

Taking in feedback from re-users at scale

Lydia Pintscher

Product Manager for Wikidata

@nightr0se

Why should we care?

- A lot of the ultimate users of our data don't know us
- They don't/can't come to us to help maintain our data
- Larger re-users have the resources and obligation to help us maintain our data and are willing to do so

What's the problem?

- We don't have clearly defined expectations for
 - how we want them to contribute
 - What we want them to contribute
- We don't yet have the right tools and processes in place to take in feedback/improvements/...

So many open questions!

- Which feedback do we want?
- Who do we want it from?
- How do we want it?
- What tools, processes, guidelines, etc do we need to have in place?

Thanks for your attention!
