PREFACE

A TEXT-BOOK of American history for beginners should aim to present a clear and somewhat comprehensive account of the chief influences that have shaped the destiny of our country and have given to it its preëminence among the nations of the earth. Educators are now quite generally agreed that this can be done in the most satisfactory manner through a series of biographies of the famous persons who have had most to do in connection with those influences. Men make history; and the telling of history in stories of the lives of its makers has a quality of concreteness very attractive to children, who usually fail to be interested in chronological narratives wherein the personal element is less prominent.

In this volume only such biographies are presented as are necessary to the continuity of the narrative as a whole. The story of no man's life is related merely because of the man, but because of its value as a link in our country's history. All the biographies in their order comprise a connected account of the discovery, settlement, and development of the United States. The plan of the

work has made some repetitions necessary; it has also obliged the omission of many details of secondary importance, which the pupil will learn in his later studies of the subject. There is a sharp line of distinction between a story-book and a history,—and yet the latter should scarcely fail to be as entertaining as the former. The narrative of the struggles and triumphs of the makers of America, and of the series of events which have culminated in the present commercial and political prosperity of our country, ought to be to young readers not only an interesting story, but an incentive to good citizenship and intelligent patriotism. To most American children a study of the “lives of great men” will scarcely fail to be a reminder that we also “can make our lives sublime.”

CHRISTOPHER COLUMBUS

AND THE DISCOVERY OF AMERICA

I. THE WAY TO INDIA

This country in which we live was not always the same beautiful land that it is now. It was once a wild region of woods and swamps and savage mountains and lonely prairies. There were no pleasant farms nor busy towns. There were no roads, no schoolhouses, no mills, no churches. The only people who lived here were Indians. No one can tell how long the land might have remained wild and unsettled had it not been for a wise, brave man whose name was Christopher Columbus.

Five hundred years ago the people of Europe had never heard of the continent which we call America. The wisest men among them had very little knowledge of the world. They knew a good deal about the countries which border the Mediterranean Sea. They knew something about England and Germany and Norway and even Iceland. A few travelers had visited Egypt and Arabia and Persia. But all the rest of the world was unknown.

Trade with India. — For a great many years the merchants of Arabia and Persia had been in the habit of sending rare and costly goods to Europe, — silks, pearls,

spices, and jewels of gold and precious stones. They said that these things came from a very far country called India. They brought them across the great deserts on the backs of camels. At Constantinople, or at some place in western Asia, they sold them to traders who sent them in ships

The world as known in Columbus's time

across the Mediterranean to sell to the rich people in Europe. At one time nearly all the trade of this kind was carried to Venice and Genoa, two cities of Italy. The merchants of those cities became very rich, and the cities themselves became very powerful.

The Turks. — Then, from unknown regions beyond the Caspian Sea, there came a warlike people called Turks. They overran all western Asia, they conquered Constantinople, and made themselves masters of the region in which their descendants live to this day. They held the sea-ports, the desert ways, and the mountain passes through which the trade of India had hitherto been brought.

How now could the wealthy people of Europe obtain the silks and spices and jewels which they prized so highly? The traders who supplied them must, if possible, find some other way to India, — some way that was not held by the dreaded Turks.

Seeking a new way to India. — It was known that India borders on the Indian Ocean which lies east of Africa. Why not send ships through the Red Sea and into this ocean? Ships from the Mediterranean could not reach the Red Sea, for there was then no canal across the isthmus of Suez as there is to-day.

Why not, then, send ships around Africa? That is just what many men were thinking of; but nobody knew the way. No ship had ever ventured so far south. The sea captains of Venice and Genoa were bold enough on the Mediterranean; but they did not dare to go far out upon the ocean. They were afraid to sail their vessels upon strange waters.

Sailing around Africa. — In the little country of Portugal, in the southwest corner of Europe, many people were interested in trying to find the way to India. Ship after ship was sent out to see how far the west coast of Africa

extended. Each went a little farther than the one before it, but all were very cautious. The sea was unknown, and it was believed to be full of dreadful things. Year after year went by, and still no one had learned whether the long coast ever came to an end, or whether there was any way at all by which to reach the Indian Ocean.

“We shall never get to India by going around Africa,” said many.

II. WHAT COLUMBUS BELIEVED

Christopher Columbus

Just at that time Christopher Columbus came forward and said : “Even if we could reach India by sailing around Africa, it would be a very long voyage. I think there is a much better and shorter way.”

Who was Christopher Columbus ?— Columbus was an Italian sailor then living in Portugal. He was born in Genoa, a famous seaport of Italy. He knew a great

deal about the sea. When a boy he had spent many a day on the wharfs, watching the ships coming and going. He had listened to many a wonderful story of India ;

and he had made up his mind that when he became a man he would visit that country of gold and spices.

When he was fourteen he became a sailor. He afterwards visited all the great seaports on the Mediterranean. He sailed down the African coast as far as the boldest captain in Portugal dared to go. He lived for a time on one of the Madeira islands, and studied the ocean. He sailed to the Far North, to the frozen shores of Iceland. Then for a while he made his home in Portugal, where he busied himself making maps and charts.

Columbus in Portugal. — There were few men who knew more about the world than he. There was not a bolder sailor in Europe. And so, when he said, "I think there is a better way to reach India than by sailing around Africa," he was asked to explain what he meant.

"Well," he answered, "the world, as our wisest men agree, is round. It is round like an apple or a globe. On one side of it are Europe and Africa. Adjoining them, but reaching far over upon the other side, is Asia. The land, in fact, goes much more than halfway round the globe of the earth. The ocean, although broad, is like a vast river dividing the land on the east from the land on the west. On this shore is Europe, on that is Asia. To reach India, we have but to cross over. My plan, then, is to sail west instead of east."

People thought the plan a strange one. Some laughed, and said it was very foolish. But Columbus explained it so well that a few of the wiser men believed in it.

The king of Portugal. — Columbus explained his ideas

to the king of Portugal. Then he said: "If you will supply me with ships and sailors, I will make a voyage across the Atlantic. I will make known this new way to India. I ask only a fair share of the honor and profits that may be gained by the voyage."

The king was more than half persuaded. He thought that the scheme might be worth trying. But he wanted all the honor and profits for himself.

So he sent out a ship secretly, to sail as far into the ocean as it could. But sailors at that time were afraid to venture to any great distance from the shore. They called the Atlantic the "Sea of Darkness." They believed that, as they sailed westward, they would encounter many dreadful dangers; that storms were raging there all the time; and that there was no farther shore.

Therefore the king's ship soon came back. The captain said that he had seen nothing but storm-tossed waves and a wilderness of waters.

Columbus in Spain. — When Columbus found that the king of Portugal would not help him, he went to Spain. He would ask Ferdinand and Isabella, the king and queen of that country, to give him the means to try his scheme. He took his little son Diego with him.

One evening, weary from long walking, he came to a small convent near the town of Palos. He knocked at the gate, and asked for a drink of water and a bite of bread for poor Diego. The prior of the convent saw the two travelers, and knew from their looks that they were no common beggars. He invited them to come in and

“ He invited them to come in ”

rest. He talked with Columbus, and found that he was a man of much intelligence.

He listened while his guest explained his ideas about the world and his plan for discovering a new way to India.

Encouragement. — Columbus told the prior his whole story. He told why he had left Portugal, how he had hoped to induce Ferdinand and Isabella to help him, and how nobody in Spain would listen to him. The king was busy carrying on a great war. The queen was not interested in his plan. People laughed when he tried to explain his ideas. He was discouraged.

“Cheer up, my friend,” said the good prior. “Persevere, and you will yet succeed. I myself will help you. I will use my influence with the queen. She will listen to me, for I was once her confessor.”

Perseverance. — Columbus did persevere. But it was yet a long time before he succeeded. Several years passed by, — years of disappointment and sore trials, — and then, just as he was getting ready to leave Spain, the queen was persuaded to favor his project. The king also agreed to give him the help that he asked.

Three ships were made ready. Two of these, the *Niña* and the *Pinta*, were very small and had no decks. The other, the *Santa Maria*, was a little larger ; it was chosen by Columbus as his flagship.

III. THE FIRST VOYAGE

One morning in midsummer the little fleet sailed away from the harbor of Palos. The sailors scarcely expected ever to return. They wept as the land faded from ¹⁴⁹² sight. Most of them had been forced to go. The smaller ships, too, had been seized upon by the king's orders and taken without the leave of their owners.

The voyage was a long one. The sailors begged to be allowed to turn back. They even threatened the life of their commander. But Columbus was determined not to give up. He stood on the deck of the *Santa Maria* and watched for signs of land.

At length a green branch from a tree was seen floating in the water. Surely, land could not be far away. Then

some little birds, of a kind that live along the seashore, hovered around the ships. Surely, land was near at hand. At length, one night, a light was seen far over the water. It moved as if it were a torch being carried from place to

“Columbus . . . went on shore with some of his men”

place. When morning broke, the ships were near a pleasant island, green with trees and grass. How glad the sailors must have been!

The landing. — Columbus, dressed in scarlet and gold, went on shore with some of his men. All knelt upon the beach and thanked God for bringing them in safety across the dreaded sea. They planted a cross in the sand. They unfurled the banner of Spain. Columbus named the island “San Salvador,” and took possession of it for

the king and queen, Ferdinand and Isabella. It was one of the group which we now know as the Bahamas.

Indians. — Soon from among the trees strange men and women and children came shyly to look at the strangers. Columbus believed that he was on one of the islands of India, and so he called the people Indians. They were copper-colored; they had long, black hair and were finely formed; they seemed gentle and timid; they believed that the white men were beings come down from the sky to bless the earth.

It was on the 12th day of October, 1492, that Columbus landed on San Salvador. It was the first land seen on this side of the ocean; and it is common for us to say that America was discovered on that day. But Columbus thought that he was near the eastern coast of Asia.

Other discoveries. — Columbus sailed onward, hoping to reach the mainland, perhaps of India, perhaps of China, perhaps of Japan. He passed near many beautiful islands. He discovered Cuba and then sailed eastward, along its northern shore. Everywhere he was delighted with the pleasant land, the trees, the flowers, the fruits, the people. The natives — the Indians — were peaceable and kind, the air was mild, the sea was calm. Never was there a happier voyage than that first cruise among the islands which we now call the West Indies.

But when the voyagers reached Haiti, misfortunes befell them. The *Santa Maria* was driven ashore in a storm and wrecked. The captain of the *Pinta* had already disobeyed orders and sailed away. Columbus was left with

only the little *Niña*. He decided then that it was best to return to Spain and tell the story of his discoveries.

The homeward voyage was a hard one. Fierce storms threatened to overwhelm the tiny vessel. Scarcely a man hoped to see Spain again. Columbus wrote on a piece of parchment an account of his discoveries. He put the

“ The king and queen sent for Columbus ”

parchment in a cask, which he sealed and threw overboard. He thought that if the *Niña* should be lost, perhaps some day the cask would drift to shore and be picked up, the parchment would be found and read, and the world would know of what he had done.

But the ship weathered the storms, and, after many

weeks, sailed proudly into the harbor of Palos. What rejoicing there was that day! The king and queen sent for Columbus. They had him sit beside them and tell all about his voyage. They looked at the strange things he had brought from the islands beyond the sea. They honored him in every way they could. A happy man was Columbus.

IV. THE SECOND VOYAGE

In a few months everything was ready for another voyage. Seventeen ships sailed from Spain with fifteen hundred men on board. This time there was no weeping as the land disappeared; but there were songs of joy and hope. All expected soon to reach the shores of India. They expected to visit the rich cities of the East; to load their vessels with gold and pearls and fine silks; and to return home carrying great wealth with them.

The voyage was a pleasant one. The first land seen was a mountainous island which Columbus called Dominica. Then he sailed northwesterly, cruising among what are now known as the Lesser Antilles. He discovered Porto Rico, which the natives called Boriquen, and finally reached Haiti, where he had stopped on his first voyage.

In Haiti the sky was as blue, the sea was as calm, the land was as beautiful as before. But the Spaniards with Columbus were dissatisfied and unhappy. They discovered no rich cities there. They saw no treasure houses filled with gold. The people whom they found were naked savages. Was this the India of their hopes?

A colony was formed. A town was laid out and named Isabella, after the queen. Twelve ships sailed back to Spain to bring other colonists and more supplies. Exploring parties were sent out to look for gold.

Further discoveries.—Columbus left the colony in charge of his brother and sailed away in three small

The West Indies—showing the discoveries of Columbus

vessels to make further discoveries. He coasted along the south shore of Cuba, thinking it was the mainland of Asia. Then changing his course he came to another large island which the natives called Jamaica.

Discouragement.—At length he returned to Haiti.

Everything there was in confusion. The men in the colony were angry because they had not found more mines of gold. They blamed Columbus for all their disappointments. Some had already gone back to Spain to make complaints against him. Others demanded that he should take them home at once. He could not quiet them; he could not control them.

He was obliged to yield to their clamors. Two hundred homesick men were crowded into two little vessels, and with them Columbus sailed back to Spain. They were nearly three months in crossing the ocean.

This time there were no great rejoicings over the return of Columbus. But the king and queen were kind to him, and promised to furnish ships for another voyage.

V. THE SAD END

The third voyage. — Nearly two years passed. Then Columbus sailed again for the new lands he had discovered in the West. His course was farther south than before.

1498 After a long, hard voyage he discovered the coast of South America near the mouth of the Orinoco River. This was the first time he had seen the mainland. He thought that it was a part of Asia. He followed the shore westward for some distance, and then, changing his course, sailed to Haiti.

In Haiti. — He found the colony there in even a worse condition than when he had left it. The men were quarreling and fighting. It was hard for him to restore order. He did not dare to go away to make further discoveries.

For two weary years he stayed in Haiti trying to establish a peaceful, prosperous settlement.

But his enemies were all the time carrying bad reports back to Spain. Almost everybody turned against him. The king listened to the complaints that were made, and at last sent out a man to be governor of Haiti instead of Columbus.

Columbus sent home.

— When the new governor arrived in Haiti he caused Columbus to be arrested. He accused him of inciting the Indians against the Spaniards. He chained him with iron fetters and sent him to Spain. The people of Spain were ashamed and angry when they saw the great

“He chained him with iron fetters”

discoverer brought home in chains. The queen ordered that his fetters should be taken off at once. With tears in her eyes she received him in her own palace. Columbus, broken-hearted, threw himself at her feet and sobbed aloud.

The fourth voyage. — In the meanwhile many ships of Spain were crossing the sea, and other men were making

discoveries in the New World, as it was called, which Columbus had made known. It was a long time before he was permitted to make another voyage. At length, with four vessels, he again crossed the ocean. When he arrived off the coast of Haiti a dreadful hurricane was beginning to blow; but the governor would not let him come into the harbor. His ships, however, found shelter in a secluded cove. The Spanish fleet which was just starting to Spain was destroyed by the storm. Twenty vessels or more went to the bottom, and with one of them the governor himself.

Columbus sailed onward toward the west. He discovered the coast of Central America, and landed on the isthmus of Panama. He little dreamed that only a few miles beyond were the shores of a great ocean which no European had ever seen. He still believed that he was on the coast of Asia.

Misfortunes now came thick and fast. Many of his men were killed by Indians. His ships were caught in a storm and driven to Jamaica, where they were wrecked. Columbus and his men stayed a whole year on that wild island, until vessels from Haiti came to their rescue.

Broken in health and sick with disappointment the great discoverer returned to Spain. Queen Isabella was then on her death-bed. With her Columbus lost his best friend. His enemies were more numerous than before.

America. — About this time a noted explorer whose name was Americus Vesputius was making a voyage along the coast of Brazil. This man like Columbus was an Italian. He was then in the service of the king of

Portugal, although he had twice sailed in Spanish ships across the ocean. Unlike most other explorers of the time, his thoughts were not all on gold. He took pleasure in examining the forests, the streams, and the mountains of the strange new lands which he visited. When he returned home he wrote a letter to a friend, giving a pleasing account of what he had seen. The

“He took pleasure in examining the forests, the streams, and the mountains”

letter was read by many people, and at last was printed. Then some one said: “Why not give a name to those wonderful countries which Americus Vesputius has so pleasantly described? What is to hinder us from calling it America, or the land of Americus?” Others approved this idea; and thus the name America was applied, first to

what is now Brazil and finally to the whole new world on this side of the Atlantic.

Death of the great discoverer.—Columbus made no more voyages. He lived about eighteen months after returning from his last voyage. He was almost alone, sick and in poverty. At length, on the 20th day of May, 1506, he died. Very few people knew of his death, or cared when they heard about it; but later his body was laid in a fine tomb at Seville. The casket in which he was placed was afterwards removed to Haiti, then it was taken to Cuba, and a few years ago it was carried back to Spain.

REVIEW

How long has America been known to the people of Europe? With what country did the merchants of Europe wish to carry on trade? Why? Why was it so difficult to bring merchandise from India? How did ships from Portugal attempt to reach India? What did Columbus think was a better way? What did others think of his plan? Why? Why was he so long in getting ready to sail across the ocean? Who finally helped him? What land did he first discover, and when? What land did he think he had discovered? How did the people of Spain receive him when he returned from his first voyage? Why was his second voyage a disappointment? What part of the mainland of America did Columbus first reach? On which of his voyages did he first see the coast of North America? Why was this continent called America? Why was it called a new world?

JOHN CABOT

AND THE DISCOVERY OF NORTH AMERICA

I. A DARING SEA CAPTAIN

John Cabot, like Columbus, was born in Genoa, Italy. For all that we know, he and Columbus may have been schoolboys together at the same school. At about the time that Columbus was first telling his plans to the king of Portugal, Cabot was living in Venice. He was a merchant and sea captain. His ships sailed to the ports at the farther end of the Mediterranean Sea and brought back goods from Syria and other distant lands.

Merchandise from India. — Once when he was in one of these ports, he saw a long train of camels that had just arrived from Arabia. The animals were loaded with rich spices which they had brought across the deserts.

“Where did those spices come from?” asked Cabot.

“They came from India,” was the answer, “and they have been many months on the way.”

This set him to thinking. Was there not some easier and shorter route by which the merchandise of India could be brought to Europe? Columbus and the king of Portugal were trying to solve the same question.

Cabot in England. — About two years before Columbus made his first voyage, John Cabot left Venice and went

with his family to England. He settled in Bristol, which was then the most important of all the English seaports. Ships from Bristol often went on long voyages to Nor-

“He saw a long train of camels”

way and Iceland, and some sailed even to Spain and the Mediterranean Sea.

Cabot soon became known as the most daring of all the merchant captains of Bristol.

Within twelve months after settling at that port, he sent some ships far out into the Atlantic to search for an island which was said to lie somewhere southwest of Ireland. This was a year before Columbus sailed from Spain. Cabot's ships ventured farther out into the ocean than any others had gone, but they did not discover any land.

By the king's leave. — When the news was told in England that Columbus had really sailed across the Atlantic, and had reached what he believed to be India, the merchants and sailors of Bristol were greatly excited. John Cabot resolved that he also would discover new lands; and King Henry of England very graciously gave him leave “to sail to the east, west, or north, with five ships carrying the English flag, to seek and discover all the islands, countries, regions, or provinces of pagans in whatever part of the world.” He was not to sail south lest he should make trouble with Spain.

Cabot sails from Bristol. — One thing and then another delayed him. It was not until four years after the return of Columbus from his first voyage that Cabot was ready to sail. He had but one ship, called the *Matthew*. With him went his son Sebastian, a young man probably not more than twenty years of age. It was early in May when he sailed from Bristol, and his course was straight west, across the Atlantic.

II. NORTH AMERICA DISCOVERED

A strange coast. — The sea was rough and the voyage was tedious and long, but at the end of six weeks a strange, rocky coast was discovered. It was a part of North America, probably the coast of Labrador. Although the season was almost midsummer, the shore seemed bare and desolate. The *Matthew* sailed along within sight of it for nearly nine hundred miles. Cabot landed now and then and took possession of the country in the name of

the king of England. But he found no such beautiful and interesting things as Columbus had discovered farther south. At length he caused the *Matthew* to be turned about, and before the end of July the little vessel and its crew were safe home in Bristol harbor. Columbus was just then preparing to make his third voyage.

The Grand Admiral. — Cabot hastened to London and reported to the king that he had discovered the coast of China. Henry was so highly pleased that he gave the brave captain a present of £10 in gold (as much now as \$200 in our money), and settled a pension on him for the rest of his life. Cabot himself was the hero of the hour. He dressed himself in silk robes, and was called the Grand Admiral of England; and whenever he walked out in Bristol or London, the people ran after him in crowds, like madmen.

The second voyage. — Early the next spring Cabot started on another voyage. He believed that if he should sail a little farther south than before, he would discover the rich island of Cipango, or Japan, about which many wonderful stories were afloat. He followed the eastern coast of our country from Maine to Cape Cod and perhaps much farther. But he saw no signs of the wealth and splendor which were said to exist in Japan and India. There were neither cities nor towns nor orchards nor fields. Everywhere there were dense woods, in which wild animals and a few savage men had their homes.

It was not a very promising country; but Cabot, as on his former voyage, took possession of the coast for his

master, the king of England. This it was that gave to England, in after years, the right to claim the larger part of North America as her own.

We hear no more of John Cabot. — Just when Cabot's ships returned to Bristol from this second voyage, we do not know. Indeed, it is supposed by some that he himself died before reaching home; for we do not hear of him again. His son Sebastian became the greatest sea captain of his time, and was for several years in the service of the king of Spain. But it was a long, long time before English ships again visited the wild and wooded shores of North America.

REVIEW

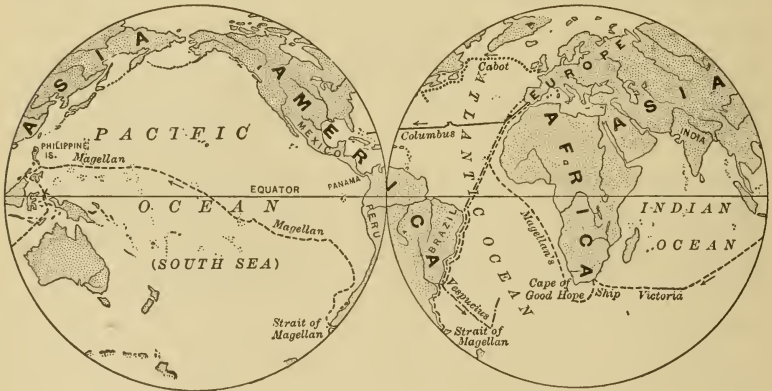

Name three Italians who had much to do with the discovery of our country. Why was John Cabot so deeply interested in discovering a short way to India? Which saw the mainland of America first, Cabot or Columbus? What countries did Cabot hope to discover? Why was he not better pleased with his discoveries? What claim did England make on account of his discoveries? What was the name of John Cabot's son? What did he become?

DE VACA AND CORONADO

AND THE EXPLORATION OF THE SOUTHWEST

I. SPANISH DISCOVERIES AND CONQUESTS

Further explorations by the Spanish. — One ship after another followed in the track of Columbus across the Atlantic Ocean. Multitudes of Spanish adventurers has-

Voyages of Columbus, Cabot, Vesputius, and Magellan

tened to seek wealth and fame in the strange, new, western world. They explored the coasts of the Gulf of Mexico and the Caribbean Sea, and made settlements in Haiti and Cuba. Soon also they formed a small colony at Darien on the neck of land which we call the Isthmus of Panama.

Balboa. — One of these adventurers, whose name was Balboa, crossed the isthmus, and was the first of white men to see the vast ocean now known as the Pacific. Wading out from the beach as far as he could go, he raised his sword in air and declared that he took possession of the great water and of all the lands adjoining it in the name of his master, the king of Spain.

The Spanish on the Pacific. — Spain now laid claim not only to the greater part of America, but to the Pacific Ocean and all the islands that might be discovered in it. Ships of Spain soon found their way across it, and visited the shores of India, which were thousands of miles farther away than Columbus had imagined. A Spanish fleet, led by a famous navigator called Magellan, was the first to make that long voyage. Magellan himself was killed on one of the Philippine Islands; but one of his vessels, the *Victoria*, sailed on, entirely round the world, and at last came back safe to Spain.

A Spanish ship of that time

For more than fifty years only Spanish ships were allowed to sail on the Pacific. Spanish trading vessels brought to Panama the rich merchandise of the Philippine

Islands and the Far East. Other vessels brought to the same place the gold and silver that had been taken from the mines of Peru, in South America. All these treasures were then carried across the isthmus and loaded upon still other Spanish ships, which carried them to Spain.

The gold seekers. — The Spanish adventurers who flocked to America seemed to have but one thought, and that was to gather treasures and heap up gold and silver to be sent home to Spain. They robbed and enslaved and killed the poor natives, only to enrich themselves and to add to the wealth and power of the Spanish king.

Florida. — One of these adventurers was Ponce de Leon. He was the first Spanish governor of Porto Rico and became very rich by robbing and oppressing the natives of that island. Having heard of a fountain which was said to make every one young who bathed in its waters, he set out in search of it. Although he failed to find it, he discovered a beautiful country which he named Florida. This discovery gave to the Spanish king the excuse to claim all the country north of the Gulf of Mexico.

Mexico. — West of the Gulf of Mexico the Spaniards discovered a wonderful country, the people of which were quite different from any others that were known. These people were called Aztecs. They lived in well-made houses, and wore clothing of cotton cloth variously colored. They had beautiful gardens and farms, and fine public roads, and villages and cities, and strange temples and treasure-houses filled with gold. Hernando Cortes, a Spanish soldier of great courage and perseverance, set out with a

small army to conquer this country. After nearly three years of cruel fighting he succeeded. The rich native kingdom of Mexico, with its treasures of gold, became the prey of the destroying Spaniard.

This conquest of Mexico was the greatest achievement that had yet been made by the Spanish in America. The mines of Mexico proved to be the richest in the world, and for three hundred years that country remained the most important of all the possessions of Spain.

II. CABEZA DE VACA

The Spanish in Mexico. — There was great excitement in Spain when the story of the conquest of Mexico first became known there. The Spanish people believed that since one such rich kingdom had been found in America there must be many others; and more than one plan was formed for discovering and conquering them. Soon the greater part of Mexico was overrun by eager gold hunters, and few were the Aztec treasures that were not seized and sent to Spain.

Strangers in camp. — About fifteen years after the conquest some Spanish soldiers at a small village in the western part of Mexico were astonished to see four wild-looking creatures coming out of the forest and approaching their camp. These creatures had the form of men, but they appeared more savage than any of the natives of that country. One was as black as ink; the other three had skins like those of white men bronzed by the sun and the wind. The little clothing which they wore was made

of the skins of wild animals. They were gaunt and thin, as though long unused to nourishing food.

Wanderers for eight years.—As they approached the camp their leader, who was taller and better-looking than the rest, called out to the soldiers in very good Spanish

“‘ Ah, what happiness!’ he cried ”

and saluted them as friends. “ Ah, what happiness,” he cried, “ to meet with countrymen once more ! ”

The soldiers were now still more astonished. They gathered around their strange visitors and inquired who they were and how they had happened to come there as though dropped from the clouds. “ We are Spaniards,” was the answer, “ and for eight years we have been wandering among wild men and wild beasts without once seeing the faces of friends.”

The leader tells his story. — “My name is Cabeza de Vaca,” said the leader of the four, “and I belong to one of the noblest families in Spain. The two white men who are with me are also Spaniards of good birth. The black man is Stephen, a negro servant who has shared in all our toils and privations.”

Then, while his listeners sat wondering, he told the story of his misfortunes and of his long wanderings in unknown lands. It was, in substance, as follows :

Narvaez. — Narvaez, a Spanish officer who had done some brave things in Cuba, had formed a plan for invading Florida and for subduing the many rich kingdoms which it was supposed to contain. The king gave him permission to carry out this plan, and four hundred of the noblest young men in Spain enlisted in his service. Cabeza de Vaca was the treasurer of the expedition ; and every man felt sure of outdoing Cortes and of sending home shiploads of gold, the plunder of savage kingdoms.

The company landed on the coast of Florida, and pushed northward through the trackless forest to a point somewhere in the present state of Georgia. But no gold did they find ; and they were so hard pressed by savage foes that they were glad to return to the coast. Their ships had disappeared. They therefore built some rude boats in which they hoped to find their way to some Spanish station on the coast of Mexico. But storms arose ; the boats were wrecked ; Narvaez and nearly all of his company perished.

Shipwreck and captivity. — A few of the men were cast

ashore at some point on the coast of Texas. Among these was Cabeza de Vaca. They were made prisoners and enslaved by a tribe of savage Indians. After much suffering and toil, Cabeza and his three companions escaped, only to be captured by another tribe. Then followed months of peril and privation. They were carried from one place to another, through the tangled forests and over the boundless grassy plains of the Southwest. They made friends with their masters and gained their freedom. They became medicine men, and traveled from tribe to tribe, pretending to heal the sick, which caused the savages to regard them with awe.

A long journey. — Their course was always toward the west, for they hoped that thus they would at last reach some Spanish settlement in Mexico. They crossed the Rio Grande and visited some parts of New Mexico. They traversed desert plains, and climbed rugged mountains, and followed deep cañons—always looking westward. And at last, after hardships too many to be related, they were gladdened by the sight of the banner of Spain floating over the little camp of soldiers near the shores of the western sea. They had traveled more than four thousand miles, much of the way along the southern borders of what is now the United States. They had seen the mouth of the Mississippi where it pours its flood of waters into the Gulf. They had been the first of white men to land on the shores of Texas, and the first to traverse the great plains of the Southwest. They have been called the first pathfinders across the North American continent.

III. THE SEARCH FOR THE SEVEN CITIES

In the presence of the viceroy. — Cabeza de Vaca and his companions were soon taken to the city of Mexico, and their story was repeated to the viceroy, as the Spanish ruler of the country was called. The viceroy questioned Cabeza eagerly about what he had seen and heard. “Did you not find any treasures?” he asked, “and did you not visit any of those rich kingdoms which are said to excel even Mexico in wealth?”

“We ourselves saw no treasures,” answered Cabeza, “for we were intent upon escaping with our lives. Neither did we visit any rich kingdoms; but I am confident that there are such at some distance farther north. In fact, the natives told us many stories of strong cities where the houses are built of marble and the doorposts are ornamented with precious stones.”

The viceroy was much excited by this report, for vague accounts had already come to his notice of seven rich cities far to the north which were said to excel in splendor anything that had hitherto been discovered in America. He was anxious to find those cities and to conquer them for Spain.

The journey of Fray Marcos. — Cabeza de Vaca was anxious to return home and had no wish to please the viceroy by going in search of the seven cities. But Stephen, the negro who had shared his adventures, was willing to act as guide through the regions which they had traversed; and a monk, commonly called Fray Marcos, under-

took with the negro's aid to discover the rich kingdoms of the north. The monk and the negro, with a few Indians as helpers, set out on their errand, and the viceroy and his friends began to prepare for great events.

Several weeks passed and then Fray Marcos returned. He reported that his negro guide had been killed by the natives of one of the cities, but he himself had seen everything from the summit of a hill. There were indeed, he said, seven cities, all at no great distance from one another, and their splendor and wealth surpassed the most extravagant dreams.

Francisco de Coronado. — The viceroy decided to send out an expedition at once to conquer these cities and take possession of their treasures. He chose Francisco de Coronado, a young officer of great promise, to be the leader of the expedition; and an army of several hundred Spaniards and Mexican Indians was soon in readiness for the march.

Coronado, although but thirty years old, was already well known for his courage and dashing energy, and not only the viceroy of Mexico, but the king of Spain had great faith in his ability as a commander. With high hopes and eager expectation, he mustered his army at the same village in western Mexico where Cabeza de Vaca
1540 had made his strange appearance four years before. On a pleasant morning in April the march was begun. The little army passed northward not far from the shores of the Gulf of California. Then it crossed the desert plains of Arizona, and arrived at last in the country of the seven cities.

The cities found. — But oh, the disappointment! Instead of the busy centers of life and trade which Coronado had expected to see, he found only the half-ruined villages of Moqui Indians. Instead of marble palaces and golden temples, he found only mud-walled houses which contained nothing worth carrying away. In the account of the place

A Moqui village

which he sent back to Mexico he said that the people wore clothing of cotton cloth which they wove for themselves; that they had fields of Indian corn upon which they depended for food; and that their villages bore no resemblance to the splendid cities which Fray Marcos had described.

Quivira. — The Indians told him that there was a great city called Quivira farther on, and that if he persevered in his march he would surely reach it. He therefore

went on, turning now toward the east. He traversed New Mexico, crossed the Rio Grande, and turned northward to the great plains of Kansas. Millions of bisons, or American buffaloes, roamed at will in that region, and Coronado was the first of white men to describe them.

Spaniards' picture of a buffalo

Three hundred leagues from the Rio Grande he arrived at Quivira, the city of which he was in search. But it was merely a collection of wretched huts, inhabited by a few Indians whose only occupation was hunting buffaloes.

The end of the long march.—Coronado was not yet ready to despair. The golden country of his hopes seemed always to be a little farther on, a little farther on; but he was determined to find it. With such of his followers as were still able to keep up with him, he marched onward across the plains until he reached, as some suppose, the Missouri River at about the spot where Kansas City now stands. Then, wholly discouraged, he turned and rode back toward Mexico. He had penetrated into the very heart of the continent; he had been the first to lead an exploring party over the mountain ridges of the Southwest, the first to describe the vast prairies of Kansas, the first to visit those regions which now form the central portion of our country.

Two sad stories. — Of what afterward befell Coronado there are two stories. One relates that while he was still a long way from Mexico he fell suddenly from his horse. When his companions raised him from the ground they found that his reason was gone. Toil and anxiety had so worn upon him that he had become a madman. The other story, which is probably the true one, says that he led his men safe back to Mexico, where he gave to the viceroy a true account of his adventures. The viceroy was angry because of his failure to discover or bring back any treasures for Spain. He dismissed Coronado from his presence, and the young officer retired to his country home, where he died of a broken heart.

REVIEW

By whom was the Pacific Ocean discovered? Who was the first to sail across it? What part of the world was claimed by Spain? For what purpose did Spanish adventurers come to America? What was the most important conquest made by the Spanish? To what part of North America was the name Florida applied? Why were the Spanish so anxious to conquer Florida? Through what part of our country did Cabeza de Vaca pass? Why did Fray Marcos give such glowing and incorrect accounts of his discoveries? Through what parts of our country did Coronado pass? Did his explorations lead to any valuable results?

FERDINAND DE SOTO

AND THE SPANISH IN THE SOUTH

Preparations for the conquest of Florida. — Ferdinand de Soto was a bold, ambitious officer who had already made himself famous by the doing of daring deeds in South America. The story of Cabeza de Vaca had led him to believe that there were indeed rich countries abounding in gold in the region known to the Spaniards by the general name of Florida. This region included all of the continent this side of Mexico and the Gulf; and more than one Spanish adventurer was anxious to risk life and fortune in its exploration. De Soto declared that with a few hundred men he could subdue the entire country and conquer for Spain even greater treasures than had been obtained from Mexico. The king was pleased with his boasting, and made him governor of Cuba, with authority to overrun and plunder whatever kingdoms he might discover in the neighboring region of Florida.

On a May morning, in the same year that Coronado was preparing for his tour in search of the Seven Cities, De Soto sailed from Cuba, intent on the conquest of Florida. He had nearly six hundred followers, — gentlemen dressed in doublets of silk, priests in their black

robes, soldiers, mechanics, and serving men. There were also two hundred horses, a drove of hogs to supply pork for the men, and a number of savage bloodhounds to be used in chasing the Indians.

The start. — De Soto and his little army landed on the west coast of Florida at a point somewhere on Tampa Bay. The ships were sent back to Cuba, and the Spaniards began a toilsome march through the forests. From the Indians they had heard vague stories of a land of gold and pearls far to the northeast, and thither they turned their course. They could move but very slowly, for often they were obliged to cut their way through the thick underbrush, to swim deep, sluggish rivers, or to go long distances around impassable swamps. Then also they were obliged to be always on their guard against savage foes; for De Soto was very cruel to the Indians, and those whom he might have won by kindness soon became his bitter enemies.

On the Savannah. — After months of toil the Spaniards came at length to the broad and beautiful river now known as the Savannah. There they discovered an Indian village with pleasant homes, and a people far more civilized than the savage tribes they had hitherto met. The ruler of this village and of the country around it was a

A Spanish soldier

young Indian princess who welcomed De Soto with much show of friendship. She presented him with a necklace of pearls of great value, and commanded that half the houses in the village should be given up to his followers, who should be treated as the honored guests of her people.

This kindness of the Indian princess was repaid by treachery. The Spaniards tore down the houses in search of treasures, and robbed even the graves of the natives in order to find the pearls that had been buried with the dead. And finally, when they left the place, De Soto carried the princess with him as a prisoner. Happily, while passing through a thick wood, she escaped from her guards, and the Spaniards never saw her again.

The terrible march. — The explorers now marched towards the west, seeking always for gold, and plundering and destroying the Indian villages that were in their way. Bloody battles were fought, and thousands of the poor natives were killed or enslaved. The Spaniards lost their provisions, their horses, their arms. Many were ready to abandon the expedition and try to make their way back to the seashore; but De Soto would not listen to them. He had set his heart upon discovering and conquering a rich empire, and he was determined to succeed. And so they traveled onward through the country where now are the states of Georgia, Alabama, and Mississippi. Month after month they toiled through the never ending forest, suffering from hunger and sickness and many privations, but never ceasing their search for gold.

On the banks of the Mississippi.— At length, weary with the long and dreadful march, they came one day to the banks of a river much larger than any they had ever seen before. At the place where they stood it was a mile and a half wide, and the flood of waters which rolled past them was truly wonderful to behold. It was the river which the Indians called Missipi (Mississippi), or the Father of Waters. De Soto had probably heard of it before, for it was not unknown to the Spanish. More than twenty years earlier than this, Pineda, a sailor from Spain, had discovered it and sailed his ship into one of its broad mouths. Afterwards, Cabeza de Vaca and his companions having tried to enter it with their boat were carried far out into the Gulf by the force of its mighty current. De Soto caused a huge wooden cross to be erected upon the bank of the river, and while the priests chanted hymns and offered prayers, his soldiers humbly knelt and thanked God that their lives had been spared amid the thousand perils of the wilderness.

Death of De Soto.— The Spaniards were delayed a month on the eastern side of the Mississippi, for they were obliged to build boats in which to carry themselves and their horses across the broad stream. When at length all were safely over they set out again, still determined upon the finding of gold. Northward they marched, and then westward an unknown distance until the hearts of all began to fail and their tireless leader himself became sick with a deadly fever. Then they returned to the banks of the great river, and there De Soto died. His followers,

fearing lest the Indians should find his body and do it harm, resolved to bury it in the river. They inclosed it in a heavy casket hewn from the trunk of an evergreen oak, and at midnight carried it far out from the shore and silently dropped it into the stream.

Escape of his followers.—Three years had passed since De Soto had first landed on the coast of Florida. Of all the proud company that had followed him then, nearly half had perished in the wilderness. Those who were still alive made haste to escape from the country in which they had found neither gold nor glory, but only suffering and disappointment. In rude boats, which they hewed from the trees by the river, they floated down the Mississippi to its mouth; then following the winding coast westward, they at last arrived at a small Spanish settlement in Mexico. Half dead with hunger and exposure, and clothed in the skins of wild beasts, these men who had started out in fine array, with silk doublets and glittering arms, now fell empty-handed upon the beach, and gave thanks that their lives were still their own.

REVIEW

What induced De Soto to undertake the conquest of Florida? Where is Tampa Bay? Where is the Savannah River? Why did the Spaniards repay the kindness of the natives with cruelty? Through what parts of our country did De Soto march? Who was the first discoverer of the Mississippi? Why did the Spanish claim all the country north of the Gulf of Mexico? What other nation also claimed a large part of the same region? Did De Soto's expedition lead to any good results?

SIR FRANCIS DRAKE

AND THE FIRST ENGLISH VOYAGE ROUND THE WORLD

I. A BOLD YOUNG SAILOR

A sailor boy.—In the south of England, on the shore of the English Channel, there is a famous old sea-port town called Plymouth. Here, about three hundred and fifty years ago, there lived a brave sailor lad whose name was Francis Drake. This boy loved the sea. His first home was the hulk of an old ship that lay on the beach by Plymouth harbor. The first sound that he remembered was that of roaring winds and dashing waves.

He liked to listen to the talk of sailors who had been to distant ports. From them and from others

he heard much about the Spanish ; how strong they were on the sea ; how their ships were all the time sailing back

Spanish ships of war

and forth, carrying the treasures of India and America to Spain; and how they claimed all the countries of the West, and even the Pacific Ocean, as their own. And as he listened, he grew angry with the thought that his own country, England, was so poor and weak, while Spain was so strong and great.

“Some time,” he said, clinching his fists, “I will show those proud Spaniards that the world does not all belong to them.”

And so, as he grew up, Francis Drake’s mind was full of hatred for Spain and everything Spanish. But he was a good sailor, strong and trustworthy; and he had scarcely become a man before he had a ship of his own. For a time he made only short voyages to the ports along the English Channel. Then with his uncle, John Hawkins, who was a great sea captain, he sailed to the west coast of Africa, where he loaded his ship with captive negroes. What would he do with these negroes?

Slaves in America.—In the Spanish settlements in America there was a great demand for slaves. The Spaniards had at first tried to make slaves of the Indians; but these would suffer death rather than submit to be driven by a master, and many thousands of them perished. Then it was found that negroes were better workers and more easy to control; and therefore great numbers of black men were captured in Africa and carried to the West Indies and the Spanish Main, as the north coast of South America was called. The most of these captives were put to work in the mines, and kept there until they died. Their Span-

ish masters found that it was cheaper to buy new slaves than to take care of the old ; hence, as I have said, there was always a demand for more and more negroes.

The first English slave traders.— Francis Drake and Captain Hawkins sailed with their negroes across the

“He tried to capture the Spanish treasure house ”

Atlantic, hoping to sell them to the Spaniards. They were the first Englishmen who had attempted to do this ; for none but Spanish ships were permitted to trade with the Spanish settlements in America. They sailed boldly into a little seaport on the Spanish Main, and made their errand known. The miners and traders

were very anxious to buy the slaves, but they were afraid to break the law by trading with Englishmen.

After much trouble, however, the negroes were sold at a high price, and Drake and Hawkins were delighted with the prospect of going home with the gold and gems they had received. But before they could get out of the harbor they were attacked by the Spaniards. Not being strong enough to resist, they were robbed of all their gains, and were glad enough to escape in their empty ships. They returned to England poorer than when they went away.

This adventure caused Francis Drake to hate Spain and the Spaniards more than before. He made several other voyages to the West Indies and the Spanish Main. At one time he tried to capture the Spanish treasure house near Darien; but just in the moment of victory he was severely wounded, his men were panic-stricken, and he was carried back to his ship. He was obliged to sail away empty-handed.

