to a young friend of mine, Miss Gretchen Wiedemann, of Thomaston, Long Island. Her mother has repeatedly assured me that the black Orpingtons lay better than her white Leghorns. My friend, Mr. Wallace P. Willett, of the Orpington fame, prefers the jubilee to any other color Orpington, because he claims from experience that the jubilee grows the fastest of all the Orpingtons and begins to lay when not quite six months old

and is the heaviest of all her cousins. I keep about one hundred Buff Orpingtons. "O! how pretty they look!" is the exclamation of my many visitors who come to visit their sons, brothers, cousins, nephews and others who are numbered here among the (fifty) boys of my boarding school.

Nothing pleases me more than to see my handsome flock running about in the yard or on the camping grounds of the school. I have noticed carriages and automobiles stop to see what I claim to be "The Perfection of Nature," the beautiful Buff Orpington.

I am not only pleased with their outer appearance, but also with their ability to fill the egg basket. And how my boys and teachers relish fresh eggs! Ninety-six Orpingtons gave me on February 1 twenty-eight eggs, on the second forty-two, thirty-three on the third, on the fourth forty-five, on the fifth thirty-six, on the sixth forty-nine eggs. These figures will certainly verify my statement that the Buff Orpingtons are heavy winter layers. In March and April they become broody, and some of them require sometimes ten days to get rid of their broodiness. Thus during these months the supply of eggs naturally diminishes.

Their broodiness is the only objection I have to the Buff Orpingtons. For this fault I blame the ancestors, the Buff Cochins, from which breed the Buff Orpingtons inherit at least one-third of their characteristics.

The Buff Cochin, as it is universally known, becomes broody quite often. Before I decided to keep Buff Orpingtons I kept Buff Cochins for a number of years and thus speak from experience. I remember that the carpenter whom I had employed to build an addition to one of my chicken houses had left a barrel full filled with nails in a somewhat dark corner in the new chicken house. Some days later he discovered that a Buff Cochin hen had laid nine eggs directly on top of the nails and had been sitting on them for a number of days. If the nails had been even carpet tacks I doubt very much if that particular hen would have looked about for a better nest for hatching.

The late Mr. Cook, with whom I was personally acquainted and whom I met a great number of times, was the originator of all Orpingtons. He counteracted the broodiness of the Buff Orpingtons by crossing the Buff Cochin with the Golden Spangled Hamburg. The Golden Spangled Hamburg hen is a non-setter and one of the best laying chickens. For six years I have worked very conscientiously to get rid of all Buff Orpington hens that show too frequently a tendency to brood, and I flatter myself that I have had pretty good success. I have a good laying strain and can count 192 eggs per hen on an average. Some years ago I sent two settings to a schoolmate of mine in Germany. Subsequently he informed me that he hatched eight pullets, two cockerels and also that one of the pullets began to lay when but five months and seventeen days old.

Mr. Meire, who is a neighbor of mine in Flushing and a breeder of Buff Orpingtons, had one pullet that began to lay when she was five months old.

Not alone that some strain may too often have broody hens, but there is one more objection to the Buff Orpington which is, however, a very small matter and can be easily overcome. Occasionally chickeys will be hatched with down on their legs, i. e., between the toes and knees, which will in the course of time develop into feathers; they are very small and hardly noticeable to the eye except on close examination. These stubs are a serious objection and will disqualify an Orpington when placed on exhibition in any show. By selecting hens in the breeding pens that have extremely clean legs, i. e., free from stubs, and a male bird with clean legs also, I am sure that no stubs will appear on the young flock. The ancestor of the Buff Orpingtons, the Buff Cochin hen, is responsible for these stubs. The Buff Orpingtons are extremely docile and stand confinement very well; they also make good faithful mothers.

Mr. Cook, in order to produce the Buff Orpington, crossed the Buff Cochin and Golden Spangled Hamburg with the old English breed, the Dorking. From that breed the Orpingtons inherit the beautiful symmetrical curves and shape, besides meat on legs and a breast with plenty of meat. To carry their heavy weight comfortably they stand low on their feet, like the Dorking. I have had one male that weighed as much as thirteen pounds and a half, while my hens weigh not less than nine pounds. In this breed of Orpingtons I might say Mr. Cook has combined the kingdom of fowls, namely, a docile breed for peace and motherly care (the Buff Cochin), a good laying breed (the Golden Spangled Hamburg), and at least a breed for meat and beauty (the Dorking). It is evident that the Orpingtons have become so popular that the fancier, the lover of beauty and that the farmers also have introduced them. Constant increase in the small as well as in the larger shows can be reported.

At the late show which was held at Mineola, Long Island, the Orpingtons were the second largest class. At the show in New York, 1905, 371 Orpingtons, and in 1906 405 were rep-

resented. At this late show in New York the Orpingtons were the third.

There is a great deal of money in chickens, provided one understands how to handle them, how to care and how to feed them.

The consolidation of Flushing with Greater New York compelled me to give up pigs, of which I fattened eight each year from the refuse of my kitchen and dining room tables. As I had no longer a channel for the use of this refuse I advertised it for sale in the local papers of Flushing, to which advertisement two farmers replied. They were willing to take the refuse, but wished me to compensate them for carrying it

quantities from August to December 1. It is not necessary to repeat that warm, roomy, convenient, perfectly dry and well-ventilated houses are what the chickens want. Too much glass in the hennery is a mistake, because that will let in the heat of the sun during the day and also the cold of the night. In one of my houses I got rid of all the windows and have now oiled canvas in place of glass. Once a month each fowl on my premises is disinfected with some lice powder. The droppings from the roost tables are cleaned every day. Once a week the houses are sprinkled with kerosene, and the result of this is that all my chickens never have any kind of vermin. I love chickens and particularly the Buff Orpingtons, which I admire more than all others.

WHITE WYANDOTTE COCKEREL.

away from the school grounds. To avoid this expense for the carting away of good food, such as meat, fine cooked vegetables, etc., I bought some crates of chickens at the Wailabout market, in Brooklyn, and changed my cow stable and pigs' pen into a chicken house. As neither of my men nor myself understood how to care and feed the chickens I lost within a month 108 of my flock of 121 chickens. However, I was not discouraged. I bought some Buff Cochins from a well-known breeder and succeeded with them for a number of years. I also subscribed for a number of poultry magazines and studied the literature as much as possible and apparently with good results. Subsequently I built some more chicken houses, the plans of which were described in some of the poultry magazines. With these buildings I am more than pleased. Feeding the chickens with the refuse of the kitchen, etc., it is obvious that my expenses are small. My bill is about \$4 a month, while my income on the average per month is more than \$42, which amount includes the sale of eggs for hatching and exhibition fowls. Besides the refuse, corn and wheat my chickens are supplied with two pounds of green ground bones ever other day and also four heads of cabbage every other day. Grit, charcoal, oyster shells they have constantly before them. Early in the morning a little millet mixed with hemp is thrown into the scratching sheds, which keeps them busy until about 9 o'clock in the morning, when they are again fed with cracked corn or wheat, also thrown into the litter. In extremely cold weather only a mash is given them, consisting of finely chopped cooked meat, potatoes and some kind of vegetables into which is mixed bran to make the mash crisp instead of sloppy. Fresh ground bone is a substitute for a juicy worm or a nice fat bug which the hens find during the summer months. Ground bone is also an egg producer and a growth promoter. As fowls have no teeth grit supplies this want and facilitates digestion, while charcoal keeps their bowels in a healthy condition.

During the moulting season, which usually lasts one hundred days, a little flaxseed mixed with oil meal, and also sulphur mixed with carbonate of iron is given daily in very small

RAPID ADVANCEMENT OF THE ORPINGTON.

A Notable Increase in the Number of Entries During the Past Five Years—
Selecting Birds for Stock Purposes—High Prices Being Paid
for Orpingtons.

Written for American Poultry Journal by W. L. Davis, Berlin, Conn.

In 1901 there were on exhibition at Madison Square Garden, New York, 23 Orpingtons in the Single Comb Buff, Black and White exhibits. At the late show in 1906 there were 370 Single Comb Buff, Black and White Orpingtons. This shows you their remarkable growth. I think there is no question but what they were the third largest class in the whole show. In any enterprise that one wants to start into, if it has genuine merit back of it, it is bound to succeed, and that is why the Orpingtons are sure to be one of America's leading fowl. When the American Orpington Club offers its special cash prizes for the show of 1907 I think that you will see the Orpingtons the largest class in the New York show.

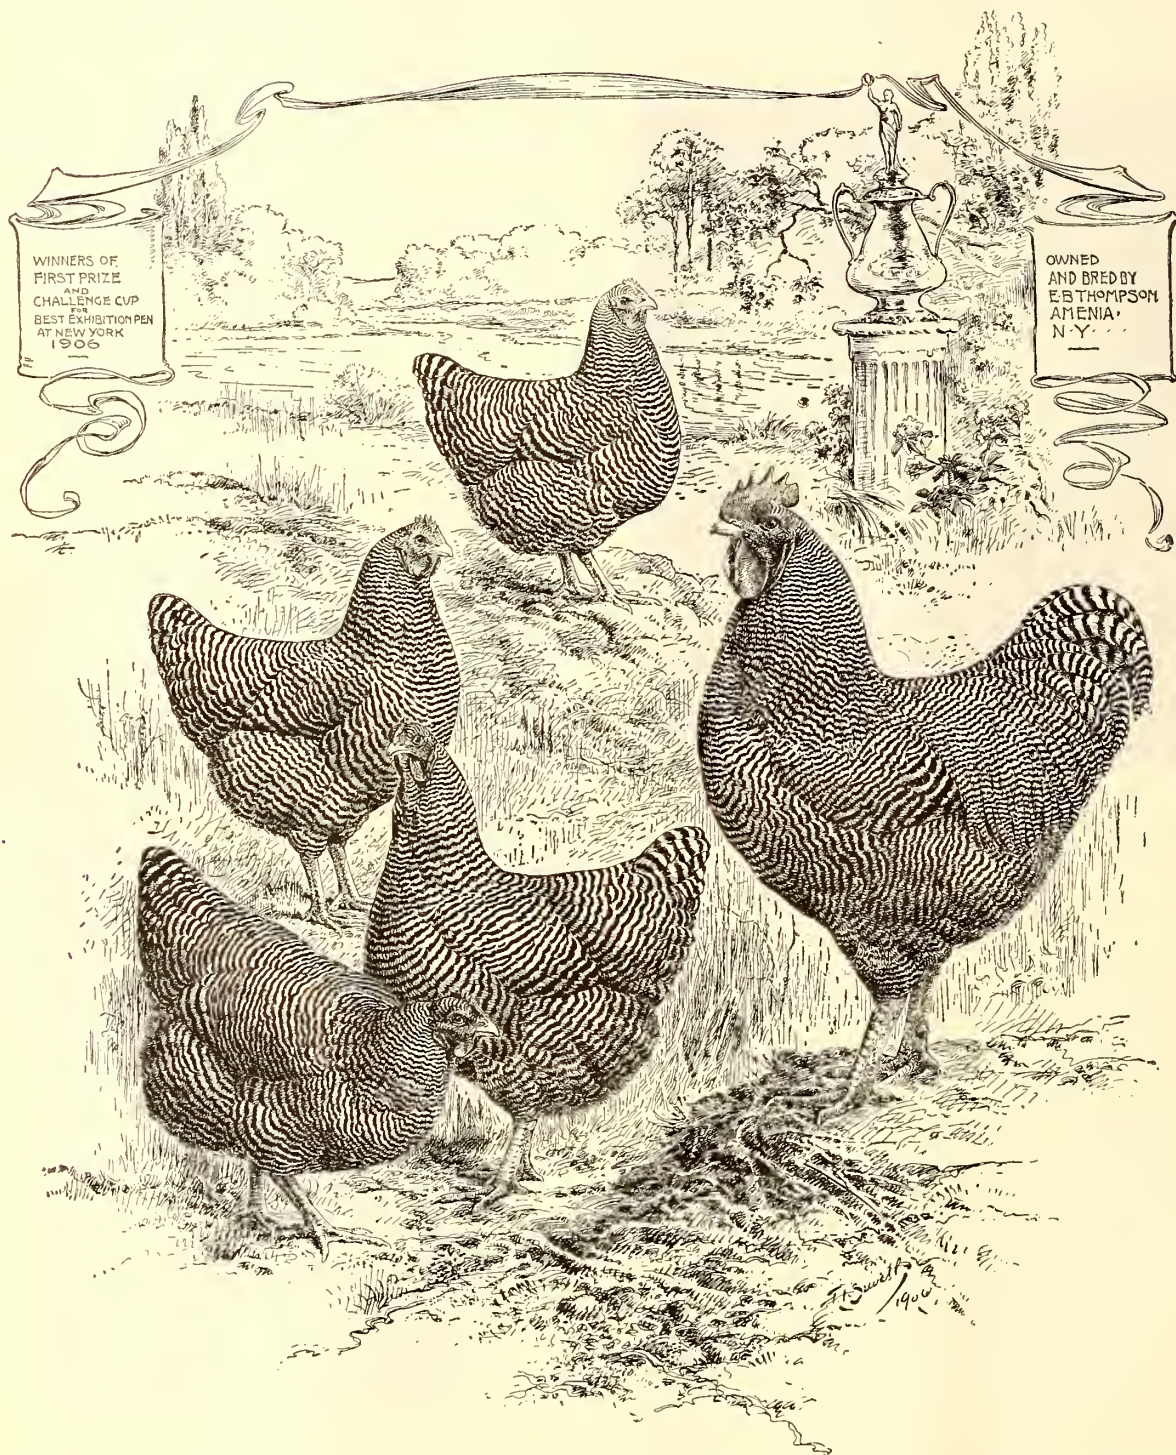

The Single Comb Black Orpingtons were the first of the family to be bred to any extent. They were originated in England in 1886. I have been told that there has been quite a change in the Black Orpington type of bird in 1891. It was in this year that Mr. Joseph Partington exhibited at the dairy show in October two cockerels and two pullets which secured first and second prizes in each class, three of the four birds being immediately sold at £30 each. These birds were of a size that had never before been seen, creating quite a sensation. Mr. Partington stated that these Orpingtons were

FIRST PRIZE BLACK ORPINGTON COCKEREL

Bred and owned by Willowbrook Farm, Berlin, Conn.

cross mated birds and had none of Mr. Cook's strain in them at all; that he started with the idea of breeding himself something in the same line, but more striking and handsome. Mr. Partington being a Cochin breeder naturally knew how to get this size. The Black Orpingtons have dark eyes and a beetle green sheen to their feathers. They are large, massive, handsome birds, good layers and one of the best for table purposes. In the celebrated Australian egg laying contest, all breeds competing, a Black Orpington pen heading the list, the second a pen of White Wyandottes and third a pen of White Leghorns. There were in the neighborhood of forty pens in this contest, and the Orpingtons won seven of the highest thirteen

THE "RINGLET" BARRED PLYMOUTH ROCKS

Herewith illustrated were awarded first prize and Challenge Sweepstakes Cup for best exhibition pen at the last New York show, Madison Square Garden, Jan. 2-6, 1906. They are owned and were bred and exhibited by E. B. Thompson, Amenia, N. Y., originator of the world renowned "Ringlet" Barred Plymouth Rocks.

places. They always look well during the entire year, never losing their color. They excite admiration wherever on exhibition.

The next to come before the public were the Single Comb Buffs. They were originated in England in 1894 and were first imported to our country in 1898. They were admitted to the American Standard of Perfection January, 1902. It was by an unanimous vote, showing their popularity. The origin of this variety has been the subject of frequent debate. The best work that it has been my pleasure to read on Orpingtons was by the late Louis Wright of England. They are said, however, to have been produced by mating a Golden Spangled Hamburg with a colored Dorking hen, pullets from this offspring being mated with a Buff Cochin cock. This combination of buff plumage of white legs and feet. I cannot say too much for the merit of this breed. They stand for the very best known in poultrydom. They are a first-class breed for broiler and roaster. They are fine layers, laying eggs at the time of the year when the price is high, and they come as near to the ideal all around general purpose fowl as is possible to possess. In breeding Buffs the main points to keep in view are, first, color of plumage, then clean white legs. Be very careful to watch that you have the true Orpington shape. In breeding them for exhibition it is necessary to carefully choose a male bird of sound, even color. I should prefer one a little darker than the exhibition color and to be free from defects or faults as is possible. He should be Buff to the skin and as free from white in wing, tail and hackle as is possible. His breast color should be nearly the same shade as his hackle and saddle. His comb should be medium and well set. The females should be very even in color, absolutely no white in hackle, flights or tail. Try and get as much buff under-color as is possible. All mealy-colored birds should never be bred. It shows that you have a mixed color in the feathers and will never breed out. The shaft of the feathers should be the same color as the rest, and one of the best rules to apply in mating Buff birds is that to choose hens or pullets the same color as the shade of buff on the breast of the male bird. Of course you must allow a little in hens, as they nearly always are lightest in color. Don't breed any birds with side sprigs or that show any signs of leg feathering. Generally speaking dark cocks and hens breed the best pullets, and lighter cocks and hens breed the best cockerels.

The White was the third variety to be produced. They claim to have been produced by mating White Leghorn cocks with Black Hamburgs and crossing their offspring with White Dorkings. They have a great future before them, as they are the ideal utility man's fowl. They breed true, but are not as large or massive as the blacks. We find them to be the best of egg producers. They are easily confined and if given their freedom are good foragers. From a table point of view they are far above the average, white juicy flesh, clean white legs, leaving nothing to be desired.

The beginner must bear in mind that Orpingtons cannot be judged on the ground or inside of the show pen. They must be handled and thoroughly examined. In selecting birds for stock purposes first consider color, then type and lastly size. The blacks and whites breed true, but the buff's are the most difficult color to get sound. To produce show specimens they have to be given protection from sun and rain and have their runs connected with shade trees. When this is not possible you must make means to accomplish this end. I know a great deal has been said as regards their white skin, but that has never given me one moment's uneasiness. I know that the American wants the best that there is to eat, and I do know that from a great deal of experience that the Orpingtons dress off and make the best table fowl I ever had the pleasure of eating. Just as soon as the breed becomes more generally known and small breeders commence to take them up then they will find their way to the best markets in the country. At the present time Orpington stock commands the highest prices known in the poultry business. It is not an unusual occasion to sell good stock breeding birds for \$100 to \$200 each. All of this, however, will adjust itself as the breed becomes more generally known and the supply is greater than the demand. Just now the demand is greater than the supply and high prices are being realized. Yet the parties contemplating breeding poultry that take them on now have that much more advancement than their competitors who go in for them later on. We are constantly sending out fine mated pens for the finest estates in this country. I find that the party who owns the fine country estate and naturally looking around to get the best obtainable in poultry, the kind that when they have a bird dressed for their table want the best. It is with these people that we do an enormous business. Considering the buff, black and white as one family we surely have got to give them credit. The American people have taken up and extended to them one of the most hearty welcomes that was

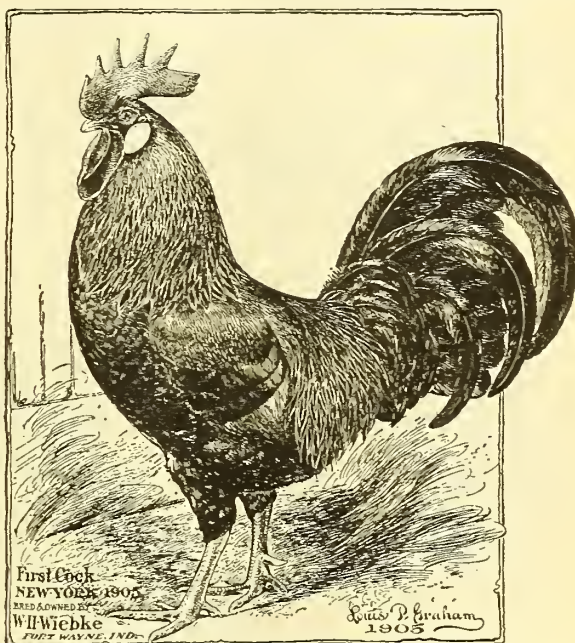

ever given to poultry. To-day all three varieties are admitted to the American Standard of Perfection, and I am looking forward to the time that when the New York show will have the Orpingtons the star attraction in both numbers and quality. The American Orpington Club, of which I have the pleasure of being a member, is going to make substantial cash prizes and specials, thus inviting the best competition in the world at New York. Willow Brook Farm is also giving silver medals and \$10 in gold to the best buff, black and white cockerel or pullet to be decided at Madison Square Garden in 1907, but the specimens must have been produced from eggs procured at the Willow Brook Farm.

THE ORPINGTON ON THE PACIFIC SLOPE.

Importations of the Various Varieties of Orpingtons—The Pacific Coast an Ideal one for Orpingtons.

Written for American Poultry Journal by I. H. McKee, Vancouver, B. C.

With your kind permission I will give you a brief review of how the Orpington poultry thrive on the Pacific slope. Having tried all the different varieties of poultry as to their merits in general, I decided about four years ago to import a pen of Single Comb Buff Orpingtons from England,

S. C. BROWN LEGHORN COCK. First at New York, 1905. Bred and owned by W. H. Wiebke, Fort Wayne, Ind.

and put them alongside a pen of Buff Plymouth Rocks and a pen of White Wyandottes under similar conditions in general. The results were such as to convince me beyond a doubt, that as a general utility bird, the Buff Plymouth Rocks and White Wyandottes were not in the race at all, although I confess I have always had a very high opinion of both the Buff Plymouth Rock and the White Wyandotte, and I did not part with them until I found, without a doubt, that so far as my experience went, I must confess the Buff Orpington was a winner on its merits.

I next imported a pen of the Single Comb Black Orpington, which I found to be fully the equal of the Single Comb Buff. The Black Orpington seems to prosper anywhere under even adverse conditions. They, like the Buff, are layers of large brown-shelled eggs of good size, and plenty of them. While their flesh, as that of the Buffs, is of a most delicious flavor, and is by many people preferred to turkey meat. They do well either confined on the small city lot, or on a large range on the farm. They are rapid growers and will commence laying at from five to five and a half months from the time they are hatched.

I next imported a pen of both the White Orpington and the Spangled Orpington, also a pen of the Diamond Jubilee Orpington. In these last three pens the White variety have appealed to me as the ideal bird of beautiful white plumage (the stay white kind). They present a most artistic sight on

a green lawn, or as I oftener have them on the clover in my fruit orchard they are a pretty sight, and as a general utility bird they are excelled by none.

The Spangled Jubilee Orpingtons are noted for their beautiful appearance, their plumage being very attractive, and their merits as layers are excelled by none, while they are likewise very hardy, and develop very rapidly. Under ordinary conditions they will fully mature in five to five and a half months, and are the best winter layers we have ever owned. The Diamond Jubilee Orpingtons are their close rivals, both as layers and general utility stock, and after giving them a fair trial I am more convinced than ever that either the beginner with poultry or the experienced poultry man can make no mistake in selecting the Orpingtons as the most profitable all-round utility and fancy bird combined that has ever graced the halls of poultrydom. They are "Par Excellence," yea, they are the twentieth century fowl.

After having been engaged for the past twenty years in the poultry business both in the eastern and western country, and having tried all varieties and been a regular exhibitor at the leading or local poultry exhibitions, I have tested them all on their merits, and could come to but one conclusion, and

in winter inclined to be damp, but it seems to be an ideal climate for the Orpington.

The writer, Mr. Editor, has his poultry yards located on Mount Pleasant, and known all over the country as the Mount Pleasant Poultry Yards. From these yards, which are located in a very fertile fruit orchard, and having a very commanding view of the whole of the city of Vancouver, its wharfs lined with ships from every clime and the silver spray

INAMORETTA 1ST PRIZE & COLOR SPEC'L.
CHICAGO 1906 Dr. O. P. BENNETT MAZON, ILL.

"INAMORETTO."

that was, that for both the fancier and the money seeker, the Orpingtons were the best fowl that has yet been produced or is likely to be produced.

In concluding, let me give you an ideal of our Pacific coast climate, where the Orpingtons thrive and grow. The eastern judges who judged our poultry just a few days ago, declared they had never seen such large specimens of Orpingtons as they had the privilege of handling and judging, as they found in our city of Vancouver poultry show. They declared they ran from one and a half to two and a half pounds heavier than they could be raised in the East, but then, Mr. Editor, everything seems to be on a large scale in the wild and woolly West. Even the Orpington eggs are like the Orpingtons themselves, large, and of choice flavor. No doubt Mr. Editor, you are aware our climate here is very mild, and

Exhibit of Hunky-Dory Farm, Burton J. Holt, Sup't, Pella, Iowa., and F. J. Holt, of Pleasantville, Iowa, in the show room of the Iowa State Poultry Association Show at Pleasantville, Iowa, Dec. 23-30, 1905. Father and son hot competitors.

of the grand Pacific ocean lashes itself upon the glittering pebbles of the shore, while for a background to it, to the whole northern and eastern outlook is the coast range of sunlit mountains, whose green foliage is ever a sight to look upon and never to be forgotten. Here the greensward carpets the ground throughout the year, and here the Orpingtons flourish and thrive in their Pacific slope home.

ORPINGTONS.

A Special Article upon this Breed of Fowl for American Poultry Journal's Special March, 1906, Orpington Number.

Written for American Poultry Journal by A. V. Meersch, Poughkeepsie, N. Y.

If poultry keepers in general were asked which is the fowl in greatest request at the present time the majority would probably reply, "the Orpington." Many new breeds have been manufactured during recent years and their respective merits have in most instances had a fair trial. The greater number of these have been made here in America. The "Orpingtons," however, have originated in England, at the place of that name in the province of Kent. The fact of there being two distinct breeds of Orpingtons, i. e., the Black and the Buff, and that these two breeds have sprung from entirely different ancestors, has caused some confusion and a good deal of discussion. Be that as it may, they are valuable additions to our stock of utility poultry.

The Black Orpington was the first on the scene. It is said to have been made by mating the Black Minorca cocks with Black Plymouth Rock hens (both of American ancestry, of course) and then crossing the produce with Langshans. The Langshans strain of blood is very potent, so that the Minorca and Plymouth Rock cross is not discernible, and the Black Orpington much resembles a clean-legged Langshan. But while the latter fowl has wandered away from the original type and become stilty and leggy, the Black Orpington has been cultivated into a large short-legged bird, with compact body and full breast. It is an excellent fowl for the table, and is hardy and a good layer, especially in the winter, of a fair-sized brown egg. Altogether it is a most useful bird.

The Buff Orpington was brought out some years later after the Black. It was stated to have been "made" by blending the Dorking, Buff Cochin and Hamburg. The ancestry is doubted by some fanciers, who assert that a fowl known as the Lincolnshire Buff was chiefly concerned in the parentage. That bird has been known in England for many years, in Lincolnshire, and is supposed to have originated from a mixture of Cochin, Dorking and farmyard fowl. There are few fowls more to be seen in all parts of England than the Buff Orpington, but not so many here in America as yet, the farmers here, even, who are not quick at taking to anything

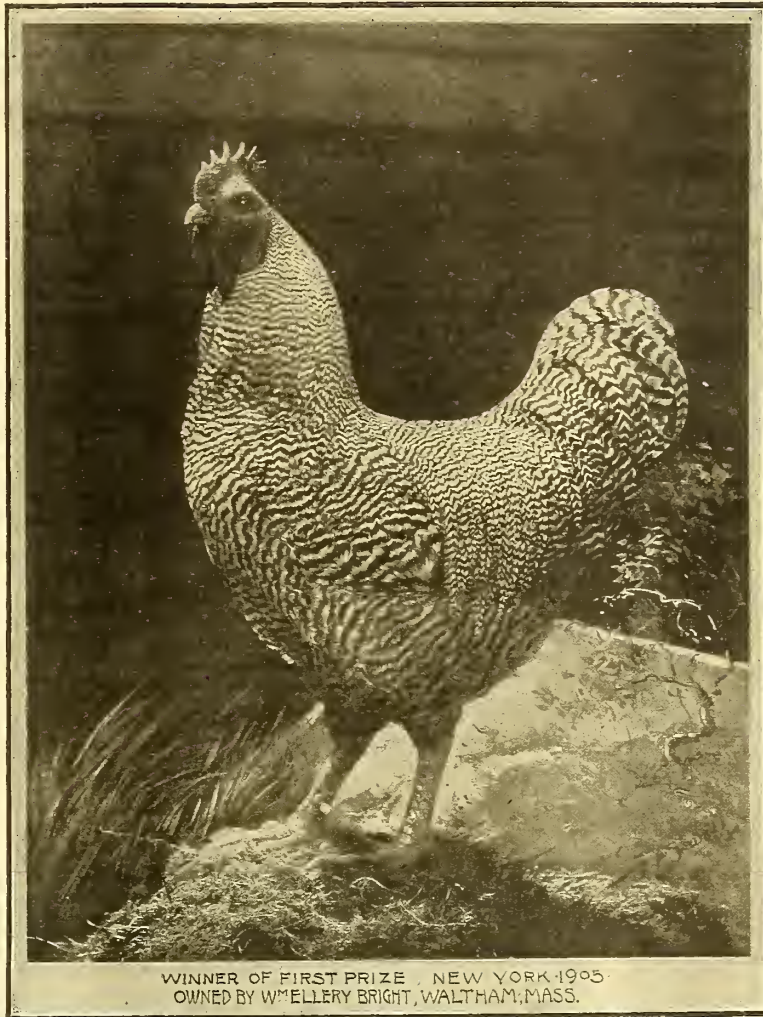

new, having in numerous instances imported some of the Buffs into their stock.

In shape the Buff should be like the Black Orpington, though many specimens are longer in the leg and less compact. The legs should be white and the skin and flesh white. The Buff Orpington does not as yet breed very true, many of the chickens having feathered legs and five toes. The difficulty in breeding good birds is to get the color level and even. The plumage may be any shade of Buff, from lemon-buff to rich buff, but it must be uniform throughout, allowing for the greater luster of the hackle and saddle feathers and of the wing-bow in the cock bird. A red fringe or white wing

and roasters. We have had pullets lay at 4 months and cockerels head the pen at 6 months.

They surpass all other breeds as winter layers. They will set any month of the year, yet are easily broken, and commence laying immediately. They are very docile, yet brave and courageous in care of the young. These birds will not fly over fences and are good foragers, yet stand confinement well. They attain a large size, males 10 to 12 pounds, females 8 to 9 pounds. Their weight is deceptive.

In addition to the buffs, from various combinations, Mr. Cook evolved the White, the Black, Diamond Jubilee, and the Spangled varieties in rose and single combs. With the

flight should be avoided. The Buff Orpington is a good layer of colored eggs, but in warm weather the hens frequently become broody. They are hardy, will lay freely in the winter, are first-rate table fowls, and about as good half-round fowl as any other that can be named.

ORPINGTONS—THE GREAT UTILITY FOWL.

There has been so much said and written on the "Orpington," it would seem as if every one would be familiar with its history. But I am in receipt daily of letters, asking description, etc. To be brief, the make-up of this breed is the Hamburg for eggs, the great English Dorking for meat, and the Buff Cochin for size and color. The world owes a great deal to Wm. Cook, who spent 40 years perfecting the Orpingtons before they were offered to the public. What a pity, his untimely end in the zenith of his success.

The Orpingtons are of low, blocky build, and very large breast, and excel in quantity and quality of the meat. They attain an early growth and excel all other birds as broilers

proper food the Orpingtons are the money makers, surpassing all breeds. So great has been the demand that we have never been able to keep up with our orders. To any who should wish further information we furnish literature gladly. Very truly yours, J. W. EASTES.

A too-fat condition is not a healthy one. A bright red comb and face is a good indication of health. An ointment of vaseline and sulphur is a good one for scaly legs. For canker in fowls, alum water is recommended. Put alum in the drinking water. There is nothing better for frosted combs and wattles than vaseline. The best tonics you can give your stock are fresh air and exercise. A busy fowl is never a sick one. The moment it is ailing it become mopish. Disinfect, if possible, once a week. It is the only way to kill disease germs. Idleness cannot be classed as a disease, but is a condition that quickly leads up to such.

American Poultry Journal

Issued the first of each month.

Subscription 50 Cents a Year—5 Cents a Copy of all Newsdealers. Chicago subscriptions 60 cents (when delivered by carriers). Foreign subscriptions \$1.00.

Look at the date upon your wrapper. Many subscribers write to ask when their subscription expires and many complain because we discontinue sending the JOURNAL at the expiration of the time for which it is paid. The date when your subscription expires is found on the wrapper each month.

AMERICAN POULTRY JOURNAL is the oldest poultry paper in America. It has a national and world-wide circulation. The best writers on poultry matters contribute to its columns. It receives the patronage and endorsement of the foremost representative breeders of standard poultry and manufacturers of poultry appliances in the country.

Advertising rates are sent upon request.

50,000 A. P. J.'s for March, 1906.

State of Illinois, County of Cook, ss.

Chicago, Feb. 26, 1906.

J. G. Budde, secretary and treasurer of Regan Printing House, Chicago, being duly sworn, certifies that the American Poultry Journal has contracted for printing and binding fifty thousand copies of the March, 1906, issue.

J. G. BUDDE,

Subscribed and sworn to before me this 26th day of February, 1906.

BLANCHE ELDER EDDY,
Notary Public.

GUARANTEED SUBSCRIBERS.

To our subscribers the display advertisers of the American Poultry Journal are guaranteed; that is, if any advertiser using display space in these columns is proved to be a swindler, the American Poultry Journal will make good to the subscriber the amount lost. We do not guarantee that men in good standing shall agree in their opinions; we do not guarantee nature against fertile eggs, but we do agree that in case a downright swindler succeeds in swindling a subscriber, we will reimburse that subscriber and publish the rascality of the swindler. We ask, in consideration of this guarantee, that our subscribers, when writing to an American Poultry Journal advertiser, say, in every case, "Saw your ad in the American Poultry Journal." In no case will this be to your disadvantage, while in many cases it may serve you well. In either event we shall be obliged to you.

Popularity of Orpingtons

Someone asks why are the Orpingtons so popular. They have a solid foundation to build popularity on, in the first place; and, secondly, have been boomed into favor by enthusiastic fanciers and breeders. Merit as a good general purpose fowl cannot be hammered into a practical poultry public! Never. The bird must be one of excellence and worthy of having nice things said of it. If the Orpington had not been able to "do" the part it was given credit for, the audience would have hissed the play and the curtain would have been rung down. Reputation is a matter of creating a good impression and then living up to it. Popularity likewise is having good things said of a fowl and then its exceeding them. Breeders of Orpingtons should be at all times careful in their matings

and selections to keep the breed advancing. Let them have the future of these popular fowls ever in mind and strive to aid the breed as well as their flocks. When William Cook gave the Orpington to England it was after ten years' careful breeding and five previously of experimenting. He knew what he offered to the public; and then with printer's ink he let the fancy know what he had. A few breeders in this country caught the swing of the Orpington stride and worked like Trojans to tell the public of their enterprise. These energetic men were the creators of the Orpington; and if you ask them for the recipe they will smile—then go to work again.

Our Advertisers.

How remarkably helpful and interesting are the advertisements in AMERICAN POULTRY JOURNAL, especially at this season. What work and expense a poultryman would have to go to find out by other means about all that he needs in his business. Now it is only necessary to drop a postal card or a brief letter of inquiry to our advertisers to obtain their descriptive illustrated catalogs, price lists and full particulars about anything or everything needed in the poultry yard.

A Notable Result.

It may be a surprise to our readers to know that there are over seventy publications in the United States devoted exclusively to thoroughbred poultry. AMERICAN POULTRY JOURNAL is the oldest in the list, being in its 37th volume—the pioneer of them all, and several years ago it bought its next oldest contemporary, *The Poultry Monthly*, then in its 24th volume.

That much abused expression, "Oldest, largest and best," poultry journal is, in the case of AMERICAN POULTRY JOURNAL, absolutely and positively true. A notable result has been achieved by the AMERICAN POULTRY JOURNAL in its February, 1906, issue.

It published the LARGEST EDITION OF A POULTRY JOURNAL EVER PUT OUT, including number of copies and number of full 30-inch pages of reading and advertising matter.

One can judge better of the magnitude of any given thing by comparison—plain figures frequently fail to convey their full importance unless by comparison. We have therefore taken the February edition of the two nearest poultry journals that approach the AMERICAN POULTRY JOURNAL, showing in just what relative relation it stands. AMERICAN POULTRY JOURNAL printed 60,000 copies, containing 37,541 agate lines of advertising of 14 lines to the inch, making 2,681½ inches of advertising, including 2,170 lines of paid write-ups, and contained 166 pages. Of the two papers that come nearest to AMERICAN POULTRY JOURNAL, one published 50,000 copies, containing 27,542 lines of advertising, making 1,967¼ inches, and issued 148 pages. The other published 32,000 copies, containing 31,374 lines, or 2,241 inches of advertising and contained 124 pages.

It will thus be seen that the AMERICAN POULTRY JOURNAL is far in the lead of its two nearest contemporaries. We will not endeavor to establish which of these two is "second," for while

one exceeded the other in number of copies and number of pages it fell behind in the amount of advertising space, while AMERICAN POULTRY JOURNAL leads both by a very wide margin in both number of copies issued and the amount of advertising and total number of pages, and far excelled either in its quality and quantity of reading matter and its general appearance.

Further figures show interesting facts that will no doubt be astounding to those accustomed to handling and reading a single copy of AMERICAN POULTRY JOURNAL as it was delivered through the mails. In this issue of February there was used 26¾ tons of paper, making nearly two carloads of 30,000 pounds to the car. To print the edition ten of the largest cylinder printing presses were used day and night for four days.

Included in this great issue were so many grand features tending to make it not only the largest but also absolutely the best and newsiest—that it would require a complete list of its entire contents from cover to cover to enumerate them.

Prominent features of especial importance that go to make this the grandest poultry journal ever issued can be summed up by even the most hasty examination.

Sixty thousand copies certified by sworn affidavit of printers.

One hundred and sixty-six pages of full 30-inch space.

Colored cover—pronounced by breeders east and west to be THE FINEST ILLUSTRATION IN COLORS OF A PAIR OF BARRED PLYMOUTH ROCKS EVER MADE.

Poultry news of the Month—including correct and magnificently written reports of all the great events of interest to the greatest number of poultry breeders in January, the month of all months of the year that includes more events of interest than all other, such as the New York Madison Square Show, Boston Show, Chicago Show, annual meeting of the American Poultry Association at Cincinnati and its attendant poultry show—all news of vital interest to poultrymen, the last event occurring up to within a day or two of AMERICAN POULTRY JOURNAL's date of issue, and news that no reader of a poultry journal should be deprived of for from thirty to sixty days to suit the convenience or capacity of the publishers, and the absence of all or any of these reports from other publications shows the superiority of the service of the AMERICAN POULTRY JOURNAL.

Added to all this enterprising NEWS-paper feature of this—a monthly publication—is the most complete, well illustrated, instructive and entertaining lot of matter ever given to a special variety—the Barred Plymouth Rocks, without giving an impartial importance to this special variety, owing to the enormous amount of space in the issue, permitting ample space to other varieties and department work; the Home Department, in which the women are so vitally interested; shows and show news; questions on every conceivable poultry problem carefully and correctly answered; editorial, of a positive and timely and dignified tone, reflecting the best ideas on current events and needs; advertising of a most varied, reliable and comprehensive nature, covering the entire country, from the leading and most prominent breeders and manufac-

turers of the United States and Canada.

All this herein described—printed on a high quality, white, half-tone paper, with heavy white enameled cover paper and set up in the highest perfection of the printer's art, printed beautifully without mar, blemish or poor workmanship—every illustration, every advertisement, every paragraph of reading matter, clear and legible and beautiful from front cover in colors to the last line of the last cover page.

We have endeavored to point out to our readers the things that we feel of especial importance and upon which we spent much time, money and thought, and we ask that you in turn write us YOUR opinion of our efforts. If YOU are pleased we will feel that our work and efforts are appreciated.

Jas. W. Bell, Our New Secretary and Treasurer.

The many old friends of Jas. W. Bell and the new friends that he made during his recent trips through the country and visits to the last New York shows will be interested to learn that at a recent meeting of the American Poultry Journal Publishing Company he was elected Secretary and Treasurer of this corporation.

Mr. Bell has been connected with the AMERICAN POULTRY JOURNAL for twenty years, first as manager of the printing office and mechanical department, then later at the incorporation of the business in 1902, as Vice-president and Associate Editor, and now is made Secretary and Treasurer. He continues as Associate Editor and will represent the publication when occasion requires as advertising representative.

Mr. Bell is of good Canadian stock, having been born in Wallaceburg, Ontario, Aug. 9, 1866. There is undoubtedly no one in the poultry publishing field so thoroughly conversant with the history of the business, its needs and op-

portunities than Mr. Bell. His twenty years' association with this, the oldest poultry journal in the world; the thorough familiarity with the rise and progress of the poultry business, the poultry breeders, incubator and supply manufacturers; his knowledge as a practical breeder of fowls—all this gained through a twenty years' connection with AMERICAN POULTRY JOURNAL, makes him a man worthy of the confidence and esteem of our patrons. These practical qualities, combined with his high ideals of character, an unblemished life, and record of loyalty and responsibility, deserve this hearty praise and recognition.

**Thos. F. Rigg, Associate Editor
American Poultry Journal.**

New Milford, Conn., Feb. 21, 1906.
Pub. AMERICAN POULTRY JOURNAL, Chicago.
Gentlemen: I cannot let it pass without saying a word in favor of your report of the New York Poultry Show in the February number. It is the best classified and most instructive report I ever saw and to one unable to attend gives a good idea of the number of birds in a class, how divided and the competition the winners had.

Very truly yours,
Mrs. G. M. Abbot.

All this praise and much more is due to Thos. F. Rigg, Associate Editor AMERICAN POULTRY JOURNAL. For years the work of Mr. Rigg has contributed largely to the interest and value of AMERICAN POULTRY JOURNAL. The work of the Riggs in relation to the poultry business and the AMERICAN POULTRY JOURNAL is measured by the quarter-centuries rather than by years. The father of Thos. F. Rigg was an early advertiser and writer for AMERICAN POULTRY JOURNAL and was one of the originators of the Houdan fowls.

Thos. F. Rigg, the son, took up breeding of the Houdans and their line-bred Houdans have been familiar terms for so many years that it will soon approach the second quarter-century

**EASY
TO
USE**
**QUICK
ACTION**

That's what you want when you have vermin and lice in your poultry pens. Lambert's Death to Lice is the quickest safest louse killer made. Cannot harm anything except the lice. You can sprinkle it on from the can, with very little trouble. If you want to apply to woodwork it can be had in liquid form for spraying. For head lice on chicks Death to Lice Ointment never fails to do the work.

Lambert's Death to Lice

powder has been on the market for nearly 25 years and used by successful poultrymen everywhere. Guaranteed to clean out vermin in poultry pens, on stock, or bugs from vines.

Lewiston, Me. Apr. 19. 05.
Mr. D. J. Lambert, Apponaug, R. I.

Dear Sir: There are plenty of other kinds "just as good?" but I want the "old Reliable"

(Signed) JOHN S. HYDE.

**"AMERICA'S BIG FOUR
GREAT AMERICAN HENS"**

The hens that lay, the hens that weigh and the hens that pay. "Rankin's Royal Strain" of "America's Big Four"—Barred, White and Buff Plymouth Rocks and White Wyandottes, are bred to win and bred to pay; bred for quality in every way. 1200 choice selected specimens that are line and pedigree bred by the trap-nest system from America's greatest sires and champions. Catalogue pronounced the neatest, most complete and business-like ever gotten up; sent free, together with most beautifully illustrated 1906 mating list if you mention A. P. J.

H. P. Rankin, B. 61, Hartington, Neb.

**O. K.
ROUP
CURE**

Checks roup at once. Just as soon as you see a case in your flock give O. K. Roup Cure according to directions. It rarely fails to give immediate relief. Cures Colds, Canke, Catarrh, asthman poultry, pigeons or song birds. This is a guaranteed roup cure and perfectly safe to use. Sent postpaid for 50 cents.

THE O. K. STOCK FOOD CO.,
408 Monon Bldg., Chicago, Ill.

mark. There is no man in the poultry field as a breeder, judge and friend more respected and admired than Thos. F. Rigg. His long experience as a newspaper writer in his early days and his love for thoroughbred fowls places him in a position of exceptional importance in the poultry world.

The letter above quoted approaches so nearly the fundamental points of value in his recent reporting of the New York Madison Square Show in AMERICAN POULTRY JOURNAL columns that we take this opportunity to express our appreciation of the value of his work not only in giving readers of this publication the most complete and comprehensive report of that poultry show, but also his reports of American Poultry Association in Cincinnati and the Chicago Show, which appeared at the same time in the February number.

The series of articles by Thos. F. Rigg now running in AMERICAN POULTRY JOURNAL on the origin and history of the different breeds deserves more than special mention. These articles are being read with interest now, and later on in years to come will be accepted as the only absolutely reliable and perfect history of the Standard fowls.

As time goes on the early history of the varieties is apt to be forgotten, the originators pass away, and those who should be authority on these subjects pass from the recollection of the coming generation of fanciers, but these articles of Mr. Rigg's will serve to fasten and establish a history that will in a few years become invaluable to poultrymen.

Our Illustrations.

One important feature in which AMERICAN POULTRY JOURNAL excels is its illustrations. For over a year we have been running a series of illustrations the basis of which is the actual photograph of a real bird. By a photographic process these are enlarged, a suitable and artistic background sketched in, the fine shadings and markings that may not appear in an ordinary half-tone illustration, but which are on the plate, are brought out and the whole then reduced to the proper size for reproduction in AMERICAN POULTRY JOURNAL. Our frontispiece this month is a reproduction of a Black Orpington cockerel from the yards of White & Goodacre, Watchung, N. J., extensive breeders of Orpingtons, whose advertising appears every month in the columns of AMERICAN POULTRY JOURNAL. The work was done by Arthur O. Schilling, of the art department of White's Class Advertising Company, of Chicago, and is undoubtedly one of the finest productions ever turned out by them and places Mr. Schilling without question among the very few really great poultry artists of the country.

Our Covers.

The many words of appreciation and praise of our February, 1906, front cover design, of a pair of Barred Plymouth Rocks is ample compensation to us for our efforts to give readers of AMERICAN POULTRY JOURNAL the best in the market.

The substance of all these words of praise is that AMERICAN POULTRY JOURNAL has produced the finest and most typical Barred Plymouth Rock illustra-

tion in colors that has ever been produced. This praise comes unstintedly and voluntarily from the largest, best and most experienced breeders East and West.

Not satisfied with the success of this illustration, great as it is, we take equal pride in presenting to our readers for this March edition equally as satisfactory a colored cover of a pair of Orpingtons. The Black Orpington male bird is a drawing from studies of fowls from the yards of Wm. Cook & Sons, Scotch Plains, N. J., and the White Orpington female from the yards of Willowbrook Farm, W. L. Davis, proprietor, Berlin, Conn.

The work was done in the art department of Long-Critchfield Corporation, Chicago, by Sam Stolz, whose work as a poultry artist is not excelled by anyone. AMERICAN POULTRY JOURNAL readers are promised still more of these magnificent cover designs of other varieties in the future.

The magnificent illustration of a White Wyandotte male in this number is a photographic reproduction of one of the birds from the yards of Clement & Fike, Libertyville, Ill. This is from a photograph retaining the good lines and shape of a real bird and is one of AMERICAN POULTRY JOURNAL's original series of illustrations that are proving so popular, and made by the same concern.

The Gist of It.

"The young fancier lives on what he hopes to be and the old one lives on what he has done or been." And it's true; but did you ever note that the successful man was the fellow who kept plugging away unceasingly, not content with good enough, but always working for something better? Too many of us are drifting—we are not working as we should. Our plans are ideal, but our execution of them is lacking. Someone has thrown a bolt 'mongst the machinery of our will and the result is that we spend the spring time of opportunity loafing. The country needs breeders of poultry. Breeders who will work with hands and head. The opportunity is greater today and the prosperity of the times seems not to wane. If "close times" again surround us we will look back to these days as golden for the fancy and fanciers. Poultry as a side issue will amuse but not profit us greatly. A man's limitations are too narrow for his making generous successes of two or three things. That industry thrives which gets the attention due it and the poultry industry is no exception. Divide your time and enterprises suffer; concentrate on one and it forges ahead. Give us more breeders who have something beside surface interest in the fancy.

The Egg Season.

The first of March places us on the threshold of the eggs-for-hatching season and from now on the busy work of packing and expressing them will take up the biggest part of the poultryman's time. The work of building up an egg trade rests on honesty, a good show record and that important subdivision of honesty, the "making good" of the quality of eggs sent out. The man who buys eggs always does so

with the one idea in view of bettering his flock. Every seller of stock and eggs for hatching should keep this idea in mind. If I buy a good bird from you and am satisfied, your egg circular makes a deep impression on me—and eventually my purse. That is building up a trade. Every satisfactory sale is a stone in the wall of your business. Did you ever think of that? Not all flocks that a breeder sends a bird into are of the same grade, and various degrees of quality satisfy as many different buyers. A breeder is gone back to for better birds or eggs than he originally sold to the same buyer—90 per cent of second or third orders are influenced by this line of reason. The buyer always wants something better than he owns even if he has previously purchased from your yards. And it is this demand that builds up the quality of your sales and total business. It keeps the successful breeder harder at work to meet the expectations based upon him than it does the average fancier to get a trade established.

Mistakes.

In our February issue we made a few errors. Some of them unimportant, others of a more serious nature. One of the most serious was in Bradley Bros. advertisement, where we made it read "fair" birds, when it should have read "five" birds. This occurred in the line where they state that they have "500 breeding birds of our best line for sale at \$3 to \$25 and up. Choice pens of fair birds, \$20 to \$40." This should have read "choice pens of five birds, \$20 to \$40." Of course, a great many of our readers know that these people do not advertise "fair" birds, as they sell nothing that is not up to standard requirements, but others do not know and for this reason we make this announcement. In getting out an issue like our February number, errors are bound to occur, but we are always willing to acknowledge them when the fault is ours, and to make amends so far as we can.

A Business of His Own.

Captain R. C. Clifford, of the New Zealand Shipping Company's steamship "Kaikoura," is the only old tar who does not allow his voyages at sea to conflict with his poultry fancy. During 1902 the captain came across a poultry journal and it gave him a severe case of hen-fever, so he wrote home to his wife asking her to subscribe to the journal and read it regularly, saving each copy for himself that he might have something to read on his long voyages. The captain's ship plies between England and New Zealand, touching at Cape Town, South Africa. He soon became an ardent Orpington fancier and took with him a few roomy pens holding some good Black and Buff Orpingtons. He buys a good quality of stock birds at home and sells them in Cape Town and other points he touches on his voyages. The captain says he has his coops cleaned twice daily and uses sea sand for the coops' floors except when crossing the Indian ocean, when he mixes sawdust with this to provide warmth. The captain has learned a bit about Orpingtons, too, for he finds his trade very particular. The

birds he buys for export are large and of a maturity to lay, so he always has fresh eggs, which he says are dearly relished by his lady passengers on his 13,000-mile runs! When he meets sister vessels in the path his good ship takes, he says they hoist the signal, "What is the price of eggs?" instead of the customary, "A pleasant voyage." The captain is certainly a man with no competitors in his particular line and we are glad of making his acquaintance by way of the poultry press of England.

The Idea Works West.

Westerners seem very anxious to learn of Eastern ideas and judging. Professor Brigham, who was for years at the head of Rhode Island's poultry school, is out in Nebraska talking to farmers' institutes about poultry and the simple methods which may be employed to double and treble the profits of the farm flock. At the agricultural college of that prairie State he is giving a course of twelve lectures and demonstrations covering a period of eight to ten weeks. Hundreds of different poultrymen have attended from time to time as the lectures especially interested them and a big class of fifty students are eager listeners at every lesson. Here are the subjects taught:

- I.—Poultry Culture and The Poultryman. Importance, Advantages, and Preparation for the Work. Basis of the Business. Purpose in Poultry Keeping.
 - II.—The Poultry Plant. Climatic Conditions. Lay of the Land. Drainage. Transportation and Market Relations. Buildings:—Situation, Construction, Ventilation, Management. Yards and Rauges:—Extent, Arrangement, Fencing, Shelter, Shade, Cultivation.
 - III.—Breeds of Land and Water Fowl. Leading Varieties, Adaptations, Choice of Breed.
 - IV.—Principles and Practice of Breeding. Foundation Factors. Application of Principles, Selection, Line Breeding, and Cross Breeding.
 - V.—Feeds and feeding. Poultry Feeds, Nutrients. Balancing Rations for Growth, Flesh, Eggs, Fattening.
 - VI.—Incubation. Development and Growth of Embryo Chick.
 - VII.—Natural and Artificial Hatching. Care of Sitting Hens. Operating Incubators.
 - VIII.—Brooding and Rearing. Care of Hens with Broods. Artificial Brooding:—Temperature, Ventilation, Cleanliness, Exercise, Special Feeding and Care, Separating Sexes, Chicken Colonies.
 - IX.—Marketing. Fattening, Killing, Picking, Dressing, Shipping.
 - X.—Parasites and Diseases. Internal and External Parasites:—Preventives and Treatment. Sickuess:—Causes, Diagnosis, Prevention, Remedies.
 - XI.—Exhibition, Scoring, Judging. Preparation and Care of Exhibition Birds. Scoring Points.
 - XII.—Management of the Poultry Plant. Investment, Labor, Leaks, Wastes, By-Products, Buying, Selling, Advertising, Records and Accounts.
- The Nebraska poultrymen are doing all in their power to have established at the state's big experiment farm a permanent school of poultry and if they can get it, there will be an effort made to secure Professor Brigham.

Real News.

In a late issue of the great English journal, *Poultry*, a German dispatch states that at a number of big shows in the fatherland this winter, a new variety of Minorcas has been exhibited. These are Cuckoo Minorcas. They have made a sensation in Germany and are already being introduced into England which means that sooner or later we will have a taste of them over here! The Cuckoo Minorcas, say our English cousins, are very good of type and very attractive in appearance. The hens are grand layers and Germans claim them to be greatly in advance of the Blacks or Whites in point of hardiness. They will "take," we predict.

But now when we have three varieties of Minorcas, it may not be long

forming a club to be known as the Practical Poultry Club. W. B. Atherton has been selected secretary by the temporary organization and John H. Robinson, is president. A committee of five will soon call a meeting for a permanent society. The two gentlemen named and H. P. J. Earnshaw, I. W. Bean and P. R. Park compose this committee, which will also present a constitution and by-laws. We look forward to the program this organization will map out with much interest, and the experiment will doubtless be followed if the club is successful.

Besides the practical instruction given to the poultry students at the Gulph agricultural school they are taught a few of the secrets of the fancy and its ups-and-downs. Mr. William

Attend To Your Renewal.

Many thousand subscriptions to the AMERICAN POULTRY JOURNAL expire this month, and we would ask as a favor that the matter be attended to at the very earliest date possible. Sometimes our subscribers wait to be personally notified by mail of the date of expiration. With such heavy work as falls upon our subscription department at this time of the year, it is impossible for us to write each one, so we would thank our patrons to attend to their renewals promptly without waiting for any special notification. The date on the wrapper of your paper will show to what time you are paid. "Jan. 06," for instance, means that you are paid to January, 1906. Subscription offers will be seen on various pages of the Journal.

Special Offer If five send in their subscriptions together, we will give a cut price of 35c each, and to the one who gets up the club we will also send a set of four beautiful colored poultry pictures, including the "Yard of Chicks."

New Subscribers This offer holds good for both renewals and new subscribers.

**American Poultry Journal Pub. Co.
325 Dearborn St., Chicago, Ill.**

until we have the Silver Penciled variety and the Partridges of the same breed. Will five varieties be too many? Mentioning new breeds and varieties reminds us that the Lakenvelders and Faverolles and one or two others have been lost sight of during the past season.

The entire stud of Barred Plymouth Rock Bantams of Mr. J. Millard, the leading English fancier, have been dispersed and a number of the choice specimens have come to this country. Just why these little beauties have never been taken up more on this side none of us can authoritatively say. Mr. Latham, D. Lincoln Orr and other breeders began doing something with these little birds a few years ago and we hope they will give us the results of their work before long.

Boston is not one of our cities that is going backward; she does not believe in allowing the practical to be lost sight of if she does love her fancyisms. The leading lights of poultry culture in that city have come together

McNeil, is going to give the students a demonstration in show-room preparations. He will select, wash and plume a bird before the students; and show them how to dry birds successfully. Richard Oke, another Canadian of more than local reputation, will discourse before the class on fancy topics of interest to all fanciers. There are many of us calling ourselves "old-timers" who would like to hear these gentlemen divulge a few of those ideas that have carried them repeatedly to victory.

The annual election of officers of the Utah State Poultry Association was held on Friday, February 3, and the following officers were elected to serve for the coming year: President, C. G. Plummer; first vice president, O. H. Hewlett; second vice president, S. O. Day; treasurer, Geo. F. Strickley; secretary, C. J. Sander; assistant secretary, Geo. Coulam, Jr.; executive committee, O. H. Hewlett, Isaac Russell, A. H. Vogeler, Jno Haslam.

E. C. Allison, Box 5, Hope, Ind., has issued a neat egg circular. Anyone interested in Buff Rocks should send for one.

CRITICS AND CRITICISMS

What the Leaders are Doing.

The critics of the American Poultry Association think the action of this body at its Cincinnati meeting was for the good of the organization. The general opinion is that this body has had its nest cleaned out, its yard plowed up and sowed to rye, and its fluff well dusted with lice-powder. In fewer words, it will begin to deposit eggs in its silk lined nest, all to be devoted to the poultry good. The salary of the secretary has been raised to \$600 per year and he will now be expected to give the office and the association's welfare a bit more of his time. The old plumage of the organization is to be cast off and the work of growing a new and brilliant suit of feathers begun. Indeed, she seems now on the path to prosperity!

* * *

When F. W. Taylor, in a recent issue of the *Poultry Tribune*, says that Mediterranean fowls are more popular than the Asiatics, it is time for breeders of the latter to come out of their advanced state of coma. The popularity of the Cochins and Langshans and Brahmas is at low ebb—breeders know it. They further know that the popularity of the prominent fowls is all owing to push and vim in the ranks of their many champions. I know that breeds can be boomed into popularity and that they may be smothered, too. Popularity is just what the breeders of a fowl work to make it. Popularity begins in big classes at the shows! Then the editors help the thing along and other breeders contribute their share by telling of the advancement the breed seems to be making. Since Dr. Robinson dropped out of the Langshan fancy things have been drifting and now that Dr. Hare is pushing Cochin club affairs, this club seems to be doing a bit better. Active specialty clubs "made" the Barred Plymouth Rock, the White Wyandotte, the White Rocks, the Buff Rocks and the Orpingtons and Reds. Stop club work and the bottom will fall out of any breed! Let the breeders of Asiatics go to work.

* * *

Says J. M. Wright in the *Fancier's Monthly*:

"The question arises in my mind, why so much anxiety is shown by old and new members of the poultry fraternity (and more especially the new members), to originate a new variety or breed. One man by judicious crossing produces a mottled Leghorn; then we must, of course, have a mottled Plymouth Rock, a mottled Cochin, a mottled Wyandotte, etc., on through the list. Each one is lauded to the skies as an unequalled table fowl, inveterate layer and so on with a full list of encomiums. They soon run their course and are relegated to the past. Something new is then again sprung on an unsuspecting public, and we are soon made aware of the fact that if we are to get in on the ground floor in this great bonanza scheme we must get a hustle on us and purchase fowls or eggs of the great and everlasting layers known as the "Bequeens." This wonderful fowl is the result of a lifelong study of scientific, theoretical poultry

culture by a poultry man who has made a wonderful success in the past in producing new breeds, but considers this last one the crowning effort of his life. This variety was produced by the successful crossing of the "Bob White" quail and an Italian Queen bee; a male from this cross was then mated with a Seabright Bantam hen. By this last mating the size was increased and a type of fowl perfected that will lay fifteen hundred eggs per year, in size somewhat smaller than a Minorca egg. Another great saving is effected in time, as these eggs will hatch in 16 days instead of 21. And the hen, instead of cackling when an egg is laid, simply buzzes, while the roosters will whistle in place of crowing, thereby solving the problem of what to do to keep the chickens more quiet, that they may not disturb the neighbors. An advertisement of this kind would be but little farther from the straight and narrow line than are the "ads" of many of the new breeds heralded far and wide before a long-suffering public."

Mr. Wright makes a strong plea for the betterment of the very excellent breeds and varieties we have and waggishly hurls a spear into the camp of new breeders and fanciers by saying that they are the only ones who think new varieties needed or who try to produce them. He shows the value of working for the improvement of a variety rather than spending energy to create new ones, by citing instances showing where the care put on perfecting fowls we now have is more profitable in every way. If he had made it a straight argument of dollars and cents he would have made it far stronger because we are a nation that feels with our purses. We generally figure dollars and cents first—other results are secondary. No breeder of note ever made his reputation by inventing a new variety. All our big breeders are developers of a breed or variety—they worked zealously in the perfection of a worthy fowl. This paper of Mr. Wright's is timely owing to the recent admittance of a half dozen fowls to the Standard. Certainly it is good criticism and worthy of a young fancier's notice.

This is not one of the famous "red hen tales" but a real, live fairy tale of a hen, hatched of an egg, brooded by a mother cluck, and raised in sunny Tennessee. Place your think-box around the story:

"There died at Evansville, Tenn., last September, a hen that was known to be twenty-two years old. This unprecedentedly long-lived hen belonged to George Bradley. Betsy was one of a fine brood of chicks hatched on the day that Bradley's eldest son was born; nearly 23 years ago. By the date of the young man's birth the family established her age. Betsy was occasionally permitted to indulge her motherly instinct, upon which auspicious occasions she invariably brought into the world from a dozen to fifteen of the finest chicks that ever scratched gravel. When not engaged in motherly duties Betsy sometimes worked over-

time and laid two eggs a day. As year after year passed without any appreciable difference in Betsy's strenuousness she became the wonder of the country and the barnyard jewel of the Bradley family. For 19 years Betsy kept up her good work. It is estimated that during that time this industrious hen laid 4,750 eggs and hatched 570 chickens—"mostly girls," as the musical comedy advertisement would say. At the age of 19 Betsy suddenly changed her habits and seemed seized with a distinct aversion for roosters. The finest cocks of the walk in Farmer Bradley's barnyard had no charms for Betsy. She spurned them all. During the last three years of her life, Betsy did not lay an egg or hatch a chick. Betsy was buried with honors befitting her, and over her grave Mr. Bradley will erect a tombstone appropriately inscribed as follows:

Born in 1883. Died in 1905.

HERE LIES LAYING BETSY.

She did many a fowl deed for those she loved.

Peace to her bones; let them lay. May she lay again some other day.

If the 4,750 eggs that Betsy laid during her 19 years of faithful service were sold in the market at their present price they would realize \$908.50. If her 570 chickens brought an average of 30 cents they would represent a market value of \$171. On this basis Betsy earned \$1,079.50 for her owner before she retired from active duty and commenced to take life easy."

Such, dear reader, is the story of dear, old Betsy. He who wrote that touching epitaph and story should have chiseled on the slab that marks his resting place:

Here lies laying Betsy's lying champion.

And we will let it go at this. Such meek stories as this are the kind that get foolish people into the "chicken business." Betsy laid, according to her lying eulogizer, something near 250 eggs per year for 19 years, a feat that can only be performed on paper. Often I think that the impressions we fanciers give to those who visit our shows are as boastful (unintentionally, of course) as the writer of Betsy's story. The visitor goes to the show and we always turn the bright side out—for it would be unprofessional not to do this. He sees us selling birds at \$10 each, and sometimes more; he hears us asking from \$50 up for a particularly nice bird—then he gets the fever and puts a few thousand into the business! Generally he gets out of it a huge bunch of amusement. Practical poultry work would take the starch out of a per cent of those who enter the fancy because of its glitter. The beginner believes any one can raise chickens—and any one can, but the difference lies in the fact that some raise more and better ones than the rest of us. SPECTATOR.

The Wilmount Farm, W. W. Casswell, proprietor, Mamaroneck, N. Y., breed White Wyandottes exclusively. Their winnings this season at the leading eastern shows were as follows: 10 firsts, 9 second, 1 third, 2 fourths, 3 fifths, 2 silver cups and 14 specials. Their egg circular is now ready for the mails.

SUCCESS WITH BROODERS.

**How to Feed and Care for the Chicks
—How to Avoid Crooked
Breast Bones.**

When chickens are hatched in an incubator, an artificial rearer (or brooder) is required, commonly called foster mother, in which to place them when they are removed from the machine. These rearers have been brought to great perfection of recent years and are sold by most incubator makers. There is usually a sleeping compartment with a run adjoining, which is made impervious to the weather. After the chicks have been taken out of the incubator and dried in the drying box they are ready for the brooder. The chicks will dry after they leave the shell in three or four hours. If there is no drying box in the incubator a basket lined with flannel and put down in front of a moderate fire will answer the purpose.

The brooder must be placed in much the same situation as if it were a coop containing young chickens. In the winter, it should stand where it is sheltered from cold winds and rain and where the little birds will be able to take advantage of all the sun there is. In hot weather, it should be put where there is shade.

The usual food for chicks the first two days is equal parts of chopped hard boiled egg and bread crumbs. After this, the egg can be discontinued

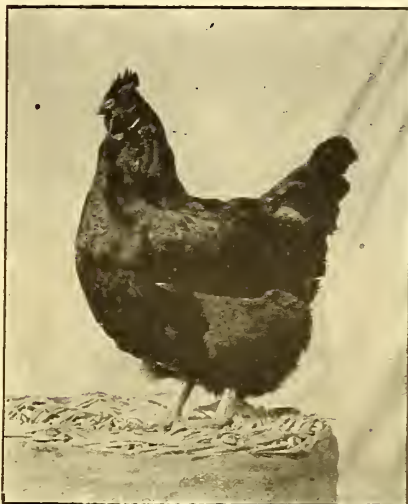

and coarse oatmeal given mixed either with milk or water. In addition to this, the chicks should have some grain, such as bruised wheat or groats. They will quickly learn to eat, particularly anything white or light colored. They

to bring chicks on quickly.

The temperature of the sleeping compartment of the brooder should be maintained for the first three or four days at about 90 degrees. The temperature should be taken half way between the floor and the top. At the end of four days, the heat can be decreased gradually until the young birds are three weeks old when 70 degrees at night will be sufficient. Then by degrees, 50 degrees can be reached until the chickens are considered to do without any artificial heat. The heat, however, in the brooder must be regulated to some considerable extent according to the temperature of the outside atmosphere. If the weather is warm, the brooder can be allowed to cool down more in the day time, care being taken that the temperature is raised again for the night.

It cannot be too strongly insisted upon that the brooder must never be overcrowded. As the chicks grow, they will, as a matter of course, take up more space, so that the number for which the brooder is stated to be made should not be kept in it. For instance, a brooder made for 100 chicks should not have more than 50 in it after they are three weeks old. If anything does go wrong with the chicks when they are packed together too closely, the mortality is very heavy.

Some poultry breeders who use incubators, rear chicks under hens after the chicks have been hatched in the incubator. This plan is seldom adopted in the winter, as broody hens are then too scarce, and at any time, there

would appear to be but little advantage in this method. When it is adopted the broody hens are allowed to set on dummy eggs until they are wanted. The chicks are placed under them at dusk, and it is rarely that a hen declines to take readily to the little things. Other poultry keepers put eggs at first under a broody hen and finish them in the incubator for the last ten days. They state that they obtain the best results in this way.

Brooders can easily be home made by a fairly good carpenter. The sleeping compartment of a brooder should be heated from the center by a lamp which is encircled by wire to prevent

ing and night until the chicks are old enough to eat cracked corn and wheat, which is when they are about two weeks old. A mixture of 25 lbs. of corn chopped to 25 lbs. of oatmeal, 30 lbs. of middlings and 20 lbs. of wheat bran, I have also found most excellent for the young chicks.

The welfare of the chicks in the brooder, as may well surmised, is entirely in the hands of those who care for them. There is no hen to call them to eat or to roost. They must consequently be taught to go in and out of the brooder, to come to be fed and to go in out of the cold and rain. All this they must learn by the efforts of the

the chick coming too near, and adjoining this sleeping compartment is a run. There are others with hot water tanks and with hot air flues at the top of the compartment.

I have found myself that the best way of feeding young chicks in a brooder is with a mixture of corn meal and oat meal in equal parts, stir with water until it crumbles, which is given them after a few days when the egg food is dispensed. Two teaspoonfuls of animal meal and one half a teaspoonful of egg food still being added to each two quarts of the mixture of the two kinds of meal mentioned. Occasionally, if by chance, I can obtain buttermilk, I use it instead of water and then bake it in an oven. This is fed morn-

one who attends them. The entire process is most artificial and each chick must be taught its part to be hoped to be successful with them. The success with the brooder as well as with the chicks depends chiefly upon the proper handling of both. If kept too hot, it kills the chicks, if too cold, they dwindle and die. Either of these errors may bring on diarrhoea. So much depends upon the care of the brooder, that success or failure is at stake and rests entirely with the attendant.

Brooders should be cleaned daily the same as a hen house, which is quite easy to achieve with regular attention, and owing to the fact that chicks are supplied with a full meal in the way of yolk of egg before they leave the shell,

Main Breeding House on Rock Hill Poultry Farm, Ossining, N. Y. This house is 350 feet long, with capacity for 1,000 head of breeding stock.

no food is required for twenty-four hours. They possess the instinct right from their start in life to commence picking at nearly anything they can see, even at one another's toe nails and to gratify their desire, there is nothing better than placing before them some fine grit. To ward off indigestion, they must have grit for grinders at all times. Never allow crushed oats to young chicks without first sifting out the hulls. The hulls either on or off the kernel are liable to produce a stoppage of their young tender crops. Plenty nourishment and exercise is absolutely necessary to them.

The brooder before the reception of any chicks should previously be provided with cleau paper at the bottom, covered to half in depth with clean, dry sand. This paper prevents filth from sticking to the bottom and the sand keeps the chicks clean, especially at their feet. Both paped and sand should be changed at least twice a week.

In regulating the heat of a brooder, all you have to do is to watch its effect on the chicks. If you find them huddled together and cry, they are too cold, on the other hand if they lift their wings and pant, they are too warm. There is more danger in overheating them and then letting them get chilled than anything. If a chilled chick does not die immediately, it seldom reaches maturity.

Do not feed wet or sloppy food to them and never too much at a time of anything. Feed them often, at least five times a day, always keeping them a little hungry and glad to see you coming along. Do not feed any raw meal especially raw corn meal, but always scald it first. Very finely chopped meat either raw or boiled is most excellent for the youngsters. For green food, use lettuce, cabbage or chick weed, always cut fine, and watch them eat it and hence thrive. A pan of dry oatmeal for them to pick at will also be found of great utility until they are about three weeks old.

If the brooder can possibly be placed in enclosed small yard, all the better and if the little fellows are then watched when they are first let out, it is amusing, but be most careful that they do not get chilled.

Young chicks should be taught from the first to eat anything that is good for them, such as wheat, screenings, millet seed, cracked corn, whole wheat and baked corn meal cake ground up. Wheat and cracked corn to be always

their predominating food after the fourth day. After a week or ten days, let them come outside the brooder in the small yard, but always get them back into the brooder early in the evening. If this is taught to them for two or three days, they will soon learn to take care of themselves in that respect, although I must say that young chicks are absolutely ignorant, they know nothing but what you teach them. A little fine dry grain kept inside the brooder will entice them to return to the brooder as their home, this should be kept in a little trough.

When the chickens that were brought up in the brooder in the early part of the year have grown into a fair size, it is generally agreed that they should be kept apart from the other fowls. Yet is a very common practice at that period to turn them with the general flock as soon as they leave the brooder, and they are then pecked and otherwise ill treated with a consequent check to their growth. Ten or a dozen cockerels or pullets in a comparatively small run will grow much faster than the same number of fowls that are allowed their liberty among the other fowls.

Now the chickens that are to quit

the brooder must be found a house. The house in which these chickens will have to roost must have plenty of ventilation overhead. However warm it may be necessary to keep the young chickens a growing, to do this, they require a great deal of air. It is as well not to allow them to perch too soon; as crooked breast bones are generally regarded as hereditary deformities, though it is by no means commou to see a newly hatched chick troubled in this way. Amongst the largest perching fowls, this disfigurement is frequent. It would appear, therefore, that it is caused to a large extent by the perching. The finer, larger and heavier the chicken, the more likely will it be to suffer in this way, if allowed to roost while the bones are yet soft. But if these young birds are kept in a well ventilated house that has no perches with the floor well littered with straw or moss, that is often cleaned out, crooked breasts will be a rare occurrence.

These growing chicks should be fed three or four times a day. They should not have too much at a time, only what they can eat readily at each meal. The day should be commenced with soft food

of some description. For whole grain, wheat is always liked and is always beneficial. By way of a change some barley and occasionally a few handfuls of corn are good; these young birds appreciate a variety. If they are kept in a small space, a good supply of

If the chickens so reared by a brooder are cross bred or mongrels, the cockerels ought to be fit for table when they are four months old; they are often at their best at that age. It is so important that these young birds should not be overcrowded, and also if

PRECAUTIONS FOR THE BEGINNER IN POULTRY RAISING.

I have had some inquiries concerning combs and wattles in our large breeds of chickens, such as Buff Rocks and Orpingtons. In both they should be rather large, standing up straight and firm. But sometimes they grow to an enormous size. I have even seen them when they fell over in cockerels, but straightened up when full grown.

One year we had such an experience. That year we commenced feeding chicks at two weeks old beef scraps that had been scalded. We fed during the summer a great deal of fresh beef direct from the market, and such combs as the cockerels did have. I concluded that it was the beef, so next year cut down feeding fresh beef, feeding only at long intervals, and our cockerels did not develop combs of the right size until almost grown. I had gone to the other extreme too far—did not feed enough beef. The following year we hit a happy medium and the combs were all right. So that from my own observation I think I am correct in saying, don't feed too much fresh beef to chicks. The older fowls can stand it. But even then I am afraid it makes them bilious. We don't want Leghorn combs or Rocks or Orpingtons. If it is

PARTRIDGE WYANDOTTE COCK

green food must be provided; they must also have plenty of grit, nothing keeps them in better health than this. Even if they have a free grass range, a barrowload of coarse grit thrown down once a week or so will be of great value to them.

they are pure bred, all wasters should be weeded out as soon as possible. In knowing which are his best chickens, the novice will experience some difficulty. Considerable experience is required to become a good judge of young stock, but he cannot go very wrong if he disposes of all those that are undersized and also those that have twisted combs and wry tails.

Shelter must be provided from the sun in hot weather, particularly for any promising youngsters that look like making up into show birds; sun burn is fatal to the chance of prize winning.

I must not omit to say, that in bringing up young chickens in a brooder, it is very suggestive and good plan in the matter of green food, to cut up the fine grass quite small with a pair of shears; and also in the winter months when the nights are so long, to give them feed of hard grain and some lukewarm water to drink about 9 P. M. by lantern light, to which they will become quite used to in a very few days; this helps on exceedingly.

A. V. MEERSCH,

Poughkeepsie, N. Y.

F. W. Richardson, Box A, Hicksville, Ohio, breeder of Barred Plymouth Rocks, has a few cockerels and pullets to spare. His stock is right, his prices are right and his eggs are right.

a cold winter we cannot keep the combs and wattles from freezing, for they can't tuck them all under their wing, and we do not want to make night-caps for them. Maybe it would be a good plan to put night-caps on our show birds. Another important thing is to look out for lice this time of the year—big lice in the fluff. Turn them upside-down and part the fluff, and maybe you will see a nice drove of them running in every direction. Nature or instinct tells them an enemy is after them and they run from the light. You may not see them, but you will find the feathers rough and perhaps compact, or the skin may be irritated until it is sick. At times a crust or scab is formed on the skin. If you find these conditions just get your best insect powder and powder them good—it's big lice—then in about a week, when the nits have had

Raise Every Chick

If every Chick hatched last season had reached maturity in 60 to 90 days—hardy, strong and vigorous—how much extra money would you now have in the bank? You could have SAVED these Chicks—every one—if you had used

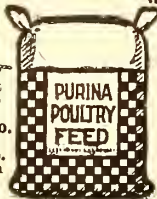

Purina Poultry Feeds

—for one kind—Purina Chick Feed, is made on purpose to save the lives of little Chicks, and make them grow like weeds. And it DOES IT. Brings up the highest percentage of every hatch EVERY TIME.

The other Purina Feeds MAKE EGGS—make your hens lay all the year 'round—make zero weather eggs EASY. They do this EVERY TIME, and with EVERY HEN, too. These may sound like "broad statements."

But don't take OUR WORD for it—try it—prove Purina Feeds yourself by feeding them to YOUR hens or chicks at OUR EXPENSE. If the RESULTS don't come, just tie up the bag and write us, and we will return every penny of your money, and tell you what to do with the unused feed. You are not out a cent in making the trial, for we will supply you through your dealer or direct. FREIGHT PAID EAST OF THE ROCKIES, and the feed used in testing will cost you nothing. Send us your dealer's name.

This is the Money Back Line! Ask for particulars about our FREE TEST Plan. Write today—you can't afford to wait. Purina Mills, B St., St. Louis, Mo. Pacific Coast orders filled by Acme Mills Co., Portland, Ore. Canadian orders by The Tillson Co. Ltd., Tillsonburg, Ont.

time to hatch, go after them again. Be sure to give the second dose, then about once a month they should be well dusted for safety. Every hen that is set should be well dusted with insect powder first.

I borrowed a hen to set, and in looking over my clothing where she touched

never known to the uncivilized or natives.

Who ever gave a wild horse a dose of colic medicine? The more we can let our domestic fowls have nature's ways the better off. Man was God's noblest creation. Sometimes I think he must have degenerated dreadfully since then. Not weaker and wiser—weaker I admit—but in something not so wise as in ignorance. Civilization and education stunts instinct. We now depend on our superior intellect and, like the appendix in man, instinct becomes useless. And as we have become an educated, intellectual race and lost instinct, we have to look after this, the worst enemy of the poultryman—vermin—for if it gets a good hold on your flock they are said to have cholera and numerous other diseases when the seat of all is lice; there are so many kinds, too.

And especially would I advise people who have had birds on exhibition at some poultry show to give their birds a good going over on their return home, for almost invariably since one has gone to the show with fowls alive with vermin, and if yours are near them in the exhibit yours are sure to come home infested with them, besides a good reliable insect powder can do no harm.

Mrs. FRANCIS TALLON.

"CONSTANT ROTATING INCUBATORS"—H. W. AXFORD, CHICAGO.

Some of the older readers of the AMERICAN POULTRY JOURNAL are aware this Journal was the first to print an advertisement of the H. W. Axford Incubator.

The whole credit for the invention he did not reserve for himself as it had many names; first it was called the "Steam-Hatcher," "Omaha Hen,"

"National Incubator," "Glass Hen," "Electric Incubator."

Being so long engaged in this work, the experience made it easy to combine the good qualities with this latest novelty of "constant rotating," saving all the time, work and care of turning the eggs often daily by hand during the necessary time of incubation, a surprising contrast to the early days of building "hatchers of chickens," when postal inspectors were sent to the works to inquire as to its genuineness.

This result was looked for in 1876 by Chicago's great show man, John P. Reynolds, when he said, "H. W. Axford Incubator had the promise of 'PRACTICAL UTILITY.'" It is the greatest gift to the thousands who will hereafter raise poultry.

Joseph P. Hildorfer, Box 1, Allegheny, Pa., breeder of Black Minorcas, has a few cockerels and pullets to spare. His winnings at Madison Square and Cincinnati are well known. Send for his circular.

The Hazelmere Poultry Farm of Cranston, R. I., breeders of Columbian Wyandottes and Rhode Island Reds, issue a neat egg circular. Their winnings at New York, Chicago and at the World's Fair, St. Louis, are too well known to need mention.

F. A. Keller, Box F, Pigeon, Pa., breeder of Partridge, Silver Penciled and Columbian Wyandottes, sold \$500 worth of birds to the Japanese Government. Mr. Keller judged the Partridge Wyandottes at Madison Square Garden, 1906. Send for circular.

WHITE ORPINGTON COCK
Bred and owned by Willow Brook Farm, Berlin, Conn.

in carrying her home I found black lice. The hen was a very dark Rock. The lice take on the color of the feathers of the fowl for protection against observation, as our wild animals and birds take on the color of their surroundings. Nature does so much to protect its own, so that I think if we could let nature alone in raising fowls we would not have this everlasting

BUFF ORPINGTON PULLET
Bred and owned by Willow Brook Farm, Berlin, Conn.

louse question on our hands. Who dusts the wild birds, the quails, ducks and geese? Whoever ran across a lot of wild fowls dead with vermin? And they say that sparrows have them.

It seems that civilization of fowls as well as the human race brings on ills

ORCHARD HILL POULTRY YARD. Barred Plymouth Rocks, White Wyandottes and Pekin Ducks, bred from choice stock. Eggs, \$1 per 13. Circular free.

GREIDER'S FINE CATALOGUE of Standard bred poultry for 1906, printed in beautiful colors, contains Fine Chromo, illustrates and describes 60 varieties. Gives reasonable prices for stock and eggs, tells all about poultry, their diseases, lice, etc. This book only 10 cents. B. H. GREIDER, RHEEMS, PA.

WE WANT NAMES

We want YOU to send us the names and addresses of from ten to twenty-five farmers living in the United States, each one having five cows or more. You can send us the names from any number of different post-offices. If you will send us these names we will send you FOUR BEAUTIFUL PICTURES FREE. These pictures are reproductions of the most celebrated paintings in the world, and they are of high quality, and we know that you will be pleased and delighted with them; no pictures will be given for a list of less than ten farmers.

We want to send a sample copy of the special dairy issue of the RURAL HOME to a lot of farmers who are not now taking our paper and that is the reason we want these names.

Send us immediately a list of at least ten farmers and we will send you, ABSOLUTELY FREE, FOUR REPRODUCTIONS OF THE WORLD'S FAMOUS PICTURES. Address THE RURAL HOME, 20 North Williams Street, New York, N. Y.

To-Day!

SEND A POSTAL OR LETTER and ask for AMERICAN POULTRY JOURNAL'S 1906 subscription offer.

Never have we offered so much before. For six subscriptions you are allowed over one-third commission, and are given a set of four beautiful colored pictures. These same subscriptions also count in a chance toward winning the \$600.00 Piano; \$100 cash; \$50 worth of Fowls; Incubators; Brooders; Eggs, etc., there being over fifty of these grand prizes. One of our subscribers says, "I do not see how you can afford to do it." But we want subscriptions and lots of them; that is why we are making such liberal offers. Our space is too small here to explain all we give to every one who helps us. We hope every reader, who reads this, will send for the Offer at once. It will be a happy new year for both of us

AMERICAN ORPINGTON CLUB.

New Officers of the Club—Constitution and By-Laws—Membership in the Club.

At the annual meeting of this club, held during the week of the Madison Square Garden show, January, 1906, the following officers were elected: President, W. L. Davis, Berlin, Conn.; vice-president, C. E. Faber, Plainfield, N. J.; secretary, Wm. Barry Owen, Vineyard Haven, Mass.; executive committee, above named officers and Dr. Sherwood, Pocantico Hills, N. Y.; A. G. Goodacre, Watchung, N. J. The following named gentlemen were appointed club judges: Richard Oak, London, Canada; Frank W. Gaylor, White Plains, N. J.; M. F. Delano, Vineyard Haven, Mass.

BY-LAWS OF THE AMERICAN ORPINGTON CLUB.

Article 1. The club shall be called The American Orpington Club.

Article 2. The object of the club shall be to promote the breeding of Orpington fowls; to urge the adoption of the true type and color by breeders, exhibitors and judges, and to advance the interests of the breed.

Article 3. The officers of the club shall be a president, vice-president, secretary and treasurer, an executive committee, and an honorary vice-president from each state or province represented.

Article 4. The management of the affairs of the club shall be vested in an executive committee, which shall consist of a president, vice-president, and secretary and two members, to be elected at the annual meeting, to hold office until the next annual meeting.

Article 5. There shall be an annual meeting of the members for the election of officers, the time and place of holding which shall be determined by the executive committee.

Article 6. Five members, either in person or by proxy, shall constitute a quorum. No member shall be allowed to vote more than two proxies.

Article 7. In event of any vacancy occurring in the officers of the club or executive committee after the annual meeting, it shall be filled by the committee.

Article 8. Application for member-

ship must be made, with membership fee, to the secretary, who shall submit the same to the executive committee, a two-thirds vote at any meeting or the annual meeting of the club being required to elect a candidate to membership.

Article 9. Membership fee shall be one dollar. No person shall be enrolled as a member until after such fee is paid.

Article 10. Annual dues shall be one dollar, and shall become due, in advance,

W. L. DAVIS.

President American Orpington Club and Proprietor Willow Brook Farm, Berlin, Conn.

the first of October of each year. All dues must be paid before the first of January following, or membership ceases; the member having been duly notified by the secretary.

Article 11. Life membership fee shall be ten dollars, which shall not include any previous amount paid.

Article 12. Resignation may be made by giving notice to the secretary, in writing, but no resignation shall be accepted if the member be in arrears for dues, or if there be any charges pending against him.

Article 13. Any member of the club

who shall be deemed guilty of conduct derogatory to the club, may be suspended from membership or be expelled from the club by a two-thirds vote of the executive committee.

Article 14. The executive committee shall have the power to offer prizes out of the funds of the club, amounting to seventy-five per cent of the sum in the treasury.

Article 15. All prizes offered out of the club funds shall be open for competition only by birds owned by members.

Article 16. A list of officers and members, together with annual report and balance sheet shall be sent to each club member within a reasonable time after the annual meeting.

Article 17. These by-laws may be altered or amended by a three-fourths vote at the annual meeting, or by the same vote at a special meeting, thirty days' notice in the latter case having been sent to each of the members by the secretary.

Article 18. The order of business at all meetings of the club shall be:

1. Roll call.
2. Reading minutes of preceding meeting.
3. Election of new members.
4. Reports of officers.
5. Reading of communications.
6. Unfinished or old business.
7. New business.
8. Election of officers and executive committee.
9. Adjournment.

MEMBERSHIP IN THE AMERICAN ORPINGTON CLUB.

Life membership fee, \$10, payable with the application. No further dues or expenses. Annual membership fee, \$1.00, payable with application. Dues, \$1 each year, payable October 1st.

Application for membership should be sent to the secretary, Wm. Barry Owen, Vineyard Haven, Mass.

Cut out the following coupon and fill out and mail at once and get in line to boost this club and by so doing help increase the popularity of the Orpingtons:

Wm. Barry Owen,
Secretary and Treasurer,
American Orpington Club,
Vineyard Haven, Mass.

Dear Sir: At the next meeting of the executive committee please present my name as an applicant for membership in the American Orpington Club, and the fee, \$....., is herewith enclosed.

Yours truly,

P. O. Address,

Date,

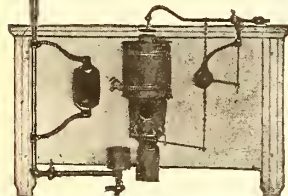

At the meeting of the Partridge Wyandotte Club at New York Show all of last year's officers were re-elected for another year. J. B. Hadaway, president, Brockton, Mass.; Mr. William Jackman, secretary, Gloucester, Mass. At the adjourned meeting of the club at the Boston Show it was voted to hold their annual meeting and exhibit at Boston next season, and an effort will be made to there make the largest exhibit of this breed ever made at any show. To date the Brockton show holds the record for the largest exhibition of this breed ever made, it being larger than at the St. Louis World's Fair Show.

THIS OUTFIT SAVES

**1 THE OIL
2 LABOR**

Your incubator is costing you double the time and attention it should. For instance, filling and trimming your lamp twice daily, regulating the flame several times, burning 2 gallons daily where one should do the work, and do it well.

And All Annoyances ACME AUTOMATIC LAMP AND COMPOUND WAFER REGULATOR

will effect a saving of one-half the oil, one-half the time and care and one-half the cost of operation. The Combined Damper and Flame Regulation shuts off oil consumption when heat is not needed. Lamp holds over one gallon oil. Top lifts off like bucket cover, makes filling easy. No funnel needed, no Spilling and Wasting oil. Safely filled while in operation. Automatic valve keeps oil always same height on wick, insuring a uniform flame. Cannot be upset. Acme mineral fiber wicks do not burn or char, and require no trimming. Acme Burners are air cooled and cannot overheat, absolutely safe, no danger of explosion or fire. No smoke, no soot, no offensive odor. Can be operated in any part of the house. Acme Compound Wafer Regulators are sensitive and accurate to a fraction of a degree, and positive in their action. Require but one ADJUSTMENT, no further attention. The only patented Thermostat. Look for patent label; none genuine without it. All infringements will be vigorously prosecuted. Made up in various styles to fit any Incubator or Brooder. Style B, here shown, enters end of machine. Has powerful crank action. Adapted for both damper and flame regulation. Other styles for damper only. Both lamp and regulator are easily attached to any Incubator or Brooder. We make them up to fit your machine. Sold separately or together. The operation of an Incubator and Brooder becomes a profitable pleasure, when equipped with this outfit. Our catalogue gives full details and illustrations, together with our complete plans for building the FAMOUS PERLESS INCUBATORS AND BROODERS. SENT FREE FOR THE ASKING. Write today. Address

National S. C. Buff Orpington Club

Benefits to be Derived from Joining this Club—Officers for 1906.

BY WILL H. SCHATZ, SEC., GOSHEN, IND

Perhaps the best reason I can give why any one should join the National S. C. Buff Orpington Club is that nearly all breeds of fowls that have taken a prominent part in the poultry fancy owe their popularity to the Specialty Club or Clubs that have pushed them to this position. Fortunate indeed is the breed that has enough merit of its own to hold this enviable position after being boomed by a Specialty Club or through the efforts of a few of its foremost breeders.

In looking over the Standard we find innumerable breeds of fowls, most of which were no doubt very popular in their day, yet what a comparative small number of them had enough genuine merit to hold their own, in the present day when new breeds are constantly knocking at the doors of the American Poultry Association, they could almost be counted on the fingers of one hand. It will be needless for me in this short article to go into details of the wonderful qualities possessed by the S. C. Buff Orpingtons, as every one that has ever bred them is loud in their praise of them claiming merits possessed by no other breed. Surely the Buff Orpingtons will never take a second place for any breed of fowls that are before the poultry public to-day. Then if for no other reason than simply helping to make the National S. C. Buff Orpington Club the strongest club in existence, so that they will be enabled to put the S. C. Buff Orpington in the first place where they surely belong you should join this club.

In addition to this the club publishes the names and addresses of every member in their annual catalogue which alone in bringing your name before the public as a breeder of this grand breed is worth more than the small fees asked to join the club. Their annual catalogue is issued expressly for the interests of club members that they may keep to the true type and color of the Ideal Buff Orpington in which are articles and illustrations from the best breeders in America, and in addition to this to advance the interests of the S. C. Buff Orpingtons.

The club also gives several hundred dollars' worth of specials each year to be competed for by club members only, and their handsome silk badge valued at \$1 each given to any member winning a first prize at any poultry show in America should be sufficient reason for any breeder of Buffs who contemplates showing his stock to join the club.

OFFICERS FOR 1906.

President, E. P. Cunningham, Goshen, Ind.; vice president, A. G. Goodacre, Watchung, N. J.; secretary and treasurer, Will H. Schadt, Goshen, Ind.; executive committee, J. M. Williams, North Adams, Mich.; Dr. James Matthews, New Paris, Ind., with the above officers.

STATE VICE PRESIDENTS.

Alabama, C. W. Hall, Brockwood; Arkansas, J. E. Wilcox, Rockhouse; California, W. S. Sullivan, Agnews; Colorado, T. G. Smith, Denver; Conne-

ticut, W. L. Davis, Berlin; Georgia, J. H. Porter, Atlanta; Illinois, Fred E. Wright, Monmouth; Indiana, George Dahlenburg, Seymour; Iowa, S. F. Helmick, Leroy; Kansas, W. C. Peuland, Liberty; Kentucky, W. J. Dickiusion, Trenton; Maine, A. G. Goodwin, Fairfield; Manitoba, W. I. Scarth, Virdeu; Massachusetts, W. J. Stokes, West Roxbury; Maryland, H. C. Henshaw, Adamstown; Michigan, W. E. Stanfield, Hillsdale; Minnesota, Alf A. Ziemer, Waltham; Mississippi, J. R. Young, Aberdeen; Missouri, Chas. Behrens, Jackson; Nebraska, J. S. Catterson, Sutton; New Hampshire, Josiah B. Higgins, Penacook; New Mexico, H. N. Packert, Albuquerque; New Jersey, Percy A. Cook, Scotch Plains; New York, Chas. Beniugton, Edmeston; North Carolina, John P.

Price, Spray; Ohio, H. A. Demand, Oxford; Oklahoma, G. H. Schultz, Blackburn; Pennsylvania, T. E. Orr, Beaver; Rhode Island, F. S. Almy, Central Falls; South Carolina, John McElree, Canova; Tennessee, W. E. Damon, Mitchell; Texas, W. T. Munger, Lampasas; Virginia, T. M. King, Hagan; Washington, Wm. Blackhurst, Tacoma; West Virginia, Wm. O. Wood, Benwood; Wisconsin, H. E. Rosenow, Oconomowoc.

The first annual catalogue of the National Single Comb Buff Orpington Club is about ready for mailing and will be sent to all parties interested in this breed. Send for it to Will H. Schadt, secretary, Goshen, Ind., and also send in your application for membership to this club.

These are the Kind of Half-Tones we Make

They are good enough for some of America's foremost poultrymen, for whom we have made cuts. Are they good enough for you? We offer you a combination of high quality and right price. Send us photo and write us for prices.

Our Specialty is Printing For Poultrymen

We are getting out Catalogues, Circulars, Letterheads, Envelopes, Cards, Tags, and all kinds of printing for some of the most particular breeders in the country. We can please you with our work, and our prices are reasonable. Correspondence promptly answered. Write us for prices on anything you want.

BIGELOW'S BIRDS

FROM THE
WEST MICHIGAN POULTRY FARM
Barred Rocks
White Rocks
White Wyandottes

None better—few as good. Order eggs now. Barred Rocks, \$1 to \$2 a setting; White Rocks (limited), \$1.50 to \$2.50; White Wyandottes (limited), \$1.50 to \$2.50. Remember on the Whites I won eight out of 10 against the traveling aggregations that attended the Missouri, Minnesota, Wisconsin, Ohio and Michigan State Fairs.

WEST MICHIGAN POULTRY FARM
Main Office 1408 Fisher Building, Chicago, Ill.

World's Foremost White Wyandottes

Won two firsts, one second and two fifth prizes on pens at New York and World's Fair past two years and several other premiums, and have for ten years won for me and my patrons at the leading shows of America. Many owe their success to my strain. Birds of my breeding or raised from my eggs were prominent winners this winter at leading shows from Boston to Portland, Ore., Texas to Canada. Grand stock for sale, returned at my expense if not satisfactory. Eggs from selected pens of 15 years' line breeding \$5 per sitting, three sittings \$10, five sittings \$15.

J. H. JACKSON - - Lock Box 88, Hudson, Mass.

BUFF ORPINGTONS.

Previous to 1901 we had always raised a mixed flock of chickens. Like many others thought them good enough and did quite well with them too, but at this time began to think about trying some full-blooded stock, and wished some that would prove to be good layers also a profitable market bird, as we only wished to keep one breed. The name Buff Orpington was suggested with the result that we purchased a trio of nice birds from an eastern breeder, and have never had reason to regret that we started with this new breed, for they have proved to be all that one could desire, being excellent layers both winter and summer and their large, plump bodies making them profitable for market. They are very early maturing, the pullets, very often, beginning to lay when but four and a half and five months of age and cold weather does not stop them.

They are great foragers when allowed to roam or lay well when confined in yards; being of such a quiet nature it does not take a very high fence to keep them yarded.

They make the best of sitters and mothers when so desired, or are easily broken up, and in a few days are again laying.

They are large, the standard weights being 10 lbs. for cock, 8 for hens, 8½ for cockerel and 7 pullets. The bright red comb, wattles and earlobes, with the beautiful buff color, make them very attractive in appearance. In fact, too much can not be said in favor of this grand breed. MRS. G. A. GIBSON.

Hector, Minn.

TO BREEDERS OF WHITE ORPINGTONS.

This is the day of specialties, and as nearly all of the prominent breeds of thoroughbred poultry have their specialty clubs, we breeders of White Orpingtons do not want to be left alone. We want a good live White Orpington club, and one is now under way. Application

First White Orpington Hen at Atlanta, Ga., Dec. 1905. Owned by F. S. Bullington, Richmond, Va.

blanks have been forwarded to all breeders and fanciers of this grand breed of fowls. And we hope at an early date to formulate one of the strongest clubs in the country. There may be several who did not receive application blanks. These I wish would drop me a line, that I may forward blanks to them. White Orpingtons are steadily coming forward, and in a few years we will see them

extensively bred all over the world. The Madison Square show gave an entry of about 50 specimens, and at Boston it was a White Orpington hen that won the Ivory Soap special of whitest fowl in show. This speaks a good future and shows that the White Orpingtons are a deserving fowl. At the A. P. A. meeting, held at Cincinnati in January, the S. C. White Orpingtons were admitted to the Standard, and it's up to us breeders now to push the breed to a place such as it so richly deserves. I would be pleased to hear from every breeder of White Orpington fowls in America, especially asking for application blanks. (Several applications have already been signed.) From all names received we will select officers for the transaction of business by forwarding to all a list of names received applying for membership, and they selecting officers of their own free will. Respectfully yours for White Orpingtons.

Dr. F. S. BULLINGTON,
Acting Secretary-Treasurer.
Box 328, Richmond, Va.

E. A. Rush, of Grand Rapids, Mich., won at Grand Rapids show, February 13-16, 1906, as follows: First, second, third, fourth cockerel; first, second, third pullet; first hen; first pen; Proctor & Gamble \$25 silver cup best White bird in show; club cup for best White pen; J. B. Martin silver cup for highest scoring pen in show, and all specials offered on White Leghorns. James A. Tucker, judge. Forty in S. C. W. Leghorn class.

H. H. Wiebke, Fort Wayne, Ind., the S. C. Brown Leghorn specialist, is now prepared to fill all orders for eggs in his usual prompt manner. His matings this season are up to their usual high standard. Send for his circular and mention AMERICAN POULTRY JOURNAL.

THE AMATEUR AND THE INCUBATOR.

Incubators seem to be the source of many anxious moments for the beginner. A correspondent says: "What is the matter with my incubator? I watch it carefully, get up in the night and keep the lamp trimmed, still it will get too hot, and then again too cold. I leave my lamp all right at 2 o'clock, and in the morning I find it out. The flues filled with smoke, etc." She asks, is it the room that I have it in? Should I burn a coal oil stove in the room to

with great success in an up-ground room. However, I think it best to avoid having an outer door. Let the door open from a hallway and do not allow any heavy walking, jumping or jarring the floor during the first few days of incubation. There is no precaution against this in using a cellar.

Now, if I were giving advice to a beginner, I would say, follow the directions that are sent out with the machine you buy. Each manufacturer has his own plan for manipulating his incubators. His ideas of ventilation, moisture, etc., are independent and should

and see to it a second time that the flame is not burning too strong, yet strong enough to keep the valve open.

I would aim to bring the temperature up to 101 degrees inside of the first twelve hours, then gradually increase the heat until you have reached the fifth day about 1/2 degree per twelve hours. At this time you should have 102 1/2 to 103 degrees. Now you will observe that the animal heat has begun in the egg and less heat is required in the egg chamber. See to the regulator now and adjust it again from the fifth to the tenth day, I like 102 to 103 degrees; after that time it is not necessary to maintain the heat as regular. I think great injury is done to the hatch by rough usage during the first few days. Almost every machine has an automatic turning rack. This I do not use until my eggs are all tested out. I lay the eggs in compact rows, the large end up and slightly inclining, and each time they are turned I turn each egg separately by hand, and why not? They must have time to cool, and we may as well be employed turning the eggs while we wait. After the tenth day, after the eggs are all tested, we may put in the turning rack and roll the eggs back and forth without much fear of doing harm by jarring. Air the eggs well each day longer until the eighteenth day, when the incubator should be closed and remain closed until the hatch is finished.

MRS. J. H. OREBAUGH.

Batavia, Ohio.

**WYANDOTTES
Silver & Columbian**

America's Leading Strain & Largest Wyandotte Farm.

Highest winners at New York, the last three years and for my customers at Chicago and Boston—home of "Ideal," the \$200 first Columbian cockerel at New York, undoubtedly the best Columbian in the world. Eggs from this pen \$10 per 15. Silver eggs \$3, from the strongest and best blood lines in America.

One of our Prize Columbian Pullets.

J. F. VAN ALSTYNE
Niverville, N. Y.

A Hen Lays

TWO EGGS EVERY THREE DAYS

And makes lots of money for her owner. That's an easy possibility. You can have a whole flock of that kind. It's a matter of selection—weeding out the poor and selecting the good layers, and building up.

**THE
WALTER HOGAN
SYSTEM**

teaches you how to do this. It enables you to weed out from pullets the ones that never will make good layers. Select cocks that will and those that will not breed laying pullets. You retain the good stock, market the poor. Any one can practice this system and put his flock on a paying basis—double his egg yield the first year. Correspondence invited. Prospectus free.

The Walter Hogan Company,
17 National Bank Bldg., Fergus Falls, Minn.

FIRST COCKREL
MADISON SQ. GARDEN - NEW YORK '06
Bred Owned and Exhibited by
R. A. TUTTLE - CENTRE MORICHES, L. I. N. Y.

GOLDEN ROD, JR.

First Buff Rock cockerel at Madison Square, New York, 1906. Owned, bred and exhibited by R. A. Tuttle, Center Moriches, L. I., originator of Golden Rod Strain Buff Plymouth Rocks.

keep an even temperature? I do not think it is necessary to run a coal oil stove to keep an even temperature. On the contrary, I think the smoke from the stove would make an atmosphere in the room impure and do great harm to the hatch. Even though the chicks were to get out of the shell, they would be greatly weakened. Plenty of ventilation in the room where an incubator is operated is necessary. My experience teaches me that a cellar is preferable to a room above ground. Still, I think an incubator can be used

be observed if you would succeed.

Make haste slowly is applicable in the use of incubators. First see and know that you have the regulator under control. If you do not understand it and cannot properly adjust it, secure the service of someone who has had experience along this line. Make it respond to the required temperature before going farther.

Now, we will suppose the machine is ready for use and we have filled it with eggs. Great care should be given the lamp to trim it each morning. Fill

Chas. G. Miller & Son of Boonville, Mo., breeder of Black and White Langshans, again won first at the recent Indianapolis show on their grand Black Langshan cock bird "Billie." This is the same bird that won at the Kansas and Illinois state shows last year, and the lowest score he had in any of those shows was 95 1/4 with a cut of 1/2 in weight occasioned by being delayed in transit. This bird was bred in their own yards and in their judgment is the best bird they have ever seen in many shows they visited. They have his score by Russell, Heimlich, Rhodes, Butterfield and Lane. His sire was also a great win-

ner with them, never scoring under 95 1/4, and was shown under eight different judges.

Chas. H. Krippene is breeding White P. Rocks and at the recent Wisconsin state show, Jan. 15-20, 1906, he made splendid winnings. In a class of 130 White Rocks which Judge Lambert said contained some of the best quality which he had seen this year he won practically everything, as follows: 1st cock, 1st cockerel, 5th hen, 1st, 2d, 3d pullet, 1st pen, silver cup for best display, special for whitest bird. Mr. Krippene has sold all his surplus stock, but is prepared for the egg trade this season. His

prices are very reasonable. An example of the quality of his stock is shown by the scores his birds received from Judge Lambert, who scored birds over 95 with cuts on weight.

One of the finest catalogues ever received in this office is that of the Elkhart Carriage & Harness Manufacturing Company, of Elkhart, Ind. In sending for this readers of AMERICAN POULTRY JOURNAL should ask for the large catalogue. These people are making a very large line of vehicles and harness. This is the thirty-third year they have been selling direct to the consumer. They have no agents, and in that way are able to sell to better advantage to the consumer.

J. C. Fishel & Son, Hope, Ind., won at Cincinnati, Ohio, 1906, as follows on their White Wyandottes: First cockerel, first hen, fourth cock, fifth pullet, third pen, special for best display, best W. W. cockerel, best W. W. hen, and best cock, cockerel, hen and pullet by one exhibitor. T. E. Orr, judge. At Indianapolis, February 5-10, 1906, they won first cock, second cock, first and second cockerel, first and second hen, first and second pullet, second, third pen, and all White Wyandotte specials.

Will H. Schadt, of Goshen, Ind., has won as follows on S. C. Buff Orpingtons this year: Cincinnati, Ohio (on three entries): First pullet and second cock. Cleveland, Ohio (on four entries): First cock, first cockerel, third and fifth pullet. Indianapolis, Ind. (on four entries): First cock, fourth cockerel. Goshen, Ind.: First pullet and silver cup, second cock, second pen, third cockerel.

Clement & Fike, Libertyville, Ill., the White Wyandotte specialists, have mated a larger number of breeding pens this season than ever before and are now prepared to take care of all egg orders. When you buy from this firm you will not be disappointed in quality. They have issued a very handsome catalogue, which could be in the hands of all lovers of White Wyandottes. Write for it and mention AMERICAN POULTRY JOURNAL.

Mrs. Denton Cole, Winwood, Pa., the Silver Wyandotte specialist, won at Scranton, Pa., on four entries, first cockerel, third hen, second pen, in strong competition. Her matings this year are better than ever and she is now prepared to fill all orders for eggs promptly. Write for prices and mention AMERICAN POULTRY JOURNAL.

E. C. Allison, Box 5, Hope, Ind., the Buff Plymouth Rock specialist, made a grand winning at the Cincinnati show, winning every first but one offered on this variety, including the much coveted prize of first pen. He has a large number of choice birds to sell, and will mate them up for best results. Send for his circular, which gives prices on eggs and other information. Mention AMERICAN POULTRY JOURNAL when writing.

Hunky-Dory Farm, Pella, Iowa, won at Iowa State Poultry Association show, Pleasantville, Iowa, December 25 to 30, 1905, as follows: First cock, first hen, third cockerel, first, third and fifth pullets, second pen, first ten special on third prize cockerel, as being the best shaped male in Rock class, including Buff, Barred and White; was cut one-quarter in shape of tail, 2 1/4 in shape in all sections, 88 in W. P. Rocks class. William Russell, judge.

Mr. G. W. Brown, of Camden, Ark., has received from the printers his beautiful new catalogue. This is splendidly illustrated and contains full information regarding the different varieties that he carries, also a complete description of his matings for this season, containing the very cream of his choice prize winners, all line bred and better than ever before, all plainly marked with prices of eggs and stock.

The Chicago Poultry Supply House, 214 South Clark street, Chicago, Ill., have issued their annual catalogue, which contains prices and illustrations for everything for the poultryman. This catalogue is sent for the asking. Write for it today and mention AMERICAN POULTRY JOURNAL.

C. S. Byers, Hazelrigg, Ind., won at Fanciers' Association of Indiana, Indianapolis, Ind., February, 1906, as follows: First pen S. C. White Orpingtons, first pen S. C. Barred Orpingtons, first pen S. C. Buff Orpingtons. Also silver cup for best display of Orpingtons. S. B. Lane, judge.

WM. COOK & SONS

Box 13, Scotch Plains, N. J.

Originators of all the Orpington Fowls

It is a well known fact that our farm contains the largest and finest collection of Orpingtons in the world; all ten varieties; and that to purchase the best in stock or eggs you must send to the Originators, who naturally have the best, as proved by our many unbeaten records. In three showings at Madison Square we have won 48 first and 36 second prizes.

EGGS from our winners, which are the finest Orpingtons in existence, \$10 per setting from exceptionally fine stock, \$5 per setting, all eggs guaranteed.

For stock write requirements. Send for the **Orpington Poultry Journal**, 5 cents per copy; yearly, 60 cents; mating list free.

Inspection of farms cordially invited. Trains met. Advice free. Do not forget to send to headquarters if you want the best.

Parks' Bred-to-Lay Barred Rocks

Are the oldest strain of bred-to-lay Plymouth Rocks in America. Selected and bred for their superior egg records since 1889, until I now have a strain that does not contain an occasional 200-egg hen, but many of them. My whole flock of 135 choice breeding fowls averaged 198 eggs each in one year. The individual records of my breeding fowls for 1905 ranged from 170 to 243 eggs per hen. This record has never yet been equaled by any other breeder of Barred Rocks. I breed for quality, eliminating all fowls that do not come close to perfection in standard points, as well as carefully culling out all poor layers by means of the trap nest.

EGGS FOR HATCHING from selected breeding pens, \$2.50 per 15, \$6 per 40, \$12 per 100. Incubator eggs \$3 per 40, \$6 per 100, \$55 per 1,000. Send in your order for eggs now. Catalogue free.

ORPINGTONS.

"The Fashionable and Utility Breed."

Perhaps it is only my love for the breed, but as soon as I enter a show-room the first thing I want to look at is the Orpington exhibit, whether I have any birds at the show or not. I am especially fond of buff color and, to my mind, there is nothing more beautiful than a pen of Buff Orpingtons, with their clean, white legs, bright red combs, ear-lobes and wattles, bay eyes and deep-breasted bodies. The true

1st. Prize CKrl. at

Scotch Plains N.J.

S. C. WHITE ORPINGTON.
Bred and Owned by Wm. Cook & Sons, Scotch Plains, N. J.

color should be a soft buff, or about half-way between a lemon or orange color.

The Orpington makes an ideal fowl for the farmer, as it lays large, brown-shelled eggs and lots of them, and when you kill a bird you have "got something." They make good setters (not the "persistently broody" kind) and excellent mothers. When dressed for the table they present a beautiful appearance, and on account of their firm, white flesh are beginning to be more sought after than yellow-skinned birds.

While the White and Black Orpingtons are very popular, the Buffs are my first and last choice every time.

For size, for business, for eggs and for looks get Orpingtons—they will take the debits off your books.

EARL M. PETTENGILL.
Amsterdam, N. Y.

The Ames Plow Company, of Boston and New York, have just issued a 32-page catalogue illustrating their hand seed drills and other garden implements. The poultryman will find many useful garden tools in this catalogue and should secure a copy at once. Write them and mention AMERICAN POULTRY JOURNAL.

M. M. Smith, Farmersville, Ill., informs us that he will dispose of all his Buff Rocks and breed nothing else but the Barred Rocks. His winnings at the Illinois State Fair are too well known to need mention. He also raises seed corn. Mr. Smith has a 200-acre farm and is well equipped to fill all orders.

B. L. Hume, R. R. 3, French Village, Ill., manager Glen Echo Poultry Farm, made the best winnings on White Wyandottes at the St. Louis show, Jan. 8-13, 1906. In a

Chas. McClave, New London, Ohio, won the following at the Cleveland, Ohio, show, 1906, on his different varieties of poultry and waterfowls: 53 firsts, 3 seconds, 2 fourths, 1 fifth. Mr. McClave has always won his share at the big shows. Send for his large illustrated catalogue and mention AMERICAN POULTRY JOURNAL.

I. N. Barker & Sons, Box A, Thornton, Ind., breeders of Light Brahmas, have a few breeders for sale. Their 1906 catalogue is now ready. Every lover of this popular breed should send for one.

J. A. Bickerdike, the "Trap Nest Man," Box A, Millersville, Ill., has sold to U. R. Fishel a number of trap nests which give entire satisfaction.

Mrs. W. S. Robinson, R. 3, Box 1, Fayette, Mo., breeder of pure "Nugget" strain Buff Rocks, made a clean sweep at the late Missouri state show. Mrs. Robinson issues a neat mating circular, which should be in the hands of every breeder of Buff Rocks.

T. E. Applegate, Box A, Spickard, Mo., has several fine breeders in Rose and Single Comb Brown Leghorns. He informs us that he can ship eggs in any quantity at reasonable prices.

J. L. Jefferson, Box A, Des Plaines, Ill., breeder of White Wyandottes and White Plymouth Rocks, has all his pens mated up for the egg season.

The Hinsdale Poultry Farm, W. E. Cook, manager, make a business of newly hatched chicks. Any one who has not the facilities for hatching his own chicks should send for their large circular.

W. A. Porter, R. R. 5, Streator, Ill., has all his pens mated up for the egg season. Send for his circular.

=====

A NEW POULTRY BOOK.

Especially Written and Designed for the
Beginners—Sent on Approval.

The book treats at length on the great profits in poultry culture, citing many cases where splendid incomes have been made from this fascinating business. It is a well established fact that there is big money in poultry culture. There are thousands of men and women who are earning princely incomes from it, while there are many more thousands who are making a snug little income every year conducting it as a side issue. To make from \$100 to \$1,000 clear profit every year, just in the spare moments, is no small matter with most people. And yet there are thousands who are doing this very thing raising poultry, and this same thing can easily be accomplished by anybody who will conduct it in an intelligent manner. It is just for this latter class that this book has been designed and by following its simple instructions success will be sure and the profits large.

SENT ON APPROVAL.

We want every beginner to read his book and we are willing to send it free on ten days' approval to every man, woman or boy interested who will take the trouble to write to us for it. In order to assist our readers to get this book on approval we print the following coupon, and advise our novice friends to fill it out, cut off, and send it today: Congress Park Poultry Yards, Congress Park, Ill.

Enclosed find 4c in stamps for which please send me on approval, your new book, "Successful Poultry Culture for Pleasure and Profit." If I want the book I agree to send you 50c for it. If I don't want it, I agree to return it to you within 10 days.

competition of 125 birds he won the following: 1st and 2d cock, 1st and 2d cock-erel, 1st and 2d pen. Sharpe Butterfield, judge. His price for eggs is very reasonable, quality considered, namely, \$2 per 15 or \$7 per 100. Mr. Hume is an old-time breeder and breeds from 500 birds.

In our February issue we made an error in the advertisement of R. A. Bloomfield, Mt. Sterling, Ill. We made his ad read R. C. Rhode Island Reds where it should have read S. C. Rhode Island Reds. Our readers will please take notice of this and write Mr. Bloomfield if they are in need of anything in his variety. Mention AMERICAN POULTRY JOURNAL.

G. M. Dewey, Box 200, Keytesville, Mo., informed us that he has 75 fine, vigorous White Wyandottes for sale. His birds are a grand lot, fine shape, and pure white. He is now ready for the egg season.

A. W. Davis, Big Rock, Ill., breeder of White and Golden Wyandottes, has some fine breeders for sale. His late winnings at the Chicago show are too well known to need mention.

FERTILITY OF EGGS.

The Close Relationship of Breeding Stock to the Fertility of Eggs, Under Conditions Normal and Abnormal.

By Rev. C. E. Petersen.

March is the great month in the year for hatching operations, both under natural and artificial conditions, and as a great deal depends on success in this direction it may not be too late to make a few remarks on a very important subject to every breeder of fancy poultry.

The winter has been one of the mildest experienced for many years, and reports come in from everywhere that there never in the memory of man has been a better winter season for the production of strongly fertile, hatchable eggs.

Here in Maine, up to the present date, we have had no snow, nor a temperature that has gone below zero but once or twice, and in our case the breeding stock has been in the open every day, and the detriment of close housing, which is one of the evils of the winter season, and so productive of infertility, has in our part of the state been done away with entirely for this winter, anyhow, and nothing but the very best consequences can result from it to the general robust health of the stock birds, which in turn means strong fertility.

We have never been an advocate of close housing in even the coldest of winters, and we have preferred to keep, as it were, "open house" all the year

round; and yet out of a necessity the time would be limited to the hours of the day when the sun was shining and giving the birds a chance to warm up by basking in it on the southern ex-

chance to get into the open and enjoy it, even when the temperature was very low.

But on very cold, bleak winter days, when the sun was out of sight, and perhaps a strong wind blowing, future success demanded that the birds should be kept in, and on such days, as far as possible, be made comfortable by means not used on other and brighter days.

Some of the means we have used are in the way of feeding material which the fowls are particularly fond of. We never fed it on other days, and given in small quantities during the day; the birds would amuse themselves by scratching for those little tidbits, and keep themselves in good trim at the same time.

The average fancier must have small breeding pens, and a few fowls cannot generate heat enough from their own bodies to make any appreciable difference in the surrounding atmosphere, and except the birds are kept busy scratching for their living, and hungry enough to have a real desire to scratch for it, they will stand around, cold and uncomfortable, and a day or more of that kind of treatment will not put many eggs in the basket, nor will those eggs astonish you for their hatching qualities.

It is almost a truism to say that in every instance of infertility of eggs it can be traced to abnormal prevailing conditions in the females of your flock.

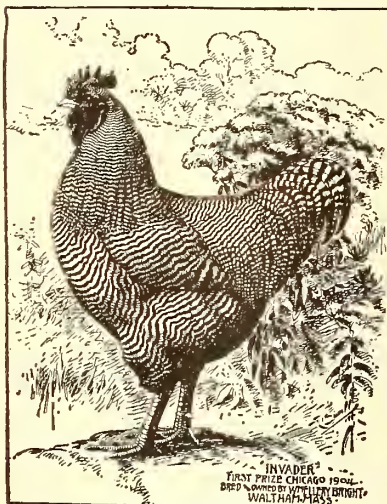

Fancy stock, for which high prices have been paid, and from which eggs are wanted for hatching purposes, are cuddled and pampered into an abnor-

F. W. CORY,
Manager Rock Hill Poultry Farm, Ossining,
N. Y.

posure of the house, where we would scatter forkfuls of straw. We never received but good from this treatment, and never knew the birds refusing the

TEN STRAIGHT FIRSTS ON Barred Ply. Rock

FIRST COCKEREL Chicago, 1904
Bred by Wm. Ellery Bright

cockerels is a record never equaled at such shows as Madison Square Garden, New York, Boston, Philadelphia, Chicago, St. Louis and Pan-American Expositions.

14 out of 18 firsts during the past ten years on cockerels alone.

3 out of 5 firsts at Chicago, 1904, in the strongest classes ever seen at Chicago. Three out of five firsts at St. Louis. Both firsts on males at both St. Louis and Pan-American Expositions.

That the Grove Hill females are strong is shown by the fact that they have won first exhibition yards at St. Louis Exposition, 1904; Chicago, 1904, and New York, 1905. It takes four crackerjack females to win in a yard; one crackerjack can win the open class. Four well matched females means good breeding, for they must show the same type and color to make a winning pen.

100 selected cockerels for exhibition male breeding, and 100 choice cockerels for exhibition female breeding at **reasonable prices.**

Trios and pens specially mated to suit the purchaser, on the same plan as we mate the pens that produce the winners.

Special for best male color at New York, Boston and Chicago went to the Grove Hill Strain.
EGGS From the pens that produce the winners
\$5.00 per thirteen, \$15.00 per fifty,
\$25.00 per hundred.

Special selections made to suit the needs of the purchaser at special prices. Send for list of matings. See Leghorn ad on opposite page.

GROVE HILL POULTRY YARDS
WILLIAM ELLERY BRIGHT, Prop. - A. C. SMITH, Supt.
P. O. Box 410 - WALTHAM, MASS.

mal existence by their over-fond owners till the very purpose for which they were gotten is frustrated, and we hear the same old story of "delicate, inactive birds," and why on earth anything should see the necessity of being active, with all they can eat right before them, and with an enlarged liver, produced by these same conditions, is more than I can see; and yet these same birds, when given a chance in the early spring to change their enforced conditions, will gladly leave them and the food provided in such abundance till their whole system loathes it, and go hunting for their living, but happy and singing, in the pursuit of it, and then, left to themselves, eggs begin to come, and eggs then are fertile and hatchable.

Careful and attentive consideration to the inmates of the breeding yard, regarding their value as breeders, is of no little consequence at this time, as, if let go too long, it may be a case of "too late to mend."

Sometimes a male bird is notional, and his fancies and predilection for one or two of the females in the pen works ill to the fertility of the balance of the egg yield from this particular pen, and this is undoubtedly the reason why sometimes eggs run poor in fertility from some pens, fed and cared for exactly in the same manner as other pens, from which eggs show a high percentage of fertility.

And some males have a good memory, whatever may be said to the contrary. Here is an instance:

One of our very best breeding females two years ago was mated to a cockerel which was a very fine bird, and almost immediately he took a dislike to her, even to persecution, and we had to take her out of the pen.

This year we tried again, but with the same results. He refused to have anything to do with her. The prejudice, or hatred, for sometimes it looked that

way, precludes any idea of hatchable eggs from this mating.

Again, a male may look right, and act right, and yet be sterile. This does not happen very often, but it does happen every now and again, and when the first trial of fertility takes place, and all eggs are found to be barren, it is well to consider this possibility.

We have also found by repeated experiments that some males will prove sterile with some females and perfectly potent with others, and the same holds true with the females; then, when this

E. K. ARFORD,
Of the firm of Smith & Arford, Marshall, Ill.

is the case, the remedy is simple, for all that is necessary is to make a change of partnership.

Much has been written about "how many females to a male," but I am absolutely convinced that the writers erred in the wrong direction, when advising too few females to the pen, on the presumption that the fewer the females the stronger the fertility of the eggs. There is of course a limit, but too few females in a pen works more

disaster to the fertility of the eggs than too many, and we do not hesitate to say that with our modern ways of breeding by pens, in ninety-nine cases out of a hundred, it is too few rather than too many females.

A young, strong, robust male, with liberty to run on a free range, will attend to a large flock, and eggs will hatch well.

In confinement, but with ample yard room, the same male will attend to ten or fifteen females without the slightest difficulty, and eggs will hatch better than if he was mated to two or three.

We do not like to contradict commonly accepted opinions, but opinions are not facts, and all the talk about saving the male's strength, so as to lengthen out his usefulness, may be all right as an opinion, but it is not well substantiated as a matter of fact, as every experienced breeder of poultry will attest to.

There is a time in the male's life when he pines for female companionship, and to keep him away from it does not help future usefulness as a breeder, but hinders it, and if it was not for the sake of the females that are to be used and sold for exhibition, and whose plumage must be kept in order, I am confident that no damage could be done by leaving the male with the females all the year round, but positive good would be the consequence as far as productiveness is concerned. Nature will take care of itself in that direction.

Another abnormal condition may be dwelt upon for a few moments, and so-called "fitting" for exhibition is responsible for it.

A male bird must weigh a certain number of pounds, so not to be cut by the judge, and to attain the necessary amount of pounds or more, a regular fattening process is gone through, confined in a small coop, the process goes on to completion, I should have said ruination, and at the date of the show

WILLIAM ELLERY BRIGHT, Prop.
A. C. SMITH, Supt.

Grove Hill Poultry Yards,

Box 410 A,
WALTHAM, MASS.

the bird is "fitted" for exhibition, but unfitted for the breeding pen, fat, loggy, inactive, and it will take a number of weeks before he will reduce himself in fat and flesh so as to be fit to breed from.

Did it ever occur to you that the seeming unselfishness and gallantry of the male bird to his consorts is simply nature's way in keeping the male in a suitable breeding condition? Nature's ways are well planned, and a reason for all things that she does.

Another evil fruitful of non-fertility is forcing for eggs. Every means is resorted to so as to have early layers, much concentrated stuff is fed so as to secure this result, and though the eggs from such stock may test out all right, only a small proportion of them will hatch, and such eggs are almost impossible to bring to a successful exclusion in the incubator.

Breeding stock should never be forced for egg production and any breeder who resorts to such means does it out of ignorance, or what is worse, mercenary motives, when eggs are in demand and bring high prices for hatching purposes, or "brooding" purposes would perhaps be a better definition, as few of them will hatch.

Where interbreeding has been practiced for a good many years with only

one object in view—to produce exhibition birds—where breeding to feather was the paramount issue, and where as a consequence one egg from a well-marked

in this respect, has in the case of a number of our well-known breeds made them unproductive, and in the end defeated even the object in view.

It is not impossible to breed for both feather and eggs, and besides this, a strong, robust constitution; but the temptation to leave the best judgment behind in selecting the breeding pen is very strong, particularly when the bird is such an excellent specimen other ways, but don't run the risk of future extinction by such a choice; anyway keep her separate, so you know what you are doing, but it is better not to use her at all; so don't.

Remember this, that strong, robust, healthy, active stock is necessary to fertility, and that fertility is necessary to production, but without proper care and selection that which is produced will degenerate and ultimately perish.

D. C. Raymond, Box 500, South Framingham, Mass., breeder of Barred Plymouth Rocks, Rose and Single Comb R. I. Reds, is offering eggs from special matings at reasonable prices when quality is considered. Send for his new mating list and mention American Poultry Journal.

The Livingston Seed Company's Seed Annual for 1906 has been received. This is gotten up in the usual artistic manner and our readers should procure a copy, which will be sent if you address the Livingston Seed Company, Columbus, Ohio.

Vineyard Haven, Mass., March 1, 1906.

To our friends the Public:—

The proprietor of the Owen Farms started his poultry breeding purely as a diversion, and because of his love for "Pure Blooded Blue Ribbon Poultry." He gathered a wonderful flock of breeding and show birds, and has succeeded in winning all along the line.

During the past year hundreds have written us asking if we would sell stock, or eggs for hatching. We have hitherto answered in the negative. We now take pleasure in announcing that we will be pleased to sell either eggs for hatching, or stock.

We have a catalogue and mating list, pricing both stock and eggs, which we will be glad to send you. "\$10,000 Value in 30 Fowls" is a list of birds and pictures that will interest you.

We remain,

Very truly yours,

OWEN FARMS.

WOMAN'S HOME DEPARTMENT.

Mabel Bates, Editor.

With the first issue of the new year, the American Poultry Journal starts this new department for women. This department will not be confined to poultry items entirely, but to all matters pertaining to household economics. We want every woman who reads American Poultry Journal to consider herself a member of this department. If you have a bit of practical knowledge in household matters, an item of experience in raising poultry that will be helpful to others; a favorite recipe, etc., send it along. This is your department, just as far as you are willing to make it.

All communications should be addressed to the Home Department of American Poultry Journal Publishing Company, 325 Dearborn Street, Chicago, Ill.

BEAUTY AND UTILITY.

The photograph which is given in our department this month is sent by Mrs. Cora June Sheppard, of Shiloh, N. J., and shows that a poultry yard needs not be bare and unattractive, but may instead be made one of the prettiest spots

chicken yard is back of the vine-covered fence."

