3^{dy}, If the Wind were the sole Agent, the Alterations in the Height of the Mercury would only be relative or topical; there would be still the same Quantity supported at several Places taken collectively: Thus what a Tube at *London* loth, another at *Paris*, or at *Pisa*, or at *Zaricb*, &c. would at the same time gain. But we find the very contrary true in Fact; for from all the Observations hitherto made, the *Barometers* in several Parts of the Globe rise and fall together; so that it must be some Alteration in the absolute Weight of the *Atmosphere*, that accounts for the Rise and Fall of the Mercury.

Lastly, Setting aside all Objections, these popular Phenomena, the Mercury's Fall before, and Rise after Rain, are really inexplicable on the foot of this Hypothesis: for, suppose two contrary Winds sweeping the Air from over *London*: we know that few, if any, of the Winds reach above a Mile high; all therefore they can do, will be to cut off a certain Part of the Column of Air over *London*: If the Consequence of this be the Fall of the Mercury, yet there is no apparent Reason for the Rains following it. The Vapours indeed, may be let lower, but 'twill only be till they come into an Air of the same specific Gravity with themselves; and there they will stick as before.

M. *Leibnitz* endeavours to supply the Defects of this Hypothesis with a new one of his own. He asserts, that a Body immers'd in a Fluid, only weighs with that Fluid while it is sustained thereby; so that when it ceases to be sus-

rain'd, *i. e.* to fall, its Weight ceases to make a Part of that of the Fluid; which by this means becomes lighter. Thus, adds he, the watery Vapours, while sustain'd in the Air, increase its Weight; but when let fall, cease to weigh along with it. Thus the Weight of the Air is diminish'd; and thus the Mercury falls, and Rain ensues.

But M. Leibnitz's Principle, notwithstanding the Experiment he brings to confirm it, is false, as has been made appear by a counter-Experiment of Dr. Desaguliers. For, a Body, whether specifically equal, or lighter, or heavier than a Fluid, while it is immerg'd in it, whether it be at Rest or in Motion, adds to the Fluid a Weight equivalent to that of an equal Bulk of the Fluid; as follows from that Law in *Hydrostatics*, That Fluids gravitate according to their perpendicular Altitudes. However, were M. Leibnitz's Principle true, yet 'tis defective; and that in the same respect with Dr. Halley's: Nor would it account for the Phenomena more than the other. For, supposing the Vapours, by being condens'd, to be put in a Motion downwards, and so ceasing to gravitate with the Atmosphere; they will therefore fall, till they reach a Part of the Atmosphere of the same specific Gravity with themselves; and there they will hang as before. If the Mercury fall, 'twill only be during the Time of that Descent; for these once fix'd, the former Gravity is retriev'd; or, were it not retriev'd, yet no Rain wou'd ensue the Fall of the Mercury.

If it might be allow'd us to add any thing after these great Men, it should be as follows: Suppose any Number of watery Vesicles, *v. g.* a Million, floating in any Part of the Atmosphere, over any determinate Portion of the Globe; for instance, over A B. If the upper Vesicles

be condens'd by the Cold of the upper Regions, their specific Gravity will be increas'd, and they will descend; the Horizontal Class 1 *v. g.* to 2, 3, &c. where meeting with other Vesicles not yet precipitated, they will coalesce, or run into larger Vesicles, by the known Laws of Attraction. Or, if we rather chuse to have the Wind act, let it drive either horizontally, or obliquely: In the former Case, the Vesicles, Class 8, will be driven a

gains't 9; that, against 10, &c. or the oblique Class A 7, driven against 5, 8 against 4, &c. By this means likewise will the Particles coalesce, and form new and larger Vesicles, as before; so that their Number, which before was a Million, will now be reduced, *v. g.* to a Hundred Thousand: But by the same Coalition whereby their Number is diminish'd, their specific Gravity is increas'd, *i. e.* they come to have more Matter in the same Space, or under the same Surface; as may be easily prov'd from Principles of Geometry: For, in augmenting the Mass of any homogeneous Body, the Increase of Surface does not keep pace with that of the Solidity; but that of the former, is as the Square of the Diameter; and that of the latter, as the Cube of the same. If then the Diameter of a Vesicle were 4, and its Surface and Mass 24; after Coalition, if its Diameter be 6, its Surface or Bulk will be 54, and its solid Content 81. But since the same Quantity of Matter is now in a less Space, or under less Dimensions, it will lose less of its Weight by the Resistance of the Medium. This is evident; for, a Body immerg'd in a Fluid, loses nothing of its Weight, but by the Friction of its Parts against those of the Fluid; but the Friction is evidently as the Surface: therefore, where the Surface is lessen'd, the Resistance must be so too. Consequently, the Vesicles, whose Gravity before the Coalition was equal to the Resistance of the Medium, now that Resistance is diminish'd, will descend; and that with a Velocity, in a Ratio of the Increase of the Mass to the Increase of the Surface. In their Descent, as they arrive at denser Parts of the Atmosphere, *v. g.* at 4, 5, &c. their Mass and Surface again will be increas'd by new Coalitions; and thus, by constant fresh Accessions, more than equal to the constant Resistances, they will be enabled to pursue their Journey thro all the Stages of the Air, till they reach the Earth; their Masses exceedingly magnified; and in the form of Rain.

Now that the Vapours are got down, let us consider how the Barometer must have been affected in their Passage. E'er any of the Vesicles began to subside, either from the Action of the Cold, or of the Wind, they all floated in the Portion of the Atmosphere A B C D, and all gravitated towards the Centre E. Here now, each respectively residing in a Part of the Medium of the same specific Gravity with it self, will lose as much of its Weight, as is equal to that of a Part of the Medium of the same Bulk with it self, *i. e.* each will lose all its Weight. But then, whatever Weight each loses, it communicates to the Medium, which now presses on the Surface of the Earth A B, with its own Weight, and that of the Vesicles conjointly. Suppose then, this united Pressure keeps up the Mercury in the Barometer at 30 Inches: By the Coalition of the Vesicles from the

Causes aforesaid, their Surfaces, and consequently their Friction is lessen'd: They will therefore communicate less of their Weight to the Air, *i. e.* less than the whole; and consequently will descend with the Excess, *i. e.* with a Velocity equal to the Remainder, as before observ'd. Now as the Vesicles can act no otherwise on the Surface of the Earth A B, but by the Mediation of the interjacent Air; in proportion as their Action on the Medium is less, their Action on the Earth will be less. 'Tis also evident, that the Surface of the Earth A B, must be now less press'd than before; and that in proportion, as the Vesicles reserve more of their Weight uncommunicated to the Medium, to promote their own Descent, *i. e.* in proportion to the Velocity of the falling Vesicles; which is, again, in proportion to their Bulks. Thus, as the Vesicles descend; their Bulks continually increasing, the Friction, and therefore the Pressure on the Earth, and lastly, the Height of the Mercury, will continually decrease, during the whole time of the Fall. Hence we see, both why the Vesicles, when once beginning to fall, persevere; why the Mercury begins to fall at the same time; and why it continues and ceases to fall together with 'em: which were the great Defiderata in the Philosophy of the Barometer.

I see but one Objection that lies against this Theory; and 'tis this, That the Vesicles being put in Motion, and striking against the Particles of the Medium and one another with some Momentum, will meet with a considerable Resistance from the *Vis Inertia* thereof; by which means their Descent will be retarded, and the Pressure of the Atmosphere retriev'd; the Impetus of the moving Vesicles being suppos'd to compensate for their Loss of Surface. Thus a heavy Body, sustain'd in a Fluid by a Hair, and moved up and down therein, presses more on the Bottom, than when held at Rest; which additional Pressure will be the greater, as the Velocity of the falling Vesicles is the greater; a greater Impulse being requir'd to break thro the *Vis Inertia* of the contiguous Particles, in a less time than in a larger. But we have both Reason and Experiment against this Objection: For, besides that the Velocity of the Vesicles, in these Circumstances, must be very small, and their Impulse inconsiderable; besides, that the *Vis Inertia* of the Air must be exceedingly weak, by reason of its extreme Subtility; and that it must be a very improper Vehicle to convey an Impulse to a Distance, by reason of its Elasticity: we find, that even in Water, (a gross un-elastic Medium) and a Piece of Lead, (a ponderous Body which falls with a great Momentum) that even here the Body, in its Descent thro the Fluid, gravitates considerably less than when sustain'd at Rest therein: In which the several Experiments of *Reaumur*, *Remondini*, and *Desaguliers*, all agree.

BARON, a Term used in various Senses: First, as a Degree of Nobility next below a Viscount, and above a Gentleman; in which Sense it is the same as in other Nations, where *Baronia* are *Provinciae*; and Barons are those who have the Government of Provinces, as their Fee holden of the King, some having greater, some less Authority within their Territories: and, probably, all those were call'd *Barons* that had such Seigniories or Lordships, as are now call'd *Courts-Barons*; who are the same with *Seigneurs in France*. Soon after the Conquest, all such came to Parliament, and sat as Peers in the Upper House; but growing very numerous, it was in the Reign of King *John* ordain'd, that none but the *Barones majores* should, for their extraordinary Wisdom, Interest, or Quality, be summon'd to Parliament. But this State of the Nobility being very precarious, and depending solely on the Prince's Pleasure, they at length obtain'd of the King Letters-Patent of this Dignity to them and their Heirs Male; and these were call'd *Barons by Patent*, or *Creation*, whose Posterity are now by Inheritance Lords of Parliament; of which kind the King may create at his Pleasure. Nevertheless, there are *Barons by Writ*, as well as *Letters-Patent*; those who were first by *Writ*, may now justly be call'd *Baron by Prescription*, for that they and their Ancestors have continu'd *Barons* beyond the Memory of Man, and by having their *Sirnames* annex'd to the Title of *Lord*; whereas *Barons by Patent* are named by their *Baronies*. The Original of *Barons by Writ*, *Camden* refers to *Henry III.* and *Barons by Patent*, or *Creation*, commenc'd in the time of *Richard II.* To those there is a third kind added, call'd *Barons by Tenure*, and such are the Lords the Bishops, who, by virtue of *Baronies* annex'd to their Bishopsricks, sit in the Upper House of Parliament, and are call'd *Lords Spiritual*. Formerly all Men were call'd *Barons*, at least all of the King's Family, or that held immediately of him. *Chamberlain* observes, that from the Time of the Suppression of the Rebellion of the *Barons by Henry III.* only such among 'em as had continu'd loyal, were call'd by *Writ* to Parliament; and that those only were reputed *Peers* of the Realm; and that those call'd by *Writ*; and thus the others lost their *Peerage*. Antiently the *Earls Palatine*, and *Earls Marches* of Eng-

land had their *Barons*; and in *Cheshire* there is one still subsisting, *viz.* the *Barony of Burford*. But as no Bishop, but those who hold immediately of the King, are *Peers of the Realm*, (for the Bishop of *Sodor and Man*, holding immediately of the Earl of *Derby*, is no *Peer of England*;) are no *Baron*, but those who hold immediately of the King, are *Peers of the Realm*. See *Peer*.

Baron is also us'd for an Officer; as the *Barons of the Exchequer*; of whom the *Lord Chief Baron* is the chief; three others are his Assistants, in Causes of Justice between the King and his Subjects, touching Matters belonging to the Exchequer and the King's Revenue. They are call'd *Barons*, because *Barons of the Realm* were us'd to be employ'd in that Office. Their Office is also to look to the Accompts of the King; to which end they have *Auditors* under them; as well as to decide Causes relating to the Revenue, brought by any means into the Exchequer. So that of late they have been constantly Persons learn'd in the Law; whereas formerly they were *Majores & discretiores in Regno, sive de Clero essent, sive de Curia*. Sir *William Temple* says, that *Baronies* were originally the larger Shares of the Lands of conquer'd Countries, which the *Northern Invaders*, such as the *Goths*, &c. us'd to divide among their Generals, and chief Commanders; as the smaller Shares, divided among the Soldiers, were call'd *Fensda*, or *Fogs*.

There are also *Barons of the Cinque-Ports*; which are Members of the House of Commons; two stand for each Port. (See *Cinque-Port*.) *Baron* is also us'd for the Husband, in relation to the Wife; which two in Law are call'd *Baron and Feme*. The Chief Magistrates also of the City of *London*, before they had a *Lord-Mayor*, were call'd *Barons*.

Menage derives the Word *Baron* from the Latin *Baro*, a strong valiant Man. Others from the German *barer*, Peasant. *Isidore*, and after him *Comden*, take the Word in its original Sense to signify, a mercenary Soldier. The Officers of the *Port Royal* derive it from *Baro*, Authority, Power. *Cicero* uses the Word *Baro* for a stupid brutal Man. And the old *Germanus* make mention of buffeting a *Baron*, i. e. a Villain. The *Italians* use the Word *Barone* to signify a Beggar, and *baronere*, to beg. Others, again, derive it from the old *Gaulish*, *Celtick*, and *Hebrew* Languages: but the most probable Opinion is, that it comes from the Spanish *Varo*, a stout noble Person; whence Wives come to call their Husbands, and Princes their Tenants, *Barons*. In the *Salick* Laws, as well as the Laws of the *Lombards*, the Word *Baron* signifies a Man. In the general and the old *Glossary of Philomenes*, he translates *Baron* by *ave, Man*. *M. de Mariva* and *Comden*, derive it from the German *Bar, Man*, or *Freeman*: Others again from *Banner bairer*, Engage-Bearer.

BARON AND FEME, a Term in Heraldry, when the Coat of Arms of a Man and his Wife are born per Pale in the same Escutcheon, the Man's being always on the Dexter Side, and the Woman's always on the Sinister: But here the Wife is not an Heiress; for then her Coat must be born by the Husband on an Inescutcheon, or Escutcheon of Pretence.

BARONET, a Diminutive of *Baron*, a Dignity or Degree of Honour next beneath a *Baron*, and above a *Knight*, having Precedency of all other *Knights*, excepting those of the *Garter*. 'Tis given by Patent, and is the lowest Degree of Honour that is Hereditary. The Word *Baronet* is us'd in some of our old Statutes, &c. see *Banneret*; particularly in a Statute of *Richard II.* The Order of *Baronets* was founded by King *James I.* in 1611, who rais'd 'em in lieu of *Knights Bannerets*; or, as others will have it, in lieu of the ancient *Valvasors*. They had several considerable Privileges given 'em, with an *Hobendune* to them and their Heirs Male. They were allow'd to charge their Coat with the Arms of *Ulster*, which are in a Field Argent a Hand Gules; and that upon condition of their defending the Province of *Ulster*, in *Ireland*, against the Rebels, who then harass'd it extremely; and, to that end, were to raise and keep up 30 Soldiers, at their own Expence, for three Years together; or, to pay into the Exchequer, a Sum sufficient to do it; which, at 8 s. per Day per Head, is 1095 l. now always remitted 'em. Their Number was at first limited to 200, but was afterwards increas'd. The Title *Sir* is granted 'em by a peculiar Clause in their Patents, tho they be not dubb'd *Knights*. A *Baronet*, and his eldest Son being of full Age, may claim *Knighthood*. To be a *Baron* 'tis requir'd a Person have 1000 l. per Ann.

BARONY, the Dignity, Territory, and Fee of a *Baron*; under which Notion are not only compris'd the Fees and Lands of *Temporal Barons*, but also of *Bishops* who, besides their Spiritual Estates, have also *Temporal* ones given 'em by the King, and call'd *Baronies*; by which they become *Barons*, and are Lords of Parliament. In ancient Times, 13 *Knights Fees* and $\frac{1}{2}$ made up a *Tenure per Baroniam*, which amounted to 400 Marks per Ann.

This *Barony*, according to *Bracton*, is a Right indivisible. Wherefore, if an Inheritance be to be divided among Co-partners, tho some Capital Messuages may be divided, yet, if the Capital Messuage be the Head of a County, or *Barony*, it may not be parcel'd; and the Reason is, left by this Division, many of the Rights of Counties and *Baronies*, by Degrees, come to nothing, to the Prejudice of the Realm; which is said to be compos'd of Counties and *Baronies*. The *Baronies* belonging to Bishops are, by some; call'd *Regalia*, as being held solely on the King's Liberty. These don't consist in one *Baron* alone, but in many; for, *tot erant Baronie, quot majora predia*.

BAROSCOPE, a Machine to shew the Alterations in the Weight of the Atmosphere, from fog, mist, and winds, &c. See *Barometer*.

BARRATRY, in a marine Sense, is the Master of a Ship's cheating the Owners or Insurers, whether by running away with the Ship, sinking her, deserting her, or embezzling the Cargo.

BARREL, a Vessel or Measure for things liquid. The *Barrel*, Wine Measure, contains 42 Gallons, or half of a Hoghead. Ale or Beer Measure, 36 Gallons, or half a Hoghead. (See *Measure*.) The *Barrel* or *Barrille* of Florence, is a liquid Measure containing 20 Fiaques, Flasks, or one third of a Star or Strain. The *Barrique*, *Barrel* of Paris, contains 210 Pints, or 26 Septiers and an half; four *Barriques* make three Muids.

Barrel is also us'd for a certain Quantity, or Weight, of several Merchandises; which is various as the Commodities vary. In this sense we say, a *Barrel*, or *Gask*, of Herrings, or Mackerel; 12 whereof make a Last. A *Barrel* of Gun-powder for Ships, is ordinarily about 100 Pounds Weight. Authors derive the Word from the Spanish *Barril*, an earthen Vessel with a wide Belly and narrow Neck. The *Roman Barrel*, according to *Vigenere*, contains four Congia, or 76 Pints, and weighs 170 Pounds 10 Ounces.

Barrel, in Anatomy, a pretty large Cavity behind the Drum of the Ear. It is lined with a Membrane, in which there are several Veins and Arteries. It is always full of a purulent Matter in Children; and in its Cavity there are four small Bones, *viz.* the *Malleolus*, the *Iocus*, the *Stapes*, and the *Os orbiculare*. See *Ear*.

BARRETOR, in Law, a common Mover or Maintainer of Suits, Quarrels, or Parties, either in Courts or elsewhere; and who is himself never quiet; *qui cum Terentiano Davo omnia perturbat*. *Lambard* derives the Word from the Latin *Baratro*, or *Bolatro*, a vile Knave or Unthrif. *Skene* says, that *Barrators* are *Simonists*; and derives the Word from the Italian *Barrataria*, Corruption, or Bribery in a Judge.

BARRICADO, a military Term for a Fortification, or Retrenchment, hastily made with Vessels of Earth, Carts, Trees, &c. to preserve an Army from the Enemy's Shot, or Assault. The general Matter of *Barricados* is Trees, which are cross'd with Battoons as long as an Half-Pike, bound about with Iron at the Feet, and usually set up in Passages, or Branches, to keep back as well the Horse as Foot.

BARRIER, a kind of Fortification made at a Passage, Retrenchment, Gate, &c. to stop up the Entry thereof. It is usually made of great Stakes, about four or five Foot high, placed at the Distance of eight or ten Foot one from another, with overthwart Rafters, to stop either Horse or Foot that would rush in; in the middle of which is a moveable Bar of Wood, which opens and shuts at Pleasure.

Barriers have been likewise us'd to signify a martial Exercise of Men, armed and fighting together with short Swords, within certain Rails or *Bars*, whereby they are enclosed from the Spectators.

BARRISTERS, in Law, Persons who for their long Study, and Knowledge of the Common Law, are call'd out to the *Bar*, to take on 'em the Protection, and Defence of Clients. These, in other Countries, are call'd *Licentiates*. To pass *Barristers* they were formerly oblig'd to study eight Years, now seven. The Exercise requir'd, was 12 grand Moots perform'd in the Inns of Chancery in time of the grand Readings, and 24 petty Moots at the Inns of Chancery in Term-Time, before the Readers of the respective Inns of Chancery. A *Barrister* newly called, is to attend the next six long Vacations the Exercise of the House, *viz.* in Lent and Summer, and is thereupon for these three Years call'd a *Vacation Barrister*. Those are call'd *Utter Barristers*, i. e. Pleaders without the *Bar*, to distinguish 'em from *Bencherers*, or those who have been Readers, who are sometimes admitted to plead within the *Bar*, as the King's, Queen's, or Prince's Council are; hence call'd *Inner Barristers*.

BARRULET, in Heraldry, is the half of the Cloiset, and the quarter of the Bar.

BARRY; when an Escutcheon is divided Bar-ways into an even Number of Partitions, it is express'd in Blazon by the Word *Barry*, and the Number of Pieces is to be specified;

cified: But if the Divisions be odd, then the Field must be first named, and the Number of Bars expressed.

BARRY-BENDY, is when an Escutcheon is divided evenly both Bar and Bend-ways, as thus, *Barry-Bendy, Or, and Sable.*

BARRY-PILY, is when a Coat is thus divided, and it is to be blazon'd *Barry-Pily* of eight Pieces.

BARTER, in Commerce, signifies to truck, or exchange one Commodity for another. The Word comes from the Spanish *Baratar*, to deceive or cheat in bargaining; perhaps, because those who deal this way, usually endeavour to over-reach one another.

BARTON, in *Devonshire*, and the West of *England*, is used for the Demefic Lands of a Manor, for the Manor-House, and in some Places for Out-Houses, Fold-Yards, &c.

BASALTES, a kind of Stone, or Marble, described by the ancient Naturalists as of the Hardness and Colour of Iron. The largest Block of it that was ever seen, *Pliny* says, was placed by *Vespasian* in the Temple of *Peace*: In it were represented 16 Children playing on the Banks of the Nile. He adds, that the Statue of *Memnon*, in the Temple of *Serapis*, at *Thebes*, which neigh'd at the Rising of the Sun, was made of this Stone. Most of the antique *Egyptian* Figures remaining, are apparently of this Stone. Some of the Antients call it *Lapis Lydius*, from *Lydia*, the Place where it was found in most abundance; and the Moderns, the Touch-stone, as being used to examine Gold and Silver. It was hard, heavy, close, black, and resisted the File; and had its Name from *Basal*, Iron, or *Basaltus*, diligenter examine. *Dalechampius* says, there are Stones of the same kind near *Gaillon* in *Normandy*; others are brought from *Ethiopia* and *Germany*.

BASE, in Architecture, from the Greek *basos*, Rest, or Support, is used to signify any Body which bears another; but particularly for the lower Parts of a Column and a Pedestal. The *Base* is sometimes also call'd *Spira*, from *Spirae*, the Po'ds of a Serpent laid at Rest, which make a Figure not unlike it.

The *Base of a Column* is that part between the Shaft and the Pedestal, if there be any Pedestal; or, if there be none, between the Shaft and the Plinth, or Zoche. (See *Column* and *Pedestal*.) The *Base* is supposed to be the Foot of the Column; or, as some will have it, 'tis that to a Column which a Shoe is to a Man. The Members or Ornaments wherof it is compos'd, are supported by others to have been originally intended to represent the Iron Circles wherewith the Feet of Trees and Posts which supported the ancient Houses were girt, in order to strengthen them.

The *Base* is different in the different Orders.

The *Tuscan Base* is the most simple of all the Orders; consisting only of a single *Tore* besides the *Plinth*.

The *Doric Base* has an *Atragal* more than the *Tuscan*; tho that was introduced by the Moderns.

The *Ionick Base* has a large *Tore* over two slender *Scotias*, separated by two *Atragals*; tho the most ancient Monuments of this Order there are no *Bases* at all; which the Architects are at a loss to account for.

The *Corinthian Base* has two *Tores*, two *Scotias*, and two *Atragals*.

The *Composite* has an *Atragal* less than the *Corinthian*.

The *Attick Base*, so call'd because first used by the *Athenians*, has two *Tores* and a *Scotia*, and is very proper for *Ionick* and *Composite* Columns.

Base, or *Basis*, in Fortification, is the external Side of the Polygon; or, the imaginary Line which is drawn from the *Rank'd Angle* of a *Bastion*, to that which is opposite thereto.

Base of a Figure, in Geometry, is the lowest Part of its Perimeter.

Base, in Music, that Part of a Consort which is the most heard, which consists of the gravest, deepest and longest Sounds; or, which is play'd on the largest Pipes, or Strings, of a common Instrument, viz. an Organ, or Lute; or, on Instruments larger than ordinary, viz. an Organ, or Lute; as, *Bas-Viols*, *Bassons* or *Bas-Hautboys*, &c. Musicians hold the *Base* the principal Part of a Consort, and the Foundation of the Composition: tho some will have the *Treble* the chief Part; which others only make a Circumstance, or Ornament. *Counter-Base*, is a second *Base*, where there are several in the same Consort. *Thorough Base*, is the Harmony made by *Bas-Viols*, or *Theorbes*, continuing to play, both while the Voices sing, and the other Instruments perform their Part; and also filling the Intervals when any of those stop. *M. Brossard* observes the *Tro-*

rough-Base to be a Part of the modern Music; first invented in 1600, by an Italian, call'd *Ludovico Viadana*. 'Tis play'd by Cypfers mark'd over the Notes, on the Organ, Spinetta, Harpsichord, Theorbo, Harp, &c. and frequently, simply, and without Cypfers, on the *Bas-Viol*, *Basson*, &c.

Base of a Triangle; any one Side thereof is occasionally so call'd, tho properly 'tis the lowest Side, or that which lies parallel to the Horizon. Indeed, in a *reclined Triangle*, the *Base* is properly that Side opposite to the right Angle, i. e. the *Hypotenuse*. The *Base of a solid Figure* is its lowest Side, or that whercon it stands: *Base of a Conick Section* is a right Line in the *Hyperbola* and *Parabola*, made by the common Interfection of the *secant Plane*, and the *Base of the Cone*.

BASE-COURT, in Law, is any Court that is not of Record. See *Court*.

BASE-FEE, or *Base-Estate*, in Law, is a Base-Tenure, or Tenure at the Will of the Lord. See *Fee*.

BASE-POINT, in Heraldry. See *Escutcheon*.

BASE-RING of a Cannon, is the great Ring next behind the Touch-hole.

BASE-TENURE, is holding by Villanage, or other customary Service; as distinguish'd from the *higher Tenure in capite*, or by military Service. See *Tenure*.

BASIL, among Joiners, &c. the Angle to which the Edge of an Iron Tool is ground. To work on soft Wood they usually make their *Basil* 12 Degrees, for hard Wood 18; it being observ'd, that the more acute or thin the *Basil* is, the better and smoother it cuts; and the more obtuse, the stronger and fitter for Service.

Basil, a Monastick Order. The Order of *St. Basil* is the most ancient of all the religious Orders; it takes its Name from *St. Basil*, Bishop of *Cesarea*, in *Cappadocia*, who was the Author of the Rule observ'd by this Order. The Order of *St. Basil* was anciently very famous in the East.

BASILARE OS. See *Sphenoides Os*.

BASILIC, or *Basilica*, in Architecture, from the Greek *basilikon*, royal House, or Palace; a Term anciently used for a large Hall, or publick Place, with Illes, Porticos, Galleries, &c. where the Princes administer'd Justice in Person: But the Word has been since transfer'd to signify any great Church, Court of Justice, or Exchange. *Azar* is of opinion, that *Basilics* were formerly such Churches as were not consecrated: But *Baronius* seems to have more Reason, when he says the Term was applied to the most magnificent Churches; such, which by their Grandeur as far surpass'd other Churches, as Princes Palaces do private Houses. Thus we still say, the *Basilic of St. Peter*, for the Church of *St. Peter*, &c. *M. Perrault* says, that *Basilics* differ'd from *Temples*, in that the Columns of *Temples* were without-side, and those of *Basilics* within. There were formerly four kinds of Churches at *Rome*, viz. *Patriarchal*, *Titular*, *Diocesan*, and *Oratorial*; wherof the first were those particularly call'd *Basilics*. See *Church* and *Temple*.

BASILICA, in Anatomy, the Name of a Vein, call'd also *Hepatica*; arising from the Axillary Branch, and running the whole Length of the Arm. It divides it self into two; the one wherof runs down the *Radius*, the other down the *Ulna*; the little Branches wherof extend to the Fingers. There are two Veins of this Name; the one wherof is call'd the *superficial*, or *subcutaneous*; the other, the *deeper* or *inner Basilica*.

BASILICON, in Pharmacy, is an Unguent so call'd, compos'd of Rosin, Wax, Pitch, and Oil; which the Surgeons use for a Suppuration.

BASILICS, a Collection of the *Roman Laws*, translated into Greek by the Order of *Basilius* and *Leo*, which were of Force in the *Eastern Empire* till its Dissolution. They comprehended the *Institutes*, *Digests*, *Code*, and *Novels*, and some Edicts of *Justinian*, and other Emperors. The Collection consist'd of 60 Books; for which reason it was call'd *Hexastichus*. It is supposed to be the Work of the Emperor *Leo*, the Philosopher, who gave it the Name of his Father *Basil*. Of the 60 Books, there are now remaining 41; the remaining 19 are, in some measure, supplied from the *Synopsis Basilicon*, &c.

Basilics were Officers in the *Grecian Empire*, who carried the Emperor's Orders. The Word is deriv'd from *basilikos*, royal.

BASILICUS, or *Cor Leonis*, is a six'd Star of the first Magnitude, in the Constellation *Leo*. Its Longitude, Latitude, &c. see among those of the other Stars in the Constellation *Leo*.

BASILIDIANS, were Hereticks, the Followers of *Basilides*, who lived near the Beginning of the second Century: He was educated in the *Gnostick School* over which *Simon Magus* presided; with whom he agreed, that *Christ* was only a Man in Appearance, that his Body was a Phantom, and, that he gave his Form to *Simon the Cyrenian*, who was crucified in his Stead. He allow'd his Disciples to renounce the Faith to avoid Martyrdom; because, says he,

ted to find many Myſteries in the Name of God, by which they impoſed upon the People. They alſo invented certain Amulets, to which they attributed great Virtues. We learn from *Euſebius*, that this Impoſitor wrote 24 Books upon the Goſpels, and that he forged ſeveral Propheſies; to two of which he gave the Names *Barabba* and *Zarobab*: His Diſciples ſuppoſed there were particular Virtues in Names, and thought with *Pythagoras* and *Plato*, that Names were not found by chance, but naturally ſignified ſomething. *Baſtides*, to imitate *Pythagoras*, made his Diſciples keep ſilence for five Years.

BASIOGLOSSUM, or rather *Baſiogloſſum*, in Anatomy, is a Pair of Muſcles which ariſe ſlightly from the Baſis of the *Oſ Hyoides*, and are inſerted into the Root of the Tongue: They ſerve to draw the Tongue towards the Bottom of the Mouth. The Word comes from the *Greek* *baſis*, Foundation, and *glossum*, *lingua*, a Tongue.

BASIS, in Anatomy, is applied to the upper and broader part of the Heart, in oppoſition to the *Mitra*, or Point; becauſe, conſidering it as a Cone, which it reſembles in Shape, this Name is proper to it, altho' by its Situation it is uppermoſt. The Root of the *Oſ Hyoides* hath likewiſe this Name. See *Heart*.

BASION, in Anatomy, is a round Cavity in form of a Tunnel, ſituate between the anterior Ventracles of the Brain, deſcending from its Baſe, and ending in a Point at the *Glandula Pituitaria*; 'tis form'd of the *Pia Mater*, and receives the Serofity which comes from the Brain, and paſſes thro' the Pituitary Gland, and from thence into the Veins. That Capacity alſo is called *Baſion*, which is form'd by the *Oſſa Iſia* and *Sacrum*, and contains the Bladder of Urine, the *Matrix*, and the Intestines. See *Pelvis*.

Baſions of a Balance, two Pieces of Braſs, or other Matter, faſtened to the Extremities of the Strings; the one to hold the Weight, the other the thing to be weigh'd. See *Balance*.

Baſion, or *Diſh*, among Glaſs Grinders. They uſe various kinds of *Baſions*, of Copper, Iron, &c. and of various Forms, ſome deeper, others ſhallower, according to the Focus of the Glaſſes to be ground. In theſe *Baſions* it is, that Convex Glaſſes are form'd, as Concave ones are form'd on Spheres or Bowls. Glaſſes are work'd in *Baſions* two ways: In the firſt the *Baſion* is fitted to the Arbor, or Tree, of a Lathe, and the Glaſs (fix'd with Cement to a Handle of Wood) preſented and held ſtill in the Right Hand within the *Baſion*, while the proper Motion is given by the Foot to the *Baſion*: In the other, the *Baſion* is fix'd to a Stand, or Block, and the Glaſs with its wooden Handle moved. The *moveable Baſions* are very ſmall, ſeldom exceeding five or ſix Inches in Diameter; the others are larger, ſometimes above ten Foot Diameter. After the Glaſs has been ground in the *Baſion*, 'tis brought ſmoother with Greafic and Emery; and poliſh'd firſt with Tripoli, and finiſh'd with Paper cemented to the Bottom of the *Baſion*. See *Glaſs*, *Lens*, *Mirror*.

Baſion, among Hatters, a large round Shell, or Cafe, ordinarily of Iron, placed over a Furnace; wherein the Matter of the Hat is moulded into Form. The Hatters have alſo *Baſions* for the Brims of Hats, uſually of Lead, having an Aperture in the middle, of a Diameter ſufficient for the larreſt Block to go through. See *Hat*.

Baſion is alſo uſed on various Occaſions for a Reſervatory of Water; as, the *Baſion of a Jet d'Eau*, or Fountain; the *Baſion of a Port*, of a Bath, &c. which laſt *Venerius* calls *Labrum*. See *Fountain*.

BASS-VIOL, a Muſical Instrument, of the ſame Form with that of the *Violin*, except that 'tis much larger. 'Tis ſtruck like that, with a Bow; but has Strings and eight Stops, divided into Half-Stops, or Semi-Tones. The Sound it yields is much more grave, ſweet, and agreeable, than that of the *Violin*, and of much better effect in a Concert. See *Violin*.

BASSON, or *Baſſoon*, a Muſical Instrument of the Wind Kind, ſerving for the *Baſe* in Concerts of Muſick, Hautboys, &c. To make it more portable it divides into two Parts: its Diameter at Bottom is nine Inches, and its Holes are ſtopp'd with Keys, &c. like large Flutes.

BASSO RELIEVO, or *Baſs Relief*, a Piece of Sculpture, the Figures whereof do not project far, or ſtand out from the Ground with their full Proportion, *M. Felſbin* diſtinguiſhes three Kinds of *Baſſo Relievo's*; in the firſt the Front Figures appear almoſt with their full *Relievo*, in the ſecond they do but ſtand out one half, and in the third much leſs, as in *Coins*, *Vaſes*, &c. See *Relievo*.

BASTARD, a natural Child, or one born out of lawful Wedlock: differing from one born in Adultery, or Inceſt, in that the Perſons concern'd are free, or allow'd to marry. See *Marriage*, *Adultery*, *Concubines*, &c.

The *Baſtards*, or natural Sons of a King in France, are Princes when own'd; thoſe of a Prince, or Nobleman, are Gentlemen; but thoſe of a Gentleman are only Plebeians, and pay Taxes. *Baſtards* cannot ſucceed before they are legitimated; nor have *Successors* except their own Chil-

dren begot in Wedlock; otherwiſe their *Succession* belongs to the King. By the *Roman Law* the Mother ſucceeded her *Baſtard-Child*, & *vice verſa*: But there was a great Difference between *Baſtards* and thoſe they call'd *Sporious*. The Law did not own the latter, nor allow them *Succession*, becauſe they were born in common and uncertain Proſtitution. *Is non habet Patrem, cui Pater eſt Populus*. The former fort, born in Concubinage, which reſembles Marriage, ſucceeded their Mothers, and had a Right to demand *Succession* of their natural Fathers. They were look'd upon as domeſtick Creditors, that ought to be treated the more favourably, for being the innocent Product of their Parents Crimes. *Solus* would have it, that the Parents ſhould be deprived of their paternal Authority over their *Baſtards*, becauſe, as they were only Parents for Penſure, that ought to be their only Reward. Antiently in *Rome*, natural Children were quite excluded from ſucceeding their Father *ab inteſtat*, but they might be appointed Heirs in general. The Emperors *Arcaudus* and *Honorius* made a Reſtriction, that when there were legitimate Children, the *Baſtards* ſhould only come in for a Twelfth, to be ſhared with their Mother. *Juſtinian* afterwards ordered, that they might come in for Half; and ſucceed *ab inteſtat*, for a Sixth, when there were Legitimates. *Baſtards* might be legitimated by ſubſequent Marriage, or by the Prince's Letters. Only the King in France can give a Right of Legitimacy, and a Power to ſucceed. The Emperor *Anaſtaſius* allow'd Fathers to legitimate their *Baſtards* by Adoption alone: But this was aboliſhed by *Juſtin* and *Juſtinian*, left by this Indulgence they ſhould authorize Concubinage. The Pope has ſometimes legitimated *Baſtards*. Nay, the Holy See has ſometimes diſpens'd not only with Illegitimacy, but the Offſpring of Adultery, as to Spiritual Conſiderations, in allowing of their Promotion to Episcopacy. *Baſtards* not legitimated, may diſpoſe of their Goods by Donation among the Living, or by Will. Thoſe legitimated by ſubſequent Marriage, are in the ſame State, and enjoy the ſame Rights, with thoſe born in Wedlock: But thoſe who are legitimated by the King's Letters, are not eſteem'd legitimate, or capable of ſucceeding, but with regard to ſuch of their Parents as have conſented to their Legitimation. Pope *Clement VII*, by his Bull, forbade a Prieſt to reſign his Benefice to his *Baſtard*. A *Baſtard's* Arms ſhould be croſſed with a Bar, or Filler, from the Left to the Right. They were not formerly allow'd to carry the Arms of their Father, and therefore they invented Arms for themſelves; and this is ſtill done by the natural Sons of a King. *Baſtards* cannot be admitted to ſimple Benefices, or the loweſt Orders, without a Diſpenſation from the Biſhop; or into Holy Orders, or a more than ſimple Benefice, without one from the Pope; nor are they allow'd to bear Office without the Prince's Letters.