II. THE FIRST ENGLISHMAN ON THE PACIFIC

Drake sees the Pacific. — On another occasion Drake formed a plan to waylay a company of Spaniards that were carrying gold and silver across the isthmus. While waiting for this company on the highest ridge of the mountains, he one day climbed a tall tree and looked about him. On the south of him, seeming to be almost at his feet, he saw the mighty Pacific, just as Balboa had seen it seventy years before. No other Englishman had ever beheld that wonderful ocean. No ships save those of Spain

had ever sailed upon it. The sight of the vast water, gleaming and sparkling in the sunlight, filled Drake with a great longing to know more about it. What right had Spain to keep it from all the other nations of the world?

And so the brave captain, while still in the tree, knelt among the branches and vowed that he would, some day, sail an English ship on that ocean.

More than one company of treasure carriers fell into the hands of Drake and his men, and so much gold and silver was taken that only a part could be gotten to his ship. The rest had to be left behind.

A bold voyage. — The next year, true to his vow, Drake did sail an English ship on the Pacific. He boldly passed through the Strait of Magellan; and then on board of the vessel which he called the *Golden Hind*, he cruised along the western coast of South America. He plundered the Spanish towns by the shore, and captured several richly laden treasure ships.

At length, when the *Golden Hind* was loaded with as much silver and gold as she could carry, Drake began to ask himself how he should get safely back to England. He could not return by the way he had come, for the Spaniards were now aroused, and Spanish war ships were watching for him by the Strait of Magellan. He therefore sailed northward looking for some passage across or around North America through which he could sail to the Atlantic. But there was none.

California. — Other men would have been in despair; but Francis Drake never thought of failure. He explored

the coast of California, which he called New Albion, and took possession of the country in the name of Queen Elizabeth. In a sheltered bay, not far from where San Francisco now is, he spent several weeks, putting his ship in condition for a long voyage. Then he steered her

“ And made him a knight, then and there ”

straight out into the Pacific. If Spanish vessels could cross that vast ocean, surely the *Golden Hind* could do as much.

Round the world. — And so, westward and ever westward, the brave little vessel sailed. She passed through wastes of unknown waters and among strange, savage islands, just as Magellan's ship had done, sixty years before. She sailed through the seas south of the Philip-

piners, then cruised among the Spice Islands and boldly entered the Indian Ocean. Finally she passed round the Cape of Good Hope and sped swiftly and safely home.

As Magellan's ship, the *Victoria*, had been the first of all vessels to sail round the world, so Drake's *Golden Hind* was the first English ship to perform that hazardous feat. The voyage was indeed a wonderful one, and soon all England was talking about it.

Drake knighted. — Queen Elizabeth was so well pleased that she visited Drake on his ship in Plymouth harbor, and made him a knight, then and there. From that day he was Sir Francis Drake, and everybody honored him as the Englishman who had done most to humble the pride of Spain. The *Golden Hind* was kept with care for many years in memory of her wonderful voyage. When, at last, her hull began to decay, a chair was made from some of the timber; and that chair may still be seen in the university at Oxford.

Chair made from the
"Golden Hind"

Other exploits. — This was not the end of Drake's exploits. Five years later, with a great fleet of war ships, he made another expedition against the Spanish in the West Indies. He attacked St. Augustine, a Spanish settlement in Florida, and sailed up our Atlantic coast as far as to Roanoke Island in North Carolina. Afterwards,

with a still stronger fleet, he attacked the Spaniards in their own seaport of Cadiz and destroyed many of their vessels. His last expedition was against Porto Bello on the Spanish Main; but, before reaching the end of the voyage, he died on shipboard and was buried at sea.

Why Drake is remembered. — Sir Francis Drake is honored in his own country because he was the first to make England's power felt on the sea. He is remembered by Americans because he was one of the first to turn the attention of the English people toward the great continent which John Cabot had discovered for them nearly a hundred years before.

REVIEW

Why were the Spanish unwilling that the ships of any other nation should sail on the Pacific? How did they carry the goods and treasures of India to Spain? Why did Francis Drake hate the Spanish? Why did the Spaniards in America wish so many negro slaves? Why did they not make slaves of the Indians? What was the name of the first English ship that ever sailed on the Pacific? What part of North America was discovered by Drake? Why did he not return to England by way of the Strait of Magellan? In what way were Drake's exploits of assistance to England? In what way were they of importance to our own country?

SIR WALTER RALEIGH AND THE FIRST ENGLISH COLONISTS

I. THE QUEEN'S FAVORITE

A courtly act. — In England, in the days of Queen Elizabeth, there lived a noble young man whose name was Walter Raleigh. He was so brave and wise, and his manners were so courtly and kind, that he drew many friends to him and became the favorite of the rich and powerful who gathered at the court of the queen.

One day as he was crossing a street in London, he saw the queen with her train of lords and ladies going down to the water side for a sail on the river. There had
1580 been a rain that morning, and across the queen's pathway there was an ugly puddle of mud too wide for her to step over. What was to be done?

While the queen hesitated, and her puzzled attendants were looking one at another, Walter Raleigh came up. He saw at a glance what the trouble was, and he acted at once. He wore a beautiful cloak of crimson velvet trimmed with gold and costly lace. This he took from his shoulders and spread upon the mud, so that the queen could step upon it and pass over without soiling her shoes.

Raleigh a knight. — The act was done so gracefully that the queen was much pleased. In a few days she sent for young Raleigh, and when he had come to her palace she bade him kneel before her. Then with the flat of his sword she struck him gently three times upon the shoulders and said, “ Rise, Sir Walter Raleigh. It is thus

“ This he took from his shoulders and spread upon the mud ”

that we make thee a knight.” And from that time, Sir Walter Raleigh was in high favor at the court of Elizabeth.

Sir Humphrey Gilbert. — Just then there was much talk about the new continent of America and about the voyages which Sir Francis Drake had made to the Spanish Main and the Pacific. Many Englishmen were beginning

to wonder whether the wild, unexplored land across the sea might not yet bring as much wealth to England as Mexico and the Indies had brought to Spain.

“Why not send out a colony, and make an English settlement in America?” asked Sir Humphrey Gilbert.

This Sir Humphrey was a half-brother of Sir Walter Raleigh, and he too had great influence with the queen. And so, about the time that Drake returned from his famous voyage round the world, permission was obtained from Elizabeth to found a colony in America. It was to be somewhere north of the Spanish province of Florida, and Sir Humphrey Gilbert was to be its governor.

The first attempt at settlement.—Four ships were fitted out, and a number of men volunteered to go on them as colonists. Among these were carpenters and blacksmiths and wheelwrights and gardeners, and others intent on making themselves new homes in the great unknown land.

The little fleet sailed, with Sir Humphrey as its captain. But the sea was stormy, and the weather was cold; and when the voyagers came in sight of land it was the bleak and rocky coast of Newfoundland. One of the ships turned back, and one was wrecked; and when the others would have gone on to the mainland, a dreadful tempest drove them hither and thither, and all on board begged to be taken back to England.

And so Sir Humphrey unwillingly gave orders to turn about and sail for home. The sea was full of huge icebergs floating down from the frozen North, the wind

blew fearfully, and the waves seemed mountain high. "Do not fear," said Sir Humphrey to his companions; "heaven is as near on the sea as on the land." And that night his ship went down.

II. VIRGINIA

Discovery of Carolina. — Very great was Sir Walter Raleigh's grief and disappointment; but he did not despair. The next year he sent out other ships to sail along the Atlantic coast and find the best place for a colony. These ships took a more southerly course; for their masters were unwilling to brave the stormy, icy seas in which Sir Humphrey had been overwhelmed.

At length they sighted the long, low coast of Carolina, and anchored somewhere in the shallow bay now called Albemarle Sound. The crews went ashore. They thought the land was the most beautiful in the world. In the woods were giant trees of kinds unknown in England. There was great abundance of grapes and plums and other wild fruit, all to be had for the gathering. Game was plentiful, and the rivers and inlets were full of fish. The Indians were friendly; and, what seemed the best of all, they told of a country not far away where gold and precious stones could be picked up without labor or trouble.

Virginia. — The ships did not stay long in that charming place. The captains were eager to carry the news back to England. When they told Sir Walter of the

pleasant country they had found, and showed him the furs and other things they had brought home, he too was delighted. "I will plant an English colony there," he said; and he named the whole country Virginia, in honor of Elizabeth the virgin queen.

The second attempt at settlement. — Soon after this, Sir Walter sent out other ships with a number of men to form a settlement as he had planned. But these men did not find the country so beautiful; and when the ships left them and returned to England, they grew restless and discontented.

They were rude to the Indians, and caused them to become unfriendly. They would not work, but spent their time wandering here and there in search of gold. At last their food was all gone; the time for wild fruits was past; they could find no game in the forest; they could take no fish in the streams. They would have perished with hunger had not Sir Francis Drake chanced to sail along the coast with an English fleet. They told him of their distress, and begged him to carry them back to England; and, as there was plenty of room on his ships, he consented to do so.

Roots and leaves. — No doubt Sir Walter Raleigh was vexed and disappointed when his colonists returned with doleful tales of the sufferings they had endured in Virginia. They had found no gold nor precious stones, and they brought only some roots and leaves which they told Raleigh were held in high esteem by the Indians. The roots were potatoes, the leaves were tobacco — both then

first made known to Englishmen. Very worthless they must have seemed; and yet such roots and such leaves afterwards added more to the wealth of the world than all the gold in the treasure houses of Spain.

III. THE LOST COLONY

The third attempt at settlement. — In spite of all discouragements, Raleigh persevered in his plan of found-

ing a settlement in Virginia.

Three ships were made ready, and a hundred and fifty colonists were sent over, with Captain John White as their governor. Some of the men took their wives with them, and all were happy with the thought of making themselves homes in the strange new land beyond the sea. They landed on Roanoke Island, and laid out a town which they named the City of Raleigh. They put up a few little houses of logs and bark, and for a time were very busy and contented. Thus, on

“She was named Virginia Dare”

that lonely shore, with the untamed wilderness on every side, the first English homes in our country were begun.

Virginia Dare.— In one of these homes, only a few weeks after the landing, a baby girl was born. She was the granddaughter of Captain White, and she was named Virginia Dare. We remember her because she was the first English child born in America.

The colony disappears.— Before the end of summer, Captain White felt that he must return to England to get

“The only sign or message that was left behind”

some needed supplies for his colony. He sailed away with his ships, and the settlers on Roanoke Island were left alone. A great war was going on between England and Spain, and Spanish ships were patrolling the sea.

Three years passed before Captain White dared return to America; and then very sad was his disappointment.

He found the island of Roanoke deserted. The City of Raleigh was overgrown with weeds and shrubs. The houses were in ruins. The colony had disappeared. What became of the men and women and of little Virginia Dare, nobody knows. The only sign or message that was left behind was the word "Croatan," carved upon a tree. Did this mean that they had gone to a place of that name? Captain White sought for them far and near, but no word or token of them could he discover.

The search for the lost colony. — Sir Walter Raleigh would never believe that the colonists were dead, and he sent out more than one ship to sail up and down the coast in the hope of finding them. But he did not try to establish another settlement in Virginia. He had spent a large part of his fortune, and accomplished nothing. And yet he never ceased to believe that Virginia would soon become the home of a busy and happy people.

REVIEW

Of what country was Elizabeth the queen? When? What kind of man was Sir Walter Raleigh? Why did he wish to send an English colony to America? Why did the expedition of Sir Humphrey Gilbert prove a failure? To what part of the coast of North America did Sir Walter next turn his attention? Did not all this coast belong to Spain? Why was it claimed by England? What name did Raleigh give to all the eastern coast of our country? Why did his first colony fail? What valuable things did the colonists carry back to England? Why did the second colony fail? Why did Raleigh continue to seek for the lost colonists?

POCAHONTAS.

AND THE SETTLEMENT OF VIRGINIA

I. AN INDIAN PRINCESS

A child of the forest. — Three hundred years ago, in that part of our country which we call Virginia, there lived a little Indian girl whose father was the head war-chief of a tribe called Powhatans. He was known as the Powhatan or “king.” The little girl was so lively and so fond of romping and playing that her father gave her the pet name of Pocahontas, which in his language meant about the same as “tom-boy.” And that is the name by which she has always been known.

Pocahontas, being the daughter of a king, was therefore a princess. Her face was dark but handsome. Her hair was straight and very black. Her eyes were large and bright. Her body was lithe and slender. She was a true child of the forest.

“A child of the forest”

Her dress was made for the most part of the skins of wild animals, prettily ornamented with beads and feathers and fringes. In her ears she wore rings of copper, and on one wrist she had a bracelet of the same metal. For shoes she had soft moccasins of deerskin, adorned with sweet-smelling grasses and the quills of porcupines.

The mother of the little princess was dressed much in the same way. But her face and arms were tattooed with strange figures of beasts and birds and snakes; and she wore over her shoulders a mantle of deerskin embroidered with feathers and brightly colored grasses.

Her father and his men were also clad in skins. On their heads they wore eagles' feathers.

“The houses were oddly built”

Some wore broad rings of copper in their ears. Others had, instead, small green and yellow snakes that twined around their necks and were used as pets. The Indian warriors smeared their faces and shoulders with red paint; and he who made himself the most hideous was usually the most admired.

The home of Pocahontas was a small village near the stream now called York River. The houses in this village were very oddly built of poles and the branches of trees. These were bent and fastened together, and covered over with mats and broad strips of bark. Some of the houses were more than a

hundred feet long, and large enough for several families. In the middle of each there was a fireplace on the ground; and over the fireplace was a large hole in the roof for the smoke to pass through.

There was not much furniture in a house: mats, baskets, earthen pots, a stone mortar for pounding corn — and that was all. The floor was covered with twigs and leaves and sweet grass. At night the inmates slept around the fire, lying on mats and skins that were spread on soft bundles of twigs.

How the Indians worked. — The men spent most of their time in fishing and hunting, or in going to war and fighting. All the hard work was done by the women and children. They made the mats and the clothing. They planted the corn and gathered it. They pounded it in mortars, and made bread of the meal. They carried wood from the forest; they built the fires; they cooked the food.

All around the village there were cleared fields where the women planted their corn. Here and there in the forest were other cleared places in which were the homes of one or more families of Indians. Where the city of Richmond now stands there was a village of ten or a dozen houses pleasantly built on a hill. This village, as well as the great river beside it, was called by the same name as the tribe, Powhatan.

Fishing. — Pocahontas was her father's favorite child, and therefore she had her own way about many things. No doubt she was sometimes allowed to go fishing with

her uncle or cousins. They went in a clumsy boat that had been made from the trunk of a tree by burning one side of it out until it was shaped like a trough. Some of these boats were forty or fifty feet long. The men

"A clumsy boat made from the trunk of a tree"

fished with nets or with hooks. The nets were made of strong cords which the women had twisted from the inner bark of trees or from slender blades of grass. The hooks were made of small crooked bones, smoothed and sharpened until they served their purpose very well.

The fishermen never failed to carry their bows and

arrows with them. They were always on the lookout for squirrels in the trees, or for wild turkeys among the underwoods by the river. They kept a close watch for enemies, too; for they never knew when some skulking fellow from an unfriendly tribe would be lying in wait to do them harm.

How time passed. — March and April were the great fishing months. In May and June the women planted the fields, and there were many squirrels in the woods. In July and August, the children gathered wild berries, and some of the people hunted for crabs and oysters and turtles in the river and bay. In September and October the corn was ripe, and everybody had plenty to eat. But Indians are great wasters, and when winter came it often happened that there was very little to eat in the village. Then the young men went out hunting; and, although they found plenty for themselves, they were not always ready to bring home game to the hungry women and children.

II. THE COMING OF THE WHITE MEN

The white strangers.— When Pocahontas was about ten years old, an alarming occurrence took place. Some of the men who had been hunting near the great river of the Powhatans reported that they had seen three huge boats with white wings coming up the stream. These vessels moved as if they were alive, for no paddles or oars were used to push them forward. When they reached a point about fifteen miles from the village, they stopped; their wings were folded; and then the men who were on board went ashore.

Very strange men they seemed to the simple Indians. Their faces were pale, they wore long beards, they were dressed in odd-looking clothes. Instead of bows and arrows, they carried clumsy pieces of wood and metal from which they could at will send out flashes of lightning and dreadful sounds like thunder.

The Indians alarmed. — “Ah,” said one of the older warriors, “now we shall indeed have to be on our guard. We have all heard about these white men, how treacherous and savage they are. Only a few years ago one of their great boats made its way up the Chesapeake. It came to land, and many of our people went to see and welcome the strangers. They gave the white men food, and were kind to them; and how were they repaid?”

“Some young men were enticed on board of the vessel. They were kept there against their will, and carried away, no one knows whither. We have heard, too, how children and women have been stolen, and how our people in many places have been robbed and abused by the men with pale faces. Would it not be better to drive them away and not allow them to get a foothold in our country?”

“Let us wait,” said others, and among them the chief Powhatan; “let us not be hasty. And while we are kind to these strangers, we must not trust them too far.”

III. JAMESTOWN

Ships from England. — The three white-winged boats which had made so great stir among the Indians, were ships from England. On board of them were one hun-

dred and five men who had come to Virginia to form a settlement. They had been sent thither by a company of London merchants, and they hoped to find much gold and many precious stones in the new country.

It was spring; and as they sailed up the broad river of the Powhatans, they were delighted with everything they saw. The day was warm and clear. The air ¹⁶⁰⁷ was fragrant with the odor of wild flowers. It seemed as though both earth and sky were welcoming the strangers to their new home.

The new settlement. — They called the river the James, in honor of the English king. And the place which they chose for their settlement they called Jamestown. When they landed they set to work to build rude shelters of poles and bark and brush in which to live. They also put up a little fort in which to protect themselves from the Indians, and they surrounded it with a high fence, or palisade, of logs set upright in the ground.

Distress of the settlers. — As soon as the fort was finished the ships sailed back to England, leaving the settlers to take care of themselves. Many of these were not used to work. They had expected to do nothing but pick up gold and live at their ease, and they did not know how to provide themselves with food. Hence they had a very sorry time of it for several months. They had nothing to eat but a little boiled barley each day, and now and then a crab or a fish which they caught in the river. Many of them grew sick and died; and to make matters still worse, those who

were well were always quarreling among themselves and lamenting that they were not back in England. Some Indians of an unknown tribe gave them a great deal of trouble, and sometimes shot their stone-tipped

“They had a very sorry time of it”

arrows into the town. But the Powhatan Indians were more friendly. They often visited Jamestown, and sometimes carried green corn and other food to the hungry settlers.

John Smith. — One day the little princess, Pocahontas, went with some of her father's people to visit the white strangers at Jamestown. The Englishmen were very kind and took great pains to amuse her. She noticed that one of the men, whose name was John Smith, seemed to be the leader of the company. Although he was not their gov-

ernor, the men listened to what he said and generally followed his advice. His face was bearded, his eyes were keen and sparkling, his whole manner was that of one who was both brave and wise. Pocahontas admired him very much. It was he who did the trading with the Indians. He bought their corn, he dealt justly with them, and he would not permit the idle men of the colony to abuse them.

IV. CAPTIVITY OF JOHN SMITH

Exciting News.—A short time after this, exciting news was brought to the village where Pocahontas lived. The Englishman, Captain John Smith, had been taken captive. He was a prisoner in the hands of a band of Indians led by an uncle of Pocahontas.

It had come about in this way. Captain Smith had gone out with some men in a boat to explore the country. After rowing some distance up one of the smaller rivers, he had left the boat and had gone on with two white men and two Indians in a canoe. Near a great marsh now called White Oak Swamp they landed. There the Indians attacked them,—for their chief, the uncle of Pocahontas, had never felt friendly toward the English. Smith's two companions were killed, and he himself was taken prisoner. The warriors wanted to put him to death. They tied him to a tree, and made ready to torture him by shooting and burning.

But Smith was not afraid. He held up a round ivory pocket compass which he was in the habit of carrying.

He showed the Indians how the needle always pointed to the north. He motioned toward the sun and the sky. With strange gestures he spoke of the moon and the stars. The chief began to believe that the white man was a wizard. He bade his warriors untie him and do him no harm. There should be no haste in putting him to death.

For several days thereafter Smith was kept a close prisoner. The uncle of Pocahontas took him from village to village and showed him to all the warriors of the tribe.

“Is this the white man who came here a few years ago and carried away some of our young men?” he asked.

“No,” was the answer, “this is not the man. The white chief who did that wicked thing was tall, very tall; but this man is short and heavy set.”

Before the great Powhatan. — Then the warriors carried their captive to the village where Pocahontas lived, and asked her father what should be done with him.

The chief Powhatan received Smith in his great house. He was sitting on a bench by the fireplace, with a robe of raccoon skins thrown over his shoulders. Near him was his little daughter, eager to see the white man whom she had so much admired when in Jamestown. Around him stood two rows of grim warriors, and behind them were as many women with their faces painted red and their necks encircled with chains of white beads.

When Smith was led into the room all the warriors and women shouted. One of the women brought him water to wash his hands, and another gave him a bunch

of feathers, instead of a towel, to dry them. Then they made a feast for him, giving him all kinds of choice food.

While he was eating, the chiefs and warriors held a grand council to decide what was to be done with him.

Saved by Pocahontas. —

At length the council was ended and two great stones were carried in and placed before the chief Powhatan. Several warriors then took hold of Smith and dragged him across the room. They laid his head on the stones, and with upraised clubs stood ready to beat out his brains. But, just as the great chief was about to speak the word, the princess Pocahontas threw herself down by the captive and laid her head upon his to save him from death.

Her father's stern face grew kind. He could not refuse anything that his little daughter asked. He bade his warriors put away their clubs. He told Smith that he would spare his life.

The Adoption. — Two days later Smith was adopted into the tribe. It was done in this way. He was taken to a large house in the midst of the woods, and left alone on a mat by the fire. For a little while there was scarcely a sound to be heard. Then suddenly the chief Powhatan

The chief Powhatan

with a great band of warriors, all painted in the most hideous fashion, burst into the house with shouts and yells too frightful to describe. But when the savages saw that Smith was not afraid, they changed their tone and told him that they would forever after be his friends and brothers. The chief Powhatan promised to give him a great tract

“He was taken to a large house in the midst of the woods”

of land on condition that he would go to Jamestown and send him two big guns and a grindstone.

Return to Jamestown.—Twelve guides returned to Jamestown with Smith, and they were instructed to bring back the presents. At the fort Smith showed them two small cannon and a millstone. The savages tried to carry them but found them too heavy. Then Smith loaded one

of the guns with small stones and discharged it into a tree that was coated with ice — for it was a cold day and there was sleet. The great noise that was made and the rattling of the ice from the tree so frightened the Indians that they ran into the woods and could scarcely be persuaded to return. In the end, however, Smith gave them a number of trinkets and toys for the women and children — and doubtless a fine present for Pocahontas — and they went gladly back to their village.

On that same day a ship arrived from England bringing many new settlers and a plentiful supply of food. Things began to have a more hopeful look ; and when the ship returned to England it carried a glowing account of the prosperity of the colony in Virginia.

V. A NEW GOVERNOR

The friend of the Englishmen. — Pocahontas often visited Jamestown, and she became known as the friend of the Englishmen. When they were in need of food she contrived to have corn carried to them. When the Indians grew restless, and threatened to destroy the little settlement, she sent warnings to Smith to be on his guard.

Smith the president. — After a while Smith was chosen to be the president of the colony. He managed so wisely and well that Jamestown was soon an orderly and prosperous place. Most of the men went to work with a will. They cleared ground for gardens and farms, and planted corn and garden vegetables. But in spite of all this there were still times of great scarcity and suffering. The

Indians could not be depended upon. The only one who never failed the colonists was Pocahontas.

Lord Delaware.—The London merchants who had sent this colony to Virginia were much disappointed because no

The beginnings of Virginia

gold had been found in that country. They had been at great expense in establishing the settlement and they did not believe that Captain Smith was managing things very well. They therefore asked and obtained from the king some new privileges for their colony, and Lord Delaware was sent out to be governor of Virginia.

Smith returns to England.—About this time Smith met with a sad accident.

Some powder exploded near him, and he was badly burned. His work in Virginia was finished, and as a ship was about to sail for England he embarked in it and returned home. Pocahontas was much grieved when she found that he had gone. But she still remained firmly attached to the English.

Hard times.—For several years after Smith's departure, the colony had much trouble. The settlers mistreated the Indians, and the Indians became very unfriendly. Even the chief Powhatan began to plan how to destroy

the English. His people would sell no more corn to them. There was but little food in Jamestown. At times the settlers were in great distress, and many died of hunger. Some who ventured too far from the town were waylaid and killed by Indians. Some of the boldest and roughest seized a vessel that was in the river and sailed away to become pirates. Had not help come from England, the colony would have perished.

I. THE LADY REBECCA

A treacherous act. — Pocahontas was now grown up to womanhood. By pleading with her father, and by giving timely warning to the settlers, she had saved the colony from destruction. Some of the English thought that if they could keep her with them as a prisoner, her father and his warriors would not dare to do them harm. So they persuaded an old chief to betray her into their hands. They promised to give him a copper kettle if he would entice her on board of a ship that was moored in the river.

The Lady Rebecca
(As she appeared in England)

The old chief wanted the kettle very much. He would do anything to get it. So he and his wife persuaded Pocahontas to go with them to look at something on the ship. Then the captain refused to let her go on shore again. Although the English were still kind to Pocahontas they would not let her go back to her people. They kept

her as a prisoner for a whole year, and during that time her father did not dare to harm them.

A wedding. — At length an English gentleman, whose name was John Rolfe, fell in love with Pocahontas and wished to make her his wife. The chief Powhatan gave his

“There was a great wedding at Jamestown”

consent to the marriage, and there was a great wedding at Jamestown. Pocahontas was baptized at the little English church, and was given a new name, Rebecca. She was very happy with her English husband. The white people and red people were once more at peace and the colony prospered.

In England. — Two years later, John Rolfe and his Indian wife went to England, taking with them their baby boy. The Lady Rebecca, as Pocahontas was called, had readily learned the ways of the English, and now she appeared as a gentle and well-bred lady. She was honored as a princess, and was kindly received even in the palace of the king. One day to her great surprise she met her old acquaintance, John Smith. "Ah, my good friend," she said, "they told me in Virginia that you were dead." And she insisted that he should permit her, after the Indian fashion, to call him her father.

Just as she was about to return to Virginia she was taken ill, and in a few days she died. Her little boy remained in England, where he was educated and grew up to be a fine gentleman. Her father, the chief Powhatan, did not live long after her death. The colony of Virginia grew rapidly and became much larger and stronger. But the Indians ceased to be friendly, and there was much trouble and bloodshed before the English were altogether safe and happy in their new homes.

REVIEW

Describe how the Indians of Virginia lived. Why did they look upon the white men with suspicion? How many ships and how many men came first to the James River to form a settlement? Who was the leading man in this company? What did most of the men expect to find in Virginia? What services did Pocahontas perform for the colony? Why did the English wish to keep her as a prisoner? Why was a new governor sent out to Virginia? Why was not the colony more prosperous at first?

HENRY HUDSON

AND THE DUTCH SETTLEMENT OF NEW YORK.

I. SEEKING NEW ROUTES TO THE PACIFIC

Henry Hudson was born in London at about the time that Drake was making his famous voyage round the world. The first talk that he heard, after he was old enough to understand, was about ships and merchandise and the wealth of the Indies. For his father and grandfather and uncles and cousins were engaged in trade with foreign countries, and the earnest wish of every London merchant was that a way might be opened for English ships to reach the Far East.

It was the custom for the sons of these merchants to learn not only about the buying and selling of goods but also about the sailing and management of ships; and so Henry Hudson, when yet a mere lad, was sent to sea. I think that he must have proved to be a better sailor than merchant, for nearly all his life thereafter, so far as we know, was spent on the water.

The trade with India. — At that time Spain and Portugal controlled all the trade with India. Spain guarded the only approaches to the Pacific Ocean, and Portugal claimed that her ships alone had the right to sail

around the Cape of Good Hope. The other nations of Europe could not trade with the Far East, because all the known routes thither were closed against them. They were therefore very anxious to discover some new passage-way into the Pacific.

The shortest way to India. — French ships sailed up the St. Lawrence River with the vain hope that through it they might reach the western ocean. English ships explored the coast far to the northward, to see if they might not get around the continent in that way. Then some one said, “The shortest line from England to China is one drawn right over the North Pole.” And by looking at a globe you will see that he was not far from right.

And so a company of merchants, among whom were kinsmen of Henry Hudson, resolved to send out a ship to see whether a northern route to India might not be discovered. They fitted up an old vessel, called the *Hopewell*, and chose Hudson to be its captain.

Trying to find a northern passage. — The course of the *Hopewell* was set toward the north star. Day after day she sailed through wintry seas, until at last great fields of ice blocked her way and hemmed her in on every side. No other ship had ever gone so far north; but the North Pole was still hundreds and hundreds of miles beyond. When Hudson saw that there was no way to pass through or around the mighty barriers of ice, he sadly gave up the enterprise and sailed back to England.

“There is yet one other route to be tried,” he said,

“and that is to the northeast through the great sea that lies north of Europe and Asia.”

Trying to find a northeast passage. — The next year, therefore, the merchants sent Hudson out to try this route. He sailed around the capes of Norway and to the frozen

“Again vast fields of ice stretched everywhere before him”

island of Spitzbergen, which no other Englishman had seen. But again vast fields of ice stretched everywhere before him, threatening to crush his little vessel, and he was forced to return. He was not ready, however, to believe that his scheme was impossible. “By sailing in a slightly different direction,” he said, “I think I may yet succeed.”

II. THE VOYAGE OF THE *HALF MOON*

In the service of the Dutch East India Company. — Just at that time some men in Holland were forming a trading association, known as the Dutch East India Company — a strong and rich company which exists to this very day. They were anxious and determined to carry on trade with India and China; and they, too, wished to discover some undisputed passageway by water to those countries. They had heard of Hudson's daring voyages to the north, and they had great confidence in him as a sea captain. So they sent for him and employed him to make one more effort to find a northeast route to the Pacific. They supplied him with a little ship called the *Half Moon*, and in this he set sail with a crew of sixteen men.

But this time the northern seas seemed even fuller of ice than before. The sailors were discontented and unruly; they refused to obey their captain and demanded that he should turn back.

A change of plan. — Hudson was unwilling to return to Holland and report that he had failed. He believed that in North America there was some unknown strait or sea stretching across the continent, and leading directly into the Pacific; and he felt that he would be serving his employers well if he could discover such a passageway. He therefore caused the *Half Moon's* course to be changed, and sailed westward across the Atlantic.

The voyage was a pleasant one, and by and by the low coast of Maryland was sighted. Hudson then sailed north-

ward, looking into every bay and inlet to see whether it did not open into some passage across the continent. At length, one fine day in September, he entered the land-locked harbor now known as New York Bay, and found the noble river which has since been called by his name.

“Food was served him in a red wooden bowl”

Up the Hudson River. — As the *Half Moon* floated slowly past the place where the city of New York now stands, a few Indians stood among the trees on shore and watched the motions of her crew. As she passed on up the river, other savages came out in canoes to meet her. They were very friendly, and Hudson and

his men traded them knives and trinkets for corn and pumpkins and tobacco. At one place Hudson went on shore and visited a chief in his own bark house. A mat was spread upon the ground for him to sit upon, and food was served him in a red wooden bowl. Most of the Indians seemed very kind, and Hudson and his crew were delighted with everything they saw.

End of the voyage. — The *Half Moon* sailed almost as far as to the place where Albany now stands. And then, as the river grew shallow and the water was all fresh, Hudson was convinced that there was no passage that way to the Pacific. So he turned about and sailed for home. He had failed to do that which the Dutch East India Company had sent him out to do; but he could carry back good news of the discovery of a great river and a beautiful land in America.

In Hudson Bay. — A few years after this, Hudson made another voyage to America. He had command of an English ship, and his object was still to find a new route to the Pacific. He sailed far to the north along the bleak coasts of Labrador, and then entered the great bay that is now called by his name. There his ship was frozen fast in the ice and compelled to remain all winter.

Very great were his sufferings and those of his crew. Their food failed. Hudson divided his last morsel with his men. But when spring opened and the ship was once more free the ungrateful wretches rebelled against him. They put him and five or six others into an open boat, and sent them adrift to perish in the ice-cold waters.

III. NEW NETHERLAND

A Dutch colony. — At that time the greatest traders in the world were the merchants of Holland. They were much pleased with the accounts which the crew of the *Half Moon* carried home concerning the river of Hudson. They called all the country New Netherland, and claimed that since it had been discovered by one of their vessels,

“The Indians were quite willing to sell the island”

it therefore belonged to Holland. Soon they sent over other ships to trade with the Indians; and, five years later, a little trading house was built at the lower end of Manhattan Island. The Indians were quite willing to sell the island; and when the traders offered them trinkets to the value of twenty-four dollars they gladly gave up all their claims to the land where now is the great city of New York.

Trading posts and settlements were established at various places along the river and on Long Island. The

whole region between the Connecticut River and the Delaware was included in the Dutch colony of New Netherland. It embraced not only what is now the state of New York, but also all of New Jersey and a part of Connecticut.

New Amsterdam. — Around the trading post on Manhattan Island a little village sprang up. A windmill was built for grinding corn; and there was a brickyard, besides a blacksmith's shop and a brewery. There was also a little Dutch church; and towering above all was the trading house and fort.

The people called the village New Amsterdam in honor of the chief city of Holland. They built themselves quaint houses, partly of wood and partly of black and yellow bricks. The houses had odd-looking gable roofs, and before the doors were little square "stoops," or platforms, just as in Holland. Inside, were fireplaces where huge logs of wood were burned in the winter time, — for in those days there were no stoves, and people had not learned to use coal. There were no carpets, but the floors were scoured white and covered every day with fresh, clean sand. Around each house

New Netherland

there was a garden of vegetables and flowers, and near it was an orchard where apples and cherries grew. North of the village, where now are tall office buildings and wholesale stores, there were cornfields and a broad pasture where the cows of the villagers grazed.

“The people sauntered out to the little park called Bowling Green”

How the people lived. — The Dutch burghers, as the villagers were called, led a contented, easy life. They never seemed to be in a hurry, and were seldom much worried, except when the Indians threatened to do them harm. After their day's work was done the people of New Amsterdam sauntered out to the little park called Bowling Green — the men to smoke, the women to talk, and the boys and girls to play.

At Christmas all had a jolly time. There were Christmas trees for the children, and the tables were loaded with sweet-cakes and plum puddings and jellies, such as only the Dutch mothers knew how to make. And then at New Year's all the houses were open, and everybody called on everybody else, and the year was begun with good wishes and kind greetings.

The Dutch governors. — In only one thing did the people of New Netherland seem to be very unfortunate, and that was in the governors who were sent over from Holland to rule them. One after another, there were four of these governors, and each seemed to be in some respects worse than the one that went before him.

Claimed by the English. — At last, about fifty years after the first settlement of New Netherland, some English ships sailed into the harbor at the mouth of the Hudson River. They had been sent by Charles II., the king of England, to demand by what right the Dutch had taken possession of that region. For did not the whole country belong to England by right of the discoveries which John Cabot had made nearly two hundred years before? The Dutch could only reply by saying that they held it by reason of Henry Hudson's discovery; and, to the English, that was no reason at all.

End of Dutch rule. — The commander of the ships sent a letter to Peter Stuyvesant, who was the governor at that time, telling him to surrender New Amsterdam and all the neighboring country to the English, who were the true owners. The governor stormed and scolded, and declared

that he would never surrender. But the people had had enough of Dutch governors, and they believed that they would fare better and be happier under English rule. And so Stuyvesant was obliged to yield; his soldiers marched out of the fort, and the English soldiers marched

“The governor stormed and scolded”

in; and he, himself, gave up his place to an English governor.

New York. — All the country about the Hudson River — in fact the whole region hitherto claimed by the Dutch, became an English province, and was given by the king to his brother, the Duke of York. The town on Manhat-

tan Island was no longer called New Amsterdam, but New York; and the same name was given to the country in the valley of the Hudson and its tributaries.

New York in Dutch times

REVIEW

Why were England and other nations so anxious to discover some new route to the Pacific Ocean? In what directions and to what places were ships sent in order to search for some such route? Why was Henry Hudson well qualified to lead expeditions for this purpose? By what great trading company was he employed? Where is the river that is called by his name? Where is Manhattan Island? For what purpose was the first settlement made on Manhattan Island? What name was given to the settlement? What name was given to the country on both sides of the Hudson? Why did the English take possession of the country? What name did they give to the region about the Hudson River?

WILLIAM BREWSTER

AND THE PILGRIMS OF NEW ENGLAND

I. THE SEPARATISTS

William Brewster. — In the eastern part of England, on the old road from London to Scotland, there is a little village called Scrooby. Here, three hundred years ago, there lived a man whose name was William Brewster. He was the master of the post — or, as we should say, the postmaster. He did not have much mail to handle, for there were no newspapers at that time, and people did not write many letters. His chief duty was to provide travelers with horses and guides to conduct them to the next post; and he kept an inn where strangers were lodged and entertained. The government paid him a salary of about two shillings a day, and his inn was in the great manor house of the archbishop of York.

William Brewster was a man of importance in his neighborhood. He had studied at Cambridge University and had afterwards spent two years in Holland with one of the queen's officers. He was strong and brave and not afraid to speak his opinion. Many of the people in and about Scrooby looked up to him as their leader.

The Separatists. — Now, at that time the king of England wished to make everybody in his kingdom belong to the English Church, of which he was the head. But William Brewster said there were some things taught in that church of which he did not approve, and he wished to worship God in the way which

his conscience told him was right. Several of his neighbors were of the same opinion; and so they met every Sunday in the large hall of the manor house, and formed a little church of their own. Their pastor was a goodly man whose name was John Robinson, and they chose William Brewster to be their ruling elder. They were called Separatists,

“He kept an inn where strangers were lodged and entertained”

tists, because they had separated from the English Church.

Persecution. — When it became known that the Separatists were holding meetings in the archbishop’s manor house, the king’s officers took steps at once to punish them. Brewster was put out of his office as post-

master. His inn was taken from him, and he was sentenced to pay a heavy fine. Others of the Separatists were driven from their homes; some were beaten, and some were put in prison. Brewster would not pay his fine; and when the officers came to arrest him he could not be found. But from his hiding place he was doing all that he could to help his friends. Many of them were houseless and homeless, and there seemed to be no place in England where they could be safe from their enemies.

Only one place of safety. — In all the world, at that time, there was but one country in which men were free to worship God as they chose. That country was Holland. William Brewster remembered what he had seen there during his visit several years before. “It is the only place,” he said, “in which we can escape from persecution.”

The Separatists were anxious to go there; but every seaport in England was shut against them. What should they do? They could not go, they could not stay.

Escape into Holland. — At length a Dutch sea captain offered to take them on board of his vessel at a lonely place far from any town. As many of the men as could get into a small rowboat were taken out to the ship, while the women and children and some others waited on shore. But hardly had the men reached the vessel, when a great mob of country people came rushing to the beach, and with clubs and stones attacked the helpless waiting ones. The Dutch captain hoisted sails and made all speed to Holland. Those who were left behind were beaten and driven from town to town and denied even the

shelter of a jail. The story of their sufferings soon became known in other parts of England. It touched the hearts of many, and even their enemies began to feel more kindly toward them. And so, at length, they were permitted to sail for Holland. They went, a few at a time and in different vessels. At Amsterdam they were soon rejoined by their elder, William Brewster.

Settle at Leyden. — A few months later most of the company found homes at Leyden, not far from Amsterdam. They supported themselves by working in the mills and factories, and as soon as they were able, they built themselves a little church.

II. IN HOLLAND

The Pilgrims. — William Brewster had lost almost everything that he possessed. For a time he was obliged to earn his living by teaching English in Amsterdam. Then he set up a printing press and printed religious books. And all this while he was active in the church at Leyden, and old and young looked up to him for guidance.

As year after year went by, the band of exiles became very much dissatisfied. They could not think of Holland as their home. They could not bear the thought that their children should grow up to be Dutchmen of Holland instead of Englishmen. "We are but pilgrims in a strange land," they said. And from that time instead of being known as Separatists they were called Pilgrims.

Why not go to America? — At length, some one said: "Why not go to America? There we may be a people

to ourselves, free to do as we wish and sure that our children will not forget the language of their fathers.”

The idea was a pleasing one, and they talked it over often. But to what part of America should they go?

They could not go to Virginia, for the colony at Jamestown—now twelve years old—had set up the English Church there. They did not want to settle with the Dutch on Manhattan Island—they might as well remain in Holland. But all the rest of the country from Florida to Canada was unsettled, and they might choose the place that seemed best. At last it was agreed that the region around Delaware Bay was the most desirable.

The king's permission.—The next thing necessary was to get the king's permission. Two of the Pilgrims went over to London and laid the matter before him.

“It is a good and honest notion,” said King James; “but by what business will you make profit out of it?”

“By fishing,” answered John Carver.

“That is an honest trade,” said James.

But he would give them no formal permission to make the settlement. He kept putting them off for a whole year. Then he gave them to understand that the Pilgrims might go to America if they chose, and that if they behaved themselves no one should molest them.

The Pilgrims were glad enough even of this. They began at once to get ready for their voyage.

The departure.—It was decided that the pastor, John Robinson, with those who were the least able to endure the hardships of the voyage, should remain in Holland

till the colony was well established. The rest, under the care of Elder Brewster, John Carver, and William Bradford, embarked on a rickety old ship called the *Speedwell*, and on a day in July bade good-by to Holland. They sailed to Southampton in England. There another vessel, called the *Mayflower*, was waiting for them.

At the last moment it was found that the *Speedwell* was too old and leaky to make the voyage. As many as possible were therefore crowded into the *Mayflower*, and the rest were left behind. There were many delays, and it was not until September that they finally set sail for America.

III. PLYMOUTH

Voyage of the "Mayflower." — The Pilgrims were on the ocean for sixty-five days. A storm drove them far out of their course. When at last they sighted land it was the long, low coast of Cape Cod, hundreds of miles from the bay of Delaware which they had hoped to reach.

They sailed around the northern point of the cape, and cast anchor in the harbor near where the village of Provincetown now stands. How glad those storm-tossed men and women must have been as they stood once more on solid ground! The first thing they did was to fall on their knees and thank God for bringing them safe "over the vast and furious ocean."

Exploring the coast. — A soldier whose name was Miles Standish had come with the Pilgrims from Holland. He

now armed himself, and, taking a few men with him, set out to explore the coast, and find a suitable spot for a settlement. Standish and his men saw a few Indians at a distance, and found some corn that had been hidden away in a kettle. They carried the corn back to the ship, and when planting time came used it for seed.