The photo shows how beauty and utility may be combined with the smallest expenditure of time and money. Not only is the unsightly fence covered, but the desired shade is secured for the chickens during the mid-day heat, and

hot summer days, but the chickens thrive upon the insect pests which would injure the tree, and the fruit itself is larger and better on account of the fertilization the soil receives.

If in addition a trellis made either of woven-wire fencing or some simple home-made wooden framework is placed a few inches outside the chicken yard fence, grapes or some quick-growing vine may be trained against it, and this part of the premises will soon become one of the most attractive corners of the yard. While doing this do not forget that a few 5-cent packages of seeds of the good old-fashioned flowers will bring wonderful results with but little work. For the vine, if grapes are not desired, try wild cucumber, or wild clematis from the woods, with its feathery white flowers, or a gorgeous screen may be made of the common climbing nasturtiums, and the housewife can utilize the pods in her pickling.

If one is so fortunate as to live in a place where they can get water connections, it is very easy to follow out the plan evolved by a chicken fancier who lives in a small northern city. He divided his chicken yard into two small com-

MRS. SHEPPARD'S IDEAL POULTRY YARD.

in the yard. Mrs. Sheppard writes an interesting letter, in which she says:

"Last evening my husband brought home the February number of the AMERICAN POULTRY JOURNAL and I was pleased to find a woman's department. We started with six pullets the year we were married and had very pleasing results. Last fall we kept six more. I can hardly understand how any family can get along without chickens. I send photo showing one of the first hens. The

we venture to say that Mrs. Sheppard's shelves show a tempting array of canned and spiced grapes every winter as well.

This brings us to the fact that nine-tenths of the poultry yards in both city and country are anything but things of beauty and joys forever. Those who have made a study of poultry raising claim that a double benefit is secured if plum, peach and other fruit trees are planted in the chicken run. Not only do the trees afford shade during the

partments and one large one by means of 6-foot wire netting. Over the two smaller compartments he trained a grape vine, arching it above them until they looked like bowers of green. From lime and cement he constructed two shallow basins, one in each compartment, with a slight fall between them, and a pipe was laid to the first one, which allowed the flow of a small amount of water, so that the two ponds kept the chickens constantly supplied with fresh water.

The overflow ran into a tiny basin of cement in the larger yard and was finally absorbed by the porous soil, which did not leave a trace of a puddle.

In these days of civic improvement it is safe to predict that the poultry raisers, who are among the most progressive people of the country, will be well in the van. Space does not permit the thousand and one things which might be said in this connection, but the subject will be further touched upon in this department during the coming months. If you have been successful in turning an ugly corner into a beauty spot, or if you have met with special success in transforming a bare yard into a restful bit of greenery, write to the Woman's Home Department and tell how it was done. Suggestions along this line will be gladly received. Also send photographs.

SOME GOOD EGG RECIPES.

At this time of the year eggs seem especially appetizing. Few people, how-

French Omelet.—Many people think an omelet is so difficult to make that they never attempt it, while in reality there is no egg dish more easily prepared. Beat the whites and yolks separately, adding to the yolks salt to taste and a dash of pepper. Put in a tablespoonful of water to each egg. Last add the stiffly beaten whites, cutting them into the yolks carefully, so as to keep all the air bubbles in. Have ready a hot spider in which has been melted a generous piece of butter, which should be smoking hot. Pour the omelet in, let it brown on the bottom, and then set it for a moment in the oven to dry the top. Some people prefer placing it in the oven without first browning it on top of the stove. The secret of a good omelet is to cook it slowly, as cooking it quickly makes it tough. With a pancake turner roll half of the omelet over on the other half and serve immediately on a hot platter. The secret of success lies in having a frying pan which sets perfectly flat on the stove and has not been warped. If this is not the case, the

MRS. O. H. BURBRIDGE, LOS ANGELES, CAL., AND A PEN OF HER BLACK ORPINGTONS.

ever, cook them in any except the old established ways. The following recipes offer a variety of new and novel methods to suit all tastes:

Egg Timbales.—Break open four eggs in a bowl, add half a teaspoonful of salt, a saltspoonful of pepper, and, if liked, a few drops of onion juice. Beat only until thoroughly blended, then add gradually a cup of rich milk. Divide equally among six well-buttered cups or little earthen baking dishes, stand them in a pan half filled with hot water and bake in a moderate oven about twenty minutes, or until firm to the touch. Turn out onto a warm platter and pour over them a bread sauce.

Bread Sauce.—Pour one and a half cups of hot milk over half a cup of fresh bread crumbs. Cook in a double boiler for twenty minutes, add a tablespoonful of butter, and season highly with salt and pepper. Brown half a cup of bread crumbs in a tablespoonful of butter and sprinkle over both the timbales and the sauce after it is on the platter. This dish will take the place of a meat dish during Lent.

omelet will burn in some spots before others have become browned. This recipe is the foundation for a large variety of omelets which may be made by adding a sprinkle of ham, chopped parsley, grated cheese, chopped celery, etc. If a sweet omelet is liked, spread jelly over it before folding it.

Daisy Milk Toast.—Make a milk toast with a slightly thickened gravy and arrange it on a hot platter. Have ready hard boiled eggs, the white cut in flower-shaped petals, and the yolks put through a grater. Arrange the whites in the form of daisies on the slices of toast, with a center of the grated yolks. This is an especially pretty Easter dish and the children will be sure to like it.

Shirred Eggs.—This is a quickly prepared breakfast dish. Butter gem pans, drop an egg in each, put dots of butter over them and sprinkle with pepper and salt. Put into the oven until the eggs are set, which will be in from five to ten minutes. The eggs may be lifted out with a spoon and dropped on slices of dipped toast. If served with ham or bacon the pans may be greased with the

meat fat, using a liberal quantity in each pan.

Egg Meringue.—Allow one egg for each person to be served. Stand cups in a pan of hot water. Then separate the yolks and whites, putting the yolks carefully into separate saucers, so as not to break them. Beat the whites to a stiff froth and pour in the cups. Sprinkle a little salt on each yolk and slip it into the middle of the white froth in each cup. Bake in a moderately hot oven five minutes. The yolk will settle down into the white, which should be slightly browned over it. Serve in the cups in which they are cooked.

SOAP THAT WILL FLOAT.

The old-fashioned soft soap, the making of which in a big kettle out in the yard was one of the first duties of early summer, has been superseded in these modern days by soap that is equally good and at the same time not so hard on the hands, in either the making or the using. For this take one can of patent lye to two tomato cans of grease. Dissolve the lye in cold water. Heat the grease, and when both are lukewarm pour the lye into the grease, stirring all the time. Add immediately one cup of ammonia and two table-spoonfuls of borax which has been dissolved in one-half teacup of water. Stir until as thick as honey. Pour into a baking tin the bottom of which has been covered with paper. Crease in squares in a few hours and in a couple of days break apart and put in a warm place to dry. It will be ready for use in a week, but is better if kept a month.

DICED TURNIPS.

If you have never tried diced turnips you have missed one of the most delicious of all the winter dishes. Pare them, slice and cut into dice an inch square and cook in salted water until nearly done. To one quart of turnips add a tablespoonful of butter, salt and pepper to taste, and half a cup of rich "top of the milk," in which one well-beaten egg has been stirred. Let it just come to the boiling point and serve at once. For a dainty company dish prepare turnips in this way and serve them in little boxes made by cutting slices of stale bread an inch and a half or two inches thick. Shape them square and scoop out the center, leaving a wall a quarter of an inch thick. Brush them inside and out with plenty of melted butter and brown them in a hot oven.

Another unusual turnip dish is a turnip pudding. For this take one pint of mashed turnips, one quart of rich milk, half a teaspoonful of salt, two teaspoonfuls of ginger, one teaspoonful of cinnamon, three well-beaten eggs and one cupful of sugar. Beat thoroughly together and bake in a rich crust.

HOUSEHOLD HINTS.

Use the wire egg beater instead of a spoon for beating pancakes, pop-overs, fritters, or any batter thin enough to permit its use. If a custard or cream sauce is lumpy it may be made as smooth as velvet by the use of the egg beater, even after the custard has become cold.

Before boiling milk, rub a little butter over the pan. This will prevent the milk from scorching on.

Home of the "Greatest Strain on Earth."

A Visit to the Poultry Farm of Clement & Fike, Libertyville, Ill.—One of the Largest Exclusive White Wyandotte Plants in the West.

After many repeated invitations we at last were enabled early last fall to spend a day on the poultry farm of Clement & Fike at Libertyville, Ill., and enjoyed eating some of the "Greatest Strain on Earth."

This farm is located about three miles from Libertyville, in one of the best farming sections in Illinois, and consists of several hundred acres; but of course only a small portion of this is devoted to poultry. The poultry farm proper is located on the banks of the Des Plaines river and is an ideal place for the rearing of chickens, as the banks of this

more uniform lot of fowls we have never seen.

Mr. Fike, who has entire charge of the business, has devoted years of time and study to perfecting this strain; and bringing the fowls on this farm to their present high standard of perfection. The record in the show room for the past several years of birds from this farm is a very enviable one, and is due entirely to the efforts of Mr. Fike, who is untiring in his efforts to produce the best strain of White Wyandottes in the world.

The business of this firm has been built upon a foundation of square deal-

5th hen; 5th pen. Jubilee Orpingtons: 1st cock; 2nd hen; 1st pullet; 1st cockerel; and 1st pen. White Plymouth Rocks: 1st cock; 4th hen; 1st and 4th pullet; 5th pen. Buff Plymouth Rocks: 1st cock; 5th hen; 4th cockerel. White Wyandottes: 4th cockerel; 1st and 2nd pullet; 4th pen. At the Boston show, which proved to be next to the largest ever held in Boston, and the finest quality show ever cooped in Mechanics' Hall, with ten entries in Orpingtons they won on Buffs: 1st cock; 1st hen; 1st cockerel; 1st pullet. Blacks: 1st cockerel; 1st pullet. Jubilee: 1st cock; 2nd hen; 1st cockerel; 2nd pullet. White Rocks: 1st and 4th cock; 5th hen; 1st and 3rd cockerel; 4th and 6th pullet, with eight entries. Their White Rocks actually won sufficient points to have won the collection special, and other leading specials offered. White Wyandottes: In the finest class of White Wyandottes of the year, 2nd and 6th cock; 2nd and

180-FT. LAYING HOUSE ON THE FARM OF CLEMENT & FIKE, LIBERTYVILLE, ILL.

stream are covered with small trees and wild grape vines, which afford natural shade for the growing stock. On our tour of inspection we first visited the 180 foot laying house, which is illustrated on this page, and from here we traveled from house to house until we had inspected all of the large laying houses. From here our guide, Mr. Fike, led the way to the south end of the farm, where the colony houses are located. These colony houses are large and roomy and in these the chicks are placed as soon as the weather will permit in the spring and are kept there until cold weather comes on in the fall. In the arrangement of these colony house we discovered the secret whereby Mr. Fike is enabled to grow and develop such grand specimens of White Wyandottes. At the rear of each house is planted a large patch of sunflowers and at the side a large patch of rape. The sunflowers provide shade and the rape an abundance of green food, and while the chicks have unlimited range they do not go very far from this ideal foraging ground.

From the colony houses we went to the brooder house, which is a large building located near the residence; but as it was long past the brooding season this house was not in use; but had been thoroughly cleaned and whitewashed and a new sand floor put in.

At the time of our visit there was something over one thousand head of White Wyandottes on the place, and a

ing and giving every customer just what their order called for.

This farm is easily reached from Chicago and visitors are assured of a hearty welcome from Mr. Fike, who advocates White Wyandottes first, last and all the time.

OWEN FARMS.

The Owen Farms, Vineyard Haven, Mass., have created somewhat of a furor in the poultry world during the past few years. Mr. Barry Owen, the proprietor, is so constituted that he is satisfied with nothing but the best, and with the determination of having only the best he has expended large sums of money in bringing the birds on this farm up to their present high standard of perfection, and as an evidence of how well he has succeeded we give the following list of winnings:

At the great Madison Square Garden Show, New York City, Jan. 2-6, 1906, which was the largest and best show ever held at this place, they won: Buff Orpingtons: 1st and 3rd cock; 1st and 4th hen; 1st and 2d cockerel; 1st pullet; silver cup for champion male, and silver cup for champion female. Black Orpingtons: 5th cock, 4th hen; 1st, 2nd and 4th cockerel; 1st and 4th pullet; 2nd pen; silver cup for champion male. White Orpingtons: 4th and

6th hen; 1st and 4th cockerel; 1st, 3rd and 6th pullet; 2nd pen; 3 firsts for best collection, and 9 other specials, making the finest record ever won on this variety at Boston. Their 4th cockerel and 1st pullet at New York were not shown in their Boston string.

This wonderful record gained at America's two leading shows will show you the quality of the birds they have in their 1906 matings.

Their spring announcement and mating list, which is mailed free, is well worth sending for, and will interest any poultry breeder in America, carefully describing as it does their farm and plans, in addition to the description of their matings.

Mr. M. F. Delano, who is manager of these farms, is well known to most of our readers; but to those who are not acquainted with him we will say that there is probably no other man in the business who is better qualified for the position and who knows more about the breeding and mating of thoroughbred fowls than he does, and our readers need not hesitate to intrust their orders to his care.

Simon Beuth, German Valley, Ill., the Buff Wyandotte specialist, is making a special sale of Lens, pullets and cockerels this month, and is offering bargain prices. This is not a sale of cheap quality stuff, but a sale of high quality birds at a low price. See his ad on back cover page for prices. Send him your order; he will treat you right. Mention AMERICAN POULTRY JOURNAL.

ANATOMY OF THE FOWL.

How We Open a Fowl—Some of the Things We See.
Popular Mistakes Corrected.

Written by Dr. S. A. McWilliams.

(Copyright, 1904, by Geo. G. Bates.)

(Reprinted by request of a number of our subscribers.)

To recognize diseased structure we must be familiar with healthy structure. This can easily be done by often examining fowl killed for the table.

If the cause of death is within the fowl it is necessary to open it to see it. If we have no conveniences for the work, it is rarely done, and, if done, the results are unsatisfactory. We enjoy the work if we have a suitable table upon which to lay the fowl and suitable tools to operate with. For pleasure, convenience and utility, the table should not be less than three feet long, two feet wide and thirty inches high. With a chair, and our legs under the table, before a good light, we can make

fence. By this arrangement we need no legs at the back of the table. We place two legs in front, thus. We take two strips of boards, two or three inches wide, and of the proper height (30 inches, more or less). Close to one end of each leg or board, to its side, we screw a two-inch wrought iron butt or a strap hinge. The other half of the hinge we attach to the underside of our table, near the front and end, and so attached that this leg will fold under the table. The other leg it attached in the same manner to the other end of the table, only two or three inches further back from the front, so that the legs, when folded under, will lie side by side. We paint the table and when folded up it occupies but little space anywhere and is always ready. We set the table a little higher in front, so that fluids may run backwards instead of forwards on our lap.

OUR METHODS AND TOOLS.

To avoid the necessity of an assistant to steady the fowl upon the table, we fasten one end of a fine string to each foot of the fowl and to the other end of the string we fasten a half-pound weight of wood, stone, brick or lead. The strings are made long enough so as to allow the weight to hang over

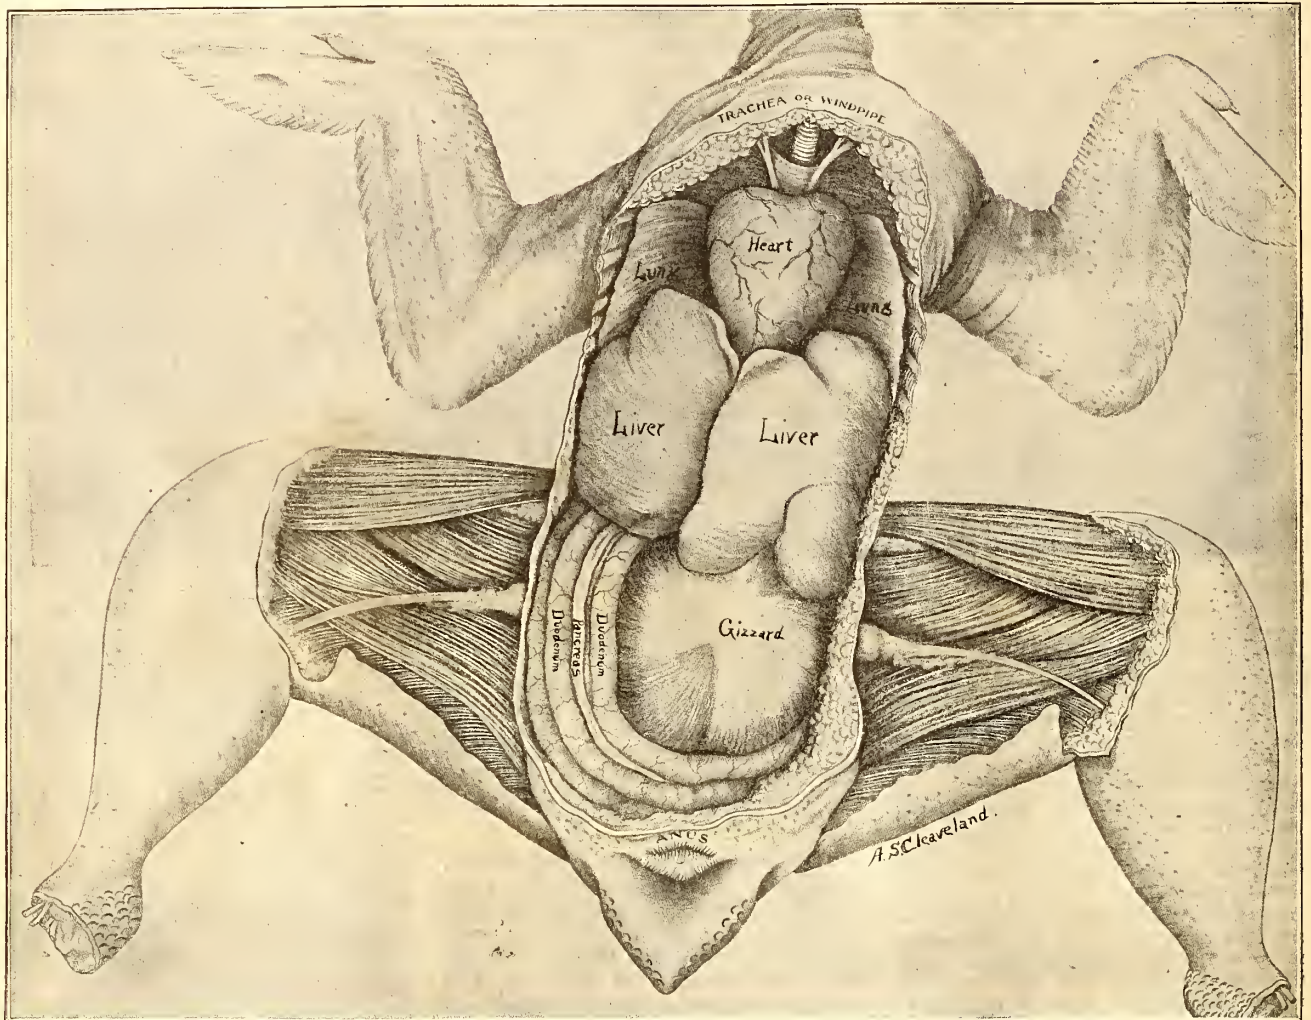

PLATE 1.—ORGANS OF A FOWL.

a post-mortem with ease, comfort and profit. The fowl is plucked, laid on the table, upon its back, with its head away from us and tail toward us.

Our table is made of smooth boards, tongued and grooved, and held together with strips or cleats screwed along the upper surface of each end. The boards, being tongued and grooved and held together tight by the cleats, do not permit blood or water to run down upon our knees under the table. Any kitchen or folding sewing table would do.

This table must be placed in a good light. In summer we set it outdoors in the shade, near our fowl house. In the back edge of our board table we insert two stout screw eyes having small holes. Two stout screw hooks for these eyes to rest on can be fastened anywhere to the side of the house, the fence, the woodpile or in front of a window, or hooked over the wire

each end of the table, one to our right and the other to our left, as we sit in front. Under the fowl we place a newspaper to protect the table. A pail of water is set upon a box by our side to wash our hands; a towel is spread across our knees to protect our clothes and dry our hands; a sponge is used to wipe up blood or matter; a covered slop pail is set at our left in which to place different refuse, and a small dish, with water, is set on the table to hold any parts of the fowl we wish to examine later. The fowl is placed well to the left side of our table to allow plenty of room on our right for various articles we use. To open the fowl we use a long, narrow bladed, sharp pointed, sharp edged knife, 7½ inches long, and keep a hone handy to sharpen it. A long cut is made through the loose skin, between the legs and body, and the thighs pressed apart, down flat upon the table, dislocating each

hip joint with a snap. The weighted cords hold them in place.

OPERATION.

Just above the vent, or anus, or outer opening of the bowel, with the thumb and forefinger of the left hand, we pick up a vertical portion of the skin; pull it toward us and with the sharp knife make a transverse cut through the skin, and fat, if any, into the abdominal cavity, being careful not to cut the intestines. We continue this incision along each side of the fowl to the ribs. With stout tinner's shears, strong knife, or fine toothed saw, we cut through all the ribs

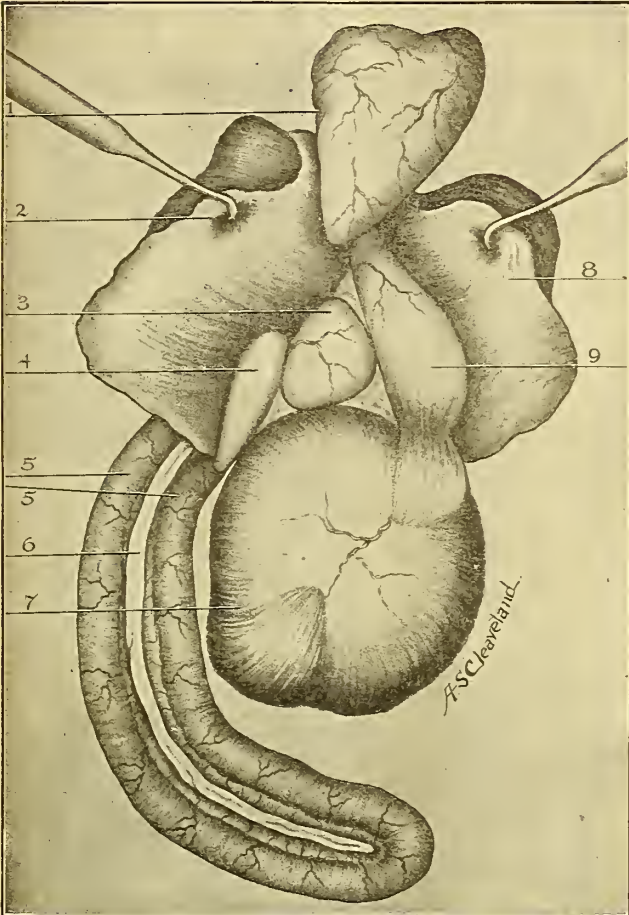

PLATE 2.—LIVER SEPARATED TO SHOW GALL BLADDER, SPLEEN AND STOMACH.
1. Heart. 2. Liver. 3. Spleen. 4. Gall bladder. 5, 5. Duodenum. 6. Pancreas. 7. Gizzard. 8. Liver. 9. Stomach

on each side, as far forward as possible, being careful not to cut too low and injure the red speckled lungs in front. A pair of tinner's shears 2 1/4 inches by 13 inches long suits us best for this purpose in young chickens. In old fowls, where the ribs are hard, strong and bony, a fine saw will answer best.

The chest wall is now gently lifted up and all attached membranes which help to hold the organs in position are carefully cut with the long, sharp-pointed knife, as far up as possible. These being cut away, the chest wall is forcibly lifted up and bent back against the neck by dislocating, breaking or cutting. With pencil and paper we take notes as we go along.

If none of the organs have been cut or disturbed, a beautiful view of the interior of a healthy fowl is now seen. But we must remember that the organs appear here and are described in this article in a reverse position, while the fowl lies upon its back, from what they would be if the fowl lay upon its chest.

(See Plate 1.)

As we opened the abdomen our attention was first attracted to the large, hard, beefy, red and glistening muscular body lying close to the first incision we made. This is the gizzard, in which the food is ground. A double fold or loop of the bowel surrounds the gizzard on its left side and rear. This portion of the bowel is called the duodenum. It starts from the left side of the gizzard at its front and under side, as we now view the fowl on its back, and passes along its left side and back over to its right side for about five inches. It then turns round on itself and forms a loop.

PANCREAS.

The pancreas is a body rarely recognized by poultrymen, and when it is, it is merely considered fat. Yet it is an organ essential to the life of fowl, beast or man. If the fold of duodenum be widely separated the pancreas will be more plainly seen.

All along the five inches of this loop of duodenum between its folds, lies the pancreas, a yellowish, creased, creamy, fatty looking body. It is securely attached, every half inch or so, on both sides, to the whole length of the loop, by means of nerves, blood vessels, lymphatic and pancreatic ducts.

In front of the gizzard will be seen the liver—a very dark, large, reddish brown body. It is seen occupying the whole width of the body, and is divided into two nearly equal parts by a slit or fissure.

HEART AND LUNGS.

In front of the liver will be seen the heart, with the lungs lying at either side of it.

(See Plate 2.)

The liver is easily torn. If the two lobes of the liver are carefully and widely separated, with hooks, and a membrane removed from the bottom of the fissure, there will be seen lying close to the under side of the left half (right half if the chicken was standing up) of the liver, and attached to it, an elongated, dark greenish sack, containing bile, the gall bladder.

SPLEEN.

After removing some more membranes there will be seen to the right of the gall bladder a round, dark, bluish red body, about the size of a small plum, or dark cherry, the spleen.

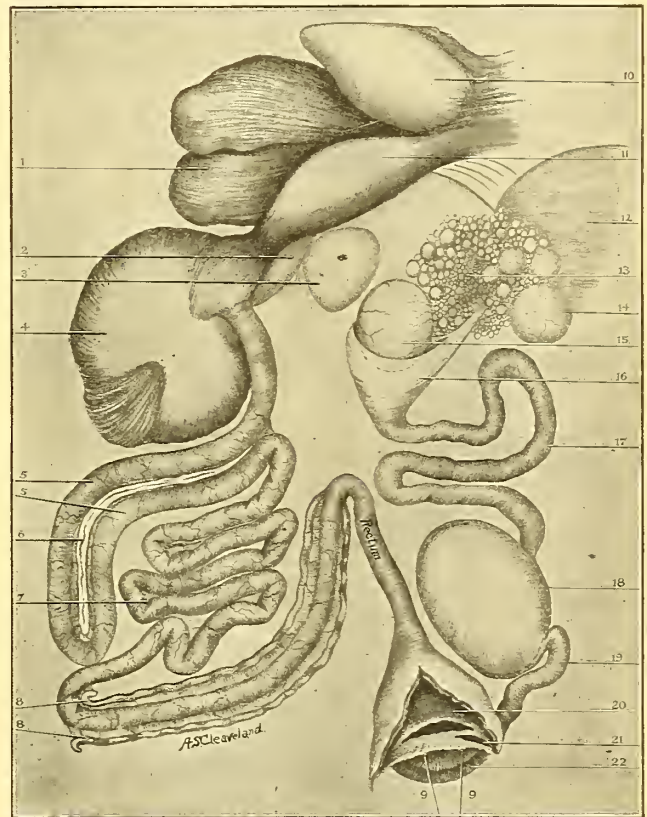

PLATE 3.—ORGANS AND OVARY OF HEN.
1. Liver. 2. Gall Bladder. 3. Spleen. 4. Gizzard. 5, 5. Duodenum. 6. Pancreas. 7. Intestine. 8, 8. Free Extremities of Coeca. 9, 9. Opening of Ureters. 10. Heart. 11. Stomach. 12. Lung. 13. Ovary. 14. Egg. 15. Egg Entering Oviduct. 16. Infundibulum. 17. Oviduct. 18. Egg Passing Through Oviduct. 19. Oviduct. 20. Cloaca. 21. Opening from Oviduct. 22. Margin of Anus.

This organ is of as much importance to the fowl as it is to man or beast. Few poultrymen recognize the organ or its importance.

A recent writer of national reputation, in a prominent poultry journal, described this organ as disc-shaped, or hemispherical. He probably copied his article and never examined the spleen of a fowl.

If he had, he would not have called it disc-shaped, which means, like the shape of the top of a blossomed sunflower, nor hemispherical, which means half a sphere, like a ball cut in

two. The spleen of the fowl is nearly round, being slightly compressed by the organ surrounding it.

PROVENTICULUS.

Again, removing some more membranes, there will be seen to the right of the spleen an elongated spindle-shaped body, called the proventiculus, or glandular stomach. It is a continuation of the oesophagus, which empties into the gizzard at its upper or front end.

Having examined the foregoing organs in their natural position, we next turn them to one side, then to the other, at the same time cutting away any membranes which interfere with this movement. We are specially interested in looking at the underside of the spleen, as it lies between the proventiculus and the gizzard, when we turn the organs over to our left, as seen in plate 3.

(See Plate 3.)

Plate 3 shows us the organs of a healthy laying hen killed for the artist's picture. The intestines and other organs are turned to the left, exposing the ovary on the right, full of eggs in all stages of growth, from the pin-head to the fully matured egg, ready to drop into the open extremity of the

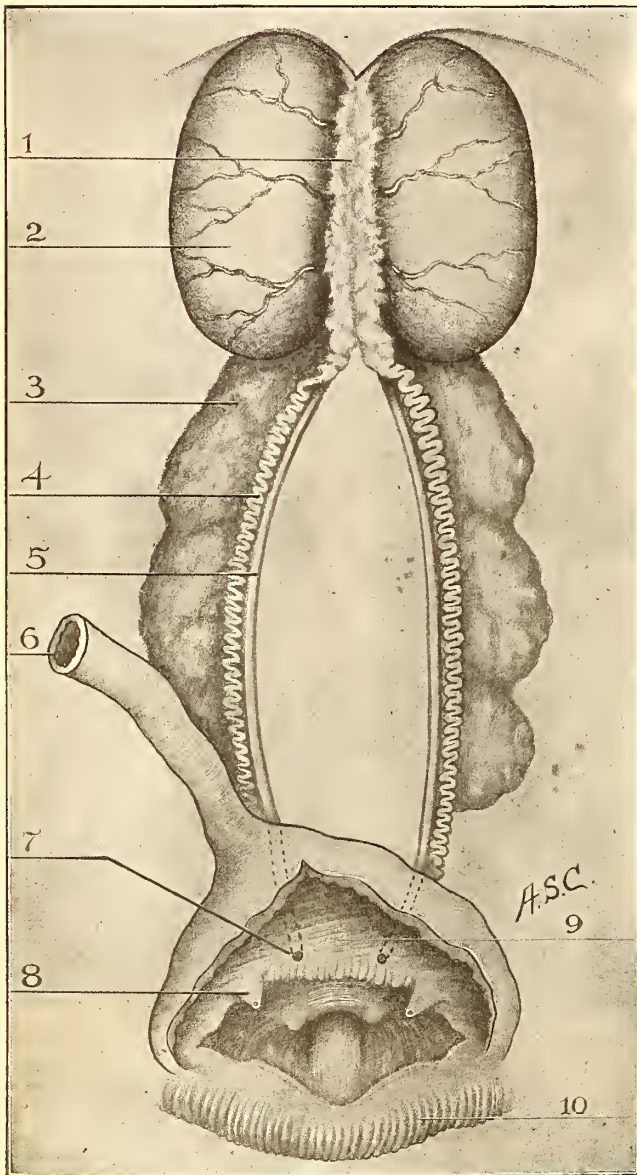

PLATE 4.—ORGANS OF THE MALE BIRD.

- 1. Epididymis. 2. Testicle. 3. Kidney. 4. Vas Deferens. 5. Ureter. 6. Rectum. 7. Opening of Ureter. 8. Opening of Vas Deferens. 9. Cloaca. 10. Verge of Anus.

oviduct. While further on in the oviduct is seen the egg with its shell ready to make its exit. The appendices, or coeca, is a most beautiful picture, as they arise from and lie alongside the intestine.

We next turn our attention to the intestines. We examine them externally for disease, and internally for worms. It is rare that we find a fowl purchased from the market, for

table use, to be free from worms. The small, tiny, little pin worms is the most common; the long, round worm next, and the tape worm occasionally.

For opening the intestinal canal, we use small scissors, about five inches in length; sharp, narrow, about 7-16-inch wide at the center screw; blunt-pointed, each blade not over 1/8-inch

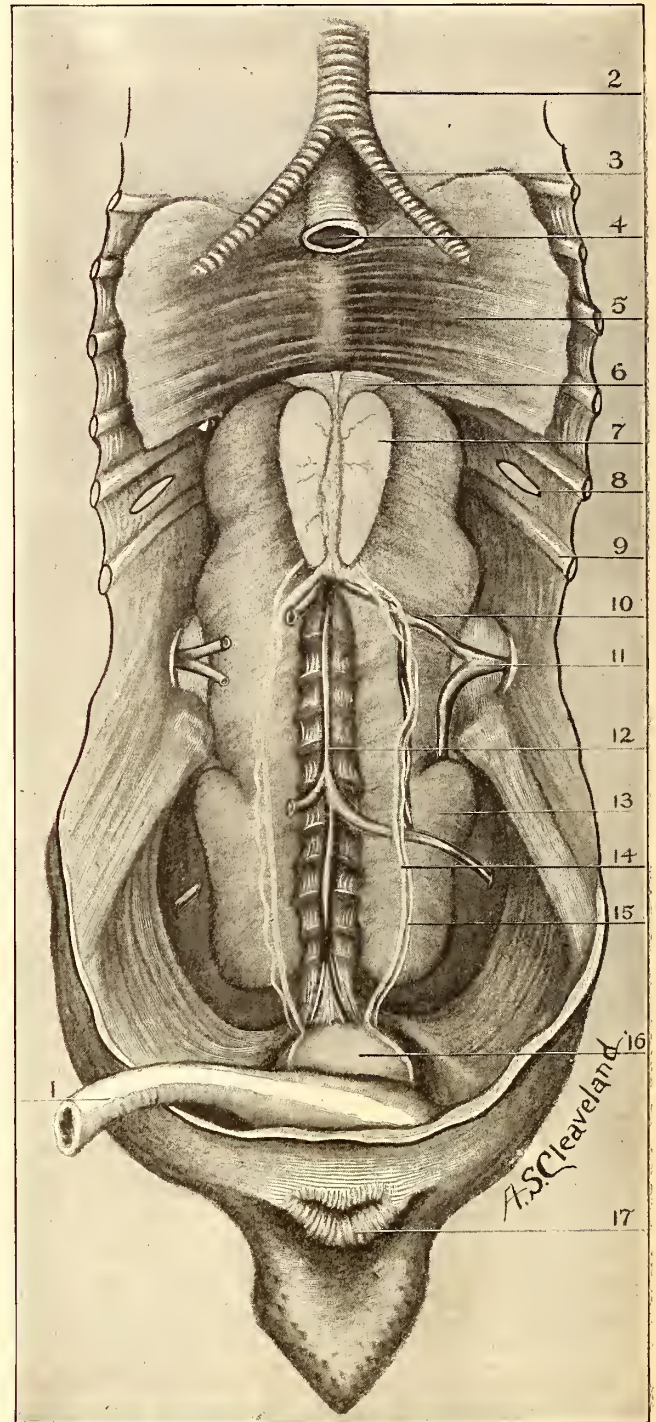

PLATE 5.—VIEW OF ORGANS LYING ALONG THE BACK.

- 1. Rectum. 2. Trachea. 3. Bronchus. 4. Oesophagus. 5. Lung. 6. Suprarenal Capsule. 7. Testicle. 8. Cut for Caponizing. 9. Rib. 10. Kidney. 11. wide near the rounded point. These do not catch in the intestinal wall, and are small enough to run along and cut rapidly.

The anus is examined first, and if stretched flat, shows a ring of beautiful parallel fibers, and a vertical slit. It should not be forgotten that we are describing what we see as the fowl lies upon its back.

With a pail of water placed upon a box between our knees

and a sponge and towel handy, we are prepared to open, examine and remove the intestines.

We commence by cutting around the anus, as seen in plate 1, and free it from its attachments; then with our blunt-pointed scissors, in the intestine, we slit it open, and examine it carefully. As we go along, we free the gut from the membranes which hold it in folds and kinks, and guide the cut end to drop into the pail of water.

About three inches above the anus, two branches or appendices, called coeca, as seen in plate 3, diverge from the main gut, like the branches from a tree. They extend forward for about six inches and terminate in round, curved, closed ends. They are held close to the main gut by the usual membranes.

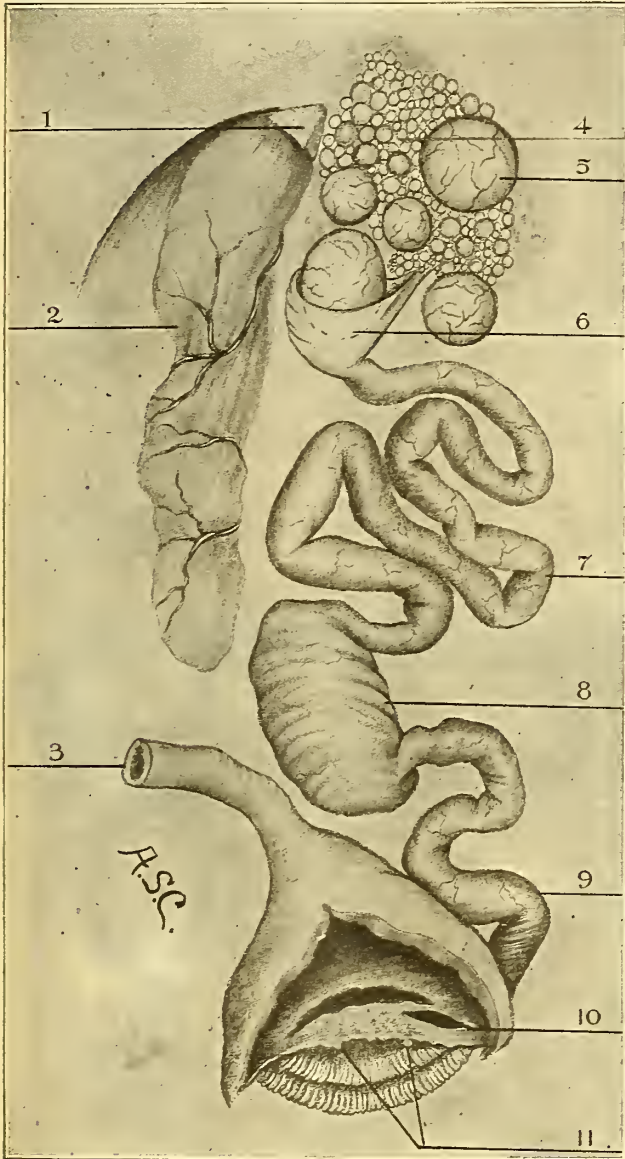

PLATE 6.—ORGANS OF THE FEMALE BIRD.

1. Suprarenal Capsule. 2. Kidney. 3. Rectum. 4. Ovary. 5. Egg.
6. Infundibular End of Oviduct Tube Grasping a Ripe Egg as it Falls from the Ovary. 7. Oviduct. 8. Uterus. 9. Exit Opening of Oviduct.
10. Exit Opening of Oviduct. 11. Outlet of Ureters.

They are usually full of a dark pultaceous matter. As we slit each coecum we almost invariably find at its extreme curved end a number of tiny pin worms, each about $\frac{3}{8}$ -inch long, more or less. They are called pin, or thread, worms, because they resemble tiny pieces of white thread. At this point or place they seem to be safe from all kinds of medicines.

As we cut along the intestine we almost invariably meet some round worms, measuring two or three inches in length, at a place about midway between the anus and gizzard. In the same locality we occasionally find some tape worms attached to the bowels by their suckers.

When we open a fowl, how shall we know whether the organs we see are healthy or diseased? The only way is to become familiar with the organs of healthy fowl. To do this we ask the cook to keep the insides of all fowl for our inspection and examination. We place the intestines in a pail of water, straighten out the kinks by cutting all membranous attachments, then slitting the gut up with our narrow, sharp, blunt-pointed scissors.

During the months of July, August and September we kill many young fowl for table use. These we open as above described, examine the organs in their natural position, with their relations to each other, their natural size, color, etc.

If we cannot examine them at once we put them in cold water in the summer to keep them from drying up and to keep them away from the too numerous and busy fly; also in winter to keep them from drying up or being frozen.

We now carefully remove the gizzard, intestines, liver and heart. We next examine carefully the organs that are left, which are of intense interest to us, because of their use and function and because of the mistakes made by poultrymen in describing them in the journals.

(See Plate 4.)

This is a most beautiful picture of the male organs of a six-pound, one-year-old, White Minorca cock, taken during the breeding season.

The epididymis is the collection of seminal tubes from the testicles, and the vessel connected with them.

The vas deferens is the corrugated tube which carries the secretions from the testicle to the cloaca. The little teat-like projection has an opening in the end through which we passed a fine probe. A milky looking secretion was easily pressed out of it. The ureter is the straight tube which collects the urine by many smaller tubes from the kidneys. Its opening is well shown. We ran a fine probe, like a knitting needle, far up the tube.

The kidneys are well shown, with the vas deferens and ureter, lying along the center of their surface.

The contractions of the kidneys are well shown. These narrow places show where the kidneys pass over projecting bones as they pass from one cavity to another.

The cloaca is laid open to show the location and openings of the ureters and vas deferens.

The Bursa of Fabricius, a glandular cavity, is never so well seen in an old fowl as it is in a young one. Like other glands of the body it dwindles away as adult life is attained.

(See Plate 5.)

This picture, drawn from a three-months-old White Minorca cockerel, shows the relations of the parts seen, true to life.

At the upper or front end of the drawing is seen the trachea, or wind pipe, dividing into two tubes, called bronchi.

Next we see the opening of the oesophagus, which leads to the stomach. We see the lungs up in front of the chest of the chicken, a pinkish, salmon colored, spongy body, with red spots and streaks.

Immediately below the lungs, in the middle line, is seen the two suprarenal capsules, partially covered by the testicles and hugging close to the upper end of the kidneys, at their inner border.

They lie close together, are somewhat gray in color, about the size of a large pea, rather triangular and pyramidal in shape, having three sides or surfaces.

The testicles are well shown, lying in front of the kidneys, so are the kidneys and backbone.

Lying along the front of the backbone are seen the largest blood vessels of the body, which subdivide to go downwards and outwards.

While examining the kidneys, as they lie along in the hollows of the back, the blood vessels and nerves will be seen to pass through their substance.

The ureters and vas deferens are seen lying along the center of the kidneys, just as they are seen in the young fowl.

The Bursa of Fabricius is well shown in this young bird.

TESTICLES.

In the male, we examine the testicles carefully to see their relation to the other organs, and how they are attached to the body. We find them fastened on their inner border only, being freely movable in every other part. They lie close together, being separated only by two thin membranes and their attachments by vessels and nerves to the center of the spine. The inner border is nearly straight, the ends and outer border are well rounded. They lie close to the lungs, close to the spine, close to each other, and close to the kidneys.

Their centers lie nearly on a line between the spaces of the last two ribs on each side.

They are creamy white in color and usually a little yellower than the intestines.

They vary in size, according to the breed, the age, and the season.

They are somewhat oblong in shape, rounded at each extremity, broader at the middle, nearly straight along the inner attached border. The attachments do not extend the full length of the testicle.

The semen or secretions of the testicles pass out from the inner border and extend down through a long tube to the cloaca.

This tube is called the vas deferens. It is convoluted or twisted, like a corkscrew, which adds very much to its length.

Lying along the side of the vas deferens is a straight tube, the ureter, which carries the urine from the kidneys. The testicles are of special interest in regard to caponizing, and hence their attachments to membranes and blood vessels should be carefully studied; as well as in their relations to each other, to the spine, to the kidneys and to the last two ribs, through which the testicles are removed when caponizing. The testicles are much enlarged during the breeding season. House sparrows' testicles are said to increase in size in the spring time from the size of a mustard seed in winter to that of a small cherry in the spring time. This may partly explain why fowls' eggs are generally so infertile in winter.

KIDNEYS.

On page 138 of D. E. Salmon's book on diseases of poultry we find a picture, by an artist, Railliet, part of which is intended to represent a kidney divided into three separate, distinct lobes. It is a mistake. A chicken's kidney don't grow in that shape.

On page 139 of the same book we find another mistake by the same artist, in which he represents the vas deferens of a cock as a straight tube, like a ureter, instead of a convoluted tube, as a vas deferens is.

Our pictures are original and were drawn by our Artist Cleaveland, at a great expense to the editor, from fowl in their natural state, under our own supervision.

Those long, dark brown bodies which we see lying on each side of the spine in the hollow of the back are the kidneys. They extend from the lungs nearly to the end of the body. They secrete and excrete the urine. Each kidney is one continuous gland, irregular in shape, thicker and broader in front, narrower and thinner in one place than another, because adapting itself closely to the inequalities between the bones along the back. They are held in place mainly by the nerves and blood vessels, which run to and fro through them to the legs. Along the surface of these glands will be seen whitish tubes or ducts, called ureters, which collect the urine and unite into one tube for each side, which terminates in the cloaca. The cloaca is the dilated terminal extremity of the alimentary canal or intestine, into which empty, as a general receptacle, the contents of the alimentary canal, the urinary ducts, vas deferens and oviduct.

(See Plate 6.)

SUPRA-RENAL CAPSULES.

This picture is intended to call special attention to the supra-renal capsule in the fully developed hen.

We see the kidney on the left, with its supra-renal capsule attached at its upper and inner end.

If the ovary was very carefully dissected away the supra-renal capsule would be found underneath it in the same relative position.

The opening in the upper end of the oviduct has already received a ripe egg.

Another egg will be seen bulging the oviduct near its lower end.

Examine the supra-renal capsules in plates 5 and 6.

These organs are of the utmost importance to health and life. We have not seen them described in poultry books or journals. These bodies are eagerly sought after in animals during the last few years.

The chemist makes an extract from them, which is both valuable and expensive. One ounce of a solution containing one grain in a thousand parts of water is worth one dollar. The solution is used internally and externally. Externally, it is the best known hemostatic, to stop hemorrhage, when locally applied to nosebleed or other organs.

Attached closely and firmly to the anterior and inner extremity of each kidney is a small body of a yellowish gray or reddish brown color, known as the supra-renal capsule. It is about the size of a pea, somewhat triangular and pyramidal in shape. It is a very important organ in man, beast or fowl, being essential to life, hence found in both sexes equally.

Writers in poultry journals make the mistake of calling these renal capsules undeveloped ovaries. If they examined them in the male they would not think so. But believing a hen should have two ovaries and finding but one, they call this organ an undeveloped ovary.

The ovary is found on the left side of the hen only, while standing, or to our right in the picture, when she lies on her back. It is intimately adherent to the supra-renal capsule and of nearly the same color before development. But the supra-renal capsule can be separated and distinguished to be of the same color and size as the one on the opposite side, or of the same size and appearance as in the male of equal size.

When the testicles are large, they almost entirely cover up a front view of these little, interesting and useful glands.

D. E. Salmon, in his book on poultry, page 144, says in the first lines: "During the early stages of development of the chick, the two ovaries are of equal size; while the right one remains stationary, the left ovary grows."

If this passage was original with Dr. Salmon, then he evidently mistook the supra-renal capsule for an ovary.

If one examines a pullet about two months old and turns the bowels well over to the left, he will see the young ovary lying well over the spine, in front of the forward end of the kidney, close to the lungs. In shape it is somewhat triangular, resembling a hulled almond. Its apex is directed backwards. Its edges are thin. The right edge nearly covers the supra-renal capsule to the right, and only partially so the left. At this early date the ovary is pale, while the capsule is more yellow. The thin edge of the ovary can be easily lifted off the yellow body. On the left side there is no sign of an ovary.

In a little male of the same age, in the same locality, the testicles will be seen. They are round, nearly white in color, lie close together, are about one-fourth of an inch long and 3-32 of an inch wide and lie in front of the two supra-renal capsules, which are yellower in color. By comparing the male and female, the two supra-renal capsules are always seen in both sexes, but only one ovary in the female.

OVARIES.

(See Plate 7.)

This plate of the ovary shows the capsule of the ovum, or egg proper, ruptured.

The egg is already in the grasp of the fimbriated extremity of the widely dilated open oviduct.

Other eggs are seen passing along the oviduct in different stages of completion.

Perhaps only one egg is found in the oviduct at one time. (See the ovaries in plates 3, 6 and 7.)

The hen's egg is always an object of interest to the poultryman. He is anxious to learn how the egg is produced, where it is made, how it grows, etc., etc.

By examining many laying hens, he will find eggs, in different stages of growth, covered up in a tube called the oviduct. He will see that this tube, which approximates 18 inches in length, is very dilatable, as shown by the great expansion of the tube, at that part where the egg lies. If he examines pullets which are too young to lay, he will find the tube or oviduct so small as to be scarcely recognizable.

In the laying fowl, he will find, on its left side only, well forward, close to the lungs and spine, a cluster of small, yellowish, round bodies of different sizes. This is called the ovary. Each round body is an egg. They develop, grow and

Fig. 180.

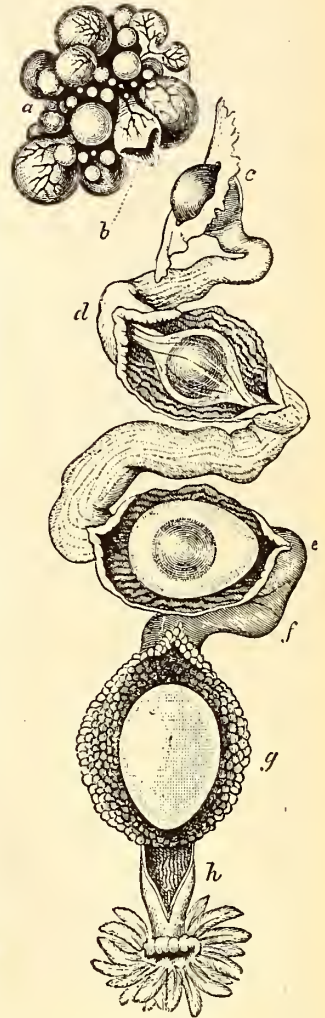

PLATE 7.—FROM DALTON—DEVELOPMENT OF THE EGG AT DIFFERENT STAGES.

are cast off, one by one, when ripe, and pass down the oviduct and out. The egg develops and grows in the ovary, just as the tooth develops and grows from the gum of the baby. The baby's

This tube or oviduct is long, tortuous, dilatible, and open at both ends. The lower end opens into the cloaca; the upper end is widely expanded and exceedingly thin. This thin edge is more or less fringed, one edge or fringe of which is attached to the ovary.

Each growing egg in the ovary is covered by a thin membrane or capsule, which is richly supplied by blood vessels. As the egg ripens, the membrane, sac, or capsule, which holds it, gradually grows thinner in a ring around the center, until it becomes too delicate to hold the ripe egg. It drops just as the ripe fruit drops. Then, as the magnet draws the iron to it, so does the ripe egg draw the electrically excited, widely dilated, open mouth of the upper end of the tube of the oviduct over it, when it grasps it, and cares for its future growth. The egg passes down the tube, just as the food passes through the body. The egg is intended to become a chicken, hence the oviduct furnishes albumen for growth and shell for protection. As the yolk or egg passes through the first two or three inches of the oviduct it absorbs certain fluids which makes it softer and more flexible. In its passage through the next nine inches it becomes covered with albumen. As the egg passes along, it becomes ovoid in shape, the pointed extremity being naturally forward or downward, as it bores its way toward the end of the duct. The next division of the oviduct is about 3½ inches long. Finally the egg passes into the fourth and last division of the oviduct, which is only about two inches in length, where it receives its covering of lime, the hard shell, after which it is

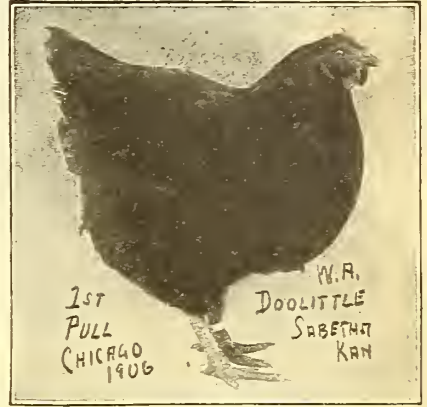

expelled. The broad or largest end is first expelled, as can be proven by allowing the hen to lay her egg on wet sand covered by powdered charcoal.

The Southern Minnesota Poultry and Pet Stock Show, held at Albert Lea, Minn., closed January 22nd. Judge Chas. McClave placed the awards. The show was a grand success, there being 815 birds scored with less than three per cent

S. C. BLACK ORPINGTON COCKEREL. First at Hagerstown, Md., 1905. Bred and owned by O. A. Bogardus, Warsaw, Ky.

first tooth is as interesting to the parents as the first egg from the prize winner is to the fancier.

PARTRIDGE WYANDOTTE PULLET.

Winner of first prize at Chicago, 1906. Bred and owned by W. A. Doolittle, Sabetha, Kan.

disqualified. There were six silver cups awarded, two incubators and other specialties, besides regular cash premiums.

SUCCESS WITH CHICKS

LEE'S LICE KILLER

Don't let the lice run your business this season. Begin now! Get them out of your poultry house, off the older fowls, and they won't pester the life out of your little chicks a few weeks hence. **Lee's Lice Killer** is the original liquid Lice Killer,—the premier insect destroyer of the world today,—and the ease with which it can be applied makes it a pleasure to use it. No handling, dusting, dipping or greasing, if you use **Lee's**. Paint it on the roots—spray it on the walls—That's all!

Price, 35c, 60c, \$1.00

LEE'S GERMOZONE

No time during the whole year is Germozone more in demand than during the spring and summer. As a bowel regulator for **little chicks** it has no equal. It will start the chicks right and keep them right. A little of it in the drinking water twice a week is sufficient. It is the best cure obtainable for bowel complaint and chicken cholera. Germozone is the acknowledged poultry medicine of the world today. It keeps them healthy and vigorous all the time. Price 50c. Either tablet or liquid. Ask your dealer or send direct to us.

LEE'S EGG MAKER

Poultrymen all over the world use **Lee's Egg Maker** because it is the best and **cheapest** poultry food on the market today. [It is not only an egg producing food but is, at the same time, a health-giving food. As a food for little chicks it has no equal. It makes them strong, healthy, and vigorous, and brings them to maturity—the **profit point**—from one month to six weeks earlier than if raised without it. Price, 25c, 50c, and \$2.00 according to size.

Prairie State Combination

Hen Egg and Duck Egg Incubator

THIS MACHINE is constructed with an extra deep egg chamber, and nursery drawers, adapting it especially to the requirements of duck raisers. It may, however, be used equally as well for hatching broilers and soft roasters during the season.

The cooling slides on top of the machine make cooling tables unnecessary. The machines are made *rights* and *lefts*, and may therefore be put in solid blocks of four, reducing the room required for operating to the minimum—a very economical and convenient arrangement in the way of saving space and for those who are engaged in shipping newly hatched chicks to their customers.

And this, by the way, is a growing and very profitable industry which is fast taking the place, among many producers and fanciers, of selling eggs by the setting. The little chicks are placed in light wooden boxes, in cells which are bored full of holes for ventilation. The top is covered with burlap, and the chicks are covered over with soft, downy feathers—a waste product in many establishments. Thus packed they will ship safely almost any distance. This plan is better for the producer, and better for the buyer, in many instances, than buying eggs for incubation, and Prairie State machines enable you to hatch chicks that will bring much better prices than to sell the eggs.

Mr. Hallock, one of the largest, if not *the* largest, duck grower in the United States, has been a user of Prairie State Incubators for a great many years. You can imagine the extent of his operations when we tell you that he used between sixty and seventy carloads of grain in feeding his stock last season. His letter below shows the durability of the Prairie State Incubators. After eighteen years of use, he asserts they are still doing good work. He has never found an incubator that will surpass the Prairie State for hatching ducks:

ATLANTIC FARM
Speonk, L. I.

BROOKSIDE FARM
Center Moriches, L. I.

A. J. HALLOCK, PROP.

Speonk, Long Island, Jan. 8, 1906.

Prairie State Incubator Co., Homer City, Pa.

Dear Sirs:—Your new model machine was received a few days ago; will fill it with eggs next week and hope to find it an improvement over the old model and hatch every egg. When I wish it may be better than the other I do not mean to infer that the old model is not good, because I know that the old machine is hard to beat.

I used my first Prairie State in 1888, and have used them continuously since that date. Last year I used one hundred and thirty Prairie States. Have never had a fire and do not recollect of having any machine smoke seriously.

The machines that were purchased 18 years ago are doing as good work now as they did then, and to all appearances are good for many years more.

Last season there were a number of hatches that averaged

two hundred and forty ducklings to the machine. I usually have from five to ten machines hatch at a time.

Yours truly,

J. Hallock

What the Prairie State has done for Mr. Hallock it will do for you. Write for catalogue of the new Improved Standard Prairie State Incubator and learn about the improvements that make it a better machine than ever.

How to Make Your Own Brooder A Piano Box Will Do

The *Universal Hover* may be attached to any size or form of Colony house, mushroom house, small portable building, or a piano box, and make almost as good a brooder as money can buy.

Piano box brooders with *Universal Hovers* inside, are being used at the Connecticut Agricultural College Experiment Station at Storrs, Conn. Prof. Graham's testimonial tells with what results:

THE CONNECTICUT AGRICULTURAL COLLEGE

CHARLES K. GRAHAM

**Instructor in Poultry Industry and
Poultry Manager**

Storrs, Conn., Dec. 11, 1905.

Prairie State Incubator Co., Homer City, Pa.

Gentlemen:—I am well pleased with your *Universal Hovers*. They are giving excellent results, and, I think, come a little nearer perfection than any other brooder I have seen.

Yours very truly,

C. K. Graham

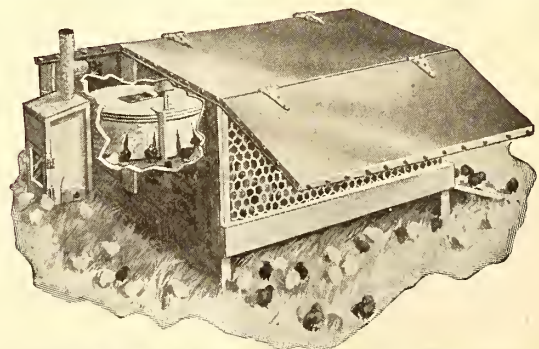

The use of the *Universal Hover* is almost boundless. During the summer season four or five broods may be successfully started in a piano box or Colony house, the same heating device being transferred from one to the other. During the winter it may be used in the winter brooder and make one of the finest individual brooders for the purpose that has yet been offered the poultryman. Our new *Brooder Book*, *free*, tells how to use the *Universal Hover* half a dozen ways to save you money and raise better chicks.

We have recently published *six valuable books* on how to increase poultry production. Every poultry raiser should have one or all of these books—they are *free* if you will write—and we will put your name on our mail list so that you will get others, now in course of preparation, also *free*, as fast as published. Write today.

Prairie State Incubator Co.

Homer City, Pa.

THE NATURAL BREEDING SEASON.

In their desire to obtain early chickens purchasers of eggs for hatching often place their orders with breeders before the cold season has passed, the eggs are shipped during inclement weather, and more or less disappointing results. Complaints of your hatches begin to appear, and breeders are often very unjustly accused of tampering with the eggs to destroy their vitality or of selling eggs which they knew would prove infertile. Later in the season, when the sun has begun to warm the earth and vegetation is beginning to appear, the complaints of poor hatches grow less frequent or almost entirely cease.

Is there, then, a natural breeding season, during which fertility is at its maximum, or must some other explanation for the failures in hatching be sought?

In attempting to answer this question attention may be called to the fact that there is a natural breeding season for wild birds. They have a natural period of mating, for laying and for hatching their young. It is the exception to find an infertile egg in their nests. For every egg laid, barring accidents and enemies, a young bird may be pretty safely reckoned upon. And the wild birds do not mate, lay and hatch until spring brings a promise of warmth and verdure.

Attention also may be called to the facts with domestic poultry, speaking by and large, eggs do not hatch well until the natural mating season of wild birds. Early eggs mean early chickens and few of them. Full vitality and

vigor are not obtained until the sun promises warmth and begins to clothe the earth with green.

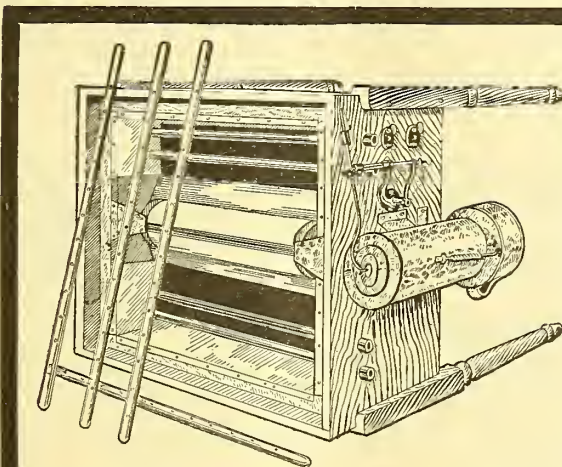

It is also to be noticed that domestic fowls are birds; that they once were wild birds, and that some wild traits persist for an indefinite period after domestication. Hens steal their nests. Their wild ancestors did the same to escape the observation of their enemies and secure the chance of rearing their young. The reason for this has disappeared during domestication, but the characteristic persists. The hens are covered with sober robes, compared with their lords. In the wild state the sober clothing of the hens served to protect them from their foes when hatching their eggs. Under domestication the necessity for this protective coloration has disappeared, but the coloration remains. It need not, therefore, be surprising if some other wild trait, no longer necessary, should persist in our domesticated fowls. We have, it is true, increased the number of eggs from six or eight to 100 or 200 per year by careful breeding and a constant and abundant supply of food. We have probably to some extent enlarged the limits of the breeding season, perhaps to a very considerable extent, but the facts hardly substantiate the belief that we have entirely eradicated the natural breeding season.

If we define "natural breeding season" as the period at which the eggs are at the maximum of fertility and when the young can be reared the most easily, then there can be no question that it is bounded by the months of April and June, that prior to the first of April and subsequent to the 13th of

June the conditions for the perpetuation of the race of fowls are not so good as during the period contained within those dates. In that sense, at least, it is true that there is a natural breeding season. But if we define the term as meaning the period in which young can be produced and out of which the race cannot be perpetuated, there can be no natural breeding season, for it is possible to hatch some eggs and rear some chickens at any time during the whole year. This latter definition, however, can hardly be considered the correct one.

For the general purposes of the breeder the natural breeding season is the one during which he can carry on his operations at the least expense and to the greatest advantage. While for special purposes he may desire to hatch and rear chickens outside of the natural breeding season, either early or late, and these special purposes may entirely justify his unseasonable operations, yet the natural breeding season is the time when most poultry keepers, and certainly beginners in poultry keeping, should set eggs and hatch chickens. As a rule this is the season during which they will find nature assisting them, and it is much easier to work with nature's help than to work against her opposition. If buyers of eggs would make their purchases during this season only, they would be better satisfied with their purchases and would form a better opinion of the fairness, honesty and honor of the great body of poultry men. There is a natural breeding season for the sellers and buyers of eggs for hatching, whatever else may be said upon the subject. H. S. BABCOCK.

LOOK INSIDE

Before you buy an incubator or brooder, it is wise to take a look inside the machine. Find out the principles involved and whether or not they are the best for the purpose. When you look inside THE "MANDY LEE" INCUBATOR, you find it is quite different from all other hot air incubators. You find an air-tight, sheet-metal diaphragm, which separates the body of the incubator into two parts, a heating chamber and an egg chamber.

All the hot air used in heating is passed into the heating chamber, then down to the level of the diaphragm and out through the four perforated tubes shown separately in the accompanying illustration. These perforated tubes (3/8 in. in diameter) pass entirely through the body of the incubator and are open at both ends. On the inside of the heating chamber they are perforated on the under side with small holes every two inches, insuring an even distribution of the heating air. None of the air used for heating passes below the diaphragm and therefore is not used for ventilating.

The heating and ventilating are operated independent of each other. The egg chamber may be ventilated to the largest or smallest extent, without regard to the quantity of air used for heating, by means of other perforated tubes above and below the egg tray, the openings of these tubes being controlled on the outside of the incubator by means of swinging caps or dampers that may be opened or closed at will. All these and many other improvements you will find by a LOOK INSIDE. The

"MANDY LEE" Incubators and Brooders

are the results of a demand for better machines. The incubator has been tested by extensive experimental hatches conducted in different climates at various altitudes and never before has there been embodied in an incubator such radical changes and improvements as found in THE "MANDY LEE". In it we have eliminated every element of DOUBT and GUESSWORK and have evolved a machine perfectly adapted to every climate and to all variations of temperature and moisture.

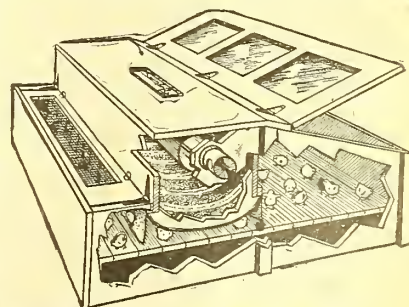

THE "MANDY LEE" BROODER also invites a careful inspection of its interior arrangements—its hover which "snuggles" the little chicks with the warmth of the mother hen with CONTACT HEAT right on their backs, where they like it best. In it chicks are, by a special arrangement, always supplied with pure, fresh air thoroughly warmed before it enters the hover.

The Brooder has a number of other important improvements you have wanted but which you will find in no other. They are fully explained in our new catalogue, together with all the new features of the incubator. You will be well repaid for sending for the catalogue and learning all about them before you buy an Incubator or Brooder. Write for it today—it's FREE.

INCUBATOR RESULTS!

FINAL TEST!

When experienced fanciers, when expert poultrymen who are in the business for profit, **freely entrust their best eggs** to the care of an incubator—eggs they value at fifty cents to five dollars each, **eggs that are relied on** to produce the season's **PRIZE WINNING SPECIMENS** at America's greatest poultry shows—prize winners that sell readily at from five dollars to several hundred dollars each—that is the final test of a **PRACTICALLY PERFECT HATCHING MACHINE.**

The 1906 Pattern Standard Cyphers.

The Genuine Patented Cyphers Incubators (beware of imitations!) have been thus honored **season after season** by poultrymen whose names are household words in the poultry world; by poultrymen who would lose hundreds (in many cases thousands) of dollars if **the incubators they use** were to fail to do good work even for one season; by poultrymen who use the **STANDARD CYPHERS** solely because it is known by them to be the **best incubator obtainable.** Please read the following sample reports and note the names of the men who signed them.

Standard Cyphers Incubators

Hatch "QUALITY" As Well As "QUANTITY."

NEW YORK—CINCINNATI—BOSTON—CHICAGO

America's Best Birds At America's Big Shows.

New York 1906: "All my **WHITE ORPINGTONS** on which I won prizes at New York were hatched in Standard Cyphers Incubators. At this great exhibition I won on White Orpingtons as follows: **First, second, third and fourth cockerels; third, fourth and fifth pullets; silver cup for best male and silver cup for best female. We were by far the largest winners in this class. I have great faith in the Cyphers Incubators and have just started one of your 1906-pattern machines, entrusting to it some of our best eggs.**"—WILLOW BROOK FARM, W. L. Davis, Prop., Berlin, Conn., Feb. 2d, 1906.

New York 1906: "My first prize Madison Square Garden (January 3-6, 1906) **Single Comb White Leghorn cockerel** was hatched in the 1906-pattern Standard Cyphers Incubator you shipped to me last May. All the rest of my winners (**Single Comb White Leghorns**) were hatched in your 1905-pattern Standard Cyphers, including the following: **1, 3, 4 cocks; 2 hens, 4 cockerels; 2, 5 pullets; 4 exhibition yard. Besides winning a challenge cup I won \$258 worth of specials—all on Cyphers hatched chicks.**"—D. W. YOUNG, Highlands, N. Y., Jan. 12, 1906.

New York 1906: "All the young **Cochins, both Partridge and White, as exhibited by Mr. Adolph Anderson and myself at Madison Square Garden last week, were hatched in Cyphers Incubators, as this season we used your incubators entirely, abandoning the hens, and must say that our success was much more satisfactory than any previous year. Our first prize Partridge Cochin pullet was hatched in the 1906-pattern Cyphers and all the other birds exhibited by us at New York were hatched in the older pattern Cyphers incubators that we have been using several seasons. Our winnings on Cyphers machine-hatched chicks at last week's New York exhibition were: PARTRIDGE COCHINS, 1, 2, 3, 4 cocks; 1, 2, 3, 4 hens; 1, 2, 3, 4 cockerels; 1, 2, 3, 4 pullets—no pens entered. WHITE COCHINS—1, 2, 3, 4 cocks; 2, 3, 4, 5 hens; 1, 2, 3, 4 cockerels; 1, 2, 3, 4 pullets—no pens entered."**—GEO. W. MITCHELL, Bristol, Conn., Jan. 11, 1906.

New York 1906: "At the great New York show last month I won **second cockerel, third cock and fourth breeding pen, and at the American Poultry Association show held at Cincinnati, this state, I won second pen, third and fourth cocks; third and fourth hens; third and fourth cockerels and third and fourth pullets on our Partridge Wyandottes, the only variety we exhibited, and these prize winners were all hatched in the Cyphers Incubators and reared on Cyphers Chick Food—without exception.**"—H. B. HARK, manager poultry dept., HARTMAN STOCK FARM, Columbus, Ohio, Feb. 1st, 1906.

Cincinnati 1906: "My first prize and silver cup winning **Golden Laced Wyandotte cockerel** at the Cincinnati show held last week was hatched in a Cyphers Incubator, as was also my first prize hen of same variety and winner of the trophy for the best laced hen in the show. **The five fine birds in my second prize breeding pen of White Wyandottes** at the Chicago show last week were also hatched in the Cyphers. The importance of the above winnings is that they were made at club shows, respectively. There was the best show of Golden Wyandottes at Cincinnati as regards quality ever made in this country."—IRA C. KELLER, Prospect, Ohio, Jan. 29, 1906.

Cincinnati 1906: "I made an exhibit of forty-eight **White Plymouth Rocks** at Cincinnati, winning four first prizes out of a possible five, also four second prizes and eight other regular prizes, besides silver cup for best display and silver cup for whitest bird in show, and all these birds, without exception, were hatched in Cyphers Incubators, as I use no other kind and do not use hens."—U. R. FISHEL, Hope, Ind., Jan. 29, 1906.

Cincinnati 1906: "Am very pleased to inform you that all of the prize winning **ROSE COMB BLACK MINORCAS** exhibited by me at the late national show held in Music Hall, Cincinnati, and winning first cock, first hen (weighing 9 and 7½ pounds, respectively), first cockerel, first pullet and first breeding pen—also second prize breeding pen, for which I received \$250—were all hatched in Cyphers Incubators and raised in Cyphers Brooders. Sixteen years in the poultry business has convinced me that I can not afford to use any machines other than the Cyphers; neither have I been able to raise as good stock by natural methods."—S. T. CAMPBELL, Mansfield, Ohio, January 27, 1906.

Cincinnati 1906: "Am glad to be able to report that our prize winning **White Wyandottes** at the recent great show held at Cincinnati, Ohio, were all hatched in Cyphers Incubators. We won, in strong competition, first cockerel, first hen, fourth cock, fifth pullet and third pen. The bird that headed the first prize exhibition yard (bred by us) was also hatched in a Cyphers Incubator."—J. C. FISHEL & SON, Hope, Ind., January 26, 1906.

Boston 1906: My first prize **Rose Comb Black Minorca** cock bird, which attracted so much attention both at Boston and New York, was hatched in a Cyphers incubator, as also were the following prize winners: Boston, 2d hen; 1st, 2d and 3d cockerels; 1st and 3d pullets and one of the hens in my first-prize breeding pen, New York, First cock as mentioned above, 1st and 2d hens; 1st

and 2d cockerels, 1st and 2d pullets. I hatched many other prize winners in my Cyphers incubators, including several Single Comb Black Minorca cockerels, hens and pullets which I have sold this winter at \$50.00 each, and one Single Comb Black Minorca I have sold since the Boston show for \$100.00, said to be a better bird than any which the buyer saw at the New York show.—GEO. H. NORTHUP, Raceville, N. Y., Feb. 9, 1906.

Boston 1906: "I take pleasure in stating that my first prize Single Comb White Leghorn pullet at Boston, January, 1906, was hatched in a Cyphers Incubator Friday, June 9th. Several of my winners at other recent exhibitions were hatched in your machines. For instance, at New Haven, Conn., my White Leghorn pullet, winning first, also special for whitest bird in the show and sweepstake for best specimen in entire exhibit, was hatched in your incubator, as was also the cockerel that headed the first exhibition pen shown by me at Springfield, Mass., which bird scored 95½ points."—ELM POULTRY YARDS, F. O. GROESBECK, Prop., Hartford, Conn., February 8, 1906.

Boston 1906: "Am sure it will please you to know that my champion \$100 Challenge Cup Buff Wyandotte cockerel at Boston show, January 16-19, 1906, and my first prize Buff Wyandotte cockerel at Chicago, January 22-27, 1906, were both hatched in one of your Standard incubators. As a result of personal experience I consider the Cyphers the best incubator made."—W. T. LORD, Troy, N. Y., February 7, 1906.

Boston 1906: "Nearly all of my Columbian Wyandottes were hatched in Cyphers Incubators last season and they came out strong and vigorous and kept so through the season. I won second on Columbian hen at Boston, 1906, and have a nice lot of exhibition quality Columbian Wyandottes produced by your Standard Incubators."—PHILANDER WILLIAMS, Taunton, Mass., February 2nd, 1906.

Chicago 1906: "We are pleased to say that our complete winnings of 1st and 2nd cocks, 1st, 2nd, 3rd and 4th cockerels, 1st, 2nd and 3rd hens and 1st, 2nd and 4th pullets, in Single Comb Buff Orpingtons; every

1st and 2nd in Rose Comb Buffs; 1st cock, 1st and 3rd hens, 2nd and 3rd cockerels and 2nd pen in Single Comb White Orpingtons; every 1st and second in Rose Comb White Orpingtons; 2nd cock, 1st and 2nd hens 2nd and 3rd cockerels in Single Comb Black Orpingtons and every 1st prize bird in Rose Comb Blacks and Spangles—a total of 27 firsts, 16 seconds and 11 thirds at the Great Chicago show, January 22-27, 1906, were all hatched in Cyphers Incubators. This record we justly feel proud of and duplicates what your machines have done for us in hatching winners during the past several years, including the St. Louis World's Fair."—J. M. WILLIAMS, president J. M. WILLIAMS & CO., importers and breeders of prize-winning Orpingtons, North Adams, Mich., February 6, 1906.

Chicago 1906: "I believe you will be interested to know that of the eleven (11) Buff Plymouth Rocks I exhibited at the late Chicago show (January 22-27) the second prize pen, first and fourth prize hens, second and fourth prize pullets and third prize cockerel were all hatched in a Cyphers Incubator, brooded in a Cyphers Brooder until they were six weeks old and were fed almost exclusively on Cyphers foods until over three months of age."—F. C. SHEPHERD, Toledo, Ohio, February 7th, 1906.

Chicago 1906: All my young prize winning Black Langshans at the late Chicago show, January, 1906, were hatched in a Cyphers incubator, 360-egg size. These Cyphers-hatched chicks won as follows: 1, 2, 3, 4 cockerels; 1, 3, 4 pullets; 1, 2 pens and special for best display. I also won on old stock 3, 5 cocks and 3, 4 hens.—JESSE T. BATEMAN, Waverly, Ill., Feb. 8, 1906.

Chicago 1906: "It affords me great pleasure to report that a number of my prize winning Orpingtons at the Chicago poultry show held last week were hatched in a Standard Cyphers Incubator. Among the winning birds hatched in your machines were my first prize male birds in White and Black Orpingtons and the cockerel at the head of first exhibition yard. Careful comparative tests with other incubators have convinced me that I can get much better results from the Cyphers than from any other machine I have tried."—C. S. BYERS, Hazelrigg, Ind., Feb. 3, 1906.

Food Values vs. Weed Seeds.

We Guarantee That no screenings, weed seeds or by-products of any kind are used in the Cyphers Company's sealed-bag poultry foods—**not a particle!** We further guarantee that all grain used in our foods is **perfectly sound and wholesome.**

Don't Pay Two Prices!! Poultrymen who are deceived into buying cheap, trashy-looking chick food, made up mostly of screenings, weed seeds, shriveled grain, bran and barley hulls, pay two prices because they get less than one-half the

FOOD VALUE they should receive and that the chicks need. **Cyphers Chick Food** Consists solely of steel-cut wheat (not crushed), sifted corn grits (maize), cracked kafir corn, cut hulled oats and millet seed in **exactly the right proportions**, with three per cent of chick size pearl grit added, thus **making sure** that the chicks get precisely what they need **AND ALL THEY NEED** to insure health, rapid growth and great vigor. **No other food of any description** need be fed to chicks during the first six weeks of their lives. The use of Cyphers Chick Food positively means **best results** at the **minimum of loss and labor.** Every reader of these lines can well afford to try a 50 or 100 pound bag of Cyphers Chick Food and thus **put our claim to the test!** On sale by 2500 dealers and at our seven places of business—see addresses below:

SOLD IN SEALED BAGS.

MONTHLY PRIZE ARTICLE DEPARTMENT

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communication about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. All articles must be written on one side of the paper only. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

The first prize in the contest this month has been awarded Louis A. Peirson, Castile, N. Y., and second prize to Agnew J. Kern, Schnecksville, Pa.

KINDNESS TO POULTRY.

The accompanying photograph, entitled "Feeding Time," was recently taken while scattering feed at the noon hour. Poultry are very responsive to good care and as a result will become very tame and great pets, affording an unlimited amount of amusement. But kindness must be shown to them as to all animals. They will appreciate kind-

Some amateurs and farmers are inclined to eliminate this kind treatment of their stock and poultry. They will drive and whip and snarl at a dumb animal, which soon knows its safety lies in sulking away from its master. Poultry are especially susceptible to kind treatment. They will do better if treated properly and with respect. One farmer possesses a clever watch dog, which every now and then runs out and furiously darts at the hens that were anywhere in sight on the premises. At one time I saw the dog with its mouth full of feathers which he had grabbed from a hen, and yet he said he could not

of December received from a coop of White Wyandotte pullets seven months old a total of 380 eggs or thirty-one dozen and eight, an average of nineteen eggs for each pullet. I visited this pen of Wyandottes in company with the owner. The first impression made was the fact of their being so tame, which conclusively showed that they were kindly treated and received good care and attention. We picked up easily several pullets and lifted one or two stately cockerels.

This man feeds the warm mash at noon and scatters grain in the morning in a litter of straw to keep them to work and get up good circulation.

Treat the poultry kindly and they in return will treat you generously.

Another amateur breeder invited me in to see his flock of Plymouth Rocks which were making an excellent record of producing eggs. "How tame they are," is the familiar expression. They were certainly a fine collection and showed no fear or alarm while their master was pointing out the good qualities of the different birds.

See to it that your flock are not frightened, give them good care and attention and they will repay you for your kindness to them.

LOUIS A. PEIRSON.

Castile, N. Y.

A FEW RANDOM SELECTIONS.

Another year has practically passed out of existence and is checked from our allotted time, but its effects for good or for bad still linger with us in every sphere of life, nor is the poultry realm an exception. But its mistakes are past mending, its failures are on record, its efforts and achievements are what we have made them. Happy is the poultryman who has the consciousness of having done his best.

But what of the new year? What it holds for us of pleasure or treasure, of losses or crosses and of difficulty, who can say? However, let everyone resolve and re-resolve to raise more and better poultry. Do the best with your chickens that your circumstances allow, act nobly and I assure you "angels can do no more."

It is a self-evident fact the poultry enterprise is in a very progressive stage, as one will be readily convinced by a glimpse at the various shows held over the whole length and breadth of this glorious nation. Take, for instance, the late Madison Square Garden show. The statistics indicate that there was an increase of two thousand entries! And the response comes from every section of the country that the quality was superb. I can verify this statement from my own personal observation. This ought to be sufficient evidence to the beginner that the poultry business is rapidly increasing.

Fellow-fancier, take an impartial inspection of your stock and decide for yourself whether you can notice a radical improvement in last year's breeding. If you are unable to see a great improvement you must coincide with me that there is something of vast importance lacking. It may be the lack of energy, the lack of economy, or the lack of scientific mating. By all means get out of the rut. Get at the bottom of your weakness and finally master the same, and I assure you that you as well as others will profit by the example, for

FEEDING TIME.

ness, care and attention. They will soon recognize the master's voice and will come at once when called, while they will escape from the voice of a stranger. It is a common occurrence to have some of them fly upon my arm or shoulder and will eat out of the feeding basket without any apprehension of fear or timidity.

Some have asserted that the White Leghorns were so wild and unruly that they could not keep them in close confinement. However that may be yet it is possible to keep them in narrow confinement, where they will produce an abundance of eggs provided they are treated with kindness and received the proper care and attention.

break the habit of the dog and wondered why there was no profit in poultry.

Thus a horse or a dog, a cat or a hen, realizes when it is well treated. This fact should not be ignored by the poultry financier. Let kindness be the word. One man I knew made such pets of his chickens that he always had to call in his hard-hearted neighbor when he wanted his chicken's head taken off. Then get a sharp axe and take it off in one clip. This sticking process among certain breeders I think is as unjust and cruel with poultry as is the docking of horses' tails among certain horsemen.

Do well by the poultry and your poultry will do well by you.

One neighbor during the cold month

“what is worth doing is worth doing well.”

I take it for granted that the amateur as well as the professional poultry breeders have squared up the accounts of the past year and have netted a snug sum for their labor. Truly, chickens may rightly be termed “Mortgage Lifters.” Of course the beginner must not expect to enter the business in a hap-hazard (topsy-turvy) way by building elaborate houses, buying a large number of hens and get-rich-quick by sifting still. To reap a golden harvest one must labor faithfully and possess some experience, which is always the best teacher. The first essential to profitable poultry keeping are warm and substantial but otherwise inexpensive buildings, which must be kept clean. Because cleanliness is the keynote to success.

The next important step is proper feeding, and right here I would caution the novice not to overfeed. Always keep the biddies busy if you expect them to lay a large number of eggs. Space per-

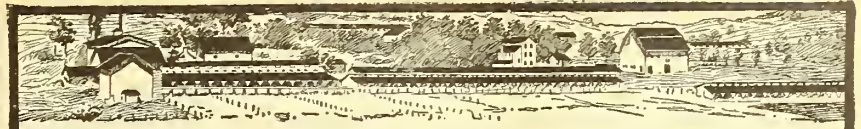

The boy holds first prize S. C. White Leghorn pullet at Mattoon, Ill.; score, 95. Bred and exhibited by Oakwood Poultry Farms, Marshall, Ill.

mitting, I will briefly enumerate the manner of feeding as conducted by The Schnecksville Poultry Yards, which has proved a valuable winter egg-producing method. After the hens are on their roosts to enjoy their peaceful slumbers we throw in their litter wheat, oats and buckwheat which constitutes their breakfast. By the time their mash is ready, about 10 o'clock, their blood is well in circulation, and they are lively as a cricket, resulting from their scratching for their breakfast. Their mash consists of one part cornmeal, two parts white middlings and one part boiled beef and bone, mixed in warm water and milk. It is always fed in a crumbly state. In the afternoon they get their green food, such as cabbage, turnips, lettuce, etc., which is suspended from a rope about eighteen inches from the floor. This serves as an exerciser, as they have to jump for their food. In the evening they are fed all the whole corn they care to eat, which proves to produce heat, just what they long for during these cold winter nights.

Paroid Roofing at Meadow Brook Farm.

Here's one of the thousands of poultry farms whose buildings are covered with Paroid. The illustration is from a photograph taken at Dallas, Pa. Paroid is especially fitted for poultrymen's use for both roofing and siding. It's extra strong—any one can lay it. Does not run nor crack. Water, spark, heat, cold, frost and gas proof. Light slate color—contains no tar—does not taint rain water. Used by poultrymen, farmers, dairymen, railroads and the U. S. Government.

Send for Free Samples and name of nearest dealer. For a 2c stamp we will send book of new poultry house and farm building plans. You'll be surprised to find how superior Paroid is to cheap imitations.

BUILT LIKE A NEST

THE AXFORD ROUND INCUBATOR

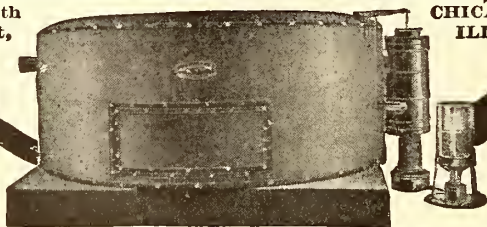

30 YEARS SUCCESS

is built different from the ordinary box affair. Thirty years of successful work is pretty strong evidence that these machines are built on correct, natural and scientific principles. Many improvements and valuable features have been recently added to this hatcher until today it comes the nearest to perfection of all incubators. The Axford is a round machine, "built like a hen's nest," insuring uniform distribution of heat to all parts of the egg chamber—has no cold corners. Its system of ventilating constantly supplies the interior of the machine with pure fresh air at the proper temperature. The heat regulator is perfect and when once regulated, it requires no further attention. There's no sitting up nights to watch the lamp or regulator on an Axford—they run themselves. Write for catalog of Axford Machines and Poultry Supplies today.

"CONTINUOUS" HATCHER

Continuous means that this hatcher hatches chicks every day. Simply start it going, do your part and it works indefinitely, testing out eggs, taking out chicks, putting in fresh eggs don't stop its work for a moment. We accomplish this remarkable result by a new system of construction so simple and yet so effective that one "Continuous" Hatcher turns out as many chicks in a given time as several ordinary incubators. It need never rest. And it's not as much bother to run it as the ordinary kind, while the results are more sure. In the building of this hatcher new ideas have ruled and have actually simplified the machine until the beginner with a "Continuous" Hatcher gets as good hatches as an "old hand" with any other machine. Our new catalog explains how this wonderful machine is made and how it works continuously—it will interest you—you'll wonder why you did not think of it before. Write for free copy.

HINTS FOR THE BEGINNER.—PURCHASE OF STOCK OR EGGS, WHICH?

The novice about to embark in raising poultry, no matter whether for pleasure and pastime, or as a business, needs first information on the subject; this is best attained by subscribing for a first-class poultry journal such as the AMERICAN POULTRY JOURNAL, thoroughly read and study its columns and you will learn a great deal that will help and benefit you when fairly embarked on your venture. Next purchase a copy of the "Standard," and after having selected your breed, study that until you are familiar with the disqualifications, workings, etc. Then you are ready to make your purchase. But you say I only want to keep a few fowls and common chickens are good enough; here is where you are mistaken. Pure bred stock cost no more (and in many cases not so much) to keep than mongrels; are better layers, and mature in less time, so that if only eggs and broilers were wanted for home consumption, pure bred stock would give best returns, but another item is the cash sale of extra stock not wanted for next season's breeders. The demand for pure bred stock is ever increasing, and they will find ready sale.

Now, having read up your breed, and consulted the advertising columns of your poultry magazine, select a breeder who is well-known and who deals in but one variety, as the man who devotes his whole time and attention to one variety must of necessity be able to improve that variety more than where several are concerned. If you possibly can visit his yards and look over the whole flock, as by taking in the whole flock one can come to correct conclusions, as if a flock is in prime condition, and healthy, well developed, fully matured and correctly marked, you are safe in making your selection, or better still, place your confidence in the breeder and tell him to mate you up a pen or two, for best results and name the highest price you are prepared to pay. He will treat you right and you will find your young stock will compare favorably with your neighbor's or anybody else's. Now, don't expect every chick hatched to be an exhibition bird, or even as good as its progenitors, for it will not turn out so, as often the highest scoring birds produce stock very much inferior to themselves. Culls come with all breeds and in all flocks, and it is having the knowledge and courage to dispose of them by killing on that improves the stock.

Don't buy cheap and inferior stock. Get the best or none of the variety you wish to breed from.

Don't try more than one breed; if you don't like your first selection, dispose of that variety and get another, as by trying to breed two you will be almost sure to fail.

In next month's issue will treat the question of purchasing eggs.

ORIGINAL PIANO BOX BROODER AND COLONY HOUSES AS USED ON THE DE GRAFF POULTRY FARM, AMSTERDAM, N.Y., RHODE ISLAND RED SPECIALISTS.

How often do we hear farmers' wives say in the fall, "I have had no luck at all with my chickens this year," and judging from the way that many of them are cared for, it is purely a case of luck with very little management about it.

A chicken one day old is about as able to take care of itself in many ways as any young creature I know of, while on the other hand it seems to have an endless list of enemies that threaten its life at every turn.

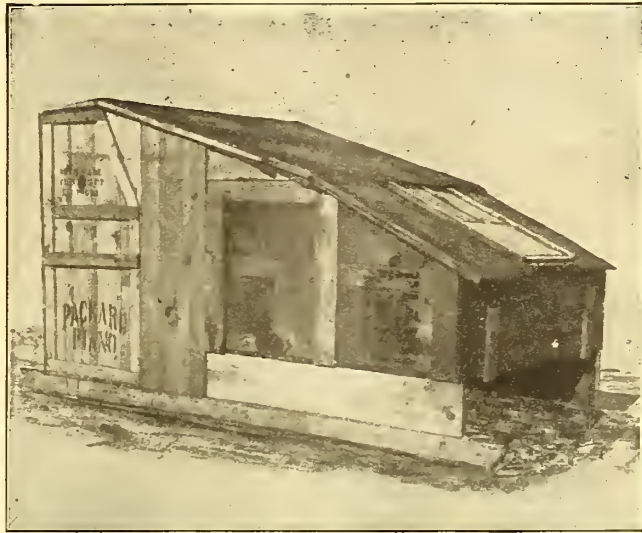

Besides the lice and mites which are ever ready to sap its young blood, there are the rats, cats, dogs, skunks, weasels, hawks, etc., and if it does survive till fully matured, it stands great chances of being surreptitiously removed by some two-legged "varmint" on some dark night, so that in order to make a success of raising young chickens considerable management is necessary.

As there are thousands of people all over the United States that want to know how to successfully raise chicks, with as little work as possible, I will give them the benefit of my extended experience both with the old hen and the leading makes of artificial methods. The accompanying picture and diagram will give a very good idea of how I build my brooder and colony houses, and I find it much more economical to spend a little money on the house and then raise the chicks than to save a little on the house and raise only part of the chicks, and sometimes none at all.

While the same idea can be carried out as elaborate as desired with good lumber I find it more practical to use piano boxes, as the lumber is cheaper and easier to construct, and I will try to make it plain as possible how to construct them.

All you need besides the two large

Place the two scantling which act as runners on the ground, leveling them up for the foundation of the house, then remove the front of one box and place on the rear end of the scantling. Then remove the front and bottom of the other box and place it in a horizontal position and nail it to the scantling by

PIANO BOX POULTRY HOUSE.

piano boxes in two scantling (2x4 in. and 14 ft. long), three boards (10 in. wide by 14 ft. long) and a roll of roofing paper, a window (28 in. by 3 ft.), and a few hinges and screws and nails to go with them, and any jack-knife carpenter can construct it.

the use of four narrow boards, which are placed in each corner and extending about thirteen inches below the box, leaving a place just ten inches wide, which is closed by one of the extra boards. (See cut.) The boxes can be placed about twenty inches apart, leav-

Cyphers Full-Nest Egg Food Makes Hens Lay

The success of this reliable tonic and conditioner has been remarkable. It increases egg production, promotes health, insures vigor in fowls and increases the fertility of eggs. In addition to medicinal seeds, vegetable extracts and mineral salts, it contains in a highly concentrated form the necessary animal food for egg production, taking the place of bugs, insects and worms in the fowl's diet. An increase of eight eggs a month will pay for a 42-ounce package of Full-Nest Egg Food, and as one package contains

1,500 Feeds for 1 Hen 10 Feeds for 150 Hens 150 Feeds for 10 Hens

it will be seen that it is the cheapest egg producer on the market. The name of the Cyphers Incubator Company is proof that it is the most reliable. It represents

60 FEEDS FOR ONE CENT.

Besides being an unexcelled egg producer, it is a concentrated meat food possessing tonic preparations which promote good health and fine condition. It stimulates and invigorates, but unlike other tonic foods it also builds up the system and keeps it up. For growing chicks Full-Nest Egg Food is the best substitute for insect life. You need it at this season when you begin to hatch your chicks and rear them because insect food is out of season or unobtainable.

Price, 42-ounce carton, 25 cents; 25 pound pail, \$2.00.

ing a space that can be filled by the extra boards, and makes considerably more room inside.

Select the best piece of the parts removed for the door, which should be placed in the back at the left-hand side, and then use the other extra pieces to complete the roof, which should be cov-

rear part and making the main floor into a scratching floor you have a colony house for a small flock that can be moved anywhere desired by simply hitching a horse to it.

While an indoor brooder can be used I have designed one that goes especially good with this house and one that has

EXPLANATION OF DIAGRAM.

A Main door, best located at back on right-hand side. B Window (3 ft. by 28 in.), greenhouse construction, on hinges. C Main floor (6 ft. 6 in. by 5 ft. 9 in.) covered with scratching material. D Ground floor, very important in hot and rainy weather. E Lamp chamber, using coldest air from coop; fumes pass out doors or between floors; no possible chance to get to nursery. F Round hover with flannel fringe as usual with thermometer. G Nursery floor slanting to rear; action of chicks' feet gradually works all dirt to opening over drawer by using dry sand. H Drawer to catch all dirt from nursery floor. I Galvanized iron tube closed at top with holes for hot air. J Door for chicks to go onto main floor, opened any space desired. K Cover door, which should be open on hot days and to clean. L Guard to main floor which lowers on hinges, making a runway to the floor below when they get old enough. M Sliding door leading to ground should always be closed at night. N Scantling should be cut slanting with hole to attach horse. XXX Floor space that the chicks can occupy; over 85 sq. ft. of floor space under one roof.

In the back corner I build a square box with a door on the side for the lamp, which should be of ample size to hold oil enough for a couple of days' use and have a burner that does not require a chimney. Over the lamp space I nail a sheet of any metal that will transmit the heat to the air space above.

Over the air space, which should have a direct connection with the outdoor air, I build a solid floor, slanting it to the rear so that the action of the chicks' feet will gradually work the droppings and fine sand (which should be supplied every few days) to the opening over the drawer, which can be removed when convenient. I have a tinsmith make me a round tube of galvanized iron about seven inches in diameter and about eight inches high and closed at one end, with a row of holes punched through about one inch below the top, and an extra round disk about three inches wide, which slides over the top and just below the holes.

A round hole is cut in center of nursery floor, into which is placed this cone with closed end up and covered with the regulation round cover, with flannel fringe around it cut in strips. The diagram will show how the pure air comes direct from outdoors, is heated while passing over the lamp chamber, and goes direct to the chicks, and as the disk just under the hover prevents it descending direct to the chicks, but spreads it so that the warmest place is a circle all the way round and three inches from the center cone, which prevents all danger of crowding when the temperature gets too low.

A light frame is constructed around the hover, with a door going to the main floor, which is on a level with nursery floor, which is another very good point, and the whole top over hover should be on hinges so that it can be all opened up and thoroughly cleaned and whitewashed when desired.

The fumes from lamp should be carried directly outdoors or through be-

ered with a good two-ply paper roofing, and by using a greenhouse construction window you will have a roof that cannot leak a drop, and covering over eighty-five square feet of floor space, which the chicks can make use of regardless of the weather.

By placing a removable roost in the

perfectly pure air for the chicks to breathe, and one that is practically self-cleaning and will accommodate fifty chicks from the time they are hatched till matured and give them ample room for healthy growth, which can be said of very few combinations that are sold on the market today.

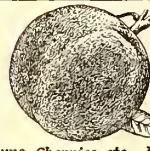

Apple Trees.

We have over half million; Baldwin, Rome Beauty, Grimes, Wine Sap, Jonathan, Stayman's, M. B. Twig, Greening, King and 100 other varieties. Well rooted, smooth and healthy.

Strawberries

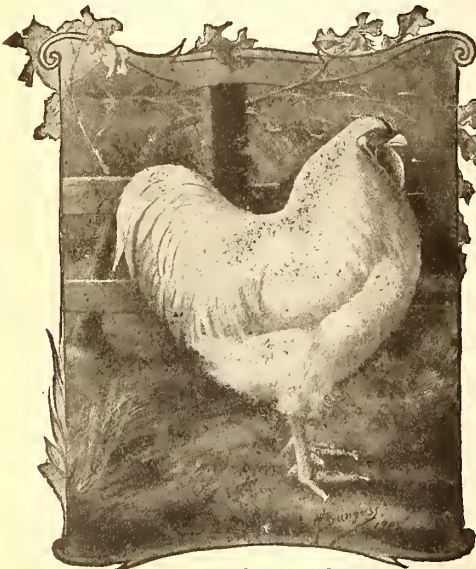

Almo is the most prolific grown. Plant this and our standard list like Excelsior, Tennessee, Haverland, Bubach, Star, Gandy, New Home. Seven million plants.

Ray A FAMOUS PEACH

of Chinese strain; regular bearing, excellent shipper, good color. Also Reeves, Crawford's, Chairs and 100 other varieties in fine condition.

White Wonder 2d

ANOTHER GREAT RECORD FOR FISHEL'S WHITE WYANDOTTES

At the A. P. A. Show held in January, 1906, at Cincinnati, Ohio, 1st cockerel, 1st hen, 4th cock, 5th pullet, 3d pen and five specials. At Indianapolis, Ind., February, 1906, 1st and 2d cock, 1st, 2d cockerel, 1st and 2d hen, 1st and 2d pullet, 2d and 3d pen and three specials. Does not the above prizes demonstrate what we claim?

The Original World's Best

Why not place your orders where you can get the quality? Remember, we have 15 yards mated and can supply you with eggs that are fresh and from birds that are winners. Please send for catalogue, finely illustrated, with pointers to breeders of White Wyandottes. Inclose two 2c. stamps; it is very instructive.

We have several hundred birds yet for sale. We will sell eggs at \$5 per setting of 15 taken from all yards. Please write us, stating just what you want. We will take pleasure in writing you.

J. C. Fishel & Son, Box J, Hope, Ind.

tween floors, as in the diagram, which works very nicely in winter weather, making a house that will raise chicks when almost entirely covered with snow.

About the time the chicks are hatching in the incubator you should paint every inch of the nursery with a good lice killer and start the lamp so that all would be in working order and temperature up to 90 when the chicks are put in.

In the afternoon, when the chicks are thirty-six hours old, or better still, when two days old, you should put about fifty or sixty in the nursery, with the floor covered with fine sand and chick grit and charcoal. After letting them pick at this for an hour I gave their first feed of stale bread soaked in milk and squeezed as dry as possible. They soon learn the hover, which is the only mother they will ever know, and to anyone that has ever operated one of these boxes and raised every chick put into it, it seems actually cruel to give a flock of young chicks to the mercy of a nervous old hen.

The next morning I give them part of the main floor and scatter some small mixed grain in the chaff, and they soon show that it is not necessary for any old hen to teach them to scratch, as it is born in them, and they should be kept scratching for their living all their life to be healthy.

No mash of any kind should be given to young chicks and the ready-mixed chick feeds that are sold composed of cracked grains and smaller seeds will give better results with much less labor. After one week old I advise keeping plenty of high-grade meat scrap, charcoal grit and dry wheat bran before them all the time. Water should be supplied in inverted bottles, so that they have a continuous supply and there is no danger of getting wet.

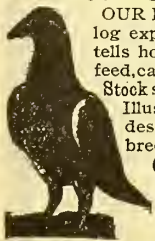

The first ten days are the most important and once their digestive organs are properly started, I have no trouble to make my Rhode Island Reds and Columbian Wyandottes weigh two pounds each when two months old if properly fed and cared for.

These houses are located in a clover-covered pear orchard, with fresh spring water in each yard, supplied by an original geyser arrangement that gives a separate dish of water in each pen by simply turning on faucet for the whole field.

There is nothing better to feed growing chicks after two months old than cracked corn, hulled oats and meat scrap, and nothing will mature pullets quicker and better than good wheat. Hoping I have made my ideas clear enough for you to understand, and if ever you should try one of these houses I hope you will have as good success with it as I have.

5 DUCK FOODS

Duck raisers know that their profits are determined not by how many ducklings they hatch but by how many they raise and market. That means the right kinds of duck foods. No one food will do. There are

Five Midland Duck Foods that will make a sure success, because each food is scientifically formulated for a specific purpose. These five foods take the duck from the shell to market with everything in the way of food they will need and save you money and loss. Sold by dealers or direct from factory. Write today for price and free book, "The Science of Poultry Feeding," which tells how to make money raising ducks. You need this book—we want you to have it.

The Midland Poultry Food Co., Dept. A, Kansas City, Mo.

Gape kills more chicks and growing fowls than any other disease. Of all poultry diseases it has been the most obstinate and one of the most destructive. The gape worms are bred by the wet weather, damp ground and low land, and these worms get into the throats of your chicks and the chicks die. That spoils your chances of a successful year. The very location of the disease—in the windpipe—makes it difficult to reach and destroy the worms.

Conkey's Gape Cure

puts an end to them. A positive preventive and cure of this disease. It comes in the form of a powder and is mixed with the soft feed. It kills the worms and makes the chicks feel good. It will instantly stop the progress of the disease in your flock. A cure guaranteed. If your chicks are not cured you can have your money back. Do not take chances. Get a package from your dealer or druggist, or by mail, 50c, postage prepaid.

OUR FAMOUS BOOK ON POULTRY DISEASES.

CONCERNING INCUBATORS.

"There is nothing new except what is forgotten," expressed her dressmaker to Queen Antoinette. And the bogus hen is nothing new. This statement never startles a speckled hen at all compared with the appearance of a chick-hawk or a weasel in the coop.

The incubator is as old as civilization—some civilizations. With the dawn of modern light, showing that the world is not flat, and that consequently no nation in itself was the center of the universe, other sweeping discoveries clarify the atmosphere, so we see the circumference is everywhere and the center nowhere, just as one has said. With equal force it may be said that we may lay no pretensions to the fatherhood of the artificial fowl-mother; the discovery centers everywhere and nowhere.

The author of fourteen books on animals and their anatomy and the founder of a system of reasoning, Aristotle, who flourished in Greece 2,700 years ago, wrote that in far away Africa (the "dark continent") that the Egyptians with their uniform climate hatched chickens—thirty millions a year—in ovens by means of the sun or artificial

M. M. SMITH, FARMERSVILLE, ILL.,
And two of his prize-winning Barred Plymouth Rock cocks.

heat. It is not known definitely when these people for all kinds of fowls did invest in the incubator business. The shelves of the "mohmals" were sealed hermetically so as to retain the warmth throughout the night. Flavius Vopiscus, historian, and Diordus of Sicily, also record the foregoing process, verifying the assertion that incubation is contemporaneous with the oldest antiquity.

Nor is it anything new to the gallinoculturist of up-to-dateness that poultry or architectural perfection and beauty had been to a remarkable degree of success attained through artificial rearing mothers of the fatherland of the Shanghai or Cochinchina fowl, China. Here in simple, long one story brick buildings, known as "Mi-aus," of which Hoang Ho possesses one of the oldest, incubation was fostered by the Celestials above 1,500 years ago. Little doubt exists, moreover, that professional incubation had been in vogue in China in a very remote period. Ancient Rome paid homage to her sacred chickens; and the religions of the Orientals,

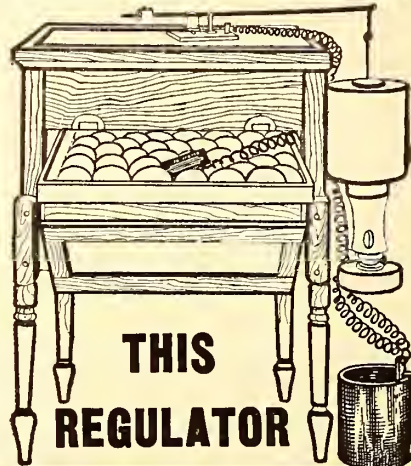

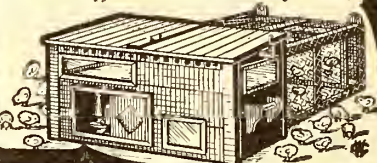

**WHY THE
SHAUB
IMPROVED
BROODER**

should be used by every farmer and poultryman. Because its system of heating and ventilation is so nearly perfect that it practically raises all the chicks placed in it. Requires less time and attention yet rears more chicks.

The heat is supplied after "Nature's method" from the top and center of the chamber. The chicks naturally select the temperature they need, thus avoiding leg weakness and bowel complaints so common in bottom-heat brooders. The Shaub is well ventilated and it is impossible for gas or smoke from the lamp to get to the chicks. The brooder is well constructed and arranged so you can divide your broods into small flocks, avoiding the danger of overcrowding, so frequent with poorly arranged brooders. Can be used as an indoor or outdoor brooder.

Mrs. LeRoy England, Rising Sun, Md., raised 140 out of 150 chicks in a Shaub Improved Brooder. The Shaub Brooder will rear 95 per cent of your chicks successfully and give you perfect satisfaction. Write for catalog and prices.

**M. O. SHERER, M'FG.
Box 101, Louisville, Ohio.**

**THIS
REGULATOR**

**KEEPS TEMPERATURE
RIGHT
DAY OR NIGHT**

The vital point in artificial incubation is absolute control of the temperature of the eggs in the egg chamber of an incubator. In order to accomplish this correctly the regulator must be operated directly from the temperature of the eggs themselves instead of trying to keep the temperature of the air surrounding the eggs in the incubator at a certain degree.

**THE UNIVERSAL
REGULATOR**

is the only regulator on the market which absolutely controls the temperature of the eggs during the entire period of incubation by forming an electric connection through the mercury in the thermometer at 103 degrees. It will fit any incubator and once started never requires adjusting. You can leave an incubator fitted out with a Universal Regulator all day and all night and feel sure that the temperature will be just right. Write for circular.

**The Universal Regulator Co.,
Box B Plainville, Conn.**

SHOEMAKER'S BOOK ON POULTRY

AND ALMANAC FOR 1906.

There is nothing in the world like it. It contains 224 large pages, handsomely illustrated. A number of most beautiful Colored Plates of Fowls true to life. THE TORMENTORS!

LICE KILL 'EM

Get after those relentless thieves of your poultry profits. Don't delay till tomorrow. Buy **LICECIL**. Follow the clearly explained directions on the can. It's a liquid, not poisonous, easily mixed. Your hen house can be rid of lice in two days.

LICECIL WILL DO IT

It's cheap—quick-to-act. Knocks lice dead. They don't come to life again. Make your hens happy, comfortable. Then they'll lay more eggs when they're eased of these terrible blood-suckers. They will take on fat faster. **LICECIL** is a profit-adder. It is also valuable for ridding hogs, cattle and dogs of lice, fleas and other vermin. Use it around the house for disinfecting cellars, etc. Ask your dealer for it. If he hasn't it, send to us. Quart can 35c; 2 qt. can 50c; gallon can \$1.00. Write us your poultry troubles. Our money-saving, new catalog is free. Send NOW for it.

American Stock Remedy Co., BOX 100 QUINCY, ILLINOIS

Buddhism (as old as the Christian religion) and others much older, classified the domestic fowl as a part of their religious institutions; law and custom provided severe penalties for the slaughter of domestic fowls.

The art of producing chicks from eggs by the agency of artificial heat, among modern people appears to be a process which supposedly had been lost (might we not say with the renowned embalming process of the old time Egyptians?) until Reaumur, the noted French physicist, whom the Academy of Science elected to membership in recognition of his services in the discovery of a process of making steel from iron and the invention of a thermometer. Reaumur, through various experiments, is said to have recovered the process of

Vesta, one of the Barred Rocks in the breeding pens of E. M. Buechly, Greenville, Ohio. Sired by Oseo B., a sire of 1st prize winning pullet of 1904, and having for dam 1st Rochester pullet of 1904.

The above cut appeared in our February issue, but through error the wrong footnote was given.

incubation. He died in the year 1757.

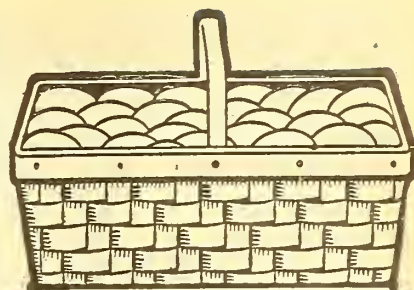

Others, particularly "Charles Hearson," says "The Incubator", (a London publication of the last century), "did more to perfect the incubator in his time than any other man." Many skillful observers and inventors have come upon the scene, so that now the market is replete with numerous highly successful poultry incubators.

ELMER E. ROGERS.

Chicago, Ill.

BUFF PLYMOUTH ROCKS.

That this variety was fortunate in securing a popular name is evident to us all. The word Plymouth Rock is magical in itself, but when prefixed by the word buff it is all the more so, for it immediately brings to our minds a fowl with all the good qualities of the Plymouth Rock variety with the beautiful buff color. It really makes no difference whether any Plymouth Rock blood was used in their make-up or not, so long as they have the general characteristics of that variety they are certainly entitled to the name. That they have all of the good qualities of any or all of the Plymouth Rock family is evident to those who are at all familiar

40¢ a Doz

FOR EGGS

How many dozen a day do your hens lay? Now is the time when every hen you are feeding should be laying every egg she is possibly capable of being made to lay. Don't you think it is worth a little experimenting as regards the feed you are feeding to see if you cannot increase your egg production? If you will begin right now and feed your hens

HARVEY'S Electric Poultry Food

for two or three weeks as an experiment you will find it a profitable experience, not only by way of increasing the egg yield of your fowls, but it will make them look better, feel better and improve their health fifty per cent. Besides it is an economical feed—costs less because it goes farther and does more good. Especially fine for young pullets. Starts them laying quicker and is equally good for the older fowls. It is a ground all grain ration—that means it is all feed, no waste—nothing but real nutritive food for flesh and egg production. If you prefer a whole all grain ration try

HARVEY'S Mixed Grains

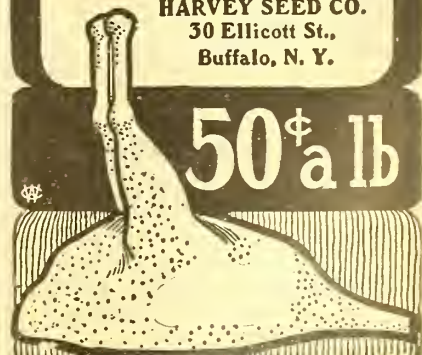

an ideal muscle, bone and egg producing feed. Excellent for the scratching pen. It is composed of carefully selected grains and seeds especially suited to the needs of all kinds of poultry. Its variety of grains affords a sort of "spice" which is relished by all fowls and accounts for the way they thrive upon it.

HARVEY'S Cut Clover Hay

is a valuable assistant to either of the above feeds because it provides a "green food" so necessary in winter time. It will make hens pick up wonderfully in their laying and tone up the general health condition remarkably. Now when broilers are bringing 50c a pound and eggs 40 to 50c a dozen, a little attention to the feed you feed will make your poultry pay handsome profits. Why not try these feeds when the cost is so small? Send for our free catalogue of poultry foods and supplies. It will help you to make more poultry profits.

with them. In fact, in many ways I consider them superior and in no way are they inferior. The buff color has always been and always will be one of the most popular in the show room on account of its brilliancy and beauty. One can easily see why in the Buff Rock we have such a very popular variety. If any other reason was needed we could state that they are distinctly an American production. As a general purpose fowl none can excel the Buff Rocks. They possess all the requirements of a good market fowl, having clean, yellow legs and skin, a plump carcass, with no ill-looking black pin feathers, and their meat is rich, tender and juicy. From the egg to the adult fowl they are healthy, vigorous and always ready for market, whether as broilers, spring fries or roasters. They are extremely hardy, good foragers, and in size are as large, if not larger, than any other general purpose breed. They possess a kind and loving disposition, and enjoy being petted and handled. They make good mothers, and are always contented whether roaming the fields or in confinement. As egg producers they are superior to any of the large varieties, and with proper care will equal the smaller and non-setters. I have raised the Buff Rocks for twelve years, and I think they are the farmer's friend. Yours truly,

F. E. GILLILAND.

Hope, Ind.

A CONVENIENT POULTRY HOUSE.

In nearly every number of the AMERICAN POULTRY JOURNAL I read interesting descriptions of new and handy arrangements and plans for poultry houses, realizing that there may be a benefit derived by an exchange of ideas, I will venture a description of a building which I have just completed, and which I think is very nicely arranged for the accommodation of a small number of fowls.

My building is 12x44 feet; six feet back, eight feet front, covered with felt roofing.

There are five 8x10x12 light windows in the front side which give a great abundance of light for a building of this size.

The building fronts to the south and is divided into three rooms. In the west end I have a room 10x12 feet, one outside door, one window, corn crib, 3x9 feet, oat bin, 3x3 feet; also four stationary coops, 3x3 feet, being double-decked. They have slated fronts and hinged doors.

These coops are raised 20 inches above the floor, leaving a convenient place for storing two bales of straw or other material. The remaining space of this room is used for cornsheller and general store room.

A board partition with door separates this room from the nesting room, which has two windows and an outside door.

This room is 12x16 feet, along the north wall and a part of the south under the windows are arranged rows of nests, each nest being made separate so that they are very handy to handle for scalding and general cleaning. The nests are 13x14x14 inches outside measurement, having a hinged door for front which opens downward. There is also a three-inch strip just inside the door, at bottom of nest to hold the nest material in place.

The top of nest is left open, for the platform for the second row of nests

Chemically pure, keeps poultry strong, healthy and in good laying condition. Corrects wrong feeding. Not a drug, but Nature's own purifier. Coarse or fine granulated, also pulverized for soft feed. 50-lb. trial bag \$1.00; special price for quantities. Samples free. Viger's Coal & Wood Co., 434 20th St., Detroit, Mich.

NO. 3 FOR FATTENING CHICKS

3

A balanced ration for fattening and finishing broilers and hens for the market. Feed as a mash, wet, not sloppy and you will simply be surprised at the results you will get. Feed at stated intervals all you can induce your fowls to eat up clean. You need add nothing whatever to No. 3, just supply the usual grit and green food and Midland Foods will do the rest. Every one of them is for a specific purpose—when you feed it you know to a certainty what the results will be and you obtain them at lowest possible cost. Sold by dealers. Write today for prices and our free book, "The Science of Poultry Feeding." The Midland Poultry Food Co., Dept. A, Kansas City, Mo.

ARE YOUR HENS LAZY?

Some of your "biddies" which strut about your poultry yard and which are not even paying their board, it would be a good plan to "axe" or make them quit their loafing. **Tonic Poultry Food** will make them get to work in double-quick time. They like it. For fifteen to twenty fowls mix two tablespoonfuls with their feed every day—then watch their laying nests. They will lay regularly, rapidly and nearly double the output of eggs.

Tonic Poultry Food

practically costs you nothing. One extra egg a day will more than pay for a 25-cent package. It is vegetable and bone—is harmless. It contains blood-making, flesh-forming, bone-constructing and egg-building materials—it assists the hen's digestion. Makes her happier, more contented, and develops sweeter flesh; gets her ready for market quicker. Makes brighter combs and in every way improves the appearance and carriage of your fowls. Let us help you. Write us a letter, tell us your troubles. We have a 48-page booklet which is waiting for you. We send it free. Ask your dealer for **Tonic Stock Food**. If he hasn't it, send us. Write us today addressing Dept. W, and get our beautiful souvenir calendar free. Agents wanted.

TONIC STOCK FOOD CO.
Elgin, Illinois

makes a cover for the first, the nests being double-decked.

The first or lower platform on which these box nests are placed is 24 inches from the floor and is 24 inches wide, being wide enough for the nests, also leaving a projection in front for the nest doors to rest on when down, making a good, broad landing for the hens to fly up on, making it easy for them to get into the nest.

The second platform is 13½ inches above the first, leaving ½ inch space between the top of nest and platform, so that nest may be placed in position easily. Above this again 13½ inches is another platform for a floor for the third row of nests if so desired (though this would make the nests rather too far from the floor) at any rate for a covering for the second row of nests. By double-decking two sides of this room in this way we have room for about 50 nests. A few more may be added at ends of room if necessary. The lower platform for these nests should be made wider than the second. That is, extend farther out into the room, as the lower row of nests is not set entirely back against the wall so that when the second row is placed back against the

BARRED PLYMOUTH ROCK.
A New York winner. Owned by Harry M. Lamon, Center Moriches, L. I., N. Y.

wall (the doors being down) will not interfere with getting at the lower row. That is, the upper row of nests being set back a few inches makes it convenient to see into the lower nests without stooping.

The top platform needs only to be just wide enough for a cover for the top row of nests. It is well also to slope this upper platform, for if not done the fowls will use it for a perch when confined in the building.

This room is separated from the roosting room by a wire partition with a door in center. This room has two windows and an outside door in east end wide enough to admit my hand cart.

The dropping boards are made double-deck. The lower boards are 20 inches from floor, 4 feet wide, running the entire length of room (18 feet) and sloping slightly downward toward pass-way. Eight inches above the dropping board are the perch poles, this leaving sufficient space for using scraper in cleaning the board. The poles are made of

WARREN'S

S. C. W. Leghorns, S. C. W. and Buff Orpingtons

Winners at New York, Chicago, Pittsburg, Allegheny and Butler. At the late Butler Show, on ten entries, won six 1sts, two 2ds, two 3ds and eight specials. My 1st prize S. C. White Leghorn pullet scored 96½. This is proof that Warren has the quality. You owe it to yourself to get my prices before ordering elsewhere. Eggs from \$2 per 30 to \$5 per fifteen. Circular free.

BERT WARREN, - Route 33, Evans City, Pa.

BARRED ROCKS

Of exhibition quality, fully up in weight, with deep, narrow, blue harring, and bred to lay eggs. At our show, February, 5-11, 1906, they won 1st, 2d, 3d hen, 2d pullet, 3d pen, 75 birds competing. They bring me winners, they will do so for you. Eggs \$2.00 per 15, \$3.50 for 30, \$5 for 50, \$8 for 100. Fertility guaranteed.

WM. TAIT - - SHELBY, OHIO

Mrs. Bailey's BARRED ROCKS

Hold the enviable record of winning more prizes in the last twelve years in my own and customers' hands, according to number of birds shown and shows made, than any other western strain. I have always bred my prize winners. Queen of the West, a hen I bred and owned, holds the highest score of any winning Barred Rock hen ever shown at Kansas City. My record on five pullets at Kansas City, 1906, has never been approached, winning 2d, 3, 4th, tying for 5th, 2d losing to 1st on a tie, my bird being over weight. Choice farm raised cockerels at reasonable prices. Eggs \$3 for 15, \$5 for 30.

MRS. C. O. BAILEY - - - - CAMDEN POINT, MO.

S. C. Buff Orpingtons Exclusively

The Gold Nugget Strain. Line bred for years. My stock has won more than their share of the blue ribbons in the best shows in Illinois and Iowa. Four grand breeding pens headed by winning cocks and cockerels. Eggs \$3 per 15 straight. A few fine cockerels for sale. Write for mating list.

ON THE IRRIGATED FARMS

In the valleys of the Grand, Gunnison, North Fork and Roaring Fork Rivers and in the San Luis and Uncompahgre Valleys, of Colorado, and the Farmington district of New Mexico,—farming, stockraising and fruit growing are carried on in a way that is a revelation to the farmer in the east.

For those who desire to make new homes, there is no other region that offers better advantages than western Colorado—a land of blue skies and sunshine, with a temperate and even climate, where the erstwhile desert needs but to be tilled and watered in order to verily "blossom as the rose." Several illustrated publications, giving valuable information in regard to the agricultural horticultural and live stock interests of this great western section, have been prepared by the DENVER & RIO GRANDE RAILROAD, and can be obtained by addressing

2x2 inch strips, rounded on top, dressed and painted. Being smooth they furnish no harbor for insects. The upper dropping board is 20 inches above lower perch, all being finished as below. Both sides of room are finished alike, leaving a passway in center of room 4 feet wide, making room for a hand cart (which should be only as high as the lower dropping board) into which the droppings may be scraped directly from the boards.

The nests and dropping boards being built above the floor all around gives the entire floor space of these two rooms last described for scratching room, thus serving a double purpose.

The floor of this building is of concrete, being varmint proof. Walls of

ROSE COMB BROWN LEGHORNS AS WINTER LAYERS AND WHAT IT COSTS TO PRODUCE EGGS IN WINTER.

Having bred Rose Comb Leghorns for five years, I knew they were good winter layers, but still this did not satisfy me, so I decided to shut up 54 pullets and four cockerels, April hatched. I divided them in two lots of 27 pullets and two cockerels each and housed them in two houses—29 to each house. The houses are 10x18, divided in two rooms, roosting room 8x10, and scratching shed 10x10. The houses face the south with one window in each room, are sided with barn siding and the cracks bated

MAJOR 8th
FIRST AT
NEW YORK
BRED & OWNED BY
IRA CKELLER
PROSPECT OHIO

A MODEL GOLDEN WYANDOTTE COCK.

Owned and bred by Ira C. Keller, Prospect, Ohio. Never beaten; winner of two firsts at New York, first at Chicago, first at Cleveland and two firsts at the Ohio State Show. One of his sons won thirteen firsts in Australia, another son won first over Crystal Palace winners at Cape Town, South Africa. A brother won first over a Crystal Palace winner at Christ Church, New Zealand, and many of his sons, grandsons and great-grandsons have been winners all over this country and other parts of the world. Mr. Keller breeds thousands of Golden's each year and has bred them since 1882. He is the leading judge and authority of the breed, being one of the originators of the variety.

"shiplap" without lining is sufficiently warm for this climate.

This building is large enough for 150 hens of my breed (White Rocks) and they are not crowded. They are kept confined only during the most severe weather, or when there is snow on the ground. While they are confined to building they have a good litter of straw to work in. They seem comfortable and contented and are giving us a good return of eggs at present.

PALMER WATERS.

and painted, are lined on the inside on the north wall with two-ply roofing paper, but west end and east end are only sided with one inch barn siding and the cracks bated. It is roofed with shingles. For a floor I use clay. The houses are built on a brick foundation about one foot high, and filled in with clay and smoothed down till it was as smooth as I could get it and it stays that way. I use a broom and sweep the droppings up every morning and put them in the garden and farm land

where I raise my corn and golden tanker mangles. I sprinkle a little sand on the clay after I sweep the droppings up, to keep them from sticking. I use straw for litter in scratching shed. I clean it out about every two weeks and put in new, clean straw. I penned these 54 pullets and cockerels up Dec. 22d and weighed all feed fed to them. I feed a small feed of wheat and oats in the litter the first feed in the morning and at noon I feed a mash of wheat bran and middlings and cracklings, about two parts bran, one part middlings and three parts cracklings. I get the cracklings at the butcher shop for one cent per pound. I take an ax and cut the cracklings up as fine as I can, then I pour boiling water over them and let them stand till they get cold. Then I mix the bran and middlings and cracklings to a crumbly mash. I put in a pinch of salt and feed what they will eat up clean. I feed this at noon. I feed them mangles every day, all they want of them. I find they are fine green feed and easy to raise and can be kept all winter in cellar or can be buried with straw and dirt. For the last feed at night I feed all the corn they will eat. I keep fresh water before them at all times and also oyster shells and good, sharp grit and a good dust bath. I have used only such feed as can be had by any one. If you live on a farm you can raise all of your feed, but the bran and middlings and cracklings, and these can be gotten in any town. I have charged this feed bill at market prices: Corn, 40c per bushel; wheat, 80c; oats, 30c; bran, 1c per pound; mangles, 1/2c per pound; middlings, 1 1/4c per pound, and cracklings, 1c per pound. Oyster shells, 1c per pound. I ran this experiment 44 days, from Dec. 22 to Feb. 3. The following food was consumed:

Corn, 3 bushels.....	\$1.20
Wheat, 2 bushels.....	1.60
Bran, 26 pounds.....	.26
Oats, 1 1/2 bushels.....	.45
Middlings, 13 pounds.....	.13
Cracklings, 36 pounds.....	.36
Mangles, 158 pounds.....	.79
Oyster shells, 6 pounds.....	.06

Total.....	\$4.85
Number of eggs layed is 1,000, or 83 1/3 dozen. It cost less than 6c per dozen to produce these eggs. Sold at 20c and 36c.	
50 dozen at 20c.....	\$10.00
33 1/3 dozen at 36c.....	12.00
Total.....	\$22.00
Feed used.....	4.85

Profit..... \$17.15

RECEIVING AND ANSWERING CORRESPONDENCE.

Take it from a business standpoint, there is no business that requires more prompt attention than does the poultry business.

Even the little things if neglected will grow to be an elephant on our hands.

Prompt attention given to the little details of the business as well as the more important things should be the watchword of every fancier.

One of the very important phases of the poultry business is the receiving and answering of correspondence. When a breeder pays out his good hard cash for

advertising his stock or eggs as the case may be, he undoubtedly expects to get sufficient results to justify him in the expenditure. Money does not grow on trees for the fancier. Nor does an ad. in a poultry journal always pay if the breeder carelessly loses the business after the journal has brought the business to his door, as it were.

It is very frequently the case that when a person makes inquiry for stock or eggs that he will also write to perhaps several breeders at the same time. In such case the breeder that is slow to answer correspondence (thinking there is plenty of time) is going to let some other breeder get the business, where if he had been prompt in answering the inquiry he would have just as good a shake at a rat as the other cat.

I do not think it is wise (when answering an inquiry) to make statements about your stock in such glowing terms as to mislead a customer were he a novice, but just simply give the facts as they are. Then breeder and customer are alike satisfied.

A friendly relation and understanding between breeder and customer is very desirable. Sometimes a breeder will answer an inquiry, but will not get an answer from the party that made the inquiry. In such case it is a good policy to write another letter or in other words use the follow-up system.

Sometimes a breeder loses an order that he would have gotten were it not for conditions that he was not in any way responsible. For illustration, I received a letter of inquiry from a Mr. Russell Horton, of Kansas City, Mo. Mr. Horton gave his address as follows: Russell Horton, Kansas City, Mo. I answered the inquiry, giving the above address. In ten days the letter was returned uncalled for.