A *Baſtard*, by the Law of *England*, cannot inherit Land as Heir to his Father; nor can any Perſon inherit Land as Heir to him, but one that is Heir of his Body. If a Child be begotten by him, who doth marry the Woman after the Child's Birth, yet is it in Judgment of the Law a *Baſtard*, tho' the Church holds it legitimate. If a Man take a Wife who is great with Child by another, not her Husband, it is call'd the Child, and may be the Heir of the Husband, tho' it were born but one Day after the Eſpouſals ſolemniz'd. If one marry a Woman and die before Night, and never bod her, and ſhe have a Child after, it is accounted his Child, and legitimate. If a Man or Woman marry again, and have iſſue by the ſecond Wife or Husband, whiſt the firſt is living, ſuch iſſue is a *Baſtard*. If a Woman elope with a Stranger, and hath a Child by him, her Husband being within the four Seas, this is legitimate, and ſhall inherit the Husband's Lands. He that gets a *Baſtard* in the Hundred of *Middleton*, in *Kent*, forfeits all his Goods and Chattels to the King.

BASTERNA, a Kind of Vehicle, or Chariot, uſed by the antient *Roman* Ladies. *Salmoſius* obſerves, that the *Baſternæ* ſucceeded the *Litteræ*; from whence it differ'd very little, except that the *Litteræ* was borne on the Shoulders of Slaves, and the *Baſternæ* by Beaſts. *Columbo* ſays, it was borne by Mules. *F. Daniel*, *Mabillon*, &c. call it a Kind of Chariot, and ſay it was drawn by Oxen, to go the more gently: And *Gregory de Tours* gives an Inſtance of its being borne by wild Bulls. The Inſide they call'd *Caves*, *Cage*; and it had ſoft Cuſhions or Beds, beſides Glaſſes on each Side, like our Chariots. The Mode of *Baſternæ* was paſſed from *Italy* into *Gaul*, and thence into other Countries; and to this we owe our Chariots; which, tho' we call 'em *Carrus*, yet have they no Conformity to the antient *Carrus*, but are in effect *Baſternæ*'s improv'd. *Papias* thinks, that *Baſternæ* is wrote for *Veſternæ*: *Roficedius* ſays, it ſhould be *Vix Sternæ*, which he concludes from *Iſidore*, who ſays, *Baſternæ*, *Vix Sternæ*. The Word, however, ſeems derived from *baſtu* or *baſtau*, I carry; or from *baſtu*, any thing proper for a Carriage. See *Coſtic*.

BASTILE, is a small antique fortified Castle with Towers, made use of, at present, for Prisons; as that at Paris, built by Charles V. 1569, which alone has retained this Name. Originally, it signified a Reconour before a Place besieg'd.

BASTION, in the Modern Fortification, a huge Mass of Earth usually faced with Sods, sometimes with Brick, rarely with Stone, standing out from a Rampart, whereof it is a principal Part. This is what in the ancient Fortification was called *Bulwork*. A *Bastion* consists of two Faces and two Flanks. The Faces are the Lines BC and CD, (Tab. Fortification, Fig. 1.) including the Angle of the *Bastion*: The Flanks are the Lines BA, SD. The Union of the two Faces makes the outmost or salient Angle, called also the *Angle of the Bastion*: The Union of the two Faces to the two Flanks, makes the Side Angles, called the *Shoulders* or *Epaules*: And the Union of the two other Ends of the Flanks to the two Curtains, the Angles of the Flanks. *Bastions* are either solid or hollow.

The Foundation of the *Bastion* is that great Rule in Fortification, viz. That every Part of the Works must be seen and defended, from some other Part: Mere Angles therefore are not sufficient, but Flanks and Faces are indispensably requisite. If the *Bastions* EFG and HI K consisted of Faces alone, the Angles G and H could not be defended from the Lines FG or IH. But if the *Bastion* consists of Flanks and Faces, as A B C S D, all the Points may be defended from the Flanks; there being none v. g. in the Face BC, but what may be defended from the opposite Flank EL, nor any in the Curtain AB, but may be defended from the adjacent Flanks BA and EL; nor any in one Flank BA, but may be defended from the other EL. For the Proportions of the Faces are not to be less than 24 *Rhineland* Perches, nor more than 30. The Flanks are better as they are longer, provided they stand at the same Angle of the Line of Defence: Hence the Flank must stand at right Angles to the Line of Defence. Indeed, in the ancient Fortification, the Flank is made perpendicular to the Curtain, so as to have the Angle out of the Enemies Eye; but this is now provided for, by sinking the lower Part of the Flank two or three Perches, as the Line AS, nearer the Axis of the *Bastion* CH: Which Part thus sunk, is better if made concave, than rectilinear, and if double, with a Ditch between, than if single. The Disposition of the Flanks makes the principal Part of Fortification; 'tis that on which the Defence principally depends, and which has introduced the various Forms and Manners of Fortifying. If the Angle of the *Bastion* be less than 60 Degrees, it will be too small to give Room for Guns; and besides, to acute as to be easily beaten down by the Enemies Guns; to which may be added, that it will either render the Line of Defence too long, or the Flanks too short: It must therefore be more than 60 Degrees; but whether or no it should be a right Angle, or some intermediate Angle between 60 and 90, or even whether or no it should exceed a right Angle, is still disputed. Hence it follows, that a Triangle can never be fortified, in regard either some or all of the Angles will be either 60 Degrees, or less than 60. See *Fortification*.

Solid Bastions are those that are fill'd up entirely, and have the Earth equal to the Height of the Rampart, without any void Space towards the Centre. *Void or hollow Bastions* are those that have a Rampart, or Parapet, ranging only round about their Flanks and Faces, so that a void Space is left towards the Centre; and the Ground is there so low, that if the Rampart be taken, no Retrenchment can be made in the Centre, but what will lie under the Fire of the Besieged.

A *Flat Bastion* is a *Bastion* built in the middle of a Curtain, when it is too long to be defended by the *Bastion*, at its Extremes: Dr. Harris says, 'tis a *Bastion* built on a right Line.

A *Cut Bastion* is that which has a re-entering Angle at the Point; sometimes also called *Bastion with a Tenaille*; used, when without such a Contrivance the Angle would be too acute. We likewise give the Term *Cut Bastion* to such a one as is cut off from the Place by some Ditch, &c. some modern Engineers having found the Art of Fortifying by Pieces detach'd from the rest. These are also called *Reconnet*.

A *Composed Bastion* is when the two Sides of the interior Polygon are very unequal, which makes the Gorges also unequal.

A *Regular Bastion* is that which hath its due Proportion of Faces, Flanks, and Gorges.

A *Deformed or Irregular Bastion* is that which wants one of its Demi-Gorges; one Side of the interior Polygon being too short. See *Gorge*.

A *Demi-Bastion* hath but one Face and Flank. To fortify the Angle of a Place that is too acute, they cut the Point, and place two *Demi-Bastions*, which make a *Tenaille*, or a re-entering Angle. Their chief Use is before a Hornwork or Crownwork. See *Tenaille*.

A *Double Bastion* is that, which on the Plain of the great *Bastion* hath another *Bastion* built higher, leaving 12 or 18 Feet between the Parapet of the lower and the Foot of the higher.

BASTON, in Law, is used for one of the Wardens of the Fleet; being Officers who attend the King's Courts with a red Staff, for taking such to Ward as are committed by the Court. See *Warden*.

BACHELOR, in a College Sense, a Person possess'd of the *Baccalaureate*, which is the first Degree in the Liberal Arts or Sciences. At *Oxford*, e'er a Person be entitled to the Degree of *Bachelor of Arts*, he must have studied there four Years; three Years more to become *Master of Arts*; and seven more to commence *Bachelor of Divinity*. At *Cambridge*, to commence *Bachelor of Arts*, he must have resided three Years; three Year, more to commence *Master*; and seven more still to become *Bachelor of Divinity*. He may commence *Bachelor of Law* after having studied it six Years. See *Degree*.

In *France*, e'er the Theology-Chairs were founded, they had their *Baccalarii Curiores*, and *Baccalarii Fororati*; the former whereof were yet in their Coffer, or had not yet pass'd thro' their Offices; and the latter had. The *Curiores* were again divided into *Baccalarii Biblici*, who explain'd the Scriptures, and *Baccalarii Sententiarum*, who explain'd the Matter of the Sentences.

There is scarce any Word whose Origin is more controverted among the Critics than that of *Bachelor*, *Baccalarius*. *Martinus* derives the Word from the Latin *Baccalaurea*, quasi *bacca laurea donatus*; in allusion to the Custom that antiently obtain'd, of crowning the Poets with Laurel, *baccis lauri*, as *Petrarch* was at *Rome* in 1343; and *Aleamus* and *Vives* are of the same Opinion. *Rhemanns* derives it from *Baculus* or *Bacillus*, a Staff, because at their Commencement a Staff was put into their Hands, as a Symbol of their Authority, of their Studies being finish'd, and of the Liberty they were restored to. Thus the ancient Gladiators had a Staff given 'em as a Discharge, which *Horace* calls *rude Donatus*. But *Splenus* rejects this Opinion, in regard there is no Appearance, that the Ceremony of putting a Staff in the Hand was ever us'd in the creating of *Bachelors*.

Bachelor was also a Title given to a young Cavalier, who made his first Campaign, and received the military Girdle accordingly. *Camden* defines a *Bachelor*, a Person of a middle Degree between a simple Knight and a Squire: Or, as some will have it, *Bachelor* was a common Name for all the Degrees between a mere Gentleman and a Baron: Thus we find the Lord Admiral sometimes to call'd. See *Knight Bachelor*.

Knights Bachelor were antiently so call'd, quasi *Bai Chevalliers*, as being the lowest Order of Knights, or inferior to Bannerets, &c. See *Knight*. At present these are call'd *Equestres Aurati*, from the gilt Spurs that are put on 'em at the time of their Creation. The Dignity was at first confined to the military Men, but afterwards was confer'd on Men of the Robe. The Ceremony is exceedingly simple; the Candidate kneeling down, the King touches him lightly with a naked Sword, and says, *Suis Chevaller, au nom de Dieu*; and afterwards, *Avenue Chevaller*. *Loyseau* derives the Word, in this Sense, from *Bai Escheval*, as being the last of the military Orders; *Cujas*, from *Baccellarium*, a kind of Knights antiently in great Esteem; *Du Cange*, from *Baccalaris*, a kind of Fees, or Farm consisting of several Pieces of Ground, each whereof contain'd 12 Acres, or as much as two Oxen wou'd plough; the Possessors of which *Baccalaris* were call'd *Bachelors*: He adds, that *Bachelor* sometimes signifies *Labourer*, and sometimes a *Freeman of a City*. A *Bachelor of Arms* was a Name formerly given to a Person who came off Victor in his first Engagement. Lastly, *Caseneuve* and *Alaterra* derive the Word *Bachelor* from *Baculus*, a Staff, in regard the young Cavaliers exercised themselves in fighting with Staffs and Bucklers: Which Opinion is confirm'd from their being call'd *Baculares* in *Oderic*, and *Bacularii* by *Wassingban* in *Richard II*'s Time.

BAT-FOWLING, a Method of catching Birds in the Night, by lighting some Straw or Torches near the Place where they are at Roost; for, upon heating them up, they fly to the Flames, where, being amaz'd, they are easily caught in Nets, or beat down with Bullets fix'd to the Ends of Poles, &c.

BATH, a convenient Receptacle of Water for Persons to wash, or plunge in, either for Health or Pleasure. See *Water*. *Baths* are either *Natural* or *Artificial*. *Natural* again, are either *Hot* or *Cold*. *Hot Baths*, call'd also *Thermæ*, owe their Origin partly to the Admixture of sulphureous Particles, while the Water is passing thro' its subterranean Canals; or rather, while it creeps thro' Beds and Mines of Sulphur, &c. and partly to the Fumes and Vapours exhaling up thro' the Pores of the Earth, where Sulphur is, whether pure or impure, as in Coals, Amber, &c. For these

Substances continually emit Fumes, which warm the Waters in their Passage thro' 'em. In most *Hot Baths*, however, there are likewise mixt Particles of Iron, Allom, Nitre, and other Mineral Bodies, which give 'em an acid astringent Taft. The chief *bat Bath* in our Country, is that near *Wells* in *Somersetshire*; another there is of lesser Note at *Buxton*. These Waters abound with a Mineral Sulphur: They are hot, of a bluish Colour, and strong Scent, and send forth thin Vapours. In the City of *Bath* are four *bat Baths*; one Triangular, called the *Cross Bath*, from a Cross that formerly stood in the midst of it; the Heat of which is more gentle than the others, because it has fewer Springs: The second is the *Hot Bath*, which heretofore was much hotter than the rest, when it was not so large as it now is: The other two are the *King's* and the *Queen's Bath*, divided only by a Wall, the last having no Spring, but receiving the Water from the *King's Bath*, which is about 60 Feet square, and has in the middle of it many hot Springs, which render its healing Quality more effectual. Each of these hath a Pump to throw out Water upon the Discafsed, where 'tis required. The Waters of these *Baths* don't pass thro' the Body, like other Mineral Waters; but if Salt be added, they purge profusely. On Settlement, it affords a black Mud, used by way of Cataplasm in Aches; of more Service to some than the Waters themselves: the like it deposits on Distillation, and no other. Dr. *Affensold* found the Colour of the Salt drawn from the *King's* and *Hot Bath*, yellow, and that from the *Cross Bath* white; whence he concludes, that the *Cross Bath* has more Allom and Nitro than the *Hotter*, which abound more with Sulphur; and yet the *Cross Bath* is found to loosen shrunk Sinews, by which it should not seem to abound much with Allom: 'tis harsher to the Taft than the others, and fooks the Hands more. The *Cross Bath* preys on Silver, and all of 'em on Iron, but none on Brafs.

The *Bath* is very useful in Discafses of the Head, as Paluses, &c. in cuticular Discafses, as Leprosies, &c. Obstructions and Hardness of the Bowels, the Scurvy and Stone, and in most Discafses of Women and Children. These *Baths* have perform'd many Cures, and are commonly used as a last Remedy in obstinate Chronick Discafses; where they succeed well, if they agree with the Constitution of the Patient; but whether they will agree or not, cannot be known without Trial.

Cold Baths were long banish'd out of Medicine, tho' the Ancients had them in the greatest Esteem: But the Improvements accruing to Physick from Geometry and Mechanics, have brought them into use again; and the present Age can boast abundance of noble Cures perform'd by 'em, and such as were long attempted in vain by the most powerful Medicines. The *Cold Bath* is one of the most univerfal and innocent Remedies yet discover'd. 'Tis serviceable in most Chronick Distempers, and reckon'd so safe that Physicians sometimes prescribe it in a beginning Phthisis, or Consumption, when the Lungs are but slightly affected. The Effect of *Cold-Bathing* is attributed not only to its Chills and constringing Power, but in some measure to the Weight of the Water. For, supposing a Person immersed two Foot, and the Area of his Skin to be 15 Foot, he sustains a Weight of Water, added to that of the Air, = 2280 L for 2, the Number of Cubical Feet of Water pressing upon a Foot square of the Skin x 76, the Number of Pounds in a Cubical Foot of Water, is = 152; which x 15, the supposed Number of square Feet on the Surface of the Body, is = 2280 L Troy. Besides, the Water in *Bathing* enters the Body, and mixes with the Blood. For the Rise and Progress of *Cold-Bathing*, and the Cures effected thereby, see *Floyer's* and *Beynard's* History of *Cold-Bathing*.

For *Artificial Baths*, they are various, according to the various Occasions. See *Balneoem*. Sometimes they consist of Milk and emollient Herbs, Rose-Water, &c. when the Design is to humectate; at other times of Bran and Water, when the Design is only to cleanse: Sometimes again, they are made of a Decoction of Roots and Plants, with an Addition of Spirit of Wine, when a Person *bathe*s for a great Pain or Tumor, &c. To these may be added the *Bagnio*, where People are made to sweat by the Heat of a Room, and pouring on of hot Water; after which they generally go into a *bat Bath*. See *Bagnio*.

Vapour-Baths are when the Patient is not plunged into what is prepar'd for the *Bath*, but only receives its Steam or Fume upon those Parts of his Body which require it: Thus, in some Distempers of the Fundament, and Womb, the Patient sits and receives the Fumes of a proper Fermentation or Decoction. There is another Species of *Baths*, made by the burning of Spirit of Wine, the Patient being placed in a convenient close Chair for the Reception of the Fume, which rises and provokes Sweat in a plentiful manner: Care is here taken to keep the Head cool, and secure Respiration. This *Bath* has been found very effectual in removing old obstinate Pains in the Limbs, and Venereal

Complaints; and will often compleat a Cure left unperform'd by Salivation. See *Sudatory*.

Baths, in Architecture, were also large pompous Buildings among the Ancients, erected for the sake of *Bathing*. On the side of each *Bath* were Lavers, which afforded hot Water and cold, to alter its Temperature at Pleasure. These *Baths* were frequented more for the sake of Pleasure than Health. The most magnificent were those of *Titus*, *Palms Emilian*, and *Dioclesian*, of which there are some Ruins still remaining. 'Tis said, that at *Rome* there were 856 *Baths*, publick and private. *Fabrian* adds, that the excessive Luxury of the *Romans*, appear'd in nothing more visible, than in their *Baths*. *Pliny* tells us, that Common People, and even Slaves, had the Walls and Grounds beset with rich Ointments. *Seneca* complains, that the *Baths* of Plebeians were fill'd from Silver Pumps; and that the Freed-men trod on *Gema Marcobius* tells us of one *Sergius Orator*, a Voluptuary, who had *pendent Baths*, hanging in the Air. See *Therma*.

Bath, in Chymistry, See *Balneoem*, and *Artificial Bath*. *Knights of the Bath*, a military Order in *England*, instituted by *Richard II*, who ordain'd that there should be no more than four; but his Successor *Henry IV*, increas'd them to 46. Their Motto was, *Tres in uno*, signifying the three Theological Virtues. 'Twas the Custom to *bathe* before they receiv'd the Golden Spurs; but this was only observ'd at first, being afterwards gradually dropt: However, this gave them the Name. The Order of *Knights of the Bath* is scarce ever confid'd, but at the Coronation of *Kings*, or the Inauguration of a Prince of *Wales*, or Duke of *York*. They wear a red Ribbon Belt-wife. *Camden* and others say, *Henry IV* was the Institutor in 1399, and upon this occasion: That Prince being in the *Bath*, was told by some Knight, that two Widows came to demand Justice of him; when his Majesty leaping out of the *Bath*, cryed, he ought to prefer doing Justice to his Subjects to the Pleasure of the *Bath*; and thereupon created *Knights of the Bath*. Some Authors, however, will have the Order of the *Bath* to have been on foot long before *Henry IV*. Be this as it will, 'tis certain the *Bath* had been used long before, in the Creation of *Knights*, in *France*; tho' there was no Order for making of *Knights*.

BATHMUS, in Anatomy, a Bone, the same as *Trochlea*. Which see.

BATON, in Architecture, is a large Ring, or Moulding, in the Base of a Column, otherwise call'd *Tore*. See *Tore*.

Baton, in Heraldry, a Kind of Bend that has only one third of the usual Breadth. See *Baton*.

BATRACHITES, a Stone supposed to be found in Frogs, to which the ancient Physicians and Naturalists attribute the Virtue of resisting Poison. The Word is form'd from the *Greek*, *Batrachos*, rana, a frog.

BATRACHOMYOMACHIA, a War of the Frogs and the Mice; the Title of a fine Burlesque Poem, usually ascribed to *Homer*. The Subject of the War is the Death of *Polyborax*, a Mouse, Son of *Loartes*, who being mounted on the Back of *Physignates*, a Frog, on a Voyage to her Palace, to which she had invited him, was seiz'd with Fear when he saw himself in the middle of the Pond, so that he tumbled off and was drown'd. *Physignates* being suspected to have shook him off with Design, the Mice required Satisfaction, and unanimously declared War against the Frogs. *Stephens*, *Nunius*, and other modern Authors, take the Poem not to be *Homer's*; but the Ancients seem of another Opinion; and *Sattius*, who wrote under *Domitian*, makes no doubt of it. The Word comes from the *Greek* *Batrachos*, frog, *mys*, mouse, and *machia*, pugna.

BATABLE Ground was Land lying between *England* and *Scotland*, heretofore in question to which it belong'd, when they were distinct Kingdoms. It signifies the same as litigious, or disputable Ground. From *battre*, to beat.

BATTALION, a little Body of infantry rang'd in form of Battel and ready to engage. A Battalion usually contains from 5 to 800 Men, of which one Third are usually Pikes in the middle, and the other two Thirds are Muskets posted on the Wings; But the Number of Men it consists of is not determined. They are usually drawn up with six Men in File, or one before another; those in Length, or Side by Side, being call'd Ranks: Some Regiments consist but of one Battalion, others more numerous are divided into several. *French* Regiments have 16 Companies to a Battalion. See *Regiment*. The Word *Battalion* comes from *Battel*, an Engagement of two Armies, &c. and that from *Battalia*, the Place where two Men fight; or from *Battalia*, the Exercise of People who learn to fight.

BATTEN is a Name the Workmen give to a Scantling of wooden Stuff, from two to four Inches broad, and about an Inch thick; the Length is pretty considerable, but undetermined. The Term is chiefly used in speaking of Doors, &c. which are not fram'd of whole Deal, &c. with Stiles, Rails, and Panels, like Waincoat, but are made

made to appear as if they were, by means of these Pieces, or *Batteux*, bradded on the plain Board round the Edges, and sometimes cross 'em, and up and down: Hence *Batteux Drosses* are such as seem to be Waincot ones, but are not. These are said to be either single or double, as the *Batteux* are fitted on to one Side, or to both.

BATTERY, in Law, an Act that tends to the Breach of the Peace of the Realm, by violently striking or beating a Man, who may therefore indict the other Party, or have his Action of Trepass, or Assault and Battery, against him, (for every Battery implies an Assault) and recover so much in Costs and Damages as the Jury will give him. This Action will lie as well before as after the Indictment. But if the Plaintiff made the first Assault, the Defendant shall be quit, and the Plaintiff be amerced to the King for his false Suit. In some Cases a Man may justify the beating another in a moderate manner, as a Master his Servant, &c.

Battery, in War, the Place where the Cannons are planted to play upon the Enemy. They are usually placed on a Platform, consisting of Planks, that support the Wheels of Carriages, and hinder the Weight of the Cannon from sinking them into the Ground. The Platform is raised a little behind, to check the recoiling of the Pieces. The *Battery* of a Camp is usually surrounded with a Trench and Palisadoes at the Bottom, as also with a Parapet on the Top, having as many Holes as there are Pieces of Artillery, and with two Redoubts on the Wings, or certain Places of Arms capable of covering the Troops which are appointed for their Defence. In all *Batteries*, the open Space left to put the Muzzles of the great Guns out, are called *Embrasures*, and the Distances between the *Embrasures*, *Merlons*. The Guns are generally about 12 Foot distant one from another, that the Parapet may be strong, and the Gunners have room to work. A *funk* or *buried Battery*, is when its Platform is sunk or let down into the Ground, with Trenches cut in the Earth against the Muzzles of the Guns, to serve for *Embrasures*. This sort of *Battery*, which the *French* call *En Terre* and *Ruinante*, is generally used upon the first making Approaches, to beat down the Parapet of any Place.

Cross Batteries are two *Batteries* at a considerable Distance from each other, which play athwart one another at the same time, and upon the same Point, forming right Angles; where what one Bullet shakes, the other bears down. A *Battery d'Enfilade* is one which sweeps the whole Length of a Strait Line, a Street, &c. A *Battery en Echarpé* is that which plays obliquely. A *Battery de Revers*, or *Murdering Battery*, is one that bears upon the Back of any Place; and being placed on an Eminence, sees into it. A *Battery joint*, or *par Camerade*, is when several Guns play at the same time upon one Place.

Battery en Rouage is that used to dismount the Enemy's Pieces.

BATTEURS d'ESTRADE, or *Scouts*, are Horse sent out before, and on the Wings of an Army, two or three Miles, to make Discoveries; of which they give an Account to the General.

BATTLEMENTS, Indentures or Notches on the top of a Wall, Parapet, or other Building, in form of *Embrasures*, for the sake of looking thro' 'em, &c. These were much affected in the old Fortification.

BATTOLOGY, in Grammar, is a multiplying Words without occasion, or a needless Repetition of the same Words over and over in a Discourse; like *Battus*, a ridiculous Poet mentioned by *Ovid*, who introduces him, saying,

Montibus (inquit) erant, Et erant sub montibus illis.

BATTOON, a Term in Heraldry, signifying a fourth part of a Bend-Sinister: It is the usual Mark of Illegitimacy, and is always borne coupé or cut off after this manner.

Batoon also signifies the Earl-Marshal's Staff.

BATTUS, a certain Order of Penitents at *Avignon*, and in *Provence*, whose Piety carries them to execrable severe Discipline upon themselves, both in publick and private.

BÁVINS, in War, Braist-Faggots made with the Brush at length.

BAY, in Geography, a little Gulph, or an Arm of the Sea, stretching up into the Land, and larger in the middle within, than at its Entrance, which is call'd the *Mouth of the Bay*. *Bay*, or *Pen*, likewise signifies a Pond-Head made up a great Height, to keep in Store of Water for driving the Wheels of the Furnace, or Hanser, belonging to an Iron Mill, by the Stream that comes thence thro' a Passage, or Flood-gate, call'd the *Pen-flock*. To *bay* is to bark as a Dog does. Among Huntsmen Deer are said to *bay*, when, after being hard run, they turn head against the Hounds.

BAYONET, a short-pointed Sword made Lancet-fashion, and having, instead of an Hilt, an hollow Iron Handle to fix it at the end of a Musket, so as not to hinder its Fi-

ring or Charging. All the Troops of the Infantry carry them in the Field: They are of great Service to the Dragoons and Fusiliers, after they have spent their Powder and Ball. This Instrument is also used in hitting the Bear or Bear; for which purpose 'tis made larger.

BAYS, in Commerce, a kind of coarse Woolen Stuff, very open, and not cross'd, having a long Nap, sometimes friz'd on one Side, and sometimes not friz'd, according to the Uses it is intended for. This Stuff is wrought on a Loom, with two Treadles, like Flannel. The Manufacture of *Bays* is very considerable in *England*, particularly at *Colchester*; and in *Flanders*, particularly about *Lille* and *Tourney*, &c. Formerly the *French*, as well as *Italians*, were furnish'd with *Bays* from *England*; but of late the *French* Workmen have undertaken to counterfeit 'em, and set up Manufactures of their own, and that with Success; especially at *Nismes*, *Montpellier*, &c. The Commerce of *Bays* is very considerable to *Spain*, *Portugal*, and *Italy*. Their chief Use is for Linings, especially in the Army: The Looking-Glass-makers use 'em behind their Glasses, to preserve the Tin or Quickfilver; and the Case-makers, to line their Cases.

BDELLIUM, or *Bedelium*, a kind of Gum. The Name is well known among the Learned; but they can't agree what it is. 'Tis mention'd in *Genesis*, c. 2. v. 12, and *Josephus* explains the Passage, by saying 'tis the Gum of a Tree resembling the Olive-Tree; and that the *Manna* wherewith the *Jews* were fed in the Desert, resembled this Drug: But *Scaliger* and others set aside this Explication, and own, they don't know what the *Bedelium* mention'd in Scripture is.

The *Bedelium* in use among us, seems again to have been unknown to the Antients: Some say it distils from a kind of Thorn; others from a Tree resembling that which produces the Myrrh. Some say it is produced on the Banks of the River *Senegal* in *Africa*; others, near the City *Saraca* in *Arabia Felix*. When good, 'tis in clear transparent Pieces, of a reddish Grey without; when touch'd with the Tongue, yellow, bitter, soft, and odorous. It enters the Composition of *Mithridate*, and the *Euphrasium divinum*.

BEACON, a Signal for the better securing the Kingdom from foreign Invasions: On certain eminent Places of the Nation are placed long Poles erect, whereon are fasten'd Pitch-Barres to be fir'd by Night, and Smoke made by Day, to give Notice in a few Hours to the whole Kingdom of an approaching Invasion. These are commonly call'd *Beacons*; whence comes *Beaconage*, Money paid towards the Maintenance of a *Beacon*. The Word is derived from the *Saxon*, *Beacnian*, to nod, or signify: Hence also the Word *beckon*.

BEAD, in Architecture, a round Moulding in the *Corinthian* and *Roman* Orders, carved in short Embossments, like *Beads* in Necklaces. See *Boguette*. A *Bead* is usually about $\frac{1}{4}$ of a Circle, and only differs from a *Boneline* in *Boguetts*. When large, the Workmen call 'em *Bonelines*; but sometimes an *Atragal* is thus carved. A *Bead-plain* is also frequently set on the Edge of each Fascia of an Architrave. A *Bead* is often placed on the Lining-Board of a Door-Case, and on the upper Edges of Skirting-Boards.

Bead, among the *Romanists*. See *Chapler*.

BEAD-ROLL, among the *Rosses* Priests, a List or Catalogue of such Persons, for the Rest of whose Souls they are oblig'd to rehearse a certain Number of Prayers, &c. which was done by their *Beads*.

BEADLE signifies a Messenger or Apparitor of a Court, who cites Men to the Court to appear and answer. It is also an Officer under all Parishes and Companies. 'Tis moreover, an Officer at the Universities, whose Place it is to walk before the Matters. Some say they are call'd *Bedelli*, from a Corruption of *Pidelli*, as serving and running on foot. Others from *Pedo*, seu *Baculo*, quia *Virga* *rebeatur*; forming *Podellus* from *Pedans*, a kind of Wand, which is their Symbol; and from *Pedellus*, *Bedellus*. Others derive the Word from the *Hebrew* בדל *bedal*, *ordinaire*, to range or dispose. *Spelman*, *Vossius*, and *Saumer*, derive it from the *Saxon*, *Bidel*, a publick Crier; in which Sense Bishops, in some antient *Saxon* Manuscripts, are call'd *Beadies of God*, *Dei Bedelli*. The Translator of the *Saxons New Testament*, renders *Evangelist* by *Bydele*; and the Word is used in the same Sense in the *Laws of Scotland*.

BEAK, in Architecture, a little Fillet left on the Edge of a Larmier, which forms a Canal, and makes a kind of Pendant. *Cbin-Beak* is also used for a Moulding, the same with the Quarter-round, except that its Situation is inverted. We find but few Examples hereof in the antient Buildings; but 'tis very frequent in the modern.

Beak, or *Beak-head*, of a Ship, is that Part of it which is fasten'd to the Stern, and is supported by a Knee; and is the becoming Part, or Grace of a Ship. See *Stern*.

BEAM, in Building, the largest Piece of Wood it is a Building, being laid a-cross the Walls, and serving to sup-

port the principal Rafters of the Roof. No Houfe has lefs than two of thefe *Beams*, viz. one at each Head: Into thefe the Girders of the Garret-Floor are alfo framed; and, if the Building be Timber, the Tenon of the Posts. The Proportions of *Beams* near London, are fix'd by Statute, as follows: A *Beam* 15 Foot long, muft be feven Inches on one fide its Square, and five on the other; if it be 16 Foot long, one fide muft be eight Inches, the other fix: If 17 Foot long, one fide muft be 10 Inches, the other fix: In the Country they usually make 'em ftronger. Sir *H. Wotton* advifes thefe to be of the ftrongeft and moft durable Timber. *Herron* tells us, that in *Fer. Cortes's* Palace, in *Mexico*, there were 7000 *Beams* of Cedar: But he muft certainly ufe the Wood *Beam* in a greater Latitude than what we do. In effect, the *French*, under *Poutre*, *Beams*, take in not only the Pieces which fupport the Rafters, but alfo thofe which fustain the Joifts for the Ceilings. Some of their beft Authors have confider'd the Force or Strength of *Beams*, and brought their Refiftance to a precise Calculation; particularly *M. Varignon*, and *M. Parent*; the System of the latter is as follows.

When, in a *Beam* breaking Parallel to its Bafe, which is fuppofed to be a Parallelogram, two Plans of Fibres, which were before contiguous, are feperated, there is nothing to be confider'd in thofe Fibres, but their Number, Bignefs, Tension before they broke, and the Lever by which they act; all thefe together making the Refiftance of the *Beam* to be broke. Suppofe then another *Beam* of the fame Wood, where the Bafe is likewife a Parallelogram, and of any Bignefs, with regard to the other, at Pleafure; the Height of each of thefe, when laid Horizontal, being divided into an indefinite Number of equal Parts, and their Breadth into the fame Number, in each of their Bafes will be found an equal Number of little quadrangular Cells, proportional to the Bafes whereof they are Parts: Thefe then will represent little Bafes, or which is the fame thing, the Thicknefs of the Fibres to be feperated for the Fracture of each *Beam*; and fince the Number of Cells is equal in each, the Ratio of the Bafes of both *Beams* will be that of the Refiftance of their Fibres, both with regard to Number and Thicknefs. Now, the two *Beams* being fuppofed of the fame Wood, the Fibres, the moft remote from the Points of Support, which are thofe which break the firft, muft be equally fretch'd when they break. Thus the Fibres, v. g. of the 10th Division, are equally fretch'd in each Cafe, when the firft breaks; and in whatever Proportion the Tension be fuppofed, 'twill ftill be the fame in both Cafes; fo that the Doctrine is entirely free, and unembarrass'd with any System of Phyticks. Laftly, 'tis evident the Levers whereby the Fibres of the two *Beams* act, are represented by the Height of their Bafes; and of Confequence, the whole Refiftance of each *Beam* is the Product of its Bafe by its Height; or, which is the fame thing, the Square of the Height multiplied by the Breadth: Which holds, not only in cafe of Parallelogrammatick, but alfo of Elliptick Bafes.

Hence, if the Bafes of two *Beams* be equal, the both their Heights and Breadths be unequal, their Refiftance will be as the Heights alone; and by Confequence, one and the fame *Beam* laid on the fmalleft fide of its Bafe, will refift more than when laid flat, in proportion as the firft Situation gives it a greater Height than the fecond: and thus an Elliptick Bafe will refift more, when laid on its greateft Axis, than on its fmalleft.

Since in *Beams* equally long, 'tis the Bafes that determine the Proportion of their Weights or Solidities; and fince their Bafes being equal, their Heights may be different, two *Beams* of the fame Weight may have Refiftances differing to Infinity: Thus, if in the one the Height of the Bafe be conceiv'd infinitely great, and the Breadth infinitely fmall, while in the other the Dimensions of the Bafe are finite, the Refiftance of the firft will be infinitely greater than that of the fecond, tho' their Solidity and Weight be the fame. If therefore all required in Architecture were to have *Beams*, capable of fupporting vaft Loads, and at the fame time have the leaft Weights poffible, 'tis plain they muft be cut thin as *Laths*, and laid edge-wife.