“It was the 21st of December”

The landing at Plymouth. — A whole month was spent in looking for a place in which to make their future homes. At last they found a pleasant spot on the west shore of the bay, where there was a fine spring of fresh water. Captain John Smith had visited the same spot six or seven years before, and had named it Plymouth, after the famous old city of that name in England. The Pilgrims were very glad to find a resting place after their long voyage.

It was the 21st of December when the first landing was made by the strongest and most venturesome of the men. The weather was cold. The winter had begun early. Very bleak and barren did the whole country appear.

The houses. — The first house was a large one and was used as a common shelter and storehouse. Then other buildings — little cabins of logs and boards — were hastily put up. It was not until March that the women and children could go ashore.

The first winter. — Very sad was that first winter in Plymouth. All suffered from exposure to the bitter weather. Their food was poor and scanty. They lacked the comforts of life. Is it any wonder that many grew sick and died? Of the one hundred who came over in the *Mayflower* only fifty-one lived to see the warm, budding days of spring. But the great-hearted Elder Brewster comforted them as best he could; he did not permit them to despair. “It is not with us,” he said, “as with men whom small things can discourage.”

At one time all were sick except Brewster, Standish, and five others. John Carver, whom they had chosen as their first governor, died; and William Bradford, a young man of great energy, was elected to take his place.

IV. THE INDIANS

Samoset. — One day early in spring, a naked Indian came out of the woods on the crest of the hill, and walked boldly down toward the little row of cabins.

“Welcome, Englishmen! Welcome!” he cried, as the men went out to meet him.

He could not speak much English, but he told them his name was Samoset. He had learned a few words from some fishermen whom he had met far up the coast. The Pilgrims invited him into their houses and treated him so well

that he went away much pleased.

Squanto.—

Soon afterward Samoset came back, bringing another Indian with him. The name of the second Indian was Squanto. He had been stolen fifteen years before, by the captain of an English vessel, and had been taken to

“One day they came with quite a large company”

Europe. He had seen a good deal of the world and could talk well. He told the Pilgrims that many Indians had once lived in that neighborhood, and had had large fields of corn. But a dreadful pestilence had broken out among them, and nearly all had died.

Massasoit.—Squanto and Samoset brought other Indians to visit the Pilgrims. One day they came with

quite a large company; and in front of them walked the head chief of the Wampanoags, a tribe to which all the red men of that region belonged. The name of the chief was Massasoit. He was dressed just as the other warriors, except that he wore a string of white bone beads around his neck. His face was painted a dull red color, and his hair was so well oiled that Governor Bradford said he "looked greasily." But he was very dignified, and all his followers looked up to him with much respect.

The council. — There were then seven houses in the village, and Massasoit was permitted to look into every one. Then in the largest house a solemn council was held. The chief was seated on a mat, with cushions around him. The governor and Elder Brewster and other leading Pilgrims sat in order before him. At the door a trumpet was blown and a drum was beaten, to let every one know that the council was begun. Miles Standish, with sword and gun, stood on guard before the house. The Indians were very much impressed by all this display.

Speeches were made in the council. Promises of friendship were given on both sides. A treaty of peace was made which was kept by red men and white for more than fifty years. And then Massasoit with his warriors returned to his home not far from the shores of Narragansett Bay.

The Narragansetts. — Beyond Massasoit's country there was a strong tribe of Indians called Narragansetts. When they heard of the coming of the Pilgrims they were not at all pleased. So they sent to Plymouth a bundle of arrows wrapped in the skin of a rattlesnake. This was their way

of telling the Pilgrims that they did not like them and were going to fight them. But Governor Bradford was not to be frightened. He filled the snake's skin with powder and shot, and sent it back to the chief of the Narragansetts. It was his way of saying, "You may fight us with arrows, but we will fight you with guns."

The Narragansetts understood him, and did not make any trouble for a long time.

V. GROWTH OF THE COLONY

The first summer. — All through the first summer the colony prospered. Their gardens provided them with vegetables in plenty. On the hillsides were wild berries, and in the thickets were grapes and red plums. The fields produced corn. In the woods wild turkeys and deer might be had for the taking. The streams and the shallow waters of the bay were full of fish. There was no longer any scarcity of food.

The first thanksgiving. — After the harvest had been gathered, the Pilgrims decided to have a great feast as a sort of thanksgiving. Hunters were sent into the woods and brought back a great quantity of game. Massasoit and ninety of his warriors came to the feast, bringing five fine deer with them. For three days white men and red feasted and rejoiced together. It was a memorable thanksgiving, the first ever held in our country.

Prosperity. — Soon other Pilgrims came over, and the colony grew in numbers and in strength. There were still many sore trials to be endured, but none like those

of the first dreadful winter. For several years William Brewster was the man of most influence at Plymouth. He was the great-hearted minister and teacher to whom all looked for guidance and comfort. Had it not been for his wonderful courage and his strong common sense, it is not unlikely that the colony would have perished at the outset. He lived to see it strong and prosperous, and died at the ripe age of eighty-four.

Relics at Plymouth. — If you should ever visit Plymouth you will be shown there the sword and other curious articles that belonged to Elder Brewster and were brought by him from Holland. You may see also the sword of Miles Standish, and the cradle in which the

Relics at Plymouth

first Pilgrim baby was put to sleep. And the rock will be pointed out to you on which the Pilgrims are supposed to have stepped when they came ashore from the *Mayflower*.

REVIEW

Who were the Separatists? Why did they wish to go to Holland? What other name was given them in Holland? Who were the leading men among them? Why did they become dissatisfied in Holland? To what part of America did they wish to come? Why did they not reach the place which they had intended to reach? Where did they decide to make their new home? Who was the first governor of the colony? What position did William Brewster hold among the Pilgrims? Why were the Indians friendly to them?

JOHN ENDICOTT
AND PURITAN LIFE IN NEW ENGLAND

I. NAUMKEAG

The New England coast. — When the Pilgrims first landed at Plymouth, all the country known as New England was an unexplored land. The seacoast from Cape Cod to Maine was without a white inhabitant. But English traders were beginning to learn something about the products of both the land and the sea. Already ships were engaged in carrying furs, fish, and timber from the new country to various ports in England. Two men, Ferdinand Gorges and John Mason, soon afterwards formed a plan for establishing a colony far to the north of Plymouth. Both these men were interested in the trade with the New England coast, and they believed that this trade could be much increased through such a colony.

First settlement of New Hampshire. — They obtained a grant of all the land between the Merrimac River and the Kennebec, and sent out a shipload of fishermen and farmers to form a settlement. Some of the colonists went on shore at the mouth of the Piscataqua River, and founded Portsmouth. Others sailed a little farther up the

river and settled at a place which they called Dover. Thus the colony afterwards known as New Hampshire had its beginning. This was less than two years after the landing of the Pilgrims at Plymouth.

The Puritans.—The eyes of many people were now turned toward New England. Fishermen and others built their temporary huts at more than one point along the shore. Then a company of Puritans obtained a grant of land south of the Merrimac and prepared to establish a strong colony there. There were many Puritans in England. They were much like the Pilgrims in their ways and beliefs; and in order that they might have their own church and worship God as they chose, great numbers of them were anxious to find new homes in America.

Their first settlement.—The first that came settled at a place on Massachusetts Bay called by the Indians Naumkeag. There were already a few white people there, mostly fishermen. These were not well pleased when they saw the Puritans' ship come into their little harbor.

“Who are you, and what do you want here?” they cried from the shore.

“We are a peace-loving people, and we have come to this land in order that we and our children may have that freedom which is denied us in England,” answered John Endicott, the leader of the Puritans.

The men on shore were not yet satisfied, but declared that the Puritans should not land there. John Endicott reasoned kindly with them. “We have authority to come here,” he said. “The king has granted to our com-

pany all the land northward to the Merrimac River and southward to the stream called the Charles and westward even to the great sea. We have come in peace, and we would live here in peace with all men."

Salem. — After some further talk the fishermen ceased their objections, and the Puritans were permitted to go ashore. There were only a few persons in this first shipload and they were soon comfortably settled in their new homes. John Endicott was so much pleased with the happy ending of the trouble with the fishermen that he changed the name of the place to Salem, which is a Hebrew word meaning Peace.

During the first winter there were not more than sixty people in Salem. But the next year others came, and some began to look for new places in which to make settlements.

Other colonists. — Two years after the first landing, many shiploads of colonists arrived, and with them came their governor John Winthrop. A few of these stayed at Salem, but the greater number went elsewhere. Some settled at Charlestown, where there was a fine spring; others went farther inland and built the first homes at Medford, Watertown, Cambridge, and elsewhere.

Boston. — One day a boatload of young people, out for a pleasure trip, crossed the river from Charlestown to the peninsula of Shawmut where the city of Boston now stands. The first person to step ashore was a young woman named Anne Pollard. The place was so inviting, with its three hills and a fountain of pure water gushing out near the

The first landing at Boston

foot of one of them, that a fine account of it was carried to Salem. Before the end of summer a settlement was begun on the peninsula. Soon Governor Winthrop himself decided to make it his home. Many of the settlers had come from the old city of Boston in the eastern part of England, and the new village was therefore called by the same name.

II. LIFE AMONG THE PURITANS

Massachusetts Bay Colony. — All the settlements made by the Puritans on the grant of land received from the king were united under one government known as the colony of Massachusetts Bay. The settlements increased very fast; for there were thousands of Puritans in Eng-

land who were glad to escape from the tyranny of the king by coming to New England.

Connecticut. — Soon some who had settled in the Massachusetts Bay Colony began to grow restless, and decided to remove farther west. They had heard of the beautiful river Connecticut, and of the surprising richness of the land through which it flows, and they resolved to go thither. With their minister as their leader, and carrying their household goods with them, they made their way through the woods to the banks of the distant river.

New England

There they formed several small settlements, and the new colony of Connecticut was founded. Other people came by water, and settled near the mouth of the river; and still others ventured as far west as New Haven, and established a colony there. The four colonies of Massachusetts Bay, Plymouth, Connecticut, and New Haven were composed of Puritans or of persons in sympathy with the Puritans; and for better protection against the Indians they soon formed

a kind of friendly union, and called themselves the United Colonies of New England. In the course of time the Plymouth colony became a part of Massachusetts, and the New Haven colony was joined with that of Connecticut.

The homes of the Puritans. — Some of the colonists, as Endicott and Winthrop, had been well-to-do in their old homes. Some were fine scholars and had been educated in the great English universities. In their new homes, however, all lived very plainly and there were no luxuries of any kind. Sometimes food was scarce, and then rich and poor shared together and no one had more than another.

The first houses were, for the most part, log buildings in which there were not many comforts. The furniture was very plain and there was but little of it. Everything was tidy and prim. All the cooking was done by a great fire-

“The cooking was done by a great fireplace”

place, for there were no such things as stoves in those days. In every house there were spinning wheels, and a reel for winding yarn, and a loom for weaving cloth; for all the clothing of the family was home-made.

“In every house there were spinning wheels”

How the Puritans lived. — The Puritans thought life too serious to be wasted in idleness, and so everybody was busy, and there was work enough for all. The parents were solemn and strict, and the children were demure and quiet.

There were few games or amusements of any sort, and there was seldom a holiday. Christmas came and passed without notice. The Puritan children

had no Christmas tree, no Santa Claus, no Christmas presents. But they were quite happy without them.

The Puritans at church. — On Sunday all went to church. It was held in a plain log meeting-house which was not warmed even in the coldest weather. The sermons and prayers were very long, and the only music was the singing of psalms. But everybody was obliged to keep awake and listen, and there was always an officer present to keep the boys and girls in order. Sometimes when the Indians were troublesome, the men carried

Puritans going to church

their guns to church, and a sentinel was stationed outside to give the alarm in case of danger.

III. GOVERNOR ENDICOTT

A stern magistrate.—John Endicott, the leader in the settlement at Salem, was for many years one of the foremost men in the colony. He was chosen governor fourteen times and deputy governor four times; and he was for several years the commander of the militia of the colony. Among all the Puritans he was one of the sternest and strictest. He disliked for any one to have opinions different from his own. Once he cut the cross of St. George out of the English flag, because it reminded

him of the emblem of the Catholic church. At another time, when he was sitting as a magistrate, he struck a man who had angered him, and for thus forgetting himself he was fined forty shillings.

Roger Williams. — Soon after the settlement of Salem there came to the colony a zealous young minister whose name was Roger Williams. He was not afraid to speak his mind on any subject, and John Endicott became much attached to him. But many of the elders did not like him. He told them so many disagreeable truths that they at last decided to get rid of him. Endicott defended him with all his stern energy, and helped him to maintain his case for a while. It was not long, however, until his enemies prevailed. Endicott was imprisoned for befriending him, and Williams was commanded to return to England.

Rhode Island. — But he was determined to stay in America. Through midwinter snows he made his way to Narragansett Bay, where the great chief, Massasoit, received him kindly. In the spring the chiefs of the Narragansetts gave him land on which to build a home. Some of his friends from Salem joined him, and they began a new settlement which Williams called Providence. Soon afterwards another colony — the colony of Rhode Island — was founded, on the east shore of the bay. Many people who were dissatisfied with the ways of the Puritans came and made their homes where all were free to believe as they chose. In time the two colonies were united under the name of Rhode Island.

The Pequots. — Eight years after the first landing at Salem, Endicott led a company of a hundred fighting men against the Pequot Indians in southern Connecticut. These Indians had never done the Puritans any harm ; but a band from Block Island had killed the captain of a coasting vessel, and the magistrates at Boston had resolved to punish the whole tribe. They told Endicott to kill as many of the men as he could, but to spare the women and children.

Endicott and his men sailed around the coast in five large boats. They landed first on Block Island, where they destroyed two villages and all the growing crops ; but the Indians had hidden themselves and could not be found. The avengers next sailed to the mainland, and at the spot where New London now stands they found another large village which they destroyed. And so they passed on along the coast, killing and burning and destroying in a most pitiless manner. In about a month they were safe back in Boston, telling of their exploits and receiving the thanks of the governor and magistrates.

Can we wonder that after such cruel treatment as this the Pequots became the bitter enemies of the white people ? In a short time a war was begun which did not end until the Pequots were almost wholly destroyed.

The Quakers. — It was while John Endicott was governor that some people called Quakers came from England to Boston. These people were peaceable and kind, and wished only to do good ; but they did not believe as the Puritans believed, and they would preach to the people in

the streets. Governor Endicott and his magistrates resolved to drive them out of the country. Some they imprisoned, some they whipped and banished, and four they put to death.

Endicott's services to Massachusetts. — But with all his harshness and narrowness, Endicott meant to do right. His aim at all times was to build up and strengthen the colony. The Puritans looked upon him as one of their ablest men and the fittest to lead them in subduing the wilderness. We can hardly doubt that much of the early prosperity of Massachusetts was due to him. He lived to be a very old man, and was governor of the colony at the time of his death.

REVIEW

Who were the Puritans? Why did they wish to come to America? Where did the first Puritan colonists land? Why was the place afterwards called Salem? What other settlements were soon made? Who was the first person to step ashore at the place where now is the city of Boston? Why was that place selected for a settlement? Why was the city of Boston so called? Describe the manner of life among the New England Puritans. Why did the Puritan elders dislike Roger Williams? Of what colony was he the founder? What reason can you give for John Endicott's friendship toward him? What place did John Endicott occupy in the colony of Massachusetts? How often was he governor? What was his character? What was his treatment of the Indians? of the Quakers? What excuses can we make for his severity and narrowness? Name the colonies of New England. Which of these were settled and controlled by Puritans? What colony was west of Connecticut and Massachusetts? What colony was on the James River?

LORD BALTIMORE

AND THE SETTLEMENT OF MARYLAND

I. SCHEMES OF COLONIZATION

An unwelcome visitor at Jamestown.— One day, somewhat more than twenty years after the first landing of the English in Virginia, a strange ship sailed up the James River and came to anchor just off the landing at Jamestown. It brought to the settlement an unwelcome visitor—a nobleman whose name was George Calvert, but who is known in history as Lord Baltimore.

Who was Lord Baltimore?— Lord Baltimore was a rich and influential Englishman. He had been an officer at the court of King James I. He was also a friend of the new king, Charles I., and had received many favors from him. He was a man of good judgment and excellent character. He was known to be kind-hearted and brave—a foe to oppressors and a friend to the poor. Why, then, was he not welcome at Jamestown? He was a Catholic, and it was whispered that he intended to bring some Catholic colonists to Virginia.

Loyalty of the Virginia colonists.— The people of Virginia were all loyal supporters of the English Church; and therefore they did not like to have dealings with

Catholics or with Puritans. They were determined that neither the one nor the other should ever gain a foothold in their colony. But how were they to deal with a Catholic nobleman who was a favorite of the king and had, no doubt, come to Virginia by his permission? The governor and his council were not long in finding out the facts of the case; for Lord Baltimore tried to hide nothing.

Lord Baltimore's first colony. — The great ambition of Lord Baltimore's life had been to establish, somewhere in America, a colony in which men of all conditions and beliefs might find homes. With this purpose in view he had bought a large part of Newfoundland, and had sent out a number of men and women to form a settlement there; he had caused houses to be built for his colonists, and a fine, large mansion to be put up for himself; and then he had gone thither with his family, hoping to make his future home there.

But very sad was his disappointment. The climate was the worst that could be thought of — snow and fog, snow and fog, throughout a great part of the year. The soil was no better — rocks and bogs, rocks and bogs, everywhere. No colony, except one of fishermen, could ever exist in such a country. Lord Baltimore felt that he must find some other place in which to form his settlement. He knew that Virginia was of wide extent, and that much the greater part of it was unsettled and even unknown. He had, therefore, come direct from Newfoundland to see for himself whether there might

not be room, either north or south of the James, for an independent colony.

This account of his intentions was not pleasing to the Jamestown colonists. Had not Lord Baltimore been a person of consequence, it is likely that they would have gotten rid of him without ceremony. But since he was the king's friend, it was necessary to be cautious.

Progress of the colony. — While the governor and his council were considering the matter, Lord Baltimore spent several days in looking about the country and finding out all that he could about its climate and resources. He learned that there were about five thousand people in the colony. The settlers for the most part lived on plantations that were scattered along the rivers at great distances apart. Wherever he went, he saw tobacco either growing in the fields or being made ready for market. In the year that was just ending, 500,000 pounds of the fragrant leaves had been shipped to London. The colonists

“I cannot subscribe
to that oath”

had ceased hoping to find gold, and all their talk was of tobacco.

The oath of supremacy.—Lord Baltimore was soon asked to appear before the governor and council. The governor had been very friendly to him all along, but the councilors were determined to be rid of him. They said that he must take the oath of supremacy as was done by all other persons coming to the colony. Now this oath was an acknowledgment that the king of England was the supreme head of the Church, and no good Catholic could take it.

“I cannot subscribe to that oath,” said Baltimore, “for I acknowledge the Pope as my master in things spiritual. But King Charles knows that I am his loyal subject, and I will swear to support him always as the true and lawful head of our nation.”

“Well, then,” answered the councilors, “since you refuse to comply with our laws, we must ask you to depart from Virginia without further delay.”

II. MARYLAND

The new colony.— Three months later, Lord Baltimore was in London, telling the king about his voyage and explaining all his plans for the future.

King Charles listened graciously, and then told him that the northeastern portion of Virginia should be granted to him and his heirs for the colony which he proposed to found. The boundaries of the territory thus granted were clearly marked out. The king himself

chose a name for the new colony, saying that it should be called Terra Mariae, or (in English) Maryland, in honor of his queen, Henrietta Maria.

Religious freedom in Maryland.—The charter which Lord Baltimore received made him the owner and ruler of all Maryland, and Maryland was declared to be a province of England. The only rental that was required was two Indian arrows to be given to the king during Easter week each year. Lord Baltimore's dearest wish was that, in

this colony, the persecuted of his own faith might find a safe refuge; for at that time the Catholics in England were treated even more cruelly than the Puritans. But he declared that others also should be protected and be free to worship as they

chose. All people were welcome to come to Maryland; it was "free soil for Christianity."

Cecil Calvert.—Before everything could be made ready for sending settlers to Maryland, Lord Baltimore died. But his great plans did not die with him. His son Cecil Calvert, known as the second Lord Baltimore, took hold of matters and pushed them forward with great earnestness. Within the next year,

Maryland and Virginia

two ships, with colonists, were ready to sail to the land of promise.

Young Lord Baltimore was himself unable to go out at that time; but he sent his brother, Leonard Calvert, who was to find a suitable place for the settlement and have the general management of the colony's affairs. The company included "very near twenty gentlemen of very good fashion, and three hundred laboring men well provided in all things." Nearly all were Catholics.

"The warriors taught the white men how to hunt deer"

St. Marys. — The place chosen for the first settlement was a pleasant spot on the bank of a broad inlet which opens into the

Potomac, only a few miles from its mouth. From the Indians who lived there the colonists bought as much land as they wanted, paying for it with axes, hoes, and cloth. A guardhouse was built, and soon a little village sprang up around it. The name of St. Marys was given to the village, and the inlet was called St. Marys River.

The Indians proved to be very friendly. Their women showed the white housekeepers how to prepare corn meal, and how to bake cakes in the ashes. The warriors taught the white men how to hunt deer, and where to find wild fruits in their season. Corn was planted in the clearings; cattle and hogs were brought in from Virginia; there was no lack of food at St. Marys; and there was no suffering among the colonists as there had been during the first years at Jamestown and at Plymouth.

III. PROGRESS OF THE COLONY

New settlements. — In a short time other settlers began to arrive in the colony, and plantations were opened in several places. The new province of Maryland seemed to be on the highroad to prosperity. But serious troubles were near at hand.

Clayborne's rebellion. — The Virginia colonists were very angry when they learned that another colony had been planted on lands claimed by themselves. A Virginia trader whose name was Clayborne had built a trading station on an island in Chesapeake Bay, and he refused to obey the laws of Lord Baltimore. He even tried to persuade the Indians to destroy the settlement at St. Marys. He went to England and petitioned the king. He gave his aid to a rebellion against Leonard Calvert — a rebellion which came near ending in the overthrow of law and order in Maryland. But he was finally silenced and obliged to keep the peace.

Trouble from the Puritans. — Some New England Puritans, who had been trying to preach their doctrines in

Virginia and had been roughly treated there, settled in Maryland at a place which they called Providence, but which is now known as Annapolis. They felt grieved that Catholics and Quakers should have freedom to worship God in their own way, and they tried hard to make trouble. But their efforts were in vain, and people of whatever religious belief were made welcome in the new colony.

In spite of all opposition the colony grew stronger year by year, and plantations were opened in all parts of the province. Thirty years after the first landing at St. Marys there were sixteen thousand white people in Maryland.

Towns and cities. — St. Marys was the capital of the province for a long time; but it never became a place of great importance. Other towns better situated for commerce sprang up at various places, and outstripped it in population and in trade. In 1694 the capital was removed to Annapolis where it still remains. It was not until nearly a hundred years after the death of Lord Baltimore that the noble city which bears his name was founded.

REVIEW

Why did Lord Baltimore wish to found a colony in America? Why was he not welcome among the colonists at Jamestown? What is meant by the oath of supremacy? By whom was the name, Maryland, given to Lord Baltimore's colony? Why were the Virginians jealous of the new colony? How did the Indians regard the early settlers in Maryland? What was the first capital of the colony? What was the second? What city was named in honor of the founder of the colony?

KING PHILIP

AND THE INDIANS OF NEW ENGLAND

I. THE INDIANS OF NEW ENGLAND

The sons of Massasoit. — Among all the Indians in New England the colonists had no better friend than Massasoit, the head chief of the Wampanoags. As we have already learned, it was he who made the first treaty with the Pilgrims at Plymouth; and this treaty was faithfully kept as long as he lived.

He had two sons, Wamsutta and Metacomet, and he was anxious that they also should live in friendship with the white men. One day he took them with him to Plymouth and called upon the governor.

“I want these boys of mine to be like Englishmen,” he said. “I want you to give them English names.”

The governor was pleased with the idea. To the elder he gave the name of Alexander, and to the younger that of Philip, in honor of two kings famous in the history of Greece. No doubt the boys were much impressed with what they saw at Plymouth; and as time went on they learned very much about the ways of white men.

What the Indians thought of the English. — There were a great many Indians in New England. Some were very

ready to lay aside their savage habits and live and do much as their Puritan and Pilgrim neighbors. Others liked the wild freedom of the woods, and were not at all pleased when they saw villages and fields taking the place of their old hunting grounds.

"I want these boys of mine to be like Englishmen"

They hated the white people, and would gladly have driven them out of their country.

John Eliot. — A good man whose name was John Eliot went among the Indians to preach. He translated the Bible into their language. He taught some of them to read. He persuaded many to live in villages and to work at farming or at some useful trade. Soon, two or three thousand had given

up their old ways of living and were trying to adopt the ways of Englishmen. But Alexander and Philip and most of their tribe kept themselves in their forest homes, and preferred to hunt and fish and to live in the rude manner of their fathers.

Alexander. — Massasoit lived to a great age, and died after being the friend of the white men for nearly fifty years. Then Alexander became chief in his stead, and for a short time everything went well as before. But there were many white men in the colonies who hated the Indians and wished to drive them out of the country and seize their lands. They had already destroyed the Pequots, and were at war with the Narragansetts; and now they wished to stir up strife with the Wampanoags.

One day some officers arrested Alexander, accusing him of plotting to help the Narragansetts. He was taken to Plymouth as a prisoner; his proud spirit was broken by such treatment, and he became ill. The charge against him was found to be false, and he was set free. He started home, borne in a litter upon the shoulders of his men; but before he was out of sight of Plymouth, he died. The Indians believed that he had been poisoned, and their feeling toward the colonists became very bitter.

II. KING PHILIP'S WAR

King Philip. — Philip now became the head chief of the Wampanoags. He was one of the noblest of his race, honest and wise, and desirous of peace. The English had such respect for him that they called him King Philip. Nevertheless, they always suspected and feared him. Perhaps they knew that the wrongs which they had inflicted upon his brother were such as he could never forget. Time and time again, he was accused of plotting against the colonists, but no one could prove that he was doing so.

His people were becoming very restless; it was all he could do to restrain them.

The first hostile act.—At length, on a certain Sunday, some of his young men plundered the town of Swansea, while the people were at church. They killed some of the people and acted in a most barbarous manner. The colonists were aroused to punish the evil-doers.

“A number were captured and sent to the West Indies”

The war begins.— Philip knew now that there was no longer any hope for peace. Either the white men must be driven from the country, or his own people would be destroyed. He, therefore, sent messengers to all the tribes from Connecticut to Maine, asking them to help him. Most of the three thousand village Indians, who had been

trying to learn the ways of white men, returned to the forest and joined their kinsmen. And then a terrible war began.

Two dreadful years. — In every town the men united to defend the settlements from savage fury. The Indians seemed to be everywhere, and no home was safe from attack. For two dreadful years the war continued. Twelve hundred houses were burned, and nearly six hundred white men were killed or made captives. There was hardly a family that did not suffer. As for the Indians, their losses were even greater. Whole tribes were wiped out or driven away from their lands.

Death of Philip. — At last King Philip, through the treachery of one of his men, was killed. His followers were now left without a leader. They scattered here and there, vainly seeking places of safety. Some escaped into the great woods beyond the Connecticut River. Many were killed outright. Still others, and among them the wife and children of King Philip, were captured and sent to the West Indies to be sold as slaves. The power of the red men in the southern parts of New England was utterly broken.

FATHER MARQUETTE

AND THE FRENCH IN NORTH AMERICA

I. THE THREE CLAIMANTS

Spain, England, and France. — Three great nations of Europe once claimed the country which is now called the United States. Spain claimed it because of the discoveries of Columbus and Ponce de Leon; and all the region north of the Gulf of Mexico was known to the Spanish as Florida. England claimed it because John Cabot had been the first to see its eastern coast; and Virginia and New England were the names which the English applied to its principal divisions. France also claimed it; and to the French people the interior of North America was known as New France and Louisiana.

The French claims. — The French, in the first place, claimed the whole of the valley of the St. Lawrence, because one of their countrymen, Jacques Cartier, had been the first to enter and explore that noble river. Then they claimed the southeastern part of our country, including South Carolina and Georgia and northern Florida, because French ships had been the first to explore the shores of that region. They called the country Carolina, after King Charles IX. of France, and tried to establish settlements at Port Royal and on the River St. John.

In Carolina and Florida. — The first settlement failed because the colonists were dissatisfied and had not the energy nor the will to make it successful. The second settlement was destroyed by some Spaniards who had just founded the colony of St. Augustine on the east coast of Florida. After this the French gave up their claims in the southeastern part of our country, but the Spanish strengthened their post at St. Augustine and held it for more than two hundred years. St. Augustine is to-day famous as the place of the first permanent settlement in the United States.

On the St. Lawrence. — In the valley of the St. Lawrence River the French were more successful. They built a fort at Quebec at about the same time that the Dutch were first exploring the Hudson River. They afterwards established trading stations at Three Rivers and Montreal. They discovered, one by one, the Great Lakes, and their traders and trappers finally made their way as far west as the present states of Wisconsin and Minnesota.

Rumors of a "great water" beyond the lakes. — The merchants of Europe had not yet given up the hope of finding a water passage across the continent. The English expected to find the Pacific coast just a little way beyond the mountain ridge of the Alleghanies. The French hoped to reach it through the Great Lakes. In this hope they were encouraged by the Indians of the lakes, from whom they heard many a vague rumor of a "great water" still farther west, and of strange lands and peoples in the region of the setting sun.

II. THE YOUNG MISSIONARY

Jacques Marquette.—One summer there came to Quebec from Laon in France a young priest whose name was Jacques Marquette. He was twenty-nine years old, a fine scholar, and noted for his sweet and gentle manners. He

had come to America to be a missionary among the Indians. He spent nearly two years in learning the languages of the tribes about the lakes and in otherwise fitting himself for the work he had undertaken. Then he started to the distant West.

A bark chapel

Sault Sainte Marie.—

At the foot of the rapids near the outlet of Lake Superior he built a little bark chapel, and founded the mission of Sault

Sainte Marie. The Chippewas, who lived there because of the good fishing in the rapids, listened gladly to his teaching; but before he had made many converts he received orders from Quebec to give up the mission to another and go still farther west.

A new mission.—On the shore of Chequamegon Bay,

in western Wisconsin, there was already a mission which another priest had established a year or two before. It was near the villages of some scattered bands of Hurons and Ottawas who had formerly lived in Canada. Marquette was assigned to this mission. Very few white men had ever gone so far into the interior of the continent. South, west, north, for a thousand miles the country was utterly unknown. Alone in this lonely place the young priest gave all his time to the service of the miserable savages around him.

The Illinois. — One day there came to the mission a band of strange Indians who seemed to be gentler and more teachable than any Marquette had yet seen. They said that they were “Illinois,” which in their language meant “men,” and that they dwelt by the edge of a treeless plain not far from a mighty water. They invited Marquette to visit them in their homes, and he assured them that, if it were ever possible, he would go and preach to them. Other Indians who came to the mission from time to time spoke also of a great water somewhere towards the south or west, but they knew so little about it that their words were hardly worth noticing.

The mission destroyed. — Soon a great calamity befell the little mission. A band of Sioux warriors attacked the villages and destroyed them. They burned the chapel of the mission. They drove the Hurons and Ottawas into the forest. Father Marquette himself escaped with difficulty and made his way back to Sault Sainte Marie.

Mackinac. — The terror-stricken Hurons, fleeing east-

ward, came after a time to the point of land that juts out into the Strait of Mackinac from the north. There they paused, and finding themselves safe from the Sioux, they decided to go no farther. There were great quantities of fish in the strait, and life on its shores would be easy.

“They drove the Hurons and Ottawas into the forest”

As soon as Father Marquette learned that some of his people were at Mackinac he made haste to join them. He built a chapel close by the north shore of the strait and founded a new mission which he called St. Ignace.

III. DISCOVERY OF THE MISSISSIPPI

Joliet. — In 1673, near the end of the year, there came a visitor to Father Marquette at his mission of St. Ignace. This visitor was Louis Joliet, a Canadian trader

and explorer, well known as a man of enterprise and good judgment. He had been sent out by the governor of Canada to discover if possible the "great water" of the West, about which so many rumors had been heard.

Joliet brought letters from the governor, asking Marquette to be his guide and companion, and to give him such aid as he could in carrying out the enterprise he had undertaken. Marquette was glad to do all that was in his power, and the two men spent the winter at the mission making plans and getting ready for the voyage.

The start. — Early in the following spring Marquette and Joliet, with two canoes and five boatmen, started upon their perilous journey. They paddled along the northern shore of Lake Michigan, crossed Green Bay, and in due

"An Indian village with a cross in its center"

time reached the mouth of the Fox River, where there was another mission. After a brief rest among friends they went on. They toiled slowly up the river, passed through Lake Winnebago, and at a little distance beyond were gladdened at the sight of an Indian village with a cross

in its center. There they were kindly received, and two guides were given them to show them the way.

A portage of about a mile was soon afterward crossed, and they found themselves on the banks of the Wisconsin River. There the guides left them. Marquette and Joliet again embarked in their canoes, and pushed boldly forward into a region never before explored by white men.

On the great river. — On the 17th. of June they reached and entered the mighty stream which the Indians called
1674 “Missipi.” They felt sure that this was the “great water” for which they were seeking. Did it flow in a westward course to the Pacific? Did it find its way to the ocean which borders Virginia? Or was it the same stream of which the early Spanish explorers had given a brief account, and did it empty its waters into the Gulf of Mexico? These were the questions which Marquette and Joliet were most anxious to solve.

For a week they floated down the river without seeing a human being. On the eighth day, however, they discovered a village of Indians, where they were entertained with much kindness. After a day with these savage friends they again took to their canoes. They floated past the place where the muddy Missouri mingles its waters with those of the Mississippi. They saw the broad mouth of the Ohio, lying between low marshy banks green with grass and reedy thickets. Farther down they saw savages armed with guns and knives which they had bought from the English in Virginia.

The end of the voyage. — At length they landed at a

village of friendly Indians nearly opposite the mouth of the Arkansas River. The Indians told them that the salt sea was only five days distant. But they said that there were many dangers in the way; the savage tribes along the river would not let them pass, and the stream itself was full of lurking monsters which would devour both themselves and their canoes.

Marquette and Joliet were now sure that the river must find its outlet in the Gulf of Mexico. It was the river, the mouth of which had been discovered by the Spaniard, Alonzo de Pineda, more than a hundred and fifty years before. The Spaniard, De Soto, had stood on its banks and been buried beneath its waters. The country bordering upon it was still claimed by Spain, and should the explorers fall into the hands of Spaniards, their voyage would be in vain. They therefore decided to go no farther.

The return. — The return voyage against the current was slow and toilsome. When they reached the mouth of the Illinois River they turned into that beautiful stream, hoping that they might find a shorter way to the lakes. They were delighted with the richness of the country — with its broad prairies and its tree-bordered streams. They

Statue of Marquette in
Washington

rested a few days in a village of the Illinois Indians. There the gentle priest busied himself consoling the sick and preaching the story of the Cross. The grateful people would not permit him to go away until he promised to return and tell them more of the wonderful story.

At the forks of the Illinois the explorers turned to the left. They ascended the Des Plaines River to a point just beyond the place where the present city of Joliet stands. Then they carried their canoes a little way over the marshy prairie and launched them in the narrow Chicago River. They paddled down that sluggish stream to the lake, and were the first of white men to behold the place where now are the busy streets and tall buildings of the chief city of the West. It was autumn when they arrived safe at the mission near the mouth of the Fox River. They were again among friends.

Joliet hastened to Quebec to tell the governor about the discoveries that had been made. But Father Marquette, worn out by the hardships he had undergone, remained several months at the mission, writing an account of his journey, and trying to recover his strength.

IV. THE VISIT TO THE ILLINOIS

By the Chicago River. — Nearly a year passed, and then Father Marquette set out to redeem the promise he had made to the Indians on the Illinois. The canoe voyage along the west shore of Lake Michigan was slow, and winter had begun before he reached the Chicago River. He was then so feeble that he could not go farther. The

two French boatmen who were with him built on the bleak prairie a hut of sticks and reeds — the first dwelling on the site of the city of Chicago. There the gentle priest spent the long winter in prayer and meditation.

Among the Illinois. — Early in the spring he started again for the Illinois. When at length he reached the Indian village he was received with every sign of joy. More than two thousand men, besides women and children, met on the prairie to hear him preach. But he knew that his life was drawing to an end, and felt that he must return to his own people before it was too late.

The end of a noble life. — The Indians wept as they bade him adieu, and a band of warriors went with him a hundred miles on the way. When he reached Lake Michigan he was so weak that the two Frenchmen were obliged to carry him to his canoe. One day as they were near the mouth of a small stream, he asked to be carried ashore. On a little hillock near the bank the men built a shelter of bark and leafy branches over him. Then, while he was praying, they walked a little way into the woods. When they returned a few minutes later he was dead.

V. THE FRENCH IN THE WEST

La Salle. — The discovery of the Mississippi by Joliet and Marquette gave to France the excuse to claim all the middle portion of North America as her own. This claim was strengthened soon afterward by Robert Cavellier de la Salle, the most enterprising of French explorers in America.

He formed a grand project for colonizing the country and carrying on trade with Indians. He built the first ship that ever sailed on the Great Lakes, explored the waterways between Canada and the far West, and established a fort on the Illinois River. After many failures he led

The "Griffon" — "The first ship that ever sailed on the Great Lakes"

an expedition down the Mississippi to its very mouth, and in the name of King Louis XIV. he took possession of all the lands drained by the great river and its tributaries. This was in April, 1682.

New France. — France thus laid claim to all that part of our country which lies between the Alleghanies and the

Rocky Mountains, and between the Gulf of Mexico and the Great Lakes. To the greater part of that region La Salle gave the name of Louisiana in honor of the king. The country about the St. Lawrence and the lakes was already known as Canada or New France. Louisiana and Canada, taken together, included more than half of the continent of North America.

French settlements. — La Salle's plans for the settlement of the Mississippi country ended sadly with his death. But they aroused much interest both in Canada and in France. Numbers of French people left the older settlements along the St. Lawrence and sought new homes in the distant West. French settlements were made at Kaskaskia in Illinois, at Vincennes on the Wabash, and later at Detroit. At several places on the Great Lakes there were trading posts, as at Mackinac and Sault Sainte Marie. French colonies also were established in the South at Biloxi and Mobile; and nearly forty years after La Salle's voyage down the river the foundations of New Orleans were laid by the French.

REVIEW

Why did Spain claim the country north of the Gulf of Mexico? Why did England claim much of the same country? Why did France also claim it? Did either of these nations have any real right to the country? By whom were the Great Lakes discovered? By whom was the Mississippi River first explored? Give a brief account of the voyage of Marquette and Joliet. What did La Salle do? What part of the United States was included in Louisiana? What part of North America was claimed by France? Where did the French form settlements?

NATHANIEL BACON

AND LIFE IN OLD VIRGINIA

I. A YOUNG PLANTER

An accomplished youth. — At about the time that Jacques Marquette was founding his mission at Sault Sainte Marie there was living in England a young man whose name was Nathaniel Bacon. He was a fine scholar, brilliant, wise, and brave. It was predicted that he would become a famous man. But he was discontented and wild. He was dissatisfied with his home and wished to travel.

At length his father, to gratify him, consented that he might go to Virginia. He gave him the means to start a plantation in that new country; and everybody hoped that the young man would do well and gain for himself both riches and renown.

In Virginia. — When Bacon arrived at Jamestown he found it quite a busy and prosperous place. More than sixty years had passed since John Smith and the first English settlers had landed there. The colony had grown until now there were forty thousand people in Virginia. Not many, however, were in Jamestown. They lived on large farms or plantations near the James River and along the banks of some of the other large streams.

Each of the plantations was itself a little settlement. Dense woods or dreary marshes surrounded it, and it was far from any other settlement. There were no roads, and all travel was by boats on the rivers and inlets. Once in a long while a ship from England would sail up the river. It would stop at each plantation to sell goods or to deliver

In an old Virginia mansion

various articles that had been ordered from London. Perhaps also it would leave letters from the old country. When it returned, it would stop again, to take off the tobacco which the planter had raised for the English market. Often many weeks would pass on one of these plantations without any news from the rest of the world.

The plantation. — Nathaniel Bacon chose for his plantation a large tract of land on the James River not far from where the city of Richmond now stands. He began work on a grand scale; and his fine manners and good judgment won friends for him in every part of the colony. His plantation was like a little kingdom in the wilderness. There was a great house for the planter himself and many smaller ones for the slaves and servants. There were barns and tobacco-sheds, a blacksmith shop and a mill. All the food needed on the place was raised in the fields. Wool and flax were also raised, and these were spun and woven and made into clothing. There was no need of money, for there was nothing to be bought.

The slaves. — All the work was done by slaves. Some of these were negroes, but the greater number were white people. More than a thousand poor white persons — men, women, and children — were brought over from England every year and sold to the Virginia planters. They were not held in slavery for life, as the negroes were, but at the end of a certain number of years they were said to have redeemed their freedom. They were therefore called “redemptioners.”

Slaves hauling tobacco to market.

II. TROUBLE WITH THE INDIANS

An Indian raid. — Nathaniel Bacon might have prospered and grown rich had it not been for his restless, ambitious nature. Three or four years after going to his plantation an event took place which changed all his fortunes. A band of Indians from the north made a raid into the country, destroyed some of the crops on Bacon's

“A band of Indians made a raid into the country”

plantation, and killed one of his men. All the planters were in dismay. They sent word to the governor of the colony asking his help, but no help came.

Sir William Berkeley. — Now the governor, whose name was Sir William Berkeley, was a proud, self-willed man who cared for no one but himself. He had ruled Virginia for more than twenty-five years, and during that time had

oppressed the people in every way that he could. He was feared by all and loved by none.

Bacon a rebel.—When Bacon learned that the governor would not protect the planters against the Indians, he made up his mind to take the matter into his own hands. He armed some of his servants, he called upon his neighbors to join him, and started out through the woods to punish the savages. He was soon overtaken by a messenger from the governor bidding all to return to their homes.

“Tell Governor Berkeley,” said Bacon, “that we shall not obey him. Since he refuses to protect us against the Indians we will protect ourselves.”

“In that case,” said the messenger, “the governor warns you that he will consider you as rebels and will punish you as such.”

A popular hero.—Bacon was now more determined than ever. He continued his march and drove the Indians back into their own place. Everybody admired his pluck and courage; and when he returned home the colonists north of the James River elected him a member of the house of burgesses, or legislature, at Jamestown. All this made Governor Berkeley very angry, and he caused Bacon to be arrested and tried for disobeying his orders.

The governor's treachery.—But Bacon's friends rallied around him, and the governor did not dare to punish him. He allowed the young man to go free, and promised to give him a commission to lead the soldiers of the colony against the Indians. But the commission was not made out. Several days passed, and then Bacon was told that the gov-

error was plotting against his life. One dark night he stole away from the town and took refuge among his friends. Berkeley sent out some soldiers to search for him. They went to his house, ran their swords through his bed, and looked in every hiding place; but no Bacon could they find.