Kansas City is a very large city and such an address is very insufficient. Mr. Horton should have given his full address with street number. Then he would have received my letter at once. If Mr. Horton will please write to me, giving his address I will be glad to answer same.

No doubt by mistake Mr. Horton failed to give me his full address, and in my mind there is no doubt that he thinks I have carelessly neglected to answer his inquiry. Breeder and customer should be very considerate in their correspondence, which will avoid any misunderstandings, and insure satisfactory results. BURTON J. HOLT,

Supt. Hunky-Dory Farm,
 Pella, Ia.

2

No. 2 Midland Poultry Food makes chicks grow rapidly—it enables late hatched chicks to mature for winter layers as well as making early spring broilers in shortest possible time. Feed No. 2 as a mash in moist, crumbly state from time chicks are 10 weeks old until four or five months old or about matured, when they should be finished with No. 3. Midland Foods are for special purposes and every one of them is the best in the world for the purpose. Sold by dealers. Write today for prices and our free book, "The Science of Poultry Feeding"—it will save you money and show you how to feed to get more money. The Midland Poultry Food Co., Dept. A, Kansas City, Mo.

Shows, Associations and Clubs.

The Latest News of the Show Room—Announcements of Special and Regular Meetings of Associations and Specialty Clubs—Secretaries are Requested to Send in the Latest News.

THE NEWARK SHOW.

Surely no one who visited the Newark show could help but notice its improvement over last year. We are glad to know it is improving, although today it stands away up in the poultry world as a show of quality. The "Fanciers' Poultry Association" can look at their tenth annual exhibition as a very successful one. The secretary and superintendent, F. F. Rackham, is the one whom we can thank probably more than any one else for its success. He is a man who always improves every opportunity in making a show go off in its best manner. The show was held in the hall on the top floor of the Bamberger's building. This year there was all told nearly 1,000 entries. The show was cooped and fed by Spratts Pat. It was estimated that during the week 70,000 people attended the show. We know, however, after 9 o'clock in the morning it was almost impossible for one to pass up and down the aisles.

To begin our report with we have a good class of Light Brahmas. C. P. Nettleton, of Sheldon, Conn., was largest winner, winning three first, two second, one third and one fourth. Mr. Nettleton brought out some very good shape and color in his exhibit. Among the other

exhibitors we had A. C. Ballinger, of Belleville, N. J.; Chas. J. Agust, of Jersey City, N. J.; Harriet Rateliffe, of Howard, R. I., and Richfield Poultry Yards, of Richfield, N. J.

In the Dark Brahmas there was only one exhibitor, George W. Heck, of Easton, Pa.

The Partridge Cochins were a little light. J. C. Froelich, of Newark, N. J., won first cock and hen, and S. W. Carley, of Orange, N. J., first, second, third and fourth cockerel and pullet.

The White Cochins while being small in number were good in quality. Some very good toe feathering was seen in this class. Geo. W. Heck and Wm. H. Heil, of Eaton, Pa., were the principal exhibitors. Heck was the largest winner.

Mr. Heck was also the lucky man in Black Cochins.

In Barred Rocks we have an excellent display, both cockerel and pullet breeding strains were well brought out. There were 85 birds in the class. The Blue Barred Farm, of Chancevater, N. J., succeeded in winning first and second cock, first and fourth hen. J. E. Waite, of River Edge, N. J., was also one of the prominent exhibitors, his first and second prize pullets were grand, good barring with excellent shape. Judge Drenvested called the first prize one, one of

the best he had ever handled. Mr. Waite also showed a good pullet breeding cockerel. D. O. Hastings, of Wilmington, Del., and H. D. Riley, of Stafford, Pa., and E. L. Geisch, of Morganville, N. J., were also among the winners.

The Buff Rocks were all good and some very fine colors were seen in this class.

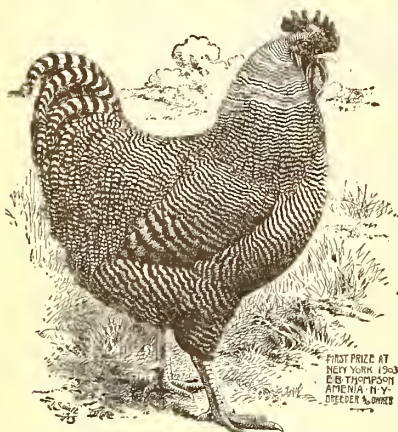

The White Rocks were the attraction of the show. Peapack Farm, of Peapack, N. J., was the largest winner, winning the \$100 silver cup for the best display in the show. We have not seen a nicer string of White Rocks shown than Peapack Farm showed at this show. Wilson & Geitel, of East Orange, N. J., won first prize cock; all the rest of the firsts went to Peapack Farm.

There were also a few Partridge and Silver Rocks exhibited by Exmoor Farms, of Lebanon, Pa., and R. C. Keen, Newark, N. J.

In the Wyandotte class we had a good exhibit of all varieties, especially in the whites. Deacon Ivory Sparks, of Swainton, N. J., was the largest exhibitor and won his share of the awards. We are sorry, however, that the "Deacon" did not wash his birds, but somehow they seemed to win just the same. Oceanside Poultry Yards, of Rockville Center, N. Y., also showed some fine specimens. W. T. Foster, of Woodstown, N. J., showed the first prize cock. Next we have the R. I. Reds which made a very fine showing in both varieties.

And now we are down to the "Englishman's," the Orpingtons, which were well represented at this show. Willow Brook Farm, of Berlin, Conn., made the largest winning, thirteen firsts, ten seconds and one third, on 24 entries, and the Ivory Soap special \$100 cup for whit-

"Ringlets" are the Imperial Birds

FIRST PRIZE "RINGLET" COCK AT NEW YORK.

The three most superb Barred Plymouth Rock Exhibition Pens on either hemisphere were exhibited by **E. B. Thompson** at the recent **New York Show, Madison Square Garden, Jan., 1906**; winning **1st, 2d and three special prizes on pens**. The **Harding Challenge Silver Cup for best pen**, and the **American P. Rock Club's grandest special prize for best pen mated to produce Exhibition Cockerels**.

My first prize Silver Cup Pen was stamped with the seal of "Ringlet" perfection.

These three "Ringlet" Exhibition Pens were the most striking feature of the most wonderful array of Barred Rocks the annals of time record. They represent the cream of my long and rich experience. The sun never before shone on **Madison Square Garden** when the great building held three such **Matchless Exhibition Pens**, they were the triumph of the Fanciers' Art.

My "Ringlet" Cockerel at New York winning the **American Plymouth Rock Club's special prize for best shaped male** is a perfect "Apollo," the ideal Barred Rock male of the New Standard of Perfection.

THE "RINGLET" BREEDING PEN WINNING the Club's Great Special offered for the best pen mated to produce exhibition cockerels was declared to be the very acme of skill in mating, a revelation in the science of BARRED ROCK cockerel breeding. Matings made up of such birds as these and their blood must produce the great winners for next season's shows and future years.

"Ringlet" Eggs Are The Best That Money Can Buy

Mr. E. B. THOMPSON, Amenia, N. Y.

Dear Sir:—I take pleasure in thanking you for the setting of "Ringlet" eggs you sent me. One of the cockerels from these eggs has won many first prizes for me, and this winter at the **Lindsay Show** he won first prize, scoring 94½ points. I got one pullet from your eggs that was never beaten except by one of her daughters. I showed her at **Lindsay** this winter winning first prize and all specials for best female of any age. She scored 95½ points, the highest score of any hen of any breed on exhibition. She was pronounced the most perfect Barred Rock hen ever shown. I again thank you for the high quality "Ringlet" eggs you sent me. Yours very truly,

Burnt River, Ontario, February 15th, 1906.

JOSEPH HARPER.

Eggs from the best at usual prices, one setting \$5, two settings \$9, three settings \$12, four settings \$15. Many of the winners at the most important shows this season, and for years back, were from "Ringlet" eggs.

Richly illustrated 36-page catalogue upon request, it is full of illustrations of New York winners from life. Elegant exhibition and breeding birds for sale in any numbers. See my other ads.

Address **E. B. THOMPSON Lock Box 510, Amenia, N. Y.**

est bird in show on their white Orpington hen.

The Dorking class had some very good birds. Geo. B. Inches, of North Grafton, Mass., was the largest exhibitor and winner.

The Mediterraneans were well set out in all classes.

In Brown Leghorns we have some birds that would not look out of place at any show held this year. E. B. Cridler, of Dansville, N. Y., made 13 entries and won ten prizes, not so bad for Cridler. He also exhibited two pens, one cockerel breeding and one pullet breeding, that deserve much credit. But the attraction of the class was the first prize hen, exhibited by Sophia Pitchlynn, of Washington, D. C. We have never seen the equal of this hen for color. It is too bad this hen was not in good plumage so Miss Pitchlynn could have shown her at New York. However, she did not come all the way from Washington, D. C., for nothing, as she brought with her the first prize hen and second prize pullet.

The R. C. Browns were good in quantity and quality. S. C. White Leghorns were not so many in number as they usually are at the eastern shows. In the S. C. Buff Leghorn class there were some birds of very fine quality. So much can not be said in regard to the quality of the Buff Leghorns at Newark. R. L. Jacobins, of Montclair, N. J., and J. I. Craig, of Arlington, N. J., were the largest exhibitors. John G. Roberts, of Undercliff, N. J., exhibited a fine lot of R. C. Buffs.

Silver Duckwing Leghorns were extra good in quality. Exmoor Farms won every first and second.

The Minorcas and Andalusians were all well represented.

The display of Hamburgs and Polish was a little light.

A large collection of Pit Games was shown. H. L. Fox, of Ridley Park, Pa., showed some birds that would put up a hot battle we should imagine. Standard Games were a little light, with the exception of Cornish Indians.

Next in line are the little fellows. All the Bantams were extra good in quality. The Golden and Silver Seabrights made a very nice show. Glenbrook Farm, of Stamford, Conn., was one of the largest exhibitors. Their first

prize Silver hen was extra fine, open lacing. The varieties of Cochin Bantams were all good. John West, Columbia, Pa., Glenbrook Farm, August Reinhart, Orange, N. J., and Dr. H. W. Lincoln, of Brooklyn, N. Y., were the largest winners.

We have not seen a finer collection of Game Bantams this year. The Short Hills Poultry Farm, of Short Hills, N. J., exhibited a grand lot, and all their birds were extra good in station.

The water fowls, turkey, cat and pet stock displays were a little light.

ful show ever held in the state. Over one thousand two hundred head of poultry were on exhibition, and the quality was the very finest. The large Armory Building was full to overflowing, and Judges McClave and Lambert were busy three days in placing the awards.

In addition to the large display of poultry there were good displays of the leading incubators, brooders and poultry supplies, made by local and out-of-town firms. A most pleasing feature of the show was the large attendance of fanciers from all parts of the state. Many

SINGLE COMB WHITE LEGHORNS.

This pen of S. C. White Leghorns has a record of 240 eggs each a year, and the male was sired by the first prize cock at Boston, 1902. Bred and owned by W. L. Fern, Elgin, Ill.

In concluding this report I want to say we wish to Newark many more successful poultry shows like the one they have just held. WM. C. JENNINGS.
Marathon, N. Y.

WISCONSIN STATE POULTRY SHOW.

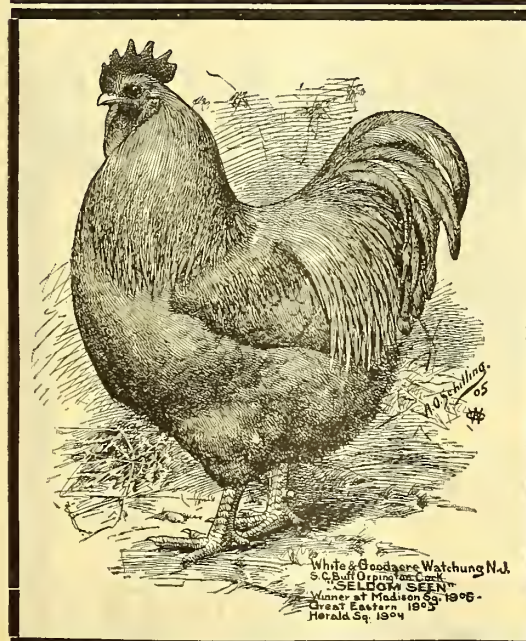

The Ninth Annual Exhibition of the Wisconsin State Poultry Association was held January 15 to 20, at Oshkosh. It was by far the largest and most success-

ful of them were exhibitors, others were present to renew acquaintance, and still others came as buyers. Excellent sales were reported.

Barred Rocks were the leading class with 185 entries. Specimens fit for any competition were on exhibition, and the winners, as well as many that were unplaced, can be counted top notch birds.

White Rocks brought out 125, all pure white, well shaped birds. Here again the winners are of first quality.

Buff Rocks, a small class with average quality.

H. W. BUCKBEE, Farm Rockford Seed Farms, 183 ROCKFORD, ILL.

White Wyandottes numbered about 100. Honors were hotly contested, and the winners had to be good ones.

Buff, Golden Laced, Silver Laced, Silver Penciled, Partridge, and Columbian Wyandottes were well represented with some fine birds.

The Light Brahma alley was filled with large typical birds that scored way up. Partridge Cochins class was strong and the Black Langshans loomed up as strong as ever. Here were specimens that rank with the best in America.

The display of Leghorns were unusually large. In S. C. and R. C. Whites, S. C. and R. C. Browns, Buffs and Blacks there were some of the very finest specimens, and quality was uniformly good throughout. The Minorea class is always well filled, this year being no exception to the rule. The winners were large, well shaped birds with good sound color.

The Cornish Indian alley should receive special notice for numbers and quality. After looking at the fine birds on exhibition it was not hard to understand the growing popularity of the breed.

Silver Spangled and Black Hamburgs were of fine quality.

The Rhode Island Reds were out over 100 strong. Many of the winners were of great merit, and the class as a whole was a credit to the breed.

Bantams are always shown in large numbers at the Wisconsin State Show. This year 225 of the little fellows were shown. In Games, Cochins, Seabrights and Japanese the exhibits were excellent. Many of the Bantams shown here have many winnings at the largest shows to their credit. Undoubtedly this was the largest display of the best Bantams in the West this season.

Turkeys and geese were of good quality, though few in numbers.

FRANK W. RADFORD.

LINCOLN, NEB.

The 1906 show of the Nebraska State Poultry Association was held in the Armory of the University at Lincoln, Neb., January 15-20. Never before has the association held a larger or more successful show. The armory, of course, was not as large as the exhibition hall of last year, but it was well lighted, well heated, clean and made one of the best show rooms in the capital city. The Auditorium is the one building in Lincoln

larger than the Armory, and in this Auditorium the 1907 show will be held. The judging was finished in good style this year by Larson, Russell and Southard, and all exhibitors seemed well pleased with the awards as they were placed by these judges. Next year the judges will be Russell, Rhodes and Shellabarger, the three authorities on scoring in the West. Their score cards sell the birds and can be relied on to give a true estimate of what the bird is worth. At the annual meeting of the association the president, secretary and treasurer were re-elected and will hold office for another year. These officers the association has always found to be very efficient and painstaking in their work. There was a new board of directors elected, and this

W. C. ELLISON.

Secretary American Buff Wyandotte Club,
1910 4th St., S. E., Minneapolis, Minn.

board has the best interests of next year's show and the other business of the association at heart. The annual banquet was held in the Lincoln Hotel where nearly seventy fanciers were seated and enjoyed a very pleasant evening. Secretary Ludden, one of the best speakers in the West, acted as toast-master, and in a rather informal way various members of the association and visitors were called on to give their ideas concerning poultry culture and exhibition. The association desires to thank the many exhibitors and breeders who attended and those who inquired for premium lists, all of which helped to make the show the grand success that it was.

DON'T YOU WANT TO KNOW MORE ABOUT THIS BROODER?

HOW MANY CHICKS did you lose last year after you had gone to the trouble and expense of hatching them? More than you like to think about. Don't make the same mistake again. Don't use a make-shift brooder. Get the

HUMPHREY PURE AIR BROODER

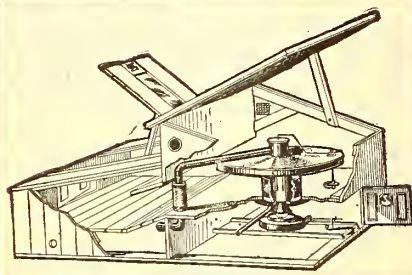

the only brooder made that gives to the chicks absolutely pure air, absolutely sanitary conditions, and perfect warmth without danger of smothering. We don't believe there's a single poultry man in the whole country who could examine the Humphrey and not say at once:

"Here's a Brooder that will REALLY raise Chicks."

Watch other makers coming our way. We want you—as a favor to yourself—to

Send Your Name for Free Book

describing the Humphrey Pure Air Brooder, the Humphrey Open-Hopper Bone Cutter, and other appliances for the poultry raiser who is really interested in his work from the dollar and cents profit standpoint. If you don't care whether your poultry pays or not, don't bother. If you do care, and are willing to investigate, send now before you forget it.

We don't ask you to take our word for it. We don't ask you to take our unsupported claims. But we do ask the privilege of showing you how the Humphrey is constructed and why it gives the young chicks a chance for their lives.

Now, if the brooder you are now using is a disappointment, write to us and let us show you how we can make it over into a first-class Humphrey Pure Air Brooder.

The expense will be small and the results absolutely successful. Other ideas in Brooder construction are coming rapidly to the front.

SEND YOUR NAME TO HUMPHREY Troop Street Factory, JOLIET, ILL.

Remember that the next show will be held January 14-19, 1907, in the mammoth Auditorium at Lincoln. Any further information concerning winnings, scores, special premiums, etc., may be had by addressing Secretary L. P. Luden, Lincoln, Neb. A. D. BURHANS,

PENNSYLVANIA FANCIERS' ASSOCIATION.

The fourth annual exhibition was held in Harrisburg, Pa., Jan. 22-27, 1906, and exceeded by far all former shows for quality of exhibits and attendance. The classes were all well filled, with Barred Rocks leading in numbers. The dog show held in connection in a separate hall overhead was a great attraction, where one of the most famous English bull dogs, "Merscham Rose," was on exhibi-

PARTRIDGE WYANDOTTE HEN.

Winner of first at New York and Chicago, 1906. Bred and owned by W. A. Doolittle, Sabetha, Kan.

tion. The show was well patronized, there being over 500 tickets sold Saturday night, in the short time of two and one-half hours. G. W. Kinter, of Dillsburg, placed the awards in the Light Brahma, S. C. Buff Orpington and S. C. Brown Leghorn classes, and H. A. Emmel, of Mars, Pa., placed the awards in all other classes, and not a dissatisfied exhibitor was to be found when the award cards were in place. The show wound up with every one in a good humor, looking forward for the next show. The officers are all real fanciers and deserve credit for the friendship shown.

PARIS, TEXAS.

The first annual exhibit by the Lamar County Poultry and Live Stock Association was given in Paris, on Friday and Saturday, the 12th and 13th of January. This was the first show of the kind ever held in Paris, and the large number of entries, and the number of people who visited the show, have created a most remarkable interest in better poultry in that county, and most of the local breeders have already sold all their surplus stock, and booked all the orders for eggs that they can possibly furnish; some have refused to take any further orders.

The interest manifested throughout the entire county in the poultry and live-stock industry assures the association that they will soon have one of the largest and best annual exhibitions in the state.

Mr. R. A. Davis, of Farmersville,

acted as judge of the show, and gave absolute satisfaction to all.
 The Barred Plymouth entries were highly creditable, to beginners, many of the birds scoring as high as 93½ to 94½; with very few birds scoring as low as 90 and below. The popular White Wyandottes entry was large in number, and attracted considerable attention. Every one seemed surprised that chickens could be grown so perfectly beautiful and snowy white. In this class many birds scored from 92 to 95.
 The White Plymouth Rock entry, while not so large in number, were of high class birds, scoring as high as 95. The Pit Game entry was unusually large and of high class birds. There was some very fine Light Brahmas, Brown Leghorns and Buff Orpingtons. There were not many turkeys, but those on exhibition were large and attractive. The Lamar County Poultry and Live Stock Association was organized last November with Dr. E. F. Morris president and Rube S. Wells secretary-treasurer.

REORGANIZATION OF WATERFOWL CLUB OF AMERICA.

Fully realizing the seeming disrepute into which the club had fallen, the poor

the mental resolutions made by the various gentlemen who have awakened at last to the absolute necessity of more specials; encouragement to the amateur breeder and a better display at the leading shows. Each state with ten or more members is to have a vice-president, and to have club specials offered at a show each year. Fellow breeders, why not try to make up that list of ten? Are your interests not worthy of the efforts? Every show held in your state means more trade for you. Means new members for a club which should be numbered by hundreds. Join the club. Let us have an early enrollment from every state. Competent men have been selected as judges. The following gentlemen have been selected for officers for 1906: Mr. Clarence King Romulus, New York, president; Charles McClave, New London, O., vice-president; M. F. Delano, Vineyard Haven, Mass., treasurer. Dues, \$1.00 per year.
 Address your applications for membership to G. J. Ross, Secretary, 289 Fourth Avenue, New York City.

AUBURN, N. Y.

showing of waterfowls at Madison Square Garden and the grand possibilities of a fully organized hard working club, the leading waterfowl men met in the committee room of the Garden at New York, on Saturday evening, January 6, 1906, and unanimously decided by actions and offers to make the club worthy of the name. Business principles are to be in vogue. Every breeder of waterfowls is to be urged to become a member. Illustrated articles prepared by experts furnished to the press. In fact no longer shall the geese and ducks be relegated to the rear of halls, neglected both in regard to premiums and proper attention. These are a few of

January 18-23, was a decided success in number and quality of exhibits and financially as well. The hall is well lighted and roomy and the birds were cooped in new Empire coops. The entries numbered 1,367, with about 1,800 birds. The American classes led, closely followed by the Mediterraneans and the Orpingtons were next in the race, there being shown 82 Black, 75 Buff and 35 fine White Orpingtons. There were good classes in some of the other varieties and nearly all were well filled. The greatest advancement in any class was made in Orpingtons, 190 being shown against 96 last year, and 35 in 1904. The New York State Orpington Club offered an

Notice to Poultry Raisers!

Before you buy your 1906 incubator be sure and get our big "Old Trusty" Book. 124 large pages. 300 illustrations. Straight, every-day chicken sense in every line. It costs a lot of money to make, but it's *free to you*, if you're at all interested in chicken-raising. It will help you a lot whether you buy "OLD TRUSTY" or not.

Johnson Pays the Freight.

A Personal Letter from M. M. Johnson

I honestly believe that I am offering chicken raisers the very BEST VALUE in incubators and brooders that they can obtain anywhere.

And I'll tell you WHY.

In the past two years I've sold more than 30,000 "OLD TRUSTIES"—every last one of 'em ON TRIAL, and I want to say to you that with very few exceptions they have all STAYED SOLD.

NO OTHER INCUBATOR IN THE WORLD EVER MADE SUCH A RECORD IN SO SHORT A TIME.

Now, I don't claim that "OLD TRUSTY" is the ONLY good incubator but I DO claim, and I'm right here to back up the claim, that "OLD TRUSTY"

- is sold on a fairer plan
- is better built
- takes less oil
- requires less attention
- hatches larger percents
- produces stronger chicks
- and is the most ECONOMIC incubator you can buy.

I want to PROVE these claims to you.

If the book doesn't convince you, get "OLD TRUSTY" on a 40, 60 or 90 days' trial, and let it PROVE ITSELF.

What do you say?

Write me anyway.

Very truly yours,

M. M. JOHNSON,
Incubator Man.

YOUR SUCCESS In Hatching Chicks

depends upon the kind of incubator you buy. You can't afford to make a mistake; you can't afford to take the say-so of Mr. Blame-it-all or Mr. Blow-Hard; you can't afford to experiment with new or untried experiments. *You want to be sure.* How can you do it? Well, the *best* way is to *try the machine.* If it isn't well-built, if it doesn't do good work; if it is hard to control and operate, *send it back.* That's the fair way. That's our way. We give you a

40, 60 or 90 DAYS' TRIAL ON

Old Trusty

It's the easiest to operate because it runs itself.

You may take off one hatch—two hatches or three hatches—until you are *satisfied* it's the incubator you want.

We know you *will be* satisfied, for we don't care where you look, you can't find a *better* incubator.

It's made of California red-wood—double walls throughout, with dead-air space between—matched and joined like a piece of fine furniture.

The copper pipe heating system (covered by two patents) is the *only* system that gives a perfectly *even* radiation of heat to all parts of the egg chamber.

The regulator is without question the most simple and positive of any regulator made. Unlike others it is *below* the top of the machine and is not in the way. It is counter-balanced within itself and does not ever need *readjusting*. It is attached and connected when shipped.

But we do not intend to describe "Old Trusty" in detail here.

Get our book and see the why's and wherefore's for yourself.

We invite comparison with any other incubator made—in *construction*—in *dur-*

ability—in *hatches*—in *strength of chicks*—in *economy of oil*—in *ease of operation*.

Remember this is the incubator founded on 13 years experience in building incubators *largely* for *inexperienced users*. We have been compelled to make them *automatic*—self-regulating and next to self-operating. We guarantee that no incubator will give you so little trouble—no incubator will cost so little for oil—no incubator will give you better results. Get the book and see.

We Save You Money.

Don't think you need pay two prices in order to get a good machine.

We have knocked the spots off high prices.

We will sell you *direct* and save you money.

We *pay the freight*, and having distributing houses all over the country, we can fill your order *promptly* and at a *low price*, no matter where you live.

Send today for catalogue No. 43. You'll be glad.

M. M. JOHNSON COMPANY,

CLAY CENTER,
NEBRASKA.

elegant silver cup for best display by any of its members, which was won by W. H. Gifford, of Auburn, on his grand display of Blacks, his winning cockerel being a marvel in size, shape and lustrous sheen in color.

The club has a good membership, constantly increasing and hopes next winter to offer a cup on all three varieties for best display. All state breeders are urgently requested to join, which they can do by sending one dollar with name and address to MRS. J. G. OSBORNE, State Sec'y. and Treas.

Fabius, N. Y.

BUFF LEGHORN MEETING.

The annual meeting of this club was held at Madison Square, New York City, January 4, 1906. The meeting was called to order by President Thomas Peer, and W. F. Brace was elected secretary pro tem. The report of Secretary and Treasurer Barnes was read and adopted, showing the club to be in good standing.

Many matters pertaining to the welfare of those egg machines, the Buff Leghorns, were discussed. It was decided that the secretary should go ahead and get the next catalogue out by the last of March. All breeders of this good, valuable breed are requested to send their \$1.00 for membership at once, and get their name in the next book, which will be mailed free to any person asking for the same. The following officers were elected:

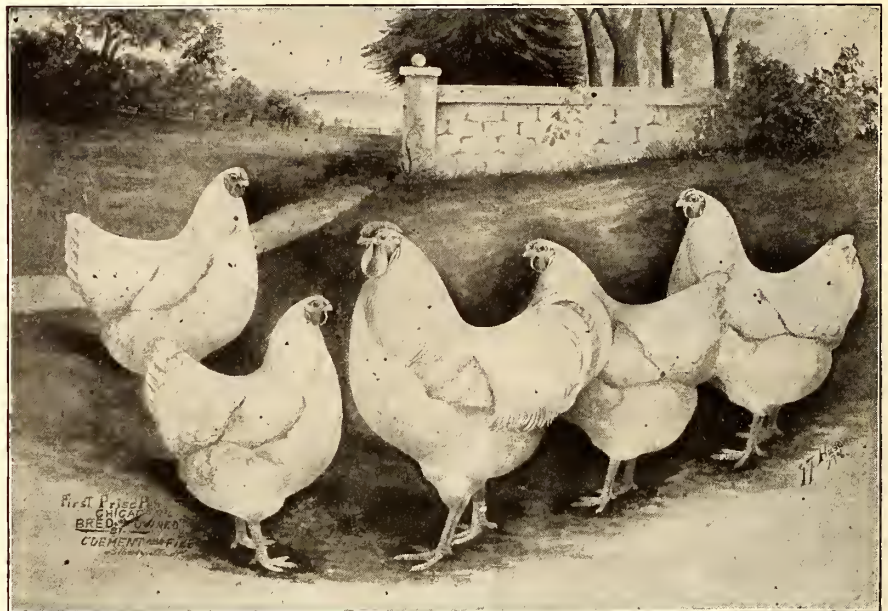

President, Thomas Peer, Fairfield, N. J.; Eastern vice president, F. G. Wyckoff, Ithaca, N. Y.; Middle vice president, W. M. Bean, Anoka, Minn.; Western vice president, Fred H. Monroe, Denver, Col. Secretary and treasurer, Geo. S. Barnes, Battle Creek, Mich.

Executive committee, Nate K. Cornwall, Thamesville, Ont. Can.; Aug. D. Arnold, Dillsburg, Pa.; Chas. L. Thayer, Chicago, Ill.

SCHWAB BROS. - ROCHESTER, N. Y.

future sufficiently large to accommodate its rapidly increasing exhibits.

All popular classes of poultry were strongly represented, the most prominent being a grand and magnificent display of Barred Plymouth Rocks, nearly one hundred and fifty specimens of this grand breed being in competition. Closely following the Barred Rocks in number came the White Wyandottes, many beautiful birds being on exhibition. The display of Silver, Golden and Buff Wyandottes was large in number and superior in quality.

Exhibition in these classes represented four states; and Minnesota divided the winnings with Illinois. In the White Rock class the exhibit was not up to the standard of former years. The birds shown were young, but not up to weight, and many decidedly off in color.

The exhibit of the Mediterraneans was confined chiefly to the Leghorn and Minorca breeds, several beautiful specimens of Single and Rose Comb White and Brown Leghorns being shown. The Minorca class was light in quantity and quality. The Bantams showed up well against their larger contemporaries, and with many other varieties of the pet stock made a creditable exhibition.

Judge Shaner, of Lanark, Ill., placed the awards and gave universal satisfaction.

The dates set for the next show will be January 14 to 19, 1907.

LITITZ, PA.

The third annual exhibition of the Lancaster County Poultry Association, held at Lititz, Pa., Dec. 26-30, 1905, was again an unqualified success. Over 1,200 birds were shown by ninety exhibitors. All premiums were promptly paid at the close of the show and a nice amount added to the treasury surplus.

While this was only the third attempt the Lititz Show already claims the proud distinction of being the leading exhibition in the Keystone State. This success is all the more remarkable when it is remembered that Lititz is a borough of only about 3,000 population. This success is mainly due to the hustling efforts of Secretary J. W. Bruckert and Treasurer D. G. Witmyer.

MEETING AMERICAN ROSE COMB BLACK MINORCA CLUB.

The American Rose Comb Black Minorca Club held a very successful meeting in connection with the Cincinnati Poultry Show and meeting of the A. P. A., Music Hall, Cincinnati, January 19, 1906, electing the following officers:

President, A. J. Knox, Orono, Ontario; vice-president, F. S. Gibson, Mobile, Ala.; secretary-treasurer, S. T. Campbell, Mansfield, O. Directors, W. C. Moat, Amsterdam, N. Y.; G. A. Clark, Seymour, Ind.; Chas. Risley, Silverlane, Conn.; Chas. Edgar, Lexington, Ky.

The club meeting brought out a large class of Rose Comb Black Minorcas, there being thirty-four birds entered for competition and seven for exhibition,

SEIP'S BARRED ROCKS

Seip's Pride holds the record of winning 1st at Kansas City in 1903, 1904, 1905, and 2d in 1906 as cock bird, 1905 I won 1st, 2d, 3d pullets and 1st and 2d cock, 3d hen. In 1906 I won 1st and 4th hen, 2d ckl., 1st and 5th pen. Am offered \$50 for 2d cock. Stock at reasonable prices. EGGS \$3 per fifteen, \$5 per thirty.

B. F. SEIP - - - Cameron, Mo.

Rush's S. C. W. Leghorns

STRICTLY LINE BRED At Chicago Show, 1906, six prizes on seven entries. Send for illustrated circular. EGGS \$2 per fifteen, \$10 per hundred. 300 birds for sale.

E. A. RUSH, 46 A Coit Ave., Grand Rapids, Mich.

Exhibition Barred Rocks, White Rocks, White Wyandottes

My birds were winners this season at Kansas City; 1st at Missouri State Fair, 1st at Missouri central show, 1st at M. and F. fair and other leading shows. At Kansas City my 3d prize ckl. tied 1st but lost on weight. He was conceded to be the cleanest colored bird ever shown here. My breeding yards are all headed by winners, and most of the females have won in different shows. Eggs at \$3 per 15, \$5 per 30.

T. E. QUISENBERRY - - - Slater, Missouri

MAAS' WHITE LEGHORNS

In the largest class ever shown in the West, viz.: Kansas City, 1906, I won 1st pen. On cockerels pullets and hens I won as many premiums as all others. I have bred my flock to be the greatest layers of large white eggs. I have also added all of Jno. Tucker's stock to my flock. Choice cockerels from \$1 to \$3. EGGS from choice matings \$2 per fifteen.

ROBERT MAAS, R. F. D. 4, Kansas City, Mo.

KNEBEL'S S. C. W. LEGHORNS WINNING HIGHEST HONORS AT WORLD'S FAIR, 1904

In the greatest competition the world has ever seen, over 400 S. C. White Leghorns competing for honors, with the result that I won more prizes on cockerels including 1st prize, than any other exhibitor. Also more prizes were awarded to pullets of my strain than any other strain. My matings for 1906 are better than ever. EGGS for hatching \$3 for 15, \$5 for 30, \$8 for 50, \$14 for 100. Eggs sent safely any distance.

G. M. KNEBEL - - - Box A, Waco, Texas

ROSE LAWN POULTRY YARDS

Barred and White Rocks, Single Comb Brown Leghorns, Rose Comb Rhode Island Reds, have won more premiums in the past five years than any breeder in Colorado. EGGS \$2 per thirteen, or twenty-six for \$3, \$7 per hundred.

H. S. GARLINGHOUSE, Prop. - Canon City, Colorado

WE WANT NAMES

We want YOU to send us the names and addresses of from ten to twenty-five farmers living in the United States, each one having five cows or more. You can send us the names from any number of different post-offices. If you will send us these names we will send you FOUR BEAUTIFUL PICTURES FREE. These pictures are reproductions of the most celebrated paintings in the world, and they are of high quality, and we know that you will be pleased and delighted with them; no pictures will be given for a list of less than ten farmers.

We want to send a sample copy of the special dairy issue of the RURAL HOME to a lot of farmers who are not now taking our paper and that is the reason we want these names.

Send us immediately a list of at least ten farmers and we will send you, ABSOLUTELY FREE, FOUR REPRODUCTIONS OF THE WORLD'S FAMOUS PICTURES. Address THE RURAL HOME, 20 North Williams Street, New York, N. Y.

McCLAVE'S BARRED PLY. ROCKS OLDEST STRAIN IN OHIO

Bred on Linwood Farm since 1874. Choice cockerels, trios and pens at reasonable prices. Eggs from twenty select matings. I also breed best prize winning White and Golden Wyandottes, White and Brown Leghorns, Turkeys and Water Fowls. Largest poultry farm in Ohio. At the late Chicago show won twenty-seven firsts, one third and six specials on thirty-one entries. Write

THE STRONGSVILLE POULTRY YARDS

Anconas, B. C. and S. C. Brown Leghorns, S. C. White Leghorns, Barred Rocks, Golden Wyandottes, R. C. Black Minorcas (Campbell and Northrup Straus), Buff Cochins and Indian Runner Ducks, the kind that win and lay. We breed and sell winners. Hundreds of prizes won. Eggs of the above varieties for sale. Also a few grand Buff Cochins cockerels and pullets to spare. A clean sweep on Buffs at Cleveland. Satisfaction guaranteed.

E. J. FISH, Manager - - - Strongsville, Ohio

Meadow Lawn Poultry Farm

Home of Tyler's famous yellow leg strain of Barred Plymouth Rocks. We have bred this best of all breeds exclusively for 21 years. We are one of the largest breeders of B. P. Rocks in the world. Our entire farm of 80 acres is devoted to this famous breed. We have produced many prize winners. We are in a position to fill your orders for either stock or eggs promptly in any quantity at all times from the best that can be produced. A trial order will convince you. Eggs \$1 per 13, \$3 per 50, or \$5 per 100.

J. FRANK TYLER - Chebanse, Illinois

BENNETT'S WHITE WYANDOTTES

Win four firsts, three seconds and one third at two of the leading shows in northern Illinois and southern Wisconsin, January 1906. Reports from my customers show that they can also win the blue in their hands. They can win for you. Stock for sale at all times. Eggs \$3 per 15, \$5 per 30, \$12 per 100. Incubator eggs \$6 per 100.

J. B. BENNETT : : : RINGWOOD, ILLINOIS

MAY WE GIVE YOU SOME INSIDE INFORMATION?

It is this: We will sell eggs from our prize winners at popular prices and will guarantee these eggs to hatch. Several winners were hatched from eggs we sold last year. This season we have won two silver cups, four specials, 11 firsts, and 14 other prizes, with championship badge on our S. C. Buff Orpingtons (Blacks also kept), White Holland Turkeys and Cornish Indian Games at Madison Square Garden, Great Eastern, N. Y., and Stamford, Conn. Book your orders now.

Worthington Poultry Yards Fred Harries, Mgr., Elmsford, N. Y.

Wonderful Record! BENNETT'S BARRED ROCKS

Made at Chicago, January 22-27, 1906, in the hottest class of Barred Rocks ever shown in the West. Second cock, 5th hen, 1st and 4th cockerel, 1st and 2d pullet, 1st and 5th pen; best display, best colored male and female.

CHAMPIONSHIP MALE

Three silver cups and sixteen other specials. Three hundred breeding and exhibition birds for sale. EGGS \$5.00 per setting. Send for free catalogue.

D. R. O. P. BENNETT
Box 218, Mazon, Grundy Co., Illinois

making 43 Rose Comb Black Minorcas. This is probably the largest class of this popular variety ever on exhibition, and the quality was superb. Mr. Theo. Hewes placed the awards and gave universal satisfaction.

The show throughout was a success and the club decided to give special cash premiums at future exhibitions.

S. T. CAMPBELL, Sec'y-Treas.
Mansfield, Ohio.

CANADIAN COUNTY POULTRY ASSOCIATION.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Am writing to advise you that the Canadian County Poultry Association had excellent success with their first annual show, paid all premiums as advertised, and closed the show with thirty dollars to the good in the hands of the treasurer. Have held our annual election at which A. K. Gore was elected president and L. G. Adams secretary for the coming year. We have secured the services of Judge C. A. Emery, of Carthage, Mo., to judge our next annual exhibition, which will be held the week commencing December 31, 1906, to January 5, 1907, at which time we expect to give another show with the admission at the door entirely free to all. With best wishes, I remain, L. G. ADAMS, Sec'y.

El Reno, Okla.

NATIONAL BRONZE TURKEY CLUB.

The National Bronze Turkey Club held its tenth annual meeting in connection with the Chicago Show, January 25, 1906.

The new officers elected for the ensuing year were as follows: President, S. H. Taylor, Vandalia, Mo.; vice-president, B. F. Hislop, Milford, Ill.; secretary and treasurer, S. B. Johnston, Fairland, Ind.

The club offers a silver cup to the member exhibiting the best pair old and young turkeys at the National Fanciers' show of Chicago, January, 1907.

They also offer one at Indianapolis, Ind., to the member exhibiting the best pair old and young turkeys, January, 1907.

We would be pleased to have all the active turkey breeders with us.

The membership fee is one dollar for the first year and fifty cents each year thereafter.

For particulars address one of the above named officers.

OKLAHOMA CITY, OKLA.

The third annual exhibition of the Oklahoma State Poultry Association is a thing of the past. The show was the best and most successful in quality of exhibit and in the financial way of any show ever held in the Southwest. Starting with less than \$2 to begin preparations the balance is over \$200 in the treasury, the Commercial Club of Oklahoma City donated \$200 to the Association to hold the show in Oklahoma City! On account of the late date of the show only the prize winners from Southern Kansas, Indian and Oklahoma Territories were on exhibition and a finer lot of high class fowls were never on exhibition at any show. The door receipts show 2,560 paid admissions, while the highest of any previous state show was 760. The territory from which the birds came has enlarged 50 per cent over that of last year and the interest taken in the association can be shown by the increase of

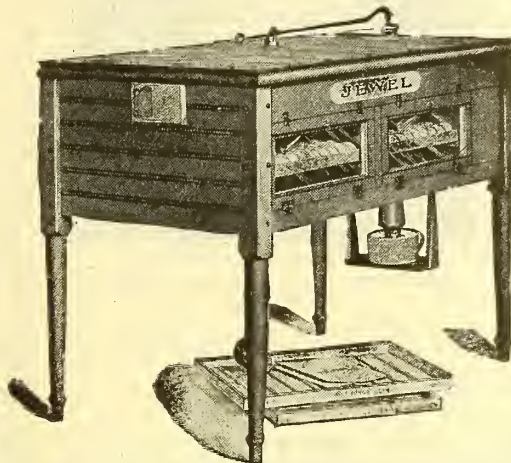

THE JEWEL INCUBATOR IS IN A CLASS BY ITSELF.

It is the first and only machine ever built that heats equally. From year to year every manufacturer has tried to reach the same point, but has failed. Would-be experts have claimed that it was impossible to build an incubator holding more than 50 or 60 eggs with flat trays that did not vary from 1 to 1½ degrees in the extreme parts of the hatching chamber. They also claimed that if the eggs were left in one position in the tray they would suffer from it. *We agree with them. The eggs would suffer.* "THE JEWEL" has all flat Trays located on a dead level and the Corners, Sides, Ends and Center, Heats Absolutely Even. No Other Incubator Can Do It.

IT IS EASY TO IMITATE

And it will only be a question of a short time when manufacturers of cheap incubators will claim equal heat, or anything else that will give them a new point.

"THE JEWEL" is the new leader in this important step, and infringements will be prosecuted.

THE IMPORTANCE OF EQUAL HEAT

Is not hard to understand. Every Egg has an equal chance to hatch. The Average Incubator varies from 1 to 5 degrees and because of this evil failure results. This one feature of "THE JEWEL" is worthy of especial attention. Cheap incubators can never have Equal Heat. It is impossible.

HIGH CLASS PROOF OF EQUAL HEAT.

STATE OF MINNESOTA, }
COUNTY OF HENNEPIN, } ss

The undersigned came personally before me, and being duly sworn, each for himself, says:

That at the invitation of the International Stock Food Company, they were present at the International Building, East Minneapolis, Minnesota, on the 11th day of November, 1905, witnessing the test of a 360-egg Jewel Incubator having flat or level trays. Thermometers placed in the ends, sides and center registered the same heat. After this test, all the thermometers were tested in warm water and all found to register equally.

GEORGE LOTH, Secy. Minn. S. P. A.

Z. M. COLE, Breeder of W. P. Rocks.

CLIVE H. OWEN, Breeder Wyandottes,

C. L. SMITH, Judge of Court.

LAWRENCE HOPE, Ex.-Pres. M. S. P. A.

L. B. RICH, Sanitary Poultry Co.

Subscribed and sworn to by each of the above named this 11th day of November, A. D., 1905.

ROBERT CHRISTENSEN,

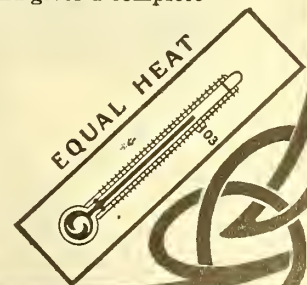

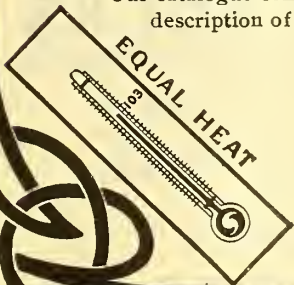

Notary Public, Hennepin County, Minn.

It is not reasonable to expect satisfactory results from a machine unequally heated, but it is reasonable to expect to hatch stronger chicks from the Jewel, because of its proper construction. Cheap incubators and cheap brooders cannot contain the features brought out in the Jewel, and it should not be expected. Jewel Incubators and Brooders offer the farmer and farmer's wife the best opportunity to make money from their poultry because they succeed where other incubators have failed. Prominent men who endorse our machines would not lend their names for recommending any article unless it was all it was claimed to be.

The International Stock Food Company guarantee every Incubator and Brooder they build. They guarantee them to produce better results, and make more money for their operators than any other machine known.

Our catalogue contains a great deal of useful information on Poultry Culture and gives a complete description of our line of Incubators, Brooders and Poultry Supplies.

Poultry Supply Department, Box E
INTERNATIONAL STOCK FOOD CO.,
Minneapolis, Minn.

membership which is very flattering. At the close of last year's show there was 58 members, at the close of this year's show there were 111 and the interest in thoroughbred poultry in this section of the country is increasing at the same ratio. The judging was done by M. S. Fite and F. W. Hitchcock, two of the best known judges in the Southwest, and their score cards are prima facie evidence that the bird is worth just what the cards show and exhibitors all took their winnings home in their pockets, every bill was paid before the show closed and a balance of over \$200 left in the treasury to begin business on next year.

The show was permanently located at Oklahoma City and the next exhibition will be held the third week in December, 1906. The following officers were elected: E. Bracht, Oklahoma City, O. T., president; M. S. Fite, Oklahoma City, O. T., vice-president; E. L. Vickars, Oklahoma City, O. T., treasurer; F. W. Stone, Blackwell, O. T., G. H. Yoeman, Hennessey, O. T., F. R. Ziller, Enid, O. T., J. N. Thompson, Morrison, O. T., J. Flem Smith, Ponca City, O. T., and C. L. Thompson, Holdenville, I. T., directors. New constitution and by-laws were adopted in which the association took a new departure and instead of electing a secretary the president appoints him. T. E. Shaw, of Oklahoma City, O. T., was appointed for the ensuing year.

With the present membership and the money in the treasury the next show should be at least three times as large as the last one. The association is in the position now to increase the size of its premiums so as to draw breeders from all over the southwest country and the Board of Directors are all breeders of standard bred poultry. The citizens of Oklahoma City are as wide awake to the welfare and interest of poultry culture as they are to all others and now that the show is permanently located in

this city they will see that it is taken care of financially as they never allow any association to fail to meet its obligations when their meetings are held here. F. W. Stone of Blackwell, O. T., an old veteran White Wyandotte breeder of this territory, was unanimously chosen superintendent, which insures the next show all that can be desired in the way

are deserving of all the honors they will receive. Not one protest was received by the committee, nothing but praise from all sides. There were between 400 and 500 birds on exhibition and it was a strictly quality show, as many of this year's prize winners from larger shows had to be contented with 2nd and 3rd place.

Very handsome ribbons were given this year instead of the old fashioned cards used in years gone by, in addition to the regular money prizes. F. A. Keller, judged the birds and gave general satisfaction.

THE CLEVELAND SHOW.

The Cleveland Fanciers' Club held its first show January 29 to February 3d. It was one of the best managed and most pleasant exhibitions held this season. The entries were numerous and the quality of the stock the very best.

The Cleveland show is one that will grow, and in time take its place among the very important annual fixtures in the country. It is a business association, this Cleveland Fanciers' Club. It is composed of fanciers who are successful business men. This means that in this they will succeed. Mr. Fred E. Pile, known to all fanciers as always right and on the square, is president. Mr. Fred L. Gruehl, an expert accountant and one of the brightest young men in the middle west, makes an ideal secretary. He has everything well in hand, which is appreciated by exhibitors and judges. Treasurer Will C. Trapp was very popular with all, and there was no waiting on the part of exhibitors for premium money. Dr. Loomis was in charge as superintendent, and Will J. Boyd handled the poultry department in a pleasing manner, as did Thos. Donkin the pigeon end.

Among the directors are the following strong men and well known and popular

BARRED ROCK PULLET.
Score, 92½. Owned by W. A. Porter,
Streator, Ill.

of management. The judges are to be selected by the board of directors and will be announced later.

WARREN, PA.

This show was a grand success, both in the quality of the birds shown and also in attendance, and the boys will have a handsome sum to put into the treasury, but the boys worked hard to please and

Keep your eyes on Cleveland.
Thos. F. Rigg.

BELVIDERE, ILL.

The show of the Northern Illinois Poultry Association, held at Belvidere, Ill., Feb. 5-10, 1906, was a decided success. The exhibition hall is well lighted and was kept in first class order.

Nearly all varieties were represented and most classes well filled.

The quality of the exhibits was above the average shows and there were birds of nearly all varieties that were fit to win in any show in the country.

It was again plainly shown that the largest exhibitions, like the largest breeders, do not always have the best birds. The Plymouth Rocks were a large class, the Buffs being the largest in the show, and they had quality such as is seldom seen anywhere. In Wyandottes the whites were the largest class and many unplaced birds were good enough to win in strong competition. The R. I. Reds were an unusually large and strong class and attracted much attention. This variety is fast coming to the front at nearly all exhibitions.

The Asiatics were a small but good exhibit. The Leghorns were out in goodly number and birds were shown that had never failed to win first at any show.

There were quail, pheasants, guinea pigs, cats, and possum and a kangaroo in the pet stock department. The officers and members are genuine fanciers whom it is a pleasure to meet.

The dates for the next exhibition have been set for Jan. 14-17, 1907, and Geo. D. Holden has been engaged as judge, which speaks well for the satisfaction he has given the last two shows.

F. L. WATERMAN.

AMERICAN BUFF WYANDOTTE CLUB.

Annual meeting of the American Buff Wyandotte Club, was held in connection with the National Fanciers' Assn., of Chicago, January 25th, 1906.

The following officers were elected: Pres., W. R. Wooden; Eastern Vice Pres., J. C. Burt; Western Vice Pres., F. L. Waterman; Secy. and Treas., W. C. Ellison.

Taking attendance and manifested interest into consideration, this was by far the best meeting in the history of the club. We expect to double our present membership before January 1907, and to do this, we ask the hearty co-operation of every club member. If you are not a member of our club, we kindly ask you to join our ranks and thus help "boost" one of the best causes in poultrydom.

M. C. ELLISON.

Minneapolis, Minn.

W. A. Porter, Streator, Ill., the Barred Plymouth Rock specialist, has a few choice cockerels and pullets to spare. He has mated up four grand pens for the egg trade this season and our readers who are looking for something in his line should write him for particulars and mention AMERICAN POULTRY JOURNAL.

The White Star Poultry Farm of South Amboy, N. J., won at Newark, N. J., on Single Comb White Leghorns, as follows: Five prizes on five entries (25 in all, nine passed).

“COLUMBIAN WYANDOTTES”

Eggs from pen headed by the 1st prize cockerel at Herald Square Show, N. Y. 1904, mated to 1st prize pullets of the 1st pen, Chicago, Jan. 1905. This makes the finest pen in the country. Only a few sittings to spare. Book orders early. **W. A. HAYES, Monmouth Ill.**

BUFF WYANDOTTES

A large flock to select from. The result of ten years' careful breeding of Chicago, Detroit, Cleveland and New York winners. Fine breeders from flock of youngsters for sale at reasonable prices. THE ASPETONG POULTRY FARM.

The accompanying illustration is that of a new cockerel house recently built on the Aspetong Poultry Farm, Newburg, N. Y. This is one of the most complete and convenient poultry houses it has ever been our pleasure to inspect. The length of this house is 75 feet. In one end is finished off an exhibition room 15x15 feet, which is fitted with six large windows, thus assuring plenty of light for best results in showing stock to advantage. The laying quarters are divided into pens 11x12 and a four foot alley way in the rear of pens. Each pen is fitted with a three-fourths wire door leading from the alley way. Roosts are cleaned, eggs gathered and fowls fed from the alleyway. Above the roosting quarters in each pen of this house is a pen 3x3 foot 11 inches, for keeping extra cockerels in, enclosed on the back, next to alleyway by a wooden shutter in winter and a wire screen in summer. The front of roosting room is fitted with a

Great Eastern Show, New York City, 2d cock, 2d and 5th cockerel. At Kingston, N. Y., 1st and 2d cock; 1st and 2d cockerel; 1st, 2d and 3d pullet; 1st pen; and special for best display and special for whitest bird in show.

They are prepared to take care of a large egg trade this season in both varieties.

Mr. Anthony, the manager, is a young man in years, but old in the chicken business, having devoted all his life to the rearing and breeding of thorough-bred fowls, and any orders intrusted to his care will have careful attention and fair treatment.

OAKWOOD JOTTINGS.

There seems to be a growing belief among poultrymen that there has been a tendency to make poultry houses too warm and tight. An acquaintance described to me a double-walled, paper-lined, outside-air-excluding house which a friend of his built and into which he

ONE OF THE MODERN AND UP-TO-DATE POULTRY HOUSES ON THE ASPETONG POULTRY FARM, NEWBURG, N. Y.

shutter, to be closed on very cold nights. The house is sealed throughout with 3-inch Georgia pine of the finest quality. The doors to each pen are 2 1/2 feet wide and 6 feet high, with a 6-light sash in each, and swing to the side, thus providing an open house in warm weather and a closed house in cold weather. In the back of the house are three shutters, made of wood, 18 inches by 5 feet. These are so arranged that they can be opened on hot days, thereby assuring a good circulation of air in warm weather.

In a recent letter, Mr. Anthony, the manager, informs us that this house is giving the best of satisfaction and that he is more than pleased with it. They have two other houses on this plant, which are much larger than this one, but not so modern. But good houses is not all there is on this farm. They have at the present time about 250 White Wyandottes and 600 S. C. W. Leghorns, and that they are of the right kind is proven by the following winnings on White Wyandottes made at recent shows: At Danbury, Conn., 1st and 2d cockerel and 2d pullet. At the

put twenty hens. He expected winter eggs in abundance for family use, but the hens sickened and before spring were nearly all dead.

A few years ago, in midwinter, I had occasion to go into one of the poultry houses of a friend. This house was boarded up and down with oak lumber which had been put on green, and in seasoning had contracted so that there were places where I could stick my fingers out at the cracks. Some of the hens had slightly frosted combs, but on looking into the nests I found them full of eggs. There were about one-third as many eggs as hens.

Now we do not advocate a house as open as the one last mentioned; and we believe that better results can be obtained in one in which the ventilation, in part at least, is under intelligent control; but too much ventilation is greatly to be preferred to too little. The idea of making spring conditions without artificial heat is not feasible. There is, however, abundant evidence to show that if hens are properly fed, kept dry, active and free from drafts, they will lay freely

BUFFS

THAT ARE BUFF

At NEW YORK 1905 my BUFF WYANDOTTES out classed all competitors, winning 1st and 3rd cock; 1st hen; 3rd cockerel and 2d pen. At BOSTON 1905, I won 1st and special for best cock in a very large class. My

Dept. B, Battle Creek, Mich.

even when the mercury sinks considerably below freezing. Care must be taken not to let the temperature run too low with fancy stock and exhibition birds, but they will be enfeebled and rendered unfit for breeders if shut up closely for any great length of time.

Consider how a house such as we first described is made warm in winter. First the pure air from the outside is to a great extent excluded. On clear days, the sun's rays, streaming through the south windows, help to raise the temperature, so far well, and the bodily heat of the confined fowls raises it still more. At night a temperature higher than that outside is maintained largely by animal heat. The products of respiration, emanations from the bodies of the fowls and from their droppings poison the air, and the wonder is, not that many die, but that any live in air so contaminated by impurities.

HOW LONG SHOULD AN INCUBATOR LAST?

Neither the case, the doors, the inside packing nor any of the structural parts of an incubator are subject to appreciable wear. Yet we find that many a man has laid aside his incubator calling it "worn out." It seems a pity that so many good machines should thus be discredited, when a remedy is so close at hand, applicable to every machine, no matter what make.

The great trouble with most of the above incubators is that the vital parts—regulator, thermostat, lamp and heating system do their part for only a short period. They are often flimsy, cheap substitutes for the real parts they represent.

The faulty parts can be readily replaced by the reliable, durable "Acme" goods made by the H. M. Sheer Co., Quincy, Ill. The Acme Wafer Thermostat is the only perfect thermostat on the market; has stood the test of time and usage. Their patented valve and filler is the key note to its wonderful efficiency. All of their regulators are equipped with this wafer, making them sensitive to a fraction of a degree, controlling the temperature automatically and requires but one adjustment, their action being almost human.

When used in connection with their Acme Automatic Lamp they give you a combined damper and flame regulator. This lamp will effect a saving of one-half the oil, time and labor. It's perfectly safe. Can be operated in any part of the house; no danger from explosion or fire. Equipped with their Acme Burners and Mineral Wicks, which require no trimming. Cuts out every annoyance usually found in ordinary incubator lamps. There is no chance for failure or disappointment in heating and regulating incubators or brooders fitted out with the Acme Lamp and Regulator. Can be attached to any make of incubator or brooder.

Their new catalogue just from the hands of the printers gives full description, prices, etc., of their large and complete line of supplies. Also contains the complete illustrated plans, enabling any one to build the famous Peerless Incubators and Brooders, so clearly described and illustrated a boy of 10 years old can follow them. They are free, together with their catalogue. Send for them today. Worth \$2 to anyone interested in artificial incubation. Address

THE UHL BROODER.

This brooder is one of the most practical brooders ever built and is the idea of one of the most practical men I ever knew in the poultry business. He has no time to build it this year, and as he had many inquiries for the above brooder he has turned the manufacturing over to me.

It is built low to the ground. It has the most practical heat of all others.

It will be built of "poplar" lumber, tongue and groove.

It will have two coats of paint and oil. Any one contemplating purchasing a brooder should write for circular and price list. Manufactured by C. A. Thompson, New Washington, O.

W. W. Kulp, Pottstown, Pa., won at Madison Square Garden, January, 1906, on Rose Comb Brown Leghorns, cock, 5th; hens, 1st, 2d, 3d, 5th; pen, 1st.

The Book that beats them all because it tells how big crops of big fancy strawberries can be grown every year and how to pick and pack them for big prices. It tells the poultryman how to combine strawberries with chickens and double his profits. It keeps Experienced Growers posted on new discoveries in plant breeding and latest cultural methods. It takes beginners through a complete course of instruction, tells just when and how to do everything to get Big Results, and how to start a Profitable Berry Farm with little capital. Beautifully illustrated with photo-engravings. Don't order your plants until you read this book. It is free.

R. M. KELLOGG CO., BOX 325 THREE RIVERS, MICH.

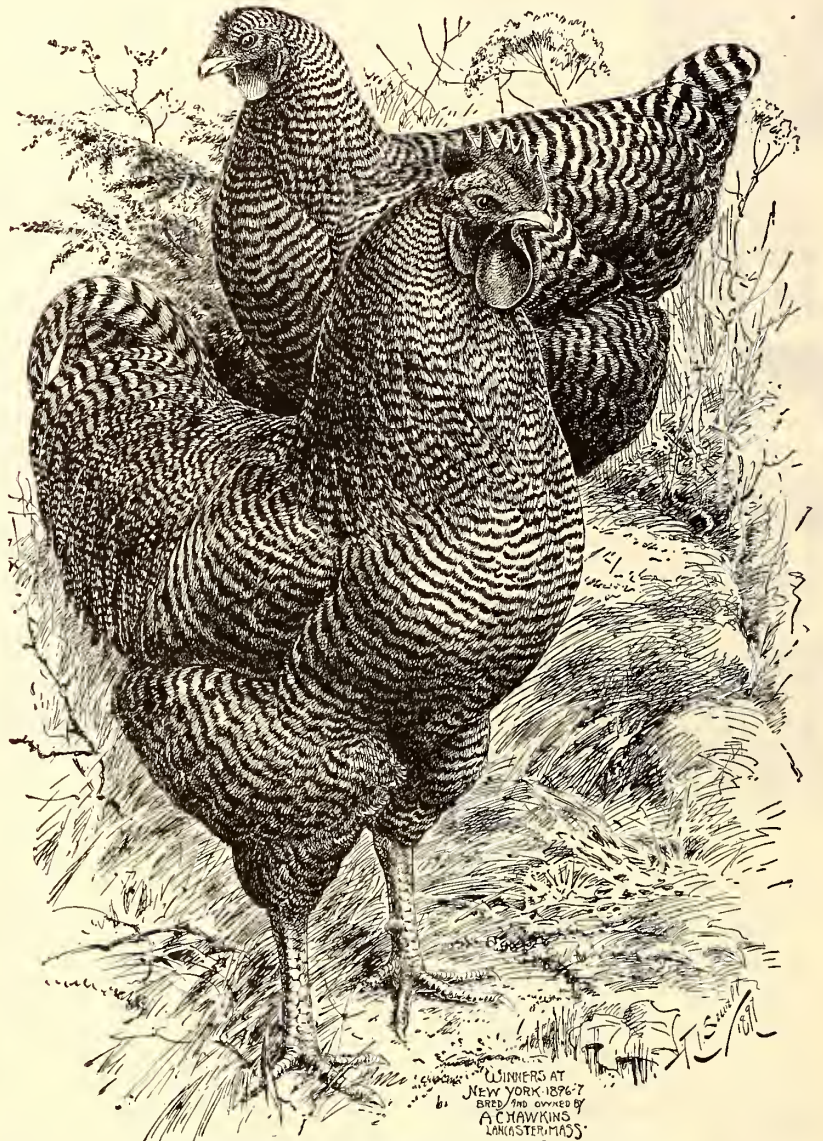

THE SPECIALIST VS. THE BREEDER OF MANY VARIETIES.

A Strong Argument in Favor of the Specialty Breeder—Choose Your Variety and Breed as Near Perfection as Possible.

Until recently I could not conscientiously write my real sentiments up on the above topic, as I was breeding two varieties, although of the same breed; but now having disposed of one, I feel I am "at liberty" to express my views.

Some time ago I read in an advertisement (I think it was A. G. Dustan's) a statement that struck me as being good logic, and since I have thought on it considerably, and the more I think, the more I am convinced of its truth and

that no breeder can produce quality who raises two or more varieties, for we all know there are quite a number of breeders who breed several, and still have excellent results in the show room, but the proportionately small number only "proves the rule." As, for instance, when you think of Black Minorcas, what man's name first enters your head as a leading breeder and promoter of this excellent fowl? Is it a breeder who carries a long list of breeds in his

PRIZE WINNING BARRED PLYMOUTH ROCKS. Owned by A. C. Hawkins, Lancaster, Mass.

sound sense. It was: "When you are sick you employ a specialist, expecting better treatment, etc.; why not use the same discrimination when buying birds?" The quotation may not be exact, but the thought is there.

Now it is only reasonable to expect that the breeder who devotes his whole interest—time, money, care, study and skill—to one variety will produce higher class stock than he who divides them among a number of breeds. I do not say

ad., or is it a specialist who puts his whole energies toward perfecting this one breed—his favorites?

The name "White Wyandotte" and a leading specialist, are synonymous, when you think of one you are almost sure to think of the other. And when it is Barred Rocks, how is it? Again, the foremost breeders of one of America's favorites are specialists; men who use their time, cash and talent in keeping this breed where it is; this is the rea-

WINNERS AT NEW YORK 1876-7 BREED AND OWNED BY A. C. HAWKINS LANCASTER, MASS.

son they stay there; the foremost breeders are men who use *their best and entire* efforts in improving this one breed, and do not divide interests among others. The Barred Rock owes its popularity to its many specialists, while the bird is good in itself, good enough for anyone, and one of the writer's favorites—it is no better than some others, and were it not for a few leading specialists, with plenty of money, brains and push, to advertise it, it would not keep where it is today. And so it is all down the list, it is the specialist nearly every time that creates the demand for the breed or variety that he represents.

Among my own favorites, of all the beautiful and useful breeds contained in the Standard of Perfection, I chose the Silver (Laced) Wyandotte, and the longer I breed them the more enthusias-

than the rest. (Study the different ads. and Show reports and see if I am not correct.) The reason is, *his heart is there*.

Another thing—there is no possible danger of the breeds mixing with only one, and if some birds of different mating *should* happen to get together, while of course undesirable, still there will not be the mischief done as with different breeds. It will not cause loss of matings, nor reputation to the breeder, nor of temper and faith in breeders in general, to the purchasers. I know many claim—and many do—raise the different varieties on different farms. This obviates the trouble of mixing, but I have found this plan, in some cases, very unsatisfactory, although many specialists have to practice it. The breeder does not have the fowls under his care and con-

1st cockerel and son of 1st cock and 1st hen, also brother and half brother to birds in 1st pen at Rochester, 1906. Bred and owned by Wm. L. Howell, Geneseo, N. Y.

WHITE WYANDOTTE COCKEREL.

Winner of first prize at Rochester, N. Y., 1906. Bred and owned by William L. Howell, Geneseo, N. Y.

tic I become over them, and even when breeding another excellent branch of this family—the White—still the Silvers were my "true love," and I think you will always find it so among breeders. There must be a favorite, and consciously or unconsciously, he will give his *best efforts* to this variety, to the detriment of the rest he breeds. He may breed this one variety as well as the specialist—but it is not probable as he has "too many irons in the fire" and it is impossible to give any the attention that he could to one alone; if he is breeding one or more breeds as well or better than the specialist, it is proof positive he has skill and ability that *should be concentrated*. When you sift the matter you will find the breeder of several breeds has one (he may not own it, may even be unconscious of it) that he breeds better

trol, but he *does* have them under his reputation, and is responsible for the condition in which the eggs or stock is kept and shipped. If eggs are infertile, the breeder is to blame; if fowls are kept lousy or overfed or starved, he is responsible again for all the attendant results. And how exasperating it is, to get birds in, in the "round up," in an unsalable condition with scaly leg. I have gotten a number in with legs double natural size and scarcely a scale left. These are some of the disagreeables in having birds "bred out," that the breeder who puts his different varieties on as many farms, must meet, and of course, the breeder of one variety who does the same has the same trouble.

I believe it is the ambition (?) of nearly every beginner to see how many breeds he can handle. I am frank to

Little Gem HATCHERIES
 Cost only 30c each, and over 60,000 successful poultry raisers are now using them. This girl hatched 1769 chicks in them last year and raised 1761. Interesting catalogue free. **F. GRUNDY, Poultry Expert, Morrisonville, Ill.**

with Silver Wyandottes and White Minorcas, intending to add as opportunity afforded Black Minorcas, Brown and Buff Leghorns, White 'Dottes, Barred and Buff Rocks, and—goodness knows where the list ended when it was so I could get them all! But these were the first I would get!! A letter of advice from a prominent breeder of several varieties, who advised me to add two or three more breeds, when I was young in the fancy, did not tend to dampen my ardor at all (now this breeder being "prominent" does not "knock my argument all on the head" he is prominent—in one variety—and is only a "clinger" to my argument). When a good friend and a true fancier advised me to give up the Minorcas and breed only the Silvers, I was sure "he did not know what he was talking about," but I am beginning to learn, after about eight years in the fancy, that he did. I am learning that it keeps the average breeder's faculties busy to do full justice to one breed, and one variety of that breed. It is my ambition to raise the very best that can be raised in my

style, type, etc., the simple matter of different plumage is not so hard to fix, for there is no danger of confusing Rock, Leghorn or Brahma, Cochin, etc., type. Still here again, I claim that if perfection is the aim sought, that one has his hands (yes, head and heart also) full with one variety.

It is true there are "two sides to this question," the same as to any other, and for the egg and market poultry plant, two breeds may be desirable, and where only medium quality is desired one may get more orders from those who wish cheap stock and eggs, by having a variety to offer; but I am speaking of, and to, those who wish to be fanciers in the true sense of the word; to those whose watchword is PROGRESS and whose ambition is to raise the very best of the variety they represent I think I am not mistaken when I assert the specialist will reach this goal sooner than he who carries several breeds, as the surplus breeds will only be a drawback to him—a hindrance in his onward course instead of a stimulant, as in one variety, when this one is carefully and judiciously

First prize cockerel and first, third and fourth prize pullets at Elgin, 1906; first cockerel, 95½; first pullet, 95¼; also eight 95-point pullets by Judge McClave. Bred and owned by W. L. Fern, Elgin, Ill.

variety (and that means it will take all the time, care, cash, study and skill I possess), and I want to be one to help improve this one "pride of my heart"; to keep it not only one of the best all-purpose breeds that it is today, but also to keep it where it is now—to me, at least—"the handsomest bird in the new Standard," and this means improvement, improvement, IMPROVEMENT, for the specialists of other breeds will keep improving theirs; and their fowls are now to them as good and beautiful as mine are to me! and in order to make others see my favorites as they appear to me, I know I must use all my powers to advance them.

There are a few who can raise a number of breeds—and with unlimited time and money—can breed reasonable quality in each; but if all these efforts were concentrated in one variety, would they not be still more of a credit to the fancy? There are more who can raise a creditable lot of two or more varieties of the same breed; this is not so difficult, for when one has the right ideal of the different sections in a breed, in shape,

chosen. This is so whether the goal is either pleasure or profit (and to speak truthfully these two are not far separated). Profit brings pleasure—every time—and he who claims to raise solely for pleasure is much better pleased if there is a little profit mixed in for amusement. To the one with limited means, especially, who is in the fancy principally for profit, one variety is best, as expenses for yards, buildings, etc., are less and also the care is less. It is no small matter to carefully keep the flocks and eggs separated; and, too, it is easier to advertise one breed. There are many things in favor of the single variety breeder. It has been my experience and every year strengthens the statement, that the breeder who can raise A1 stock always has plenty of demand for it. I never yet have been able to anywhere near fill my orders for "top-notchers" in show birds and breeders, especially in early hatched pullets. But the cheaper ones sometimes have to "go a-begging" for a buyer. The great demand the past season in the variety in which I took most interest, and conse-

Success with the Chicks

Don't depend upon how many you hatch but upon how many you raise. Many fine hatches of a hundred chicks leave you with but a dozen scrawny little birds after a few weeks. You know why.—Cholera, Indigestion, Bowel Trouble, Diarrhoea, Dysentery, Sour Crop. These are the things that knock a poultryman's profit.

CONKEY'S CHOLERA CURE

will positively cure and prevent all of these diseases. We know it. We guarantee it. We'll give your money back if we don't prove it. Get a package of Conkey's Cholera Cure from your Druggist or Poultry Supply Dealer, or send direct to us. It is equally good for turkeys, chickens and pigeons, old and young. Price 50c per box post paid.

Our new 48 page book on poultry diseases sells for 25c, but if you answer this advertisement and send the names of two other poultry raisers and 4c in stamps to pay postage, we'll send you a copy free.

G. E. CONKEY & COMPANY,
No. 15 Ottawa Bldg., Cleveland, Ohio,
PETALUMA INCUBATOR CO.
Pacific Coast Agents, Petaluma, Cal.
AGENTS WANTED EVERYWHERE

quently did better justice in every way, decided me to give all my attention hereafter to this one variety. It is discouraging to the ambitious breeder to have to refuse a number of calls for birds at \$5 to \$20 each because the supply is gone, and next season I expect to get many more calls than in the past and I sincerely hope, having only the one kind, I can fill the orders, although I shall miss many inquiries like this: "Please give me price on 100 to 200 laying White Wyandotte pullets," etc. But there is much more profit, pleasure and complete satisfaction in raising—and selling—ten birds at \$10 each than one hundred at \$1.00 each, and the specialist is the one who raises by far the greatest proportion of birds that sell at and above this price.

I am not writing this article in any sense to "toot my own horn" (I do this through different kinds of advertising), but this is my honest conviction, has been so for some time, and is the real reason I became a specialist—although I really believe I was one when breeding the two varieties, as I certainly made a "specialty" of the one even then). I merely cite my own case to be better understood and as proof of the correctness of some of my statements. So I say: "Three cheers for the specialty breeder: give us more of them!"

MRS. DENTON COLE.

Winwood, Pa.

AN OPPORTUNITY FOR BEGINNERS.

There are many families who have considered the incubator hatching of chickens, but who have never made a start in that direction on account of the expense involved in purchasing an outfit. Not knowing just how successful they would be, they have desired to be very conservative in the outlay for hatching machinery.

The Geo. Ertel Co., of Quincy, Ill., gave this desire careful attention last summer, and decided that they could afford to make a very close price on a small machine, which would do good work and which would serve to introduce their goods to users, who, making a success of the small machine, would certainly want a larger one in time. By careful figuring on the manufacture of such a machine in large quantities, they decided that they could get the price down to \$7.90 for the incubator delivered anywhere east of the Rocky mountains, and that it would be possible to include the Brooder for a delivered price of \$11.50. On account of the high freight rates, the prices to points west of the Rocky Mountains have to be a little higher.

They have thousands of these machines all crated and ready to ship, and those who have seen them say they are an up-to-date machine which will certainly do good work.

This machine is made in one size, 100-egg capacity, and is an improved form of the Hatching Wonder which they have sold for a number of years, and with which, doubtless, many readers of the AMERICAN POULTRY JOURNAL made their start in chicken raising.

James Kugler, Jr., proprietor of the Maple Farm Poultry Yards at Frenchtown, N. J., has issued a neat little circular of his winning strain of Buff Leghorns and White Plymouth Rocks. It explains the qualities of his stock and states prices of stock and eggs, also the iron-bound guarantee. The half-tone on front cover is a good sample of one of his many hens that have records from 204-223 eggs a year. He has bred standard bred poultry for six years and still believes a satisfied customer to be a profitable customer. Look up his ad in this paper and if you are interested in good quality Buff Leghorns or White Plymouth Rocks write to him at once for a circular. It is sent free for the asking.

Geo. D. Nothstein, Bowmanstown, Pa., the Buff Orpington specialist, is offering eggs from his line-bred, prize-winning strain and guarantees fertility. Write him for prices and mention AMERICAN POULTRY JOURNAL.

Brown's Prize Winning Black Langshans

as good as grow. Eggs \$3 per 13. High-class cockerels from King-Yan, first prize cock, Chicago, 1906, mated to my 1905 and 1906 prize winning hens and pullets.

HORACE R. BROWN - Princeton, Illinois

BARRED P. ROCKS

Five pens for 1906; three pens for cockerels and two for pullets. Cockerel at head of pen 1 has won three out of four blue ribbons. Others as good. Two pens of Buffs.

Three Fine Pens Of S. C. BROWN LEGHORNS

for 1906. Two pens for cockerels and one pen for pullets. Fifteen good breeding cocks and 30 pullets, and one cock that has won three blue ribbons straight, for sale.

S. U. TEEPLE - BELVIDERE, ILL. A. J. HUMPHREY - BELVIDERE, ILL.

MAGEE & GOWRAN'S BLUE BARRED ROCKS

ARE BLUE RIBBON WINNERS. In hot competition with Barred Rocks that had previously won at nearly all the shows in the state, we entered one pen, won 1st; entered three pens, won 1st, 2d and 4th; entered four pullets, won 1st, 3d and 4th. **Good, isn't it?** Please write us. We can convince you that we have quality, pure Bradley Bros. and Thompson strains. Eggs \$2 per sitting.

MAGEE & GOWRAN - Two Rivers, Wisconsin

S. C. BUFF ORPINGTONS

GOLDEN WEST DUCK RANCHE - JOLIET, ILLINOIS

VASS' Buff Black White ORPINGTONS

My Buffs at World's Fair won 1st and 3d hen, 4th cockerel and 7th pullet. Madison Square Garden, 1901, four 1sts, two 2ds, one 4th, one 6th. All these winners were bred by myself. This record has never been equaled by any Orpington breeder. 1905 2d cockerel, defeating the originator and 1st prize cockerel at first International Alexander Palace, London Show, which was purchased at a cost of \$750, defeating every American bred bird in his class, 37 competing. 1906, 5th cock, 21 birds competing. Scranton, Pa., 1906, Blacks, two 1sts, one 2d, one 3d, special and \$100 challenge silver cup for best bird in show, 1000 birds competing. S. C. Whites, four 1sts; R. C. Buffs, three 1sts, one 2d. N. Y., White, 2d ckl., defeating many English bred birds. Have grand lot of stock to offer at reduced price; will please you. Eggs for hatching from prize winners. Write for prices. Circular free.

C. E. VASS - Washington, N. J.

White Wyandottes

Mapleside Strain Winners of highest honors at Madison Square Garden, 1906, first and special hen. 51 hens in competition. Twelve years of careful study has produced me an unequalled strain for size, shape and color. All my winners are bred and owned by myself. Write today for my booklet. EGGS \$2 per thirteen, \$5 per forty. Also incubator eggs.

Chas. Nixon, Prop. Box 202, Washington, N. J.

BUFF WYANDOTTES

I have, without exception, the best flock of Buff Wyandottes in America. Ten grand matings for 1906. All birds I breed from are fine individual specimens; many are absolutely solid buff. My birds do not have white lobes, willow shanks, stubs, single combs or show white in plumage. I make a specialty of Buff Wyandottes and will guarantee that you will get fewer culls and more good birds from my strain than from any other breeder in the country.

RALPH W. STURTEVANT, LOCK BOX B 22, BELOIT, WISCONSIN

Davis' White Plymouth Rocks Exclusively

Prize winners wherever shown. No more stock for sale. EGGS for sale at \$2 per fifteen, \$8 per hundred. I have the best matings this year I ever owned. If you are in need of eggs please give me a trial. Satisfaction guaranteed.

ARCHIE DAVIS :: MEMBER OF THE WHITE PLYMOUTH ROCK CLUB :: R. R. 1, Tremont, Illinois

WHITE WYANDOTTES

My birds are white, are good in size and are Wyandottes in shape. Females score to 96½. At the Northern Illinois Poultry Association Show at Belvidere, February 5th to 10th, 1906, won first cock, first and fourth cockerel, first, second and fourth hen, fourth pullet, first and third pens.

I also breed choice Single Comb Brown Leghorns. Eggs for hatching.

W. F. ALLEN - - BELVIDERE, ILL.

DIRK'S BUFF WYANDOTTES

Even buff color and true Wyandotte shape. At Toledo Fanciers' Association, February 1st to 5th, 1906, we showed nine birds; males scoring to 93¼, females from 93¼ to 95, under Ben S. Myers; and in strong competition we won 2d pullet, 3d cock, and 3d pen, score 187½. At Findlay, Ohio, January 9th to 13th, we won 1st and 2d cockerel, 1st, 2d and 3d pullet, 1st pen. At North Baltimore, Ohio, February 16th to 20th, McClave judge, we won 1st, 93¼, 2d and 3d ckl., 1st, 95¼, 2d and 3d pullet, 1st hen, 93¼, 1st cock, 92½, 1st pen, 187½. A few good cockerels for sale. Eggs for hatching \$3 per 15, \$5 per 30. No females in breeding yards scoring less than 93¼. Address

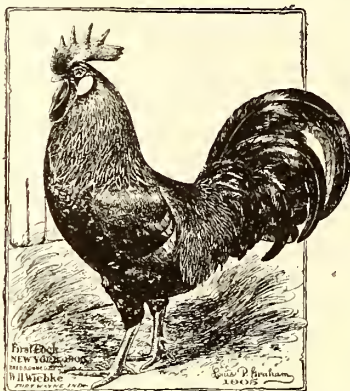

M. E. DIRK, Box 102 :: North Baltimore, Ohio

S. C. BROWN LEGHORNS

The prize winning kind, having won thirty first prizes at Chicago, Indianapolis, Cleveland and Ft. Wayne. Also winners at Madison Square Garden.

EGGS \$2 and \$5 per Sitting from the best pens I have ever mated up. Circular free.

W. H. WIEBKE, 2001 P, Ft. Wayne, Ind.

"A BUCKET OF CHICKS EVERY DAY."

The "Continuous" Hatcher is the name of an incubator which its makers claim will hatch chicks continuously every day. This idea they have very cleverly illustrated on the front cover of their catalog which shows a bucketful of the brightest, liveliest chicks you ever saw. They look as if they were glad they were alive, and are singing the praise of their wooden mother.

Besides listing the various machines and poultry appliances made by The Hacker Incubator & Manufacturing Co., the catalog contains a very complete and exhaustive article on the subject of artificial incubation; showing how the principles which Nature employs to hatch fowls in a natural way must be observed if success is to crown your attempts to hatch them artificially.

Every incubator owner and every poultryman and beginner in the chicken business is vitally interested in this most important subject and should read this article, published only in this catalog, which will be sent free to all those interested who will write for it.

A PLEA FOR MORE MONEY.

Anyone who doubts that there is money in bee-keeping need only to look up statistics on the honey crop of the United States to find out what a great marketable article honey is. In the year 1900 the total amount of capital invested in bees in the United States was \$10,186,000. The returns from the national honey crop that same year were \$6,065,000. A dividend of 63 per cent on the amount invested. What other crop pays this rate of interest?

At a convention of the bee-keepers of the state of Massachusetts held this year the fact was revealed that only 40 tons of honey is raised annually in that state while the amount of honey consumed each twelve months amounts to more than 200 tons.

Honey is always a ready seller and the price per pound averages anywhere from 12 to 20 cents, depending upon the locality and quality. A good hive of bees in the average locality will produce about 75 lbs. of honey per year and pay 50 per cent on the investment the first season. Get posted on bee-keeping if you seek a pleasant and profitable occupation. T. P. HALLOCK, Medina, Ohio.

"A STURDY, YELLOW PUFF-BALL —HIS MOTHER WAS A 'HATCH-ALL.'"

That is the legend on the title page of a newly written, 80-page incubator catalog just off the press. A fluffy, happy chick backed up by two of his brothers makes a cute and appropriate illustration for the "Hatch-All" Incubator catalog.

Inside, the whole eighty pages are interesting, instructive, profitable to every poultry raiser. There are over sixty half-tone illustrations reflecting nearly every phase of the poultry industry. The double half-tone (pages 36 and 37), illustrating "How I made money on a town lot," shows a thrifty flock of White Wyandottes in their own surroundings. They are a lot of beauties. The article is written by Mrs. Wagner, a Nebraskan. Every poultry lover ought to send for this book if merely to own this handsome double-page illustration.

There are a score of valuable, money-making features about this catalog. It explains in full the value of the "Hatch-All" Incubators and Brooders, their heating systems, ventilation, regulators, lamps, etc. These are fully illustrated in half-tone. It explains how the Hebron Incubator Co. send their machines freight prepaid, saving buyers trouble, annoyance, expense. An extended article details the proper methods of running an incubator, how to avoid mistakes and loss through lack of experience.

Space is too limited here to tell all about this well-written piece of incubator literature. I urge every raiser and keeper of poultry to send to the Hebron Incubator Company, Hebron, Neb., for this book. *One Who Has Read It.*

Wm. K. Lewis, Dry Ridge, Ky., the Buff Wyandotte specialist, made five entries at the late Cincinnati show and won four prizes—1st cock, 5th cockerel, 3d pullet and 1st pen. He has some choice cockerels and pullets yet for sale and can satisfy the most exacting customer. His breeding pens this season will contain all his prize winners and his circular which is free for the asking will give you prices and other information. Write for it and mention AMERICAN POULTRY JOURNAL.

YOUNG'S PRIZE WINNING BUFF COCHINS

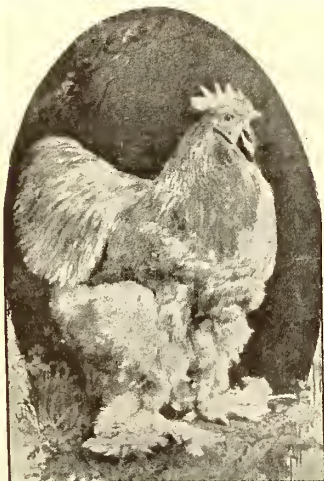

The Best Buff Cochins in America. Magnificent in size, immensely heavy feathered, with the true golden buff color. Bred to the top notch of highest perfection, producing a long line of gorgeous exhibition prize winners.

Manlove Gate Company 272 E. HURON ST. CHICAGO, ILL.

FREE INFORMATION

In Poultry Raising for Profit.

The Sure Hatch Incubator Company, having offices at Clay Center, Neb., and Indianapolis, Ind., occupy a position of great importance in the poultry raising industry, and their business keeps them in touch with 60,000 people who are operating Sure Hatch Incubators with profit.

Their knowledge is practical, not theoretical, and for the past few years they have been a sort of clearing house for information on poultry topics.

An experienced poultry raiser gives his entire time to answering questions and helping people to get started right getting more money out of their poultry.

Suppose, for instance, you are about to build a poultry house. You can write to this company and get a complete plan for just the size house you want to build, showing just how to go about it, so as to avoid expensive mistakes and have an up-to-date building. Not a cent is accepted for this work.

If you want to learn the latest scientific methods of testing and handling eggs, raising poultry, feeding, protecting from ver-

J. A. BICKERDIKE.
The trap-nest man, Millersville, Ill.

min, etc., etc., this company will give you correct information—the boiled-down results of its experience, the Sure Hatch Incubator Company and its army of patrons.

Of course, if you ask this man to recommend an incubator, he will advise you to buy a "Sure Hatch," but you are under no obligation to do so unless your own judgment tells you that it is the most simple, practical and successful machine.

We will say this for the Sure Hatch. It is the best selling machine on the market, and that fact in itself is mighty good evidence that it "makes good."

The 1906 Sure Hatch has a number of improvements which greatly increase its efficiency. It is sold on sixty days' trial and is guaranteed by the company to out-hatch any incubator on the market.

This is a pretty stiff guarantee, but the company is financially strong and its methods are open and above board, so you can test the Sure Hatch without running any risk whatever.

If it doesn't do the work they claim it will, you simply get your money back without any "see-sawing."

In addition to the free instruction, the Sure Hatch Catalogue and Poultry Manual can be obtained free by addressing a postal to the Sure Hatch Incubator Company, Box C. 6, Clay Center, Neb., or East Washington street, Indianapolis, Ind.

Harry M. Lamon, Center Moriches, L. I., N. Y., formerly of Watertown, N. Y., who is no doubt well known to a large number of our readers, is again advertising in our columns. Mr. Lamon has added White Plymouth Rocks to his yards and will hereafter devote his time to the breeding of Barred and White Rocks, and reports that he has some choice pens of these two varieties from which he will sell eggs at \$3 per 13; \$5 per 26, for this season only. Mr. Lamon knows how to mate to produce winners, and if you are looking for eggs that will hatch a large percentage of really good birds you should get in communication with him. Mention AMERICAN POULTRY JOURNAL when writing.

TWO YEARS AT MADISON SQUARE GARDEN.

The following winnings by the Willow Brook Farm, Berlin, Conn., is a record that anyone should be proud of: At New York, January 3-7, 1905, at Madison Square Garden, the Orpingtons were the third largest class in the show. Willow Brook Farm won upon S. C. Buff Orpingtons as follows: Second and fourth cocks; third and fifth hens; third cockerel; third and fourth pullets and first pen. Also the president's silver cup for the best display of S. C. Buff Orpingtons. In Blacks: First and fourth cocks; second, third and fourth hens; fourth cockerel; fourth and fifth pullets and first pen. In Whites: First and fifth cocks; first, second and fourth hens; third and fifth cockerels; first, second, third and fifth pullets and first pen. Also seven (7) special ribbons calling for president's silver cup for best display in S. C. Buff Orpingtons, silver cup for best S. C. Black Orpington male, silver cup for S. C. White Orpington male, silver cup for best S. C. White Orpington female, and silver cup for best display in S. C. White Orpingtons. Twenty-nine (29) out of a possible sixty-three (63) prizes, seven (7) firsts out of a possible fifteen (15). New York, January 2-6, 1906, in the strongest competition ever at Madison Square Garden (370 S. C.

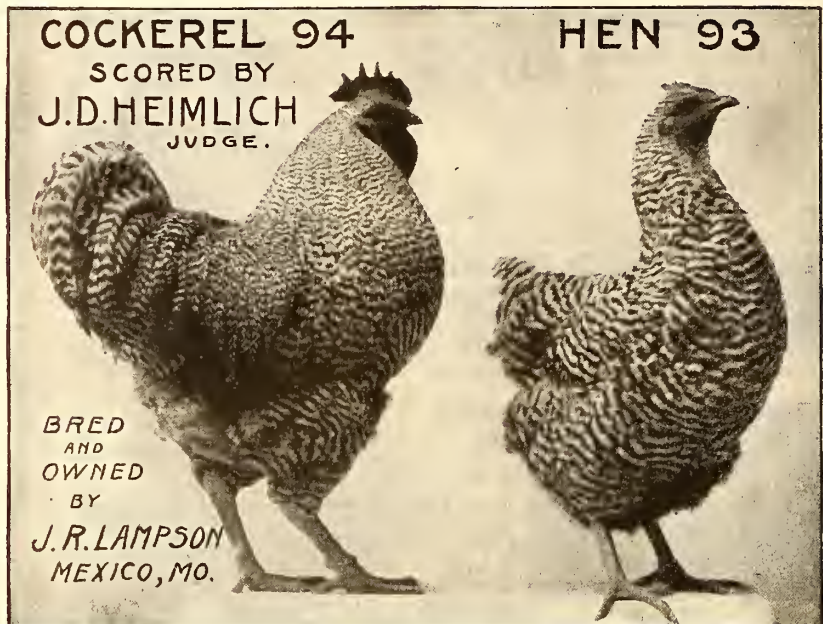

which, no doubt, is the reason for the club not having a larger membership; but as it is composed of breeders that are particularly interested in their breed, the good this club can do is considerable if carried out in the right direction.

The sentiment of the meeting was that we should work to better the condition of our exhibits at the important shows in the east. The place for the next meeting will be decided by vote of the executive committee.

W. R. GRAVES, Secretary.

JOHN MILLER'S POULTRY BOOK.

In looking over a copy of this interesting poultry guide the other day we found a list of questions and the correct answers as given by a practical poultry raiser. We believe this will be interesting to our readers. Here are some of the questions that are asked: "How many fowls can be successfully kept on one acre?" "How much house room is needed for twenty-five grown fowls?" "To insure fertility, how many females should be mated with one male?" "How long after mating until the eggs are fertile?" "What is the average cost for food per hen per year?" etc. You will find the answers and a whole lot of other valuable information, including poultry house plans, etc., in Mr. Miller's catalogue. He is a practical poultry raiser, as well as in-

PAIR BARRED PLYMOUTH ROCKS.
Owned by J. R. Lampson, Mexico, Mo.

Buff, Black and White Orpingtons in competition), they won upon S. C. Buff Orpingtons as follows: Second cock; third and fifth cockerels; second and fourth pullets, and second and third pens; also the National S. C. Buff Orpington Club's silver cup for the best display. In S. C. Black Orpingtons: First, second and third cocks; first and second hens; second and fifth pullets, and first pen; also silver cup for the best Black female. In S. C. White Orpingtons: First, second, third, fourth and fifth cocks; first, second and third hens; first, second, third and fourth cockerels, and third, fourth and fifth pullets; also silver cup for best White male and silver cup for best White female.

AMERICAN WHITE WYANDOTTE CLUB.

The annual meeting of the American White Wyandotte Club was held at the Mechanics' Fair building during the Boston show. The club offered \$50 in prizes to be competed for at the Boston show and also gave handsome club badges to winners of the same and offered the same style badges to the Hartford, Conn., and Newark, N. J., shows. The following officers were elected for the ensuing year: Horace Haverly, Stamford, Conn., president; W. Barry Owen, Vineyard Haven, Mass., vice-president; W. R. Graves, Springfield, Mass., secretary and treasurer; executive committee, W. E. Mack, West Woodstock, Vt.; A. L. Sparks, Swanton, N. J.; D. Lincoln Orr, Orr's Mills, N. Y.

The membership fee to this club is \$5,

ventor and manufacturer of the Ideal incubators and brooders. His book contains some of the finest cuts of standard bred fowls and an accurate and interesting historical review of the breeds given. Address a postal card to the J. W. Miller Company, of Freeport, Ill., asking for a copy of their book, "Poultry for Profit." It is sent free if you will mention this paper.

R. A. Richardson, of Haverhill, Mass., commencing an ad in this month's issue, is a breeder of White Wyandottes. He describes them as follows: "Persistent layers White Wyandottes bred for seven years by an individual record system." He claims that his two hens, No. 19 and No. 21, have the highest egg laying record for any two hens in the United States and sends authorized statement that No. 19 laid 272 eggs and No. 21, 267.

A. A. Lee, of Painesville, Ohio, is a breeder of S. C. Buff Orpingtons. He writes that he has some very fine stock in his breeding pens. This season he only exhibited at his home town show in January, 1906, at which time he was awarded first cock, second pullet, first pen and two specials, and with the competitors that he had he feels very proud of his record.

Wm. Tait, Shelby, Ohio, breeder of Barred Plymouth Rocks, is offering eggs from his bred-to-lay strain at prices anyone can afford to pay. Look up his ad elsewhere in this issue and write him and mention AMERICAN POULTRY JOURNAL.

CORNELL

"Follow the Flag"

The Best Incubators

Above everything an Incubator should have ability to hatch healthy, vigorous chicks—the kind that live and make profitable growth.

It is poor satisfaction to hatch chicks if they will not live, much less, if they do not rapidly make bone, flesh and feather.

The actual percentage of stock raised to maturity is what you should be most interested in.

For instance you will find there is more profit in hatching 80 and raising all of them, than to hatch 100 and have only 80 at the end of the season.

The first 80 will contain the prize winners, the early layers and the kind that the marketman pays the highest price for—the profitable kind.

The second 80 will be the slow growing ones, liable to disease, the kind that you and your customers do not want—the unprofitable kind.

What is the cause?

Healthy chicks can only be obtained when all conditions of incubation are accurately supplied. It is essential that the cubic contents, the ventilation, the heating, the regulating, the capacity and every part of each Incubator be balanced one with another.

The Incubator that is perfectly correct in all the fundamental principles, the one in which every step in the construction is based on knowledge, practical experience and put together by skillful workmen, will not only produce healthy chicks, but will hatch the largest number.

It is the "knowing how" gained by long experience and the "doing" for which we have a reputation that has resulted in the perfection of the Cornell Incubator for 1906.

You see we planned this Incubator so it is practically automatic; five minutes attention night and morning is all the care it requires.

The regulation is automatic, being absolutely controlled by our quadruple action all-metal thermostat.

The Cornell moisture lamp and elastic ventilation system permits the furnishing of a supply of pure warmed air of exactly the right humidity, to produce the maximum number of vigorous chicks, in the extreme cold or warm weather, in the arid climate of such States as Colorado or New Mexico, or in sections where there is great humidity, as on Long Island or in Florida.

No trouble in hatching duck eggs with this system. There is no danger from fire as the laminated asbestos heater jacket provides absolute safety—the entrance of the heater into the Incubator, also, is protected by asbestos board.

The Regulator Arm is out of the way of interference, beneath the Table Top, an exclusive feature of Cornell construction.

No tools of any kind are necessary in setting up the machine, as the legs are attached in the same manner as piano legs and the all-metal lamp-support is easily slipped in place.

In construction, design and finish the Cornell is easily in the lead.

We have taken advantage of every valuable feature that has been introduced in Incubator construction up to the present time, and we offer you the most successful, most dependable, most practical and best finished machine being made today.

If the selection of any article of Chick Machinery is more important than another, it is the choice of a Brooder.

Upon it depends, more than any other one thing, the success of your investment in poultry.

THE BEST IS THE PEEP-O'-DAY.

It has been made and sold since 1892.

The Government Poultry Farms and the most successful Poultrymen all over the world use, and strongly recommend, the Peep-O'-Day as the best Brooder made. They recommend it to everyone who raises poultry and who desires to make the most profit.

No other Brooder has received such flattery,—that of imitation,—as the Peep-O'-Day. It has served as a pattern and a model for the majority of Brooders.

But does it pay to get the imitation when the genuine costs no more?

Can you afford to take chances in getting any the but best? If you do, you will find it expensive; that your profits will not be as large and you will be disappointed at the end of the season.

Read a letter received from an experienced Poultryman:

Rossville, Staten Is., N. Y., Dec. 9, 1905.

Cornell Incubator Mfg. Co.,

Ithaca, N. Y.

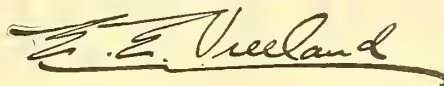

Gentlemen:

My experience with the Cornell Incubator last season was such that I shall discard the few ———— Machines we have at the farm and replace them this spring with Cornells.

We have found that we can hatch stronger and better chicks with your machine. I used to think that the percentage of hatch decided the success of an Incubator, but four years experience has taught me that the liveability of the chicks is the real vital thing.

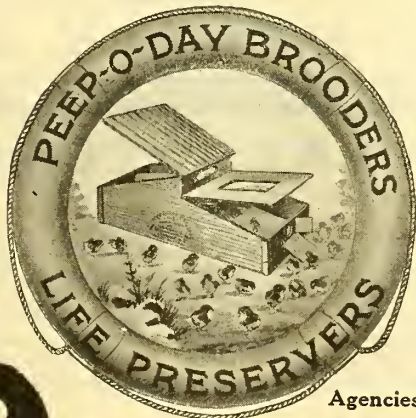

Two years ago I visited the famous Lakewood farm and found Brown using a steam heated Brooder House and just starting in with Peep-O'-Day Brooders. I tried your Brooders myself and today we use nothing else. About two weeks ago I was down to Lakewood again, and to my surprise found the steam heated house had been entirely fitted with Peep-O'-Days. It is the best Brooder built, according to my experience.

Very truly yours,

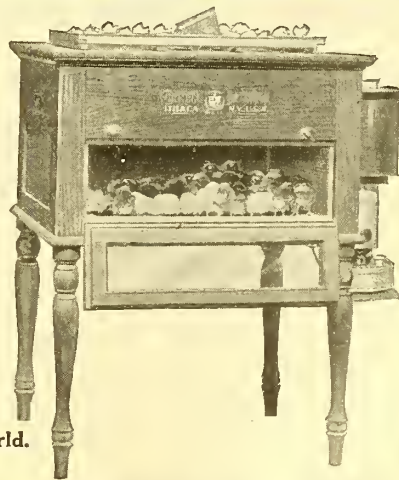

Have you heard of our new Peep-O'-Day No. 6?

OUR NEW CATALOGUE just from the press, contains illustrations and a detailed description of our Incubators, Brooders and Practical Poultry Supplies. It will pay you to send for it, because it is **FREE FOR THE ASKING** if you mention this paper and address

A POULTRY PROPOSITION.

The mention of poultry raising naturally carries with it an idea of hatching, rearing and marketing chickens, turkeys, ducks, etc., but there are many other sides to the question, involving, both commercial and manufacturing interests. Among the numerous firms engaged in producing equipments for poultrymen is the Climax Incubator & Brooder Company, Castorland, N. Y. We present herewith portraits of the officers of this concern, namely: Mr. S. L. Hirschey, president; Mr. Urban C. Hirschey, vice-president; Mr. James B. Smith, secretary and treasurer. These gentlemen are manufacturing a line of goods which has

many good points to recommend it to the consideration of the practical poultryman.

Their catalogue shows a fine line of incubators, brooders, automatic safety lamps, colony houses, etc. A feature of their automatic safety lamp is the fact that it only requires refilling about once a week. This is a departure which will be highly appreciated by all poultry raisers, as it eliminates a great deal of attention which was formerly required in order to keep brooders and incubators at the proper temperature.

The oil reservoir of this lamp holds nearly one gallon. The supply of oil to the

wick is governed automatically by the means of an air feeder, which supplies the oil only so fast as it is consumed, thus preventing overheating of the burner, formation of gas or fumes in the wick chamber and averting all possible danger of an explosion.

The tank is located on the outside, where it is always cool, and the lamp can be easily adjusted to any other make of brooder by any person of ordinary ingenuity. Anyone contemplating the purchase of anything in the line of incubators, brooders, colony houses or lamps will do well to write for the Climax Incubator & Brooder Company's catalogue, addressing them at Castorland, N. Y., mentioning this paper. Their advertisement appears on another page.

ONE CENT FOR A POUND.

Besaw's Arabian Poultry Tablets furnish to poultry raisers everywhere the most remarkable poultry food ever put on the market and for only one cent per pound.

These tablets are all active principle—no filler—made from the extracts of five seeds—nature's remedies—compressed into tablet form, neat, convenient and giving an accurate feed each time. The manufacturers of these tablets give an ironclad guarantee:

First—That these tablets are absolutely pure and contain only the best conditioning compound known to science. We will give \$1,000 to anyone showing them otherwise.

Second—One tablet crushed and mixed with one pound of common corn meal or chop will produce better results than a pound of any so-called poultry foods regardless of price.

Third—They will positively cure as well as prevent 90 per cent of the diseases common to poultry.

Fourth—They will grow and develop good, large, healthy, thrifty birds quickly for ready markets or shows and develop prize strains for perfect broods.

Read what Dr. J. Frank Titus, the noted breeder of fine poultry, Attica, Ohio, says about the Besaw tablets: "Having always been more or less skeptical about feeding poultry foods, and having fed a great many different kinds of them without any apparent results, I was persuaded to try your Arabian Poultry Tablets, and can frankly say they are the most wonderful things I have ever seen, not only as a conditioning food and developing growth and perfection in the birds, but when fed to breeding pens it produces a larger per cent of fertile eggs and nicer and thrifter chicks than anything I have

ever used, and the cost is so exceedingly small that no poultry raiser, whether on a large or small scale, can afford to do without them." Send for their circulars describing their goods; it is free if you mention American Poultry Journal.

The question of how to properly house and care for your poultry is an important one and should be considered thoughtfully by every one who is engaged in raising poultry, or expects to be. It is the wisest kind of economy to have neat, attractive houses, that are also snug and comfortable for your fowls. They need not be fancy buildings, but should be practical and handy to care for. One takes pride in such houses and will be more liable to keep them clean and give his fowls better care. As a result he gets more profitable returns from his fowls and is not troubled with disease or lice in his flock.

The Sanitary Portable Houses and Brooders built by Mr. J. E. Morgan, Lemont, Ill., are a great aid in housing and caring for poultry. They are built so as to afford plenty of air space for the fowls, yet there is no waste of room, making them easy to keep warm without the aid of artificial heat. These Sanitary Poultry Houses and Brooders will make the task of caring for your fowls a pleasant one, besides saving you much time and money. We advise our readers to write to Mr. Morgan for a copy of his descriptive circular, which contains much information of interest to poultry raisers.

John J. Keig & Son, Lockport, Ill., the well-known Buff Plymouth Rock breeders, receive many very flattering letters from their customers; the following extracts from a couple of them are fair samples. Mr. Wilk H. Works, Vesay, Ind., writes: "Out of the eggs I purchased from you last spring I hatched and raised 18 chicks from 30 eggs. At the Vesay show I won 1, 2, 3 pullets, 94, 93½, 91½, and 1, 2 cockerels, 90¼, 89. I also won at Warsaw, Ky., show and the first pullet again scored 94 by Theo. Hewes." Rowland Clarke, Madisonville, Ky., writes: "The birds arrived O. K. and thank you very much for your promptness. Will say they are splendid and I am very much pleased with them. The cock bird I got of you last year has come out to be a very fine fellow and the hens have moulted out fine and much better color than they were before."

C. F. Blackmon & Son, of Painesville, Ohio, won at Painesville, Ohio, January 9-13, 1906, as follows: First, second and third hen; first cockerel, on Single Comb Buff Orpingtons. Thomas F. Rigg, judge.

ARNOLD'S COLUMBIAN WYANDOTTES

WIN AT MADISON SQUARE GARDEN, NEW YORK, 1906

Columbian Wyandottes the sensation of the show. Here were found all the leading breeders of the East, with 141 of the best Columbian Wyandottes to be found. When we found 10 Pens of great quality in the class, all our best birds went into the pens with the following results: We won 1st 2d and 4th pens, also winning 2d cock and 1st pullet, (22 pullets competing.) At the St. Louis Exposition we won 1st pen; at the great Hagerstown Fair we won 1st, 2d and 3d pens; at Madison Square Garden we won the following specials on Columbians, (having won in all classes.) Special for best collection, special for 3 best cocks, hens, cks., pullets and pens; also gold special for best Wyandotte, any color, offered by Spratt's Patent. Our 1st prize cockerel, (son of Teddy), was considered by all judges and breeders the most remarkable Columbian Wyandotte male ever seen. Stock and eggs for sale. No birds sold for less than \$5. Eggs, \$20, \$10 and \$5 per 15; 10 chicks guaranteed.

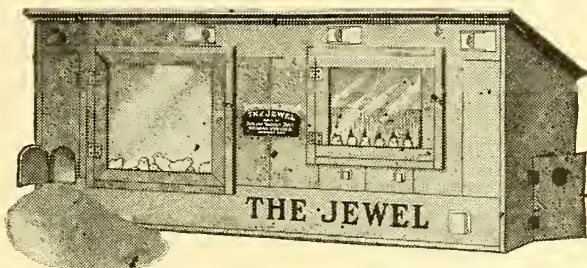

AUG. D. ARNOLD

Box 777, Dillsburg, Pa.

SOMETHING NEW FOR BROODING CHICKS.

The International Stock Food Company are creating quite a stir among poultrymen with their new Jewel Outdoor Brooder. Occasionally we have heard of brooders being used for a short time outdoors during winter time. We have never heard of brooders being used any length of time during midwinter and doing successful work. Since the latter part of January the Sanitary Poultry Yards have been using a number of these brooders, and the work they do under the most difficult circumstances is simply marvelous.

On January 31st at 6 p. m. the temperature outdoors was 30 degrees above zero. At 7 a. m. the following morning

true of the average incubator under favorable circumstances.

Mr. Rich says he has never raised healthier chicks, and at no time has he had as little trouble with them as he has in rearing them in Jewel Colony House Brooders. These machines have an immense amount of ventilation, but as for heating their record will show for itself. Mr. Rich says that within an hour and twenty-five minutes from the time the brooders were unloaded from the delivery wagon they were uncrated, set up and heated to the proper temperature and ready for chicks.

We have always taken the position that there was plenty of room for improvements in incubating and brooding, and it is very evident that Mr. Sprague, the designer of these machines, has made a

the temperature had dropped to 5 below. This made a change of 35 degrees, while the thermometer in the hover room of the brooder showed a change of but 2 degrees. On February 7th the temperature dropped 20 degrees in twelve hours, with 2 degrees drop under the hover. On February 11th the outside temperature dropped 30 degrees, with but 2 degrees change under the hover.

Mr. Rich, proprietor of the Sanitary Poultry Yards, says that he uses a lamp burning a one-inch wick with but half a flame turned up and the machines he is now operating are six feet long. It is astonishing, to say the least, that we find a brooder consuming less oil than the average 200 egg incubator, and being operated in temperature where an incubator could not succeed at all, and yet the brooder maintains as even a heat as is

wonderful improvement over the old-time methods.

The Jewel Brooders have a heating apparatus that can be instantly taken apart if at any time it is necessary to wipe out the soot that is always liable to collect in heaters. This is the only machine that has this feature, which will be highly appreciated by all its operators. Those who are interested in better methods of brooding should investigate this machine and get their order in early, as the factory advises us they are now behind in their orders and that it will take at least a thousand machines to meet the present demand.

Catalogs describing this scheme will be mailed to interested persons upon application to the International Stock Food Company. Their ad appears elsewhere in this paper.

AUTOMATIC GATE.

Gates upon the farm are a necessity. The easier to open the greater is the value. If they open of themselves by the mere act of driving upon a crank this convenience of itself is of much importance. Ofttimes you are driving a team that you cannot leave to open the old time gate, in which this self-opener would prove worth all it cost you in this instance. There have been many teams run away in leaving them to open and shut a gate and the damage done would probably pay for a self-opening gate.

The Manlove Gate is one of the best of the self-openers. It stands in the front. It is not only convenient, it is durable and ornamental. It is a time saver, an insurance against accidents, and certainly a valuable invention. Address the Manlove Gate Company, 272 East Huron street, Chicago, Ill., for particulars of same.

CERTIFICATE OF SALE.

JANUARY 24, 1906.

This is to certify that I have this day sold the following Single Comb Buff Orpingtons to Mr. Earl M. Pettengill, Amsterdam, N. Y.: My first prize cockerel at Chicago, 1905 (now a yearling cock); first prize pullet at Chicago (now a yearling hen). In addition to the above Mr. Pettengill also purchased of me three hens (half sisters to the above Chicago pullet), my best cockerel and my best pullet. These birds cannot help but produce prize winners, and as I know Mr. Pettengill to be an upright business man, I can safely recommend him to all intending buyers.

(Signed.) F. C. BAILEY.

Reading, Mich.

EVERY HEN A PROFIT.

If every one of your hens could be made to increase your profits to the extent of 15 cents each a year, wouldn't you help them a little? It's when eggs are selling at 50 cents a dozen that you want eggs! One of the greatest foods for hens, if not the greatest, for making hens lay is

green cut bone. But it must be cut bone. By "cut bone" is meant bone that has been prepared by a machine which does not splinter the bone, but actually cuts it in pieces suitable for every size fowl. Among the many devices for this purpose the Stearns Bone Cutters stand out prominently in the front rank. They have a patented steel cutter head which mills the bone perfectly—cuts it in pieces small enough for every size fowl to readily seize. These cutters will just as easily cut meat, vegetables, roots, etc., thus saving the price of a root cutter. They are made by E. C. Stearns & Co., of Syracuse, N. Y.

S. U. Teeple, Belvidere, Ill., won on his Barred Plymouth Rocks as follows: Rockford, Ill., January 16 to 21, 1905: First and third cock, second cockerel, third pen. At northern Illinois sixteenth annual show, Belvidere, Ill., January 30 to February 4, 1905: First cockerel, second cockerel, third pen. At Rockford, Ill., January, 1906: First and second cockerel on Barred Plymouth Rocks; on Buff Rocks, first hen, third cockerel. At northern Illinois seventeenth annual show, Belvidere, Ill., February 5 to 10, 1906: First and third cock on Barred Rocks; also American Plymouth Rock Club emblems for members for best shaped male, best shaped female and best colored female; best colored male; on Buff Rocks, third cockerel.

George M. Kline, of Downer's Grove, Ill., is selling eggs from his best pen of White Wyandottes, headed by the cockerel that was in the first prize pen at Chicago show, 1906. This pen contains some grand females and anybody desiring to raise good stock will make no mistake in placing their orders with him. His prices are very reasonable.

We are in receipt of a book entitled "Guinea Culture," written by Mr. J. H. Edgerton, Marietta, Ohio. This book treats on the breeding, rearing and marketing of Guineas. The author has been for several years actively engaged in the raising and marketing of Guineas and is therefore in a position to know whereof he writes.

B. S. Beuerlein, Mt. Morris, N. Y., won at Canisteo, N. Y., Feb. 6-9, 1906, as follows: 1st pen, 1st cockerel, 1st cock, 1st and 2d pullet, 1st and 3d hen on 7 entries. Burgott, judge 30 in Single Comb Buff Leghorn class.

Wm. L. Howell, Geneseo, N. Y., won at Flower City Poultry & Pet Stock Association, Rochester, N. Y., as follows: 1st cock, 1st cockerel, 1st hen, 1st pen, 2d pullet and 9 specials. At same show in 1904 won special for White's male in the largest class ever shown there. Quilhot, judge; 46 in White Wyandotte class.

Rudolph Poultry Yard, of Rudolph, Ohio, won at Toledo Fanciers' Association, Toledo, Ohio, Feb. 1-5, 1906, as follows: 2d Barred pullet, 2d Buff Rock hen, 2d and 5th cockerel, 3d pullet, 2d pen. Hewes and Pierce, judges; 228 in Barred and 122 Buff class.

Geo. J. Gleason, Dunlap, Iowa, won at Boyer Valley Poultry Association, Dunlap, Dec. 26-29, 1905, as follows: 1st, 2d, 3d, 4th pullet; 1st, 2d, 3d, 4th hen; 2d cock; 2d cockerel; 1st pen and special for best display of Silver Wyandottes. F. H. Shellabarger, judge.

Bert Warren, R. F. D. 33, Evans City, Pa., won at Butler Poultry & Pet Stock Association, Butler, Jan. 24-27, 1906, as follows: On S. C. White, 1st, 3d cockerel; 1st, 2d pullet. S. C. Buff Orpingtons, 1st, 3d cockerel; 1st, 2d pullet. S. C. White Orpingtons, 1st cockerel, 1st pullet. W. C. Pierce, judge.

John C. Plane, of Belvidere, Ill., won at Northern Illinois Poultry Association, Belvidere, Ill., Feb. 5-10, 1906, as follows: 1st, 2d, 3d, 4th cockerel; 1st hen; 1st pullet; 2d cock; 1st pen. Highest scoring pen in show of 1,200 birds, also \$35 silver cup for best cock, cockerel, hen and pullet in show. Geo. D. Holden, judge; 75 in S. C. White Leghorn class.

W. L. Fern, of 568 Slade avenue, Elgin, Ill., won at Elgin Poultry Association, Elgin, Ill., Jan. 1-6, 1906, as follows: 2d,

3d and 4th hen; 1st, 3d cock, 1st, 3d and 4th pullet; 1st, 2d, 3d and 4th cockerel; 1st pen. One special for best pen of solid colored birds in the show. Chas. McClave, judge; 75 in S. C. White Leghorn class.

Paul T. Hobart, of Roscoe, Ill., won at Northern Illinois Poultry Association, Belvidere, Ill., Feb. 5-10, 1906, as follows: 2d, 3d, 4th pullet; 3d cockerel; 2d pen. Geo. D. Holden, judge; 54 in S. C. B. Leghorn class.

M. E. Sullivan, of Quincy, Ohio, won at Springfield Show, Springfield, Ohio, Jan. 22-27, 1906, as follows: 1st cock, 3d and 4th, 2d pen; special for best cock in class. Henry Trafford, judge; 8 in White Wyandotte class.

Theodore Baker, Jr., of Meadow Farm, Hartsdale, N. Y., won at Madison Square Garden, New York City, Jan. 2-7, 1906, as follows: 3d on old Pekin drake, 3d on old Pekin duck, 4th on young Pekin duck, 4th on W. Scovy drake, 5th on W. Scovy drake, 4th on W. Scovy duck, 1st, 2d, 3d, 4th ou Belgian Mondaine pigeon cocks, 1st, 2d, 3d, 4th on Belgian Mondaine pigeon hen.

A. L. Emerson, of Inkster, Mich., won at Michigan State Poultry Show, Detroit, Mich., Jan. 27 to Feb. 1, 1906, as follows: 1st cock, score 90; 1st, 3d hen, score 93-92½; 1st, 2d, 3d cockerel, score 92½, 92¼, 92; 1st pullet, 92¼; 1st pen, score 184¼. Also made nearly a clean sweep at Adrian, January, 1906, and the great Ann Arbor Show, January, 1906, 207 Barred Rocks in class. Tucker Butterfield and Hewes, judges—100 in Barred Rock class, at Michigan State, Detroit; 100, at Adrian, Mich.; 207, at Ann Arbor.

W. R. Wooden, of Battle Creek, Mich., won at Detroit Fanciers' Association, Detroit, Mich., Jan. 6-11, 1906, as follows: 1st cock, 1st hen, 1st cockerel, 1st pullet, 1st pen. Frank Heck, judge Buff Wyandottes.

W. A. Hayes, of Monmouth, won at Warren County Poultry and Corn Association, Monmouth, Jan. 8-13, 1906, as follows: 1st cock, 1st cockerel, 1st, 2d, 3d, 4th pullet, 1st breeding pen. McClave, judge in Columbian Wyandotte class.

Winfred W. Britton, of Elgin, Ill., won at the Elgin Poultry Association, Elgin, Ill., Jan. 1-6, 1906, as follows: Single Combed Black Minorcas, 1st, 2d and 3d cock; 1st, 2d, 3d and 4th hen; 1st, 2d, 3d and 4th cockerel; 1st, 2d, 3d and 4th pullet, and 1st, 2d, 3d and 4th pens; also all ribbons offered by the American Black Minorca Club offered here. Rose Combed Black Minorcas, 1st and 2d cock, 1st and 2d hen, 1st, 2d, 3d and 4th cockerel; 1st, 2d, 3d and 4th pullet, and 1st and 2d pens, and all ribbons offered by the International R. C. Black Minorca Club. Chas. McClave, judge; 30 in Single Combed class, 18 in Rose Combed class.

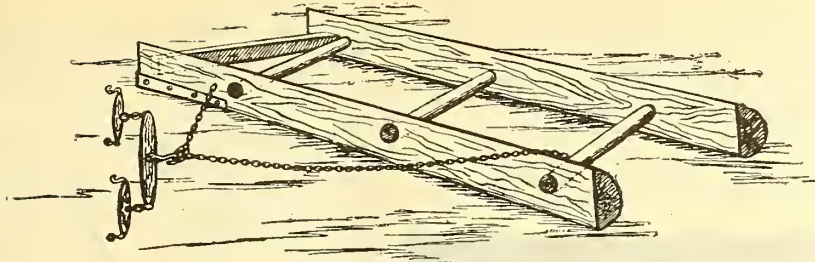

Jno. W. Underwood, of Sullivan, Ill., won at Kankakee Poultry Show, Kankakee, Ill., Jan. 29 to Feb. 3, 1906, as follows: 1st and 2d cock, 1st, 2d and 3d hen; 2d breeding pen; 2d in American class. Sharp Butterfield, judge of White Rocks.

Oakwood Poultry Farms, of Marshall, Ill., won at Eastern Illinois Fanciers' Association, Mattoon, Ill., Jan. 8-12, 1906, as follows: 1st cock, 1st cockerel, 1st hen, 1st pullet, all S. C. White Leghorns. T. M. Campbell, judge.

Show record for past two years of J. M. Detwiler: At Dunlap, Iowa, December, 1905, 1st cockerel, 1st, 2d, 3d pullet; 1st pen; 20 specials. Glidden, Iowa, December, 1904, 1st, 2d, 3d, 4th pullet; 3d cockerel; 2d pen. Odebolt, Iowa, December, 1904, 1st cockerel. Fremont, Neb., December, 1903, 3d and 5th pullet. Blair, Neb., January, 1903, 1st, 2d, 3d pullet; 2d cockerel; 2d pen.

C. P. Nettleton, of Shelton, Conn., won at Newark, N. J., Jan. 29 to Feb. 3, 1906, as follows: On seven entries Light Brahmas, 1st cock, 1st hen, 2d, 3d cockerel; 2d, 4th pullet; 1st pen.

I. N. Barker & Son, Thorntown, Ind., breeders of the most noted prize-winning strains of Light Brahmas, have issued their 1906 egg circular and would be pleased to mail same to anyone who will ask for it. Messrs. Barker have mated ten fine breeding yards for the season and are in the best shape in their lives to furnish eggs from strictly high class matings. Their egg catalog gives a description of each mating. All infertile eggs replaced.

GOOD EARTH ROADS.

The Chicago & Alton Railway in order to assist farmers in their efforts to have good roads without big taxes has arranged for a series of lectures by M. D. Ward King, the inventor and exponent to the King's road drag, a simple, inexpensive device which can be easily made by any farmer who, if he uses the drag in accordance with directions, can have good roads in his neighborhood. Through the courtesy of the C. & A. Ry. we received the following illustration and description of the drag, and it is published for the benefit of the thousands of farmers who are subscribers to the AMERICAN POULTRY JOURNAL.

Log 12 inches in diameter, of some soft wood; oak is too heavy.

Slabs 7 to 9 feet long, to suit weight of team.

Cross sticks hold the slabs 30 inches apart.

Platform of inch boards should be laid on cross sticks.

2x12-inch plank can be used instead of log slabs; when plank are used it is better to reinforce the middles with a 2x4 piece lengthwise.

The hitching ring should be 2 or 2½ feet in front of the drag.

After each rain drive up one side of the wheel track and back on the other side with drag in position to throw the earth to the center. Ride on the drag. Have an angle of 45 degrees.

A GOOD LITTLE POULTRY BOOK.

We take pleasure in directing the attention of our readers to a little book before us, entitled "Proper Care and Feeding of Chickens, Ducks, Geese and Turkeys." It is published by the Des Moines Incubator Company, Des Moines, Iowa, and is sold for 10 cents a copy. No reader will begrudge the small price to get the accurate, specific information which this little book contains. It is in neat, compact form, and gives directions and pointers in a way that they will be applied every day by the poultry raiser. The different classes of fowls are treated separately. Particular attention is given to right starting, the foods that are adapted and those not adapted to the new horn flegelings. It is an especially valuable book for beginners. Old poultry raisers will get many valuable suggestions from it. A copy may be procured by sending the 10 cents direct to the publishers.

U. S. GOVERNMENT RECLAMATION WORK IN COLORADO.

Effect of the Gunnison Tunnel Project on the Uncompahgre Valley in Western Colorado.

This project has for its object the reclamation of about 150,000 acres of land in the Uncompahgre valley in southwestern Colorado. The normal flow of the Uncompahgre river, which traverses the tract to be reclaimed, is already utilized for irrigation, and in order to water this immense area, the construction of a tunnel six miles

long to divert to unused waters of the Gunnison river was conceived. Work on this tunnel has now been in progress for more than a year and in eighteen months it is believed that the work will be completed.

Considerable of the land under this irrigation scheme is in private ownership, but there are 35,000 acres government land, subject to homestead.

The principal crops that can be successfully raised are alfalfa, grain of all kinds and a great variety of fruits and vegetables. When the water supply is sufficient and the ground properly tilled, these products, particularly the fruits, are of the highest grade and the yield abundant and certain. Well watered orchard lands, in bearing, are easily worth \$500 per acre.

Narrow gauge branches of the Denver & Rio Grande railroad traverse the entire length of the valley, practically none of the land being more than ten to twelve miles from a railroad station. An excellent market exists in the mining towns surrounding the valley, but the bulk of the crops raised, particularly fruit, is shipped east, where it commands fancy prices; and soil is excellent and the land is divided into farm units of eighty and forty acres, the latter being in the vicinity of town sites.

The plodding farmer may be slow, but in the end, in his race with other lines of industry that seem to hold out brighter promises, he always seems to come out as did the patient tortoise in his race with the hare. The latest illustration of this comes from Colorado, a state which only a few years ago was dazzling the world with the riches of its gold and silver mines.

The annual reviews of Colorado's progress show that in 1905 the state produced

the greatest amount of gold of any year in its history, a total of \$29,000,000. But in the same year the grain and potatoes, hay and other produce from Colorado farms aggregated more than \$40,000,000 in value. Silver was higher in value than for several years, and the production of this metal in Colorado rose to \$11,000,000, but the combined product of the orchard and sugar beet patches beat the total of silver by \$1,500,000. Five million dollars' worth of lead was marketed, which is just about equal to the value of the fat lambs shipped. The whole value of the product of the metaliferous mines of the state was \$43,000,000. The products of the farms aggregated more than \$70,000,000.

More money is being invested in agricultural projects in Colorado than in the development of mines. Reservoirs and canals originally planned for placer mining have been diverted to irrigation, and the next few years seem likely to see the area of highly productive farming lands in the state more than doubled. The "man with the hoe" seems to have secured a start over the mar with the hammer and drill, which the latter will never be able to overcome, unless some very remarkable new discoveries of mines are made.

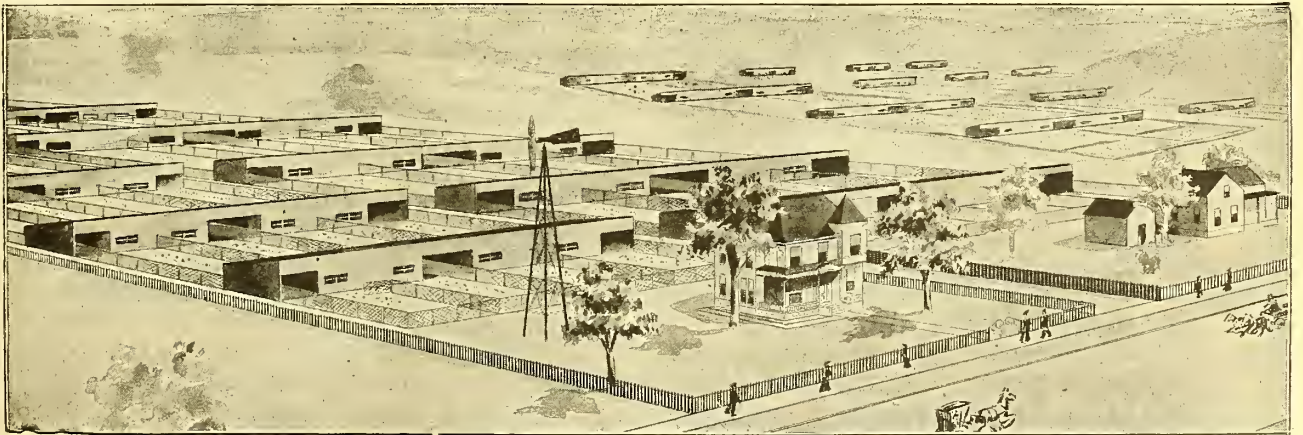

I should like to have every reader of your journal who is interested in Barred Plymouth Rocks send for one of my free circulars which will contain the cuts of my Chicago winner. I made the greatest winnings of any Barred Rock breeder in the world this season at a large show. I won, Chicago, January 22 to 27, 1906, 2d cock, 5th hen, 1st, 4th cockerel, 1st, 2d pullet, 1st, 5th pen; championship male, best colored male and female, silver cup for best display, Riggs Challenge Cup for best display in the American class, \$10 stockholders' cup for best display any and all varieties and sixteen specials. My matings this year are the best I ever had and I sell eggs from any and all of them.

DR. O. P. BENNETT.
Mazon, Grundy County, Illinois.

The "Original Idea Catalogue," issued by the De Graff Poultry Farm, Amsterdam, N. Y., is on original ideas throughout and describes many original, practical and economical devices that are in operation on this farm only. It is the finest illustrated catalogue ever published in the poultry business, containing over 35 artistic halftones taken from photographs of different parts of his farm and some of his ideal prize winning specimens, besides describing his simple remedies for all diseases. Owing to the expense of this high grade work he charges 10 cents postage on this catalogue and gives good value and mails his mating list free to all that ask for it.

We are just in receipt of a copy of the fifth edition of Natural and Artificial Incubation, by Jas. Rankin. This book has been revised and enlarged and is full of interesting matter pertaining to duck culture.

The sixteenth annual catalogue of the Galbraith Nurseries, Fairbury, Neb., has been received. It is gotten up in its usual attractive manner.

Crescent Poultry Farm, Frank Foy, Proprietor, Des Moines, Iowa

"Money in Poultry" is the title of our new 84-page thoroughly revised and illustrated book which tells how to make it; also how to feed, breed and probably gives more reliable information about the poultry business drawn from actual experience, than any book of the kind published. It contains many illustrations; tells all about raising poultry for profit; feeding for eggs, broiler raising, artificial incubation and contains many valuable and interesting articles. Illustrates and describes the largest pure-bred poultry farm in the country. It also describes and illustrates 30 leading varieties of pure-bred fowls, and the Frank Foy Incubators and Brooders, and quotes extremely low prices on fowls, eggs, Incubators and Brooders. Mailed to any address for four cents in stamps. Address

FRANK FOY, : : Box B, : : DES MOINES, IOWA

AN OLD PROVERB PROVES TRUE.

