ACKNOWLEDGEMENT

The National Institute of Mental Health wishes to acknowledge the generous cooperation of the superintendents and staffs of the various private mental hospitals and general hospitals.

I. INTRODUCTION

The data for this report are taken from the 41st Annual Census of Patients in Mental Institutions. This yearly census was conducted by the U.S. Bureau of the Census, Department of Commerce for the years prior to 1947, and by the National Institute of Mental Health since then. A detailed historical account of the development of this census may be found in Patients in Mental Institutions - 1947, pp. 1-4, U.S. Government Printing Office, Washington, D.C. 20402.

The publication is divided into four parts as follows:

- Part I Public Institutions for the Mentally Retarded
- Part II State and County Mental Hospitals
- Part III Private Mental Hospitals and General Hospitals with Psychiatric Services
- Part IV Private Institutions for the Mentally Retarded

These reports provide basic annual data on the numbers and characteristics of hospitalized patients; movement of patient population, and, in addition, certain administrative data are provided for the State and county mental hospitals and public institutions for the mentally retarded.

Provisional survey data for the State and county hospitals and public institutions are published on an interim basis in Mental Health Statistics - Current Reports, Series MHB. These publications are available on request from the National Institute of Mental Health, 5454 Wisconsin Avenue, Chevy Chase, Maryland, 20203

A listing of facilities surveyed is contained in Mental Health Directory, 1966. This directory is published by the National Clearinghouse for Mental Health Information and is available from the U.S. Government Printing Office, Washington, D.C. 20402. A more complete directory will be published in 1968.

II. COVERAGE

This report includes data from all known private mental hospitals and general hospitals with psychiatric facilities, i.e., those which routinely and knowingly admit patients for diagnosis and/or treatment of mental disorder. Private hospitals exclusively for alcoholics, hospitals for the aged, and rest homes are not included. The following facilities are omitted from the general hospital category: specialized hospitals (orthopedic, childrens, etc.), Federal general hospitals, and general hospitals to which mentally disturbed patients are admitted only on an emergency basis.

This report covers the calendar year ending December 31, 1966.

The universe of general hospitals providing

psychiatric services is based on a survey of general hospitals conducted in March 1964.¹ In this survey 1,046 hospitals that routinely and knowingly admit patients for the express purpose of diagnosing and treating mental disorders were identified. An additional 88 hospitals were added based on previous listings maintained by the Biometry Branch.

By the time the 1966 annual census was conducted in January 1967, 246 of these hospitals reported that they did not routinely admit psychiatric patients, or that they no longer admitted psychiatric patients. The distribution of the remainder (888 hospitals) by response is given in Table 1. The distribution of the private mental hospitals by response is given in Table 6.

III. DEFINITIONS

A. Type of Hospital

1. Private mental hospital. A hospital operated privately by an individual, a corporation, or a non-profit organization. Exceptional cases. Four hospitals were classified by the way they function rather than the authority under which they operate:

- (a) The DeJarnette State Sanitarium, Staunton, Virginia. Although under State authority, this hospital is not tax-supported and is operated as a private hospital.

- (b) The Yale Psychiatric Institute, New Haven, Connecticut; Henry Phipps Psychiatric Clinic, Baltimore, Maryland; Pennsylvania Hospital, Philadelphia, Pennsylvania. These large units of

¹Giesler, Raymond, Hurley, Peter L., Person, Phillip H. Jr., Survey of General Hospitals Admitting Psychiatric Patients, Public Health Service Publication No. 1462, National Clearinghouse for Mental Health Information, PHS, U.S. Department of Health, Education, and Welfare, 1966, 12 pp.

general hospitals are classified as private hospitals because of their independent operation, length of stay of patients, and types of service available.

2. General Hospitals providing psychiatric services - Those hospitals that knowingly and routinely admit patients for the express purpose of diagnosing and treating psychiatric illness.

With separate psychiatric unit(s) - Those hospitals that knowingly and routinely admit patients for the express purpose of diagnosing and treating psychiatric illness and provide service in a separate psychiatric unit, i.e., beds are set up and staffed specifically for psychiatric patients in a separate ward or unit. These beds may be located in a specific building, wing, or floor or they may be a specific group of beds physically separated from regular medical or surgical beds.

Without separate psychiatric unit(s) - Those hospitals that knowingly and routinely admit patients for the express purpose of diagnosing and treating psychiatric illness, but for whom services are not provided in a separate psychiatric unit. Inpatient care is provided in beds set up and staffed for general use and are not specifically set aside for psychiatric patients. Such beds are in regular medical or surgical wards with no physical separation or isolation of the psychiatric inpatient from other inpatients.