If the Bafes of the two *Beams* be fuppof'd unequal, but the Sum of the Sides of the two Bafes equal, v. g. if they be either 12 and 12, or 11 and 13, or 10 and 14, &c. fo that they always make 24; and further, if they be fuppof'd to be laid edge-wife; purfuing the Series, it will appear, that in the *Beam* of 12 and 12 the Refiftance will be 1728, and the Solidity or Weight 244; and that in the laft, or 11 and 13, the Refiftance will be 529, and the Weight 22: The firft therefore, which is fquare, will have lefs than half the Strength of the laft, with regard to its Weight. Hence *M. Parent* remarks, that the common Practice of cutting the *Beams* out of Trees as fquare as poffible, is ill Husbandry: He hence takes occafion to determine geometrically, what Dimensions the Bafe of a *Beam*, to be cut out of any Tree propos'd, fhall have, in order to

its having the greateft poffible Refiftance; or, which is the fame thing, a Circular Bafe being given, he determines the Rectangle of the greateft Refiftance that can be infcrib'd, and finds that the Sides muft be nearly as 7 to 5, which agrees with Obfervation.

Hitherto the Length of the *Beams* has been fuppofed equal; if it be unequal, the Bafes will refift fo much the lefs, as the *Beams* are longer. To this it may be added, that a *Beam* fustain'd at each End, breaking by a Weight fuspend'd from its middle, does not only break at the middle, but alfo at each Extreme; or, if it does not actually break there, at leaft immediately before the Moment of the Fracture, which is that of the Equilibrium between the Refiftance and the Weight, its Fibres are as much fretch'd at the Extremes as in the Middle: So that of the Weight fustain'd by the middle there is but one third Part which acts at the middle, to make the Fracture; the other two only acting to induce a Fracture in the two Extremes. A *Beam* may either be fuppofed loaden only with its own Weight, or with other foreign Weights applied at any diftance, or only with thofe foreign Weights; fince according to *M. Parent* the Weight of a *Beam* is not ordinarily above $\frac{1}{2}$ part of the Load given it to fustain, 'tis evident that in confidering feveral Weights they muft be all reduced by the common Rules to one common Centre of Gravity. *M. Parent* has calculated Tables of the Weights that will be fustain'd by the middle, in *Beams* of various Bafes and Lengths, fitted at each End into Walls, on a Suppofition that a Piece of Oak of an Inch fquare and a Foot long, retain'd horizontally by the two Extremes, will fustain 25 *lib.* in its middle before it breaks, which 'tis found by Experience it will. See *Memo. French Academy, An. 1708.*

BEAM-COMPASSES, an Instrument made in Wood or Brafs, with sliding Sockets, or Curfors, ferving to carry feveral flifting Points, in order to draw and divide Circles with very long Radii. They are ufe of in large Projections for drawing the Furniture, on Wall-Dials, &c. See **COMPASSES**.

BEAM-FILLING in Building, the filling up the vacant Space between the Raifer and Roof, with Stones, or Bricks, laid between the Rafters on the Raifer, and plaiter'd on with Loom; frequent where the Garrets are not purgeted, or plaiter'd.

BEAM, among Hunters, that Part of the Head of a Deer, which bears the Antlers, Royals, and Tops; the little Streaks wherein are called *Circles*. From the *Saxons* *Beams*, a Tree; becaufe they grow out of the Head, as Branches out of a Tree.

BEAMS of a Ship are the large, main, crofs Timbers, which hold the Sides of a Ship from falling together, and which alfo fupport the Decks and Orlops. The *main Beam* is next the Main-Maft; and from it they are reckoned by *First, Second, and Third*. The *great Beam* of all is called the *Main-Ship-Beam*.

BEAR, in Astronomy, a Name given to two Conftellations; called the *Greater* and the *Leffer Bear*; or *Ursa Major*, and *Minor*: The Pole-Star is laid to be in the Tail of the *Leffer*; becaufe that Star is never above two Degrees diftant from the North-Pole of the World. See *URSA Major & Minor*.

BEAR is alfo a Term ufed in Heraldry: Thus, he that hath a Coat of Arms, is laid to *bear* in it the feveral Charges or Ordinaries which are in his Efcutcheon; as, if there are three Lions Rampant in it, he is laid to *bear three Lions Rampant*. See **CHARGE**, &c.

At Sea, when a Ship fails towards the Shore, fhe is laid to *bear in with the Land*; when a Ship that was to Windward comes under another Ship's Stern, and fo gives her the Wind, fhe is laid to *bear under her Lee*; if a Ship fails into an Harbour with the Wind large, or before the Wind, fhe is laid to *bear in with the Harbour*, &c. In Conding they fay, *bear up the Helm*, that is, let the Ship go more large before the Wind; and *bear up round*, that is, let the Ship go between her two Sheets, directly before the Wind. There is likewife another Ufe of the Word, in reference to the Burden of a Ship, (which Word is derived from hence) for, they fay a Ship *bears*, when having too leeder a Quarter fhe will fink too deep into the Water with an over-light Freight, and thereby can carry but a fmall Quantity of Goods.

BEARD. See **HAIR**, and **TONSURE**.

BEARD of a Comet, the Rays which the Comet emits towards that part of the Heavens to which its proper Motion feems to direct it; in which the *Beard* of the Comet is diftinguifhed from the *Tail*, which is underftood of the Rays emitted towards that part whence its Motion feems to carry it. 'Tis called *Beard*, from fome fancied Refemblance it bears to the *Beard* of a Man. See **COMET**.

BEARER, in Architecture, a Poft, or Brick-Wall, trimm'd up between the two Ends of a Piece of Timber to fhorten its Bearing, or to prevent its bearing with the whole Weight at the Ends only.

BEARER of a Bill of Exchange, &c. the Person in whose Hands it is, and in favour of whom the last Order or Endorsement was passed. When a Bill is said to be *payable to Bearer*, it is understood to be payable to him who first offers himself after it becomes due. To be paid a Bill of this kind, there needs neither Order nor Transfer: yet 'tis good to know to whom 'tis paid. See **BILL OF EXCHANGE**.

BEARERS, in Heraldry. See **SUPPORTERS**.

BEARING, in Geography and Navigation, the Situation of one Place from another, with regard to the Points of the Compass; or, the Angle, which a Line drawn thro' the two Places makes with the Meridians of each. The *Bearings* of Places are usually determined from the Magnetic Needle: In the managing of these lies the principal Part of Surveying; since the *Bearing* and *Distance* of a second Point from a first being found, the Place of that second is found; or the *Bearings* of a third Point from two others, whose *Distance* from each other is known, the Place of the third is found: Instrumentally we mean; for, to calculate Trigonometrically, there must be more *Data*. Mr. Collins gives the Solution of a Problem in the *Philos. Transact.* where the *Distances* of three Objects in the same Plain being given, and the *Bearings* from a fourth Place in the same Plain observ'd, the *Distances* from the Place of Observation to the respective Objects are requir'd. See **SURVEYING**.

BEARING of a Piece of Timber, in Carpentry, the Space either between the two fix'd Extremes thereof, when it has no other Support; which is called *bearing at length*; or between one Extreme, and a Post, Brick-Wall, &c. trimm'd up between the Ends to shorten its *Bearing*.

BEASTS of Chase, in our Statute-Books, are five; the Buck, Doe, Fox, Martin, and Roe. *Beasts of the Forest* are, the Hart, Hind, Hare, Boar, and Wolf. *Beasts and Fowls of the Warren* are, the Hare, Coney, Pheasant, and Partridge. See **GAME**.

BEATIFICATION, in the Romish Church, an Act whereby the Pope declares a Person happy, after Death. *Beatification* differs from *Canonization*: in the former the Pope does not act as a Judge in determining the State of the *beatified*, but only grants a Privilege to certain Persons to honour him by a particular religious Worship, without incurring the Penalty of superstitious Worshipers; but in *Canonization* the Pope speaks as a Judge, and determines *ex Cathedra* upon the State of the *canoniz'd*. *Beatification* was introduc'd when 'twas thought proper to delay the *Canonization* of Saints, for the greater Assurance of the Truth, and Manifestation of the rigorous Steps taken in the Procedure. See **CANONIZATION**.

BEATING, in Medicine, a Term applied to the Agitation or Palpitation of the Pulse or Heart. Some Physicians distinguish 81 different Kinds of Simple *Beatings*, and 15 compound ones. They compute about 60 *Beats* in the Space of a Minute in a temperate Man. See **PULSE**.

BEATING of Gold and Silver. See **GOLD-BEATING**, &c.

BEATS in a Watch, or Clock, are the Strokes made by the Fangs, or Pallers of the Spindle of the Balance; or of the Pads in a Royal Pendulum. See **CLOCK-WORK**.

BEAU-PLEADER, a Writ on the Statute of *Merbridge*, whereby it is provided that no Fine shall be taken of any Man in any Court for *fair-pleading*, i. e. for not *pleading* truly, and to the purpose.

BEAUTY, a Term whereby we express a certain relation of some Object, either to an agreeable Sensation, or to an Idea of Approbation. When therefore I say a thing is *beautiful*, I either mean that I perceive something that I approve, or that something gives me Pleasure: Whence it appears, that the Idea affix'd to the Word *Beauty* is double; which renders the Word equivocal, and is the Source of all the Disputes on the Subject of *Beauty*. We must therefore distinguish between Ideas and Sensations. Ideas take up the Mind; Sensations interest the Heart. Tho' we see nothing in an Object to interest us, we may yet discover something in its Idea to merit our Approbation. Such an Object therefore pleases, and does not please, i. e. it pleases the Idea, and not the Sensation. On the contrary, there are some Objects whose Ideas don't offer any thing laudable, which yet excite agreeable Sensations. There is therefore *Beauty* and *Beauty*. 'Tis exceeding hard to fix any general Characteristics of *Beauty*: For, as the Ideas and Sensations of different Persons differ according to the Habitudes of the Body, and the Turn of the Mind; so do the relations of Objects to these Ideas and Sensations vary, whence what we call *Beauty* results. Hence arise those different Opinions of a *beautiful Thought*, a *beautiful Woman*, a *beautiful Painting*, &c. M. Perrault distinguishes two Kinds of *Beauties* in Architecture, which came in pretty early with the two Species of *Beauty* above. The one he calls *positive* and *convincing*, such as the Richness of the Materials, Grandeur of the Structure, Neatness of the Workmanship, Symmetry, &c. The others he calls *arbitrary*, which depend on the Will, and might

have their Proportion changed without Deformity. These only please by the Connexion, or Affociation of their Ideas with others of a different Kind, and which please of themselves; and owe their Beauty to that Prepossession of the Mind, whereby a thing whose Value we do know, infatuates an Esteem for others which we do not. Thus he observes, there are many things in Architecture which Reason and good Sense would judge deformed, and which however, Custom has not only made tolerable, but even *beautiful*, by their being always joined with other *Beauties* that are positive. Thus, being at first pleas'd with viewing 'em in Company, and merely on account of their Company, at length we become pleas'd with 'em alone; and thus we frequently fall in love with Deformities, and grow fond of Faults. Hence the Use of Foils appears founded on an ill Philosophy. If a *Beauty* takes off from a *Deformity*, the *Deformity* in its turn takes off from the *Beauty*: 'Tis the Foil therefore is the Gainer, the Diamond loses. The Diamond pleases, we are pleas'd in some measure with every thing about it, particularly the Foil; the Foil displeases, we are in some measure displeas'd with every thing about it, particularly the Diamond: The Mind can't be well pleas'd and displeas'd at the same time. By viewing the Diamond and Foil together, a Man might in a long Course of Time find the one almost as *beautiful* as the other. The Disparity would be always diminishing, till they came near a Level: By removing 'em a-part, they would by degrees return to their original State, i. e. the Diamond would recover, and the Foil lose its Lustre. See **LOVE**.

BECHICA, Medicines proper for Diseases of the Lungs and Breast; frequently also call'd *Pectorals*. *Bechick* is also used for any thing relating to a Cough, &c. The Word comes from the Greek, *βηχ*, *βηχ*, *βηχ*, *Cough*.

BED. The old Romans had various kinds of *Beds* for Repose; as, their *Lectus cubicularis*, or Chamber-*Bed*, whereon they slept; their *Tabula-Bed*, or *Lectus discubitorius*, whereon they eat, (for they always eat lying) there being usually three Persons to one *Bed*, whereof the middle Place was accounted the most honourable, as well as the *middle Bed*. They had also their *Lectus incubratorius*, whereon they studied; and a *Lectus funebrius*, or *emortuarius*, whereon the Dead were carried to the Pile.

BED of the Carriage of a great Gun, is that thick Plank which lies immediately under the Piece; being, as it were, the Body of the Carriage.

BED-CHAMBER: with us, the *Gentlemen of the Bed-Chamber* are Persons of the first Rank, 11 in Number; whose Office is, each in his turn, to wait a Week in the King's *Bed-Chamber*, lying by the King on a *Pallor-Bed* all Night, and to wait on the King when he eats in private. The first of these is *Groom of the Stole*, or *Long-Robe*. See **STOLE**.

BED, in Gardening, a Piece of made Ground, rais'd above the Level of the rest.

BED, in Masonry, a Course, or Range, of Stones; and the Joint of the *Bed* is the Mortar between two Stones placed over each other.

BED, in speaking of Minerals and Fossils, signifies certain *Strata*, or Thicknesses of Matter dispos'd over each other. See **STRATA** and **VEIN**.

BED, or **BEDDING-MOULDING**, in Architecture, a Term used by the Workmen for those Members in a Cornice which are placed below the Coronet; and now a *Bed-Moulding* usually consists of these four Members, an O-G, a List, a large Boultime, and another List under the Coronet.

BEECH-OIL, an Oil drawn from the Fruit, or Mast, of the *Beech-Tree*. The *Beech-Mast* is a kind of Seed in form of a Nut, or Acorn, containing a whitish, oleaginous Pith, of a very agreeable Taste; whereof is made an Oil much valued in Salades, &c. 'Tis very common in *Picardy*, and other Places, where the Mast abounds. They draw it cold, by Expression, after the Mast has been shell'd, and ground, or pounded. An Attempt was made a few Years ago, to introduce the Manufacture of *Beech-Oil* in *England*, and a Patent granted to the Proprietor, but without Success; the Country-People, it seems, turning their Mast to better account in feeding the Hogs with it, than in selling it to the Patentee, and his Co-Proprietors, for Oil. See **OIL**.

BEER, a popular Drink, prepared from Malt and Hops. *Matthioli* takes the *Zythum* and *Corani* of the Antients, to be the same with the *Beer* of our Days; and thinks the only Difference between *Zythum* and *Corani*, to lie in some Circumstances of the Preparation, which render the one stronger than the other. See **MALT-LIQUORS**.

Tacitus, speaking of the ancient Germans, *Diescorides*, *Galen*, &c. condemn *Beer* as prejudicial to the Head, Nerves, and membranous Parts, as occasioning a more lasting and more uneasy Drunkenness than Wine, and as promoting a Suppression of Urine, and sometimes a Leprosy.

M. *Perrault*, *Rainsfant*, &c. defend the Modern *Beers*; arguing, that the Hops used with us, and which the Antients were Strangers to, having a Faculty of purifying the Blood, and removing Obstructions, serve as a Corrector, and free the Drink from the Inconveniences laid at the door of that of the Antients. For the Manner of preparing *Beer*, see BREWING; for its Qualities, see MALT-LIQUOR. The Word comes from the old German, *Biere*: *Festus* derives it from the *Latin*, *bibere*, to drink; others from the Hebrew, *Bar*, Corn; others from *Bion*, a Drink mentioned by *Pliny*.

BEER MEASURE. See MEASURE.

BEGLER-BEG, a Turkish Title for a Governor of a Province, who has under him several *Sangiaks*, or Sub-Governors. There are 28 *Beglerbegs* in the Ottoman Empire. *Dous-Beglerbeg* is the *Basha* of the Sea, or the Admiral of the *Turks*. *Beg*, in the Turkish Language, signifies Lord; and *Beglerbeg*, or *Beglerbeghi*, Lords of Lords.

BEGLIARD, or BRIGIARD, the Name of an Heretical Sect in Germany, which sprung up towards the End of the 13th Century. Their Head was one *Dulcinus*. Their principal Tenets were, that Man, in this Life, might be impeccable; and, that he might arrive to a Degree of Perfection not to be exceeded; that this State was as happy as Heaven, which when once obtain'd, they were no longer obliged to observe the Falls of the Church, nor obey their Superiors; that every intellectual Creature is self-happy; that it stands in need of nothing but the Light of Glory to raise it to the Vision and Enjoyment of God; that none, but the Imperfect, apply themselves to precise virtuous Actions; that *Jesus Christ* should not be adored in the Elevation of the Host, nor the Myseries of his Incarnation be regarded; that they condemn'd good Works, and spread abroad impure Doctrines. These Fanatics, who wore the Habits of Monks, without paying regard to any Rule, or observing Celibacy, were condemn'd under Pope *Clement V.* at the Council of *Vienne*, in 1311.

BEQUINES are devout Societies of young Women, establish'd in several Parts of *Flanders*, *Picardy*, and *Lorraine*. They maintain themselves by the Work of their own Hands; they lead a middle kind of Life, between the Laick and Religious; but make no Vows. These Societies began at *Novelle*, in *Flanders*, A. D. 1226, and soon spread into *France*. Their Habit was particular, but modest; they lived in common, and had Men of great Piety for their Governors. Some of them giving into absurd Opinions, Pope *Clement V.* abolished their Institution; upon which they cess'd in *France*: But, *John XXII.* Successor to *Clement V.* explain'd that Decree, and declar'd only those Societies of the *Bequines* extinct, who had fallen into Heresy.

BELAY on board a Ship, signifies the same as *fasten*; thus they say, *belay the Sheet*, or *Tack*, that is, fasten it to the Kettle, &c.

BELCHING. See RUCTATION.

BELL, a popular Machine, rank'd by Musicians among the number of Musical Instruments of Percussion. Its Form needs no Description; its Parts are the *Body*, or *Bavel*, the *Clapper* with-in-side, and the *Far* or *Caupon*, whereby it is hung to a large Beam of Wood; its Matter is a Metal compounded of twenty Pounds of Pewter to an hundred of Copper, call'd *Bell-Metal*. The Thickness of its Edges is usually $\frac{1}{2}$ of the Diameter, and its Height twice times its Thickness. The *Bell-Founders* have a *Diapason*, or *Bell-Scale*, whereby they measure the Size, Thickness, Weight, and Tone of their *Bells*. The Uses of *Bells* are furnish'd up in the *Latin* Distich:

Laudo Deum verum, Plebem voco, congrego Clerum,
Defunctis ploro, Pestem fugo, Festa decoro.

For the Method of Casting *Bells*, &c. see *FOUNDRY*. Mr. *Hankinck*, and others, find by Experiment, the Sound of a *Bell* struck under Water, to be a fourth deeper than in the Air: But *Morijonne* says, 'tis of the same Pitch in either Element. *Bells* are observ'd to be heard further, placed on Plains, than on Hills; and still further in Valleys, than on Plains: the Reason of which is not difficult to assign, if it be considered, that the higher the sonorous Body is, the rarer is its Medium; consequently the less Impulse it receives, and the less proper Vehicle it is to convey it to a Distance.

The first *Bells* are said to have been made at *Nola*, in *Campania*, whereof *St. Paulinus* was Bishop; at least, 'tis said, he was the first who brought 'em into the Church. And hence, 'tis added, they had their *Latin* Names, *Nolo* and *Campane*: But others say, they take these Names, not from their being invented in *Campania*, but because 'twas here the manner of hanging and balancing of 'em, now in Use, was first practis'd; at least, that they were balanced and hung on the Model of a Balance invented or used in *Campania*. For, in *Latin* Writers we find *Campana Stratera*, for a Counter-poise, and in *Greek* *Campania*, for ponderate, or load or weigh. *Polydore Virgil* ascribes the Invention of *Bells* to Pope *Sabinian*, *St. Gregory's* Successor;

but by Mistake; for *St. Jerome*, Cotemporary with *Paulinus*, makes mention of a *Bell*. In effect, Pope *Sabinian* did not invent *Bells*; but he was the first who appointed the Canonical Hours to be distinguish'd by 'em. We even find mention made of *Bells* in *Ovid*, *Tibullus*, *Marcial*, *Statius*, and *Martial*, and the *Greek* Authors, under the Titles of *Tintinnabula*, and *Sounding Brass*. *Suetonius*, *Dion*, *Serabo*, *Polybius*, *Josephus*, and others, mention 'em under the Names of *Petalis*, *Tintinnabulum*, *Aramentum*, *Crotalum*, *Signum*, &c. But these appear to have been little else but Baubles, and little like the huge *Bells* in use among us.

Hieronymus Mogius, who has a Treatise express on *Bells*, wrote, when in *Chains*, in *Turkey*, and which is account'd very remarkable, purely from his Memory, without the Assistance of any Books) makes large *Bells* a modern Invention. Indeed, we don't hear of any before the sixth Century: In 610, we are told, *Loth*, Bishop of *Orleans*, being at *Sens*, then besieg'd by the Army of *Clotaire*, frighted away the Besiegers by ringing the *Bells* of *St. Stephen's*. The first large *Bells* in *England* are mention'd by *Bede* towards the latter End of that Century. The *Greeks* are commonly said to have been unacquainted with 'em till the ninth Century, when their Construction was first taught them by a *Venetian*. Indeed, 'tis not true that the Use of *Bells* was entirely unknown in the ancient *Eastern* Churches, and that they call'd the People to Church, as at present, with wooden Mallets. *Les Alsatins*, in his *Dissertation of the Greek Temples*, proves the contrary from several ancient Writers. 'Tis his Opinion, that *Bells* first began to be disused among 'em, after the taking of *Constantinople* by the *Turks*; who, it seems, prohibited 'em, lest their Sounds should disturb the Repose of Souls, which, according to them, wander in the Air. He adds, that they still retain the Use of *Bells* in Places remote from the Commerce of the *Turks*; particularly, very ancient ones in *Mount Abois*: *F. Simon* thinks the *Turks* rather prohibited the *Christians* the Use of *Bells*, out of political, than religious Reasons; inasmuch as the Ringing of *Bells* might serve as a Signal for the Execution of Revolts, &c. See *MINARET*. The City *Bourdeaux* was deprived of its *Bells* for Rebellion; and when 'twas offer'd to have 'em restored, the People refus'd it, after having tasted the Ease and Convenience of being freed from the constant Din and Jangling of *Bells*.

Mattiree Paris observes, that antiently the Use of *Bells* was prohibited in Time of Mourning; tho' at present they make one of the principal Ceremonies of Mourning. *Mabilion* adds, that 'twas an antient Custom to ring the *Bells* for Persons about to expire, to advertise the People to pray for 'em; whence our *Passing-Bells*. *Lobinseau* observes, that the Custom of ringing *Bells*, at the Approach of Thunder, is of some Antiquity; but that the Design was not so much to shake the Air, and so dissipate the Thunder, as to call the People to Church, to pray the Parish may be preserved from that terrible Meteor.

The Custom of baptizing, or blessing *Bells*, is very antient. Some say 'twas introduced by Pope *John XIII.* in 972; but 'tis evidently of an older standing; there being an express Prohibition of the Practice in a Capitulary of *John XIII.* *Alcuin* says 'twas establish'd long before Pope *John XIII.* Yet this is only to be understood of an Order of that Pope, for restoring the Practice which had been disused. See *BAPTISM*.

Nankoo, a City of *China*, was antiently famous for the Largeness of its *Bells*; but their enormous Weight having brought down the Steeple, the whole Building fell to Ruin, and the *Bells* have ever since lain on the Ground. One of these *Bells* is near 12 English Foot high, the Diameter $\frac{7}{8}$, and the Circumference 23; its Figure almost Cylindric, except for a Swelling in the middle; and the Thickness of the Metal about the Edges, seven Inches. From the Dimensions of this *Bell*, its Weight is computed at 50000 Pounds, which is more than double the Weight of that of *Erfort*, said by *Father Kircher* to be the greatest *Bell* in the World. These *Bells* were cast by the first Emperor of the preceding Dynasty, about 300 Years ago. They have each their Name, the *Hanger Seboui*, the *Eater Che*, the *Sleeper Choui*, the *Will Fi*. *Father le Comte* adds, that there are seven other *Bells* in *Pekin*, cast in the Reign of *Toulo*, each of which weighs 120000 Pounds. But the Sounds even of their biggest *Bells*, are very poor; being struck with a Wooden in lieu of an Iron Clapper. The *Agyptians* have none but Wooden Clocks, except one brought by the *Franks* into the Monastery of *St. Anthony*.

BELL: The Sound of a *Bell* consists in a vibratory Motion of the Parts thereof, much like that of a Musical Chord. The Stroke of the Clapper, 'tis evident, must change the Figure of the *Bell*, and of round, make it oval: But the Metal having a great degree of Elasticity, that Part which the Stroke drove furthest from the Centre will fly back again, and that even somewhat nearer to the Centre than before: So that the two Points which before

were the Extremes of the longer Diameter, now become those of the shorter. Thus the Circumference of the *Bell* undergoes alternate Changes of Figure, and by means thereof gives that tremulous Motion to the Air wherein Sound consists. See *SOUND*.

M. Perrault maintains, that the Sound of the same *Bell*, or *Chord*, is a Compound of the Sounds of the several Parts thereof; so that where the Parts are homogeneous, and the Dimensions of the Figure uniform, there is such a perfect Mixture of all these Sounds, as constitutes one uniform, smooth, even Sound; and the contrary Circumstances produce Harshness. This he proves from the *Bell's* differing in Tune according to the Part you strike; and yet strike it any where, there is a Motion of all the Parts. He therefore considers *Bells* as composed of an infinite Number of Rings, which, according to their different Dimensions, have different Tones, as Chords of different Length have: And when struck, the Vibrations of the Parts immediately struck, determine the Tone; being supported by a sufficient Number of consonant Tones in other Parts. See *TUNE*.

BELLOWS, a Machine used to give a brisk Agitation to the Air, by enlarging and contracting its Capacity by Turns. *Bellows* are of various Kinds, as *Domestic Bellows*, *Essemelery Bellows*, *Smiths Bellows*. See *FORGE*. The *Bellows* of an Organ are six Foot long, and four broad; each having an Aperture of four Inches, that the Valve may play easily. There should likewise be a Valve at the Nose of the *Bellows*, that one may not take the Air from the other. To blow an Organ of 16 Feet there are required four Pair of *Bellows*. There are some *Bellows* triangular, which only move on one Side. Others call'd *Lancers Bellows*, from their resembling a Paper Lantern: These move each way, and yet still continue parallel to each other. The *Hessian Bellows* are a Contrivance for driving Air into a Mine for the Respiration of the Miners. This M. *Papin* improved, changing its cylindrical Form into a Spiral one; and with this, working it only with his Foot, he could make a Wind to raise two Pound Weight. See the *Philos. Transact.*

BELOMANCY, a kind of Divination by Arrows; (from *βέλος*, an Arrow, and *μαντις*, Divination,) practis'd in the East, but chiefly among the *Arabians*. 'Twas performed in different manners: One was to mark a Parcel of Arrows, and put eleven, or more of 'em, into a Sack; these were afterwards drawn out, and according as they were mark'd, or not, they judged of future Events. Another way was to have but three Arrows, upon one of which was wrote, *God orders it me*; upon another, *God forbids it me*; and upon the third was wrote nothing at all. These were put into a Quiver, out of which they drew one of the three at random; if it happen'd to be that with the first Inscription, the Thing they consulted about was done; if it chanced to be that with the second Inscription, 'twas left alone; but if it proved that without an Inscription, they draw'd over again. This was an ancient Practice, and probably that which *Eschiel* mentions, *ch. xxi. 21*. At least *St. Jerome* understands it so, and observes that the Practice was frequent among the *Affyrus* or *Babylonians*. Something like it is also mentioned in *Hesiod*, *ch. iv*, only that *Rods* are there mentioned instead of *Arrows*, which is rather *Rhodomancy* than *Belomancy*. *Grævus*, as well as *Jerome*, confounds the two together, and shews that it prevail'd much among the *Megi*, *Chaldeans* and *Seythians*; whence it pass'd to the *Selvonians*, and thence to the *Germans*, whom *Tacitus* observes to make use of it. See *RHODOMANCY*.

BELTS, in Astronomy, two *Fæcidæ*, or Girdles, observ'd in *Jupiter's* Body, more lucid than the rest, and terminated by Parallel Lines, being sometimes broader and sometimes narrower; nor do they constantly take up the same Places in his Disk. *Huggens* observ'd a *Belt* in *Mars* in 1656, much broader than those of *Jupiter*, and possessing the middle Part of his Disk, but very obscure. See *JUPITER*, &c.

BEN, or *Behen*, a Name given to a Medicinal Root, rank'd among the *Cardiacs* and *Counter-Poisons*; and to an Oil extract'd from this Root, used by Perfumers, &c. The Root of *Ben* is divid'd into white and red: The first is insipid, leaving only a little Bitterness behind it on the Tongue; the red is fibrous, brown without, and reddish within. They are both brought from *Syria*, and have the same Virtues, being substituted for each other; they must be chosen dry, and are of an aromattick, astringent Taste.

BENCHERS in an Inn of Court, the Seniors of the House, who have the Government and Direction thereof, and out of whom is yearly chosen a *Treasurer*, &c.

BEND, in Heraldry, one of the eight honourable Ordinaries; consisting a fifth when uncharged, but when charged a third part of the Escutcheon: It is made by two Lines drawn thwartways from the Dexter-Chief to the Sinister-Basis Point; thus he beareth Or, a *Bend Sable*. A *Bend* is subdivided into a

Bendlet which is the sixth part of the Shield, a *Garter* which is the Moiety of a *Bend*, a *Crest* which is the fourth part of a *Bend*, and a *Ribbon* which is the Moiety of a *Crest*. There is also a *Bend-Sinister*, which is drawn from the Sinister-Chief Point to the Dexter-Basis, and this is subdivided into the *Scraps*, or *Scorps*, and the *Battoon*; which latter is the fourth part of the *Bend*. This *Battoon* is the most usual Mark of Illegitimacy; but then it never extends itself quite athwart the Shield, but is cut off a little at each End: When two straight Lines drawn within the *Bend* run nearly parallel to the outward Edges of it, that is call'd *Voiding*; and he that bears it, is said to bear a *Bend voided* thus: He beareth Ermine, a *Bend voided Gules*.

BEND: At Sea they say *bend the Cable*, when it is to be made fast to the Ring of the Anchor; and to *bend two Cables*, is the same as to tie them together. To *unbend the Cable*, is to loosen it from the Ring of the Anchor; which is done when a Ship designs to be long at Sea. To *bend a Main-Sail*, is to make it fall to the Yard in its proper Place. The *Bends* in a Ship are the same with the *Wales*, or *Wales*, which are the outermost Timbers of a Ship, on which Men set their Feet in climbing up: They are reckoned from the Water the first, second, and third *Bend*: They help much to strengthen the Ship, and have the Beams, Knees, and Foot-Hooks bolted into them.

BENDY, the Term in Blazonry for an Escutcheon's being divided *Bend-ways* into an even Number of Partitions; but if they are odd, the *Field* must first be named, and then the Number of the *Bends*.

BENEDICTINES, a Set of Religions, who profess to live by the Rule of *St. Benedict*. The *Benedictines* are divid'd into several Congregations. They wear a loose black Gown, with large wide Sleeves, and a Capuce on their Heads, ending in a Point behind. In the Canon Law they are call'd *Black Friars*, distinguishing them from the other Orders by their Habit, and not by the Name of their Patriarch *St. Benedict*. There is only this Difference between the ancient *Monks* and the *Benedictines*, in that the former were mere *Monks*, without any Attachment to a particular Order. The List of Saints of the *Benedictin* Order is very ample; but they are accus'd by *Baronius*, and many other Writers, of putting those in the List who were never of that Order.

BENEFICE, in an Ecclesiastical Sense, a Church endow'd with a Revenue for the Performance of Divine Service; or, that Revenue itself, assign'd to an Ecclesiastical Person for Life, in return for the Service he is to do to that Church. All Church-Preferments, except Bishopsricks, are call'd *Benefices*; and all *Benefices* are, by the Canons, sometimes call'd *Dignities*: But we now ordinarily distinguish between *Benefice* and *Dignity*, using the Word *Dignity* for *Bishopsricks*, *Deaneries*, *Arch-Deaconries*, and *Prebends*; and *Benefices* for *PARSONAGES*, *VICARAGES*, or *DONATIVES*; which see.

Benefices are divid'd by the *Canons* into *Simple* and *Sacredotal*: In the first there is no Obligation but to read Prayers, sing, &c. as *Canons*, *Chaplains*, *Chantors*, &c. The second is charg'd with a Cure of Souls, or the Direction and Guidance of Consciences, as *Vicarages*, *Rectories*, &c. The *Canons* make three manners of vacating a *Benefice*, viz. *de Jure*, *de Facto*, and *by the Sentence of a Judge*. A *Benefice* is vacated *de Jure*, when the Person enjoying it is guilty of Crimes express'd in those Laws, as *Heresy*, *Simony*, &c. A *Benefice* is vacated *de Facto*, as well as *de Jure*, by the natural Death, or the Resignation of the Incumbent; and that Resignation may be either express, or tacit, as when he engages in a State, &c. inconsistent with it; as among the *Romanists* by Marrying, Entering a Religious Order, &c. A *Benefice* is vacant by the Sentence of a Judge, by way of Punishment for certain Crimes, as *Concubinage*, *Perjury*, *Sorcery*, &c. The *Romanists*, again, distinguish *Benefices* into *Regular* and *Secular*. *Regular*, or *Titular Benefices*, are those held by a *Religious*, or a *Regular*, who has made Profession of some Religious Order, as an *Abby*, *Priory*, *Conventual*, &c. Or rather, a *Regular Benefice* is such as can't be confer'd on any but *Religious*, either by its Foundation, by the Institution of a Superior, or by Prescription: For Prescription, 40 Years Possession by a *Religious*, without a Dispensation, makes the *Benefice Regular*. *Secular Benefices* are those that are only to be given to *Seculars*; of which kind are almost all their Cures. All *Benefices* are reputed *Secular*, till the contrary is made appear. They are call'd *Secular Benefices*, because held by *Secular Priests*, i. e. by such as live in the World, and are not engag'd in any Monastick Order. Some *Benefices*, *Regular* of themselves, are secularized by the Pope's Bull. See *REGULAR* and *SECULAR*.

A *Benefice in Commendam* is that, the Direction and Management whereof, upon a Vacancy, is given or commended to an Ecclesiastick for a certain Time, till it may be conveniently provided for. See COMMENDAM.

The Term *Benefice* comes to us from the old *Romans*, who used to distribute part of the Lands they had conquered on the Frontiers of the Empire to their Soldiers, those who enjoy'd such Rewards were call'd *Beneficiarii*, and the Lands themselves *Beneficia*, as being held on the pure Beneficence and Liberality of the Prince. These *Benefices* at first were given for Life only, but afterwards became Hereditary and Patrimonial. From the *Romans* both the Name and the Thing passed into *France* and *England*, with this Difference, as Mr. *Blount* observes, that *Benefices* were not given as mere Gratuities for past Services, but as Warrants for future ones, and were accordingly held by the Tenure of serving, on occasion, in the Wars, &c. So that what was before a *Benefice*, became now converted into a *Fee*. Hence, doubtless, came the Term *Benefice* to be applied to Church-Livings; for, besides that the Ecclesiasticks held for Life, like the Soldiers, the Riches of the Church arose from the *Beneficence* of Princes.

As to the Origin of *Ecclesiastical Benefices*, 'tis hard to determine when the *Ecclesi*s of the Church were first divided; 'tis certain, till the fourth Century all the Revenues were in the Hands of the Bishops, who distributed them by their *Oeconomia*; they consisted principally in Alms and voluntary Contributions. As the Church came to have Inheritances, Part thereof was assign'd for the Subsistence of the Clergy, and call'd a *Benefice*, for which we find some footing in the fifth and sixth Century; but then there does not appear to have been any certain Partition, nor any precise Quota allotted to each Particular, but the Allotments were absolutely discretionary till about the twelfth Century. At first each was contented with a single *Benefice*, but Pluralities were, by degrees, introduced, on pretence of Equity; for, a single *Benefice* being sometimes scarce thought a Competency, the Priest was allow'd two: As his Quality, or Occasions, increas'd, so the Number of *Benefices* that were to support 'em were increas'd too. Hence some affecting to equal Princes in Quality, pretend to Revenues answerable thereto.

V. Ferrier observ'd, that in his Time there were five *Cases* by which *Benefices* were acquire'd: By the *Nominative*, as in royal Nominations; by the *Genitive*, as where the Children of Great Men, &c. are provided of *Benefices* by their Birth; by the *Dative*, as when speaking of a *Benefice*, 'tis said, *Dare, & dabitur vobis*; by the *Accusative*, as where by virtue of an Accusation, either true or false, an Incumbent is dispossest'd, and another admitted; by the *Abstractive*, as when *Benefices* are taken away by Force from the poor and helpless: but the *Vocative Case*, which is the most just and legitimate, is out of use. The *Nominative* is for the King; the *Genitive* for the Great; the *Dative* for the Rich; the *Accusative* for the Canning; and the *Abstractive* for the Ambitious; but the *Vocative* is reserved for the *Holy Ghost* alone.