A pleased customer is the best advertisement, says the old proverb. The Galbraith Nurseries, of Fairbury, Neb., have continued to please their many customers and friends, and they in turn advertise the stock bought of the Galbraith Nurseries to their neighbors who know a good thing when they see it.

The stock in these Nurseries has been inspected by the State Entomologist and is pronounced clear and free from any disease.

If you wish to buy forest, fruit or ornamental trees, roses or small fruits, their illustrated catalog will show you what splendid trees and plants can be bought for a very reasonable price.

These people actually give as a premium on an order amounting to only \$6 nursery stock worth at least \$1.75. For an order amounting to \$10 they not only give this premium of \$1.75 worth of nursery stock but also pay the freight. Their advertisement appears in another column of this issue. We advise our readers to send for their catalog, mentioning this paper. It will give you a start in the right direction.

J. C. Fishel & Son, Hope, Ind., recently shipped a choice pen of White Wyandottes and a pair of Fox Terrier puppies to Baden Baden, Germany. This sale was the direct result of advertising in AMERICAN POULTRY JOURNAL. The following letter speaks for itself:

NEW YORK, Feb. 14, 1906.—Messrs. J. C. Fishel & Son, Hope, Ind.—Dear Sirs: I am very pleased to inform you that the pen White Wyandottes and the pair of Fox Terriers arrived in good condition. The birds are now in the open of a large loft and the dogs are running around in another loft. I expect to coop up again and ship on steamer sailing on the 20th, where they will be placed in large stationary coops and have a real good run. So I look forward to everything arriving at Baden-Baden, Germany, in fine shape. I must confess that I am very much pleased with the chickens and dogs. Surely you are entitled to my expression of satisfaction. I have no doubt this is gratifying to you as well as it is to me. I must repeat that I

am delighted with the little puppies. They are the most active little things I have ever seen. I am also highly pleased with the birds, and probably you will be all the better satisfied when I tell you that I think I am justified in claiming that I am capable of passing on both. Very truly yours,
Geo. W. Crossman.

George W. Bachman, of Baltimore, Ohio, is a breeder of Barred Plymouth Rocks commencing his advertisement in the March

1ST PRIZE S. C. WHITE LEGHORN COCK.
Scored 95 by Judge McClave. Bred and owned by W. L. Fern, Elgin, Ill.

issue of AMERICAN POULTRY JOURNAL. Mr. Bachman has bred Barred Rocks exclusively for eight years. He has exhibited five times, and always won first cockerel. At Toledo, Ohio, February 1-5, 1906, he won first cockerel, 93¼; first hen, 92; first pen and third pullet. Three out of a

possible five firsts in a class of over 200 birds in open classes. At North Baltimore, Ohio, February 16-20, 1906, McClave, judge, he won first, second, third cockerel, 93¼, 92½, 92½; first pullet, 94¼; third pullet, 93¼; first pen, 187.

Charles Nixon, Washington, N. J., the originator of the Mapleside strain of White Wyandottes, reports the following winnings at Madison Square Garden, New York, January 1-6, 1906: First hen and special for best hen, fifty-one hens in competition. At Boston, Mass., January 15-20, 1906: Fifth hen, forty hens competing. At Dover, N. J., December, 1905, first cock, first hen, first cockerel, first pullet and eleven specials, including special for best bird in show, any variety or sex. His booklet gives prices of stock and eggs. Send for it and mention AMERICAN POULTRY JOURNAL.

Ralph W. Sturtevant, Beloit, Wis., won at Delavan, Wis., Wisconsin's best show, January 15-20, 1905, as follows: First, second, third cocks; first, second, third, fourth hens; first, third, fourth cockerels; first, second, third, fourth pullets; first, second pens; every special; American Buff Wyandotte state cup; highest scoring male bird in show, all varieties competing (95½); highest scoring breeding pen, all varieties; association silver cup; highest scoring trio, all varieties competing (including Bantams). J. A. Tucker, judge.

At the great "wind-up show" at Indianapolis, Ind., Miller's Langshans were again in evidence. Their cock bird "Billie" won first in the hottest kind of competition. This bird and his sire have been winners for the past six years in the leading shows of Colorado, Kansas, Illinois and Missouri. Send for their list of winnings and mention American Poultry Journal.

John J. Keig & Sons, of Romeville, Ill., won at Chicago, Jan. 23 to 27, 1906, National Fanciers' and Breeders' Association, as follows: State cup, offered by Am. Buff Plymouth Rock Club, for best cock, hen, cockerel and pullet. Also won at Chicago Heights, Ill. 1st hen, 1st cockerel and 1st pullet. W. C. Denny, judge.

Sickness and Death Among Poultry

This time of the year plays havoc with the profits, and leads to discouragement

We are contracting with every large breeder and small breeder to positively save him from 90 per cent. of all such losses for 10 per cent. of that loss.

ARABIAN POULTRY FOOD TABLETS—a common-sense idea at a common-sense price of only ONE CENT a pound rate, **guarantees you** Free from Diseases; Larger Birds; Thriftier Birds; Better Strain; Better Broods; Fertile Eggs; Readier Sales; Surer Profits

THE BESAW CHEMICAL CO.,
Cleveland, O.

HUDSON, MICH., Jan. 24th, 1906.

INDUSTRIAL SCHOOL FOR BOYS,
LANSING, MICH., Jan. 22d, 1906.

Gentlemen—I secured a box of the Poultry Tablets from your representative at the Adrian, Michigan, Show, and I have given nearly all of them away to the farmers here, and they all speak in the highest terms of the results obtained.

MR. M. G. BRYANT,
Hudson, Mich.

Dear sir—Mr. Haynes of your place sent me last week a Tablet he thinks he secured from you, to give fowls that are suffering from colds. I gave the Tablet to two or three of my pullets that caught cold in the show room recently, and it worked wonders. Will you please put me in touch with the agents for same?

I have several well bred colts, and if your Horse Tablets are as good as your Poultry Tablets, you can count on me as a regular customer. Send me your price list, and I will send you an order. Hoping that I may hear from you by return mail, I beg to remain

Yours very truly,

MILTON G. BRYANT,
Proprietor of Onahill Poultry Farm.

Fraternally yours,

C. H. BURGESS.

BREED FROM HEALTHY BIRDS ALWAYS—FOR SUCCESS

ARABIAN ROUP TABLETS—Simple—Sure—Easily Fed—Guaranteed to cure even the most stubborn cases promptly. 50 cents a box prepaid.

ARABIAN DOG TABLOIDS—The Dog Raiser's Favorite. 50 cents a box prepaid.

ARABIAN STOCK FOOD TABLETS—For Horses, Cattle, Sheep, Hogs,—all distinct. \$1.00 per box prepaid—makes 100 lbs. Stock Food for \$1.00.

Write us for "What 10,000 Leading Breeders Everywhere Say."

The BeSaw Chemical Company, POULTRY DEPT., **Schofield Bldg., Cleveland, Ohio**

\$100.00 IN GOLD to the agent selling the most of our goods in any state during the year, proportionately.

FEEDING METHODS CHANGING.

The problem of economical stock feeding is being solved. There was a time (not far back, either) when fattening stock or feeding dairy cows for milk and cream was a "hit and miss," haphazard process; when feeder and dairyman had no idea of the relative nutritive value of feeds. But now, new and radical changes are rapidly taking place. Many wise feeders who are studying feeds and their fattening and milk values find that by adding a condimental mixture like Tonic Stock Food they get happier results all around. Tonic Stock Food is a condimental appetizer and digestant made in four separate formulas for horses, dairy cows, hogs and for general feeding. It puts life, vigor, muscle and bone into farm animals by helping to digest their feed more thoroughly. It makes them more profitable in flesh, fleece, fat, milk. It can be profitably fed with any and all rations. Animals relish their food better when given Tonic Stock Food with their rations. They will digest from 10 to 20 per cent more and so reduce the feed bill.

This food is made in Elgin, Ill., by the Tonic Stock Food Company, and therefore is properly named "Elgin Brand." It has a very attractive trade mark—a black circle pierced with an arrow. This brand appears on every package. "Elgin Brand" Tonic Stock Food costs \$3.50 per 100 lbs., freight paid. Feeders and all farmers should send for their booklet full of feeding facts. By addressing Dept. 10 they will also send a handsome souvenir calendar.

MORE SMALL FRUITS SHOULD BE GROWN.

Increased acreage on small fruits should be the effort this season among all classes of growers. The insistent demands from Chicago, Boston, Philadelphia and St. Louis markets should be planned for and met by farmers and fruit growers—large and small.

There are not raspberries, strawberries, blackberries or other small fruits of the right quality to satisfy commission men all over the country. Mr. W. N. Scharff, New Carlisle, Ohio, says that \$300 profit per acre can be made from the plants which he supplies. This is a good margin—more

than corn or wheat will bring. Mr. Scharff's 1906 catalogue is just off the press. It has a handsome cover in half-tone showing a portion of the nurseries at New Carlisle. The inside of the book is given up to detailed descriptions of small fruits, garden and field seeds, fruit and ornamental trees and other nursery stock. Whoever would like to know how to make \$300 per acre with small fruits should write Mr. Scharff.

THE GERMAN NURSERIES.

To purchasers of seeds, plants and trees the name of Carl Sonderegger and the Ger-

BARRED ROCK COCK.

Winner of three first prizes the past season. Owned and bred by W. A. Porter, Streator, Ill.

man Nurseries is not new, but it is nevertheless not out of place to call attention to the fact that as usual Mr. Sonderegger

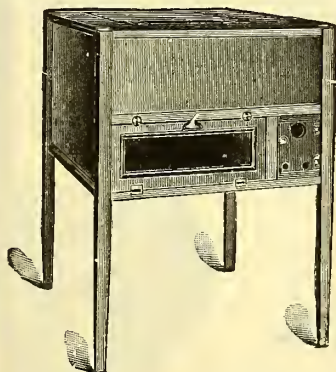

is prepared to supply the very best in quality on his usual reasonable terms. Anything that is required in the way of apples, plums, cherries, peaches, grapes, etc., will be supplied by the German Nurseries in any quantity and the purchaser can rest assured that it will be of the satisfactory kind. For the convenience of his patrons Mr. Sonderegger issues two editions of his catalog—one in English and the other in German. The catalog lists a great many good things for the agriculturist and includes not only fruit trees and small fruits, but forest tree seedlings and hundreds of choice varieties of tested seeds. Be sure and send for one of these catalogs before ordering your supply of seeds for this season's planting. Address The German Nurseries, Carl Sonderegger, Proprietor, Beatrice, Nebraska, mentioning this paper.

AN EVERGREEN SPECIALIST.

In these days it pays to be a specialist. No matter what line or profession in which one is engaged it pays to thoroughly master every detail and to know that one thing perfectly from A to Z. Mr. D. Hill, of Dundee, Ill., has long been known as an evergreen specialist, and a visit to his nurseries at the above named place establishes his right to the title beyond question. Mr. Hill has given the subject of transplanting and packing special attention and packing is such that there is seldom any loss caused by the operation, and the trees thrive and do well in their new locations even though they may have to travel many hundreds of miles before being placed where they are to remain permanently. Anyone contemplating the planting of either evergreens or the other sorts will do well to secure a copy of Mr. Hill's catalog. This book is but recently from the press and is beautifully illustrated and contains full information of value to anyone in need of nursery stock. It will be sent free on request. Address Mr. D. Hill, Dundee Nurseries, Dundee, Ill.

Sunny Side Poultry Farm, Adrian, Mich., won at Michigan State Poultry Association, Detroit, Mich., January 27 to February 1, 1906, as follows: Black Langshans, 1st cock, 1-2-3-4-5 hen, 1-2-3 cockerel, 1-2-3 pullet, 1st pen, 1st display and 3 specials on 12 entries; Tucker & Butterfield, judges.

Natural Incubator Chicks are Strong Chicks

THEY are not the kind that die during incubation, or come so weak that they cannot survive but a few days. Natural Incubator Chicks are different from other chicks because the Natural Incubator is different from other incubators. It is not an incubator of draft slides, "ventilator vents," and other "do-funnies." But it does supply fresh air in right quantity in the right way, and that stands for vigorous chick life. Its walls are

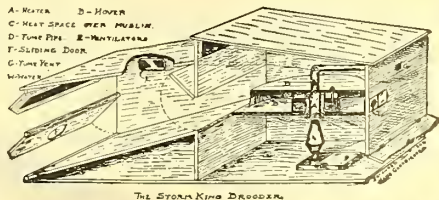

Made of Glazed Paper Board

just as car wheels are made, and is one of the best non-conductors of heat in the world. It does not warp, crack or split, as wooden incubators do. It is lighter, easier to handle, more permanent and is less subject to outside temperatures than wooden incubators. A change of 40 degrees outside does not affect inside temperature. Is not such an incubator with assured better results the incubator you want? You owe it to yourself to investigate.

The Storm King Brooder

recognizes the same necessary principle as the incubator. Pure air and plenty of it, naturally moistened, no overheating, no chilling, no crowding. All the warmth and comfort that chicks get from the hen. That's the Storm King Brooder.

Make Your Own Brooder The fixtures are the only important thing. We supply them. You can make your own roomy box (it need not be air-tight) and put in these fixtures and you'll have a better brooder than you can buy anywhere and at half the cost, and we prepaying freight there is no shipping expense. Blue print plans and all directions furnished. Freight paid as far west as the Mississippi. Purchasers beyond that pay from the river on. Address

Perpetual Hen Company
12 Escher Street
TRENTON, N. J.

Questions and Answers

Questions asked by subscribers will be answered in this department only under the condition that the full name and address is signed by the writer.

NOTICE.

We again desire to call the attention of our readers to the fact that no questions will be answered in this department unless the writer signs full name and address to communication. We have received a number during the past month that did not have any address on and only initials signed. These found their way to the waste basket. We make this explanation that the writers may know why their questions were not answered.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: In your Question and Answer Department please answer the following: "What is good to prevent frost-bitten combs, and what can be used to cure such and restore its natural color?"

Bay City, Mich.

Answer—The only way to prevent frost-bitten combs is to have your house warm enough to prevent freezing. A few applications of vaseline will restore the comb to its natural color.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Please answer the following in your paper and oblige: I have a R. C. Black Minorca pullet that I showed at our home show, and the judge

pronounced her a fine specimen with the exception of her comb, which had not started to grow out yet on account of her age. I decided to exhibit her again at one of our neighboring shows two weeks later, and when she left my hands she was in the best of condition and her comb had just started to grow out. When she came back, after being in the show room for one week, her comb had grown almost one inch in height and loped over on one side, nearly covering her eyes. This bird was fed while in my hand as follows: Wheat in the morning, buckwheat, barley and millet at noon, and corn at night; three times a week a very small quantity of ground bone. Am I at fault on account of feeding for the condition of this bird? Please enlighten me on this subject if possible and oblige.

Lansing, Mich.

Answer—The heat of the show room is what caused this phenomenal growth of the comb. Your method of feeding is not at fault.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: The writer would like to have answered in your "Question and Answer Department" the following questions:

What do you consider the best green winter food for W. P. Rocks?

Are carrots a good food for greens for winter and should they be fed in limited quantities?

Do you think turnips a very good winter food also?

How about alfalfa meal? What quantity would you feed per dozen pullets in the mash?

Also, what quantity of the other mentioned vegetables would you consider sufficient, shredded, for twenty-four birds?

Do you consider mangel wurtzel beets a good winter food?

Shrewsbury, Mo.

Answer—The best green winter food for fowls is cabbage and mangel wurtzel beets. These should be fed raw and can be kept before them at all times. Carrots and turnips are very good if cooked and mixed with the soft feed. Alfalfa meal is one of the best feeds for egg production. About a quart of the alfalfa meal per dozen fowls. The others you will have to use your own judgment as to quantity.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Please answer the following in next number of AMERICAN POULTRY JOURNAL: I have some White Leghorn pullets that the feathers came off around their necks and the new feathers start to come out before the others drop out, and their combs get hard and scaly and seem to dry up. I don't think it is the mite, although I am not sure. The hens seem to be in good health otherwise.

Egypt, Wash.

Answer—It is caused by a parasite called the depluming mite. Anoint the parts with lard and flower of sulphur,

There's Money in Poultry

Not everybody makes it, but not everybody uses good judgment in outfitting for the business. Don't expect to make money out of poultry if you cannot hatch dependably, at all seasons, in all climates, under all conditions, upwards of 90% of your fertile eggs. Not all incubators will do this. Show your good judgment by selecting one that will.

Raising all the chicks you hatch is just as important. Just any sort of a box for a brooder will not do. See to it that you get the best possible substitute for the hen to mother your chicks. You will start out right in the poultry business and go a long ways toward assuring your success if you outfit with

SUCCESSFUL Incubators and Brooders.

They are machines that have been proven. Many thousands have been in use for many years. They can be relied upon for uniform good results. Every user testifies to their perfect self-regulation, their dependableness and their uniform good results under all conditions.

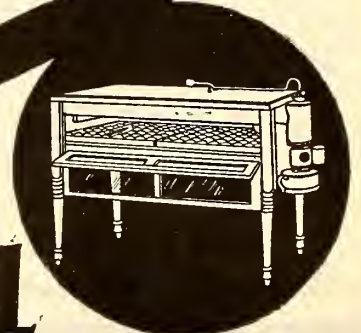

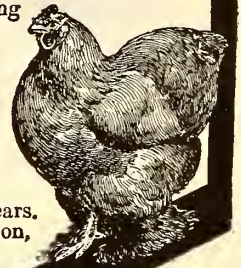

Successful Incubators and Brooders for years have been, and now are, sold with the positive guarantee that, under like conditions, they will hatch as many and as strong, vigorous chicks from a given number of eggs, and will brood as many to maturity, as any other incubator and brooder in the world.

This guarantee protects you. Start right with proper machines. Incubator and Poultry Catalogue Free. Booklet, "Proper Care and Feeding Small Chicks, Ducks and Turkeys," 10c. 50c poultry paper one year, 10c.

DES MOINES INCUBATOR CO.

We have a full line of poultry supplies,
poultry and eggs.

SUCCEED
WITH A
SUCCESSFUL

two tablespoonfuls of the former to a teaspoonful of the latter. Carbolated vaseline is also good.

Editor AMERICAN POULTRY JOURNAL.
Dear Sir: Kindly answer the following in your valuable paper:

1. In order to secure the highest percentage of fertile eggs, how many roosters would you put with a flock of 80 B. P. Rock pullets running at large?

2. One of our pullets appeared to breathe with the greatest difficulty. At every respiration she would open her mouth widely and literally "gasp" for breath. At the end of the third or fourth day she died. There was no swelling of any kind to be noticed on her head and her eyes were bright and clear as in health. What was the trouble and could she have been saved?

3. Where can we purchase a pair of young parrots? R. & M. Storden, Minn.

Answer—1. Five. 2. Unless we have some idea of the appearance of internal organs after death we cannot say. 3. At any of the bird stores in the larger cities.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Please answer the following in Question and Answer Department of the next issue of your valuable paper: Am feeding three gills every other day to eight hens. Will the feeding of this much ground bone injure the vitality of the eggs for hatching? What is the best remedy for bowel trouble in small chicks and what is good for prevention? What should small chicks be fed for the first week? Will cockerels mated to pullets produce healthy chicks? G. H. M. East Dubuque, Ill.

Answer—This is about three times too much ground bone for eight hens. It will not only injure the eggs for hatching but will injure the health of the fowls. Boiled milk to which a little cinnamon has been added is one of the best preventives and cures for bowel trouble in little chicks. There are a number of good chick feeds advertised in these columns that are splendid for little chicks from the first feed until they are old enough to eat wheat or other grains. If the cockerel is a good, vigorous bird he will produce healthy chicks.

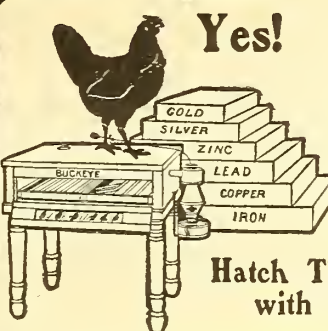

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Please tell me through your paper whether cracklings from pork fat ground up is good for hens or not? How much should I feed and how often?

Loddinia, Mo. J. W. S.
Answer—A very small quantity of this feed two or three times a week would be all right, but beef cracklings are better.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Wishing to go into the poultry business as a business I wish some pointers from you or your readers as how to properly invest \$500 in buildings and appliances. Can have all the land necessary and have on hand 150 pullets, and will raise all feed except meat, bone and grit. Wish to keep Minorcas and Audalusians for eggs and White Wyandottes for broilers. Want to get started this spring if possible. Will start in southern Missouri. Lumber is \$10 to \$12 per M. Help is \$15 per month. What kind of houses are best, colony or long? Will use either incubator or brooder or incubator and brooder houses. How much of a plant

Yes! The American Hen is so large.

Her annual product is worth more than all the metals mined in the United States. A town lot is large enough and a 160 acre farm is not too large to utilize part of it and get some profit out of this gigantic business.

Hatch Them with a BUCKEYE.

Rear them with an old Hen Brooder—Feeding Buckeye Chick Starter for a week and the trick is done. Our Free Catalog tells all about it. We sell self regulating incubators; guaranteed as to work and material and to hatch every good egg. As low as \$5.00, and 200 egg ones for \$12.75.

All on 40 Days Trial, or will rent you one for \$1 per month and let rent pay for it, we paying the freight, or will sell you parts and plans and you can build one just like it. We sell everything the Poultryman needs—all Buckeye quality, which means the best. Our Portable Poultry and Colony Houses are unequalled for quality or price. Think of it, a 6 ft. by 3 ft. Iron Roof Colony House for \$5.75.

Buckeye Chick Starter for the first week after hatching insures raising the Chicks. A 2 lb. package is enough for 25 chicks. Costs 25 cents with other goods or 50 cents by express, prepaid. 100% hatches are the rule, not the exception with Buckeyes.

BUCKEYE INCUBATOR CO. Box 2, Springfield, Ohio.

DOING ITS DUTY

by subscribers, is the paper that covers thoroughly and in a practical, profitable, timely manner, the subjects of natural and artificial incubating, housing, feeding, raising, breeding, marketing and exhibiting. But when, in addition to this, there is a splendid, systematically conducted series of "FIRST LESSONS IN POULTRY KEEPING" that all poultrymen are talking about—a policy of giving all the show news, not omitting any prize winner because he does not happen to be an advertiser—complete current market reports—a "Questions and Answers" Department second to none—indeed readers are being generously dealt with. Such a paper is **Farm-Poultry**, issued twice a month—1st and 15th—at a cost of 50 cents a year, but for a limited period it makes a

Special Offer of Farm-Poultry, American Poultry Journal and Reliable Poultry Journal, all three papers One Full Year, for only \$1.00.

Take advantage of this extremely liberal combination offer now. It is one which we guarantee will please and gratify you beyond expectations. Sample copy free. Send orders and remittances to

American Poultry Journal Pub. Co., Chicago, Ill.

HOW TO BUILD AN INCUBATOR and BROODER

It's easy with our COMPLETE ILLUSTRATED PLANS. A ten-year-old boy can readily follow them with success. They show you every stage of construction, step by step, in nearly 100 half tone illustrations. They contain complete specifications for building the famous PEERLESS INCUBATORS AND BROODERS. Every feature is clearly pictured and thoroughly explained, making it possible for ANYONE to build an Incubator and Brooder possessing exclusive features and advantages which are unequalled by any machine on the market. We supply ALL PARTS not possible for you to make, such as lamp, regulator, tank, heater, legs, door, etc., at a very small cost and furnish the

Plans and our new FREE Illustrated Catalog

which contains our full line of Improved Incubator and Brooder Fixtures and Supplies, including our New

Acme Automatic Lamp and Compound Regulator

with combined damper and flame regulator, which SAVES ONE-HALF THE OIL. No danger from fire; can't overheat; no trimming of wick; regulator controls both flame and damper. Can be attached to any make of incubator or brooder. If your machine is not working right our catalog will tell you how to remedy the trouble.

Salt Lake City, Utah, July 25, '05.

H. M. Sheer Co., Quincy, Ill.
I have built twelve 200-250 Peerless Incubators from your fixtures and plans. Six I sold to poultry dealers here, and six I run myself. These machines gave good results, never hatched below eighty per cent and as high as 92 per cent. I have up to date 2,150 Pekin ducks and 540 chicks. I don't think I lost over 5 per cent of ducks and chickens hatched. These incubators take very little care. The regulator, when once set, holds the 103 mark from beginning to end, and the lamp is a big oil and time saver. I have orders for 4 Peerless incubators now and I want to build two or three more for myself. Respectfully yours,
W. M. REBEKER.

Plans and catalog are free. Address **H. M. SHEER CO., Dept. G, Quincy, Ill.**

100 Egg Peerless Incubator
built from our Plans and Fixtures

Equipped with Acme Compound Regulator and Automatic Lamp. Note combined damper and flame Regulation above

can I have and what kind of incubators are the best? Mrs. J. E. C.

Russell, Wyo.

Answer—Would advise the building of colony houses. These can be built cheap or expensive, as you desire. Our book "How to Build Poultry House" will give you much valuable information along this line. Price, 50 cents. The amount named will not start a very extensive plant, but if properly handled will give you a plant where you can produce from 1,000 to 1,500 fowls.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Will you please answer me these questions? I have the W. Wyandottes and I am in trouble. The first stage of the disease is watering at the eye and nose. Then swelled head and the eyes swell and close and sores come on some of their combs and wattles. Some time there is a little bad odor, but not as bad as from roup. Some are dying. I am greasing heads with lard, turpentine and coal oil, and use Conkey's Roup Cure. Would you bread these chickens? A. C. L.

Latty, Ohio.

Answer—Chicken pox, complicated by a bad cold. These fowls will not be fit to use as breeders, and we would advise you to kill and burn those that are affected and thoroughly disinfect your premises with a 10 per cent solution of carbolic acid.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Would you in your next issue of the JOURNAL describe, as much as space will allow, the egg organ, as I know very little about the physiology of the hen? J. C. M.

Topeka, Ind.

Answer—In this issue of AMERICAN POULTRY JOURNAL you will find the egg organs of fowls fully described.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Will you kindly answer the following questions in your Question and Answer Department: 1. I have a poultry house lined inside with tar paper. Is there any danger in vermin or mites lodging in back of same? Would you advise me to take down paper for the summer months? 2. Will it do any harm to feed hens plain oats or should hulled oats be fed? 3. I have a S. C. White

Leghorn cockerel that has got something like blisters on the edge of his wattles. When I opened the blisters there was a milk like substance in them. Will you please tell me what ails him and a cure for same. G. F.

St. Louis, Mo.

Answer—1. No. 2. Plain oats will not do any harm, but hulled oats are better. 3. This is evidently a blood disease of some kind. By feeding sulphur in the soft feed you will purify the blood, and by the application of sulphur ointment to the sores same will be rapidly healed.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Will you kindly tell me in your February or March issue what Barred Rock breeder's yard I could visit in a few days from Toronto if I am able to get away to attend the British Medical Association's meeting there next summer? J. P. C.

Answer—By consulting the advertising columns of AMERICAN POULTRY JOURNAL you will be able to locate nearly all the prominent Barred Plymouth Rock breeders of the country.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: As a subscriber and a reader of your paper, I would like to ask a question through your "Question and Answer Department." I have a Victor Incubator; have fair luck with it, but not perfect. Am not much good on the moisture point. My incubator has two glass doors. At times drops of water gather on both doors on the inside; at times it don't. Is there enough moisture in the egg chamber when drops of water gather on the doors or is there too much? I only put in moisture the last three days before the hatch is completed. I operate it in a spare room and avoid noise and draught. Mrs. F. H.

Warrenton, Mo.

Answer—It is very evident that there is much moisture when water gathers on inside of glass. If properly ventilated this will be avoided. It is best to follow directions given by the manufacturers, which are usually very plain.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Please answer the following question through your very valuable paper. I have a nice flock of Buff Orp-

ingtons, but some of them got the habit of pulling their feathers out, and a couple of them are quite naked on the neck. Their droppings are of a yellowish color. They have a good appetite, are busy all day in the scratching shed, and everything is kept clean. Could you tell what is the matter and a remedy for it, you would very much oblige

Fairville, N. B., Canada.

C. B.

Answer—Feather-eating is one of the worst habits that fowls can have. This is usually brought about by lack of exercise. Fowls should be kept busy at all times. All feed should be fed in deep litter, so that the fowls will be kept at work. This is the only remedy for vices of this character.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Please answer the following questions in Question and Answer Department of your next issue: 1st. Is a yard fifty feet square large enough for fifteen W. Rock hens? 2. How can I break hens from eating eggs? 3. How large should the house be for fifteen hens? S. M.

Melrose, Iowa.

Answer—1st. Yes. 2d. This is a very difficult thing to do. By giving them a number of china nest eggs to pick at will sometimes have the desired effect. The most effective way we know of is to give the hens all the stale eggs they will eat. 3d. A house 10x15 will be ample.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Will you kindly answer in your journal the following: What are the disadvantages of feeding red pepper to laying hens? Would half burnt limestone, crushed, take the place of oyster shells? Can you tell me what is the matter with my Leghorn cockerels; their wattles swell up, then start to fade, comb begins to go black and they stagger around for a week or two, then die.

Holmfild, Man., Can. H. E. W. A.

Answer—The feeding of red pepper to laying hens will disarrange the egg organs and lay the foundation for diseases of all kinds. Hens that are forced to lay by the use of red pepper or other condiments will not produce fertile eggs. Limestone crushed would take the place of oyster shells to a certain extent, but would not be as good. Your cockerels have probably been overfed and have not

WHO BRED THE WINNERS?

When a man buys breeding stock or eggs for hatching from a breeder with a big show record, he has a right to know who bred the winners, so we are going to give you a few pointers.

Pointer No. 1.—All of our National Club Cup and First Display Winners at Madison Square Garden, 1906, were bred and raised by us, excepting one of our winning hens; she was raised from our stock; sired by a male from a setting of eggs we sold, and is now in our yards.

Pointer No. 2.—In the last eight years, 59 birds bred by us have won regular prizes at Madison Square Garden, either singly or in pens.

Pointer No. 3.—Since 1900 we have bred and raised in our yards six males that have won 1st and 2d prizes at Madison Square Garden in the open class, competing with the best from the yards of America's most prominent breeders. This is double the number of 1st and 2d prize Madison Square Garden winning males bred and raised by any of our competitors during that time.

Pointer No. 4.—This is a record of winnings made in modern times, with modern Barred Plymouth Rocks, under modern judges. If you want to breed winners, buy your breeding stock and eggs from the yards that are producing the winners. Write for catalog and mating list giving full record of winnings, prices of stock and eggs, and other valuable information.

Gardner & Dunning : M. S. GARDNER : Auburn, New York
Manager

had enough exercise, which has brought on liver troubles. Feed them sparingly for a few days and what you do feed them scatter in deep litter, so that they will have to work for all they get.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Will you please answer the following questions in your next issue: 1st. Will oats, wheat and corn produce eggs when fowls have free range, oats for green forage? 2d. I have about 25 fowls (Brown Leghorns). Would two-thirds quart of oats be plenty to form their first meal, two-thirds for meal at noon and two-thirds quart of corn at night? The above is thrown in leaves when weather is good for them to work for. 3d. Would it be best to mix the grains, if so, what proportion? 4th. My hens lay only every other day. Can you tell me why this is? 5th. My poultry house is 8x10. I have no ventilators, except one door facing west, 2½x6½, and one 8x10 plank on hinges at east side of house at bottom. Is this sufficient ventilation? They are kept open every day fit and closed at night.

Richland, S. C.

J. M. H.

Answer—1st. Yes. 2d. No. Twenty-five fowls should have at least four quarts of feed at a meal. 3d. Yes; three parts wheat, two parts oats, one part corn. Fowls at this season of the year should be supplied with plenty of green food and a liberal quantity of fresh ground raw bone, or beef scraps. If you will do this your fowls will no doubt give a better egg yield. 5th. Your ventilation is bad. The foul air should be allowed to escape from the upper part of the house; but with your arrangement this is impossible. Give plenty of ventilation, but avoid direct draughts.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Please answer in your next journal the following: 1st. Can you tell me where I could get a good poultry house heater to connect pipes to run under chicken house floor to keep floor dry and warm? 2d. The best method for building chicken houses and scratching shed, and arranging nests and roosts.

Spokane, Wash.

H. M. W.

Answer—1st. There are a number of these advertised in our columns. 2d. Our book, "How to Build Poultry Houses," will give you the desired information. Price 50c.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Please answer, if possible, in the next issue of the JOURNAL, what is the cause of chickens molting. I have 35 Buff Leghorns that molted in November and October last, and started to molt again in this month (January). In feeding I feed in the morning a mixed feed of grains, composed of wheat, buckwheat and oats, and for evening I feed warm corn. I also give them a soft feed once or twice a week of bread with poultry powder mixed in it. This bread that I feed I get from a bakery. They have shells and grit and bone meal before them at all times. I get from 8 to 15 eggs a day, and have since last fall. Their house is just an ordinary one, but very comfortable, size 10 by about 24 feet. Also where can I get an up-to-date Poultry Book with everything pertaining to poultry and poultry houses, and about what it would cost me?

Butler, Pa.

H. S.

Answer—It is caused by something in the feed you have been using, probably the poultry powder you mention. In order to get the information you desire

you will have to purchase several books, as no one book contains it all.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Is the following a good feeding plan for 800 hens and right as to quantity—Leghorn stock? Morning mash of boiled roots, 15 gallons; alfalfa meal, 2 gallons; wheat bran, 12 gallons. Keep oats scattered over place all day and feed all corn they will clean up at night. Give them 75 lbs. ground green bone per week.

A. P. O.

Nashville, Tenn.

Answer—If your system of feeding gives results in egg production we would not advise changing it, but believe better results would be obtained if you fed more wheat and less corn.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: In your "Questions and Answers" department of the next issue can you not answer the following questions: In a section of the South where the temperature rarely goes below 20 what kind of a chicken house would you recommend? Would a house with wire mesh sides and front afford sufficient protection or would it be advisable to have an all wood house? Is a good plan to keep 20 or 25 hens in a pen with a cock and cockerel? I have heard this advocated, but it seems to me it would be impracticable. What would be a good system of feeding chicks till they are ten weeks old with the following: corn, peas, alfalfa, and beef scraps? By this I mean what should be the proportion of each, how mixed, quantity given, when given each week.

J. N. Y.

Wilmington, N. C.

Answer—A single board house, free from draughts, would be the best. Front

UNEQUALED ORPINGTON TRIUMPH!

Again in 1906 at Madison Square Garden, New York, we win SEVEN FIRSTS, NINE SECONDS, SIX THIRDS, FOUR FOURTHS and THREE FIFTHS in

The Strongest Class of Orpingtons

ever brought together. This is a record unapproached by any other Orpington breeder. Furthermore, Willow Brook Farm won on stock we bred and raised at our own farm. In other words, WE DID NOT HAVE TO BUY ONE BIRD—NOT ONE—to make this great winning.

For the past four years we have been the LARGEST ORPINGTON WINNERS at New York. Others may make this statement, but we stand prepared to prove our claim.

If you wish to produce winners, it is necessary that you buy from the farm that has the winning lines and that breeds its own winners—every one of them.

If You Want the Best Obtainable

in either S. C Buff, Black or White Orpingtons, why not come to the fountain head, to the farm that has its established breeding lines and has produced year after year the majority of the New York winners? We do not have to mislead our customers in advertising, as OUR FARM CAN BE SEEN, and the birds are here to show for themselves.

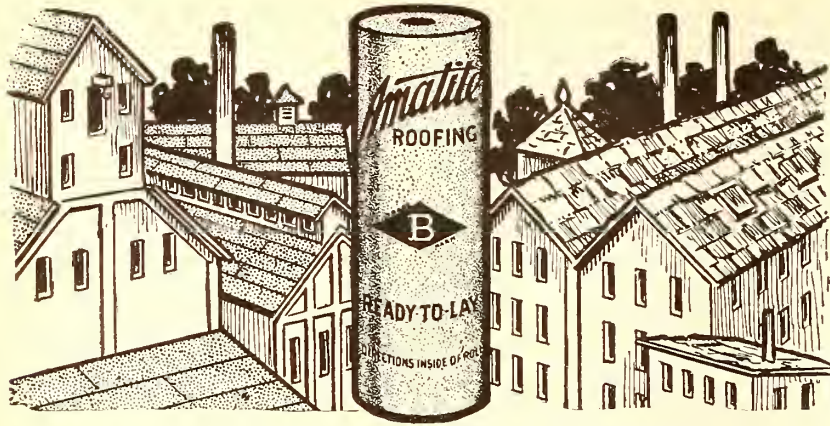

Remember that our show record and winnings have been obtained in competition with THE BEST PRODUCED IN THIS COUNTRY AND ENGLAND. Each year thousands of dollars have been paid for birds imported to this country, and not withstanding this fact we have been

The Largest Winners the Past Four Years

More than 370 S. C. Buff, Black and White Orpingtons were on exhibition at Madison Square Garden Show this year.

WE NOW KNOW that our matings for the breeding season of 1905 were correct, and that our stock is better than ever. We offer you stock and eggs from which you can get results. OUR ORPINGTONS are winning in the hands of our customers all over the country. We have forty breeding yards mated FOR THE PRESENT SEASON, and for the asking will mail you our mating list, giving you prices of eggs, etc. We have the largest flock of Orpingtons in America to select from, and would be pleased to sell you either exhibition or breeding stock, as may be desired.

WILLOW BROOK FARM
 W. L. DAVIS, Prop. Box A, BERLIN, CONN.

THE DIFFERENCE BETWEEN A GOOD ROOF & OTHERS IS

Amatite

Can a durable satisfactory Ready Roofing be made at a low price? We say yes, and offer you Amatite.

Low price in most things means poor quality—unless there is some special circumstance—and in the case of Amatite there are special circumstances that enable you to get the very best Ready Roofing at the lowest price.

Years of experience have taught us that there is only one way to make a roofing that is both cheap and durable. That is by using coal tar pitch as the waterproofing agent in combination with wool felt. Pitch is the lowest priced material known that is adapted for protection against water; that it is the most durable is proved by tests of thirty years in actual use. If pitch is used, therefore it is really possible to secure a cheap, durable, ready roofing. There are other materials besides pitch that will make a satisfactory roofing, but they all cost very much more. None of them are good as pitch, for pitch is ideal. Water is absolutely ineffective against it, both chemically and physically.

We are the largest manufacturers of coal tar pitch in the world.

Our many years of experience enables us to make a ready roofing out of pitch, and only this company is equipped to do that to advantage.

So we can offer Amatite Roofing—made of pitch and wool felt in a practical form at so low a price.

To obtain its equal you must pay at least twice as much.

Compare its cost at your dealers, weight for weight—for that is what counts—with the cost of its rivals.

Roughly speaking, a roll of Amatite equals in weight (and durability) the three-ply or four-ply grade of any roofing which is not made of pitch. But its price is usually less than half.

Don't be deceived into thinking that Amatite can't be lasting because its price is on a par with flimsy light weight roofings.

Amatite would sell on its merits at double its price. We prefer to keep to a normal profit and to make big sales.

You, Mr. Purchaser, get the benefit!

We should like to send you a free sample, just to show what a solid, practical, weather resisting roofing you get when you buy Amatite.

A postal card will do. Address the BARRETT MANUFACTURING COMPANY, New York, Chicago, Cleveland, Boston, Allegheny, St. Louis, Minneapolis, Philadelphia, New Orleans, Kansas City.

of house could be placed on hinges so that in warm weather it could be opened from the bottom, and would afford protection from the sun and give the interior of the house plenty of fresh air. Two male birds should never be allowed in a pen at the same time. We do not believe corn, peas, alfalfa and beef scraps would make a good chick feed, no matter how mixed. There are a number of good chick feeds advertised in these columns that will give better results than any mixture of this character.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Will you kindly answer the following questions in your next issue? 1st. We have a Plymouth Rock rooster which has had a lame leg for about 3 months. It eats well and looks well, but can't step on the leg. It came on gradually and we can't see anything on the leg. Would you advise me to keep him for breeder if it ever gets well? 2nd. We have Leghorn pullet which is similarly affected in both legs. It came on a few days ago, and same pullet has some trouble in throat. It eats a little, but if it drinks it seems to have its mouth full of blood. We also had two pullets that looked well in the evening, but in the morning we found them dead on the floor.

Columbus, Ohio. Mrs. O. H. R.

Answer—Rheumatism. This is usually caused by fowls roosting in damp, filthy quarters. Give five grains of bicarbonate of soda daily in the drinking water. The afflicted birds should be removed to dry, warm quarters and fed on cooling foods, such as bran, barley, rice, green feed, skim milk, buttermilk and vegetables. Do not give any meat or stimulating rations of any character. Would not advise the use of this male bird for breeding purposes. 2nd. These pullets also have rheumatism. We are unable to say what the trouble is with the other pullet. The two that died so suddenly were probably affected with heart trouble caused by overfeeding.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: I noticed in the last issue of the JOURNAL (January) that A. J. C., Clinton, Ia., wants to have a remedy for his chicks drooping their wings. You can tell them if they will clip the wings the chickens will get over it, as I have done it for the past 10 years. This is one of granny's receipts. I do not know the cause, but I think the wing is so heavy the young chick is not strong enough to handle or hold it up.

Sioux Rapids, Iowa. D. J. DAVIS.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Will eggs that have been near the freezing point hatch? How cold does it take to spoil an egg from hatching?

A. W. M.

Little Rock, Kan.

Answer—Eggs have been known to hatch after having been frozen, but we do not believe that eggs should be used for hatching purposes if they have been chilled, for the chances are that if they do hatch they will produce chicks of very low vitality.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Please answer the following questions in your next issue. 1st. How many Barred Plymouth Rocks can be raised successfully on a ten-acre farm? 2nd. To buy all the feed, how much would it cost to feed them for one year? 3rd. By taking good care of

LIGHT BRAHMAS

EGGS from three matings good to best prices in accordance. My choice mating will give you winners. Could still spare a few good trios or pens.

J. N. O. F. WOODS, UTILITY FARM
ROUTE 19, OWENSVILLE, INDIANA

THE DANDY LINE TO SUCCESS

Includes a complete line of simple, serviceable, sensible, sanitary poultry appliances—everything to successfully raise chickens "from the egg to the exhibition coop," for pleasure and profit. This month we show the only Sanitary Exhibition Coop made. It has a removable floor and top, roll curtain front and is a beauty for the show room. Write for price at once. The new 1906 Portable Poultry House and Yard Combined. The new 1906 Dandy Incubator, soap-stone lined, a marvel for simplicity, convenience and success. Also Dandy Jr. and Dandy Special Incubators. Get on the "Dandy Line" and reach success. Send for new catalog, it will save you money, time, chickens, will help you to raise more and better chicks. Write today.

DANDY POULTRY NOVELTY CO.
23 Daniel Bldg., Danville, Ill.

them, how many dozen eggs should they produce during the entire year?

Council Bluffs, Iowa. J. H. C.

Answer—1st. This all depends on the ability of the person who is taking care of them. Some men might raise 5,000 and others could not raise over 1,000; but we believe 1,000 would be the average. 2nd. The cost of feeding would be between 75c and \$1.00 per head, depending on the price of grain. 3rd. A flock of hens should average 125 eggs per hen.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Please answer in next issue of AMERICAN POULTRY JOURNAL the following: If there is a way to tell which is the male and which female of the Toulouse geese, and how, if any?

Tenino, Wash. W. F. C.

Answer—The voice of the female is coarse and the male has a thicker neck and a generally masculine appearance.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: What is the cause of my hens' crops filling up? The feed which they eat bakes before it digests. They are fed parched corn morning and night, and at noon a little wheat, oats or barley in litter. They have grit before them all the time and have a large yard to exercise in. I warm the water that they drink three times a day. Every other day I feed them apples.

Springport, Mich. G. S. W.

Answer—This is usually caused by overfeeding and lack of grit. Put them on a starvation diet for a few days and give them plenty of grit and charcoal.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: I have a S. C. Black Minorca cockerel whose comb does not stand erect, but turns to one side. Will this cockerel be all right to breed from, and will his comb straighten up as he grows older?

Clearfield, Pa. O. G.

Answer—We would not advocate the use of this cockerel for breeding purposes. The chances are that his comb will never straighten up.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Will you please answer the following questions in your Question and Answer department? How many R. I. Reds or W. P. Rock hens can I keep in a coop 12 by 24 feet with raised dropping board, and in a coop 24 by 7 with a 10 by 12 scratching shed at each end?

Woodbridge, Conn. J. B. P.

Answer—Fifty fowls in a coop 12 by 24; 25 in a coop 10 by 12.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: In your next issue please answer the following: What is the standard weight of a White Wyandotte pullet and cockerel, hen and cock?

Yale, Mich. B. R.

Answer—Cock, 8½ lbs.; hen, 6½ lbs.; cockerel, 7½ lbs.; pullet, 5½ lbs.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Will you please answer in your next issue and tell me what is the trouble with my turkey? I have a M. B. that has throat trouble. She coughs and sneezes all the time. Seems to have a stiff mucus phlegm in her throat. She eats heartily and seems well every other way.

halation of steam or vapor from boiling water in which hops or a small quantity of carbolic acid has been placed is beneficial. Give with the food two grains of black antimony twice a day.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Please tell me the cause of my chickens losing their feathers. They did so last spring, but in fall after molting they looked to be all right, but now they have started to lose them again. They are healthy, eat and lay right along. I have 29 hens and during month of January I got 135 eggs from them. I clean the coop every morning and have good ventilation. I can't find any lice or mites; skin is clean and nice. At morning I feed them corn and scratch food, noon time mash of corn meal, beef scraps and bran and scraps from the kitchen, at night, corn and scratch food again. They have a yard, so they are outdoors most of the time, if the weather is not too bad. G. L. Chicago, Ill.

Answer—We are unable to tell the cause of this. Will some of our readers please answer above question.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Please answer in your next issue the following: What causes white feathers in S. C. Brown Leghorns. I had an argument with a party and he claimed poor care when about a half pound each in weight. M. P. G. North Adams, Mass.

Answer—White in plumage of S. C. Brown Leghorns comes from improper mating or shows impurity in the blood. Treatment does not affect the color of the plumage in this manner.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Please answer the following questions through your journal: 1st. What is a good formula for a chick food? 2d. After the chicks are eight or ten weeks old, would you advise a self-feeder for them? 3d. What is meant by the double mating system? Will you please give it a thorough explanation. Elwood, Ill. J. J. B.

Answer—1st. Two parts steel cut oats, 2 parts cracked wheat, 1 part millet, 1 part rape, a small portion of charcoal and grit. 2d. No. 3d. Double mating is where one pen is mated to produce cockerels and another to produce pullets. This is practiced more in the breeding of parti-colored fowls than it is with the solid colored varieties.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: I have been a subscriber of your journal for some time and would like to ask the following questions. Please answer in March issue. I have 39 chickens, about 20 full grown, the rest hatched in July. I feed 4 quarts of grain a day and about 2 gallons of mash, consisting of table scraps and bran. Is that about the right amount or would you advise more feed? I do not get an average of one egg per day. 2d. How many chickens can be kept on a city lot? 3d. If 40 were kept on a city lot how large a scratching pen would you recommend? W. P. D. Denver, Colo.

Answer—1st. Your fowls are on a starvation diet. Increase your grain ration to at least 10 quarts a day. Hens cannot produce eggs unless they have plenty of feed. 2d. From 50 to 200, depending on the variety and the care given. 3d. A scratching pen 12x18 would be about right.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Please answer the following in your next issue: 1st. Which is best, in this climate, which is dry but sometimes cold, to excavate so as to have ground floor of house three feet below surface, with house over it or to build on the surface? 2d. Which is best for walls of house, two courses of matched lumber, together with building paper between, or two courses with 4-inch air space between? B. W. Deer Lodge, Mont.

Answer—You will get better ventilation and light if you build your house on the surface. 2d. A house built with a four-inch air space between the walls will be warmer and better in every way.

"PURITY STRAIN" SINGLE COMB WHITE LEGHORNS

are without doubt the ideal Leghorns, as has already been proven by their show room record, as well as egg record. You surely can't afford to miss getting some stock, or eggs for hatching from this pure white strain. My pure white cockerel or cock birds are the very thing for improving your strain. Eggs for hatching, from pens made up of prize winners, \$3 per 15, \$5 per 30; from great egg producing pens, \$2.50 per 15, \$4 per 30 or \$8 per 100. I guarantee to give my customers just what they order or tell them I can't fill the order.

material you do not find it all we represent it, or if you are not perfectly satisfied in every way. Just send the material back at our expense, and we will refund the purchase price. If you want quick delivery, now is the time to place your order. Send us diagram of the Building you have to cover, and we will quote you a Freight prepaid price on such covering as we deem best suited for your purpose. Ask For Our Special Catalogue No. R-186. It quotes low prices on roofing, Down Spouting, Eave Trough, Wire Pipe, Fencing, Plumbing, Sash, Doors, Furniture, Household Goods and everything needed on the Farm or in the Home. CHICAGO HOUSE WRECKING CO., 35th & Iron Sts., CHICAGO

A BIG TOMATO.

Last year when Mr. J. R. Lawrence, the noted horticulturist and experimenter of Massachusetts, reported that he had grown one of the Majestic tomatoes which weighed 5½ pounds, we thought that surely the limit had been reached, as before the introduction of this grand new variety 2½ to 3 pound was considered the largest weight possible. During the past season \$100 in cash prizes was offered and all of the five prize winners grew specimens weighing over 6 pounds each. Mrs. Amelia Cronin, of Akron, Iowa, has a scheme for growing large specimens which proved very successful and will undoubtedly be of interest to some of our readers. She says: "Enclosed find my report, which is signed also by two witnesses who saw the big tomato weighed. I planted the Majestic tomato seed in February in a box of soil in the house, and when about two inches high, transplanted to another box. At proper season I set them out on a very rich piece of ground where a straw pile had been burned and the ashes raked in. The plants were watered every night and when about eighteen inches high I cut the tips off and by allowing only two or three fruits to ripen on some of the plants, I threw all the strength to these fruits. The largest specimen weighed 7 pounds 7 ounces and there were several which weighed over 5 pounds each." Some plants

of the Majestic tomato have produced 145 to 160 pounds of fruit. Just think what that kind of a crop would mean on an acre of land. They are of such large size and so productive that they are attracting general attention. This new variety is being introduced by the Iowa Seed Company, of Des Moines, Iowa, who are again offering \$100 in cash prizes on them, and we hope our readers will compete. Better write them today for a copy of their large illustrated catalogue of garden and farm seeds, which will be sent free if you mention this paper.

A BOOM IN THE EGG BUSINESS.

Of all the creatures on many farms the humble chicken receives the least attention. Many times she is compelled to roost on a leafless apple tree on cold nights and is forced to seek her own food. Yet the hungry farmer delights to sit down to a meal of steak and eggs or a delicious roasted chicken. On the other hand, many farmers are waking up to the fact that the "biddy" who lays the eggs can be developed into a profit-producing machine; with warm quarters, clean surroundings, a hen house free from lice and drafts, with good food and clean water she will double the cost of her board in egg production.

One of the ideal methods to help a hen swell profits is to give her a balanced ration of masbes and grains. Each day mix with this a proper portion of Lucky Brand Stock Food. This scientific preparation is not a haphazard mixture, but is designed especially to assist the digestion and assimilation of the hen's food. It is a flesh producer and egg maker. According to the proportion which you feed you can obtain eggs for market or increase the quantity of the fowl's flesh.

Lucky Brand Poultry Food and the flavor which it develops when mixed with other rations, just suits the hen's palate. Experienced poultrymen say that Lucky Brand Poultry Food helps to increase eggs in winter, shortens the molting season and keeps their poultry healthier. It is composed of roots, herbs, bark and mineral salts. It helps to get the full food value out of the different feeds and enables the poultryman to successfully compete with his neighbors. Write the American Stock Food

Company, Quincy, Ill. They will send you their new free booklet that tells all about it.

A VALUABLE NEW IDEA.

We are in receipt of that marvelous book of strawberry lore, the 1906 issue of R. M. Kellogg's "Great Crops of Strawberries and How to Grow Them."

This book is one of the handsomest of its kind in print and is a veritable picture book, filled with beautiful illustrations of home scenes of enthusiastic strawberry growers and other characteristic views beautifully reproduced in half-tone.

The R. M. Kellogg Company is authority on everything that relates to the strawberry and its production, and we are glad to learn that this company is about to begin the publication of a monthly illustrated magazine under the title of *The Strawberry*.

Not only that, but the flood of questions, concerning strawberry culture, which reaches that company's office daily has resulted in the determination of its management to establish a correspondence school of strawberry culture, in which everybody, everywhere, may receive thorough, practical instructions just when it is most needed to help win success in the strawberry field.

The monthly magazine to which we refer will be the medium between this school and its membership, and several pages of the publication will each month be devoted to answering inquiries from its readers.

The Kellogg company will place the membership in the school and a year's subscription to *The Strawberry* at the nominal price of \$1, and from what we know of the Kellogg company and its work we can assure our readers that every issue of that magazine will be worth more than the cost of a year's subscription to each member.

Better send \$1 and join the school and get its valuable publication.

Address R. M. Kellogg Company, Three Rivers, Mich.

ALL TELL A SIMILAR STORY.

JONES
The Wyandotte Man

OFFERS EGGS FOR HATCHING. I have the best lot of birds in my breeding pens this season that were ever owned by one breeder in this country, clear open centers in my silvers and Golden's; pure white, free from ticking, in my Whites. Every pen headed by a winning male with a National reputation; many of the females have won honors at such shows as Chicago, New York, Indianapolis, St. Louis, Nashville, Tenn., etc. The same blood lines that produced the winners at more big shows the past season than any other strain in America.

THE STRONGEST BLOOD LINES ON EARTH

This has been proven by the high per cent of winners they produce, and by the heavy production of eggs; they are a combination of fancy and utility, the best all purpose fowl in the world. Will not raise the price of eggs—better quality than you can buy for double the money elsewhere.

SILVER, GOLDEN AND WHITE WYANDOTTES

Thirty-six pens mated up—12 of each. Will sell eggs at \$3 per 13; \$5 per 26; \$9 per 50; \$15 per 100; choice of any one pen \$5 straight. More good value for your money than you can buy of any breeder.

500 GREAT BIG LINE BRED BIRDS FOR SALE

Can mate you pairs, trios or pens and large lots, or furnish you a high-class male bird that will improve your flock. Get my handsome 36-page catalogue, illustrated in colors—a book worthy a place in any library, full of good practical poultry pointers, sent to any address for 6 cents to pay postage.

Feed" on sale until now without disclosing many complimentary expressions and highly favorable commendations and endorsements from breeders of poultry. And, very soon, these pleasant letters began coming from all over the country, as the fame of his "Perfect Feeds" extended, while, best of all, this testimony increases up to date. The following letter from a widely known breeder of Buff Plymouth Rocks is a fair sample:
"W. F. Chamberlain, St. Louis, Mo.
"DEAR SIR:—I am happy to state that the first and second cockerels at Illinois State Show at Bloomington last year were both raised on Chamberlain's Perfect Chick Feed, and that all my prize winners of the past winter were hatched in a Model incubator, reared in a Model brooder, and fed on your "Perfect Chick Feed."
"Yours truly,
CHARLES E. BARNES.
Taylorville, Ill., December 30, 1905.

LINCOLN, NEBRASKA, IS PROUD OF THE QUEEN.

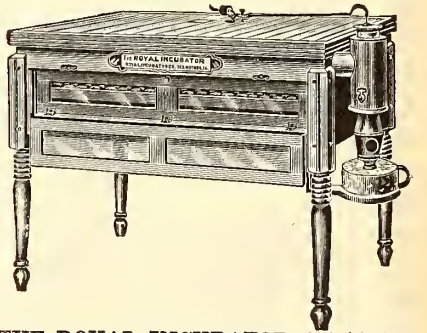

The Pinkerton Manufacturing Company has an enviable reputation in the incubator field and the people of the capitol city are justly proud of the Queen incubators and brooders made by this company. This company, with its extensive plant and modern equipment, is one of the big enterprises of Lincoln, Neb.
In a remarkably short time the Queen incubators and brooders have become famous and today they are in use in every state in the Union. The record of this company is ample proof of the fact that "merit wins." The Pinkerton Manufacturing Company will not sacrifice quality in order to offer price inducements to the buying public.
By doing business upon this principle they are deserving of the success they have attained.
In another part of this paper the Pinkerton Manufacturing Company have an advertisement calling attention to their 1906 catalogue. This book not only describes the Queen incubators and brooders but it also tells of the merits of the Pinkerton brand of poultry foods, also advises the reader in reference to their famous White Leghorn and White Wyandotte fowls.
It would be well worth while for anyone and everyone to get acquainted with the Pinkerton Manufacturing Company's products.

A PROFITABLE BUSINESS.

Fowls, like other animals, have a natural season for reproduction. To produce eggs, broilers or roasters out of this natural breeding season requires special care and feeding such as the average farmer does not give his poultry. As a result, the great bulk of the eggs and poultry is produced during the natural breeding and growing season. This accounts for the lower prices received for these products during the spring and summer and their scarcity during the fall and winter. It is plainly evident that the person who prepares to handle and care for his fowls so as to produce eggs and broilers—and lots of them—in the off season is going to greatly increase his profits thereby.
The rapid increase in the use of artificial methods for producing broilers and roasters out of the natural season has resulted in a comparative increase in the supply of fresh stock during this season, but the consumption of poultry products has also increased so rapidly along with the growth of our large cities, that the demand has kept the prices up to the top notch, and there are no prospects of there ever again being a time when eggs and poultry will sell at such low prices as they brought eight or ten years ago. The ambitious farmer or poultryman can, therefore, make plans for raising poultry on the basis of present conditions and prices with a reasonable assurance that these conditions will be maintained indefinitely.
Aside from the general markets of our great cities, special markets may be found all over the country. Wherever people congregate at either summer or winter resorts there will be a demand for fresh poultry and eggs at good prices. The farmer or poultryman must study the conditions and possibilities of his own location, and then cater to them. If his eggs are clean and fresh and his poultry of prime grade, he can usually command a good price, for, unlike a hog or steer, poultry and eggs can be marketed direct by express at a good profit.

Now comes the question of selecting an incubator and brooder for the proper conduct of the poultry business. There are many different machines on the market, but we know of none so good as Chas. A. Cyphers' Model Incubators and Brooders. We are not alone in this belief, for thousands of the largest and best poultrymen in the country have discarded their old machines for the "Model," and they all state that there is none so economical in the use of oil, or requires so little of the attendant's time to operate, or hatches such a large per cent of strong, healthy chicks as the "Model" Incubator.
Mr. Cyphers has been manufacturing incubators and brooders for many years and has embodied the results of his many experiments and long experience in the Model Machines. The system of air circulation is entirely new and gives them perfect ventilation. He has added a new patent thermostat which gives a much larger movement and consequently prevents any variation in temperature. Every poultryman realizes the value of this feature on an incubator or brooder in hatching and rearing strong, vigorous chicks. In fact, we would advise everyone who wishes to make the greatest possible profit from poultry to get Model Incubators and Brooders. Those of our readers who have not secured one of this season's catalogues of these machines will do well to write to Mr. Chas. A. Cyphers, 000 Henry street, Buffalo, N. Y., for a catalogue and a copy of his valuable book, "Eggs, Broilers and Roasters." This book is one of the most interesting and instructive pieces of literature ever gotten out on the subject. It takes up the different branches of the poultry business and covers them thoroughly. Mr. Cyphers has had much practical experience in rearing and feeding poultry, both for eggs and for broilers, and he is recognized by all poultrymen to be one of our best authorities on these subjects. He will send this book, "Eggs, Broilers and Roasters," free of charge to everyone interested in poultry raising, and we feel sure that our readers will get much profitable knowledge from it.

THE ROYAL INCUBATOR AT \$12.75.

There are days of low prices among incubator people, but a machine that seems to go just a little beyond anything else in the way of a bargain is this 230-egg No. 3 Royal at \$12.75.
It is a double walled, self-regulating machine with all the appliances and devices, in finest working order, of the very highest priced machines. Its weight is 140 pounds and we have the word of the manufacturing company that they really consider that in selling this 230-egg Royal at \$12.75 they are offering "the best incubator proposition that has ever been made by any incubator company in existence."
The Royal has been one of the most popular incubators before the public for years. It enjoys the enviable reputation among poultrymen of being the one really high-class incubator that has always sold at a popular price. It must be borne in mind that its price this year, the figure named above, is just about a third less than it has ever been sold for before.
If you want an incubator bargain you cannot do better than get in touch at once with the Royal Incubator Company, Drawer 80, Des Moines, Iowa. They will send you their catalogue free. Enclose 10 cents with your request and they will send you their valuable little book on "Proper Care and Feeding of Chicks, Ducks and Turkeys."

INFORMATION ABOUT RHODE ISLAND REDS.

Every poultry grower aims to improve his own birds—that is natural—but it is unusual to meet with one who goes beyond that and makes a special effort to help others to improve their stock. Such an instance has just come to our notice in the new catalogue of Messrs. Charles F. Thompson & Co., Lynnfield Center, Mass., in which is given in full the standard adopted by the American Rhode Island Red Club. The catalogue gives fine illustrations of well bred birds, and Messrs. Thompson & Co. also offer to answer such questions about Reds as their correspondents may ask, and they will send specimen feathers as a guide to the most desired color; when especially asked they will give information about mating free of charge.

Every grower of the popular Reds wants to know how their favorites ought to look, and what goes to the making of Reds that are right. Hence they should have a copy of the Red Standard. It will be sent free to anyone asking for it, but we suggest that a stamp be enclosed to pay the postage. Please mention that you saw this notice in the AMERICAN POULTRY JOURNAL when you write.

Bay View Poultry Association, Oconto, Wis., winners at the State Poultry Show held at Oshkosh, Wis., Jan. 15 to 20, 1906, won the following prizes: First on Buff Rock cock, first on Buff Rock cockerel, first on pullet; first on Pea Comb White Rock cockerel, first and second on pullets; second and third on S. C. Buff Orpington cockerel, first, second and third on pullets; second on White Orpington cockerel, fourth and fifth on pullets; second on White Wyandotte cockerel; first on S. P. Wyandotte cockerel, first, second and third on pullets; on R. C. Rhode Island Red cockerel, second on pullet; fifth on S. C. Black Minorca cockerel, third on pen; first on R. C. Black Minorca cockerel; first on S. C. White Minorca cockerel, first on pullet; third on S. C. White Leghorn cockerel; third on R. C. Brown Leghorn cockerel; first on American Dominiques, second and fourth on pullets; second on S. S. Hamburg cockerel, pullet fifth; first on Silver Duckwing Game cockerel, first and second on pullet; also ten special prizes. McClave and Lambert, judges.

There will start breeding Leghorns this spring many new beginners, that may think they are as hard to breed as the larger breeds of fowl. If they keep them warm and dry the first few weeks and do not feed more than about one-half what they want to eat they will be surprised how fast they grow and how few die and what wonderful roosters they are, and how fast they become full feathered young hens and cockerels. It's nothing uncommon to see them full fledged layers in October, those March hatched chickens. It's not stuffing with too much feed that makes the early layers. It's more in the hardy, rustling, healthy strain. The trap nest will move the poultry world into a double header. Where we will get two big eggs where we only got one small one. We all must use them. Those that cannot plan out a good one of their own had better buy than do without.

Conton, Ill. H. C. BEEBE.

H. S. Garlinghouse, of Canon City, Colo., won at the recent show held in Denver, Colo., on his S. C. Brown Leghorns as follows: First cockerel, first pen, second cock, second, third, fourth hen, third pullet and fourth pen. On Barred Plymouth Rocks: Fourth cock, fourth cockerel, fifth pen. On White Plymouth Rocks: Second pullet, third cock, third cockerel, score 95; fourth hen and fifth pen, in a class of 170 birds. Also Chamber of Commerce \$50 cup for best pen of S. C. Brown Leghorns.

George M. Cline, Downer's Grove, Ill., writes that he is now prepared to fill orders for eggs from his choicest pen of White Wyandottes that is headed by a cockerel that was in first pen at Chicago. Also from his choicest pen of Barred Rocks, that contains the first prize cockerel at the Rockford show. He guarantees satisfaction. Write him for prices and particulars and mention AMERICAN POULTRY JOURNAL.

John A. Shaw, proprietor of the Rocky Hill Poultry Farm, McKittrick, Mo., writes that his breeding pens are all mated up for this season's egg trade and that he still has a few Silver and Buff Wyandotte and Buff Orpington cockerels to spare that are A No. 1. Write him for prices and particulars and mention AMERICAN POULTRY JOURNAL.

STAY WHITE WYANDOTTES

that have won more prizes at NEW YORK AND BOSTON than any other strain. I have been offered \$500 for my 1st Prize Cockerel at New York 1904. My 1st Prize Pen at Boston 1905 was the admiration of all White Wyandotte fanciers.

EGGS from the whitest and best breeding pens: 1 setting \$5; 2 settings \$8; 3 settings \$10. For the best White Wyandottes write. (Ad on back cover).

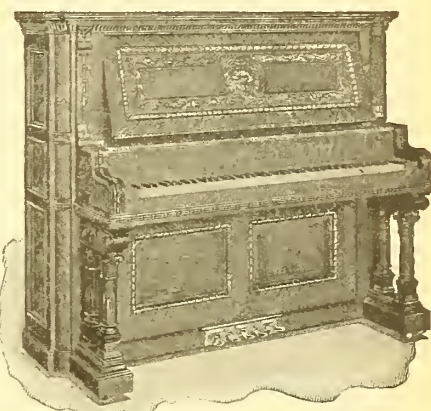

A. C. HAWKINS : Lock Box 25, Lancaster, Mass.

WING PIANOS

Are Sold Direct From the Factory, and in No Other Way

You Save from \$75 to \$200

When you buy a Wing Piano, you buy at wholesale. You pay the actual cost of making it with only our wholesale profit added. When you buy a piano, as many still do—at retail—you pay the retail dealer's store rent and other expenses. You pay his profit and the commission or salary of the agents or salesmen he employs—all these on top of what the dealer himself has to pay to the manufacturer. The retail profit on a piano is from \$75 to \$200. Isn't this worth saving?

SENT ON TRIAL
Anywhere We Pay Freight
No Money in Advance

We will place a Wing Piano in any home in the United States on trial, without asking for any advance payment or deposit. We pay the freight and all other charges in advance. There is nothing to be paid either before the piano is sent or when it is received. If the piano is not satisfactory after 20 days' trial in your home, we take it back entirely at our expense. You pay us nothing, and are under no more obligation to keep the piano than if you were examining it at our factory. There can be absolutely no risk or expense to you.

Do not imagine that it is impossible for us to do as we say. Our system is so perfect that we can without any trouble deliver a piano in the smallest town in any part of the United States just as easily as we can in New York City, and with absolutely no trouble or annoyance to you, and without anything being paid in advance or on arrival either for freight or any other expense. We take old pianos and organs in exchange. A guarantee for 12 years against any defect in tone, action, workmanship or material is given with every Wing Piano.

Small, Easy Monthly Payments

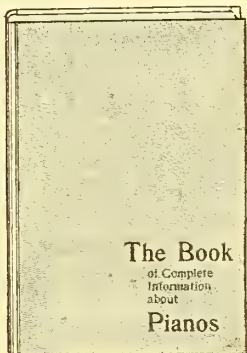

In 37 years over 40,000 Wing Pianos have been manufactured and sold. They are recommended by seven governors of States, by musical colleges and schools, by prominent orchestra leaders, music teachers and musicians. Thousands of these pianos are in your own State, some of them undoubtedly in your very neighborhood. Our catalogue contains names and addresses.

Mandolin, Guitar, Harp, Banjo—The tones of any or all of these instruments may be reproduced perfectly by any ordinary player on the piano by means of our Instrumental Attachment. This improvement is patented by us and cannot be had in any other piano. WING ORGANS are made with the same care and sold in the same way as Wing Pianos. Separate organ catalogue sent on request.

You Need This Book

If You Intend to Buy a Piano—No Matter What Make

A book—not a catalogue—that gives you all the information possessed by experts. It tells about the different materials used in the different parts of a piano; the way the different parts are put together, what causes pianos to get out of order and in fact is a complete encyclopedia. It makes the selection of a piano easy. If read carefully, it will make you a judge of tone, action, workmanship and finish. It tells you how to test a piano and how to tell good from bad. It is absolutely the only book of its kind ever published. It contains 156 large pages and hundreds of illustrations, all devoted to piano construction. Its name is "The Book of Complete Information About Pianos." We send it free to anyone wishing to buy a piano. All you have to do is to send us your name and address.

The Book of Complete Information about Pianos

Send a Postal To-day while you think of it, just giving your name and address or send us the attached coupon and the valuable book of information, also full particulars about the WING PIANO, with prices, terms of payment, etc., will be sent to you promptly by mail.

WING & SON, 350-395 West 3rd St. New York
1868—37th Year—1905

Cut out this coupon and mail to us after writing your name and address at bottom. We will promptly mail book and other information.

350-395 West 3rd St., New York

Send to the name and address written below, the Book of Complete Information about Pianos, also prices and terms of payment on Wing Pianos.

SAVE YOUR FEATHERS

And send your address to the Enterprise Manufacturing Company, Akron, Ohio, U. S. A. They pay good prices for the following dry picked feathers:

Rooster Hackles, assorted colors; Plain and Barred Wood duck, Teal duck, White goose, Gray Mallard and Gray goose feathers from the body and wings; peacock eyes and swords, Guinea hen body feathers, prairie chicken, grouse, quail, partridge, wild turkey and Indian crow feathers from the wings, tails and body, chatterer and blue jay feathers. 3-2

INCUBATOR BARGAINS.

Referring to the subject of incubators and brooders, the card of A. J. Child & Sons' Mercantile Company, Box 901, St. Louis, appeals to breeders who want something good, while the prices quoted are away down. This concern has been before the public nearly a third of a century, are of known responsibility and enjoy a large trade, and are able to make extremely low figures on everything they sell. Their poultry supplies catalogue is now ready and will be promptly sent on request. Better ask for it now. Address as above.

One of the best catalogues that has come to us this season is the catalogue of H. M. Sheer Company, Department G, Quincy, Ill. This catalogue is beautifully printed on heavy enamel paper with a cover in colors, and contains half-tone illustrations of the many articles that this concern turns out in the way of incubator and brooder supplies and fixtures, such as Acme automatic lamps and compound wafer regulators, which can be attached to any incubator or brooder, tanks, lamps, burners, punches, leg hands, thermometers, etc. We believe they are the largest incubators and brooders in the United States, having been in business for eighteen years.

C. M. Baskerville, Mount Pleasant, Mich., won at the big state show at Detroit, Mich., just closed, on his Partridge Wyandottes as follows: First cock; 1st, 2d and 4th hen; 2d, 3d and 5th cockerel; 1st, 3d and 4th pullet and 1st pen. Also sweepstakes special for the ten highest scoring Wyandottes, any variety. In the show. His stock also won nearly all the other premiums, defeating winner at Chicago, Indianapolis and the World's Fair.

We received a new catalogue issued by S. A. Hummel, Box 52, Freeport, Ill. This is made in a pocket edition size, nicely illustrated, with a complete list of prices of fowls and eggs of all the varieties that he raises, and there are many. This catalogue will be sent on request to anyone

mentioning the AMERICAN POULTRY JOURNAL.

Mr. Hummel has for fifteen years bred and exhibited fancy poultry and shipped stock and eggs to every nook and corner in the world. He breeds thirty or more different varieties of land and water fowls, and so a purchaser can easily make a selection of his favorite varieties.

John F. Wood, Owensville, Ind., the Light Brahma specialist, writes that he does not do any exhibiting himself, but that his matings produce the winning kind, and that his matings this year are better than ever. Those interested in this variety should write him for prices and particulars and mention AMERICAN POULTRY JOURNAL.

Schumacker Bros., Plainfield, Ill., breeders of Barred Rocks and Golden Wyandottes, won at the 1906 Naperville show on Wyandottes, 1st, 2d cockerel; 1st, 2d hen; 4th pullet; on Barred Rocks they won 3d pullet on single entry. They report a fine lot of birds in their breeding pens for the coming season.

O. E. Michael, Dayton, Ohio, the S. C. Brown Leghorn specialist, made the following winnings at Cincinnati: Secoud and 3d pullet and 3d pen on three entries. His birds win wherever exhibited. Write him if you are interested in this variety and mention AMERICAN POULTRY JOURNAL.

O. A. Bogardus, Warsaw, Ky., breeder of S. C. Buff and Black Orpingtons, won on Buff and Black at the late Cincinnati show seven first prizes out of a possible ten. Look up his ad elsewhere in this issue and write him for prices and particulars, mentioning AMERICAN POULTRY JOURNAL.

H. C. Beebe, Canton, Ill., breeder of S. C. White Leghorns, is desirous of getting his handsome folder in the hands of everyone who is interested in this variety. Write him and mention AMERICAN POULTRY JOURNAL.

To the winnings of S. T. Campbell, Mansfield, Ohio, mentioned in our February issue, report of the Cincinnati show should be added: First, 2d and 3d Rose Comb Black Minorca pullet. His exhibit won the silver cup for the best display of Rose Comb Black Minorcas.

Our readers who are in need of Barred Plymouth Rocks to improve their flock, or birds for a foundation, should take advantage of the extraordinary stock that Bradley Bros., Lee, Mass., are offering at very moderate prices. This firm has devoted over twenty years to the upbuilding of their strain of Barred Plymouth Rocks and breed nothing else, and birds from

their yards always give satisfaction. When writing them mention AMERICAN POULTRY JOURNAL.

The agricultural and horticultural resources of the Grand Valley, Colorado, are most entertainingly set forth in an attractive booklet, "The Little Empire of the Western Slope," now being distributed by the passenger department of the Denver & Rio Grande railroad.

R. J. Sullivan, Sheldon, Ill., who is making the breeding of Houdans a specialty, made a grand winning on this variety this season, winning 1st cockerel, 1st hen, 1st, 2d, 3d and 4th pullet, at Sheldon, Ill., Jan. 22-27, 1906. 1st cock, 1st cockerel, 1st hen, 1st, 2d, 3d and 4th pullet at Forest, Ill., show in November, 1905. 2d cockerel, 2d, 3d and 4th pullet at the big state show at Danville, January, 1906. This is certainly a record to be proud of and shows that Mr. Sullivan knows how to produce the good ones. Any of our readers who are interested in this variety should write him for prices and particulars, and mention AMERICAN POULTRY JOURNAL.

Mrs. W. S. Robinson, Fayette, Mo., breeder of Barred Plymouth Rocks and S. C. White Leghorns, won at Fayette, Mo., as follows: On Barred Plymouth Rocks, 1st, 2d cock; 1st, 2d and 3d hen; tied for 1st cockerel; 3d pullet; 1st and 3d pens, White Leghorns, 1st, 2d and 3d hens. Also won two firsts on Pekin ducks. Also special for highest scoring bird in show. She has mated up several very choice pens of both varieties and is in splendid shape to supply eggs for hatching, and those of our readers who are looking for eggs of these varieties should correspond with Mrs. Robinson and mention AMERICAN POULTRY JOURNAL.

H. A. Emmel, Mars, Pa., who is well known to our readers as a judge and breeder, made seventeen entries in Light Brahma, S. C. Buff Orpingtons and S. C. Brown Leghorns at the Pennsylvania State Fanciers' Association show, held in Harrisburg, Pa., January 22-27, 1906, where he won nine firsts (out of a possible eleven), six seconds and two thirds. He also officiated as judge at this show, of the classes in which he was not an exhibitor. Mr. Emmel sold birds to a customer for whom they won first honors at Butler, Pa., show, held on same dates, and also his birds in the hands of a customer won at the recent Olean, N. Y., show. Every bird exhibited by him or his customers the season never failed to win worse than third prize—a record unequalled. The intending purchaser of stock or eggs for hatching will receive honest treatment, as he guarantees satisfaction and everything as represented or your money back. Look up his ad in these columns.

BLANCHARD'S WHITE LEGHORNS

are no experiment, having been carefully selected and bred for over twenty years. No labor or expense has been spared in building up and perfecting this strain and while the production of large, pure white, fancy market eggs has been the main object, standard qualities have not been neglected. They are large, vigorous, active and handsome. Good winter layers and keep at it all summer. They excel for introducing new blood or as foundation stock. **NONE BETTER ANYWHERE AT ANY PRICE.** Eggs for hatching, from my regular matings, \$2 per 15; \$3.75 per 30; \$5 per 45; \$10 per 100. From exhibition matings, \$3 per 15; \$5 per 30. Illustrated circular free.

WINNERS AT MADISON SQUARE GARDEN, N. Y., 1903-1904-1905-1906

H. J. BLANCHARD : : : Box 997, GROTON, N. Y.

Beebe's S. C. White Leghorns

are the best, and if you were here so we could talk together, and you could see my scientific way of breeding, it would be an easy matter to convince you. Eggs from prize pens, \$2 per 15, \$5 per 45; from heavy tested layers, \$1 per 15; \$3.50 per 30; \$6 per 100. Cir. H. C. Beebe, R. 5, Canton, Ill.

KEELER'S W. WYANDOTTES

"THE WORLD'S GREATEST STRAIN"

Winning for the past ten years in my own and my customers' hands in the largest and hottest shows in America, including the World's Fair, St. Louis, the Lewis and Clark Exposition, Chicago, Indianapolis, Philadelphia, San Francisco and Washington, D. C.

Do You Want White Wyandotte Eggs?

from pens headed by full brothers to the second cock, World's Fair, 1st cock and 1st hen, Lewis Clark Exposition, 1st cockerel, San Francisco, 2d cockerel Indianapolis, sons of the 1st and 2d pullets, Indianapolis, and 1st hen at Cleveland.

Do You Want White Wyandottes?

with low curving, nicely corrugated combs, red eyes, nice arched necks, broad backs, short, well spread tails, deep, round, broad breasts, bright yellow legs and beak, the large silvery white—stay white—kind, that score from 94 to 96? Then buy eggs from me. My 1906 illustrated catalogue, one of the finest poultry catalogues issued, free for the asking. It tells you all about them. Send for it today. EGGS \$3 per fifteen, \$5 per thirty, \$15 per hundred.

Charles V. Keeler, Box 4810, Winamac, Ind.

WHAT COUNTS IN AN INCUBATOR?

The best incubator made cannot produce results unless it is kept at the proper heat, and no incubator can be kept at the proper heat unless it has a reliable thermometer.

There is just as much difference in thermometers as there is in watches, although there isn't as much difference in the price. They may look about the same, but there is a big difference. Just so it is with thermometers. Two thermometers which look exactly alike may be entirely different.

You might not think thermometer making is a very important matter, but you must remember that these small tubes are drawn in lengths of 300'; that the bore of some of these tubes is so small it is impossible to insert a human hair in them, and that this bore must run absolutely uniform throughout the entire 300'. Do you now see why thermometer making is different from ordinary manufacturing?

In some thermometers the capacity of the bulb is one thousand times as great as the capacity of the bore. This means that any error caused by a contraction of the bulb is multiplied a thousand fold.

You know glass contracts with age. In order to have a permanently reliable instrument it is necessary that every tube be seasoned or aged for a certain length of time. In order to do this the manufacturer must carry in his seasoning vaults about \$30,000 worth of thermometer tubes. It takes a large company to be able to do this and an honest one to want to do it.

When you buy an incubator you can examine the details, workmanship and general construction of the various makes and determine for yourself which is the best machine, but with thermometers it is a different question. The value of a thermometer depends entirely upon its accuracy, and its accuracy depends wholly upon these things we have told about which do not show, in any way, in the finished product.

You cannot tell a reliable instrument from an unreliable one, and there is only one thing for you to do and that is to insist upon having a thermometer that is made by a company which has had the most experience and a company who is backed by a good reputation.

Taylor Brothers Company, Rochester, N. Y., have a reputation of fifty-three years' standing which has been well earned by living up to the spirit and letter of their motto and trade mark "Accuratus."

IMPROVING THE INCUBATOR.

Since the introduction of the first incubator, manufacturers have been constantly striving so to improve the "artificial hen" that it will beat the hen herself in hatching chickens. How well they have succeeded is best shown in the incubators made by Shotwell, Tucker & McGinn, of Skaneateles, N. Y. Their line of New Marillas being conceded by leading poultrymen to be the best on the market.

Constant improvement has made the New Marilla incubators as near perfect as possible—they are automatic in operation, require but little attention, and results show that they hatch more chicks, and healthier chicks, than the mother hen.

This year this firm are introducing a new feature in the 55-egg incubator—the Baby Marilla. It is just right for those who wish to raise but a few chicks at a time, and for its cost—\$5.50—can't be beaten.

The different sizes of New Marilla incubators are fully described in the regular catalogue sent to anyone on request. The catalogue also tells about the wonderful incubator bargain—a 200-egg side machine made to sell for \$25.50, which is offered for \$11.75. Anyone contemplating buying an incubator should ask for this catalogue—it will save you money. Address Shotwell, Tucker & McGinn, Skaneateles, N. Y.

Harmon Bradshaw, Box A, Lebanon, Ind., the noted S. C. White Leghorn specialist, made the following winnings at Indianapolis, Ind., Feb. 5-10, 1906: 1st cock, 1st hen, 1st, 2d, 3d, 4th cockerel; 1st and 2d pullet; 1st pen, on 10 entries. This, with his grand record at the big Chicago show, is a record that he may well be proud of. Mr. Bradshaw has devoted years to perfecting his strain and is now offering our readers the benefits of his labor at very reasonable prices and they should take advantage of the opportunity to improve their stock or to introduce new blood into their flock. Look up his ad elsewhere in this issue and write him for prices and particulars. Mention AMERICAN POULTRY JOURNAL.

Mitchell's Barred Rocks.

At Kansas City show, January, 1906. Kansas City King, my first prize cockerel was the leading attraction. Ma Belle, 2d prize hen. My lines of breeding for five years have proven winners and heavy layers. My breeding pens, from which I sell eggs, are headed by prize males and consist of show females. EGGS at \$3 per 15, or \$5 per thirty.

E. E. Mitchell 39th Agnes, Kansas City, Mo.

C. A. EMMY, CARTHAGE, MO.

POULTRY JUDGE AND BREEDER OF STANDARD POULTRY

Leading varieties, healthy, farm raised stock. Have been at it for twenty-five years. Standard mating Barred Plymouth Rocks our specialty. Stock and eggs. Write me your wants, you will get the goods wanted with every order.

A CARLOAD OF LUMBER FOR \$100.00

At this price we will furnish you 12,000 feet of lumber from THE FIFTY MILLION DOLLAR LOUISIANA PURCHASE EXPOSITION. The lumber is offered at this extremely low price because we want to quickly dispose of the odds and ends of miscellaneous lumber which we have for delivery. This is not in specified sizes. It consists of an assortment of 1 inch stuff, Flooring, Sheathing, Boards, 2 inch stuff from 2x's to 2x10's and 12's; also timbers, if desired, from 4x4 to 12x12. It is all in lengths from 3 to 9 ft. We cannot accept orders for portions in specified sizes, but will fill orders for specified quantities of either the 1 inch or 2 inch stuff or timbers. \$100.00, 18 P. O. B. cars Exposition, St. Louis. This material is suitable for many purposes. In lots of instances it will work in just as good as though it came in full lengths. It is mostly all best Southern Pine. We will select with as great care as we possibly can. If you want us to figure on lumber in specified widths and lengths Send Us Your Lumber Bill for Our Estimate, and we will make you extremely low prices. Save \$0 to 60 per cent. We have all kinds of lumber for every purpose. We can furnish it promptly and correctly. Now is your time to put into execution your long needed improvements. You may never again find such an opportunity to buy lumber at a very low price.

A Money Making Book Free

A 64-page book, finely illustrated, that will put you on the right track to make dollars in place of cents out of poultry. A real poultry guide written from 24 years' practical poultry experience and based on facts. A book for beginners or anyone seeking advice on breeding, feeding, rearing and hatching. Contains plans for brooder, colony and poultry houses, yards, poultry farms, etc. It also describes and illustrates Berry's "Biddy" Incubators and Brooders—the successful kind—with all the latest improvements. Also our fine pure-bred poultry, giving prices of different varieties and their eggs for hatching. If you want to make the most money from poultry, send 3c for this valuable book, Do it today.

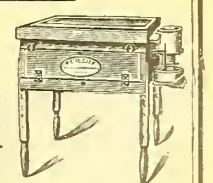

"Profitable Poultry,"
BERRY'S GOLDEN RULE POULTRY FARM, Box 74, Clarinda, Ia.

\$7.00 Buys the Best 120-Egg Incubator Ever Made.

\$4.50 Buys the Best 100-Chick Brooder.

Both Incubator and Brooder, if ordered together, cost but \$11.00. Incubator is double walled all over—best copper tank—hot water—self regulating—nursery. Brooder is the only double walled—hot water—brooder ever made. Satisfaction guaranteed. We pay the freight.

Our book, "Hatching Facts" tells all about them. Mailed free. Write for it today. Address
Belle City Incubator Company, Box 27, Racine, Wisconsin.

A CORRECTION.

In our February issue we through mistake credited Mrs. C. O. Bailey, Camden Point, Mo., with having won fifth on Barred Plymouth Rock pullet at Kansas City, 1906. This prize was won by Mr. E. C. Branch, Lee's Summit, Mo. Mrs. Bailey is anxious that we make this correction as she does not desire credit given to her for anything that she did not win.

Improved machinery which combines the performance of several operations, facilitates cultivation and lessens farm labor is something no agriculturist can afford to be without. In these days of large crops and small profits the great question with the market gardener should be the least expensive means he can employ for preparing the ground, for planting his crops and cultivating it. Proper planting is a very essential object in saving labor in after cultivation.

The seed drill that has the reputation for many seasons' use, one that in operation opens the furrow, drops the seeds accurately at the desired depth, covers it and lightly rolls the earth down over it and marks the next row with such precision as to admit of cultivation with implements that are furnished as attachments is a safe article for the farmer to invest in.

Such an implement is made by the Ames Plow Company, of Boston and New York. They also offer the seed drills and wheel hoes as separate implements. The Mathews principle, which is embodied in the construction of these implements, has been copied by nearly all makes of seed drills. This in itself is the strongest kind of a recommendation for the *genuine goods*. As offered by the Ames people this year, they have all the "up-to-date" improvements. You should send to these manufacturers for further particulars. The Ames Plow Company have probably had more experience in the manufacture of hand seeders and cultivators than any other concern in this country. They first illustrated them in a cata-

logue published as early as 1847. It is indeed remarkable that one concern should be able to keep at the head of the market for so many years, but the name, Ames Plow Company, and the sterling worth of their goods, are known throughout the world.

Persons desirous of obtaining the very best of implements in the line above mentioned should not fail to investigate the merits of the goods put out by this company. It would be well to become familiar with the many excellent features possessed by their implements before purchasing articles of this kind. They will cheerfully answer all inquiries and furnish any information that may be requested. Address the Ames Plow Company, Boston, Mass.

J. B. Hadaway, Brockton, Mass., writes: In addition to the regular prizes won on my Partridge Wyandottes at the Madison Square Show, New York, January, 1906, I won the \$75 challenge Breeders' Cup for the best pen of young stock actually owned and bred by the exhibitor; silver medal for the best exhibit; silver medal for the best colored female, and silver medal for the best pencilled pullet. The Challenge Breeders' Cup has been the most coveted prize contested for by Partridge Wyandotte breeders the past two years, and has been won both seasons by my birds.

At the great Boston show January, 1906, I won the \$100 championship cup for the best male, all five first prizes, five gold mounted championship shields for the best cock, hen, cockerel, pullet and pen. Special for best shaped male, special for best colored male and special for best colored female. Four birds that were at Boston show at its close I sent to the Chicago show, the 2d cock, 2d hen, 2d pullet and a cockerel, and won at Chicago 2d cock, 3d hen, 2d pullet and special for best colored male, I deeming it inadvisable to send some of my first-prize Boston prize-winners so far in their tired condition after having been a week on exhibition at Boston.

The Belle City Incubator Co., Racine, Wis., have just issued a very neat catalogue entitled "Hatching Facts," a copy of which has been received by us. Those of our readers who are interested in incubators should write for a copy of this catalogue and mention AMERICAN POULTRY JOURNAL.

Charles Nixon, Washington, N. J., the White Wyandotte specialist has issued a very neat booklet which he desires to place in the hands of every one interested in this variety. Write for it and mention AMERICAN POULTRY JOURNAL.

One of the handsomest catalogues of the season is the one entitled "How to Make Poultry Pay," published by Geo. L. Harding, Binghamton, N. Y. This book should be in the hands of every poultryman. Write for it and mention AMERICAN POULTRY JOURNAL.

The new 1906 catalogue of Geo. Ertel & Co., Quincy, Ill., is larger and better than ever, and contains much information of value to the poultrymen. Write for it and mention AMERICAN POULTRY JOURNAL.

We are in receipt of catalogue of American Incubator Co., Freeport, Ill. This catalogue contains illustrations of 26 varieties of poultry; also other valuable information pertaining to incubators and poultry supplies. Everyone interested in poultry should send for a copy of this catalogue and mention AMERICAN POULTRY JOURNAL when writing for it.

The new improvements in the 1906 "Mandy" Lee Incubator insure success in any location, and any kind of weather. Better read about it. Catalog free.—Geo. H. Lee Co., Omaha, Neb.

C. W. Brown, of Monticello, Iowa, says that if the eggs are fertile the "Mandy" Lee will bring out a chick for every egg. It's the *hatching* kind. Catalog free.—Geo. H. Lee Co., Omaha, Neb.

3785 PRIZES WON IN THE LAST 18 MONTHS

BY BIRDS FROM THE GREAT CENTRAL POULTRY FARM

These prizes were won by birds raised on our farm, hatched in Great Central Incubators and raised in Great Central Brooders. We have many of them on our farm today, with hundreds of others just as good. We know we have the goods and we back them up with our guarantee. **We take the risk.** We guarantee our shipments to be satisfactory. We practically insure your success. Isn't that fair? We raise nearly every variety of bird that is sold in America. Write us for special information on any breed you are interested in and we will cheerfully respond. Eggs in season from every variety we carry.

GREAT CENTRAL INCUBATORS AND BROODERS

are the surest hatch machines on the market. Results have proved it. We offer you a 30 days' trial free. If the machines are not satisfactory, return them at our expense. Last season we sold hundreds of our Incubators and Brooders on the 30 days' trial proposition, and not one was returned. Send for our large 72-page catalogue of "Poultry that Pays." It contains much information indispensable to the practical poultryman. It gives descriptions and cuts of each of our many varieties of poultry, and also of the Great Central Incubator and Brooder. Send five 2c stamps for mailing.

GREAT CENTRAL POULTRY FARM
F. W. Niesman & Co., Props. Box 40, FREEPORT, ILL.

CATALOGUES RECEIVED.

We are in receipt of a very neatly printed and well arranged catalogue of the Manson-Campbell Co., Detroit, Mich., manufacturers of Incubators, Brooders, Fanning Mills, etc.

Among the new catalogues one of the best that we have seen is that of the Cornell Incubator Company, a book of 96 pages, 7 1/2 x 10, with a three-color cover. It is well written, nicely printed and by using plenty of illustrations the reader can follow the construction of every part of the Cornell Incubators and Peep-O-Day Brooders from the time the rough lumber starts through the dry kiln until the machines are completed ready for shipment.

A noticeable departure in design is found in the Cornell Incubator in the Patented Table Top, beneath which the Regulator Arm is placed out of the way of interference, thus protecting the sensitive parts of the thermostat in the egg chamber. The Table Top also provides an unusually good place on which to place the egg trays when turning the eggs or cooling them.

Among other features are the Cornell Moisture Lamp and the Elastic System of Ventilation, through the using of which the manufacturers claim that Cornell Incubators can be successfully operated under more widely varying conditions than any other incubator. The legs of the Cornell Incubators can be attached without the use of tools of any kind, being screwed into the bottom of the machines in the same manner in which the legs of a piano are put on.

The Peep-O-Day Brooder has been successfully used and recommended by the government poultry farms and successful poultrymen so long that it is recognized as the best brooder on the market. It should prove interesting to all to read about the original machine, which was the first successful brooder invented, and see how closely the Peep-O-Day as it is now being made resembles the original.

The Cornell Company manufacture and handle a full line of Poultry Supplies and Appliances, including Colony Houses, Poultry Foods, Poultry Remedies, Roup Cure, Drinking Fountains, Feed Troughs, Lice Paint, Lice Powder, Food Hoppers and other necessary articles. The 1906 Catalogue illustrates and describes each one.

The Cornell Company has prepared to contract for the building and equipping of poultry plans in any part of the country, starting in with the laying out of the plant and erection of the buildings and finishing by furnishing the different kinds of feed necessary to use until the stock is ready to go to market. Expert poultrymen in the employ of this company make suggestions and advise customers regarding proposed plans of poultry plants, houses and yards and answer questions pertaining to any branch of poultry culture. This service is free to friends and customers of the Cornell Company.

A Registration Department has been established whereby owners of poultry plants looking for competent help can make application and secure same; also poultrymen who are desirous of securing positions can file applications and the company will do all they can to assist them in securing places. No charge is made for this service.

Other features will be found in the book and every reader of AMERICAN POULTRY JOURNAL may obtain a copy by addressing The Cornell Incubator Mfg. Co., Dept. 106C, Ithaca, N. Y.

Frank J. Hicks, proprietor of Blossom Farm, Onarga, Ill., reports the following winnings on his White Plymouth Rocks: On two entries at Chicago, January, 1906, 1st and special on hen and 3d on cockerel. The same week as the Chicago show, at Paxton, Ill., in a class of 55 White Rocks, 1st and 4th pullets, 4th hen, 2d and 3d cockerel, 1st pen. At Kankakee, Jan. 29 to Feb. 3, in a class of 64 White Rocks, Sharp Butterfield, judge, 1st and 3d cockerel, 1st and 2d pullet, 1st pen. At Illinois State Show, 2d on hen. He showed different birds at all these shows, which goes to show that he has some good birds in his yards this season. Hens in his breeding pens score up to 95 points and pullets up to 96, cockerels up to 95, and he is prepared to furnish eggs from these choice matings at a very reasonable price. Look up his ad and write him. Mention AMERICAN POULTRY JOURNAL.

H. W. Buckbee, the well known seed man, of Rockford, Ill., has sent us a copy of his 1906 Seed and Plant Guide, which is gotten up in its usual artistic manner. A copy of this book should be in the hands of everyone who is interested in gardening. Send for it and mention AMERICAN POULTRY JOURNAL.

SMITH'S STANDARD - BRED LAYERS
are prize winners at the Big Shows; St. Louis World's Fair, Madison Square—1903, 1904, 1905, 1906—and everywhere. Strong proofs that these

Single Comb White Leghorns are from the greatest exhibition strain. Choice breeding and exhibition stock. Eggs for hatching \$1.50 and \$2 per 15; \$6 per 100. HARDING'S BABY CHICK FOOD

NO GRIT. There is no better food for little chicks. After 10 years' test it leads all competition. It contains nutritious grain, granulated beef scrap, bone, charcoal, seeds and other health-giving, strength-imparting substances. Perfectly balanced and carefully mixed. A builder of flesh, bone and feathers. Especially prepared for little chicks, pigeons and caged birds. Develops youngsters into profitable fowls. The most economical food made. Try it. 50-pound bag, \$1.50; 100-pound bag, \$2.50.

Harding's Granulated Milk A pure milk food for poultry—wonderful egg producer and one of the richest protein foods known—has absolutely no waste—a tissue builder, egg maker and growth producer. Write for my free book "How to Make Poultry Pay". Sent free.

George L. Harding, Box 333, Binghamton, N. Y.

MAPLE GROVE POULTRY YARDS

WHERE THE WORLD'S FAIR WINNERS WERE BRED, AND STILL BREEDING GOOD ONES

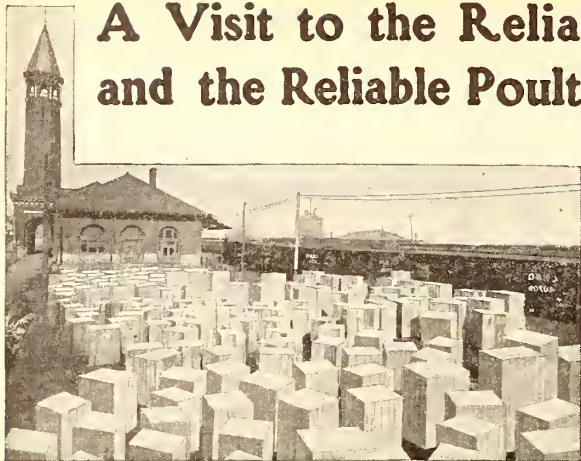

"LOUISIANA" FIRST PRIZE HEN AT WORLD'S FAIR 1904 BRED AND OWNED BY MRS. DELLA MAXWELL FAYETTE-MO.

"LOUISIANA," 1st prize hen at World's Fair, is still in my possession, also her mother and sisters and their offspring of 1905. I have shown at 7 out of 9 of the last Mo. State Shows and have won more 1st prizes at the 7 shows than all competitors combined. Won \$15 cash special at Sedalia for the best pen in the American class; also the \$75 Challenge Cup 2 years in succession for the 2 best cocks, 2 best hens, 2 best cockerels and 2 best pullets. At St. Louis World's Fair, 1st hen and 5th breeding pen. In the Missouri exhibit, at same time, 1st hen, 1st pen and 4th cock. At Mo. State Show, 1905, 1st pullet and 1st cock; lost 1st hen and 1st pen by 1/2 lb. overweight, which is no bad defect. At Moberly, Mo., 1905, 1st, 2d hen; 1st, 2d, 5th pullet; 2d cock; 1st, 3d pen; won \$75 Trophy Cup in 1903. I am better than ever prepared to sell 1st class breeders at reasonable prices. All birds have free access of a 300-acre farm, are vigorous and healthy; my stock is noted for size and sound color in plumage, also the finest laying strain that can be had. M. B. Turkeys, unequalled in size and plumage, Pekin Ducks and Scotch Collie Dogs, eligible to registry. Eggs in season, from show birds, \$5 per 15; from the good yards, \$3 per 15; M. B. Turkey eggs, 50c each. Will duplicate eggs at half price when less than 8 hatch. Satisfaction guaranteed. Write your wants to

MRS. DELLA MAXWELL
MAPLE GROVE POULTRY YARDS .: R. 5, FAYETTE, MO.

A Visit to the Reliable Incubator and Brooder Co., and the Reliable Poultry Farm of Quincy, Ill., U. S. A.

A GREAT FOREIGN SHIPMENT.

Made by the Reliable Incubator and Brooder Co. Scene at the C. B. & Q. Ry. freight depot in Quincy, Ill.

A true history of a great business enterprise is always interesting. Very often the history is also instructive. The history of the up-building of the Reliable Incubator and Brooder Co., of Quincy, Ill., an industry which has won—fairly and honestly won—such wide fame ought to be, and will be, of interest and very instructive to the readers of the AMERICAN POULTRY JOURNAL. This concern is, with one exception, the pioneer among all the incubator manufacturers now in operation. It is now enjoying its 24th year of business life. Between the years of 1880 and 1885 a great deal of experimenting was done, in order that a true and sure artificial hatcher might be put on the market, one that would give satisfaction. The industry was practically new. To accomplish such a vast amount of hard work, thought, and time, including tests innumerable, was necessary, but the determination was there, not merely a determination to produce a hatcher, but the determination to produce a good reliable one. Finally, that was just what was done. In the year of 1884 the success of the machine was so great that a patent for the incubator under the name of Reliable Incubator and Brooder Co., was granted in the year 1885. For a few years the business was run on a rather light scale until the World's Fair at Chicago in 1892 and 1893.

That was an opportunity that was taken advantage of and interest of visitors at the World's Fair was so great in their machines that the company's business amounted to many times the value of its capital stock.

Since then the capital stock of the business has been increased from time to time to suit the needs of the growing business. In 1894 they suffered a complete loss of their plant by fire, yet within a few days they were shipping out goods from their new quarters all over the country. The success of such a business would not be complete without a description of the controlling force back of it.

The world always admires success.

Nor does the world always stop to ascertain whether the kind of success admired is worthy of admiration. For not all success is due to merit—not by any means. Some men fall heir to success, as it were—at least to the means of attaining success. Others become successful more through the efforts of other people rather than their own merits. Again, there is the kind of success that comes from genuine merit, from close application, hard work, both of brain and body, from thought, from honorable upright character, the kind of success that takes with it at every step a stainless life. This is the kind of success that has come to Mr. J. W. Myers, pres-

the machine, and now that it was first-class he had full confidence that with the kind of pushing the business could be made a success. The machine was advertised judiciously and placed in competition with others at the various world's fairs and poultry shows. The magnificent results that have been achieved in this business, a good standing of a reliable incubator all over the country, is well known; and the immense success in business must be attributed to the good business character of John W. Myers. Mr. Myers is president of the firm and his brother-in-law, F. J. Reynolds, is vice-president, and we have been able to present to our readers excellent portraits of these two gentlemen. Following out the policy of its president, Mr. John W. Myers, the machines of the Reliable Incubator & Brooder Co. have been exhibited at innumerable exhibitions, large fairs and principal poultry shows, of which a few of the chief ones are named herewith: The World's Fair at Chicago; the St. Louis World's Fair; the Cotton States and International Exposition, at Atlanta, Ga.; the Trans-Mississippi Exposition, at Omaha, Neb.; the World's International Exposition, at Paris, France—at which latter city the company erected its own buildings and made the largest and most creditable incubator exhibition ever given in

the world. The company also exhibited at Exposition Internationale, at Brussels, Belgium, Stanger, Norway, and Guelph, Ontario. They have also exhibited their incubators at nearly every state fair in the United States and have never been defeated at a single show. Their records are clean.

SPLENDID INCREASE IN BUSINESS.

The business of the Reliable Incubator & Brooder Co. has gradually increased from year to year and in recent years the increase has been very fast. For instance, the increase from June, 1904, to June, 1905, the last year, has been 50 percent greater than the increase for the previous year. And here is another most significant fact: About

OFFICERS OF RELIABLE INCUBATOR AND BROODER CO., QUINCY, ILL.

Reading from left to right: John W. Myers, president; F. J. Reynolds, vice-president

ident of the great Reliable Incubator & Brooder Co., of Quincy, Ill., U. S. A., and the splendid business progress that has been carved out by Mr. Myers is right worthy of its warm admiration by that gentleman's army of good friends. Mr. Myers is still a young man, having been born on a farm in Novelty, Mo., Jan. 16, 1861. Mr. Myers became interested in the poultry business in 1879 in a small way at first, but gradually increasing his poultry yards until they became of considerable importance.

His first venture in the incubator business that has developed so extensively was with what is known as the "World's Favorite—Reliable Incubator." He had thoroughly investigated

FACTORY OF THE RELIABLE INCUBATOR AND BROODER CO.

twenty percent of the orders received this season have been from customers who have purchased Reliable Incubators and brooders heretofore. This fact speaks for itself as to the merits of the company's goods. These customers, amounting to one-fifth of the whole number ordering goods this season, had tried and tested the machines and the further orders were indisputable evidence of satisfaction. When a company begins a business and keeps it growing every year for twenty-four years, it does not need much argument to prove that the goods they make are satisfactory. The Reliable Incubator & Brooder Com-

pany, of Quincy, Ill., U. S. A., are now advancing in their twenty-fourth year of successful business. This long experience has been devoted to an effort to produce the best and has taught them what machinery they need, where to get the highest quality and right kind of lumber, how to make incubators that will produce the best hatching results under all conditions, what is necessary for correct ventilation, moisture and the general construction of their machines. All this has been fully accomplished by the above company. One of the features of this business that was very apparent to the writer when mak-

ing a visit to this plant was the amount of stock carried on hand. The factory is absolutely filled to overflowing from top to bottom. In addition they have a large warehouse 70 feet by 120 feet in size and 18 feet high, that is filled to the roof with completed machines. They state that they have a supply of incubators and brooders and complete line of the many poultry appliances and supplies, all made up and ready for instant shipment for a full year's demand. This makes it possible for orders to be shipped the same day they are received. Everything in the way of incubators, brooders and poultry supplies and fix-

MAIN BUILDINGS AND MANAGER'S RESIDENCE ON THE RELIABLE POULTRY FARM.

tures of all kinds are already put up, crated and ready for shipment and they state that they have at least \$125,000 worth of stock made up and on hand. They guarantee shipments of any order within thirty-six hours.

One of the striking points in their business is that they manufacture in their own plant everything needed in management and conduct of the poultry plant from incubator to feed cookers and all the smaller appliances necessary to the every day use of the well-being of poultry. One indication of the enormous business that they do in appliances and supplies is the manufacture of 26,000 burners for the lamps used in operating incubators, since May, 1905, and they are now just fairly getting into their busy season. The motto of this concern, in relation to their incubator and manufactured products, is, "How can we make it better?" and with this principle at the bottom the foundation of success is certainly well assured. One of the features regarding the incubator manufactured by this concern of which they are especially proud is their double heating system. Instead of having the heater of the Improved and Standard Incubator exposed to the atmosphere, and at an expense for fuel and heat, they have arranged a special heat chamber in which the heat is enclosed in their Improved and Standard machines of the 100 size or larger, thus utilizing all the heat in the egg chamber and effecting a great economy in fuel. The tanks in all of the hot-water machines are made of 14-oz. copper, entirely, top, bottom and sides. The tanks extend the full length of the upper part of the machine.

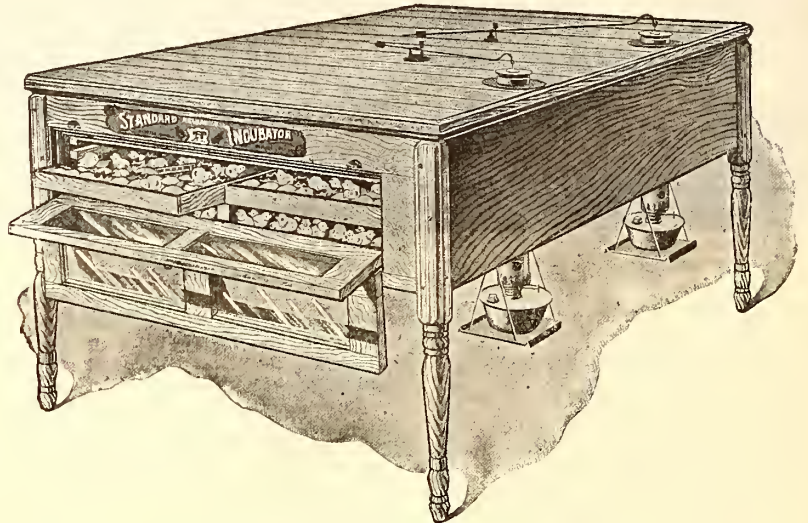

In the hot-air machines the tanks are made of the best steel, also extending the full length of the upper part of the machine. Just below the tank and above the egg tray, is a perforated hanging wall to temper the heat and give the same condition as received from the hen's body in the natural process, and also a deflector, which distributes the heat evenly to all the eggs in the tray and to all parts of the machine alike. The corners, the sides, the back, the front and the center of the machine are given a uniform temperature.

A unique feature of the Reliable is its double heating system—a feature possessed by no other incubator, and one which gives a decided advantage in economy of operation. In the hot-water machines there are two tanks, a hot-air tank above the water tank. This tank, in addition to heating the fresh air

supply, before conducting it into the egg chamber, also radiates heat from its own surface in sufficient quantity, that, if necessary, the heat from the hot-water tank could be cut off entirely, and the hot-air tank would maintain the temperature at the proper degree. They have, therefore, a double system of heating, combining all the advantages of both hot-air and the hot-water systems, overcoming all of the disadvantages of either. Practically the same system is embodied in the hot-air machines, there being two tanks (both hot-air), one closed and running entirely through the machine, the other open at the inner end, supplying fresh, warm air and at the same time radiating heat,

their already large office force, and recently secured the services of Mr. Frank Rupp, of Indianapolis, Ind., in their correspondence department. Mr. Rupp is eminently fitted for the position he will occupy and will no doubt add strength to the already very efficient office force.

The Reliable Incubator & Brooder Co. not only handle incubators and brooders, but they also manufacture and handle everything that is needed on a well regulated poultry farm, from a poultry marker to a portable poultry house. The company owns and operates one of the largest thoroughbred poultry farms, stocked with some of the highest scoring and best breeding birds that money can buy.

A STANDARD RELIABLE INCUBATOR.

thus not necessitating the use of an extra amount of fuel.

The whole institution shows the result of a good systematic management. Each department is under the care of an experienced foreman and the work is carried on from room to room, from department to department, from lumber as it comes from the dry-kiln to the finishing product ready for shipment. This, particularly, is a manufactory where the work is all of home production and that all that is used in the construction of the machines is of their own make, with the exception of castings, etc.

Owing to the rapidity with which their business increases they are compelled from time to time to add new men to

The illustrations that we give of the poultry plant hardly do justice to the place, for it is so large and well-managed that many illustrations would be needed to fully picture it and a visit of a full day would hardly be sufficient to thoroughly examine and describe all the stock. In addition to this they have farmed out at one place over 1,500 White Leghorn fowls. The company keep employed at their poultry plant experienced poultry breeders who know exactly what is required to achieve the best results and the manager of the firm, Mr. Binger has been with them for over ten years. Every year a competent judge is secured to aid Mr. Binger to score the birds, so that he can properly mate them up and get them ready

A VIEW ON THE RELIABLE POULTRY FARM.

for the next season.

Shipments of poultry on this farm are made every day and to many different points outside of the United States, ranging from New Foundland to Buenos Ayres, South America, and Pretoria, S. Africa.

The nice feature of this plant is that all visitors are cordially welcome, not only to the poultry farm, but also to the factory. Poultry shipments are brought in from the farm each day to the factory and kept a while in an exhibition room especially devoted for this purpose for a period of rest before being shipped away, thus enabling the stock to be started on the journey under the most favorable conditions.

The name of Quincy, Ill., has long been associated with the building of incubators and the raising of good poultry, and surely not the least to contribute to this has been the Reliable Incubator and Brooder Co., with its immense factory and its magnificent poultry farm.

MOTTLED ANCONA FOWLS.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: I would like a little space in the March number of the AMERICAN POULTRY JOURNAL to describe the Mottled Ancona fowls, as but few people know anything about them. I have sixteen pullets, four nice cockerels. My pullets began laying when five months old and have layed all winter. They are a little larger than the Leghorns and black and white, non-sitters and great singers, so much so I have named my pullets Jenny Lind, and the singing hen is the happy hen, and is the hen you get the eggs from during our zero weather here in Michigan, where we have not had snow this winter. They have been right out on the wheat field foraging, and seemed to enjoy getting their combs frozen. The chicks are the easiest to raise of any chick I ever tried to raise. They grow right up quick and feather out and in a few weeks they can forage their living for themselves on the farm. They do not get sick like the larger fowls. They run too fast to get sick. I used to raise the B. P. Rocks, but it was so hard to convince them that I did not want them to spend their whole summer raising chickens that I gave them up for a non-sitter, and hen that would lay in winter as well as in summer. The Rocks are grand for exhibition fowls, as they are beautiful, and they all look as if they would win the first prize. I am crossing my Ancona cocks with a mixture of varieties of other hens and expect a cross that will be wonderful layers, too. MRS. L. A. PEACOCK.

GEO. M. LEFFEL'S BARRED PLYMOUTH ROCKS.

There is probably no breeder and his stock in the country today that is better or more favorably known than Geo. M. Leffel and his Barred Plymouth Rocks. Mr. Leffel's great success with this variety is due to his careful breeding and the treatment he gives his customers. He keeps a pedigree of every one of his breeding birds and is thus in a position to know just what to expect from every mating he makes. His stock is raised on his 265-acre farm which is located two and a half miles from Springfield, Ohio, and this insures birds with plenty of vigor and a strong constitution.

His birds always win the cream of the prizes wherever exhibited, and his show record is an enviable one. His large circular, giving list of prizes won, prices of eggs and stock and other information will be sent for the asking. Write for it and mention AMERICAN POULTRY JOURNAL.

ROYAL BLUE BARRED ROCKS

Have won all down the big line this season. At the WORLD'S FAIR, CHICAGO, NEW YORK and BOSTON they won many of the highest prizes.

200 ROYAL BLUE COCKERELS

BIG, STRONG, FINELY MARKED BIRDS that will breed winners,

E-G-G-S

TRAP NESTS

An Unsolicited Testimonial For Superior Trap Nests

MR. J. A. BICKERDIKE,

Cedar Lake, Ind.

Dear Sir:—Some three months ago I purchased some of your trap nests, and after a 30 days' trial I scored them No. 1. I again take liberty to write you about them. I have now given them a three months' trial and trapped over eight thousand hens, the nests falling only once, and that because it was not set right. My hens range from the Brahma to the Hamburg.

I have made a special effort with the test as I contemplate installing them altogether and must honestly say they are the acme of perfection, supreme in every respect. You may refer your doubtful patrons to me.

Very Sincerely yours,

FAIR VIEW POULTRY YARDS.

O. K. STOCK FOOD

Prominent among the new successful business enterprises of the past year is the O. K. Stock Food Company, of Chicago. This firm manufactures the already famous O. K. Stock and Poultry Foods, as well as the well known poultry remedies formerly put out by D. J. Lambert, Apponaug, R. I.

The O. K. Stock and Poultry Foods have been constantly on the market the past seven years, during which time many stock feeders and poultry raisers have come to regard them as the best adapted to their needs.

The poultry food is not a substitute for the ordinary feed, but is a condimental

manufacture of the O. K. product.

The vice-president, Mr. D. J. Lambert, is well known to every poultryman and farmer throughout the country as a poultry raiser and breeder, as well as a maker of the famous Lambert Poultry Remedies extensively advertised the past 25 years. These are now made by the O. K. Company and sold with the same guarantee as formerly, particular attention being given to keeping these products up to their high standard of excellence.

Mr. F. J. Holt, secretary and office manager, has had a wide experience in merchandising, has traveled extensively in the United States and is very familiar with the feeding proposition. With his knowledge of successful methods the busi-

A COMMENDABLE INCUBATOR IDEA.

Those of our readers who have had any experience with incubators will appreciate the novel idea embodied in the Gem Incubator Removable Chick Tray and Nursery. It has a great many commendable features both as regards advantages favorable to the chicks as well as the care of the eggs and the machine during the hatching period. This chick tray and nursery is so made that it can be removed from the incubator combined or separately; that is, the egg tray can be removed without disturbing the nursery. The nursery is large and roomy and affords a desirable place for the chicks as they come from the eggshells, and avoids the crowding and tramping so objectionable in many incubators. The chicks drop into the nursery as soon as they leave the shell where they become thoroughly dried and are kept warm enough to give them a good start. Its convenience will appeal to those who have had any experience with the many other forms of nursery and egg trays now in use. It enables you to keep the incubator thoroughly clean and free from filth and foul odors at all times. It is also advantageous to get at, as it is not necessary to get down on one's knees and reach at arm's length to get at the back of the egg chamber. All in all this removable chick tray and nursery appeals to us as being one of the most convenient and desirable arrangements we have seen in incubators before; and together with the many other desirable features of the Gem Incubator we think our readers will be much impressed with this machine when they know of all its many good points of merit.

Its heating system is different from other machines and is so arranged that it is impossible for the machine to become overheated. The ventilation and moisture are controlled in the Gem Incubator automatically, a feature which should appeal to the buyer of incubators with more than ordinary force.

This machine will hatch ducks, turkeys, geese or pheasant eggs just as successfully as it does chicken eggs, and if any of our readers contemplate the purchase of incubators or brooders they would do well to send for their illustrated catalog which explains these machines in detail, and which can be had free of cost on request to the Gem Incubator Co., Trotwood, Ohio, if you mention this paper. Read their advertisement in this issue.

food and conditioner to be used in connection with the regular ration. As a tonic food for laying hens it has given the highest satisfaction while preventing disease in the flock.

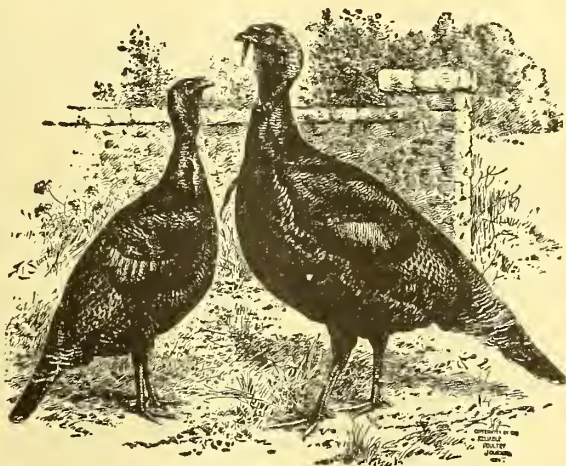

O. K. Stock Food is regarded by the best feeders as an article of more than ordinary merit. Many prominent cattle breeders and horsemen use it constantly and rely upon it thoroughly in maintaining and keeping healthy in horses, cattle or swine. It is widely used as a hog cholera preventive, and is used for all classes and kinds of stock.

The president of the O. K. Stock Food Company, Mr. John C. Klein, began business in a very modest way in 1892 and gradually increased his sphere of action until the formation of the O. K. company. Through the value of his formulas the business is constantly increasing and new warehouses are being added for the

ness of the company is in good hands and producing results that pay.

Mr. W. F. Klein, treasurer and factory manager, has had charge of the factory output during the past six years and through his energy and skill in the manufacture is attributed no small part of the O. K. Company's success. With such a strong combination of desirable products needed by every stock raiser and poultryman the future of the O. K. Stock Food Company should be assured.

W. A. Porter, Streator, Ill., the Barred Plymouth Rock specialist, has mated up four grand pens for the egg trade and is now prepared to fill all orders. He also has a few cockerels and pullets to spare. He guarantees satisfaction. Write him for prices and particulars and mention AMERICAN POULTRY JOURNAL.

BRONZE TURKEYS

I am happy to say I have reared this season more and better Bronze Turkeys than ever before. At

Great St. Louis World's Fair

my Turkeys won fourth Old Tom, first, second, third, sixth and seventh Young Tom, first, second, fifth and sixth Hen, first, fourth, fifth and seventh Pullet, and SILVER CUP for BEST DISPLAY. This in competition with the best Bronze Turkeys in the world, for we know there never was such a display of Bronze Turkeys as was shown at St. Louis. At

Madison Square Garden, New York, '05

I exhibited eighteen birds, winning EIGHTEEN PRIZES; two firsts, five seconds, six thirds and five fourths. What better proof can I give you as to the excellent quality of my Turkeys? I have something like

To-Day!

SEND A POSTAL OR LETTER and ask for AMERICAN POULTRY JOURNAL'S 1906 subscription offer.

Never have we offered so much before. For six subscriptions you are allowed over one-third commission, and are given a set of four beautiful colored pictures. These same subscriptions also count in a chance toward winning the \$600.00 Fiano; \$100 cash; \$50 worth of Fowls; Incubators; Brooders; Eggs, etc., there being over fifty of these grand prizes. One of our subscribers says, "I do not see how you can afford to do it." But we want subscriptions and lots of them; that is why we are making such liberal offers. Our space is too small here to explain all we give to every one who helps us. We hope every reader, who reads this, will send for the Offer at once. It will be a happy new year for both of us.

AMERICAN POULTRY JOURNAL PUB. CO.
325 Dearborn Street :: :: :: Chicago, Illinois

System in Poultry Practice BY JAMES Shackleton.

30 Chapters, 147 Pages, One Dollar, Postpaid.

May 1, 1905. Sales of this book since Sep. 1, 1904—eight months—are larger than for preceding 18 months. It is meant to appeal to common sense and evidently succeeds, for increase is chiefly in places where it has gone before. California always took more than any other state, and now takes more than any other three. Canada has many and now takes more than any state but California. Even Australia takes many. This book has been sold in every state of the Union, except two southern states, and Alaska. In Canada, Newfoundland, P. E. Island, New Brunswick, Nova Scotia, Quebec, Ontario, Manitoba, Assiniboia, Alberta, British Columbia and Vancouver Island. In Cuba, Hawaii, Philippines. In England, Belgium, Germany, Australia, New Zealand and China. It is meant to be of equal value in every climate, for whatever purpose fowls are kept, and evidently is so regarded. Sales are increasing rapidly everywhere. Enthusiastic testimonials are plentiful.

The book and American Poultry Journal for one year for \$1.10, new or renewal.

JAMES SHACKLETON, Box A 12, Milburn, New Jersey

WHITE WYANDOTTES!

Rigg's White Wyandottes have been line-bred since 1897—bred for Wyandotte form and color and for egg production.

Shape and color characteristics have been firmly fixed. These Wyandottes are the low-down, blocky kind, in weight exceeding somewhat standard requirements.

Unapproached in size, style and finish, they have never failed to win the coveted prizes in the strongest competition, east and west. Every bird line-bred and pedigreed and sold on approval. Eggs: \$3 per setting; two for \$5; three for \$7.

HOUDANS

Line-bred since 1874. Acknowledged standard of Houdan excellence in America.

Eggs: \$3 per setting; two for \$5; three for \$7.

THOS. F. RIGG

IOWA FALLS, IOWA

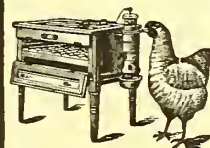

200 Chicks Like This

will soon develop into two-pound broilers worth \$60 in any market, or will form the nucleus for a large poultry farm. Any man or woman can make good money the year round raising poultry. It's just a question of getting started. You don't need expensive grounds or buildings.

A warm cellar or garret—a little patch of ground and

THE Wooden Hen

\$12.80

is all that you need to begin with. This 200-egg incubator will more than pay for itself with the first hatch. The wooden hen costs much less and is better than dozens of high-priced hatchers. It will hatch every fertile egg. Write for free catalogue and full information regarding the care and growth of incubator chicks.

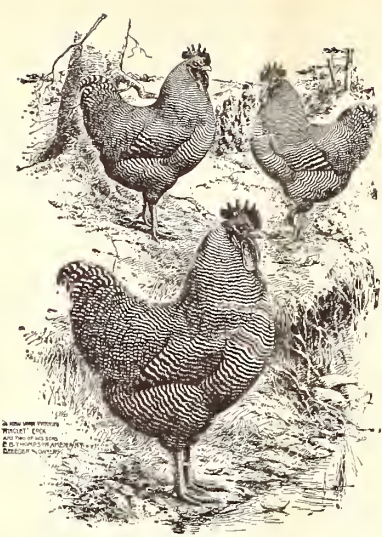

GEO. H. STAHL, Quincy, Ill.

Lice refuse to live where Pratts Lice Killer is used. Kill the lice and save your chickens, it's much cheaper.

"RINGLETS" Soar Still Higher.

At the Imperial Show of the Nation
Madison Square Garden, New York

E. B. THOMPSON'S BARRED P. ROCKS

A "Ringlet" 1st Prize New York Cock and two of his Sons.

Stamped their superiority in the most decisive manner, winning again the Superb Challenge Trophy, value \$100, for best cock, cockerel, hen and pullet. This is the third time the "Ringlets" have won this grandest of all trophies, giving them now absolute and final ownership. In this "COLOSSAL CONFLICT" the "Ringlets" lifted the great National Sweepstakes Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. My Barred Rocks won double the number of silver cups and special prizes of any competitor, including the sweepstakes special in gold for best Plymouth Rock on exhibition male or female any variety.

The "RINGLET" World's Record of four years in succession at New York is a page of history. The "RINGLET" World's Record of first on exhibition pen at this great show, three years in succession, is the undisputed champion.

The "Ringlet" cleans sweep 1st, 2d, 3d, 4th and 5th prizes on pullets has never been approached at Madison Sq. Garden, and stands alone and unequalled. The "Ringlets" have won at New York—exhibited by me personally—a grand total of 101 prizes, 48 of these are 1sts and specials, being more than double the number of 1st and special prizes won by any competitor in the history of the show.

GRAND STOCK FOR SALE

in any number. Rare bargains in yearling breeders in lots of a trio or 100. Show birds fit to win in the fastest company—600 choice breeding cockerels. Richly illustrated 36-page catalogue on application. It is full of original illustrations of New York winners from life. Eggs from finest exhibition matings. One setting \$5, two settings \$9, three settings \$12, four settings \$15. Address

E. B. THOMPSON, Lock Box 510, Amenia, Dutchess Co., N. Y.

HAWKINS'

ROYAL BLUE STRAIN

PLYMOUTH ROCKS

BARRED, WHITE AND BUFF.

WYANDOTTES, Silver White and Buff.

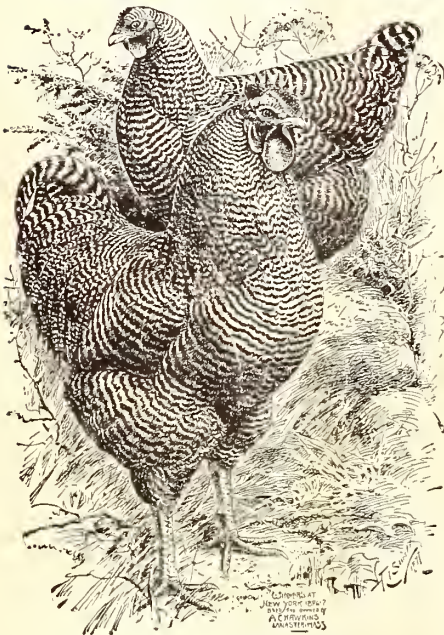

Have won more prizes at New York, Boston, Washington, and America's greatest shows than all others. My matings this season are the best I ever owned.

At New York, in the largest show of Barred Rocks ever seen, 451 Birds, I won 1st, 2d, 3d and 4th Cockerels; 1st, 2d and 3d Pullets; 1st and 3d Cocks; 1st and 2d Hens; 1st and 2d Breeding Pens. My other varieties are of the same high quality. Hundreds of choice exhibition and breeding birds at honest prices. EGGS from Prize Matings: One setting, \$5.00; two settings, \$8.00; three settings, \$10.00; five settings, \$15.00. \$20.00 per 100. Catalog of America's finest Plymouth Rocks and Wyandottes free.

HERE'S THE GREATEST INCUBATOR BARGAIN.