B. Patient Categories

1. Private Mental Hospitals

(a) First Admissions During the Year includes patients who have not been admitted pre-

viously to any inpatient service (public or private) for the treatment of mental disorders or mental retardation.

(b) Resident Patients at End of Year includes patients physically present in the hospital at the end of the year, plus those patients who are permitted to leave the hospital on temporary visits with the understanding that they are to return within a short period not to exceed seven days, excludes patients on unauthorized absence; that is, on escape, elopement, or AWOL, as well as those on trial visits and in family care, or otherwise absent.

2. General Hospitals with Psychiatric Services

(a) Discharges During the Year includes all patients discharged from the hospital with a primary diagnosis of mental disorder. Deaths in the hospital are not included.

C. Age of Patients

Age of first admissions is reported as of the last birthday prior to admission. Age at admission is reported also for discharges from general hospitals. Age of resident patients is reported as of the end of the year.

Diagnostic Nomenclature

The diagnostic classification can be found in Diagnostic and Statistical Manual - Mental Disorders, American Psychiatric Association, 1952, or in Standard Nomenclature of Diseases and Operations, "Psychobiologic Unit," American Medical Association, 1962.

IV. LIMITATIONS OF HOSPITAL DATA

These data, even when combined with those for public mental hospitals, should not be used as a measure of the incidence or prevalence of those mental disorders which are sufficiently serious to require hospitalization. Since, for a variety of reasons, persons with such disorders may not be admitted to a mental hospital, they would not be reflected in these institutional reports. For example, they (1) might be seen in outpatient clinics or other types of facilities; (2) might not have access to an institution; or (3) might not seek care for other reasons. Thus, projections or rates based on the present data would underestimate the actual number of these psychiatric conditions in the general population.

The use of utilization rates of private mental hospitals and general hospitals for interstate comparison is not recommended because admission to a private mental hospital or general

hospital does not require residence in a State in which the institution is located. Under-reporting must also be taken into account when making interstate comparisons or examining trends.

A further limitation is the possible duplication in patient counts between general hospital discharges and mental hospital admissions. General hospitals typically offer diagnostic service or short-term treatment. Therefore, those patients requiring more extended treatment are usually discharged to mental hospitals.

Information on patients by psychiatric diagnosis has been reported for discharges rather than for admissions to conform with general hospital record system procedures.

1/ There were no private mental hospitals in operation during 1966 in the following 15 states: Alaska, Arkansas, Delaware, District of Columbia, Hawaii, Idaho, Minnesota, Mississippi, Montana, Nevada, New Hampshire, North Dakota, South Dakota, Utah, Wyoming.

* During the year 1965 the universe of known private mental hospitals was reviewed by the Biometry Branch, NDMH, in conjunction with the State mental health authorities and the National Association of Private Psychiatric Hospitals. In this review, it was found that of the 238 hospitals classified as private mental hospitals for 1965 and preceding years, 64 were in fact hospitals for alcoholics, geriatric hospitals, or nursing homes, or for some other reason should not be considered private mental hospitals. The apparent drop in the number of hospitals in operation in 1966 is due therefore to a more careful classification of facilities, rather than a change in the number of hospitals.

^{1/} First admission rates per 100,000 population are based on the July 1, 1966 civilian resident population. Source: U.S. Bureau of the Census, *Current Population Reports*, Series P-25. The population used for the U.S. rates and geographic regions excludes those states in which there were no private mental hospitals: Alaska, Arkansas, Delaware, District of Columbia, Hawaii, Idaho, Minnesota, Mississippi, Montana, Nevada, New Hampshire, North Dakota, South Dakota, Utah, Wyoming.

^{2/} Includes estimates for private mental hospitals which did not report. See Tables 17 and 18 and footnotes to Table 18.

^{1/} Resident patient rates per 100,000 population are based on the estimated January 1, 1967 civilian resident population. Source: U.S. Bureau of the Census, *Current Population Reports*, Series P-25. The population used for the U.S. rates and geographic regions excludes those states in which there were no private mental hospitals: Alaska, Arkansas, Delaware, District of Columbia, Hawaii, Idaho, Minnesota, Mississippi, Montana, Nevada, New Hampshire, North Dakota, South Dakota, Utah, Wyoming.

^{2/} Includes estimates for private mental hospitals which did not report. See Tables 17 and 18 and footnote to Table 18.

^{1/} For twenty six hospitals, the distribution of resident patients at end of year by age, sex and diagnosis was not reported and for twenty two hospitals, the distribution of first admissions by age, sex and diagnosis was not reported (see Table 17). For each of these hospitals the total number of resident patients and / or first admissions was obtained by telephone. This total was then allocated among the age, diagnostic categories based on the known distribution of patients in hospitals submitting reports.