BENEVOLENCE is used, both in our Statutes and Chronicles, for a voluntary Gratuity given by the Subjects to their Sovereign. The first *Benevolence*, *Stow* observes in King *Edward* the IV's Days, was granted that Prince in regard of his great Expences in Wars, &c. There was one given by Act of Parliament to King *Charles* II. In other Nations this is call'd *Subsidium Charitativum*, given sometimes by Tenants to their Lords, by the Clergy to their Bishops, &c.

BENJOYN, or, as 'tis commonly called, *Benjamin*, an excellent kind of Resin, imported from the Kingdom of *Lao*, and other Parts of the *East-Indies*. 'Tis procured by a Wound or Incision in a Tree, whose Leaves resemble those the Lemmon-Tree. 'Tis of a yellowish Colour, of an agreeable Scent, and easy to melt. There are three Sorts of it: The first is call'd *Amysodoides*, because of its being interspers'd with several white Spots which resemble broken Almonds: This comes from *Siam*. The second is black and very odoriferous; it drops from young Trees, and comes from *Samatra*; 'tis call'd *Benjoinum de Boninas*. The third Sort is also black, but less odoriferous; this is found in the Islands of *Javo* and *Samatra*. 'Tis used in Physick, as a Febrifugal and Anti-Asthmatick; and thrown on live Coals, it serves to perfume Houses, &c.

BERENGARIANS, a Religious Sect who adher'd to the Opinions of *Berenger*, Archdeacon of *Angiers*, who oppos'd the Doctrine of Transubstantiation and the real Presence, a considerable time before *Luther*. He is further charged by the *Romanists* with decrying Marriage, and maintaining the common Use of all sorts of Women, and asserting infant-Baptism of no effect. His Followers were divided on the Head of the Eucharist: Tho they all agreed that the Bread and Wine were not essentially chang'd, yet some allow'd it to be chang'd in effect, tho under an Impanation,

which was the Opinion of *Berenger* himself: Others deny'd any Change at all, and reserved all into Figure; others again allow'd a Change in part; and others an entire Change, with this Restriction, that to those who profanated themselves unworthily it was chang'd to back again.

BERENICES Hair, or *Coma Berenices*, a Constellation in the Northern Hemisphere, consisting of Stars near the *Lion's Tail*.

BERGHMOT is a kind of Essence, drawn from a Fruit, produc'd by ingrafting the Lemon-Tree on the *Bergamo-Pear* Stock. 'Tis no more than the oily Fluid of these Lemons express'd by the Fingers. There is likewise a kind of Snuff of the same Name, which is only clean Tobacco, with a little of the Essence rubb'd into it.

BERGHMOTH, vulgarly call'd *Barmote*, a Court held on a Hill for deciding Pleas and Controversies among the *Derbyshire* Miners. From the *Saxon Berg, Mount*, and *Mote, Convocatus*.

BERLIN, a particular kind of Vehicle of the Chariot-kind, much used of late; taking its Name from the City *Berlin* in *Germany*; the some attribute the Invention of it to the *Italians*. 'Tis a very convenient Machine to travel in, being lighter, and less apt to be overturn'd, than a Chariot. The Body of it is hung high by Shafts to leathern Braces; there being a kind of Stirrup or Footstool for the Conveniency of getting into it: Instead of Side-Windows, there are Sheds to let down in bad Weather, and draw up in good.

BERME, in Fortification, is a small Space of Ground four or five Foot wide, left without between the Foot of the Rampart and the Side of the Moat, to receive the Earth that rolls down from thence, and to prevent its falling into the Moat. Sometimes, for more Security, the *Berne* is pallisadoed.

BERNARDINE, the Name of a religious Order extended over great part of *Europe*. This Order is an Improvement of that of *St. Benedic*t, made by *Robert Abbe de Molesme*; and again by *St. Bernard Abbe de Clervaux*. Their usual Habit is a white Gown, with a black Scapulary; but when they officiate, they put on a large white Cowl with great Sleeves, and a Hood of the same Colour.

BERIL, or BERYL, a precious Stone, much like Chrysol, brought from the *Indies*; there are some also found on the Banks of the *Euphrates*. There are several Kinds of *Berils*. Lapidaries reckon ten: The most esteemed are the *Beril*, the *Chrysoberil*, and the *Chrysopras*. The *Beril* borders much on the Sea-green; whence the *Latin*s call it *Aqua Marina, Sea-Water*. To give it a Lustre, it must be cut Facet-wise: Polishing does not give it any Brilliant, if cut any other way. The *Chrysoberil* is somewhat paler, and partakes more of the yellow. *Chrysopras* partakes most of the green. Some Authors take the *Beril* to be the Diamond of the Ancients: This is certain, the ablest modern Jewellers sometimes mistake the one for the other. The *Beril* is sometimes found in Pieces large enough to form fine Vases. 'Tis said, there are many of 'em at *Cambaye, Martaban, Pegu*, and *Ceylon*.

The Properties of the *Beril* were very wonderful in the Opinion of the ancient Naturalists: It kept People from falling into Ambuscades of Enemies, excited Courage in the fearful, cured Distiches of the Eyes and Stomach. It does none of these things now; because People are not simple enough to believe it has the Virtue to do 'em.

BERRY, a Grain, Fruit, or Seed, produced by several Trees and Shrubs for the Conservation, and Re-production of their Kind. *Berries* are of various Sizes, Forms, Properties, and Uses, according to the Plants whereon they grow: Some used in Medicine, as *Juniper-Berries, Buckthorn-Berries*, &c. Others in Dying, as *French or Yellow Berries*, &c. See GRAIN and SEED.

BESANT, a sort of Coin struck at *Constantinople*, in the Time of the Emperors, anciently call'd *Byzance*; 'twas pure Gold, or 24 Carats fine. Its Value is not determin'd. Hence the Gold offer'd by the King at the Altar, and on Festivals, is still call'd *Besant*, or *Byzant*.

BES, or BESSIS, the Mark, or eight Ounces, Part of the *Az*; *Bes* for *Bis*, which is two *Triens*, which are each four in Value. See *As*.

BESTIARI, among the ancient *Romans*, those who combated with Beasts, or were expos'd to 'em. We usually distinguish two Kinds of *Bestiarii*: The first were those condemn'd to the Beasts, either as being Enemies, taken Prisoners, or as being Slaves, and guilty of some enormous Crime. These were all expos'd naked, and without Defence to the Beasts; nor did it ought avail to conquer and kill the Beast, fresh ones being continually let loose on 'em, till they were dead. The *Christians* were *Bestiarii* of this Kind, even some of 'em who were *Roman* Citizens, tho 'twas the Privilege of such to be exempt from it: But it seldom happen'd that two were requir'd for the same Man; on the contrary, one Beast frequently dispatch'd several Men. *Cicero* mentions
C c
a Lion,

a Lion, which alone dispatch'd 200 *Bestiarii*. Those who succeeded the first were call'd *Spidzys*, and the last *Agastis*. See *MERIDIANI*.

The second Kind of *Bestiarii*, *Seneca* observes, consisted of young Men, who, to become expert in managing their Arms, fought sometimes against Beasts, and sometimes against one another; and of Beasts, who, to shew their Courage and Dexterity, expos'd themselves to this dangerous Combat. *Augustus* encourag'd this Practice in young Men of the first Rank; *Nero* expos'd himself to it; and 'twas for the killing Beasts in the Amphitheatre, that *Commodus* acquir'd the Title of the *Roman Hercules*. *Vigener* to these adds two Kinds of *Bestiarii* more: The first were those who made a Trade of it, and fought for Money; the second was where several *Bestiarii* armed, were let loose at once against a Number of Beasts.

BEVEL, in Masonry, and among Joiners, a kind of Square, one Leg whereof is frequently crooked, according to the Sweep of an Arch or Vault. 'Tis moveable on a Point or Centre, and so may be set to any Angle. Its Make and Use are pretty much the same as those of the common Square and Mitre, except that those are fix'd; the first at an Angle of 90 Degrees, and the second at 45; whereas the *Bevil* being moveable, may, in some measure, supply the Office of both, and yet, which 'tis chiefly intended for, supply the Deficiencies of both; serving to set off, or transfer, Angles either greater or less than 90 or 45 Degrees. Hence a *Bevil* Angle is used to denote any other Angle but those of 90 or 45 Degrees.

BEVILE, a Term in Heraldry signifying Broken, or opening like a Carpenter's Rule. Thus he beareth Argent a chief *Beville* Vert, by the Name of *Beverlis*.

BEY, a Term used for a Governour of a maritime Country or Town in the Turkish Empire. The *Turks* write the Word *Begh*, or *Bek*, but pronounce it *Bey*. Properly it signifies *Lord*, but is particularly applied to a *Lord of a Banner*, whom in the same Language they call *Sangjak-beghi*, or *Bey*; *Sangjak*, which among them signifies *Banner*, or *Standard*, being the Badge of him who commands in a considerable Place of some Province, having under him a considerable Number of *Spahis*, or Horse. Each Province in *Turkey* is divided into seven of these *Sangjaks*, or *Banners*, each of which qualifies a *Bey*; and these are all commanded by the Governour of the Province, whom they also call *Beg-biler-Beghi*, or *Beyler-bey*, i. e. *Lord of the Lords*, or *Bey of the Province*. These *Bey*s are in a great measure the same that *Bannetiers* formerly were in *England*.

BEZOAR, or *BEZOARD*, a Medicinal Stone, esteem'd a Sovereign Counter-Poison, and an excellent Cardiac. 'Tis also given in *Verigo's*, *Epilepsis*, *Palpitation of the Heart*, *Jaunderic*, *Cholic*, and to many other Diseases, that were its real Virtues answerable to its reputed ones, it were doubtless a *Poison*. Indeed, its Rarity, and the peculiar Manner of its Formation, have, perhaps, contributed as much to its Reputation, as any intrinsic Worth. At present it begins to be priz'd less, and a great many able Physicians discard it, as of no Use or Efficacy at all.

There are several Kinds of *Bezoar*; the Chief are the *Oriental*, the *Occidental*, and that of *Germany*. The *Oriental* is in the most Esteem, and is brought from several Parts of the *East-Indies*, chiefly *Goceoda* and *Cannor*: 'Tis there found mingled with the Dung of an Animal of the Goat Kind call'd *Pazen*; in the Belly whereof this Stone is found: The Buds of a certain Shrub which the Animal uses to browse, are usually found in the middle of it, and supposed to be the Seed whence it arises. The *Bezoar* ordinarily grows of the Bignets of an Acorn, sometimes of that of a Pigeon's Egg. It is composed of several shining Skins, or Coats, like an Onion, sometimes of a Blood-Colour, sometimes a pale yellow, a brownish red, and Honey-Colour. The Number of *Bezoards* produced by each Animal is various, some yielding one, two, &c. to six, and others none at all. The larger the Stone the more valuable, its Price increasing like that of the *Diamond*. A Stone of one Ounce is sold in the *Indies* for 100 Franks, and one of four Ounces for 2000 Livres. *Oriental Bezoars* must be chose shining, of a small like that of Amber-green, smooth to the Touch, and in large Pieces; its Figure is indifferenc, its Colour usually Olive. *Bezoar* is easily sophisticat'd, and the Deceit as easily discover'd. The Methods of proving it are, 1st, To steep it three or four Hours in lukewarm Water; if the Water be'n't ting'd, nor the *Bezoar* lose of its Weight, 'tis pure. 2^{dly}, To try it with a sharp, red hot Iron; if it enters the Stone, and the Heat makes it fry and shrivel, 'tis factitious. 3^{dly}, To rub it over a Paper smear'd with *Ceruss*; if it leave a yellow Teint, 'tis good.

Occidental Bezoar, or *Bezoar of Peru*, is very different from the first. 'Tis found in the Belly of several Animals, peculiar to the Country: In some 'tis the Bignets of a Nut, in others of a Pullet's Egg; in some 'tis oval, in others flat, in others round; 'tis usually of an Ash-Colour, sometimes dusky; and form'd of Scales, like the *Oriental*, but much thicker; 'tis smooth and even without-side, but when broke, looks as if it had been sublimated, by reason of the little shining Needles whereof it appears to be composed. The Animals that produce it are the *Guanaco's*, *Jacho's*, *Vicunna's*, and *Taragua's*; the *Bezoar* of which last is the most esteem'd, this Animal being much like the Goat that produces the *Oriental*.

The *German Bezoar*, which some call *Cow's Eggs*, is found in the Stomach of some Cows, but more frequently in that of the *Chamois* or *Hard*. These are supposed to be nothing else but the Hair of those Animals, which being occasionally lick'd off by the Tongue, is swallow'd down, and being impregnated with the *Saliva*, &c. is condens'd into Balls. Some of these *Bezoars* weigh 18 Ounces, but they are not much esteem'd, tho they are used in some Medicines, and by the *Painters* in *Miniature*, to make their yellow Colours.

Besides these three Kinds of *Bezoar* which the Shops afford, there are three other Kinds much rarer, viz. the *Stone of the Hog*, that of *Malacca* or *Porcupine*, and that of the *Ape*. The first call'd by the *Dutch*, *Pedro de Porco*, and by the *Portuguese*, who first brought it into *Europe*, *Pedro de Vaparis*, found in the Gall-Bladder of a Boar in the *East-Indies*. In Figure and Size it resembles a *Filbert*, tho more irregular; its Colour not fix'd, but most commonly white with a Teint of blue; it is smooth and shining. The *Indians* attribute infinite Virtues to this *Bezoar*: They call it *Mafica de Sobo*, and prefer it to the *Oriental Bezoar*; not so much on account of its being supposed the best Preservative in the World against Poisons, as on account of its being Sovereign in the Cure of the *Mordado*, a Disease they are very liable to, and which is not less dangerous than the *Plague* in *Europe*. The other Properties they ascribe to it are, that 'tis admirable against malignant Fevers, *Small-Pox*, and most Diseases of Women not with Child; Experience shewing, that it promotes Abortion in those who use it indifferently. To use it, they infuse it in Water, or Wine, till it has communicat'd a little Bitterness to it. To facilitate the Infusion, and at the same time preserve so precious a Stone, they usually set it in a gold Case pierced with Holes.

Bezoars of Porcupines and Monkeys only differ from those of the *Hog*, in that they are found in the Gall-Bladders of those Animals; unless we say with *Tavernier*, that these two, which he calls *Malacca-Stones*, are not taken from the Gall-Bladders, but the Head of the *Monkey* and *Porcupine*; and that they are held in such Esteem by the *Natives of Malacca*, that they never part with 'em, unless as Presents to *Ambassadors*, or the greatest Princes of the East. Some add, that they are likewise found in *Siam*. Indeed, the Form, Colour and Properties of these three *Bezoars* are so near a kin, that 'tis more than probable, that 'tis the same Stone under three different Names.

Bezoar is applied by the *Chymists*, to several of their Preparations, on account of the *Bezoardick* Qualities they are supposed to have.

Animal Bezoar is the Heart and Lungs of the *Viper* pulveriz'd together.

Mineral Bezoar is an Emetic Powder of *Antimony* correct'd with Spirit of *Nitre*, and softened by repeated Lotions, which carry off the purgative Virtue of the *Antimony*, and substitute a *Diaphoretick* one. It promotes Sweat like the Stone of that Name.

BEZOARDICUM Joviale, or *Bezoar of Jupiter*, a *Regulus* made by melting three Ounces of *Regulus of Antimony* and two of *Black-Tin*, which, powder'd & mix'd with six Ounces of *Corrosive Sublimate*, and distill'd off in a kind of *Butter*, and that distill'd in Spirit of *Nitre*, the Solution is distill'd three times; the *Bezoar* remaining at bottom, to be powder'd, wash'd, and mingled with Spirit of *Wine*, till it grow insipid.

BEZOARDICUM Lunale, or of the *Moon*, is made by mixing eight Ounces of rectified *Butter of Antimony* with one of fine *Silver*. This is distill'd in Spirit of *Nitre*, by gently pouring it on, fresh and fresh, till the *Ebullition* cease; when, the Spirit is drawn off by a gentle Heat, and the *Bezoar* manag'd as the former.

BEZOARDICUM Martiale, a *Disolution of Crocus Martis* by *Reverberation* in *Butter of Antimony*, with Spirit of *Nitre* pour'd on it; the rest as in the first.

BIBLORY *Mofite*. See *ADVERSUS OCULI*, which is the same.

BIBLE, a Book by way of Eminence so call'd, containing the Scriptures, i. e. the *Old and New Testament*. *Bibles* are distinguish'd according to their Language, into *Hebrew*, *Greek*, *Latin*, *Chaldee*, *Syriack*, *Arabick*, *Coptick*, &c. an

Acquaintance with which making a considerable Article in Theological Criticism; we shall here subjoin some Account thereof.

HEBREW BIBLES are either Manuscript or Printed. The best Manuscripts are those copied by the *Jews of Spain*. Those copied by the *Jews of Germany*, are less exact, but more common: The two Kinds are easily distinguish'd from each other; the former being in beautiful Characters, like the *Hebrew Bibles of Stephens and Plantin*; the latter in Characters like those of *Munster and Grypbeus*. *F. Simon* observes, that the oldest Manuscript *Hebrew Bible* is not above 6 or 700 Years old; nor does *Rabbi Meuschen*, who quotes a vast Number of 'em, pretend any of 'em exceed 600 Years.

The most ancient printed *Hebrew Bibles* are those published by the *Jews of Italy*, especially of *Pesaro and Bressa*. Those of *Portugal* also printed some Parts of the *Bible at Lisbon*, before their Expulsion. This may be observ'd in the general, that the best *Hebrew Bibles* are those printed under the Inspection of the *Jews*; there being so many *Minutiae* to be observ'd, that 'tis scarce possible for any other to succeed in it.

In the beginning of the sixth Century *Dau. Bombergus* printed several *Hebrew Bibles* in Folio and 4to at *Venice*, most of which are esteem'd both by the *Jews and Christians*: The first in 1517, which is the least exact, and generally goes by the Name of *Felix Pratensis*, the Perion who revised it: The second in 1526, with the *Massas* and the *Commentaries* of several Rabbins, and a *Hebrew Preface* by *Rabbi J. Benachaim*. In 1548 the same *Bombergus* printed the *Folio Bible* of *Rabbi Benachaim*, which is the best and most perfect of 'em all: 'Tis distinguish'd from the first of the same Rabbi, by the *Comment* of *Rabbi D. Kimchi* on the *Paralipomena*, which are not in the preceding. From this Edition it was, that *Eustorf*, the Father, printed his *Hebrew Bible* of the Rabbins at *Basil*, in 1618; but in this are several Faults, especially in the *Commentaries* of the Rabbins, where that learned Man corrected some places that were against the *Christians*. In the same Year appear'd at *Venice* a new Edition of the *Bible* of the Rabbins by *Leo de Modena*, a Rabbi of that City, who pretended to have corrected a great Number of Faults in the former Edition; but, besides that 'tis much inferior to the other *Hebrew Bibles of Venice*, with regard to Paper and Print, it has pass'd thro the Hands of the Inquirers, who have alter'd many Passages in the *Commentaries* of the Rabbins.

For *Hebrew Bibles* in 4to, that of *R. Stephens* is esteem'd for the Beauty of the Characters; but 'tis very incorrect. *Plantin* also printed several beautiful *Hebrew Bibles* at *Antwerp*; the best is that of 1566, in 4to. *Mansfeld Ben Sion*, a learned *Portuguese Jew*, published two Editions of the *Hebrew Bible* at *Amsterdam*, the one in 4to, the other in 8vo; the first has two Columns, and for that reason is commodious for the Reader. In 1634, *R. Jacc. Lambroso* publish'd a new Edition in 4to at *Venice*, with small literal Notes at the bottom of each Page, where he explains the *Hebrew Words* by *Spanish Words*. This *Bible* is much esteem'd by the *Jews* at *Constantinople*: In the Text they have distinguish'd between Words where the Point *Camets* is to be read with a *Camets-hataph*, that is, by an *o* and not an *e*.

Of all the Editions of the *Hebrew Bible* in 8vo, the most beautiful and correct are the two of *J. Abbia*, a *Jew* of *Amsterdam*. The first, of 1661, is the best Paper; but that of 1667, the most exact: That however, publish'd since at *Amsterdam* by *Vander Hooght* in 1705, is preferable to any of 'em.

After *Abbia*, three *Hebraising Protestants* engaged themselves in revising and publishing the *Hebrew Bible*, viz. *Claudin*, *Jabrowski*, and *Opitius*. *Claudin's* Edition was publish'd at *Frankfort* in 1677, in 4to. At the bottom of the Page it has the various Readings of the former Editions; but the Author does not appear sufficiently vers'd in the Accenting, especially in the Poetical Books; besides that not being publish'd under his Eye, many Faults have crept in. That of *Jabrowski* in 1699, in 4to, at *Berlin*, is very beautiful, as to Letter and Print: but, tho the Editor pretends he made use of the Editions of *Abbia* and *Claudin*, some Critics find it scarce different in any thing from the 4to Edition of *Bombergus*. That of *Opitius* is also in 4to, at *Keil* in 1709; the Character is large and good, but the Paper bad: 'Tis done with a great deal of Care; but the Editor made use of no MSS. but those of the *German Libraries*; neglecting the *French* one, which is an Omission common to all three. They have this Advantage however, that besides the Divisions used by the *Jews*, both general and particular, into *Paraphes* and *Pesukim*, they have also those of the *Christians*, or of the *Latin Bibles*, into Chapters and Verses; the *Keriketh* or various Readings, *Latin Summaries*, &c. which make 'em of considerable Use, with regard to the *Latin Editions* and the *Concordances*.

The little *Bible* of *R. Stephens* in 1602, is much priz'd for the Beauty of the Character. Care, however, must be taken; there being another Edition of *Geneta* exceedingly like it, excepting, that the Print is worse, and the Text less correct. To these may be added some other *Hebrew Bibles* without Points, in 8vo and 24to, which are much covet'd by the *Jews*; nor that they are more exact, but more commodious than the rest, and are used in their Synagogues and Schools: of these there are two beautiful Editions, the one of *Plantin*, in 8vo, with two Columns, and the other in 24to, reprint'd by *Repselange* at *Leiden*, in 1610. There is also an Edition of them by *Latreus* at *Amsterdam*, in 1631, in a larger Character; another in 12mo at *Frankfort*, in 1694, full of Faults, with a Preface of *M. Leusden* at the head of it.

GREEK BIBLES. There are a great Number of Editions of the *Bible* in *Greek*; but they may be all reduced to three or four principal ones, viz. that of *Complutum*, or of *Alcala de Henares*, that of *Venice*, that of *Rome*, and that of *Oxford*. The first was publish'd in 1515 by Cardinal *Ximenes*, and inserted in the *Polyglot Bible*, usually call'd the *Complutensian Bible*. This Edition is not just, the *Greek* of the Seventy being alter'd in a great many places according to the *Hebrew Text*. This Edition has been reprint'd in the *Polyglot Bible* of *Antwerp*, in those of *Paris*, and in the 4to *Bible* commonly call'd the *Bible of the Variable*.

The second *Greek Bible* is that of *Venice* in 1518. Here the *Greek Text* of the *Sepтуагуит* is reprint'd just as it stood in the MS. full of Faults of the Copies, but easily amended. This Edition has been reprint'd at *Strasbourg, Basil, Frankfurt*, and other Places, with some Alterations; to bring it nearer the *Hebrew*. The most commodious is that of *Frankfort*, there being added to this, little *Scholias* where are shown the different Interpretations of the old *Greek Translators*: The Author of this Collection has not added his Name; but 'tis commonly ascribed to *Jovinus*.

The third *Greek Bible* is that of *Rome* in 1587, with *Greek Scholia* collected from the MSS. in the *Roman Libraries* by *Pet. Morin*. This fine Edition has been reprint'd at *Paris* in 1628, by *J. Morin*, Priest of the Oratory, who has added the *Latin Translation*, which in the *Romans* was printed separately, with *Scholias*. The *Greek Edition* of *Rome* has been reprint'd in the *Polyglot Bible* of *London*; to which are added, at bottom, the various Readings of the *Alexandrian MS.* This has been also reprint'd in *England* in 4to and 12mo, with some Alterations. It has been again publish'd at *Franker* in 1709, by *Bez*, who has added all the various Readings he cou'd find.

The fourth *Greek Bible* is that done from the *Alexandrian MS.* begun at *Oxford* by *Dr. Grabe* in 1707. In this the *Alexandrian MS.* is not printed such as it is, but such as 'twas thought it should be, i. e. 'tis alter'd wherever there appear'd any Fault of the Copies, or any Word inserted from any particular Dialect: This, some think a piece of Merit, but others a Fault; urging that the MS. should be given absolutely and entirely of itself, and all Conjectures, as to the Readings, to be thrown into the Notes.

Latin Bibles, how numerous soever, may be all reduc'd to three Classes, viz. the *Ancient Vulgate*, made from the *Greek Septuagint*; the *Modern Vulgate*, the greatest part of which is done from the *Hebrew Text*; and the *New Latin Translations*, done also from the *Hebrew Text* in the 16th Century. We have nothing remaining of the *Ancient Vulgate* used in the Primitive Times in the *Western Churches*, but the *Psalms, Wisdom, and Ecclesiastes*. *Nobilus* has endeavour'd to retrieve it from the Works of the ancient *Latin Fathers*; but 'twas impossible to do it exactly, in regard most of the Fathers did not keep close to it in their Citations.

As to the *Modern Vulgate*, there are a vast Number of Editions very different from each other. Cardinal *Ximenes* has inserted one in the *Bible* of *Complutum*, correct'd and alter'd in many Places. *R. Stephens*, and the Doctors of *Lowain*, have rook a world of Pains in correcting the *Modern Vulgate*. The best Edition of *Stephens's Latin Bible* is that of 1540, reprint'd in 1545; in which are added, on the Margin, the various Readings of several *Latin MSS.* which he had consulted. The Doctors of *Lowain* revised the *Modern Vulgate* after *R. Stephens*; and added the various Readings of several *Latin MSS.* The best of the *Lowain* Editions are those, at the End of which are added the Critical Notes of *Francis Luke*, of *Bruges*.

All these Reformatiions of the *Latin Bible* were made before the Time of Pope Sixtus V. and Clement VIII. Since which, People have not dared to make any Alterations, excepting in Comments, and separate Notes. The Correction of *Clement VIII.* in 1592, is now the Standard throughout all the *Roman Churches*: That Pontiff made two Reformatiions; but 'tis the first of 'em that is follow'd. From this the *Bibles* of *Plantin* were done, and from those

of *Plautin* all the rest; so that the common *Bibles* have none of the After-Corrections of the same *Clement VIII.* publish'd at *Rome* in 1592. 'Tis a heavy Charge that lies on the Editions of *Pope Clement*, viz. that they have some new Texts added, and many old ones alter'd, to countenance and confirm what they call the *Catholic Doctrine*: Witnesses that celebrated Passage of *St. John*, *Tres sunt in unum*. See *VULGATE*.

There are a great Number of *Latin Bibles* of the third Class, comprehending the Versions from the Originals of the Sacred Books made within these 200 Years: The first is that of *Pagninus*, a *Dominican*, printed at *Lions* in 470, much esteem'd by the *Jews*. This the Author improv'd in a second Edition: In 1542, there was a beautiful Edition of the same at *Lions* in *Folio*, with *Scolia*, publish'd under the Name of *Michael Villanovanus*, i. e. *Michael Servetus*, Author of the *Scolia*. Those of *Zurich* have likewise publish'd an Edition of *Pagninus's Bible* in 470. And *R. Stephens* reprint'd it in *Folio*, with the *Vulgate*, in 1557, pretending to give it more correct than in the former Editions. There is also another Edition of 1586, with four Columns, bearing the Name of the *Vatable*: And we find it again in the *Hamberough* Edition of the *Bible*, in four Languages. In the Number of *Latin Bibles* is also, usually, rank'd the *Version* of the same *Pagninus* corrected, or rather render'd literal, by *Arias Montanus*; which Correction being approv'd by the Doctors of *Lowain*, &c. was insert'd in the *Polyglot Bible* of *Philip II.* and since in that of *London*. There have been various Editions of it in *Folio*, 4to, and 8vo; to which have been added the *Hebrew Text* of the *Old Testament*, and the *Greek of the New*. The best of 'em all is the first, which is in *Folio*, 1571.

Since the Reformation, there have been several *Latin Versions* of the *Bible* from the Originals by *Protestants*. The most esteem'd are those of *Munster*, *Leo de Juda*, *Castelo*, and *Tremellius*: The three last whereof have been reprint'd various times. *Castelo's* fine *Latin* pleases most People; but there are some who think it too much affected: the best Edition thereof is that in 1573. *Leo de Juda's* *Version*, alter'd a little by the Divines of *Salamanca*, was added to the ancient *Latin* Edition, as publish'd by *R. Stephens* with Notes, under the Name of *Vatable*. That of *Junius* and *Tremellius* is prefer'd especially by the *Calvinists*, and has undergone a great Number of Editions.

One may add a fourth Class of *Latin Bibles*, comprehending the *Vulgate* Edition corrected from the Originals. The *Bible* of *Isidorus Clarus* is of this Number: That Author not being contented with restoring the ancient *Latin Copy*, has corrected the Translator in a great number of places, which he thought ill render'd. Some *Protestants* have follow'd the same Method; and among others, *Andrew* and *Luke Ofsander*, who have each publish'd a new Edition of the *Vulgate*, corrected from the Originals.

ORIENTAL BIBLES. At the head of the *Oriental Versions* of the *Bible*, must be plac'd that of the *Samaritan*, that being the most ancient of all, and admitting no more for *Holy Scripture* but the *Pentateuch*, or *Five Books of Moses*. This Translation is made from the *Samaritan Hebrew Text*, which is a little different from the *Hebrew Text* of the *Jews*. This *Version* has never been printed alone; nor any where but in the *Polyglots* of *London* and *Paris*.

CHALDEE BIBLES are no more than the *Glosses* made by the *Jews* in the Time when they spake the *Chaldee Tongue*. These they call by the Name of *Targumim*, or *Paraphrases*, as not being any strict *Version* of the *Scripture*. They have been insert'd entire in the large *Hebrew Bibles* of *Venice* and *Basil*; but are read more commodiously in the *Polyglots*, being there attend'd with a *Latin* Translation.

SYRIACK BIBLES. In the Year 1562, *Widmanstadius* print'd the whole *New Testament* in *Syriack* at *Vienna*, in a beautiful Character: After him there were several other Editions; and it was insert'd in the *Bible* of *Philip II.* with a *Latin* Translation. *Gabriel Sionita* also publish'd a beautiful *Syriack* Edition of the *Psalms* at *Paris* in 1525, with a *Latin* Interpretation. The whole *Bible* is printed in *Syriack* in the *Polyglots* of *London* and *Paris*.

ARABICK BIBLES. In the Year 1516, *Aug. Justinian*, Bishop of *Nebio*, print'd at *Genoa* an *Arabick* *Version* of the *Psalter*, with the *Hebrew* Text and *Chaldee* Paraphrase, adding *Latin* Interpretations. There are *Arabick Versions* of the whole *Scriptures* in the *Polyglots* of *London* and *Paris*; and we have an Edition of the *Old Testament* entire, print'd at *Rome* in 1671, by Order of the Congregation de *propaganda Fide*; but 'tis of little Use to us, as having been alter'd by the *Vulgate* Edition. The *Arabick Bibles* among us, are not the same with those us'd by the *Christians* in the *East*. Some learned Men take the *Arabick* *Version* of the *Old Testament*, print'd in the

Polyglots, to be that of *Saadias*: at least, in the main. Their Reason is, that *Aben Ezra*, a great Antagonist of *Saadias*, quotes some Passages of his *Version*, which are the same with those in the *Arabick* *Version* of the *Polyglots*; yet others are of opinion, that *Saadias's* *Version* is not extant. In 1622, *Erpenius* print'd an *Arabick Pentateuch*, call'd also the *Pentateuch* of *Mauritania*, as being made by the *Jews* of *Mauritania*, and for their Use. This *Version* is very literal, and esteem'd very exact. The *four Evangelists* have also been publish'd in *Arabick*, with a *Latin* *Version*, at *Rome* in 1591, *Folio*. These have been since reprint'd in the *Polyglots* of *London* and *Paris*, with some little Alterations of *Gabriel Sionita*. *Erpenius* publish'd an *Arabick New Testament*, entire, as he found it in his *MS. Copy*, at *Leysden*, in 1616.

COPTICK BIBLES. We have no Part of the *Bible* print'd in *Coptick*; but there are several Manuscript Copies in the good Libraries, especially in that of the *French King*.

ETHIOPICK BIBLES. The *Ethiopiack* have also translated the *Bible* into their Language. There have been print'd separately, the *Psalms*, *Canticles*, some Chapters of *Genesis*, *Ruth*, *Job*, *Jonas*, *Sophonias*, *Malactias*, and the *New Testament*; all which have been since reprint'd in the *Polyglot* of *London*. For the *Ethiopiack New Testament*, which was first print'd at *Rome* in 1548, 'tis a very inaccurate Piece, and is print'd in the *English* *Polyglot* with all its Faults.

ARMENIACK BIBLES. There is a very ancient *Armenian* *Version* of all the *Bible*, done from the *Greek* of the *Seventy*, by some of their Doctors, about the Time of *St. Chrysostom*. This was first print'd entire in 1664, by one of their Bishops at *Amsterdam*, in 4to; with the *New Testament* in 8vo.

PERSIACK BIBLES. Some of the Fathers seem to say, that all the *Scripture* was formerly translated into the Language of the *Persians*; but we have nothing now remaining of the ancient *Version*, which was, doubtless, done from the *Septuagint*. The *Persian Pentateuch* print'd in the *London Polyglot*, is, doubtless, the Work of Rabbi *Jacob*, a *Persian Jew*. In the same *Polyglot* we have likewise the *four Evangelists* in *Persian*, with a *Latin* Translation; but this appears very modern, incorrect, and of little Use.

GORICK BIBLES. 'Tis generally said, that *Wysbilas*, a *Gorick Bishop*, who lived in the fourth Century, made a *Version* of the whole *Bible*, excepting the Book of *Kings*, for the Use of his Country-men. That Book he omitted, by reason of the frequent Mention of the Wars therein; as fearing to inspire too much of the military Genius into that People. We have nothing remaining of this *Version*, but the *four Evangelists*, print'd in 4to at *Dort*, in 1665, from a very ancient *MS.*

MUSCOVITE BIBLES. An entire *Bible* in the *Slavonick Tongue*, was print'd at *Ostravia* in *Pollonia*, in the Year 1481; and this is what we commonly call the *Muscovite Bible*. 'Twas print'd at the Expence of *Con. Bassil*, Duke of *Ostravia*, for the common Service of all *Christians* who speak the *Slavonick* Language, whereof the *Muscovitish* is a Dialect.

BIBLES in *Vulgar Tongues* are too numerous to be here recited. See *F. Simon's* CRITICAL HISTORY. See also the Word *POLYGLOT*, *PENTATEUCH*, &c.

BICEPS, in Anatomy, a Name common to several Muscles, from their having two Heads. Such is the

BICEPS Cubiti, a Muscle of the Arm, one of whose Heads arises from the upper Edge of the Cavity of the Head of the *Scapula*, and is round and tendinous, and inclin'd in the Channel in the Head of the *Humerus*. The other arises from the *Processus Coracoideus*; it is broad and tendinous; and both unite about the Middle and Fore-part of the Arm, and make one Belly, which is insert'd by a strong and round Tendon into the Tuberosity, at the upper end of the *Radius*. Some of the Fibres of this Tendon form a large and thin *Aponeurosis*, which covers all the Muscles of the *Radius* and *Fingers* externally. Care ought to be taken in *Blood-letting*, not to cut a-cross, but according to the Length of the Fibres of this *Aponeurosis*. This, with the *Brachialis internus*, bend the Arm.

BICEPS externus. See *GEMELLUS*.

BICEPS Tibie, a Muscle of the Leg with two Heads; the one coming from the Tuberosity of the *Ilium*, and the other from the middle of the *Linea aspera*; both which join together, and are insert'd by one Tendon into the superior and external Part of the *Peroe*. Its Use is to help to bend the *Tibia*, and is likewise employ'd in turning the Leg, together with the Foot and Toes, outward, when we sit down.