THIS 230 EGG Royal Incubator \$12.⁷⁵
FREIGHT PREPAID ANYWHERE

East of the Rocky Mountains.

Quality and price—two things that "talk." You can't get a better incubator than the Royal at any price. It is built right, strong, substantial, will last a lifetime, and is guaranteed to hatch as large a percentage of fertile eggs as any incubator in the world. It is not a "cheap" incubator, but is strictly high-grade in every respect. Easy to operate; automatic control of heat; perfect ventilation. **ONE TRIAL HATCH FREE**, if you want it. Your money back if not satisfactory. Don't pay more for a smaller incubator; don't buy a poorly constructed, go-to-pieces incubator; don't buy any incubator until you have investigated our remarkable offer. Remember, **WE PAY THE FREIGHT**, (east of the Rockies). We guarantee the incubator under a bank bond; we give you a fair trial. We save you about half the cost and guarantee better results than incubators give costing twice as much. It will surely pay you to investigate. Write to-day for special offer:

FREE Handsome Catalogue of incubators, brooders, poultry supplies, poultry foods, eggs for hatching and standard bred poultry from our own farm.

Book on "Proper Care and Feeding of Young Chicks, Ducks and Turkeys," 10c. 50c Standard Poultry Paper 1 year, 10c.

WRITE TODAY AND SEE FOR YOURSELF THE BARGAIN WE OFFER.

We Can Teach You How to RAISE POULTRY PROFITABLY

If your poultry isn't paying as it should, you are making costly mistakes. Our Course of Instruction will quickly teach you how to make any place (large or small) pay from 25 per cent. to 50 per cent. profit. Your knowledge and ours combined will make you successful.

The individual home lessons, delivered regularly at your very door, are prepared by practical Poultrymen who have by actual experience mastered the problems which worry nine-tenths of all poultry raisers. You get no theoretic instructions. After a little study you can discover your errors and overcome them. The instructions are easy to understand and follow, and big paying results are sure.

If you want to qualify yourself as manager of a poultry plant and accept one of the

Many Lucrative Positions

we have open on our records, our Course of Instruction will soon make it possible. Poultry Culture is not drudgery when rightly conducted. It is a healthful, profitable, enjoyable vocation for man or woman.

Write for interesting free literature at once. Ask for circular showing some of the good paying positions we have open for competent men.

COLUMBIA SCHOOL OF POULTRY CULTURE, Box 196, Waterville, N. Y.

BUFF ORPINGTONS 1906 CHICAGO WINNERS

We won every first and 2d prize in both Single and Rose Comb; silver cup for display. Our World's Fair record, St. Louis, was seven out of ten firsts. Our catalogue gives our other winnings.

J. M. WILLIAMS & CO. Box B, No. Adams, Michigan

ASPETONG FARM POULTRY YARDS White Wyandottes and S. C. W. Leghorns

won wherever shown. At Kingstown, N. Y., we won 1st and 2d cock, 1st and 2d cockerel, 1st, 2d, 3d pullets, 1st pen. White Wyandotte eggs for hatching \$2.00 per thirteen; Single Comb White Leghorns \$1.50 per thirteen.

Address J. J. ANTHONY, Mgr. NEWBURG, NEW YORK

Eggs \$1.00, \$2.00, \$5.00 a setting; \$6, \$10, per 100

Utility and prize winning stock. Strong, vigorous, standard weight birds, bred for egg production and the show room. Won sixty premiums this season. Send for catalogue, which gives full description of matings. R. 1. Red Standard free. Large lot of \$3 cockerels. Prize winners at higher prices.

ORPINGTONS

S. C. BLACK AND BUFF

First prize winners at Chicago, Cincinnati, Louisville, Hagerstown and other shows. At the great Cincinnati show, Jan. 16th to 20th, my birds won seven firsts out of a possible ten: six seconds and other prizes. Send for mating list. Every pen headed by a prize winner.

O. A. BOGARDUS, Box 31, Warsaw, Ky.

Petersen's Houdans

Reign Supreme at the Nation's Greatest Shows

My record has never been approached by any breeder.

BOSTON, 1900. In world famous competition, 135 Houdans exhibited, I won 1st cock, 1st and 2d pullet.

BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.

BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials.

BOSTON, 1905. We won every important prize. 1st and 2d cock, 1st, 2d, 3d cockerels, 1st, 2d and 4th ben, 1st, 2d, 3d and 5th pullets; \$100 champion challenge cup for best male; American Houdan Club Cup for best cock, hen, cockerel and pullet. All shape and color ribbons; gold special. Such records prove the superiority of Petersen's strain of Houdans and denies competition.

LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdan's.

Also highest honors at Madison Square Garden, Philadelphia, Pan-American Hagerstown, Ontario. No matter where you want to exhibit, no matter what the competition, I can furnish the winners. Photographs on application. Eggs in season.

V. C. E. PETERSEN, Pres. Houdan Club, Drawer 12, Franklin, Maine

The Best CHICK MOTHER on Earth and YOU can TRY IT 60 Days FREE

We don't ask you to believe anything. We ask you to let us prove what we say.

Let us send you a Sure Hatch Incubator, at our own risk, freight prepaid.

Use it two months in your own home. If you don't find it all we claim, send it back at our expense. Could we do more than that?

Yes, we do more. We guarantee every Sure Hatch Incubator for 60 days, 6 months; or for 6 years, if you prefer.

They are always on trial. We stand ready to make good any fault of ours at any time—now or ten years from now.

We know what we are talking about when we say the Hatch Incubators are the best.

For there are over 80,000 in use right now. And they are hatching all hatchable eggs put into them. Sure Hatch means a chicken from every good egg.

The success of the Sure Hatch sells more of them each year than are sold of any other make.

Sure Hatch prices run from \$7.50 to \$17.50—capacity 75 to 200 eggs to a hatch.

Our big FREE catalogue explains why we can give you the biggest incubator value ever offered. Send for it today.

It contains facts worth money to every poultry raiser. The information it includes will put dollars in your pocket.

It tells the best ways to hatch, feed, raise and market poultry.

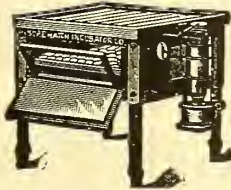

Its 100 pages are filled with illustrations, Poultry House plans, and figures that mean a lot to you.

A post card with your name and address brings it.

Remember, no ordinary mail order house can offer you an incubator like the Sure Hatch at any price.

And no dealer can sell you anything as good, no matter how much he charges.

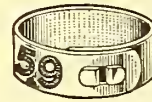

Write us today.

MIDLAND POULTRY FOODS

PETALUMA CHICK FOOD

"If I could raise 90 per cent of the chicks I hatch I would be delighted." How often we hear this remark! Two principal reasons why so many dismally fail in raising chicks are—First, Variable Heat. Second, Unsuitable Food. You overcome the first reason—we'll overcome the second for you with **Midland Poultry Foods** and guarantee results. If you will feed them as directed you can raise 90 per cent of all the chicks you hatch and make a profit where you now make a failure.

No. 1 A food for the new born chick—to be fed after it is 24 hours old and until it is 10 days or two weeks old. No. 1 is a balanced, complete baby chick food, just suited to the chick's delicate digestive organs. You need add nothing whatever to it—this is all the feed you'll need to take your chicks past the danger point.

No. 2 Takes the chick after it has outgrown No. 1 food, builds its frame strong and makes it a robust and vigorous chick. It supplies every requirement for health and rapid growth in a natural, profitable way. This food opens possibilities for growing early broilers you can't appreciate until you have fed it for that purpose. It matures late chicks for winter layers. Feed it until chicks are four or five months old or nearly matured, when you should feed No. 3 or No. 4 according to what you wish to accomplish.

No. 3 Fattens and finishes broilers and hens for market in shortest possible time. Produces a firm flesh, white and juicy, with a flavor which will add 10 to 15 per cent to the selling price of the fowl and put more money in your purse. No. 3 is a balanced ration, complete in itself—you need add nothing but the usual grit and green stuffs.

No. 4 is the greatest egg food in the world. There is nothing on the market to compare with it for increasing the egg yield. With it you can control egg output for your hens—we guarantee it. And for putting your birds in fine feather for show purposes it is without a rival. We sell this food by the car load to the large feeders everywhere—the people who feed their hens for profit—and get it.

Perhaps you prefer a Dry Chick Food. Then this new addition to the Midland line will just suit you. It is all food—a balanced ration for chicks without a bit of grit or stones in it. It is meeting with great favor and we are selling a lot of it. Try it.

Free You can't possibly try all the poultry foods on the market—you wouldn't want to if you could. But if you want to make your poultry business successful, you'll try **Midland Foods**. They are scientifically prepared for specific purposes—you can get a food that will produce just the result you want without any ifs or ands; without any experimenting on your part. "The Science of Poultry Feeding," will tell you how to feed for profit every fowl on your place. It tells how to feed the **5 Midland Duck Foods** that have made so many duck raisers prosperous. If you raise ducks you know what a hard proposition you have to save the ducklings—you'll have no trouble if you use **Midland Duck Foods** and feed by the book. The young ducklings will grow into money for you and make your duck business profitable. Write for the book today—it will be worth dollars to you. We'll send it free if you will write and ask for it, and we'll tell you how to buy **Midland Food**.

MIDLAND POULTRY FOOD COMPANY,
 Dept., A Kansas City, Mo., U. S. A.

Banner Chick Food

is the best food for little chicks. When fed on this food for the first 6 to 8 weeks, they grow very fast and strong, and you can raise every one that's hatched. A complete food, but no grit or oyster shells—you add these yourself. Prices: 5 lbs. 20c, 10 lbs., 35c, 25 lbs., 75c, 50 lbs., \$1.35, 100 lbs., \$2.50. BUY THE NEW LINDSEY

**No Time Limit
on Our
Guarantee**

Start right—get in line for best results in hatching and brooding strong, healthy chicks by using the New Lindsey Incubators and Brooders. No smoke, fumes or impure air from lamp go into either incubator or brooder. The only sensible heating system ever devised. THE NEW LINDSEY is the nearest approach toward all round perfection in incubators yet produced. Cannot fail to give perfect satisfaction. Hatches every fertile egg; uses less oil. Fill the lamp, turn the eggs daily and the Lindsey will do the rest. Self regulating. **OUR GUARANTEE—ABSOLUTE SATISFACTION AS LONG AS YOU OPERATE THE LINDSEY or your money back. No time limit. Write for catalogue.** Lindsey Incubator Co., Box E, Fairfield, Nebraska

**Try These
Machines for
90 Days.**

**CLAIMS!
CLAIMS! CLAIMS!**

That is the most incubator and brooder manufacturers fill their advertisements with. And of what earthly use is it when dozens of them are "claiming" the same things. It doesn't help the man, woman, boy or girl who is in doubt one bit. So we don't claim. We simply state facts and then demonstrate

American Incubators and Brooders

are sent out on 90 days trial and if they don't hatch and raise a satisfactory percentage of chicks, send them back and get your money. There's no empty claim about that, and we give a guarantee with each machine that **really protects** you.

We have the largest poultry machine factory in the world, and we operate the largest standard-bred poultry plant. We have been in the business 20 years and we have learned what's what when it comes to raising poultry for profit.

These are not mere claims either.

Get our catalogue, notice the list of references and investigate for yourself.

Remember this: It will pay you well to do all your investigating **before** you pay out your money to **any one**.

American Incubators have all the advantages that any other machines have, only more, because they are built by practical men, men who have been through the mill

We manufacture and sell direct to poultry raisers

The Most Complete Line of Poultry Foods and Supplies in the Country

and everything is priced at the very lowest figure, because our facilities and great volume of business enable us to undersell all competitors.

Our Standard-Bred Poultry Farm is stocked with the largest variety and the finest specimens of pure bred birds to be found anywhere. Fowls and eggs are guaranteed to please or money will be refunded without a word. It's the highest quality at the lowest possible prices that has built up our enormous business.

Our New Catalogue is the best we have ever issued and is full of valuable information. Important poultry questions answered and articles on poultry diseases, also a complete illustrated description of American Incubators, Brooders, Poultry Supplies and Standard Poultry. Sent free, postpaid, for the asking.

Address, **AMERICAN INCUBATOR COMPANY, Box 10, FREEPORT, ILLINOIS.**

Start Now

If you have been intending to raise chickens, don't delay. Start now and have some chickens to sell this summer or pullets to lay next winter. It doesn't cost much to start. We have made an introductory price on a small outfit that is so irresistible, so appealing that you can't afford to longer delay.

The way to make hens pay is to keep them laying or send them to the market. To feed and keep a setting hen—uncertain of temper—uncertain whether she will bring off any brood or not—is not profitable when you can get an incubator at this low price, and be almost sure of 95 per cent. hatches.

\$7.90
Delivered

\$7.90 FOR OUR 100-EGG HATCHING WONDER INCUBATOR, DELIVERED ANYWHERE IN THE UNITED STATES EAST OF THE ROCKY MOUNTAINS, OR WITH THE BROODER, MAKING A COMPLETE OUTFIT, FOR ONLY \$11.50.

Our Hatching Wonder Hot Water Incubator could not be better named, as considering the low price and splendid work they do they are indeed wonders. Witness the experience of a few users:

Winfield, Kan., June 12, 1900.

I received from you last March one of your Hatching Wonders, 50-egg size, and must say it has been a great success, finding it to be and do everything you claim, and now we want a larger one. ED. ROBERTS.

Cleveland, Ohio, June 6, 1901.

I am well-pleased with the little Hatching Wonder; hatched 38 chicks from 44 eggs. Would like prices on your 200-size Victor. You have our preference for purchase, as we know what your machines can do. Was looking at one of your larger machines (Victor) and am very much pleased with it.

FRED HIRST, 912 Doan St.

St. Louis, Mo., May 26, 1903.

The 50-egg Hatching Wonder you sold me is a daisy. Results of the first trial, 100 per cent., and I have had no previous experience.

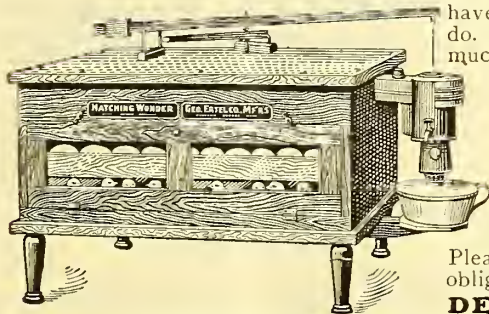

ALBERT VEITCH, 602 Rutger St.

Norwich, N. Y., Apr. 10, 1904.

I have been operating one of your Hatching Wonder Incubators for the past three seasons with the greatest success, best hatch 96 per cent. of fertile eggs and smallest hatch 84 per cent.

Please send me your best price on a 100-egg Hatching Wonder, and oblige.

W. M. CASEY, R. F. D. No. 3.

DESCRIPTION OF THE MACHINE

The 100-egg Hatching Wonder is 26 inches long, 21 inches wide and 14 inches high. It has triple walls, triple top and triple bottom, scientifically constructed to hold the temperature necessary within the incubator for the least expenditure of oil, regardless of how cold the air outside. It has a large aluminum coated tank and heater so that, instead of air which cools quickly, we have the benefit of a circulation of hot water, which cools slowly and cannot be quickly heated too hot. Each machine too is fitted with our regular Victor regulator, which has a record of maintaining the temperature of 103 degrees for the 21 days of incubation without appreciable variation. The heater is jacketed so that there is not the loss of heat that there would be if there were only a single thickness of metal between the water in the heater and the outer air. This too is a feature of our Victor machines which we give to purchasers of this small machine. There is an outer covering of metal around the water chamber with an air space between, and this double jacket makes a tremendous difference in the oil consumption. This brings us to the lamp, and here too we give our patrons the advantage of our nearly 40 years of experience. We have learned that nothing is too good that can be made in the way of a lamp burner and the very best is included in this outfit. Bigness counts here too. A big lamp bowl doesn't need filling so often and is less apt to burn out if forgotten for a few hours—a big wide burner means heat—a big stout metal chimney doesn't get broken, and that means a saving in expense. All these things the Hatching Wonder has. They are the vitals of an incubator. Lamp, heater and tank provide the circulation of heat which means life to the chicks that are to come. An ample supply of hot water passes up from the heater over into, through and around the tank; and becoming gradually cooler, drops back into the bottom of the heater, where it is warmed and again put into circulation. Such an incubator is a living mother, with the lamp the stomach, the heater the heart, and the water the blood circulated over and around the chamber in which the eggs are to become baby chicks. Below the egg chamber with its movable tray is a nursery for the care of the newly hatched chicks—taking them off of the tray containing the hatching eggs so that they do not interfere with or smother the piping chicks. The double glass in the door permits of the inspection of the interior of the incubator without the necessity of subjecting either eggs or chicks to drafts of outside air. Ventilation is provided for by airinlets in the vicinity of the hot water passage into the tank, insuring a constant supply of warm fresh air. There is absolutely no way and it is utterly impossible for the fumes of the lamp to get into either the egg chamber or the nursery, or any part of the interior of the incubator.

In addition to the substantially built incubator with its egg tray and nursery, aluminum coated tank, heater, lamp and automatic regulator, the \$7.90 price includes a thermometer, funnel and book of instructions, giving valuable hints as to the raising of young chicks, besides telling how to get the best results from the incubator, all delivered at any railroad station east of the Rocky Mountains.

If the Brooder is ordered shipped with the incubator, the delivered price of both is only \$11.50. The Brooder provides a necessary home to take the place of a mother hen's sheltering wings during the first weeks of a chick's life, and up to the time a hen would wear her brood. It furnishes a good warm, evenly heated, well ventilated nestling chamber large enough to afford sufficient exercise when weather conditions do not permit of an outdoor range. Brooder cases are made warm and tight and dry. The lamp and metal work are of the same quality as go into the Incubator. Ventilation and ease of cleaning are carefully provided for. In every way the Brooder is a fit companion to the Incubator. The purchaser of one of these outfits at \$11.50 for 100-egg Incubator and Brooder, delivered anywhere east of the Rockies, has a bargain in chicken raising machinery never before approached.

Better write us today and have yours ready to start up just as soon as possible. We have made up a large stock of these machines in anticipation of this special offer, and are in position to ship promptly on receipt of your order. Remit in post office or express money order or bank draft, and if the machine is not just as we represent it, you may send it back and we will return the full amount you paid.

You need have no hesitation in dealing with us as we have been in business nearly 40 years, and have a paid up capital of \$60,000.00. We have a reputation for fair, square, upright dealing, which we intend to maintain. You can ask your banker or express agent about us.

If you want further information, write for our large illustrated catalogue "The Victor Book," testimonial sheets and order blank. A postal will do, only do it today before you forget.

NOTE: The price of the Improved Hatching Wonder Incubator delivered West of the Rockies is \$9.90, and the Incubator and Brooder together \$14.75.

WILLET'S WATER PRESERVER
 CLASS

The only sure way of preserving eggs to sell at high prices. Pure water glass. Cost, about 1¢ a dozen. Pint, 15¢; quart, 25¢; gal. \$1. Circulars free for postal.

Willet's Water Glass Egg Preserver Co. Box 56, Anderson, Ind.

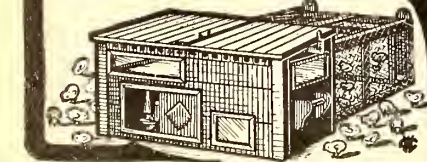

WHY THE SHAUB IMPROVED BROODER

should be used by every farmer and poultryman. Because its system of heating and ventilation is so nearly perfect that it practically raises all the chicks placed in it. Requires less time and attention yet rears more chicks.

The heat is supplied after "Nature's method" from the top and center of the chamber. The chicks naturally select the temperature they need, thus avoiding leg weakness and bowel complaints so common in bottom-heat brooders. The Shaub is well ventilated and it is impossible for gas or smoke from the lamp to get to the chicks. The brooder is well constructed and arranged so you can divide your broods into small flocks, avoiding the danger of overcrowding, so frequent with poorly arranged brooders. Can be used as an indoor or outdoor brooder.

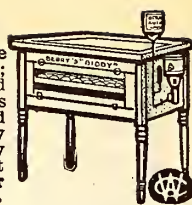

Mrs. LeRoy England, Rising Sun, Md., raised 140 out of 150 chicks in a Shaub Improved Brooder. The Shaub Brooder will rear 95 per cent of your chicks successfully and give you perfect satisfaction. Write for catalog and prices.

M. O. SHERER, M'FG. Box 101, Louisville, Ohio.

PROFITABLE POULTRY

You can raise it and make money with our free 64-page poultry guide. It tells how to avoid mistakes and failures; tells what to breed for biggest profit; how to feed, rear and hatch successfully. Tells about Berry's "BIDDY" incubators and brooders, the kind that "run" themselves—the kind to buy. Contains plans for brooder, colony and poultry houses, yards, poultry farms. Also cuts of our pure-bred poultry with prices of birds and eggs for hatching. It's a book that will be appreciated by every one. 3c in stamps brings it to your home. Berry's Golden Rule Poultry Farm, Box 74, Clarinda, Ia.

GREYSTONE BLACK MINORCAS AND WHITE PLYMOUTH ROCKS

made a sweeping win at Madison Square Garden, 1905; eight 1sts out of a possible 10, a record never equaled at the Garden. Grand Central Palace; seven 1sts, five 2ds; Rochester, 1904; four 1sts and nine regular and specials on Rocks alone. Boston, 1906, gold special; largest win on both varieties; 20 other regular and specials and cup. Eggs, \$3 and \$5 per 15. Stock for sale.

Do You Want Eggs

From America's Best Wyandottes, in Golden, Silvers, Black or Whites?

Bred in line since and before 1884. No other strain is so well established or breeds so true to type or up-to-date as the Keller strain; known in all parts of the world. I export more Wyandottes than any other breeder in the world. My 80 breeding pens are simply wonderful in quality, and contain my New York, Chicago, World's Fair, Cleveland, Columbus and Cincinnati winners and the best of my unshown birds for the past 3 years. Such a superb display of fine matings can't be found anywhere else in the world. Eggs from my best individuals at \$5 per setting; from my fine matings, same as I raise my show birds from that win in all parts of the world, 1 setting \$3, 2 settings for \$5 or \$18 per 100. 1000 fine birds yet to spare at bargain prices. I also breed Jap Silkies, Sebright Bantams, Colbie Dogs and Berkshire Hogs; all imported stock direct from many of the noted champions in dogs and hogs. My circular free, of America's greatest Wyandotte Farms.

IRA C. KELLER ——— Brookside Fancy Stock Farms ——— Box 75, Prospect, Ohio

W. Wyandottes

OUR Wyandottes are mated for standard size, correct shape and pure white plumage. Winners at St. Louis World's Fair, Chicago, Madison Square, N. Y. and Boston are in our pens—not descendants of winners, but the birds themselves. We can safely say we are the largest breeders of White Wyandottes in the world, as we have 45 breeding pens, all correctly mated.

IF BLUE RIBBON QUALITY
 is what you want, we have them. Individual merit with each bird—the kind that do win and in the hottest competition are hatched from our eggs for hatching.

BRED TO WIN—BRED TO LAY
 Prices of Eggs Four special matings to produce exhibition ckls.; 2 special matings to produce exhibition pullets; \$5 per 15, \$9 per 30; Eggs from all yards, \$3 per 15, \$5 per 30; Eggs from our great Utility Strain, \$10 per 100. No further reduction for quantity.

EXCLUSIVELY Bradley Bros. and E. L. Miles Strains each in its purity. Young stock in Bradley Bros. cockerels and pullets fit for the big state shows, and Miles' pullets that are beauties. Every sale guaranteed to please. EGGS: \$3 per 15; \$5 per 30.

L. H. EDWARDS - R. R. 1, Owasco, Ind.

Your Hatch Will Be Right if your Thermometer is Right

An Incubator Thermometer is small in bulk and in price, but it is the most vital part of an Incubator. It is the heat that hatches, but to hatch right the Thermometer must be right. It makes little difference what make of Incubator you use, if your Thermometer is accurate and you keep the temperature at 103 degrees. To be absolutely safe, use the

HOEHN RED CROSS THERMOMETERS

The bulb rests upon the eggs so that the Thermometer gives you the temperature you want to know. It is easy to keep this at 103 degrees, because this point is emphasized by a narrow point. The black metal frame with white graduations and figures makes it easy to read. These Thermometers are all well seasoned and accurately tested before being shipped. Send 75 cents for a sample Thermometer (prepaid) or ask for catalog illustrating other styles. This catalog is free. It answers your questions about Incubator Thermometers.

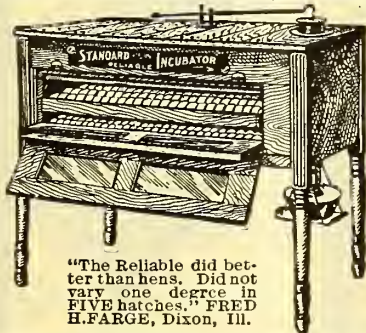

THE R. HOEHN CO.
83 CHAMBERS STREET, NEW YORK CITY.

1906 STANDARD RELIABLE INCUBATOR

Our money-back guarantee is back of every incubator we sell. Don't forget that when you get ready to buy an incubator. No other incubator is sold on such broad terms—no other can be guaranteed so strongly. Here is an out and out proposition to refund your money if the Reliable does not give perfect satisfaction.

We're not a particle afraid that you will want your money back because we know the Reliable is right and we know what it will do. It's all in the way it is built. Take for instance the packing above the tank—four layers of strawboard and three layers of insulation. Note the double insulated walls, the double-thick, extra heavy glass doors. No cold air can

"The Reliable did better than hens. Did not vary one degree in FIVE hatches." FRED H. FARGE, Dixon, Ill.

sell our MACHINES on a money-back guarantee.

Don't buy an incubator until you have learned all the good points of the 1906 Standard Reliable. Send for FREE catalog. It only costs a stamp to find out how this year's Reliable saves half the oil, turns out bigger hatches and excels all other incubators today. Reliable Brooders will rear your chicks successfully—bound to do it for they are built that way, thoroughly up-to-date method—double heating system—top heat, no draughts. We sell Pure Bred Poultry and Eggs. Get prices.

Reliable Incubator & Brooder Co., Box A-1 Quincy, Ill., U. S. A.

reach the eggs; the double heating system keeps the temperature perfect and the air pure. Even temperature is the greatest factor in successful hatching—the temperature in a Reliable doesn't vary more than one-half degree during an entire hatching. THINK OF THAT! The principles of successful hatching are so positively, practically and simply applied and so perfectly provided for that no artificial moisture is required. Moisture in the Reliable is provided in exactly the same way as it is by the hen. These are a few of the reasons why WE can

REMEMBER THE RELIABLE IS SOLD ON AN ABSOLUTE MONEY BACK GUARANTEE

"CONTINUOUS" HATCHER

The "Continuous Hatcher" is a new departure in artificial incubation. It comes closer to the "ideal" mother-hen method than any other mechanical process. Our new catalog tells how it accomplishes these wonderful results, how it hatches continuously, and how one Hatcher hatches more chicks than several common incubators. Every poultryman will want to know how this new hatcher works and how it hatches bigger, better chicks and more of them. A continuous hatch means a continuous output of chicks—means more money. Do you want to raise two chicks where now you raise but one? Write for catalog.

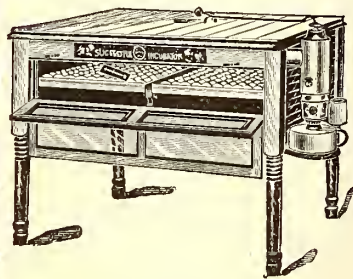

HACKER INCUBATOR & MFG. CO., 3101 N. Jefferson Ave., St. Louis, Mo.

If You're In Earnest

about poultry raising, outfit with approved incubators and brooders. All the failures come from people who go at the poultry business in a half-hearted way and try to "get along" with most anything. You'll not fail if you use

SUCCESSFUL

Incubators and Brooders

No one ever failed who really gave them a fair trial. They are record hatchers and brooders, not experiments or makeshifts. For many years they have been hatching more, stronger and better chicks

and raising more of them to maturity than any other machines made. They consume least oil, take least attention, are

MOST RELIABLY SELF-OPERATING

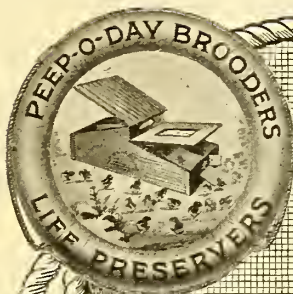

and produce uniformly best results under all conditions. We have the proof for every one of these statements. Write us for it. Incubator and Poultry Catalogue FREE. Booklet, "Proper Care and Feeding Small Chicks, Ducks and Turkeys," 10c. 50c poultry paper one year, 10c.

Department 1, DES MOINES, IOWA.

We have a full line of all poultry supplies, standard bred poultry and fine eggs, listed at lowest prices in our free catalogue. Send for it.

PEEP-O-DAY BROODERS

THE ONLY BROODERS!

If you are going to buy a Brooder, you want a machine that is built right, for you are aware that you cannot expect satisfactory results from a Brooder that is not correctly ventilated, properly heated or built of any but the best material.

The ventilation system must not be a direct draft.

Direct drafts cause bowel trouble,

Chicks die and you lose money.

The warmed air must be evenly distributed.

If not there will be hot and cold spots.

The chicks will become overheated or chilled, and their growth checked.

The lamp must be sure and safe. It is inadvisable to have any other kind and run the risk of fire.

Without knowing all about them, we appreciate it is difficult for you to select the Brooder that will please you best.

If you ask any practical poultryman, the Editor of any poultry paper or any one versed in poultry matters, what Brooder to use, without exception, they will answer "THE PEEP-O'-DAY."

It has a reputation of fifteen years behind it.

Patents protect the original invention, so that imitators, cannot use the basic principles of mechanical construction.

For this reason it has been impossible for others to produce a safe Brooder—one that compares with the excellent principles combined in every part of the Peep-O'-Day.

When the Peep-O'Day Brooder is seen and tried, others are never satisfactory.

We can offer you no greater argument of superiority of Peep-O'Day Brooders than the fact that they are endorsed by the leading Poultry Scientists as the best Brooders made.

Prof. Gowell says: "I must have them, for they are the best of anything I know of. Send me 20 of the No. 4 Brooders."

Prof. Stoneburn: "The Peep-O'-Day Brooders work perfectly. We have had some very severe weather, but the chicks entrusted to these Foster Mothers are thriving and growing."

Mr. A. F. Hunter: "While it may be possible to make a better Brooder, up to this time it has never been done."

PURITY POULTRY YARDS

Berkley, Norfolk Co., Va., Oct. 12, 1905.

Cornell Incubator Mfg. Co., Ithaca, N. Y.

Gentlemen:

Until this year I have been using several different makes of the best Brooders I could buy, some costing \$12.00.

Acting under the advice of a friend, I ordered from you one No. 3 Peep-O'-Day Brooder, and put it into service along with the other makes, and the results obtained from it were far beyond my expectations.

It requires less oil, is easier to clean and care for, and a more even temperature can be maintained with less attention than with any other Brooder, with which I have had any experience, which enabled me to raise a larger per cent. of chicks and at less cost. The Peep-O'-Day is justly called "The Life Preserver."

As a result of the purchase and use of this Brooder this season, I have taken some of my higher priced ones as roosting coops for young stock, and expect to replace them next season with "Peep-O'-Day" Brooders.

Yours very truly,

L. A. Reeves.

Its achievements have shown the Peep-O'-Day to be the best Brooder on the market.

We want you to give us a chance to prove:

- That the ventilation is perfect.
- That the heat is easily distributed.
- That the temperature is easily controlled.
- That there are no drafts.
- That the lamp is absolutely fireproof.
- That the Brooder can be easily cleaned.
- That it can be operated with less care and less expense than any other Brooder.

There would be less money wasted on Brooders faulty in construction if more people insisted on being shown.

You cannot wisely select a Brooder until you are familiar with the Peep-O'-Day.

Let us tell you all about it. We will if you will **send for a copy of our 1906 Catalogue.** By illustration and description, it also explains how every part of the Cornell Incubator is made from the time the rough lumber starts in the mill until a machine is completed, and crated ready for shipment. It is free, if you address

BIG SUCCESS WITH HOGS.

SOME farmers are more successful with hogs than others. The man that only gets 8 lbs of pork out of a bushel of corn fed to hogs makes only half as much as the man that gets 18 lbs.
The American Swineherd is a specialist and the best authority on the hog industry.
The greatest success results from concentrating all efforts upon one line.
Three-fourths of the farmers waste a third of their feed given to hogs because they do not understand the best methods.
The American Swineherd teaches you how to be successful.
How to secure the greatest profits.
How to feed, to double the growth and gain over usual methods.
How to keep your hogs healthy, as only healthy ones are profitable.
How to get 18 pounds of pork out of a bushel of corn, and 20 pounds out of a bushel of wheat, fed to hogs.
Prof. Kennedy of the Iowa Agricultural College says: "Your paper is a leader on feeding."
One man writes: "A single instructive lesson in the Handbook on Hog Hygiene saved me \$50 in feeding a bunch of 40 hogs 60 days over the ordinary way of feeding. It is the best investment I ever made."
Every owner of hogs should take advantage of this special offer:
Send us \$1 for two years' subscription to the **American Swineherd** and it will entitle you to a free copy of the Hand Book on "Hog Hygiene," with trade secrets, recipes, valuable information, etc. If the offer is accepted in ten days we will send you in addition "The Pig Feeders' Manual," worth a \$1 itself.
This equips you for a successful hog business.

I D E A L

Just two classes of people go into the poultry business. One class makes a **conspicuous failure**; the other class **makes money**, year in and year out. It is not a matter of luck or chance. It is a matter of means and methods—of applying right principles, of using appliances adapted to the work, of following intelligently the way other successful people have found to be right. Will you profit by the experience of others? Your first requirement should be the simple, dependable, self-operating **Ideal**

Incubators and Brooders Sold on 90 Days FREE TRIAL.

They literally grew out of the experience of "The Man Who Knows" and who had spent a lifetime raising poultry for profit. Since their perfecting they have been tried and endorsed and used by the **men who know** everywhere. Their heating, ventilating and regulating systems are next to perfection. Machines do it all—same results to the novice as the expert if he gives them just a decent amount of care. Our guarantee is straight-out and iron bound. Full success and satisfaction or money refunded.

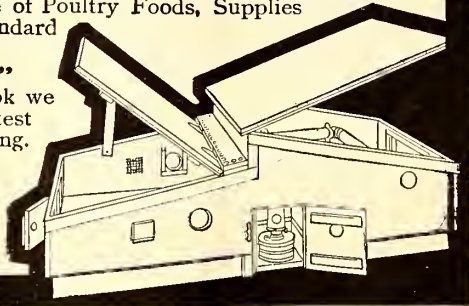

You Feed to a Purpose When You Use Miller's Standard Foods.

Close up to hatching and brooding in importance. Each specially prepared for its special need. Foods, Grits, Lice Killers, Remedies, Punches, Egg Testers—in short a complete line of Poultry Foods, Supplies and Appliances. Everything standard and guaranteed.

"**POULTRY FOR PROFIT**" is our 1906 Catalog—greatest book we have ever issued—we think greatest anybody ever issued. Free for asking.

The J. W. Miller Company,
Box 56, Freeport, Ill.

The "Jewel"

With Its Equal Heat

Has already attracted the attention of many of the best experts. It is a fact none dare dispute that repeated claims have been made "that there never has been a small machine built, and there never would be one holding more than four or five dozen eggs that did not vary from one to one and a half degrees in the extreme parts of the hatching chamber. It has also been openly admitted that if the eggs were left in one position in such machines the vitality of the chicks would suffer much from it." It must now be admitted that the statements quoted have been incorrect.

The "Jewel" uses Flat Trays, located on a Dead Level, and the Corners, Sides, Ends and Center Heat Absolutely Even.

ALL MUST ADMIT that a correct heat and a correct ventilation combined are absolutely necessary to establish an equal heat in the egg chamber. The average square incubator will show a variation of from one to five degrees in the several parts of the egg trays. Why use a thermometer at all unless it registers the heat as it exists in all parts of the machine? When a tray full of eggs is placed under such unequal conditions in the egg chamber, what can be expected in the way of results? **THE PRIME VALUE OF EQUAL HEAT IS PROOF OF CORRECT VENTILATION.** Ventilation, rightly applied, is of greater importance in successful incubation than any other principle involved. The value of a machine is in imparting the right kind of vitality to the chicks, which permits them to be raised. This should be preferred to the large percentage of hatches claimed by many. It should not be the question as to the number of chicks that can be hatched, but the number that can be raised. In this The Jewel is Without an Equal.

We Furnish Proof That Proves

STATE OF MINNESOTA, }
COUNTY OF HENNEPIN } SS

The undersigned came personally before me and being duly sworn, each for himself says: That at the invitation of the International Stock Food Company, they were present at the International Building, East Minneapolis, Minnesota, on the 11th day of November, 1905, witnessing the testing of a 360-egg Jewel incubator having flat or level trays. Thermometers placed in the ends, sides and center registering the same heat. After this test, all the thermometers were tested in warm water and all found to register equally.

GEORGE LOTH, Secy. Minn. S. P. A.

CLIVE H. OWEN, Breeder Wyandottes.
C. L. SMITH, Judge of Court.

LAWRENCE HOPE, Ex-Pres. M. S. P. A.
L. B. RICH, Sanitary Poultry Co.

Subscribed and sworn to by each of the above named, this 11th day of November, A. D. 1905.

ROBERT CHRISTENSEN, Notary Public, Hennepin Co., Minn.

¶ Is it necessary to say more when such proof is given to substantiate the claims made for the Jewel? It is the greatest step taken in advance in building incubators. JEWEL BROODERS are leaders in their line; easy to operate, require less oil for heating than any other known machine. In sanitary arrangements they have no equal. JEWEL BROODERS are equipped with the only detachable heater ever used in brooder building. No other machine has these special features; they are only to be found in the Jewel.

POULTRY SUPPLY Dept., International Stock Food Co.

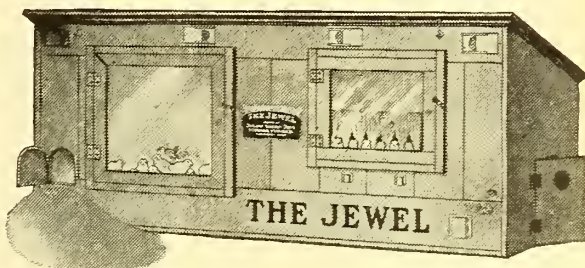

MINNEAPOLIS, MINN.

GENTLEMEN:—We write you in regard to your Brooder which we have been operating for eight weeks. We put 65 chicks into it eight weeks ago and have not had one die, and they are more developed than any lot we have raised this year (for their age). The heating arrangement is simply immense.

Very truly yours,

SANITARY POULTRY CO., Per L. B. Rich.

¶ Never in the history of incubator and brooder building has there been such radical changes made along all lines as is true of the Jewel. They are representatives of a new standard. Real hens with hen instinct. Nature's own way instead of so called "self-operating" patent boxes. No other machine in the world equals Siem's plan. 200 Egg size only \$3.00. Catalogue free. Write today.

Natural Hen Incub. Co., B. 4, Columbus, Neb.

The best hand on the farm is one that accomplishes the most in the shortest time. The farm telephone sends messages instantly over the miles your team would have to trot for hours. The work is half done when you have delivered the order. A dozen times a day the telephone will be useful and any one, particular call may pay for the entire cost of putting in and maintaining the line for a year.

THE BEST HAND ON THE FARM

A veterinary surgeon may come out and save your best horse. The doctor may be had in the nick of time to save your life or some member of your family.

No man can know the exact worth of a 'phone on the farm until he uses one. We show here with the best telephone made for farm use, the "EACO," a special farm type telephone with special 5-magnet generator and 1600 ohm ringer. Will ring more bells than any other and is constructed in the best possible manner. Takes little wall space, handsome from every point of view and low in price. For all 'round practical use there is none better. Fitted with our X. P. Condenser, which makes it possible to call up any subscriber when receivers are off. Send today for our free book "How to Buy the Right 'Phone." It tells all about the "EACO" phone, how made and why you should buy it.

ELECTRIC APPLIANCE COMPANY Dept. C Chicago, Ill.

DEAN'S BARRED AND WHITE PLY. ROCKS AND WHITE WYANDOTTES

are winners at many of the leading shows. I have in my breeding yards without doubt as fine birds as there are in America. If you are looking for quality I can certainly please you. Will sell eggs for hatching that are bound to produce prize birds at \$3 per 15. L. B. Dean, Box 62, Lakeside, Ill.

LINVILLE BLACK LANGSHANS WHITE WYANDOTTES S. C. BR. LEGHORNS

C. F. YOUNG, Topeka, Kan.

First Prize Cock, World's Fair.

Wouldn't You Like to Raise 90% of the Chicks You Hatch ?

There's a Way—We'll Tell You How and Help You Do It

At this season of the year the subject of rearing chicks is one of vital interest and importance to the poultry-raiser. It isn't so much trouble to hatch chicks, with the modern incubator, but to raise them—there's where the rub is.

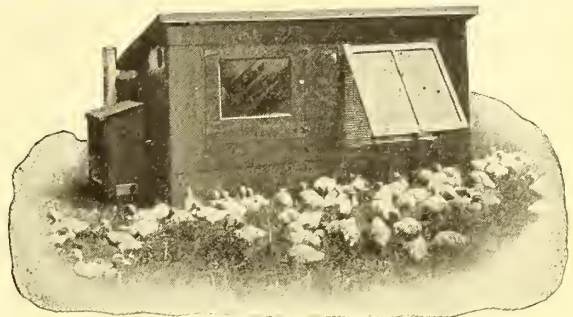

If you could raise 90 per cent of the chicks you hatch, wouldn't your profits be considerable more than they are now? You can do it.

The secret of successfully rearing chicks is mainly a question of proper feeding and brooding.

In our free book, "The Artificial Rearing of Chicks" we give you the correct principles of proper feeding for different ages of chicks—when to feed, how to feed, what to feed, etc., all so plainly set forth that anyone can feed successfully.

The greatest loss of chick-life, however, results from the lack of right kind of brooding apparatus—brooders that are not properly heated and ventilated—that are too hot at one time and too cold at another—that do not furnish an abundance of pure, fresh air, heat to the right temperature, at all times.

In our free Brooder Book we describe a line of brooders and apparatus that will help you raise 90 per cent of all the chicks you hatch. It describes

The No. 1 Combination Colony Brooder

This type of Brooder is a wonderful improvement over the old style brooder. The Colony Brooder, with its dry, roomy quarters, level floors, overhead heat, graduated temperature, thorough ventilation and sun parlor for exercise, certainly offers a happy solution to the rearing problem.

The Universal Hover

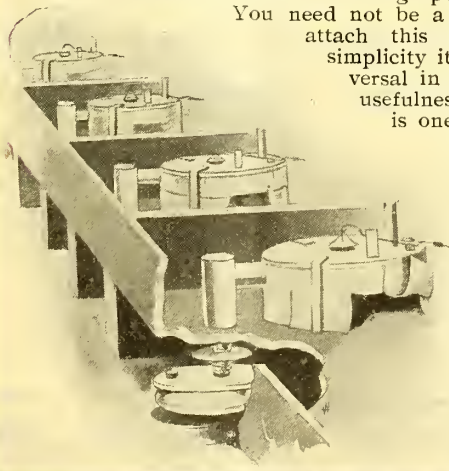

which is, without doubt, the most practical contrivance ever offered the poultryman. It enables him to make his own brooders at small expense. The Universal Hover can be attached to any form or size of colony house, mushroom house, small portable building, dry goods box, shed, coop or piano box and give you the best brooder for the money you ever saw. This has proven to be the most satisfactory money-saving, money-making apparatus we have ever produced and it is meeting with unprecedented success everywhere. As illustrated here, the Universal Hover may be used in a large poultry house very conveniently. It is simple and easy to attach—is complete in itself and may be shifted from the poultry house to an outside brooder to suit the convenience and requirements of the user.

The lamp of the Universal Hover will burn three days in February weather, to seven days in mild weather, with one filling.

This illustration shows how the Universal Hover can be used in a large poultry house.

You need not be a mechanic to attach this hover—it is simplicity itself and universal in its sphere of usefulness. Economy is one of its chief features. It

fills a want poultrymen have felt for a long time and adds one more valuable help to the rearing of 90 per cent of the chicks you hatch.

THE ARTIFICIAL REARING OF CHICKS

EMERSON POULTRY FARM.

G. C. Topping, Mgr.

Emerson, Neb., March 4, 1906.

PRAIRIE STATE INCUBATOR CO.,

Gentlemen—I have given your Colony Brooders an unusual test. I placed them out of doors with the weather registering 13 degrees below. Heat in the brooders 83½ degrees, varying only ½ of a degree at night. I am highly elated over results. They are in my estimation, the best on the market to-day, for money, chalk or marbles.

I operate 14 Brooders of other makes beside yours, and I can safely be a judge. They do not retain the heat so even as the Prairie State. I have to date raised 300 as fine a bunch of chicks as you ever came across. The passing farmers stop and look at them with wonder, and I have had to sweep the snow away from the glass door, so they could be really convinced there were really chicks in the Brooders. I placed them out in the weather from 3 degree to 15 degree below zero, and did not feel the least worried, as they took care of themselves O. K. Yours for success,

MR. G. C. TOPPING.

This method divides the broods of young chicks into colonies and provides a means of successfully rearing thousands of birds. The colony plan is fully described in our Brooder Book which we will send free for the asking. These Brooders have been used out of doors all through the winter and have produced remarkable results.

This certainly has never been accomplished before in outdoor brooders; and the consumption of oil is only 25 per cent as compared with others.

We have solved the problem of raising 90 per cent or more of the chicks hatched, and we want to help you to do that. Anyone with our free book, "The Artificial Rearing of Chicks" and our Improved Brooders or Universal Hovers can rear chicks as easily and as successfully as they can hatch them with our new open bottom Prairie State Incubator which has done so much to increase hatching possibilities.

Cypress, Ill., March 7, 1906.

PRAIRIE STATE INCUBATOR CO.

Sirs:—I feel like throwing my hat in the air on account of the high per cent hatches secured with your open bottom machines. Ninety-eight per cent, how does that sound? Perfection, isn't it? Your machines are the talk of this section. There were over one hundred people here to see me take off my hatch. I am not afraid now to put \$2,000.00 into your machines and shall install twelve Standards at once. I beat the other man's machine 20 per cent. Yours truly,

GEORGE ADAMS.

The many and vital practical improvements we have recently made to help you hatch and raise a larger percentage of chicks are all described in a series of five books which we will send free to you if you will write and ask for them. We will also put your name on our mail list and send you other books as they are published. Write today and get in shape to raise 90 per cent of the chicks you hatch. It is simply a matter of right feeding and right brooding.

Prairie State Incubator Co.,
468 Main Street, Homer City, Pa.

1894 Barred Rocks 1906 EGGS

From America's best strains \$3 per 15, \$5 per 30, \$7 per 50. Line bred for heavy laying as well as high scoring. They won at Lacon, Ill., under Heimlich, 1st cock, 2d ekl, tie, 4th ekl., 1st, 3d pullet, 2d pen. No hens shown. Address

Prompt And Honest Treatment

is our motto. We are making a specialty of the egg trade this season from prize winning snow White and Silver Wyandottes. If you want the best send your orders to the Sunny Heights Wyandotte Farm; \$2 per 15 eggs; three settings for \$5.00. Also Fox Terrier pups, fine as silk.

G. W. CAMPBELL & SONS, MT. VERNON, INDIANA

"Saved 20 Times Its Cost."

"I am writing this" says E. C. Parmelee, Highlands, N. J., "by the light of one of your Angle Lamps. I would not think of using any other light. They are the lamps. Every one who has seen mine is impressed with them. I have saved at least 20 times their cost in oil, burners, chimneys and 'cuss words.'"

The Angle Lamp is not an improvement on the old style lamp, but an entirely new principle of oil lighting which has made common kerosene (or coal oil) the most satisfactory of all lighting methods. Safer and more reliable than gas, oil, or acetylene, yet as convenient to operate as gas or electricity.

The Angle Lamp

is lighted and extinguished like gas. May be turned high or low without odor. No smoke, no danger. Filled while lighted and without moving. Requires filling but once or twice a week. It floods a room with its beautiful, soft, mellow light that has no equal. Write for our catalog "59" and our proposition for a **30 Days Free Trial.**

Write for our catalogue "59" listing 32 varieties of the Angle Lamp from \$1.50 up, now—before you forget it—before you turn the leaf for it gives you the benefit of our ten years experience with all lighting methods.

The Angle Mfg. Co., 78-80 Murray St., New York

Plane's S. C. White Leghorns

Swept the board again at the Northern Illinois show. The highest scoring pen in 1200 birds, also \$35 silver cup for best cock, cockerel, hen and pullet in the show. This is the kind you want.

Collinsville, Ill.

MODEL
MFD. BY
Chas. A. Cyphers
TRADE MARK

MODEL

Incubators

The Model Incubators are meeting with a larger sale than ever this season. What is the reason for it? Simply that the Model hatchers have given complete satisfaction to earlier customers. These customers recommend Models on their merits. They are not bought for either cash or advertising. They make their money out of rearing poultry for profit.

I have a letter from one of my customers, Mr. William H. Truslow, of Stroudsburg, Pa., under date of March 9th, in which he states, "I think the best hatch I ever had on duck eggs came off last week in one of your Models." Mr. Truslow has been hatching ducks for about fifteen years, has used all the leading makes of incubators, and is now using only the Model. He has forty-seven of the No. 4's, from which he averaged last season close to 1,000 ducks from each machine, and which netted him a handsomer profit than most breeders make.

Another large customer is the Crystal Springs Duck Farm, Oil City, Pa. They used last season thirty-three Models and forty-nine of my old make which I remodeled early in the season. I have just shipped this plant eight more, which gives them a capacity of ninety machines. Mr. Patrick McEvoy, the manager, writes me that the Model is the best hatcher he can get. Mr. McEvoy is a successful chicken man as well as a successful duck breeder, and last season marketed some of the finest and largest capons that went to New York. Mr. McEvoy undoubtedly draws the largest salary of any manager of a poultry plant, and gets it because he makes the plant a profit payer.

Another large customer who has ordered more machines since the season opened is The Lakewood Poultry Farm Co., Burrsville, N. J. Mr. Brown, the president of the company, is one of the men who can handle chickens successfully in large numbers. More chickens can be found on this plant than on any other in the country. Visitors are always welcome, and if you have been travelling over the states in search of up-to-date poultry farms without seeing what you were looking for, pay a visit to the Lakewood Farm.

These men use the Model Incubators only because they give them the best hatches. If you are going into the poultry business you cannot afford to do otherwise. My catalogue is free. Also ask for a free copy of "Eggs, Broilers and Roasters." This book will tell you of the comparative profits of all branches of the business, cost of production, market quotations, etc., virtually an "Easy Lesson in Practical Poultry Culture."

Brooders

When a baby chick is first hatched it is thinly clad, has little power of resistance and is particularly sensitive to the slightest draught. Within the egg, while the chick is developing, it is immersed in a fluid and breathes in a like manner to a fish by means of an outer circulatory system called the allantois. A short time before the chick is excluded from the shell the lungs, which have previously been filled with a fluid, begin to dry out and the chick has a double circulation. That is, it begins to breathe by inhaling the air contained in the egg at this time into the lungs, while the circulation in the allantois is gradually decreasing. As the chick breaks the shell the circulation in the allantois ceases and it then depends entirely for the aeration of the blood on the lungs. It is, therefore, seen that the change from the aquatic state to the aerial state is quite rapid, and that when the chick is first excluded from the shell the circulation is more or less imperfect. It takes some few days before the circulation has become strong enough to give the chick any resistive force. It is during this early period that millions upon millions have been killed in artificial brooding, which has caused hundreds of failures and many heartaches.

The Model Brooder is designed to properly care for the chick during this critical period, to nurse it along until it gains in strength and activity, until its resistive forces have developed, while it gives the necessary warmth, and in a way to keep the chick perfectly comfortable. It provides more fresh air than any other brooder on the market. With this brooder the chick can be gradually hardened off until its powers of resistance are equal to the outdoor temperature. The results are that the Model Brooders successfully rear the chicks entrusted to them.

Of these brooders my many customers write all kinds of praise:

"The outdoor brooder I bought of you last spring raised successfully every chick put in it."
—Clifford F. Klees.

"I raised two broods of chickens in the brooder I purchased from you, 75 chicks in one brood and 85 in another, and never lost a chick in either brood."
—W. E. Rose.

My testimonial sheet tells what hundreds of others are doing.

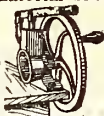

"Poultry Feeding for Profit" for free distribution, tells of methods of feeding old to few and new to many. It also tells of the Model Mill and the Model Prepared Foods.

Squab breeders in imported Mowaines and Homer Pigeons. White Wyandottes, S. C. W. Orpingtons, White Holland and Bronze Turkeys. All varieties Pheasants, Pigeons, domesticated and wild water-fowl. Prices right. No circular. Write your wants.

THEODORE BAKER, Jr., Box 111, Hartsdale, N. Y.

Real Fence Economy

consists of getting the greatest possible *fence value* for the money expended. We offer you the best fence value obtainable and here is why we can do it.

We Sell Direct from Factory to the user of the fence. Thus we avoid all unnecessary and expensive handling and storing and cut out all profits and commissions of go-betweens. This makes a large saving. It enables us to spend more for good material and proper construction.

The Continuous Stay is what gives Advance Fence its superior strength. In Advance Fence the stay is *never* cut but runs continuously up and down across the fence for many rods without an end. Thus we *preserve* and *utilize* all the strength of the wire about half of which is wasted in fences with cut stays. Our method of construction costs a little more but it's worth while.

30 Days' Free Trial. Place your order with us for what fence you need and if after examining it you do not like it you can return it at our expense and get your money back. Don't you think this is a fair offer?

We Prepay Freight and *guarantee* safe delivery.

Write today for our Free Fence Book and wholesale delivered prices.

ADVANCE FENCE CO.

Incubator Book

The Best That Was Ever Written.

If you will write us to-day we will send you the best book ever written on incubators.

It is interesting, fascinating, written by a man who knows, by a man who has spent 24 years on the problem. It tells all he has learned, all the results of hundreds of experiments with every kind of incubator made. It is a book you should read before buying, if you wish to avoid a costly mistake. The writer has spent 24 years in perfecting Racine Incubators and Brooders. The book tells all about them—that is why we send it free. It will lead you to choose the Racine. But it will give you the knowledge you need, and it is fair. It tells you practical facts that no other book ever told. Don't buy without reading it. Write to-day.

Racine Hatcher Co., Box 26, Racine, Wis.

We have Warehouses at Detroit, Buffalo, Kansas City and St. Paul.

We Pay The Freight

219 EGG STRAIN OF BARRED PLY. ROCKS

Large and prolific layers. 250 of my pullets averaged 219 eggs in one year. I have bred for size, eggs and standard birds for fifteen years. Can't be beat. Eggs at all times. Circular free. Write today.

W. J. DAVIS - - - - - R. R. 1, EATON, INDIANA

EGGS } FROM PRIZE WINNING } \$3 per 15
 } WHITE PLYMOUTH ROCKS } \$5 per 30

This season I am selling eggs from the best pens I have ever mated up. These pens are headed by the 1st and 3d prize cks. at Chicago, and the 1st and 3d prize cockerels at Kankakee, mated with hens scoring up to 95, and pullets scoring to 96. Eggs from these choice matings \$3 per 15, \$5 per 30. Ten fine cockerels for sale, with score cards by Russell and Butterfield. I can satisfy the most exacting.

FRANK J. HICKS - Onarga, Illinois

Eggs — Eggs — Eggs

From Wilber's Prize-winning S. C. White Leghorns. The world's best. At great Charleston, S. C. Birmingham, Ala. and Atlanta, Ga. won 1st pen, 1st chl.; Nashville, Tenn., 1st pen; Knoxville, Tenn., 3 of National White Leghorn Club's 1st ribbons and more 1st and 2d pullets, hens, specials and cups than any Southern strain. 10 grand yards now mated. Eggs: \$5 and \$2 50 per 15; \$9 and \$4 per 30. Cockerels and pullets at right prices. Write your wants. Satisfaction guaranteed. Mating card free.

STILL THEY COME!

I BREED S. C. WHITE LEGHORNS EXCLUSIVELY

MAYHEW—1st at Chicago, 1898.
1st at Indianapolis, 1899.

AT THE Chicago Show, Jan. 1906, in a strong class, I won 1, 3, 5 ckl., 1, 2 pul., 1 pen, 3 hen and 5 cock.

Now, at Indianapolis, Feb. '06, I won 1 cock, 1 hen, 1, 2, 3, 4 ckl., 1, 2 pul. and 1 pen. There were more S. C. W. Leghorns at Indianapolis than Chicago. Eggs: \$3 per 15; \$5 per 30. Also have some choice stock for sale.

This cut shows how I "used to do it." One next month will show the way I am "still doing it."

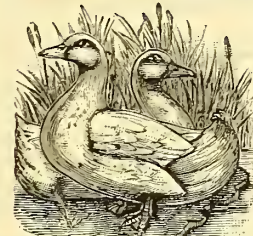

Harmon Bradshaw, Box A, Lebanon, Ind.

My Barred Rocks

are bred exclusively and to win. Why not buy your eggs this season from best stock and enter the winning lists next fall? Per setting of fifteen \$3, two settings \$5. Breeding stock for sale. Males from \$2 to \$10; females from \$2.00 to \$8.00.

EDWIN E. ROBBINS :: P. O. Box 284, Baldwinville, Mass.

James Rankin :: South Easton, Mass.

The AXFORD Round Incubator is built upon correct, natural and scientific principles. Thirty years of careful study and experimenting have enabled us to produce a machine that will hatch every fertile egg placed in its care. There are no cold corners in the Ax-ford. Write for free catalog.

ROUND LIKE A NEST — 30 YEARS SUCCESS

The AXFORD Round Brooder is a good mother. It cares for young chicks much better than most hens. Built after natural methods and is constructed to avoid crowding and trampling. Get our catalog of Poultry Supplies. Axford Incubator Co. 366 45th Street, Chicago, Ill.

1 CENT IS ALL IT WILL COST YOU

to get our large Bicycle and Tire catalogues, showing the most complete line of high-grade bicycles, tires and sundries at LOWER PRICES than can be made by any other manufacturer or dealer in the world. Simply write us a postal card saying, "send me your catalogues," and all the catalogues will be sent you by return mail, FREE, postpaid. In them are fully illustrated and described every detail of construction of all our models; you will be shown the difference between high class work and cheap construction. We explain how we can sell bicycles with coaster brakes, puncture proof tires and best equipment direct to the rider at less than dealer's cost.

WE EXPLAIN HOW we ship to any person, anywhere ON APPROVAL with-DAYS' FREE TRIAL on every bicycle we sell, and other new and marvelous offers. You will learn everything by simply writing us a postal.

WE WILL CONVINCe YOU that we can sell you a better bicycle for less money than any other house that ever made or sold a bicy-cle. These offers are genuine; our sole protection is good bicycles, low prices, and pleased purchasers. Deal direct with the factory, who make and guarantee their bicycles. YOU CAN MAKE MONEY without interfering with your other work. We need a Rider Agent in each town to represent us and are prepared to offer a very profitable opportunity to suitable young men who apply at once. IF YOU OWN A BICYCLE write to us anyway; there are suggestions and information in our catalogues that will be of immense value to you.

TIRES, COASTER-BRAKES, built-up wheels, saddles, pedals, parts and repairs and everything in the bicycle line are sold by us at half the usual prices charged by dealers and repair men. Ask for our tire and sundry catalogue.

DO NOT WAIT but write us a postal today. Do not think of buying a bicycle or a pair of tires from anyone until you know the new and wonderful offers we are making. It only costs a postal to learn everything. Write it now. **MEAD CYCLE COMPANY, Dept. S126, CHICAGO, ILL.**

FACTS FOR FARMERS!

Southern lands are fertile and productive and are low in price. The rainfall is ample for all purposes, and irrigation is not needed.

The Southern farmer is in close reach of the principal markets of the country and has the best of railway facilities for the transportation of his crops.

General farming shows good returns. The crops grown cover a wide range and yield an abundant harvest. The cereals and grasses thrive. The stock raisers find the South a profitable field. Cattle can be raised at the lowest cost. There are finest opportunities for raising horses, mules, sheep and hogs.

There is a demand for a greater dairy interest in the South. Local markets are good. The conditions are most favorable for the success of the milk producer and butter maker.

Trucking is extensively engaged in along the Southern Railway. Lands especially adapted to this branch of farming may be purchased at low figures and upon good terms. The facilities for quick handling of the crops are first-class and the products reach the best markets of the country in good condition. All fruits are grown in the South. The commercial orchards along the Southern Railway are extensive and the quality of the fruit is unexcelled. The best sections of the south are reached by the

PAGE POULTRY FENCE

Keeps heavy stock out of your poultry yard, and costs less erected than common nettings. Made of the same strong quality of coiled wire as Page Stock Fences, woven in the same practical way—continuous cross bars securely knotted around every horizontal bar, and the whole fabric heavily galvanized. Requires few posts, and no top rail or bottom board; stretches up smoothly on uneven ground and never sags, bags or buckles.

A complete line of Lawn, Park and Stock fences constantly on hand. Write for descriptions and comparison of costs.

Page Woven Wire Fence Co., Box 589, Adrian, Michigan.

HANSEN'S WORLD CHAMPION RHODE ISLAND REDS

Winners of more cash prizes at World's Fair than any other exhibited. Won every first prize at Madison Square Garden, N. Y., 1905. Also three specials for color and shape at Chicago, December, 1904, won every first prize and Silver Cup for best ten Reds in show. Rose and Single Comb competing. Also won all first prizes at Cincinnati, 1903 and 1904; Indianapolis, Louisville, Hamilton and Warsaw. They have this year won prizes at New York and Birmingham, Ala.; also in hands of my customers. Eggs now booked at \$3, \$5 and \$10 per setting.

PRESIDENT NATIONAL RHODE ISLAND RED CLUB

SHIMER Spring Steel Poultry Fence

The best poultry fence in the world. Made of high carbon, tempered steel wire. Sufficiently high and tight to keep poultry in; unaffected by wear and strains that would wreck the ordinary fence.

Notice the Crimp in the Wire. That crimp makes the whole fence a woven steel spring that allows for contraction in different temperatures, and makes it impossible for the fence to bulge, sag or break. The Shimer is the only fence that never needs repairs.

Write for illustrated booklet. It's free.

AGENTS WANTED.—We want a reliable agent in every community to take orders for the Shimer Fence. Poultryman or farmer preferred. Will make permanent arrangement with liberal profit to the right man. Write for our proposition

\$2000 VALUE OF TWO \$2000
Fishel White Rocks

The noted prize hen, "MARY E." first and special World's Fair, St. Louis; first, special and Silver Cup for whitest fowl, Cincinnati; first, special and Silver Cup for whitest fowl, Indianapolis. Prize cock, "FISHEL'S BOY II," first and special, Cincinnati; first and special Indianapolis, where I refused \$1000 for him.

\$800 FOR A FISHEL WHITE ROCK \$800

This is the amount I received for "Prince of Indiana," the 2d prize cock at Indianapolis, 1906. I mention this sale to convince you of the importance of your buying

EGGS FOR HATCHING

from stock that you know will give you results, and from matings which produce these high priced and valuable specimens. When you buy eggs from my yards you get the same blood lines that produced "Edward B Jr." that sold for \$500. Also "Mary E," the \$1000 prize hen, etc. I am pleased to say that birds hatched from eggs I sold last season did most of the winning at most of the shows the past season.

THE FISHEL WHITE PLY. ROCKS

are conceded the world over to be the best there is in poultry, both from a commercial and fancy point of view. My matings this season are the best I ever owned, in fact I doubt if there was ever as many high-class birds mated up as I have in my matings this season. My winnings of every FIRST PRIZE but one at three large shows the past season, together with two Silver Cups for whitest fowl in show, surely convinces you that the Fishel White Rocks are

"THE BEST IN THE WORLD"

Send three 2-cent stamps, please for my 48-page catalogue, and remember I have a lot of choice breeders and utility birds still to sell; in fact am in a position at all times to supply your wants for whatever you may need in White Rocks, the most beautiful and profitable of all breeds.

BARRED ROCK HEADQUARTERS

Holds the World's Records at the Chicago Shows

Our winnings on male birds last season were phenomenal. More first prizes and clean sweeps than nearly all competitors combined.

CLOSING OUT SALE

Tbirty cockerels, five cocks, fifty females. Good ones, closely related to our famous line of winners. These birds must go, so write quick. Big bargains for the quality. State exactly what you want.

Eggs From 30 Matings

this season, mated to produce **Exhibition paralyzers**. Perhaps the grandest lot of matings to be found in one breeder's yards. Others have raised winners from our eggs; why not you? Testimonial and mating list now ready. Write for it.

KING LEE—1st CK1, Chicago, Jan., 1905

R. E. HAEGER & CO. Algonquin, Ill.

ORPINGTONS At Chicago, 1906

replaced free. From other yards (same blood lines as our winners), carefully mated, \$3 per fifteen, \$15 per hundred. We positively guarantee to please you.

We won six firsts, four 2ds, two 3ds and one 4th on S. C. Blacks, and S. C. Whites in the hottest class ever seen in the West, and we bred every one of these 13 winners and they are now in our breeding yards. In Buffs we are quite as strong. We now know that our matings for 1905 were correct and we will duplicate them in 1906 with greater results. Some splendid stock for sale. EGGS from our Chicago winners \$10 and \$5 per fifteen. Infertiles

Show Record For 1905 and 1906, at Syracuse and Hagerstown

We won 41 first and 36 second prizes, together with eight of the best specials given at the latter show, namely: silver cup for best white bird in the show; specials for best Wyandotte, best Plymouth Rock and best Leghorn, any variety, in the show, and specials for best White Wyandotte cock, hen, cockerel and pullet.

At Madison Square Garden we won 34 ribbons besides a large number of special prizes, including specials for best display of White Wyandottes, and best display of Silver Penciled P. Rocks. After studying the above record you must be convinced that we keep the **blue ribbon breeders**. Eggs from the best matings of the season, \$5 per 15, \$20 per 100. Visitors always welcome. Send for illustrated catalogue containing description and mating list.

First Prize Hagerstown; special for best white bird in the show; special for best Wyandotte, any variety; special for best White Wyandotte Pullet.

GEN. E. A. McALPIN, Prop. :: :: F. W. COREY, Manager

White Wyandotte Cock, White Wonder 2nd, winner of first prize at the Indiana Fanciers' Show, Indianapolis, Ind., and was also winner at the great American Poultry Association Show held at Cincinnati, Ohio. Bred and owned by J. C. Fishel & Son, Hope, Ind. He will head one of their special pens this season.

ORIGIN AND HISTORY OF THE BREEDS

The Origin of the Golden and Silver Penciled Hamburgs Not Positively Known, Chaucer in His Book, Printed in the Fourteenth Century, Referring to Them As Turkish Cocks and Hens—The Other Varieties of the Family Are Clearly of English Origin—Description of Some of These Fowls Which Existed in England Long Before What We Now Term Breeds of Fowls Were Known or Recognized—Standard Requirements for the six varieties of the Breed.

Paper No. 9—The Hamburgs.

Written by Thos. F. Rigg, Associate Editor American Poultry Journal.

The Hamburgs are among the most attractive of domestic fowls. The plumage, coloring and markings are delicate, yet striking and beautiful. In form they are graceful and jaunty.

They represent the highest type of the poultry fancier's products in the way of exquisite markings and color blending.

The Hamburgs are, too, wonderful egg producers. They are a little smaller than the Leghorns. In America and England they are by common consent accorded first place as a strictly fancier's fowl.

The Standard of Perfection recognizes six varieties of the Hamburgs, as follows: Golden Spangled, Silver Spangled, Golden Penciled, Silver Penciled, White and Black.

ORIGIN OF THE HAMBURGS.

The earliest reference in literature (which we can find after a very careful search) to the Hamburgs is in Chaucer's "The Nonne's Preeste's Tales," printed in the 14th century. Here we find reference to a fowl resembling the Golden variety. His lines are applicable to the Golden Penciled cock:

"His comb was redder than the fine corall,
Embattled as it were a castel wall;
His bill was black, and as the jet it shown,
Like azure where his legges and his tone (toes),
His nails whiter than hily flour,
And like the burned gold was his color."

Buffon, naturalist, born 1707, died 1788, in one of his works referred to the Black Hamburg cock as being "velvet breeches," from the black, velvety appearance of the bird.

Ulysses Aldrovandus, professor of natural history at Bologna, born 1522, died 1607, writer of works on ornithology, zoology and botany, gave an illustration in one of his books of a pair of fowls closely resembling the Hamburgs. He called them the "Turkish cock and hen." He said:

"The cock whose likeness we give is called the Turkish cock. His whole body is in a manner inclined to be white. Still, the wing feathers were partly black as were the feathers on the breast. The tail consists of feathers partly white and partly black; some half green, some half black. His whole body is exquisitely adorned with lines that are sometimes golden, sometimes silver, and it is wonderful what a beautiful effect this produces. His legs and feet are tinged with blue. The hen is all white, sprinkled all over with black spots. The hen would seem the same, except that her neck is yellowish. She had a sharp point on top of her head; her feet altogether blue and an immaculate tail."

It is somewhat confusing, the statement of Aldrovandus that

"the lines were sometimes golden and sometimes silver." It is to be presumed that he did not mean this as applying to a single specimen, but that he had in mind individual cocks of the Golden and Silver varieties.

It will appear that long before what we now term breeds of fowls were known or recognized the Hamburgs were bred to feather and form by the peasants in Yorkshire and other parts of England. We cannot come to the conclusion that the original Hamburgs, the penciled varieties, were found in Holland and from there taken to England in the 14th century, as is so commonly believed. The Whites, Blacks, Silver and Golden Spangled varieties are clearly of English production. They in time found their way to Holland.

The words of Aldrovandus make it not unlikely that the Golden and Silver penciled varieties were natives of Turkey or, at least, of Eastern origin, and not originally of Holland. But it is now too late for the most diligent searches of facts to obtain positive information as to the origin of the Hamburgs.

Dixon, the eminent authority, classified the early Hamburgs, or what we may now rightly claim as the parent stock of the present Hamburgs, as follows:

1. Penciled fowls, distinguished by light hackles.
 2. Spangled fowls, with darker hackles.
- Fowls with pure white hackles or clear unmixed yellow hackles are included in the first general class.

Those of pure white hackles are Chittaprats, Bolton Grays, Penciled Dutch, Creole or Coral, Silver Hamburgs.

Those of unmixed yellow are Bolton Bays, Golden Hamburgs. Those with white hackles striped in the center with black he placed in the second class, as follows: Silver Spangled, Silver Mooneys, Silver Moss.

In the second division of the same class he placed those having yellow hackles striped in center with black, brown or green, as follows: Golden Spangled, Gold Mooneys, Copper Moss.

Doyle, 1854, individualized the various Hamburgs, according to Dixon's order of arrangement, as follows:

"We have now to consider Chittaprats, Bolton Grays and Penciled Dutch (they are frequently imported from Rotterdam), Silver Hamburgs and Creoles, altogether, as one and the same family; therefore one family picture will include them all. The ground color is pure white, with delicate black pencillings, which, however, in the cock are few; both hackles white and quite free from pencillings; wings, barred with black; tail black; sickle feathers edged with pinkish white; comb, double and coral-colored; ear lobes white. The hen should have a pure white neck. The whole of the body, wings and tail should be delicately but distinctly penciled with clear black, upon a clear white ground, and there are in general such distinct pencillings or bars across each feather on the body, the extremes being marked the most distinctly. The tail and flight feathers should be barred all the way up them.

"The Bolton Bays, or Golden Hamburgs, come next before us, the former being but a provincial name for the latter.

"This is the second division of the first or penciled class, and distinguished from it by having 'a clean, unmixed ochry-yellow ground, instead of white.'

"The Silver Spangled are a sub-variety of the Silver Penciled, and also have white for their ground color and black spots upon every feather. We think that the spangle which appears in a circular form is the most correct, for when of the crescent or horseshoe shape it appears to be passing towards the laced character. When the spangle is of the crescent form the plumage may have a gayer and lighter aspect,

but when the spangle is circular or oval the plumage is richer to the eye. The ground color must be perfectly clear.

"The Golden Spangled only differs from the Silver Spangled in having a yellow or golden bottom color. In all other respects they are the same."

These words of Doyle indicate that prior to 1854 the Hamburgs were bred to feather as well as they are today, or nearly so.

While there is some doubt as to origin of the Golden and Silver Penciled varieties it is a well known and established fact that the perfection of the Hamburgs is due wholly to the skill and patience and untiring energy of the English fanciers. The world's greatest artists never so harmoniously, so skillfully and so beautifully blended colors upon the canvas as they have been blended and harmonized in the plumage of the Hamburg fowls. None but an Englishman could have accomplished this task, which in the end gave us this richly colored and distinctly marked race of fowls. It required the inherent

ing with large black spangles. Coverts, white, each feather ending with a large black spangle, forming two distinct parallel bars across the wings. Tail, white on outside, each feather ending with a large black spangle. Undercolor, dark slate. Color of legs and toes, leaden blue. Comb, rose, covered on

BUFF COCHON COCK.

love of the beautiful, the methodical temperament, the unyielding nature, all possessed by the Englishman, to carry out this tedious and apparently never-ending task. England today produces and supplies the world with the best Hamburgs.

BREED CHARACTERISTICS.

In the Hamburgs we have the most graceful and symmetrical type of fowls. They are valued most highly for their beauty of form and color markings. They have no standard weight or size clause.

Here in America the Silver Spangled variety is the most popular, being quite extensively bred.

Color of the male: Neck, white, each feather ending with an elongated black spangle. Black feathers should be white, spangled with black. Each feather of breast must end with a large black spangle. Body and fluff like breast. Wingbows, silvery white, spangled with black; primaries, white with black edging on end of each feather; secondaries, each feather end-

A prize-winning Barred Plymouth Rock cockerel, valued at \$50. Bred and owned by L. B. Dean, Box 62, Lakeside, Ill.

top with small points, terminating at rear with spike, which inclines upward very slightly.

In color the Golden Spangled is the same as the Silver, substituting rich golden bay for white.

Color of Golden Penciled male: Neck, rich bay. Back, rich reddish-bay. Breast, reddish-bay. Body and fluff, glossy reddish-bay, the sides below the wing penciled across with black bars; fluff, black. Wingbows, bright reddish-bay; primaries, upper web black; lower web, bay; secondaries, upper web, reddish-bay, penciled across with black bars; lower web, reddish-bay, each feather ending with a small black spot. Tail, black; sickles and coverts, greenish black, with edging of black reddish-bay, the narrower the better. Undercolor, dark slate. In the female each feather of body and fluff is penciled across with parallel bars of greenish black.

The Silver Penciled is the same as the Golden Penciled, substituting silvery white for reddish-bay.

The Black Hamburg is clad in a plumage of greenish black throughout.

The White Hamburg is pure white in plumage, quills and shafts included.

The Hamburg, better than any other fowl, satisfies those persons who desire poultry possessing rare beauty and fairly good utility qualities combined.

The Hamburgs are large classes in the leading shows of America and England.

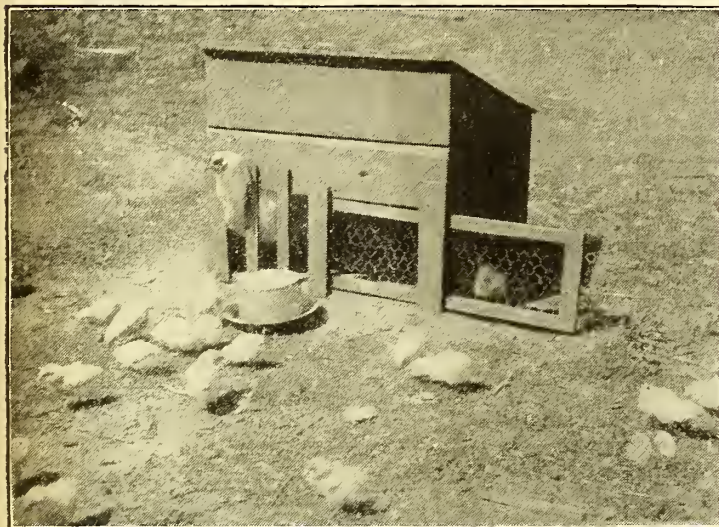

NEWLY HATCHED CHICKS.

Some Thoughts on Their Care and Management—A Good Brood Coop an Important Factor.

Some of the Important Things to be Done when Chicks are first Hatched—Hopper Feeding a Time and Labor Saver.

Written for American Poultry Journal by Victor D. Caneday, Taylors Falls, Minn.

Without the baby chicks much of the pleasure in poultry culture would be lacking. I guess we are all somewhat alike in the way of anticipating each year the time when the broods of little, downy chicks will be cooped out on the ground hunting for the new blades of tender grass and the first bugs and worms of the season. The hatching of the chicks is one of the most fascinating experiences connected with poultry culture, for it is the beginning of the work of another season's flock and the success of the year's effort is done up in these tiny packages, the care and feeding of which will have much to do with the quality and numbers of the birds we have to sell and select our breeders from in the fall. As a general thing the newly hatched chick is born to live if conditions are such as to give it a reasonable opportunity to make its way in this cold world of ours. Most of the troubles with chicks are the result of the care they get during the first few days of their lives.

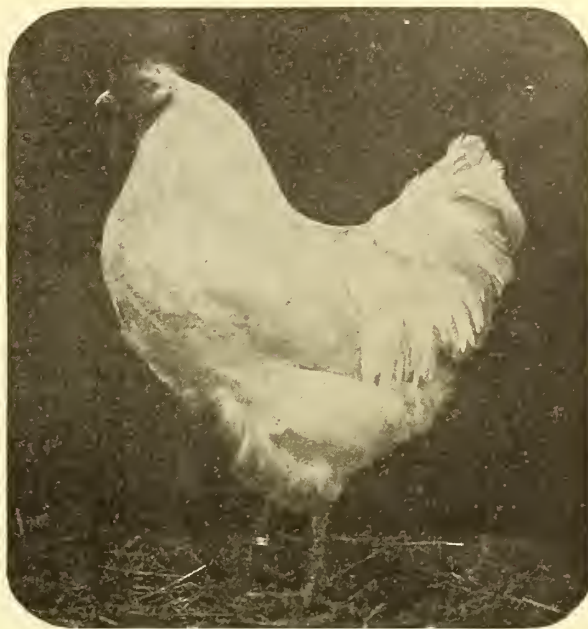

Brood coop for hen and chicks in use on the farm of Victor D. Caneday, Taylors Falls, Minn.

When the chick cuts its own little circular door of entrance into this world and emerges from the shell its soft, downy coat is saturated with moisture and the one thing most essential to its well being is the warmth of its mother's breast or the nursery tray of the incubator, as the case may be. It is previously supplied with food to last it for some considerable length of time by the absorption of the yolk of the egg the last thing before it breaks the shell in the process of hatching. In this way nature has provided for careful brooding of the newly hatched chick until it is thoroughly dry and strong enough on its feet to follow the mother hen in search of its food.

One of the most common mistakes of amateurs is to begin feeding the little chicks too early. As soon as they are thoroughly dry they can be taken from the nests and placed with their mother in the brood coops, when they should be provided with good, sharp grit and pure water and left to themselves until they are at least thirty-six hours old. Some well informed poultry writers claim that seventy-two hours is still better, but it is a safe rule to never give a brood of little chicks food the first time until they are hungry enough for it to manifest it by their insistent cry and restlessness that all poultry keepers have noticed when food has been withheld beyond the regular feeding time. It is claimed that the yolk of the egg absorbed by the chick just previous to hatching is fully sufficient for the support of the chick until it is four or five days old, so the folly of feeding them as soon as they can be transferred to the brooder or brood coops ought to be evident to all.

If proper precautions have been taken to thoroughly rid the setting hens of lice by carefully dusting them regularly once

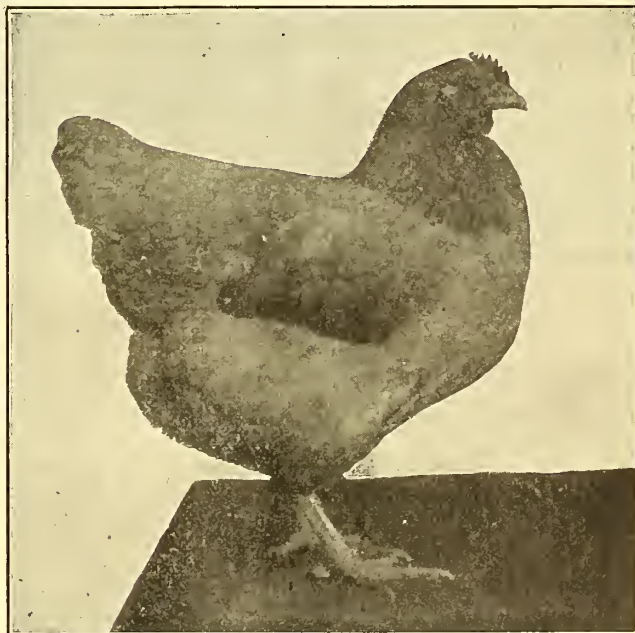

a week while they have been setting and just before placing them in the brood coops with the chicks with a good insect powder, there should be very little trouble from lice, and by occasionally dusting the mother hen while brooding the chicks they can be kept practically free from lice during the early part of their lives, which is the time when most of the mis-

WHITE WYANDOTTE COCKEREL.

chief is caused by the presence of these parasites. Before placing the young brood in their new home the brood coop should be thoroughly sprinkled with kerosene oil to prevent red mites from getting a foothold. This is a very important precaution to take in cooping the chicks and no one can fully appreciate its importance until they have seen the havoc these

BUFF PLYMOUTH ROCK.

First prize pullet at Cincinnati A. P. A. Show, January 16-20, 1906. Bred, owned and exhibited by E. C. Allison, Hope, Ind.

little pests can work in a brood of young chicks. Each time the coops are cleaned they should be sprinkled with the oil and the red mite will have no opportunity to infest them.

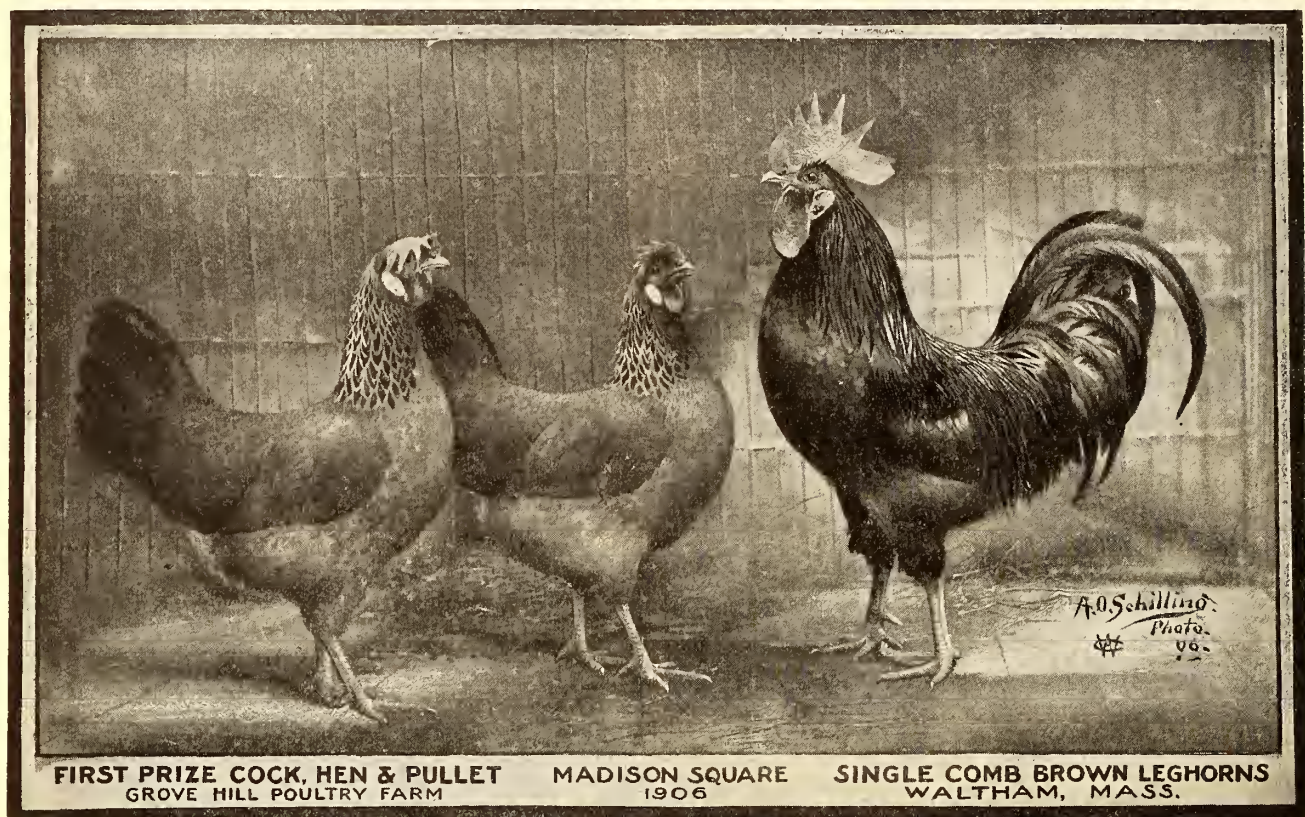

A good brood coop is an important factor in the proper care and successful rearing of a flock of young chicks. There are many styles of good ones in use by poultrymen, but the essen-

tial points to be borne in mind in the construction of a coop for a hen and her brood are protection from storms and varmints and provision for ample room and plenty of fresh air for the chicks as they grow and the weather becomes warmer. The illustration of the coop and a family of my pedigreed White Plymouth Rock chickens, which accompanies this article, will give the reader a fair idea of the style of coop in use on my farm and one which I have adopted after a thorough trial of several different kinds of coops for this purpose and for myself I find answers all the requirements of a first class brood coop and one that is easy for any one to make who is at all handy with hammer and saw. They can be made any size convenient and old dry goods cases worked over will make excellent coops of this kind and can often be purchased for a very nominal sum from the merchant with whom one does his trading, if one is not particular about having them of a uniform size. These coops may be made with movable bottom to facilitate cleaning or the bottom may be nailed solid and the cleaning done through the unslatted half of the front of the coop. The sliding door is a frame made of inch strips and covered with inch mesh wire netting, which fully protects the chicks from rats, skunks and other nocturnal enemies,

In this way the care of the first broods is greatly simplified and the dangers from the sudden changes to cold, stormy winter weather, which sometimes comes down upon us after the first broods are out, is greatly lessened.

The water fountain for little chicks shown in the illustration is a splendid style to use as the chicks cannot get into the water to get themselves wet or to foul their drinking water. It is simply a can of a size to fit in the bottom of a deep pie tin and when filled with water and the pie tin is turned upside down on the can they are quickly inverted to the position seen in the illustration, when the water runs out into the pan through a hole punched in the side of the can close to its upper edge and when the water in the pan covers this hole no more water can leave the can until the chicks drink the water in the pan surrounding it, thus giving a constant supply of clean water until the can is entirely empty.

With a good brood coop and a supply of pure water and sharp sand or some of the prepared chick sized grit for sale by the poultry supply dealers, the comfort of the newly hatched chick is fully provided for until the demands of nature call for something more substantial, when bread crumbs, moistened in milk and squeezed dry and crumbly, can be fed them, alter-

FIRST PRIZE COCK, HEN & PULLET

when it is pushed up at night so as to close the entire front of coop. This door is made to slide both ways and in the illustration is in the position required to confine the hen while giving the chicks their liberty. If the keeper desires to give the hen her freedom or allow her access to a yard placed in front of the coop, all that is necessary is to withdraw the door entirely from the front of the coop or slide it out half way on the opposite side, when half of the front is entirely open for the use of both hens and chicks. After the mother has weaned her brood and the chicks have grown large enough to require a larger sized entrance than is provided on the slatted side of the front the opposite side may be used alone and the chicks prevented from injuring themselves by crowding through between the slats by sliding the door out so as to cover the slatted entrances and leave the other half of the coop front entirely open. By having the upper half of the coop front boarded tight the brood is fully protected from driving rainstorms, while at the same time they have plenty of fresh air. For the early broods, when protection from the cold is needed, a light frame covered with muslin may be made to fit inside the frame of the sliding door and the brood can enjoy all the benefits of a scratching shed on a small scale, which will be amply sufficient for their comfort while they are in babyhood.

nated with hard boiled eggs chopped fine, shells and all. Cracked wheat and corn and rolled oats are splendid foods and give variety. Cottage cheese is also good for variety. One of the most essential things in feeding little chicks for the first three or four weeks of their lives is to be careful and never overfeed, for about nine-tenths of the losses from the broods during this period are directly or indirectly caused by overfeeding and a consequent derangement of their digestive systems. As soon as the chicks are large enough and independent enough to range some little distance from their brood coops I provide dry feed in hoppers in the shape of cracked wheat and cracked corn and beef scraps, which are kept within constant access of the broods and the hand feeding is gradually dispensed with as soon as the chicks learn their way to the hoppers for the dry grains and scraps. All my young chicks are grown on free range and I have found this method an excellent one in the production of large sized, healthy, vigorous chicks of the kind we all covet for the breeding yard. Where the young are confined to yards I do not suppose this method would give as good results as with chickens that have the unlimited range of the fields and woods as mine have, but it has certainly given me the best results of any method I have practiced and I find that the entire flock under this system of dry

feeding develops more uniformly and reaches standard weight quicker than with any method I have practiced previously. Besides the advantages it gives me in the better growth of the chickens, it saves an enormous amount of very exacting work during the early part of the summer, for young chicks, when fed by hand five times every day require considerable of one's time if many are being raised. The exercise the chickens get on free range is almost an essential element in the production of hardy, vigorous birds for the breeding yard and I raise them exclusively for this purpose.

BARRED PLYMOUTH ROCKS.

A Production of American Genius—A Fowl that is Bred to a Greater Extent than any other Variety—The Pride of the American Fancier.

Written for American Poultry Journal by D. T. Heimlich, Jacksonville, Ill.

This variety leads and will lead all other standard varieties for many years to come. They suggest more food for thought, study and require greater skill in mating than any variety recognized in the Standard of Perfection. They embody more characteristics in their diversities of types, color and character of barring than any other variety; in fact, they are emblematic of our national character as a nation, and like our people, there is only now and then one who comes to the forefront of public notice that all can recognize as approaching the characteristics nearing the ideal. They are truly a production of American genius, produced by the skill and high artistic conception of the American fancier and breeder. To produce specimens that in general character and finish approach the description given by the Standard of Perfection means honor to the producer who, by his skill and judgment in selection, has accomplished in advance of his fellow breeder such a work of art that leads to firing the ambition of many to also accomplish results equal or even greater in form and finish. This begets a rivalry that appeals to the higher sentiment of men and women who make up the vast numbers making effort along these lines. To listen to the discouraging and criticizing voices that annually croak out the doleful whine

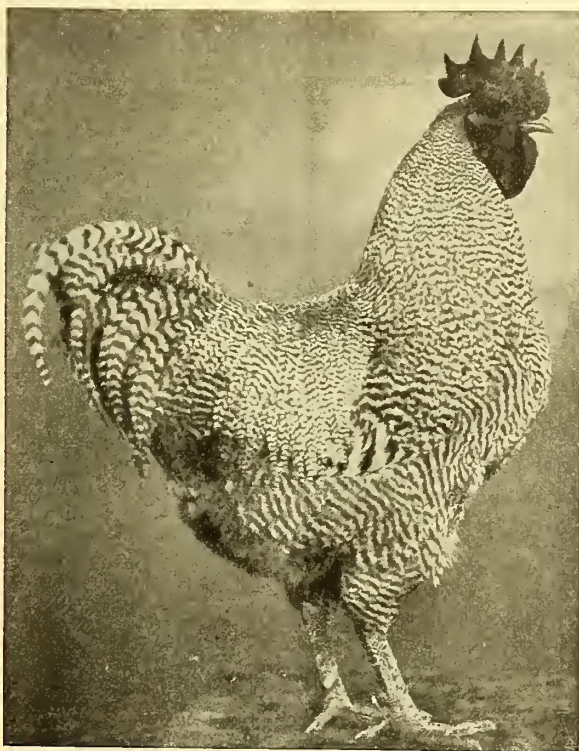

gratifying results and helps others into broader and higher viewpoints of desire, and who are thus made more capable to accomplish from the previous effort of others results that are readily recognized as advance steps approaching what is pictured and accepted as the highest point to date approaching perfection.

The Barred Plymouth Rock is of composite origin, from

BARRED PLYMOUTH ROCK MALE.

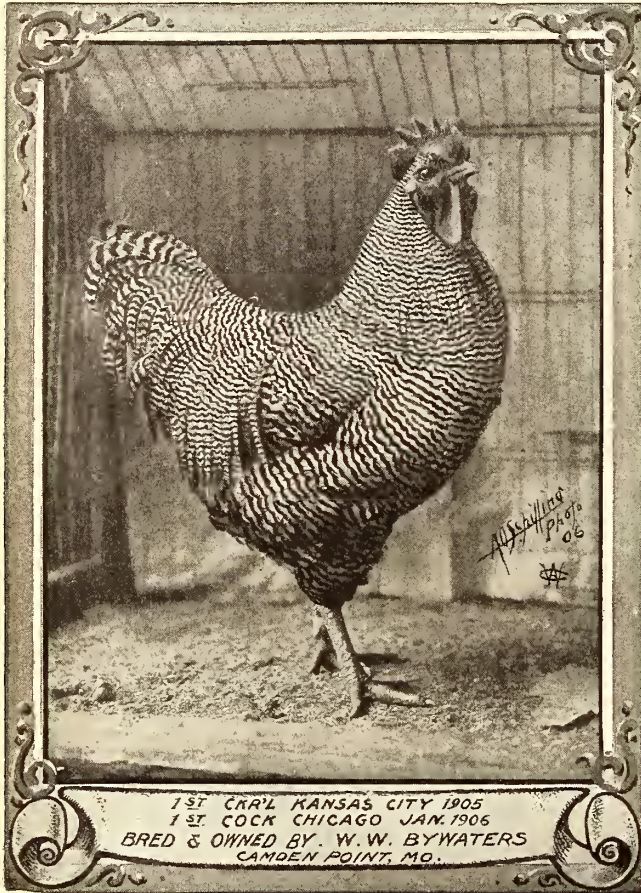

Bred and owned by D. T. Heimlich, Jacksonville, Ill.

that "the Barred Plymouth Rock is no nearer to approaching what the Standard calls for than they were ten years ago," is like hearing the sluggard who fails to realize the fact that no goal is reached, neither is perfection in man, beast or fowl, but there is a sufficient number met with through the journey of life that cause the thinking and willing worker with high aims and purposes to make effort that eventually brings

which a combination of characteristics are brought out that make them the embodiment as the greatest work of art produced in all poultry culture. Through selection the breeder has removed almost entirely the predisposition to revert back to either of its three or more original ancestors that are claimed for them. It is seldom a white or black chick appears where breeders adhere in their selection of breeding stock to such, as in a great degree, come up to the requirements of our Standard. There are annually specimens produced and exhibited that in several sections of their makeup are so near perfect that the breeder sees the possibility of making a combination where he can produce a specimen with defects in all sections minimum. The comb is a feature that often is found just right in size, form, spacing of points and quality of texture. The head, with perfect eyes, beak and appendages of wattles and earlops. The neck, with the arch below the head line—then filling out in bell-like spread to cap every feather showing the dark and light barring of equal width and standing out clear. This section is often found perfect in finish of form and within a quarter of a point of perfect in color, which would mean that every feather in the section had the equal division of both colors, clean cut and in color the silvery white and the dark, just short of positive black, and every bar going down to the skin. A few such are met with, the only fault being when bunching the feathers in hand the tips of some being white instead of dark. The back, too, is often found of right length and width, with plumage well barred down, narrow and regular, with but few broken barred feathers, so that the discount can be made as only a half-point faulty of the six allotted to color in this section. The breast has shape and color equally divided, five for each. A full, broad, well rounded breast is what is most desirable. The color and barring differ from that of the female in that the dark bar is seldom found as positive in color.

The character as to straightness and freeness of light shafting running through the dark bar, this being a common fault; also a minute white tip on the male's breast feathers, which greatly detracts from the finish of color. The body and fluff

color and barring should blend well with the breast. The size, carriage and spread of tail on a specimen correct in back, neck and breast shape is a feather that often makes or mars the finish of a specimen. A tail carried too high is a most serious fault. This section is seldom found perfect. When so found it is of utmost value to fix as a characteristic on a flock. The barring of tail coverts is often found nearly perfect, and

BARRED PLYMOUTH ROCK COCK.

Bred and owned by W. W. Bywaters, Camden Point, Mo.

if the main tail feathers bar straight and clean cut, this section as a breeding factor is most valuable. The length and depth of body is of essential importance, excess of size often give a Brahma or Java type, with legs too long. The proper length of legs under a well proportioned body gives balance and finish that goes to make a symmetrical whole, each part in perfect harmony, blending into one another, and the whole set on legs that are well spread, toes straight and in color a nice even shade of yellow, free from tendency to orange red or pinkish white. A green tinted leg is unworthy as a breeding specimen in either sex at the present day, for all such should go to the cull class.

We have progressed too far with this variety to put up in hopes of "breeding up" from such specimens. All such should be classed with white in earlops, feathers, stubs or down on shanks or deformities. Defects offset in mates modify, as a rule, serious faults and disqualifications, should and can only be overcome by close culling, thus eliminating without taking chances. None but the best should be considered worthy to perpetuate stock from. This made a rule and strictly and carefully adhered to, will do more to build up a flock than any other possible method that might be suggested. There are still too much extreme colors held on to in breeders, which, in many instances, has resulted in producing males with entirely too much metallic in the dark bar. These bred with females so near black in plumage, tends to fix color characteristics from which there must be a withdrawal for the best interest of maintaining clearness of barring in the female progeny. The pullet matings will stand a darker shade in the male, mated to the standard barring now required in the female. This will mean doing away with the open, splashy, indistinctly barred males and coarse barred females, so that eventually the matings will be male and female where both harmonize in type and color of barring.

To achieve this, care must be taken to select those that ap-

proach nearest, and by judicious inbreeding fix the character and tendency that, with a few years of experience, lay a foundation to uniformity for breeding the correct shades of color most desirable. When extremes in colors and barring are cut out and our matings modified and such as accord with Standard description and requirements be used so that the great confusion and inability now so prevalent among old and new breeders to comprehend what the "double mating" means may be done away with, and the single mating produce the results wanted and desired.

CROP BOUND POULTRY.

A Few Timely Suggestions on the Treatment of this Trouble—Plenty of Grit the Best Preventive.

Written for American Poultry Journal by Mrs. Frances Tallon, South Haven, Mich.

I suppose that sometime in every poultry raiser's life he has a crop bound fowl; it's not a common occurrence, but rather the exceptional, and rather a discouraging outlook generally. I have often heard people say, "The remedy I use is the ax." Some even open the crop and remove the substance clogged there, but that is unpleasant and it's not every one that has nerve to perform a surgical operation, for it has to be sewed up again, and the substance being sour and foul smelling, makes it most unpleasant. The causes are various, but I think the worst is eating old dead grass or long blades of hay, for the trouble usually comes in the winter. This winter one cold Sunday morning—and we on the shores of old Lake Michigan do have some cold mornings, even in a mild winter; that is why we have such a delightful climate for a summer resort—I detected on going into the poultry house a very bad odor. After a while I found that two of my nice cockerels were crop bound, having great wads in their craws and making an effort to swallow it all the time. The day before I had let them scratch in some hay intended for horses, not chickens. Clover hay is what chickens need—what they can swallow of that is short and beneficial, but long hay is bad. Evidently they had eaten too much and it had formed into a wad that could not pass out.

I took them, one at a time, and gave them this treatment: First, I got a pint of quite warm water, with baking soda in it, put the fowl on my lap, with its feet stretched out behind it. I then took hold of its head with the left hand and opened its mouth with thumb and forefinger and with a teaspoon

WHITE WYANDOTTE.

First prize hen at Madison Square Garden, New York, 1906. Bred and owned by Charles Nixon, Washington, N. J.

forced it to swallow about half of the amount; then I took it by the legs, held it head down in a pail. The soda, correcting the acidity, caused it to run out of the fowl's mouth, cleansing the craw of some of its foulness; then I gave it the rest of the warm water, kneading the craw for some time. They were the worst cases I ever saw; being hay it would not unpack; food will soon unpack, but hay or old grass has to be digested.

I followed this treatment for two days, then I prepared water the same as before, but instead of the soda I used about five drops of Lee's Germazone, gave half as before, then turning them head down to wash out the remaining sour fluid, giving the remainder afterwards, still working the lump, and finally the lump commenced to shrink until, one morning I succeeded in pushing it down and it was gone to stay. I did not give them any food for two days, then gave them bread soaked in milk and plenty of grit. They ate greedily of the grit. I think they had been short on their supply of grit. It was on Saturday that they ate the hay and we forgot to order grit that day and it was Sunday that I found them in this condition. I know they did not have grit enough.

I only spent about ten minutes each day apiece treating them and they certainly were worth that much time spent. They came out of it a little thin, but as healthy as ever. I kept them separated from the rest of the flock. Grit is very important. I have had chickens refuse to eat corn until they had all the grit they wanted, then they would eat the corn greedily.

Now, if you have chickens off their feed or crop bound and no lice, just give them a good lot of coarse grit to run to and it is almost sure to set them to eating again. I think that is one reason that chickens running at large are often healthier than those confined in pens or yards; they always find gravel or some coarse stuff to "grind" with, and sometimes, when dependent on man—or woman—they are neglected.

Another thing in favor of running at large is they don't gorge themselves with any one thing. It's a peck here and another there. They like a variety; that is the secret of mixed grain food. I surely advocate mixed grains for best results.

BUYING EGGS FOR HATCHING.

The Majority of Breeders Give Full Value for Money Received—Advice to the Amateur.

Written for American Poultry Journal by L. Watson, M. D., Chesaning, Mich.

A cheap way to get a start in keeping poultry is by the purchase of eggs, and here, as with breeding stock, don't go on the "cheap," but pay a fair price, and in doing so, don't

First prize Buff Orpington cock, Cleveland and Indianapolis, 1906, and Goshen, Ind., 1905; also second Cincinnati and Goshen, 1906. Bred and owned by Will H. Schadt, Goshen, Ind.

get the idea in your head that the higher price you pay the bigger hatch you will expect. If you do, you will in all probability be disappointed, but the majority of the rank and file of breeders are honest in their dealings and will give you the best they have, and if, as sometimes, a season of bad hatches

is experienced or accidents happen, you write and place the matter before him fairly and squarely, he will make some effort to arrange matters to your mutual satisfaction. The amateur is too often hasty in writing letters, which often do more harm than good, and are written at a time when adjectives are liable to be too freely used and with this a little exaggeration,

FIRST PRIZE CKRL. MADISON SQ. 1906
ROCK HILL POULTRY FARM Ossining N. Y.

SILVER PLYMOUTH ROCK.

First prize cockerel at Madison Square Garden, New York, 1906. Owned by Rock Hill Poultry Farm, Ossining, N. Y.

and the result is the breeder, if not an old hand, is "riled" and the "fat is in the fire." Now, I would say to you, my amateur friend, to observe the following rules and you will come out all right:

First—On receipt of eggs unpack at once and if any are broken or packages received in damaged state, write the shipper at once, stating the condition eggs were received in and whether due to lack of care in packing, and if this is the case, insist on having them replaced, as with the cheap and safe packages made today, if care is exercised in packing the eggs, they should carry safely any distance, barring accidents.

Keep notes of the tests you make after setting the eggs and the number that are infertile and if the infertility runs higher than you think it should, don't sit down and write that the eggs received were no good, etc.; wait until the hatch is taken off and then you will see feathers on the shanks of a clean legged variety or as they grow older, a black feather will show in a white specimen, etc. Now is the time to write and give him fits. Again write, about the time the chicks are big enough to distinguish the sexes. Look them over and if you have a cull or two, what of it? There is that cockerel that we will try and get fit for the first show, and some of those pullets are all right, so as nothing in the line of breeding stock or fowls has as yet attained perfection, you should be satisfied. One exhibition specimen in a hatch is a good average and a good investment for your money. Now you can write and tell the breeder that the hatch was not up to your expectations in fertility, etc., that there were so many culls and a few good birds, with one extra good bird, that you don't want the earth and are satisfied.

If the fertility is low when eggs are tested, write at once, stating facts, and nothing more. Leave it with the breeder and he will do what is right.

All breeders should see that eggs are strictly fresh, all thin shelled and extra large or small ones culled out and that they are carefully packed, well tied or sealed and carefully and plainly addressed, so that mistakes will not be made in name, place or route eggs are to travel.

Be prompt in filling orders or write and explain cause of

delay. Don't guarantee a hatch to hatch so much percent, except you want to have trouble occasionally, as all purchasers are not above trying to get an extra setting by reporting a poor hatch and the guarantee you have given leaves the "door open" for them to walk in by making a false statement as to the hatch. Help the novice make a start in the business, but don't be "flim-flammed" by sharks.

HATCHING AND RAISING CHICKS.

A few Timely Suggestions on the best Method of Selecting Eggs and the Care of Chicks after Hatching.

Written for American Poultry Journal by Harry W. Quinn, Chicago, Ill.

This article is from my own successful experience and may be of some help to beginners in the poultry business. I will divide it into two parts: first, setting the hen; second, raising the chicks.

Evening is the best time to set hens, because it is dark and

in the nest for the first twenty-four hours; then they can be removed to the brood coop, which should be placed in a dry and sunny location.

Their first meal should consist of bread crumbs moistened with sweet milk and some chick grits mixed with it. After that they should be fed every two hours for the first two days, then they can be fed four times daily. Hard boiled eggs is a fine feed, but when that cannot be obtained commercial chick feed may be substituted, but care must be taken to avoid wet or sloppy feed, such as cornmeal or middling mashes.

Dry oatmeal is very good if fed sparingly. Give the chicks plenty of fresh water and chopped green food. Milk is a fine growing food, but be sure it is fresh, as sour milk is very bad for young chickens. Chick grits should be kept before them all the time.

A very good coop can be made of an old packing case by covering the cracks with lath or tarred paper.

I should advise the use of covered runs in order that the chicks may be kept safe from cats, rats and hawks. Brooder chicks should be cared for in much the same way as chicks with hens.

SEVEN WHITE PLYMOUTH ROCKS THAT SOLD FOR \$1,750. BRED AND SOLD BY U. R. FISHEL, HOPE IND.

the hen cannot leave the nest, and by morning she has become accustomed to the new nest.

In selecting the eggs it is better to take those that have a smooth shell and are not pointed at the ends. The nest should be a small box, about twelve by fourteen inches and four inches deep; it should be placed where the rats cannot get to it as they will suck the eggs. The bottom of the nest should be covered with a layer of moist earth, about an inch thick, and then short straw should be put in and shaped like a saucer, so that the eggs will stay in the middle.

Fresh water and whole corn should be kept near the nest all the time and if the hen does not come off to eat she should be lifted off once a day very carefully, so as not to jar the eggs. Do not feed the hen on the nest as the eggs should be cooled for a short time every day.

When the chicks hatch they should be left under the hen

POULTRY MAIL ORDERS.

Rules to be Observed by both the Seller and Purchaser—Promptness in Answering Mail Very Necessary to Success.

Written for American Poultry Journal by B. M. Russell, Lamont, Iowa.

At this season of the year it may not be out of order for breeders of fancy poultry to study proper rules for a successful mail order business. While it would be a herculean task to lay down hard and fast rules that would meet every contingency, yet I feel that a few rules might be stated, that, if followed, would help us all as fanciers and breeders of the beautiful—the feathered tribe. Of course the Golden Rule is "do unto others as you would have others do unto you."

If this one rule was followed strictly, the way of the great buying public would be easy—if all mail order fanciers followed it, but, alas, there are a few who go by the rule, "do him before he does you." I am glad to think, however, that the world has but few of that kind of fanciers.

My experience has proven to my entire satisfaction that there are those who are doing a mail order business who do more than they promise—who send out better stuff than they make claim of having. Their rule is to do a little better than you promise. Such breeders always have orders to return, for they are remembered with future orders. "He who builds for today builds on a foundation of sand."

I think every true fancier should make it a standing rule to test eggs from every pen headed by a new male before he offers eggs to the buying fancier. I have several new males in my pens of Buff Orpingtons and Rhode Island Reds, and I am today—February 15—taking off some very fine chicks. My method is to take seven or nine eggs from each pen I desire to test and put them under hens, if convenient, and note the results. If a good per cent hatch, I know my males are such that I can truthfully represent, and can consequently guarantee a good per cent of fertility. I count more on my hatch than I do on a fertility, for I want strength and vigor. This is a little earlier than I usually want to test my eggs in this manner, but a number of local customers were purchasing eggs and I wanted to be able to make a report when they did. One customer reports every egg but one as hatching—not bad for winter hatch under hens.

It should be an unailing rule to answer promptly and fully every letter or card inquiring for eggs and birds. Nothing is so disappointing as to have to wait for days and days for a reply to our answer to an advertisement. We at once lose faith in the business ability of such delinquents. More than

nals as possible, and the more the better, if our capacity for filling orders justifies. It is true that many advertise in the farm papers, but our experience has taught us that only beginners and those with poorly graded stuff confine themselves to such mediums. The readers of farm journals want only the cheaper class of birds and care nothing for quality and

COLUMBIAN WYANDOTTE.

First prize cockerel at Indianapolis, Ind. Bred and owned by Oak Hill Poultry Yards, 2055 Hillside avenue, Indianapolis, Ind.

WISCONSIN KING.

Pronounced by many competent judges and breeders the best Buff Wyandotte ekl. in America. Absolutely solid, even buff throughout. Silver Cup winner. First at Delavan, and special for highest scoring bird in the show, all varieties competing. Owned by Ralph W. Sturtevant, Beloit, Wis.

that, we are apt to get in correspondence in the meantime with others who may prove more prompt. Remember, that it is the early chick that gets the worm. We admire the early bird.

Experience has taught all fanciers that to be successful and have a little profit, we must advertise in as many poultry jour-

nals as possible, and the more the better, if our capacity for filling orders justifies. It is true that many advertise in the farm papers, but our experience has taught us that only beginners and those with poorly graded stuff confine themselves to such mediums. The readers of farm journals want only the cheaper class of birds and care nothing for quality and

three hundred dollar birds. Nor do the cheaper poultry journals always bring the most orders. My experience has been that where I have paid the biggest advertising fee is where I find the medium that brings the most inquiries. It is proper, it is natural to want to place your money where you can get the most for the investment, and that is what I maintain we get when we place our ads in a journal like this. So I say, patronize the poultry journals as far as you can, for it is these journals that make it possible for the fancier to be a fancier and dispose of his fine stuff after he has become one and has grown the stuff. Just what would become of the fancier if it were not for the poultry journals I am not prepared to say, but I do know that had it not been for the great poultry journals the poultry industry would not be where it is today, one of the best and most honored industries in our land. Patronize the poultry journals.

A LITTLE TALK ON EGGS FOR HATCHING.

Ordering Eggs Ahead—Satisfying the Purchaser—Marking and Packing the Eggs for Shipment—Exercising Judgment in Shipping.

Written for American Poultry Journal by A. C. Allen, Knightsville, L. I. N. Y.

The spring months, March, April and May, is the time that the bulk of the trade comes in eggs for hatching, and in these three months there are more pleased, as well as more disappointed, people than at any other season. A great deal of this disappointment could be avoided, as well as a pleasure added, too, if both the buyer and seller would use a little more judgment, the one in ordering his eggs and the other in shipping them.

The party that wishes to buy a setting of nice eggs should correspond with the advertiser in some first class poultry paper (say the AMERICAN POULTRY JOURNAL) in January or the first of February at least and send his order at least a month ahead. It is not necessary to send all the money, just enough to bind the bargain. Then the breeder will know that you mean business, and tell him about the time that you will want the eggs shipped. Do not order eggs shipped in January and

then blame the seller if you do not get a good hatch. If it is pleasant where you live, don't forget that where the eggs are shipped from it may be below zero. If you heat up your incubator and have it ready before you send, perhaps 500 miles for your eggs, don't be surprised if you have to keep it running a week without eggs, as the breeder may have twenty-

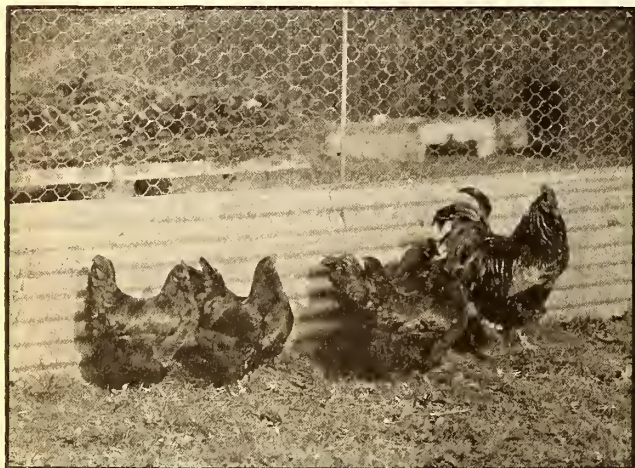

SILVER WYANDOTTE PULLET.

Bred and owned by J. F. Van Alstyne, Niverville, N. Y.

five orders ahead of yours that have been ordered a month. The first order must have the first attention. If you wish to put a choice setting under a hen, it is good judgment to set two hens. Put the good eggs under one hen and set the other hen on china eggs; then if your hen leaves the nest from any cause take out the china eggs from under the surplus hen and put the choice setting under her. *Don't* change the hen, but change the eggs. I have saved a great many in this way.

The breeder that sells eggs for hatching can help to make his customers satisfied in a great many ways. He should do all in his power to see that the eggs from his pens are fertile before sending them out. It is a good plan to put a few

PEN OF BLACK ORPINGTONS.

Bred and owned by W. H. Gifford & Son, 151 Franklin street, Auburn, N. Y.

marked eggs from each pen in his incubator and after testing he can, if necessary, change his male birds. The breeder of several varieties should be very careful in picking up his eggs to see that they are correctly marked and, if by accident, as will sometimes happen, a female should fly into the next yard containing another variety, don't pick her up and put her back

at once, but shut her up separate for at least two weeks. She can then be safely put back and her eggs will be all right again if they have been contaminated.

The breeder should keep a record of all orders and stamp the date when they are to be shipped on each order. He should exercise good judgment in shipping only on warm, pleasant days and should notify each buyer that he has shipped his eggs and the buyer will know when to expect them. All should be done in a business and systematic way. If both buyer and seller handle the egg trade in a business way a great deal of trouble that now exists will be avoided.

GLEANINGS FROM MY EXPERIENCE.

A Few Things in the Management of an Incubator, Learned from Practical Experience.

Adjusting the Regulator—Selecting the Breeding Stock—The Judicious Use of Lice Powder—Causes of Bowel Trouble.

Written for American Poultry Journal by Mrs. H. W. Saxton, Granville Summit, Pa.

It has always seemed curious to me what a difference there is in people's experience with the same breed of fowls. Plymouth Rocks have the reputation of being everlasting setters, yet I have found them to be quite the reverse. Although our

One of the many prize winners bred, owned and exhibited at the Wisconsin State Show, Oshkosh, January 15 to 20, by King Bros., Oshkosh, Wis. This beautiful bird weighs 9 lbs. and heads Yard No. 2, cockerel mating.

hens laid well through the winter, I could never get any very early chickens, as none would set until April, once in a great while one in March. This was discouraging from one point of view and led to the purchase of an incubator. I find it will set when I wish it to, does not break any eggs or leave its nest unless told and, best of all, never tramples the chicks before leaving the nest. Altogether, it is decidedly more reliable and easier to manage than the hen.

I have learned a few things in the management of the incubator that have greatly decreased the attention required. Give your regulator a fair chance to regulate by so adjusting it that the damper will be slightly raised when the machine is at the required temperature. Then, if the oil gets low in the lamp, the damper may go down and still maintain the temperature, and if the blaze is too high, it will raise the damper still higher and no harm done.

After the final adjustment of the regulator when starting the machine I have found it best to change it as little as possible, perhaps a little on the eighth and eighteenth days, on account

of increase of heat within the eggs. Upon cooling the eggs and putting them back in the machine, if the thermometer is lying on the eggs the damper may still be raised considerably, while the thermometer shows the heat to be low. The temptation then is to think something is wrong and readjust the regulator, but if you will patiently wait a half hour or so you will find the temperature correct.

The reason for this apparent difference is that the regulator is adjusting the damper according to the temperature of the machine, while the thermometer shows the temperature of the eggs which have not yet warmed up.

Some other things I have learned besides the care of an incubator. I have found that practically all the chickens hatched from eggs laid by selected birds can be raised if you select hens one or two years old and vigorous and mated to an early hatched cockerel or cock not more than two years old. The flock with proper care will be healthy and grow quickly to a uniform size, while chicks from a promiscuous lot of eggs, including those from late hatched, undeveloped pullets and the late cockerels, will vary greatly in size and stamina, the smaller, weaker ones being a constant care, gradually dying off and never attaining the size of the larger ones. Also I have found it the height of extravagance to be without a good lice powder on hand. No poultryman can afford to do without it, for unexpectedly, sooner or later, the army of mites

weather and fifteen eggs if it is warm. Every afternoon she should be fed and given good water. Corn is about the best feed for biddy if you give her plenty of sharp grit, for it furnishes the necessary heat.

Test the eggs on the seventh and eighteenth days. After the nineteenth day do not touch her or the nest, for it is liable to chill the little chicks so that they will die in the shell.

On the twenty-second day take her off the nest and remove all

Partial view of the Lake Side Poultry Farm (J. F. Van Alstyn, Prop.), Niverville, N. Y. This farm is devoted to the breeding of Silver and Columbian Wyandottes.

Prize winning Larded Rock pullet at the Wisconsin State Show, Oshkosh, January 15 to 20, 1906. Bred, owned and exhibited by King Brothers, Oshkosh, Wis.

will invade your flock and unless prepared to fight them they will destroy it. However, do not wait until you know they are present before proceeding against them by using the powder occasionally as a preventive measure.

It does not pay to entirely remove the heat from the brooders until the chicks are at least four weeks old, even in hot summer time. It may, perhaps, go out during the middle of the day, but the nights will be cool and look out for the chill, rainy, days. Cold is one of the most frequent causes of bowel trouble. I said four weeks, instead of six or eight, as are often recommended, as our hens almost invariably wean their chicks when four weeks old.

A labor saver as well as chick saver is the use of prepared chick foods. By using them for the first four or five weeks none will die as the result of feeding.

HATCHING AND REARING OF CHICKS.

The first essential is the good natured old hen. About three days after she gets broody set her on some glass eggs. If she remains on these a couple of days you may be sure she is ready for work. Set her at night on thirteen eggs if it is cold

egg shells for chicks often cut themselves severely on these. If you have other setting hens you can give them the chicks who are pipping the shells on the twenty-second day.

Remove the old biddy and her brood to a previously prepared coop. I find that a dry goods box about two feet high, three feet deep and three feet long is a very good size. The front should be covered with wire netting of about one-half inch mesh, except in the lower right hand corner, where a door, sliding upwards, can be made. Cover the bottom with straw chaff and have a small salmon can in one corner for water.

Do not feed the chicks for about thirty-six hours after they are hatched. They can then be fed some bread crumbs and hard boiled eggs, finely chopped. Give the chicks plenty of fine chick grit. This is essential to life for that is their only way to grind their food. For the first ten days dampened cornmeal, not wet, should be their chief diet. After this time

ROSE COMB WHITE LEGHORN COCK.

Winner of first at St. Louis World's Fair, New York and Chicago. Bred and owned by Rocky River Poultry Co., 5931 Superior street, Chicago, Ill.

they can be fed prepared chick food, until they are six weeks old. After this give them cracked corn and wheat, gradually increasing until they are two months old. They can then be fed wheat and other small grains until they reach maturity.

H. T. LAMBERT.

Hampton, Iowa.

PRIZE ARTICLE DEPARTMENT

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communication about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. All articles must be written on one side of the paper only. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

The first prize in the contest this month has been awarded Fred Kazmeier, Kiel, Wis., and second prize to Mrs. M. A. Ford, Star Route, Lockwood, Mo.

FEEDING CHICKS.

Since the introduction of the incubator and brooder the matter of feeding chicks has been given more careful attention and every person engaging in the rearing of fowls is

A 200-egg White Wyandotte on the Iolink Poultry Farm, Egg Harbor City, N. J. J. H. Wolsieffer, proprietor and manager.

desirous of ascertaining the best foods for a given purpose.

The natural food of the "hen family" is grain, vegetables, insects and grasses, together with sufficient grit to digest these "rations" and sufficient drink to slake thirst. It is to the lack of this properly varied diet that is largely due the lack of winter egg production. It is the lack of such diet in "required proportion" that lessens the fertility of eggs for incubation that are produced out of the natural season largely. It is the lack of "properly adjusted" rations that makes the rearing of artificially cared for chicks a complex problem.

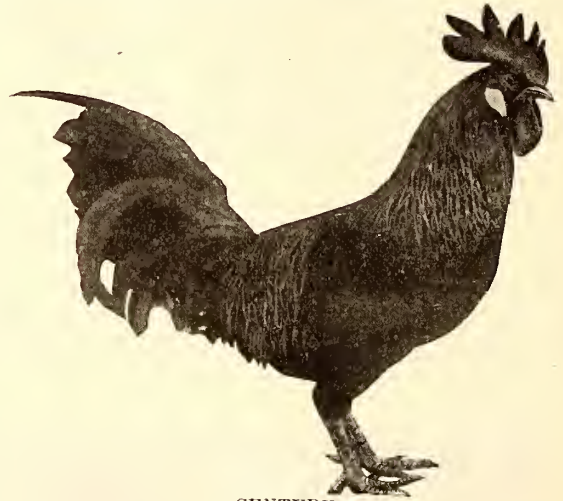

What foods, in what proportion, how often to feed and how well assimilated, are all questions of importance to all stockmen and are coming to be of recognized importance to poultrymen.

True, there can be no universal formula or system of feeding alike adapted to this whole continent or globe. Just as human beings in different localities require or abstain from certain foods, so must the successful breeder of fowls recognize and cater to the taste and requirements of the feathered friends according to the breed, locality and latitude that he and they reside in.

In the feeding of tiny chicks, as the Irishman would say:

"Don't feed them;" that is, not for thirty-six to forty-eight hours. We verily believe more of these downy creatures succumb to premature deaths from being fed too soon and too much, rather than not soon enough or not enough food being given.

The yolk of the egg is not fully absorbed for several hours after the baby chick breaks from its tiny prison house, and

CENTURY.

Seven-pound S. C. Brown Leghorn cock, sire of second and third prize pullets at Cincinnati. Owned and bred by Orion E. Michael, Dayton, Ohio.

in view of the fact that life will be sustained perfectly for many hours after hatching, they need no food the first twenty-four or thirty-six hours.

With the proper degree of warmth, either from artificial means or from Mother Bidly, one can rear nearly all chicks hatched barring accidents when fed at regular intervals on clean, wholesome food reduced to eatable size, such as an adult fowl relishes.

We feed "dry foods" almost exclusively and rarely have any trouble from bowel disorder since discarding wet goods during the chick's babyhood days.

Steel cut oatmeal, millet, a chick feed that is composed of a mixture of seeds, grains, grit and meat preparations in just the right proportion to make a "balanced ration" are all in my favor. As soon as the weather is settled and warm enough

TRIO R. C. BROWN LEGHORNS.

First cockerel, first hen, first pullet, Chicago, December, 1904. Also first cock and first hen, Missouri State Show, December, 1905. Bred and owned by T. E. Applegate, Spickard, Mo.

to admit of outdoor exercising and cooping we lessen the quantity of food, as the chicks can add so much to their feed by gleaned choice bits that are ever at hand upon the farm for the "picking up." But, while confined to the brooder, their diet should be varied by finely minced, hard boiled eggs (shell and all), well mixed with bread crumbs, lettuce leaves and shredded onion tops, together with clover leaves, supply

the needed green food, while two or three times a week bits of raw liver or a few angleworms tossed into their hurdle will cause such a scampering and hustling as will effectually prevent any leg weakness from lack of exercise.

Never omit fine, sharp gravel or grit and plenty of clear water from their feeding pen, but be careful to provide the water in such manner as will prevent the wee things from getting wet, as they are likely to chill afterward and a chilled chick is quite likely to succumb to some chicken illness sooner or later.

There are new questions constantly being asked relative to the care, housing and rearing of chicks, new problems to be solved that engage the attention of the thoughtful student of poultry culture, who in turn gives out that which has proven helpful to him and which under like conditions will prove equally helpful to others.

We are just now on the threshold of another season's hatching. Every poultry man and woman too is now making the best possible preparation for another active season. Just how successful it may be depends largely upon the caretakers' ability and strength to perform the duties attendant thereto at the right time and in the right manner.

Clean, wholesome food, given at regular intervals (five times a day) until climatic conditions admit of steady outdoor cooping and free range, then decrease to three daily feeds, and later to but two (morning and evening), scrupulous cleanliness in brooder and runs, freedom from poultry vermin and sufficient

so that I could remove any left and keep everything sweet and clean.