How Bacon obtained his commission. — A few weeks later news came that the rebel, as he was called, was

“Bacon . . . marched
into the town”

marching upon Jamestown at the head of an army. There was great confusion. The governor's soldiers were called out, and the burgesses met to determine what to do. But before anything could be done, Bacon, with more than three hundred armed men, marched into the town. The governor's soldiers were few and they could do nothing

against so strong a force. The governor himself was greatly excited. He rushed out between the lines and called upon Bacon to shoot him if he dared.

“No,” said Bacon, “we do not wish to hurt a hair of any man’s head; but we have come for a commission to save us from the Indians—the commission which you have promised; and we will have it before we go.”

“Yes, we will have it! we will have it!” shouted his men; and they primed their muskets.

“Wait! wait!” cried one of the governor’s friends. “Wait till to-morrow, and you shall have the commission.”

Bacon’s men lowered their guns and promised to wait, and Bacon himself walked into the state house and made a stirring speech to the burgesses. In the end the governor, much against his will, signed the commission, and the burgesses passed some excellent laws which were known for many years afterward as “Bacon’s laws.”

More trouble with the Indians. — In the meanwhile the Indians had made another raid into the country north of the James. They had burned the houses, driven off the cattle, and destroyed the crops of several plantations, and had killed some of the people. Bacon, now having his commission, mustered his men and marched promptly against them. But no sooner was he at a safe distance than Berkeley again declared him to be a rebel and called out the militia. Twelve hundred militiamen, supposing that they were to fight Indians, answered his call. But when they learned that they were to pursue Bacon and his men they disbanded and scattered to their homes.

Flight of the governor.— Bacon was in the Indian country when he heard what Berkeley had done. “It vexes me to the heart,” he said, “that while I am hunting wolves that are destroying innocent lambs, the governor should be trying to put me like corn between two mill-stones.” And with that he turned his army about and marched straight back to Jamestown. The governor, finding himself with but few friends, embarked in a boat and sailed hurriedly away; nor did he feel himself safe until he was on the farther side of Chesapeake Bay.

III. A TYRANT'S REVENGE

Another Indian raid.— Bacon was now the real governor of Virginia and he found plenty of work to do. The Indians made another raid upon the plantations, and he was obliged to march against them for the third time. It was a hard campaign. But the savages were so badly beaten that they gave no more trouble for a long time.

The governor's return.— All this time Berkeley was busy on the other side of the Chesapeake, calling to his aid every man that was willing to serve him. He fitted out seventeen small vessels and with six hundred men sailed back to Jamestown and took possession of the place. He made great haste to build a palisade and raise earth-works around the town; but before he could finish them, Bacon and his men returned hurriedly from the Indian country and laid siege to the place. In the dead of night the governor and his men embarked in boats and dropped silently down the river. Early in the morning Bacon

marched into Jamestown, but found there only deserted houses, two or three horses, and a small quantity of corn.

The burning of Jamestown.—What should be done? The men could not stay in that empty place without food.

Burning of Jamestown

If they went out in search of supplies, Berkeley might return and complete his fortifications. A council was called. “Better burn the town,” said one, “than let it serve as a shelter for the false governor.”

“Yes, burn it! burn it!” cried others.

Some of the men ran and set fire to their own houses,

and soon the whole place was ablaze.

Thus the first English town in America was destroyed. It was never rebuilt. Of the old Jamestown, all that is left is part of the church tower.

Death of Bacon.—Bacon called the leading men of the colony together, and did all that he could to restore quiet and peace. But his health was broken by the hardships he had undergone. When at the highest point of success he was taken ill. In a few days he died. There was

no one to take his place as a leader. His men, therefore, dispersed and went sadly back to their homes, leaving nothing in the way to prevent the governor's return.

Berkeley's revenge. —

Very severe was Berkeley when he again took control of the government. He hanged a number of Bacon's friends; he punished some by fines and imprisonment; he drove others into banishment; even women and children were made to feel his vengeance. When the king heard of his cruelty, he removed him from his office. Deserted by all his friends, the old tyrant returned to England and died there of a broken heart.

Jamestown having been destroyed, the capital of the colony was afterwards established at Williamsburg, about ten miles to the northwest.

Old church tower at Jamestown. (The church itself was rebuilt in 1907)

REVIEW

Describe the life of the people in Virginia seventy years after its first settlement. Why did Bacon refuse to obey the orders of Governor Berkeley? Why did he destroy Jamestown? What was the character of Berkeley?

WILLIAM PENN
AND THE SETTLEMENT OF PENNSYLVANIA

I. FATHER AND SON

Penn's childhood. — It is now more than two hundred and fifty years since William Penn was born in London. His father was a rich man, and one of the greatest of England's admirals. William when a child was very bright, and handsome, and thoughtful. The admiral hoped that he would grow up to be a brilliant and successful man. When he sailed with his fleet to distant seas, and engaged in battle with the ships of Spain, his thoughts were still at home with his young wife and his little son.

As soon as William was old enough, the best teachers that could be found were employed to give him instruction. He learned fast and was soon ready for college. When still quite young he was sent to Oxford University, where he was very diligent and well-behaved. But he had some strange ways which no one could understand. He would often shut himself up in his room and sit there alone for hours, doing nothing but think. He also talked a great deal about a strange light which he said sometimes shone in his heart and gave him peace of mind.

William Penn

The Quakers. — One day a Quaker preacher came into Oxford, and William and some other students went to hear him. We do not know what he said, but his words had a great influence upon the young men, and they at-

tended his meetings again and again. Now the Quakers were a very peculiar people, and were not regarded with much favor in England. They called themselves Friends. They said that all men were equal; and therefore they would not take off their hats as a sign of homage, even to the king. They called the churches "steeple houses," and did not believe that any man ought to be paid for preaching the gospel. They said that women were as intelligent as men and ought to have equal rights with them. They were opposed to war and to all kinds of oppression. They believed in plainness of speech, and therefore never said "mister," or "sir," or "madam," but called every one, even the king, by his given name. They dressed very plainly, lived very quietly, and were afraid of no man. All these things pleased William Penn very much, and he resolved to become a Quaker.

Expelled from college. — One of the first things that he did was to join with a few of his young friends who believed as he did, and tear the gowns from the backs of some students who believed differently. This was done to emphasize their belief in plainness of dress. When the professors heard what had been done, William and his companions were sent home in disgrace. What must have been the feelings of proud Admiral Penn when he learned that the son whom he loved so much had become a Quaker and was expelled from college!

A disappointed father. — The fond father did everything he could to change William's way of thinking. Presently he sent him to Paris to amuse himself for a year in that

gay city. He got him a commission in the king's army that was fighting rebels in Ireland. He gave him money, pleasure, everything that one could wish for. And when the young man persisted in being a Quaker, he said, "William, if you will only agree to take your hat off in my presence and before the king and the Duke of York, I will say no more, and you shall have your will."

"I cannot be a respecter of persons," answered William; and his father in despair drove him from home.

The admiral, however, could not remain angry with his son. He soon sent for him and forgave him. "You have disappointed me," he said, "but I honor you for the courage with which you have stuck to your convictions."

William fined and imprisoned.—William now spent much of his time in preaching at different places in England. For doing this he was often fined and sometimes shut up in prison for months at a time. But with all his plainness, there was a nobility in his speech and actions which won the hearts of many persons in high authority. The Duke of York, who was the king's brother, became one of his firmest friends.

II. PENNSYLVANIA

Collecting a debt.—The English government was owing Admiral Penn a large sum for his services; but as the king needed all the money that he could get hold of, there was small hope of the debt being paid. When the admiral died, the greater part of his estate went to his son William. William tried in various ways to induce

the government to pay him, but without success. At length he said, "Suppose that, in place of paying me the money, you give me a grant of land in America. It would be an act of both justice and economy."

This proposition was very pleasing to the Duke of

"Here, William!" said the king"

York. It was pleasing also to the king, for the land in America had cost him nothing. In the end it was agreed that William Penn should be given a broad tract of land on the west side of the Delaware River and that this should be accepted as payment for the debt that was owing him.

Pennsylvania. —

"Here, William!" said the king, jokingly, "I am doing a fine thing to give all these seas, bays, rivers, and forest

lands to such a fighting man as you are. But you must promise that you will not take to scalping."

"I will answer for William," said the Duke of York. "But what shall we call the new empire that he is to found for us in the wilds of America?"

“If I might have my preference,” answered Penn, “I would name the country New Wales; for Wales was the first home of our family.”

“Nay, nay,” said the king. “I am the godfather of that country, and I will do the naming of it. It shall be called Pennsylvania, which in plain English is Penn’s Woods.”

Penn was not pleased with this. He thought it looked like foolish vanity to call the country by his own name.

“Leave off the ‘Penn,’” he said, “and call it Sylvania.” And when the charter was being made out, he offered the king’s secretary twenty guineas if he would write it so.

“There is no cause for you to feel proud,” said the king. “I named the country not in your honor, but in honor of your father, the admiral.” And after that, William made no more objections.

A new colony. — What use would William Penn make of that great tract of land in the wilds of America? He had long wished to establish a colony where the people of

Pennsylvania

his own society, the Quakers, could live in peace and be free to do and say whatever they believed was right. In England they could scarcely open their mouths without being fined or imprisoned. In New England matters were even worse; for the Puritans who had endured every privation to gain freedom for themselves were unwilling that others should share that freedom. But in the wild forest region by the Delaware, Penn would found a commonwealth where everybody, whether Quaker, or Puritan, or Catholic, or English Churchman, might speak his own mind on all subjects, and be free to worship God as he chose.

New Jersey.—He had already taken a step toward this, but not with much success. Four years before, he had become part owner of the lands on the east side of the Delaware River, including about half of the present state of New Jersey. A few Quakers had gone over and a few feeble settlements had been begun along the river; but there were disputes with the Duke of York about the title to the lands, and Penn felt that he could never carry out his plans satisfactorily there. The eastern part of New Jersey, where there were now many settlements, was controlled by Sir George Carteret as proprietor, and there the same disputes were going on. In truth, the only vacant territory between Maine and Virginia was the great tract which Penn had just secured west of the Delaware.

Quaker and king.—He was not long in carrying out his plans. He advertised to sell his land very cheap, and soon many emigrants of all classes were on their way

to Pennsylvania. When Penn himself was ready to embark, he called upon the king to bid him good-by.

“I fear I shall not see you again,” said the king. “I shall soon hear that you have gone into the savages’ war kettle. What is to prevent it?”

“Their own inner light,” answered Penn. “Moreover, as I intend to pay them a fair price for their lands, I shall not be molested.”

“Buy their lands! Why, is not the whole country mine?”

“No, Charles, thou hast no right to their lands. The red men were the first occupants of the soil, and they are the true owners.”

“What! what! have I not the right of discovery?”

“Well, Charles, let us suppose a case. Suppose a canoe load of savages from an unknown region should by some accident discover Great Britain. Would all this country be theirs or thine? Wouldst thou vacate or sell?”

The king could not answer. He had never thought of the matter in that light.

III. A QUAKER COLONY

Philadelphia. — William Penn chose for the site of his chief settlement the high ground between the Delaware and Schuylkill rivers. There he laid off a city, with straight streets crossing each other at right angles. It was the first city ever planned so perfectly. He named it Philadelphia, from two Greek words meaning “brotherly love.”

The Treaty.—A great council was held under an old elm tree at Shackamaxon, now Kensington, near Philadelphia. Penn and his companions went to the meeting unarmed; the natives, seeing them so, threw their own arms upon the ground. All seated themselves in a semi-circle on the grass, and then Penn made a speech to the

“A great council was held”

chiefs that were present. He told them that he and his friends had come unarmed because they did not believe in fighting, and never used weapons. And he assured them that he wished nothing so much as to live in friendship with them and all men.

Then he explained to them his wish to buy their lands, and showed the merchandise that he would give in ex-

change for them. A treaty was drawn up and agreed to; there was a general shaking of hands, and a strange muttering of good wishes; and then all departed in happy mood to their several homes. This was the first treaty ever made without being strengthened by an oath, and it was perhaps the only treaty with the Indians that was never broken. While in all the other colonies the settlers were harassed and distressed by many Indian wars and massacres, the people of Pennsylvania lived in peace and were never molested.

What the Indians thought of Penn. — No other white man was admired by the Indians so much as Penn. He walked with them, sat with them, visited them in their little huts, ate with them their hominy and roasted acorns. Once when some were having a game at jumping, he joined them and as he had practiced athletics in his youth, he outjumped them all. It was something new to the red men to see the white chief take an interest in their own modes of life, and they honored and loved him for it.

Progress of the colony. — Not only was Penn discreet and kind in his treatment of the Indians, but the laws which he made for the government of his people were wise and just. Although some found fault and were troublesome, the most of the colonists were contented and well behaved. The new city on the Delaware grew very fast. In the second year a school was opened in a little house built of cedar and pine planks; and Enoch Flower was the teacher. A printing press was set up. There were shops and stores and gardens and farms. And while

“He outjumped them all”

the most of the people were Quakers and worshiped in their own plain little meeting houses, all others who came were welcome and were permitted to hold such opinions as they chose.

IV. GOVERNOR PENN

Delaware.—About a year after the beginnings were made at Philadelphia, the Duke of York gave up to William Penn all his claims to the lands west of Delaware Bay. These lands comprised what is now known as the state of Delaware. Settlements had been made there long before by the Swedes and by the Dutch, and later by people from England. Penn said that all the colonists should be governed by the same wise and

gentle laws that he had made for Pennsylvania. As long as he lived, the "three lower counties on the Delaware," as that region was called, formed really a part of Pennsylvania. At a later time they became a separate colony — the colony of Delaware.

Return to England. — It was not long before Penn was obliged to leave his colony and return to England. His enemies in that country were making false accusations against him, and he went back to defend himself. At about the same time, King Charles died, and the Duke of York became king of England, being known as James II.

Now James II. was a Catholic, and he was accused of wanting to establish the Catholic religion in England. His people

were very bitter against him, and because he was friendly to William Penn, they declared that Penn was a Catholic in disguise, ready to help the king carry out his designs.

Imprisoned again. — In the end James II. was driven from his throne and obliged to find safety in France, and his daughter Mary and her husband William of Orange

Penn's house in Philadelphia

were made queen and king of England. The Penn's enemies accused him of plotting to bring James back, and although nothing could be proved against him he was several times shut up in prison.

Once more in Pennsylvania.—About seventeen years after the first settlement at Philadelphia, Penn sailed once more for America. He took his family with him, and expected to stay in Pennsylvania during the rest of his life. He found his colony in a very flourishing condition. Philadelphia was a busy, bustling little city. It was larger than New York, although only one fourth as old. Counting those in all the settlements, there were more than twenty thousand people in Pennsylvania.

The governor's mansion.—At Pennsbury Manor on the Delaware, Governor Penn, as he was now called, had a fine country seat, and there he lived in the style of an English country gentleman. While, like other Quakers, he was plain of speech and simple in manners, he did not deny himself of the luxuries to which he had been accustomed in his father's house. In his spacious mansion there were many signs of wealth and good taste that were very uncommon in the colonies. There one might see costly tables of solid oak, damask table cloths and napkins, curtains and blankets of softest silk, and down-filled cushions covered with satin or plush and embroidered with the finest needlework. But in that fine mansion everybody that came was welcome. In the halls were long tables, kept always standing and ready to be loaded with food for the guests that might come. At one

time when an entertainment was given to the Indians, a table was put up under the poplar trees before the house, and a hundred roasted turkeys were served at a single meal.

A man to be admired. — Governor Penn did not dress as plainly as the other Quakers. His clothes were made

“He treated all with the same gentleness and courtesy”

of rich materials, and they were cut and fitted with great care. His hat, although broad-brimmed, was not very different from those worn by the gentlemen at King Charles's court. He liked fine wigs, and in a single year ordered four very costly ones from London. He was kind and friendly to rich and poor alike. All men, in his eyes, were equal, and he treated all with the same gentleness and courtesy.

His last years. — But Penn was not permitted to stay long in his colony. His enemies at home were trying to pass a law depriving him of the right to govern Pennsylvania. And so, to defend himself, he was obliged to return to England. He had been in America only about two years.

Many troubles now beset him. He was defrauded of very much of his property in England. His money was gone. He was imprisoned nine months for debt. Disappointment and anxiety bore heavily upon him. His health failed. He at length retired to the quiet of his country home, but he never regained his strength. Sixteen years after his return to England he died.

REVIEW

Who were the Quakers? What were some of their peculiar beliefs and habits? Why did not Admiral Penn wish his son William to become one of them? For what was the English government in debt to Penn? Why was the debt not paid? What proposition did William Penn finally make to the king? What lands were granted to him in settlement of the debt? Why did he wish to have control of such lands? What right had King Charles to these lands? Why did he call the region Pennsylvania? How did Penn deal with the Indians? Why did the Indians have so much esteem for him? Why did the colony prosper so well? Of what did Penn's enemies accuse him? In what respects did life in Pennsylvania differ from life in Massachusetts?

JAMES OGLETHORPE
AND THE SETTLEMENT OF GEORGIA

I. A FRIEND TO THE POOR

Prisoners for debt. — In the days of William Penn and later it was a dangerous thing to go in debt, especially in England. If a person was unfortunate and could not pay at the promised time he was shut up in prison; and if he had no friends who were willing to satisfy his creditors, he would be kept there probably as long as he lived. He was treated very badly in the jail, and was often obliged to stay in the same room with the vilest criminals. Many a poor man whose heart was gentle and good, was thus imprisoned and made to suffer great distress, not for any crime but because he had met with misfortune.

Once, when the times were very hard, the prisons of London were crowded with such men. Their misery was such that it ought to have touched the hardest
1728 hearts; but in those days very few people seemed to trouble themselves about the sufferings of others.

James Oglethorpe. — It so happened, however, that there was in the city a rich country gentleman who was moved with pity when he heard about these poor prisoners. The name of this man was James Oglethorpe. He had

been a soldier in the king's army and had fought bravely in a great war that had but lately ended ; and upon his return home his friends had sent him to Parliament. He now visited the prisons in London and saw for himself how cruelly the poor debtors were being treated.

"I must do something to relieve them," he said.

Oglethorpe's plan of relief. — But what could he do? He brought the matter before Parliament and succeeded in having many of the debtors set free. And yet this did not relieve them from distress. They had lost their homes ; there was no work for them to do ; they must beg or starve on the streets. Then he thought of a plan. In America there was room enough for every man to have a home ; the climate was mild, the soil was rich, any person with energy might earn a livelihood. Why not find a place in that new country where the poor debtors of England might make themselves homes ?

Georgia. — George II. was the king of England at that time. When Oglethorpe explained his plans to him he was much pleased. He readily agreed to aid the kind enterprise by giving up to it all the unsettled region which lay between the English colony of South Carolina and the Spanish province of Florida. Oglethorpe and some of his friends were to hold the lands in trust for the poor people who should settle there ; and Oglethorpe was to be the governor of the colony. The new province was to be called Georgia, in honor of the king ; and Parliament voted to give a large sum of money to aid in founding the colony.

II. A GLANCE BACKWARD

The Spanish in Georgia. — Oglethorpe without delay hastened to carry out his plans for the settlement of Georgia. The history of the region was no doubt well known to him. The English had all along claimed possession of it on account of John Cabot's discovery. The claim, however, was early disputed by both Spain and France.

Spain asserted that it was a part of Florida. Spanish adventurers had made more than one expedition into the territory. It was through Georgia that Narvaez, with Cabeza de Vaca and a company of noble young Spaniards, had marched to disappointment and defeat. It was

through southern Georgia that De Soto had led his band of gold seekers, his path marked everywhere by destruction and misery.

The French in Georgia and Carolina. — The French had been the first to explore the coast of Georgia with care. Jean Ribaut, a Huguenot sea captain, discovered the St.

Georgia and the Carolinas

John's River, and gave names to many of the streams that enter the sea farther north. He called the country Carolina, in honor of Charles IX., the French king; and, as he viewed its rivers and forests, he declared it to be "the fairest, fruitfulest, and pleasantest of all the world." Where now is Port Royal, in South Carolina, he left a few colonists to hold the region for France. They built a fort there, but deserted it within a year, being unable to maintain themselves in that wilderness place.

The English take possession. — For nearly a hundred years the country was neglected; the long coast from Roanoke Island to the St. John's River was without a white inhabitant. Then King Charles II. of England granted the whole of Carolina, from Virginia to Florida, and from the Atlantic to the Pacific, to eight wealthy men called lords-proprietors, who agreed to establish colonies there. They built a fort and founded a town at the mouth of the Ashley River, and named the place Charleston. This was the beginning of the English colony of Carolina. Many people were attracted to the new colony, and a number of settlements sprang up along the rivers and by the coast. The colonists were much dissatisfied with the rule of the lords-proprietors, and at last succeeded in freeing themselves from their control. This occurred just at the time when Oglethorpe was beginning to form his plans for the relief of the English poor. The king divided the country into two colonies, or royal provinces, North Carolina and South Carolina, and appointed a governor over each.

Conflicting claims. — Although the English claimed that the province of South Carolina extended to the St. John's River, no settlements had been made south of the Savannah. The Spanish also claimed all the country between these rivers, but had made no efforts to colonize it. The time had come when the question of ownership must be settled. The nation that should be first to plant a colony in the disputed territory would be the most likely to make its title good. And this, perhaps, was the reason why King George consented so readily to the plan of colonization proposed by Oglethorpe.

II. GEORGIA

The first colonists. — Soon a ship was ready to sail with the first company of emigrants. Thirty families were on board, and Oglethorpe himself sailed with them. They had a prosperous voyage, and in January, 1733, reached the Savannah River. They landed and began at once to prepare themselves homes. Some set to work to clear the fields and make the land ready for planting; some were busy building houses; others marked out the streets of the town, which they named Savannah. "All worked with a will," wrote one. "There were no idlers; even the boys and girls did their part."

Thus the thirteenth and last of the English colonies in our country had its beginning.

Other colonists. — Soon other settlers began to arrive. Many classes of people came; for Oglethorpe had made it known that all who were oppressed in any way would be

welcome in his colony. There were not only poor Englishmen but Scotch Highlanders and Moravians and Bavarians and Jews and many others.

“All worked with a will”

Oglethorpe's laws.

—Oglethorpe tried to enforce good laws in his colony. One of these forbade negro slavery; but, since slaves were held in all the other colonies in America, his people thought that this was a very hard law. Before twenty years had passed they succeeded in doing away with it, and negroes were bought and sold in Georgia just as elsewhere.

Very soon the men who had been most befriended by Oglethorpe turned against him. Although he had made it possible for them to have their own homes and to live in a free country, they were dissatisfied because he did not do more. They sent complaints about him to England, and tried to have him removed from his office of governor.

The war with Spain. — Five or six years after the landing at Savannah a war broke out between England and Spain. Governor Oglethorpe mustered all the fighting men in Georgia and made an attack on St. Augustine in Florida. But the place was so strongly guarded that the Georgians were driven off and obliged to return home. A short time afterward a Spanish fleet sailed along the coast of Georgia, and a number of Spaniards came to land with the intention of overrunning the country. But Oglethorpe and his soldiers bravely withstood them, a bloody battle was fought, and the invaders were glad to return to their ships and sail away.

End of a long life. — When the colony was eleven years old Oglethorpe left it and returned to England. Perhaps he was tired of trying to serve a thankless people, and besides this, his affairs at home required his attention. Although he never saw his colony again, he was always warmly interested in its welfare and ready to give it such aid as he could. He lived to be a very, very old man, — ninety-six years of age, — and was hale and hearty and joyful to the very end.

REVIEW

Name all the English colonies you have learned about in this book. With which of the colonies was Captain John Smith connected? Which colony was settled by Pilgrims? by Puritans? by Roger Williams? by lords-proprietors? by Catholics? by Quakers? by the Dutch? What was the object of James Oglethorpe in founding the colony of Georgia? What classes of people were among the first settlers in Georgia?

BENJAMIN FRANKLIN

AND THE PROGRESS OF THE COLONIES

I. A STUDIOUS BOY

Franklin's childhood. — Benjamin Franklin was born in Boston on the 17th of January, 1706. His parents were poor people who lived in a humble home on Milk Street, and he was the youngest son in the family of seventeen children.

His schools. — Little Benjamin learned to read almost as soon as he could talk. He was so bright and studious that his parents wished to educate him for the ministry. When he was eight years old, therefore, they sent him to the Latin School where boys were prepared for Harvard College. He learned very fast and soon made his way to the head of his class; but his father had little money, and the cost of keeping him in school would be very great. His parents talked the matter over again, and the plan of educating him for a preacher was given up.

Benjamin was taken out of the Latin School and sent to a cheaper place where he learned to write and to calculate — two things very necessary to one who was to follow a trade. When he was ten years old he was taken out of school altogether. Although so young, there were many things he could do, and his father needed his help.

His work.—Mr. Franklin was a candle maker, and for two years he kept Benjamin busy cutting wicks, molding candles, and waiting on customers. But the lad did not like the business. When he saw the ships come into the harbor with their cargoes of goods from strange lands beyond the sea, he thought that he would like above all things to be a sailor. But his father objected to this and kept him in the shop more closely than ever. Then he turned his attention to books.

His books.— There were no children's books in those days, and not much of anything that a boy at the present time would care to read. But Benjamin Franklin read all the books he could get hold of. Sometimes he would borrow a volume and sit up nearly all night reading it so as to return it promptly. When James Franklin, one of Benjamin's brothers, set up a printing press in Boston, his father said,

“He was apprenticed to learn the printer's trade”

“Here is a chance for Benjamin. He is a lover of books. He shall learn to be a printer.” And so, at the age of twelve years, the lad was apprenticed to his brother to learn the printer’s trade.

The newspaper that was issued from James Franklin’s press was called the *New England Courant*. It was the fourth newspaper published in America. People thought that James Franklin was very foolish. One newspaper, they said, was enough for the entire country.

In those days it was unsafe for a newspaper to criticise men who were in power. But the *Courant* was very outspoken from the start. The magistrates, therefore, caused James Franklin to be imprisoned for a month; and it was ordered that he should no longer publish the *Courant*. But in spite of this order, the paper was issued every week as before. It was printed, however, by Benjamin Franklin; and for a long time thereafter it bore his name as editor and publisher.

II. A TRIAL OF NEW FORTUNES

Franklin leaves home. — James Franklin’s temper was not improved by his month’s imprisonment. He was always finding fault with his workmen, and sometimes he would beat young Benjamin unmercifully. The lad bore this ill treatment until he was seventeen years old, and then made up his mind to endure it no longer. He would go to some other place and look for work. But his brother warned the other printers in Boston not to employ him; and so Benjamin decided to run away from home.

He visits New York. — He sold his books to raise a little money, put his best clothes into a bundle, and without bidding good-by to any one, took passage on a packet sloop that was just ready to sail from the harbor. Three days afterward he stepped ashore at New York.

New York, when Franklin visited it, was a small town at the extreme southern end of Manhattan Island. The stockade, or wall, that had been built by the Dutch, might still be seen on its north side. Above Wall Street there

New York as Franklin saw it

were only a few outlying dwellings surrounded by vegetable gardens and cow pastures.

William Bradford. — Young Franklin's first care was to find the shop of William Bradford, the official printer of the colony. Mr. Bradford had put up the first printing press in New York, and had published the first bound book. He received the boy very kindly, but told him that it was useless to look for work in New York. There was not a single newspaper in the place, and not enough printing was done to support the half dozen persons who were already engaged in the business. He advised Benjamin

to go to Philadelphia, where printing was more in demand. The boy reflected that Philadelphia was a hundred miles farther from home; but, having set out to seek his fortune, he would not turn back.

Franklin's journey across New Jersey. — There are two ways of going from New York to Philadelphia — one by sea, and the other by land across New Jersey. Since young Franklin had but little money he decided to take the shorter and cheaper route. The trip can now be made in less than two hours; but there were no railroads at that time, nor would there be for more than a hundred years. There was not even a stagecoach anywhere in the colonies. Franklin walked from Perth Amboy, on the eastern coast of New Jersey, to Burlington on the Delaware.

The only road was a rough bridle path through green woods and desolate clearings, and the boy trudged along for nearly three days before reaching Burlington. There he took a boat, and after passing a night on the Delaware, he arrived, early one Sunday morning, in Philadelphia.

In Philadelphia. — As Franklin stepped ashore at the foot of Market Street, none who saw him could have guessed that he would one day be the greatest man in Pennsylvania. He was dressed in his working clothes; his pockets were stuffed out with spare wearing apparel; and all the money that he possessed was little more than a dollar. He had not a single friend. Yet he had within him those qualities of pluck and endurance that would have won success in almost any situation.

Philadelphia was still a new place, for only forty years

had passed since Penn had established his colony there. It had as many inhabitants as New York, which was a good deal more than twice as old. It was almost as large as Boston, which had been settled nearly a hundred years.

Seeking employment. — There were only two printing presses in the place. One was owned by Andrew Bradford, a son of William Bradford of New York. The other was controlled by a man named Keimer. Mr. Bradford was the publisher of the *American Mercury*, the only newspaper outside of Boston, and Franklin hoped that he might obtain work in his shop. He had no room, however, for another printer; but he sent the young man to Mr. Keimer, who gave him employment.

An old style printing press

III. A SUCCESSFUL CAREER

Deceived by the governor. — The pleasant manners and manly ways of Benjamin Franklin soon won for him many friends. William Keith, the governor, became much interested in him, and promised to set him up in a printing office of his own. Relying upon this promise, Franklin was persuaded to go to England to buy types, paper, and a press, on the governor's credit — for none of these things were made in America.

The governor, however, proved to be a scoundrel. When Franklin arrived in London he found himself deserted by his pretended patron, friendless, and without money.

Returns to Philadelphia. — The strong common sense of the young man, together with his ability as a printer, carried him safely through every difficulty. He found employment in a printing shop and soon had both money and friends. Among the latter was an American merchant whose name was Denman. This gentleman persuaded Franklin to return with him to Philadelphia, and take a position in a store which he owned there. This appeared to be a turning point in the young man's life, and he was soon busy at work keeping books and measuring cloth and selling goods. Scarcely, however, was he well settled in his new business when his employer died. The store passed into other hands, and Franklin was again obliged to find work with his old friend Keimer.

The "Pennsylvania Gazette." — Soon after this a gentleman, who had money to invest, proposed to go into the newspaper business, and asked Franklin to become his partner. Franklin consented, and became the editor and publisher of a new paper which he called the *Pennsylvania Gazette*.

His services to the country. — As time passed, Franklin became known as one of the leading men in the English colonies. He founded the first circulating library in America — the beginning of the present Public Library of Philadelphia. He established the University of Pennsylvania. He organized the first fire company in Philadelphia, which was also the first in our country. By

many ingenious experiments, he learned more about electricity than the world had ever known before. He became famous in foreign countries as a philosopher and man of science. The universities of Oxford and Edinburgh honored him by giving him the degree of Doctor of Laws.

Carrying the mail

Postmaster general. — In 1753, when Dr. Franklin was forty-seven years old, he was made deputy postmaster general for the thirteen colonies. People were astonished when he proposed to have the mail carried regularly once every week between Philadelphia and Boston. At that time there were not seventy post offices in the whole country. There are now more than seventy thousand.

The convention at Albany.—In the meanwhile the colonists were beginning to feel great alarm on account of the threatening manner of the Indians and French in the Northwest, and it was decided to send delegates to a convention in Albany, to talk the matter over and provide for the defense of the outlying settlements. Dr. Franklin was one of the delegates from Pennsylvania. He presented a plan for the union of all the colonies, and it appeared so wise and practicable that the convention voted to have it adopted. But neither the English government nor the colonies themselves were willing to try the experiment.

The idea of union.—The plan which Franklin proposed was much talked about, however; and it set people to thinking. Why should not the colonies unite? Instead of each standing alone, why should they not help one another? It was thus that Dr. Franklin first put into men's minds the idea of forming that union which is now known as the United States of America.

Franklin's first mission to England.—The king of England and his counselors had but little regard for the American people. They made many unjust and oppressive laws, which were designed to enrich English politicians and merchants, without benefiting the colonists. At length the colony of Pennsylvania decided to send some one to England to advocate the cause of the people. Benjamin Franklin was the man chosen for that difficult mission. He remained abroad five years, pleading in behalf of the colonists and winning much esteem

both in England and in France. When he returned the colonial assembly publicly thanked him for his services to his country.

IV. A STATESMAN AND PATRIOT

The Stamp Act. — Soon new troubles arose. The English parliament passed a law for taxing the colonists by obliging them to buy stamped paper. No deed or note or other document was valid unless it was written on this paper, which must be bought of the government. This law, which is known in history as the Stamp Act, was opposed by the people with all their might.

Franklin's second mission to England. — Dr. Franklin had been at home scarcely two years when he was sent back to England to plead against this and other oppressive measures that were designed to rob the colonists of their just rights. He stayed abroad, this time, for more than ten years, trying to induce the king to deal more liberally with the American people; but his work was in vain.

Benjamin Franklin

The Revolutionary War begins. — In May, 1775, Franklin returned to Philadelphia. The colonists could endure oppression no longer. A battle had just been fought at Lexington; the war of the Revolution had begun.

The Declaration of Independence. — A year later, delegates from all the colonies met in Philadelphia to make

“ At the court of the French king ”

plans for the carrying on of the war. These delegates in convention formed what is now known as the Continental Congress of America. A committee was appointed to prepare a declaration of independence, and Benjamin Franklin was one of that committee. On the 4th of July the declaration was adopted

1776

by Congress, and the thirteen colonies became the United States of America.

Ambassador to France. — Not long after this, Dr. Franklin was sent to Paris to represent our country at the court of the French king. He soon succeeded in bringing about a treaty whereby France acknowledged the independence of the American states and agreed to
1777 assist them in their war for liberty. He thus secured aid for our country in the time of its greatest need, and made it possible for the Americans to win the victory.

Franklin's last services. — It was not until more than two years after the states had gained their freedom that he was able to return home again. He was
1785 then nearly eighty years old. The grateful people of his state could not do enough to prove their esteem for him, and in that same year they elected him president of Pennsylvania. The next year he was a delegate to the convention which formed our present Constitution.

In 1790, Dr. Franklin died, honored by the entire country in whose service he had spent so many years of his life. His grave may still be seen in Philadelphia.

REVIEW

How long ago was Benjamin Franklin born? What kind of books did children have to read then? Why was Philadelphia the best place for an enterprising young man like Benjamin Franklin? What plan did Dr. Franklin propose at the convention in Albany? In what way did the king of England and his counselors oppress the American colonists? In what way was Dr. Franklin of great service to the colonies?

SIR WILLIAM JOHNSON
AND THE FRENCH AND INDIAN WAR

I. A MAN OF AFFAIRS

William Johnson was about ten years younger than Benjamin Franklin. He was born in Ireland, and belonged to a rich and influential family. When ¹⁷³⁸ he was about twenty-three years old he came to America to take charge of a large tract of land belonging to his uncle, who was an admiral in the British navy. The land was on the south side of the Mohawk River in New York. It was little more than a broad extent of woods inhabited by wild animals and roving Indians. Young Johnson expected to colonize this tract, to clear away the forest trees, and to found a great estate similar to those of the rich land-holding gentlemen in England.

Indian commissioner. — Johnson's first care was to make friends with the Indians. He began to trade with them on a large scale. He learned their language, hunted with them, lived with them, and welcomed them to his home on the Mohawk. By these means, and by always treating them justly, he gained their confidence. The Mohawk Indians adopted him into their tribe and gave him a name which meant, in English, "the man who has charge of affairs." The governor of the colony appointed

him commissioner among the Indians, and soon afterwards placed him in command of all the New York colonial militia for the defense of the frontier.

The Iroquois. — The estate of which William Johnson had the management was on the border of the Indian country. Since the earliest times all that region which lies between the Mohawk River and Lake Ontario had been the home of a powerful confederacy of Indians called the Iroquois. In this confederacy there were at first five nations — Mohawks, Onondagas, Cayugas, Oneidas, Senecas.

Long house of the Iroquois

They were later joined by their kinsmen, the Tuscaroras, from North Carolina. The English then called them the Six Nations.

Enemies of the French. — The Iroquois were bitter enemies of the French who were settled in Canada along the St. Lawrence River. The fear of these Indians had prevented the French from pushing southward at an early period and gaining a foothold in the valley of the Hudson. The Iroquois stood like a wall between the English colony of New York and any foes, whether white or red, that might invade it from the north.

The power of the Iroquois. — The war parties of the Iroquois wandered as far west as to the prairies of Illinois; and they were known and feared by all the Indian tribes from the Great Lakes to the Ohio River. It was of the utmost importance that they should continue friendly to the English, and it became William Johnson's duty to see that nothing disturbed that friendship. By his wise management he gained a greater influence over them than any other white man ever possessed.

II. THE FRENCH AND INDIAN WAR

English and French. — For many years there had been a growing jealousy between the English colonists and the French. The English fur traders in New York and Pennsylvania were anxious to extend their business among the Indians of the Northwest, but were prevented by the French, who claimed all that region as their own. The colonists of Virginia had but lately learned of the beauty and fertility of the Ohio Valley. They had always thought of this region as belonging to Virginia; but the French had been the first to occupy it.

The English at last began to trespass upon the territories claimed by the French; and the French prepared to defend their possessions, and tried to persuade the Indians to help them against the English colonists.

The English colonists alarmed. — To the thinking men of both nations it was plain that serious trouble was at hand. The English colonists from New Hampshire to Virginia were alarmed, and some of the colonies appointed

delegates to a convention to make plans for protection in case of war. The convention was held at Albany, probably because of its nearness to the Iroquois, whose friendship it was so necessary to keep.

The convention at Albany. — William Johnson was one of the delegates from New York. He explained to the convention his views as to the best methods of preventing the French from gaining any influence over the Iroquois; and so wise and judicious were his plans that Benjamin Franklin publicly thanked him for his speech and asked that a copy of it should be sent to each of the thirteen colonial governments. The war for the possession of the Ohio Valley and the Northwest was already beginning; and the Iroquois remained faithful to the English.

“Benjamin Franklin thanked him for his speech”

Johnson a major general. — Early in the following year, Johnson was invited to go to Alexandria in Virginia to confer with General Braddock, who was about to march

against the French and Indians on the Ohio. Braddock was a self-conceited man. He did not ask for advice about the manner of carrying on the war; he would not listen to any man's opinion. But he appointed William Johnson to the command of an expedition against the French on the New York frontier, and gave him the rank of major general in the king's army.

Braddock's defeat. — A few weeks after returning to the north, General Johnson learned that Braddock's grand army of British regulars had met some French and Indians near the forks of the Ohio, that a terrible battle had taken place, that Braddock had been killed, and that his forces had been defeated and driven back to Virginia. This was discouraging news, but it was for General Johnson to redeem the English cause and turn the tide of war.

Lake George. — With a body of armed men from New York and New England he hastened to meet a French force that was threatening the colony by way of Lake Champlain. He pushed through the dense woods about the headwaters of the Hudson, and late in August pitched his camp on the south shore of a magnificent body of water which the French had named Lac Saint Sacrament. As General Johnson stood admiring the beauty of the lake he declared that it should be rechristened. "It shall be named Lake George," he said, "not only in honor of his Majesty, the king, but to assert his dominion here." And Lake George it has ever since been called.

A battle with the French. — A few days later the colonial forces were attacked by the French army and a

desperate battle was fought. The raw soldiers of New York and New England, however, proved to be more than a match for the French regulars. General Johnson was wounded early in the fight; but the French commander was taken prisoner, and his army was utterly routed.

Sir William Johnson. — After this the colonists felt for a time as though they were quite secure from the French in

Lake George

Canada. The credit for the victory seems really to have belonged to General Lyman, who conducted the battle after Johnson was wounded. But, for some reason, General Johnson was everywhere praised as the hero who had avenged the defeat of Braddock and saved the English colonies. The British parliament voted him a

gift equal to twenty-five thousand dollars in our money ; and two months later he was made a baronet of Great Britain and became Sir William Johnson.

A long war. — It is no part of our purpose to follow Sir William Johnson through the long war that was fought for the possession of the West. Nor is it necessary to name the great men who took part in that war, or to describe the campaigns, the victories, the defeats, the various maneuvers by land and sea. Sir William Johnson's influence over the Iroquois was such that no temptations which the French might put in their way could make them unfriendly to the English ; and this had very much to do in deciding the outcome of the war.

Quebec and Montreal. — The war had been going on for five years when the British under General Wolfe attacked Quebec. A desperate battle was fought outside of the walls of that city, and the French under General Montcalm were defeated. This was the deathblow to the cause of France in America. A few months later, Sir William Johnson was one of the officers to receive the surrender of Montreal and with it the whole of Canada.

Results of the war. — France had lost everything. At the treaty of peace that was signed some time afterwards, she gave up to Great Britain not only Canada but ¹⁷⁶³ the Great Lakes and all the region between the Mississippi River and the Alleghany Mountains. The country west of the Mississippi was given to Spain. The king of France had no longer any possessions in North America.

III. THE LORD OF KINGSLAND

A great landholder.—Sir William Johnson was well rewarded for his services in the war. Besides the money that had been given him by the British parliament, he received a grant of one hundred thousand acres of land in the Mohawk Valley. He soon afterwards went to live on this estate, which was long known as Kingsland. He induced many enterprising men to make their homes there; he laid out the village of Johnstown, which he named after himself; he built in it a courthouse, a church, and an inn; he supplied the villagers with lumber from his own mill; he established a free school for the village children; and he took a fatherly interest in the welfare of every white person or Indian within his reach.

“He lived in the style of a feudal lord”

Johnson Hall.—Not far from the village he built for himself a noble mansion which he called “Johnson Hall.”

There for the rest of his life he lived in the style of a feudal lord, surrounded by his tenants and his Indian dependants. He took great pride in the management of his estate; he experimented with the best grains and the finest fruit trees; he was the first in that region to raise sheep and fine breeds of cattle and horses. Inspired by his example, the white settlers took much pride in raising good crops and in improving their farms. Even many of the Indians left off their savage ways and became excellent farmers.

To the end of his life Sir William was superintendent of the Iroquois and other northern Indians; and it is said that his death was caused by a cold, brought on while making a speech at an Indian council on a very warm day. He died ten months before the beginning of the Revolutionary War, being nearly sixty years of age.

REVIEW

Who were the Iroquois Indians and where did they live? What important part did they perform in the history of our country? What was the secret of Sir William Johnson's influence over them? What was the cause of the French and Indian War? Tell about the convention at Albany. Tell about Braddock's defeat. Why was Sir William Johnson regarded so highly by the British government? What was the result of the French and Indian War?

GEORGE WASHINGTON

AND THE WAR FOR INDEPENDENCE

I. WHEN WASHINGTON WAS YOUNG

Childhood and Youth. — George Washington was born in Virginia a little more than a year before General Oglethorpe and his first colonists landed in Georgia.