BIDENTALES, Priests among the ancient *Roman*, instituted for the Performance of certain Ceremonies, on occasion of a Thunderbolt's falling in any Place. The first and principal Part of their Office was, the sacrificing of a Sheep of two Years old, which in their Language was call'd *Bidentis*, as having Teeth on each Side; whence also the Place

fruck with a Thunderbolt, was call'd *Bidental*. This was not allow'd to be walk'd over; but was encompass'd with a Wall, or Pallisade, and an Altar erected over it; whence also the Priests, who officiated at it to perform the prescribed Expiation, took the Name *Bisexualis*.

BIGA, a Chariot drawn by two Horses. The *Dige* and *Quadrigæ* were the Chariots that run in the Liit. The *Bige* are of a very ancient standing; all the Heroes in *Homæ*, *Hesiod*, *Virgil*, &c. fought in 'em. Hence *Bigars*, or *Bigars*, a kind of Coin whereon was represented Victory drawn in a Chariot by two Horses. Many of the ancient Medals call'd *Consular*, are *Bigars*. The Word comes from the *Latin Biga*, of *bis* and *jugum*, double Yoke.

BIGAMY, a double Marriage, or the possessing of two Wives at the same time. Among the ancient *Romans*, those convicted of *Bigamy* were branded with a Note of Ignominy; and in *France*, were antiently punish'd with Death.

BIGAMY, in the Canon Law, is where a Person has espous'd two Women successively, or simply, espous'd a Widow: Each of which the *Canonists* account Impediments to be a Clerk, or to hold a Bishopric without a Dispensation. This Point of Discipline they found on that of *St. Paul*, *A Bishop must be the Husband of one Wife*. *Bigamy* they make of two Kinds; *Real*, as where the Party actually marries twice; and *Interpretative*, where he marries a Widow, or a Woman debauch'd before, which is esteem'd a kind of double Marriage. Here *F. Donin* distinguishes and observes, that *Irregular* having been married twice, must in this Sense have been guilty of *Bigamy*, and therefore made Bishop of *Tyre* contrary to the Canon. He therefore thinks with *St. Jerom*, &c. that those only who married two Wives after Baptism, came under the Incapacity of *Bigamy*: But *St. Ambrose*, *Augustin*, &c. are express, that 'tis *Bigamy*, whether the first Wife were married or contracted before, or after Baptism. By a Statute of *Edward I.* those guilty of *Bigamy* were excluded the Benefit of the Clergy; but this is since repeal'd. The *Romanists* make a third kind of *Bigamy* by *Interpretation*; as, when a Person in holy Orders, or that has taken on him some Monastick Order, marries: This the Bishop can dispense withal, at least on some Occasions. There is also a kind of spiritual *Bigamy*; as, when a Person holds two incompatible Benefices, *v. g.* two Bishopricks, two Vicarages, two Canonries, &c. *sub eodem Tecto*.

BIGNESS. See **MAGNITUDE**.

BIGOT, a Person foolishly obstinate, or perversely wedded to an Opinion. The Word comes from the *German Bey and Gott*, or the *English by God*. *Cambden* relates, that the *Normans* were first call'd *Bigots*, on occasion of their Duke *Rolla*, who receiving *Gisla*, Daughter of King *Charles*, in Marriage, and with her the Investiture of the Dukedom, refus'd to kiss the King's Foot in token of Subjection, unless he would hold it out for that purpose: And being urged to it by those present, answer'd hastily, *No by God*; whereupon the King turning about, call'd him *Bigot*; which Name pass'd from him to his People.

BILIARIUS PORUS, or *Hepatic Duct*, a considerable Aperture of the Liver, form'd after the manner of a Vein, from the Concurrence of infinite small Ramifications springing from the Glands of the Liver, which unite into several Trunks, equal in Magnitude to the Branches of the *Hepatic Arteries*, which accompany 'em Branch for Branch thro the whole Substance of the Liver, and are wrapp'd up in the same *Capsula* with the *Porta*. These Branches are about the Size of a Wheat-Straw, the biggest large enough to admit the little Finger; and are distinguishable from the *Porta* by their Contents, being always full of *Bile*. Besides the *Capsula* common to this and the *Porta*, it has a thick white Coat proper to itself, like the Muscular Coat of an Artery. On the concave Side of the Liver the several Ramifications meet, and form one Trunk, or Channel, properly call'd the *Biliary Pore*, about the Bigness of a Goose-Quill, which descending about two Inches, meets with the *Cystick Duct*, and together with it forms what we call the *Ductus communis*; which descending in a right Line, about four Inches, discharges itself into the *Duodenum*, by an oblique Insertion, sometimes at the same Aperture with the *Pancreatic Duct*. The *Porus Biliaris* communicates with the Gall-Bladder, by a *Duct* first described by *Dr. Giffon*, and afterwards by *M. Terrault*, who gave it the Name of the *Cyst-Hepatic Duct*. *Verheyen*, in *Oxen*, found two, three, or four of these *Cyst-Hepatic Ducts*; and the like has been observ'd in a Dog and a Man. See **CYST-HEPATIC DUCT**.

BILIDGE of a Ship, is the Bottom of her Floor: *Bilidge-Water* therefore is that, which by reason of the Flatness of the Ship's Bottom, lies on her Floor, and cannot go to the Well of the Pump; and consequently the *Dutch*, whole Ships are often of this Form, do much use a sort of Pumps call'd *Bilidge-Pumps*; or, as we call them, *Burr-Pumps*, to carry off the *Bilidge-Water*. Also when a Ship strikes

on a Rock, they say, she is *bilidged*. And *Bilidge* is the Breadth of her Floor when she lies a-ground.

BILE, a yellow, bitter Juice, separated from the Blood in the Liver, collected in the *Porus Biliaris*, and Gall-Bladder, and thence discharged by the Common *Duct* into the *Duodenum*. The *Bile* is of two Kinds, *Hepatic* and *Cystick*: The first, properly call'd *Bile*, separated immediately from the Glands of the Liver into the *Porus Biliaris*: The second, call'd *Gall*, separated likewise from the Glands of the Liver into the Gall-Bladder, by Roots or *Ducts* proper to itself. The *Cystick Bile* is thicker, a deeper yellow, and bitterer; is not evacuated continually, but only when its Reservoir is replete; in which Case the Contraction of the irritated Fibres propels it into the *Duodenum*. The *Hepatic* is thinner, more mild and pellucid, and is continually oozing out; being expell'd by the sole Actions of the neighbouring Humours. The *Cystick Bile*, or *Gall*, resists Acids, and, mix'd with other Fluids, gives 'em the like Property: It abberges like Soap, and renders Oils capable of mixing with Water; it resolves and attenuates Resins, Gums, and other tenacious-Bodies, rendering 'em homogenous to itself. 'Tis neither alkaline nor acid, but seems a Concretion of Oil, Salt, and Spirits diluted with Water. By a Chymical Analysis *Dr. Drake* observes it affords some Sulphur, or Oil, some volatile Salt, a good deal of fix'd Salt, (in which particularly it differs from all other animal Liquors) and a pretty Quantity of *Coprus Martium*, or Earth: The Basis is Phlegm. The Effect of the *Bile* is, by mixing with the Chyle and the *Fæces*, to attenuate, resolve, abberge, and stimulate the *Fibræ nutritivæ*, to mix together things very different, to bruise and blunt those that are sharp and saline, to divide those that are coagulated, to open the Passages for the Chyle, to excite Appetite, to act the Part of a Ferment, and to assimilate crude things to things concocted. These Effects the *Cystick Bile* has in a greater, the *Hepatic* in a less Degree. *Dr. Quincy* thinks their principal Use is to sheath and blunt the Acids of the Chyle, entangling them with its Sulphurs, so as to prevent their being sufficiently diluted in the Pancreatic Juice to enter the Lactæals: Which he thinks confirm'd by this, that notwithstanding the great Quantity of acid Salts in the Aliment in the Stomach, there are never any found in the Chyle after it has pass'd the *Duodenum*, and been impregnated with the Chyle continually oozing out from the *Porus Biliaris*.

Borelli asserts, that Part of the *Bile* discharged into the Intestines, re-enters the *Mesaraick Veins*, and mixing with the Blood of the *Vena Porta*, is again percolated thro the Liver; and *Borhaave* seems of the same Opinion. Some will have the *Cystick Bile* brought to its Reservoir three different Ways, and that 'tis even composed of three different Kinds of *Bile*, whence its new Properties. *Borhaave* takes those Properties to result from its stagnating in the Gall-Bladder; and, with *Malpighi*, thinks the bitter Part may probably take that Property in the Glandules between the Coats of the Gall-Bladder, which are furnish'd from the *Cystick Arteries*; whence it proceeds bitter, and mixes with the rest in the Bladder.

The *Bile* is a Juice of very great Importance; with regard to the good or ill Habitude of the Animal. *Dr. Woodward* has traced its Effects throughout the Body very minutely, and makes no Scruple to ascribe most of the Diseases thereof to some Disorder of the *Bile*. This he takes to be the chief Spring in the Animal Machine, and from this accounts for most of the Phenomena of a Body, whether healthy or diseas'd: And yet the Antients took it to be no more than an Excrement, for which they could not find any Use. Many of the Moderns, from the small Quantity of *Bile* secret'd, have been led into a Mistake, that this Secretion is not the sole End of so considerable a Vices as the Liver. *Dr. Keil* observes, that in a Dog whose common *Duct* was near as big as that of a Man, he gather'd at the Rate of about two Drams an Hour; tho in a human Body, there is Reason to think the Quantity secreted to be greater.

Sometimes the *Bile* from yellow becomes greenish, like *Verdigreese*, and frequently pale, like the Yolks of Eggs, and that without any other apparent Cause than a little Motion, a Convulsion, or a violent Passion of the Mind. This occasions many and terrible Diseases, as Nausea's, an Abhorrence of Food, Anxiety, Sighing, Cardialgia's, Wind, Diarrhea's, Dysenteries, acute Diseases, Fevers, and Convulsions. Sometimes it becomes black, and takes the Name of *Choler*: In this Case it sometimes tastes like a very sharp Vinegar; sometimes like purified Blood, gnawing, burning, dissolving, consuming, occasioning Inflammations, Gangrenes, Mortifications, violent Pains, and terrible Fermentations. Of *black Bile*, *Borhaave* distinguishes three Kinds; First, the mildest, arising from the Matter of the Blood, put in too great Motion, which hence takes the Name of *Adul*: The second is an Aggravation of the first arising from the same Causes, only heighten'd: The third is a coar-

rapt, parch'd *Bile*, which, if it arose from a greenish, or palish *Bile*, is still worse. Too great an Evacuation of the *Bile*, either upwards or downwards, robs the Cholefaction of its main Instrument; hence it prevents Digestion, Secretion, Excretion of the Faeces, produces an acid Temperature, Cold, Weakness, Paleness, Swoonings, &c. If when prepared it be prevented its Discharge into the Intestines, it produces a Jaundice.

For the Manner in which the Secretion of the *Bile* in the Liver is effected, there are various Opinions. Some maintain, that the Pores of the Secretary Glandules of the Liver, have a certain Configuration and Magnitude, to which the Particles of the *Bile* floating in the Blood being just answerable, both in Bulk and Figure, are admitted in, and all the rest excluded. Others, with *Silvius* and *Lifter*, not allowing any Difference in the Configuration, as knowing that the Pores of all the Vessels are Circular, and that Particles of all Kinds will be admitted, if small enough, have recourse to a Ferment which they suppose to reside in the Liver, by means whereof the Particles of the Blood, in their Passage thro' the Secretary *Ducts*, assume the Form of *Bile*. But as this is little else than begging the Question, others have recourse to another Hypothesis; maintaining, that the Fluids contain'd in the Blood of the *Vena Porta*, while that enters the Substance of the Liver in its way to the Extremities of the *Vena Cava*, indifferently apply to the Apertures of the Secretary Tubules contiguous to the extreme Branches of the *Porta*, which are wide enough, and to the Roots of the *Cæca*, which are not wide enough, to receive 'em; by which means being separated from the Society and the incessant Motion of the other and the essential Parts of the Blood, and being no longer agitated by the Vital Action of the Blood-Vessels, and exposed to the Action of the *Biliary* Vessels, they constitute a new Humour distinct from the Blood, call'd *Bile*, &c.

Lastly, *Dr. Keil* accounts for this Secretion of the *Bile* from the strong Attraction between the Particles whereof the *Bile* is compos'd. He observes, that the Heart and Liver being so near each other; were the *Cæliack* Artery to have carried all the Blood to the Liver, considering the Velocity of the Blood, so viscid a Secretion as the *Bile* could never have been effected. Nature therefore forms a Vein for the purpose, viz. the *Porta*, and by it sends the Blood from the Branches of the *Mesenterick* and *Cæliack* Arteries to the Liver; by which the Blood is brought a great way about, passing thro' the Intestines, Stomach, Spleen, and Pancreas, e'er it arrives at the Liver: Thus its Velocity is exceedingly diminish'd, and the Particles that are to form the Gall have a sufficient time to attract one another, and unite before they come to their secreting Vessels. But, as if this Diminution of Velocity were not sufficient for the purpose, Nature has gone further; having made the Cavities of all the Arteries increase as they divide: thus the Sum of the Branches arising from the *Aorta*, is to the *Aorta* itself as 102740 to 100000. And yet, as if that Proportion were too little for the present Purpose, Nature has here taken a further Step, and increas'd the Branches springing from the *Mesenterick* Artery in a greater Ratio. Thus, in a Body which he examined, he found the Sum of the Branches more than double that of the Trunk; and therefore the Velocity of the Blood in the former, must be less than half that of the latter. He further shews, from a just Calculation, that the Time the Blood now takes in its Passage from the *Aorta* to the Liver is at least 16 Minutes: whereas, had an Artery gone directly from the *Aorta* to the Liver, it would have pass'd in little more than half a Second, viz. in 2437 times the Space it now takes up in its Passage. Whence it appears, that the Blood was not in a State fit to yield *Bile*, had it gone directly from the *Aorta* to the Liver; and that a longer Time, and more languid Motion, was necessary to have the *Bilious* Particles in a readines to be separated. He adds, that were the Humours separated by the Glands at all Times and Places the same in the Blood, and not form'd after this manner, Nature would not have been at so much expence to retard the Blood's Velocity: Besides that, the *Bile* has another Advantage from the Use of the *Porta*; for, by running thro' so many Parts e'er it reach the Liver, it leaves behind it most of its Lymphæ; by which means the Particles being brought nearer each other, are, by their mutual Attraction, sooner united. For the Parts concern'd in the Secretion of the *Bile*, see LIVER, BILARY PORE, GALL-BLADDER, &c. See also SECRETION.

The Word *Bile* comes from the *Latin Bilis*, which some fetch further from the *Greek Bile*, Violence, because *Bilious* People are inclined to Anger. Others fetch it from the *Latin bullire*, to boil. The *Bile* is a Part found in all Animals: even *Figeons*, &c. which have no Gall-Bladder, yet have *Bile*; their Liver being found very bitter. *M. Yauvry* observes, that the *Bile* becomes one of the principal Causes of Thirst, by mixing with the Salival Juice.

BILINGUIS, in Law, the Name of the Jury which passeth in any Case betwixt an *Englishman* and an *Alien*; whereof one Moiety to be *Natives*, the other *Foreigners*; if required. The Word in the *Latin* signifies *double-tongued*.

BILL, an Edge-Tool, fitted to a Handle, used to lop Trees, &c. When short, it is call'd an *Hand-Bill*; when long, an *Hodging-Bill*.

BILL is also a Declaration in Writing, expressing the Wrong and Grievance the Complainant hath suffer'd by the Party complain'd of; or else some Fault committed by him against some Law or Statute of the Realm. This *Bill* is commonly address'd to the *Lord Chancellor*; especially for unconscionable Wrongs done sometimes to others having Jurisdiction, according as the Law they are grounded on, directs. It contains the Facts complain'd of, the Damages suffer'd, and the Petition of Process against the Defendant for Redress.

BANK-BILLS: Instruments whereby private Persons become entitl'd to a Part in the *Bank-Stock*. They are form'd on the Model of the *Lombard-Bills*.

BILL of Entry, an Account of Goods enter'd at the *Custom-House*, both Inward and Outward; wherein is express'd, the Merchant importing or exporting, the Quantity of Goods, and the Sorts, and from whence imported, or to what Place exported.

BILL of Exchange, a Writing ordering the Payment of a Sum of Money in one Place, to any Person assign'd by the Remitter, in consideration of the like Value paid the Drawer in another Place. The whole Estate and Effects of Merchants usually consist in *Bills of Exchange*. There is some Dispute about the Nature and Sanction of a *Bill of Exchange*: Some take it to be the Contract of an Exchange; but the more general Opinion is, that it is a mere Contract of Buying and Selling; that the Money given the Person who gives the *Bill*, is the Price of Sale; and that paid at the appointed Place, the Thing bought and sold.

Bills of Exchange were unknown in the ancient *Roman Jurisprudence*. According to the common Opinion, they are the Invention of the *Jews*; who being banish'd *France*, for some enormous Crimes charg'd on 'em, retir'd into *Lombardy*, about the 12th Century, and found means to withdraw their Effects, which they had lodg'd in the Hands of Friends, by secret Letters and *Bills*, conceiv'd in short, precise Terms, like the modern *Bills of Exchange*; and this by the Assistance of Merchants and Travellers. The Faction of the *Gibelins*, being expell'd *Italy* by the *Guelfs*, retir'd to *Amsterdam*, and used the same Means, for the Recovery of their Effects in *Italy*, as the *Jews* had done: Hence the *Dutch* Merchants took the Hint of negotiating *Bills of Exchange*; and soon spread the Practice throughout all *Europe*. The same *Gibelins* are said to be the Inventors of the *Rechange*, on account of Damages and Interests, when *Bills of Exchange*, which they call'd *Polizze di Cambio*, were not paid, but return'd on Protest.

That which gives the Essence, and Form to a *Bill of Exchange*, is the Cession, or Vendition of a Sum of Money made by the Drawer, to him, on whose Account it is drawn, to be receiv'd of his Correspondent in another Place; which Cession, or Vendition, is made, in the Mercantile Terms, for Value receiv'd, i. e. for a like Sum given by the Person for whose Sake the *Bill* is drawn, to the Drawer, in Money, Merchandize, or other Effects. So that there are three things necessary to establish the Quality of a *Bill of Exchange*; 1st, That it be drawn by one City to another; 2^{dly}, That there be three Persons concern'd, the Drawer, the Person for whom 'tis drawn, and he on whom 'tis drawn; 3^{dly}, That it make mention, that the Value which the Drawer has receiv'd, is in another *Bill of Exchange*, in Money, Merchandize, or other Effects, which are to be express'd; otherwise 'tis no *Bill of Exchange*. When a *Bill of Exchange* is conceiv'd for Value in my self, 'tis not supposed the Drawer has receiv'd the Sum; but the Person, for whom 'tis drawn, stands Debtor to him for it: When a *Bill of Exchange* bears, for which Sum I promise to furnish *Bills of Exchange* to such a Place, the Person for whom the *Bill* is drawn, may compel him to give the *Bills*, or to return the Money.

BILL of Lading, an Instrument sign'd by the Master of a Ship, acknowledging the Receipt of the Merchant's Goods, and obliging himself to deliver them, at the Place to which they are consign'd, in good condition; of which *Bills* there are usually three: the first the Merchant keeps; the second is sent to the Factor to whom the Goods are consign'd; and the third is kept by the Master of the Ship.

BILL, in Law, a Security for Money under the Hand and Seal of the Debtor, without any Condition, or Forfeiture, in case of Non-Performance; in which it is distinguish'd from a Bond or Obligation.

BILL of Parcels, an Account of the particular Sorts and Prices of the Goods bought, given by the Seller to the Buyer.

BILL, in Parliament, a Paper containing Propositions of-fur'd to the Houses, to be pass'd by them, and then presented to the King to pass into an Act or Law. See PARLIAMENT.

BILL of Sale, is when a Person wanting a Sum of Money, delivers Goods as a Security to the Lender, to whom he gives this *Bill*, empowering him to sell the said Goods, in case the Sum borrow'd is not repaid, with Interest, at the Time appointed.

BILL of Stove, a kind of Licence granted at the *Custom-House* to Merchants, to carry such Stores and Provisions as are necessary for their Voyages, Custom-free.

BILL of Sufferance, a Licence granted at the *Custom-House*, to a Merchant, to suffer him to trade from one *English* Port to another, without paying Custom.

BILLA VERA, the *Bill is true*. The Grand Inquest impannell'd and swore before the Justices of Eyre, &c. endorsing a *Bill* whereby any Crime punishable in that Court is presented to 'em, with these two Words, signify thereby, that the Presenter has furnish'd his Presentment with probable Evidence, and worthy further Consideration; whereupon the Party presented is said to stand indicted of the Crime, and bound to make an Answer thereto, either by confessing or traversing the Indictment. If the Crime touch his Life, it is yet refer'd to another Inquest, call'd the *Inquest of Life and Death*, by whom if he be found guilty, he stands convict of the Crime, and is condemn'd by the Judge. See INQUEST, INDICTMENT, &c.

BILLET, in Heraldry, a Bearing in form of a long Square. *Billets* are said to be couch'd, or inverted, when their longest Side is parallel to the Top of the Shield, and the shortest perpendicular. These were anciently Pieces of Cloth of Gold, or Silver, longer than broad, plac'd at a distance by way of Ornament, on Clothes, and afterwards translated to their Coat-Armour. *Gentilium* mistakes, when he says a *Billet* represents a Letter seal'd up. A Coar is said to be *billeted*, when it is charg'd with *Billets*. Thus, he bears *Argent-Billette*, a *Croci engrais'd Gules*, by the Name of *Heath*. *Bloom* says, the *Billets* must be number'd when they are not above ten.

BILLIARDS, a very ingenious Game play'd on an oblong Table, with little ivory or wooden Balls, which are driven by crooked Sticks, made on purpose, into Hazards, or Holes, on the Edge and Corners, according to certain Laws, or Conditions of the Game. The Word comes from the *French Billiard*; of *Billa* the *Balls* made use of, and that from the *Latin Pila*, a Ball.

BILLON, in Coinage, a kind of base Metal, either of Gold or Silver, in whole Mixture Copper predominates. According to *M. Boussier*, *Billon of Gold* is all Gold beneath Standard, or 21 Carats; and *Billon of Silver*, all below ten Pennyweights. But, according to others, and among the rest *M. Boissard*, Gold and Silver beneath the Standard, as far as twelve Carats, and six Pennyweights, are properly base Gold and Silver; and all under those, *Billon of Gold*, and *Billon of Silver*, in regard Copper is the prevailing Metal. The Word is *French*, form'd, according to *Moussé*, from the *Latin, Brass Denarius*. We don't find 'tis naturaliz'd among us; but the Necessity we are frequently under of using it in the Course of this Work, requir'd its being explain'd.

BIMEDIAL, a Term in Mathematicks: when two Medial Lines, as *AB* and *BC*, commensurable only in Power, and containing a Rational Rectangle, are compounded, the whole

AC shall be irrational, and is call'd a first *Bimedial Line*.

BINARY ARITHMETICK. A kind of *Arithmetick* first propos'd by *M. Leibnitz*; wherein, in lieu of the ten Figures in the common *Arithmetick*, and the Progression from 10 to 10, he has only two Figures in all his *Arithmetick*, and uses a more simple Progression from two to two; shewing it of considerable Advantage in the Sciences. All his Characters are 0 and 1. And the Cypher, here, multiplies every thing by 2, as in the common *Arithmetick* by 10: Thus, 1 is one; 10, two; 11, three; 100, four; 101, five; 110, six; 111, seven; 1000, eight; 1001, nine; 1010, ten, &c. which is built on the same Principles with the common *Arithmetick*.

Hence immediately appears the Reason of a celebrated Property of the Duplicate Geometrical Proportion in whole Numbers, viz. that one Number of each Degree being had, one may thence compose all the other whole Numbers above the double of the highest Degree. It being, *v. g.* as if one should say, 111 is the Sum of 4, 2, and 1. Which Property may serve Effays to weigh all kinds of Masses with a little Weight; and may be used in Coins, to give several Values with little Pieces. This Method of expressing Numbers once establish'd, all the Operations will be easy: In Multiplication particular-

100	4
10	2
1	1
111	7

ly, there will be no need for a Table, or getting of any thing by heart.

He does not recommend this Method for common Use, because of the great Number of Figures used to express a Number: Adding, that if the ordinary Progression was from 12 to 12, or from 16 to 16, it would be still the more expeditious; but its Use is in discovering the Properties of Numbers, in making Tables, &c. What makes the *Binary Arithmetick* the more remarkable is, that it appears to have been the same with that used 4000 Years ago among the *Chinse*, and left in *Enigmas* by *Poly*, the Founder of their Empire, as well as of their Sciences.

M. Lagni has propos'd a new System of *Logarithms*, on the foot of the *Binary Logarithms*; which he finds shorter, more easy, and natural, than the common ones.

BINARY NUMBER, that compos'd of two Units.

BINARY MEASURE, in Music, is that wherein you beat equally, or the Time of Rising is equal to that of Falling. See TIME.

BINDING of Books. See BOOK-BINDING.

BINOCLE, or **BINOCULE**, in Opticks, a double Telescope, i. e. consisting of two Tubes join'd together, by which a remote Object may be view'd with both Eyes at once. It was invented by *F. Rubeus*, a *Capuchin*, who describes it in a Book call'd, *Oculus Hæcæ & Eliæ*. Since which *F. Cherrubin* has wrote a large Volume thereon. See TELESCOPES.

BINOMINAL, in Algebra, a Number produced by the Addition of two Numbers of incommensurable Magnitudes, or a Root consisting of two Parts, or Members, connect'd by the Sign +: Thus $a + e$, or $5 + 3$, is a *Binomial*, consisting of the Sum of those two Quantities; if it have three Parts, as $a + b + c$, it is call'd a *Trinomial*; if it have four Members, it is call'd a *Quadri-nomial*; if more, a *Multinomial*. See NUMBER.

BIOGRAPHER, an Author who writes the History, or Life of any Person, or Persons, as *Plutarch*, *Corne. Nepos*, &c. From the *Greek βίω, vita*, and *γράφω, scribo*.

BIQUADRATICK, the next Power above the Cube, or the Square of a Cube Root. See EXTRACTION, POWER, and ROOT.

BIQUINTILE, an Aspect of the Planets, when they are 144 Degrees distant from each other.

BIRDLIME, a viscid Substance, prepar'd various Ways, and from various Materials. The best us'd among us, is made from Holly-Bark, boil'd 10 or 12 Hours; when, the green Coat being separated from the other, 'tis cover'd up a Fortnight in a moist Place, pounded into a tough Paste, that no Fibres of the Wood be left, and wash'd in a running Stream till no Motes appear, put up to ferment four or five Days, skim'd as often as any thing arises, and laid up for Use. To use it, a third part of Nut-Oil is incorporated with it over the Fire. The *Birdlime* brought from *Damascus* is suppos'd to be made of *Scheffers*, their Kernels being frequently found in it; but this does not endure either Frost or Wet: that brought from *Spain* is of an ill Smell; that of the *Italians* is made of the Berries of Mistletoe, hence, mix'd with Oil, as before; to make it bear the Water, they add Turpentine. 'Tis said, the Bark of our Lantane, or way-faring Shrub, makes *Birdlime* as good as the best.

BIRDS are distinguish'd in that they belong to Land or Water: Of *Land Fowl*, some have crooked Beaks and Talons; and of these some are carnivorous and rapacious call'd *Birds of Prey*; some frugivorous, call'd by the general Name of *Parrots*. Of *Birds of Prey*, some prey in the Day-time; and of these are reckon'd a greater and lesser Sort: The greater are either of a more bold and generous Nature, as the *Eagle-kind*; or of a more cowardly and sluggish, as the *Vulture*: The lesser diurnal *Birds of Prey*, are the *Hawk-kind*, which are wont to be reclaim'd and mann'd; for Fowling, and call'd *Hawks*; and by the Falconers distinguish'd into *long-winged*, as the *Falcon*, *Lanner*, &c. whose Wings reach almost as far as the End of their Train; or *short-wing'd*, as the *Gift-Hawk* and *Sparrow-Hawk*, whose Wings, when closed, fall much short of the End of their Trains: Those of the *Hawk-kind* which are of a Nature more cowardly, and sluggish, or else indolent, are neglected by our Falconers, and so live at large; and of these also there is a greater Sort, as the *Buzzard-kind*; and a lesser, as the *Butcher-kind*, or *Shrike*, (about the Bigness of a *Blackbird*, and found in *England*.) The *Bird of Paradise* is Exotic. Of *Birds of Prey* with crooked Beaks and Talons, some are Nocturnal, as the *Owl-kind*, which prey by Night; and these are either horned, or eared, as the *Eagle-Owl*, *Horn-Owl*, &c. or without Horns, as the *Brown-Owl*, *Grey-Owl*, &c. There is a Sort of *Land Birds* with crooked Beak and Talons, call'd frugivorous, because they do sometimes eat Flesh, yet they eat Fruits too; and these are known by the general Name of *Parrots*, and are distinguish'd into three Sorts, according to their Bigness; the greatest Size being call'd *Maccaws*; the middle-sized, and most common, *Par-*

rots, and *Poppinjays*; and the least Sort, *Parrakeets*; and all this Kind make use of their Beak in climbing, and move the upper Jaw. *Land Birds* that have their Bill and Claws more freight, are distinguish'd into three Sizes; the greatest Kind are, such as by reason of the Bulk of their Bodies, and Smallness of their Wings, cannot fly at all; these are *Exotic Birds* of a singular Nature; such as the *Ostrich*, the *Cassowary*, and the *Dodo*: The middle-sized Kind are divided, by their Bills, into such as have large, thick, strong, and long ones; some of which feed promiscuously on Flesh, Insects, and Fruits, as the *Gro-wink*, which are wholly black; and the *Pic-kind*, which are partly colour'd: Some feed on Fish only, as the *Kingfisher*; and some on Insects only, as the *Wood-pecker*: And into such as have a smaller and shorter Bill; whose Flesh is either white, as the *Poultry-kind*; or blackish, as the *Pigeon* and *Turkey-kind*. The least sized Kind of *Land Birds*, with freight Bills and Claws, are called *Small-Birds*; and these are of two Kinds; *soft-beaked*, which have slender, freight, and pretty longish Bills, most of them, and feed chiefly upon Insects; and *hard-beaked*, which have thick and hard Bills, and feed mostly on Seeds.

Water-Fowls, are such as frequent Waters and watry Places to seek their Food; and these are all cloven-footed, and generally have long Legs, and those naked, or bare of Feathers, a good way above the Knee, that they may the more conveniently wade in Waters. Of these they reckon two Kinds; a greater, as the *Crane*, *Jabiru*, &c. and a lesser, which are either piscivorous, feeding on Fish, as the *Heron*, *Spoon-Bill*, *Stork*, &c. or *Masduckers*; or insectivorous, of which some have very long Bills, which are sometimes crooked, as in the *Curlew* and *Wimbrell*; and sometimes freight, as in the *Woodcock* and *Godwit*: others have middle-sized Bills, as the *Sea-Pye* and *Red-Shank*, &c. and a third Sort have short Bills, as the *Lapwing* and *Plover*. Those are reckon'd short Bills, which exceed not an Inch and half; middle-sized Bills, to two Inches and half; and long Bills above two Inches and half. There is another kind of *Water-Fowl*, which swim in the Water; some of which are cloven-footed, as the *Moor-Hen*, and *Coot*, &c. but most are whole footed; and of these some few have very long Legs, as the *Flammar*, the *Avocetta*, and *Curruca*; but mostly they are short-legg'd: Of which some few have but three Toes on each Foot, as the *Penguin*, *Razor-Bill*, &c. but generally they have four Toes on each Foot, and these either all connected together by intervening Membranes, as in the *Pelican*, *Soland-Goose*, &c. or more usually with the Back-Toe loose; and this Kind are either *narrow-bill'd*, or *broad-bill'd*: Those with *narrow Bills* have their either blunt, and hooked at the Tip, of which Sort some are serrate, as in the *Diver-kind*; and some not toothed, as in the *Puffin*; or sharp-pointed and straighter; of which, some Sort have long Wings, as the *Gull-kind*; and some shorter, as those *diving Birds* call'd *Dauckers*. Those with broad Bills may be divided into the *Goose-kind*, which are larger; and the *Duck-kind*, which are smaller; and these latter into *Sea-Ducks*, or *River* and *Plash-Ducks*. Most *Water-Fowls* have a short Tail; and none of this Kind have their Feet dispos'd like *Parrats* and *Wood-peckers*, that have two Toes forward, and two backward, none having more than one Back-Toe, and some none at all. See *Willoughby's ORNITHOLOGIA*.

BIRTH, of a *Fetus*, is Delivery from the Mother. See **FOETUS**; for the Number of *Births* see **MARRIAGE**: Under which the Proportion of *Births* to Marriages, of *Births* to Burials, and of *Male-Births* to Females, are computed.

BIRYING, or *Birthing*, a Term among the Seamen for due Distance observed between Ships lying at an Anchor, or under Sail; and the Raising, or Bringing up the Sides of the Ship: Aids the proper Place a-board to put their Chests, &c. is call'd the *Birch*; and a convenient Place to moor a Ship in, is also call'd by this Name.

BISHOP, a Prelate, or Person consecrated for the Spiritual Government and Direction of a Diocese. See **DIOCESE**. 'Tis a long Time that *Bishops* have been distinguish'd from mere *Priests*; but whether that Distinction be of divine or human Right, whether it was settled in the Apostolical Age, or introduced since, is much controverted. On the one Side stands the *New Testament*, wherein 'tis certain the Names *Bishop* and *Priest* are used indifferently: On the other Side is *Tradition*, the *Fathers*, and the *Apostolical Constitution*. Indeed, there appear no Footsteps of any Institution of *Bishops*, distinct from *Priests* in the Scriptures; neither do the Opposers thereof pretend to shew any Mark of any other Form of Church-Government therein. So that it may seem probable, the Apostles did not settle any thing of this kind at all; but either left the Spiritual Oeconomy in the Hands of the *Priests*, or of those together with the People. Accordingly new Occasions requiring new Measures, in a little Time, the Functions of this *Priesthood* were divided, and the *Priests* distinguish'd into Degrees; the Political Part of Religion being assign'd principally to

Bishops, and the Evangelical to the *Priests*, &c. Or rather, as some others will have it, the Functions of *Teaching* and *Preaching* were reserv'd to the *Bishop*, and that of *Ordination* supersed'd; which was their principal Distinction, and the Mark of their Sovereignty in their Diocese. See **EPISCOPACY**.

The Word comes from the *Saxon Bishop*, and that from the *Greek Episcopus*, an Overseer, or Inspector; which was the Title the *Apostles* gave those whom they sent into the Provinces subject to 'em, to see whether every thing were kept in Order; and the *Romans* gave the same Title to those who were Inspectors and Visitors of the Bread and Provision. It appears from a Letter of *Cicero*, that he himself had a *Bishoprick*, being *Episcopus Ore & Campanie*. *Diocece* was also used for the Extent of this Government; and *Cicero* uses it in this Sense, *diocesan*.

Bishops are of various Kinds, *Archbishops*, *Bishops*, and *Suffragan-Bishops*, which see; as also *Accephals*, *Metropolitans*, &c.

The Function of a *Bishop*, in *England*, may be consider'd as twofold, viz. what belongs to his Order, and what to his *Jurisdiction*. To the Order belong the Ceremonies of Dedication, Confirmation, and Ordination: To his *Jurisdiction*, by the Statute Law, belongs the Licensing of Physicians, Chirurgeons, and School-masters, the Uniting small Parishes, (the this last Privilege is now peculiar to the *Bishop of Norwich*) to assist the Civil Magistrate in the Execution of Statutes relating to Ecclesiastical Matters, and to compel the Payment of Tithes, and Subsidies due from the Clergy: by the Common Law, he is to certify the Judges, touching legitimate and illegitimate Births and Marriages; and by that and the Ecclesiastical Law, he is to take care of the Probate of Wills, the Granting Admistrations, to collate to Benefices, grant Institutions on the Presentation of other Patrons, command Induction, order the collecting and preserving the Profits of vacant Benefices for the Use of the Successors, defend the Liberties of the Church, and visit his Diocese once in three Years. To the *Bishop* belong Suspension, Deprivation, Deposition, and Degradation; and EXCOMMUNICATION, which see.