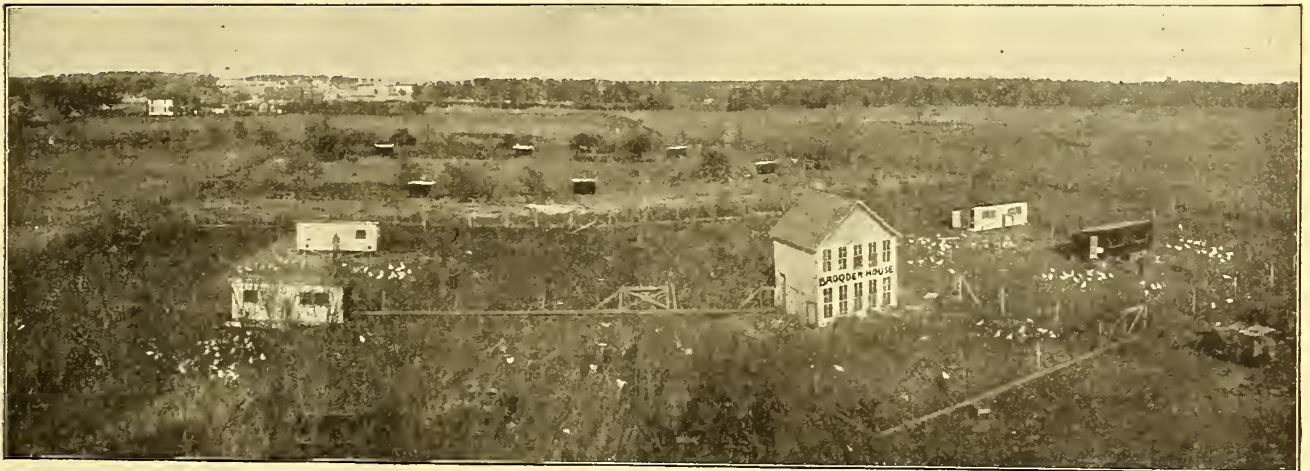

I fed whole wheat and cracked corn in chaff as soon as they could eat it. I only kept brooder lamp lighted a few days in daytime and before chicks were three weeks' old had stopped lighting lamp at all and had south window up much of the time.

I never had any trouble about piling up or overheating in brooder as in a very short time I left brooder door open at night and chicks would sit with heads peeping out from under hover cloth.

In three weeks they were put in good, large, well-ventilated coops, with tight floors hinged so that I could raise up the coops and air and clean floors daily. These, as well as pens, made of lath, 10x12 feet, in which coops were placed were moved to fresh grass each day. I raised three incubator hatches to the age of three weeks in that room, one hundred and fifty in later hatches and never saw chicks do better.

The chaff in brooder should be changed daily; in fact, the chicks will scratch it out if you use timothy chaff. Once a week I changed chaff in yard. It is a good plan not to put too much in yard at first, adding a little fresh each day and keeping well stirred up. This year I have sewed old calico pieces together to put over paper under chaff so I can take chaff up easily. The newspapers keep dust from going through to floor.

By using this plan I saved considerable coal oil, did not have

Bird's-eye view of part of Chas. V. Keeler's Winamac, Ind. extensive poultry farm, where prize-winning White Wyandottes are bred. In the distance are seen the summer colony houses, where the youngsters are raised in a large orchard and with free range of the adjoining fields.

warmth for comfort will insure the rearing to maturity the greater number of chicks hatched—barring any unforeseen accidents.

FRED KAZMEIER.

Kiet, Wis.

PLAN FOR RAISING EARLY CHICKS ECONOMICALLY.

Last spring, when my incubator was due to hatch, I was a little worried about my chicks, as the weather was so wet and cold and we had no brooder house and a very poor hen house. My husband suggested putting the brooder in a room upstairs that we were not using. I at first objected, but finally consented to the plan. The room is on the southeast corner, protected on the north and west, and, as we keep a fire day and night in the room below, it is a warm room.

I put an old rag carpet on the floor, although that is not necessary. Over this I spread newspapers. I put my brooder in there and at first used only the wire yard furnished with brooder, enlarging it later to one-fourth, then one-third of the room, 14x16 feet. On top of newspapers I put timothy chaff from barn mangers and loft quite thick, also put this fine chaff on top of newspaper on floor of brooder.

After drying off chicks nicely in baskets I put the first time, April 8, 100 chicks into the warm brooder. They scattered out over the soft chaff and looked as comfortably happy as chicks can look. In twenty-four hours they were picking timothy seed from the chaff. In a week they were scratching like a flock of old hens after timothy seed and the millet seed, cane seed, etc., that I scattered there. I kept sand, oyster shell, dishes broken up fine and charcoal before them and they ate a great deal of it. I put the drinking fountains on a piece of oilcloth to prevent them from getting chaff wet and fed corn bread or anything liable to sour on pieces of oilcloth

to go outdoors to see to chicks in bad weather, had the comfortable feeling that my chicks were always warm and dry and, I suspect, saved a good many chicks.

I started with thirty hens last year, late in season, and raised about 400 chickens.

MRS. M. A. FORD.

Star Route, Lockwood, Mo.

The United States Department of Agriculture recommends, in warding off roup, a decrease in the proportion of corn, and an increase in the proportion of meat food, in the daily ration.

For sneezing, and slight colds, a simple remedy is a tablespoonful of kerosene in the drinking water, to be repeated for several days in succession.

For sore head or chicken pox, an ointment made of two parts lard and one part kerosene, is reliable.

Another cure for sore head is bathing with salt water, and afterward anointing with carbolyzed vaseline.

Cases of roup have been greatly benefited by placing a little bromide of potassium in the drinking water.

It is a noteworthy fact that the cry of "cholera" comes from sections where corn is the main diet.

Disease comes to many flocks through the drinking vessels. Disease lurks in filthy water fountains.

April hatched Leghorns generally give better results than those hatched in May.

Look at the date upon your wrapper. Many subscribers write to ask when their subscription expires and many complain because we discontinue sending the JOURNAL at the expiration of the time for which it is paid. The date when your subscription expires is found on the wrapper each month.

AMERICAN POULTRY JOURNAL is the oldest poultry paper in America. It has a national and world-wide circulation. The best writers on poultry matters contribute to its columns. It receives the patronage and endorsement of the foremost representative breeders of standard poultry and manufacturers of poultry appliances in the country.

Advertising rates are sent upon request.

45,000 A. P. J.'s for April, 1906.

State of Illinois, County of Cook, ss.

Chicago, March 26, 1906.
J. G. Budde, secretary and treasurer of Regan Printing House, Chicago, being duly sworn, certifies that the American Poultry Journal has contracted for printing and binding forty-five thousand copies of the April, 1906, issue.

J. G. BUDDE.

Subscribed and sworn to before me this 26th day of March, 1906.

BLANCHE ELDER EDDY,
Notary Public.

GUARANTEED SUBSCRIBERS.

To our subscribers the display advertisers of the American Poultry Journal are guaranteed; that is, if any advertiser using display space in these columns is proved to be a swindler, the American Poultry Journal will make good to the subscriber the amount lost. We do not guarantee that men in good standing shall agree in their opinions; we do not guarantee nature against infertile eggs, but we do agree that in case a downright swindler succeeds in swindling a subscriber, we will reimburse that subscriber and publish the rascality of the swindler. We ask, in consideration of this guarantee, that our subscribers, when writing to an American Poultry Journal advertiser, say, in every case, "Saw your ad in the American Poultry Journal." In no case will this be to your disadvantage, while in many cases it may serve you well. In either event we shall be obliged to you.

Annual Meeting of the Stock-Holders of the National Fanciers' and Breeders' Association of Chicago.

The annual meeting of the stockholders of the National Fanciers and Breeders' Association was held March 8 at the office of the secretary, Fred L. Kimmey, 325 Dearborn street, Chicago.

Mr. Thos. F. Rigg, of Iowa Falls, Ia., and Mr. J. F. Schureman, of Chicago, Ill., were added to the board to take the place of members whose terms had expired. The complete board now consists of the following members: J. F. Schureman, E. J. W. Dietz, J. Louis Draper, E. B. Eddy, K. J. Muir, M. Wagner, Frank B. White, Geo. G. Bates, of Chicago; and Fred L. Kimmey, Morgan Park, Ill.; J. C. Klein, Blue Island, Ill.; E. W. Wickey, East Chicago, Ind.,

and Thos. F. Rigg, Iowa Falls, Ia.

A very gratifying report of the financial condition of the association was rendered, demonstrating that the recent show held in January, 1906, was one of the most successful, if not the most successful, that this association has ever conducted, and a decided contrast over the previous show held in January, 1905. At that time, owing to a blizzard during part of the week of the show, excessive charges for rental, and the purchase of a large number of coops, the association came through with a deficit of nearly \$1,500. The January, 1906, show was so successful that it wiped out the old deficit, paid all its running expenses and comes out with about \$400 to the good, and with assets of considerable value, consisting of a complete equipment of exhibition coops. The Chicago show has always had the reputation of paying its premiums promptly, and this year was no exception, every premium being paid promptly within a few days after the show closed.

It is an interesting fact that the Chicago show has always been more successful when held at Tattersall's than any other location. The next show will be held as usual the latter part of January, but instead of commencing on Monday, as heretofore, will commence the middle of the week, thus giving exhibitors a better opportunity for the shipping of birds.

Never in the history of the association has the attendance been so gratifying as at the last show. Every afternoon and evening the exhibition room was taxed to its utmost with interested sight-seers. The quality of stock entered was of the highest. The \$2 entrance fee was the means of bringing out only the top-notchers in every class. The judging was extremely satisfactory, there being but few criticisms. The incubator and poultry supply manufacturers and all others who occupied space at this show reported splendid results, which was made possible by the enormous attendance during the week.

The regular meeting of the directors will be held soon, at the call of the president, for the election of officers for the ensuing year.

Selling Day-Old Chicks.

This is practically a new departure in poultry culture in this country. Three or four years ago it was almost unheard of. No one thought of shipping newly-hatched chicks hundreds of miles and expecting them to arrive in good condition. This, however, is what is being done at the present time, with perfect satisfaction to the buyer. Dozens of breeders throughout the country have taken up this branch of the poultry industry during the past two years, and so far as we have been able to ascertain they are all doing a thriving business. This branch of the chicken industry has been carried on in England for several years.

The chicks are usually shipped in shallow wooden boxes, about six inches deep, with small holes cut in the sides near the top for ventilation. The top consists of two thicknesses of burlap, with narrow strips of board nailed across for protection. The chicks are taken from the incubator as soon as dry and packed somewhat closely in these boxes, and can be shipped 1,000 miles or more in perfect safety.

Owing to the fact that little chicks do not require any feed for from forty-

eight to sixty-four hours after they emerge from the shell, makes it possible to ship them any distance that does not require a greater length of time than this, and by the time they arrive at their journey's end they are ready for their first meal.

This is a very suitable and profitable business for those who have neither room nor time to raise the chicks after hatching them. Profits are good considering the amount of capital that is necessary to invest in such a business.

Meeting of the Standard Committee.

At the recent meeting of the American Poultry Association held at Cincinnati, Ohio, January 18-19, a committee consisting of Grant M. Curtis, Fred L. Kimmey and T. E. Orr was appointed to arrange for the proper placing of new breeds (those admitted during this meeting) in the Standard and to correct errors appearing in the present edition of the Standard. This committee has held a session at Buffalo, N. Y., and the AMERICAN POULTRY JOURNAL will, undoubtedly, be able to soon give a report of this meeting. This early action of the committee shows commendable zeal, and will, without doubt, result in still further advancement of the value of the Standard.

Barred Wyandottes.

From 'way down South in Georgia comes the news that one chicken fancier, a Mr. Holt by name, has originated the Barred Wyandottes! From the half-tones of his best male and female we would say that he has the making of a breeder in himself. His pullet shows real Wyandotte type. But is it not stretching the cloth a notch too far to add this variety to the list of Wyandottes already with us? We will venture that if this gentleman would put the same enthusiasm into the perfecting of a popular variety he would in a couple or three seasons be at the head, in the South, of the fowl he chose to breed. Barred Wyandottes are getting a trifle too close to the danger line. We hope the breeders of the country will express an opinion and let themselves be heard on this question.

Unsolicited Praise.

When a publisher realizes that his efforts are appreciated by his readers, it is very gratifying, and when praise comes unsolicited this feeling is largely increased.

In a recent issue of the Carthage, N. C., Blade, one of our readers, W. T. Jenkins, submits in an interview some very complimentary references to the AMERICAN POULTRY JOURNAL, which we cannot refrain from publishing, as it shows, in a very unbiased way, his opinion of this publication. His opinion, so freely given, is, we are led to believe, held by others, who, perhaps, have not the opportunity or the time to express themselves. The average reader and admirer of a publication does not realize how much good it does a publisher to be told that his efforts are appreciated in getting out a good paper nor how much encouragement is contained in expressions of praise, thereby urging the publisher on to still better endeavors in

the future. In this interview with Mr. Jenkins he refers to the poultry business in general, and the AMERICAN POULTRY JOURNAL as follows:

"There is a sort of free masonry among poultry people, men and women. It is said that there is no other business in the world in which those engaged in it are so willing to extend a helping hand, and give out valuable information to those seeking advice. A glance at the contents of any poultry paper will confirm this statement.

"There are good journals devoted to the chicken business whose subscription prices range from 50 cents to \$1 a year. The value of the articles in any one number is worth a great deal more than that amount to anyone who wants to know anything about chickens or chicken raising. In an interview with our Carthage poultry breeder, Mr. W. T. Jenkins, the other day along this line, he said:

"I consider a good poultry paper a very valuable adjunct to the outfit of any person engaged in the chicken business, no matter how large or small their flocks are."

"No one," he continued, "can afford to be without one if they raise more than half a dozen fowls." Replying to a question as to which paper he considered the best, Mr. Jenkins expressed himself as being decidedly of the opinion that the AMERICAN POULTRY JOURNAL, published in Chicago, Ill., was the best paper of its class. It is a monthly magazine and costs but 50 cents a year. The January number, which Mr. Jenkins showed us, contains 113 solid pages of reading matter and advertisements. (Subsequent editions of the February and March AMERICAN POULTRY JOURNAL contained 166 and 164 pages, respectively.—EDITOR.) It is profusely illustrated and the contributions are from practical poultry raisers. Many of the contributors to this journal are women who have made a success at the business. Some of them—farmers' wives and

others—who in villages and cities, in more contracted quarters, found pleasure and profit in the business. Even to one not interested particularly in chickens these communications are interesting, instructive and entertaining.

"They give the ups and downs of the beginner, and tell in plain every-day English how to avoid mistakes and blunders and point the way to success.

"The JOURNAL has a woman's department and a department reserved for questions and answers. It is a chicken paper exclusively, has been published thirty-six years and has no favorites.

"Each and every strain of chickens is given an impartial showing. The February issue was devoted to a large extent to the Barred Plymouth Rocks. The foremost breeders of this popular strain of fowl contributed articles and photographs of their chickens."

The Australian Competitions.

While we poultrymen have been perusing our new Standard, the Australians have improved their time with more egg-laying contests. The ninth month of the Hawksbury college contest is just over and the report dated December 31, after some rough sea weather, is at hand. Single Comb White Leghorns stand at the top for the nine months with 1,121 eggs to the credit of six hens. This is within a fraction of 187 eggs per hen and is most excellent! The second pen is one of Imperials, a new breed, with 1,039 eggs credited to them. Black Langshans stand next, with 984; Black Orpingtons come next, with 980; Silver 'Dottes have 962, and then Leghorns, Single Comb Whites again, come along in order, with 955. The Rockdale competition, for the same period of time stands: Black Orpingtons, 1,154, averaging 192 eggs per hen for the nine months; Single Comb White Leghorns, 1,113; Black Minorcas, 1,109; Rose Comb White Leghorns, 1,106; Black Orpingtons, 1,104. The

RANKIN'S ROYAL STRAIN OF "AMERICA'S BIG FOUR"

Barred, White and Buff Ply. Rocks and White Wyandottes are bred to win and bred to pay, bred for quality in every way. All stock selected specimens that are line and pedigree bred by the trap nest system from America's greatest sires and champions. Catalogue pronounced the neatest, most complete and business-like ever gotten up, sent free, together with the most beautifully illustrated mating list ever published, if you mention this Journal. Eggs \$1.50 to \$10 per 15, \$7 to \$20 per 100. Seriously, you can't afford to place an order before writing me.

H. P. Rankin, B. 61, Hartington, Neb.

DEATH TO LICE

The old favorite louse killer used by successful poultrymen everywhere. A vermin killer wherever you put it, but harmless to human and animal life. The original Lambert's "Death to Lice" has been in use nearly a quarter of a century. It never fails to give satisfaction.

FOR POULTRY

take the fowls singly from the roost, hold them head down and sprinkle a small quantity among the short fluffy feathers. Only takes a few minutes to go over the entire flock. Then the next day spray the roosts with "Death to Lice" liquid.

For setting hens sprinkle the powder in the nest and in the ruffled feathers. For head lice on chickens use "Death to Lice" ointment. This is an old English remedy in use for years. It's sure and safe.

FOR STOCK

sprinkle "Death to Lice" powder in the mane of your lousy horse and wherever he rubs. The lice will soon depart. Sprinkle or dust it on with a bellows along the neck, back and loins of the cow or wherever the hair is coming out. One good application is generally sufficient. Sometimes it is necessary to scatter the powder over a blanket and strap the blanket on tightly. This takes a little more powder but it gets the lice killer right where it will do the most good.

FOR SHEEP

for ticks on sheep part wool where the lice abide and sift in the "Death to Lice" powder with a bellows or blower. "Death to Lice" liquid sprayed in the pens and sleeping places will help to effectually remove them. One good thorough application is better than several half-way attempts. "Death to Lice" may also be profitably used on swine or other animals infested with vermin. No hog can fatten and fight lice at the same time. Kill them off and save feed.

FOR PLANTS

and vines infested with lice, squash beetles, cabbage worms or the like, dust while damp with "Death to Lice" Powder. Gardeners and florists use it. 100 ozs. \$1.00 or Sample 10c postpaid.

408 Monon Building,
Chicago, Ill.

duck laying contest for six months will open the eyes of the water fowl world with a record of 125 eggs per duck. These leaders are Buff Orpington ducks! The pen of six have laid 752 eggs to December 31. Indian runners are next with 733; Buff Orpingtons again with 700. These competitions are the life of the fancy, almost, in that far-off country, and their influence has done more than all else to stir up the interest of the farmer in pure-bred fowls. It is a practical demonstration to anyone of the value of good poultry. We are afraid it will be some time before our breeders equal these records, yet the sooner we try it the better for the industry.

A Challenge From Afar.

An Australian correspondent challenges this country rather sharply regarding our laying hens. He declares that the stock that American fanciers have sent to his continent for laying competitions has not done as well as native fowls and that our plea of a change of climate affecting our fowls does not hold good, for the progeny of American birds in the skilled hands of Australian breeders fails to score! The birds we have sent to them have molted twice in the same twelve months as a result of the change. No fowl can make eggs to advantage and grow two plumages, in the same year and should we ever hold a laying contest and invite the Australians to compete they will find this true. The fact that American hens of the second generation do not do as well as native stock proves nothing, for we have time and again

Poultrymen, paint the nests, roosts and dropping boards with Pratts Liquid Lice Killer. That's what you need to use now.

been taught by scientists that the environments unnatural to parents are not accepted by the young of the first generation. Our Rose Comb Brown Leghorns that led the second annual Hawksbury laying contest for eight months proved to the Australians that we know a thing or two about laying hens. Their molting twice in a season and leading for eight months gave them the championship when handicaps were considered. At least we think so.

Some Grand Games Sold.

As an instance of a valuable flock's dispersion we will cite the disposal of the late Harrison Weir's Old English Derby games. Here is a flock of Derbies that have been inbred very carefully for fifty years. They have increased in value year by year only to be sold cheaply in the end and probably go to some breeder who cannot keep them up to the high standard their breeder maintained. Mr. Weir's flock never had an outcross in fifty years and every season saw them better. The English games of today boasting "Old English" blood are many times lacking the white legs that made the Derbies famous. A cockerel and six wheaten pullets are priced at \$30; another cockerel and three pullets, the mating made by the late Mr. Weir himself only brings the same figure; a cock and five wheaten hens, extra fine in plumage and length of head, two dun pullets and one partridge pullet only bring £5. These birds are all mated for the best results and to the fancier who wanted to start with the breed they would be worth ten times the figures placed on them.

New Zealand Exposition.

Mr. E. R. Gillet, of Milwaukee, Wis., has been appointed to take charge of the incubator exhibits at the New Zealand International Exhibition to be held at Christchurch, Canterbury, New Zealand, December 1906, and January, February, March and April, 1907. It is the aim of Mr. Gillet to make the incubator exhibit a prominent feature of the American display. Mr. Gillet informs us that they have succeeded in making special rates for freight and attendance that will materially reduce the cost to exhibitors. This, we believe, is an opportunity that should be taken advantage of by the incubator manufacturers of this country. Any information desired will be gladly furnished by addressing Mr. E. R. Gillet, 357 Milwaukee street, Milwaukee, Wis.

And So It Grows.

Poultry culture is getting on a surer basis as the seasons whisk past us. Yesterday we knew not the benefits of the curtain front or the scientific ration. We were ignorant of the principles of poultry growing, but the industry has grown and attracted brains to it which have made studies of the essentials and thus have we arrived at definite conclusions. Through the medium of the poultry press the knowledge gained by the few, with its whys and wherefores, is given to those who are working day by day with the fowls. The one great fault of the poultryman is that he gives too little study to the industry and its details. Many of us are devotees of speed rather than thoroughness. And

as the essentials become known and the methods of poultry keeping and raising increase in efficiency the business becomes more stable and sure. This gives the pure-bred poultry industry a constantly increasing foundation to work upon. We who endeavor to better the form and feather of the breeds and varieties will be the gainers as the industry thrives.

A New Corporation.

On February 14, the American Fancier Publishing Company was incorporated at Albany, N. Y., and on February 19, at a meeting of the board of directors, the following officers were elected, viz.: President, R. L. Hutchings, Rutherford, N. J.; vice-president, J. H. Drevenstedt, New York City; secretary, Robert Dennis, Ossining, N. Y.; treasurer, H. M. Carpenter, Ossining, N. Y. The American Fancier Company is composed of a number of prominent fanciers who will publish the *American Fancier* from New York City in an enlarged form. It will appear every week in the year, and be what it was originally intended to be—a weekly newspaper. J. H. Drevenstedt will have sole charge of the editorial department and will be assisted by a large staff of correspondents.

The Great Importance of Care of Little Chicks at This Time of the Year.

At this season of the year the time and attention of poultrymen are devoted to the hatching and rearing of the stock for another season, and we have, therefore, devoted a considerable amount of space to the subjects of the care of little chicks and the management of brooders. It is of vital importance that the prospective prize winners and breeders get the proper start in life. A wrong move at this season of the year means that a whole season's work will be lost. The inexperienced breeder should read carefully the experience of others, as outlined in this issue, and endeavor to benefit by their mistakes as well as by their successes.

Changes in the Poultry Publishing Field.

The *American Fancier*, of Washington, D. C., announces its removal to New York City. A new company has been formed for its publication, and the editorial management continues in the care of J. H. Drevenstedt.

The publication offices of *Commercial Poultry* will be removed to Marseilles, Ill., about May 15. We understand that a handsome and commodious building is being erected to be used by *Commercial Poultry* exclusively. A complete printing plant, bindery, etc., will be installed. At the annual meeting of the directors of the company in January, Mr. J. F. Schureman was elected president and Mr. Ben S. Boyce secretary and treasurer. Mr. Schureman will continue as editor and manager. Marseilles is about 75 miles from Chicago, on the main line of the Rock Island road. A Chicago office will be maintained by the company.

J. H. Drevenstedt, the well-known editor and judge, has recently become

has associated himself with Frank H. Hodges, of Red Bank, N. J., and R. L. Hutchings, of New York, and has formed a corporation to operate the Columbia Poultry Farm at Red Bank, N. J., for the purpose of supplying the first-class trade with choice eggs and fowls, and the fancy trade with the best birds that experienced poultrymen can produce.

The Columbia Poultry Farm is one of the finest equipped plants and one of the most practical in the United States. Mr. Hodges founded it and he has been one of the most successful breeders of prize-winning birds of any one breed in this country. His record for blue ribbons has yet to be duplicated. Mr. Hodges is associated with Mr. Drevenstedt, who is known all over the country as one of the best poultry judges in America, and an experienced poultryman as well as editor of the *American Fancier*. Mr. Hutchings is a stockholder in the American Tobacco Company, president and vice-president of several large enterprises in New York, and a true fancier and experienced business manager.

The officers of the corporation are: President, J. H. Drevenstedt; vice-president, F. H. Hodges; secretary and treasurer, R. L. Hutchings.

In our February issue, under the illustration of the first prize Barred Plymouth Rock cockerel at Missouri State Show, on page 211, the statement was made by Mr. Lampton that he won first on hen, defeating first prize pullet at the World's Fair, which was shown as a hen at the Missouri State Poultry Show. Mr. W. W. Henderson, St. Louis, Mo., the owner of first prize World's Fair pullet, called our attention to the fact that this was a misstatement. In response to a letter from us we received the following from Mr. Lampton:

"MEXICO, Mo., March 1, 1906.

"Editor AMERICAN POULTRY JOURNAL, Chicago, Ill.

"Dear Sir: Your letter to hand. Now, in regard to the statement under my cut, me beating the World's Fair pullet at the Missouri State Show as a hen. I was mistaken in the matter, thinking the World's Fair pullet belonged to R. B. Thompson. Since this matter

has been called to my attention I find the pullet belonged to Mr. W. W. Henderson and not to R. B. Thompson, and I ask you to make a note of it in your journal as an apology, and also notify Mr. Henderson, and hope this will be satisfactory.

"Respectfully. J. R. LAMPSON."

The Boston Poultry Club is growing and its meetings becoming more interesting. The club is an experiment; i. e., it began as an experiment and will probably become a fix-

ture. At the March 20 meeting of the club, Mr. Arthur C. Smith, of Barred Rock and Brown Leghorn note, will give a talk on breeding these fowls. He will explain the double mating system and use choice birds to show just what he means. The idea should be "catching." There are enough cities in the country to support a dozen clubs of this kind, and possibly more. We understand that the club will charge non-members an admission of 25 cents to help defray the cost of the hall and other expenses.

PLYMOUTH ROCKS

When your friends tell you that the oldest and best strain of Buff Rocks was originated by Wilson, why not go to him to secure them? There is a loss sere by obtaining them from others. Remember that birds you buy and eggs are seed—seed sowing always precedes reaping. What you buy in birds and eggs that shall you reap. You can give the progeny any name, as Mr. Bardick gave his purchase from me Nuggets. Eggs \$5 for 13, \$8 for 26, \$10 for 39. Birds \$2 up. Winners at World's Fair, Madison Square Garden, N. Y., Troy, N. Y., Rochester, N. Y., Boston, Mass.

LEFFEL'S BARRED ROCKS

Are Known Everywhere as one of the Finest Strains in the World

WHY? Because they have an unbroken record during the past fifteen years at the leading poultry shows and under twenty-one judges.

At Springfield, Ohio, 1890 to 1903, my birds won all prizes offered on Barred Rocks and all sweepstakes over all varieties—2,700 fowls competing each year. At Springfield Fanciers' Show, I again won every prize offered on this variety with birds scoring to 94½. At Dayton and Cleveland, in tremendous competition, I also swept the board, one of my 1st prize cocks, scoring 95 by I. K. Felch. I challenge the world to beat this record. Better this season than ever. I am willing for my stock to go on approval. Write for bargain prices on breeding stock. Circular free. I have finer birds this year than ever before, and more of them. Send for circular giving full list of winnings, also price of stock and eggs. Pekin Ducks, W. Holland Turkeys, Chester White Swine, sired by prize winners; young and old stock.

CUTS FOR OVERWEIGHT.

This Subject Analyzed from a Practical Standpoint—The Practical Market does not Demand a Large Fowl.

I beg to analyze the above subject from a practical standpoint and apply a particular case in my recent experience.

In the first place, I have strong convictions and courage to express them in the simple form or declaration, that the fancier is today the greatest enemy in existence to practical poultry breeding, and if allowed to hold undisputed sway over the destinies of poultry matters, there would in the end of a brief period be not a single practical and valuable common purpose fowl in existence. It remains for such men as Sid Conger, J. K. Felch and U. R. Fishel, who elevate poultry breeding above the technique of fancying, to save the breeds.

An excess weight clause for show specimens is contrary to the plainest sense of justice and detrimental to improvement and as senseless as it would be for some one to establish an arbitrary weight for a beef animal or a draught horse, or to declare a person weighing 200 pounds is not a man, in so much as the normal, average weight of man is estimated at 154 pounds. Just what is the reason for the existence of an excess weight clause in the standard may not be clear. It has been charged to be the selfishness of fanciers who, in a struggle for minor details, have lost good weight and large frame. This can only be implied, not proven; but the fact remains true in every man's experience, that whatever be your maximum weight of breeding stock your general stock falls below this weight. Then, if you establish a maximum of nine pounds, and this be regarded as the typical, practical weight, and you use such stock as your breeders, your averages will fall below nine pounds and the popularity and usefulness of your stock lose accordingly.

One of two practical conclusions must follow upon this condition. The standard of nine pounds is too high or else you are doing an injustice to your breed. If the breed cannot produce a specimen over standard weight, that is otherwise good as any, then your standard is too high. If your breed can produce fine specimens of overweight, they are just what is needed to raise the average to standard and you are on dangerous ground when you discourage the production of such stock, dangerous because your stock will lose place upon the popular market; dangerous because the man who disregards your standard provisions will show his culls and win prizes on them. And if winning prizes on culls is fancy doctrine, please excuse me from the fancy.

That the popular market does not demand over a 3½ to 5-pound dressed carcass is, I think, true. Yet this is not an argument in favor of small or medium size. The feeder of live stock knows, if the fancier does not, that the young animal is the profitable feeder, that the younger the subject the more pounds gain in a given quantity of feed produces and the cheaper the production. Then, if a 3 to 5-pound carcass of a 9-pound standard fowl can be produced in three months, as against the same weight of carcass from a 7-pound standard bird at four months, then the higher the standard the more profitable the feeder, and if this be true between

standard and standard, it is true between weight and weight, standard or otherwise. Then, shape and other things being equal, why cut for overweight? Is it because overweight is often attended by ungainliness? Then cut for ungainliness or bad shape and action, so not to punish great merit because there happens to be superabundance of it.

As an example: At the late Grand Rapids show a certain bird was cut 2 points for overweight. Then, as I have been informed, scored 90 and won second. Had this bird been standard

was thrown out as a cull and given to a boy. The boy took good care of the chicken and exhibited it without expert fitting. Result: a farm cull won over expert fancy stock, after being handicapped two points for superiority.

How about practical applications? What may be the experience of others is probably mine. In Barred Rocks the great demand at present is large frame, notwithstanding the great battle of the fancy is "barred down to skin."

Contrast inevitable results of breeding from your "barred down to skin"

creation only and treated as such by the practical public, or else it must align itself with the practical sides of poultry industries before it will be very highly regarded outside classes of amusement, pure and simple, and that when it unloads its culls of culls upon the public under glittering and false pretenses, it is little less than a confidence game.

Among my experiences of a few years ago, I had some pens of my very largest birds, in which the males weighed 12 pounds, the females 10 pounds, otherwise fine birds. My averages, of course, were below this. I advertised my ownership of these birds. Every order that came in ordered a 12-pound male or a 10-pound female. I could sell every one of these birds at \$5 apiece, but when I suggested putting in a standard weight at \$2 I lost the sale. Not one of those demanding a large bird asked "what does he score?" I found myself practically advertised out of the market, except on eggs and I could not get enough of them to fill orders at \$3 a setting, while I had plenty of \$1 and \$1.50 standard size stock eggs for all purposes. I believe I recognize an extravagance even in this great demand for size, but it is but the inevitable reaction that comes of people's disgust, after an experience or two with some of the lauded stock that wins prizes at the show, under the cut weight for excess, or no weight clauses. If it be true, as alleged, that 4-pound pullets have won at Madison Square in a breed the standard of which was nearly 3 pounds heavier than the specimen, then fancying is not an ideal exponent of quality as quality is measured in a business way.

Size as a factor in general poultry must be made to conform to the particular objects and conditions attending the operator, and is not necessarily always and everywhere the same.

But when it comes to a question of breeding stock, which should be held synonymous with show stock, such as is produced for improvement purposes, a minimum weight clause is imperative, a maximum weight clause or a cut for excess size will surely prove a premium on inferiority. I have used new weight and size synonymously, which is also an error, and as an error I use it to make emphatic my distinction. Weight may be conditioned, size represents frame. Two birds of same weight may not be same size, owing to difference of condition, one fat the other thin. No bird should be kept or shown in over-fat condition, nor in overlean condition.

An overfat bird should be cut, an oversize bird should be encouraged if you intend to encourage the best breeding qualities.

If you wish to test a common flock by the greatest possibilities its selected specimen can present, then give it a free hand for everything from the minutest detail to the most exaggerated and ponderous possibility in growth, in conformity with good shape. There is one quality I would not exempt for superiority in everything else—shape.

Some people presume there is more ill-shape in large specimens than in small ones. Careful analysis will not sustain this opinion as regards percentages. An overgrown, ugly specimen is particularly noticeable, because there is so much of him to be seen; his size demands our attention, while the little, insignificant thing, equally ill-shaped, does not even attract our notice by one single notable feature. One has *size*, the other has

First Cockerel, Indianapolis, bred and owned by Chas. V. Keeler, Winamac, Ind.

weight he would have scored 92 as a parti-colored bird and won not only 1st in the show, but very high distinction in his breed.

The history of this bird is this: Standard of breed, 8½ (cockerel); weight of bird, about 10. The bird was bred from a flock of very heavy weights, specimens often running 10 to 13 pounds. The breeder makes a specialty of broilers and roasters. When he closed out his season's stock this particular bird

affair of 7½ or 8 pounds, honest, unfattened weight, with breeding from 10½ pounds of same conditions. The average progeny of the heavy bird is two pounds heavier at same age and at 9 cents per pound is 18 cents better value. Multiply this by the millions that are produced for market purposes and you must come to the conclusion that fancying is not particularly beneficial to the poultry industry.

That it must become known as a re-

nothing, to show; both are culls. Yet one is *something*; the other is *nothing*. One is practical, the other fancy.

Belding, Mich. J. E. TAYLOR.

A STORY ABOUT "WHAT THE AMERICAN POULTRY JOURNAL IS DOING."

A few years ago a certain man residing in the suburbs of a certain large city which shall be nameless, subscribed for THE AMERICAN POULTRY JOURNAL, not because he cared for a poultry journal—mercy, no! he had no time to read anything so worthless as a poultry journal; he had his opinion of a man who spent his time that way—but only to help his friend get up a club.

In the home where this journal came there was a boy nearly eleven years old. For the first few months no one but the boy took any notice of it, and he only to look at the pictures of the handsome fowl, that of course no one could raise.

He finally read, believed and became interested; he wanted to try and see what he could do.

So, asking his father if he would get him a few hens, his father to please him gave him twelve hens and a rooster for one dollar, thinking before a month was past he would be sick of his bargain, but no, he took great care of them, sold his eggs, buying grain for them, was pleased on finding one of the hens wanted to set. He bought a setting of R. I. Red eggs and she hatched eleven chicks from thirteen eggs and had six early pullets. He set every hen and that year raised about sixty chicks, of which he kept thirty-five pullets. He did the same the next year, raising 200 chicks and keeping seventy-six pullets. That year he carried two cockerels and two pullets to a poultry show, carrying off one special prize and learning a great deal.

The following year he raised nearly 300 chicks, buying quite late in the

season an Old Trusty incubator and two brooders.

By this time he feels that he can tell a good bidly when he sees her.

He is following up the shows, trying to do better each year. Nothing will satisfy that boy but a blue ribbon and he is bound to have it sooner or later.

He has some fine birds, S. C. R. I. Reds and S. C. Black Minorcas. All this time he has attended school. He is in his sixteenth year and is well started in the poultry business. And this is the work of the AMERICAN.

AN INTERESTED READER.

FIRST TRIALS OF PHEASANT KEEPING.

In looking over the pages of the AMERICAN POULTRY JOURNAL I find nothing pertaining to pheasants, and while this comes under the head of fancy poultry, very little is said in any of the poultry journals concerning the raising of these beautiful birds. I will give the readers my first experience, which may be of help to beginners.

I am a lover of the innocent, little pigeon and raise them to quite an extent and when I saw an article to the effect that pigeons and pheasants could be raised in the same aviary successfully I sent post haste to a reliable man for a trio of English Ring Neck pheasants, that being the cheapest breed on the market.

When they arrived and were placed in the pen with the pigeons, such a time as I had, each being afraid of the other to such an extent that in order to get either to partake of any food it was necessary to fasten the pigeons in the house and the pheasants in the aviary.

In a few days they became more reconciled and would eat together, but the pigeons being greater eaters than the pheasants, the latter did not get very much until the pigeons were again shut out. So if any of the readers are contemplating the step I took I will say: don't, until you have a separate place from the pigeons made for the pheasants.

The change of climate (or at least that is my version) caused my hen pheasants to take a severe cold in the throat. I gave each one a five-grain capsule of epsom salts, followed the next day with one-half grain quinine every two hours. The second day I made a mixture of the following ingredients, prescribed by Mr. Hunter: One tablespoonful each of lard, cayenne pepper, ground mustard, vinegar, adding flour until a stiff dough is formed. I gave a pill the size of a hazelnut and repeated in six hours. The next morning all wheezing was gone, but I gave the third pill to make sure that all cold was eradicated.

I feed raw meat cut fine and green cut bone three times a week at this time of year, when insects are scarce; the grain used being alternate feeds of wheat, corn, buckwheat and barley. For a windbreak on the west I piled some cedar trees that had done service at a church for Christmas trees. They seemed to enjoy running under these during the day and especially if any one strange or a dog came by, the pheasants would dart under these bushes and stay until all was quiet without before venturing from their hiding place.

DABBERT POULTRY FARM

BOX A,

WHEATON, ILL.

HOME-MADE BROODER.

I give my experience, hoping to help those with small capital to get a start. Last winter I thought I could not afford an incubator, so used hens for hatching. I had seventy-five hens, but not more than six at one time seemed inclined to help me out. My first hatch came off February 1—only thirty-five chicks. For a brood coop I used a grocery box five inches deep and about twenty inches square, knocking one side out for a

chicks to cuddle in. Nail a two-inch strip of board across the front at bottom and put in two inches of clover chaff for them to sit on and place in a warm room. I had to put them in the first few nights until they learned to go alone.

The back stairs lead from our sitting room to an unused chamber with sloping roof, and which could be kept warm by opening stair door nights and occasionally for a short time daytimes. The floor was covered with clover chaff and

hundred early ones in this way and kept eighty early pullets for this winter.

I have a large incubator in the cellar now and have one hundred and two chicks hatched January 25 and the machine filled again. Am using a room 12x14, containing a good heating stove and hope to raise, in the two rooms and shop, five or six hundred early broilers.

I believe chicks are stronger raised with less heat than brooders furnish and they do not pile up in these coops as people say they do in brooders. Keep

First prize cock, hen, cockerel and pullet at Madison Square Garden, New York, 1905. Also winners of three special ribbons offered by the American Rhode Island Red Club for best color and shape. Bred and owned by C. N. Hansen, Warsaw, Ky.

door and nailing top boards together for cover, which I hinged on with leather.

For hover a piece of old muslin the size of cover was used, stitching one edge of three-inch-wide flannel across it, one inch apart, completely covering the foundation, then slashing the flannels crosswise nearly to stitched edge in one-inch-wide slashes. The muslin was then tacked inside the cover in such a way as to leave the narrow flannels hanging down all over the inside of box for the

partitioned off into small pens with window and door screens, where I kept each size by themselves. They went in their coops only at night as the floor was warm enough for them to stretch out on when tired.

They were lively and healthy and nearly every one grew to broilerhood. The last week in March the older broods were put out of doors in deeper boxes arranged the same way, and enclosed in yards, and the younger ones were moved out as fast as old enough. I raised three

the room warm and they will be warm enough in the coop. Don't put more than fifty in one box when small, and fewer as they grow larger, but any number of one size may run together.

I have said nothing of the feed used as so much has been written on that subject that any one can feed properly. I raise R. C. B. Minorcas, S. C. B. Orpingtons and W. Wyandottes, all thoroughbreds and all good utility breeds.

MRS. BELL KELLOGG.

W. Richfield, O.

PLEASURE AND PROFIT IN PURE-BRED POULTRY.

The raising of pure-bred poultry is making rapid advancement. Business men, physicians and clergymen find it a paying diversion, and many a farmer counts it one of his most profitable investments. No doubt, there are many who put more money in fine poultry than they realize from it, but the time and funds might be much more injudiciously spent.

A chicken fancier in a community,

A few years ago our family's poultry reading was confined to the Poultry Department found in the various farm journals, of which we were subscribers. Now from six to ten poultry journals reach us each month to refresh and enlighten their readers, and that they are studied carefully, the many marked articles and paragraphs indicate. It has been my pleasure to pass on some of these excellent periodicals to my neighbors and the advertising pages have been brought to the notice of possible customers.

tion I am convinced that there is no better way of keeping the boys and girls at home than by interesting them in poultry. Invest a little in bantams, pigeons, or their favorite fowls and do not forget to give them a share of the proceeds when they have taken care of them.

Do not conclude that there is but one variety of chickens, turkeys, etc., but, of course, the breed that you like the best will give you the most successful results, if it is suited to your requirements and locality.

In conclusion, let me urge you, as the welcome days of spring come, to take a new start, clean up and fix up your poultry quarters, buy some good birds, or at least some eggs to improve your flock, or start a better one, and stick to the resolution you made at the county fair or poultry show, to take next fall some birds as good or better than those you saw, and may the year be to all of us one of pleasure and profit.

J. O. BEEMAN.

Sherman, Kan.

HOW I BECAME A BUFF WYANDOTTE SPECIALIST.

So many good articles have been written concerning this variety of poultry that it seems to me useless to try to say more. However, too much cannot be said in praise of the Buff Wyandotte as an ideal all-purpose fowl, and, perhaps, my past experience and how I became a Buff Wyandotte specialist may be of interest to some. When I first became interested in fancy poultry I began trying some of the most popular varieties, and, after a few years' experience, I finally adopted the ones I considered the most practical and profitable.

Soon after this a fancier with whom I had become intimately associated persuaded me to try the Buff Wyandottes, and the following season presented me with a setting of eggs. In addition I purchased another setting and succeeded in hatching a nice lot of chicks. Although at this time I was prejudiced in favor of another breed, somehow that season I watched my growing flocks with unusual interest. That they were quiet and easily confined, a fence made of four-foot poultry netting with a six-inch base-board, being of sufficient height for all purposes. That their round plump bodies, yellow legs and skin, with no dark pin feathers to be seen when dressed, made them most desirable both for the market and for table use. That they came into laying earlier and continued to lay all winter, through all kinds of weather, and last, but not least, their beautiful golden buff plumage, always bright and clean, challenged the admiration of all who saw them. This I considered evidence enough in their favor to convince even the most skeptical, and as a natural result I soon discarded all other varieties and began breeding Buff Wyandottes exclusively.

While there are today many excellent general-purpose varieties, I have found the Buff Wyandotte possessed of so many superior qualities that I would not give it in exchange for any other breed or variety. If you are looking for an all-purpose fowl, one in which both utility and beauty are combined to the highest degree, try the Buff Wyandotte, and you will not be disappointed.

M. G. WELLS.

Single Comb White Leghorns, owned by Harmon Bradshaw, Lebanon, Ind.

though not always successful, conveys his enthusiasm to others, all anxious to promote his favorite variety and breed of fowls. Soon enough are interested to form a poultry association and a show may be held, which if rightfully conducted will give much instruction, pleasure and profit to its promoter and those in attendance.

A year's subscription sent to some of my friends who had never taken a poultry paper, never fails to secure an interested reader, who soon has a desire to own better poultry.

A flock of well kept, pure-bred chickens, turkeys, ducks, geese, and other fowls, adds very materially to the appearance of a farm, and from observa-

WILMINGTON, OHIO.

The first annual exhibition of the Wilmington Fanciers' Association was held at Wilmington, Ohio, Feb. 14-17, 1906, and was a complete and grand success in every respect, both in pecuniary matters and the well-filled entries in each class. Mr. Ira C. Keller, of Prospect, Ohio, judged the show, and his decisions were fair and satisfactory to all. Judge Keller's compliment to our show was "that it was a nice, clean-cut show, and composed of as fine specimens as any show of similar size he had ever attended." We consider that a "Cold Bone" ad. for our future shows.

Each state, with a membership of ten or more, is entitled to an elegant silver cup, offered by the American Buff Wyandotte Club. Each show having a member of the club is entitled to two special ribbons. For particulars write W. C. Allison, secretary, 1910 Fourth street S. E., Minneapolis, Minn.

Dr. Hare, of Holmhurst Poultry Yards, Whitby, Ont., Can., has still for sale some very choice cockerels and pullets that he is willing to sell at what he considers a "bargain" for the quality of stock he offers. Should any purchaser think otherwise, he has the privilege of returning the birds, and getting back money paid. Notwithstanding that this offer has been given every purchaser, it is gratifying to learn that not a single bird has been returned this whole year. Having met Dr. Hare at the World's Fair and seen the superior quality of his birds we have no hesitation in recommending his stock to prospective buyers.

W. L. Howell, Lock Box 687, Geneseo, N. Y., who has made a specialty of breeding White Wyandottes for years, and who has produced as many prize winners as any man in the business, is offering eggs from his best matings at very reasonable prices, when you take into consideration the quality of his stock. Place your order with him at once and be in a position next show season to win some of the big prizes that are always offered on this variety. Write him today and mention AMERICAN POULTRY JOURNAL.

Humphrey & Sons, Joliet, Ill., manufacturers of the Humphrey Pure Air Brooder, wish to call our readers' attention to the fact that in their new 1906 brooder they have made changes and improvements that place their brooder in the front ranks of brooder construction. They have accomplished perfect combustion in an internally fired brooder, something that has never been accomplished before. The brooder lamp will not blow or draw out. It can be turned low and yet not smoke and at the same time the brooder can be thoroughly heated during the coldest weather and can be regulated during the warm weather. Send for their catalogue and mention AMERICAN POULTRY JOURNAL.

Ralph W. Sturtevant, Beloit, Wis., the Buff Wyandotte specialist, is now prepared to furnish eggs from ten grand pens, mated for best results. Send for 1906 mating list, and mention AMERICAN POULTRY JOURNAL.

REARING AND FEEDING CHICKS

Cleaning and Disinfecting the Brooder—Outdoor Brooders the Best—The First Feed—The Amount to Give at Each Meal.

As the incubator chick has only a wooden mother, the care taker must attend to it that a good, comfortable brooder is all ready for their reception.

If the brooder is not brand new, it should be thoroughly scrubbed with hot soap suds, and rinsed with hot water containing carbolic acid, then thoroughly dried. If out of repair in any way see that it is fixed. This should all be attended to in the fall before being stored for the winter, but if it has been neglected, see that no chicks' lives are entrusted to its care until it is done. So many chicks are killed through careless handling, and if we have hatched the little ones, is it not a *duty* we owe them to give them careful attention? And I think nearly every woman who has had the care of the incubator for three weeks, can but feel a deep interest in the little lives brought forth. I use the outdoor brooders entirely, as they are so much better made, more room and better in many ways, so as to fully cover the difference in first cost. If you wish to use an indoor brooder, you must always keep it under cover, as they are not rain proof. A colony house, barn, or even a piano box will do, if made to keep the brooder dry and a window put in, and if very cold this room must be warmed, too. Of course, the outdoor brooder should be placed in under shelter, too, if severe cold weather

overtakes the chicks. I think I could trust the brooder I have to take care of chicks with no discomfort after April first, with no other shelter, but if freezing weather came I should certainly put it under cover. I use the brooder with open bottom, that is, mother earth is the floor. Of course, the hover is up off the ground, also the feeding table, but when thought best they can run down into the grass and still be in a warm atmosphere under cover. It sets down close to the ground so no cold winds can get under to chill the chicks, care being used as to location, where it is placed, that the ground is level, and a brooder covers so little space this is not hard. I use the hot water brooder. The tank covers the entire top of hover so no cold corners or over heated center is to be met with and the heat comes from above, as nature has it. The hover is a shallow drawer with the customary curtains in front for the chicks to crawl under. The little chicks so enjoy running under something when cold or frightened; that is nature, and we should follow nature as far as we can. The brooder has a table that fits up close to hover with a wire partition between that and rest of brooder, so they have a nice play room without going on the ground when it is damp with dew or rain. Two panes of glass let the sunshine in on their little backs when so much enjoyed, and when pleasant the chicks are allowed to run in the grass, still under cover.

After a few days old I remove the entire top, except over hover, and replace with a fine wire screen just made to fit, then "there they are," out in the sunshine, on the green grass, and when

they need sleep or warmth the cozy warm nover is waiting for them and they are safe from cats, dogs etc. If a shower comes up the chicks quickly scud under the hover and it takes but a few moments' time to remove screen top and close doors, lift up the table (which has little tin legs), place in the little wire fence, and they are perfectly safe, if you keep the lamp burning. They have plenty of room and fresh air. That chicks must have to do well.

Now we will get the brooder ready for the chicks. Thoroughly clean the lamp, fill and trim evenly, fill the tank with hot water, light the lamp, place a newspaper in bottom of hover, then sprinkle in dry sand, and over this earth or dry leaves, cut straw or chaff. Earth alone will do, but I like a soft bed for a few days at least. Place in a water fountain with cool but not cold water. I use a tomato can with top melted off. Punch three little holes near top, fill this and quickly invert with saucer over it. For little chicks you have a fountain as good as any boughten one, and will do until they are strong enough to tip over the can. Be sure to give plenty of water as incubator chicks are thirsty little fellows. Now place a thermometer in hover and when it stands at 95° the brooder is ready for the chicks (gradually lower the temperature after first few days). Seventy degrees to eighty degrees will be warm enough after the third day. I leave chicks in incubators until about twenty-four (24) hours old. Have a basket with cloth in, remove strongest chicks to basket and cover over. Take quickly to brooder and place them in warm hover. If any chicks seem weak I leave them longer in incubator.

LEE'S

LEE'S GERMOZONE

is a regular spring and summer tonic for chicks. Regulates the bowels of the little fellows and saves the loss so frequent from bowel disorders. A little in the drinking water twice a week does the trick. Germozone is known wherever fowls are raised and is the recognized leader of poultry medicines. It cures bowel complaint and chicken cholera and keeps the whole flock in the pink of condition. Don't lose birds when Germozone will save them for you. Price, 50c. Ask your dealer or order direct from us.

LEE'S EGG MAKER

is not only an egg-producing food—it is more—it is a health-giving food. Hens must be healthy to lay. It is also a splendid food for little chicks and growing fowls. It makes them robust, strong, healthy, vigorous—starts them to growing right and brings them to maturity from one to six weeks earlier than where it is not fed. It's the best and cheapest poultry food on the market today.

Price,
25c, 50c
and
\$2.00
according

size.

LEADERS

LEE'S LICE KILLER

Now is the time to begin to rid your old birds and poultry houses of lice, then the young chicks won't be pestered to death when they come. Lee's Lice Killer will kill every louse in your house. It is the original liquid lice killer—the king of lice killers—destroys all vermin by its fumes or by contact. Simply spray or paint it about roosts and walls—no dusting, handling, dipping or greasing fowls—as easy as can be. Price, 35c, 60c and \$1.00. Write for several new books we have just published. You will want to keep in touch with LEE for he's always got something new and helpful to the man, woman, boy and girl who raises chickens. He wants to help you to make a success of your poultry business; he offers you the experience of his years of study in these books; he'll send them free. Write today.

GEO. H. LEE CO.,
OMAHA, NEB.

Now let chicks rest and drink, or pick up grit. They like to doze the first day. When 36 hours old, give first feed of steel cut oat meal, or the common table oat meal, and prepared chick feed of tiny grains, seeds, and cracked grain. Mine always seem to like the rolled oats best of all and to thrive on it, too. I also give dried bread soaked in milk or water then squeezed dry in the hand as a relish once a day. This is the only wet feed I give. I do not think a fowl's nature is to eat wet food. It has the gizzard to grind the feed and the sooner grist and grain are given to set this mill to work the better to make a strong healthy chick. They need animal food. After the first week feed beef scraps ground fine, three times a week. They will hustle for this. Feed five times a day the first week, four times the second week and place feed in deep litter where they must scratch for it. They love to do this, as you will often see them scratch if on a clean board. After the second week feed whole wheat and cracked corn, also a little of the oatmeal, then gradually begin feeding other grains. I have wire runs made to put over brooder and here they get plenty of green grass. They are changed to fresh ground every day. When they outgrow the brooder I have a large dry goods box fashioned after the brooder but with no heat in it. By letting the heat gradually lower in the brooder they do not notice the change. I do not keep a thermometer in the brooder only the first few days, for after the chicks get to running out and in no regulator can control the heat. Watch your birds; if they loll and lay down, they are too warm; if they huddle together and pile up they are cold. Increase or decrease the heat accordingly. Learn the language of the chicks' pee-peep, it will soon tell you more than books can.

The brooder should be thoroughly cleaned every day. I prefer to have this done late in the afternoon, as then it is all sweet and clean for their night's rest. Clean, trim and fill the laup each evening. How many chicks' lives are sacrificed and owners discouraged because "the lamp went out," and the chicks chilled and died. Provide the chicks, if yarded, a good, dry earth bath. They do so enjoy it. It helps to keep them healthy and growing. Some say it will keep down lice, but I have no trouble with these pests, never having found one on my incubator chicks while kept in clean brooders and runs, but we all know they will bother the older fowls unless closely watched, homes kept thoroughly clean. The best lice powder I have found is simply flour of sulphur and a few drops of carbolic acid placed in each pint of sulphur, dust the fowl in fluff and between legs with this and Mr. Louse will leave, dead or alive. No more than 50 chicks should be placed in any 100-chick brooder. I have placed as many as 91 to 94 and had them do well. But it takes constant care and watchfulness and I think they would do far better if they have more room, and think next year, if I had the room, only 50 chicks would find a home in the 100-chick brooder for more than the first week at least. While small they don't crowd, unless cold. I have never given much medicine to my chicks, but if on a cold, wet morning you find them dumpish, just make them a good, warm ginger tea made of milk and a little sugar. Withhold all water, placing this in fount instead. It is one of the best

of tonics and to prevent colds, and chicks seem to like it. I also give a little dash of red pepper in soaked bread if I think they have any chance to chill. Keep grit and pulverized charcoal before them at all times. This is a cheap remedy and one of the very best for all chick ailments.

As to the amount of feed to give at each meal at different ages, I do not think one can give a set rule that will always do. Feed a plenty and still have the chicks hungry at each meal time so they will run to meet you and each scramble for his full share. Never feed more than they will eat up clean, as it soon becomes filthy and unfit to eat. Always go to the brooder at night after dark and with the hand gently spread the chicks over the brooder floor. They will stay where put after dark. Clean

all drinking and feed dishes often and keep clean water before them, and with brooders sweet and clean and filled with strong, healthy chicks, you surely will enjoy caring for them, at least I do. Hatched 295 Barred Plymouth Rocks the past season. The two first broods lived and thrived well, only a few dying, and those were only a few hours old. The others were hatched in midsummer and did not do as well. I would not advise hatching as late as that unless one has a good shady place for a brooder and yards during the hot weather. But as it is, have received a nice sum for stock and eggs sold, and have a fine breeding pen for this season, and am anxiously awaiting the arrival of the downy youngsters of 1906.

EFFIE HIELD.

FARNSWORTH'S BARRED ROCKS

Just a moment of your time, please. You are looking for a square deal in eggs for hatching. I have the eggs; you have the money. I'll give you a square deal on the eggs in exchange for your money. My birds are farm raised, vigorous and healthy, properly housed and cared for to produce eggs that bring results. My exhibition pens are bred direct from winners at Rochester, Syracuse and New York shows. Eggs from these matings at \$2 per 15, \$3.50 per 30, \$5 per 45. I also look after the utility branch of the business and can furnish eggs from stock that are approaching the 200 eggs per hen per year average at \$1.50 per 10, \$2.50 per 30, \$3.50 per 45. Place your order today. Tomorrow may be too late.

A. A. FARNSWORTH - - ELBA, NEW YORK

HUME'S WHITE WYANDOTTES

still in the lead. Notice my winnings at St. Louis, Jan. 8-13, 1906: 1st and 2d cock, 1st and 2d chl., 1st and 2d pen; tied for 3d pullet and 2d hen; 125 birds in competition. This entitles me to a seat in the front row. Still eggs are the same, \$2 per 15 or \$7 per 100. Every pen headed by a prize winner; have 8 breeding pens. Show me where you can get such quality elsewhere for this money. Send for circular.

DO YOU KNOW

that FARM-POULTRY, the great National poultry publication, is still conducting that splendid series of "First Lessons in Poultry Keeping" begun January, 1905, a feature whose praises are being sung by poultry keepers everywhere?

DO YOU KNOW

that FARM-POULTRY was established in 1889 and for the past 16 years has been giving its readers the very best obtainable information on incubating, housing, feeding, raising, breeding, marketing and exhibiting poultry—and prints show reports in full?

DO YOU KNOW

this is the last time this season that FARM-POULTRY, which is published twice a month (1st and 15th) will make the offer of Farm-Poultry, American Poultry Journal and Reliable Poultry Journal, all three one full year for only \$1.00.

DO NOT FAIL

to take advantage of this splendid combination. The "First Lessons in Poultry Keeping" alone will be worth ten times the price you pay. Send all orders and remittances to

American Poultry Journal Pub. Co., 325 Dearborn St., Chicago, Ill.

SUCCESS WITH BROODERS.

How to Feed and Care for Chicks—A Well Balanced Ration has Much to do with the Development of the Chick.

This has been a great problem to solve for years, as all breeders and fanciers have been contending to save the chicks after hatching successfully. Experience has taught many that chicks raised without a mother hen is based on best principles for the chick's life for brooders to take the place of mother hen. Still the brooder house is the best on large quantity, for life needs oxygen, pure fresh air; the brooder house can be managed so the chicks can have all that is necessary. So much has been written on how to feed and care for the chicks; of course, it helps to develop the bird but without oxygen, air, sunshine is in a shadow, to be discussed in the near future to prevent scores of diseases that chicks are subject to.

Since the use of brooders and hot air they need tons of fresh air and oxy-

gen. So much of the poultryman's prosperity depends upon the health of his flock, that any step that may bring up the general tone should be eagerly sought and rigidly adhered to when once found. We do not think there is a case of failure in the rearing of the chicks where the birds are kept clean and healthy and plenty of oxygen and air. The cause of failure is due entirely to something else; either the owner is entirely unfit for the business and would have failed at any other business or hampered by improper help.

Take chicks 25 hours after hatching and place them in as warm a place as they came from. Now you have a lot of babies in a down dress that Nature has provided them with. The second dress, plumage, depends on what you feed and how given. A fine dress of plumage, second consideration is bone and muscle, flesh, fat last. For a day or so feed on sand, rolled or pin head oats, fresh water twice a day. Bake corn meal bread made of milk, sod salt, and egg: alfalfa meal, oats, millet, meat scrappings from butcher's block: feed five times a day until three weeks

old. The chicks begin to show the new dress, wing feathers begin to grow and the down begins to wear off. Change feed, adding corn chop and wheat, green vegetables. Raw potatoes are relished, and as a preventive of bowel trouble give sulphur and coppers in drinking water in dry weather.

In formation of plumage, wing feathers turning in all directions is poorly nourished by improper food. Regular feeding and feeding a well balanced ration has much to do in promoting a well developed chick. Later hatched chicks where they have free range of the grass, they help themselves to all the grass blades and green stuff they need and find lots of bugs, worms and insects. These two food elements must be supplied to them regularly and systematically if we expect to produce good looking chicks.

Have shade and sunshine, cleanliness, fresh water, grit charcoal and good, wholesome food to bring chicks to maturity.

Much depends on how a brooder is used, owing to the location and temperature where you live. Brooder heated

3785 PRIZES WON IN THE LAST 18 MONTHS

BY BIRDS FROM THE GREAT CENTRAL POULTRY FARM

These prizes were won by birds raised on our farm, hatched in Great Central Incubators and raised in Great Central Brooders. We have many of them on our farm today, with hundreds of others just as good. We know we have the goods and we back them up with our guarantee. We take the risk. We guarantee our shipments to be satisfactory. We practically insure your success. Isn't that fair? We raise nearly every variety of bird that is sold in America. Write us for special information on any breed you are interested in and we will cheerfully respond. Eggs in season from every variety we carry.

GREAT CENTRAL INCUBATORS AND BROODERS

are the surest hatch machines on the market. Results have proved it. We offer you a 30 days' trial free. If the machines are not satisfactory, return them at our expense. Last season we sold hundreds of our Incubators and Brooders on the 30 days' trial proposition, and not one was returned. Send for our large 72-page catalogue of "Poultry that Pays." It contains much information indispensable to the practical poultryman. It gives descriptions and cuts of each of our many varieties of poultry, and also of the Great Central Incubator and Brooder. Send five 2c stamps for mailing.

GREAT CENTRAL POULTRY FARM

"PURITY STRAIN" SINGLE COMB WHITE LEGHORNS

are without doubt the ideal Leghorns, as has already been proven by their show room record, as well as egg record. You surely can't afford to miss getting some stock, or eggs for hatching from this pure white strain. My pure white cockerel or cock birds are the very thing for improving your strain. Eggs for hatching, from pens made up of prize winners, \$3 per 15, \$5 per 30; from great egg producing pens, \$2.50 per 15, \$4 per 30 or \$8 per 100. I guarantee to give my customers just what they order or tell them I can't fill the order.

JOS. A. BURKHART STATE VICE-PRES., NAT'L S. C. W. LEGHORN CLUB **SMITHSBURG, MD.**

in a warm climate the same as in an extremely cold climate would be a detriment to the chicks. Amateurs will go by the directions given, and when it is too late experience has taught them different. Chicks raised without the hen, a brooder must take the place, for chicks must have a mother. Where early chicks are raised, it is necessary to have a brooder, but cleanliness and care are very essential to the health of the chick. In a warm climate, chicks hatched during April and May can be put in a home made brooder, which can be made out of a large drygoods box covered with tar paper sides and top. In the front have screen door and curtain of burlap; inside of large box place a small one for hover; top of the inside covered with wool; cover floor with straw or cut clover hay. Make a run 3x6 of mesh wire in front of brooder. Have brooder 4 inches from the ground so rats cannot stay underneath and air can pass under, and thereby avoid dampness.

Young chicks should not be allowed to roost too early, let them seek the roost of their own accord. Care should be taken to prevent crowding in pens or brooders. They persist in piling upon top of each other and the under ones suffer; this weakens and takes the life out of them.

In raising chicks more than ever we realize that in order to make money by chickens for market and fancy trade, one must formulate a definite plan and apply good business sense to the working out of that plan. The breeder, who aspires to raise thousands must take advantage of the modern poultry appliances, must systematize his work and always be alert, attending carefully to the minute details.

MRS. M. B. WILLIAMS.
Salisbury, Mo.

WHAT IS A GOOD HATCH?

Many people expect too much for their money, I fear. This is especially true when a person buys eggs for hatching or when a person is operating an incubator. Too many incubator catalogues publish testimonials that are untrue, in a sense, or, at least, very misleading. They publish testimonials where customers are hatching 95 to 100 chicks from 100 eggs. This may be true enough, but I don't believe any man ever hatched 100 chicks from 100 eggs without replacing the infertile eggs with fertile eggs. There are many fine hatchings with machines, but they are (the companies) trying to make the people believe they can hatch chicks easier than they really can. If the incubator companies would put this sign on every machine, namely, "Fifty per cent is counted a fair hatch," there would be less people saying incubators are no good. When we set a hen with 15 eggs we usually get from 1 to 15 chicks. We often get 12 and 13 chicks but if we get 8 chicks we are well pleased and we should be. But if we set 150 eggs in an incubator we expect at least 100 chicks when we should be satisfied at 80 chicks. I say that if we get half as many strong chicks as the number of eggs we set we have no reason whatever to complain. Eggs that are shipped by express are very liable to be roughly handled by the expressmen. Or they may be placed too close to the heating pipes on the train, thus causing the germs to start and preventing a hatch,

or they may in some way get chilled, which will prevent a good hatch. To get a good hatch our breeding birds must be healthy and our eggs must be gathered frequently in cold weather to prevent chilling. They should be kept in a cool place (but not too cold). They should be set as fresh as possible and when kept several days they should be turned at least once a day. I have kept eggs as long as three or four weeks and got excellent hatches from them, but I would not advise keeping eggs longer

than two weeks unless it is impossible. I know of a prominent judge and breeder who said he did not see any use in turning eggs at all, but I want to say if you will break an egg that has not been turned for a few days you will see that the yolk is stuck to one side. Eggs in this condition will hardly ever give a satisfactory hatch and if they do hatch chicks they are likely to be deformed. I say turn your eggs by all means. PLUMMER McCULLOUGH.
Mercer, Pa.

SPRING CARE OF CHICKS WITH HENS.

Although incubators and brooders have taken away from hens a great deal of business, it is needless to say that there are still a great many small fanciers and poultrymen; together with a number of larger ones who depend each year on "Old Biddy" to do their hatching and rearing of chicks. When setting hens it is always best to put each hen in a pen by herself with an outdoor run attached (if possible), although this outdoor run is not absolutely necessary, neither is it absolutely necessary that the hens be kept separate.

When kept separate, unless the hen is wild (which hens are never good for sitting) it is not necessary that the hen be kept shut up. Water and food should be kept in the pen before her at all times. Where more than one hen is set in a single pen the hens should have something put in front of them so that they can not go off the nest except when let off because if they go off at other times they are apt to go back on a nest with another hen and spoil their own eggs. In these cases let three or four off at one time, always watching to see that they go back at the proper time. The proper time for most hens at most times of the year is about one-half hour. After the chicks have begun to hatch leave them in the nest for at least thirty-six hours. Then put the hen and chicks in a waterproof outdoor brood coop (if the weather permits) and keep them shut up in this coop for at least one day. The hen should not be let out for three or four days. During those days the chicks should be let out alone through slats. When the hen is first allowed to run it is best, if possible, to let her run only in a small yard, as otherwise she is apt to tire the chicks. In this yard there should be no other hens, as hens, when together, are apt to fight, and in so doing to kill the chicks. After two weeks the hen can be let run most anywhere with the chicks, provided there is no danger from cats, rats or anything else. The feeding is a very important item in the care of chicks. The first feed for chicks should be the yolk of hard boiled eggs and bread crumbs. After this they should have some prepared grain chick food (there are a great many good brands on the market). Most of these have grit mixed in with them but if a feed is used that does not contain grit they should be given grit from the start. Water should be before them at all times and it should be clear and fresh. If there is no grass in their run or wherever they are they should be supplied with green food in the form of lettuce, cabbage or clover chopped up fine. They should have meat in some form, either worms and bugs or meat. One other important thing is the number of chicks to the hen. This should be regulated according to the size of the hen and the time of year. An ordinary hen can cover from fifteen to twenty chicks in warm weather, while in cold weather ten is sufficient. FRANCIS H. BAKER.

Rock Island, Ill.

At the recent St. Louis poultry show, Mr. John A. Shaw, of McKittrick, Mo., won on Silver Wyandottes, first cock, third hen; Buff Wyandottes, first cock, first and second hen, first and second pullet; White Wyandottes, second hen; Buff Orpingtons, first cock, third hen, a total of eleven regular prizes. Mr. Shaw always gets his share of the ribbons. See his ad elsewhere in this paper.

ROUP AND A GOOD CURE.

Roup is one of the most dreaded diseases that a farmer, as a rule, has to contend with. It is easily detected in the first stages. If one would examine the fowls in his yard once in a while, it would save a great deal of trouble.

My way to do this is to catch a fowl, place its body under the left arm, hold the head easily in the left hand, run the forefinger of the right hand down from the eye to the nostril. If any discharge oozes out or if there are any white spots in the throat, this is the first stage of roup.

The reason farmers are bothered so much with roup is because their buildings are poor, with large cracks and crevices or their chickens have to roost on the fence, in trees, or wherever they can get. I knew of a case where a farmer did not know that he had a fowl with the roup until he got a poultry man to come and caponize some birds for him. He had about 70 head of fowls up in a coop, but out of that number about one-half had the roup in a light form. This case I firmly believe was caused by using barrels and boxes (which were tight except a small opening in the front) for coops. The chicks were let roost in there from the time they were taken off the nest until they were large enough to fly upon the fence. They would fill the coops so full that they would steam and sweat, then come out early of a morning and cool off too quick, which would make them take cold. It will not show on a young chick before winter, and unless examined one would think they were all right. A successful dealer or breeder, whether for home or market use, should have coops and houses warm, but with plenty of ventilation. Another good way of keeping healthy fowls in winter, especially where they are kept confined, I believe is to make a small enclosure next to the hen house open entirely on the front by using poultry netting. This will give fowls plenty of fresh air, and open air exercises, which will help to keep off diseases.

In case fowls should get the roup a good and tried remedy is this (in fact it has been proved reliable by different ones in light and bad form): Confine the sick fowls from the rest of the flock and allow them nothing else to drink except the following: To one gallon of water add one-half pound common copperas sulphuric acid, one gill or one-half fluid ounce. Do not cork up tight.

Directions for giving: Give about one teaspoonful to a quart of water; can be fed in any soft food. If these directions are followed closely health will be quickly restored.

Dead Chicks

in the shell is the cry the world over, AND WHY? These are the principal causes: Poor ventilation and insufficient moisture in your incubators. Scott's Eureka Fresh Air Incubators solve the problem. Made in three styles—one of straw walls, and our well known Scott and Junior Incubators, all fitted with our new, perfect moisture device. Supplies the moisture at the same degree of humidity that the hen supplies it. If nature or the hen says 70 degrees of moisture is right to hatch the eggs, then the imitation hen, or incubator, must have a like amount to be a success. The Eureka and Scott Incubators are made on nature's principle. Properly ventilated. Moisture supplied at the proper degree. Absolutely self-regulating. Nature's perfect hatcher. Fully guaranteed. Send for free catalogue today.

EUREKA INCUBATOR CO. :: Box 32, ABINGDON, ILLINOIS

Parks' Bred-to-Lay Barred Rocks

Are the oldest strain of bred-to-lay Plymouth Rocks in America. Selected and bred for their superior egg records since 1889, until I now have a strain that does not contain an occasional 200-egg hen, but many of them. My whole flock of 135 choice breeding fowls averaged 198 eggs each in one year. The individual records of my breeding fowls for 1905 ranged from 170 to 243 eggs per hen. This record has never yet been equaled by any other breeder of Barred Rocks. I breed for quality, eliminating all fowls that do not come close to perfection in standard points, as well as carefully culling out all poor layers by means of the trap nest.

EGGS FOR HATCHING from selected breeding pens, \$2.50 per 15, \$4 per 40, \$12 per 100. Incubator eggs \$3 per 40, \$6 per 100, \$55 per 1,000. Send in your order for eggs now. Catalogue free.

J. W. PARKS :: Box J, Altoona, Pa.

BUMBLE FOOT.

Nature and Course of the Disease—What is the Name of this Disease?—Treatment—Remedies We Use.

Written for A. P. J. by Dr. S. A. McWilliams.

What is Bumble Foot? I do not find the word in the dictionary; but I define it as a tubercular inflammatory swelling of the foot, caused by the tubercular germ. It usually commences in the sole of the foot, but not always generally extending up between the toes, frequently involving the legs and often causing the death of the fowl.

Ordinary abscesses from stone bruises or other injuries usually get well, in man, beast, or fowl, but not so with bumble foot.

The contents of this swelling differs from ordinary boils and abscesses; but resembles the tuberculous affections of long bones, joints, and spine of youth.

Most poultrymen believe that the injury is a bruise caused by the fowl alighting from high roost upon some hard substance, as a stone, a hard floor, a splinter of wood, nail, thorn or what not, and hence recommend low roost, and fresh sand, earth, leaves, straw or other litter for the birds to light on.

They declare that the heavy breeds suffer most; Leghorns and even pigeons have been known to suffer severely from bumble foot.

Some flocks in the same hands, of the same breed are troubled much more than others, showing to my mind that bumble foot is mainly due to a constitutional defect.

One of my flocks of forty hens had several severe cases of bumble foot. Their roosts were only two feet high with a smooth board floor beneath.

Another flock of 100 yearling pullets had their roost five feet high with a brick floor underneath and yet there was not one case of bumblefoot among them.

Stone bruises and other injuries to the tender feet of boys soon get well. Chick-

disease is caused by jumping from high roosts—How do they know?—Did they ever examine, at the time, one so hurt? Are the fowl that roost in the trees more troubled with bumblefoot than those that roost in the pens?

NATURE AND COURSE OF THE DISEASE.

It can commence either outside or inside of the foot as described. When the swelling has reached maturity, that is ripe, it does not contain pus alone, but in addition a hard grayish mass, cheesy like, usually called the core. In this, it differs from a boil or ordinary abscess, which when ripe and opened can be emptied completely. It differs again from the ordinary boil or abscess, in the fact that the empty cavity of the boil or abscess, immediately begins to get well while the cavity in the chicken's foot frequently shows no tendency to get well, but continue to develop more cheesy material for weeks or months until the fowl dies, pale and emaciated.

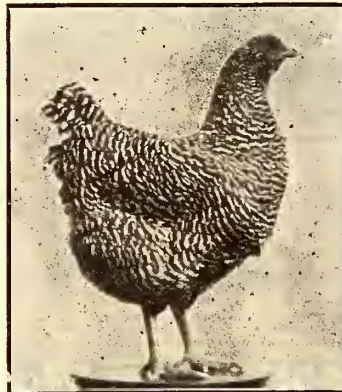

It is astonishing how rapidly this cheesy material grows after the ripe swelling has been opened and cleaned out. It is astonishing what large quantities of this cheesy material can be scraped off daily from the inside of the wall of this so called pus cavity.

WHAT IS THE NAME OF THIS DISEASE?

The Pathologist, (the man who studies diseased structure with the microscope) declares this disease to be tuberculous, whether it occurs in the foot or leg of the pigeon on fowl, or in the back, hip, or knee of the child. It is all the same disease and caused by the same germs, called Tubercle Bacilli.

BREEDING.

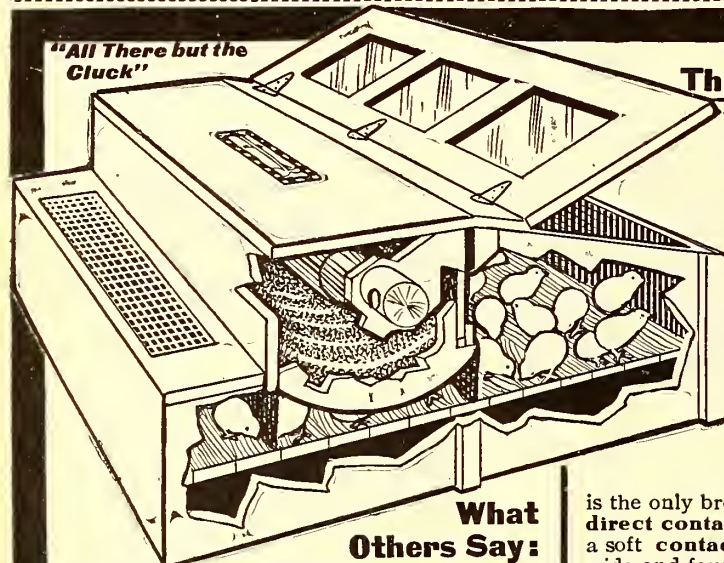

Most people know that the children of Tuberculous parents are thin, puny, and

"Abbie," first prize hen, Lafayette, scoring 94 by Pierce; also in third, Indianapolis pen, 1906. Bred and owned by Wm. H. Robinson, Lafayette, Ind.

ens are light, their feet are tough, and they use their wings.

Before the fowl show signs of foot injury I think the fowl can be seen to be mopy, face and comb pale, and gait feeble. I never bred from such a bird. Every poultryman I question says the

What Others Say:

Your Brooder is all right and I almost talked myself hoarse at the Indiana State Fair telling other fanciers about its good points. It is the only machine in which I have ever been able to raise chicks successfully.

CHAS. V. KEELER, Winamac, Indiana.

Your Brooder is all you claim for it and more. I had more than 300 chicks in it last spring, the weather was all against them, but thanks to your splendid machine I only lost five out of the entire lot.

H. M. WARE, Des Moines, Iowa.

Send me another "Mandy Lee" Brooder. Your machine is head, neck, and shoulders above them all.

JAS. J. BROWN, Scottdale, Pennsylvania.

In my estimation the "Mandy Lee" is the only real Brooder that has ever been manufactured. I have seen lots of them but never anything to equal the "Mandy Lee".

A. J. LAWSON, Sec'y, Cleveland Poultry Association, Cleveland, Tenn.

That warm "blanket" for them to crawl under does the trick and no mistake. There is no Brooder on the market that could equal the "Mandy Lee" for results.

H. B. HALL, Racine, Wisconsin

This is The Brooder That "LEE" Makes

SUCCESS in the poultry business depends, to a large extent, on the brooder, for it is not the number of chicks hatched so much as it is the number raised that determines your profits. To raise strong, healthy chicks you must have natural brooding conditions.

See That Hover

CHICKS must be hovered during their early days—it's nature's way of caring for them.

THE "MANDY" LEE

is the only brooder made that provides natural brooding conditions—direct contact heat—in a natural way. In this Brooder there is a soft contact heat—the hover forms a warm "blanket" one foot wide and four feet long, curved down in the middle, and with curtains front and back. This blanket is heated evenly from end to end, to the temperature of a hen's body, by pipes from above. The chicks sleep with this warm blanket on their backs, giving a soft, contact heat just as nature intended.

In the "Mandy Lee" Brooder each chick gets just as much heat, and no more, as that individual chick desires. Every chick is not compelled to take the same amount of heat as in other brooders. The heat is there, and each chick gets just what it wants all the time. The "Mandy Lee" will raise practically every chick placed in its care. Read the accompanying letters. Ask anyone who has ever used one and they'll tell you it's worth its weight in gold.

Send for catalog—Do it now.

GEO. H. LEE CO., Sole Manufacturers
1191 Harney St., Omaha, Neb.

"The Original Mandy Lee"

feeble; and that many of them die of tuberculosis or consumption. The wise ones know that it is unwise to marry into a tuberculosis family, for if they do, sickness, suffering, and death is the inevitable result. The poultryman who wants strong vigorous healthy stock will not breed from bumble foot fowl; nor any other kind of ailing fowl.

The public are becoming aware that consumption becomes prevalent among people confined in close quarters, as in homes of foreigners in cities, prisons, asylums and convents.

Let any one after sleeping in a room all night go out doors and get the fresh air, then return to his bedroom and notice the foul odor of that bedroom. Not enough of fresh air to make the sleeper's room healthy. Hence laws are being passed, requiring so many cubic feet of breathing space for inmates of schools, asylums, workshops, prisons etc.,

Our journals are full of advice, teaching all poultry beginners how little space they can keep large numbers of poultry in. Not one word of how much breathing space is required for each fowl. They tell us how to crowd our fowl into a small space on the roost, with a curtain front, so as to keep warm on cold nights. A system that must be disastrous to the fowl. If small close quarters is unhealthy for man or beast, so it is for fowl.

Instead of trying to crowd fowl, in severe cold weather, into the smallest space, the larger the room the better, without drafts. Have an abundance of pure air coming into the roosting room at some distance from the fowl and in severely cold weather there should be a small heater of some kind under the dropping board or beneath the roosts.

Do not shut out the air and invite tuberculosis, but temper the coldest air by a sufficient heat to prevent the freezing of combs. The reason so many fowl are said to be ruined by going to the show, is because they are kept at home in close quarters, without sufficient fresh air, without sufficient exercise, and fed

foot grows worse, and the fowl finally succumbs.

When the disease is confined to the sole of the foot, it usually appears as a dry hard, round scab. If it is removed it will leave a raw bleeding surface.

If the scab is allowed to remain until it is ripe, it will pull out with a core and leave a hole. If the inflammation and swelling extends between the toes, it may appear as round swellings, which may become soft and fluctuating and contain pus. If it extends along the leg the same condition may appear there.

TREATMENT.

As tuberculosis can be occasionally cured in the individual, so may it be cured in the foot of the fowl, if taken early enough. The first thing usually noticed is the limping of the fowl. On examining the foot of the fowl, there is seen a roundish, rough, dirty looking scab.

If this scab is removed early, a raw bleeding surface will be seen underneath. On this raw surface pour a few drops of Argyrol. Over this a small piece of absorbent cotton should be applied and over this a clean cotton cloth should be securely bandaged. Again at night the bandage should be removed, the foot washed in clear warm water that has been boiled and placed in a clean dish. A few drops of Argyrol solution should be again dropped on it, clean cotton applied and over this a clean bandage.

The fowl should be placed on clean grass by day, fed regularly, and placed in a clean coop on clean straw by night. The coop should be cleaned out daily in summer or winter and kept in a clean, dry, large, well aired room. The fowl

WHITE PLYMOUTH ROCK.

This cockerel has several prizes to his credit at the leading shows of Missouri and the West, including Kansas City. Bred and owned by T. E. Quisenberry, Slater, Mo.

too much rich food. The same applies to a fowl with bumblefoot. When a fowl is seen limping and holding its foot up, it is unable to scratch or forage. It is usually put into close quarters where it gets neither fresh air nor exercise. The coop in which it is confined is usually never cleaned until it stinks. The diseased

J. C. FISHEL & SON :: Box J, Hope, Ind.

cannot scratch with the sore foot; neither can it stand on the sore foot and scratch with the other.

If the disease is not seen until it has penetrated farther into the foot, then when the scab is pulled off a core will come out with it.

It requires two persons, one to hold the fowl and the leg, while the other treats the foot. Drop the Argyrol into the hole from whence the core came out, and bandage it as before described. When the disease progresses still farther so that round lumps protrude between the toes, and the skin looks thin, and the tumors feel soft, then a free opening should be made through them with a sharp, clean knife previously dipped in the Argyrol solution.

The contents of the lump usually contains a slimy fluid and a core. These contents differ from a ripe boil or abscess, the contents of which is more or less granular and without a cheesy core.

Having emptied the lump of its contents, wash the cavity out clean with warm water from a clean bowl or glass, by means of a bulb or a fountain syringe twice daily.

Pour into the cavity some peroxide of hydrogen and continue to do so as long as bubbles form. Then wash out again and pour in some Argyrol, then apply

some clean absorbent cotton and wrap the foot up in some clean fresh laundered old linen or cotton cloth. If the disease has reached a still farther advanced stage, then the surface of the cavity inside should be scraped clean night and morning of all cheesy material, which forms very rapidly.

For the purpose I use a small spoon (called an ear spud or eurette) which is made of iron. It is about 4½ inches long and at the spoon end is about 5-32 of an inch wide, hollowed out like a spoon. A handy boy could make such a spoon out of a piece of hickory wood.

The absorbent cotton is to protect from germs and dirt. The best treatment is to chop the head off the chicken.

It does not pay for two people to spend time and money, nights and mornings for weeks and months to doctor and care for a sick chicken which has tuberculosis.

Even if the foot of the fowl gets well, it is probable that the germs are still in the blood. No matter how valuable the bird, it is unwise to continue its ailments in the flock. The ailment I have tried to describe is not a simple harmless one that leaves no trace behind it.

REMEDIES WE USE.

We use the Argyrol in the strength of one part to three parts of water, equally good is Campho-Phenique in full

strength. Permanganate of Potash, or Bichloride of Mercury in the strength of one part to 3,000 parts of water makes an excellent wash for the foot. Peroxide of Hydrogen should be used in full strength in the cavity until all bubbling has ceased. Another excellent mixture is equal parts of Alcohol, pure Carbolic acid, and Glycerine. Tincture of Iodine may be used in the cavity once but not daily.

If the foot is lanced too soon, while the skin is thick, before the swelling is ripe, the wound may bleed so freely as to kill the fowl. Adrenalin in solution, as found in drug stores, is the best remedy known for such capillary bleeding in fowl or man.

To stop such bleeding from mouth, cut finger, comb or fowl's foot, wrap a small piece of absorbent cotton around the end of a match or tooth pick, dip into the adrenalin solution and apply it to the oozing, bleeding surface every half hour until hemorrhage ceases.

I often stop hemorrhage from a bleeding comb, by placing a thin wad of clean absorbent cotton over it and applying gentle pressure over it between my thumb and finger for 15 minutes.

Nature alone cures disease. The blood contains the food that heals or cures every ill of human flesh; every injury,

AGAIN BRADLEY BROS.' WIN BARRED PLYMOUTH ROCKS

SIRE OF THE FIRST PRIZE AND CHAMPION MALE AT NEW YORK SHOW, 1906.

Forty-five Winning Males at New York Shows have been bred by us the last Seventeen years. The last Eight years Thirty-one birds bred by us have sold for \$100.00 or more each, or that price refused.

N. B. The foregoing facts are compiled from actual records carefully kept.

300 Breeding Birds of our Best Winning Lines for sale at \$3.00 to \$25.00 and up. Choice Pens of five birds \$20.00 to \$40.00.

EGGS From Best Pens and Best Pens only, \$7 per 13, \$20 per 39, \$48 per 100. \$250 was refused for a Cockerel and Pullet hatched by two customers from eggs we sold.

FREE---Large Circular, "America's Best---Illustrated," 22 pictures of New York Show Winners; also new testimonial sheet. Send for it.

BRADLEY BROS. - - Box 909, Lee, Mass.

WE BREED OUR WINNERS. EVERY ONE OF OUR WINNERS AT NEW YORK WAS OUR BREEDING, PURE.

"I take pleasure in writing you that my First Chicago cock is the same that won First as cockerel at Kansas City last year, and the one hatched from eggs you sold me. This I think, should be convincing proof to any one that you sell eggs from your best pens. I believe that 90 per cent. of Eastern birds that win in the large Western shows are of your breeding. Yours very truly, W. W. BYWATERS. February 1, Camden Point, Mo"

AT NEW YORK SHOW, 1906, in a class of nearly 500 Barred Plymouth Rocks, Representing All the Largest Breeders, **we won** as follows:

The Prize of Prizes of the Entire Show;

First and Sweepstake on Cockerel;

The best record for Cocks and Cockerels;

The best record for Cockerels Alone;

Spratt's Gold Special for best Plymouth Rock

Cockerel or Pullet, any color, Spratt's Fed;

Special for Champion B. P. Rock Male;

Special for best Pullet Mated Exhibition Pen.

Our "World's Champion" Cockerel and his Sire are both

Pure Bradley Bred and of our Richest New York First Prize Winning lines, extending back for Seventeen years.

FOR SEVENTEEN YEARS BIRDS THAT WE BRED AND RAISED have won at New York Shows more first prizes by over 25 per cent. than any other exhibitor has won on any stock; 25 per cent. more first prizes on Exhibition Pens, and double the number of first prizes on Cockerels; also nearly three times the number of first prizes on Males that any other exhibitor has won on stock not our breeding.

every cut, every wound, every diseased structure. The wounds or sores are kept scrupulously clean, to prevent the rotten material from being absorbed and poisoning the blood.

If the blood is kept clean, pure and healthy, then it will cure every diseased structure.

The washing and scraping with a tiny spoon or curette is to clean out the filth that poisons the blood, the peroxide of hydrogen and argyrol solutions are for the same purpose.

Poultices, salves, liniments, wax, balsam, tobacco, etc., have no curative effect.

Nature (healthy blood) alone cures; cleanliness and protection aids. Rich earth makes plants grow; salves or liniments would not.

The good housewife covers the milk and other food products to protect them from the germs of the atmosphere.

The good doctor or poultryman washes and covers the sores to protect them from the germs of the atmosphere.

The germs of the air must have food, in order to grow, thrive, and multiply, and nothing better than flesh and blood for the purpose.

EXPERIMENTS WITH CHINESE PHEASANTS.

Experiments in the breeding of game birds will begin shortly at the Kansas state agricultural college. The work will be under the direction of Prof. Oscar Erf, head of the dairy and animal industry department, and Theodore H. Scheffer, assistant geologist, in conjunction with Mr. D. W. Travis, state fish and game warden. About thirty birds of the variety known as the

Chinese or Torquatus pheasant will be shipped by Mr. Travis to the college breeding pens, and others will be secured from time to time. The state game commission will bear the expense of fitting up the enclosures and breeding pens. The pheasants supplied by the game warden become the property of the college.

Mr. Travis will accompany the first

CHAS. V. KEELER, Winamac, Ind.

shipment and will incidentally look over the college farms and the surrounding country with reference to their desirability as pheasant breeding grounds.

At present it is not the purpose to

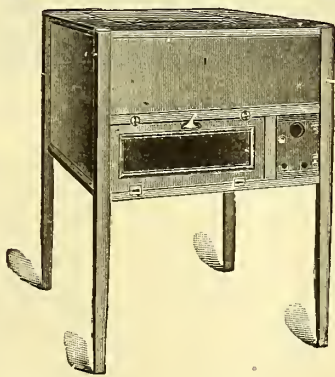

liberate any of the birds. They will be kept in enclosures and their eggs hatched, either by incubators or by domestic fowls of the bantam breeds. If any are released on the campus they will be protected and their habits studied. It is hoped that they will propagate rapidly and become a valuable addition to the game supply of Kansas. One of their good points is that they attain maturity and are ready to ship by September following their hatching in the spring. Fancy poultry usually does not mature until the spring of the next year.

The Torquatus was introduced into Oregon some twenty years ago. They thrived remarkably well, completely stocking the state in a few years, and the Willamette valley is now commonly referred to as the "Sportsman's Paradise" by the people of Oregon and others. One reason the pheasant is so prolific is that the male cares for the spring brood while the female prepares for another, so that two broods are raised each year.

Correspondence with the Oregon game warden was carried on for a considerable length of time for the purpose of securing information for further work and study of the pheasant problem. If the present experiment proves a success, and there is every reason to believe it will, further experiments will be conducted at the college in conjunction with Mr. Travis, with other game fowls and several species of squirrel not now found in Kansas.

R. A. Tuttle, Center Moriches, N. Y., won first and second cockerel, first and fourth pullet, at Madison Square Garden, 1906, on Buff Rocks. Send for his egg circular.

Natural Incubators Hatch Strong Chicks

They don't die during incubation and they come from the shell bright eyed, vigorous and healthy, and will feather naturally in every way equal to hen hatched chicks. They must be so because the Natural Incubator follows the hens' method in hatching, in that the eggs are supplied at all times with just the right amount of pure, fresh, life-giving air. Different in principle from any other incubator. It almost runs itself; no sitting up nights with a Natural. Read what it does with the most difficult of all eggs to hatch:

"Perpetual Hen Co., Paterson, N. J., February 20th, 1906.
Gentlemen:—As a Light Brahma Breeder exclusively, I have, during the last six years, been trying to hatch eggs from this breed of poultry. During this time I have tried at least six different kinds of Incubators, always with the same result; about 5 per cent hatch and 85 per cent dead in shell, while from the eggs under a hen I could get 85 per cent strong chicks. I have been told many times that the incubator was never made, nor ever would be, that would hatch Light Brahma eggs successfully. However, I am now using the "Natural Incubator," and feel proud that at last I can say that Light Brahma eggs can be hatched successfully. I had a hatch come off on Feb. 17th of 93 per cent, which I think is something very much out of the ordinary, considering the time of the year. There was not more than two hours between the pipping and the chick being hatched, and they are all strong and lively—not a cripple or a sign of one in the whole bunch. I feel more than glad to know that I can now hatch my favorite breed of eggs at any and all times. Truly yours, HOLDEN RIGBY."

The following letter from H. L. & C. S. Nason, the well known poultrymen, who want the best of everything; and who are competent to judge of what IS best in incubators, shows what the Natural does in competition with other machines:

Frenchtown, N. J., March 17th, 1906.
Gentlemen:—You will find enclosed our order for eighty (80) of your No. 3 Natural Incubators. Twenty-five of these are for immediate delivery, balance as soon as we can place them in buildings now being erected. These machines will be used exclusively in our new plant here, and we are placing the order only after a very careful test with a number of other machines, which from our long experience, we considered the best on the market. Wishing you a very prosperous season, and hoping you will give the inclosed order your careful attention, we are, yours very truly, H. L. & C. S. NASON, by H. L. Nason."

The Storm King Brooder

Recognizes the same necessary principles as the incubator. Pure air and plenty of it, naturally moistened, no overheating, no chilling, no crowding. All the warmth and comfort that chicks get from the hen. That's the Storm King Brooder.

Make Your Own Brooder and use the famous Storm King fixtures which we sell you. Blue print plans and full directions furnished.

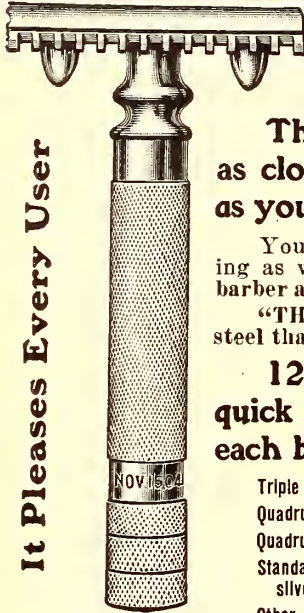

Special Prices Having placed large contracts for materials for Incubators and Brooders we are enabled to make a considerable reduction in the selling prices, and our customers are to have the benefit of our saving. Write for prices.

CARE OF THE INCUBATOR.

Calendar of Hatch, and what to do from the first Day Until the End of the Hatch.

First Day—We will now suppose everything is in readiness to begin the hatch, tray filled with eggs, thermometer in position, lamp well trimmed and burning to produce sufficient heat, regulators set to open at 102, and ventilators on the machine wide open. On this day do not turn the eggs. Do not open the door at all. Fill the lamp and trim the wick both morning and evening every day of the hatch. Always trim lamp as late at night as possible, leaving a good strong flame, so as to insure a steady heat throughout the night, especially if you think the night will be cold. Watch lamp for about ten minutes after lighting and see that lamp flame does not grow any larger.

Second Day—Same as first; turn the

First prize Barred Plymouth Rock cockerel at Michigan State Poultry Show, Detroit, Mich., January 27-February 1, 1906. Bred, owned and exhibited by A. L. Emerson, Inkster, Mich.

eggs both morning and evening, as near twelve hours apart as possible.

Third Day—Same as second, except on the morning of this day examine the regulator carefully and see if it needs readjusting. The machine and the eggs are now properly heated throughout, in fact, both have got down to business. See that the damper barely opens at 102 degrees and change eggs from center to outside of tray and vice versa.

Fourth Day—Fill lamp and trim wick. Look at the temperature and see that the regulator is just as you fixed it the day before, thus making sure it is doing its work properly. The machine should be looked at twice a day, morning and evening. When eggs are turned change the position of them from center to outside of tray and vice versa. If the atmosphere in the compartment where incubator is being operated is not colder than 50 degrees, air the eggs when you turn them about 5 minutes; if the room is colder than 50 degrees, turn and air them 2 minutes. Always close incubator while eggs are being aired.

"GREATEST STRAIN ON EARTH"

CLEMENT & FIKE'S WHITE WYANDOTTES

Winners at the leading shows in America. Let them win for you next year.

BRIDGEWATER POULTRY FARM

H. H. FIKE, Gen'l Mngr. :: Box A, LIBERTYVILLE, ILLINOIS

Fifth Day—Fill lamp and trim wick, both morning and evening, and turn eggs. Air eggs from 5 to 7 minutes.

Sixth Day—Same as third day. Do not forget to turn tray end for end.

Seventh Day—Same as second day, excepting air eggs about 10 minutes.

Eighth Day—Same as fourth day, excepting air eggs about 10 minutes.

Ninth Day—Same as eighth day. Fill lamp and trim wick and have the temperature after this time registering 103 degrees, with the thermometer in its proper position. Be sure the damper is working freely, and turn eggs, changing about as on third day.

Tenth Day—Now come some changes. This day is the day for the testing of the eggs and rejecting the clear and infertile ones. Take pains with this work, for success depends upon your own intelligence and judgment from this day on, up to and including the morning of the twentieth. Turn eggs twice a day, evening and morning. Always reverse the tray end for end. Air eggs once a day, fill lamp and trim wick each morning and evening and see to getting a good blaze, ample heat and take a look at the regulator and make sure all is well. Do not forget to test the eggs and air them.

Eleventh Day—Turn the eggs night and morning, fill lamp, trim wick and look at thermometer, regulator, etc. Air eggs twelve minutes.

Twelfth Day—Same as eleventh day.

Thirteenth Day—Same as eleventh day.

Fourteenth Day—Same as eleventh day. Do not forget to air eggs every day, nor to fill lamp and trim wick. Air eggs 12 minutes.

Fifteenth Day—The regulation routine, turning eggs in the morning, also evening. Fill lamp and trim wick twice a day. See that temperature, regulator and thermometer are O. K. Air eggs 14 minutes. Change eggs about as on twelfth day.

Sixteenth Day—Same as fourteenth day, excepting air eggs 16 minutes.

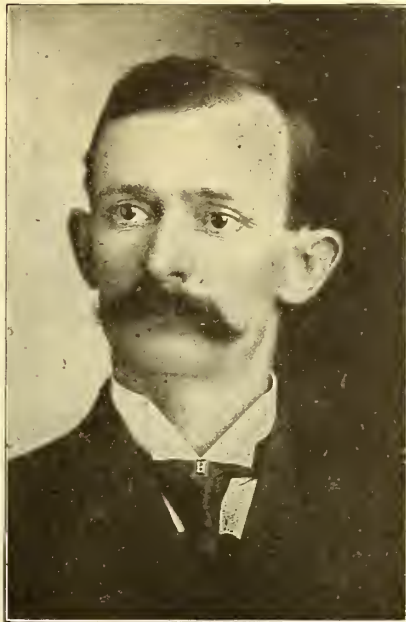

Seventeenth Day—Same as eleventh day, excepting air eggs 16 minutes.

Eighteenth Day—Same as seventeenth day, only air eggs 10 minutes.

Nineteenth Day—Do not air eggs, only enough to turn them, or about 5 minutes.

Twentieth Day—Now comes the interesting time. On the morning of this day turn eggs as usual, but very carefully. Keep the temperature at 103 to 104 degrees. Right here we wish to say that owing to the life of the chicks in the eggs the heat in the egg chamber may go up to 104 degrees. Never open up the egg chamber within 36 to 48 hours after the chicks begin to hatch. If patent turning rack is used, remove it.

Twenty-first Day—Hands off.

BERT WARREN,
Evans City, Pa.

Twenty-second Day—On the morning of this day remove the dry chicks to the brooder, which should have been heated up to about 95 degrees.

Note—Be sure that the room in which the incubator is run is well ventilated, and the air is pure and sweet, and it will insure you a much better hatch. Never run an incubator in a room with foul air that you could not stay in yourself. Be sure that your incubator stands level.

FRED KAZMEIER.

THE HEN THAT LAID TWO EGGS
IN ONE DAY.

Editor of the AMERICAN POULTRY JOURNAL:

Kindly allow me space in your valued columns to prove to your many readers that I have an Orpington hen that actually layed two eggs in one day. On Sunday, March 11, the writer found an egg as large as a goose egg, its actual weight was 5¼ ounces.

Now, the writer's curiosity was aroused and he took the egg to J. F. Koerber's store and in the presence of seven men the egg was broken, and it contained one average sized egg with shell complete and also the white and yolk of another egg, equal to an extra sized egg, showing to be fertile.

Now, the writer has fowls that are extra good layers, but he never expected any of them to lay two eggs per day. The egg with shell complete shall be placed in incubation and expects an exhibition bird from it, not only by high scoring but the only fowl in existence that is an actual twin. Can any of your readers prove they have had a hen that layed two eggs in one day?

Yours for more eggs,

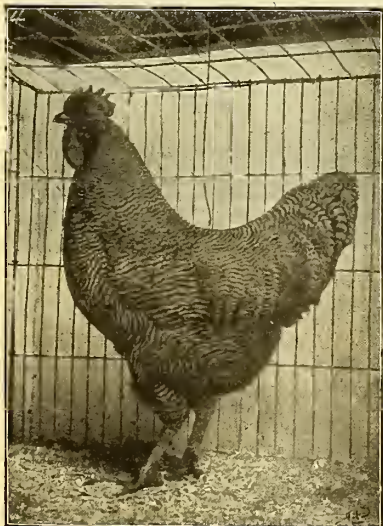

J. E. BRAY.

ARGOLA, IND.

The fifth annual show of the Tri-State Poultry and Pet Stock Association, held at Angola, Ind., was the most successful show in the history of the association. Over six hundred entries were made by some fifty exhibitors. Every bird was first class, and would give the exhibitors at the largest shows a run for their money. Judge Lane placed the ribbons to the satisfaction of all. The association is in the best of condition financially, and has a good balance, with which to make the sixth annual show a great hit. Judge J. Y. Bicknell, Buffalo, N. Y., has been engaged, and the next show will be held at Angola, Ind., Jan. 16-19, 1907.

C. A. REDDING, Secretary.

Are Your Hens Vigorous?
Do They Pay?
There's a Way!

You will find successful, money-making poultrymen continually looking after the health of their flock. They keep on hand constantly a supply of

Conkey's ROUP CURE

because it prevents and will cure roup, colds and canker in all forms as long as poultry can see to drink. Equally good for Turkeys and Pigeons. It is guaranteed and you get your money back if it don't cure. Roup is one of the most common and dangerous diseases known to poultrymen. A box of **Conkey's Roup Cure** will absolutely insure you against its dangers. Why not get from your dealer or druggist a 50c or \$1.00 package and be ready to fight this disease? If they can't supply you, send to us, don't take a substitute. **We pay the postage.**

Book on Poultry Diseases FREE. We have published a book on "Poultry Diseases" for the practical man who wants to watch his flock and keep it in a healthy, profitable condition. We sell this book for 25c, but to the readers of this paper we will send it for only 4c in stamps to pay postage, if they send us the names of two other poultry raisers.

BREEDING FOR EGGS.

By Careful Selection a Laying Strain can be Built Up—A Trap Nest System Necessary—The Male Bird One-half the Flock.

Correct and profitable breeding is a very important matter in connection with the handling of any kind of stock. The old long-horned, slab-sided ranger of other ages has been grown into the blocky, juicy, beefy, steaky fellow of this epicurean age. Such is the kind of cattle raised now, because beef is the want of the age, not bones and hide,

important meat growing lines known to men. The varieties of stock grown are grown for profit. To secure that profit the variety must be grown to meet the identical demand made upon it. This can be done by proper care in breeding.

Most people keep some chickens because they think it will pay and not for their health. It is natural for any kind of stock to pay under proper conditions. To make them pay the owner must get enough in product from them to cover expenses and a reasonable dividend on the investment of money and time.

Your hens must lay eggs, for from

FIRST PRIZE W. WYANDOTTE CKRL. MADISON SQ. 1906
ROCK HILL POULTRY FARM OSSINING N.Y.

WHITE WYANDOTTE COCKEREL.

Winner of first prize at Madison Square Garden, New York, 1906. Owned by Rock Hill Poultry Farm, Ossining, N. Y.

nor powder horns. The sweet, tender, juicy pork chops, so appetizing in this fastidious age, have made the growing of the modern hog necessary. We no longer need to grow him for his bristles. The times have created a demand. Scientific breeding has been resorted to to meet the demand. This same fact holds good all along the line in growing any kind of live stock.

This is pre-eminently true in the poultry world, since it is one of the most

this source alone comes all the profit. They must lay enough to more than cover cost or they are unprofitable. At this point is the sticking place. You may keep a dozen or a few dozen and be able to bear the loss, but what about keeping two, or three, or five hundred? The business principle is the same if there is a leak. You must provide to stop the leak. The only way to effectually do this is to breed it out. You may be able to feed it out part of the time,

but this will be expensive and uncertain. Laying quality is in blood as much as in feed.

To begin with, get the best laying strain you can of the variety you fancy; or, if you have on hand a flock and want to keep them, in either case the same system is necessary to accomplish the desired result.

But few flocks, as a whole, pay a decent profit. It is estimated that but about 40 per cent in most cases pay an actual profit. The other 60 per cent barely pay their expenses, or fall far below. This is due to the fact that only a few hens in the flock are layers. The rest are most of them drones. To make a paying strain and a paying business get rid of the drones and use as breeders only the hustling hard workers.

You can do this only by some system by which you can ascertain just which hen lays and just how well she lays. Some form of a trap-nest system will be most serviceable, unless you can give your whole attention to watching the hens and keeping a record of each hen, as everything depends on the record.

Follow up this method of selection from year to year, using only as breeders the pullets hatched from eggs from the best layers the previous year. Use only males from the highest egg record hen in the flock, remembering that the male is one-half of your flock so far as building up the utility qualities are concerned. If this system of breeding is carefully followed a very profitable laying strain can be built up in a very short time. The great record strains of the country have been built up just this way, and not because they were naturally any better than what you have.

As an example of this system we want to cite to a report of the "Maine Agricultural Experiment Station." In 1898 they began with 140 pullets and 52 trap-nests. They began November 1. In one year from date the record showed that the 140 birds had averaged 120 eggs. Twenty-four laid over 160 eggs, twenty-two fewer than 100 eggs. Pullet No. 36 laid 201; No. 101 laid 204; No. 286 laid 206 eggs. In the following year for special breeding purposes only females having a record from 160 to 200 eggs were used, and No. 101 and No. 286 were mated with a finely bred cockerel, from which mating cockerels were selected for future breeding.

The result of the year 1899 mating showed pullets making a record from 268 to 237 eggs. This method was followed until in the year 1902 a record was reached of 240 eggs, and in 1903 they made an average of 150 eggs each for the whole flock tested. Thus in five years an increase of 30 eggs per hen was reached. This would make a nice profit in a large flock of hens, if they had even been paying expenses. This can be done by any one with good, healthy well-cared for stock, with proper system. This is breeding for eggs, and your success is sure if you will give necessary attention to details.

REV. E. T. DAILEY.

Huntsville, Ohio.

Theodore Ambrosius, Collinsville, Ill., breeder of White Wyandottes and Pekin Ducks, has issued a neat egg circular describing his matings. His winnings at Chicago, 1906, on White Wyandottes were first and third cockerel, third pullet, second hen, five specials, two silver medals; on Pekin Ducks, second cock, third hen, second cockerel, fourth pullet. This ought to convince the most skeptic that Mr. Ambrosius has the goods. Send for circular and mention AMERICAN POULTRY JOURNAL.

Cyphers Incubator Company

MANUFACTURERS OF

Everything for Poultry-Keeper.

Only the knowledge of experienced practical poultrymen and the study of the science of feeding can successfully produce the perfectly balanced Chick Food ration so well known as **Cyphers Chick Food** which is composed of a mixture of seeds and grains from which **all weed seeds have been removed.** That Cyphers Company Chick Food is correctly balanced; that it contains the right material in correct proportions for the formation of **Bone, Muscle, Flesh and Feathers,** and that it keeps the young chicks in continual health is proven by its popularity among the successful breeders and fanciers of America. If you desire to get the best results—to keep your chicks alive and growing, use

Look for the seal.

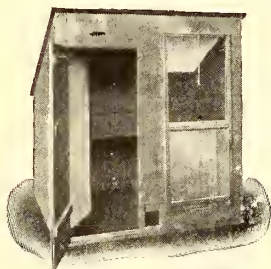

QUICK-GROWTH, STRENGTH-GIVING, Cyphers Chick Food.

Cyphers Laying Food, Cyphers Scratching Food, Cyphers Developing Food, Cyphers Forcing Food, Cyphers Short Cut Alfalfa, Cyphers Shredded Alfalfa, Cyphers Mealed Alfalfa.

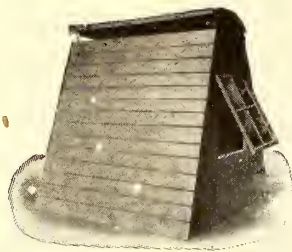

SOLD ONLY IN SEALED BAGS—LOOK FOR THE SEAL.

Our Kansas City Mill manufactures nothing but the above poultry foods and alfalfa products—no breakfast foods nor ordinary stock foods. We purchase by the carload only. This mill has a capacity of eight carloads per day—nothing but poultry foods, and remember you get the whole grain—every atom of it. For development of young chicks; for steady, persistent egg production; for ready fattening for market and for general all-round foods, remember that **Cyphers Company Foods** are the standard. Our big, free catalogue fully describes them and illustrates the process of manufacture.

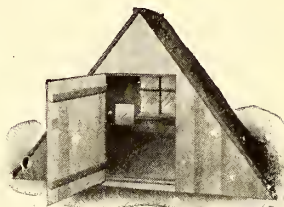

Portable Poultry Houses. Take Your House With You When You Move.

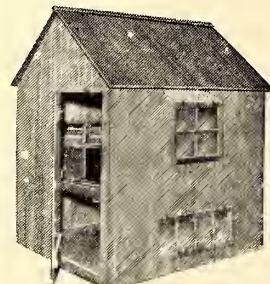

Shed Roof Canvas Lighted House.

Hare-Curtis Hygienic House.

Apex House for Boys.

Suburban House with Two Rooms.

Our Portable Poultry Houses have been designed with a view to furnishing poultry keepers on rented lands a house that can be set up and taken down readily without driving a post or fixing them in any way to the ground. They are also just the thing for poultry farming on a large scale as they are easily moved from place to place. They are shipped "knock-down" with accompanying instructions how to set up; therefore the freight charges are low. **The Shed-Roof House** possesses two doors—one of wood, the other of canvas—either or both may be used. It also possesses a canvas window with wooden shutter. **The Suburban Poultry House** has two rooms—one with wooden floor the other being a scratching room; one window in each room. **The Hare-Curtis or Hygienic Poultry House** is specially constructed for a brooding house for young chicks, although equally suitable for old fowls. It is equipped with special roof for advanced mode of ventilation. **The Apex Poultry House** is a smaller, low-priced house for beginners—built for the boy to give him a start at little cost. Our big free catalogue gives full photographic illustrations and description with sizes and price.

Laboratory Specialties. Accept Only the Genuine Cyphers Remedies.

Save Your Chicks by using Cyphers Lice Powder.

Cyphers Poultry Remedies are prepared with the knowledge that the best ingredients give the best results. Back of these Remedies stands the good name of the Cyphers Company. There is danger in cheap, carelessly compounded preparations. **Order by Number:** No. 1.—Cures Catarrh, Bronchitis, etc.; No. 2.—Colds, Discharge from Eyes, etc.; No. 3.—Chicken Pox, Sores, etc.; No. 4.—Diarrhoea, Cholera, etc.; No. 5.—Diphtheritic Roup, Canker, etc.; No. 6.—Indigestion, Liver Diseases, Limberneck, etc.; No. 7.—Egg Bound, etc.; No. 8.—Rheumatism, Cramps, Lameness, etc.; No. 9.—Worms, etc.; No. 10.—Adds Fertility to eggs, etc.

Cyphers Full-Nest Egg Food Makes Hens Lay.

It increases egg production, promotes health, insures vigor in fowls and increases the fertility of eggs. In addition to medicinal seeds, vegetable extracts and mineral salts, it contains in a highly concentrated form the necessary animal food for egg production, taking the place of bugs, insects and worms in the fowl's diet. An increase of eight eggs a month will pay for a 42-ounce package of Full-Nest Egg Food, and as one package contains 1,500 Feeds for 1 Hen, 10 Feeds for 150 Hens, 150 Feeds for 10 Hens, it will be seen that it is the cheapest egg producer on the market. The name of the Cyphers Incubator Company is proof that it is the most reliable. It represents **60 FEEDS FOR ONE CENT.** Price 42-ounce carton, 25 cents; 25 pound pail, \$2.00.

Cyphers Incubator Company

MANUFACTURERS OF

Everything For Poultry Keepers.

Experienced chick raisers will tell you that many chicks die because of impure air or lousy hens. To overcome the latter, brooders were invented; and to overcome the former, brooders have been perfected. Cyphers Company Brooders secure in the highest degree fresh air, even temperature, and strong, vigorous chicks.

Experienced poultrymen who have encountered the disappointment of chicks dying without apparent cause are convinced that the following requirements in a brooder are absolutely necessary:

1st—The admission of fresh air in the Hover Chamber; 2nd—The introduction of Perfectly Regulated Heat Free from Oil Fumes and Smoke; 3rd—Sufficient floor space for exercise during inclement weather. The combination of the two former requirements call for such scientific construction as combines the fresh air with the heat and keeps both continually renewed. A box heated with a lamp cannot accomplish this. A scientific knowledge of heat and cold and the action of air currents (drafts) and ventilation is necessary. This knowledge aided by practical experience in raising chickens has enabled the Cyphers Company to produce its **unequaled line of Outdoor and Indoor Brooders** that are giving such great satisfaction throughout the world and its varying climates. Just as the CYPHERS INCUBATORS are renowned for their Hatching Qualities so are CYPHERS BROODERS renowned for their Chick Raising Advantages. They possess every improvement suggested by the experience of practical successful poultrymen, and combine low cost with superior construction and material. They include Three Styles, Four Sizes of Outdoor and Indoor Brooders.

THREE STYLES, FOUR SIZES

Cyphers Brooders

Nineteen pages of our Big 228-page Free catalogue are devoted to nothing but Brooders—all illustrated—interiors and exteriors—so that you may judge for yourself before buying. This catalogue contains a large number of testimonials from leading successful chicken raisers who have raised their winners in Cyphers Company Brooders.

Mail Order Banking

Under our banking system, business men everywhere find it to their advantage to make remittances by checks, rather than by bank drafts, post office or express money orders. There are several good reasons for this, but the two principal ones are these:

First—The convenience in paying a bill by simply writing out a check, thus making it a great time-saver as well.

Second—It gives the most satisfactory form of receipt for the payment made.

The farmer has become a business man. In the progress he has made within the past ten years he has found it necessary, and greatly to his profit and convenience to handle his own financial affairs, rather than trust them to the local banker, lawyer or merchant. Our agricultural colleges, farm institutes, and great conventions, that relate to agriculture in various forms, have all advocated the importance of the farmer paying more attention to the financial end of his business. Instead of being isolated from the great commercial centers, as was the case in the earlier days, he has, through the means of modern transportation facilities, rural mail routes, telephones and interurban railways, become very closely identified with these great centers. His home is his business office, and instead of spending time driving considerable distances to his local town and making expenditures for things that many times he does not want, he has brought to his home the great mail order catalogues, and when he wants to make his selection, which is usually done in conference with the whole family on a rainy day, or in the evening, he simply writes his order, encloses a check, and the mail order merchant does the rest.

A recent difficulty has arisen with reference to personal checks, because of the excessive exchange charge imposed by local banks. The local banker is usually biased in favor of the local merchant, because he is his best customer. The farmer who wants to save from twenty-five to fifty per cent on his purchases—which he can do through the modern mail order method of buying—finds his local bank a bank of deposit only. How much better it would be for the farmer to make his deposits in a bank in a great mail order center like Chicago. Banking by mail has become an established fact, and to keep progress with the great mail order movement, the Ravenswood Exchange Bank, of Chicago, Ill., has arranged to carry farmers' accounts, allowing them to draw their checks on this bank for their purchases, which will be accepted anywhere without exchange. This will be a great convenience to farmers everywhere.

Mail order merchandising is conducted in the city of Chicago to the amount of \$200,000,000 annually.

Chicago is the greatest live stock market in the world. Many of our farmers

make direct shipments to commission houses at the Union Stock Yards and receive checks in return. It can be arranged to have these checks sent to this bank for deposit to the account of the farmer without exchange charges.

Chicago is likewise the great produce center, and commission houses here are remitting millions of dollars annually to the farmers direct. By the plan proposed, the farmer can have this placed to his deposit and receive the credit notice from the bank.

Chicago is also the great grain market and the same rule applies in that case.

George W. York

Louis P. Scoville

This mail order banking proposition is best explained through the literature the Ravenswood Exchange Bank, of Chicago, Ill., will send to anyone asking for it.

The Ravenswood Exchange Bank is composed of men who have had agricultural experience and are familiar with the requirements of the farmer along banking lines. The president, Mr. Louis P. Scoville, under whose direct supervision the mail order business is conducted, is a director in White's Class Advertising Co., an advertising agency that handles extensively agricultural advertising accounts, and is thus placed in close touch with the great consuming interests of the country.

Mr. George W. York, a director of the bank, is also treasurer of White's Class Advertising Co., and has had more than twenty years' experience in business lines directly affecting important branches of agriculture. He is publisher, likewise, of the American Bee Journal, the oldest bee paper in America, with which he has been connected for twenty-two years.

Mr. Frank B. White, president of White's Class Advertising Co., who is well known by the agricultural fraternity because of his long service in connection with the advertising business, always a specialist in agricultural lines, has this to say about this plan intended for farmers to conduct their banking by mail:

"I most heartily approve of the plan proposed by the Ravenswood Exchange Bank to conduct a banking business by mail, particularly in behalf of farmers. Both Mr. Louis P. Scoville and Mr. George W. York are interested in my company, and I know them to be thoroughly competent, honorable, safe and conservative. I am also acquainted with the vice-president, Dr. W. C. Abbott, whom I know to be a successful publisher and manufacturer, and who has recently become interested in this splendid institution. I am sure that the plan they propose is going to be of great advantage to the farmers everywhere, because of the convenience and saving, and furthermore, because of the interest to be paid on deposits, all of which they explain in their literature."

Columbian Wyandottes

New York and Chicago winners. I will sell eggs from one mating only, headed by the first cockerel at the Herald Square Garden Show, N. Y., Dec., 1904. Mated with him are pullets from the first pen at Chicago, Jan., 1905. Get my prices before you order elsewhere. Book your orders soon. Stock all sold.

W. A. HAYES

Monmouth, Illinois

AN ARTICLE THAT DESERVES THE ATTENTION OF EVERY FARMER, POULTRYMAN AND ORCHARD PROPRIETOR.

Lumber bills, sickness amongst poultry, the destruction of orchards by noxious insects and tree diseases has given many farmers a good deal of trouble and expense.

In the Avenarius Carbolineum, a preparation based on 30 years' experience, we have now such a cheap, simple and sure medium to overcome all these troubles and save the farmers of the country thousands of dollars annually.

Used for painting barns, granaries, shingle roofs, silos, posts, bridges and all other woodwork, it is guaranteed to prevent rot and decay and at the same time imparts a nice brown color to objects painted.

Used in the chicken house against chicken lice, mites, etc., it is the most radical remedy for this purpose and saves the monthly expense for insect powder, lime, kerosene, etc. One coat applied to the interior of your hen house will last for years.

Of late Avenarius Carbolineum has been successfully used in orchards as a destroyer of the San Jose scale, red scale, orange scale, oyster-shell scale, black scale, etc., and as a preventative of canker, blight, fungus and gumming.

Our claims are based on 30 years' experience and thousands of testimonials. Whoever desires further information about Avenarius Carbolineum should write to the Carbolineum Wood Preserving Co., Milwaukee, Wis., mentioning this paper.

ALL FROM ONE MAN.

Poultrymen like the convenience of buying all their supplies and appliances from one man. Especially is this true when they know the man that makes them is up to snuff on all poultry matters and is a practical poultryman himself.

Take for instance the incubator for hatching the eggs; the brooder for rearing the chicks, and the foods and remedies so necessary for raising them easily and profitably. If you can buy them all from one man you'd rather do it, wouldn't you? In this way you are sure of better results and you can depend upon the qualities, if

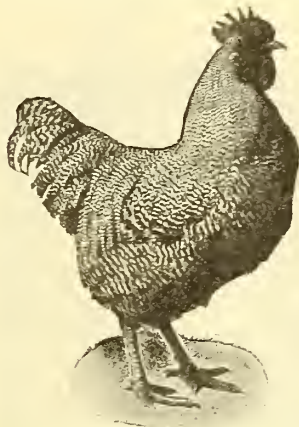

the man you buy from is reliable and competent. And this is exactly the secret of the success of the Geo. H. Lee Co., of Omaha, Neb.

Mr. Lee knows every phase of the chicken business, from the formation of the egg clear on through to the very end of the chick's life—in the pot or frying pan; and how to help the poultryman make every stage of the business successful. He has been in the business for years, and has made a scientific and practical study of

are so effective and profitable for the poultry raiser to use.

Every chicken raiser knows about the "3 Lee Leaders"—Lee's Egg Maker, Lee's Germozone and Lee's Lice Killer—but not every chicken raiser knows *why* they have made the name Lee famous throughout the poultry world.

If you will take the trouble to write to the Geo. H. Lee Co. they will furnish you with reasons for these whys, and will do their best to make you more familiar with their wares, so that you can buy all your supplies of "that man Lee" also. It will be convenient and save your money.

BARRED PLYMOUTH ROCK.

First prize cockerel at Central Missouri Show and third at Kansas City. Owned and bred by T. E. Quisenberry, Slater, Mo.

every requirement of the poultry raiser. He knows how to hatch eggs artificially, how to rear chicks and then how to feed and care for them to get them to market in the best condition, in the shortest possible time, to realize the greatest percentage of profit.

Every chicken raiser has heard of "The Mandy Lee" incubators and brooders—but not every chicken raiser knows why they

Schumacker Bros., of Plainfield, Ill., won at the great Chicago Show, January 22-27, 1906, as follows: On Golden Wyandottes, 3d cockerel and 4th pullet, on three entries; at Naperville they won 1st, 2d, 3d cockerel, 1st, 2d hen, 4th pullet and 1st pen on Barred Rocks; they won 3d pullet on single entry. Schumacker Bros. report that they have some extra fine birds in their pens for the season of 1906. See ad on another page.

U. R. Fishel, of Hope, Ind., won at Indianapolis, February 5-10, as follows: Cock, 1st, 2d, 3d, 4th, 5th; hen, 1st, 2d, 3d, 5th; cockerel, 1st, 2d, 3d, 5th; pullet, 1st, 2d, 3d, 4th; breeding pen, 1st, 2d; special, whitest fowl, best display White Rocks, best display all varieties and six silver cups. W. C. Pierce, judge; 107 in White Rock class.

J. H. Jackson, Hudson, Mass., the noted White Wyandotte breeder, has a change of ad this month, in which he is advertising stock and eggs from his noted prize winners. Mr. Jackson satisfies his customers. Our readers should correspond with him if they are desirous of obtaining prize-winning blood. MENTION AMERICAN POULTRY JOURNAL.

T. E. Applegate, Box A, Spicard, Mo., breeder of Rose and Single Comb Brown Leghorns, made a clean sweep at Kansas State Show; also has won at Chicago, Illinois State Show and the Governor \$50 silver cup, donated by Governor Folk at Missouri State Show. Send for his egg circular and mention AMERICAN POULTRY JOURNAL.

UNEQUALED ORPINGTON TRIUMPH!

Again in 1906 at Madison Square Garden, New York, we win SEVEN FIRSTS, NINE SECONDS, SEVEN THIRDS, FOUR FOURTHS and FOUR FIFTHS in

The Strongest Class of Orpingtons

ever brought together. This is a record unapproached by any other Orpington breeder. Furthermore, Willow Brook Farm won on stock we bred and raised at our own farm. In other words, WE DID NOT HAVE TO BUY ONE BIRD—NOT ONE—to make this great winning.

For the past four years we have been the LARGEST ORPINGTON WINNERS at New York. Others may make this statement, but we stand prepared to prove our claim.

If you wish to produce winners, it is necessary that you buy from the farm that has the winning lines and that breeds its own winners—every one of them.

If You Want the Best Obtainable

in either S. C. Buff, Black or White Orpingtons, why not come to the fountain head, to the farm that has its established breeding lines and has produced year after year the majority of the New York winners? We do not have to mislead our customers in advertising, as OUR FARM CAN BE SEEN, and the birds are here to show for themselves.

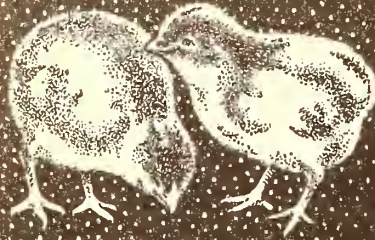

Remember that our show record and winnings have been obtained in competition with THE BEST PRODUCED IN THIS COUNTRY AND ENGLAND. Each year thousands of dollars have been paid for birds imported to this country, and not withstanding this fact we have been

The Largest Winners the Past Four Years

More than 370 S. C. Buff, Black and White Orpingtons were on exhibition at Madison Square Garden Show this year.

WE NOW KNOW that our matings for the breeding season of 1905 were correct, and that our stock is better than ever. We offer you stock and eggs from which you can get results. OUR ORPINGTONS are winning in the hands of our customers all over the country. We have forty breeding yards mated FOR THE PRESENT SEASON, and for the asking will mail you our mating list, giving you prices of eggs, etc. We have the largest flock of Orpingtons in America to select from, and would be pleased to sell you either exhibition or breeding stock, as may be desired.

WILLOW BROOK FARM
 W. L. DAVIS, Prop. .: . Box A, BERLIN, CONN.

The First Food

It is very important that the first food you feed little chicks is right. That is, it must be a food suitable to their delicate digestive organism, because upon this first food depends your success in raising them to a profitable point.

HARVEY'S CHICK FOOD

has gained a big sale because it meets exactly the requirements of a chick food. Supplies the proper nutrition and regulates the bowels perfectly. Chicks thrive fast, grow strong and vigorous on it simply because it contains just the properties best adapted to their peculiar organism.

CONTAINS NO GRIT

It has a record of success that is remarkable and you take no risk in giving Harvey's Chick Food a thorough test. It should be fed until the chicks are old enough to be put on

regular ration. You will find with this food your loss of chicks will be greatly reduced and your gain in bigger, stronger, better growth greatly increased. If you have never fed ground raw bone you ought to try it. It makes young stock grow faster and stronger; overcomes tendencies to leg weakness, etc. If you get

HARVEY'S GROUND RAW BONE

you will be assured of best results. Pure; made from fresh bones, properly ground. For developing strength, vigor and big growth you will find it a winner.

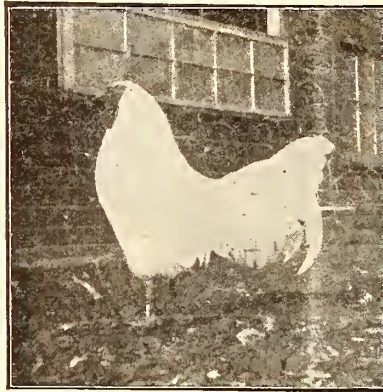

Our complete catalogue of everything for the poultryman is free. You ought to send for a copy today and note the good things—money saving prices we have to offer. It's the poultryman's buying guide.

Harvey Seed Company

Buffalo New York

VENTILATION AND MOISTURE IN THE CORNELL INCUBATOR.

A frequent complaint from operators of incubators who have had poor hatches is that chicks die in the shell. On breaking the eggs that have failed to hatch they find them to contain dead chicks in the different stages of development, many of them full grown. The chief cause of this loss has been attributed to carbon dioxide; in other words, carbonic acid gas, due to improper ventilation.