1732 Virginia had then been settled about a hundred and twenty-five years. It was not only the oldest but the richest of the English colonies in America, and it had more inhabitants than any other.

George Washington's father owned at least three large plantations. One of these was on the banks of the Potomac, nearly forty miles above its mouth; another was farther up the river, at a place then called Hunting Creek, but since known as Mount Vernon; the third was on the Rappahannock River, nearly opposite the town of Fredericksburg. It was in a quaint old house on the first of these plantations that George Washington was born, on the 22d of February, 1732. Much of his childhood was spent at the Rappahannock home, and there, when George was eleven years old, his father died. During his youth he lived at Mount Vernon with his elder brother Lawrence, who had inherited nearly all of their father's estate.

The boy surveyor. — A wealthy Englishman, whose name was Sir Thomas Fairfax, had become the owner of more than five million acres of the choicest forest lands in Virginia. His vast estate included the whole of the

The boy surveyor

beautiful valley of the Shenandoah, besides much of the country about the headwaters of the Potomac. He was anxious to have a portion of his domain settled and improved. In looking about to find some one to explore his lands along the Shenandoah, he was attracted to young George Washington, whom he had met at Mount Vernon, and whom he knew to be both brave and trustworthy. Washington was at that time only

sixteen years of age, but he had already learned most of the things necessary for a young Virginian to know, and he had had some experience as a surveyor. When Sir Thomas Fairfax asked him to undertake an expedition beyond the Blue Ridge, and offered to

pay him well for his services, he willingly undertook the difficult task.

Western pioneers.—The results of young Washington's trip into the wilderness were very pleasing to his employer. He brought back such glowing accounts of the "Far West" — which was then no farther than the Shenandoah Valley — that Sir Thomas decided to make his own home in that region. He therefore became a "western pioneer" and built himself a fine mansion in the wilderness, not far from the present site of Winchester. He invited colonists to come and settle on his lands, and soon there were many small farms and peaceful homes all up and down the valley. The people who came were mostly of a sturdy, self-reliant class, who owned few if any slaves; and they had no wish to establish great plantations as there were in other parts of Virginia. They did so well that still others were persuaded to come; and many persons began to feel interested in western lands.

The Ohio Country. — About this time wonderful stories were being told in Virginia about a fertile region still farther west. This region was beyond the last ridge of the Alleghanies, and was called the "Ohio Country," from the name of the noble river by which it was watered. It was claimed by the French, because they had discovered and partly explored it; but Virginia had also a claim upon it, because it was included in the charter which King James I. had given to the colony a hundred and forty years before. A few hunters and traders, who had ventured by stealth into that country, had returned with

the most glowing accounts of its beauty and fertility. Many people were now beginning to look westward and to feel that Virginia should do something to rescue that fair region from French control.

The Ohio Company.—Finally some Virginian planters and English gentlemen formed a company to explore the Ohio Country and to establish forts and settlements there. This company was called the Ohio Company. Lawrence Washington was one of its managers. King George II. granted to these gentlemen a large tract of land to be chosen in any part of the Ohio Valley that seemed to them the most desirable. They were required to build a fort and to settle a hundred families of colonists near it. If they failed to do this within seven years, the land should be given back to the king.

II. THE FRENCH AND INDIAN WAR

A young major.—No one doubted that the French would object to the settlement of an English colony upon lands which France claimed as her own. Governor Dinwiddie of Virginia was therefore urged to keep the colonial militia always ready for any trouble that might occur; and Lawrence Washington induced him to appoint his brother George to the post of adjutant, with title of major. Major Washington was only nineteen years old at the time of his appointment; but he soon became known as one of the most promising soldiers in the colony.

The French begin to build forts.—Before the Ohio Company had done more than send out an explorer to find

a good place for their colony, word was brought that the French had begun to build a line of forts along the Ohio River. The object of these forts was to prevent the English from getting into the country. Governor Dinwiddie therefore decided to send a message to the French commander warning him not to trespass upon lands belonging to Virginia. He chose Major George Washington to carry that message.

A perilous journey. — With three white hunters, two Indians, and a guide, young Washington set out on a perilous journey through the mountainous country about the headwaters of the Ohio. Far up the Allegheny River, at a place called Venango, he found the first outpost of the French. There he met some of the French officers, who told him that they intended to hold the Ohio Valley in spite of all that the English might do.

The message delivered. — At Fort le Bœuf, several miles farther, the French commandant welcomed Washington with much show

of kindness. He read the message from Governor Dinwiddie, and two days later gave his answer. He said that he would forward the message to his superior, the governor of

Canada; but as for the Ohio Valley, he had been instructed to keep the English out of it, and he expected to do so.

Fort le Bœuf

A safe return. — Three weeks later, Washington was back in Virginia. He gave a full account of what he had seen on his journey, and repeated what the French officers had said. His story convinced Governor Dinwiddie that the only way to gain possession of the western lands was to fight for them.

Washington promoted. — The governor was not long in making up his mind. To reward young Washington for his gallant services he promoted him to the office of lieutenant colonel; and preparations were at once begun for the struggle which everybody knew was sure to come.

Fort Necessity. — Colonel Washington, with a hundred and fifty men, marched over the mountains to establish an English post on the Ohio. In June they arrived at a place called Great Meadows, a few miles from the Monongahela River. Washington's first act was to throw up some breastworks, which he afterwards called Fort Necessity. His second was to surprise a party of thirty-two Frenchmen, of whom ten were killed and all the rest, except one, made prisoners. Before he could complete his fort he was attacked by a strong force of French and Indians, and after an all-day fight compelled to surrender.

War. — This was on the 4th of July, 1754. It was the beginning of the long and bloody struggle known in history as the French and Indian War. Washington, with the remnant of his army, was permitted to return to Virginia. The French retired to the forks of the Ohio, where Pittsburg now stands, and there intrenched themselves in a stout little fortification which they called Fort Duquesne.

Braddock. — Early in the following year General Braddock arrived from England at the head of a fine British army. The general boasted that nothing would be easier than to drive the French out of America and utterly subdue their Indian allies. Through the influence of Governor Dinwiddie and others he gave Washington a place on his staff as aid-de-camp ; but he had little faith in the Virginia soldiers, and was too proud and self-willed to listen to advice from any one.

The march of the regulars. — The British regulars in their fine red uniforms made a grand appearance as the army marched over the wooded slopes of the Alleghanies. The colonial troops who followed them, dressed in plain homespun, seemed very commonplace and useless when compared with them. The army moved very slowly, and in July arrived at a spot within seven miles of Fort Duquesne. There, while passing through a wooded ravine, it was attacked by unseen foes.

The battle. — The woods rang with the cries of savage men. The red-coated soldiers knew not where to fire, or how to protect themselves. They huddled together like sheep and were shot mercilessly down. General Braddock, while trying to rally them, was himself mortally wounded. The Virginia militiamen took to the trees and fought the Indians after their own method. Colonel Washington rode hither and thither, trying his best to save the day. Four bullets passed through his coat; two horses were shot under him ; yet he came out of the dreadful fray unhurt.

The retreat. — At last the order was given to retreat. The retreat soon became a wild flight, and, had it not been for Washington's cool courage, it would have ended in a panic. Four days after the battle, General Braddock died; and the remnant of the army hurried back to the eastern settlements.

Progress of the war. — The people of Virginia were fearful lest the French and Indians should follow up their victory and overrun the settlements beyond the Blue Ridge. A regiment of a thousand men was hastily raised to aid the soldiers already in the field; and George Washington was made commander of all the forces of the colony and intrusted with its defense.

The war, however, scarcely touched the borders of Virginia. Most of the fighting was done in the north — in New York and in Canada; and Washington and his Virginians saw but little active service. In our account of Sir William Johnson we have already learned how the great struggle ended, and how the French were at length driven from the possessions which they had claimed.

III. THE TYRANNY OF ENGLAND

Washington at Mount Vernon. — Several months before the end of the war, Washington resigned his commission and retired to Mount Vernon. His brother Lawrence had died some time before, and now the fine estate was his own.

Not long after this he was married to Mrs. Martha Custis, a handsome widow, who also was the owner of large estates. Washington was now one of the richest men in

George and Martha Washington

Virginia. He was elected member of the House of Burgesses, and thus became one of the lawmakers for the colony. For many years he lived the quiet life of a country gentleman, overseeing the work on his plantations, hunting foxes with his sport-loving neighbors, and going down to Williamsburg every winter to help make the laws in the House of Burgesses.

The colonies oppressed.—In the meanwhile the colonists from New Hampshire to Georgia were becoming every day more and more dissatisfied with the way in

which they were ruled by the English king and Parliament. They were forbidden to trade with any country but England; to build factories for the making of cloth

“A shipload of tea was thrown into the harbor”

or other goods; to manufacture tools and machinery from their own iron. They were taxed without their consent. Parliament had passed the Stamp Act, and put a tax on tea and other articles which the colonists could get only from England.

The Boston Tea Party. — At Boston a shipload of tea was thrown into the harbor by the excited colonists, who declared that, rather than pay the tax, they would have

no tea in the country. Then the king, to punish them, ordered that no ship should be permitted to enter or leave the harbor; and to enforce this order he sent over a body of English soldiers to be fed and lodged in the people's houses.

A convention called. — The colonists revered the king, but they were not willing to have all their liberties taken away. They said that Parliament had no right to tax them without their consent. Finally it was agreed that each colony should send delegates to a convention to be

Carpenter's Hall in Philadelphia

held in Philadelphia, to decide upon the wisest course to pursue. George Washington was one of the delegates from Virginia. He had already spoken his opinions in

the House of Burgesses. "If necessary," he said, "I will raise a thousand men, subsist them at my own expense, and march them to the relief of Boston."

The First Continental Congress. — The delegates met at Carpenter's Hall in Philadelphia, and organized what has since been known as the First Continental Congress of America. They were in session fifty-one days, discussing the means by which the colonists might preserve their liberties. At last it was decided to send an address to the king to remind him of the rights of the people, and to petition him to do away with the laws that were so oppressive to the colonies.

When Washington returned to Mount Vernon, he knew, as well as any man could know, that serious work would soon be required of every patriot in the land.

IV. THE REVOLUTIONARY WAR

The first battle. — Matters grew worse at Boston. The soldiers who were quartered there grew more and more abusive. The colonists were becoming desperate. "These people ought to have their houses knocked about their ears and destroyed," said one of the king's officers.

Then on the 19th of April, several hundred soldiers were sent to Concord, a few miles from Boston, to seize some powder that was stored there. As they were passing through Lexington on their way, they met a company of colonists and there was a sharp and bloody fight. This fight, which is called the battle of Lexington, was the beginning of the Revolutionary War.

The Second Continental Congress. — Washington was again on his way to Philadelphia, where another convention of delegates was to meet. Three weeks after the fight at Lexington, the Second Continental Congress began its work. The delegates were ready now to do something more than petition. Brave men were flocking toward Boston to help its people defend themselves from the king's soldiers. War was actually going on, and the Congress must provide for it.

Commander in chief of the colonial army. — On the 15th of June, on motion of John Adams of Massachusetts, George Washington was chosen to be commander in chief of the colonial army. He at once entered upon the work that had been intrusted to him. He entered upon it, not for profit nor for honor, but because he believed that he ought thus to serve his country and his fellow-men.

At Boston. — Two weeks after his appointment he rode into Cambridge, near Boston, and took formal command of the army. It was but a small force, poorly clothed and poorly armed; but every man had the love of country in his heart. And so well did Washington manage affairs, and so hard did he press the king's soldiers in Boston, that before the beginning of another summer they were glad to sail away from the town which they had so long oppressed.

The Declaration of Independence. — On the 4th of the following July the Congress adopted the Declaration of

1776 Independence. The colonies were now no longer colonies, but states; and, as they were joined together to defend their liberties, they were called United

States. Washington and his army, instead of fighting merely to do away with oppressive laws, were now to fight for the independence of the country.

Progress and end of the war.— We cannot here describe the marches and retreats, the victories and defeats, the sufferings and triumphs, of the patriot army during the long contest that followed. The struggle was ended in October, 1781, when the English general, Cornwallis, at Yorktown, Virginia, surrendered his army to Washington. Nearly two years more passed by, and then a treaty of peace was signed, and England acknowledged the independence of our country.

Washington resigns his commission.— As soon as peace was assured, Washington resigned his commission as commander in chief. Some men suggested that he should make himself king of the United States; but the great man would not listen to them. “If you have any regard for your country or respect for me,” he said, “banish those thoughts and never again speak of them.”

V. BUILDING THE NATION

Thirteen nations.— At the close of the Revolutionary War people did not think of the United States as one undivided nation. They thought of the states as thirteen little nations, each making its own laws and having its own selfish little aims. They were united only so far as was necessary for common defense. There was no president to stand at the head of the government. The Congress might make laws, but it could not enforce them.

It might declare war, but it could not raise an army. It might contract debts, but it had no way of paying them.

Wise men soon saw that such a government could not continue long. They saw, too, that without a strong government the states would be in no better condition than when they were subject to the king.

Room where the Constitutional Convention met

The Constitutional Convention. — Four years after the treaty of peace, therefore, another convention met in Philadelphia to decide what must be done to save the country from ruin. Delegates from twelve of the states were present. George Washington was the president of

the convention, and no man's words had greater weight than his. "Let us raise," he said, "a standard to which the wise and honest may repair. The result is in the hand of God."

This convention did a most wonderful work. It devised a plan of government called the Constitution, in accordance with which our country has since been governed.

Our first President.—The new constitution made it necessary for the people to choose electors to elect a Presi-

Our first President

dent who should be the chief ruler, or executive officer, of the country. An election was held, and when the electoral votes were counted, it was found that every one had been cast for George Washington.

On the 30th of April, 1789, he was inaugurated at Federal Hall in New York. During the first year New York was the capital of the United States, and then the seat of gov-

ernment was removed to Philadelphia. Arrangements were made, however, that in the year 1800 it should be established permanently at the place, by the Potomac River, which Washington himself should select. This place is now known as the city of Washington.

Washington landing at New York just before his inauguration

Elected for a second term.—The duties which Washington was called upon to perform as President of the United States were both difficult and perplexing. He was to bring order out of disorder; he was to put a new government into operation. But so well did he perform his great task, and so well did he meet the expectations of the people, that at the end of four years he was unanimously elected to serve a second term.

We cannot so much as mention all the difficult problems which he was required to solve. There were troubles enough both at home and abroad,—troubles with the Indians, with England, with France, with jealous poli-

ticians, with dishonest officials,—but in the midst of them all, Washington stood steadfast, wise, serene, conscious that the right would prevail.

His Farewell Address.—People began to talk of electing him for a third term. They could not think of any other man so able to govern the nation as he. But he declared that he had served the country long enough. There were others, he said, who would manage its affairs both wisely and well. And so, when about to retire to private life, he published a Farewell Address which is so full of patriotic wisdom that every American can still study it with profit. “Beware of attacks upon the Constitution. Beware of those who love their party better than their country. Promote education. Observe justice. Treat with good faith all nations. Be united—keep united.” These, in effect, are some of the things that he said.

John Adams.—The new President was John Adams of Massachusetts. He was one of the staunchest of patriots. He had been one of the prime movers in bringing on and supporting the Revolutionary War. He was one of the makers of the Declaration of Independence. He had been Vice President of the United States during the eight years of Washington’s administration.

Trouble with France.—Scarcely had Washington retired to enjoy the quiet of private life at Mount Vernon when a new trouble arose. France was at war with Great Britain, and her rulers wished that the United States should help her. When they failed to bring this about by

persuasion, they tried other means. Our officers were abused, our government was insulted. Congress and President Adams at once took steps to defend the honor of the nation. Preparations were made for war, and Washington was called from his retirement to be again the commander in chief of the American army.

Washington's room at Mount Vernon

Peace prevails. — Fortunately, however, the war did not come. When the French saw that the people of the United States were ready to fight for the honor of their country, as they had already fought for its liberty, their manner changed. They ceased their abuse, and all ill-feeling was forgotten. The American army was disbanded; and Washington again went back to his home at Mount Vernon.

Washington's work was done. — A few months later, on the 14th of December, 1799, he died from the effects of a cold. He had lived not quite sixty-eight years. No other American has been so generally admired and esteemed. "First in war, first in peace, and first in the hearts of his fellow-citizens," he will always be regarded as the greatest man that our country has produced.

REVIEW

Where and when was George Washington born? Why was Virginia then the most important of the colonies? How was trade carried on with England? What nation claimed all the country west of the Alleghanies? What did the men of Virginia think of this claim? For what purpose did the Ohio Company wish to make a settlement on the Ohio River? Why was Washington sent on his perilous journey to Fort le Bœuf? Why was Braddock with his army sent across the Alleghanies? Of what war was this the beginning? What were the causes of this war? Why were the colonists dissatisfied with the English king and Parliament? When did the First Continental Congress meet, and what did it do? When and where was the first battle of the Revolution fought? When did the Second Continental Congress meet, and what did it do? When was the Declaration of Independence made? How long did the Revolutionary War continue? Where and when was the last battle fought? What services did Washington perform during the war? What kind of government did the United States have at the close of the war? When was the Constitution of the United States adopted? What was the object of the Constitution? When was Washington inaugurated first President of the United States? What were some of the difficult things he had to do? Why would he not be elected for the third time? What advice did he give in his Farewell Address?

DANIEL BOONE

AND THE SETTLEMENT OF KENTUCKY

I. THE YOUNG HUNTER

In Pennsylvania. — Daniel Boone was born in Pennsylvania a few miles north of Philadelphia. In front of his

“He loved the forest”

father's log cabin flowed the Delaware River; behind it were the wild woods, stretching so far to the west and the north that no man could tell where they ended. Daniel took but little interest in the river, but he loved the forest. As soon as he was strong enough to hold a rifle he learned to shoot. His eye was so keen and his hand was so steady that he

never failed to hit the mark. Before he was ten years old he was a famous hunter. He would shoulder his gun and go out alone, far into the tangled woods, in search of game. He never lost his way, and was never afraid of anything. None of the older hunters were so successful as he, and he kept the family table well supplied with venison. Now and then he would bring down a bear or even a panther; and while he was pleased with his success he never boasted of his skill. The forest seemed to be his natural home, and there he spent the greater part of his time.

In North Carolina. — When Daniel was about fourteen years old his father decided to remove to North Carolina. It was a long, hard journey of seven hundred miles, and the family traveled all the way on horseback and on foot; for there were no roads then. The new home was on the banks of the Yadkin River, in the very heart of the forest. It was just the place for a hunter. A little log cabin was built, some small fields were cleared, and the family settled down to a happy and contented life.

Marriage. — Six or seven years passed. Other families came and made their homes on the Yadkin. The woods were being cut away, and the hunting was not so good as before. Daniel Boone was a tall, strong young man now, famous for miles around as the best hunter in that part of the country. He thought it was time for him to have a home of his own. So he asked a neighbor's pretty daughter to be his wife. She consented, and they were married.

The backwoods home. — Daniel Boone had nothing but his rifle and an ax. But what more could he want? He went far into the woods, out of sight and hearing of all his neighbors, and there built his own house. He built it of unhewn logs and covered it with strips of bark. At one end he made a big fireplace of stones and clay. Blocks of wood served as chairs; the broad, smooth top of another made a serviceable table. A heap of furs would make a fine bed. The level ground, well swept, was good enough for a floor. No window was needed; and as for the door, what could be better than a bearskin hung over the opening to keep out the wind and the rain?

Life in the forest. — To this humble home Daniel Boone took his bride; and I doubt if there was ever a much happier home-coming. A pot and skillet, and a few pewter dishes, made the furnishing of the house complete. As for food, there was no reason to be anxious about that. Daniel's rifle was sure to secure plenty of game for meat. Corn meal was easily obtained for bread; the brook furnished water to drink. King and queen never lived happier than young Mr. and Mrs. Boone.

II. THE COUNTRY BEYOND THE MOUNTAINS

The western country. — It was not long, however, until many new settlers came into the neighborhood. Game was no longer plentiful. Then Boone began to grow restless. From the door of his cabin he could see, far to the west, the dim, blue outlines of mountains rising like a wall to conceal some new, unknown world

They were the Blue Ridge Mountains, and beyond them were other ranges of unknown number and extent. Among the settlers on the Yadkin there was, no doubt, much talk about these mountains, but most that was said was mere guesswork. Very few white men had ever crossed them, and people had strange ideas about the region on the other side of them. As Daniel Boone gazed at them from his cabin door he wondered whether good hunting grounds were not there.

Kentucky. — One day a hunter came to his cabin and told him a tale which made him more restless than ever. This hunter had just returned from a trip on the other side of the distant western mountains. He said that the country was the most beautiful in the world, and that it was full of game of all sorts. No Indians lived there; but it was the common hunting ground of many tribes. They called it Kentucky, or “the dark and bloody ground,” because of the many fierce battles that had been fought there by rival bands of Indian hunters.

The hunters. — Daniel Boone made up his mind to go at once to this new-found region beyond the mountains. Six other hunters agreed to go with him. It was on the first day of May, 1769, that he bade his wife and children good-by and started on his long and perilous journey. Five weeks later he stood with his companions, on a summit of the Cumberland Mountains, and viewed for the first time the beautiful region now known as Kentucky. All that had been told him of its forests and streams and wild game was true. The hunters built a log camp near the

banks of the Red River of Kentucky, and there they remained for seven months, making long excursions into the forest and living an easy, half-savage life. Early in the winter Boone and one of his companions were surprised and made prisoners by a band of strolling Indians.

“He stood on a summit of the Cumberland Mountains”

At the end of a week they escaped; but when they returned to their camp they found it in ruins. The other five men were never again heard of, and there is little doubt that they perished at the hands of the Indians.

When Boone returned to his home on the Yadkin he gave a glowing account of the new country of Kentucky, of its beautiful scenery, its rivers and mountains, its fertile soil, and its abundant game. The story was told from house to house and was soon known in many parts of Carolina and Virginia; and many people became eager to emigrate to the rich, wild region beyond the mountains.

III. KENTUCKY

Boonesboro. — Boone soon went back to the West. He built a strong fort of logs on the left bank of the Kentucky River and named the place Boonesboro.

“He built a strong fort of logs”

Thither he conducted his wife and family and about thirty of his neighbors who were anxious to try their fortunes in the new country. Thus the foundations were

laid for the noble commonwealth of Kentucky.

Captured by Indians. — There was constant danger from prowling bands of Indians who did not like this intrusion of white men upon their hunting grounds. Daniel Boone had many adventures among them, and many narrow escapes. At one time he was captured by a large band and taken to the Indian town of Old Chillicothe, nearly two hundred miles north of Boonesboro.

The Indians liked him so well that they adopted him into their tribe. They permitted him to do very much as he pleased, but kept a close watch over him to prevent his escape. He pretended to be pleased with their company. He joined them in their sports, and went

hunting with them, and was almost as much of an Indian as any of them.

The escape. — Thus several months were passed in captivity. One day he learned that the Indians were planning to send a war party into Kentucky to capture and destroy Boonesboro. That night while the Indians were sleeping he stole away from the town and made his way homeward through the woods. He traveled one hundred and sixty miles in four days, and at last arrived safe at home. His friends had all given him up as dead,

“ At one time he was captured ”

and his wife not hoping to see him again had returned with his children to her father's house on the Yadkin. The Indians soon attacked the fort; but Boone and his men resisted them bravely and drove them away.

The settlement of Kentucky. — Soon after this, Boone went back to North Carolina to be with his family; but before long he brought them again to Boonesboro, where they remained several years. The Indians were still very troublesome, and life in the backwoods was full of peril. But in spite of all this, numbers of people from Virginia and the Carolinas pushed their way over the mountains and began making themselves new homes in Kentucky. Little settlements sprang up here and there, and pioneers built their cabins and hewed out little clearings in many lone places in the heart of the woods.

Boone goes farther west. — In 1792 Kentucky became a state. It was no longer a great hunting ground. Much of the woods had been cut down, the game had been killed or driven away, it was no place for a hunter like Daniel Boone. When he was sixty years old he left the state for which he had done so much and removed to Missouri, which was still a wild, unsettled country. There he lived, hale and hearty, until he was a very old man. His passion for hunting clung to him to the end of his life, and his chief enjoyment was in roaming through the woods with his rifle on his shoulder.

REVIEW

Which of the colonies claimed the country on both sides of the Ohio? Why did this region remain so long unknown? Why did Kentucky seem so attractive to Daniel Boone? Why is he sometimes called the founder of Kentucky?

along the distant Potomac and by the James River, and all united in declaring themselves independent of England.

As the war went on, however, it was found that Virginia had enough to do to guard her own shores and send her share of troops to serve in the patriot army of Washington. She could spare neither men nor money for the protection of her western lands. If danger should threaten her colony of Kentucky she could give it but little aid.

Indians and British. — The British were not long in finding this out. General Hamilton, the British commander at Detroit, formed a plan to harass and destroy the settlements in Kentucky, and thus conquer all the country west of the Alleghanies. He encouraged the Indians to fight for the British, and sent their war parties across the Ohio to murder the settlers and to destroy their homes. Bands of these savages would appear suddenly before the cabins of the settlers, shoot and scalp the men, burn the buildings, and carry the women and children into captivity. It seemed for a while as though every settlement in Kentucky would be blotted out.

George Rogers Clark. — Among the friends of Daniel Boone there was a young surveyor whose name was George Rogers Clark. He had but lately come from Virginia; but, as the troubles increased in Kentucky, he soon showed himself to be so wise and brave that the pioneers began to look up to him as a leader. For protection against the Indians they formed themselves into a company of militiamen called “the prime riflemen of Kentucky,” and elected Clark as their captain.

The Kentucky riflemen were among the bravest fighters in the country, and they knew all about Indian methods of warfare. But their store of powder was being rapidly used up, and they were but poorly prepared for war. They therefore decided to send Captain Clark to Virginia, to tell the governor how things stood, and, if possible, obtain some help.

“Bands of these savages would suddenly appear”

Patrick Henry was the governor. He listened with much attention to Clark's story of the distress and alarm among the border settlements, but he regretted that it was impossible to give them any aid — Virginia was hard pressed to take care of herself. Captain Clark would not be put off; he would not listen to excuses.

“A country that is not worth protecting is not worth claiming,” he said. He pleaded his case so well that the governor gave him five hundred pounds of powder, and promised still further aid when it was needed.

II. THE CONQUEST OF ILLINOIS

More trouble. — When Clark returned to Kentucky he found that the Indians were more troublesome than ever. Band after band crossed the Ohio, being urged on by the promise of reward from the British commander. They skulked through the forest, and appeared suddenly where they were least expected. They killed, they burned, they destroyed without mercy. Outside of the strongest forts no life was safe.

Clark's plan. — George Rogers Clark saw that the only way to meet the danger was to strike at its source. He therefore decided upon a plan which he thought would save not only Kentucky, but also the whole of the Northwest for the new state of Virginia. He would march into the enemy's country, and, by capturing the British posts there, he would so overawe the Indian tribes that they would cease their murderous work.

His plan approved. — He hurried back to Virginia. The governor listened with pleasure to his plans; gave him money and a commission as colonel in the army of Virginia; and authorized him to raise seven companies of volunteers for the invasion of Illinois. The object of the expedition was to be kept secret until the little army was well on its way.

The march into Illinois. — Colonel Clark was unable to raise so many companies; but he was soon at the head of a force of nearly two hundred backwoodsmen who were ready to follow him upon any enterprise, no matter how difficult or dangerous. The little army floated down the Ohio from Pittsburg to a point nearly opposite the mouth of the Tennessee River. Then it marched on foot through an uninhabited country, for a hundred and thirty miles, to the town of Kaskaskia near the Mississippi.

Kaskaskia was one of the oldest and most important of the French settlements in the West. Its inhabitants were still French, although it was the chief post of the British in the Illinois country. No one had supposed that it would ever be at-

tacked by the Americans, and hence it was protected by only a handful of men under a French officer in the service of the British.

The French settlements captured. — It was night when Colonel Clark and his men reached the village. No

“Go on with your fun”

sentinel was on guard, and Clark made his way to the fort. As he pushed open the door he saw the soldiers and their friends engaged in a dance. The alarm was given by an Indian who was lying on the floor, but Clark coolly stepped into the room and said: "Go on with your fun. But remember that you are now dancing under the flag of Virginia instead of that of England." The garrison surrendered at once.

The French people received the backwoods riflemen with delight. It was an easy matter after the fall of Kaskaskia to take possession of the other French settlements in Illinois, none of which was far distant. Two men were also sent to Vincennes on the Wabash to receive the surrender of that place.

Vincennes.—When General Hamilton at Detroit heard of the manner in which Colonel Clark had invaded the Illinois country, he at once prepared to march out and recover what had been lost. At the head of several hundred British soldiers, Frenchmen, and Indians, he descended the Wabash River and retook Vincennes, finding in the fort there only the two soldiers who had taken possession of it for Colonel Clark. As it was then the beginning of winter he decided to remain in Vincennes until spring. He expected to strengthen the place, and when the weather grew milder march against the Virginians at Kaskaskia.

Hamilton surrenders.—But Colonel Clark was not the man to wait to be attacked. As soon as he heard that Hamilton was so near, he began to make ready to meet

him. While it was still midwinter he led his little army over the flooded and half-frozen prairies of Illinois, crossed the Wabash, and before his presence was suspected, made a determined attack upon the British in their fort at Vincennes. General Hamilton had felt so secure in his winter quarters that he had permitted most of his soldiers and his

“Colonel Clark was not the man to wait”

Indian allies to return to Detroit. He was unprepared for a siege; and he was so completely surprised by the attack, that he surrendered without making more than the faintest show of resistance.

The county of Illinois.—All the country north of the Ohio was now in possession of the Virginians. The legislature of Virginia organized it into the county of

Illinois, with Kaskaskia as its capital, and appointed a governor to have control of its public affairs.

The Indians hastened to make treaties of peace, and no more savage raids were made into the settlements beyond the Ohio. George Rogers Clark had not only saved Kentucky, but he had conquered the whole of the Northwest for the United States. Had it not been for his courage and good management the Ohio River might have remained the southern boundary line of Canada, and England might to this day have kept possession of the Great Lakes and all the rich country adjoining them.

REVIEW

Why did Virginia claim Kentucky as a part of her territory? Why could she not help the settlers there during the Revolution? Why did the British wish to destroy the settlements? Why did Captain Clark wish to capture the British posts in Illinois and on the Wabash? If he had not succeeded, what might have been the result?

THOMAS JEFFERSON

AND THE FOUNDING OF THE GOVERNMENT

I. "TREASON!"

Two young patriots. — You have already read about the Stamp Act and the tax on tea, which caused so much commotion in the colonies. At the time when all the country was stirred up by these things there were two young men at Williamsburg, Virginia, who were fearless in their defiance of the king. One of these was Thomas Jefferson, a student at the College of William and Mary — a tall, slender youth with sandy hair and hazel eyes, and a powerful mind. The other was Patrick Henry, a lawyer, who was a great orator and could make fine speeches, although he knew but little law. He was several years older than Jefferson, and at that time was a member of the House of Burgesses.

A famous speech. — As Jefferson stood at the door of the capitol at Williamsburg one morning, he heard Henry deliver the most daring speech that had yet been made upon the tyrannical acts of the king and his parliament. The orator was speaking to the rich burgesses of Virginia, and he held his audience spellbound while he told of the injustice of taxing a people without their consent. Then, as he brought his speech to a close,

he reached the climax: "Cæsar had his Brutus, Charles the First had his Cromwell, and George the Third —" and here he was interrupted by cries of "Treason! treason!" from the listening burgesses. The speaker waited a moment for silence, and then finished his sentence — "George the Third may profit by their example."

“Treason! treason!”

We may imagine what influence such speeches must have had upon the mind of the young student, Jefferson. In truth, however, no speeches were needed to arouse his patriotic zeal. All through the troubles which led up to the Revolutionary War he was among the foremost in defending the American colonists.

Jefferson in the Continental Congress. — When the Second Continental Congress met in Philadelphia, Jefferson was there as one of the delegates from Virginia. At first there were few of the members who ventured to speak in favor of making the colonies independent. The aim of most was to induce the king and Parliament to change the laws so as to give to the people their just rights as loyal subjects of England. But their “repeated petitions were answered only by repeated injury,” and they at last saw that the only thing to be done was to rebel against the king’s authority and to refuse to obey his laws.

II. HOW THE COLONIES BECAME STATES

The Declaration of Independence. — At length the time for action came. Richard Henry Lee, of Virginia, offered a resolution asserting that “these United Colonies
1776 are, and of right ought to be, free and independent states.” This was the first step, and the next was to appoint a committee to prepare a declaration of independence. Thomas Jefferson was one of the committee, and it fell to his lot to write the declaration. In it he set forth the reasons which obliged the colonies to rebel. It was because of the tyranny of the king, he said.

What had the king done? — Every act of oppression was clearly stated in the Declaration.

The king had refused to make good laws for the colonies.

He would not permit the colonies to make good laws for themselves.

Independence Hall, Philadelphia. — The place where Congress met

He had kept a standing army in the colonies in times of peace, and had obliged the colonists to feed and lodge the soldiers.

He had forbidden the colonies to trade with other parts of the world.

He had taxed them without their consent.

He had taken away their charters, and was waging war against them.

He had plundered their seas, ravaged their coasts, burnt their towns, and destroyed the lives of many people.

He had incited the Indians to make war upon the border settlements.

He had refused to listen to the petitions which the colonists had humbly presented him.

The king a tyrant. — Such, in substance, were some of the things which Jefferson wrote in the Declaration of Independence. The king who is guilty of such acts, he added, is a tyrant, and unfit to be the ruler of a free people. And then, at the close of the Declaration he asserted that the time had come for the setting up of a new government — a government founded upon the principle that all men are created equal, and have rights which no power can justly take away from them.

The colonies become states. — The Declaration, as I have said, was written by Jefferson. It was slightly revised by Adams and Franklin, and was reported ¹⁷⁷⁶ to Congress on the 2d of July. On that day and the next, it was carefully examined and discussed. Then, on the 4th of July, 1776, it was agreed to, and was signed by John Hancock, the president of the Congress. From that moment the thirteen colonies were no longer colonies, but independent states.

III. OUR COUNTRY INDEPENDENT

Governor of Virginia. — Mr. Jefferson soon withdrew from Congress and returned to Virginia; for he believed that one of the best ways to serve his country was to serve his native state. For three years he was one of the most active members of the Virginia House of Delegates, as the House of Burgesses was then called. He proposed many wise laws for the new state, and helped the people to

provide means for her defense. In 1779, he was chosen governor of Virginia.

Perilous times. — It was the most trying period in the war of the Revolution. British soldiers had invaded Virginia; British ships were blockading her harbors; the patriots were hard beset on every hand. But Jefferson proved to be a wise and able governor.

In the North, through the skill and perseverance of Washington, the tide of war had been turned. Through the efforts of Benjamin Franklin, the king of France had been induced to help the states in their struggle against Great Britain. The Marquis de Lafayette, a young French nobleman, had come to America and was one of Washington's strongest helpers.

In the South, the partisan leaders, Marion and Sumter, had given the British much trouble and were doing good service to the cause of freedom. General Greene, with the patriots of the Carolinas, dealt the enemy more than one stunning blow. At last Washington marched
1781 into Virginia and with the help of his French allies defeated Cornwallis at Yorktown and forced him to surrender the British army. And thus the long war of the Revolution was brought to an end.

IV. MANY PATRIOTIC SERVICES

The treaty of peace. — Jefferson's term of office, as governor of Virginia, expired in the same year that the war was ended. He retired to his country home, Monticello, where he busied himself in looking after his plantation,

nursing his sick wife, and attending to the education of his children. But the country needed his services; and two years later he was again in Philadelphia as one of Virginia's delegates to the Continental Congress. He took his seat there in time to vote in favor of the treaty of peace with Great Britain. By that treaty our country

Monticello

was assured of the independence claimed in the Declaration which Jefferson had written seven years before.

The Northwest Territory. — The vast region north of the Ohio, which George Rogers Clark had rescued from the British, was still unsettled. The most of it was claimed by Virginia and, as we have seen, was included in the new county of Illinois. Many persons thought it was not right that this great territory should be controlled by a single state. Thomas Jefferson was of the

same opinion, and Virginia at last decided to give up her claims. Her deed of gift of the great Northwest was presented to Congress by Jefferson himself.

A wise law. — Jefferson was also one of a committee appointed to prepare a plan of government for the Northwest Territory, as it was called. No doubt it was he who suggested the wise provisions that were afterwards made for the support of public schools in that part of our country. By these provisions, one square mile of land in every thirty-six was given for the education of the children.

Minister to France. — But Jefferson did not remain long in Congress. Before a year had passed, he was appointed United States minister to France. He remained abroad for five years. When he returned, the new Constitution had been adopted, and George Washington was just beginning his first term as President of the United States.

Secretary of State. — Jefferson had hoped to be sent back to France, but Washington wished him to become a member of his cabinet as Secretary of State. The nation was then in its infancy and it was very necessary that the wisest men should be at the head of its affairs. Next to Jefferson in the President's cabinet was Alexander Hamilton of New York, who was Secretary of the Treasury. Henry Knox of Massachusetts was Secretary of War, and Edmund Randolph of Virginia was Attorney-general. These four were the only members of the first cabinet.

Jefferson and Hamilton could never agree upon public questions. Jefferson was in favor of intrusting all matters

of government to the people of the states; Hamilton wanted a strong central government, and was afraid of giving too much power to the people. Two political parties were formed. Of one of these, called the Federal party, Hamilton was the leader. Of the other, called the Democratic-Republican party, Jefferson was the founder. The two men at last became bitter enemies; and Jefferson, after nearly four years of service, was glad to give up his place in the cabinet and retire once more to the quiet of Monticello.

But he was still the leader of the Democratic-Republican party — an organization which was later known, and is still known, as the Democratic party. When Washington refused to be elected for a third term, Jefferson allowed himself to become his party's candidate for the
1796 presidency. The candidate of the Federal party was John Adams of Massachusetts. Adams was elected, and Jefferson having received the next highest number of votes was chosen Vice President.

V. AN IMPORTANT PURCHASE

The third President of the United States. — Four years later, Jefferson's party triumphed and he became the third President of the United States. It is said, although the story is disputed, that upon the day of his inauguration he rode on horseback to the capitol, hitched his horse
1801 to a post, and walked unattended into the senate chamber. He was a citizen of the United States, called to direct its public affairs, and he refused all marks of atten-

tion that would not have been paid to him as a private person. He had the greatest confidence in the republic. "Some honest men," he said, "fear that a republican government is not strong enough. I believe it, on the contrary, the strongest on earth."

"He rode on horseback to the capitol"

Louisiana. — The United States, as at the close of the Revolution, was still bounded on the west by the Mississippi. The country beyond that river belonged to France, having been given up to her by Spain only a short time before. It was called Louisiana. Nobody knew its

exact extent. Nobody knew what were its resources, or what might be its future value, for only portions of it had been explored. But France needed money, and Napoleon Bonaparte, who was at the head of French affairs, offered to sell the entire region to the United States.

The Louisiana purchase

The purchase of Louisiana. — President Jefferson had already sent James Monroe to Paris, with full power to do what he believed best. A bargain was soon made. For the sum of fifteen million dollars the vast territory of Louisiana was given up to the United States. Our country's boundaries were thus extended to the Rocky Mountains, and its area was more than doubled.

Jefferson reelected. — The people were well pleased with the way in which Jefferson conducted the affairs of

the government, and when his term was about to expire they reëlected him by a much larger vote than he had received before.

VI. SHIPS EMBARGOED

Trouble with England and France. — During Jefferson's second term as President, there was much trouble with foreign nations. Great Britain and France were again at war, and every effort was made by them to force the United States to take sides in the quarrel. British ships overhauled American vessels at sea, and even within sight of American harbors, under pretense of searching for sailors who had deserted from the British navy. American sailors were forcibly taken from their own ships and made to serve on British men-of-war. The British government forbade our merchants to sell or buy in French ports, and our trading vessels were stopped at sea and searched for French goods.

France, on the other hand, was also overbearing and unjust. Many American vessels were seized in French ports, and French ships were sent out to prevent any trade between our country and England.

The embargo. — It would seem that nothing but war could remedy these abuses; but Jefferson adopted another plan. "Our passion," he said, "is peace." Since other nations denied to the United States the freedom of the seas, he thought that the best way to punish them and secure justice was for the United States to abandon the seas. He therefore placed an embargo on all our shipping in

American waters—that is, no American vessel was permitted to leave port for foreign lands. It was thought that Great Britain, rather than lose her trade with this country, would agree to make amends for the injuries which she had inflicted.

A great mistake.—

But the embargo caused far greater harm to the American people than to the English. Business came to a standstill. Merchants closed their doors. Wages stopped. The prices of all kinds of produce went down. Every industry was threatened with ruin. And besides all this, the British were just as abusive as before.

James Madison becomes President.— The embargo was continued until the last day of Jefferson's second term; but he himself saw that it was a great mistake. In 1809 he was succeeded by James Madison, his friend and fellow-

“Sailors were forcibly taken from our ships”

Virginian. It was then plain to almost every person that a war with Great Britain must surely come.

Jefferson again at Monticello. — Jefferson retired again to Monticello. He had served his country almost continuously for more than forty years. During the remainder of his life he was busy with plans for the education of the young and for the doing of good to mankind. His most important work was the founding of the University of Virginia. He lived to see the opening of that institution with bright prospects for its success.

The end of a useful life. — In the following year, just fifty years to the day from the adoption of his Declaration of Independence, he died. He was buried in his own grounds at Monticello, and on his tombstone was engraved the epitaph which he himself had composed:

1825 “Here was buried Thomas Jefferson, author of the Declaration of Independence, of the Statute of Virginia for Religious Freedom, and Father of the University of Virginia.”

REVIEW

What important part did Jefferson take in establishing the independence of the colonies? Of what did the Declaration of Independence accuse the king of England? Name some of the patriotic services of Thomas Jefferson. On what questions did Jefferson and Hamilton differ? What great addition did Jefferson make to the territory of the United States? How? What is meant by an embargo? Why did Jefferson place an embargo on the shipping in American ports? What was the last important act of Jefferson's life?

ELI WHITNEY

AND THE INVENTION OF THE COTTON GIN

I. AMBITION AND PERSEVERANCE

Childhood. — When the Declaration of Independence was made, Eli Whitney was about ten years old. His home was on a farm near the village of Westboro in Massachusetts. He did not go to school very much when a child, neither did he have many books to read. His father wished him to be a farmer like himself, and did not think it necessary for him to have an education.

An inquisitive boy.
— But Eli was not satisfied with this. He was always anxious to learn,

and he wished to know how everything was made. Once when he was a very little lad he took all the wheels out of his father's watch in order to see how they were made and

An inquisitive boy

how they were put together. His father was at church at the time, but when he returned home the watch was hanging in its place and ticking away as though no one had touched it. The child had put every wheel back just where it belonged, and it was not till a long while afterward that he told his father what he had done.