The *Bishops of England* are all *Barons* and *Peers*. *Barons* in a threefold manner, viz. *Peers*, in regard of Lands and Baronies annex'd to their *Bishopricks*; by *Writ*, as being summon'd by *Writ* to Parliament; and by *Patent*, or *Creation*: Accordingly, they have the Precedence of all other *Barons*, and sit in the Upper House, both as *Barons* and *Bishops*. They have two special Privileges next to *Regal*: The first, that in their Courts they sit and pass Sentence, of themselves, and by their own Authority: The *Bishops Courts* are not like all other Courts; but, *Writs* are sent out in their own Name, *septe the Bishop*, not the King's Name, as the Kings Courts do. The second, That, like the King, they can depute their Authority to another, as their *Suffragan*, *Chancellor*, *Commissary*, &c. They have this Advantage over *Lay-Lords*, that in whatever *Christian* Country they come, their *Episcopal* Degree and Dignity is acknowledg'd; and they may, *quatenus Bishops*, ordain, &c. They have their Vote in the Trial and Arraignments of a *Peer*; but 'er Sentence of Death, &c. they withdraw, and vote by Proxy. They have several Immunities, as from *Arrests*, *Outlawries*, *Distrains*, &c. Liberty to hunt in the King's Forests, &c. to have certain Tuns of Wine Duty-free, &c. Their Persons may not be seiz'd, as *Lay-Peers* may, upon Contempt, but their Temporalities alone. They may qualify as many Chaplains as a *Duke*, viz. Six. By Law, the Crime of *Episcopicide*, which a Clergyman commits by killing his *Bishop*, is equivalent to *Parricide*, viz. *Petty-Treason*. The *Bishops* in *England* are 24, *Archbishops* two, *Suffragans* none.

The Form of Consecrating a *Bishop* is different in different Churches. In the *Greek Church*, the *Bishop* Elect being by the Assistent *Bishops*, presented for Consecration, and the Instrument of Election put in his Hand, after several Prayers, the first call'd *Diaconique*, the *Bishop* Elect demanding Consecration, makes Profession of his Faith; after which he receives a Benediction: He is then interrogated as to his Belief of the *Trinity*; to which he answers by a long Profession of Faith, and receives a second Benediction. Lastly, he is ask'd what he thinks of the Incarnation; to which he answers in a third Profession of Faith, with the Pastoral Staff: after which he is led up to the Altar; where, after certain Prayers, and three Crosses on his Head, he receives the *Pallium*, if he be an *Archbishop*; or *Patriarch*; he then receives the Kiss of Peace, of his Consecrator and two Assistants; and, sitting down, reads, prays, and gives the Communion to his Consecrator and others.

In the *Romish Church*, the *Bishop* Elect being presented by the Elder Assistent to the Consecrator, takes the Oath: He is then examin'd as to his Faith; and, after several Prayers, the *New Testament* is drawn open over his Head, and he receives the Unction on his Head by *Christma*. The

Turbans, *Staff*, *Ring*, and *Gospel*, are then given him; and, after Communion, the *Mitre* put on his Head: Each Ceremony being accompanied with proper Prayers, &c. the Process ends with *Te Deum*.

In *England*, the King being certifi'd of the Death of a *Bishop* by the Dean and Chapter, and his Leave requested to elect another, the *Conge d'Elire* is sent to 'em, nominating the Person he would have chosen. The Election is to be within 20 Days after the Receipt of the *Conge d'Elire*; and the Chapter, in case of refusing the Person named by the King, incurs a *Premunire*. After Election, and its being accepted of by the *Bishop*, the King grants a Mandate under the Great Seal for Confirmation; which the *Archbishop* conveys to the *Vicar-General*; consisting, mostly, in a solemn Citation of such as have any Objections to the *Bishop* Elect, a Declaration of their Contumacy in not appearing, and an Administration of the Oaths of Supremacy, and Canonical Obedience. Sentence being read by the *Vicar-General*, the Confirmation concludes with a Treat: Then follows the Consecration, by the *Archbishop* and two Assistant *Bishops*. The Ceremony is the same as in the *Romish Church*, save that, having put on the *Episcopal Robes*, the *Archbishop* and *Bishops* lay their Hands on his Head, and consecrate him with a certain Form of Words. After Communion they go to a Banquet.

The Translation of a *Bishop* to another *Bishoprick*, only differs in this, that there is no Consecration. Note, A *Bishop* differs from an *Archbishop* in this, that an *Archbishop* with *Bishops* consecrate a *Bishop*, as a *Bishop* with Priests ordain a *Priest*; that the *Archbishop* visits a Province, as the *Bishop* a Diocese; that the *Archbishop* convokes a Provincial Synod, as the *Bishop* a Diocesan one; and that the *Archbishop* has Canonical Authority over all the *Bishops* of his Province, as the *Bishop* over the Priests in his Diocese.

BISHOP'S-COURT, an Ecclesiastical Court held in the Cathedral of each Diocese; the Judge whereof is the *Bishop's* Chancellor, antiently call'd *Ecclesiasticus*, and *Ecclesie Cancellarius*, the Church-Lawyer; who judges by the Civil and Canon Law; and, if the Diocese be large, has his Commissaries in remote Parts, who hold what they call Consistory Courts, for Matters limited to him by his Commission.

BISMUTH, a Mineral Body, half Metallick; compos'd of the first Matter of Tin, while yet imperfect; and found in Tin Mines. Its Substance is hard, heavy, sharp, and brittle, of a large Grain, polish'd, white, and shining. 'Tis also call'd *Im of Glass*; because, when broke, it shews a vast Number of little polish'd Substances like Glass: 'Tis also call'd *Morchebite*, by way of Excellence, because surpassing all others in Whiteness and Beauty. It contains an Arsenical Salt, very dangerous to take inwardly. Its Precipitate is a very white Magistery, which is mix'd with Waters and Pomatums to make a Facus to beautify the Complexion, and preserve the Skin. There are also Flowers prepar'd from it, which take away Spots in the Face; whence 'tis otherwise call'd *Bianc de Perle*. See the Process in *Chyrurg.*

Aloysius Barba says, there has been lately found a Mine of *Bismuth* in *Bohemia*; and ranks it among the Metals: But *Bismuth* is properly the *Regulus* of the Stone call'd *Cobalt*; whence is prepar'd *Arsenic*, *Lapis Lazuli*, and *Bismuth*. M. *Stahl*, a German Physician, gives us its Preparation.

There is also an Artificial *Bismuth*, which is that ordinarily us'd, made by reducing Tin into thin Lamine, or Plates, and cementing them by a Mixture of white Tartar, Salt-Petre, and *Arsenic*, stratified in a Crucible over a naked Fire. The same is also made of a Stone call'd *Zin*, using Lead instead of Tin, and a little Calamine Stone.

BISQUET, a Confectioner's Preparation of fine Flower, Eggs, and Sugar, with Aniseeds and Citron Peel, baked in the Oven in Tin or Paper Moulds.

SEA-BISQUET, a Bread much dried, by passing the Oven twice, to make it keep: For long Voyages they bake it four times, and prepare it six Months before the Embarkment. The Word comes from the Latin *bis*, and the French *cuit*, q. d. twice baked.

BISSECTION, in Geometry, the Division of any Quantity into two equal Parts; the same with *Bipartition*: Thus, to bissect any Line, is to divide it into two equal Parts.

BISSEXTILE, or Leap-Year, in Chronology, a Year consisting of 366 Days, happening once each four Years, by reason of the Addition of a Day in the Month of *February*, to recover the six Hours which the Sun spends in his Course each Year, beyond the 365 Days, ordinarily allow'd for it. The Day thus added, is also call'd *Bissextile*; *Cesar* having appointed it to be the next after the 25th of *March*, which among them was the 7th of the *Calends* of *April*. Thus the 6th of the *Calends* of *March* is this Year reckon'd twice over; whence the *Intercalary Day*, and the Year when it happens, are both call'd by the Name *Bissextile*.

However, the Astrologers concern'd in reforming the *Calendar*, by Order of Pope *Gregory XIII.* observing that

the *Bissextile* in four Years added 40 Minutes more than the Sun spent in returning to the same Point of the *Zodiac*, and computing that these supernumerary Minutes in 153 Years would form a Day; to prevent any Changes being thus insensibly introduc'd in the Seasons, 'twas appointed, that in the Course of 400 Years, there should be three *Bissextiles* retrench'd: Accordingly, in the Year 1700, there was no *Bissextile*, for that reason. By the Statute de Anno *Bissextill*, 21. Hen. III. To prevent Misunderstandings, the *Intercalary Day*, and that next before it, are to be accounted as one Day. See YEAR.

BISTER, or BISTRAN, among Painters, a Colour made of Chimney-Soot black'd, and afterwards dilu'd with Water, serving to wash their Designs. Instead of this some use the Strokes of a Pen, some *Indian Ink*, others a black Stone, &c.

BIT, an essential Part of a *Bridle*; its Form and Use well known; its Parts and Kinds various.

For the several Parts of a *Bit*, those of a *Saffle* or *Curb-Bit*, are, the Mouth-Piece, the Cheeks and Eyes, Guard of the Cheek, Head of the Cheeks, the Port, the Weils, the Campanel or Curb and Hook, the Bosses, the Bossers and Rabbits, the Water-Chains, the Side-Bolts, Bolts and Rings, Kirbles of the Bit or Curb, Trench, Top-roll, Flap and *Face*.

The Kinds of Bits are, 1. The *Mistroll*, *Saffle*, or *Watering Bit*. 2. The *Common Mouth*. 3. The *Common* with a full Mouth all of a Piece, only kne'd in the middle, to form a Liberty or Space for the Tongue. 4. The *Common Mouth*, with the Liberty in form of a Pigeon's Neck. 5. The *Common* with a Port Mouth and an Upriser, or mounting Liberty. 6. The *Scotch Mouth* with an Upriser. 7. The *Common Mouth* with a Liberty, after M. *Pagnatelli's* manner. 8. The *Mallicadour*, or *Slavering Bit*. 9. The *Cats Foot Bit*. 10. The *Boston Bit*, &c.

BITE of a mad Dog. See HYDROPHOSIA.

BITE of a Viper. See VIPER.

BITE of a Tarantula. See TARANTULA.

BITTERNES, a particular Savour or Sensation, suppos'd to result from this, that all the Particles of the bitter Body are broken, blunt'd, and diminish'd, so as none of 'em remain long and rigid; which is confirm'd from this, that Foods burnt, and their Particles much comminuted and broken by the Fire, become bitter.

BITUMEN, an inflammable Matter, fat and unctuous. Naturalists distinguish three Kinds of *Bitumens*, hard, soft, and liquid or oily; and each of these they subdivide into several others. Among the hard *Bitumens* are rank'd *yellow Amber*, (some add *Ambergreese*) *Jet*, *Asphaltum* or *Bitumen of Judea*, *Pisphaltum*, *Pit-Coal*, *Black-Stone*, and *Sulphurs*. The soft are, *Maltha*, *Bitumen of Coloa*, of *Siriana*, and *Copal*. Lastly, The *Naphtha* of *Italy*, and *Petroleum*, are rank'd among the liquid *Bitumens*.

Of these *Bitumens* some are useful, others are found floating on the Surface of certain Lakes, and others spring from the Earth like Fountains. Some *Bitumens* are so hard, that they are us'd in Forges, instead of Coals; others so glutinous, that they serve instead of Cement, or Mortar in Buildings; of which kind it was, that the famous Walls of *Babylon* were built: and others so liquid, that they are burnt in Lamps instead of Oil. The *Bitumen* in most Resin is that of *Judea*. See ASPHALTUM; and the other *Bitumens* under their proper Heads. *Sirabo* derives the Word from *Sirra*, Pitch.

BIVALVE, a Term us'd by the Writers of Natural History, for such Shell-Fish as have two Shells, as Cockles, Mussels, Oysters, &c. which are said to be of the *Bivalve-kind*; and also for the *Siliqua*, or Seed-Pods of such Plants as open all their whole Length to discharge their Seeds; such as Pease, Beans, &c. for those the Botanists lay have a *Bivalve Siliqua*.

BIVENTER, in Anatomy, the sixth Muscle of the Jaw, and last of those serving to open it: 'Tis call'd *Biventer*, or *Digastricus*, as having two Bellies for its two Extremities, and a Tendon in the middle. It takes its Origin from a Scissure between the Occipital Bone and the Mastoidal Apophyses, whence passing its Tendon thro a Hole in the *Stylohyoidens* and an Annular Ligament of the Os *Hyoides*, there arise some Fibres which join its second Belly; whence going fleshy, and returning upwards, it is inserted into the middle of the inferior Part of the lower Jaw. By this Contrivance it is enabled to draw the Jaw downwards.

BLACK, something opaque and porous, that imbibes all the Light falling on it, reflects none, and therefore exhibits no Colour. See BLACKNESS. There are various Kinds of *Blacks* which pass in Commerce, viz. *Dyers Black*, *Common Black*, *Ivory Black*, *Spanish Black*, *Lamp-Black*, &c.

Dyers Black, is one of the five Simple and Mother Colours us'd in *Dying*. 'Tis made differently, according to the different Quality and Value of the Stuff to be dy'd. For Broad-Cloths, fine Raynes, and Druggets, &c. they use *Pate*, or *Wood*, and *Indigo*; the Goodness of the Colour con-

fits in there not being above six Pounds of Indigo to a Ball of Paper, when the Paper begins to call its blue Flower; and in its not being heated for Use above twice. Thus blood, the Stuff is boil'd with Alum, or Tarrar, then madder'd; and, lastly, the Black given with Galls, Copperas, and Sumac: To bind it, and prevent its smearing in Use, the Stuffs are well scower'd in the Fulling Mill, when white, and well wash'd afterwards. For Stuffs of less Value, 'tis sufficient they be well blood with Stuffs, and black'd with Galls and Copperas: But no Stuff can be regularly dyed from White into Black, without passing thro the intermediate Blue. Yet there is a Colour call'd cold Black, or Jesuits Black, prepar'd of the same Ingredients as the former, but without being first dyed Blue. Here the Druggs are dissolv'd in Water that had boil'd four Hours, and stood to cool till the Hand wou'd bear it; then the Stuff dipp'd in it, and again taken out six or eight times. Some prefer this Black to the other, but on weak grounds. This Method of Dying Black is said to have been invented by the Jesuits, and to be still practis'd in their Houses, where they retain Numbers of Dyers. See GRAY. See also DYING.

German or Frankfort BLACK is made of the Lees of Wine burnt, then wash'd in Water, and ground in Mills for that Purpose, together with Ivory or Peach-Stones burnt. This Black makes the principal Ingredient in the Rolling-Press-Printers Ink. It is ordinarily brought from Frankfort, Mentz, or Strasbourg, either in Lumps, or Powder. That made in France is less valued than that of Germany, by reason of the Difference between the Lees of Wine used in the one and the other; tho some prefer that made at Paris to that of Frankfort.

Ivory or Velvet BLACK, is made of Ivory burnt, ordinarily, between two Crucibles well luted; which being, thus, render'd perfectly black, and in Scales, is ground in Water, and made into Troches, or little Cakes, us'd by the Painters; as also by the Jewellers, to blacken the Bottom or Ground of their Collets, wherein they set their Diamonds to give 'em their Tint or Colour.

Spanish BLACK, so call'd because first invented by the Spaniards, and most of it brought from them, is no other than burnt Cork; us'd in various Works, particularly among Painters.

Lamp-BLACK, or Smoke-BLACK, the Smoke of Rafin, prepar'd by melting and purifying the Rosin in Iron Vessels; then setting fire to it under a Chimney, or other Place made for the Purpose, and lined a-top with Sheep-Skins, or thick Linnen Cloth, to receive the Vapour, or Smoke, which is the Black: In this manner they prepare vast Quantities of it at Paris. In England it is, ordinarily, prepar'd from the resinous Parts of Woods, burnt under a kind of Tent, which receives it: It is us'd on various Occasions, particularly in the Printers Ink; for which it is mix'd with Oils of Turpentine and Linseed, all boil'd together. It must be observ'd, that this Black takes fire very readily, and, when on fire, is very difficultly extinguish'd: The best Method of putting it out is, with wet Linnen, Hay, or Straw; for Water alone won't do it.

Earth-BLACK is a kind of Coal found in the Ground, which, well pounded, is us'd by the Painters in Fresco.

There is also a kind of BLACK made of Silver and Lead, us'd to fill up the Strokes and Cavities of Things engrav'd.

BLACKNESS, the Quality of a black Body, or a Colour arising from such a Texture and Situation of the superficial Parts of the Body, as does, as it were, decaden, or rather absorb, the Light falling on it, without reflecting any, or very little, of it to the Eye. In which Sense Blackness stands directly oppos'd to Whiteness; which consists in such a Texture of Parts, as indifferently reflects all the Rays thrown upon it, of what Colour soever they be. Sir Isaac Newton, in his Opticks, shews, that for the Production of black Colours, the Corpuscles must be less than those which exhibit any other Colours; because, where the Sizes of the component Particles are greater, there is too much Light reflected to constitute this Colour; but, if there be a little less than is requisite to reflect the white, and very faint blue of the first Order, they will reflect so little Light, as to appear intensely black; and yet may, perhaps, reflect it variously to and fro within them so long, till it happen to be stifled and lost; by which means they will appear black, in all Positions of the Eye, without any Transparency. And from hence it appears why Fire, and Putrefaction, by dividing the Particles of Substances, turn them black; why small Quantities of black Substances impart their Colours very freely, and intensely, to other Substances to which they are applied; the minute Particles of these, by reason of their very great Number, easily overspreading the gross Particles of others: Hence also appears, why Glais ground very elaborately with Sand, on a Copper-Plate, till it be well polish'd, makes the Sand, together with what by rubbing is worn off from the Glais and Copper, become very black; and why black Substances do, sooneit of all others, become hot in the Sun's Light, and

burn, (which Effect may proceed partly from the Multitude of Refractions in a little room, and partly from the easy Commotion of a very small Particles;) and also why Blacks are usually a little inclined towards a bluish Colour: for, that they are so, may be seen by illuminating white Paper, by Light reflecting from black Substances, where the Paper will usually appear of a bluish white; and the Reason is, that black borders on the obscure blue of the first Order of Colours; and therefore, reflects more Rays of that Colour than of any other. It is necessary also, to the Production of Blackness in any Bodies, that the Rays be stopp'd, retain'd, and lost in them; and these conceive Heat (by means of a Burning-Glass, &c.) more easily than other Bodies; because the Light which falls upon them is not reflected outwards, but enters the Bodies, and is often reflect'd and refracted in them, till it be stifled and lost. See LIGHT and COLOUR.

BLACK ROD, or Gentleman-Usher of the Black Rod, is Chief Gentleman-Usher to the King: He is call'd in the Black Book, *Lator Virge Nigre & Hostiarum*, and elsewhere *Virgi-Bajulus*. His Duty is to bear the Rod before the King at the Feast of St. George at Windsor: He has also the keeping of the Chapter-House Door, when a Chapter of the Order of the Garter is sitting; and, in time of Parliament, attends the House of Peers. His Badge is a Black Rod, with a Lion Gold a-top. This Rod has the Authority of a Mace. The Office was formerly held by Patent.

BLACKS, or NEGRO's, a Nation of People, so call'd from the Colour of their Skin: For the Reason of their Colour, and the Commerce made with 'em, see NEGRO.

BLADDER, in Anatomy, a thin expanded membranous Body found in several Parts of an Animal, serving as a Receptacle of some Juice, or of some liquid Excrement; from whence it takes various Denominations, as *Urinary-Bladder*, *Gall-Bladder*, &c.

BLADDER, by way of Eminence, is a large Vessel, which serves as a Receptacle of the Urine of Animals, after its Secretion from the Blood in the Kidneys. It is situated between the Duplicature of the Peritonæum, and the lower Part of the Abdomen, between the *Oes Sacrum* and the *Oes Pubis*, above the strait Gat in Men, and in the Neck of the Womb in Women. It is tied to the Navel by the *Urachus* degenerated into a Ligament, its Sides to the *Umbilical Arteries*, and its Neck to the *Intestinum Rectum* in Women. It is compos'd of three Coats; the first a Covering of the *Peritonæum*; the second is compos'd of Muscular Fibres, which run irregularly several ways; and the third, which is full of Wrinkles for facilitating its Dilatation, is both glandulous and nervous. Its Glands separate a viscid and slimy Matter, which defends it from the Acrimony of the Salts in the Urine: Around its Neck there goes a small Muscle, call'd *Sphincter Vesicæ*, which contracts the Orifice of the Bladder, to prevent the Urine from dripping involuntarily, or till it thrust open the Passage, by the Contraction of the second Coat of the Bladder, which is therefore call'd *Detrusor Urine*. The Bladder has Blood-Vessels from the *Hypogastricks*; and Nerves from the *Intercostals*. See URINE, &c.

BLAIN, a Distemper incident to Beasts, consisting in a Bladder growing on the Root of the Tongue against the Wind-Pipe, which at length swelling, stops the Wind. It comes by great chafing, and heating of the Stomach; whereby, as some judge, it still grows, and increaseth by more Heat.

BLANCHING, the Art or Manner of Bleaching, or Whitening. See BLEACHING.

BLANCHING OF WAX. See WAX.

BLANCHING, in Coinage; the Preparation of the Pieces, given 'em before the striking, to give 'em the Lustre and Brillant. The Blanching, as now practis'd, is perform'd by heating the Pieces in a kind of Peel, with a Wood Fire, in manner of a Reverberatory, so as the Flame passes over the Peel. The Pieces being sufficiently heated, and cooled again, are put successively to boil in two other Peels of Copper, wherein are Aqua fortis, common Salt, and Tarter of Montpellier; when they have been well drain'd off this first Water in a Copper Sieve, they throw Sand and fresh Water over 'em; and when dry, they are well rubb'd.

The ancient Method of Blanching was, by putting the Pieces, after heating, in a large Vessel of common Water, and some Ounces of Aqua fortis; but in different Proportions for Gold and Silver. This Method is now diffus'd, partly by reason of its Expensiveness, and partly because it diminishes the Weight of the Metal. See COINAGE.

BLANK VERSE. See VERSE and RHYME.

BLATA BIZANTIA, or *Unguis Odoratus*, the upper Part of a Shell call'd by the *Latini Conchylium*. These Shells are of different Magnitudes; but the Figure, in all, is that of a Claw of a Wild Beast; whence its second Name; the first being occasion'd by its being usually brought from Constantinople, the ancient *Bizantium*. The *Blata Bisan-*

is very thin, of a brown Colour, burns readily; and in burning smells ill. Its Use in Physick is the same with that of *Castoreum*, viz. for Vapours. Instead of the *Blaze Bizarria*, which is very rare, is frequently substituted another kind of Shell, of lels Virtue, call'd *Solen*.

BLAZE, in the *Manege*. See *STRAB*.

BLAZING-STAR. See *COMET*.

BLAZONING, in Heraldry, the Art of Deciphering the Arms, or Armories of Noble Houses, &c. or of Naming all the Parts in their proper and particular Terms. There is this Difference between *Arms* and *Blazon*; that the first are the Device or Figures bore on the Coat, or Shield; and *Blazon*, the Description thereof in Words. See *ARMS* and *DEVISE*. In *Blazoning* a Coat, 'tis a special Rule, to begin with the *Field* first, and then proceed to the *Blazon* of the *Charge*. If the *Field* be taken up with several things, whether of one or various kinds, that which lies next and immediately on the *Field*, must be first nam'd; then those more remote. After the Metal-Colour of the *Field* is nam'd, the Manner of the Division of the *Espace* between by Line, whether downright, or bend-ways, must be express'd. After the *Field* in Colour, and the *Line* and *Charge*, if there be more Parts of the *Field* possess'd by the *Charge* than one, the principal Part of the *Field* must be nam'd first. The Arms of all Emperors, Kings, and Princes, are *blazon'd* by Planets; those of the Nobility by precious Stones; and Barons, Knights, Esquires, and Gentlemen Coats, by Metal and Colour. It must farther be observ'd, that Metal must never be put on Metal, nor Colour on Colour; for, in so doing, the Arms are false. It may be added, that when Lions stand upright in a Coat, they are call'd *Rampant*; when walking forward, *Passant*; when they look you in the Face, *Passant Guardant*: In other Postures they have other Terms, as *Saliant*, *Rogardant*, &c. which see. Wolves and Bears are term'd after the manner of Lions; Gryphons (instead of *Rampant* and *Saliant*) are term'd *Sergreant*; Lions, Gryphons, and Eagles, are also *Lougard* and *Armed*; Swans, *Membred*; Hawks, *Jess'd* and *Bell'd*; Cocks, *Armed*, *Crest'd*, and *Jowl'd*. And note, All these Things are to be express'd in *Blazon*, when met with, viz. when the Tongues, Bills, and Claws, are found of different Colours from the Body: When a living Creature proceeds from the Bottom of the *Ordinary*, 'tis term'd *Issuant*; when over two Colours, *Jeasant*; if it proceed from the middle of any *Ordinary*, or common *Charge*, *Naissant*.

There are various Etymologies of the Word *Blazon*: The most probable brings it from the German, *blasen*, to blow a Horn; it being the Custom of those who presented themselves at the Lists in the ancient Tournaments, to blow a Horn, to notify their coming. After this the *Heralds* founded their Trumpets, and then *blazon'd* the Arms of those who presented themselves; describing them aloud, and sometimes expatiating on the Praises and high Exploits of the Persons who bore them.

BLEACHING, or *BLANCHING*, the Art and Manner of *Whitening* Linens, Stuffs, and Silks, &c. The Process in each is as follows.

For bleaching Silk. While 'tis yet raw, 'tis put in a thin Linen Bag, and thrown into a Vessel of boiling River-Water, wherein Soap has been dissolv'd, then boil'd two or three Hours, and the Bag being turn'd several times, taken out, beaten, and wash'd in cold Water, slightly wrung out, and thrown into a Vessel of cold Water mix'd with Soap and a little Indigo: The Indigo gives it the bluish Cast always observ'd in white Silks. After taking out of the second Vessel, 'tis wrung out, and all the Water and Soap express'd, shook out to unrivet and separate the Threads, and hung up in the Air, in a kind of Stove made on purpose, wherein is burnt Sulphur; the Vapour whereof gives the last Degree of *Whiteness* to the Silk. See *STRAB*.

To bleach Woolen Stuffs. There are three Manners of *Whitening* Stuffs; the first with Water and Soap; the second with Vapour of Sulphur; the third with Chalk, Indigo, and Vapour of Sulphur. For the first, the Stuffs being taken from the *Fulling-Mill*, are put into soap'd Water, pretty hot, and work'd a-fresh by Force of Arms over a Bench, which finishes the *Whitening* the *Fulling-Mill* had begun; and lastly, wash'd out in clear Water and dried: This is call'd the Natural Way of *Bleaching*. In the second Method, they begin with washing the Stuff in River-Water; 'tis then laid to dry on Poles, and, when half dry, spread out in a kind of Stove well clos'd, wherein is burnt Sulphur; the Vapour whereof diffusing itself, sticks by little and little over all the Stuff, and gives it a fine *Whiteness*: this is commonly call'd *Bleaching* by the *Fluwer*. In the third Method, after the Stuffs have been wash'd, they are thrown into cold Water, impregnated with Chalk and Indigo; after they have been well agitated here, they are wash'd a-fresh in Eldar Water, half dried on Poles, and spread in a Stove to receive the Vapour of the Sulphur; which finishes their *Bleaching*. This is not esteem'd the best Method of *Bleaching*, the agreeable enough to the

Sight. It may be here observ'd, that when a Stuff has once receiv'd the Steam of Sulphur, 'twill scarce receive any beautiful Dye, but *Black* or *Blue*.

To bleach fine Linens. After taking 'em from the Loom, while yet raw, they are steep'd a Day in clear Water, wash'd out and clear'd of their Filth, and thrown into a Baking Tub, fill'd with a cold Lixivium, or Lye. When taken out of the Lye, they are wash'd in clear Water, spread in a Meadow and water'd from time to time, with Water from little Dikes, or Canals, along the Ground, by means of Scoops, or hollow Peels of Wood, call'd by the *Dutch*, who pretend to be the Inventors of 'em, *Gister*. After lying a certain time on the Ground, they are steep'd thro a new Lye, pour'd out, hot; and again wash'd in clear Water, and laid a second Time on the Ground, and every thing repeated as before; then pass'd thro a soft gentle Lye, to dispose 'em to reclaim the Softness which the other harsh Lyes had taken from 'em, wash'd in clear Water, soap'd with black Soap, and that Soap again wash'd out in clear Water: they are then steep'd in Cow's Milk, the Cream first skimm'd off, which finishes their *Whitening*; and Scouring gives 'em a Softness, and makes 'em cast a little Nap: When taken out of the Milk, they are wash'd in clear Water for the last time. After all this Process, they give the Linen its first Blue, by passing it thro a Water wherein a little Starch, Smalt, and *Dutch Lapis* have been steep'd. Lastly, the proper Stiffness and Lustre is given with Starch, pale Smalt, and other Gums, the Quantity and Quality whereof must be adjust'd according to occasion. In fine Weather, the whole Process of *Bleaching* is achiev'd in a Month's Time; in ill Weather, it takes up six Weeks, or more.

To bleach coarse Linens. They are taken from the Loom, and laid in wooden Frames, full of cold Water; where, by means of wooden Hammers, work'd by a Water-Mill, they are beat so, as insensibly to wash and purge themselves of their Filth; then spread on the Ground, where the Dew which they receive for eight Days, takes off more of their Rawness; then put in a kind of wooden Tubs, or Pans, with a hot Lye over 'em. Thus lixivated, they are again purg'd in the Mill, laid a-fresh on the Ground, and, after eight Days more, pass'd thro a second Lye, and all things repeated, till such time as they have acquir'd their just Degree of *Whiteness*. For *Bleaching* of Hair, see *HAIR*. For *Bleaching* of Wax, see *WAX*, &c.

BLEEDING, an Operation in Surgery, consisting in the Opening of a Vein with a Lancet, for the evacuating of corrupted or redundant *Blood*. *Bleeding* is the surest and most efficacious Species of Evacuans. It was very rare among the Antients, but is frequent among the Moderns. *Ostiensis* observes, that at *Rome* Persons of Quality are not allow'd to be let blood, even in their most dangerous Diseases, without Leave from the Pope. The *Hippopotamus* is said to have first taught Men the Use of *Bleeding*: For that Animal being overcharg'd with *Blood*, rubs herself against a pointed Barash, and opens a Vein; still finding her Plenitude discharged, she welters in the Mire to stanch the *Blood* again. See *STRICTURE*: See also *PHLEBOTOMY*.

BLEMISH, a Term in Hunting, when the Hounds, or Beagles, finding where the Chace has been, make a Proffer to enter, but return.

BLEMYES, People suppos'd to be without Heads, and to have their Eyes and Mouth in their Breast; mention'd by *P. Metax*, and other ancient Authors. They are suppos'd to have inhabited Part of *Aethiopia*. Some Authors derive the Fable of the *Blemyes* from this, that their Heads were hid between their Shoulders, by hoisting those up to an extravagant Height. *Bochart* derives the Word *Blemyes* from *בלי*, which implies a Negation, and *מוח*, Brain: in which Sense the *Blemyes* must have been People without Brains.

BLIGHT, or *BLAST*, a Disease incident to Plants, and affecting 'em variously; the whole Plant sometimes perishing of it, and sometimes only the Leaves, which will be scorch'd and shrivel'd up, the rest remaining green and flourishing. This Disease seldom happens, but upon the blowing of sharp Eastern Winds, which are most frequent with us about *March*; whence that Month proves, of all others, the most fatal to Plants: From this Circumstance, some imagine the Colds that then reign being exasperated by the Eastern Winds, effect *Blight*s; but Mr. *Bradley* furnishes us with a better Account: for, on this Principle, it were hard to say, why one Plant, or one Part of a Plant, should be *blight*d more than another. He observes, then, that Caterpillars generally attend those Winds, and that they infect some one kind of Tree more than another, and even some particular Branches more than others; and thence infers, either that the Eggs of those Insects, or the Insects themselves, are brought to us by the Easterly Winds; or that the Temperature of the Air, when the Eastern Winds blow, is necessary to hatch those Creatures, supposing the Eggs to have been already laid on the infected Parts. Now, each of these

these Causes seem to have their Effect: Those *Blight*s attended with large Worms or Caterpillars, seem hatch'd by the Eastern Winds; and those others, which only produce the small Insects, that occasion the Curling of the Leaves of Trees, may proceed from Swarms of 'em, either ready hatch'd, or in the Egg, brought with the Wind. The Coldness of those Winds be shews to be no Objection against their being fitted to hatch Insects; different Insects requiring vastly different degrees of Heat. To this he shews, that every Insect has its proper Plant, or Tribe of Plants, which it naturally requires for its Nourishment, and will feed on no other; and in which, therefore, it lays its Eggs: 'Tis no wonder then, that one kind of Tree should be infected, and all the rest escape. That Wind, u. g. which brings, or hatches, the Caterpillars on the Apple-Tree, will not infect the Pear, Plum, or Cherry; because, were the Shoals of Insects natural to the Apple, to light on those other Trees mention'd, they would either want their proper Matrix to hatch in; or, were they ready hatch'd, would perish for want of proper Food. So that 'tis morally impossible, all kinds of Plants should be *blighted* at the same time, unless the Eggs of every kind of Insect natural to each Tree, could be brought at one time with the Wind; or, that an Easterly Wind could contain it at once, as many different Degrees of Cold, or Heat, as would be requir'd to hatch and maintain each different Class of Insects. Nor is it any Objection, that in *Blight*s there are not frequently any Animals immediately perceivable. By the Microscope, we discover Animalcules a Million of times less than the smallest which comes under ordinary Notice: These, the gentlest Air may be conceiv'd capable of blowing from Place to Place; so that 'tis no wonder if they be brought to us from the remotest Regions, especially the North-East Parts of *Great Tartary*, &c. where the Cold is intense enough to give 'em Life; and from whence there is not Sea enough, by the Warmth and Saltness of whose Vapours they may be suffocated. Those brought from the North-East Parts of *America*, may be probably destroy'd by passing the vast *Atlantic* Ocean, which may be the reason why the North-West Wind is not so infectious.

What confirms this Doctrine of *Blight*s is, that the more knowing among Country-People, while the Eastern Winds blow, use to guard against *Blight*s by burning Heaps of Weeds, Chaff, and other Combustibles, on the Wind-side of their Orchards, that the Smoke may either poison the Insects, or their Eggs, as they pass along. It may be added, that these Fires are often made with good Success, to destroy the Caterpillars, even after they were hatch'd, and had begun to devour the Trees. Another Method of preserving Trees from *Blight*s is, by sprinkling Pepper-Dust; which, 'tis said, is present Death to all Insects, and even all Animals. Corn is liable to *Blight*s like other sorts of Grain. The *Blight* of Wheat, call'd *Smut*, is prevented by washing the Wheat in three or four Waters, stirring it well all the time, and skimming off the light Wheat, then steeping it 50 or 60 Hours in Water impregnated with Salt, with the Addition of some Alum, till it be capable of sustaining a Body of twice the specific Gravity of an Egg; when taken out, some slack'd Lime is sifted on it, to dry it fit for sowing the next Day: Such a Process secures the Grain from being infected with any kind of Vermin.

BLINDNESS, a Privation of the Sensation of Sight, arising from a total Deprivation of the Organs thereof, or an involuntary Obstruction of their Functions. The Causes of *Blindness* are various; proceeding from *Cataracts*, *Gutta Serena*, &c. which see. *Aldrovandus* tells us of a Sculptor, who became blind at 20 Years of Age, and yet 10 Years after made a perfect Marble Statue of *Cosmo II. de Medicis*; and another of Clay, like *Urban VIII. Bartholin* tells us of a blind Sculptor in *Denmark*, who distinguish'd perfectly well, by mere Touch, not only all Kinds of Wood, but all the Colours; and *F. Grimaldi* gives us an Instance of the like kind, beside the blind Organist lately living in *Paris*, who is said to have done the same. *F. Zabe* gives abundance of Instances of the amazing Sagacity of blind People, in his *Oculus Artificialis*. The Aunty of the Embassy of *D. Garcia de Silva Figueroa* into *Persia* tells us, that in several Parts of that Kingdom are found vast Numbers of blind People of all Ages, Sexes, and Conditions; by reason of little Flies which prick the Eyes and Lips, and enter the Nostils, carrying certain *Blindness* with 'em. See *SIGHT*.

The Chymists say their Vessels are *blind*, which have no Opening but at one Side. See *COCCUM*.