To test this theory analyses were made of the air taken from incubators and from

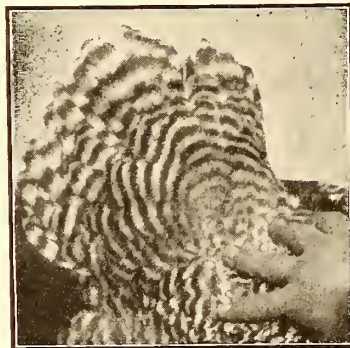

S. C. WHITE LEGHORN.
Cock heading pen one on the farm of John C. Plane, Belvidere, Ill. Weight 8 3/4 pounds; score 95.

air drawn from around the eggs under sitting hens. The average of all analyses shows 20 parts by weight of carbon dioxide in ten thousand parts of air drawn from incubators, while the air drawn from under the hen during incubation shows an average of 43 parts of carbon dioxide—more than double the amount contained in the air of the incubators.

Further analyses of air taken from incubators show that increased ventilation lessens the amount of carbon dioxide, but when increased ventilation was accompanied by supplied moisture there was more carbon dioxide found; there is, then, in incubators, a direct connection between the rate of evaporation and the amount of carbon dioxide found in the machine.

With the hen, the largest amount of carbon dioxide was found in a test that showed the lowest per cent of loss in weight or evaporation of the eggs. Evidently the rate of evaporation has some connection with the ventilation that the hen may give to the eggs.

It is easy to demonstrate, to your own satisfaction, if you place the hand between the body of a sitting hen and the eggs that a perceptible amount of moisture is

Showing back plumage of hen in Yard No. 6 of W. H. Robinson, Lafayette, Ind.

noticeable to the touch—consequently the rate of evaporation under the hen has not only some connection with the ventilation but also with the amount of moisture supplied by her body.

As our claim has always been to reproduce artificially conditions prevailing in natural incubation, we have arrived at the following conclusions:

First—That ventilation accompanied by carbon dioxide produces an evaporation fatal to the maximum results.

Second—That ventilation accompanied by carbon dioxide and supplied moisture pro-

Buy Poultry Supplies from YOUNG

Everything for the poultry raiser. Incubators, Brooders, Feeds, Tonics, Powders, Wire Fences, Leg Bands, Egg Boxes, Gape Worm Extractors, Bone Cutters, etc. Instead of sending to one place for an incubator and to another for a hone cutter or a chicken food, buy all your supplies from the one place. It's more convenient, and besides you save money. Let us send you a copy of our Poultry Supply Catalogue. You'll be surprised how much money you can save. We also sell Farm Implements. Don't forget to also ask for a free copy of

Young's Great Farm Catalogue

It contains everything in the way of farm implements that the farmer or gardener needs; also gives special directions for successful cultivation. Whatever other catalogue you may have he sure you get a copy of Young's.

JOSIAH YOUNG,
17 Grand Street,
New York.

Gape kills more chicks and growing fowls than any other disease. Of all poultry diseases it has been the most obstinate and one of the most destructive. The gape worms are bred by the wet weather, damp ground and low land, and these worms get into the throats of your chicks and the chicks die. That spoils your chances of a successful year. The very location of the disease—in the windpipe—makes it difficult to reach and destroy the worms.

Conkey's Gape Cure

puts an end to them. A positive preventive and cure of this disease. It comes in the form of a powder and is mixed with the soft feed. It kills the worms and makes the chicks feel good. It will instantly stop the progress of the disease in your flock. A cure guaranteed. If your chicks are not cured you can have your money back. Do not take chances. Get a package from your dealer or druggist, or by mail, 50c, postage prepaid.

OUR FAMOUS BOOK ON POULTRY DISEASES.

A practical book of information on how to keep the flock healthy, for only 4c in stamps to pay postage, and the names of two other poultrymen. (Usually sells for 25c.)

duces a condition congenial to the maximum results. Consequently, an incubator to do the best must not be ventilated if it is not provided with supplied moisture; but, as oxygen is essential to life before, during and after exclusion, we devised our moisture lamp, thus completing in the Cornell conditions as they exist under the hen.

When the hen is about to bring off a good hatch the egg shells present that shiny, velvety appearance so seldom found in incubator eggs. It is produced by a balanced amount of carbon dioxide, ventilation and moisture. Fresh air is necessary to the growing embryo, while moisture and carbon dioxide, properly combined, are essential to rot the shell.

Below we give the results of tests made to discover what effect carbon dioxide, with varying amounts of water, or no water at all, had upon the shell.

The eggs were put in bottles; the contents of the eggs were first blown out. The bottles were all given the same amount of carbon dioxide, but different amounts of water were used; some of the eggs were filled with water and the hole afterward sealed with wax to prevent it from escaping.

The following are the results:
First—The egg shells that were subjected to carbon dioxide without water or moisture showed no apparent weakening or rotting of the shell.

Second—The egg shells that were in bottles containing water were badly decomposed.

Third—The egg shells that were filled with water, although no water was in the bottle, were also badly decomposed.

A steady current of carbon dioxide was passed through the series of bottles during the whole period, and was made to bubble through the water in bottles that contained water.

It is thus conclusively shown that carbon dioxide without water has no influence on the shell of the egg; that carbon dioxide and water weakened or entirely dissolved the egg shell.

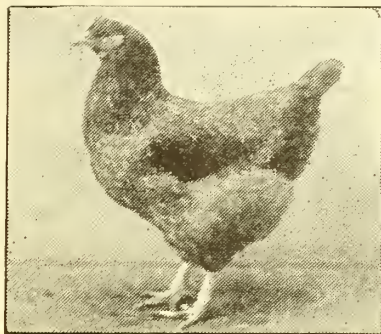

In the Cornell we successfully meet and combine all of the above conditions.

The slatted bottom affords the requisite, soft, automatic ventilation without direct drafts or currents; aided by the Automatic Moisture Lamp and the requisite amount of carbon dioxide given off by the eggs, the combination effectively smashes the shells.

There lacks but "cluck and feathers" to make the Cornell a real old hen.

SPECIAL DUCK VENTILATION.
To hatch hens' eggs the Cornell is equipped with an automatic system of ventilation, balanced to produce the maximum results under all of the climatic and harmonic conditions that may confront the operator.

To hatch duck eggs more oxygen is required, both during the period of incubation and when "drying off" the ducklings after the hatch is under way.

S. C. BUFF ORPINGTON.

First pullet at Muscatine, Iowa, November, 1905. First at Fairfield, Iowa, December, 1905. First at Monmouth, Ill., January, 1906. Score 94½. Bred and owned by Fred E. Wright, Monmouth, Ill.

To fulfill these conditions we have provided the Cornell with our patented system of elastic ventilation. It opens into the nursery tray and is controlled by an adjustable metal slide in the outer wall of the machine.

Each size of the Cornell is equipped with this elastic ventilation, permitting the operator to hatch both hen or duck eggs with the maximum results.

At the late Chicago Show one of the best Barred Rock cocks we ever saw was shown by Mr. W. W. Bywater, Camden

Point, Mo., a Plymouth Rock from beak to toe, correct shape, grand comb, and color that no male in the house could match, a wing with barring equal to the best pullet in any show we have attended this winter; a bird worth \$1,000 if any cock bred is worth that price. He had other good birds on exhibition, including some fine cockerels. Mr. Bywater practices the double mating system. He has bred Barred Plymouth Rocks several years, breeds them exclusively, has established a valuable strain, and bids fair to become a foremost specialist. He now produces about 500 head of stock each year. His prices for eggs are \$5 per 15, \$13 per 50 and \$25 per 100. Send for egg circular. He has about 400 grand birds to sell.

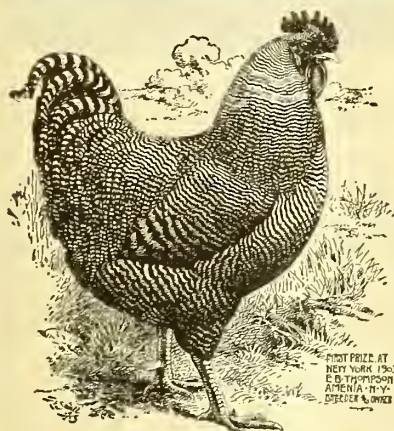

The Dabbert Poultry Farm, Box A, Wheaton, Ill., informs us that they have sold all their surplus stock. They are now ready for the egg trade. Their birds are majestic in size, majestic in shape, majestic in color. Anyone interested should write them. Eggs, \$2 per 13, \$5 per 35, \$12 per 100; worth double. Send for circular and mention AMERICAN POULTRY JOURNAL.

Wm. J. Davis, Eaton, Ind., the Barred Plymouth Rock specialist, is offering eggs from his large and prolific laying strain at "live and let live" prices. After years of patient study and work Mr. Davis has produced one of the best laying strains of Barred Plymouth Rocks to be found anywhere and has not in any way sacrificed their exhibition qualities. Write him for particulars and mention AMERICAN POULTRY JOURNAL.

Berry's Golden Rule Poultry Farm, Clarinda, Iowa, have their 68-page catalogue now ready for distribution to our readers. This catalogue contains much interesting reading matter that will be of valuable assistance to the amateur. It also gives prices of stock and eggs, incubators, brooders and supplies of all kinds. Write for one today and mention AMERICAN POULTRY JOURNAL.

Eureka Incubator Co., Abingdon, Ill., manufacturers of the Eureka Incubators and Brooders, request that our readers send for their large illustrated catalogue, which is sent for the asking.

"Ringlets" are the Imperial Birds

FIRST PRIZE "RINGLET" COCK AT NEW YORK.

The three most superb Barred Plymouth Rock Exhibition Pens on either hemisphere were exhibited by E. B. Thompson at the recent New York Show, Madison Square Garden, Jan., 1906; winning 1st, 2d and three special prizes on pens. The Harding Challenge Silver Cup for best pen, and the American P. Rock Club's grandest special prize for best pen mated to produce Exhibition Cockerels.

My first prize Silver Cup Pen was stamped with the seal of "Ringlet" perfection.

These three "Ringlet" exhibition pens were the most striking feature of the most wonderful array of Barred Rocks the annals of time record. They represent the cream of my long and rich experience. The sun never before shone on Madison Square Garden when the great building held three such matchless exhibition pens, they were the triumph of the Fanciers Art.

My "Ringlet" cockerel at New York winning the American Plymouth Rock Club's special prize for best shaped male is a perfect "Apollo," the ideal Barred Rock Male of the New Standard of Perfection.

THE "RINGLET" BREEDING PEN WINNING the Club's Great Special offered for the best pen mated to produce exhibition cockerels, was declared to be the very acme of skill in mating, a revelation in the science of Barred Rock cockerel breeding. Matings made up of such birds as these and their blood must produce the great winners for next season's shows and future years.

"Ringlet" Eggs Are The Best That Money Can Buy

Mr. E. B. THOMPSON, Amenia, N. Y.

Burnt River, Ontario, February 15th, 1906.

Dear Sir:—I take pleasure in thanking you for the setting of "Ringlet" eggs you sent me. One of the cockerels from these eggs has won many first prizes for me, and this winter at the Lindsay Show he won first prize, scoring 94½ points. I got one pullet from your eggs that was never beaten except by one of her daughters. I showed her at Lindsay this winter winning first prize and all specials for best female of any age. She scored 95½ points, the highest score of any hen of any breed on exhibition. She was pronounced the most perfect Barred Rock hen ever shown. I again thank you for the high quality "Ringlet" eggs you sent me. Yours very truly,

JOSEPH HARPER.

Eggs from the best, at usual prices, one setting \$5, two settings \$9, three settings \$12, four settings \$15. Many of the winners at the most important shows this season, and for years back, were from "Ringlet" eggs.

Richly illustrated 36-page catalogue upon request, it is full of illustrations of New York winners from life. Elegant exhibition and breeding birds for sale in any numbers. See my other ads.

Address **E. B. THOMPSON Lock Box 510, Amenia, N. Y.**

What You Gain

In a few words, you gain this by using a Tubular: (1). One-quarter to one-half more cream, because Tubulars skim by centrifugal force, which is thousands of times stronger than the force of gravity that makes cream rise in pans. (2). One-half to twice as much for butter, because Tubulars remove dirt and bacteria, thus making gilt-edge butter possible. (3). Half the work saved, because you finish skimming five minutes after milking, feed warm skimmed milk at barn, and have only the can of cream to care for. Write today for catalog W-205. It tells all plainly.

CREAM SEPARATORS

HATCHING TIME NEAR.

The nearer the time comes to start your incubator the more important it becomes to overhaul your machines to see that they are in proper trim to turn out good, strong, early hatches.

If your old incubator is out of fix or out of date don't waste your eggs or your time bothering with it. For a few dollars you can buy a new "Dandy" Incubator, soapstone lined, with improvements and conveniences that will insure profitable results.

The "Dandy" has features that adapt it to the beginner as well as to the expert incubator user, and for early spring hatches its peculiar advantages will be appreciated by incubator users everywhere. It is practically proof against sudden changes of atmosphere, such as occur in the early spring. And the "Dandy" Brooder will take care of the earliest chicks you can hatch, and keep them as snug as the proverbial "bug in a rug."

The "Dandy, Jr.," is a cheaper incubator, if price cuts any figure with you. It is double-walled and first class in every respect. Many users think it is the best incubator on the market for the money.

CUT.
The remarkable growth of the Dandy Poultry Novelty Co., of Danville, Ill., is an indorsement for their products that is truly

Battle Creek, Mich.

HAZELMERE POULTRY YARDS.

A Rhode Island Plant Devoted to Columbians and Rhode Island Reds.

Since the advent of the White Wyandotte perhaps no new breed has come to the front as fast as the Columbian, and the readers of the AMERICAN POULTRY JOURNAL may be interested in a short description of the Hazelmere Poultry Yards, the proprietor of which, Mr. W. B. Richardson, has done more than any one man to place this breed before the American public.

Hazelmere Poultry Yards are located at Knightsville, R. I., about four miles from Providence. The home place consists of about three acres. The yards are twelve by seventy feet in length and are well shaded by peach and plum trees that are now in full bearing and add quite a sum to the income of the plant, as well as furnishing shade for the fowl in the hot summer days. The houses are seven in number and are each sixty feet long and are built on the scratching shed plan. The other buildings consist of a cockerel-house and cook-room eighty by twenty-five feet, that contains eighty pens for surplus cockerels. In this building the show birds are fitted and here the food is cooked for the entire plant. Another cockerel-house is fitted with twenty pens, and in this building all the culls are killed and sold to a first class retail trade.

Although high-class White Wyandottes and White and Barred Rocks are bred at Hazelmere, three-quarters of the plant is devoted to Columbians and Rose and Single Comb R. I. Reds. As a rule Hazelmere Poultry Yards do not sell many of their New York and Boston winners, believing them to be much more valuable in the breeding pens, as the eggs trade is very extensive every spring, and eggs are shipped over the entire country from the Atlantic to the Pacific.

No chicks are raised on the home place, but the eggs are put out on several farms in the vicinity and the chicks are brought home in the early fall. Albert C. Allen, who was one of the first Silver Laced breeders in New England and who has handled all varieties of Wyandottes and R. I. Reds for many years, is the resident manager and predicts a great future for the Columbians and Reds. Visitors are always welcome and will receive courteous attention.

BETTER POULTRY MONEY.

The advertisement elsewhere in this paper surmounted with the heaped-up basket of eggs is worthy the attention of poultrymen. There is always something wrong if your poultry does not pay. People who proceed right find that it does pay and pays big. It will pay you if you are properly organized along the profit-bringing line.

The successes achieved by the Great American Poultry Farm at Brodhead, Wis.,

C. N. HANSEN,
Breeder Rhode Island Reds, Warsaw, Ky.

place them in a position to give advice. They head their advertisement, "Get Your Own Price." That's a possibility if you produce the goods and get the name of doing so. But the American Poultry Farm people do not keep dunghill chickens. Their successes in the sale of eggs and of birds and in producing prize winners are due to their superior stock. The kind of stock they

have is the kind there is money in. It is a good concern to get in touch with. They publish a finely illustrated catalogue describing, pricing and picturing some forty varieties of fowls which are the basis of their great business. This book will put you in touch with the ways of one poultry concern that has made a monumental success of right breeding in their twenty-five years' work. The book will be sent free if you enclose the postage, 10 cents, and it is a good book to have.

There are many good chick feeds on the market and it is sometimes hard to decide which one to buy, but one that has been tried and proven and found to be pretty near right is Steinmesch's Extra Quality Quick Meal, made by the Steinmesch Feed & Poultry Supply Co., St. Louis, Mo.

Mr. Steinmesch, one of the firm, has been a very popular breeder of poultry for years, especially Silver Laced Wyandottes, and his combination of poultry feeds are the results of his long experience in raising prize-winner birds. His "Quick Meal" Chick Feed has been found to come nearest the natural food for chicks, and in his own case has proven that breeding right and feeding right is the path to success.

Quick Meal Chick Feed is a dry feed in which there is practically no waste. It contains cracked and broken grains of all sorts. Millet, Rape and other seeds, Beef, Bone and Grit, Charcoal and other choice ingredients, and does not induce over gorging or clogging, but tends to produce rugged, hardy chicks, always ready for their ration. Yet, it contains some grit, because grit is just as necessary to the chicken as teeth are to other animals. They need the grit to digest their feed and this is admitted by every known authority on chicken feeding.

The Steinmesch Co. issue a neat booklet which explains the advantage of using this valuable food, and may be had by addressing the company as above.

We are pleased to state that our old friend, Will Brown, is manager for Mr. William Casswell, proprietor Willmount Farms, Mamaroneck, N. Y., breeder of White Wyandottes exclusively. Mr. Brown knows a good bird when he sees one and whoever has done business with him will testify to that. Price of eggs, \$3 per 15, or \$15 per 100. Send for circular.

Sickness and Death of Poultry

This time of the year plays havoc with the profits, and leads to discouragement. We guarantee every large and small breeder of poultry to positively save him 90 per cent. of all such losses at a comparative cost of only 10 per cent. Moreover, in selling you

ARABIAN POULTRY FOOD TABLETS—a common-sense idea at a common-sense price of only ONE CENT a pound. We not only guarantee you Free from Diseases, but also Larger, Thriftier Birds; Better Strain; Better Broods; Fertile Eggs; Readier Sales; Surer Profits. What more can you ask?

HUDSON, MICH., Jan. 24th, 1906.

THE BESAW CHEMICAL Co., Cleveland, O.
Gentlemen:—I secured a box of the Poultry Tablets from your representative at the Adrian, Mich., Show, and I have given nearly all of them away to the farmers here, and they all speak in the highest terms of the results obtained.

I have several well bred colts, and if your Horse Tablets are as good as your Poultry Tablets, you can count on me as a regular customer. Send me your price list and I will send you an order. Hoping that I may hear from you by return mail, I beg to remain, Yours very truly,

MILTON G. BRYANT,
Proprietor of Onahill Poultry Farm,

INDUSTRIAL SCHOOL FOR BOYS,
LANSING, MICH., Jan. 23d, 1906.

MR. M. G. BRYANT,
Hudson, Mich.

Dear Sir:—Mr. Haynes of your place sent me last week a Tablet he thinks he obtained from you, to give fowls that are suffering from colds. I gave the Tablet to two or three of my pullets that caught cold in the show room recently, and it worked wonders. Will you please put me in touch with the agents for same?

Fraternally yours,
C. H. BURGESS.

SUCCESSFUL BEE-KEEPING.

The keeping of bees is a delightful occupation, yielding generous returns for the little time and trouble necessary to look after them.

Some knowledge of housing and caring for bees is needed, but one of the most essential things is to have a good beewear handy at all times to put together to take advantage of early swarming and honey flow.

Many old beemen as well as hundreds of beginners date their success from the use of Lewis Beewear, made in Watertown, Wis.

For thirty years the Lewis factory has grown steadily from a comparatively small plant to its present dimensions, and now enjoys a worldwide reputation as one of the largest manufacturing institutions in existence.

The many advantages of having easy access to the famous Wisconsin white pine and basswood has been of material benefit in producing Lewis hives and sections of superior quality.

The northern pine is especially adapted for hive making and free from resinous knots, while the varieties of basswood found in the north are closer grained, exceedingly tough and of good color. These favorite woods, which are used exclusively in all Lewis Hives and Sections, are properly seasoned before being brought out for actual use, and do not warp out of shape while in the flat. Thus they are always ready to go together at a moment's notice—a very essential point to the beeman.

The G. B. Lewis Company have agents in all parts of the country, who buy in carload lots and are ready at all times to fill orders for all kinds of supplies. This method of selling has been very successful in making the name of Lewis a familiar word in every beeman's home. Beginners in bee culture should secure the Lewis catalog and other information necessary to making an intelligent start. This valuable book may be had free of charge by applying by letter or postal to the G. B. Lewis Company, Watertown, Wis.

HOW TO GROW BIG STRAWBERRIES.

"Great Crop of Strawberries and How to Grow Them" is the title of a handsome book just received. It is published by the R. M. Kellogg Co., the famous growers of thoroughbred pedigree plants of Three Rivers, Mich. The book contains sixty-four pages, and on every page is a picture of a strawberry or a photo-engraving of a scene indicating the result of proper cultural methods in strawberry production. Illustrations of convenient devices and tools for

making work easy in the strawberry field also appear. The book tells you just what and how and when to do everything from the time the plants are set until the berries are marketed, and how to handle the plants to make them produce larger crops the second year than they did the first. It also teaches you how to improve plants by selection. The book is handsomely printed, and is a veritable picture book. Everybody interested in strawberry culture, either for market or family use, should have it. Send for a copy, but send neither money nor stamps, as the book is free to our readers. Address R. M. Kellogg Co., Box 325, and tell them you are a reader of AMERICAN POULTRY JOURNAL.

S. C. WHITE LEGHORN HEN.
Bred and owned by G. M. Knebel, Waco, Tex.

SUPERB APPLE AND PEACH TREE STOCK.

Any reader who wants this spring to keep some of the good resolutions made during the year on fruit tree planting should begin by dropping a line to the Harrison Nurseries, Berlin, Md., for their 1906 catalog. Apples and peaches are the bases of most orchards. Of these such standard,

ever popular varieties as Baldwin, Ben Davis and N. W. Greening apples and Crawford Late Ray, Reeves and Wonderful peaches well deserved consideration. We have word from the Harrison people that they are in a position to furnish exceptionally fine trees right now in each of these varieties. We mention these as being Harrison favorites. Of course, they grow about every variety of apple and peach in their 1,000-acre nurseries. Harrison stock is widely known for its excellence—vigor, shapeliness, health, strong rooting. The catalog is mailed free and it is a good book to have for anybody who is interested in fruit tree planting.

HARRISON STRAWBERRIES.

Each season we learn of more and more of our readers who are sending to the Harrison Nurseries at Berlin, Md., for strawberry plants. They are getting the Harrison habit, as it were. It is a good habit to acquire. As the excellence of Harrison plants becomes more generally known the demand is bound to increase. They have a great new variety this year in the Almo, which has a record of producing a full quart of berries from a single plant. Unquestionably it is one of the most, if not the most, prolific varieties of strawberry ever grown. All good varieties can be had of them—something like fifty different kinds. Whatever the kind you fancy, if you send to the Harrison people for it, you will receive as strong, thrifty, well rooted plants as it is possible to procure anywhere. They publish a catalog with full information which comes free for the asking.

John A. Dickerson, Rochester, Ind., breeder of Barred Rocks, reports that he has sold all of his surplus stock. However, he has eggs for sale from his grand matings, \$2.50 per 15, \$4.50 per 30. Besides the three grand pens he has an outside flock of sixty hens and pullets that are good ones; not a bad one in the lot. With these are eight fine cockerels—large, fine, stylish fellows, that weigh ten pounds each and good in color all over. This flock should produce some fine cockerels and pullets. Price of eggs from this flock, \$2 per 15, \$3.50 per 30.

A. & E. Tarbox, Yorkville, Ill., report the following winnings: At Newark, N. J., January 29-February 3, 1906, on one entry, 1st pen, Silver Wyandottes. At Minnesota Fanciers' Association, St. Paul, Minn., February 5-11, 1906, we won on seven entries Silver Wyandottes, 1st, 2d cockerel, 1st, 2d, 3d, 4th pullets, 1st pen.

BUFF WYANDOTTES

are in my yards. Ten grand matings for 1906. Pens headed by such noted winners as "Wisconsin King," score 95½; best Buff Wyandotte ekl. in the world. "Gold Chief," 1st at Chicago; "Gold Eagle," 1st at Toronto, etc.; champion of Canada; "King," 1st at Madison Square; "Waterboy," cock, headed 2d pen at World's Fair; many other grand male birds, mated with absolutely solid Buff females. The best to be found anywhere, including winners at World's Fair, Madison Square Garden, Boston, Hagerstown, Toronto, Chicago, etc. Without any exception the world's best Buffs. Send for mating list.

RALPH W. STURTEVANT, Lock Box B 22, BELOIT, WISCONSIN

"BEST I CAN GET."

Poultry breeders all over the country, no matter what variety is bred, know of the class of stock kept in the pens of the gentleman who writes the subjoined letter, and they know any statement he makes about things is right. Of Chamberlain's Perfect Chick Feed he says:

W. F. Chamberlain, St. Louis, Mo.
Dear Sir: About this time I always get in my order for a few sacks of your Perfect Chick Feed, as I fully appreciate the fact that it is the best I can get, as well as most economical, for young chicks. I attribute much of my success as a breeder of high-class Buff Plymouth Rock prize winners to having reared my young stock on Chamberlain's Perfect Chick Feed. Respectfully yours,
B. E. JOHNSON.
Kirkswood, Mo., March 1, 1906.

Chas. S. Brent, proprietor Dartmoor Yards, Oconomowoc, Wis., formerly of the well-known firm of Brent & Eddy, won at Chicago Show, January, 1906, two seconds, two thirds, one fourth, one fifth, and one special in the largest and best class of "Indians" ever shown at Chicago. Mr. Brent is one of the oldest breeders and importers of Cornish Indians in the United States. His stock comes direct from Wm. Brent, of Callington, Cornwall, England, over thirty years a breeder and exhibitor of Cornish Indians in England. Four imported males of extra good size, shape and color in our

Second Barred Plymouth Rock pullet at Toledo, Ohio, February, 1906. Owned and bred by Rudolph Poultry Yards, Rudolph, Ohio.

yards; also cock that won 1st as cockerel St. Louis Exposition. See ad in this journal the year round.

H. P. Mason, the Buff Rock specialist of Fayette, Mo., has a change of ad in this issue. It will appeal to those wanting eggs from high-class Buff Rocks. Mr. Mason was the largest winner at the St. Louis World's Fair in the Buff Rock class, which was the second largest class at the fair. He has also been a leading winner at the large western shows for several years. He did not exhibit the past season and his breeders are all the more vigorous for that fact. He has mated four grand pens for the season's egg trade. See his ad.

Fred E. Wright, of Monmouth, Ill., won at Muscatine, Iowa, November, 1905, 1st, 2d cockerel, 1st, 2d, 3d, 4th pullets, 1st, 2d pen, highest scoring ten birds. Fairfield, Iowa, November, 1905, 2d cockerel, 1st, 2d, 3d, 4th pullets, 1st pen. Marshalltown, Iowa, December, 1905, 1st cockerel, 2d, 3d and 5th pullets, 1st pen. Monmouth, Ill., January, 1906, 1st, 2d, 3, 4th cockerels, 1st cock, 1st, 2d, 3d, 4th hens, 1st, 2d, 3d, 4th pullets, 1st, 2d, 3d pens. Meyers, Shauer, McClave, Judges.

The Maples Poultry Farm, Geo. A. Barrows, proprietor, Box 500, Groton, N. Y., has mated up several fine pens of their ever popular strain of Single Comb White Leghorns. Mr. Barrows guarantees the quality of his stock and eggs. He issued a neat circular describing his stock, which should be in the hands of every reader of AMERICAN POULTRY JOURNAL.

White Rock Eggs

For the next thirty days we will sell fifty settings of our famous White Rock eggs at \$2 per 15, \$3.50 per 30, \$4.50 per 45. Order early.

BUFF ROCK SPECIALIST FAYETTE, MISSOURI

THE PLANET JR. GARDEN TOOLS.

An advertisement that should attract and does attract the attention of thousands of people every spring is that of the excellent garden tools of S. L. Allen & Co., of Philadelphia. The fame of the "Planet Jr." garden tools is world wide. There does not seem to be anything that will quite take their place. The hand hoes, cultivators, plows, planters, etc., and in some cases all these combined in one single tool, make up a combination that in nice adaptability to all kinds of garden work is not found in any other make of tools. The line goes beyond this and includes also horse tools of all kinds.

In this connection we note that there has been a new addition to the Planet Jr. family for 1906. It is numbered 74 and is a Two-Horse Pivot Wheel Cultivator, Plow, Furrower and Ridger. This covers the one spot in garden work not already provided for in the long line of Planet Jr. tools, and we are assured that the new machine possesses more really good points than anything of like kind ever invented. If you garden and are not already provided, you will find the Planet Jrs. to be your kind of tools. It's an old saying that there's a Planet Jr. for every need. You will find just what you want in the 1906 Allen catalog. Send for it. It will be mailed free. Notice the advertisement of Messrs. Allen & Co. elsewhere in this paper and address as there directed.

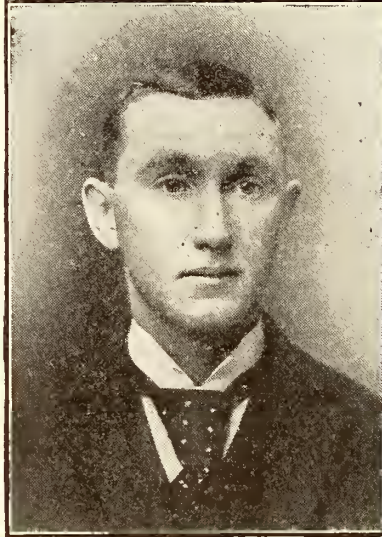

We are just in receipt of the handsome 1906 Spray Pump Catalog of the Deming Company, 280 Depot street, Salem, Ohio, whose Sprayers, Nozzles and "bug-fighting" appliances in general are recognized as the standard by growers everywhere. Their "Universal Verdict," an attractive and well named little booklet, reproduces a number of testimonials received by them during 1905 from customers in all parts of the United States and elsewhere, all of which substantiate the claims of the Deming Company as to the merits of their goods.

A good many orchardists do not have well defined notions as to what spraying appliances to use. To our mind there is no better course for such people to pursue than to get in touch with the Deming people. If you do not know what sprayer is adapted to your wants, they will know, and they are a concern whose integrity can be relied upon.

With long experience in the manufacture of sprayers, the Deming Company is well qualified to advise those who may need information on the subject, and they will be pleased to enter into correspondence with any persons who are interested in this most

important phase of fruit and vegetable growing, whether they are present or prospective exponents of the spraying doctrine.

Nothing is more important in the rearing of large, healthy chicks than a good brooder. No matter how successful you are in hatching chickens, if you are unable to raise a good per cent of them to maturity there is no profit in the business for you. The market, of course, is flooded with box affairs called brooders, but there are very few real good ones. One of the best we know of is the Shaub Improved Brooder,

ARCHIE DAVIS,
Breeder of White Plymouth Rocks, Tremont, Ill.

manufactured by M. O. Sherer, Louisville, Ohio. This brooder is built large and roomy and has several compartments, enabling one to separate his flocks of chicks according to age or size. There's no trampling or crowding in these brooders and no trouble from bowel complaint, which cause the death of so many brooder chicks. The Shaub has a fine system of ventilation and a perfectly safe and reliable heater. It is an

easy brooder to keep clean and we know from experience that it raises about 95 per cent of all chicks placed in its care. We advise all our readers interested in raising chicks to write to Mr. Sherer, Louisville, Ohio, for a copy of his catalog.

Mr. Ross C. H. Hallock, 6314 Clifton avenue, St. Louis, Mo., reports that he has all his pens mated up for the egg season. Mr. Hallock's winnings at Madison Square Garden, New York, are too well known to need mentioning. He is the secretary of the White Wyandotte Club. Write him for egg circular and mention AMERICAN POULTRY JOURNAL.

J. M. Detwiler, of Dunlap, Iowa, won at the Boyer Valley Poultry Association, Dunlap, Iowa, December 26-29, 1905, as follows: 1st cockerel, 1st, 2d and 3d pullet, 1st pen and two specials; no old stock shown by me. My first prize cockerel was an attraction of the show. F. H. Shellabarger, judge Barred Plymouth Rock class.

W. H. Wiebke, of Ft. Wayne, Ind., won at Fanciers' Association of Indiana, Indianapolis, Ind., February 4-10, 1906, as follows: 1st cock, 2d cockerel, 3d, 4th hen, 1st pen and \$25 silver cup for best S. C. Brown Leghorn display, scoring 33 points, while strongest competitor scored 16 points. Geo. H. Burgott, judge S. C. Brown Leghorns.

E. C. Zoeller, of Jackson, won at Wash-tenaw P. P. S. Association, Ann Arbor, Mich., 1906, as follows: 1st cockerel, 94½; 1st hen, 95¾; 1st, 2d, 3d, 4th pullet, 95¾, 95½, 94¾, 94½; 1st pen, 191. At Kalamazoo, December, 1905, Kalamazoo S. W. P. Association: 1st, 2d, 3d cockerels, 94, 94, 94; 2d hen, 94½; 1st, 2d, 3d pullet, 95½, 95, 94¾; 1st pen, 189; three special prizes. Tucker and Hewes, judges W. P. Rocks.

Note the change of Ira C. Keller's ad on another page. He calls the public's attention to his eighty fine matings of Wyandottes which he is willing to sell eggs from, containing the most of his winners at such great shows as Madison Square Garden, Chicago, St. Louis World's Fair, Columbus, Cleveland and Cincinnati for the past three years. Mr. Keller is a known expert breeder and judge on Wyandottes throughout the world, and produces annually hundreds of winners for the leading shows throughout the world. Those that buy eggs of him have equal chances, for he sells eggs from the same fine mating as he raises his winners from. He also breeds imported Scotch Collie dogs, Berkshire swine, Sebright Bantams and Japanese Silkies, all of rare quality.

JEFFERSON'S WHITE ROCKS
AND WHITE WYANDOTTES

have won 16 firsts at Chicago shows in two years. His Rocks won 1st cockerel and 1st pullet three times in succession. His Wyandottes are the only ones that ever won 5 firsts at a Chicago Show. EGGS: \$5 per 15, \$8 per 30 and \$10 per 45.

THE POPULAR BLACK MINORCAS.

Black Minorcas seem to be steadily gaining in public favor, for general usefulness as well as for the fancy. George H. Northup, Raceville, N. Y., whose name is always thought of in connection with this noble breed, writes us that on February 1st he issued a printed sheet to offer his surplus, a large flock of extra fine birds, and that, in twenty days, all were sold except a few cheap birds, at prices from \$2 to \$50 each, for breeding birds. Beside these, Mr. Northup sold, during the same period of time, several especially fine Single Comb Black Minorcas at from \$50 to \$100 each.

Since then Mr. Northup has purchased the entire stock, 160 Single Comb Black Minorcas, of Dr. C. J. Andruss, Canandaigua, N. Y., including all the doctor's fine prize winners and best breeders, cuts, good will, etc., and has sold all of them, except enough of the finest females for two breeding pens, by issuing another printed sheet to describe them to his customers. Dr. Andruss holds Minorcas in the same great esteem as the greatest producers of large white eggs that he has for many years, but having sold his farm did not have facilities for keeping them.

Mr. Northup says he has thirty pens of the finest Black Minorcas, Rose and Single Comb, that he has ever owned, from which to produce eggs for hatching, that his eggs are hatching remarkably well, both for him and for his customers, and that, with his greatly increased facilities, he hopes to be able to supply eggs promptly to all who order from him. We have just received his large 1906 catalogue, 28 pages, with sup-

S. C. BUFF ORPINGTON.

First cockerel at Muscatine, Iowa, November, 1905; second at Fairfield, Iowa, December, 1905; first at Monmouth, Ill., January, 1906. Also headed first pen at all the above shows. Score 93 1/4. Bred and owned by Fred E. Wright, Monmouth, Ill.

plement. It is one of the most complete poultry catalogues which has come to our desk. Anyone who is interested in a great laying breed of fowls ought to send for a copy.

THE PULSE OF AN INCUBATOR.

There's one thing about a hatching machine that must be surely right—the thermometer. It is small in size, small in price, but its importance is great. What the throbbing artery in the wrist is to the human organism, a Hoehn thermometer is to the incubator. There is no worry in store for the man who puts a Hoehn "Red Cross" Thermometer on a tray of fertile eggs. It will quickly give the danger signal of low temperature and save fertile eggs by the dozen.

The bulb rests directly against the egg-shell. The figures and graduations are easily seen in the shadowy egg-chamber because the thermometer frame is jet black and the markings are sharp, large and white. The mark "103" is emphasized by an arrow point. The Hoehn Thermometers are well-seasoned and tested before being shipped. They are sent prepaid for 75c. The R. Hoehn Co., 83 Chambers street, New York, N. Y., manufacture these delicate instruments. Their catalog is free.

The Strongville Poultry Yards, Strongville, Ohio, breeders of several of the leading varieties of thoroughbred poultry, are offering eggs at reasonable prices from their Strongville, Norwalk, Cleveland and Chicago winners. They please their customers, as is proven by the many testimonials they have received from their customers. Write them and mention AMERICAN POULTRY JOURNAL.

State Vice-President American Black Minorca Club.

EXHIBITION B. B. R. GAMES

Ky. Jack, 93 1/2 by Judge McClave, Creator Jr., first prize chl. at great Chicago show, Jan., 1905; son of Creator, first prize cock at World's Fair, St. Louis; Defender, 94 1/2; Protector, 93 1/2, both by Snellabarger. Pullets mated to above are choice specimens and will surely produce many prize winners. Eggs from above birds \$2 per 15; guarantee 10 chicks or duplicate at half price. Can spare Protector 93 1/2; score card furnished, \$5. Balance of stock sold out. Nothing but eggs to offer this season!

ORVILLE D. GHINN :: B. B. R. GAME SPECIALIST :: KEHOE, KENTUCKY

White Wyandottes Half Price.

For the next thirty days we will sell White Wyandotte eggs \$2 per fifteen, \$3.50 per thirty, \$4.50 per forty-five. Worth double. Satisfaction guaranteed.

CONGRESS PARK POULTRY FARM - Congress Park, Ill.

If It's From King It's Good

Is the verdict of hundred of pleased customers who have been producing their winning birds from eggs or buying stock direct from a breeder who understands the method of mating to produce the winning kind. If you are looking for a few Barred Rock eggs that will help you land in the King row at next winter's shows, or produce for you top notch breeders to head your breeding pens next season, send your order, and send it quick, to a breeder who mates and produces his winning birds and furnishes his customers, either through stock or eggs the same high quality. Only a limited number of eggs to spare this month from best pens only at \$6 per setting. Send for egg sheet giving prices and latest show record.

Address The BARRED ROCK KING Walnut Grove, McDonough Co., Ill., U. S. A.

Mammoth Bronze Turkeys

Silver cup winners at Indianapolis. At Cincinnati winners of every premium for which they competed, 1st, 2d on hen, 1st, 2d on pullet. Barred Plymouth Rock cockerels, large framed, finest barring I ever raised, from birds that won in strong competition. I can send you eggs that will produce winners. Turkey eggs \$5 for ten straight. Rock eggs \$2 per 15, \$3.50 per 30, \$5 per 45. Incubator eggs \$4 per 100 \$7 per 200. Free circular.

THE BIRD BOOK OF BUILDING PLANS.

The book of plans for farm buildings and poultry houses, which we have heretofore mentioned as being distributed by F. W. Bird & Son, East Walpole, Mass., is proving a most popular idea. Anyone may procure a copy just by writing for it. The first edition was long ago exhausted. The second edition is going so rapidly that the third edition is in process of preparation. Anyone who wants to procure a copy should take advantage of the invitation and write for it immediately.

It is really a most valuable little book for anyone putting up any kind of farm building. The plans are varied, up to date, well considered. The book is full of valuable suggestions for new buildings or remodeling old ones. If you do not use any plan entire, you may in part. It is the suggestion you want. The little book loses none of its value because you may see fit to change or adopt some of its admirable plans to your own requirements. There are to strings to the offer. Just cut out this notice and send it with a 2-cent stamp with your name and address to F. W. Bird & Son, and they will send you a copy free.

ONE CENT A POUND.

Besaw's Arabian Poultry Tablets furnish to poultry raisers everywhere the most remarkable poultry food ever put on the market and for only one cent per pound.

These tablets are all active principle—no filler—made from the extracts of five seeds—nature's remedies—compressed into tablet form, neat, convenient and giving an accurate feed each time. The manufacturers of these tablets give an ironclad guarantee:

First—That these tablets are absolutely

S. C. WHITE LEGHORN COCK.

Winner of first prize at St. Louis World's Fair and sold for \$200, the record price for a White Leghorn. This bird was bred and exhibited by G. M. Knebel, Waco, Tex.

pure and contain only the best conditioning compound known to science. We will give \$1,000 to anyone showing them otherwise.

Second—One tablet crushed and mixed with one pound of common corn meal or chop will produce better results than a pound of any so-called poultry foods regardless of price.

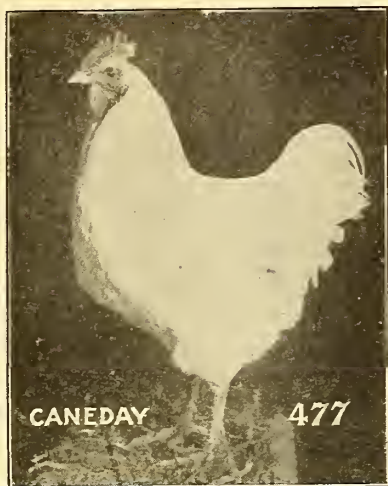

Third—They will positively cure as well as prevent 90 per cent of the disease common to poultry.

Fourth—They will grow and develop good, large, healthy, thrifty birds quickly for ready markets or shows and develop prize strains for perfect broods.

Read what Dr. J. Frank Titus, the noted breeder of fine poultry, Attica, Ohio, says about the Besaw tablets: "Having always been more or less skeptical about feeding poultry foods, and having fed a great many different kinds of them without any apparent results, I was persuaded to try your Arabian Poultry Tablets, and can frankly say they are the most wonderful things I have ever seen, not only as a conditioning food and developing growth and perfection in the birds, but when fed to breeding pens it produces a larger percent of fertile eggs and nicer and thrifter chicks than anything I have ever used, and the cost is so exceedingly small that no poultry raiser, whether on a large or small scale, can afford to do without them." Send for their circulars describing their goods; they are free if you mention AMERICAN POULTRY JOURNAL.

F. W. Niesman & Co., Box 40, Freeport, Ill., issue a 72-page book entitled "Poultry That Pays." It contains much information indispensable to the practical poultryman. Send 10 cents for it—it is worth having.

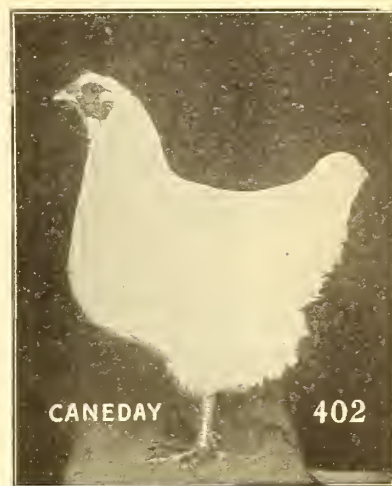

A TRIO OF CANEDAY'S PEDIGREED WHITE PLYMOUTH ROCKS, BRED FOR BUSINESS AND EXHIBITION BY VICTOR D. CANEDAY, BOX A, TAYLOR'S FALLS, MINN.

Favorite's Grandson No. 477, at nine months. Weight, 8½ pounds. Now a 10-pound cock.

Favorite's Daughter No. A19—Laid 181 eggs in nine months. Weight, 7½ pounds. Her sire's sister laid 213 eggs in a year.

Favorite's Granddaughter No. 402—Weight, 7½ pounds. Laid 25 eggs in 30 days under conditions not conducive to heavy laying.

ANNOUNCEMENT.

We have lately purchased a 70-acre farm and in future will devote our entire attention to the breeding of "Nonpareil" Banded Plymouth Rocks. The demand for our stock and eggs has made this change necessary, and in future with our improved and greatly enlarged quarters we hope to give all calls and orders prompt, and the very best of attention.

Our new location is 4 miles north of Rochester, on the Cole road. From Rochester take the Summerville Trolley or the R. W. & O. R. R. One-quarter mile from either station. Fraternally yours,

SCHWAB BROTHERS,
Summerville Poultry Farm, Irondequoit, N. Y. Home Phone A-6366.

SEEDS AND CHICKEN FEEDS.

The garden and the poultry pens of this country are two sources of great wealth. Both industries are real necessities to the welfare of the nation and furnish employment to thousands of people. What a lot of comfort and luxury they afford as well. Then think of the pleasure and the profit one may get from a well-kept garden and a well-stocked poultry yard. How nicely these two businesses go together—if, of course, you keep the chickens out of the garden and out of the neighbor's garden.

To have a good garden you need good seed. And to raise good chickens you need

good feed. The Harvey Seed Co., 30 Elliott street, Buffalo, N. Y., one of the well-known concerns that has made a reputation for quality and fair, square dealing, supply good seeds for the garden and good feeds for your fowls. If you raise chickens you will find their Poultry Supplies Catalog of practical help in selecting the right kind of feeds for your poultry to make them more profitable, and their Seed Catalog will help you to plant your garden with the best varieties of everything you care to grow. Write for either catalog you need—the one for seed or the one for chicken feed, or ask for both, if you can use them. They will be sent free.

POULTRY FOOD.

Poultry foods are good for specific purposes or they are good for nothing. There is no one food that will make hens lay, chicks grow and fatten broilers; that will do for ducks, geese and turkeys of all ages and conditions. You might as well recommend a breakfast food for every meal and for every person.

The sooner poultry raisers learn this lesson the sooner will their success be assured. Scientific poultry feeding is rapidly taking the place of haphazard methods, and the results are seen in the increased egg and poultry production. The big packing concerns and poultry raisers have demonstrated how certain methods of feeding will fatten

fowls in half the time with less feed and less labor than it formerly took.

While this subject is interesting chicken raisers everywhere it will pay you to read the book, "The Science of Poultry Feeding," the thoughts of Dr. Nishkian, originator of the Midland Food, who was for a number of years the analytical and organic chemist of the Armour Packing Co., and an authority on poultry feeding, and published by the Midland Poultry Food Co., Kansas City, Mo. They will send the book free to poultry raisers who will write for it.

G. D. McCLASKEY.

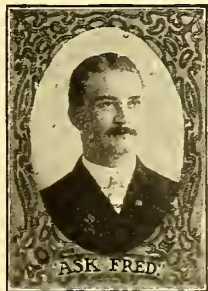

Formerly editor of the Poultry Gazette, one of Nebraska's most practical poultrymen and popular poultry judges, born and raised with chickens, ducks, geese and turkeys, and knows what he knows from a lifetime experience.

He has hosts of friends all over the United States, wherever poultry is raised, and is known by everyone to be "straight as a string," of excellent judgment and a high degree of ability to tell and to know what good poultry is, how to get it and how to manage it, to get the best returns for the least outlay.

The Sure Hatch Incubator Co., Clay Center, Neb., have secured the services of Mr. McClaskey to assist them in furnishing reliable information concerning every phase of the poultry industry to their tens of thousands of friends.

Have been winning the highest honors at the leading shows of America for the past 5 years. Stock and eggs for sale from our New York and Boston winners. Our 1st pen is headed by the 2d ckl. at Boston, 1906, mated to 1st pullet at N. Y., 1905, 2d hen at N. Y., 1905, 3d pullet at Boston, 1906, and 15 more of their equal. Eggs from this special mating \$4 per 15, guaranteed. From four other pens \$3 per 15, or \$5 per 30 guaranteed. Write us your wants today.

ORCHARD BANK POULTRY FARM

Wm. O. Jenniogs, Prop. Marathon, N. Y.

A White Wyandotte specialist and enthusiast is Mr. Chas. V. Keeler, of Winamac, Ind., a gentleman who is a thorough fancier, a good business man and a man who makes White Wyandottes pay.

Several years ago Mr. Keeler started with the small capital of \$5.00, with which he bought a setting of eggs, and now he is one of our foremost fanciers.

Mr. Keeler's first exhibit of any consequence was at Bunker Hill, Ind., in 1898, where he showed one cockerel and one pullet and won first prize on each. The next winter at Logansport he won about everything he competed for, including first cockerel, first hen, first, second, third, fourth and fifth pullets, and first pen, besides a long list of specials. From that time down to the present he has been winning somewhere every year and sometimes twice in a year. Indianapolis, Indiana State Fair, Chicago, 1903, Cleveland, Ohio, and several other places too numerous to mention are in the list of which his new circular gives full particulars.

The egg season is now at hand. Any one interested should write Mr. Keeler for his special mating circular, describing each pen in detail. It is free if you mention AMERICAN POULTRY JOURNAL.

B. S. Hume, French Village, Ill., specialty breeder of White Wyandottes, has established a good strain of White Wyandottes and is what we shall take the liberty of styling "a soft snap" when it comes to the sale of eggs for hatching. He fixes his prices, advertises them, sends out circulars and feels in duty bound to stick to said prices, although he ought to get fifty to one hundred per cent more than he asks for them. Last year he exhibited at Chicago, winning two or three regular prizes, but it was not until he showed at St. Louis this season that he found out just how good his birds are in comparison with others. At St. Louis he won first and second cock, first and second cockerel, first and second pens, tied for third pullet and bought the second hen. He has mated up ten pens for the present egg season and feels in duty bound to sell eggs at \$2 per 15 straight, \$7 per 100, \$12 per 200. Mr. Hume is not a price cutter, but certainly should have asked more money for eggs of the quality he has for sale.

Mrs. W. S. Robison, Route 3, Box 1, Fayette, Mo., breeder of pure "nugget strain" of Buff Rocks, winners wherever shown, reports that she has several grand pens mated up, each pen containing one or more prize winners. The price of eggs is exceptionally low, quality considered. Namely, from prize winners, \$3 per 15, \$5 per 30. Good ones for \$1 and \$2 per 15, \$1.75 and \$3.50 per 30. No culls. Incubator eggs from same blood, \$4 per 100. Write for mating circular and mention AMERICAN POULTRY JOURNAL.

Harmor Bradshaw, Box 4, Lebanon, Ind., the noted S. C. White Leghorn specialist, made the following winnings at Indianapolis, Ind., February 5-10, 1906: First cock, first hen, first, second, third, fourth cockerel, first and second pullet, first pen, on ten entries. This, with his grand rec-

ord at the big Chicago show, is a record that he may well be proud of. Mr. Bradshaw has devoted years to perfecting his strain and is now offering our readers the benefits of his labor at very reasonable prices and they should take advantage of the opportunity to improve their stock or to introduce new blood into their flock. Look up his ad elsewhere in this issue and write him for prices and particulars. Mention AMERICAN POULTRY JOURNAL.

One of the best hatchers we know of is the old reliable Axford Round Incubator. This machine has been on the market for over thirty years and every machine sold have given good satisfaction. It is "round like a nest" and has many other natural principles which account for the remarkable results obtained in hatching.

The Axford Heater and Lamp are entirely different from those used on any other machine, and in our opinion are far superior. It is very easy to care for and is economical in the use of oil. The Axford people issue an attractive catalog, "Money in Poultry," which contains full descriptions and illustrations of their machines. We would advise anyone thinking about purchasing an incubator or brooder to write the Axford Incubator Co., 368 Forty-fifth street, Chicago, for a copy of this book.

E. A. Rush, of Grand Rapids, Mich., breeder of Single Comb White Leghorns, won at Grand Rapids show, February 13-16, 1906, as follows: First, second, third, fourth cockerel; first, second, third pullet; first hen; first pen; Procter & Gamble \$25 silver cup; best White bird in show; club cup for best White pen; J. B. Martin silver cup for highest scoring pen in show, and all specials offered on White Leghorns, James A. Tucker, judge. Forty in S. C. W. Leghorn class. His winnings at the late Chicago show were published in the February issue. Any one interested in White Leghorns should send for his circular, it is free if you mention AMERICAN POULTRY JOURNAL.

King Bros., Oshkosh, Wis., the Barred Plymouth Rock breeders, have issued a very neat and attractive 24-page catalogue, that they are desirous of placing in the hands of our readers. This catalogue gives a brief outline of their matings for this season, how they mate for best results in cockerels and pullets, their show record and much other information. It also gives the prices for eggs and contains many testimonials from their customers. Send for this catalogue and mention AMERICAN POULTRY JOURNAL.

The Standard Flower City Incubator Co., Rochester, N. Y., whose ad appears on the front inside cover page of this issue, has been advertising in these columns for a number of years, which goes to show that this machine is no new experiment, but one of the standard machines of the day. This machine is sold on a 20-year guarantee. Send for their handsome catalogue which gives full particulars. It is free for the asking. Mention AMERICAN POULTRY JOURNAL.

OUR AMERICAN BRED ORPINGTONS

Won at Madison Square '06, on only 15 entries, all in close competition

**Four Firsts, Three Seconds,
One Third, Two Fourths,
Two Gold Specials**

Nine ribbons placed over the originator's best. These, together with our great winnings at great Eastern and Hagerstown, go to show that we certainly breed the best.

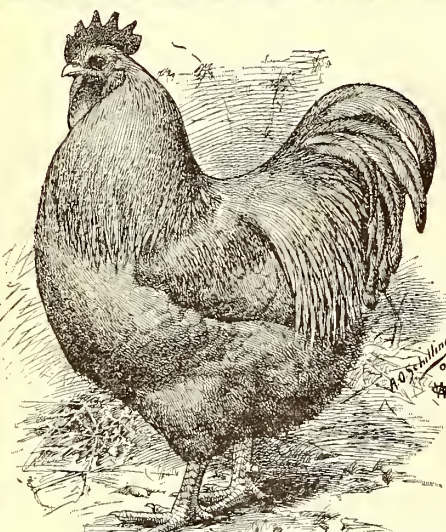

WE DO NOT HAVE TO BUY OUR SHOW BIRDS, WE BREED THEM

Most of the above awards were placed over imported birds. Stock and eggs for sale. Write us your wants. Our new circular and catalogue for the asking.

White & Goodacre, Watchung, N. J.
S. C. White Leghorn Specialist
"CELESTINE" SEEN
Winner at Madison Sq. 1906
Great Eastern 1905
Herald Sq. 1904

Wm. H. Robinson, LaFayette, Ind., reports the following winnings for the past season: At LaFayette's big show, January, 1906, in Barred Rocks, won first and second cock, tied for first cockerel. First, second and third hens; third pullet, first and third breeding pens. Pierce, Judge, White Leghorns, only cockerel and hens entered, won first, second and third hens, third breeding pen. Mammoth Pekin ducks, won first male, first female. Also special for highest scoring bird in show. At Indianapolis, Ind., my yards nearly all being mated, I entered only a pen, hen and a pullet, in Barred Rocks, won third pen and third pullet.

One of the finest, most complete and up-to-date mating lists that has come to us this season is that of the Willow Brook Farm, Berlin, Conn. In this is listed 17 pens of Single Comb Buff Orpingtons, 13 pens of Single Comb Black Orpingtons and 11 pens of Single Comb White Orpingtons, making a grand total of 41 pens from which to select eggs. Our readers should send for a copy of this mating list at once. Please mention AMERICAN POULTRY JOURNAL when writing.

Premiums won at the great A. P. A. Cincinnati Show, 1906, by F. D. Blair, Georgetown, O.: 1st cock, 1st hen, 2d and 3d pullet and 5th cockerel, also \$5 special given by association for best cock, hen, cockerel and pullet by one exhibitor, also \$10 special by association to club member for best five, also \$10 for best cock and hen, given by Silver Wyandotte Club. All of these prizes won on six single entries in a large class of Silvers.

H. A. Emmel, of Mars, Pa., won at Pennsylvania Fanciers' Association, Harrisburg, Pa., January 22-27, 1906, as follows: 1st cock, 1st and 2d hen, 1st and 2d pullet, on five entries in Light Brahmas; 1st cock, 2d cockerel, 2d and 3d hen, 1st and 3d pullet, on six entries in S. C. Buff Orpingtons; 1st cockerel, 1st and 2d hen, 1st and 2d pullet, on five entries in S. C. Brown Leghorns; 1st cock on one entry in W. P. Rocks. G. W. Kinter, judge of these classes only.

T. E. Quisenberry, of Slater, Mo., made a creditable showing during the past season by winning twenty-seven prizes, eleven firsts and five specials on thirty-seven entries at Kansas City, Missouri State Fair, Kansas State Show and Central Missouri Hls Barred and White Rocks and White Wyandottes are sired by the best birds in America. All the males at the head of his pens have been winners in the strongest of competition and most of his females have been winners at some show.

F. W. Richardson, Box A, Hicksville, Ohio, breeder of Barred Rocks, holds the world's record for largest winnings in Barred Rocks at Chicago. Mr. Richardson has furnished many winners at the leading shows, even to a great many of the old timers. His prices of eggs is within reach of all. \$5 per 13. \$8 per 26. \$10 per 40. Any one interested in specially mated trios, pens or cockerels should write Mr. Richardson and mention AMERICAN POULTRY JOURNAL.

Lester Tompkins, Concord, Mass., breeder of S. C. and R. C. Rhode Island Reds, informs us that he has all his pens mated up for the egg season. His winnings at the late A. P. A. show are as follows: Single Comb, four firsts, three seconds, five thirds, two fourths. On Rose Comb, two firsts, three fourths, four fifths and special for best shape and colored female in Single Comb, also three silver cups. Send for his egg circular, free to AMERICAN POULTRY JOURNAL readers.

Mr. J. A. Bickerdike, "the trap nest man," of Millersville, Ill., has just issued his annual catalogue fully illustrating and describing his Superior Trap Nests. These nests are fast becoming popular with poultrymen everywhere and Mr. Bickerdike is kept busy supplying the demand. He will be glad to send a copy of his new catalogue to any reader of AMERICAN POULTRY JOURNAL who applies for it. Address J. A. Bickerdike, Millersville, Ill.

W. T. Naylor, Painesville, Ohio, reports the following winnings during the past season on his Blue Andalusians: At Painesville, Ohio, January, 1906, first and second on cock; first, second and third on hens, and second on cockerel; first on pullet. At Cleveland, Ohio, Show, January, 1906, only showed three Andalusians; won first on cock, first on pullet and second on hen. I supply annually the choicest prize winners for America's leading shows.

Paroid Roofing at Meadow Brook Farm.

Here's one of the thousands of poultry farms whose buildings are covered with Paroid. The illustration is from a photograph taken at Dallas, Pa. Paroid is especially fitted for poultrymen's use for both roofing and siding. It's extra strong—any one can lay it. Does not run or crack. Water, spark, heat, cold, frost and gas proof. Light slate color—contains no tar—does not taint rain water. Used by poultrymen, farmers, dairymen, railroads and the U. S. Government.

Send for Free Samples and name of nearest dealer. For a 2c stamp we will send book of new poultry house and farm building plans. You'll be surprised to find how superior Paroid is to cheap imitations.

ON THE IRRIGATED FARMS

In the valleys of the Grand, Gunnison, North Fork and Roaring Fork Rivers and in the San Luis and Uncompahgre Valleys of Colorado, and the Farmington district of New Mexico,—farming, stockraising and fruit growing are carried on in a way that is a revelation to the farmer in the east.

For those who desire to make new homes, there is no other region that offers better advantages than western Colorado—a land of blue skies and sunshine, with a temperate and even climate, where the erstwhile desert needs but to be tilled and watered in order to verily "blossom as the rose." Several illustrated publications, giving valuable information in regard to the agricultural horticultural and live stock interests of this great western section, have been prepared by the DENVER & RIO GRANDE RAILROAD, and can be obtained by addressing

S. K. HOOPER, G. P. & T. A., Denver, Colo.

WRITE TODAY FOR FREE COPIES

BUFF P. ROCK EGGS

We will have a limited number of pure bred Buff Plymouth Rock eggs for sale, \$2 per 15, \$3.50 per 30. Place your orders early.

B. F. WORKMAN, Auburn, Illinois
BIG MONEY IN EGGS

F. S. & J. S. GASPER Rudolph, Ohio

1906 WINNERS

My Barred Rocks were winners at Illinois State Fair, Oct., 1905, Illinois State Show, Danville, Jan. 1-7, 1906; also Bloomington, Jan. 10-16. A few fine cockerels for sale. Eggs \$2.50 per 15 from four grand matings, two cockerel and two pullet matings.

PERCY R. BUFFHAM
Care Water Works Bloomington, Ill.

ROBERTSON'S WHITE ROCKS

Line Bred for years. 31 prizes won at four leading shows of the South. 400 for sale. Write for prices and show record. Eggs in season.

J. T. ROBERTSON R. F. D. No. 2, Pleasureville, Ky.

BARRED PLYMOUTH ROCKS

THE BLUE RIBBON WINNERS
EGGS \$3 per 15, \$5 per 30, from pens mated to produce exhibition cockerels and pullets. Stock for sale at all times.
Edgar G. Simpson, Naperville, Ill.

HATCHABLE EGGS

Are the kind you want. I have them and will let you have them at \$1.50 per 15, \$4 per 50, \$7 per 100, from my very best pens of White, Barred or Buff P. Rocks, White or Buff Wyandottes. These are the most popular breeds and they well deserve their popularity. It will pay you to order at once. My breeding pens are composed of all strong, vigorous, carefully selected stock and are sure to produce winners as well as good layers. If you are not satisfied please tell me so and I will see that you are satisfied.

F. W. OWENS, RICHWOOD, OHIO

We are in receipt of a copy of the mating list of the Owen Farms, Vineyard Haven, Mass., which contains 15 very fine half-tone illustrations of this extensive plant; also illustrations of the different kinds of fowls bred on this plant, together with a large amount of descriptive matter, besides the list of prizes won and prices of eggs, etc. Write for it and mention AMERICAN POULTRY JOURNAL.

The new catalogue of the Rock Hill Poultry Farm, Ossining, N. Y., is a work of art and should be in the hands of every reader of AMERICAN POULTRY JOURNAL. Mr. F. W. Corey, the manager, informs us that at the present time they have over 1,000 chicks hatched and that they can fill all orders for eggs promptly. Send for their catalogue and mention AMERICAN POULTRY JOURNAL.

T. W. Ellis, of Jasper, Mo., won at Carthage, Jasper Co. Poultry and Pet Stock Association, Nov. 22-25, 1905, as follows: In class of 75 S. C. Brown Leghorns, first, second and third cockerel, first, second and third pullet, first and second pen, first cock, first hen, special for best cockerel in Mediterranean class, special for best Leghorn pullet on exhibition. C. H. Rhodes, Judge.

A. M. Barackman, Streator, Ill., is the agent for Mandy Lee Incubators and Brooders. These machines have become very popular and by ordering from Mr. Barackman you will save the excessive freight rates from Omaha, Neb. He also handles poultry supplies of all kinds. Mica grit and oyster shells, 65 cents per 100. Send for circular and mention AMERICAN POULTRY JOURNAL.

Hon. Jos. P. Hildorfer, Box 1, Allegheny, Pa., proprietor Clifton Poultry Farm and Kennels, states that he has a few cockerels of his famous Black Minorcas for sale. His winnings at Madison Square Garden and Cincinnati were reported in the February issue AMERICAN POULTRY JOURNAL.

G. M. Dewey, Box 200, Keytesville, Mo., informs us that he has 75 fine, vigorous White Wyandottes for sale. His birds are a grand lot, fine shape, and pure white. He is now ready for the egg season. Mr. Dewey is one of our people. He has unlimited range for his flock and his prices are right; so are his eggs and stock.

Dr. F. W. Young & Sons, proprietors of the Evangeline Poultry Farm, Birmingham, Mich., report that they are entirely sold out of stock and have booked all the orders for eggs that they can spare this season. They will have plenty of Rose Comb Rhode Islands Reds, S. C. Buff Leghorns and Houdans for sale in the fall.

M. M. Smith, Farmersville, Ill., informs us that he will dispose of all his Buff Rocks and breed nothing else but the Barred Rocks. His winnings at the Illinois State Fair are too well known to need mention. He also raises seed corn. Mr. Smith has a 200-acre farm and is well equipped to fill all our orders.

Nate K. Cornwall, Thamesville, Ont., Canada's leading Buff Leghorn breeder, has just issued a very handsome catalogue, entitled "Buff Leghornology." It is printed in two colors on heavy enameled paper and is full of interesting reading. Send for a copy and mention AMERICAN POULTRY JOURNAL.

A. W. Davis, Big Rock, Ill., breeder of White and Golden Wyandottes, has some fine breeders for sale. His late winnings at the Chicago show are too well known to need mention. Send for his egg circular. His prices are right, his stock is right and his eggs are right.

Chas. McClave, New London, Ohio, won the following at the Cleveland, Ohio, show, 1906, on his different varieties of poultry and waterfowl: 53 firsts, 3 seconds, 2 fourths, 1 fifth. Mr. McClave has always won his share at the big shows. Send for his large illustrated catalogue and mention AMERICAN POULTRY JOURNAL.

W. W. Kulp, Pottstown, Pa., has just issued his 1906 mating list, which he will send to all who ask for it. Mr. Kulp has made a specialty of Rose Comb Brown Leghorns for years and has probably produced as many prize winners of this variety as any breeder in the country. Write him and mention AMERICAN POULTRY JOURNAL.

Mrs. Chas. Jones, of Paw Paw, Ill., won at Chicago, 1906, as follows: On three entries of Golden Bronze turkeys, 1st on hen, 1st on cockerel, in the hottest competition. D. J. Lambert, judge.

KITSELMAN BROS.,
Box 295 MUNCIE, INDIANA.

THE AMERICAN FARMER.

Today more than forty million Americans live on almost six million farms. One bread-winner in every three is a farmer. But from the Missouri to the Pacific the population averages only three persons to the square mile. Disregarding the increasing yields that will be reaped from arable lands by raising the standards of agriculture, the irrigation projects now planned alone will support an additional population of twenty-five million on land now called outcast. The prairie settler and town builder, as we have glimpsed him, is there fore a passing phrase, a chapter in a titanic evolution whose goal is not yet in sight.—Ralph D. Paine in "The Builders," in *The Outing Magazine* for March.

THE MARCH AMERICAN BOY.

In attractiveness, timeliness and interest *The American Boy* for March is, to use a popular expression, a "ten-time winner." The cover page shows a typical young line-man in happy mood. The continued stories are: "Shaggycoat," the biography of a heaver, by Clarence Hawks; "Adventures of Joe and Dan," telling of the thrilling adventures of two boys lost in the woods, and two more chapters of "A French Frog and an American Eagle." The usual departments of Stamps, Coins and Curios; The Boy Photographer; Amateur Journalist; Boy Mechanic and Electrician; Order of The American Boy; Boys' Brain Sharpeners; Boys' Books Reviewed and Tangles are filled with matter which will delight the boys. In addition there are seventy-eight illustrations. Subscription price, \$1 a year. The Sprague Publishing Company, Detroit, Mich.

THE MODERN WIFE AND THE MONEY QUESTION.

Usually it is the shadow of money that brings the first partial eclipse to the honeymoon, and unless the problem is rightly handled the eclipse may become total. The modern wife cannot always be asking for money and retain either her happiness or her self-respect. The husband could not keep his business going if he did not have a pay-day for his employees or if he was careless about settling his bills. He cannot expect to keep his house going without a financial arrangement that will give it regularity and security. It is passing strange that this matter should be a constant difficulty in millions of homes, but it is a hardship which wives are supposed to hear uncomplainingly. She is a wise woman who rebels early and secures her rights, for she will never be a successful wife until she has her part of the income without days of grace or discounts. This is important; it is vital. Unless it is made plain and duly fixed, all her other purposes and aspirations will be forever handicapped.—*From the April Delineator.*

PRACTICAL WORK IN PUBLIC SCHOOLS.

A school in Wisconsin supplies a cripples' home with preserves put up by its cooking classes. A Chicago school says that its sewing pupils regularly make the christening dresses for their baby brothers and sisters. One mother tells the story of finding her twelve-year-old daughter instructing a new nursemaid in the care of the baby, warning her particularly against over-feeding, and drawing a diagram of the infant's diminutive stomach.—*Good Housekeeping.*

LINCOLN THE LAWYER.

It is conceded by all his contemporaries that Lincoln was the best all-round jury lawyer of his day in Illinois. Undoubtedly his knowledge of human nature played an important part in his success. He possessed another quality, however, which is almost, if not quite, as essential in jury work, and that is clearness and simplicity of statement. * * * His logical mind marshaled facts in such orderly sequence, and he interpreted them in such simple language, that a child could follow him through the most complicated cause, and his mere recital of issues had the force of argument.—*From Frederick Trevor Hill's "Lincoln the Lawyer" in the April Century.*

H. P. Rankin, Hartington, Neb., who breeds "America's Big Four," has his 1906 mating list now ready for distribution. Our readers who are interested in Buff, Barred and White Rocks and White Wyandottes should write at once for a copy and mention AMERICAN POULTRY JOURNAL.

REMOVAL NOTICE.

The Chicago Poultry Supply House, on account of their increasing business, have moved from 214-220 South Clark street to larger quarters at 407 Dearborn street, ground floor. This enables them to take proper care of their enormous trade. You will be able to see their Model incubators, manufactured by Charles A. Cyphers, in operation in their show windows. The chicks hatched in these incubators will be placed on sale before Easter.

This is the place you can procure the famous Phillips' Chick Feed and, as the quality is so well known, it is unnecessary to give it special mention. They have purchased the entire Gibson stock of poultry supplies and are able to quote you very low prices on all goods. Anyone interested should visit their new quarters, and we guarantee that you will receive fair and courteous treatment at their hands. They

Exposition, Buffalo, 1903, St. Louis, 1904, and New York, 1906. Grove Hill won absolutely every first prize on females and won first on exhibition yards at two of these shows, competing at three only, and one-half the first prizes on males at these shows and many of the minor prizes.

We also wish to call the attention of our readers to the sale made by Grove Hill at New York of the B. P. Rock cock "Revelation" to the noted English breeder John Wilkinson. Mr. Wilkinson was present at the show and pronounced this bird the best one that he saw in America, from an English standpoint, and he was finer and stronger barred than anything he had ever seen over here and that he had no doubt that he could win in English competition. He further made the statement that he had won on a very similar bird but not as good in tail as this one, all over England the previous year. Although the terms of the sale are private, Mr. Wilkinson paid,

Surplus stock house on the White Wyandotte Farm of Charles V. Keeler, Winamac, Ind. This house is 120 feet long, with cement floor throughout.

will be pleased to meet all their old customers and those that are contemplating starting in the poultry business. If you have not received their new 1906 catalogue, send for one. It is free if you mention the AMERICAN POULTRY JOURNAL.

At the late Madison Square Garden show, Grove Hill Poultry Yards made a notable winning on their S. C. Brown Leghorns. They won first, second, third and fourth on cocks; first, second and third on hens and first and second on pullets in the largest class of S. C. Brown Leghorns seen in New York for years. It is a remarkable fact, but nevertheless a fact, that at the four largest and best shows of S. C. B. Leghorns ever seen, that is, Pan-American

so far as we know, the Garden's record price for a bird of this variety.

Paul T. Hohart, of Roscoe, Ill., won at Rochelle Poultry Association, Rochelle, Ill., Jan. 2-6, 1906, as follows: Second cockerel, fourth cockerel, first, second and third pullet, first pen, second sweepstakes pen, fourth pen, seven specials. Chas. McClave, Judge; 44, in S. C. B. Leghorn class.

Robert Larmer, Ravenwood, Mo., breeder of Buff Rocks, made two entries at the late Indianapolis show and secured second cockerel and second pullet. He has mated up six grand pens and can fill orders for eggs promptly. Write him and mention AMERICAN POULTRY JOURNAL.

Davis' White Plymouth Rocks Exclusively

Prize winners wherever shown. No more stock for sale. EGGS for sale at \$2 per fifteen, \$8 per hundred. I have the best matings this year I ever owned. If you are in need of eggs please give me a trial. Satisfaction guaranteed.

ARCHIE DAVIS :: MEMBER OF THE WHITE PLYMOUTH ROCK CLUB :: R. R. 1, Tremont, Illinois

Doolittle's Partridge Wyandottes

BEST ON EARTH. Winners of the most coveted prizes at three of America's largest shows. First and \$50 championship silver cup for best male; silver medal for best shaped male; 1st and 2d hen. 4 points more than any competitor at New York, 1906.

1st cock, 1st hen, 1st pullet, 1st pen, silver cup for best display and 7 other specials—18 prizes in all; more points than all competitors combined at Chicago, 1906.

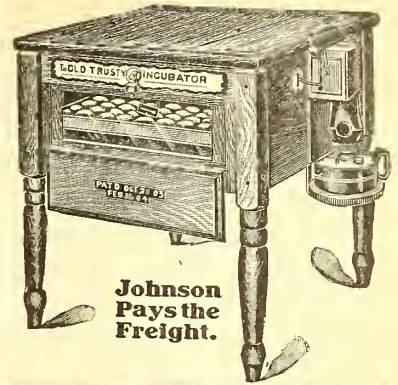

2d cock, 1st hen, 1st cockerel, 1st pullet, all but one possible 1st; 11 prizes on ten entries. More prizes than any three competitors at World's Fair, 1904. Who can dispute their championship?

Eggs from the same yards that I am hatching myself: \$5 for 15; \$8 for 30. The handsomest and most complete catalog to date, with color plate, and telling how to mate and breed Partridge Wyandottes, mailed for 10c in stamps.

W. A. Doolittle THE PARTRIDGE WYANDOTTE MAN Sabetha, Kan., U. S. A.

Notice to Poultry Raisers!

Before you buy your 1906 incubator be sure and get our big "Old Trusty" Book. 124 large pages. 300 illustrations. Straight, every-day chicken sense in every line. It costs a lot of money to make, but it's *free to you*, if you're at all interested in chicken-raising. It will help you a lot whether you buy "OLD TRUSTY" or not.

Johnson Pays the Freight.

A Personal Letter from M. M. Johnson

I honestly believe that I am offering chicken raisers the very BEST VALUE in incubators and brooders that they can obtain anywhere.

And I'll tell you WHY.

In the past two years I've sold more than 30,000 "OLD TRUSTIES"—every last one of 'em ON TRIAL, and I want to say to you that with very few exceptions they have all STAYED SOLD.

NO OTHER INCUBATOR IN THE WORLD EVER MADE SUCH A RECORD IN SO SHORT A TIME.

Now, I don't claim that "OLD TRUSTY" is the ONLY good incubator but I DO claim, and I'm right here to back up the claim, that "OLD TRUSTY"

- is sold on a fairer plan
- is better built
- takes less oil
- requires less attention
- hatches larger percents
- produces stronger chicks
- and is the most ECONOMIC incubator you can buy.

I want to PROVE these claims to you.

If the book doesn't convince you, get "OLD TRUSTY" on a 40, 60 or 90 days' trial, and let it PROVE ITSELF.

What do you say?

Write me anyway.

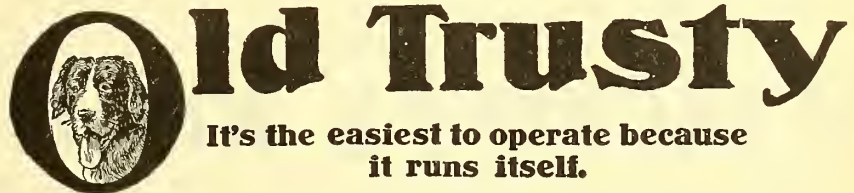

Very truly yours,

M. M. JOHNSON,
Incubator Man.

YOUR SUCCESS In Hatching Chicks

depends upon the kind of incubator you buy. You can't afford to make a mistake; you can't afford to take the say-so of Mr. Blame-it-all or Mr. Blow-Hard; you can't afford to experiment with new or untried experiments. *You want to be sure.* How can you do it? Well, the *best way* is to *try the machine.* If it isn't well-built, if it doesn't do good work; if it is hard to control and operate, *send it back.* That's the fair way. That's our way. We give you a

40, 60 or 90 DAYS' TRIAL ON

You may take off one hatch—two hatches or three hatches—until you are satisfied it's the incubator you want.

We know you *will* be satisfied, for we don't care where you look, you can't find a *better* incubator.

It's made of California red-wood—double walls throughout, with dead-air space between—matched and joined like a piece of fine furniture.

The copper pipe heating system (covered by two patents) is the *only* system that gives a perfectly *even* radiation of heat to all parts of the egg chamber.

The regulator is without question the most simple and positive of any regulator made. Unlike others it is *below* the top of the machine and is not in the way. It is counter-balanced within itself and does not ever need *readjusting*. It is attached and connected when shipped.

But we do not intend to describe "Old Trusty" in detail here.

Get our book and see the why's and wherefore's for yourself.

We invite comparison with any other incubator made—in *construction*—in *dur-*

ability—in *hatches*—in *strength of chicks*—in *economy of oil*—in *ease of operation.*

Remember this is the incubator founded on 13 years experience in building incubators *largely* for *inexperienced users.* We have been compelled to make them *automatic*—self-regulating and next to self-operating. We guarantee that no incubator will give you so little trouble—no incubator will cost so little for oil—no incubator will give you better results. Get the book and see.

We Save You Money.

Don't think you need pay two prices in order to get a good machine.

We have knocked the spots off high prices.

We will sell you *direct* and save you money.

We *pay the freight*, and having distributing houses all over the country, we can fill your order *promptly* and at a *low price*, no matter where you live.

Send today for catalogue No. 43. You'll be glad.

M. M. JOHNSON COMPANY,

CLAY CENTER,

NEBRASKA.

The McClanahan Co., Eugene, Ore., and Los Angeles, Cal., Pacific Coast Selling Agents.

\$1,750 FOR SEVEN WHITE PLYMOUTH ROCKS.

Mr. U. R. Fishel, Hope, Ind., recently sold to Mr. William Miller, Crescent, Mo., seven of his White Plymouth Rocks for \$1,750. One bird, Prince of Indiana, sold for \$800. He won second prize at Indianapolis, 1906. The fourth and fifth prize cock birds at Indianapolis sold for \$500, and the four hens that were in the second prize breeding at Indianapolis, 1906, sold for \$450. The attention of our readers is called to the fact that all these are second, fourth and fifth prize birds. Mr. Fishel refused \$1,000 for the first prize cock bird and did not sell any of his first prize winners, as he reserved those for his own use.

Mr. Fishel, in the past few years, has made a number of record-breaking sales of his famous White Plymouth Rocks, but keeps right on producing the "good ones," which will prove to our readers that he does not sell his best birds at any price.

Mr. Fishel and his White Plymouth Rocks are too well known to the readers of AMERICAN POULTRY JOURNAL to need any further mention here, but we would suggest that everyone interested in this variety should have a copy of Mr. Fishel's 48-page catalogue, which will be sent for three 2-cent stamps to pay postage. When writing Mr. Fishel please mention AMERICAN POULTRY JOURNAL.

The whole poultry business depends upon the successful hatching of chicks, and everyone who expects to hatch early chicks and lots of them depends upon an incubator to do the hatching. If the incubator works well and hatches out a large per cent of strong, healthy chicks one has secured a good start on the road to success. The

vital point in the successful operation of an incubator is to control the temperature in the egg chamber so that it will keep the eggs themselves at a right degree throughout the whole period of incubation. In order to accomplish this correctly the regulator must be operated directly from the temperature of the eggs themselves instead of trying to keep the air surrounding the eggs at a certain degree, regardless of the temperature of the eggs.

INSERT CUT.
We illustrate here the Universal regulator, which is an electric arrangement that can be connected to the thermometer and regulator of any incubator and insures absolute control of the temperature of the eggs at all times. When once started it never requires adjusting and you can leave your eggs in an incubator that has this regulator on it feeling sure that they are in no danger of getting cooled or overheated from the pranks of an ordinary thermostat and regulator.

We advise our readers who are using an incubator that has not this regulator to write direct to the Universal Regulator Company, Plainville, Conn., for their descriptive circular "B," concerning these wonderful regulators. We feel sure that when once you have given them a trial you would not do without one for almost any price.

This is the season when the poultryman's interest centers in his incubators. With the approach of spring he anticipates the advent of a large number of fluffy little balls of down which are later to be developed in the profits he must make in order to successfully carry on his business. Any failure on the part of the machine at this critical juncture means serious loss, not only of money invested in eggs, but time wasted in producing a poor hatch—not that hatching is such a difficult matter, because there are many devices which will hatch chickens, but the point to be considered is to get the machine which will unquestionably hatch the largest number of strong, vigorous chicks, with the least expenditure of time, labor and money.

As a standard of excellence in these respects the Reliable incubator will meet every requirement. The system of heating and ventilating employed in the 1906 Reliable so perfectly controls the temperature and moisture that, provided the eggs used are

of the proper fertility, results can be guaranteed almost to a certainty. While the system employed embraces the most advanced and practical ideas in the principles of incubation, it is extremely simple in operation, requiring little care to run the machine, and relieving the operator of all unnecessary labor.

No artificial moisture is required, and as the lamp, burners and chimneys are made entirely of metal and so constructed as to be perfectly safe from explosion or catching fire, this machine is an ideal one for the poultry raiser.

The many years which the Reliable Incubator & Brooder Company have been before the public have established their reputation for producing a most excellent line of poultry appliances. The machines they offer the present season are fully up to their previous standard of excellence, besides embodying further improvements. A complete description of their incubators and brooders will be found in their catalogue, which they will be pleased to mail free of cost to anyone who will address the Reliable Incubator & Brooder Company, Quincy, Ill., requesting a copy of same. When writing kindly mention this paper.

One of the best hatchers we know of is the old reliable Axford round incubator. This machine has been on the market for over thirty years. It is "round like a nest" and has many other natural principles which account for remarkable results obtained in hatching. The Axford heater and lamp are entirely different from those used on any other machine. It is very easy to care for and is economical in the use of oil. The Axford people issue an attractive catalogue—"Money in Poultry"—which contains full descriptions and illustrations of their machines. We would advise anyone thinking about purchasing an incubator or brooder to write the Axford Incubator Company, 368 Forty-fifth street, Chicago, for a copy of this book.

W. A. Porter, Streator, Ill., the Barred Plymouth Rock specialist, has a few choice cockerels and pullets to spare. He has mated up four grand pens for the egg trade this season and our readers who are looking for something in his line should write him for particulars and mention AMERICAN POULTRY JOURNAL.

BLANCHARD'S WHITE LEGHORNS

are no experiment, having been carefully selected and bred for over twenty years. No labor or expense has been spared in building up and perfecting this strain and while the production of large, pure white, fancy market eggs has been the main object, **standard qualities have not been neglected.** They are large, vigorous, active and handsome. Good winter layers and keep at it all summer. Unexcelled for introducing new blood or as foundation stock. **NONE BETTER ANYWHERE AT ANY PRICE.** Eggs for hatching, from my regular matings, \$2 per 15; \$3.75 per 30; \$5 per 45; \$10 per 100. From exhibition matings, \$3 per 15; \$5 per 30. Illustrated circular free.

WINNERS AT MADISON SQUARE GARDEN, N. Y., 1903-1904-1905-1906

H. J. BLANCHARD : : : **Box 997, GROTON, N. Y.**

Beebe's S. C. White Leghorns

are the best, and if you were here so we could talk together, and you could see my scientific way of breeding. It would be an easy matter to convince you. Eggs from prize pens, \$2 per 15; \$5 per 45; from heavy tested layers, \$1 per 15; \$3.50 per 50; \$6 per 100. Cir. H. C. Beebe, R. 5, Canton, Ill.

COLUMBIAN WYANDOTTES

"Arnold's Columbian Wyandottes were the pride of Madison Square Show." (From American Fancier, Feb. 13, 1906.) A few trios and pens for sale. Eggs \$5, \$10 and \$20 per fifteen.

Aug. D. Arnold - - **Box 777, Dillsburg, Pa.**

KEELER'S W. WYANDOTTES

"THE WORLD'S GREATEST STRAIN"

Winning for the past ten years in my own and my customers' hands in the largest and hottest shows in America, including the World's Fair, St. Louis, the Lewis and Clark Exposition, Chicago, Indianapolis, Philadelphia, San Francisco and Washington, D. C.

Do You Want White Wyandotte Eggs?

From pens headed by full brothers to the second cock, World's Fair, 1st cock and 1st hen, Lewis Clark Exposition, 1st cockerel, San Francisco, 2d cockerel Indianapolis, sons of the 1st and 2d pullets, Indianapolis, and 1st hen at Cleveland

Do You Want White Wyandottes?

with low curving, nicely corrugated combs, red eyes, nice arched necks, broad backs, short, well spread tails, deep, round, broad breasts, bright yellow legs and beak, the large silvery white—stay white—kind, that score from 94 to 96? Then buy eggs from me. My 1906 illustrated catalogue, one of the finest poultry catalogues issued, free for the asking. It tells you all about them. Send for it today. EGGS \$3 per fifteen, \$5 per thirty, \$15 per hundred.

Charles V. Keeler, Box 4810, Winamac, Ind.

1906 HATCHES WITH 1906 PATTERN Cyphers Incubators

YEAR AFTER YEAR we have published in our annual catalogues splendid reports of work done in previous seasons, but now—**Now we Have Reports of Work done Before the Season is Half Over.** From January to April, from Maine to California, both Chickens and Ducklings have fairly Popped Out of the Shells, Chirping the Triumph of The Cyphers Company's Latest Pattern Machines.

1906 These Are From Hen Eggs 1906

Had Hatched 8,281 Chicks.

Vineyard Haven, Mass., March 19, 1906.
Cyphers Incubator Co., Buffalo, N. Y.
Our hatches with your 1906 Pattern Standard Cyphers Incubators (No. 2 and No. 3 sizes) have been simply wonderful for January and February eggs. We have hatched 8,281 strong, healthy chicks from 12,562 untested eggs. Chicks were hatched between January 22nd and March 13th. I have never known of this record being even approached from a similar number of eggs at this time of year, and the results speak volumes for your 1906 Pattern Incubators.—Owen Farms, MAURICE F. DELANO, Manager.

A 100 Per Cent Hatch.

Bristol, Conn., March 14, 1906.
Cyphers Incubator Co., Buffalo, N. Y.
The two No. 1, 1906 Pattern Cyphers Incubators ordered by us a little time ago came safely to hand. Early each season we hatch a quantity of White Wyandottes for early broilers. On Monday, February 23rd, we started one of the new machines with Wyandotte eggs and at the second test there were 59 eggs left in the machine. On Monday of this week the hatch was due and we took from the machine 59 fine, strong, healthy and vigorous chicks. A 100 per cent hatch at this season is very unusual.—GEO. W. MITCHELL.

Eggs From Newly Mated Pens.

Eufaula, Ala., Feb. 24, 1906.
Cyphers Incubator Co., Buffalo, N. Y.
I placed 140 eggs in one of your No. 1, 1906 Pattern Incubators, bought of your agents, Messrs. A. C. Wooley & Co., Atlanta, Ga. From the two tests and an accident in turning some of the eggs, the number left in the machine on the 17th day was 122. During the evening of the 20th day the eggs began to pip, and by noon of the 21st day the hatch was through, and 98 fine, strong, white Wyandotte chicks were the result. Considering that these eggs were from newly mated pens, which had not been tested in previous hatches, I think the per cent of eggs hatched very good. The

chicks are the strongest and best developed I have ever seen taken from a hatch of any kind.—J. M. KENDALL.

"Not A Cripple in the Lot."

Ottuma, Iowa, March 14, 1906.
Cyphers Incubator Co., Buffalo, N. Y.
On February 17th I started my new No. 2, 1906 Pattern Standard Cyphers with 240 eggs. Seven days later tested out 38 infertiles. In just twenty days I took off 161 chicks from 190 fertile eggs remaining. Not a cripple in the lot. Considering the season in which eggs were laid and that some of the eggs were three weeks old, I think it was a great hatch.—W. S. RUSSELL.

Hatched in Business Office.

St. Louis, Mo., March 14, 1906.
Cyphers Incubator Co., Buffalo, N. Y.
Three weeks ago we put a hundred eggs in one of your No. 1, 1906 Pattern Incubators here in our office. This machine received very little attention, showing it to different parties sometimes as high as eight or ten times a day, taking out the eggs every time a customer wanted to look at the machine and adjusting the incubator every time a new customer came in. This morning we have about a 95 per cent hatch. This we think is remarkable, as the office was full of tobacco smoke part of the time and trains passing on overhead railroad right alongside of the building every few minutes, shaking the building every time they pass. The chicks came out of the shell clean and bright; in fact some of them just walked out.—W. F. CHAMBERLAIN, "The Perfect Chick Feed Man."

Just the One Word, "Satisfied."

Geneva, Iowa, March 8, 1906.
Cyphers Incubator Co., Buffalo, N. Y.
My No. 2, 1906 Pattern Standard Cyphers hatched today, giving me 154 bright little chicks from 183 fertile eggs. Just the one word "satisfied" tells the whole story, so far as I am concerned.—C. H. ELLENBERGER.

1906 These Are From Duck Eggs 1906

Using 65 of No. 3 Size.

Leaman Place, Pa., Feb. 20, 1906.
Cyphers Incubator Co., Buffalo, N. Y.
I am pleased to report the finest hatches from your new 1906 machines (Mr. Woods has 65 of the No. 3 size) we have ever had in all our experience in artificial incubation. Our entire hatching so far has averaged over 80 per cent of the fertile duck eggs.—GEO. M. WOODS.

"Have a Brooder House Full."

Easton, Mass., March 16, 1906.
Cyphers Incubator Co., Buffalo, N. Y.
I am very much pleased with what the new 1906 Cyphers Incubators are doing for me, as I am getting from 80 to 90 per cent and I now have a brooder house full of ducklings as fine as anyone would wish to look at—all out of your new-pattern machines.—F. S. KEITH.

Hatches Average 80 to 90 Per Cent.

Saugus, Mass., March 7, 1906.
Cyphers Incubator Co., Buffalo, N. Y.
Your 1906 Pattern Standard Cyphers Incubators, of which we have 24 of the No. 3 size, are doing grand work for us. Our smallest hatch to date has been 201 ducklings and our largest 231. If we run out of duck eggs will try "door knobs." Our average thus far this season of fertile eggs has ranged between 80 and 90 per cent, and the ducklings have come strong and fine.—ROBINSON DUCK & POULTRY CO., C. E. Robinson, Pres. and Mngt.

Using 104 of No. 3 Size.

Yardley, Pa., March 10, 1906.
Cyphers Incubator Co., Buffalo, N. Y.
We are getting the best hatches we ever had, and all from your 1906 pattern machines. (Messrs. McCormick & Son have 104 of the No. 3 size.) We took off seven hatches yesterday, averaging 198 ducklings.—W. H. McCORMICK & SON.

DOES IT NEED MORE THAN THIS to convince you that the 1906-Pattern Standard Cyphers is the Incubator of the Day—The one You Can Rely Upon—The Machine You Should Buy? If so, send for our 1906 Catalogue entitled "Poultry Raising Made Easy and Profitable." This book consists of 223 pages, 8x11 inches, and contains a large amount of valuable information, including six chapters on poultry raising for profit, the raising of broilers, roasters, capons and ducks for market, poultry keeping on the farm, photographs of America's leading successful poultrymen, and illustrations of the largest poultry plants in the world; also complete description of our full line of manufactures. This book will be mailed free to all who mention this paper and send us the addresses of two neighbors who are interested in poultry for profit. Address nearest office.

ALLISON'S BUFF ROCKS.

The record of prizes won by Allison's Buff Rocks is a most enviable one and one that Mr. Allison may well be proud of; but it only goes to show what may be accomplished with this breed if the proper care and attention is given to selecting and mating the breeders. At the Indianapolis show in 1903, Mr. Allison won more prizes than any two other exhibitors of this variety. At this show there were 141 birds in the class, which was the largest class of this variety ever gotten together up to that time. Again in 1904 he won at this show and at the World's Fair, St. Louis, in the fall of 1904. At the late Cincinnati show his Buff Rocks won every first prize but one, winning 1st and 2d cock, 1st and 3d cockerel, 1st and 4th pullet, 2d and 3d hen and 1st pen, and three special prizes for best shape, color, etc. There is no one in better shape to sell you prize winning stock than he is. He has hundreds of birds for both exhibition and breeding purposes and considering the quality of his stock the prices are very reasonable. For this season he has mated up seven grand pens from which he will furnish eggs. Each one of these pens is headed by a prize-winning male and a large number of the females are also prize winners, and his customers get eggs from the same matings that he produces his prize winners from. Those of our readers who are contemplating purchasing stock or eggs of this variety should write E. C. Allison, Hope, Ind., for prices and particulars and mention AMERICAN POULTRY JOURNAL.

Scribner's Magazine for April contains a remarkable article on that daring plan known as the Pan-American Railway. For many years the scheme of a great railway along the backbone of two continents has been the dream of such men as James G. Blaine, Andrew Carnegie and A. J. Cassatt. There is a regular commission, which has been in existence for years, and of which Charles M. Pepper, the author of this article, is a member. From the fullest knowledge he describes the links in the chain that have already been built, and gives a clear idea of the missing portions and just what it will cost to construct them. Many new roads are planned or are under construction in the various countries which fit into the general scheme, and it is believed that, with all the American nations working together for this end, the time is not far distant when a continuous railway ride may be taken from New York to Buenos Ayres. The illustrations are picturesque and give a good conception of the marvelous region which this route will traverse. This is the first article in the series on "The Railway of the Future."

Simon Beuth, German Valley, Ill., the largest breeder of Buff Wyandottes in the world, has just issued a very handsome catalogue and mating list, which should be in the hands of everyone who is interested in thoroughbred poultry. Send for it today and mention AMERICAN POULTRY JOURNAL. Mr. Beuth informs us that he has mated up twenty-five grand pens from which he will sell eggs at popular prices and is prepared to fill all orders on short notice. There is probably no farm in the country that has so many noted prize winners as is now housed on the 120-acre farm of Mr. Beuth.

Cooley Farm Poultry Yards, Frenchtown, N. J., make a specialty of breeding S. C. White Leghorns and "Nugget" Buff Plymouth Rocks, the acknowledged standards of the world. Any stock shipped out by these yards can be returned if unsatisfactory. In their ad this month they are offering eggs from their choice matings at very reasonable prices, considering the quality of their stock. Write them and mention AMERICAN POULTRY JOURNAL.

The Hazelmere Poultry Farm, of Cranston, R. I., breeders of Columbian Wyandottes and Rhode Island Reds, issue a neat egg circular. Their winnings at New York, Chicago and at the World's Fair, St. Louis, are too well known to need mention.

One of the most complete and accurate mailing lists that we have received this season is that sent out by the Grove Hill Poultry Yards, Waltham, Mass. It gives illustrations of their winners and a complete description of every pen which they have mated up for the season of 1906. This should be in the hands of everyone who is at all interested in Barred Plymouth Rocks or Single Comb Brown Leghorns. Send for one and mention AMERICAN POULTRY JOURNAL.

A. J. Humphrey, Belvidere, Ill., reports the following winnings on his S. C. Brown Leghorns: At Belvidere, Ill., 1905, 1st, 2nd and 4th cock; 1st, 2nd, 3rd and 4th cockerel; 2nd, 4th and 5th hen; 1st, 2nd, 3rd pullet; 1st and 2nd pen. At Rockford, Ill., 1906, 1st cock; 2nd, 3rd cockerel; 3rd pullet; 3rd pen. At Northern Illinois Poultry Association seventeenth annual show, 1st, 2nd and 3rd cock; 1st, 2nd cockerel; 1st and 3rd pen; 1st pullet; 1st pen.

Charles Staaff, Peapack, N. J., breeder of Barred Plymouth Rocks, made some very creditable winnings with his birds the past season, having won 1st hen and 1st cock at Trenton, N. J., 2nd cock and 2nd hen and 3rd cockerel at the great eastern show, New York City. Mr. Staaff breeds his winners. Write him for prices and particulars and mention AMERICAN POULTRY JOURNAL.

I still have a few White Plymouth Rock cockerels for sale; score, 92 to 93 3/4. Stock from my breeding yards; score, 92 to 95 1/2 points by Heimlich. My birds are pure white and fine layers. Judge Heimlich said my flock was away above the average. If you want fancy and utility stock write to me for prices. Eggs for sale in season. Address Alice M. Hedges, Pana, Ill., and mention AMERICAN POULTRY JOURNAL.

A. A. Farnsworth, Elba, N. Y., is offering eggs from his farm-raised Barred Plymouth Rocks in this issue. His exhibition pens are bred direct from winners at Rochester, Syracuse and New York shows. His stock being farm-raised, the average fertility of the eggs is high. Look up his ad and write him. Mention AMERICAN POULTRY JOURNAL.

We are in receipt of a copy of the annual circular and price list for 1906 of the Mountain Crest Poultry Farm, F. A. Keller, proprietor, Pigeon, Pa. This gives prices of eggs of Partridge, Silver Penciled, Columbian and White Wyandottes and much other information of value to anyone interested in these varieties. Write for a copy of this circular and mention AMERICAN POULTRY JOURNAL.

William H. Robinson, Lafayette, Ind., has just issued a very neat 20-page booklet giving description, prices and illustrations of his Barred Plymouth Rocks, Single Comb White Leghorns, Pekin ducks and Scotch Collie dogs. Send for a copy and mention AMERICAN POULTRY JOURNAL.

Hy. J. Barnett, Winamac, Ind., who breeds Light Brahmas exclusively, now has his 1906 circular ready for distribution and requests that our readers send for one and mention AMERICAN POULTRY JOURNAL.

F. A. Keller, Box F, Pigeon, Pa., breeder of Partridge, Silver Penciled and Columbian Wyandottes, sold \$500 worth of birds to the Japanese Government. Mr. Keller judged the Partridge Wyandottes at Madison Square Garden, 1906. Send for circular.

H. E. Hoak, Ligonier, Ind., manufacturer of the Hoak Incubators and Brooders, has his annual catalogue now ready for distribution, and requests that our readers send for a copy.

One of the neatest and best gotten-up catalogues it has been our pleasure to examine this season is that of C. N. Hansen, Warsaw, Ky., the Rhode Island Red breeder, and we believe our readers will agree with us when they see it. Send for one today.

S. T. Campbell, Mansfield, Ohio, the Rose Comb Black Minorca man, has a 28-page catalogue that he is sending to those interested. Write for one today and mention AMERICAN POULTRY JOURNAL.

Carrery & Avey, Columbia City, Ind., breeders of Partridge and Silver Penciled Wyandottes, have issued a very neat 12-page circular and price list for this season. Send for one and mention AMERICAN POULTRY JOURNAL.

Trap Nests

WILLMOUNT FARM PRODUCES THE WINNERS

Ten 1sts, nine 2ds, one 3d, two 4ths, three 5ths, two silver cups and fourteen special prizes won at the four following shows, 1905:

Great Eastern, N. Y., Paterson and Rutherford, N. J., and Mineola, L. I. Young stock for sale. Selected eggs for hatching from our winning strain \$3 per fifteen, or \$15 per hundred.

Willmount Farm William W. Caswell, Prop. Mamaroneck, N. Y.

BUILD IT YOURSELF

Of course you can build your own Incubator and it will hatch as perfectly as any factory-made machine on the market, and you **SAVE HALF THE COST.** This means two machine for the cost of one; or an incubator and brooder, both for less than the cost of an ordinary machine alone. How? Get Our New Book "How to Make and Save Money with Incubators and Brooders." It explains how you can build Incubators and Brooders and gives full directions for operating them. The New Idea Incubator is built from plans we furnish you. The only tools you need are a saw and hammer. Hundreds have built them and are making money. We sell you at wholesale parts like Tank, Lamp, Regulator, etc. Thus you get a complete machine at less than half price. Get the Book! Read all about the plans. See photographs of Incubators and Brooders built from our plans. This book will save you many dollars. Write to-day.

This is only a model

WYANDOTTES Silver & Columbian

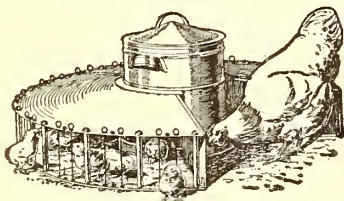

America's Leading Strain & Largest Wyandotte Farm.

Highest winners at New York, the last three years and for my customers at Chicago and Boston—home of "Ideal," the \$200 first Columbian cockerel at New York, undoubtedly the best Columbian in the world. Eggs from this pen \$10 per 13. Silver eggs \$3. from the strongest and best blood lines in America.

One of our Prize Columbian Pullets.

J. F. VAN ALSTYNE
Niverville, N. Y.

The Automatic Poultry Feeder, Water Fountain and Young Chick Protector

We are on hands for the season of poultry raising with our labor-saving, money-making device. We sold one feeder, fountain and protector combined last year to each third inquiry, and not one was returned, though our guarantee grants that privilege with money refunded. We will be fair with you. This invention goes on its own merit or it don't go. Write for free catalogue, it will tell you all about it. Ordering in quantities gives you a commission. E. H. TURNER & CO. Box 424, Tippecanoe, Ia.

Shows, Associations and Clubs.

The Latest News of the Show Room—Announcements of Special and Regular Meetings of Associations and Specialty Clubs—Secretaries are Requested to Send in the Latest News.

OF INTEREST TO RED BREEDERS.

"A new day has dawned for the Reds." That sentence, spoken by a prominent breeder, an authority on Red matters, at the close of the American Poultry Association meeting at Cincinnati, most aptly expresses the feelings of the Red breeders in attendance at the Cincinnati show. What called forth that remark?

First, the fact that the "Red Alley" contained 324 birds, the largest class ever shown outside of Boston, and the warmest ever shown, Boston not excepted. Second, the fact that the breed club, the American Rhode Island Red Club, had endorsed the variety club, the National Single Comb Rhode Island Red Club.

The fact that the executive committee of the National had been instructed to have printed a monthly paper, the *Red Breeders' Bulletin*, devoted exclusively to matters of interest to Red breeders, to the fact that the two clubs were working together for the welfare of the breed and without friction, to the fact that Mr. Baerman, in the A. P. A. meeting had withdrawn his motion made at Minneapolis for the admission of the American Reds, and the fact that because of the cordial relations of the two clubs the Baerman amendments providing for changes in color and weights of the present Standard, had been defeated. The breeder who made that statement was well within the truth. Mr. Baerman, notwithstanding his former endeavors, deserves well at the hands of every Red breeder for his courage, despite his convictions, and his courtesy in withdrawing his amendments.

That this is fully appreciated by his opponents is shown by the motion introduced by the Hon. C. Y. Bryant, tendering him the thanks of the association. With the American Red incident closed, the Baerman amendments defeated and two active clubs, breed and variety in the field, working in the utmost harmony, pushing the Reds, with a monthly paper devoted exclusively to the Reds, and with the Reds themselves, the grandest utility and fancy fowl of the century to build on, all at Cincinnati felt that a new day indeed had dawned for the Reds.

G. L. WILCOX,

Secretary National Single Comb Rhode Island Red Club.

AMERICAN ROSE COMB WHITE LEGHORN CLUB.

At a meeting held at Chicago, Ill., of the American Rose Comb White Leghorn Club members the following officers were elected for the ensuing year: President, J. A. Leland, Springfield, Ill.; vice-president, L. A. Stafford, Blodgett Mills, N. Y.; secretary and treasurer, John J. Peters, Lincoln, Ill. On the executive board are the following members: J. A. Leland, M. G. Bryant, L. A. Stafford, Clarence Heves, Mrs. Jennie E. Warren.

When the interest that has been shown and taken are considered the American Club can surely be proud of its membership as it is the strongest and has in it the best breeders of this variety in the

world, and it is my desire and aim to advance the interest shown and also increase its membership (two fold) by January, 1907, so I ask that all members unite with me to bring these results. If you are not a member of the American, why I ask you to become one at once and help a good cause along. Write me for application blanks. JOHN J. PETERS, Secretary and Treasurer.

553 Third street, Lincoln, Ill.

AMERICAN SINGLE COMB BROWN LEGHORN CLUB.

The American Single Comb Brown Leghorn Club met at Cleveland, Ohio, Feb. 1, 1906. The following officers were elected for 1906: E. E. Carter, Knoxville, Tenn., president; E. W. Steabler, Cleveland, Ohio, secretary and treasurer; H. M. Moyer, Bechtelsville, Pa., eastern vice-president; Wm. G. Warnoch, Genesee, Ill., western vice-president; W. H. Wiebke, Fort Wayne, Ind., northern vice-president; M. S. Copeland, Powell's Station, Tenn., southern vice-president; S. W. Crosby, Newton Falls, Ohio, central vice-president.

EDWIN W. STAEBLER,
Secretary and Treasurer.

OKLAHOMA CITY, OKLA.

The third annual exhibit of the Oklahoma State Poultry Association closed Feb. 3 at Oklahoma City. It was a success in every way and by far the best show ever given by the association. The members showed their appreciation of the good treatment they received by voting Oklahoma City as the permanent place for holding their show. The officers elected for ensuing year are Emil Bracht, president; M. S. Fite, vice-president; E. L. Vickers, treasurer; T. E. Shaw, secretary. The next show will be held Dec. 17-22, 1906. Frank W. Hitchcock, judge.

T. E. SHAW, Secretary.

INTERNATIONAL ROSE COMB BLACK MINORCA CLUB.

The second annual meeting of the International Rose Comb Black Minorca Club was held at the Boston Poultry Show, Jan. 18, 1906, at 2:30 p. m. The following officers were elected: Officers—H. E. Curtis, president, Rutland, Vt.; S. A. Howland, vice-president, Granville, N. Y.; Geo. H. Northrup, secretary-treasurer, Raceville, N. Y. Directors—Lewis H. Green, Picton, N. J.; Clarence J. Denton, Round Lake, N. Y.; James W. Cobb, Birmingham, Mich.; C. E. Coggshall, Miles City, Mont.

The International Rose Comb Black Minorca Club was organized at the Boston Show, January, 1905, and has made greater progress than any other organization of its kind in the same length of time. The club now has in its membership the leading Rose Comb Black Minorca breeders in America and it is our object to interest all breeders of this variety in united action whereby we can bring out to the shows the best exhibits of Rose Comb Black Minorcas and thus acquaint the public with their sterling

qualities. We hope also to work together to establish the best methods of breeding to improve our flocks and to assist those who have good birds to receive higher prices for surplus eggs and stock. The club will publish and distribute literature which will benefit members in many ways, and will offer many specials in various shows, so that they will be available for the greatest possible number of the club's members.

While yet less than one year old, the club has provided special ribbons and offered them to nearly one hundred show associations to be competed for in eighteen different states and in Canada, as follows: Massachusetts, Indiana, New Jersey, New Hampshire, New York, Wisconsin, Connecticut, Michigan, Vermont, Illinois, North Carolina, Kentucky, Montana, Pennsylvania, Ohio, California, Washington, Missouri, also District of Columbia and the provinces of Ontario and Nova Scotia, Canada. We hope that most of these states will have enough members a year from now to entitle them to have a silver cup from the club, for state competition by club members, and that all other states will be represented by sufficient members to entitle them to ribbons.

The financial report, which was read and approved at the annual meeting, showed a balance of \$10.99 after paying for the ribbons mentioned, \$29.00 in cash, special printing and all other expenses for the year. Geo. H. Northup, secretary of the club, gave personally a beautiful silver fruit bowl to be awarded to the club member winning greatest number of points on Rose Comb Black Minorcas, donor not to compete. The Boston Show Association gave a cash special of \$15.00. The club invites all breeders of genuine Rose Comb Black Minorcas to join its ranks and share its benefits. For full particulars, address Geo. H. Northup, Secy., Raceville, N. Y.

CAREY, OHIO.

The poultry breeders of Carey, O., have formed a poultry club and will hold a show the second week in December, 1906. The services of Geo. H. Burgett, as judge, have been accepted. This club will offer good prizes and will guarantee honest treatment to all who exhibit with them.

GEO. WOLFRUM, Sec.

ZANESVILLE, OHIO.

An organization of the breeders and fanciers of Muskingum County has been formed, constitution, rules and by-laws adopted, and getting in shape to hold a show the coming winter, probably during January, 1907. Date not decided. The following officers were elected: Jos. Whartenby, president; G. W. Dozer, vice-president; Wm. E. Thomas, secretary; L. A. Pherson, assistant secretary; F. C. Clester, treasurer; W. C. Brookover, superintendent. Are starting out with about 100 members with prospects of as many more. Not bad for a beginning? Will probably hold a bench show in connection with the poultry show.

WM. E. THOMAS, Secretary.

BONHAM, TEXAS.

The Bonham Poultry and Pet Stock Association met in call session and elected the following officers for the ensuing year: A. R. Anthony, president; W. T. Smith, vice-president; W. W. Huddleston, secretary; A. E. Sweeney, treas-

A BARGAIN FOR SOMEBODY

Having decided to make a specialty of Orpingtons and White Wyandottes in the future. I have a fine lot of White Rocks, Light Brahmas and Single Comb White Leghorns to sell at a bargain. These are all thoroughbred and many of them prize winners. If interested address

T. L. LODGE BANNOCK, OHIO

urer; M. L. Moore, superintendent; Chas. Duncan, assistant superintendent. Executive committee, E. G. McKinney, Walter Elsworth, A. E. Sweeney. At a former meeting it was unanimously decided to open our annual show to the world, and dates set for holding same on Dec. 13, 14 and 15. There was much interest shown at our meetings and we expect to have the biggest and best show we have ever had. There will be a nice lot of cash prizes to compete for. Catalogue will be out in due time.

W. W. HUDDLESTON, Secretary.

AMERICAN BUFF PLYMOUTH ROCK CLUB.

The ninth annual meeting of the American Buff Plymouth Rock Club was held in connection with the National Fanciers' Association show in Chicago, Wednesday, Jan. 24, 1906.

In the absence of the president and vice-presidents the meeting was called to order and presided over by Mr. C. A. Morton.

The following named officers were elected for the present year: President, W. C. Denny; eastern vice-president, M. F. Delano; western vice-president, J. J. Keig; southern vice-president, C. W. Fowler; secretary and treasurer, C. A. Morton; executive committee, F. C. Shepherd, S. D. Lapham, B. E. Johnson.

The membership list will be published in March and every breeder not already a member is invited to join at once. Send \$1.00 each for membership fee and annual dues to

St. Louis, Mo.

NEW CATALOGUE OF THE AMERICAN POLISH CLUB.

Our new club catalogue is now ready for mailing and a copy will be sent to anyone interested on receipt of a two-cent stamp. If you are a breeder or lover of the Polish fowls you should not fail to secure a copy of our club catalogue as it contains many good things you should know. We advise you to send for a copy at once, and at the same time, if you are not a member, just enclose a one-dollar bill in your letter, and become one at once, as you will find it is a dollar well invested by the returns you will get in being a member.

M. V. CALDWELL,

Secretary and Treasurer.

Lectonia, Ohio.

ST. MARYS, OHIO.

The St. Marys Poultry and Pet Stock Association was organized March 19 for the purpose of holding annual shows. St. Marys is well situated for the purpose, being connected with the adjoining country by three electric lines and two steam roads. The following officers were elected: W. L. Smith, St. Marys, Ohio, president; B. Kuckereide, New Bremen, Ohio, first vice-president; B. Raberding, New Knoxville, Ohio, second vice-president; F. F. Aschbacher, St. Marys, Ohio, secretary; Edward Smith, St. Marys, Ohio, assistant secretary; J. F. Stout, St. Marys, Ohio, treasurer.

The association starts out under very favorable circumstances, and its first show, which will be held early in December next, will no doubt be a success.

WOMAN'S HOME DEPARTMENT.

Mabel Bates, Editor.

This department will not be confined to poultry items entirely, but to all matters pertaining to household economics. We want every woman who reads American Poultry Journal to consider herself a member of this department. If you have a bit of practical knowledge in household matters, an item of experience in raising poultry that will be helpful to others; a favorite recipe, etc., send it along. This is your department, just as far as you are willing to make it.

All communications should be addressed to the Home Department of American Poultry Journal Publishing Company, 325 Dearborn Street, Chicago, Ill.

A WHOLESOME CELLAR.

Let some parts of the house wait until early summer, if need be, but do not neglect the cellar when house cleaning time comes. Many cases of illness can be traced directly to an unwholesome, unventilated cellar, which has been closely shut up all winter. As soon as the mild spring days arrive air the cellar thoroughly, not occasionally, but every day, if possible. If there are no outside windows, try to plan some way to get a couple, so arranged as to give a good draft. It will be an expense now, but a

grandmothers and great-grandmothers? However that may be, it is certainly true that with the coming of the spring showers and the change from the dull garb of winter to bright flower-carpets and green leaf-draperies, the good housewife seems impelled, much to the bewilderment of the man of the house, to sweep and scrub, paper and paint, until the inside of the house is as fresh and spotless as the rain-swept blue sky outside.

While brightening the house within, every housekeeper should go a step farther, and make the exterior surroundings

real "rest value" in such things which can only be understood and appreciated by those who have tried it. It is a case of "planting flowers in the soul's front yard," which is consciously or unconsciously a help to every one who sees it.

A LITTLE OF EVERYTHING.

Savory Rice—Put plain boiled rice in a saucepan with a lump of butter. Add as much tomato sauce as the rice will take up, and from half a cup to a cup of grated cheese, prepared by grating all the dry bits and those nearest the outer edge of the cheese. Mix well and keep stirring until hot clear through.

Potato Omelet—One cup of mashed potatoes, three eggs well beaten, a scant teaspoonful of salt, a dash of pepper, half a cup of sweet milk and a heaping tablespoonful of flour. Mix well together. Heat and grease a large frying pan and pour the mixture into it. Keep on top of the stove at a moderate heat until browned on the under side, then set on the rack in the oven to brown on top.

Mock Sausage—Chop very fine a pound of cold beef scraps from a roast,

A load of Black Minorcas, exhibited by W. W. Britton, returning home from the Elgin Show after winning 41 ribbons and 25 cash and special prizes.

saver of doctor's bills in the end. If the cellar, after being thoroughly cleaned seems damp, put a box of unslacked lime on the floor and it will do the work for you. Whitewash is cheap, and it is one of the greatest labor savers. If no one can be found to put this on for you, try it yourself; it is not nearly as hard as many parts of the housework, and when once done will save weary hours of cleaning, while at the same time it acts as a microbe killer. A sweet, clean, dry cellar is the sure sign of a good housekeeper, and assures in large measure the well-being of the entire family.

HOUSECLEANING TIME.

Says the old verse:

"Mother Earth has been housecleaning,
And the world is fair to view."

Is it from good old Mother Earth that women inherit the impulse which comes so strongly upon them with the advent of spring? Or is it the result of generations of housecleaning mothers and

of the home neat and clean. It will only take a little extra time, with the assistance of the "guid mon" and the boys, perhaps only an extra hour each evening for a little while, to clean up the accumulation of rubbish which has gathered during the winter. Then a few minutes more will plant a handful of quick growing seeds, and in a few weeks the dingy fence will be a mass of living green, the ugly pile of stones in the corner will be a riotous glow of color and the sweet pea hedge will shut off the ugly view around the corner of the house. Unless the summer is exceptionally dry, the Monday morning's wash water with an occasional help from the pail of dish water will keep the hedge and vines beautiful, while at the same time disposing of the otherwise unwholesome "pond" which too often accumulates in the vicinity of the back door. In this way it will prove a sanitary measure, while at the same time it makes a spot of beauty on which to rest tired eyes during the hot summer days. There is a

crumb a slice of bread, moisten it in water, add three or four tablespoonfuls of mashed potato, and one beaten egg. Season with salt, pepper and sage, add the meat, mix well, shape it in small, flat cakes, dust lightly with flour and brown them in a frying pan the same as sausages, using drippings or butter.

Apple Bread—Peel and core eight good sized apples and steam or boil them until tender. Let stand until lukewarm, then mix thoroughly into enough sifted flour to make a thick paste. Set in a warm place over night and in the morning take this sponge and make bread in the usual manner.

Hickory Nut Cookies—Two cups sugar, two eggs, half cup melted butter, six teaspoonfuls sour milk, one even teaspoonful soda, one cup chopped nuts, flour for a soft dough.

Nut Cake—One cup sugar, one-half cup butter, three eggs, one-half cup sweet milk, two cups flour, two rounding teaspoonfuls baking powder, flavoring to taste. Bake in layers and use the fol-

lowing filling: Make a custard with a pint of milk, one tablespoonful corn-starch, two eggs, one-half cup sugar and a cup of chopped nut meats of any kind, though hickory nuts or pecans will be found especially good. When the milk, which should be placed in a double boiler, is scalding hot, add the corn-starch, moistened with cold milk, and when it thickens, add the beaten eggs and sugar and the nut meats, with a pinch of salt. While the custard and cake are still warm, but not hot, put custard between the layers. Cover top and sides with icing and dot with halved nut meats. This makes a delicious company cake, and is plain enough to be wholesome for ordinary consumption as well.

IN CLEANING TIME.

In housecleaning time people must eat, as at other seasons of the year. There are many delicious dishes which can be prepared quickly, and with small expenditure of time and strength.

Milk Soup—One cup of potatoes mashed and seasoned with salt, the yolks of three hard boiled eggs mashed and made smooth with milk, one-fourth cup butter, one quart milk brought to the boiling point, one large tablespoonful flour. Stir quickly and strain.

Boston Brown Hash—Chop any pieces of left over meat and place in layers with cold potatoes in a seasoned pie tin, using potatoes for the bottom layer. Over the meat sprinkle bread crumbs. Season with salt and pepper, moisten with half a cupful of meat gravy, add a layer of potatoes and smooth over with a knife dipped in milk.

Bake half an hour.

Creamed Eggs—A delicious dish which will take the place of meat for an occasional dinner, or which is a fine supper dish is made by boiling eggs until hard, cutting them in halves lengthwise and putting them on a hot platter, and pouring over them a white sauce made by melting together a rounding tablespoonful of butter and one of flour. When they bubble add a cup of hot milk and season to taste.

Steak with Tomato—One pound round steak, three-quarters of a can of tomatoes, one small onion, salt and pepper and a bay leaf. Put all together in a closely covered frying pan or baking dish and cook slowly three hours.

Cherry Bread—Slice and butter bread from which the crusts have been neatly trimmed, put them in a serving dish and pour over them and between them a pint of canned cherries which have been brought to a boil just before serving. This is equally good eaten hot or cold, and makes a nice cold dish for the unexpectedly hot days which come in April and May.

THE HANDY WOMAN.

The woman with a hammer is no longer a novelty. Manual training is being rapidly introduced in the public schools, and the time is coming when women will not have to wait the pleasure of the man of the house or the busy carpenter, when a shelf needs adjusting or a lock wants a screw. Every woman who has once tried keeping a drawer in the kitchen or a shelf in the woodshed, where a hammer, a light but sharp toothed saw, a little package of assorted

wire nails and screws, a screw driver and wrench each have a place, will wonder how she ever managed to keep house without them, and would as soon think of doing away with the broom and dust pan as these equally handy and necessary "tools of the trade."

THE PREPARATION OF SOUPS.

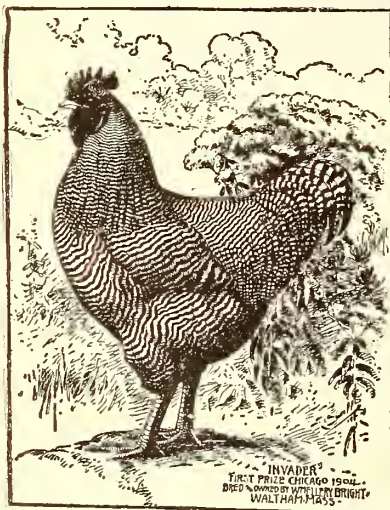

The quantity of water should be in proportion to that of the meat, or other material used and depends upon the degree of richness you wish to attain. Fresh meats should always be used, sometimes adding the remains of roast beef well done with meat added. Cold ham may be used to advantage in white soups. The soup made entirely from fresh meat is generally better the second day than the first, reboiling with no water added. If it is absolutely necessary to add water when soup is boiling, let it be hot water, for if luke warm or cold it will spoil it.

Skim off all the fatty matter that rises. Lean meats are best for soups. Boil slowly and for a long time. Remove all shreds of cartilage and bone; season slightly with salt and pepper.

Bean Soup—One quart of beans soaked over night. Boil two and one-half pounds of lean fresh beef cut up and all bones broken, with one-half pound of bacon. Season with pepper and pour on three quarts of water. Boil beans well and strain through colander; add to soup. Add a few sticks of celery or a tablespoon celery salt. Peas can be used instead of beans.

Vermicelli Soup—Make two quarts of good stock the day before required. Add carrot, turnip, onions, parsley and mace,

TEN STRAIGHT FIRSTS ON Barred Ply. Rock

FIRST COC KREEL. Chicago, 1904
Bred by Wm. Ellery Bright

cockerels is a record never equaled at such shows as Madison Square Garden, New York, Boston, Philadelphia, Chicago, St. Louis and Pan-American Expositions.

14 out of 18 firsts during the past ten years on cockerels alone.

3 out of 5 firsts at Chicago, 1904, in the strongest classes ever seen at Chicago. Three out of five firsts at St. Louis. Both firsts on males at both St. Louis and Pan-American Expositions.

That the Grove Hill females are strong is shown by the fact that they have won first exhibition yards at St. Louis Exposition, 1904; Chicago, 1904, and New York, 1905. It takes four crackerjack females to win in a yard; one crackerjack can win the open class. Four well matched females means good breeding, for they must show the same type and color to make a winning pen.

100 selected cockerels for exhibition male breeding, and 100 choice cockerels for exhibition female breeding at **reasonable prices**.

Trios and pens specially mated to suit the purchaser, on the same plan as we mate the pens that produce the winners.

Special for best male color at New York, Boston and Chicago went to the Grove Hill Strain.
EGGS From the pens that produce the winners
\$5.00 per thirteen, \$15.00 per fifty, \$25.00 per hundred.

Special selections made to suit the needs of the purchaser at special prices. Send for list of matings. See Leghorn ad on opposite page.

GROVE HILL POULTRY YARDS
WILLIAM ELLERY BRIGHT, Prop. - A. C. SMITH, Supt.
P. O. Box 410 - WALTHAM, MASS.

salt and pepper, strain and skim. Take the crumbs of French rolls, boil and stir in the mashed rolls for 15 minutes; add yolks of two eggs beaten with cream. Boil the vermicelli 15 or 20 minutes by itself; put it into a dish and pour your soup over it.

Soup with Paste or Vegetables—Boil all vegetables, rice, barley or paste; add stock. Proportion one-half cup cooked material to one quart of stock, an egg beaten well and stirred in rice soup makes it like chicken soup.

Clam Soup—Chop 25 clams and strain the liquor. Melt 1 tablespoon butter in a saucepan, add two tablespoons chopped onion, cook 10 minutes without browning, then add two finely rolled crackers and stir a few minutes. Add 1 pint boiling water, 1 pint fine cut potatoes, 1 teaspoon pepper; cook 15 minutes; next add clams and liquor and cook 10 minutes. Put 1 pint boiling milk in a tureen, pour in the soup and serve with crackers.

Mushroom Soup—One pint mushrooms, 1 quart milk, 1 tablespoon celery salt or a bunch celery, 1 teaspoon salt and pepper, 1 tablespoon butter, 1 cup stock; boil half-hour; dissolve 1 tablespoon corn starch in very little cold water; add to soup; stir to keep from lumps.

Vegetable Soup—Three quarts of stock, 1/2 cup rice and barley mixed, 1 onion, 1 carrot, 1 turnip, 1/2 dozen small or 3 three large potatoes cut in small cubes, a cup of beans and peas mixed, a half cup cabbage (chopped), a half cup celery, 1/2 cup fresh Lima beans and 1/2 dozen ears of corn. If in winter succotash answers the same as fresh Lima beans and corn; add salt and pepper to taste and boil steady, but slow, till thick and well done.

Onion Soup—Take six medium sized onions, slice and brown slightly in a pan with a tablespoon butter; add 1 pint stock, 3 sliced potatoes, pepper and salt to taste; cook one hour, serve hot.

Deviled Bone Soup—Melt 2 tablespoons butter and add 1 tablespoon chili and 1 tablespoon Worcestershire

sauce, 1 tablespoon walnut catsup, 1 spoon made mustard and a few grains of cayenne. Cut four small gashes in drumsticks, second joints and wings of a cooked chicken; sprinkle with salt and pepper, dredge with flour and cook in the seasoned butter until well browned; pour on 1 quart of hot stock and simmer five minutes. Add a tablespoon celery salt and a little chopped parsley; boil 5 minutes and serve hot.

Scotch Mutton Broth—Soak a neck of mutton in water 1 hour; cut off the scrags, place in a stew pan with 2 quarts water; boil 1 1/2 hours. When it boils skim, then cut the best end of the mutton into pieces; take off some of the fat; then put in as much as you want. Put in 4 carrots, 4 turnips and 3 onions cut rather large and boil tender; add 4 tablespoons barley; the meat should stew 3 hours; salt to taste and serve together. Twenty minutes before serving put in some chopped parsley.

MRS. B. NOWOTNEY.

Beaver Falls, Pa.

Best results will be obtained when clothes are sprinkled with hot water and a good whisk broom kept for the purpose.

“CONSTANT ROTATING INCUBATORS”—H. W. AXFORD, CHICAGO.

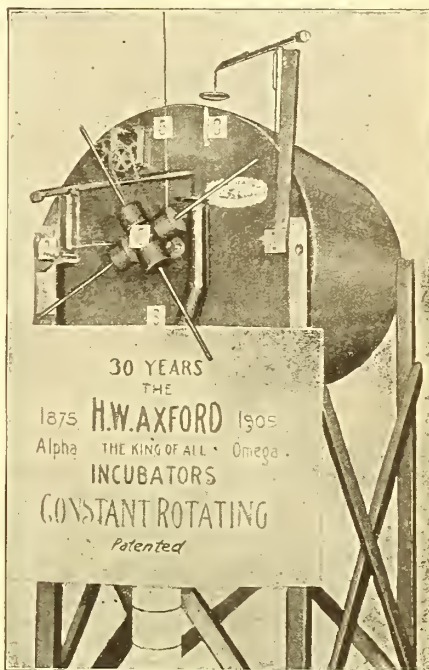

Some of the older readers of the AMERICAN POULTRY JOURNAL are aware this journal was the first to print an advertisement of the H. W. Axford Incubator.

The whole credit for the invention he did not reserve for himself, as it had many names; first it was called the “Steam-Hatcher,” “Omaha Hen,” “National Incubator,” “Glass Hen,” “Electric Incubator.”