The shop. — Mr. Whitney, like most farmers at that time, had a shop of his own where he made little articles for the house and mended his wagons and plows and other farming implements. The tools in this shop were a source of great delight to Eli, and before he was ten years old he could handle them as well as any one. He could make anything that was needed about the house or farm.

Making nails. — During the Revolutionary War the price of all kinds of iron goods was very high. Even nails were scarce and costly. “Why not make nails in our shop and sell them?” said Eli Whitney. “It would be a more profitable business than hoeing and plowing.”

His father thought so too, and the boy set up a forge and went to work. All nails at that time were made by hand; and the ringing of Eli’s hammer on his father’s anvil was heard from morning till night. There was a good demand for nails; and Eli Whitney’s were of the best quality and brought a high price.

Going to college. — One day, after the Revolutionary War was over, he surprised his father by saying that he was going to college. Mr. Whitney did not think that an education was of much use to a working man, and he would have been pleased if his son had been content to be

a nail-maker all his life. For three years Eli studied hard to prepare himself for college, and during all that time he kept on working. Then with his small earnings he went to New Haven and passed the examinations for entrance into Yale.

Working his way. — It was very hard for him to get money enough to carry him through college. But he was not ashamed to work. He did little jobs of carpentering and mending at odd hours, and during vacation he taught a small country school. The professors and students had great respect for him, for they saw that he was a young man who would make his mark in the world.

A law student. — He still retained his love for tools and machinery, but he did not wish to be a mechanic. He therefore decided to become a lawyer. But how should he support himself while studying law? While he was thinking of this question, a letter was received from Savannah, Georgia, saying that a teacher was wanted in a certain private school in that city. He might have the position if he wished it.

Here then was his opportunity. He would go to Savannah, accept the place, study law while teaching, and earn money enough to give him a start in his profession.

Disappointment. — The journey to Georgia was a very long and tiresome one in those days. When Whitney finally reached Savannah he met only disappointment. The school was not what it had been represented, and the salary was not sufficient to pay his board. What should he do?

II. THE COTTON GIN

A friend indeed. — At Mulberry Grove, on the Savannah River, there lived at that time a wealthy and accomplished lady whose name was Mrs. Greene. She was the widow of General Nathanael Greene, one of the ablest and most famous officers in the Revolutionary War. She had made the acquaintance of young Whitney on the boat which had brought both of them from New York, and she was pleased with his intelligence and attractive manners.

“Come to Mulberry Grove,” she said, “and study law under my roof. You shall be welcome to stay as long as you please.” And so to Mulberry Grove he went.

A cotton field

Cotton. — At that time there were no great cotton plantations in the South as there are now. The climate and the soil were just what was needed for the growing

of cotton, and large crops might have been raised. But the planters could not make it profitable. When the cotton is taken from the plant it contains a great many seeds which must be picked out before it can be sent to

“It would require a great many slaves”

market. There was no way to do this but by hand. A slave with nimble fingers could clean only one pound of cotton in a day. It would require a great many slaves to prepare a large crop for market.

“If some person would only invent a machine for picking out the seeds,” said a planter to Mrs. Greene, “cotton would soon become the most profitable thing in the South.”

“Mr. Whitney, my young friend from Massachusetts, will make such a machine,” said Mrs. Greene. “He can make anything he tries.”

And so the matter was explained to Mr. Whitney. “Yes, I think I can make such a machine,” he said.

Making the cotton gin. — Mr. Whitney had never seen raw cotton, nor had he seen any cotton seeds. But some cotton with the seeds in it was obtained and he began to experiment with it. There were many difficulties in his way. He had to make his own tools before he could begin work on his machine. Months passed before the model for his first machine was completed. No one was permitted to see it except Mrs. Greene and the manager of her plantation. But there was much talk about it among the neighboring planters; and one night the shop was broken into and the model was stolen.

Defending the patent. — It was necessary, of course, to make a new model; but before it could be finished the men who had stolen the first were making machines and claiming them as their own invention. At length, however, the work was completed, and Eli Whitney exhibited his cotton gin, as it was called, to the planters around Savannah. By its use one man could clean more cotton in a day than a hundred men could clean by hand, and the cleaning was also better done. Everybody saw the advantage of such a machine, and the planters all through the South began to raise larger crops of cotton. But other men came forward with similar machines and tried to prove that Mr. Whitney was not the inventor of

the cotton gin. He was obliged to go to law to defend himself; and at one time he had no fewer than sixty law-suits in the courts. Finally, after many vexations and misfortunes, he found that he would never receive much profit from the gin, and he decided to give his attention to other things.

At New Haven, Connecticut, he built a large shop for the manufacture of firearms; and in this he was so successful that he soon

A modern cotton gin

acquired a very large fortune. He was the first person to make firearms by improved machinery; and his shop became the model for all the great arsenals that were afterwards built in this country.

Justice at last. — Eli Whitney died at the age of sixty years. But it is pleasant to know that before his death all the world was ready to acknowledge his claims as the inventor of the cotton gin; and as long as our country exists his name will be honored as that of one of its greatest benefactors.

REVIEW

Why was not cotton-raising as profitable in the South at the close of the Revolution as it is now? Why did other men wish to rob Whitney of his invention? What effect did the invention of the cotton gin have upon the wealth of the South? Why?

ROBERT FULTON

AND THE INVENTION OF THE STEAMBOAT

I. AN INGENIOUS BOY

The birth of an idea. — At about the time that young Eli Whitney was setting up his forge and getting ready to hammer nails on his father's anvil, two other boys of nearly the same age as himself were fishing in the Conestoga River in Pennsylvania. They were in a heavy, flat-bottomed boat, which they moved from place to place by means of a pole. This was done by standing in the stern of the boat and pushing on the pole, one end of which was thrust to the bottom of the stream. It was hard work and slow work, and the boys were sometimes very tired with lifting the pole and then pushing it down again.

“Some time,” said the younger lad, “I intend to make a boat that will go faster and easier than this.”

“That is just like you, Robert Fulton,” said the other, whose name was Christopher. “You are always making things, or planning to make them.”

“Just wait till I come back from my aunt's,” answered Robert.

The young machinist. — The next day Robert went on a visit to his aunt, while Christopher remained at a farmhouse near the river for a few more days of fishing.

At his aunt's Robert's first care was to get hold of some tools. Then he found a place in the attic which he could use as a shop; and after that, but little was seen of him. He spent his time in whittling, hammering, sawing, and tinkering, and told his secret to nobody. When his visit was ended, and he went to say good-by to his aunt, he gave her a little toy boat which had a tiny paddle-wheel on each side. "Keep this boat, aunt, till I come again," he said.

When he returned to the Conestoga he found his friend still there, fishing from the old flat-bottomed boat. "I have studied it all out, Christopher," he said.

The paddle-wheel boat. — For the next two or three days the boys spent their time on shore, making a pair of paddle-wheels. First, two sticks of equal length were fastened together at the middle, so that they stood at right angles to each other. Then to the four ends of the sticks the boys nailed flat pieces of boards to serve as paddles. Two paddle-wheels of this kind were made, one for each side of the boat. They were connected by a long iron rod which crossed the boat from side to side. The rod was bent in the middle so as to form a crank.

The trial trip. — When all was ready, the boys made a trial trip with their boat. They found that the paddles were a great improvement over the pole. "She goes all right," said Christopher; "but how are we to guide her?"

"That is an easy matter," said Robert Fulton; and he rigged an oar at the stern to serve as a rudder. They were able then to make the boat go where they wished.

“Quicksilver Bob.” — Robert Fulton was in one respect like Eli Whitney — he was always busy looking into things and making things. He was fond of making experiments. At one time he bought some quicksilver at the village store,

“The boys made a trial trip”

and his school-mates were very curious to know what he was going to do with it. But in answer to all their questions he merely shook his head, and they never learned what

sort of experiment he was trying. From that time, however, he was known among his intimate friends as **“Quicksilver Bob.”** It was not a bad nickname for a person so restless and busy as he.

II. PAINTER AND INVENTOR

Robert Fulton's home was in Lancaster, Pennsylvania. During the Revolutionary War he took great interest in the gun shops in the village; for guns, like nails, were then made by hand, and almost every blacksmith was also a gunsmith. Boy as he was, Robert knew more than most men about the science of gun-making. He could tell just how far a certain charge of powder would carry a ball; and he made many plans for the improvement of firearms.

An artist. — But Robert did not spend all his time in the shops. He was a lover of beautiful pictures, and he knew as much about drawing as about tools and machinery. It was his wish to become a great artist. When he was seventeen years old he went to Philadelphia to receive instruction in art. There he became acquainted with Benjamin Franklin, and there he spent three years studying and painting. He painted miniature portraits and landscapes; and his work was so highly praised that his friends advised him to go to Europe for further study.

In London. — He was not quite twenty-one when he went to London. There the great painter Benjamin West received him into his house and gave him instruction in his chosen art. He stayed in England several years; but his active nature would not permit him to devote all his time to the painting of pictures. He took an interest in the busy affairs of the world, and was never so happy as when “making things or planning to make them.” He invented a double-inclined plane for raising and lowering canal boats from one level to another. He patented a mill for sawing marble, a dredging machine, a spinning machine, and other useful and curious things. There were few busier men in England than this young artist from America.

In Paris. — In 1794 he went to Paris, where he painted the first panorama ever seen in France. He then began to make experiments with torpedoes to be used in war for the blowing up of vessels at sea. He also invented a boat for sailing under the water. But neither of these schemes proved to be very successful.

The first steamboats.— At that time people had not learned to make much use of steam. A few clumsy engines had been made, but they were very cumbersome and of but little value. There were no steam cars, no great steam mills, and no steamboats in all the world. Ships and boats were moved by the wind, and a voyage of only a few miles often occupied several days. While Robert Fulton was in England, several men at different places were trying to find some method of moving boats by means of steam. John Stevens, at Hoboken, New Jersey, built a boat which was propelled by steam and traveled five miles an hour; but it was looked upon rather as a curiosity than as something useful. At Phila-

John Fitch's boat

delphia, a man named John Fitch made a boat with paddles, which was driven by steam at the rate of eight miles an hour. But for some reason this boat did not prove successful and

was abandoned. Other men spent much time and money in trying to make similar inventions, and not one succeeded. People laughed at them and said that it was folly to think of making steam drive a boat or indeed anything else.

In the meanwhile Robert Fulton was studying the same thing. No doubt he remembered the paddles which he had made so long before for the fishing-boat on

the Conestoga. If he could put a steam engine in his boat and make it turn the paddle-wheels, why might not steam navigation be made successful?

Experiments. — There was in Paris at that time a wealthy American whose name was Robert R. Livingston. He was much interested in steamboats, and believed that the time was coming when they would be in general use. He urged Mr. Fulton to build a boat as an experiment, and promised to pay a large part of the expense. If the experiment was successful he would secure from the New York legislature a grant of the sole right to use steamboats on the water courses of that state.

III. THE CLERMONT

Further experiments. — Thus encouraged, Robert Fulton went earnestly to work. A boat was soon built and launched upon the Seine; but it was so top-heavy that it sank. Another boat was built with more care, and the old machinery was put into it. A trial trip was made; but the vessel moved so slowly and uncertainly that it seemed to be a failure. Mr. Fulton was not the man to be discouraged. "We shall try again," he said.

He decided that the next trial must be made in the United States. He therefore ordered an engine to be built in London; and when it was finished he sailed with it for New York.

"Fulton's Folly." — For the next few months Fulton was busy superintending the building of his boat. His former failures and the failures of other men had taught

him many valuable lessons. People laughed at him and said that he had lost his senses. They called his boat "Fulton's Folly," and declared that it was impossible to build a steam vessel that would ever be of any use. Mr. Fulton listened to their talk and went on with his work.

The "Clermont." — At last, in the summer of 1807, the boat was finished and the engine was put in place. The vessel was 130 feet long and 16½ feet wide. It had been built with the greatest care throughout. It was named the *Clermont*, after Mr. Livingston's country home on the

The "Clermont"

Hudson. It was a strange-looking craft, not much like the modern steamboats which are now seen daily on all our large rivers and lakes. Mr. Livingston said that it looked "like a backwoods sawmill mounted on a scow and set on fire."

The trial trip. — The 11th of August was the day set for the trial trip. The boat was to steam up the Hudson River, and if possible go as far as to Albany. Few even of Mr. Fulton's friends believed that it would sail far out of sight of the pier from which it started.

But the trip was successful in every way. The voyage to Albany was made in thirty-two hours, and without any serious mishap. The return to New York was accomplished in thirty hours. There was no longer any doubt

as to whether boats could be propelled by steam. After that the *Clermont* made three trips regularly every week between New York and Albany.

Opposition. — The owners of the sailing vessels on the Hudson were very jealous of the new boat. They tried in every way to prevent the full success of Mr. Fulton's enterprise. They disputed his claim to the invention, and said that he had stolen his ideas from other men. They even tried to wreck the *Clermont* by running their own clumsy vessels against her, and breaking off the wheels.

Steamboats and steamships. — But in spite of this opposition Mr. Fulton persevered. The *Clermont*, as a passenger boat, became very popular, and soon it was found necessary to build others like her. In a few years the voyage to Albany was made in eighteen hours instead of thirty-two. Soon steamboats were

A modern steamboat

in use on all our inland waters. Twelve years after the trial trip of the *Clermont*, the first steamship voyage was made across the Atlantic. The vessel which accomplished this was the *Savannah*, of Savannah, Georgia. The voyage is now made in about six days, but it then occupied twenty-two days.

Other inventions. — With the invention of the steamboat Mr. Fulton accomplished the great work of his life.

“The voyage is now made in about six days”

But he was not content to stop with that. He still took great interest in the invention of torpedoes for use in naval warfare. He planned and built the first steam warship in this country — a vessel carrying forty-four guns. The War of 1812 came to a close, however, before this ship could be tested, and it was never used.

In 1815, when only fifty years old, Robert Fulton died. His name, like that of Eli Whitney, will always be remembered as that of one of the world's great benefactors.

REVIEW

How did people travel from place to place in Washington's time? How were goods carried? Make a list of inventions that have been made within the last hundred years. Name some things, now in everyday use, which were unknown in the time of Washington. What influence did the perfection of the steamboat have upon travel and commerce?

ANDREW JACKSON

AND THE PROGRESS OF THE NATION

I. A SELF-MADE MAN

A determined young rebel. — In one of the last years of the Revolutionary War, a band of British soldiers in South Carolina was sent out to capture some troublesome patriots, who were in the neighborhood of Waxhaw Creek. After a good deal of difficulty and some sharp fighting, they succeeded in bringing in a few backwoodsmen who were known to be determined rebels. Among these prisoners were two boys, Andrew Jackson, aged thirteen, and his brother Robert, who was a little older.

“Desperate young fellows these are,” said one of the British officers, “but we shall soon tame them;” and he ordered Andrew to clean and polish his boots.

The slender, pale-faced boy drew himself up proudly and answered, “Sir, I am a prisoner of war, and demand to be treated as such.”

“Indeed!” cried the officer. “We shall soon see what you are. Down with you, and do my bidding!”

The boy’s eyes blazed with fury as he answered, “I am an American, and will not be the slave of any Britisher that breathes.”

The angry officer struck at him with his sword. Andrew parried the blow, but received a severe cut on his arm. To the end of his life the scar from that wound continued to nourish his hatred toward the British.

“I am an American!”

Reading law. — Robert Jackson died while in the British prison pen; and Andrew, when he was finally given his freedom, found himself alone in the world, and obliged to make his own way as best he could. He worked for a short time in a saddler’s shop in Charleston, but that trade was not agreeable to one of his restless nature. He had learned, in some unexplained way, to read and write; and so he tried school teaching for a little while. The next thing heard of him, he was in Salisbury, North Carolina, trying to read law in the office of a noted judge whose name was John McNairy.

Appointed to office. — He did not learn much law, but he was shrewd and self-confident, and had good judgment.

And so, through the influence of his friend McNairy, he was appointed public prosecutor for the western district of North Carolina. He was then only twenty-one years of age.

II. THE NEW STATE OF TENNESSEE

At Nashville. — The western district of North Carolina comprised all the region now known as Tennessee. It was a wild country with only a few scattered settlements of white people. The inhabitants were for the most part rough backwoodsmen, who disliked the restraints of civilized life, and cared but little for the laws. Many were idle and thriftless. Drunken brawls were common. There were quarrels which set whole neighborhoods at odds, and often ended in bloodshed. To be public prosecutor required courage rather than scholarship, and Andrew Jackson proved himself well fitted for the position. He settled at Nashville, which was then merely a collection of log huts, and without fear or favor began to perform his duty.

District attorney. — In the following spring Washington was inaugurated first President of the United States; and very soon afterward word came to Nashville that North Carolina had ceded her western district to the general government. Congress had formed a code of laws for the Southwest Territory, as the region was then called, and Andrew Jackson had been retained in his office with the title of district attorney.

Movement to form a new state. — Three years later Congress admitted Kentucky into the Union, and immediately the people of the Southwest Territory began to

wonder why they too could not form themselves into a sovereign state on an equal footing with the others. The matter was discussed by the pioneers at all their neighborhood meetings, and finally a convention was called at Knoxville to form a state constitution.

Tennessee. — On a day in midwinter, 1796, a number of backwoodsmen, with hunting knives in their belts and rifles in their hands, met together in the little log courthouse at Knoxville to lay the foundations of a great commonwealth. The district attorney, Andrew Jackson, was the man of most influence in that convention; and it was through his suggestion that the name of Tennessee was selected for the new state. A constitution was soon agreed upon, and messengers were sent to Philadelphia to lay it before Congress.

The admission of Tennessee was opposed by Alexander Hamilton and the Federal party on the ground that it was not wise to permit the ruffian pioneers of the West to send representatives to Congress. But the Democratic-Republicans under the guidance of Thomas Jefferson declared that every man, even though a backwoodsman, was entitled to his share in the government of the country; and the new state was admitted.

Jackson in Congress. — When Congress met at Philadelphia in the following December, Andrew Jackson appeared as the first representative from Tennessee. He was then thirty years old, and had never before been in the company of cultured people. He was tall and lank, "with long locks of hair hanging over his face, and

a cue down his back tied in eel-skin." He was dressed in coarse homespun, and his manners were those of a backwoodsman. The time came, in after years, when he not only dressed as a gentleman but practiced all the courtly graces known to those who move in the most refined society.

III. EVENTS IN THE WEST

Senator, judge, and general. — Andrew Jackson did not take much part in the discussions of Congress; and when he later became a senator from his state, he failed to attract much attention. He soon grew tired of public life and returned to Tennessee, where he engaged in business as a trader, — buying produce from his neighbors and shipping it down the Mississippi to New Orleans. Although he knew very little law, yet his reputation as district attorney was such that he easily secured an appointment as judge of the supreme court of Tennessee. He had never had any military training, yet his dauntless daring was so well known that he was soon afterwards chosen major general of the state's militia.

“Tall and lank”

Growth of the country. — In the meanwhile the country was increasing rapidly in wealth and power. The great territory of Louisiana had been purchased from

France. Ohio had been admitted into the Union. New lands in the West were being opened for settlement.

Tecumseh. — There were still many Indians in the country east of the Mississippi, and these were a source of constant anxiety to the people in the border settlements. A Shawnee warrior named Tecumseh conceived the plan of uniting all the Indian nations into one confederacy for the purpose of making a decided stand against the white men. He stirred up the tribes north of the Ohio, and then made a visit to the South to enlist the aid of the Creeks in Alabama.

“He stirred up the tribes north of the Ohio”

The battle of Tippecanoe.

— While he was absent in the South, his warriors in

Indiana Territory became so troublesome that William Henry Harrison, the governor of the territory, led out an armed force against them. On a day in November, 1811, he met a strong band of Indians at Tippecanoe, near the site of the present city of Lafayette. They attacked him and were so badly beaten that all the tribes were glad to sue for peace. When Tecumseh returned to Indiana and learned what had happened, he fled to Canada. But his

visit to the Creeks had its influence, and those Indians soon afterwards began to burn and destroy the border settlements south of Tennessee.

IV. THE WAR OF 1812

War declared. — During all this time the troubles with the British, which had begun while Jefferson was President, grew worse and worse. At last they became unbearable; and on the 19th of June, 1812, Congress declared war against Great Britain.

At first the Americans met with many losses. Detroit was surrendered without striking a blow; one skirmish after another ended in defeat; and later the city of Washington was captured and burned. But on the sea our sailors proved themselves to be more than a match for the boastful British; and of seventeen important sea fights the Americans were victors in all but four. Captain Oliver H. Perry, with a few clumsy vessels, fought the British on Lake Erie and destroyed their fleet; and General Harrison defeated the British army in Canada and retook Detroit.

The Creek War. — In the meanwhile Andrew Jackson — late major general of Tennessee militia, but now major general in the army of the United States — was busy defending the southern borders. He marched against the Creeks, and in a campaign of seven months gave them such a severe punishment that they dared not make any further trouble. He even carried the war into Florida, which still belonged to Spain, and captured Pensacola, where some British troops had been landed.

New Orleans. — Toward the end of the year 1814, he learned that a strong British force had sailed to the Gulf of Mexico, with the intention of attacking New Orleans. He at once put his own little army in order and marched with all possible speed toward the threatened city. He arrived there several days before the British landed, and with all his rare energy began to provide for defense. He caused intrenchments to be made and breastworks to be thrown up; and he was everywhere present to see that all things were quickly and properly done. His enthusiasm

“ The battle was one of the most remarkable ever known ”

inspired his men and spread like contagion from company to company; and when, on the 8th of January, the
 1815 British made a grand assault upon his works, everything was in readiness to receive them.

A famous victory. — The battle that followed was one of the most remarkable ever known. The British were repulsed with a loss of more than two thousand men.

Jackson's loss was only seven killed and six wounded. It was, indeed, a famous victory.

Peace.— Had there been a telegraphic cable between Europe and America at that time, the battle of New Orleans would not have occurred.

A treaty of peace had been signed at Ghent in Holland two weeks before; but news traveled very slowly in those days, and it was a month later before General Jackson learned what had been done. The long and distressing struggle, commonly known as the War of 1812, was at an end. Through

it the United States won the respect of her enemies and gained a place of honor among the world's great nations. American sailors were never more to be insulted upon the high seas.

Monument in New Orleans to commemorate the battle

V. AN ACTIVE POLITICIAN

A bold maneuver.— General Jackson was the acknowledged hero of the war. Some time after its close he was sent to Georgia to quell an uprising of the Seminole Indians in that state. Suspecting that the Spanish were giving aid and encouragement to the red men, he marched boldly into Florida and took possession of the fort at St. Marks.

Purchase of Florida. — This was a daring thing to do, and might have caused war between our country and Spain. But the Spanish king was already planning to sell Florida to the United States. President James Monroe, who succeeded James Madison in 1817, offered five million dollars for the province, to be paid to citizens of the United States who had claims against Spain. The Spanish government after a good deal of delay accepted the offer and Florida became a part of the United States.

The first governor. — General Jackson was appointed the first American governor of Florida. That region was then little more than a wilderness of marshes and tangled forests, with but few settlements within her borders. The only towns were St. Augustine on the east and Pensacola on the west, and the inhabitants of these were Spaniards.

The Hermitage. — Jackson did not care to remain long in the new territory after there was no further need of fighting. He soon returned to Tennessee and retired to his home, called the Hermitage, near Nashville.

Great changes had taken place in the West since Andrew Jackson first crossed the mountains to become public prosecutor for the western district of North Carolina. Since then eleven new states had been added to the Union — Vermont, Kentucky, Tennessee, Ohio, Louisiana, Indiana, Mississippi, Illinois, Alabama, Maine, and Missouri — and of these all but two were west of the Alleghanies. The forests and wild prairies had in large part given way to fertile farms. Busy villages had sprung up; and pleasant

homes and schoolhouses and churches had taken the place of Indian wigwams and squatters' cabins and frontier trading posts. Steamboats plied up and down the larger rivers, bringing trade to the very doors of the prosperous farmers and planters. Already the great West was begin-

The Hermitage

ning to rival the Atlantic slope both in political importance and in the wealth and intelligence of its people.

Presidential candidates. — Hitherto all the presidents had been men from the Atlantic states. Four of the five who served during the first thirty-six years of our country's history, were citizens of Virginia. The people beyond the Alleghanies began to feel that the time had come for the

West to assert itself. The next President, they said, must represent the new and growing West.

Election of John Quincy Adams. — Since his victory at New Orleans, General Jackson had been the most popular man in the country; but another western man, Henry Clay of Kentucky, had proved himself to be one of the most accomplished statesmen of the time. Both men had hosts of friends, and it seemed to the people of the West that one of them must surely be chosen. But there were
1824 other candidates in the field, for the East and the South had each its favorite. The result was that not one of the candidates received a majority of electoral votes. It therefore became necessary for the House of Representatives to choose the President, and the choice fell upon John Quincy Adams.

VI. THE SEVENTH PRESIDENT

“Not fit to be President.” — Jackson had very modestly said, “I can command troops in my rough way, but I am not fit to be President.” Yet he was much disappointed by his defeat; and by way of revenge, he made some serious charges against both Adams and Clay which, to his discredit, were as untrue as they were unkind.

Jackson successful at last. — When the time for another presidential election came round, Jackson was again named as a candidate. His admirers united in his support, and he was elected. On the 4th of March, 1829, he was inaugurated the seventh President of the United States.

The tariff. — Of the many acts of President Jackson’s

administration the most important was that relating to what is known as the nullification act of South Carolina. Congress had passed a law putting a high tariff or tax on woolen cloths and certain other manufactured goods brought into the United States from foreign countries. The object of the law was to protect American manufacturers, and one of its results was to increase the price at which all such goods were sold. But there were no manufactures in the South; and the southern people did not think it right to be obliged to pay taxes on imported goods. They claimed that the law was made for the benefit of northern manufacturers, and that it was an act of great injustice to the South.

The nullification act. — Finally the people of South Carolina met in convention and declared that, so far as their state was concerned, the law was null and void, and would not be obeyed; and they asserted that if any attempt was made to enforce it in any of the ports of South Carolina she would secede from, or go out of, the Union.

“The Union must be preserved.” — It was supposed that since President Jackson was himself a native of Carolina, and since he had been elected chiefly by southern votes, he would be friendly to the nullifiers. On the contrary, he issued a proclamation declaring that “the laws of the United States must be executed.” “The Union must and shall be preserved,” he said; and then, to show that he was in earnest, he sent to Charleston two ships and a body of troops under General Scott with orders to quell the first motion toward rebellion. At about the same time,

Henry Clay came forward and proposed a compromise measure which was so satisfactory to all parties that the South Carolinians ceased their opposition to the hated law.

Andrew Jackson served two terms, or eight years, as President of the United States. His faults were many, his mistakes not a few; and yet scarcely any other President since Washington ever won so high a place in the esteem and admiration of his fellow-citizens. At the close of his administration he said, "I leave this great people happy and prosperous."

He lived for eight years in peaceful retirement at the Hermitage, and died on the 8th of June, 1845, at the ripe age of seventy-eight.

REVIEW

What qualities in Andrew Jackson's character enabled him to become a great man? Tell what you know about early times in Tennessee. Describe Andrew Jackson's appearance when he first entered Congress. Why did Tecumseh attempt to form a confederacy of Indians? What were the causes of the War of 1812? What part did Andrew Jackson take in that war? Tell about the battle of New Orleans. Who were the candidates for the presidency in 1824? How was John Quincy Adams elected? Why did the people of the South object to the tariff law? What stand did Jackson take when South Carolina threatened to secede from the Union? Why was Jackson so popular a President?

SAMUEL F. B. MORSE

AND THE INVENTION OF THE TELEGRAPH

I. SCHOOL AND COLLEGE

His childhood. — Samuel Finley Breese Morse was born in Charlestown, Massachusetts. At the time of his birth George Washington had been President of the United States just two years lacking two days. Andrew Jackson was then serving his first term as district attorney in the backwoods of Tennessee; Eli Whitney was working his way through Yale College; and Robert Fulton was painting pictures in London and drawing plans for new inventions.

Mr. Morse, the father of Finley, as the lad was called, was the pastor of the Congregational Church in Charlestown. He was a man of much influence. He was also a great scholar and wrote the first geography of any note ever published in this country.

At school. — Little Finley was sent to school almost as soon as he could walk. He learned very fast, and took great delight in drawing pictures, which was against the rules of the school.

Preparing for college. — When he was seven years old he was sent to Andover to attend the famous Phillips Academy there and be prepared for college. He was a diligent student and, for so young a lad, was very thoughtful. He liked to read about great men, and one of his favorite books was Plutarch's "Lives." At fifteen he entered Yale College.

The first electrical experiment. — It was while in college that Finley Morse first became interested in electricity. Very little was known about it at that time. Franklin had made several experiments and had published some pamphlets on the subject. He had discovered that lightning and thunder are caused by electricity, and he had suggested the lightning-rod. But nobody supposed that electricity could ever be made of any practical use.

The instructor in natural philosophy at Yale was Professor Day. He had a very crude, old-fashioned electrical machine which would throw out sparks and produce a slight current of electricity. Once a year, when his class reached the short chapter on electricity in the college textbook, he would bring out this machine to illustrate the two or three things then known about that strange force which has since become of so much importance in the world's work.

"Now, boys," he would say, "we will try a few experiments."

All the boys joined hands and stood up in a circle. The electrical machine was set to going. The boy nearest

to it presented his knuckles. Instantly there was a slight flash, and every boy felt a strange, half-painful shock pass through his arms. The last boy felt the shock at precisely the same moment as the first boy. The electricity had passed through the entire circle in no time at all. But few of the boys cared to make any further investigation of the subject. The whole thing was strange and interesting, but of what use was it?

“All the boys joined hands”

What is electricity? — Finley Morse, however, was much impressed by the experiment. “What is electricity?” he asked himself. “It is a force, for it jerked every arm through which it passed. It acts instantaneously, and therefore it must travel very rapidly. Being a force, why can it not be controlled and made to perform some kind of useful work?”

II. A SUCCESSFUL ARTIST

Making miniatures. — Interesting as electricity appeared to be, young Morse gave it but little more attention. All his spare time was given to painting, and his chief ambition was to become a good artist. During his last year in college he was very busy making portraits. “My price

is five dollars for a miniature on ivory," he wrote home to his mother, "and I have engaged two or three at that price. My price for profiles is one dollar, and everybody is willing to engage me at that price."

A trip to England. — About a year after graduating from college, Finley Morse decided to go to England, where he would have better opportunities to study art. The voyage was very long and tiresome, for no steamship had yet crossed the Atlantic. The first thing that Morse did after landing was to write a letter to his parents at home.

"I only wish," he said, "that you had this letter now to relieve your minds from anxiety. . . . I wish that in an instant I could communicate the information. But three thousand miles are not passed over in an instant."

Little did he dream that an invention of his own would sometime make it possible to send news instantly from London to New York.

An art student. — He remained four years in London painting pictures and studying under Benjamin West, with whom Robert Fulton had also studied. A large painting called "The Dying Hercules," which he made at that time, was praised very highly by the art critics of England.

A portrait painter. — When twenty-four years of age he returned to America and set up a studio in Boston. People liked to come and look at his beautiful pictures, but they did not care to buy of him or to give him work to do. Soon all his money was gone, and he was obliged to go from village to village in New England, painting portraits for those who wished them. No one had yet learned how

to make photographs, and so he found much work to do. Then he settled for a while in Charleston, South Carolina, and afterwards in New York, giving most of his time to the painting of portraits.

III. YEARS OF EXPERIMENT

A change of purpose. — Mr. Morse was more than forty years old before the idea of making an electric telegraph took hold of him and caused him to give up his chosen profession. He had been in Paris and was returning home on the packet ship *Sully*. On board the same ship was a young student of natural science, who had been visiting in Europe.

“I spent some time,” said the student, “with Ampère, the great electrician, and I saw him perform some wonderful experiments with the electro-magnet.”

“What is that?” asked Mr. Morse.

“It is a bar of soft iron surrounded by a coil of copper wire. By sending a current of electricity through the wire, the bar is made a magnet; and as long as the current continues it has all the properties of any other magnet. But as soon as the current ceases, it loses these properties.”

“Suppose a very long wire is used, does that make any difference in the strength or speed of the current?”

“It does not. Dr. Franklin proved by experiment that electricity passes in an instant through any known length of wire.”

“If that is the case I see no reason why some means cannot be discovered whereby news can be carried by

electricity. And if it can be carried ten miles, why not carry it around the world?"

The telegraph. — From that moment, Mr. Morse devoted all his spare time and energy to the invention of the electric telegraph. Even before the ship *Sully* reached New York, he drew a rough plan of a telegraphic instrument in some respects like the instruments now in use. He also studied out the signs to be used as an alphabet. The perfecting of the instrument for sending and receiving messages would require much study, and to this his attention was chiefly given.

Experimenting. — The first thing to be done after landing in New York was to find a place to work. He fitted up a little garret room at the corner of Beekman and Nassau streets, and began the making of models and the trying of experiments. There he lived alone for several months. He did his own cooking, wore shabby clothes, and was seldom seen even by his brothers and most intimate friends.

Professor in the University of New York. — But he could not live and carry on his experiments without money; and he soon found it necessary to earn something by the practice of his art. Through the influence of his friends he was appointed professor of the arts of design in the University of New York. The little down-town shop was given up, and he established himself in rooms on the third floor of the university building overlooking Washington Square. There, while not engaged in the duties of his professorship, he continued his experiments.

The first telegraphic machine. — In September, 1837, Mr. Morse invited the professors of the University, besides others who were interested in his work, to come and see what he was able to do with his invention. Seventeen hundred feet of wire had been stretched around his rooms, and through this several messages were sent.

An early telegraphic machine

The receiving instrument was so made that the words were written — in telegraphic symbols — on a long strip of paper. The machine was of course very imperfect and crude, but it did all that was claimed for it.

IV. SUCCESS AT LAST

Delays. — Mr. Morse at once applied for a patent on his invention, and he petitioned Congress to aid him in building a line of telegraph. After this there were many vexatious delays. Money was needed to carry on the work, and but few men were willing to take any risks in an enterprise about which they understood so little. To send messages over a wire without also sending the paper upon which they were written, seemed to most people utterly impossible. Years of discouragement and poverty followed. It was not until March, 1843, that Congress at length consented to grant thirty thousand dollars for the construction of a trial line between Baltimore and Washington.

The distance from Washington to Baltimore is about forty miles, and work was begun at the Washington end. About half of the line was finished, when a convention of Whigs met in Baltimore for the purpose of nominating a candidate for the presidency of the United States. Mr. Morse resolved to test the practical value of his telegraph. The convention chose Henry Clay as its candidate. The news was at once carried by railroad train to the nearest point that had been reached by the telegraph line. From that point it was sent over the wires to Washington. The train went onward, and at length also arrived in Washington. What was the surprise of the passengers to find that the news of Clay's nomination had reached the city nearly an hour before! This was the first real news message ever transmitted by electric telegraph.

The first message. — A few weeks later the line was finished, and on the 24th of May, 1844, it was ready for operation. Mr. Morse and his friends met in the chamber of the supreme court of the United States to celebrate its formal opening. Miss Annie G. Ellsworth, of Washington, had been the first to tell Mr. Morse of the action of Congress in granting him the aid which he had asked for; and to her was given the honor of choosing the words for the first message. They were these: "What hath God wrought?" The strip of paper on which the characters were printed by the telegraphic instrument may still be seen in the Athenæum at Hartford, Connecticut.

First earnings of the telegraph. — There was no longer any question about the successful working of the tele-

graph ; but people did not at once appreciate its usefulness. During the first year the line was controlled by the post office department at Washington. One cent was charged for every four letters or characters in messages transmitted to Baltimore. The receipts during the first four days

Laying the Atlantic cable

were only one cent ; during the next four they amounted to something over three dollars.

Mr. Morse offered to sell his telegraph to the government. But Congress refused to give the hundred thousand dollars which he required for it. A private company called the Magnetic Telegraph Company then obtained control of it, and soon there were telegraphs in all parts of our

country. Other persons tried to invent machines better than Morse's; they infringed upon his patents; they did all that they could to deprive him of both the honor and the profit which belonged to him as the inventor of the telegraph. In the end, however, he triumphed over all opposition.

The Atlantic cable. — In 1858, when Professor Morse was sixty-seven years old, the first telegraphic cable was laid across the Atlantic Ocean. Only about four hundred messages were sent by this cable, and then it ceased to work. Eight years later another cable was laid. It was twenty-three hundred miles in length and weighed forty thousand tons. Since that time it has been possible at any time to send messages instantaneously from our country to almost any city in Europe. There are now several ocean cables all in working condition.

Samuel Finley Breese Morse lived to be more than eighty years of age. He died honored by all the world as one of the greatest inventors of the times.

REVIEW

Name some of the useful ways in which electricity is now employed. Who first discovered that lightning and thunder are caused by electricity? When Samuel F. B. Morse was in college, how long a time was required for news to come from London to New York? What battle would never have been fought had there been an ocean telegraph cable at that time? What first caused Mr. Morse to believe in the possibility of an electric telegraph? If there were no telegraph lines now, would it be possible to carry on business as at present? Why? Why is Samuel F. B. Morse to be considered as one of the great benefactors of our country?

HENRY CLAY

AND THE COMPROMISES BETWEEN THE NORTH AND THE SOUTH

I. THE MILL BOY OF THE SLASHES

The schoolhouse. — In Hanover County, Virginia, there is a marshy district, which on account of its many swamps is known as the “Slashes.” Here there stood during Revolutionary times a little log schoolhouse which had neither floor nor ceiling nor any windows. At one end of it there was a wide door which was never closed; at the other there was a huge fireplace made of stones and burnt clay. Between the door and the fireplace there were three or four long, narrow benches, without backs, where the boys sat and hummed aloud their lessons in spelling and reading. Except a stool for the teacher, and a shelf or two on the wall, there was no other furniture. Outside of the little building everything was dismal and bare — desolate bogs and lonely farms and a landscape devoid of beauty.

Henry Clay. — Among the children of the Slashes who attended school at that poor place there was a thin-faced, light-haired, barefooted little fellow, whose name was Henry Clay. This child was six years old when the treaty of peace was made, which gave to the American colonies their liberty. His father was dead. His mother was very

The children of the Slashes at school

poor. He was the fifth in a family of seven little children. There was a charm in the looks and manners of the lad which no one could ever withstand; it attracted respect and love wherever he went. That same charm remained with him through life and was the secret of his wonderful influence over his fellow-men.

Going to mill. — Little Henry was so bright and quick that at the end of a few weeks he had learned to read, and write, and cipher “as far as Practice.” The schoolmaster could teach him no more. The rest of his childhood was spent on his mother’s farm, plowing, and hoeing, and doing

the thousand things that farmer boys must do. He never attended another school.

Years afterward the neighbors told how he would rise at daybreak and ride to the mill for his mother; a bag of corn was thrown across his pony's back, and upon this he would sit, his bare legs dangling on either side. People saw him so often plodding along the boggy road that they came to know him as the "Mill Boy of the Slashes"; and this name in later life became one of his proudest titles.

II. ATTORNEY AND STATESMAN

At Richmond. — When Henry Clay was fourteen years old he left the farm and went to Richmond. There he found work for a few weeks as errand boy in a drug store. About that time his mother married again and his stepfather secured a place for him as copying clerk in the office of the Chancery Court. He was only fifteen, and to be employed in such a place he must have been a good writer and a boy of much promise.

His odd appearance. — The other clerks stared at him in amusement when he first entered the office. He was very slender and tall, with long, straight hair combed smoothly over his ears. He wore a suit of "pepper-and-salt" homespun. His wide shirt collar was stiffly starched; his coat tails stood out behind him. He had every appearance of a country greenhorn.

Becomes an attorney. — But that nameless charm which he possessed won the immediate friendship of all in the office. His handwriting attracted the attention

of Chancellor Wythe, who had been the teacher of Thomas Jefferson. Mr. Wythe told him what books to read, and encouraged him to study law. Young Clay soon became acquainted with several distinguished men; he studied diligently, and before he was twenty years old he was licensed as an attorney. He then removed to Lexington, Kentucky, and began the practice of his profession.

“The Mill Boy of the Slashes”

At Lexington. — He was successful from the start. He began at once to take an active part in politics, and when only twenty-six years old was elected to the state legislature. Before he had quite completed his thirtieth year he was appointed to fill a vacancy in the United States Senate. The term soon came to an end, and he was again elected to the state legislature.

In Congress. — Two years later, at the beginning of President Madison’s administration, Mr. Clay took his seat for the second time in the United States Senate. From that day until the end of his life he was one of the foremost men in the councils of the nation; and as a member either of the Senate or of the House of Representatives his voice was heard on all the important questions that claimed the attention of the government.

The War of 1812. — When President Madison in 1812 hesitated as to the best course to pursue with Great Britain, it was Henry Clay who urged war. It was the only way, he said, by which our country could maintain its honor and secure a lasting peace. And when the people began to despair because of early losses and disasters in that war, it was Henry Clay who went about making great speeches and inspiring every heart with patriotism. At the close of the war he was one of the commissioners who signed the treaty of peace.

A great question. — Six years later, when Clay was speaker of the House of Representatives, a question of vast importance came before Congress. It was a question which for the time threatened to break up the Union and destroy the very life of the nation. Then it was that Henry Clay came forward as a peacemaker and performed the first of many friendly acts which gave him the title of the Great Pacificator. To understand this we must trace briefly the history of the cause of long disagreements between the North and the South.

III. SLAVERY

Slavery was at the bottom of the trouble. Slaves, as you have already learned, were brought into this country at the time of the earliest settlements. They were at first held in all the colonies, as well in the North as in the South. While the people generally accepted slavery as they found it, there were some who feared that in the end it would bring about evil results.

At the close of the Revolution slavery existed in every state. In the Northern states, however, beginning with New Hampshire and Pennsylvania, it was gradually abolished. It was abolished, not so much because the people pitied the slaves, but because slave labor was less profitable than free labor. Washington, Jefferson, and other founders of the nation saw clearly the evils of slavery, and wished that it could be entirely done away with.

The Northwest Territory.—When the region north of the Ohio River became a territory of the United States, Congress adopted an ordinance, or general law, in which it was declared that slavery should never be permitted in that part of our country. The states of Ohio, Indiana, Illinois, Michigan, and Wisconsin, which were formed from that territory, were therefore free states from the beginning. The Ohio River was the boundary line between freedom and slavery.

Cotton and slavery.—After the invention of the cotton gin by Eli Whitney, cotton-raising became the chief industry of the South. It was believed that only negroes could do the hard work on the great plantations. Every year slaves became more and more valuable. The sentiment in the South against slavery became weaker and weaker as slave labor became more profitable. Virginia and Kentucky, in which but little cotton could be raised, became great slave-producing states, sending a constant stream of negroes to the slave markets of the more southern states.