BLINDS, in Fortification, Defences made of Wood, or Branches interwoven and laid a-cross between two Rows of Scales about the Height of a Man, and four or five foot apart. They are used particularly at the Heads of Trenches, when they are extended in Front towards the Glacis; serving to shelter the Workmen.

BLISTER. See *VESICATORY*.

BLOCK, a Piece of Marble, as it comes out of the Quarry, e'er it has assum'd any Form from the Workman's Hand. See *MARBLE*.

BOERS, in Falconry, the Perch whereon the Bird of Prey is kept. This is to be cover'd with Cloth.

BLOCKADE, the Siege of a Place, intended to be taken by Famine; wherein all the Passages, and Avenues, are seiz'd, and shut up, so as no Supplies of Provision can be brought in. A *Blockade*, in strictness, is no regular Siege; insomuch as there is not any Design of an Attack. A *Blockade* is form'd by the Cavalry. The Word is sometimes also used at the Beginning of a Siege, when Forces are sent to seize the principal Avenues, where the *Besiegers* intend to fix their Quarters. It comes from the *German Bloclat*, a wooden Houfe; or from the *Gaulish Bloclat*, Barricade; Others derive it from the *Latin buclare*, to shut up the Passage.

BLOCK-LAND was formerly that which we now call *Freehold Land*, or *Land* held by Charters; and it was by that Name distinguish'd from *Folk-land*, which was *Copyhold Land*.

BLOCKS, a-board a Ship, are Pieces of Wood in which the Shivers are placed, and wherein the Running-Ropes go: Of these, some are single, some double; and some have three, four, or five Shivers in them. They are named and distinguish'd by the Ropes they carry, and the Uses they serve for.

BLOMERY, the first Forge in an Iron-Mill thro which the Metal passes after it is melted out of the Mine. See *IRON*.

BLOOD, a warm, red Liquor or Humour, circulating, by means of Arteries and Veins, through every Part of the Body. While in its Vessels, it appears to the naked Eye, uniform and homogeneous; but, when let out and cold, separates spontaneously into two different Parts; the one red and fibrous, which coheres into a Mass, and is call'd the *Cruor*; the other thin and transparent, which retains its Fluidity when cold, and, being suppos'd specifically heavier than the other, sustains and bears it up, and is call'd the *Serum*. The Proportion of the *Serum* to the *Cruor*, *Dr. Drake* makes at a Medium, as one and an half to one: But *Mr. Boyle*, more accurately, makes the *Serum* $\frac{2}{3}$ of the whole *Blood*; and *Dr. Jurin* $\frac{2}{3}$ of the whole Weight, or $\frac{1}{2}$ of the Bulk.

By the Microscope, the *Blood* appears to consist of little red Globules, swimming in an aqueous Liquor, suppos'd to be the *Cruor* and *Serum*, that appear so distinct when let out. *M. Leewenboeck* compares these Globules to be twenty five thousand times smaller than the smallest Grains of Sand; and *Dr. Jurin* makes 'em still less. Upon an accurate Mensuration, he found the Diameter of one, equal to $\frac{1}{1700}$ of an Inch, or $\frac{1}{100}$ of an ordinary Hair of the Head. *Dr. Drake* thinks, that tho the rapid Motion of the *Blood* may make the *Cruor* appear round, and perhaps, by a kind of Whirling, or Rotation, really convolute 'em; yet that their Figure is not naturally Globular, when let out, as appears from their Cohesion, or hanging together in a Lump; which spherical Bodies, touching in a very few Points, are not apt to do: But, on the contrary, this Property, he thinks, argues an Implication of their Fibres within one another: Which is confirm'd by what *Dr. Adams* observ'd by his Microscope, viz. that immediately after Emission of *Blood*, 'tis so far from exhibiting any red Globules, that it appears to consist of infinite Branches, running in no certain Order, and variously colour'd.

By a Chymical Analysis, the *Blood* is found to consist of *Plegm*, as the Basis or Vehicle of Volatile Salts; of *Oil*, which, by some nice Examiners, has been found of two Kinds; and of *Caput mortuum*, or Earth; which, tho it may consist of divers Substances, essentially different from each other, yet all we get out of it is a little fix'd Salt. From the best Experiments in this kind it appears, that in seven Ounces of human *Blood*, there are five Ounces two Drachms of *Plegm*, three Drachms of a subtle, spirituous Oil, two Grains of a thicker Oil, two Drachms of Salt, and about two of Earth. *Dr. Jurin* adds, that the *Serum*, upon a Chymical Analysis, exhibits a great deal of *Plegm*, and of the other Principles a small Quantity; and, on the contrary, the *Cruor* yields less *Plegm*, but the other Principles much more copiously than the *Serum*. From which Data he concludes, that the Globules consist of some *Plegm* united with the Oil and Salts, and a small Quantity of Earth; but in what Proportion, and how, and in what Parts they are form'd, &c. is not determin'd. Indeed, it must be consider'd, that the Principles which the Chymists thus produce separate, may possibly be much alter'd by the Fire. Thus, 'tis past doubt, the Oils drawn from the *Blood* by Fire, are vastly different from the natural Oil which circulates with the *Blood*. To which may be added, that the *Caput mortuum* remaining after Distillation, may, possibly, be a new Production, which had no Existence under any Form resembling that in the *Blood*.

The Source, or Origin, of the *Blood* is the *Chyle*, which passing the *Lacteals*, is deliver'd into the *Sabclavian*; where, mixing with the *Blood*, they proceed together to the *Right Ventricle* of the Heart; and there, being yet more intimately mix'd, they circulate together thro' the whole Body; till after several Circulations, and Secretions, at the several Strainers of the Body, they are assimilated so as to make one uniform compound *Mafs*, which appears to be nothing else but *Chyle*, alter'd by the Artifice of Nature, and exalted into *Blood*; there being no Appearance of any thing extraneous mix'd with the Liqueur circulating in the *Blood-Vessels*, but *Chyle*; excepting what had been before separated from it, for some particular Purposes, which being once serv'd, it is return'd to it again: unless, perhaps, it may receive some Portion of Air in the Lungs. That there is Air mix'd in the *Blood*, and circulating with it, is past doubt; but, whether any more than was at first contain'd in the Food whereof the *Chyle* is form'd, is a Question not yet decid'd. The principal Arguments urg'd for it, are, the Necessity of Respiration; which is account'd for on another Principle; and the florid Colour the *Blood* receives in the Lungs, and first shows in the *Vena Pulmonalis*; which is countenanced by an Experiment made with the red grumous Part of the *Blood* after Coagulation on *Blood-letting*; for, upon turning the Under-Surface, which was before black, upwards, and exposing it to the Air, by its Contact therewith it acquires a florid Colour, like that of the *Blood* in the *Vena Pulmonalis*. But this Effect others account for from the extraordinary Agitation and Commotion of the *Blood* in the Lungs.

Indeed, *Dr. Keil* and some others go further. *Mr. Boyle* having examin'd the Specific Gravity of *Blood*, and found that of the *Serum* to be greater than that of *Blood*, in the Proportion of 1190 to 1040, i. e. nearly as 8 to 7, it follow'd, that the *Cruor*, or *Blood-Globules*, were specifically lighter than the *Serum*, and that in a great degree; which was further confirm'd by the *Globules* being sustain'd in the *Serum*, both while circulating, and when let out. Hence it was conjectur'd, that these *Globules* were nothing else but thin Vessels fill'd with a subtle aerial Substance: And this Opinion was confirm'd from its being observ'd, in viewing the Circulation by a Microscope, that a *Blood-Globule*, in passing thro' a very narrow Vessel, wou'd change its Shape from a Globular to an Oval Form, and wou'd again recover its former Figure, as soon as it was got thro' its narrow Passage; which Appearance was naturally enough ascrib'd to the Elasticity of the included Air: And, from this Conjecture, were account'd for a great Number of the Phenomina of the Animal Oeconomy, particularly *Dr. Keil's Theory of Muscular Motion*. But this Principle *Dr. Farin* has examin'd, and appears to have overthrow'd. He made several Experiments, in some of which the *Cruor* before suspended a-top of the *Serum*, by its Adhesion to the Sides of the Poringer being cut off, and put in another Vessel of *Serum*, immediately sunk. In others, the *Cruor* buoy'd up in the *Serum*, even without any Adhesion to the Sides of the Glass, and merely by the Bubbles of Air adhering to its Surface, upon including it in a Receiver, and exhausting the Air, the Bubbles bursting, the *Cruor* wou'd sink; when he concludes, the globular Part of the *Blood* to be heavier than the *Serum*: And, from other Experiments, he ascertains the Proportion of the Gravity of *Blood* to that of *Serum*, to be as 1054 to 1030; whence the Quantity of the *Globules* being before fix'd at $\frac{1}{2}$ of the whole, the precise Gravity of the *Globules* beyond that of the *Serum* is easily determin'd. The *Blood-Globules*, therefore, are not Vessels fill'd with Air, or any other fluid Substance lighter than *Serum*: Which is further confirm'd from this, that *Blood-Globules* are not found to dilate, or undergo any Alteration, in an exhausted Receiver, when view'd thro' a Microscope; whereas, were they fill'd with any elastic Fluid, they wou'd either burst, or at least dilate into 70 or 80 times the Space.

As to the Heat of the *Blood*, Authors are exceedingly divid'd about the Cause thereof: The Antients ascrib'd it to a vital Flame, or innate Heat lodg'd in the Heart, and thence communicat'd to the *Blood*. *Dr. Willis* imagines a kind of Accension in the *Blood*; and thinks its Heat results from its being, as it were, set on fire, and persevering in that State. *Dr. Henslow* solves it from an Effulgence consequent on the Mixture of two Fluids, so dissimilar as the *Chyle* and *Blood*. Others have recurr'd to the chymical Principles of Alkali and Acid; others to the mutual Action of the Principles, or component Parts of the *Blood*, by means whereof an intricate Motion, and by that means an intricate Heat, or local effulgence, is effected. *Dr. Drake*, with more Reason, attributes the Heat of the *Blood* to the Spring of the Air includ'd together with it in the Vessels: For, Air being includ'd in the *Blood-Vessels*, will endeavour to expand it self, and, consequently, if it have Force enough, will drive outward the Parts of the Body that include it; by which means it causes the *Blood* to beat against the Sides of the Vessels, which having muscular, contractile Coats, do in

their Turns compress it again, and so cause a reciprocal *Astus* in the *Blood*, greater than the mere circulatory Motion cou'd; whence the Parts of the Solids, or containing Vessels, being put into a constant Agitation, a Heat is produced in both, which they mutually impart to each other. Lastly, *Dr. Boerhaave* accounts for it from the Action of the Heart, and the Re-action of the *Aorta*: For, the *Blood*, driven by the Heart obliquely against the Sides of the *Aorta*, presses them, and spends almost its whole Momentum against the Curvature thereof, and is, by its Figure and Elasticity, press'd back again. Every Moment of Time, therefore, each Particle of *Blood* acquires a new Motion, a new Nilus and Rotasion: Hence follows a perpetual Attrition, Attenuation, rubbing off of Angles, and a Similitude and Homogeneity of all the Parts; and hence the *Mafs* derives its Fluidity, Heat, Division into Particles accommodated to all Vessels, Pressure into the Lateral Tubes, &c.

Nor is the Cause of the Redness of the *Blood* less obscure: The Chymists account for it from the Exaltation of its Sulphur; others from the Mixture of saline and subacid Juices with sulphureous; and others from the Colour of the Heart. The French Philosophers attribute this Redness to the Smallness of the Size, and Roundness of the Figure of the Particles that compose the *Cruor*; notwithstanding, that red being the Colour, of all others, least refrangible, and the Globular Figure, of all others, most refrangible, that Figure seems, of all others, least apt to produce this Colour. Others fetch the Colour of the *Blood* from the Impregnation of the Air in the Lungs: For, that Air is dispos'd to produce such an Effect, appears from the Experiment above. But others, more relev'd, extend this Effect of the Air no farther, than to account for the Difference of Redness between the *Venal* and *Arterial Blood*; supposing, that after its Colour has been heighten'd, and render'd more florid by the Mixture of the Air in the Lungs, it retains it pretty well in the Arteries; but that circulating in the Body, and carried thro' the Veins, the Air transpires, by degrees, thro' the Pores of the Vessels, and leaves the Liqueur of a paler Dye. *Boerhaave* accounts for the Colour of the *Blood* from the same Cause as for its Heat, viz. from the Action of the Heart, and Re-action of the Sides of the *Aorta*. *Borelli*, to ascertain the Cause of the Redness, took a Parcel of the *Cruor*, after it had separated itself as far as spontaneity it wou'd from the *Serum*, and washing it frequently in Water, found it separable into a viscous, slippery Substance, consisting of white, or colourless Fibres, (which rose to the Surface of the Water, and there gather'd into a Skim, or coherent Pellicle of a reticular Texture) and a deep red Powder, which precipitated pretty plentifully to the Bottom. Hence it appears, that the red Colour of the *Blood* is imparted to it by red tinging Particles, as in the common Case of Dyers. By examining the red Precipitate apart, and finding which of the Elements it consisted chiefly of, a Man who wou'd reason about the Colour of the *Blood* from Principles of the Chymists, might carry that Matter nearer an Issue.

However, this red Colour, the generally found in all terrestrial Animals, is not yet absolutely necessary and essential; there being whole Species which have their circulating Liqueur, or *Blood*, white and limpid: To which *Dr. Drake* adds an Instance of a pure white *Blood*, like Milk, which he set out of the Median Vein of a Man, and which, when cold, did not separate into a Crassamentum, as the red usually does; nor yield a Skim, or Cream, or turn four upon keeping, as Milk does. *Dr. Beal* gives us another Instance of the like kind; and *Dr. Lower* adds a third, of a Person who bled so long at the Nose, till at last the Broth he drank, flow'd, little alter'd, that Way as *Blood*.

From the Principles, or constituent Parts of the *Blood* above-rected, variously combined and distributed by the Circulatory Motion impress'd by the Heart, (see CIRCULATION,) and by the Oscillatory, expansive Motion of the interspers'd Air, and the Re-action of the Contractile Vessels, flow all the Properties, and Operations of the *Blood*. From this Mixture of Elements, and their lax Composition, it becomes susceptible of various Alterations and Impressions; the principal whereof are, Coagulation, which usually attends it out of the Body, sometimes in it, and scarce ever without an artificial Procurement, but always mortal: and Distension, which is just opposite to the former, and consists in such a Commotion of the Fibrous Parts of the *Blood*, as indisposes it for a Separation of the *Cruor* from the *Serum*. This is frequently the Consequence of Malignant and Pestilential Fevers, &c. and is likewise occasion'd by some Kinds of Poisons. These two contrary Affections of the *Blood*, *Dr. Drake* ascribes to the opposite Kinds of Salts, Acids, and Volatile Alkalies. For tho, acids be, in a human Body no fierce Acid is found, nor cou'd it, indeed, be consistent with Life; yet it may, and does often enter the *Blood* so compound'd, as to hinder the Volatile, Alcalious Salt of the *Blood*, and so hinder the due Attenuation

and Mixture of the several Parts; as is the Case in a *Dia-*
betes, and, perhaps, in a *Chlorosis*, where the *Blood* is thick
and torpid: On the other hand, where the Alcalious are
too redundant, the *Blood* is render'd too thin and fluid, so
that the Difference of its constituent Parts is lost.

Another Affection frequent in the *Blood* is, a too great
abundance of Oils, or saline Particles, by means whereof the
active Parts of the *Blood* are too much clogg'd, and those
Parts which should be secreted for peculiar Uses in the Bo-
dy, are detain'd; and perhaps the Solids, thro' which it
passes, too much lubricated, their Tone vitiated, shrunk,
relax'd, &c. whence that Sluggishness and Inactivity of ve-
ry fat People. The contrary Affection to this is, the defect
of Oil in the *Blood*; which being, as it were, its Balsam,
lines and preserves the Parts from being fretted and corro-
ded by the Salts, whose Spicula, or Edges, are, as it were,
sheathed in this soft Balsamick Matter, and their Attrition
against the solid Parts prevented. This State of the *Blood*
is usually attended with a general Atrophy, and a Fretting
and Corrosion, of some particular Parts; whence ferous Des-
tillations, Apothumations, and Ulcers, especially in the Lungs,
whose tender, vesiculous Substance is more easily annoy'd
than any other, by the Acrimony of the saline Serum.

There are other less considerable Affections of the *Blood*,
resulting from its Temperature and Mixture, with regard
to the earthy Parts; the Consequences of which are, the
Stone, &c. and others that don't originally spring from any
Dyscrasy, or undue Mixture of the Elements, but from an
Alteration in its Motion; such as an Augmentation, or Di-
minution, of its progressive Motion, or the like Changes in
its elastic Motion; whence supernatural Fermentations are
induced: The Occasions here may be various; sometimes
Fevers, and other Disorders occasion'd by Surfeits, De-
bauches, catching Cold, violent Exercise, &c. whence Atonias;
at other times, some latent Malignity of the Air,
whence Epidemical Diseases.

The *Blood* thus variously compounded and circumstanc'd,
visits even the minutest Parts of the Body, by means
of its Circulative Motion: The Cause and Courfe whereof
see under CIRCULATION. In this Round, those Particles
of the *Blood* which conform best to the Figure and
Structure of the Parts thro' which they pass, are appointed to 'em,
either for their Accretion, or for the Reparation of such as
the constant rapid Force of the *Blood* wears off.

About the Matter of Nutrition, or the Source whence the
Nourishment is deriv'd, great Contests have arose among
the Physicians and Anatomists; some contending for a nu-
tritious Juice convey'd thro' the Lungs; some setting up the
Lymph, others the *Chyle*, some the Serum of the *Blood*,
some the *Crown*, as the universal *Succus sibilis*, &c. How-
ever, all these, except they who bring the Nutriment thro'
the Nerves, make the *Blood* the Vehicle, that conveys the
Alimentary Parts thro' the Body, whatsoever they be, and
whencesoever derived: But, perhaps it was on the score
of its Heterogeneity, or Composition of different Elements,
that they did not make it self the Nutritious Fluid, with-
out restraining that Faculty to some particular Parts thereof.
But Dr. Drake makes no Scruple to say, that the *Blood*, in
its largest Acceptation, as consisting of all the Parts before
describ'd, is simple and homogeneous enough for the Pur-
poses of Nutrition; and that every Part thereof contributes
something, either materially or instrumentally, to the Aug-
mentation, or Reparation, of the Parts thro' which it passes.
See NUTRITION.

For the Manner in which the *Blood* is form'd, and how
the *Chyle* is assimilated into *Blood*, see SANGUIFICATION.

The Quantity of *Blood* in a human Body, has been
variously estimat'd by various Authors. Where note, That
in Computations of this Kind, not only the Fluid contain'd
in the Veins and Arteries, but also that in the Lymphaducts,
Nerves, and the other Vessels secreted from it, and
return'd to it, are included. This Dr. Lower computes, in
an ordinary Man, at about 20 Pounds; Dr. Mead at about
 $\frac{1}{2}$ of the Weight of the whole Man, which may amount
to about 8 or 10 Pounds; But Dr. Keil, from a more ac-
curate Calculation, built on the Proportion of the Coats to
the Vessels, shews, that in a Body weighing 160 Pounds,
100 Pound thereof are *Blood*. Hence he proposes a Me-
thod of determining the Velocity of the *Blood*: For, as
each Ventricle of the Heart is capable of receiving an
Ounce of *Blood*, being full in their Diastole, we may sup-
pose they throw out about an Ounce each Systole. Now,
the Heart beats about 4000 times in an Hour; therefore,
every Hour 4000 Ounces, or 250 Pound of *Blood*, passes
thro' the Heart. So that a Quantity of *Blood* equal to the
whole Mass, passes in two Hours and a half: but, the Sum
of the Sections of the Branches of an Artery being always
greater than that of the Trunk, the Velocity of the *Blood* will
continually decrease as the Artery divides; and the Ratio of
its greatest to its least Velocity in the Arteries may be thus
found, as 5225 to 1. Again, the Veins are to the Arte-
ries, as 441 to 324; wherefore, as the *Blood* returns to

the Heart by the Veins, its Velocity will be still further di-
minish'd, and may be found to move more slowly in the
Veins than in the *Aorta*, 7116 times. Again, the farther
the *Blood* goes off the Heart, the more slowly it returns.
The Times of these are directly as the Spaces, and reci-
procaly as the Velocities; consequently, some Parts may
be some thousands of times longer in returning to the Heart
than others. From the Diameter of the *Aorta*, and the
Quantity of *Blood* driven out every Pulse, the Velocity of
the *Blood* in the *Aorta* is easily determin'd, and found to
be at the rate of 52 Feet in a Minute. But Dr. Jurin
shews, that in any two Arteries transmitting equal Quan-
tities of *Blood*, the Momentum of the *Blood* is greater in
the Artery more remote from the Heart than in that
nearer; and that its Momentum is greater in all the capi-
lary Arteries together, than in the *Aorta*; and, lastly, that
the Momentum of the *Blood* is greater in any of the Veins,
than in the Artery corresponding to it; and therefore great-
er in the *Vena Cava* than the *Aorta*.

Lastly he shews, that the Momentum of the *Blood* in
the *Vena Cava*, is equal to that of the Quantity of *Blood*
thrown out into the *Aorta* at each Systole, whose Velocity
is such as wou'd pass the whole Length of the Arteries and
Veins in the Interval of Time between two Pulses; and
that the absolute Momentum of the *Blood* in the *Cava*,
without any regard to the Resistance, is equal to the Mo-
mentum of a Weight of 20 Pounds passing over the Space
of an Inch in a Second. But note, that the Motion of the
Blood is here supposed equable, which in reality it is not.
See HEART.

As to the Transfusion of the *Blood* of one Animal into the
Veins of another, first set on foot by Dr. Lower, see the
Method and Effects thereof under TRANSFUSION.

In the *Philosophical Transactions* we have several very
uncommon Instances of spontaneous Bleeding; particularly of
a Child that bled at the Nose, Ears, and hind-part of the
Head, for three Days; from that to the sixth, she sweat
Blood from the Head; on the sixth, bled at the Head,
Shoulders, and Waste; and for three Days more continued
to bleed at the Toes, Bend of the Arms, Joints of the Fin-
gers of each Hand, and at the Fingers Ends till she died:
After her Death were found, in the Places whence the
Blood issued, little Holes like the Prickings of a Needle.
For the Stanching of *Blood*, see STRICTURE.

Blood of Jesus Christ, a military Order instituted at
Mantua in 1608, by Vin. Gonzagus IV. The Devise of
this Order was, *Domine probasti me*; or that, *Nihil hoc*
visite recepto. Herman speaks of this Order, and observes
it took its Name from some Drops of the *Blood* of Christ,
said to have been preserv'd in the Cathedral Church of
Mantua. Their Number was restrain'd to 20, besides the
Grand Master; the Office whereof was attach'd to himself
and his Successors.

There is also a Congregation of Nuns at Paris call'd by
the same Name, reform'd from the *Bernardines*.

BLOOD-LETTING. See PHLEBOTOMY.

BLOOD-SHOTTEN, a Distemper of the Eyes, where
the *Blood-Vessels* are greatly distended, so as to make the
Eyes appear red.

BLOODY-HAND, one of the four kinds of Trespasses
in the King's Forefe, by which the Offender being taken
with his Hands or other Part bloody, is judg'd to have kil-
led the Deer, tho' he be not found Hunting or Chasing.

BLOSSOM. See FLOWER.

BLOWING OF GLASS, one of the Methods of forming
the divers kinds of Works in the Glass Manufacture. 'Tis
perform'd by dipping the End of an Iron Pipe in the mol-
ten Glass, and blowing thro' it with the Mouth, according
to the Circumstances of the Glass to be blown. See GLASS.

BLUE, one of the Primitive Colours, otherwise call'd
Azure. See COLOUR.

The Painters *Blue* is made different, according to the
different kinds of Paintings. In Limning, Fresco, and
Miniature, they use indifferently *Ultramarine*, *blue Albet*,
and *Smalt*; these are their natural *Blues*, excepting the
last, which is partly natural, partly artificial: See each un-
der its proper Head. In Oil and *Miniature* they also use
Indigo prepared; see INDIGO; as also a factitious ULTRA-
MARINE, which see. Enamellers and Painters on Glass
have *Blues* proper to themselves; each preparing 'em af-
their own manner. See ENAMELLING, and PAINTING ON
GLASS.

Blues of the Dyers, is one of their simple, or Mother-
colours, used in the Composition of others: 'Tis made of
Wood, *Indigo*, and a *Pastel* brought from *Normandy*: Of
the three, the *Pastel* is esteem'd the best, and the most
necessary: *Wood*, tho' of less Force and Effect, yet makes
a tolerable Colour: *Indigo* only makes a spurious Colour;
yet it may be used along with *Pastel*, if it be well pre-
par'd, and ben't mix'd in too great a Proportion. *Wood*
having but little Substance, can neither be used alone, nor
is it capable of correcting the *Indigo*, without the Assis-

tance of *Pistel*. Some *Dyers* heighten their *Blue* by adding *Brasil* and other Woods. The ways of brightening *Blues* are, by passing the *Stuff*, when dyed and well wash'd, thro' luke-warm Water; or, which is much better, by working and faling the dyed *Stuff* with melted *Sosp*, and then foaming it well. *Blues* are dyed immediately from the *Wheet*, without any other Preparation than Fulling.

Turshil Blue, is a *Blue* used in *Painting* on Wood, made of the Seed of that Plant. 'Tis prepar'd by boiling four Ounces of *Turshil* in a *Pint* and half of Water wherein *Lime* has been slack'd. See *TURNISON*.

Flanders Blue, is a Colour bordering on *Green*, seldom used but in *Landscips*.

Antiently, *Blue* was the Symbol of the Sea; for which Reason, in the *Circassian* Games the *Combatants* who represented the Sea were clad in *Blue*; and those who had distinguish'd themselves by any notable *Exploit* at Sea, were rewarded with a *blue Ensign*.

BLUING of Metals, is the heating any Metal till it assumes a *blue* Colour; particularly practis'd by *Gilders*, &c. who blue their Metals e'er they apply the *Gold* or *Silver* Leaf. See *GILDING*.

BLUENESS, the quality of a Body that is *blue*; or, such a Size and Texture of the Parts that compose the Surface of a Body, as disposes 'em to reflect the *blue* or *azure* Rays of Light, and those only, to the Eye. See *LIGHT* and *COLOUR*. For the *Blueness* of the Skies, *Sir Isaac Newton* observes, that all the *Vapours*, when they begin to condense and coalesce into natural Particles, become first of such a Bigness as to reflect the *azure* Rays, e'er they can constitute Clouds of any other Colour. This, therefore, being the first Colour they begin to reflect, must be that of the finest and most transparent Skies, in which the *Vapours* are not arrived to a Grossness sufficient to reflect other Colours.

M. de la Hire, and before him *Leonardo da Vinci*, observes, that any black Body view'd thro' a thin white one, gives the Sensation of *blue*; and this he assigns as the Reason of the *Blueness* of the Sky, the immense Depth whereof being wholly devoid of Light, is view'd thro' the Air illuminated and whitened by the Sun. For the same Reason, he adds, it is, that *Soot* mix'd with a white makes a *blue*; for white Bodies being always a little transparent, and mixing themselves with the black behind, give the Perception of *blue*. From the same Principle he accounts for the *Blueness* of the Veins on the Surface of the Skin, tho' the Blood they are fill'd with be a deep red; for red, he observes, unless view'd in a clear, strong Light, appears a dark brown bordering on black: Being then in a kind of Obscurity in the Veins, it must have the Effect of a black; and this, view'd thro' the Membrane of the Vein and the white Skin, will produce the Perception of *Blueness*.

BLUSHING, a Phenomenon in the Animal Oeconomy, excited from a Sense of Shame, &c. It is supposed to be produced from a kind of Consent, or Sympathy, between several Parts of the Body, occasion'd by the same Nerve being extended to 'em all. Thus the fifth Pair of Nerves being branch'd from the Brain to the Eye, Ear, Muscles of the Lips, Cheeks, Palate, Tongue, Nose, &c. hence a thing seen, or heard, that is shameful, affects the Cheeks with Blushes, driving the Blood into the minute Vessels thereof, at the same time that it affects the Eye and Ear. For the same Reason it is, as *Mr. Derham* observes, that a savoury Thing seen or smelt, affects the Glands and Parts of the Mouth: If a Thing heard be pleasing, it affects the Muscles of the Face with *Laughter*; if melancholy, it exerts it self on the Glands of the Eyes, and occasions *Weeping*, &c. And to the same Cause *Dr. Willis* ascribes the Pleasure of *Kissing*.

BOAT, a little floating Vessel, for the Navigation of Rivers, Lakes, &c. The Boat acquires various Names, according to its various Structure, and the various Uses it is appointed for, and the Places where it is to be used. The several Boats, and their Names, are,

- A Jolly Boat,
- A Long Boat,
- A Skiff,
- A Pinnace,
- A Water Boat,
- A Taul,
- A Gondola,
- A Greenland Boat,
- A Bermudas Boat,
- A Ballon of Siam,
- A Horse Boat,
- A Porpoise,
- A Pleasure Boat,
- A Pouton,

- A Canoe,
- A Cruckle,
- A Currycurry,
- A Deal Hooker,
- A Felucca,
- A Ferry-Boat,
- A Prave,
- A Flying Prave,
- A Punt,
- A Tilt-Boat,
- A Tad-Boat,
- A Well-Boat,
- A Wherry.

rent without either Sails or Oars, but also advance so much the faster, as the Rapidity of the Water is greater. Its Make is the same with that of the others, excepting only a Wheel added to its Side, with a Cord, which winds round a Roller as fast as the Wheel turns. See *VESSEL*.

M. de la Hire has given us an Examen of the Force necessary to move *Boats*, both in stagnant and running Water, either with Ropes fasten'd to 'em, or with Oars, or with any other Machine: wherein he shews, that the larger the Surface of the Oars plung'd in the Water, and the smaller that of the Boat presented to the Water is; and again, the longer that Part of the Oar between the Hand and the Place where the Oar rests on the Boat, and the shorter that between this last Point and the Water; the freer will the Boat move, and the greater Effect will the Oar have. See *ROWING*.

Hence 'tis easy to calculate the Force of any Machine that shall be apply'd to *Rowing*; v.g. If we know the Absolute Force of all the Men who *Row*, it must be chang'd into a Relative Force, according to the Proportion of the two Parts of the Oar; i.e. if the Part out of the Vessel be double the other, and all the Men together can act with the Force of 900 Pounds; we compute first, that they will exert 300: Which 300, multiply'd by the Surface the Vessel presents to the Water, gives a Solid of Water of a certain Weight; whose Weight may be found, and of Consequence the Velocity impress'd on the Vessel by the Oars. Or the Velocity of the Oars may be found in the same manner, by multiplying the 300 Pounds, by the Surface of all the Parts of the Oars plung'd in the Water. Nor would there be any Difficulty in finding first the Relative Forces, then the Absolute ones; the Velocities either of the Oars, or of the Vessel being given, or the Proportion of the two Parts of the Oar.

BOAT-SWAIN, is an Officer on Board a Ship, who has Charge of her Rigging, Ropes, Cables, Anchors, Stils, Flags, Colours, Pendants, &c. He takes care of the Ship's *Lang-Boat*, and its Furniture; and steers her, either by himself or his Mate. He calls out the several Gangs aboard, to the due Execution of their Watches, Works, &c. and he is likewise a kind of *Provost-Marshal*, who sees and punishes all Offenders who are sentenc'd by the Captain, or a Court-Martial of the Fleet.

BOCARD, in Logic, the fifth Mode and the third Figure. In a Syllogism in *Boardo*, the first Proposition is particular and negative, the second universal and affirmative; and the Medium, or middle Term, the Subject in the two Propositions. Thus,

Some Animal is not Man,
Every Animal has a Principle of Sensation,
Therefore something has a Principle of Sensation besides Man.

BODY, in Physics, a solid, extended, palpable Substance; compos'd, according to the *Peripateticks*, of Matter, Form, and Privation; according to the *Epicureans* and *Corpuscularians*, of an Assemblage of hooked, heavy Atoms; according to the *Cartesians*, of a certain Quantity of Extension; according to the *Newtonians*, of a System, or Association of solid, maffy, hard, impenetrable, moveable Particles, rang'd or dispos'd in this or that Manner; whence repeat Bodies of of this or that Form; distinguish'd by this or that Name. These Elementary or Component Particles of Bodies must be infinitely hard; vastly harder than the Bodies compos'd of 'em; nay, so hard as never to wear, or break in pieces. 'Tis *Sir Isaac Newton* observes to be necessary, in order to the World's persisting in the same State, and Bodies continuing of the same Nature and Texture in several Ages. For should the Component Particles break or wear, the Nature and Frame of Things depending on 'em, would be chang'd. Water and Earth compos'd of old worn Particles, and Fragments of Particles, would not be of the same Nature and Texture now with Water and Earth compos'd of Entire Particles in the beginning: And therefore, that Nature may be lasting, the Changes of Bodies are to be plac'd only in the various Separations, and new Associations and Motions of these permanent Particles. Bodies don't break in the midst of solid Particles, but in the joinings of those Particles, which only touch in a few Points. These Particles have not only a *Vis Inertia*, accompany'd with such passive Laws of Motion as naturally result from that Force; but likewise with certain active Principles, such as that, v.g. of Gravity, (See *GRAVITY*.) And that which occasions Fermentation and the Cohesion of Bodies. See *FERMENTATION* and *COHESION*. For the rest, Bodies being only particular Associations or Systems of primitive Particles of Matter, have the same Properties, and follow the same Laws with Matter." See *MATTER*; see also *PARTICLES*.

The Existence of Bodies, or of external Objects, is a Thing not to be demonstrat'd in any Manner whatever.

De Chales proposes the Construction of a Boat, which, whar Burden loaves it bear, shall not only fall against the Car-

The Order in which we arrive at the Knowledge of the Existence of *Bodies*, seems to be this; We first find we have *Sensations*; then observe we have not those *Sensations* when we please; and thence conclude, we are not the absolute Cause thereof, but that there is requir'd some other Cause for their Production. Thus we begin to know, that we don't exist alone, but that there are several other *Things* in the World together with us. But even this Dr. Clark owns to fail of a Demonstration of the Existence of a corporeal World: He adds, that all the Proof we have of it is this; That God would not create us such, as that all the Judgments we make about *Things* existing without us, must necessarily be false. If there be no External *Bodies*, it follows, that 'tis God who represents the Appearances of *Bodies* to us; and that he does it in such a manner as to deceive us. Some think this has the Force of a Demonstration: 'Tis evident God can't deceive us; 'tis evident he does deceive and delude us every Moment, if there be no *Bodies*; 'tis evident therefore, there must be *Bodies*.