Being so long engaged in this work, the experience made it easy to combine the good qualities with this latest novelty of “constant rotating,” saving

all the time, work and care of turning the eggs often daily by hand during the necessary time of incubation, a surprising contrast to the early days of building “hatchers of chickens,” when postal inspectors were sent to the works to inquire as to its genuineness.

This result was looked for in 1876 by Chicago's great show man, John P.

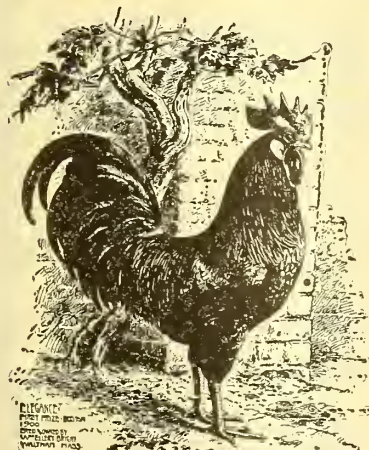

The above is a partial representation of H. W. Axford's new Constant Rotating Incubator, which promises to revolutionize the incubating of eggs.

Reynolds, when he said, “H. W. Axford Incubator had the promise of “PRACTICAL UTILITY.” It is the greatest gift to the thousands who will hereafter raise poultry.

BRIGHT'S BROWN LEGHORNS

MAINTAIN THE LEAD AND ARE STILL THE CHAMPIONS of the World

At Madison Square, New York, 1906

They win 1, 2, 3, 4 Cocks—four exhibited. 1, 2, 3 Hens—four exhibited. 3, 5 Cockerels; 1, 2 Pullets; 2, 3 Yards. Easily outpointing all competitors, winning 49 out of possible 64 points.

Questions and Answers

Questions asked by subscribers will be answered in this department only under the condition that the full name and address is signed by the writer.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Here are a few questions I would like to have you answer in your paper:

No. 1. I breed White Wyandottes in one pen of nine hens and a cock. I get only three eggs a day. The hens are nice and fat and weigh about seven to eight pounds. I feed them one quart mash in morning, one quart scratching food (use buckwheat for scratching food), one quart corn at night. Give them a cabbage a day and keep oyster shells in front of them all the time.

No. 2. When can you rely on eggs being fertile, at what time of year?

No. 3. What is the best breed to fat?

No. 4. Can poultry be housed on second floor eight feet from ground?

No. 5. How many eggs had I ought to get from 23 hens at above ration?

No. 6. Where is the best and nearest market for broilers and roasters for me?

No. 7. I have a hen that just as soon as she is through eating instead of scratching around after scratch food fluffs out her feathers and stands out of the way for an hour or so at a time. What is the matter with her?

No. 8. I have a hen setting when she drinks she will put her head close to the ground and back up. What is the matter with her?
J. W.

Pontiac, Mich.

Answer.—No. 1. You have probably got your hens too fat, and that is the reason they do not lay better. Buckwheat is very fattening. It would be better to feed good sound whole wheat and oats, and less buckwheat.

No. 2. Eggs should be fertile at all times of the year, providing the stock is healthy, and the male bird vigorous.

No. 3. Any of the American varieties would be suitable for fattening for market purposes.

No. 4. Yes.

No. 5. In spring and early summer

you should average from 12 to 15 eggs a day from 23 hens.

No. 6. Chicago is probably the nearest and best market for you.

No. 7. This hen has probably acquired this habit of standing around from being overfed. Make her scratch for all she gets. This can be done by not feeding anything to her but what is fed in the litter.

No. 8. We are unable to say, unless given more detailed information in regard to this hen.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Will you please answer the following questions in your April number? I am a beginner in the poultry business. I have kept R. I. Reds for about three years, and every year have had one pullet go blind. There seems to be a flu come over one eye and after a few months it will extend over the other. They seem perfectly healthy. What is the cause, and can I use anything to take that off the eye? I enjoy my hens and take the best care of them; they have all the market affords, and I make many changes in their food. Give them warm mash in morning, what they will eat up in five minutes, and scatter all kinds of grain in their litter. Last year I kept fourteen hens and one rooster and raised forty-two chicks, and my net profit was \$44.59. Was this doing well on the number I kept? Do you consider Cyphers' chick food the best for baby chicks? How many hens can be kept in a house 9 by 12 feet with no scratching shed?
Mrs. C. L.

Westbrook, Maine.

Answer.—This blindness is probably due to some constitutional weakness or it may be caused by a cold which settles in the eye. By the use of burnt alum the coating over the eye can be removed. Take a lump of alum, place it on a hot iron until it melts. After it becomes

cool powder it very fine and sprinkle a little in the eye. A few treatments will generally remove all foreign matter in the eye. Your record on 14 hens and one rooster was a remarkably good one, being almost \$3 per head profit. Cyphers' chick feed is considered one of the standard feeds on the market at the present time. Twelve to fifteen fowls is sufficient to keep in a house 9 by 12.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Kindly answer through your question and answer department the following: One of my Barred Rock hens has a very large lump which hangs between the legs and very nearly touches the ground. She seems to be very awkward in running; she has to hop along. Also her feathers are off from her breast to the lump above mentioned.

Toronto, Can.

J. C. Mc.

Answer.—This is evidently a tumor, and as there is no cure for this we would recommend that the bird be killed at once.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Will you please answer the following questions in your next issue: On October 1 I preserved 30 dozen fresh eggs in one part "water glass" and ten parts "water." To-day after more than five months I candled them all and found them first-class. I had them in my cellar all the time. I want to know: First—If I preserve eggs this way in April and May and keep them in my cellar during the summer months without ice will they be good for Christmas? Second—After the eggs are taken out of the fluid and packed in boxes for market will the yolk come in place by turning the boxes once a day for one week? Third—Can the fluid be used more than once?

Chicago, Ill.

C. H. A.

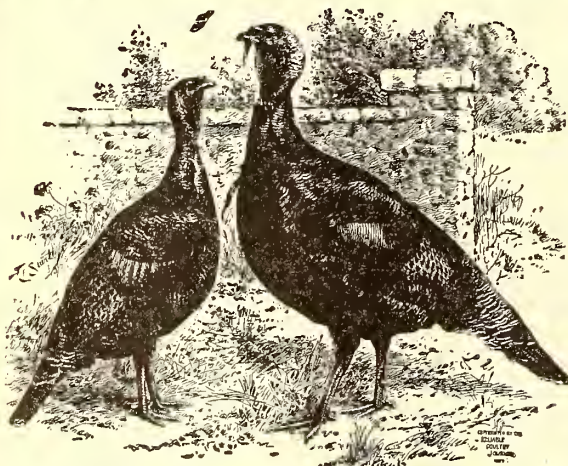

Answer.—Where eggs are preserved in water glass and stored in a reasonably cool place they can be kept for an indefinite period of time without ice.

Second. Yes.

Third. No.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer in your next month's issue of AMERICAN POULTRY JOURNAL the following: I have white Plymouth Rock pullets. I feed while

Bronze Turkey Eggs

have always been very hard to obtain. Last season we were compelled to return money for something like fifty settings we could not furnish. This season we have reserved one hundred choice hens and have mated to them twenty-five toms, every one a prize winner, and will sell the eggs at the low price of

\$5.00 PER ELEVEN

Our turkeys won fifteen prizes at the World's Fair and eighteen prizes at New York; also winners at Cincinnati, Chicago, Indianapolis, etc. A few choice toms for sale—birds that will give you splendid results.

MRS. U. R. FISHEL .∴ Box A, Hope, Ind.

one day, boiled and dry oats mornings, in scratching shed; at noon cabbage or alfalfa, Kaffir corn or barley; at night cracked corn. (My pullets don't like corn, as I did not feed it until cold weather.) Clean coop in every way. My eggs are not right. They lay good, only yolk of egg is "pale" and would want them brighter. Please tell me what to do to get them. Second—Two of my pullets get on the nest and stay there most of the time, but can't lay. They stand around with their heads up and tails on the ground and below vent is swollen (from vent to end of breastbone), not hard, but soft. They won't eat and pass offensive droppings. I thought that they must have bursted an egg inside. Please answer and tell me what can be done to cure them. C. A. F.

Akron, Ohio.

Answer.—First. You do not feed enough green food. Second. This may be egg bound, gangrene of oviduct, rupture of oviduct or ventgleet, but you do not give enough detail for us to determine exactly which one it is. You will be able to determine whether the fowl is egg bound or not by examining her closely and endeavor to distinguish if there is an egg in the abdominal cavity. We are of the opinion that it is ventgleet, owing to the offensive droppings, and would suggest the following treatment: First reduce the inflammation by holding the lower part of the fowl's body in a pan or bucket of hot water, to which has been added a teaspoonful of bicarbonate of soda to each part of water. The water should be as warm as can be comfortably borne by the hand and application should be continued from one-half to three-quarters of an hour, and should be repeated daily while the inflammation is at its height. After the bird is removed from the water it should be dried with a cloth and a tablespoonful of the following injected into the cloaca: water, 6 ounces; glycerine, 2 ounces; morphia sulphate, 1 grain; boracic acid, 1½ drams. Should this fail to give satisfactory results try a solution of carbolic acid the strength of 1 per cent.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—I have a cockerel that is healthy in every way, but does not eat enough to keep him in good flesh, although he has access to feed where the hens cannot reach it. He is also a coward around other roosters. Is it because I had him shut up alone when he was just developing? I think he needs some kind of an appetizer, but do not know what to give. W. W.

Answer.—About two ounces of fresh, raw meat, or liver once a day for a week or ten days, will probably put this bird in condition.

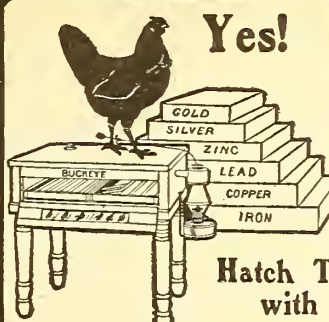

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer the following question in your next issue: Do all capons grow spurs? If not, what is the cause and how can it be prevented? G. E.

Answer.—Capons will grow spurs if they are allowed to reach that age, but for best results capons should not be more than eight to ten months old when killed.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer the following question in the April issue of the AMERICAN POULTRY JOURNAL: How early should Rose Comb Brown Leghorns be hatched in the northeastern part of

Yes! The American Hen is so large.

Her annual product is worth more than all the metals mined in the United States. A town lot is large enough and a 160 acre farm is not too large to utilize part of it and get some profit out of this gigantic business.

Hatch Them with a BUCKEYE.

Rear them with an old Hen Brooder—Feeding Buckeye Chick Starter for a week and the trick is done. Our Free Catalog tells all about it. We sell self regulating incubators; guaranteed as to work and material and to hatch every good egg. As low as \$5.00, and 200 egg ones for \$12.75.

All on 40 Days Trial, or will rent you one for \$1 per month and let rent pay for it, we paying the freight, or will sell you parts and plans and you can build one just like it. We sell everything the Poultryman needs—all Buckeye quality, which means the best. Our Portable Poultry and Colony Houses are unequalled for quality or price. Think of it, a 6 ft. by 3 ft. Iron Roof Colony House for \$5.75.

Buckeye Chick Starter for the first week after hatching insures raising the Chicks. A 2 lb. package is enough for 25 chicks. Costs 25 cents with other goods or 50 cents by express, prepaid. 100% hatches are the rule, not the exception with Buckeyes.

BUCKEYE INCUBATOR CO. Box 2, Springfield, Ohio.

HARDING'S BABY CHICK FOOD

NO GRIT. There is no better food for little chicks. After 10 years' test it leads all competition. It contains nutritious grain, granulated beef scrap, bone, charcoal, seeds and other health-giving, strength-imparting substances. Perfectly balanced and carefully mixed. A builder of flesh, bone and feathers. Especially prepared for little chicks, pigeons and caged birds. Develops youngsters into profitable fowls. The most economical food made. Try it. 50-pound bag, \$1.50; 100-pound bag, \$2.50.

Harding's Granulated Milk A pure milk food for poultry—wonderful egg producer and one of the richest protein foods known—has absolutely no waste—a tissue builder, egg maker and growth producer. Write for my free book "How to Make Poultry Pay." Sent free. George L. Harding, Box 333, Binghamton, N. Y.

HOW TO BUILD AN INCUBATOR and BROODER

It's easy with our COMPLETE ILLUSTRATED PLANS. A ten-year-old boy can readily follow them with success. They show you every stage of construction, step by step, in nearly 100 half tone illustrations. They contain complete specifications for building the famous PEERLESS INCUBATORS AND BROODERS. Every feature is clearly pictured and thoroughly explained, making it possible for ANYONE to build an Incubator and Brooder possessing exclusive features and advantages which are unequalled by any machine on the market. We supply ALL PARTS not possible for you to make, such as lamp, regulator, tank, heater, legs, door, etc., at a very small cost and furnish the

Plans and our new Illustrated Catalog FREE which contains our full line of Improved Incubator and Brooder Fixtures and Supplies, including our New **Acme Automatic Lamp and Compound Regulator** with combined damper and flame regulator, which SAVES ONE-HALF THE OIL. No danger from fire; can't overheat; no trimming of wick; regulator controls both flame and damper. Can be attached to any make of incubator or brooder. If your machine is not working right our catalog will tell you how to remedy the trouble. Salt Lake City, Utah, July 25, '05.

I have built twelve 200-size Peerless incubators from your fixtures and plans. Six I sold to poultry raisers here, and six I run myself. These machines gave good results, never hatched below eighty per cent and as high as 92 percent. I have up to date 2,156 Pekin ducks and 540 chicks. I don't think I lost over 5 per cent of ducks and chickens hatched. These incubators take very little care. The regulator, when once set, holds the 103 mark from beginning to end, and the lamp is a big oil and time saver. I have orders for 4 Peerless incubators now and I want to build two or three more for myself. Plans and catalog are free. Address **H. M. SHEER CO., Dept. G, Quincy, Ill.** Respectfully yours, W. W. REBEER.

New York state so that they would lay not later than the first of December?

Plattsburgh, N. Y. E. M. COLE.

Answer.—Leghorns should be hatched not later than the last of April or the first of May to have them far enough advanced to begin laying the first of December.

Editor AMERICAN POULTRY JOURNAL.

GLENROSE, O., March 12, 1906.

Dear Sir:—I have been a subscriber for your valuable paper for over a year. I wish you would kindly answer this through your columns. I have a pen of W. Wyandottes and a few Leghorns, not pure bred, but a good laying strain. There is a disease started among them, and I am unable to stamp it out. The symptoms are: They begin with a cough and whoop and get weak in legs, especially one of them. They can't walk, and lose appetite; don't look bad, but in a day or two begin to improve. They have a warm house upstairs (as my hen house is two story), a floor covered with straw; they have charcoal, grit, oyster shell, before them at all times. I feed cracked corn, oats, wheat and millet seed in litter; also ground green bone, and mash twice a week. I gave roupino, but it does not seem to check disease. It is surely contagious, as it is affecting the whole flock. Some of them still lay after being sick. I am unable to tell the cause, as the pen is about the best cared for of all my birds. They have been housed all winter.

One night not long ago the snow blew in under the eaves of the house and snowed in part of their roosting place. As soon as I discovered it in the morning I put plenty of dry straw in pen

and wiped some off the hen that was the most damp. Do you think this could have caused rheumatism?

I am very desirous to find out what to do and what caused this. I separate sick ones immediately that show signs of disease. I wish to say that I also clean dropping boards every morning.

Glenrose, O.

Z. T. R.

Answer.—This trouble was evidently brought on by a cold contracted by the fowls being allowed to roost in a draught. Take a lump of lard the size of an egg and melt it and to this add one tablespoonful of kerosene oil. Give a teaspoonful of this mixture to each fowl twice a day and also rub the head and throat of the fowl. This will probably give them relief in two or three days. If not you should procure some one of the roup cures advertised in our columns. It is not likely that the fowls would get rheumatism from the snow drifting in under the eaves of the house as you mention. Rheumatism is usually caused by fowls being confined in damp, filthy, ill-ventilated quarters.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer in your next month's JOURNAL how many Brown Leghorns it is advisable to keep in a pen, and how large should the pen be to good advantage.

Second.—Could you please give me an answer as to a good feed for fowls the first thing in the summer and winter.

Colorado City, Colo.

R. H. L.

Answer.—First: From 15 to 20 for best results. The pen should be at least 12x16 feet, with all the yard room that can be given. Second: By consulting our advertising columns you will find a

number of feeds advertised, any one of which will be suitable for the purpose.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—I want to keep 200 Brown Leghorn pullets for layers next winter hatched in April or May. What feed should they have during the summer up till the time they are housed for winter. All the range they can have is over $\frac{3}{4}$ of an acre. Also what is a good ration after they are housed; would prefer to feed twice a day and not feed any mashes. They will have access to a horse manure pile when in the yard. Will this do any hurt? Will I have as good success to have them in one large house that all the floor space can be used for a scratching room as in smaller houses? Is a ground floor all right.

Spencer, O.

C. R. A.

Answer.—Any one of the feeds advertised in these columns will be suitable for your Leghorns. Mash feed is not necessary, unless you desire to force egg production during the winter months. The manure pile will not do any harm. Better results will be obtained if you separate your fowls into small flocks about 25 to each flock. A ground floor is all right, providing it is perfectly dry.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer in your next question and answer column the following questions: Is oats, corn and buckwheat a good feed for the noon? And is cornmeal and bran mash a good feed for the morning?

Meriden, Conn.

F. S.

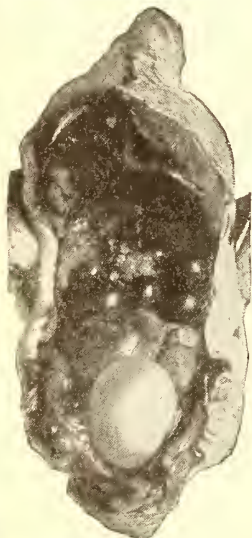

Answer.—Would suggest that wheat be added to the above mixture. To the

cornmeal and bran add clover or alfalfa meal for a mash.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Will you please answer through your JOURNAL the following question: What is the matter with my chickens? They seem to have taken a bad cold, which began with rattling in their throats. They have a discharge at the nostrils and strong smelling breath. but they have very red combs, lay extra good and seem in the best of health. Is it catarrh or roup, and what can I do for it? MRS. M. A.

Cozad, Neb.

Answer:—This is catarrh, but unless checked will develop into roup. This is usually the result of undue exposure to cold or dampness or to draughts of air. In mild cases of this character treatment is frequently unnecessary if the cause is removed. If the disease appears serious, wash out the mouth and nostrils twice a day with boric acid solution of the strength of fifteen grains to an ounce of water, or creoline solution, one per cent. The following remedy will be found to be very effective: Gentian root, 4 drams; ginger, 4 drams; sulphate of iron, 2 drams; hyposulphite of sodium, 1 dram; salicylate of sodium, 1 dram. These substances are to be pulverized and then thoroughly mixed. The dose is three or four grains a day for a medium sized fowl.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please tell me through your paper whether pullets hatched the 10th of April and began to lay the 15th of February will their eggs do to set the 1st of June or when will they do to set? M. W.

Rock Island, Ill.

Answer.—If mated to a good vigorous male bird eggs from pullets may be used for incubator any time after they begin to lay.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Will you please answer some questions for me? I have a Grist Champion Game cock that staggers, always to the left; hangs his head to the left. I think he has apoplexy, but he never falls over entirely. Can you and will you please tell what is the matter with him and what to do for him. Second: What do you think is the average cost of feeding 50 hens per year and feeding them to lay? The cost for four months, from Nov. 15 to March 15, and also January and February? Third: Can you tell me what to do for a hen with rheumatism? Lost use of her feet; is that rheumatism? Fourth: We had a hen that had young chickens and her feet swelled up about three times as big as normal size. She could walk on them, but could not scratch, so we killed her to get her out of her misery. Can you tell me what was the matter with her and the cure? Fifth: I have a friend that has a disease among his chickens that I would like for you to help me help him out. The disease commences in the eye; they gradually go blind; then their eyes sink way in their heads and in the course of about three or four months they die. I think the owner cares for them good enough, so I can think of no cause. Can you tell me what is the matter with them and the cure? Connellsville, Mo. C. E. M.

Answer.—Vertigo. This comes from various causes. It is sometimes occasioned by fright or indigestion. It occurs most frequently in male birds dur-

DO IT YOURSELF

An attractive feature about **Amatite Ready Roofing** is that it is really ready to lay when it reaches you.

In many so-called Ready Roofings the purchaser must get nails, cement and other little articles before he can really begin to lay his "ready roofing." But with Amatite these little extras are supplied free.

Each roll contains nails and every other necessity for putting Amatite properly on the roof. The roofing is absolutely ready to lay. Prepare your roof, then lay Amatite—you will not need to send to the painter or carpenter or blacksmith or hardware store for this, that or the other thing.

Anyone can put Amatite on the roof. Just follow the simple directions and you'll have a water-tight, weather-proof

roof, that rain, wind, snow or hail can not harm. You can then cut the "repair item" out of your yearly expenses, for Amatite will require no repairs or painting for years after it has been nailed on.

The protective mineral surface is the feature which makes painting and coating unnecessary, and gives to Amatite a longer life than that of any other ready roofing.

Send for a sample. Test it—read up about it in our booklet. You may not need a new roof now, but get acquainted with the subject, and when the time comes that new roofs are required, you can order Amatite without delay.

THE DANDY LINE TO SUCCESS

Includes a complete line of simple, serviceable, sensible, sanitary poultry appliances—everything to successfully raise chickens "from the egg to the exhibition coop," for pleasure and profit. This month we show the only Sanitary Exhibition Coop made. It has a removable floor and top, roll curtain front and is a beauty for the show room. Write for price at once. The new 1906 Portable Poultry House and Yard Combined. The new 1906 Dandy Incubator, soap-stone lined, a marvel for simplicity, convenience and success. Also Dandy Jr. and Dandy Special Incubators. Get on the "Dandy Line" and reach success. Send for new catalog, it will save you money, time, chickens, will help you to raise more and better chicks. Write today.

DANDY POULTRY NOVELTY CO.
23 Daniel Bldg., Danville, Ill.

ing the breeding season, and is sometimes due to irritation of the intestines by parasitic worms. It may also occur as the result of a blow upon the head. Give internally 30 grains of Epsom salts, or one and one-half grains of calomel, or two teaspoonful of castor oil. If there is not entire recovery under this treatment, try bromide of potassium, one to five grains, three times a day, dissolved in a teaspoonful of water. Second: The average cost of feeding 50 laying hens per year varies from 90c to \$1.25, according to the price of grain and whether you raise any of your feed or have to buy it all. Third: Rheumatism is brought on by allowing the fowls to roost in damp, filthy quarters. Remove the cause and give plenty of green food. Begin treatment with a dose of Epsom salts, 20 to 30 grains. The following day add 30 to 40 grains of bicarbonate of soda (baking soda) to the quart of drinking water and give 2 or 3 grains of salicylic acid twice a day. Birds that are seriously affected should be killed, as they will never be fit for breeding purposes. Fourth: Rheumatism. See answer above. Fifth: This disease is brought on by a severe cold and the fowls being compelled to roost in poorly ventilated quarters. Proper ventilation is the first thing to attend to. Wash the eyes with a 50 per cent solution of peroxide hydrogen and give the copperas in the drinking water.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Will you please inform me through your correspondence column whether washing the duck eggs with water after gathering has any effect on

the fertility of the eggs when used for hatching?

F. T. H.

Rochester, N. Y.

Answer.—Washing duck eggs will not injure their hatching qualities. But hens eggs should not be washed.

Dear Sir:—Please, answer the following questions in the April issue of your magazine: Being desirous of entering the poultry business, I am confused as to know which is the better state, as far as raising poultry in large numbers is concerned—Pennsylvania or Southern New Jersey, and why? Also what is meant by Philadelphia broiler or roaster and why are they quoted highest market price?

H. C.

Milbrook, N. Y.

Answer.—We don't believe there is much difference in the two states; both are of easy access to good markets. In the territory adjacent to Philadelphia the market poultrymen have made a specialty for years of preparing broilers and roasters for that market, and have established a demand for the "Philadelphia" broiler.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer the following question in next number of AMERICAN POULTRY JOURNAL: I have a Barred Rock Cockerel; some four weeks ago his short toe became hard and swollen at the nail. It has now enlarged three times its ordinary size and has extended up into the foot. Know of no cause; he has been kept in a dry and well ventilated house. Otherwise the bird is healthy and vigorous. What is the cause and remedy? Would he be all right for

a breeder? I have also a Partridge Cochin male that has lost about all of his feathers and has been shedding them for the last month or so. What is the cause and remedy? Will eggs laid away for two or three weeks do for hatching?

Kirkwood, Ill.

O. Q. B.

Answer.—This is the result of injury to the toe. Reduce the inflammation by holding the foot in hot water from one-half to three-quarters of an hour each day until swelling has gone down. After this treatment thoroughly dry the foot and leg and apply carbolic ointment or balsam of Peru and wrap the toe in absorbent cotton, over which place a clean linen bandage. We are unable to state the cause of your Partridge Cochin male shedding his feathers at this season of the year. Eggs for hatching should not be kept longer than two weeks.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer the following in your question and answer department next month—First: Should fowls with crooked breast bones be used for breeders? If not, why? What do you think of the following feed for 103 B. P. Rock hens: Six quarts oats, cracked corn and wheat twice a day? C. H. E.

Antrim, N. H.

Answer.—It is claimed by the best breeders in the country that if fowls with crooked breast bones are used for breeders that the offspring will also have crooked breast bones. Six quarts of feed for 103 B. P. Rocks, twice a day, is not enough, unless the fowls have free range where they can pick up considerable feed. They should be given at least twice this amount.

JONES

The Wyandotte Man

OFFERS EGGS FOR HATCHING. I have the best lot of birds in my breeding pens this season that were ever owned by one breeder in this country, clear open centers in my silvers and Goldens; pure white, free from ticking, in my Whites. Every pen headed by a winning male with a National reputation; many of the females have won honors at such shows as Chicago, New York, Indianapolis, St. Louis, Nashville, Tenn., etc. The same blood lines that produced the winners at more big shows the past season than any other strain in America.

THE STRONGEST BLOOD LINES ON EARTH

This has been proven by the high per cent of winners they produce, and by the heavy production of eggs; they are a combination of fancy and utility, the best all purpose fowl in the world. Will not raise the price of eggs—better quality than you can buy for double the money elsewhere.

SILVER, GOLDEN AND WHITE WYANDOTTES

Thirty-six pens mated up—12 of each. Will sell eggs at \$3 per 13; \$5 per 26; \$9 per 50; \$15 per 100; choice of any one pen \$5 straight. More good value for your money than you can buy of any breeder.

500 GREAT BIG LINE BRED BIRDS FOR SALE

Can mate you pairs, trios or pens and large lots, or furnish you a high-class male bird that will improve your flock. Get my handsome 36-page catalogue, illustrated in colors—a book worthy a place in any library, full of good practical poultry pointers, sent to any address for 6 cents to pay postage.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer through columns of JOURNAL cause and cure for chicken eating feathers. I have a full-blooded Brown Leghorn hen that I have tried everything to break her of pulling feathers from the other chickens and eating them. Would you kindly inform me through your next issue what to do for it?
A. D. K.

Williamsport, Pa.

Answer.—This habit is usually brought about by the fowls not having sufficient exercise. The birds should be given free run or they should at least be made to scratch for a large part of their food. This exercise improves their digestion and gives them something to occupy their time. In some cases the habit is due to insufficient animal matter in the ration or to feeding too long on a single kind of grain, particularly corn. One of the first measures adopted should be a well-balanced ration containing skim milk, meat, bone, vegetables or green feed and frequently varied. Mix powdered aloes with lard or vaseline and apply on the feathers. The disagreeable taste of the aloes will soon stop the habit.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Will you please answer in next month's issue the following: I set turkey eggs early so they were all hatched in May. The eggs were fertile, as only two were bad. Forty-three hatched. I put them with three turkey hens and kept them in a small yard with a dry place to roost nights. I fed boiled eggs, cottage cheese and bread pressed dry out of milk or water. They grew fast. As they became older I added wheat screenings, cracked corn and boiled mashed potatoes to their feed, and gave them free range. I always provided them with plenty of pure water. They were all healthy until the first part of August. Then they picked grain around the newly stacked grain. But I still fed screenings, oats, cornmeal and whole corn at night. They roosted in the trees. At this time some of them began to droop, stand with their heads drawn down or under the wing. They also had diarrhoea; the droppings were yellow and watery. They would be sick a day or two and then die. The head would turn somewhat pale. They all died except four. Is there anything I could have done to cure or prevent the disease? Is it of any use for me to try to raise turkeys again? Or will the disease stay on the premises and breed the contagion into the next flock? They did not have vermin.
Mrs. J. C. G.

Morgan, Minn.

Answer.—This is what is known as "Black Head," or infectious enterhepatitis, and is a disease that generally makes considerable progress before any sign of ill-health can be detected. The affected birds show more or less loss of appetite and emaciation, though one or more of these symptoms may not be constant. Diarrhoea is the most marked and constant symptom and may be expected sooner or latter in the course of the disease. A peculiar discoloration of the head occurs at the height of the disease, which has led to the popular designation of "black head." The young birds seem to be most susceptible. This disease is caused by a parasite which is taken into the digestive organs with the food or drink. It attacks the mucous membrane of the cæca, causing the development of inflammation, which leads to the symptoms already described. The treatment of this disease must be prin-

THIS REGULATOR

KEEPS TEMPERATURE RIGHT DAY OR NIGHT

The vital point in artificial incubation is absolute control of the temperature of the eggs in the egg chamber of an incubator. In order to accomplish this correctly the regulator must be operated directly from the temperature of the eggs themselves instead of trying to keep the temperature of the air surrounding the eggs in the incubator at a certain degree.

THE UNIVERSAL REGULATOR

is the only regulator on the market which absolutely controls the temperature of the eggs during the entire period of incubation by forming an electric connection through the mercury in the thermometer at 103 degrees. It will fit any incubator and once started never requires adjusting. You can leave an incubator fitted out with a Universal Regulator all day and all night and feel sure that the temperature will be just right. Write for circular.

The Universal Regulator Co.,

cipally of a hygienic and preventive nature. Where the disease has existed long upon a farm the roosting places, runs and feeding grounds must be infected, and the breeding stock that are infected must be disposed of. By thoroughly disinfecting the premises with a solution of carbolic acid, five to ten parts to one hundred parts of water. In starting a new flock obtain eggs from healthy stock and hatch them under common fowls or in an incubator. Raise the young turkeys, if possible, on a part of the farm that has not been infected. By following this course it should be possible to eradicate the disease and obtain a healthy flock. The medical treatment of diseased turkeys has not been successful, and it is doubtful if it could be profitably undertaken in any but exceptional cases. Among the remedies most likely to be beneficial are sulphur, sulphate of iron, quinine, salicylic acid, benzonaphthol and betol. Where a flock has re-

BLACK LANGSHAN COCK.

cently been infected it would be well to use these remedies with a view of arresting the disease in the mildly affected birds and preventing the infection of others. Sulphur, 5 to 10 grains, sulphate of iron, 1 grain, may be combined and given at one dose. Or give benzonaphthol 1 grain, salicylate of bismuth 1 grain. Or sulphur 1 grain, sulphate of iron 1 grain, sulphate of quinine 1 grain. Hyposulphate of sodium may be useful in doses of 2 to 4 grains, or betol in the dose of 1 grain. It is necessary that such remedies be repeated two or three times a day and continued for some time to obtain results.

Editor AMERICAN POULTRY JOURNAL.
 Dear Sir:—Please answer in your next issue the following: What is the cause of my chickens laying so many little eggs, about the size of quail eggs? I have been keeping poultry for four years and I have the common barnyard fowl, a general mixture. Have some full-blooded Brown Leghorns and some good Barred Rocks. I keep some roosters every year I raise and keep some of the old ones also for four years and I think it is in-breeding. Will be very much

obliged to you for any information.

Paducah, Ky. Mrs. T. J. W.

Answer.—The production of these small eggs may be due to irritation in the central portion of the oviduct; but in this case we believe it is due to in-breeding or lack of new blood in the flock. The best way to remedy this is to dispose of stock now on hand and start with an entirely new strain.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer in question and answer column of next month's issue the following: I have hens that take a breaking out on the head, comb and eyelids, which we call chickenpox. What is the cause of this trouble? Give remedy and treatment. J. K.

Santa Claus, Ind.

Answer.—Chickepox has long been recognized as contagious and to spread from one bird to another. If an affected bird is introduced into a flock the roosting places become infected, and the contagion is spread about the premises, and it is not long before other birds become diseased. This disease is usually caused by fowls being confined in damp, filthy,

BLACK LANGSHAN

Hen shown in first breeding pen at World's Fair. Score 96 by Hewes as pullet, 96 by Emry as hen. Bred and owned by John Hettick, Bowling Green, Mo.

poorly-ventilated quarters. The following treatment has proved very beneficial: Bathe the affected parts with soap and water in order to soften the crusts and afterwards apply carbolio ointment or glycerine containing 2 per cent of carbolio acid. Some persons have been successful by feeding sulphur and applying sulphur ointment to the sores twice a day.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Will you please answer these questions for me in the next month's JOURNAL: How many hens can I keep in one pen where I desire to use the eggs for hatching, and what shall I feed them to produce good strong chicks? I have a Sure Hatch incubator and I have a house 6x10 feet. How many windows should I have in it and is it a good place for an incubator? M. M.

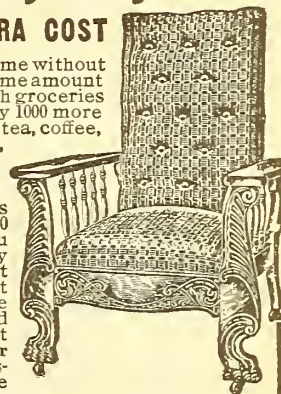

Mt Vernon, Ind.

Answer.—From 10 to 15 females in a breeding pen is sufficient. Good, sound

Make Your Grocery Money Buy Both

GROCERIES AND FURNITURE WITHOUT EXTRA COST

Do you know that you can get these nice things for your home without extra cost by buying your groceries direct from us? The same amount of money you are now paying out for groceries will get both groceries and these beautiful premiums, or your choice from nearly 1000 more shown in our big free catalog. Every day you buy or use tea, coffee, soap, baking and washing powder, flavoring extracts, etc., which if purchased on our "Factory to Family" plan—direct from the maker—can be had for same prices or less than you are now paying the regular dealer and in addition we give these nice premiums. If you buy \$2 worth of groceries we give a \$2 premium; with \$5 worth a \$5 premium; with \$10 worth this \$10 couch or chair or any other \$10 premium you select from our catalog. Why not make your grocery bill pay your furniture bill—or furnish your home without extra cost? You will be surprised how quickly you can get these useful, beautiful articles. To convince you that the groceries and premiums we furnish are high-grade we send both on 30 days trial. We even allow you to use them—test them—and if not satisfactory you can return them at our expense and your money will be returned without a question. That proves our goods are right—our premiums are right—our dealing with our customers is right—honest.

GROCERIES AT HALF PRICES ON OUR "FACTORY TO FAMILY PLAN"

If you don't need the premiums you can get our high-grade groceries for just one-half what regular dealers charge. We give you a Pure Cream Tartar Baking Powder for only 12¢ which dealers sell at 25¢ a can; a 25¢ bottle of Lemon or Vanilla Extract for 12¢; Family Laundry Soap at 2¢ a bar (regular price 5¢ a bar,) box of Fine Toilet Soap (3 bars) only 12¢ for which dealers ask 25 to 50¢. In fact, we save you one-half on everything we make. Then we have another saving plan—we call it our "Club of 10 plan" which is fully explained in our large free Furniture catalog and Style Book. You ought to send for this money-saving book today.

wheat is one of the best feeds for laying hens, but any of the prepared feeds that are advertised in these columns will do the work that is claimed for them. It is best not to have too many windows in the incubator house. One window in a house 6x10 will be plenty. Good ventilation is absolutely necessary for best results.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Will you kindly answer in your next issue of the AMERICAN POULTRY JOURNAL the following questions: I have a S. C. Brown Leghorn hen that seems as though something was stuck in her throat and has some difficulty in breathing, like a rattle sound, and coughs as when drawing her breath; has good appetite and lays, etc. I had a Black Wyandotte that seemed to get so awful light in weight, its comb and wattles turned a real light blue; had good appetite, but would mope around by itself. If a wing or the feathers on the wing of a fowl have been cut to prevent it from flying over the fence, how

this condition, where you have to go to any great expense. The Black Wyandotte you should have killed as soon as you discovered same going light. This is consumption, for which there is no cure. In regard to clipping of the wing; the length of time necessary for the feathers to grow again all depends upon the season of the year. If this clipping is done early in the spring, the feathers will probably grow out to full length in about six weeks or two months. If late in the summer, they will not reach their full length again before molting time.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please tell me in your next issue, if convenient, what is wrong with my hens. I have four different breeds, one Mediterranean, two American and one Asiatic class, and they have all become loose in the bowels. My coops are raised off the ground about two feet, and I use the space underneath for a scratching shed. I have three inches of sand and six inches of straw and clover hay on the floors all the time and change

A pair of prize-winning Light Brahmas, owned by I. N. Barker & Son, Thorntown, Ind., and now in their breeding yards. The cock bird won first prize as a cockerel at Ohio State Show, January, 1905, and the hen won first as a pullet at same show. They also won first cock and first hen at the following state fairs during the fall of 1905, viz.: Ohio, Indiana and Illinois.

long will it take for them to grow out to a full feather again, or will they not grow out again until they molt?

Antioch, Ill.

A. P.

Answer.—Your S. C. Brown Leghorn hen is evidently suffering from bronchitis brought on by a severe cold, which settled in the bronchial tubes. This is a rather difficult disease to handle, especially if it has been of long standing. By allowing the hen to inhale the steam or vapor from boiling water to which has been added a few drops of carbolic acid will very often give relief, and also give in soft feed two grains of black antimony twice a day. A small quantity of flax seed steeped in hot water makes a good drink for them and often gives relief very quickly. If these simple remedies do not effect a cure in a short time, we would advise you to kill the fowl, as it does not do to doctor a fowl in

it whenever it gets dirty; the coops are dry and roomy and I do not let my fowls out when the ground is damp. I feed a mash of ground oats, corn and ship stuff in the morning; at noon I scatter some wheat and buckwheat in the litter and in the evening I feed whole corn. Sometimes they do not eat it all clean at once, but it is all gone by the next feeding time. I keep dry ground bone, grit and oyster shell before them all the time and feed green bone twice a week; also feed the scraps from the table and some kind of green food now and then. I have followed as closely as possible the instructions in your paper as to feeding, and cannot see why my hens are not in excellent condition, as there is no vermin to bother them. The fluff on all my hens is streaked with droppings and the excretions appear at times to be foamy and of a

muddy brown color, sometimes streaked with white. If you can give me any remedy for this, would be very much obliged. F. B. T.

Clarington, Ohio.

Answer.—Cases of diarrhoea of this character is caused by either the quantity of the food, the quality of the food or of the drinking water, or the atmospheric conditions to which the bird has been exposed. In the treatment of this class of diseases it is especially important that the cause should be sought and removed. See that the birds are comfortable and not exposed to draughts, cold or dampness. Give pure drinking water and regulate the food. Allow small quantities of mash or cooked food, with

some chopped beef. Put a handful of oatmeal in the drinking water, or give boiled milk for drink. Give a tablespoonful of olive oil as a laxative to carry off any irritating matter that may be in the intestines, then follow with 1/2 to 1 grain of bicarbonate of soda and 2 grains of subnitrate of bismuth in a little water three times a day. In cases where the diarrhoea becomes serious, with symptoms of pain, fever, or bloody discharges, omit the bicarbonate of soda and give 1/2 grain powdered opium and 2 grains subnitrate of bismuth every four hours. If the diarrhoea persists after the fever has disappeared and the appetite is returning, it may be checked with laudanum, 5 to 10 drops; or give

10 drops of a mixture of equal parts laudanum and tincture of catechu; or in mild cases add one or two drams of sulphate of iron to the pint of drinking water.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—A subscriber would like to know what causes May pullets to become weak in their legs. I have a flock of 15 that has been kept on the upper floor of barn, with plenty of sand on the floor and plenty of oyster shell and grit all winter. Have had three different ones get weak in the legs, so they would start to run and fall down. In each case it only lasted a few days, when they would seem to be all well again. They

Merchandise From Sheriff's and Receiver's Sale

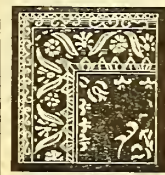

Also Material From the \$50,000,000 St. Louis World's Fair.

THE CHICAGO HOUSE WRECKING COMPANY is unquestionably the most unique institution on earth. Our business consists in the purchase of general stocks of merchandise of every kind and character, at Sheriff's, Trustee's, Assignee's, Manufacturer's and other sales. Purchasing our merchandise in this way gives us an opportunity to sell you goods at prices that seldom represent the original cost of manufacture. We sell everything manufactured; household goods, furniture, hardware, plumbing material, lumber, machinery, electrical apparatus and general building material.

Our purchase of general stocks at various sales is but one of our methods of obtaining material. In addition, we purchase outright Expositions and other institutions.

We bought and dismantled every Exposition of modern build, including the Fifty Million Dollar St. Louis World's Fair, the Thirty-Three Million Dollar Chicago World's Fair, the Nine Million Dollar Pan American Exposition and the Four Million Dollar Omaha Exposition. Our operations are the most wonderful of any concern on earth.

From these various Expositions we obtained millions of dollars worth of valuable building supplies and furnishings. Take for instance, at the St. Louis World's Fair, we had over 100 million feet of lumber, ten thousand doors, ten thousand windows, fifty miles of pipe, in fact, sufficient material to build outright a City with a population of 50,000 to 60,000 people. In this advertisement we offer but a few of the many items we have for sale.

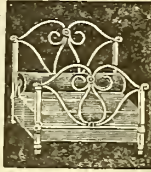

3000 Rugs at 85c

HAZELMERE POULTRY YARDS, Knightsville, Cranston, R.I.

eat good all the while and one even layed while she was sick. The only thing I did for them was to put them in a box for about three days, when they would seem to be all well again. My method of feeding may be at fault, if so, please advise what change to make. I have fed for morning about three pints of whole wheat and oats, about one-third oats. And at night I feed a mash composed of wheat middlings and scraps from the house, mixed with boiled potato parings. I feed only twice a day. About once each week I feed some fresh cut raw bone that is new and sweet, not stale. Those pullets have layed fairly well since about the 15th of January, and are still laying now. Yet this weakness will now and then crop out. What is it and what will I do to remove the cause, and also what would you give, if anything? Please state the cause of soft shell eggs when plenty of oyster shell is kept by the fowls in a hopper. Would the lack of proper grit to go with it cause it? Do oyster shells in any way supply the gizzard with grit that helps to grind the food? G. H. A.

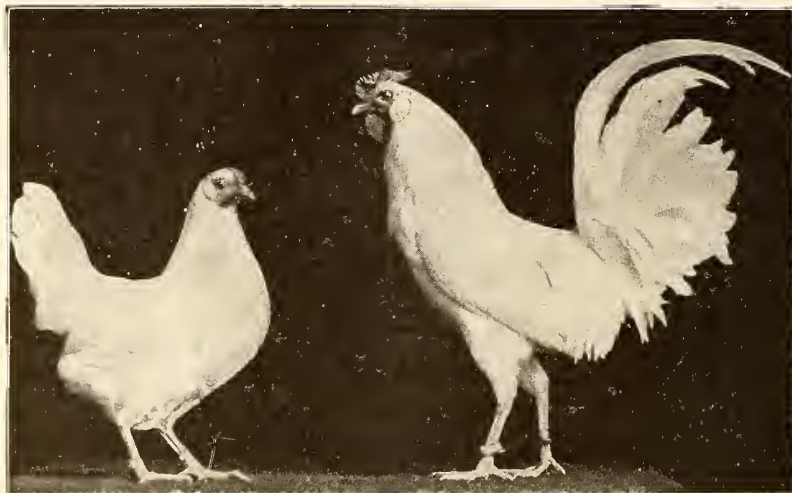

North Creek, N. Y.

Answer.—Leg weakness is usually caused by the fowls not having proper

but unable to swallow food, even after putting it in their mouths. Also had a number die, where crop was not empty and gizzard contained a sufficient quantity of grit and droppings regular. Both of above cases chicks were fed on mash, composed of cracker wheat and kaffir corn; also chick feed and chopped vegetables and green bone every other day. Sickness was of short duration, lasting not over two days. Age of chicks two months. W. C. S.

Coffeyville, Kans.

Answer.—The disease you speak of in your little chicks is evidently due to a chill: They have been chilled in some manner which has paralyzed the crop and it refused to do its proper work. This is a very common disease among little chicks and is most always due to the chicks getting chilled. When chicks get in this condition there is absolutely no use of doctoring them. If they do pull through they will be stunted and will never amount to anything. By carefully watching the temperature and not allowing the chicks to get chilled and by careful use of food, all this will be avoided. It is always better to feed a little less feed than to feed too much. Too much feed is the cause of a great

ROSE COMB WHITE LEGHORNS.

First cockerel New York and Chicago and first pullet Chicago, 1906. Winner Ivory Soap Silver Cup for whitest bird. Bred and owned by Rocky River Poultry Company, 5931 Superior street, Chicago, Ill.

exercise. You should have your floor covered with four or five inches of straw into which the food should be scattered. This will give the fowls plenty of exercise and will overcome any tendency to leg-weakness. Your formula for feeding is very good and is not the cause of the trouble. The cause of soft-shelled eggs is frequently due to weakness of the egg organs, caused by the fowls becoming overfat. The feeding of plenty of green food and wheat bran will remedy this in a short time. Oyster shells, to a certain extent, supply the gizzard with grit, but will not take the place of grit entirely; but a good grit will take the place of oyster shells.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Kindly answer in your next issue the following: What disease have little chickens when the throat swells and they eat with difficulty, if at all, finally die gasping, as in the case of gaps? Could find no gap worm in wind-pipe, or could detect no ulcers in mouth. They seem hungry and willing to eat,

deal of sickness in little chicks. By feeding a dry feed in litter it gives the chicks plenty of exercise and will keep them in a good healthy condition, especially in winter time, when there is no grass or outside run for them.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer the following questions in your next issue of AMERICAN POULTRY JOURNAL: 1. I have recently divided my White Wyandottes into two pens, putting three females and a male in one pen and as I have no male bird for the other pen of seven, I would like to know if he would do for both pens, by putting him part of the day in the one pen and the other part in the other and yet have good fertile eggs. 2. What is the best place to keep eggs for hatching? 3. Is three weeks too long to keep eggs for hatching in an incubator? 4. Do eggs kept for hatching have to be turned every day? 5. Is one quart of equal parts of wheat, oats, barley and cracked corn, fed three times

a day in straw litter, sufficient for eleven chickens? C. M.

Davenport, Iowa.

Answer.—It will be all right for you to divide your females in the manner that you mention, if you desire to go to the trouble of changing the bird every other day, but it would be much more satisfactory to you and the results would be better if you would procure another male bird for use in one of these pens. Eggs for hatching should be kept in a cool, dry place and should be turned at least once a day. Three weeks is too long to keep eggs for hatching. You might get good results from eggs three weeks old, but the chances are that you would not. Two weeks is plenty long enough, and one week is better. One quart of feed three times a day will be sufficient for 11 chickens, if they are provided with a liberal quantity of green food, grit, oyster shells, etc.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Being a subscriber to your paper, would like to ask you a few questions. First: What do you think the best grit for young chicks? Second: Do you consider clover seed good feed

HELEN.

Four-pound S. C. Brown Leghorn pullet; winner of second prize at Cincinnati. Owned and bred by O. E. Michael, Dayton, Ohio.

for young chicks? Third: Is it best to let young turkeys have free range or put them in large coops with a run to it? Hardin, Ky. E. B. I.

Answer.—First: Any of the chick grits advertised in these columns will be suitable for young chicks. Second: Clover seed is all right, but should be mixed with a variety of other seeds for best results. Third: Young turkeys should not be given free range until they are six or eight weeks old.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—In your last issue I see reference to the double mating system. You say that one is for pullets and one for cockerels. In your next number will you please state if there is any way to mate and get pullets and how?

Bemis, Maine. E. J. S.

Answer.—You have taken a wrong definition from our answer in last issue, or perhaps we did not make it plain enough. The reason for double mating is due to the fact that good exhibition specimens of both sexes cannot be produced from the same mating. Therefore, most breeders practice the double mating system. There is no way to mate to produce all pullets.

ROYAL BLUE BARRED ROCKS

Have won all down the big line this season. At the WORLD'S FAIR, CHICAGO, NEW YORK and BOSTON they won many of the highest prizes.

200 ROYAL BLUE COCKERELS

BIG, STRONG, FINELY MARKED BIRDS that will breed winners,

\$200.00 IN CASH PRIZES FREE

Other Prizes are Given for Sending us Subscriptions; but **THIS \$200.00 IN CASH PRIZES WILL BE AWARDED ON MAY 15, ABSOLUTELY FREE** to the persons sending us the neatest correct solutions. : :

Arrange the 51 letters printed in the centre groups into the names of six cities of the United States. Can you do it? Large CASH PRIZES, as listed below, to those who send in the neatest solutions, will be given away on May 15. **First Prize, \$50.00 in Gold. Second Prize, \$25.00 in Gold. Third Prize, \$15.00 in Gold. Fourth Prize, \$10.00 in Gold. Five Prizes of \$5.00 each. Ten Prizes of \$2.50 each. Fifty Prizes of \$1.00 each.** Making a Total of Two Hundred Dollars in Prizes. Don't send us ANY MONEY when you answer this advertisement, as there is absolutely no condition to secure any one of these prizes. **RULES GOVERNING THE CONTEST.**—In preparing the names of the six cities, the letters in each group can only be used as many times as they appear, and no letter can be used that does not appear. After you have found the six correct names you will have used every letter in the 51 exactly as many times as it appears. These prizes ARE GIVEN, as we wish to have our Magazine

We could go on and point to hundreds of names of people who have gained large sums of money from our contests, but only give a few names. The solution can be worked out by an alert and clever person, and it will amply pay you to TRY AND SPELL OUT THESE CITIES. Brains and energy nowadays are winning many golden prizes. Study it very carefully and let us see if you are clever and smart enough to spell out the cities. We would rather take this way of advertising our excellent Magazine than spending many thousands of dollars in other foolish ways. We freely and cheerfully give the money away. YOU MAY WIN. We do not care who gets the money. TO PLEASE OUR READERS IS OUR DELIGHT. The question is, Can you get the correct solution? If you can do so, write the names of the cities and your full address plainly in a letter and mail it to us, and you will hear from us promptly by return mail. Lazy and foolish people neglect these grand free offers and then wonder and complain about their bad luck. There are always plenty of opportunities for clever, brainy people who are always alert and ready to grasp a real good thing. We have built up our enormous business by being alert and liberal in our GREAT OFFERS. We are continually offering our readers RARE AND UNUSUAL prizes. We have a big capital, and anyone can easily ascertain about our financial condition. We intend to have the largest circulation for our high-class Magazine in the world. In this progressive age publishers find that they must be liberal in giving away prizes. It is the successful way to get your Magazine talked about. Of course, if you are easily discouraged and are not patient and are not willing to spend any time in trying to work out the solution, you certainly cannot expect to win. USE YOUR BRAINS. Write the names of the cities and send them to us, and we will be just as much pleased as you are. We desire someone to be successful, and as it does not cost you one cent to solve and answer this contest, it will be very foolish for you to pass it by. In all fairness give it some of your leisure time. SUCCESS IS FOR ENERGETIC AND THOUGHTFUL PEOPLE, and the reader do not pass this advertisement without trying hard to make A SOLUTION OF THE LINES OF LETTERS PRINTED IN THE CENTRE OF THIS ADVERTISEMENT. We suggest that you carefully read this offer several times before giving up the idea of solving the puzzle. Many people write us kind and grateful letters, profusely thanking us for our prompt and honest dealings. It always pays to give attention to our grand and liberal offers. OUR PRIZES have gladdened the hearts of many persons who needed the money. If you need money you will give attention to this special offer this very minute. If you solve it, write us immediately.

CAN YOU SOLVE IT?

everyone living in the United States. Our Magazine is carefully edited and filled with the choicest literary matter that the best authors produce. **TRY AND WIN.** If you make out the six names, send the solutions at once—who knows but what you will WIN A LARGE PRIZE? Anyway, we do not want you to send any money with your letter, and a contest like this is very interesting. Our Magazine is a fine, large paper, filled with fascinating stories of love and adventure, and now has a circulation of 400,000 copies each issue. We will send FREE a copy of the latest issue of our Magazine, to every one who answers this advertisement. **COMMENCE RIGHT AWAY ON THIS CONTEST** and you will find it a very ingenious mix-up of letters, which can be straightened out to spell the names of six well-known cities of the United States. Send in the names right away. As soon as the contest closes you will be notified if you have won a prize. This and other most liberal offers are made to introduce one of the very best New York magazines into every home in the United States. **WE DO NOT WANT ONE CENT OF YOUR MONEY.** When you have made out the names of these cities, write them neatly and plainly and send it to us, and you will hear from us promptly BY RETURN MAIL. A copy of our fascinating MAGAZINE WILL BE SENT FREE to everyone answering this advertisement. Do not delay. Send in your answer immediately. Understand, the neatest correct solutions win the prizes. WE WANT TO GIVE AWAY VAST SUMS OF MONEY in the future, just as we have done in the past, to advance our CHARMING MAGAZINE. We find it is the very best advertising we can get to offer LARGE PRIZES. Here are the names and addresses of a few people we have recently awarded PRIZES: M. M. Hannah, Fernwood, Miss., \$75; H. A. Parmelee, Milford, Neb., \$91; Kate E. Dunlap, 133 N. Hill street, Los Angeles, Cal., \$61; Mrs. E. Freiter, Richmond, Tex., \$55; M. G. Christenson, Gregg, Minn., \$50; Mrs. C. E. Welting, 1330 Landerdale street, Memphis, Tenn., \$50; Mrs. Harriet S. Bullard, 120 Intendencia street, Pensacola, Fla., \$40; J. C. Henry, Box 118, Sligo, Pa., \$25; Henry Perry, Central Slip, L. I., N. Y., \$25; James A. Cooter, Holden, Mo., \$25; Evelyn S. Murray, 182 S. Central Avenue, Austin, Chicago, Ill., \$25; Mrs. L. D. Puffenberger, 340 West Forty-fifth Street, New York City, N. Y., \$20.

DON'T DELAY. Get your name on our list and win a prize Write plainly. Address

WHITE BEAUTILITY WYANDOTTES

A NEW INVENTION.

C. F. Anderson & Co., 394 Clark St., Chicago, Ill., have patented a new labor-saving device for poultrymen that will save them much labor and time. This is called an Automatic Door Opener. This can be attached to any door or opening on a poultry house and will open the door and let the fowls out at any time desired. The same machine can be used for one or one hundred doors. It can also be used for closing the door at night, and for various other purposes, and as it is inexpensive, considering the uses it can be put to, we would advise our readers to send for circular and mention AMERICAN POULTRY JOURNAL.

SAVE YOUR FEATHERS.

And send your address to the Enterprise Manufacturing Company, Akron, Ohio, U. S. A. They pay good prices for the following dry picked feathers:

Rooster Hackles, assorted colors; Plain and Barred Wood Duck, Teal duck, White goose, Gray Mallard and Gray goose feathers from the body and wings; peacock eyes and swords, Guinea hen body feathers, prairie chicken, grouse, quail, partridge, wild turkey and Indian crow feathers from the wings, tails and body, chatterer and blue jay feathers.

H. H. & E. M. Coburn, Memphis, Mich., have sold their entire flock of Silver Pencilled Wyandottes, including prize-winners, to E. Lewis, Memphis, Mich.

Keeps Poultry Healthy **VIGER'S Crushed Charcoal** Prevents Disease

IT WON'T COST YOU A RED

unless you find Viger's Crushed Charcoal all we claim for it—the greatest poultry conditioner on earth. Thousands of American breeders will testify that Viger's Pure Crushed Charcoal is a sure preservative of health. It keeps hens in perfect laying condition and corrects all troubles due to wrong feeding.

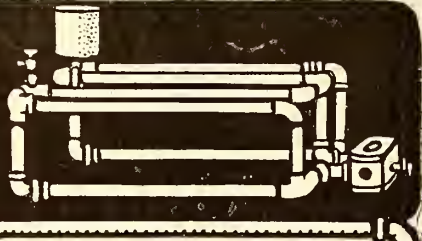

Here's our proposition: Send us \$1.00 and we will send you a full-sized 50-pound bag. Unless it does all we claim for it, we will refund your money immediately upon request. Three sizes (same price for all). Coarse granulated—for mature poultry. Fine granulated—for small chicks. Pulverized—for mixing with mash and condition powders.

There's nothing fairer than this. You be the judge. Write us today for samples.

Special prices in quantities.

VIGER'S COAL & WOOD CO., 434, 20TH ST., DETROIT, MICH.

THIS HEATING SYSTEM

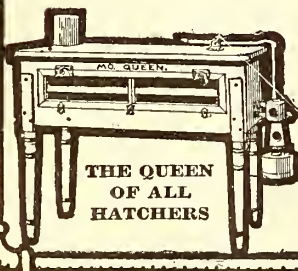

Hatches Strong Healthy Chicks

It is unlike that used in any other incubator. Our system is based on the same principles as those used in heating a house with hot water, which is admitted by all scientists and practical mechanics to be the best and most healthful system. With our system the heat is supplied from every corner and side of the machine, thus making it the most evenly heated incubator in existence. The hot water pipes are of the best wrought iron material and are carefully put together. There is no danger from bursting or leaking as is the case in the cheap hot water machines with which the market is flooded. The supply tank does away with any chance of the water getting low in the pipes, so there's no retarding of circulation.

THE MISSOURI QUEEN INCUBATOR

has many other superior features, which make it the most practical and successful hatcher of strong, healthy chicks. The regulating system is very accurate and reliable. It keeps the temperature just at the right degree at all times and under all conditions. The ventilation is perfect and is easily regulated. The case of the Missouri Queen Incubator is built either of cypress or select white pine, just as you desire, and is carefully and skillfully put together by competent workmen. The walls are double and perfectly air tight. There is no odor or smell in this machine which causes the death of so many young chicks in other incubators. In fact, the Missouri Queen is the queen of all hatchers and will start you on the right way to success in the poultry business. Write for descriptive catalog. It's free.

THE MISSOURI QUEEN INCUBATOR CO., DEPT. C, PRINCETON, MO.

ILLUSTRATED Breeders' Cards.

"A WORD TO THE WISE"

IS AN INVITATION FOR YOU TO INVESTIGATE THE MERITS OF THE

QUEEN

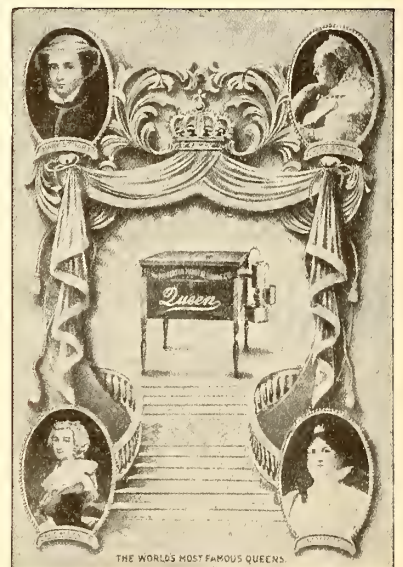

INCUBATORS and BROODERS

Your success in the poultry business is assured if you hatch your eggs in a Queen Incubator, then raise the chicks in a Queen Brooder and then feed our superior makes of Chick Feed and later our Balanced Ration Mash.

QUEEN Incubators and Brooders are the only perfectly ventilated machines made. No other Incubators or Brooders will hatch and raise as large a per cent of chicks

We have the best machines made, and right now we offer a remarkable price inducement—you cannot afford to miss this extraordinary offer we are making, so send us name and address today; by return mail we'll send you full particulars of our EXTRA SPECIAL OFFER.

Pinkerton Manufacturing Co., - Box 20, Lincoln, Neb.

DAKIN'S W. WYANDOTTES

PREMIER STRAIN OF STANDARD TYPE

Bred and raised more winners of the very highest awards at New York (Madison Square), Boston, Chicago and St. Louis than any other. This is a fact. Some know it—you ought to. You can't get good results from cheap inferior stock, that's sure. Limited number of stock, and eggs for hatching.

JOHN L. DAKIN - - - ROXBURY, MASS.

To-Day!

SEND A POSTAL OR LETTER and ask for AMERICAN POULTRY JOURNAL'S 1906 subscription offer.

Never have we offered so much before.

For six subscriptions you are allowed over one-third commission, and are given a set of four beautiful colored pictures. These same subscriptions also count in a chance toward winning the \$600.00 Piano; \$100 cash; \$50 worth of Fowls; Incubators; Brooders; Eggs, etc., there being over fifty of these grand prizes. One of our subscribers says, "I do not see how you can afford to do it." But we want subscriptions and lots of them; that is why we are making such liberal offers. Our space is too small here to explain all we give to every one who helps us. We hope every reader, who reads this, will send for the Offer at once. It will be a happy new year for both of us.

AMERICAN POULTRY JOURNAL PUB. CO.
325 Dearborn Street :: :: :: Chicago, Illinois

System in Poultry Practice BY JAMES Shackleton.

30 Chapters, 147 Pages, One Dollar, Postpaid.

May 1, 1905. Sales of this book since Sep. 1, 1904—eight months—are larger than for preceding 18 months. It is meant to appeal to common sense and evidently succeeds, for increase is chiefly in places where it has gone before. California always took more than any other state, and now takes more than any other three. Canada has many and now takes more than any state but California. Even Australia takes many. This book has been sold in every state of the Union, except two southern states, and Alaska. In Canada, Newfoundland, P. E. Island, New Brunswick, Nova Scotia, Quebec, Ontario, Manitoba, Assinibola, Alberta, British Columbia and Vancouver Island. In Cuba, Hawaii, Philippines. In England, Belgium, Germany, Australia, New Zealand and China. It is meant to be of equal value in every climate, for whatever purpose fowls are kept, and evidently is so regarded. Sales are increasing rapidly everywhere. Enthusiastic testimonials are plentiful.

The book and American Poultry Journal for one year for \$1.10, new or renewal.

JAMES SHACKLETON, Box A 12, Milburn, New Jersey

WHITE WYANDOTTES!

Rigg's White Wyandottes have been line-bred since 1897—bred for Wyandotte form and color and for egg production.

Shape and color characteristics have been firmly fixed. These Wyandottes are the low-down, blocky kind, in weight exceeding somewhat standard requirements.

Unapproached in size, style and finish, they have never failed to win the coveted prizes in the strongest competition, east and west. Every bird line-bred and pedigreed and sold on approval. Eggs: \$5 per setting; two for \$5; three for \$7.

HOUDANS

Line-bred since 1874. Acknowledged standard of Houdan excellence in America.

Eggs: \$3 per setting; two for \$5; three for \$7.

THOS. F. RIGG IOWA FALLS, IOWA

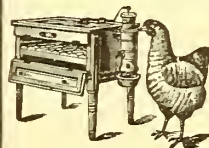

200 Chicks Like This

will soon develop into two-pound broilers worth \$60 in any market, or will form the nucleus for a large poultry farm. Any man or woman can make good money the year round raising poultry. It's just a question of getting started. You don't need expensive grounds or buildings.

A warm cellar or garret—a little patch of ground and

THE

Wooden Hen

\$12.80

is all that you need to begin with. This 200-egg incubator will more than pay for itself with the first hatch. The wooden hen costs much less and is better than dozens of high-priced hatchers. It will hatch every fertile egg. Write for free catalogue and full information regarding the care and growth of incubator chicks.

GEO. H. STAHL, Quincy, Ill.

LITTLE CHICKS

Just Hatched

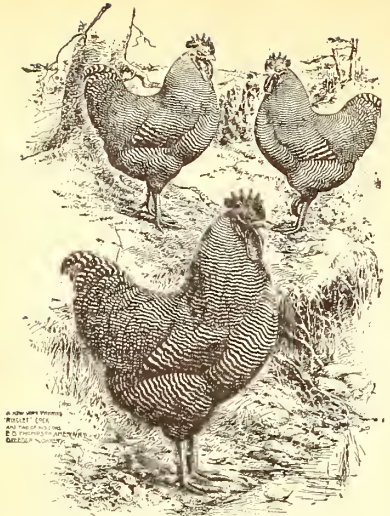

From pure bred S. C. Brown and White Leghorns, Barred and W. Rocks, White Wyandottes and Black Minorcas. Also manufacture the "Uhl Brooder." Send for circular.

G. A. THOMPSON, Box 42, New Washington, Ohio

"RINGLETS" Soar Still Higher.

At the Imperial Show of the Nation
Madison Square Garden, New York

E. B. THOMPSON'S BARRED P. ROCKS

A "Ringlet" 1st Prize New York Cock and two of his Sons.

Stamped their superiority in the most decisive manner, winning again the Superb Challenge Trophy, value \$100, for best cock, cockerel, hen and pullet. This is the third time the "Ringlets" have won this grandest of all trophies, giving them now absolute and final ownership. In this "COLOSSAL CONFLICT" the "Ringlets" lifted the great National Sweepstakes Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. My Barred Rocks won double the number of silver cups and special prizes of any competitor, including the sweepstakes special in gold for best Plymouth Rock on exhibition male or female any variety.

The "RINGLET" World's Record of four years in succession at New York is a page of history. The "RINGLET" World's Record of first on exhibition pen at this great show, three years in succession, is the undisputed champion.

The "Ringlet" clean sweep 1st, 2d, 3d, 4th and 5th prizes on pullets has never been approached at Madison Sq. Garden, and stands alone and unequalled. The "Ringlets" have won at New York—exhibited by me personally—a grand total of 101 prizes, 48 of these are 1sts and specials, being more than double the number of 1st and special prizes won by any competitor in the history of the show.

GRAND STOCK FOR SALE

In any number. Rare bargains in yearling breeders in lots of a trio or 100. Show birds fit to win in the fastest company—600 choice breeding cockerels. Richly illustrated 36-page catalogue on application. It is full of original illustrations of New York winners from life. Eggs from finest exhibition matings. One setting \$5, two settings \$9, three settings \$12, four settings \$15. Address

E. B. THOMPSON, Lock Box 510, Amenia, Dutchess Co., N. Y.

HAWKINS'

ROYAL BLUE STRAIN

PLYMOUTH ROCKS

BARRED, WHITE AND BUFF.

WYANDOTTES, Silver White and Buff.

Have won more prizes at New York, Boston, Washington, and America's greatest shows than all others.

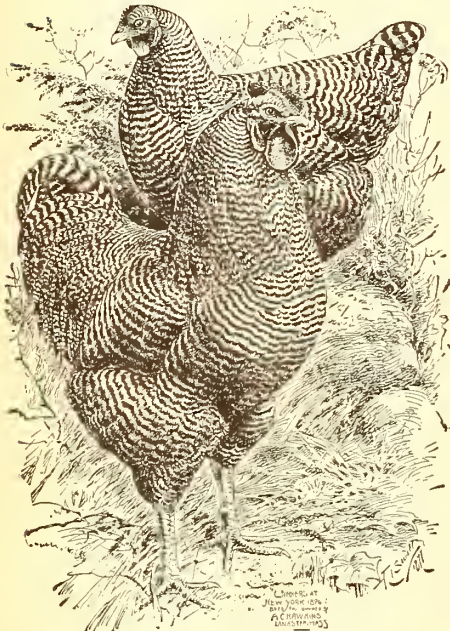

My matings this season are the best I ever owned.

At New York, in the largest show of Barred Rocks ever seen, 451 Birds, I won 1st, 2d, 3d and 4th Cockerels; 1st, 2d and 3d Pullets; 1st and 3d Cocks; 1st and 2d Hens; 1st and 2d Breeding Pens. My other varieties are of the same high quality. Hundreds of choice exhibition and breeding birds at honest prices. EGGS from Prize Matings: One setting, \$5.00; two settings, \$8.00; three settings, \$10.00; five settings, \$15.00. \$20.00 per 100. Catalog of America's finest Plymouth Rocks and Wyandottes free.

A. C. HAWKINS, Lock Box 25 Lancaster, Mass.

First Cockerel at New York.

Winners at New York, from Life.

Buff Wyandotte Eggs!

I have mated up Twenty-five Grand Pens for the trade this season, headed by World's Fair, Chicago, Indianapolis, Rockford and other prize winning males, and will sell eggs at the low price of

\$3 per 15; \$5 per 30; \$8 per 50; \$15 per 100

There is no strain of Buff Wyandottes that is better or more favorably known than this one. Send for illustrated catalog, which tells all about the largest and best flock of Buff Wyandottes in the world. Mention A.P.J.

SIMON BEUTH : Successor to ACKLEY & PAGE : Box B, GERMAN VALLEY, ILL.

World's Fair Prize Winners!

If its grand young stock you want, for breeding or for the show room, we surely have them in the choicest quality and largest quantity we ever produced. Brother, try us, just for your own sake. Give us a chance to show you and help you, for we can, and will honestly and truly guarantee to please you with such as Barred Rocks, Wyandottes, Leghorns, Games, Pekin Ducks, Wild and Bronze Turkeys.

We can supply you with anything in choice Fruit Trees or Poultry Supplies.

Petersen's Houdans

Reign Supreme at the Nation's Greatest Shows

BOSTON, 1900. My record has never been approached by any breeder. In world famous competition, 135 Houdans exhibited, I won 1st cock, 1st and 2d pullet.
BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.
BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials.
BOSTON, 1905. We won every important prize. 1st and 2d cock, 1st, 2d, 3d cockerels, 1st, 2d and 4th hen, 1st, 2d, 3d and 5th pullets; \$100 champion challenge cup for best male; American Houdan Club Cup for best cock, hen, cockerel and pullet. All shape and color ribbons; gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition.

ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdans.
Also highest honors at Madison Square Garden, Philadelphia, Pan-American Hagerstown, Toronto. No matter where you want to exhibit, no matter what the competition, I can furnish the winners. Photographs on application. Eggs in season.

REV. C. E. PETERSEN, Pres. Houdan Club, Drawer 12, Franklin, Maine

\$7.90 FOR OUR HATCHING WONDER 100 EGG INCUBATOR

DELIVERED, in U. S. east of Rockies, or with Brooder, making complete outfit only \$11.50

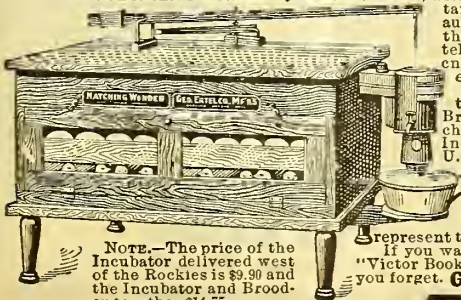

The 100-egg Hatching Wonder has triple walls, triple top and triple bottom, a large aluminum-coated tank and double-jacketed heater and is fitted with our regular Victor Regulator. The lamp has a big bowl, a wide burner and a stout metal chimney. The ventilated egg chamber with double glass in the door contains movable egg-tray with nursery below. The machine is 26 inches long, 21 inches wide and 14 inches high.

In addition to this substantially built incubator, with its egg-tray and nursery, aluminum-coated tank, double-jacketed heater, modern lamp and automatic regulator, the \$7.90 price includes a thermometer, funnel and book of instructions, telling how to get the best results from the incubator, all delivered at any railroad station east of the Rocky Mountains.

If the Brooder is ordered with the Incubator the delivered price of both is only \$11.50. The Brooder is also a complete and well made machine. One of these outfits at \$11.50 for a 100-egg incubator and Brooder, delivered anywhere in U. S. east of the Rockies, is a great bargain in chicken raising machinery.

Better write us today; we will ship promptly on receipt of your order. Remit in post-office or express money order or bank draft, and if these machines are not just as we represent them we will return your money.

If you want a larger machine write for our 80-page "Victor Book." A postal will do, only do it today before you forget. **Geo. Ertel Co., Quincy, Ill., Established 1857.**

NOTE.—The price of the Incubator delivered west of the Rockies is \$9.90 and the Incubator and Brooder together \$14.75.

Day's Barred Rocks

are county, state and national winners for ourselves and customers. See cut this issue. Yards contain many winners, and best product in fancy and utility. Eggs \$3 per 15. Write me your wants.

MRS. ANNA L. DAY, - R. R. 2, Box 1, Fillmore, Ind.

Trethaway's Anthracite Black Minorcas

again win at the club meeting show, Madison Square Garden, January, 1906, in the strongest competition ever had at a club show, 2d cock, 3d hen, 1st, 3d, 5th cks., 2d, 3d pullets and first pen; ten specialties including special for best cock, hen, ckl. and pullet.

ARTHUR TRETAWAY 175 N. Meade St., Wilkes Barre, Pa.

No gapey chicks or leg weakness where Pratts Poultry Food is fed. Don't try to raise little chicks without it.

"Your bees are swarming!" That's what your neighbor cries, but have you the necessary hives and implements with which to handle them? Two things are necessary for success in bee culture. You must order early, and you must insist on Lewis Bee Ware, which has been on the market for thirty years. It is for sale all over the world. Agents everywhere. Lewis Bee Ware is made of the finest clear white Wisconsin pine and basswood, not spotted like the woods from other states. All parts fit accurately.

Lewis Bee Ware

goes together quickly. An old beekeeper will advise you to use no other than Lewis Bee Ware. Send for our catalog L-15 containing nearly one-hundred pages devoted to Bee goods. Also containing seven full pages of points to the beginner. Its free for the asking. Send now. IT WILL ALSO CONTAIN THE NAME OF YOUR NEAREST AGENT TO WHOM YOUR ORDER MAY BE SENT THEREBY SAVING YOURSELF FREIGHT AND TIME.

Built Right-Works Right

The 1906 Standard Reliable Incubator is the product of nearly a quarter century of successful incubator building. The principles of its construction have been successfully demonstrated beyond question. They are in accord with the most advanced scientific and practical ideas and the most direct and simple application of the laws of successful incubation

The 1906 Reliable Incubator

has many features you ought to know about. The double heating system which, besides being more economical and using one-third less oil for heating, preserves absolutely uniform temperature and supplies perfect ventilation. There are no draughts, no hot spots, no cold air but a steady even degree of heat that produces successful hatches every time. Remember our positive guarantee goes with every Reliable incubator. If it doesn't do as we say we'll refund your money—we know it's reliable because it's right. Send for free catalog. Pure bred poultry and eggs from Reliable Farm. Shipped everywhere. Get prices.

Bogardus' Orpingtons

S. C. BUFF AND BLACK

At the great Poultry Association Show at Cincinnati, Ohio, January, 1906, I won in strong competition seven firsts out of a possible ten, five 2ds, four special and other prizes. This, added to my previous winnings at Cincinnati, Chicago, I rank first. Hagerstown, Md., proves that my Orpingtons are as good as the best. Each of my nine grand yards headed by a first prize winner. Enclose stamp for mating list.

O. A. BOGARDUS, Box 31, Warsaw, Ky.

MIDLAND POULTRY FOODS

PETALUMA CHICK FOOD

No. 1 "If I could raise 90 per cent of the chicks I hatch I would be delighted." How often we hear this remark! Two principal reasons why so many dismally fail in raising chicks are:—First, Variable Heat. Second, Unsuitable Food. You overcome the first reason—we'll overcome the second for you with Midland Poultry Foods and guarantee results. If you will feed them as directed you can raise 90 per cent of all the chicks you hatch and make a profit where you now make a failure.

No. 1 A food for the new born chick—to be fed after it is 24 hours old and until it is 10 days or two weeks old. No. 1 is a balanced, complete baby chick food, just suited to the chick's delicate digestive organs. You need add nothing whatever to it—this is all the feed you'll need to take your chicks past the danger point.

No. 2 Takes the chick after it has outgrown No. 1 food, builds its frame strong and makes it a robust and vigorous chick. It supplies every requirement for health and rapid growth in a natural, profitable way. This food opens possibilities for growing early broilers you can't appreciate until you have fed it for that purpose. It matures late chicks for winter layers. Feed it until chicks are four or five months old or nearly mature when you should feed No. 3 or No. 4 according to what you wish to accomplish.

No. 3 Fattens and finishes broilers and hens for market in shortest possible time. Produces a firm, fleshy white and juicy, with a flavor which will add 10 to 15 per cent to the selling price of the fowl and put more money in your purse. No. 3 is a balanced ration, complete in itself—you need add nothing but the usual grit and green stuffs.

No. 4 is the greatest egg food in the world. There is nothing on the market to compare with it for increasing the egg yield. With it you can control the egg output of your hens—we guarantee it. And for putting your birds in fine feather for show purposes it is without a rival. We sell this food by the car load to the large feeders everywhere—the people who feed their hens for profit—and get it.

Petaluma Chick Food Perhaps you prefer a Dry Chick Food. Then this new addition to the Midland line will just suit you. It is all food—a balanced ration for chicks without a bit of grit or stones in it. It is meeting with great favor and we are selling a lot of it. Try it.

Free You can't possibly try all the poultry foods on the market—you wouldn't want to if you could. But if you want to make your poultry business successful, you'll try Midland Foods. They are scientifically prepared for specific purposes—you can get a food that will produce just the result you want without any ifs or ands; without any experimenting on your part. "The Science of Poultry Feeding," will tell you how to feed for profit every fowl on your place. It tells how to feed the 5 Midland Duck Foods that have made so many duck raisers prosperous. If you raise ducks you know what a hard proposition you have to save the ducklings—you'll have no trouble if you use Midland Duck Foods and feed by the book. The young ducklings will grow into money for you and make your duck business profitable. Write for the book today—it will be worth dollars to you. We'll send it free if you will write and ask for it, and we'll tell you how to buy Midland Food.

MIDLAND POULTRY FOOD COMPANY,
 Dept. A Kansas City, Mo., U. S. A.

Banner Chick Food

is the best food for little chicks. When fed on this food for the first 6 to 8 weeks, they grow very fast and strong, and you can raise every one that's batched. A complete food, but no grit or oyster shells—you add these yourself. Prices: 5 lbs. 20c, 10 lbs. 35c, 25 lbs. 75c, 50 lbs. \$1.35, 100 lbs. \$2.50. Our 212-page poultry supply catalog free. **EXCELSIOR WIRE & POULTRY SUPPLY CO., Dept. O, 26-28 Vesey St., New York City.**

TELEPHONE FACTS

We publish a finely illustrated book that is full of telephone facts. It tells all about telephones for farms, the kind to use, how to organize a farm telephone company, how to build the lines and where to buy the best telephones. Free if you ask for Book 61-F. **Stromberg-Carlson Tel. Mfg. Co., Chicago, Rochester, N.Y.**

WILBER'S S. C. WHITE LEGHORNS

Bred to lay and win and do it. Won 23 regular and special premiums in five of the South's greater shows this season, of which 14 are first honors, with scores to 96½. Eggs balance of season \$2 and \$3 per 15, \$3.50 and \$5 per 30. Try a setting or two of our best and batch your winners. Nice breeders after batching season. Handsome mating card free, or write us.

WILBER BROS. :: Box B, Petros, Tenn.

HONEY MONEY

Whether you are an "old hand" or a beginner at bee-keeping you need to know both old and new "tricks" at getting money from the golden nectar. Bee-keeping is enjoyable, profitable, easily learned, fascinating. The question department in that great, semi-monthly bee-paper—

GLEANINGS IN BEE-CULTURE

is a school from which neither the editors nor their 90,000 readers ever graduate. But they learn a lot every issue how to get honey money by the easiest, quickest, surest methods. It warns you against mistakes, exposes the bee's enemies, explains all the "ins and outs" of the business. The editors and writers are men who not only write, but they are practical bee-keepers, who handle bees every day. They are making money at it too. That's why their advice is worth dollars to you. 6 mos. trial 25c. You can afford 25c. Your quarter back if not satisfied. Write for free sample copy. Now's the time.

"At it Seventeen Years"

900 Caxton Bldg. Chicago, Ill.

C We want every farmer who reads this advertisement to send for our book, "How to Buy a Farm Phone." It contains information that will save money and disappointment if you should ever purchase a telephone. It will tell you how to organize a company, build a complete serviceable line and tell

you why you should have a phone on the farm. This book will surely save you time and money.

C No farmer is doing the best he can for himself if he is doing without a good reliable farm telephone. But he wants to be sure he gets the "right" phone. The one for all uses that will give him the service he needs and should have is the "EACO," No. 35. This is a specially made telephone for farm needs. It is compact, durable and strong; has extra large generator and is guaranteed in every way; a strong clear talking phone, the kind the farmer wants. Our X. P. Condenser in each phone makes it possible to ring up any subscriber with one or more receivers off the hooks, something no other phones will do. Write for the book today and see what we can save you in cost of a phone and how much better satisfaction an "EACO" will give.

Eggs! BARRED PLYMOUTH ROCKS Eggs!
"RINGLETS" IN THEIR PURITY

If you buy eggs you want to buy them where you know they have the very best quality and will sell you from the same yards they hatch their own from; and another thing, you don't like to pay \$5, \$7 and \$10 per setting for them if you can buy them for \$3.50, which is our price. At the big Wis. State show, Oshkosh, Jan. 15-20, '06, in a class of 300, we made nearly a clean sweep, winning not only the most coveted prizes, but more of them than all our competitors combined. Don't fail to send for our new 20-page catalog with full show winnings and also more and better unsolicited testimonials from highly pleased customers than any other breeder east or west can show. After May 15th we will sell eggs from our finest exhibition matings at \$2.50 per 15 straight, and we positively guarantee them to be as good as any \$10 eggs you can buy.

KING BROS., : Box 174, Oshkosh, Wis.

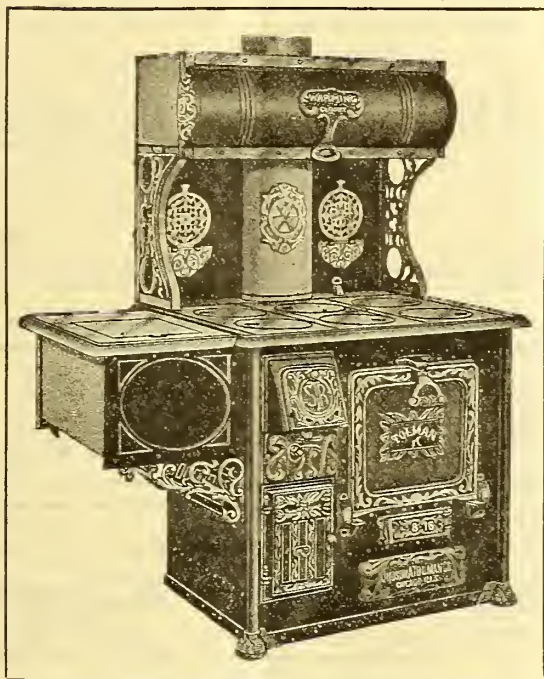

BUILT TO BAKE

TOLMAN RANGES

IF YOU were confident you could save \$15 to \$40 by buying your Steel Range of us, by mail, would you hesitate to do so? We offer you a stove or range of the highest quality at lowest factory prices; moreover, our terms of shipment are so fair that you run no risk.

We are able to save you many dollars in your range buying because—

1. **Our direct selling plan—Factory to Family.** (One profit).
2. **We have a perfect factory and foundry of our own.**
3. **We have the experience of over twenty-three years.**

For durability, economy and baking qualities our Tolman Ranges are unsurpassed. They are made from the very best of material, by skilled workmen, in our own factory. The ovens are large, square and perfectly ventilated. We manufacture over forty styles and sizes of ranges. The most complete line in America. No one has ever yet disputed that Tolman Ranges are absolute range perfection. We challenge comparison.

We know some say you should patronize your local dealer, but should you? Let us see. It is a well established business principal to buy where you can buy the cheapest, quality considered. Your home merchants do this every time. Not one of them will pay you a cent more for the produce you offer them than they can procure the same thing for of others. Will they?

Then why pay your local dealer \$15 to \$40 more for a range than you can procure even a better one for of us, by mail. We ship on terms so fair that you run no risk, and give you a more binding guarantee than that of any other stove manufacturer or dealer.

We manufacture and sell by mail over forty different styles and sizes of ranges. Every range is carefully inspected by the President before being shipped, so that no poor material, careless workmanship or other defects can enter into the manufacture of our Tolman Steel Ranges.

We have such confidence in the superiority of our ranges that we will ship you a range on

ONE YEAR DECISION TRIAL AND GIVE YOU A WRITTEN 10 YEARS' GUARANTEE

We know we are giving our thousands of customers satisfaction because of the many testimonials we receive daily, telling us of the wonderful enduring and baking qualities of our Tolman Ranges. These letters show clearly that we must give our customers entire satisfaction:

JUDSON A. TOLMAN Co.,
Chicago, Ill.

Gentlemen:—It is with pleasure I take the opportunity to inform you that the Tolman Steel Range I purchased of you over a year ago is all and more than you recommend it to be. One could not go to any of our local dealers and get anything like it for less than \$68.00. I would not give it for any Steel Range I ever saw. Everybody that sees it compliments it. Three of my neighbors have bought Tolman Ranges after looking at ours, and there are several more who intend sending in orders soon.
Yours truly,
A. M. BRINGLE, Fair Oaks, Ind.

JUDSON A. TOLMAN Co.,
Chicago, Ill.

Gentlemen:— Please send me one of your Tolman Steel Ranges, catalogue No. 400. Ship at once to Livermore, Ky. I know your range will last, because Mrs. H. T. Nally of this town has one of your ranges in use. Mrs. Nally's range went through a very severe test. Her house burned to the ground and the range is still as good as new. I know a range of such perfect construction as this will last a life time.
Very truly yours,
R. H. ATHEXTON, Livia, Ky.

TOLMAN STOVE Co., Chicago, Ill.

Dear Friends:—I received the range all right in every way. There was nothing broken or damaged in any way and I am well pleased with my purchase. It is all and more than you claim it to be; moreover, it is a perfect heater and splendid baker. If I can do anything for you to help you sell your stoves, I will be glad to do so. I feel confident I saved at least \$35 by buying of you. Your offers were the best of any I received. You are welcome to use my name if it will be of any service to you. Thanking you for courteous treatment, I remain, Respectfully yours,
GEO. D. JOHNSON, P. O. Box 54, Coleville, N. J.

WHY NOT SAVE THIS \$15 to \$40 IN YOUR RANGE BUYING? WHY NOT CUT YOUR FUEL BILL AND HOUSEWORK IN HALF?

Our large free catalogue describes this and forty other styles of ranges. It describes fully why you can buy of us by mail without risk, and how to save the dealers' profits. It will be mailed free. It will pay you to investigate. **SEND FOR CATALOGUE "E" TODAY.**

EGGS

that will produce winners, \$3 per 15, \$5 per 30, from matings equal to any. Barred and W. Ply. Rocks, W. Wyandottes and Golden Sebright Bantams.

D. T. HEIMLICH --: Jacksonville, Ill.

Do You Want Eggs

From America's Best Wyandottes, in Golden, Silvers, Black or Whites?

Fred in line since and before 1884. No other strain is so well established or breeds so true to type or up-to-date as the Keller strain; known in all parts of the world. I export more Wyandottes than any other breeder in the world. My 80 breeding pens are simply wonderful in quality, and contain my New York, Chicago, World's Fair, Cleveland, Columbus and Cincinnati winners and the best of my ushown birds for the past 3 years. Such a superb display of fine matings can't be found anywhere else in the world. Eggs from my best individuals at \$5 per setting; from my fine matings, same as I raise my show birds from that win in all parts of the world, 1 setting \$3, 2 settings for \$5 or \$18 per 100. 1000 fine birds yet to spare at bargain prices. I also breed Jap Silkies, Sebright Bantams, Collie Dogs and Berkshire Hogs; all imported stock direct from many of the noted champions in dogs and hogs. My circular free, of America's greatest Wyandotte Farms.

Place your order with me and raise stock that will not disappoint you. Orders filled promptly.

GEO. M. KLINE :: Box A, Downers Grove, Ill.

Wouldn't You Like to Raise 90% of the Chicks You Hatch ?

There's a Way—We'll Tell You How and Help You Do It

At this season of the year the subject of rearing chicks is one of vital interest and importance to the poultry-raiser. It isn't so much trouble to hatch chicks, with the modern incubator, but to raise them—there's where the rub is.

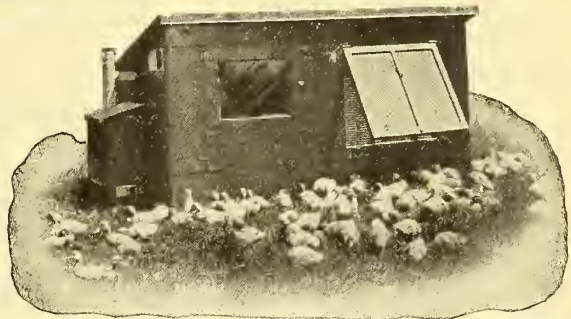

If you could raise 90 per cent of the chicks you hatch, wouldn't your profits be considerable more than they are now? You can do it.

The secret of successfully rearing chicks is mainly a question of proper feeding and brooding.

In our free book, "The Artificial Rearing of Chicks" we give you the correct principles of proper feeding for different ages of chicks—when to feed, how to feed, what to feed, etc., all so plainly set forth that anyone can feed successfully.

The greatest loss of chick-life, however, results from the lack of right kind of brooding apparatus—brooders that are not properly heated and ventilated—that are too hot at one time and too cold at another—that do not furnish an abundance of pure, fresh air, heat to the right temperature, at all times.

In our free Brooder Book we describe a line of brooders and apparatus that will help you raise 90 per cent of all the chicks you hatch. It describes

The No. 1 Combination Colony Brooder

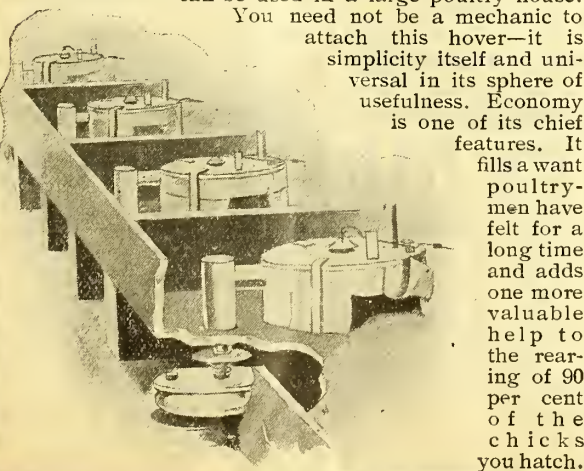

This type of Brooder is a wonderful improvement over the old style brooder. The Colony Brooder, with its dry, roomy quarters, level floors, overhead heat, graduated temperature, thorough ventilation and sun parlor for exercise, certainly offers a happy solution to the rearing problem.

The Universal Hover

which is, without doubt, the most practical contrivance ever offered the poultryman. It enables him to make his own brooders at small expense. The Universal Hover can be attached to any form or size of colony house, mushroom house, small portable building, dry goods box, shed, coop or piano box and give you the best brooder for the money you ever saw. This has proven to be the most satisfactory money-saving, money-making apparatus we have ever produced and it is meeting with unprecedented success everywhere. As illustrated here, the Universal Hover may be used in a large poultry house very conveniently. It is simple and easy to attach—is complete in itself and may be shifted from the poultry house to an outside brooder to suit the convenience and requirements of the user.

The lamp of the Universal Hover will burn three days in February weather, to seven days in mild weather, with one filling.

This illustration shows how the Universal Hover can be used in a large poultry house.

You need not be a mechanic to attach this hover—it is simplicity itself and universal in its sphere of usefulness. Economy is one of its chief features. It fills a want poultrymen have felt for a long time and adds one more valuable help to the rearing of 90 per cent of the chicks you hatch.

THE ARTIFICIAL REARING OF CHICKS

EMERSON POULTRY FARM.
G. C. Topping, Mgr.
Emerson, Neb., March 4, 1906.

PRAIRIE STATE INCUBATOR CO.,
Gentlemen:—I have given your Colony Brooders an unusual test. I placed them out of doors with the weather registering 13 degrees below. Heat in the brooders 9 1/2 degrees, varying only 1/2 of a degree at night. I am highly elated over results. They are in my estimation, the best on the market to-day, for money, chalk or marbles.

I operate 4 Brooders of other makes beside yours, and I can safely be a judge. They do not retain the heat so even as the Prairie State. I have to date raised 300 as fine a bunch of chicks as you ever came across. The passing farmers stop and look at them with wonder, and I have had to sweep the snow away from the glass door, so they could be really convinced there were really chicks in the Brooders. I placed them out in the weather from 3 degree to 15 degree below zero, and did not feel the least worried, as they took care of themselves O. K. Yours for success,

MR. G. C. TOPPING.

This method divides the broods of young chicks into colonies and provides a means of successfully rearing thousands of birds. The colony plan is fully described in our Brooder Book which we will send free for the asking. These Brooders have been used out of doors all through the winter and have produced remarkable results.

This certainly has never been accomplished before in outdoor brooders; and the consumption of oil is only 25 per cent as compared with others.

We have solved the problem of raising 90 per cent or more of the chicks hatched, and we want to help you to do that. Anyone with our free book, "The Artificial Rearing of Chicks" and our Improved Brooders or Universal Hovers can rear chicks as easily and as successfully as they can hatch them with our new open bottom Prairie State Incubator which has done so much to increase hatching possibilities.

PRAIRIE STATE INCUBATOR CO.

Cypress, Ill., March 7, 1906.

Sirs:—I feel like throwing my hat in the air on account of the high per cent hatches secured with your open bottom machines. Ninety-eight per cent, how does that sound? Perfection, isn't it? Your machines are the talk of this section. There were over one hundred people here to see me take off my hatch. I am not afraid now to put \$2,000.00 into your machines and shall install twelve Standards at once. I beat the other man's machine 20 per cent.
Yours truly,
GEORGE ADAMS.

The many and vital practical improvements we have recently made to help you hatch and raise a larger percentage of chicks are all described in a series of five books which we will send free to you if you will write and ask for them. We will also put your name on our mail list and send you other books as they are published. Write today and get in shape to raise 90 per cent of the chicks you hatch. It is simply a matter of right feeding and right brooding.

LEFFEL'S BARRED ROCKS

Are Known Everywhere as one of the Finest Strains in the World

WHY? Because they have an unbroken record during the past fifteen years at the leading poultry shows and under twenty-one Judges.

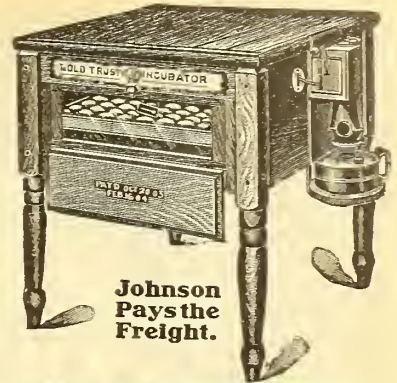

At Springfield, Ohio, 1890 to 1903, my birds won all prizes offered on Barred Rocks and all sweepstakes over all varieties—2,700 fowls competing each year. At Springfield Poultry Show, I again won every prize offered on this variety with birds scoring to 94 1/2. At Dayton and Cleveland, in tremendous competition, I also swept the board, one of my 1st prize cks. scoring 95 by I. K. Felch. I challenge the world to beat this record. Better this season than ever. I am willing for my stock to go on approval. Write for bargain prices on breeding stock. Circular free. I have finer birds this year than ever before, and more of them. Send for circular giving full list of winnings, also price of stock and eggs. Pekin Ducks. W. Holland Turkeys, Chester White Swine, sired by prize winners; young and old stock.

GEO. M. LEFFEL . . . SPRINGFIELD, OHIO

EGGS: One Sitting, \$4; Two Settings, \$7; Three Settings, \$9; \$20 per 100

Notice to Poultry Raisers!

Before you buy your 1906 incubator be sure and get our big "Old Trusty" Book. 124 large pages. 300 illustrations. Straight, every-day chicken sense in every line. It costs a lot of money to make, but it's *free to you*, if you're at all interested in chicken-raising. It will help you a lot whether you buy "OLD TRUSTY" or not.

Johnson Pays the Freight.

A Personal Letter from M. M. Johnson

I honestly believe that I am offering chicken raisers the very BEST VALUE in incubators and brooders that they can obtain anywhere.

And I'll tell you WHY.

In the past two years I've sold more than 30,000 "OLD TRUSTIES"—every last one of 'em ON TRIAL, and I want to say to you that with very few exceptions they have all STAYED SOLD.

NO OTHER INCUBATOR IN THE WORLD EVER MADE SUCH A RECORD IN SO SHORT A TIME.

Now, I don't claim that "OLD TRUSTY" is the ONLY good incubator but I DO claim, and I'm right here to back up the claim, that "OLD TRUSTY"

- is sold on a fairer plan
- is better built
- takes less oil
- requires less attention
- hatches larger percents
- produces stronger chicks
- and is the most ECONOMIC incubator you can buy.

I want to PROVE these claims to you.

If the book doesn't convince you, get "OLD TRUSTY" on a 40, 60 or 90 days' trial, and let it PROVE ITSELF.

What do you say?

Write me anyway.

Very truly yours,

M. M. JOHNSON,
Incubator Man.

YOUR SUCCESS In Hatching Chicks

depends upon the kind of incubator you buy. You can't afford to make a mistake; you can't afford to take the say-so of Mr. Blame-it-all or Mr. Blow-Hard; you can't afford to experiment with new or untried experiments. *You want to be sure.* How can you do it? Well, the *best* way is to *try the machine.* If it isn't well-built, if it doesn't do good work; if it is hard to control and operate, *send it back.* That's the fair way. That's our way. We give you a

40, 60 or 90 DAYS' TRIAL ON

Old Trusty

It's the easiest to operate because it runs itself.

You may take off one hatch—two hatches or three hatches—until you are *satisfied* it's the incubator you want.

We know you *will* be satisfied, for we don't care where you look, you can't find a *better* incubator.

It's made of California red-wood—double walls throughout, with dead-air space between—matched and joined like a piece of fine furniture.

The copper pipe heating system (covered by two patents) is the *only* system that gives a perfectly *even* radiation of heat to all parts of the egg chamber.

The regulator is without question the most simple and positive of any regulator made. Unlike others it is *below* the top of the machine and is not in the way. It is counter-balanced within itself and does not ever need *readjusting*. It is attached and connected when shipped.

But we do not intend to describe "Old Trusty" in detail here.

Get our book and see the why's and wherefore's for yourself.

We invite comparison with any other incubator made—in *construction*—in *dur-*

ability—in *hatches*—in *strength of chicks*—in *economy of oil*—in *ease of operation*.

Remember this is the incubator founded on 13 years experience in building incubators *largely* for *inexperienced users*. We have been compelled to make them *automatic*—self-regulating and next to self-operating. We guarantee that no incubator will give you so little trouble—no incubator will cost so little for oil—no incubator will give you better results. Get the book and see.

We Save You Money.

Don't think you need pay two prices in order to get a good machine.

We have knocked the spots off high prices.

We will sell you *direct* and save you money.

We *pay the freight*, and having distributing houses all over the country, we can fill your order *promptly* and at a *low price*, no matter where you live.

Send today for catalogue No. 43. You'll be glad.

BIG SUCCESS WITH HOGS.

SOME farmers are more successful with hogs than others. The man that only gets 8 lbs of pork out of a bushel of corn fed to hogs makes only half as much as the man that gets 18 lbs.

The American Swineherd is a specialist and the best authority on the hog industry.

The greatest success results from concentrating all efforts upon one line.

Three-fourths of the farmers waste a third of their feed given to hogs because they do not understand the best methods.

The American Swineherd teaches you how to be successful.

How to secure the greatest profits.
How to feed, to double the growth and gain over usual methods.

How to keep your hogs healthy, as only healthy ones are profitable.

How to get 18 pounds of pork out of a bushel of corn, and 20 pounds out of a bushel of wheat, fed to hogs.

Prof. Kennedy of the Iowa Agricultural College says: "Your paper is a leader on feeding."

One man writes: "A single instructive lesson in the Hand book on Hog Hygiene" saved me \$50 in feeding a bunch of 40 hogs 60 days over the ordinary way of feeding. It is the best investment I ever made."

Every owner of hogs should take advantage of this special offer:

Send us \$1 for two years' subscription to the American Swineherd and it will entitle you to a free copy of the Hand Book on "Hog Hygiene," with trade secrets, recipes, valuable information, etc. If the offer is accepted in ten days we will send you in addition "The Pig Feeders' Manual," worth a \$1 itself.

This equips you for a successful hog business.

MODEL

Incubators and Brooders

ARE IN THE LEAD

Mr. Charles K. Graham, Instructor in Poultry Industry and Poultry Manager of the Connecticut Agricultural College, Storrs, Conn., states that the Model Incubator gives him better hatches than two of the 1906 pattern incubators of other makes. He also states that he has been rearing chicks in the Model Colony Brooder, placed out in the snow, with the loss of scarcely a chick.

At the mid-winter course in poultry at the Cornell University all the leading makes of incubators were operated. At the close of the course the students took a vote on which was the favorite machine, which vote the Model won, and I have since sold machines to many of these students.

Mr. J. S. Jeffrey, Poultryman at the Agricultural Experiment Station of the North Carolina College of Agriculture and Mechanic Arts, West Raleigh, N. C., writes as follows:—

“I wish to say in regard to your Colony Brooder that it is the best that I have used to date, and has given me splendid service, being both economical and efficient. I had one of them in an exposed field last May, at the time of a very severe wind and rain storm, filled with three-day-old chicks, and although the lamp end was toward the storm it went through it without even smoking. The wind was strong enough to tear large oak trees up by the roots and take the roofs off houses.”

Eggs, Broilers and Roasters and Poultry Feeding for Profit are Free

If you have not had a copy of these books send your name in now. You cannot afford to be without them. Regarding “Eggs, Broilers and Roasters” the editor of “Poultry” writes:—

“The Sub-title says it is “An easy lesson in Practical Poultry Culture.” It is more than this. It is a mine of information for everyone who breeds poultry of any kind and it is the kind of information that everyone wants. We are going to keep our copy where we can get our hands on it at any time.”

Also ask for Incubator and Brooder catalogue.

FACTS FOR FARMERS!

Southern lands are fertile and productive and are low in price. The rainfall is ample for all purposes, and irrigation is not needed.

The Southern farmer is in close reach of the principal markets of the country and has the best of railway facilities for the transportation of his crops.

General farming shows good returns. The crops grown cover a wide range and yield an abundant harvest. The cereals and grasses thrive. The stock raisers find the South a profitable field. Cattle can be raised at the lowest cost. There are finest opportunities for raising horses, mules, sheep and hogs.

There is a demand for a greater dairy interest in the South. Local markets are good. The conditions are most favorable for the success of the milk producer and hutter maker.

Trucking is extensively engaged in along the Southern Railway. Lands especially adapted to this branch of farming may be purchased at low figures and upon good terms. The facilities for quick handling of the crops are first-class and the products reach the best markets of the country in good condition. All fruits are grown in the South. The commercial orchards along the Southern Railway are extensive and the quality of the fruit is unexcelled. The best sections of the south are reached by the

ORIGIN AND HISTORY OF THE BREEDS

The Rhode Island Reds Are a Breed Made and Finished by Out-breeding, Not In-breeding, as is Usual in the Establishment of a New Breed or Variety—More Than Sixty Years Ago the Foundation of this Breed Was Laid by Farmers in Rhode Island and Massachusetts, this Being Red Cochin China Fowls Brought by a Sea Captain to a Massachusetts Port—The Name Rhode Island Red First Applied to the Red Cocks Farmers Used to Head Their Flocks—How a Few Earnest Men Brought a Ridiculed and Defamed Breed to a High Place and Into Popular Favor—Breed Characteristics.

Paper No. 10—The Rhode Island Reds.

Written by Thos. F. Rigg, Associate Editor American Poultry Journal.

Dr. N. B. Aldrich, Fall River, Mass., has given a very interesting and undoubtedly correct review of the origin of the Rhode Island Reds, the same being contributed to *Red Hen Tales*, the official organ of the Rhode Island Red Club. Dr. Aldrich says:

"I am not one of those who is willing to say, 'Never mind the origin of the 'Reds' or any other worthy variety of fowl.' I have been breeding poultry for twenty odd years, and I am always interested in the origin of every breed. Go back into history with me fifty years, and we find that, at that time, 1846-1850, different Asiatic breeds were introduced into this country, especially in neighborhoods that were near the coast. One variety, the Shanghai fowl (yellow and white), was introduced just after the Cochin China, and the two breeds for a time became confused, and 'many farmers and poulterers declare, spite of feathers or no feathers (on their legs), that their fowls are Cochin Chinas or Shanghais, just as they please.' At this time Bennett, in his poultry book, says: 'There are but few, if any, bona fide Shanghai fowls now for sale.' These Shanghai fowls (Simon pure) were heavily feathered on the legs. Not so with the Cochin China. At this time the Cochin Chinas were bred extensively in southeastern Massachusetts and Rhode Island. Dr. Alfred Baylies of Taunton, Mass., imported in July, 1846, specimens of the yellow Cochin Chinas. 'The cockerels were generally red.' These were not specimens of what were called the Royal Cochin Chinas, as bred by the Queen of England, but direct importations. 'The Royal Cochin Chinas were one-third larger.' The Shanghais were heavily feathered in the legs; these imported Cochin Chinas lightly feathered, if at all. The ship *Hutness*, in May, 1847, direct from Cochin China, brought a pair of this variety of fowl, and Mr. Taylor, in speaking of them, says, 'The imported cock was a peculiar red and yellowish Dominique, and the hen a bay or reddish brown;' that the young stock varied 'only in shade of color.' Bennett says, 'The legs of both sexes are of reddish yellow, sometimes, especially in the cocks, decidedly red—more so than in any other variety.' How many times I have called attention to the red pigment in a R. I. Red cock's legs.

"So much, then, for the Red Cochin China cock of fifty years ago. The sea captains brought home just such specimens to Little Compton, R. I., but a little later came the great Malay fowl, with its knobby knob of a comb—a comb that even today occasionally is to be seen on the R. I. Reds. The Jersey Blues

—Bucks County and Boobies—were inferior varieties of Malays. The great Malays came from the peninsula of that name, at the southern point of the continent of Asia. They were spoken of as 'serpent headed.' Their color was dark brown or reddish, streaked with yellow; some varieties of Malays run more reddish than others. In Little Compton was introduced what was known as the Red Malay. The Red Cochin China and the Red Malay cocks were selected, and crossed with flocks of fowls in Little Compton forty and fifty years ago, the same as today. Later, before the Wyandotte fever, the R. C. Brown Leghorn was introduced into many flocks of fowls in the neighborhood. Even at the time of the introduction of the R. C. Brown Leghorns the red fowls were spoken of as R. C. Reds. In a certain section, where the Leghorn blood was not used, today old settlers speak of their fowls as Red Malays. In this section ten years ago the Reds were all of the single comb variety, whereas ten or twelve miles further south were to be found Rose Combs in abundance.

"Now, Mr. Editor, let me say right here, and I wish to say it plainly, there were no Pea Comb Reds ten years ago, any more than today. Why should R. I. Reds have Pea Combs? Where is the comb to come from? It is not even the common comb of the barnyard fowl. Pea Comb Rocks were once admitted to the standard, only to be dropped again. I do not believe the Red Club will admit Pea Combs only to be dropped again." [The Club and the American Poultry Association has refused to admit the Pea Comb variety—T. F. R.]

Dr. Aldrich supplemented the above article with the following:

"If I were to say that the foregoing article told the whole story of R. I. Reds, I would be making a mistake. This breed derives its name Rhode Island Red from the male bird. The utility farmers of that section of Rhode Island known as Little Compton for nearly sixty years, have been selecting red males and leaving the females to be what they may. By this means they have carefully out-bred this now famous breed. Probably today there is not in the whole world another breed of fowls produced by fifty years of out-breeding. If it were only so, how much more vigor our several breeds would have. The R. I. Reds stand as the only proof of what out-breeding will do. We fanciers do not live years enough to compose a breed deliberately, unless we in-breed, but it was not so with the original R. I. Red breeders, they knew the Red cock was the most vigorous and almost unconsciously they made a breed.

"The famous Barred Plymouth Rock, called more than once the 'American mongrel,' was not produced by out-breeding, and right here it might be of interest to note that the early Plymouth Rocks produced red males. Listen to Dr. Bennett's own statement: 'I have given this name (Plymouth Rocks) to a very extra breed of fowls, which I produced by crossing a cockerel of Baylies importation of Cochin China with a hen, a cross between the fawn colored Dorking, the Great Malay and the Wild Indian (game). The cocks are usually red or speckled.' By a later cross with the Black Java and in-breeding, were produced the modern Barred Rocks.

"In regard to Rose Comb R. I. Reds, I am positive the rose comb variety existed long before the introduction of Leghorn blood. Old settlers assure me, their fathers brought home Red cocks with rose combs, and I have been informed that some Cochin Chinas had rose combs. There was also a red variety of Chittagongs, and Mr. Rugg says 'sometimes there is a rose comb.' I know my grandmother and others had Chittagongs in this neighborhood fifty years ago; possibly, the rose comb on our reds may date back to Red R. C. Chittagongs.

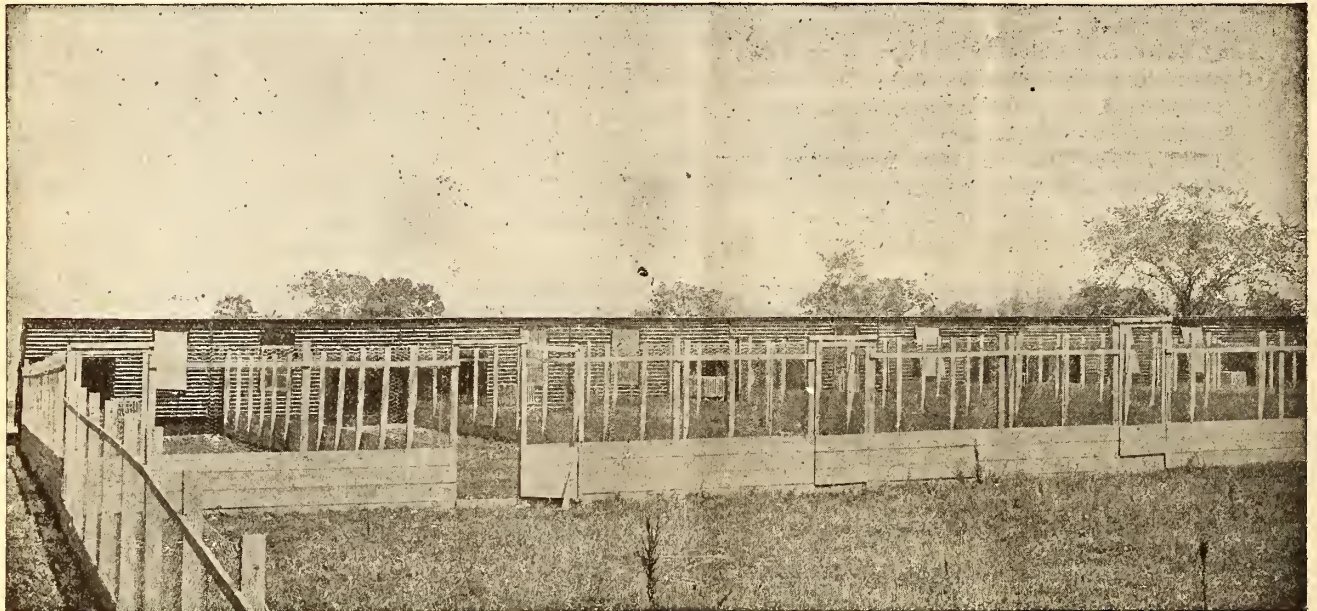

"In reviewing this subject, one thing has struck me very forcibly, and that is, that Red cocks were numerous in 1850; just think of the different breeds that produce them. At the first Boston Poultry Show held at the Public Gardens on Nov.

16, 1849, Red Shanghais and Cochin Chinas, "the cockerels were generally red," were exhibited, as well as Plymouth Rocks, which, as I said before, produced Red males. At this time, we also find Red Malays and Red Chittagongs. The Shakebag fowl were imported to this country by Mr. J. L. Tucker of the Tremont House, Boston. Mr. Mowbray thus writes of one in his possession, "The only one I ever possessed was a red one in 1784, weighing about ten pounds," and Dickson says "the plumage of the male is brilliant in the extreme, being a bright red—the hens are of a bright yellow." I do not need to quote more to convince you that Red cocks are nothing new, even though the world did lose sight of them, except isolated Little Compton, R. I. It was the ghost of Hamlet's father who, suddenly hearing the crowing of the cock, announces abruptly, that he "snuffs the morning air," and then vanishes to his dreary home. Probably this very crower was a Red cock.

The red rooster of fifty years ago vanished to a small country village, but now has been returned to the large world. If the R. I. Reds were not a worthy breed they would have been relegated from the show room long before this. Little Compton, R. I., and Wertfort, Mass., are adjoining towns, lying to the southward of Fall River, Mass. One small vessel from 1827 to 1850 made about twenty-five trips annually between Westfort and Providence, R. I., averaging 400 dozen of eggs. The total was 3,450,000, and the value of them \$35,000. This gives some idea of the value of the ancestors of the Reds in 1850. Finally

ing of 1901 when a more formal description and a more detailed statement of the points of excellence of the breed were decided upon. In the meantime, the membership had grown to upwards of fifty. Included in the list were breeders from about a dozen States. The election of officers at this meeting resulted in the choice of Hon. Charles M. Bryant, of Quincy, Mass., as president; William P. Shepard, South Swansea, R. V. Browning of Natick, Rhode Island, and E. A. Robbins of Nashua, N. H., as vice-presidents; John Crowther, secretary-treasurer; with an executive committee comprising, beside Messrs. Bryant, Shepard and Crowther, ex-officio, Vernon L. Stafford, Fall River; D. P. Shove, Somerset; Dr. J. Fred Watson, Nashua, N. H., and P. R. Park, Methuen, Mass. Honorary vice-presidents were designated as follows: Maine, I. F. Clark; New Hampshire, Luther Robbins; Vermont, Sanford Daniels; Massachusetts, C. A. Sanborn; Rhode Island, Samuel Cushman; Connecticut, R. C. Tuttle; New York, Chas. Smith; Illinois, E. L. C. Morse; Missouri, R. F. Smith; Canada, W. R. Walters. It was decided to copyright the Club Standard, at that time the club membership numbered 102; today the membership is nearly 1,200.

No breed or variety of fowls which have petitioned for recognition by the American Poultry Association have met with the opposition which was directed against the Rhode Island Reds. At first they were ridiculed by a very large number of breeders. When they were first exhibited—and this but

ONE OF THE MAIN BREEDING HOUSES ON GEDNEY FARM POULTRY YARDS, WHITE PLAINS, N. Y.

This house is an open front scratching shed house, 162 feet long and contains nine pens. Each pen has a yard 100 feet long, 18 feet wide, and, as shown in the photo, in front of these yards is an exercising field of nearly half an acre in which one pen is allowed each day, thus affording them an ample supply of natural green food.

a few of us discovered the Reds and the "colossal plan" of raising fowls. We have tried to give the world the benefit of Little Compton's breed and experience, and trust that the Rhode Island Red Club will prove as careful in guardian of the Reds as the whole-hearted farmers of Rhode Island did."

EARLY HISTORY OF THE BREED.

A few breeders of Rhode Island Red fowl held a meeting in the Coffee Tavern, Fall River, Mass., in February, 1898, and, after discussing the feasibility of organizing a Rhode Island Red Club and deciding in the affirmative, elected officers as follows: President, Daniel P. Shove; vice-presidents, William P. Shepard and Thomas W. Roe; secretary and treasurer, John Crowther. These officers were voted "power to act" in promoting the interests of the breed.

On the 10th day of the following December, during the Fall River poultry show, a meeting of "all interested Rhode Island Red breeders" was held at the request of the gentlemen named at which a standard for the Reds was formulated. Those who took a leading part in the discussion of this document were Dr. N. B. Aldrich, John Crowther, John W. Freelove and Vernon L. Stafford, of Fall River, Mass.; Daniel P. Shove, of Somerset; William P. Shepard, of South Swansea; Fred W. Cochrane, of East Somerville, and Mr. Proctor, representing the Poultry Monthly. At this meeting the original officers were re-elected and a third vice-president was chosen in the person of Rowland G. Buffinton. The standard adopted at this time proved to be an excellent working guide to breeders till the Boston meet-

a few years ago—they were decried loudly and most vigorously by a great many fanciers. They were but mongrels, picked up here and there from the farm yards of Massachusetts and Rhode Island, said their denouncers. They were of no beauty and no use, and it was ridiculous for their promoters to presume to offer them for admission to the Standard as a distinct breed. There was no established blood in their veins. All this and more said these self-appointed guardians of the Standard. The editor of a leading poultry journal, whose columns now teem with Rhode Island Red advertisements, referring to the exhibit of these fowls at the New York show but five years ago, described them as a "motley lot, of all colors," and advised their friends to speedily withdraw them from an offended public gaze.

Today the Rhode Island Red Club is the largest specialty club in America, numbering among its membership prominent breeders in every state in the Union and some in foreign countries. The Rhode Island Red today is extensively bred, is everywhere recognized as one of the most useful and beautiful of standard-bred fowls. As an exhibition fowl it has taken rank with the Plymouth Rocks and Wyandottes. Upon thousands of farms throughout the land the Reds are making money for their owners, while as a fancier's fowl they are very profitable.

And why, we may well ask, has this once denounced, ridiculed and much abused fowl become one of America's most popular and prominent breeds? It is, first, because it is worthy of the place. This thing of the Rhode Island Reds coming into its

own is another illustration of the truth of the saying that "truth crushed to earth will rise again." But this is not all. The Rhode Island Red would not have reached the high place they hold today, would still be in the humble place we found it a few years ago, had it not been championed by men who firmly believed in it—men who possessed the ability, the courage, and that determination which balks not at opposition. There was indeed a talk before which most of men would have quailed. But C. M. Bryant, Dr. N. B. Aldrich, D. P. Shove, Lester Tompkins, Phillip Caswell, John Crowthers, R. C. Tuttle and their co-workers did not turn from a practically united opposition. They knew the merits of the fowls they were supporting. They realized, as well as did the critics of the breed, that their fowls were crude and unfinished so far as color markings were concerned. They proceeded, undaunted, to establish the desired color markings. This done the battle was nearly won, for shape was firmly and satisfactorily established long before. Now they fix the beautiful red color markings. The great merit of the fowl, its desirable shape and beautiful color markings—the deep rich red—at once won the approval and love of American fanciers and breeders. It was a battle royal, and merit finally won, as it always does, in the end.

The Single Comb Rhode Island Reds were admitted to the Standard in 1904.

In 1905 the Rose Combs were admitted as American Reds. At the 1906 meeting of the American Poultry Association this

lar to the base of the beak. At least it should never be carried anterior to this line.

Body—Deep, broad and long; keel bone long, straight and extending well forward and back, giving the body an oblong look.

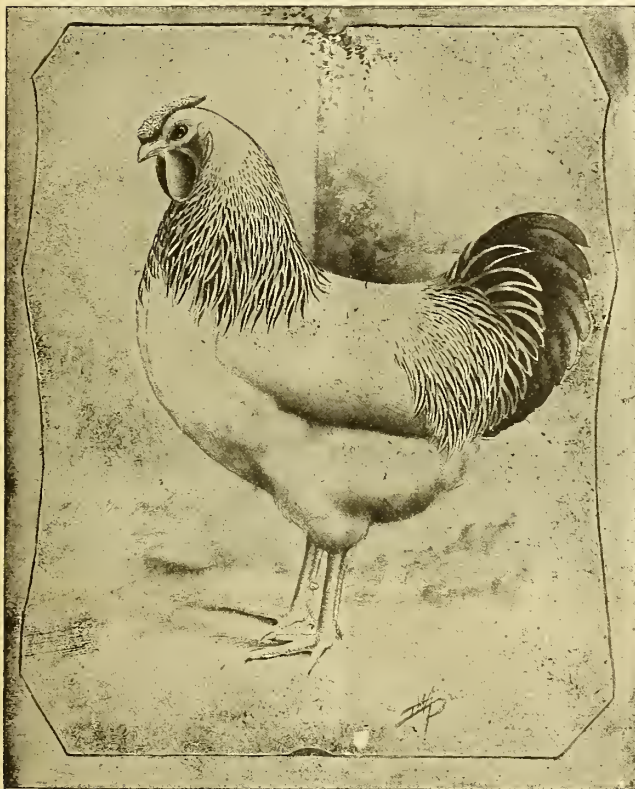

S. C. BLACK MINORCA HEN.

A New York and Boston winner. Bred and owned by Greystone Poultry Farm, Yonkers, N. Y.

Tail—Of medium length, quite well spread, carried well back, increasing the apparent length of the bird.

Color of the male: General surface rich brilliant red, except where black is desired. Free from shafting, mealy appearance or brassy effect. Depth of color (red) is slightly accentuated on wing bows and back, but the least contrast between these parts and the hackle or breast the better; a harmonious blending is what is desired. The bird should be so brilliant in lustre as to have a glossed appearance. Other things being equal the specimen having the deepest and richest red, salmon, or buff under color shall receive the award. Any smut or white in the under-color is to be cut hard. The quill of the feather should be red or salmon. White showing on the outside of the body is to be cut harder than white that is out of sight. Black is desired in the under-web of the wing flights. The main tail feathers and two main sickle feathers are to be black or greenish black. The greater tail coverts are mainly black, but as they approach the saddle they may become russet or red. The blending of the red body with the black tail is gradual, thus preventing any sudden contrast. With the saddle parted showing the under color at the base of the tail, the appearance should be red or salmon, not whitish or smoky. The hackle should be free from black although a suspicion of black, that can hardly be found, would not cut the bird much. White in hackle will be cut

COLUMBIAN WYANDOTTE.

First Cockerel, Indianapolis, Ind., February, 1906. Judge Tucker, who awarded the prizes in this class, says of this bird: "The best colored male that I have found to date. This bird, to breeders of this variety, is worth his weight in gold." Bred and owned by Oak Hill Poultry Yards, 2055 Hillside Ave., Indianapolis, Ind.

action was rescinded and these fowls were admitted as Rose Comb Rhode Island Reds.

BREED CHARACTERISTICS.

Standard weights, both varieties: Cock, 8½ pounds; cockerel, 7½ pounds; hen, 6½ pounds; pullet, 5 pounds.

The Rhode Island Red has distinctive and individual shape. This shape should not be confused with that of the Plymouth Rock which it somewhat approaches, but from which it differs materially. In the male the following distinctive character must be prominent:

Back—Broad, long and in the main nearly horizontal; this horizontal effect being modified of slightly rising curves at hackle and lesser tail coverts. Saddle feathers of medium length and abundant.

Breast—Broad, deep and carried nearly in a line perpendicu-

A Group of Mammoth Bronze Turkeys on the farm of Mrs. Charles Jones, Paw Paw, Ill.

harder than black. The wing bars should be free from black, and all black in the primaries and secondaries should be out of sight when the wing is folded.

The female carries the same general color—rich red. In the female the lower hackle feathers should end with black tip, making a ticking.

REARING AND FEEDING CHICKS.

Starting the Chick Right is Half the Battle—The First Two Weeks of the Chick's Life is the Critical Period—The Only Way to Start is to Start Right.

Written for American Poultry Journal by Mrs. B. F. Wilcoxon, Des Moines, Iowa.

The poultry business is not one that has its pathway strewn with roses. Many obstacles arise from time to time that almost cause one to seek other vocations in life. There is just as much hard work in it, both mentally and physically, as there is in any mercantile business, mentally in trying to solve the problem why every egg did not hatch, why some chicks die in the shell, and how and what to feed to obtain the best results, and physically in keeping the poultry houses clean, feeding and watering the stock. No season is without its cares, but at certain times lack of care is most disastrous, houses should be cleaned frequently at all seasons, warm weather increases the degree of filth, and with it lice and mites appear. It is not all sailing on flowery beds of ease. If those who are climbing the ladder of success or nearing its top in the poultry business

an objective point. If any man who has been at all successful in any stock line would only stop to think that should the same energy and thought be devoted to the poultry business that is given to that of any other class of live stock he would see that the profits can not help but be satisfactory. A person should never go into this business who is too lazy to do other kinds of hard work. Keep an account of all poultry expenses, so you can tell how much profit there is in it. The business of poultry raising opens a promising field for all who possess ambition and industry. The cost of raising is small when compared with the high prices they command. It is a sure business when one understands it, because you can generally control the condition which assures success if you but attend to it. There is money in poultry and will be for years to come. The fact that many fail to make a "go" of it is what makes it profitable. The hard working man or woman will reap the results, while the indifferent will fail. Where one fails another is successful. Out of the same soil wheat and tares are produced. One presses forward to a definite aim. The other drifts here and there on the waves of circumstances. So our poultry operations in proportion to the amount of zeal and energy put forth. The conditions and circumstances surrounding different persons make it impossible for anyone to lay down fixed rules that would be a sure guide to those who seek fame and money; every one must work out his or her salvation. There are

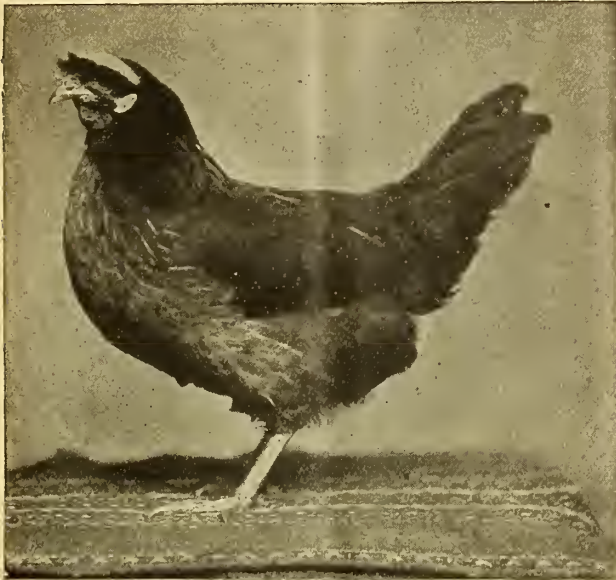

COCKEREL HOUSE ON GEDNEY FARM POULTRY YARDS, WHITE PLAINS, N. Y.

This house is 25x75 feet, built purposely for the wintering of surplus stock, but several rooms of which are used during the breeding season for choice matings.