To the people of the South slavery was a source of

prosperity and wealth ; it was but natural that they should wish to strengthen and defend it.

South and North. — When the Constitution of the United States was adopted there were seven Northern states and six Southern states. Virginia, a Southern state, had a larger number of inhabitants than any other. The senators and representatives in Congress, therefore, were about equally divided — half from the South and half from the North. The idea grew that this equality should always be preserved. Many men failed to think of our country as a great nation, every part of which was interested in the welfare of every other part. They thought of it as composed of many states, or little nations, leagued together for protection. They thought of these states as comprising two groups or sections — the South and the North ; and, since the South had slavery and the North had it not, it was supposed that the interests of the two sections were different and that each was all the time trying to get some advantage over the other. Thus jealousies sprang up, and whenever one section seemed to be getting more than its equal share in the government there were threats from some of the states in the other section to secede, or withdraw, from the Union.

The admission of new states. — It was the constant care of patriotic statesmen on both sides to keep the two sections as nearly equal as possible. The first new state admitted to the Union was Vermont, a free state ; but the balance was preserved by soon afterward admitting Kentucky, a slave state. Next, Tennessee, a slave state, was

followed by Ohio, a free state. Then Louisiana was offset with Indiana, and Mississippi with Illinois. In 1819 Alabama was admitted. There were then eleven slave states and eleven free states, and each section had twenty-two senators in the United States Congress.

IV. THE FIRST GREAT COMPROMISE

The question about Missouri. — The time was at hand for the admission of two more states, Maine and Missouri. Of course Maine would be free; but how about Missouri? No other state had yet been formed entirely west of the Mississippi; and no boundary line between freedom and slavery had been established in the region acquired through the Louisiana Purchase. If Missouri should be admitted with slavery there would be as many slave states as free states; if she should be admitted without it the free states would have a decided majority in Congress.

Henry Clay as a peacemaker. — There were many hot discussions in Congress. There were threats, both from southern men and from northern men, of breaking up the Union in case the matter should be decided contrary to their wishes. Then Henry Clay, in his masterly way, came forward as the peacemaker. "It is impossible," he said, "for both sections to have all that is desired. Let each, therefore, give up a little to the other, and let us preserve this Union of the states." And then he advocated a plan that had been proposed by the Senate for the settlement of the dispute — the plan since known as the Missouri Compromise.

The Missouri Compromise. — The compromise provided that Missouri should come into the Union as a slave state: this was to satisfy the South. On the other hand it declared that all the rest of the Louisiana Purchase north of the line that forms the southern boundary of Missouri should forever be free: this was to appease the North. The compromise seemed so fair to both parties that it was adopted. It proved to be a great victory for the South. The slaveholding power was triumphant, and for the next thirty years it controlled Congress and most other branches of the government.

V. THE SECOND GREAT COMPROMISE

Clay and the presidency. — Henry Clay was now acknowledged to be the leading statesman of the West. The people of his own state idolized him. In the halls of Congress he had but two equals, Daniel Webster of Massachusetts, and John C. Calhoun of South Carolina. We have already learned how, in 1824, Clay was nominated for the presidency, and how he failed to be elected. For the next twenty years he lived in constant expectancy of being President. He would have been the choice of a large portion of the people. He was probably the ablest man among all the candidates for that high position. But he had incurred the hatred of Andrew Jackson, the popular hero of the time; he was opposed by jealous politicians in his own party; and he, therefore, never gained the prize that seemed often within his reach. Another man would have felt the dis-

appointment keenly, but Mr. Clay said: "I would rather be right than President."

The second great compromise.— In the story of Andrew Jackson it has been told how the state of South Carolina tried to nullify the laws of Congress, and how she was ready, in case of opposition, to withdraw from the Union. It was President Jackson who said, "The Union must and shall be preserved;" but any use of force on his

Clay's home in Kentucky

part would very likely have brought on a bloody and disastrous war. It was Henry Clay who preserved the Union by coming forward at the right time and proposing a compromise by which the tariff law was made less hateful to the South. Thus, for the second time, he acted as peace-maker between the sections.

The growth of slavery.— Every year the country increased in prosperity. As the cotton planters of the South grew wealthier and wealthier, their plantations were made

larger, and more and more slaves were required to work them. The demand for cotton became greater with each passing year. More lands were needed, and more territory in which slave labor would be profitable. This, together with the desire to preserve the power of the South in Congress, led to the admission into the Union of Texas, which had been a part of Mexico.

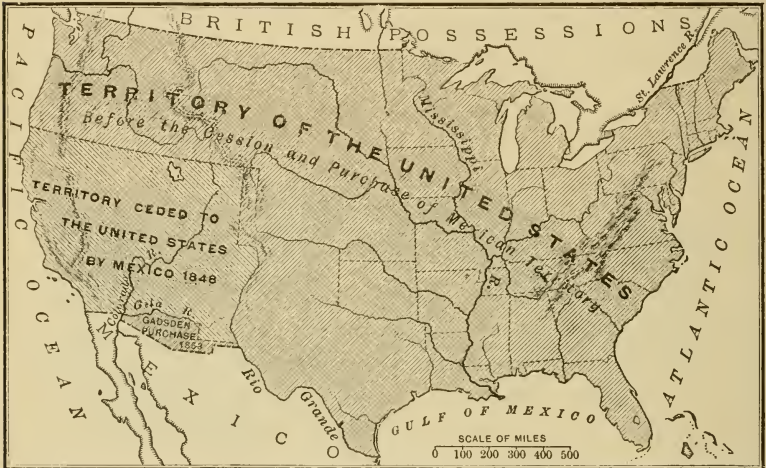

The Mexican War. — This brought on a war with Mexico. It was a disastrous war for Mexico ; for at its end she was obliged to give up a large portion of her territory to the United States. The lands thus added to our country included California, Nevada, Utah, most of New Mexico and Arizona, and a part of Colorado and Wyoming.

Hopes of the South. — At that time the only inhabitants of those territories were Indians and a few Mexicans, and the region was for the most part unknown and unexplored. But it was hoped that in due time settlers would be attracted thither, and if slave states could be formed there, the power of the South would be much increased.

VI. THE THIRD GREAT COMPROMISE

Gold in California. — Very soon after the close of the war some Americans discovered gold in California. As soon as the news reached the Atlantic states there was an excitement such as has never since been known. Great numbers of men, especially in the North, left their homes and hastened to go to the golden West. Some went in ships around South America ; some shortened the voyage by crossing the isthmus of Panama ; some went in wagons

and on foot across the great plains and the mountainous regions beyond. Go which way they would it was a toilsome and perilous journey of many months; for as yet there were no roads to the Pacific Coast. Most of these men were accustomed to labor; they had no slaves and

Territory gained by the Mexican War

they wanted none; they hoped to get great wealth quickly and easily from the gold mines of California.

The South disappointed. — Now the line which the Missouri Compromise had named as dividing freedom and slavery did not extend through the territory gained by the Mexican War. Had it done so, a large portion of California would have been south of that line. The slaveholders of the South claimed, however, that it belonged to that part of the country which had been assigned to their

section. They expected that California would become a slave state. What was their astonishment when they learned that the men of California had organized a free-state government and were asking for admission into the Union!

The cause of disagreement. — This was in 1850. Ever since the Missouri Compromise was made, the balance of power between the two sections had been well kept. There were now fifteen free states and fifteen slave states. The mere admission of California as a free state would not disturb the balance much; but the South claimed that it would violate the spirit of the Missouri Compromise and give the North a great advantage.

The question was before Congress for ten months. Again there were open threats of breaking up the Union. The whole country was full of excitement. The nation seemed drifting to destruction.

The Compromise of 1850. — Then Henry Clay came forward for the third time as a peacemaker, and for the third time he saved the Union. The compromise which he advocated is known in history as the "Compromise of 1850." It provided among other things that California should be a free state and that there should be no more slave markets in the District of Columbia; these were concessions to the North. On the other hand, slavery was not to be prohibited in any of the other territories taken from Mexico, and a very severe law — known as the Fugitive Slave Law — was to be enacted requiring runaway slaves in the North to be returned to their masters; these were concessions to the South.

The slavery question supposed to be settled. — The measure was debated in Congress for many days. Daniel Webster, in supporting it, made the last great speech of his life. John C. Calhoun, too feeble to read his own speech against the compromise, was carried from the Senate chamber to his deathbed. Congress finally voted to adopt the plan, and men of both sections felt relieved that the crisis was past. “This settles the slavery question forever,” they said. “We shall have no more disputes about it.”

This was Henry Clay’s last great work. — Clay was already in feeble health. In December, 1851, he took his seat in the Senate for the last time. Before the end of the following June the Great Pacificator was dead.

REVIEW

What was there in the character of Henry Clay that enabled him to become a great man? What was Clay’s course with reference to the War of 1812? Why? Tell what you know about slavery in the colony of Virginia; in the colony of Georgia. Why was slavery abolished in the North? What invention caused slaveholding to become very profitable in the South? How many slave states and how many free states were there when the Constitution was adopted? Why did politicians desire to keep the number of slave states and free states about equal? Why did the South wish Missouri to be a slave state? Why did the North object? What compromise did Henry Clay propose? What was the cause of Henry Clay’s great popularity? Why was he never elected President? What other two compromises did he propose? When was gold discovered in California? Why was Henry Clay called the Great Pacificator? What two other famous statesmen are often compared with him?

ROBERT E. LEE
AND THE UPRISING IN THE SOUTH

I. THE BEGINNING OF A FAMOUS CAREER

Light Horse Harry Lee. — Among the personal friends whom George Washington welcomed to his home at Mount Vernon none was more loved and trusted than Henry Lee

“A famous corps of dragoons, the finest in the American army”

of Virginia. During the Revolutionary War, Lee was the commander of a famous corps of dragoons, the finest in the American army. This fact, coupled with his known fearlessness in the face of danger, gave him the familiar

name of "Light Horse Harry." After the war he was prominent in that great company of Virginia statesmen which numbered among its members Washington, Jefferson, Madison, Monroe, Patrick Henry, and Chief Justice Marshall.

His address on Washington. — Henry Lee was twice chosen governor of his state, and in 1799 was elected to Congress. On the death of Washington he was appointed to deliver the funeral address. It was in this address that he first uttered those words about Washington which all Americans like to quote: "First in war, first in peace, and first in the hearts of his fellow-citizens."

Birth of Robert E. Lee. — At the close of his term in Congress, General Henry Lee retired to his home in Westmoreland County. There he occupied himself with the

Lee's childhood home

oversight of his large plantation and his numerous slaves, and with the generous entertainment of his many friends; and there, within sight of the birthplace of Washington, his youngest son, Robert Edward, was born on the 19th of January, 1807.

The childhood home of Robert E. Lee was a stately brick mansion, from the towers of which one might watch the vessels sailing up and down the Potomac. The rooms were large, the ceilings were lofty, and all the

furnishings were rich and massive. A child in such a house could want for nothing. There were black servants to wait upon him; there were books and pictures and pleasant companions to provide for his amusement; there were all the comforts and delights that wealth could give.

And yet Robert Lee was not brought up as a spoiled child. His father's example taught him to be self-reliant and brave, and above all, loyal to his native Virginia. His mother's precepts led him always to love and practice truth, morality, and religion.

At West Point.—While he was still a small boy the family removed to Alexandria, just opposite the new city of Washington. He soon afterwards became a pupil in the Alexandria Academy and afterwards entered a famous private school in the same town, where he was prepared for college. At eighteen he decided to follow the profession in which his father had won distinction, the profession of arms. He therefore entered the Military Academy at West Point, from which in due time he graduated, the second in his class. He was made a lieutenant and soon afterward a captain in the Engineer Corps of the United States army.

An officer of the government.—The United States, however, was then at peace with all the world; and it was not until Lee was nearly forty years old that anything occurred to call him into active military service. In the meanwhile he was occupied in looking after the building of forts and arsenals, and in the dull routine of a soldier's life in times of peace. But when the Mexican

Cadets at West Point in the time of Robert E. Lee

War began he was assigned to duty as chief engineer of the army, and was one of the first to be sent to the border.

II. THE MEXICAN WAR

Mexico and Texas. — The Mexican War was caused by the annexation of Texas to the United States. All the country west of the present state of Louisiana had once belonged to Spain. In 1820, the people of Mexico became independent of Spain and set up a government of their own. Texas was a territory of Mexico. It was a wild region of prairies and woodlands, with scarcely any inhabitants.

Settlement of Texas. — The Mexicans did not seem to think that Texas was worth settling. But a country so fertile and promising could not long be hidden from

Americans. Moses Austin, a Connecticut Yankee, obtained from the Mexican government several grants of land near the very center of the territory. His son Stephen founded a number of American settlements on these grants. Other Americans came from the South and the West. Cotton planters came with their slaves, and opened great plantations in the river valleys. Men from Tennessee and the more northern states found this region an ideal place for stock-raising. Rough characters, vagabonds, and fugitives from justice flocked to Texas, where they could live without fear of the law.

Texas a republic. — The better class of Americans in Texas saw that a strong government was needed to restrain the lawless men who had come among them. Without such a government neither life nor property was secure. But they felt that Mexico could never give them such a government. For this and other reasons, they organized a revolution and, under the leadership of Sam Houston, of Tennessee, gained their independence and set up the new republic of Texas.

Annexation to the United States. — This was in 1836. The Texans hoped that their country would very soon become a part of the United States; for the little republic was not strong enough to hold its own against any of the great nations of the world. But Martin Van Buren, who succeeded Andrew Jackson as President, was opposed to its annexation; the matter was put off from year to year; and it was not until the presidential election in 1844, that the question was decided. At that election James K. Polk,

of Tennessee, was chosen President with the understanding that he was in favor of the annexation of Texas. The Whigs with Henry Clay at their head were opposed to the measure, partly because they foresaw that it would make trouble between our country and Mexico. The planters of the South favored it, because Texas was well

Map showing Texas and Mexican boundary

sited for cotton-raising, and if it should come into the Union as a slave state it would strengthen the power of the slaveholders.

The dispute about boundaries. — Texas was accordingly brought into the Union, and one of the first things to do was to decide the location of its western boundary.

1845 Mexico said that it should be the Nueces River; the United States said that it should be the Rio Grande. The

country between these rivers was without inhabitants; it was so wild and barren that no one thought it could ever be colonized; and yet neither Mexico nor the United States would consent to give it up.

Beginning of the war. — President Polk sent an army under General Zachary Taylor to occupy the east bank of the Rio Grande. A Mexican army crossed the river. Two battles were fought, and the Mexicans were driven back with great loss. There was now no way to settle the question but by war.

Lee in Mexico. — Captain Lee with his corps of engineers was sent first to the Rio Grande; but his stay there was short. Another American army under General Winfield Scott was dispatched by way of Vera Cruz to capture the city of Mexico, and Lee was assigned to a place on General Scott's staff.

Becomes a colonel. — We cannot follow him through all the fortunes of this war. It is enough to say that he distinguished himself more than once by his excellent judgment and his cool, determined courage. Although war was his profession, he was shocked by its barbarities. He wrote home to his boys, "You have no idea what a horrible sight a battlefield is." And yet he performed his duty bravely, desiring to put an end to the conflict as soon as possible. He was promoted and made a colonel in the army; and at the close of the war General Scott declared that "his own success in Mexico was largely due to the skill, valor, and undaunted courage of Robert E. Lee."

Results of the Mexican War. — By this war the United States wrested from Mexico not only the disputed strip of land between the Nueces and the Rio Grande, but all that region now composing Utah, Nevada, and California, and most of New Mexico and Arizona, besides a part of Colorado and Wyoming. General Taylor, as one of the heroes of that war, was nominated by the Whigs for the presidency of the United States, and in 1848 was elected.

III. THE GREAT CRISIS

Another period of peace. — During the next twelve years, Colonel Lee, as a military officer, served the country

Lee's home at Arlington, near Alexandria

in various capacities, — as chief of engineers, as superintendent of the Military Academy at West Point, and as cavalry officer.

John Brown. — There was a class of persons in the North who hated slavery and wished to have it abolished at any cost. These persons were called abolitionists. In 1859, one of them, whose name was John Brown, formed a desperate plan for freeing the negroes of the South. His project was to furnish them with arms from the United States arsenals, and to urge them to win their freedom by the slaughter of their masters and the destruction of the slave power in the South. With a few followers he captured the arsenal at Harpers Ferry, in Virginia; but the slaves upon whom he relied to carry out his project made no effort to join him.

Lee at Harpers Ferry. — Colonel Lee, who was then at home on furlough, was ordered to hasten with a battalion of marines to Harpers Ferry, to repel what was reported to be an invasion of Virginia by the North. The marines besieged John Brown and his men in the engine house of the arsenal. Those of the raiders who were not killed outright were soon made prisoners. John Brown was tried, convicted, and hanged.

Alarm in the South. — The people of the slave states were greatly alarmed by this attempt to bring about a negro insurrection. Wild rumors were set afloat concerning the intentions of the abolitionists in the North. Governor Wise, of Virginia, called for volunteers to defend the state from invasion, and numbers of excited men from all sections hastened to join the Virginian army. In the meanwhile, Colonel Lee returned to his regular duties and was soon with his own army corps, then stationed in Texas.

Misunderstandings.— When the time came for the next presidential election, there was great excitement in both the North and the South, all growing out of the question of slavery. The people of each section misunderstood those of the other. The majority of those living in the South saw no wrong in slavery. It

Harpers Ferry

had come down to them from their fathers ; it had existed in their states since the earliest settlements. Their modes of life, their business, their social habits, were all influenced by it. They believed that it would be impossible to live without it. Recent events had persuaded them that the people of the North were determined to deprive them

of their slaves, to trample on their rights as citizens of the United States, and to rob them of their liberties.

Election of Lincoln. — The result of the election made their fears still stronger. The man who had received the majority of electoral votes was Abraham Lincoln, of Illinois — a man unknown in the South, but who was said there to favor all kinds of harsh measures. The southern people feared that he would treat them unjustly and restrict slavery within the narrowest possible limits.

Secession of the States. — The political leaders of the South were already prepared for this event. Some of them wanted to found a great southern republic, in which slavery should be one of the chief features; and they hoped to include in that republic not only the states of the South, but the territories won from Mexico, and even Mexico herself. Before the electoral votes were counted, South Carolina seceded from the Union. Other states, one after another, followed her lead. Within a few months a new government called the Confederate States of America was
1861 set up with Jefferson Davis of Mississippi as its President. This confederation finally included eleven southern states: South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Virginia, North Carolina, Tennessee, and Arkansas.

IV. THE CIVIL WAR

Lee and slavery. — Colonel Lee saw that nothing could now prevent a war between the states, and no man regretted it more than he. He returned to his home near

Alexandria, to await the progress of events. "I cannot imagine a greater calamity," he said, "than the dissolution of the Union." He declared that if he were the owner of all the negroes in the South, he would gladly yield them up for the preservation of peace. In fact, he did not approve of slavery. He had already freed the slaves that he had inherited from his father.

The first shot. — The war began in April, 1861, by the troops of South Carolina firing upon Fort Sumter in Charleston harbor. A few days later Virginia joined the seceding states. Robert E. Lee had now to decide whether he would take part against his native state, his relatives, and his friends, or whether he would retire from the service of his country and be loyal to the South.

States' rights. — We have already learned that some of the founders of our government held to the idea that this country was not a single strong nation, made up of many states, but that it consisted of several small nations leagued together for the common welfare. They claimed that each of these small nations, or states, was an independent commonwealth and might withdraw from the Union whenever its people thought best. In the North this idea gradually gave place to the present idea of one great government. But in the South no such change of opinion took place. To a South Carolinian, South Carolina was his country, and he owed allegiance to her first of all. It was so in all the southern states; and the right of a state to act independently of any other power was not disputed. This is known as the doctrine of States' Rights.

Lee loyal to Virginia. — Robert E. Lee had been taught as a child to be loyal to Virginia. When he grew to manhood he did not suffer his devotion to the United States to overshadow that loyalty. And so, when Virginia joined the Confederacy, he felt that he must resign his commission in the army and remain faithful to his state.

Made commander of the army of Virginia. — He was appointed major general of the military forces of Virginia, and was asked to lead them in a war against the Union which he would so gladly have helped to preserve. He accepted the appointment. "Trusting in Almighty God and an approving conscience," he said, "I devote myself to the service of my native state, in whose behalf alone will I ever again draw my sword."

The war which was then beginning continued for four years. It was in many respects the most remarkable war ever known. To follow its course through those distressing years, to name the great men who became conspicuous on this side or that, to describe in detail the various conflicts on land and sea, is not the purpose of this book. You will read of these in the larger histories.

Robert E. Lee

Commander of the Confederate forces. — On the 13th of March, 1862, General Lee was appointed commander in chief of all the forces of the Confederate States. For three years he devoted all his energies to the great but hopeless task which he had undertaken, leaving nothing undone that could be done for the success of the southern cause.

Surrender of the Confederate army. — At length, in April, 1865, at Appomattox Courthouse in Virginia, Lee surrendered his army to General U. S. Grant, the commander of the Union forces; and on that day the last hope of the Confederacy expired.

“My men,” said Lee to his soldiers, “we have fought through the war together; I have done my best for you; my heart is too full to say more.”

Results of the war. — The southern soldiers, “in faded, tattered uniforms, shoeless and weatherbeaten, but proud as when they first rushed to battle, returned to desolate fields, homes in some cases in ashes, blight, blast, and want on every side.” The terrible war had cost nearly a million of lives, besides countless millions of treasure. Slavery was destroyed. The South had lost its political power. The Union had been preserved. The question as to whether the United States is one great nation or a group of small nations was forever settled.

General Lee retired to a quiet home near the Rapidan River in Virginia. He had been a soldier, in one capacity or another, for forty years. He was now for the first time a private citizen.

His last services. — He was not to remain long in retirement. Before the end of the year he was chosen president of Washington College at Lexington, Virginia. The remaining energies of his life were given to the upbuilding of that institution and to the promotion of education in the South. He died on the 12th of October, 1870. The singular uprightness of his character, no less than his grand abilities as commander, won for him the admiration of the North and the loving veneration of the South. To the people of Virginia his name and that of Washington will ever be linked together as of the two most illustrious citizens of their state.

Lee's writing table

REVIEW

Give an account of Henry Lee. What were the causes of the war with Mexico? Who was President of the United States during that war? What did Colonel Lee think of the barbarities of war? What was the result of the war with Mexico? Why was John Brown's plan for freeing the slaves not a wise one? What effect did his act have upon the people of the South? What did the southern people think that Abraham Lincoln would try to do? Name the states that seceded from the Union. What did Colonel Lee think of the dissolution of the Union? Why did he accept service as commander of the army of Virginia? What were the results of the Civil War? What great question was settled by it?

ABRAHAM LINCOLN

AND THE SAVING OF THE UNION

I. A BOY OF THE WEST

His birth. — Abraham Lincoln was born in Kentucky, on the 12th of February, 1809. At that time Thomas Jefferson was just closing his second term as President of the United States. Robert E. Lee was then a child two years of age, being brought up in the midst of wealth and luxury in his father's mansion by the Potomac.

His childhood. — The parents of Abraham Lincoln were very poor. The home in which he was born was of the humblest sort, lacking even the commonest comforts. His childhood was not unlike the childhood of others brought up in the midst of poverty in the early West. He grew to be a very strong boy, able when quite young to do the work of a man. His mind was as active and strong as his body. He learned to read when a small child, his mother being his best teacher. The schools which he attended were of the poorest kind; and all his school-days put together would not make a twelve-month.

In Indiana. — When he was about eight years old his parents moved to Spencer County, Indiana. It was then scarcely a year since Indiana had become a state. Land could be bought very cheap, and Abraham's father thought

that life would be easier there than in Kentucky. But it required a great deal of hard work to open a farm in the midst of the woods. There were trees to be cut down, logs and brushwood to be burned, stumps and roots to be grubbed up, fences to be built, fields to be plowed; and in all this work Abraham Lincoln, boy though he was, was his father's best helper.

Life in the backwoods. — The family lived as did most pioneer families in the backwoods of Indiana. Their bread was made of corn meal, their meat was chiefly the flesh of wild game from the woods. Pewter plates and wooden trenchers were used on the table. The drinking cups were of tin. There was no stove, and all the cooking was done on the hearth of the big fireplace.

Young Abraham dressed like other boys of his age in the backwoods. On his head he wore a cap made from the skin of a squirrel or a raccoon. Instead of trousers of cloth, he wore buckskin breeches the legs of which were several inches too short. His shirt was of deerskin in winter and of homespun tow in summer. Stockings he never wore until he was a grown-up man. His shoes were of heavy cowskin and were worn only on Sundays and in very cold weather. No one who saw the lad in his uncouth apparel would have dreamed that he would become one of the most famous men in the world's history.

His education. — Perhaps the great secret of his success in life lay in the fact that in whatever position he was placed he always did his best. He was not satisfied with the scanty instruction he received at school, and

therefore he set about educating himself. Although books were scarce and hard to obtain, he read every one that he could get hold of. After working hard all day he would sit up late into the night, reading by the flickering light of a wood fire on the hearth of his father's cabin. He borrowed every book that he could hear of in the neighborhood.

His ideal hero. — One book that made a great impression upon him was Weems's "Life of Washington." He read the story many times. He carried it with him to the field and read it in the intervals of work. Washington was his ideal hero, the one great man whom he admired above all others. Why could not he model his own life after that of the Father of his Country? Why could not he also be a doer of noble deeds and a benefactor of mankind? He might never be President, but he could make himself worthy of that great honor.

II. EARLY MANHOOD

In Illinois. — In the summer after Abraham Lincoln's twenty-first birthday his father sold the farm in Indiana, and the whole family removed to Illinois. They settled on a tract of wild prairie land near the town of Decatur and began the making of a new home. Abraham stayed with the family until they were well settled again; he helped his father fence his land and plant his first crop of corn. Then he went out to win his way in the world.

All kinds of work. — He did not hesitate to do any kind of labor that came in his way. He split rails and

built fences; he piloted a flatboat down the Mississippi; he served as clerk and manager of a little store in the village of New Salem near Springfield. No matter what he undertook to do he always did it honestly and well.

Indians in Illinois.

— Illinois was still very thinly settled. Most of the people lived in the middle section. In the northern and southern parts there were broad stretches of wild prairie lands and timber groves where no habitation had yet been built. In the Rock River valley in the northwest corner of the state, a tribe of Indians called the Sacs had lived for nearly a century. Recently, however, the United States govern-

“He served as clerk and manager of a little store”

ment had bought their lands, and they had been removed to a reservation west of the Mississippi. But the Sacs did not like their new homes, and longed to go back to the hunting grounds of their fathers.

Black Hawk's war. — In 1832, under the leadership of a warrior called Black Hawk, a number of the Sacs re-

crossed the Mississippi. They came, they said, to plant corn in their old cornfields; but they soon began killing the white settlers and burning their homes. The news of these savage acts caused great alarm throughout the state, and the governor called for volunteers to help drive the Indians back across the Mississippi.

“They soon began killing the white settlers”

Captain Lincoln.— Among the young men who responded to this call was Abraham Lincoln. His company elected him captain — an honor which was more gratifying to him than any other that he ever received. The Indians, however, had already suffered a crushing defeat, and Captain Lincoln’s company arrived in the Rock River region too late to have any share in the fighting. In a

few weeks the war came to an end, the state volunteers were mustered out, and Lincoln returned to New Salem.

Reading law. — Since boyhood it had been Lincoln's ambition to become a lawyer; and now, while earning his living by doing whatever came in his way, he devoted all his spare time to the study of law. He bought a second-hand copy of Blackstone's Commentaries at auction, and studied it so diligently that in a few weeks he had mastered all its most important contents. He got possession of an old form-book, and spent his evenings drawing up contracts, deeds, and other kinds of legal documents. Soon he began to practice law in a small way before justices of the peace and country juries.

In the legislature. — The people of his district were so pleased with his energy and good common sense that they chose him to represent them in the state legislature; and so well did he answer their expectations that they continued to reëlect him until he had served eight years. In the meanwhile he removed to Springfield, where he became established as a lawyer with a small but increasing practice.

III. IN POLITICS

Whigs and Democrats. — In politics at that time every man was either a Democrat or a Whig. The Democratic party was in most respects the same as the old Democratic-Republican party of which Thomas Jefferson was the founder. The Whig party was a new one composed of those who were dissatisfied with the President, Andrew Jackson. The first leaders of the Whig party were Daniel Webster,

Henry Clay, and John C. Calhoun, three of the ablest statesmen ever known in our country. These three men held very opposite opinions on many questions, and were united only in their opposition to the Democratic party. Abraham Lincoln was a Whig and a great admirer of Henry Clay, and he soon became a leader of his party in Illinois.

An exciting campaign. — The presidential campaign of 1840 was one of the most famous in our history. The Democratic candidate was Martin Van Buren, who had succeeded Andrew Jackson in 1837 and was then nearing the end of his term as President. The Whig candidate was William Henry Harrison, famous as having been the first governor of Indiana Territory, and as having defeated the Indians at Tippecanoe. John Tyler of Virginia was nominated on the same ticket for Vice President.

The log cabin. — Some Democrats had spoken sneeringly of General Harrison as being the candidate of the West, where people lived in log cabins and drank hard cider. The Whigs at once adopted the log cabin as the emblem of their party. In every city and town and village, wherever that party held a political meeting, a log cabin was exhibited. On one side of the low door a coonskin was nailed to the logs; on the other stood a barrel of cider. The rallying cry of the party was "Tippecanoe and Tyler too!" For weeks before the election, business of all kinds was at a standstill. Farmers left their plows, merchants closed their doors, everybody joined in the excitement of the campaign.

At the election the Whigs were the victors, and General Harrison was elected President. Scarcely, however, had he taken his place in the White House before he fell ill, and just one month after his inauguration he died. John Tyler, who as Vice President succeeded him,

“ A log cabin was exhibited ”

did not follow out the wishes of the party to whom he owed his election. There was soon an open quarrel between the President and the Whig members of Congress, and it appeared as though their late victory had been in vain.

Annexation of Texas.— During Tyler’s administration the question of the annexation of Texas came before the country for solution. It was answered at the next general

election by the choice of James K. Polk as President. Polk was the candidate of the Democratic party, and he ¹⁸⁴⁴ was pledged to the admission of Texas. The Whig candidate was Henry Clay, and to him Abraham Lincoln gave his earnest support.

IV. CONGRESSMAN AND LAWYER

Lincoln in Congress. — Abraham Lincoln was now so well known as a political leader that he was sent to Congress as the representative of his district. He was the only Whig from Illinois. In Congress there were then many notable men. Among those in the House was John Quincy Adams, who had been the sixth President of the United States. Among those in the Senate were Daniel Webster of Massachusetts, John C. Calhoun of South Carolina, and Jefferson Davis of Mississippi.

His opinions about slavery. — Although Mr. Lincoln did not distinguish himself in Congress, he was more active than is usual with new members. He made several speeches, and proposed a bill for the gradual abolition of slavery in the District of Columbia. He believed that slavery was harmful to the nation; and while he did not think it could be wholly done away with, yet he wished to prevent its becoming a still greater evil.

He returns to the practice of law. — In 1848 the Whig party was again victorious and Zachary Taylor, one of the heroes of the Mexican War, was elected to the presidency. When Mr. Lincoln's term in Congress expired he hoped that his services to the party would be recognized and

that the President would appoint him to some public office. But in this he was disappointed. He therefore returned to Springfield, and for the next eight years devoted himself quietly to the practice of law.

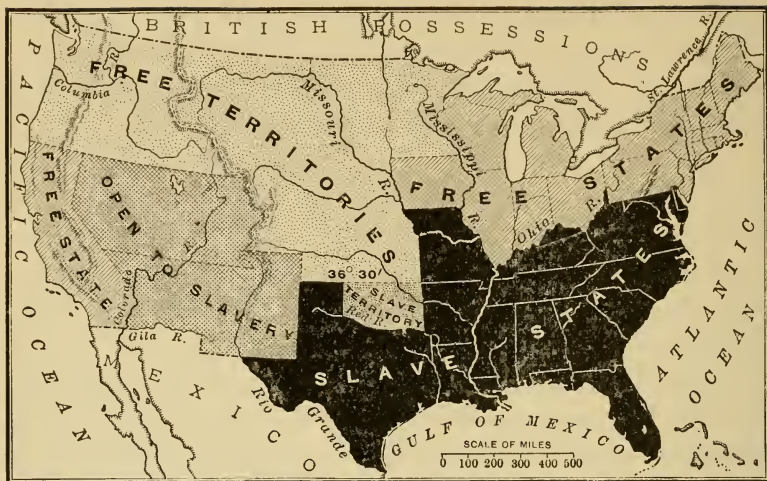

The Free Soil party.—At about this time a new political party was formed called the Free Soil party. Its rallying cry was “No more slave states and no slave territories.” It began with but few members, but was soon joined by many Whigs and northern Democrats who were opposed to the spread of slavery.

Soon after this the great discussion began concerning the admission of California as a free state. As we have already learned, it was brought to an end through the efforts of Henry Clay, and the famous Compromise of 1850 was adopted. In the meanwhile President Taylor died, and Millard Fillmore, the Vice President, succeeded him as the thirteenth President.

Election of President Pierce.—In 1852 a new President was to be chosen. The Whigs proposed another hero of the Mexican War, General Winfield Scott. The Democrats named Franklin Pierce of New Hampshire. Abraham Lincoln did all that he could to secure the success of the Whigs. But Mr. Pierce was elected.

V. KANSAS AND NEBRASKA

West of the states of Missouri and Iowa was a boundless extent of prairie land—fertile plains, where bands of wild Indians and immense herds of buffaloes roamed at will. The War Department of the United States

Slave states and free states in 1852

suggested that all that splendid region should be ceded to the Indians to be held by them and used as hunting grounds "as long as the grass should grow."

Stephen A. Douglas, a Democratic senator from Illinois, proposed another plan. He proposed that it should be divided into territories, each with some form of government, and that people in the states should be encouraged to buy lands and make their homes there. Then at once arose the same old troublesome question as to whether slavery should be admitted into such territories.

Slavery in the territories. — The North said that that question had been settled by the Missouri Compromise; that the entire region was north of the line fixed upon by that compromise, and therefore no slavery should

exist there. The South replied that California, a part of which is farther south than that line, had been made a free state, contrary to the spirit of the Missouri Compromise, and consequently the compromise was null and void: since the South had conceded California to the North, why should not the North concede some part of these western territories to the South?

Kansas-Nebraska. — Henry Clay, the Great Pacificator, was dead, and there was no one to propose a new compromise. But Stephen A. Douglas conceived the plan of leaving the whole matter to the people who should settle in the territories. “The people are the sovereigns,” he said. Through his influence, therefore, a bill was passed by Congress which provided for the organization of a large portion of the wild western country into two territories, Kansas and Nebraska. The bill further declared that the Missouri Compromise was void, and that the people in each territory should decide whether it should become a slave state or a free state.

War in Kansas. — The excitement throughout the country became intense. From New England and other northern states great numbers of emigrants hurried to Kansas in order to give their votes for freedom. From Missouri and the South almost as many southern men rushed into the same territory in order to use their influence for slavery. Very soon there was actual war between the “free-state” men and the “pro-slave” men in the territory. Thinking people in all parts of the country saw that a great crisis was at hand.

The Republican party. — At this time a new political party was organized. It was composed of the old Free Soil party together with such Whigs and Democrats as were opposed to the further extension of slavery. It was called the Republican party, and in Illinois Abraham Lincoln was one of its most influential leaders.

The Democrats triumphant. — In June, 1856, the Republican party nominated John C. Fremont for President. But it was not strong enough to carry the election that year. Stephen A. Douglas had hoped to be the nominee of the Democratic party; but his course in proposing the Kansas-Nebraska bill had caused many of his friends to desert him. He failed in his ambition, and James Buchanan, of Pennsylvania, was nominated and elected the fifteenth President of the United States.

VI. LINCOLN AND DOUGLAS

A famous debate. — Stephen A. Douglas had served two terms in the Senate of the United States and was a candidate for reëlection to a third term. The Republi-
1858 cans of Illinois selected Abraham Lincoln as their candidate for the same position. The part which Douglas had taken in reopening the troublesome question of slavery in the territories had made him many enemies, and he found it necessary to defend himself before the people of his state. Lincoln challenged him to debate in public the great questions of the day. Douglas accepted the challenge, and the two men canvassed the state together, making speeches in many places.

Some points in the debate. — “I believe,” said Mr. Lincoln, “that this government cannot endure permanently half slave and half free. It will become all one thing or all the other.”

“I care not,” said Mr. Douglas, “whether slavery is voted in or out of the territories. Slavery is an existing fact, and wherever climate and other conditions make slave property desirable, there a slave law will be enacted.”

Mr. Lincoln answered him by reference to the Declaration of Independence. “The signers of that declaration said that all men are created equal, and are endowed by their Creator with the right to life, liberty, and the pursuit of happiness. . . . I beseech you, do not destroy that immortal emblem of humanity, the Declaration of Independence.”

The result. — The two candidates went from town to town, debating the great question before crowds of interested listeners. Their speeches were printed, and people in all parts of the country read them. Mr. Douglas was already famous as a leader of the Democratic party, and it was quite generally believed that he would be the next President. But who was this man Lincoln, who so boldly answered his arguments and more than once defeated him in debate? Outside of Illinois his name had scarcely been heard.

Douglas, as most people expected, was returned to the Senate. Lincoln, although defeated, had made himself known throughout the North as a man of great talents and strong convictions.

VII. THE SIXTEENTH PRESIDENT

In 1860 there were four candidates for the presidency. The Democratic party was divided, and while one branch nominated Stephen A. Douglas, the other, which represented the dissatisfied slaveholders of the South, named John C. Breckenridge of Kentucky. The Union party, which included those of the Whigs who wished to say nothing about slavery, nominated John Bell of Tennessee. The Republican party nominated Abraham Lincoln.

The campaign was carried on with much vigor; but the Democrats, being divided, could hope for nothing but defeat. Lincoln was elected.

The sixteenth President

The people of the South, as we have already seen, were alarmed by the results of this election. One state after another seceded from the Union. The Confederate States of America was organized.

Inauguration. — When Lincoln was inaugurated he said to the southern people: “In your hands, my dissatisfied countrymen, and not in mine, is the momentous issue of civil war. Your government will not assail you. You can have no conflict without being yourselves the aggressors. You have

no oath registered in heaven to destroy the government ; while I shall have the most solemn one to protect and defend it."

The seceding states demanded that our government should give up all the forts, arsenals, and other public buildings within their limits. President Lincoln answered that no state could withdraw from the Union without the consent of the people of the United States, and that therefore the states of the South were still parts of this country and were not entitled to any portion of the public property of the general government. The seceded states then began to take possession of the southern forts by force.

War begins. — In April a demand was made for the surrender of Fort Sumter, in Charleston harbor. When this demand was refused, the fort was fired upon and captured by soldiers of South Carolina. This was the beginning of the war. President Lincoln issued a call for seventy-five thousand volunteers to serve in the army for three months ; and both sides prepared for the contest.

At first it was thought that the war would be very brief. Its object was neither to defend nor to destroy slavery, although slavery had been its real cause. President Lincoln and the people of the North were determined to preserve the Union. The people of the South with Jefferson Davis, the president of the Confederacy, were equally determined to defend the rights of their native states and to set up an independent government of their own. The northern soldiers boasted that it would be only a "before-breakfast affair" to force the secessionists

to beg for peace. The southern volunteers declared that the "Yankees" would not fight, and that one Confederate in arms would be a match for five northern soldiers. But as the war went on, both parties found that they had engaged in a terrible conflict, and all boasting ceased.

Lincoln's object. — The antislavery people urged Lincoln to declare the slaves free. "Why not strike at the root of the trouble?" they asked.

He answered, "My paramount object is to save the Union, and not either to save or destroy slavery. If I could save the Union without freeing any slaves, I would do it. If I could save it by freeing all the slaves, I would do it. If I could save it by freeing some and leaving others alone, I would also do that."

The Emancipation Proclamation. — At last, however, when he found that the Union could not otherwise be saved, he made up his mind to take the decisive step.

1863 On New Year's Day, 1863, he issued a proclamation declaring that the slaves, in all the states or parts of states then in rebellion, should be set at liberty. By this proclamation freedom was declared to more than two millions of colored people in the South. It was the first actual movement toward the ending of human bondage in the United States. But slavery was not finally done away with until the adoption of the Thirteenth Amendment to the Constitution more than two years afterward.

The war went on. — There were calls for more men and more men, until nearly a million soldiers were engaged on each side. The conflict was the most tremendous the

world has ever known. It reached a turning point, however, in the defeat of Lee's army at Gettysburg in July, that same year; and then the cause of the Confederate States began to wane. The resources of the South were gradually exhausted. Slowly, very slowly, the forces that

Lincoln reading the Emancipation Proclamation to his cabinet

were battling for the Union gained one point of advantage after another until victory was assured.

Lincoln reelected. — At the close of Mr. Lincoln's first term he was again elected. The war was then almost ended, but he did not boast of what had been done. He
 1865 said, "With malice toward none, with charity for all, with firmness in the right as God gives us to see the right, let us strive on to finish the work we are in; to

bind up the nation's wounds; to care for him who shall have borne the battle, and for his widow and his orphan — to do all which may achieve and cherish a just and lasting peace among ourselves and with all nations."

Peace. — On the 9th of April the Confederate army under General Lee surrendered to General Grant, and the war was at an end. Abraham Lincoln's work was done. Five days later, on the evening of Good Friday, while attending a play at a theater in Washington, he was shot by an assassin. Kind arms carried him to a

View of the battlefield of Gettysburg

private house near by; but no skill could save his life. At twenty minutes past seven, on the morning of the 15th, he died.

The whole nation wept for him. He had even won the affections of the people of the South; and they, as well as their late foes in the North, bowed themselves in

grief. Other nations joined in mourning for the great man who had passed away. Never in the world had there been such sincere and universal manifestations of sorrow.

REVIEW

Compare the boyhood of Lincoln with that of Washington. Name some of the qualities of his character which made it possible for him to become a great man. What famous men were at one time the leaders of the Whig party? Tell about the famous campaign of 1840. Name in order all the presidents from Washington to William H. Harrison. What great question was settled by the election of Polk in 1844? Which party was victorious in 1848, and who was elected President? What was the rallying cry of the Free Soil party? What principle did Stephen A. Douglas advocate? Why were the people of the North opposed to the Kansas-Nebraska bill? What were the causes of the troubles in Kansas? Name in order all the Presidents from William H. Harrison to Lincoln. Why did the southern states secede from the Union? When did President Lincoln issue his first call for soldiers? Why did not Lincoln try to destroy slavery at once? Did his emancipation proclamation set all the slaves free? Why not? What was the turning point in the Civil War? When did the war come to an end? What did the South lose by it?

ULYSSES S. GRANT

AND THE GREAT CIVIL WAR

I. PREPARATION FOR A GREAT CAREER

United States Military Academy. — At West Point on the Hudson River is one of the most famous schools in America. It is called the United States Military Academy and is maintained by our government for the purpose of training young men in the art of war. Many of the most distinguished soldiers of our country were educated there. General Robert E. Lee, as we have already learned, was once the superintendent of the Academy. The students are called cadets. Each congressional district in the United States may send two young men to the Academy, but these must be chosen and recommended by the congressman of the district. The course of study is by no means easy; but every cadet who finishes it and graduates receives a commission, usually as a lieutenant, in the United States army.

Cadet U. S. Grant. — In 1839 a young man from Ohio whose name was Hiram Ulysses Grant was admitted into the Academy. Through some mistake he was enrolled as Ulysses Simpson Grant, and by that name he was always known thereafter. He was only seventeen years of age

at the time of his entrance, and not a very ambitious student. During his four years' stay at the Academy he stood well in mathematics and was the best horseman at West Point; but otherwise he did nothing to distinguish himself. When he graduated he stood a little below the middle of his class.

In Texas.—At the age of twenty-three young Grant received his commission as second lieutenant in the army of the United States. Very soon afterward he was sent with his regiment to Texas. That was in 1845, just before the beginning of the Mexican War. General

“The best horseman at West Point”

Taylor was already in the neighborhood of the Rio Grande, prepared to prevent the Mexicans from gaining a foothold on the east side of that river.

In Mexico.—The war began almost immediately. Lieutenant Grant was in several of the earlier battles. At Monterey, where the Americans gained a great victory, he distinguished himself for bravery. His regiment was soon sent to Vera Cruz to join General Scott in his march

to the city of Mexico. The army was obliged to fight its way across the country, and Lieutenant Grant had his courage tested many times. But he acquitted himself so well that he received the personal thanks of his superior officers, and was promoted to be first lieutenant. Major Robert E. Lee, of Virginia, who was one of General Scott's aids in that famous march, made special mention of him in his report. "Lieutenant Grant," he wrote, "behaved with distinguished gallantry."

Captain Grant.—After the capture of the city of Mexico by our troops there was not much more fighting to be done. Grant's regiment remained there until peace was declared and the army was withdrawn. During the next six or seven years the young lieutenant was stationed at various places. He was now on the Gulf coast, now by the Great Lakes, and finally in California and Oregon. In 1853, when he was thirty-one years old, he became the captain of his company, but a year later he resigned his commission and settled on a farm in Missouri.

Failures in business.—Captain Grant knew nothing about farming, and at the end of a year he found himself deeply in debt. He gave up the farm and went to St. Louis. There seemed to be nothing that the man could do. After trying various ways of making a living, and succeeding in none, he went to Galena, Illinois, and became a clerk in a leather store which his father owned there. His salary for the first year was to be only \$800. He entered upon his new work only a few weeks before the nomination of Abraham Lincoln for the presidency.

II. THE FIRST YEARS OF THE WAR

The volunteers. — When Fort Sumter was fired upon by the soldiers of the South, and President Lincoln issued his call for seventy-five thousand volunteers, the whole country was aroused. In every city and village throughout the North men hastened to obey the call. In the town of Galena a company was quickly formed. Captain Grant gave up his place in the leather store in order to drill the volunteers and get them ready for service. “The United States,” he said, “educated me for the army. As a soldier I have served my country through one war, and I am ready now to serve her through another.”

In Missouri. — The governor of Illinois gave him a commission as colonel of the Twenty-first Regiment of that state.

1861 Little time could be taken for preparation. The regiment was at once ordered to Missouri to guard the railroads and prevent an uprising among the slaveholders. Colonel Grant drilled his men while marching. He was always on the move. He left nothing undone; he did nothing by halves. His ability as a military leader soon became known to his superiors. He was made brigadier general, and was placed in command of all the Union forces in southeastern Missouri.

Union volunteer

First victories. — The Confederates were already moving toward Missouri and Kentucky, with the intention of winning both of these states to the southern cause. They began to fortify the islands in the Mississippi,

Confederate volunteer

and stretched a line of defenses eastward across Tennessee. General Grant saw that he must drive them from these positions before they had time to strengthen them with more troops and other fortifications. His movements were so rapid that the Confederates could do but little to resist him. One strong position after another was taken by his army. The southern leaders, instead of marching their forces farther north, were obliged to defend the ground which they had already won.

“Unconditional surrender.” —

Fort Donelson, on the Cumberland River, covered the approach to Nashville and central Tennessee. It was held by more than twenty thousand Confederate soldiers. Grant saw that until this point should be taken and held by Union forces it would be hard to gain any further advantages in that direction. He therefore lost no time in marching against it. He besieged Fort Donelson, and for three days the battle raged fiercely around it. General Buckner, who had been with Grant in Mexico when both

were young men, was in command of the fort. He knew that he was contending with a person of uncommon pluck and perseverance. He asked for terms of surrender. General Grant's answer was short and decided: "No terms other than an unconditional and immediate surrender can be accepted. I propose to move immediately upon your works." Buckner surrendered without delay.

This was the first important victory that the Union armies had gained. The plans of the Confederates were thwarted; their lines of defenses were broken. The name of "Unconditional Surrender" Grant at once became famous throughout the country, and the victorious hero was rewarded by being made major general of volunteers.

Other successes. — The capture of Fort Donelson was followed by other victories. At Corinth, Mississippi, and at other important points, terrible battles were fought. General Grant was made commander of the department of the Tennessee, with headquarters at Corinth. Union troops and gunboats moved down the Mississippi, capturing every place of importance north of Vicksburg. Commodore Farragut had seized the forts at the mouth of the great river, had ascended to New Orleans, and after bombarding that city, had received its surrender.

Vicksburg. — General Grant understood what great advantage it would be to the Union cause if he could gain complete control of the Mississippi. The Confederacy would then be cut into two parts and its power greatly weakened. He therefore marched against Vicksburg, one of the last of the Confederate strongholds on the river.

The city stands on a high bluff overlooking the stream, and it was so strongly fortified that it seemed safe from any attack.

Other men would have been daunted by the difficulties which lay in the way, but General Grant persevered. After months of labor and disappointment he at length

In the trenches at Vicksburg

succeeded in surrounding the city with his forces. Supplies were cut off from those within. The Confederate soldiers were unable to escape. Finally, on the 4th of July, 1863, the place was surrendered unconditionally.

Chattanooga. — It was plain now that of all the Union generals in the West, Ulysses S. Grant was the ablest, as he had been the most successful. He was therefore pro-

moted to the command of the military division of the Mississippi, which really included all the United States forces west of the Alleghanies. His next great victory was won at Chattanooga. There, after a long and determined struggle, the Confederate lines were broken and the army was forced to withdraw from the state.

III. THE LAST YEARS OF THE WAR

Promoted. — Congress gave to Grant the title of lieutenant general, and ordered that a gold medal should be presented to him in commemoration of his great achievements. Soon afterward, President Lincoln gave him a commission to be commander of all the armies of the United States. General Sherman took charge of affairs in the West, while Grant at the head of the army of the Potomac marched against Lee and his army in Virginia.

Pluck and perseverance. — The last battles, while attempting to reach Richmond, were among the most terrible in the war. The loss of life was very great on both sides, and the Union army met with many checks and discouragements. Men with less determination than Grant said that he had undertaken too much, and that he ought to give it up and try some other plan. But he answered, "I propose to fight it out on this line if it takes all summer."

Sherman's march. — It did take all summer, and all winter too, but the dauntless commander would not give up. General Sherman, having dispersed the Confederates in the West, began a great march from the mountains to the sea. Through Georgia and the Carolinas he led his

victorious army, burning bridges and tearing up railroads as he went. A strip of country sixty miles wide was laid waste, and everything that could be of any use to the Confederate cause was destroyed. The South had no more resources with which to carry on the war. The end of the terrible struggle was at hand.

The surrender of Lee.—On the night of the 2d of April, 1865, General Lee with his army left Richmond

Farmhouse where surrender was arranged

and began a hasty retreat toward the southwest. Grant followed. The Confederates were overtaken and surrounded near Appomattox Courthouse. They were no longer able to make any resistance.

On the 9th of April the two generals met at a farmhouse to arrange for the surrender. The terms were soon agreed upon. General Grant made them as easy as he could. The men who had fought so long and lost all for their beloved South were not held as prisoners. They

were permitted to go to their homes on the promise never again to bear arms against the United States. Those who had horses were allowed to keep them. "They will need the poor beasts to help them on their farms," said Grant. In every word and act he tried to spare the feelings of his fallen foes.

Thus the great war between the states came to an end.

IV. RECONSTRUCTION

Troublesome questions. — Upon the death of Abraham Lincoln, Andrew Johnson, the Vice President, became President of the United States. Although the war was ended, the great problems to which it had given rise were yet to be adjusted. What was to be done with the states that had seceded from the Union? Were they still states, and should they be permitted to resume their former places in the Union and send representatives and senators to Congress?

President Johnson, like Lincoln, held that no state could withdraw from the Union without the consent of the people of the United States. The southern states, he said, were therefore still in the Union, notwithstanding their acts of secession, and, this being so, they were entitled to representation. Congress, he argued, could not impose laws upon such of the southern people as had remained loyal to the Union unless those people were given an opportunity to share in the making of such laws.

Congress and the President. — But Congress decided differently. It declared that the states by their own acts

had lost their rights in the Union, and that they should not be restored to their former places until they had complied with certain conditions. There was thus a disagreement between the President and Congress, and this soon deepened into a bitter quarrel. The House of Representatives passed a resolution for the impeachment of the President and his removal from office; but when he was tried before the Senate he was not convicted.

What the states were required to do. — What were the conditions which Congress imposed upon the southern states? The most important were these: They must agree that no part of the debts incurred by the Confederate States should ever be paid by the United States; and they must accept certain amendments to the Constitution, one prohibiting slavery in every part of the United States, and another giving to the negroes the same public privileges as white people.

Slavery. — But had not Abraham Lincoln already put an end to slavery? He had not. His famous proclamation had given freedom to those slaves only who were within the regions actually in rebellion on the 1st of January, 1863. It did not forbid the people of the South from afterward acquiring and holding slaves. It did not apply in any way to the slaves in the loyal states of Delaware, Maryland, West Virginia, Kentucky, and Missouri, nor to those in some other parts of the South where the authority of the Union had been restored. Slavery was not fully and finally abolished until the Thirteenth Amendment to the Constitution went into force on the 18th of December, 1865.

V. THE END OF A GREAT CAREER

President Grant. — At the close of the war General Grant was the most popular man in the country. The people of the North could not do enough to show their appreciation of the man who had led the Union armies to victory and had conquered a lasting peace for the country. When the time drew near for another presidential election the Republican party nominated him as their candidate. He was elected by a very large majority, and on the 4th of March, 1869, was inaugurated as the eighteenth President of the United States.

The eighteenth President

Prosperity. — As time went on, the affairs of the country improved. The jealousies of the North and the South began to disappear. Prosperity smiled on all the land. President Grant served his people so well during his first term that he was reelected. His second term was equally successful, and there were many who insisted that he should be chosen a third time. He was not again nominated, however, but was succeeded in 1877 by Rutherford B. Hayes, of Ohio.

The end. — After the close of his second term General

Grant made a tour round the world. He visited many of the most important countries in Europe and Asia, and was received with great honor by their rulers. When he returned to America he settled in New York, where he lived for some time like any other private citizen. But

Grant's tomb in Riverside Park

his last years were clouded with trouble. Much of the fortune which he had acquired while in public life was lost through the dishonesty of men in whom he had confided. He had trouble with his throat, and this

developed into an incurable disease. At length on the 23d of July, 1885, he died.

His body now rests in a magnificent tomb in Riverside Park by the banks of the Hudson. His memory will ever be honored by the grateful people of a united country.

REVIEW

Why does the United States maintain the Military Academy at West Point? Name two famous men who were educated there. When did the civil war begin? What were its causes? What were the most important victories gained by General Grant in the West? Why was the control of the Mississippi River so important to the Confederates? What was one of the chief results of the war?

WILLIAM McKINLEY
AND THE EXPANSION OF THE NATION

I. FROM PRIVATE TO MAJOR

At the Sparrow Inn. — One evening in June, 1861, an excited company of men and boys was gathered at the Sparrow Inn, in the little village of Poland, Ohio. Every countenance wore a serious, determined look, showing that the meeting was for no idle purpose. One man who seemed to be well known to all arose and made a speech. "Our country's flag has been shot at," he said. "It has been trailed in the dust by those who should defend it, dishonored by those who ought to cherish and love it. Who will be the first to volunteer to defend it?"

The volunteers. — Among the company present there was very little hesitation. One by one, men and grown-up boys went forward and pledged themselves to give the next three years of their lives to their country. Almost the first was a slim, gray-eyed youth of nineteen, who gave his name as William McKinley, Jr. Everybody knew young McKinley. He was at that time a clerk in the village post office. He was a teacher in the Methodist Sunday School. He had been a pupil in the academy at Poland, and he had the reputation of being a great student.

With the rest who had pledged themselves that night, young McKinley went without delay to Columbus, and was there formally enlisted as a private in the Twenty-third Regiment of Ohio volunteers. One of the officers in that regiment was Rutherford B. Hayes, who, sixteen years later, became the nineteenth President of the United States.

The Twenty-third Ohio was one of the most famous regiments in the war; and when Mr. Hayes was advanced to

“Formally enlisted as a private”

its command he selected William McKinley to be a member of his staff. Before the end of a year McKinley received his first actual promotion by being chosen commissary sergeant for his company. Other promotions

The grand review

followed in order, and finally he received, direct from President Lincoln, a commission as brevet major "for gallant and meritorious services."

The grand review. — With the surrender of Lee's army the war was virtually ended, and in May, 1865, Major McKinley was one of those who took part in the last grand review of the Union army at Washington. A few weeks later, he was mustered out of service with his regiment and returned to his father's home at Poland. "He had never been absent a day from his command on sick leave," says one of his friends; "he had had only one

short furlough in his four years of service ; he never asked nor sought promotion ; he was present and active in every engagement in which his regiment took part ; and he performed bravely and well every duty assigned to him."

II. LAWYER AND CONGRESSMAN

Studying law.—William McKinley was now twenty-three years old. He had already made up his mind to be a lawyer, and he at once began the studies necessary to prepare him for his profession. He made such rapid progress that within less than two years after leaving the army he was admitted to the bar. He then settled down to the practice of his profession at Canton, the county seat of Stark County, Ohio.

Negro suffrage.—It was in support of negro suffrage that Mr. McKinley made his first political speeches. Until several years after the war the idea of permitting negroes to vote was very unpopular, not only in the South but in many of the northern states. In Ohio, Indiana, Illinois, and other states, only white men were allowed the right to vote and hold office ; black men were not even citizens, and in some places there were laws forbidding them to settle within the limits of the state. In a few of the states these laws were repealed during or soon after the war ; in others they remained on the statute books until they were made null by the passage of the Fifteenth Amendment. While this question of negro suffrage was being agitated in Ohio, Mr. McKinley spoke in favor of it at a number of political meetings ; and his speeches made him

so many friends that he was soon afterward nominated and elected to the office of prosecuting attorney.

A public speaker.—Mr. McKinley held his office of prosecuting attorney for only one term and then resumed the private practice of law. But although a successful lawyer, he was a better politician. In every campaign he was the most popular political speaker in his district. His name was soon known throughout the state as that of a rising young man of more than ordinary ability.

In Congress.—In 1876, at the age of thirty-four, he was elected to Congress. On the same day that he became a member of the House of Representatives his old friend and commander, Rutherford B. Hayes, succeeded General Grant as President of the United States. Being a personal friend of the President, Mr. McKinley exerted not a little influence upon the conduct of affairs. He soon became known in Congress as

McKinley in Congress

one of the ablest advocates of a high tariff for the protection of American manufacturers.

Two kinds of tariff. — When goods are brought into the United States from foreign countries the owner is required to pay to the government a tax equal to a certain part of their value. This tax is called “tariff,” and the amount paid on any goods is known as “duty.” Many persons believe that there should be no tax of this kind except to obtain money to pay the expenses of the government. The tax in that case would be called a tariff for revenue. Others believe that it should be so high on all kinds of manufactured goods that nothing when brought to this country can be sold for a less price than that for which our own manufacturers can make and sell it. The tax is then a tariff for protection.

McKinley’s opinion. — Mr. McKinley, as I have said, was a strong advocate of a high protective tariff. For seven successive terms in Congress he was the champion of this doctrine. Near the close of the last term he introduced the general tariff measure which has since been known as the “McKinley Bill.” “I believe in this measure and warmly advocate it,” he said, “because enveloped in it are my country’s development and greatest prosperity.” The bill was passed by Congress and, on the 6th of October, 1890, became a law.

The twentieth President. — In 1880 Mr. McKinley was appointed a member of the Ways and Means Committee of the House, to succeed his friend and fellow-citizen James A. Garfield, who had been elected the twentieth

President of the United States. Four months after his inauguration Mr. Garfield was shot by a disappointed office-seeker. He lingered for ten long weeks on the confines of life and death, and on the 19th of September breathed his last. When the House of Representatives went into mourning for the dead President, it appointed William McKinley to be chairman of the committee in charge of the memorial exercises. Five years later, when the state of Ohio placed a statue of the murdered President in the Capitol at Washington, William McKinley was chosen to deliver the memorial address.

President Arthur. — President Garfield was succeeded by the Vice President, Chester A. Arthur, of New York, who served until the end of the presidential term in 1885.

Grover Cleveland, who succeeded Mr. Arthur, was the twenty-second President of the United States. He was the first Democrat to hold that office since 1860. He was opposed to the tariff doctrines of Mr. McKinley, and was active in promoting reforms in the civil service of the government.

McKinley honored. — Toward the close of Mr. Cleveland's term the Republican leaders began to look for a candidate whose popularity and ability would restore their party to power. Many declared that William McKinley was the man best fitted to lead them to victory, and at the National Convention they urged his nomination for the presidency. But Mr. McKinley had promised to give his support to another candidate, and he announced that he could not permit his name to be used.

Benjamin Harrison. — His name was therefore withdrawn, and Benjamin Harrison, of Indiana, was nominated and afterward elected to the presidency.

III. GOVERNOR AND PRESIDENT

Governor of Ohio. — In the year following that in which his famous tariff bill became a law, Mr. McKinley was elected governor of Ohio. Soon after his inauguration another presidential campaign began, and his friends again urged him to become a candidate. But again he declined, saying that President Harrison was entitled to another term and ought to be renominated.

Cleveland again elected. — The Republican nomination was accordingly given to Harrison. In the election he was defeated, and Grover Cleveland was returned to the presidential chair.

The twenty-fifth President

McKinley President. — McKinley as governor of Ohio was so well liked by the people of the state that they elected him to a second term. Everybody now saw that he must be the next Republican candidate for the presidency. All over the United

States the voice of the Republican press and of the Republican leaders was for McKinley. And so, when the National Convention met in 1896, he was the choice of more than two thirds of all the delegates. In the election he received

over six hundred thousand votes more than his strongest opponent. On the 4th of March, 1897, William McKinley was inaugurated President of the United States.

Another tariff law. — During Cleveland's second administration, the McKinley tariff law had been superseded by another less favorable to the protection of American industries. President McKinley, therefore, urged the enactment of a measure more in harmony with his opinions. A new bill, drawn up under his supervision and known as the "Dingley Tariff Act," was introduced into the House. After some discussion it was passed and duly became a law.

The tyranny of Spain. — Very early in McKinley's administration the attention of the American people was turned to the condition of affairs in the island of Cuba. Of all the possessions which Spain had acquired through the discoveries of Columbus and his follow-

The West Indies

ers none remained to her in America except Cuba, Porto Rico, and a few small adjoining islands. Her tyranny and the oppressive acts of her officers in Cuba had often driven the Cubans into rebellion. The last uprising began in 1895, when men in all parts of the island united in taking up arms for the defense of their liberties.

The Cuban rebellion. — The war dragged along for many months without either side gaining much advantage. Americans who had money invested in Cuban mines and plantations were among the heaviest losers. American sympathizers had to be restrained from sending arms and supplies to the Cubans. Americans in general were horrified by the barbarous manner in which the natives of the island were treated by their Spanish rulers.

The “Maine.” — In February, 1898, the United States battleship *Maine* was at anchor in the harbor of Havana.

The “Maine” after the explosion

One evening a terrible explosion took place which destroyed the vessel and caused the death of two hundred and sixty American officers and men. How the explosion was caused, no one ever learned. But it was thought to be an act of Spanish treachery; and soon in every part of the country the cry of “Remember the *Maine*!” awakened the desire for revenge. The people demanded war.

McKinley's message. — The excitement continued for nearly two months. On the 11th of April, President McKinley sent to Congress a special message on Cuban affairs. He spoke of the tyrannous acts of Spain, through a long series of years, by which the Cuban people had been goaded to repeated acts of rebellion. He described how our own trade had suffered, how American property in Cuba had been destroyed, and how the temper and forbearance of the American people had been strained. He closed by asking Congress to authorize him to take measures to bring about "a full and final termination of hostilities in the oppressed islands."

The war begins. — A few days later Congress passed a resolution granting his request. A formal demand was also made upon the Spanish government, requiring it to relinquish its authority in Cuba and withdraw all its forces from the island.

Spain, of course, refused to comply with this demand, and war began. An American fleet under Admiral Sampson was sent to blockade the ports of Cuba. Another fleet, which was then cruising in Chinese waters, was sent under Commodore Dewey to attack the Spanish fleet in the Philippine Islands.

American Victories. — On the 1st of May, Dewey arrived in Manila harbor and surprised and destroyed the Spanish ships that were lying there. On the 3rd of July, Spain's only remaining fleet, commanded by Admiral Cervera, was destroyed by American battleships off the harbor of Santiago on the south coast of Cuba. A few

days later the American land forces defeated the main body of Spaniards in Cuba, and the city of Santiago was surrendered.

IV. EXPANSION

Spain could do no more.—Toward the last of July the Spanish government began to ask for peace; and, a few weeks later, President McKinley issued a proclamation which put an end to the war. By the treaty of peace which was signed in December, Spain agreed to withdraw from Cuba, to cede the islands of Porto Rico and Guam to the United States, and to sell the Philippine Islands to our government for twenty million dollars.

Thus Spain after more than four hundred years of dominion was forced to give up the last of her American possessions.

The Philippine Islands were discovered in 1520 by the Spaniards with Magellan in that famous first voyage round the world. They had been for centuries the most important possessions of Spain in the Far East. The natives of some of the islands had long cherished the idea of independence, and they hoped that the United States would aid them in setting up a government of their own. But in this they were disappointed, and a large number in the northern islands refused to submit to our government. This led to a long and distressing war, which cost much treasure and the lives of thousands of American soldiers, and inflicted untold misery upon the native inhabitants.

Hawaii. — In the year 1893, the white inhabitants of the Hawaiian Islands in the middle of the Pacific Ocean established a republican government and asked to be joined to the United States. But President Cleveland did not favor the adding of any further territories to our domains, and the petition was not granted. Soon after the inauguration of McKinley the matter was revived, and the Hawaiians again asked to have their islands placed under the control of the United States. The President, unlike his predecessor, believed that if this were done it would result in great advantage both to our country and to the country of the Hawaiians. In July, 1898, therefore, while the Spanish war was at its height, Congress passed a resolution for the annexation of the islands, and in the year 1900 they became a territory of the United States.

The end. — The American people were so well satisfied with Mr. McKinley's first administration that they re-elected him by a much larger vote than he had received before. On the 6th of September, 1901, while visiting the Pan-American Exposition in Buffalo, he was shot by a young anarchist, who took this method of showing his hatred of all law and of all rulers. He lingered for a week, while the world hoped and prayed for his recovery. Early on the morning of the 14th he died. The death of no other man since that of Lincoln in 1865 was so generally regretted and lamented. He was succeeded by the Vice President, Theodore Roosevelt, of New York.

REVIEW

What induced William McKinley to enlist in the Union army? How long did he serve? Who succeeded Lincoln as President? What great questions had to be settled after the close of the war? When and how was slavery fully abolished? What does the Fifteenth Amendment to the Constitution provide? Who was the eighteenth President of the United States? What is meant by a "tariff"? What is a protective tariff? Who was the nineteenth President? The twentieth? What can you say of his character? Who succeeded him as President? Who was the twenty-second President? The twenty-third? What were the causes of the war with Spain? What did Spain lose by the war? What did the United States gain?

LATER ADMINISTRATIONS

AND THE BEGINNING OF THE WAR WITH GERMANY

Theodore Roosevelt was not quite forty-three years old when, upon the death of William McKinley, he became the twenty-sixth President of our country. He was the youngest man ever called to be the chief executive of our national government. The people were so well pleased with his administration during the three-and a-half years which remained of McKinley's term, that in 1904 he was reëlected to the presidency by the vote of a very large majority.

Theodore Roosevelt

The Panama Canal. — While Roosevelt was President, the United States began the great work of constructing a canal across the Isthmus of Panama to connect the waters of the Atlantic Ocean with those of the Pacific. A treaty was made with the independent state of Panama whereby a strip of land five miles wide, on each side of the canal was granted to our government and became a part of our possessions. This strip is known as the Canal Zone. Through the energetic management of President Roosevelt and his successors, the great canal was completed in 1914,

and was ready for the passage of vessels from ocean to ocean. The cost of its construction was about four hundred million dollars, and its benefits to the commerce of the world, and especially of our own country, can never be estimated.

William H. Taft.—During Roosevelt's administration, also, the disturbance in the Philippine Islands was happily ended. The natives soon learned that our people could be trusted, and under the wise management of William Howard Taft, who was governor-general of the islands (1901–1904), they became quite generally reconciled to the beneficent rule of America. A school system was established

William H. Taft

throughout the islands, most of the schools being taught by American teachers; the English language was introduced; and American ideals and inventions helped to bring about an era of prosperity hitherto unequalled in the islands. In 1907 the first Philippine legislative assembly was opened officially by Mr. Taft, and little by little since that time the people have been intrusted with the difficult task of self-government.

Taft as President.—In 1908 another election took place, and William Howard Taft, a native of Ohio and late governor of the Philippines, was chosen as Roosevelt's successor in the presidency. The four years which followed were a period of peace and great prosperity. Much attention was given to the improvement and devel-

opment of the dry and hitherto barren regions in the West; dams and reservoirs were built, canals were constructed, and millions of acres of arid lands were irrigated and made productive. During this period the last of the western territories, New Mexico and Arizona, were admitted to the Union as states. Our country, stretching from ocean to ocean, then embraced forty-eight states besides the District of Columbia. Its territorial possessions and dependencies included Alaska in the far north; the Philippine Islands, Hawaii, Guam, and Tutuila in the Pacific Ocean; Porto Rico among the West Indies; and the Canal Zone on the Isthmus of Panama. To these were added in 1916 the three Virgin Islands, St. Thomas, St. Croix, and St. John, purchased from Denmark for twenty-five million dollars.

Woodrow Wilson. — While President Roosevelt was negotiating with Panama for the Canal Zone and Mr. Taft was devising methods for the conciliation and uplifting of the people in our far Eastern possessions, Woodrow Wilson was performing the duties of president of Princeton University in New Jersey. The three men were of nearly the same age, Taft being a few months younger than Wilson, and a few months older than Roosevelt. Wilson was a native of the South; he was born in Virginia only about four years before the beginning of the Civil War. His early education was with a view to the practice of law, but he soon

Woodrow Wilson

became famous as a professor of political economy and as a writer of history. In 1910, having resigned the presidency of Princeton University, he was elected governor of New Jersey, and two years later he was chosen to be the twenty-eighth President of the United States.

The trouble with Mexico. — During the first two years of Wilson's administration public attention was directed to Mexico, where civil war was being carried on between different political factions. The rights and lives of American citizens in that country were imperiled, and at times it seemed as though our government would be forced to intervene; but happily this danger was at length averted, and the people of Mexico were left to adjust their own political differences without interference from the United States.

The war with Germany. — Meanwhile, however, a much greater peril threatened. On the first of August, 1914, Germany declared war on Russia and, immediately afterwards, began the invasion of Belgium and France. It is not for us, in this little history of the United States, to inquire into the causes of that war or to trace its progress in European countries. We are concerned only with its effects upon our own country, and later with the part which America was forced to take in it. Three days after its beginning President Wilson sent out a formal proclamation of neutrality on the part of the United States, and every effort was made to preserve the friendship and good will of each one of the warring European countries.

On the 7th of May, 1915, the great passenger steamer

Lusitania, bound from New York to Liverpool, was sunk by a torpedo from a German submarine. Nearly two thousand persons were on board, and of these more than half were drowned; many were Americans. All over our country there was a cry for war; but President Wilson said, "Wait, and perhaps this matter can be settled peaceably with Germany." Diplomatic notes were sent to the German government protesting against the barbarities of submarine warfare, and demanding that the lives and property of American citizens should be respected and safeguarded upon the seas. The German replies were evasive. The inhuman war continued. American ships were torpedoed and sunk. American lives and property were destroyed. German plots against the United States government were discovered. International laws which all civilized countries had hitherto observed were grossly violated. For nearly two years our government waited and protested and hoped, until it was plain that nothing could be gained by further endurance. Accordingly on the 6th of April, 1917, agreeably to the President's recommendation, Congress passed a resolution declaring that this country had been forced into a state of war by the German government. Immediately steps were taken for the arming and equipping of an immense army, and a national loan of seven billion dollars was authorized.

Thus, not hastily or without counting the cost, did our country enter the great conflict. It was a war for human freedom; a war, as President Wilson said, "to vindicate the principles of peace and justice in the life of the world."

REVIEW

When was Theodore Roosevelt the President of our country? Tell about the Panama Canal. What is the Canal Zone? Who was the next President? What has our government done for the Philippines? What other islands belong to the United States? How many states are there in our country? Where is Alaska? In what state was Woodrow Wilson born? Can you name any other Presidents that came from that state? Tell about Wilson's life before he was elected President. In what year did Germany begin a great war in Europe? How did our government try to keep peace? What was the fate of the *Lusitania*? What was done to some American ships? In what other ways did Germany force war upon our country? When did the United States declare war? What, in President Wilson's words, is the purpose of our country in the war?

APPENDIX
BIOGRAPHICAL NOTES

BIOGRAPHICAL NOTES

Leif the Lucky.—A thousand years ago the bravest sailors on the sea were the Northmen, whose homes were in Denmark and Norway. They invaded England in the time of King Alfred and later. They conquered a portion of France, which they called Normandy. They afterward discovered and settled Iceland, and their ships sailed to Greenland where they also made settlements. It is said that, about the year 1000, one of these sailors, Leif Ericson, or Leif the Lucky, sailed southwest from Greenland, and discovered a new land which he named Vineland. This must have been a part of the coast of North America, but no one knows exactly where it was. Some suppose that Leif landed and remained for some time on the shores of what is now called Rhode Island; but of this there is no proof. Longfellow's poem, "The Skeleton in Armor," is founded upon this supposition.

Marco Polo.—One of the first travelers from Europe to the Far East was Marco Polo, who was born in Venice, Italy, in 1254. When seventeen years of age, he accompanied his father across Asia Minor and Persia and finally to China which was then called Cathay. There they made the acquaintance of the great Tartar emperor, Kublai Khan, and Marco was employed by him on several important missions to neighboring lands and cities. The Polos

remained in China nearly twenty years, and then returned home by way of India and Persia. Some time after this, Marco was taken prisoner by the Genoese, and confined in Genoa for a year. During his imprisonment he related to a fellow-captive the story of his adventures in the Far East. This story was written down and published, and it is supposed that it had great influence upon Columbus who probably read it when a boy. Marco Polo died in 1324.

Christopher Columbus. — Born in Genoa; died in Spain, 1506, aged about sixty. (See page 7.)

Ferdinand de Soto. — Born in Spain, 1501; died in Louisiana, 1541. (See page 42.)

John Cabot. — Born in Genoa; died at sea, 1499. (See page 25.)

Sir Francis Drake. — Born in England, 1540; died at sea, 1596. (See page 47.)

Sir Walter Raleigh. — Born in England, 1552; died, 1618. (See page 55.)

John Smith, the hero of Virginia, was born in Lincolnshire, England, in 1579. At the age of fifteen he was apprenticed to a trade, but ran away and joined the army. He afterward served in Hungary, and was captured by the Turks and sold into slavery. He escaped and returned to England in 1605. The next year he joined the expedition which was sent out to establish a colony in Virginia. The colonists reached Virginia, April 26, 1607. John Smith was one of the seven persons appointed to govern the colony. The settlement of Jamestown was begun on the 13th of May (p. 70). Toward the end of the next year he was

chosen president, but in 1609 he was superseded by Lord Delaware. He soon afterward returned to London. In 1614 he made a voyage to the coast of New England. He was given the title of Admiral of New England, but his later years were spent in retirement. He died in 1631.

Pocahontas. — Born in Virginia; died in England, 1617. (See page 63.)

Miles Standish, the captain of the Pilgrims at Plymouth, was born in Lancashire, England, in 1584. He served as a soldier in Holland, and in 1620 came to Plymouth in the *Mayflower*. He was not a Separatist, but he liked the Pilgrims and joined his fortunes with theirs (p. 97). He was harsh in his treatment of the Indians, but was of much service in protecting the colony during its infancy. He was one of the founders of Duxbury, and died there in 1654.

John Winthrop, the first governor of the Massachusetts Bay colony, was born in England in 1587. From 1630 until his death, in 1649, he was reëlected governor almost every year (p. 106). While strict and puritanical in his manners, he had always the welfare of his people at heart.

Roger Williams, the founder of Rhode Island, was born probably in London about 1607. He came to Massachusetts in 1631, and became pastor of the church in Salem the same year (p. 112). He died in Rhode Island in 1684.

Henry Hudson. — Born in England; died in Hudson Bay, 1611. (See page 80.)

Peter Minuit, the first Dutch governor of New York (New Netherland), arrived at Manhattan in 1626. It was he who purchased the island for twenty-four dollars (p. 86).

He remained there until 1631, when he was recalled and succeeded by Wouter van Twiller. He then entered the Swedish service, and founded a colony on the west side of the Delaware. He built Fort Christina, near the present city of Wilmington, and died there in 1641.

Peter Stuyvesant, the fourth and last Dutch governor of New York (New Netherland), was born in Holland in 1602. He served in the West Indies, and was made governor of New Netherland in 1644. He was very active and energetic, made friends with the Indians, and conquered the Swedish colonies on the Delaware which Peter Minuit had helped to establish. He surrendered New Netherland to the English in 1664 (p. 89). He afterward retired to his farm (the Bowery), where he lived until his death in 1682.

Samuel de Champlain, called the Father of New France, was born in France in 1567. He founded Quebec in 1608, and discovered Lake Champlain in 1609 (p. 129). He was the governor of Canada, and did much to establish the power of France in America. He died at Quebec in 1635.

Robert Cavelier, Sieur de la Salle, was born in France in 1643. At the age of twenty-three he went to Canada, where he at once became active in explorations (p. 137). After exploring the Mississippi and taking possession of the lands drained by it, he attempted to found a settlement at the mouth of that river. By mistake he landed with his colonists in Texas, where nearly all perished. He himself was killed by one of his own followers (1687).

Lord Baltimore. — Born in England, 1580; died, 1632. (See page 115.)

William Penn. — Born in England, 1644; died, 1718. (See page 150.)

General James Oglethorpe. — Born in England, 1690; died, 1785. (See page 165.)

Nathaniel Bacon. — Born in England, 1642; died in Virginia, 1676. (See page 140.)

Benjamin Franklin. — Born in Boston, 1706; died in Philadelphia, 1790. (See page 172.)

Marquis de Montcalm was born in France in 1712. After the breaking out of the French and Indian War (p. 186), he was appointed commander of the French forces in Canada. He captured several important posts from the British, and repelled Wolfe's attack on Quebec in July, 1759. In September of the same year, however, both he and Wolfe were killed in the battle outside the walls of that city (p. 190).

James Wolfe, the English general at the battle of Quebec (p. 190), was born in England in 1727. While only a boy he distinguished himself for his courage. He was made brigadier general at the age of thirty, and the next year assisted in the capture of Louisburg from the French. He died at Quebec (1759) in 'the hour of victory.

Patrick Henry was born in Virginia in 1736. He became a lawyer in 1760, and five years afterward entered the Virginia House of Burgesses (p. 229). He was a member of the Continental Congress (p. 231), and was twice governor of Virginia (p. 223). He died in 1799.

Samuel Adams, one of the leaders in the American Revolution, was born in Boston in 1722. He was active during the events which preceded the war (p. 202), and was a

member of the first Continental Congress (p. 204). He was also one of the signers of the Declaration of Independence (p. 231). At the age of seventy-two he was elected governor of Massachusetts. He died in 1803.

George Washington. — Born in Virginia, 1732; died, 1799. (See page 193.)

Philip Schuyler. — Soon after the beginning of the Revolutionary War (p. 204), a British army under General Burgoyne was sent south from Canada to take possession of the Hudson River, and thus cut off New England from the other colonies. General Philip Schuyler (born in Albany, 1733) was in command of the American forces in New York. He put so many hindrances in the way of Burgoyne that, when at last the two armies met at Saratoga, the British general was forced to surrender. In the meanwhile, however, General Schuyler had been superseded by General Gates. Two years later General Schuyler resigned from the army. He died at Albany in 1804.

Nathanael Greene, born in Rhode Island, 1742, was one of the ablest of the American generals in the Revolution. He was made commander of the southern army in 1780. He won several important victories, sometimes by hard fighting and sometimes by a masterly retreat. He thus helped to pave the way for Washington's final victory at Yorktown (p. 206). He died in Georgia in 1786.

John Paul Jones, commonly called Paul Jones, was born in Scotland in 1747. His real name was John Paul. He went to Virginia in 1773, and at the beginning of the Revolutionary War took command of an American ship of war.

He afterwards cruised on the coast of Scotland and in the Irish Sea, and captured or destroyed a number of British vessels. After the war he took service with the French, and later accepted a place in the Russian navy. He died in Paris in 1792.

Thomas Jefferson. — Born in Virginia, 1743; died, 1826. (See page 229.)

Alexander Hamilton was born in the island of Nevis, West Indies, in 1757. When fifteen years of age he came to New York, and was for a time a student in King's College (now Columbia). He was for four years a member of Washington's staff, and later a member of the Continental Congress. He was a delegate to the Constitutional Convention (p. 207), and was the first Secretary of the Treasury (p. 236). In 1804 he was killed in a duel with Aaron Burr.

Daniel Boone. — Born in Pennsylvania, 1735; died in Missouri, 1820. (See page 213.)

Eli Whitney. — Born in Massachusetts, 1765; died in Connecticut, 1825. (See page 243.)

Robert Fulton. — Born in Pennsylvania, 1765; died in New York, 1815. (See page 250.)

Oliver Hazard Perry, who won fame in the battle with the British on Lake Erie (p. 265), was born in Rhode Island in 1785. He announced his victory in a note to General Harrison: "We have met the enemy, and they are ours." Congress voted him a silver medal, and promoted him to the rank of captain. He died in 1819.

Thomas Macdonough, an American naval officer, performed good service to the Americans in the War of 1812

by defeating a British squadron on Lake Champlain. This was in September, 1814. Congress rewarded him by making him a captain in the navy.

Marquis de Lafayette was a French general who gave much important aid to America during the Revolutionary War. He came to America in 1777, and served in the army in several important battles. He was present at the surrender at Yorktown (p. 206). He was a friend of Washington, and was of much assistance to him. After the war he returned to France, and took part in the French Revolution which soon began there. In 1825 he revisited the United States, where he was received with great honor.

Andrew Jackson. — Born in North Carolina, 1767; died in Tennessee, 1845. (See page 259.)

Henry Clay. — Born in Virginia, 1777; died at Washington, D.C., 1852. (See page 283.)

Daniel Webster was born in New Hampshire in 1782. He was educated at Dartmouth College, and removed to Boston in 1816. He was at different times a member of Congress, United States senator (p. 291), and Secretary of State — all his life being spent in the active service of his country. He died in 1852.

De Witt Clinton, a distinguished governor of New York, was born in 1769. For thirteen years he served as mayor of New York. In 1817 he was elected governor, and it was chiefly through his influence that the Erie Canal, connecting Lake Erie and the Hudson River, was successfully completed. He was again chosen governor in 1824, and reelected in 1826. He died in 1828 while still in office.

Samuel F. B. Morse. — Born in Massachusetts, 1791; died in New York, 1872. (See page 273.)

Abraham Lincoln. — Born in Kentucky, 1809; died at Washington, D.C., 1865. (See page 312.)

Ulysses S. Grant. — Born in Ohio, 1822; died in New York, 1885. (See page 332.)

David G. Farragut, an American admiral, was born in Tennessee in 1801. He was adopted by Commodore Porter, and was appointed midshipman when less than ten years of age. He served in the War of 1812 and in the Mexican War. At the beginning of the Civil War he was a captain in the navy. He distinguished himself in the capture of New Orleans and in the battle of Mobile Bay. Congress promoted him to the rank of admiral. He was the first in the American navy to hold that rank. He died in 1870.

Cyrus McCormick was born in Virginia in 1809. At the age of twenty-two he built the first practical reaping machine that was ever made. He afterward removed to Chicago, where he established large shops for the manufacture of his machines. He died in 1884.

Clara Barton was born in Massachusetts in 1830. She served as nurse during the Civil War, and later went to Europe, where she gave great assistance in military hospitals. She organized the American Red Cross Society in 1881, and was its first president. She died in 1912.

George Dewey, an American admiral, was born in Vermont in 1837. He was with Farragut in several naval engagements during the Civil War. He was promoted to the rank of commander in 1872, and to that of commodore

in 1896. In 1898 he commanded the squadron which destroyed the Spanish fleet in Manila Bay. For that act he was promoted to the rank of admiral. He died in 1917.

Thomas A. Edison was born in Ohio in 1847. He began life as a newsboy on a railroad train. He learned telegraphy, became an operator, and made a number of inventions connected with the telegraph. The world owes to him many inventions, such as the electric light, the phonograph, improved telephone, and scores of others.

Andrew Carnegie, philanthropist and manufacturer, was born at Dunfermline, Scotland, in 1835. He came to America when a boy, and worked in a factory at Pittsburgh at \$1.20 a week. By industry and skillful management he amassed a large fortune; and in later life he gave many millions of dollars toward the founding of libraries, hospitals, institutions of learning, and other public benefactions.

Theodore Roosevelt was born in New York in 1858, and was the youngest of our Presidents (see page 359). Before 1900 he had filled several important offices in New York and at Washington. In the war with Spain he commanded a famous regiment of "Rough Riders." He is also well known as an author of historical works and of books on outdoor life. In 1912 the Progressive party nominated him as their candidate for the presidency.

William H. Taft.—Born in Ohio in 1857. (See page 360.)

Woodrow Wilson.—Born in Virginia in 1856. (See page 361.)