Against the Existence of *Bodies*, or any External World, Mr. Berkeley argues very strenuously, "That neither our Thoughts, Passions, nor Ideas form'd by the Imagination, exist without the *Mind*, he observes is allow'd; and that the various Sensations impress'd on the *Mind*, whatever *Objects* they compose, cannot exist otherwise than in a *Mind* perceiving them, is not less evident: This appears from the meaning of the Term *Exist*, when apply'd to sensible Things. Thus, the Table I write on exists; i. e. I see and feel it; and were I out of my Study, I should say it existed; i. e. Were I in my Study, I should see and feel it as before. There was an Odor; i. e. I smelt it, &c. But the Existence of unthinking *Beings*, without any Relation to their being perceiv'd, is unintelligible; their *Essence* is *Percepti*: Nor is it possible they should have any Existence out of the *Mind* that perceives them." The Notion of *Bodies*, he endeavours to shew founded on the Doctrine of *Abstract Ideas*: "What are Light and Colours, Heat and Cold, Extension and Figures, in a word, the Things we see and feel, but so many Sensations, Notions, Ideas, or Impressions on the *Sense*? And is it possible to separate, even in Thought, any of these from Perception? The several *Bodies* then, that compose the Frame of the World, have not any Subsistence without a *Mind*; their *Essence* is to be perceiv'd or known; and as long as they are not perceiv'd by Me, nor any other thinking Being, they have no shadow of Existence at all.—The *Things* we perceive, are Colour, Figure, Motion, &c. that is, the Ideas of those *Things*: But has an Idea any Existence out of the *Mind*? To have an Idea, is the same thing as to perceive: That therefore wherein Colour, Figure, &c. exist, must perceive them. 'Tis evident, therefore, there can be no unthinking Substance, or Substratum of those Ideas. But you will argue, If the Ideas themselves don't exist without the *Mind*, there may be Things like 'em, whereof they are Copies or Resemblances, which exist without the *Mind*: 'Tis answer'd, an Idea can be like nothing but an Idea; a Colour or Figure can be like nothing else but another Figure or Colour. It may be farther ask'd, whether those supposed *Originals*, or *External Things* whereof our Ideas are the Pictures, be themselves perceivable or not? If they be, they are Ideas; if they be not, I appeal to any one whether it be *Sense* to say, A Colour is like somewhat which is Invisible; hard or soft, like somewhat Intangible, &c. Some distinguish between Primary and Secondary Qualities; the former, viz. Extension, Solidity, Figure, Motion, Rest and Number, they maintain have a real Existence out of the *Mind*: For the latter, under which come all other sensible Qualities, as Colours, Sounds, Tastes, &c. they allow the Ideas we have of 'em, are not Resemblances of any *Things* existing without the *Mind*, or unperceiv'd; but depend on the Size, Texture, Motion, &c. of the minute Particles of Matter: Now 'tis certain, that those Primary Qualities are inseparably united with the other Secondary ones, and cannot even in Thought be abstracted from them; and therefore must only exist in the *Mind*. Can any Man conceive the Extension and Motion of a *Body*, without all the other sensible Qualities? For my part, I find it impossible to frame an Idea of a *Body* extended and moving, without giving it some Colour, &c. In effect, Extension, Figure and Motion, abstracted from all other Qualities, are Inconceivable: Where the others, therefore, are, there they too must be; i. e. in the *Mind*, and no where else. Again, Great and Small, Swift and Slow, are allow'd to exist no where without the *Mind*; being merely relative, and changing, as the Frame or Position of the Organ changes: The Extension therefore that exists without the *Mind*, is neither great nor small, the Motion neither swift nor slow; i. e. they are nothing.—That Num-

ber is a Creature of the *Mind*, is plain (even tho' the other Qualities were allow'd to exist) from this; that the same thing bears a different Denomination of Number, as the *Mind* views it with different Respects: Thus the same Extension is 1, or 3, or 36, as the *Mind* considers it, with reference to a Yard, a Foot, or an Inch. Nay, many of the modern Geometricians hold, that a finite Line may be divided into an infinite Number of Parts, and each of those Infinitesimals into an infinity of others; and so on, in *Infinitum*: So that the same Thing is either Unity or Infinity; either no Number or all Number. In effect, after the same manner as the modern Philosophers prove Colours, Tastes, &c. to have no Existence in Matter, or without the *Mind*; the same thing may be proved of all sensible Qualities whatsoever. Thus, they say, Heat and Cold are only Affections of the *Mind*, not at all Patterns of *real Beings* existing in corporeal Substances; for that the same *Body* which seems cold to one hand, seems warm to another. Now why may we not as well argue, that Figure and Extension are not Patterns or Resemblances of Qualities existing in Matter; because the same Eye, at different Stations, or to Eyes of different Structure at the same Station, they appear various? Again, Sweetness, 'tis proved, does not exist in the Thing itself; because the Thing remaining unalter'd, the Sweetness is chang'd to Bitterness, as in a Fever, or otherwise vitiated Palate. Is it not as reasonable to say, that Motion does not exist out of the *Mind*? since if the Succession of Ideas in the *Mind* become swifter, the Motion, 'tis acknowledg'd, will appear slower, without any external Alteration.—Again, were it possible for solid figur'd Bodies to exist out of the *Mind*, yet it were impossible for us ever to know it: Our Senses, indeed, give us Sensations or Ideas, but don't tell us that any Thing exists without the *Mind*, or unperceiv'd, like those which are perceiv'd: This the Materialists allow. No other way therefore remains, but that they know 'em by *Reason*'s inferring their Existence from what is immediately perceiv'd by *Sense*. But how should Reason do this, when 'tis confess'd there is not any necessary Connection between our Sensations and these *Bodies*? 'Tis evident from the *Phenomena* of Dreams, Phrenesies, &c. that we may be affected with the Ideas we now have, tho' there were no *Bodies* existing without them: Nor does the Supposition of external *Bodies* at all forward us, in conceiving how our Ideas should come to be produc'd. The Materialists own themselves unable to conceive in what manner *Body* can act on *Spirit*; or how it should imprint any Idea on the *Mind*. To suppose therefore *Bodies* existing without the *Mind*, is little else than to suppose, God has created innumerable *Beings* entirely useless, and serving to no Purpose at all. On the whole, it appears that the Existence of *Bodies* out of a *Mind* perceiving 'em, is not only impossible, and a Contradiction in Terms; but were it possible, may real, it were impossible we should ever know it. And again, that supposing there are no such Things, yet we should have the very same Reason to suppose there were that we now have: Suppose, v. g. an Intelligence affected with the same Train of Sensations, impress'd in the same Order, and with the same Vividness; would it not have all the Reason to believe the Existence of *Bodies* represented by his Ideas that we have?—All our Ideas and Sensations are visibly inactive; nay, the very Being of an Idea implies Passiveness and Inertness: So that it is impossible for an Idea to do any thing; or, in strictness, be the Cause of any thing: It cannot therefore be the Resemblance or Pattern of any active *Being*; unless Opposites can be said to resemble one another.

Now we find a continual Succession of Ideas in the *Mind*; but these, it has been proved, don't depend on any External *Body* as their Cause: It remains therefore, that their Cause is an Incorporeal active Substance or *Spirit*. For that I am not the Cause of my own Ideas, is plain from this, that when I open my Eyes in broad Day-light, I can't help seeing various Objects. Now the fix'd Rules or Methods wherein the *Mind* we depend on excites in us the Ideas of *Sense*, are call'd *Laws of Nature*: These we learn by Experience; which teaches us, that such and such Ideas are attended with such and such other Ideas in the ordinary Course of Things.—Ideas are not any how, and at random produc'd; there is a certain Order and Connexion establish'd among 'em, like that of Cause and Effect: And there are several Combinations of 'em made in a very regular artful Manner, which we call *Bodies*; and the System of those, the *World*. In strictness, however, the Connexion of Ideas does not imply the Relation of Cause and Effect; but, only of a Mark or Sign of the Thing signify'd: The Fire I see is not the Cause of the Pain I feel, but the Mark that forewarns me of it. The Noise I hear, is

"not the Effect of this or that Motion or Collision of Natural Bodies, but the Sign thereof. The Cartesian own somewhat like this: The Action of Bodies on our Organs, say they, is not the Efficient Cause of our Ideas and Perceptions, but only the Occasional Cause, which determines God to act on the Mind, according to the Laws of the Union of the Soul and Body. See CAUSE. Mr. Berkeley, indeed, taking away Bodies, takes away what these Philosophers account the Occasions of their Ideas: By an Occasion, he says, must either be meant the Agent that produces an Effect, or something observ'd to accompany or go before it, in the ordinary Course of Things: But Matter is allow'd to be passive and inert, and can't therefore be an Agent or Efficient Cause; and this Matter primitively and in it self, is allow'd imperceivable, and devoid of all particular sensible Qualities; i. e. it has not this or that particular Colour, this or that particular Figure, &c. but has Colour in the General, Figure in the Abstract, &c. but an Abstract is no Object of Sense: Matter therefore, can't be the Occasion of our Ideas in the latter Sense."

How far the great Argument of the Maintainers of a material World, from the Impossibility of God's deceiving us, and from the Evidence that he does so, if there be no such thing, will go against this Reasoning, we leave to the Reader. See EXTERNAL World.

For the Colours of BODIES: Sir Isaac Newton shews, that Bodies appear of this or that Colour, as they are dispos'd to reflect most copiously the Rays of Light originally endu'd with those Colours. See LIGHT and COLOUR. But the particular Constitutions whereby they reflect some Rays more copiously than others, remain yet to be discover'd. However, some of the Laws and Circumstances thereof, he delivers in the following Propositions.

1. The soft Surfaces of transparent Bodies, reflect the greatest Quantity of Light, which have the greatest Refracting Power; i. e. which intercede Mediums, that differ most in their refractive Densities: And in the Confiners of equally refracting Mediums, there is no Reflexion. 2. The least Parts of almost all Natural Bodies, are in some measure transparent; and the Opacity of those Bodies, arises from the multitude of Reflexions caus'd in their internal Parts. See OPACITY, &c. 3. Between the Parts of Opake and Colour'd Bodies, are many Spaces, either empty, or replene with Mediums of different Densities; as Water between the tinging Coepules, wherewith a Liqueur is impregnated; Air between the aqueous Globules, that constitute Clouds or Mists: and even Spaces, void both of Air and Water, between the Parts of hard Bodies, are not yet perhaps wholly void of all Substance. See MEDIUM. 4. The Parts of the Bodies, and their Intersities, must be less than of some definite Signific, to render them opake and colour'd. 5. The transparent Parts of Bodies, according to their several Sizes, reflect Rays of one Colour, and transmit those of another, on the same Grounds that thin Plates or Bubbles do reflect, or transmit those Rays: And this appears to be the Ground of all their Colour. See COLOUR. 6. The Parts of Bodies, on which their Colours depend, are denser than the Medium which pervades their Intersities. 7. The Signific of the component Parts of Natural Bodies, may be conjectur'd from their Colours; on this Principle, that transparent Coepules, of the same Thickness and Density with a Plate, do exhibit the same Colour. 8. The Cause of Reflexion, is not the impinging of Light on the solid or impervious Parts of Bodies, as commonly believ'd. See REFLEXION. 9. Bodies reflect and refract Light, by one and the same Power variously exercis'd, in various Circumstances. See REFRACTION; see also LIGHT, RAY, &c.

BODIES, are distinguish'd into *Animate* and *Inanimate*; i. e. into those inform'd by a Soul, and those which are not; or those that have Life, and those that have none.

Some consider Bodies, either as *Natural* and *Sensible*; or, as form'd by Physical Causes, and cloth'd with Physical Qualities: (In which Sense, Body makes the Object of Physicks.) See PHYSICIAN. Or, as *Intellectual* or *Quantitative*, in the General or Abstract; and according to the three Dimensions: In which Sense, Body makes the Subject of Geometry. See GEOMETRY.

Body, with regard to *Animals*, is us'd in opposition to the Soul; i. e. for that Part compos'd of Bones, Muscles, Canals, Juices, Nerves, &c. In which Sense, Body makes the Subject of Anatomy. See ANATOMY.

The *human Body*, consider'd with regard to the various voluntary Motions it is capable of performing, is an Assemblage of an infinite Number of Levers, drawn by Cords: If consider'd with regard to the Motions of the Fluids it contains, 'tis another Assemblage of an Infinity of Tubes and hydraulic Machines. Lastly, If consider'd with regard to the Generation of those same Fluids, 'tis another infinite Assemblage of Chymical Instruments and Vessels; as Philters, Alembics, Receipts, Serpentine, &c. and

the whole is a Compound which we can only admire; and wherof the greatest Part escapes our Admiration itself. The principal Chymical Apparatus in the whole Body, is that wonderful Laboratory the Brain: 'Tis in this, that precious Extract, call'd *Animal Spirits*, the only material Movers of the whole Body, is secreted from the Blood. See BRAIN, SPIRITS, BLOOD, HEART, &c.

In the Machine of the *Animal Body*, the Remainers to the Doctrine of *Trisuration* maintain the Brain to do the Office of the *Beam* of a Press, the *Heart* of a Piston, the *Lungs* of Bellows, the *Mouth* of a Millstone, and the *Terb* of *Pestles*; the *Stomach* of a Press, the *Intestines* of a Reservoir, the *Vessels* of Sieves or Strainers, and the *Ar* of a *Pondus*, or Spring that sets the Machine a going. See TRISURATION.

The *Soul*, *Robault* well observes, is not the Form of the *Human Body*: So far is the *Animal Life* from depending on the *Soul*, because of its ceasing when the *Soul* is separated; that on the contrary, the Continuance of the *Soul* depends entirely on the Disposition of the *Body*: the former never quitting the latter, till its Economy or Order is interrupted. The Cartesian maintain the *Soul* and *Body* to be too disproportionate, for Thoughts or Ideas of the *Soul* to be caus'd by the Motions of *Bodies*, and vice versa: Thus, their reciprocal Motions not being able to be the direct Cause of the one and the other, are only deem'd the Occasion, or occasional Cause. God, on occasion of the Motion of a *Body*, impresses an Idea or Sensation on the *Soul*; and again, on occasion of an Idea of the *Soul*, communicates a Motion to the *Body*: of consequence, God is, as it were, the Mediator of all the Commerce between *Soul* and *Body*. See CAUSE.

Physicians divide the *Body* into three Ventrals, or Cavities, the *Head*, *Thorax*, and *lower Venter*; which see: The rest of the *Body* they call *Members*. See PARTS.

Body, *Corpus*, is also apply'd by Anatomists to several particular Parts of the *Animal Fabric*: As the *Callous Body* of the Brain; the *Cavernous* or *Spongy Bodies* of the Penis, &c. See CORPUS CALLOSUM, CORPORA CAVERNOSA, &c.

Body in *Geometry*. The *Regular* or *Platonsick Bodies*, are those whole Sides and Angles are equal; of these there are only Five, viz. The *Tetrahedron*, consisting of four Angles; the *Octahedron* of eight; the *Icosahedron* of twenty; the *Dodecahedron* of twelve Pentagons; and the *Cube* of six Squares. See REGULAR BODY.

Body in *Law*. A Man is said to be bound, or held, in *Body* and Goods; that is, he is liable to remain in Prison, in default of Payment. In *France*, by an Ordinance of 1667, all Restraints of *Body*, for Civil Debts, are null after four Months, unless they exceed 200 *Livres*. A Woman, tho' in other Respects she cannot engage her Person but to her Husband, may be taken by the *Body*, when she carries on a separate Trade.

Body in *War*, is an Assemblage or Collection of Forces, Horse and Foot, united and marching under some Chief. An Army, rang'd in Form of Battle, is divided into three *Bodies*; the *Vant-Guard*, the *Rear-Guard*, and the *Main Body*; which last is ordinarily the General's Post. See CORPS.

BOGOMILES or BOGARMITES, a Sect of Heretics, sprung from the *Manichees*, or rather the *Panticians* in the 12th Century. The Chief hereof, *Basil*, was burnt, by Order of the Emperor *Alexander Comnenus*. They denied the *Trinity*; maintain'd, that God had a human Form, that the World was created by evil Angels, and that it was the Archangel *Gabriel* that became incarnate. They rejected the Books of *Moses*, and only admitted seven Books of Scripture: They maintain'd the Lord's Prayer to be the only Eucharist; that the Baptism of the *Catholics* was that of *St. John*, and theirs that of *Jesus Christ*; and that all those of their Sect conceiv'd the Word, or *Logos*, as much as the Virgin. Lastly, That there was no other Reluctation but Repentance. *Du Congo* derives the Name from two Words in the *Bulgarian* Language, *Bog*, *den*, and *Milica*, *miserere*, have Mercy.

BOLLING, *Ebullition*, in *Physicks*, the Agitation of a fluid Body, arising from the Application of Fire, &c. The Phenomenon of *Bolling* may be thus accounted for: The minute Particles of the Fuel being detach'd from each other, and impell'd in *Orbena*, with a great Velocity, (i. e. being converted into Fire) pass the Pores of the containing Vessel, and mix with the Liquid. By the Resistance they here meet withal, their Motion is destroy'd; i. e. they communicate it wholly to the quiescent Water; hence arises, at first, a small intestine Motion in the Water, and from the continued Action of the first Cause, the Effect is increas'd, and the Motion of the Water continually accelerated: So that the Water, by degrees, becomes sensibly agitated. But, now, the Particles of the Fire striking on those in the lowest Surface of the Water, will not only give 'em an Impulse upwards, contrary to the Laws of *Equilibrium*, but will likewise render 'em specifically lighter than before, so as to determine 'em to ascend according to the Laws of *Equilibrium*: And this, either by inflating 'em into little Vessels, by the

Attraction of the Particles of Water around 'em; or by breaking and separating the little Spherules of Water, and so increasing the Ratio of their Surface to their solid Content. There will therefore be a constant Flux of Water from the Bottom of the Vessel to the Top; and consequently a reciprocal Flux from the Top to the Bottom: *i. e.* The upper and under Water will change Places; and hence we have the Reason of that Phenomenon, of the Water's being hot at Top sooner than at Bottom. Again, an intense Heat will diminish the specific Gravity of Water, so as not only to make it mount in Water, but also in Air; whence arise the Phenomena of *Vesour* and *Swoak*: Tho' the Air inclosed in the Interstices of the Water, must be allow'd a good share in this Appearance: for that, Air being dilated, and its Spring strengthened by the Action of the Fire, breaks its Prison, and ascends thro' the Water into the Air; carrying with it some of the contiguous Spherules of Water, so many as shall hang in its *Villi*, or as can adhere immediately to it. The Particles of Air in the several Interstices of the fluid Mass thus expanded, and moving upwards, will meet and coalesce in their Passage; by which means great Quantities of the Water will be heav'd up, and let fall again alternately; as the Air rises up, and again passes from the Water: For the Air, after Coalition, tho' it may buoy up a great heap of Water, by its Elasticity while in the Water, yet can't carry it up together with itself into the Atmosphere; since when once get free from the upper Surface of the Water in the Vessel, it will unbend itself in the Atmosphere, and so its Spring and Force become just equal to that of the common unheated Air. Add to this, that were the Spring and Motion of the Air sufficient to carry up the Water with it, yet it would not have that Effect; but the Water would run off at the Extremities of the Air; all, except so much as should be either entangled in its *Villi*, or immediately adhere to its Surface by Attraction: And hence we see the Reason of the principal Phenomenon of *Boiling*, *vis.* The subsiding of the Surface of the Water. See *EBULLITION*, and *EFFERVESCENCE*.

Water, only lukewarm, boils very vehemently in the Receptacle of an Air-Pump, when the Air is exhausted: The Reason is obvious; for the Pressure of the Atmosphere being taken off from its Surface, the Air included in the Interstices of the Water, dilated by a feeble Heat, has Spring enough to heave up the Water, and disengage itself.—When the Water ceases boiling, it is again excited thereto by pouring cold Water upon the Receptacle; and when it boils the most vehemently, ceases by pouring on hot Water: The Reason whereof is scarce guess'd at. See *HEAT*, *FIRE*, &c.

BOLE, in Medicine, is us'd, in the general, for several Kinds of Earths that enter Galenical Preparations, and are used by Painters and other Artificers. See *EARTHS*.

BOLE-ARMONIAIC, or *Armoniac*, is a kind of Earth, of considerable Medicinal Virtue, brought from *Armenia*. The Physicians sometimes call it *Rubrica Synopica*, from the City of *Synope*, where it is suppos'd to be found. 'Tis of a pale red Colour, and partakes much of the Nature of Stone; but soft, fat, friable, easily pulveriz'd, and sticks to the Tongue. 'Tis esteem'd Dedicative and Seiptic; in which Quality 'tis us'd in several Diseases, both internal and external. This *Bole* is easily falsify'd; and the Merchants frequently sell *Lemnius-Earth* in lieu thereof. *Matthiolus* says, 'tis found in Gold, Silver, and Copper Mines. See *ARMONIAIC*.

BOLE of the Levant, is a Medicinal Earth brought from the *Levant*; nearly of the same Nature, and having the same Uses with the *Bole-Armoniac*. *Panet* says, there is no such thing among us, as either true *Bole-Armoniac*, or *Bole of the Levant*; and that all the *Boles* now in use, are brought either from the Provinces of *France*, or the neighbouring Countries. But this does not seem sufficiently warrant'd; and the *New Travels*, or Duties on Goods imported into *France*, which mention 'em both, make it credible that there are of either kind imported into that Kingdom. Indeed, it appears, that 'tis the *Levant Bole* which passes among us for the *Armoniac*: It enters several Compositions, particularly *Dispedimus*, to give it the Colour, &c.

BOLLANDISTS, a modern Term, now become of some Consequence in the Republick of Letters. The *Bollandists*, are certain *Jesuits* of *Antwerp*, who have been a considerable Time, and continue still employ'd in collecting the Lives of the Saints. As we find frequent Occasion to quote that learned Body in this Work, and are indebted to 'em for several excellent Observations that occur therein; the Reader will not be displeas'd to find the Occasion of their Name.

In the beginning of the XVIIth Century, *F. Heribert Rosicoides*, a Jesuit of *Antwerp*, laid a Design of collecting the Lives of the Saints, as wrote by the Original Authors, with Notes, like those added to his Lives of the *Fathers*, to clear obscure Passages, and distinguish the Genuine from the Spurious: He died in 1629, e'er the Work was begun. The Year following, *J. Bollandus*, a Jesuit of the same

House, took up the Design; and whereas *Rosicoides* only propos'd to collect the Lives already compos'd, *Bollandus* undertook, where there was no Life of a Saint extant, to compose new ones from the Authors who had mention'd 'em. In 1635, he took in *G. Heusebenius* a Partner with him; and in 1641, publish'd the *Saints of the Month of January*, in two large Volumes, Folio. In 1650, *F. Papebroeck* became an Associate; and, *Heusebenius* dying, *F. Baert*, *Janning*, *Solier*, and *Reye* were call'd in, who are still alive, and continue the Work: whereof, in 80 Years, there have appear'd 24 Volumes, for the first six Months of the *Roman Calendar*.

BOLT-HEAD, the same as *Matras*; a Vessel used by the *Chymists*, see *MATRAS*.

BOLTING, a Method of Pleading, or Arguing, in use in the Inns of Court; inferior to *Mooting*. The Cause is argued first by three *Students*, then by two *Barristers*; a *Senior* sitting Judge. The Word came from the *Saxon Bolt*, as *Hoy*, because done privately within Doors for Instruction. See *BENCHER*, and *MOOTING*.

BOLTS of Iron, in Building, are distinguish'd into three Kinds, *Plate*, *Round*, and *Spring-Bolts*.

BOLTS, or Iron Pins in a Ship are several sorts: As, *Ring-Bolts*, serving for the bringing to of the Planks, &c. *Drive-Bolts*, used to drive out others; *Set-Bolts*, employ'd for forcing the Planks and other Works, and bringing them close to one another; *Rag-Bolts*, on each side full of Jags or Barbs, to keep them from flying out of their Holes; *Cleach-Bolts*, for the same end cleach'd, or fasten'd at the Ends where they come thro'; *Fore-Bolts*, made like Locks with an Eye at each end, wherewith a Forelock of Iron is driven to prevent starting out; *Fender-Bolts*, made with long and thick Heads, track into the uttermost Bends or Waives of a Ship, to save her Sides from Bruises and Hurts.

BOLUS or **BOLS**, in Medicine, an extemporaneous Form of a Medicine, of a soft Consistence, somewhat exceeding that of an Electuary, and of the Quantity of one Doze; contriv'd principally for the sake of such as have an Aversion to potable Medicines; as also for the better Conveyance of certain Preparations of *Mercury*, *Antimony*, &c. which by their Weight would sink to the bottom of the Glass, were they mix'd with Fluids. There are *Bolus's* of various kinds, made with Electuaries, Confections, Conserves, Pulpes, Powders, Salts, Oils, Essences, Extracts, Syrups, &c. some of which Ingredients must always have Solidity or Driness enough, to give a Consistence to those that are Liquid.

BOMB, a large *Granada*, or hollow Iron Ball, or Shell fill'd with Gunpowder, and furnish'd with a Fusee, or wooden Tube full of a Combustible Matter; to be thrown out from a Mortar.

The Method of preparing a *Bomb* is as follows: A hollow Iron Globe A B, (Tab. *Pyrotechnia*, Fig. 1.) is cast pretty thick, having a round Aperture A, by which it may be fill'd and lighted; and circular Handles CD, for the commodious putting it into the Mortar. To prove whether it be staunch, after hearing it red-hot on the Coals, it is expos'd to the Air, so as it may cool gently: for since Fire dilates Iron, if there be any hidden Chinks or Perforations, they will thus be open'd and enlarg'd; and the rather, because of the Spring of the included Air continually acting from within. This done, the Cavity of the Globe is fill'd with hot Water, and the Aperture well stopp'd; and the outer Surface wash'd with cold Water and Soap: So that if there be the smallest Leak, the Air, rarefy'd by the Heat, will now perspire, and form Bubbles on the Surface. If no Defect be thus found in the Globe, its Cavity is fill'd with whole Gunpowder; a little Space, or Liberty is left, that when a wooden Tube A E, of the Figure of a truncated Cone, is driven thro' the Aperture, and fasten'd with a Cement made of Quick Lime, Ashes, Brickduft, and Steel-filings work'd together in a glutinous Water; or, of four Parts of Pitch, two of Colophony, one of Turpentine, and one of Wax; the Powder mayn't be bruis'd. This Tube is fill'd with a Combustible Matter, made of two Ounces of Nitre, one of Sulphur, and three of Gunpowder-duft, well ramm'd. This Fusee set on fire, burns slowly till it reach the Gunpowder, which goes off at once, bursting the Shell to pieces with incredible Violence: Whence the use of *Bombs* in besieging Towns. Special Care, however, must be taken, that the Fusee be proportion'd, as that the Gunpowder don't take Fire e'er the Shell arrives at the destin'd Place; to prevent which, the Fusee is frequently wound round with a wet clammy Thread.

Bombs being made of different Magnitudes, it may be proper to exhibit some of their Dimensions; as in the following Table:

Diam. of Bomb.	Thickness of Bomb.	Diam. of Apert.	Quant. of Gunpowd.	Weight of Bomb.
17, In. 10	2 In. 2, 10	20	48 lb.	490 lb.
11, 8	1, 18	15	15	150
8	0, 10	10	4	40

Others make the Thickness of the Bomb $\frac{1}{2}$, or $\frac{1}{3}$, or $\frac{1}{4}$ of the whole Diameter; and the Diameter of the Aperture $\frac{1}{2}$ or $\frac{3}{4}$ of the same.

Bombs only differ from Hand Granades, in that the latter are much less, and instead of Mortars are thrown out of the Hand; see GRANADA. The Word BOMB comes from the Latin, *Bombas, crepitus, aestivus Ani*, by reason of the Noise it makes. M. Blondel, who has wrote the Art of throwing Bombs, observes, that the first Bombs were those thrown into the City of *Wachtendonck* in *Guelderland*, in 1588; others pretend they were in use a Century before, viz. at the Siege of *Naples* by *Charles VIII.* in 1495.

BOMBARD, a Piece of Artillery antiently in use, exceedingly short and thick, and with a very large Opening: Some also call it *Basilic*. There were some of these said to have carry'd Balls of 300 Pound Weight; *Freissart* mentions one of 50 Foot long. To load 'em, they made use of Cranes, &c. The *Bombard* is supposed to have been in use before the Invention of Cannons, see CANNON and ORNAMENTS. Some derive the Word, by Corruption, from *Lombard*, as supposing 'em first us'd in *Lombardy*: *Message*, after *Vossius*, derives it from the Greek *Βασίς*, or the Latin *Bombus, & bubo & ardeo*; others from the German *Bombardier*, the plural of *Bomber, Ballist*.

BOMBARDIER, an Engineer, or Person whose Business is to take care of the firing and throwing Bombs out of Mortars: He first drives the Fusee, then fixes the Shell, loads, and fires. See BOMB.

BOMB-CHEST, is a kind of Chest fill'd with Gunpoder, Bombs, &c. plac'd under Ground, to tear and blow it up into the Air, with those who stand upon it. These Bomb-Chests are frequently us'd to drive Enemies from a Post they have seiz'd, or are about to take possession of; and are set on fire by means of a Saucidge fasten'd at one End. See MINE.

BOMB-KETCH, is a small Vessel, strengthen'd with large Beams, for the use of Mortars at Sea.

BONA NOTABILIA, in Law. Where a Person dying has Goods, or good Debts, in another Diocese or Jurisdiction within that Province, besides his Goods in the Diocese where he dies, amounting to the Value of 5 l. at least, he is said to have *Bona notabilia*; in which Case, the Probate of his Will, &c. belongs to the Archbishop of that Province.

BONA PATRIA, a Jury or Assize of Countreymen, or good Neighbours, see JURY.

BONE, in Anatomy, a similar Part of the Body, white, hard and brittle, not dissoluble, and void of Sensation; giving Support, and Form to the whole Fabrick. The Bones of the Body are all cover'd with a peculiar Membrane, call'd the *Periosteum*, which is extremely sensible, (see its Description and Office in its Place :) They are most of 'em likewise hollow, and fill'd with an oily Substance call'd Marrow; see MARROW. *Dr. Havers*, describing the Texture of the Bones, observes, that they consist of *Lamellae*, or Plates lying one upon another; and those, again, of Fibres running lengthwise, some to the Extremities of the Bones, others not so far; but none of 'em terminating there in distinct Ends, as they seem to do; but in lieu of that continue'd transversely, and as it were arch'd: The Fibres of one Side, meeting and uniting with those of the other; and this at each Extremity. So that the Fibres are a Continuation of each other, tho' not in the same uniform Order, but in very long *Ellipses*; not all of a length, however, but in each Plate, shorter and shorter than other.

These *Lamellae*, or Plates, are differently dispos'd in different Bones; v. g. In those that have a large Cavity, they are contiguous on each side, and very closely united; in those again whose Cavities are small, or which are altogether spongy within, many of the internal *Laminae* are plac'd at a distance from each other, having betwixt 'em little bony Cells; and even in Bones that have a larger Cavity, some of these lesser Cells are usually found at each Extremity. In such Bones as have their Plates contiguous, there are Pores thro' and between the Plates, besides those made for the Passage of the Blood-Vessels: The first penetrate the *Laminae* transversely, and look from the Cavity to the external Surface of the Bone; the second run longitudinally between the Plates: The first are found in every *Lamina*; the nearer the Cavity, the greater the Number of Pores; but they don't lie directly over one another, so as to form any continu'd Passage from the Cavity to the Surface. The second are seldom found but by good Glasses: A Medullary Oil is diffus'd, by these, throughout the Plates; and to those, the first kind seem only subordinate; serving to bring the Oil into 'em.

The Marrow in the Cavity of the Bones, is invest'd with a Membrane, wherein are included little Bags, or *Lobules*; and in these Bags are *Vesiculae*, or glandulous Bladders; serving both for the Secretion of the Medullary Oil from the Blood, and for the Reception and Conservation of the same. They seem to have Passages into each other, as have also

the Bags; whereby the Oil has a freer Course to the Joint and Substance of the Bone. The use of the Marrow, is to oil the Substance of the Bone, and to prevent its being too dry and brittle; it also lubricates the Articulation of the Bones, and hinders their Ends from being worn, or overheated with Motion; and it softens the Ligaments by which they are ty'd to each other: in which it is assisted by the Mucilaginous Glands, found in all the Articulations of the Bones; see MUCILAGINOUS.

The Bones are generally bigger at their Extremities than in the Middle; that the Articulations might be firm, and the Bones not so easily dislocated: But to render the Middle of the Bone strong withal, so as to sustain its allotted Weight, and resist Accidents, the Fibres are there more closely compacted together, and support one another: To which it may be added, that the Bone being hollow, is not so easily broken, as if it had been solid; and smaller: For of two Bones of equal Length, and of equal Numbers of Fibres, the Strength of the one to the Strength of the other, will be as their Diameters. See GIANT.

The Bones are join'd and connect'd together various Ways, according to the various Purposes they are to serve: Some being intended for Motion; others for Rest, and the Support of the incumbent Parts only. That Jointure intended for Motion, is call'd *Articulus*, or *Articulation*; that for Rest, *Symphisis*, or *Coactio*. Articulation is divided into two Kinds, *Diarthrosis* and *Synarthrosis*; and each of these again subdivided into several others, see ARTICULATION, DIARTHROSIS, &c. *Symphisis* is divided into *Sutura*, *Harmonia*, and *Gomphosis*; which see. Besides these, are five other Kinds of Connexion, viz. *Syffarobosis*, *Syncondroisis*, *Synsurosis*, *Syntenosis*, and *Synsymphisis*; which see.

The Number of the Bones is various in various Subjects; ordinarily 'tis about 250, viz. 61 in the Head, 67 in the Trunk, 62 in the Arms and Hands, and 60 in the Legs and Feet: The Variations are in the number of the *Sesamoides*, the *Teeth*, and the *Sternum*. See the Names of the several Bones in the following Table; their Figures, and Places in the Plate, *Anatomy*; and particular Descriptions of each under their proper Heads.

Dr. Havers divides the Blood-Vessels of the Bones into Nutritious and Medullary; the one furnishing Matter for the Nutrition, the other for the Lubrication of the Bones. The Chief of the Nutritious enter the Ends of the Bone, viz. the Arteries at one End, and the Veins at the other. The Medullary commonly enter the Sides of the Bone, and that obliquely; but both by the same *Foramen*.

The Medullary Oil is dispens'd from the Cavity where it is deposited, throughout the whole Substance of the Bone; passing first thro' the transverse Pores of the first internal *Laminae* into the longitudinal ones; where it proceeds till it finds other transverse Pores, when it alters its Course again, and exudes further: Thus it passes alternately thro' and between the Plates, till it is diffus'd throughout. This is the Method of its Conveyance in Bones, the Plates whereof are contiguous: Where the Plates are at a Distance, as in Bones that have no great Cavity, the small Cavens above-mention'd contain Medullary Glands; whence the Plates have the Benefit of the Marrow without the former Method of Conveyance.

Thus are all the Bones stock'd with Pores, &c. excepting the *Teeth*; which have this further Distinction, that they have Nerves inserted into 'em: whereas in all the other Bones, the Nerves go no farther than the *Periosteum*.

Besides the large Cavities in the Inside, most Bones have superficial Cavities, or *Sinus*; which may be distinguish'd into *Salet*, or *Furrows*, the longer sort; and *Pits* the shorter ones. On the Outside are also observ'd Prominences, whereof there are two Kinds; the one a continu'd Part of the Bone, jetting apparently above its plane Surface, for the more commodious Insertion of the Muscles, &c. call'd *Apophyse*;

Physis; the other an additional *Bone*, growing to another by mere Contiguity, being generally more soft and porous than the other, and call'd an *Epiphysis*, or Appendage. If the Protuberance be round, it is call'd the *Caput*, under which is the *Cervix*; if flat, *Condylus*; if sharp, *Corone*.

The general Uses of the *Bones*, are to support and strengthen the Body, like Beams and Pillars in Building; to defend some of the more essential Parts, as the Brain, &c. to give Shape to the Body, and to assist in Motion.

BONONIAN STONE, a small, gray, weighty, soft, sulphurous Stone, about the bigness of a large Walnut; when broken, having a kind of crystal or spary Tale within: found in the Neighbourhood of *Bologna*, or *Bononia* in *Italy*, (whence it takes its Name) and in other Parts of that Country, particularly at the Foot of Mount *Palermus*; where a *Silvemaker*, one *Vincenzo Casiarlo*, having gather'd some Pieces and carry'd 'em home, in hopes by the Fire to draw Silver out of 'em; instead of what he expected, found that admirable Phenomenon they exhibit, which consists in this, that having been expos'd to the Lights, they retain it, and shine, for the space of six or eight Hours, in the Dark. M. *Hemberg* was the Person who first taught us the manner of preparing and calcining the *Bononian Stone*, having made a Journey to *Italy* on purpose to learn it. When prepar'd, 'tis a kind of *Phosphorus*, under the Appearance of a calcin'd Stone. 'Tis said, the Art of preparing and calcining the *Bononian Stone* is lost; there having been but one, an Ecclesiastick, who had the true Secret, and who is since dead, without communicating it to any Person; see *Philosop. Transact.* N^o 21. M. *Elpigni* observes, that one *Lozonius* had a Method of making Statues and Pictures of the *Bononian Stone*, which would shine variously in the Dark; but he adds, The Person dy'd without discovering his Secret, *Philos. Transf.* N^o 134. See **PHOSPHORUS**.

BONNET, in Fortification, a Work rais'd beyond the Counter-scarp, having two Faces, which form a salient Angle, and as it were a small Ravelin without any Trench; its Height is about three Foot, and it is environ'd round with a double Row of Pallisadoes, ten or twelve Paces distant from each other; hath a Parapet three Foot high, and is like a little advanced *Corps de Guard*.

BONNET a Prestre, or *Priest's-Cap*, is an Outwork, having at the Head three salient Angles, and two inwards; it differs from the *Double Tenaille* only in this, that its Sides, instead of being parallel, are made like a Swallow's Tail; that is, narrowing, or drawing close at the Gorge, and opening at the Head.

BONNETS, in the Sea-Language, small Sails, set on upon the Courses, on the Main-sail and Fore-sail of a Ship, when too narrow or shallow to clothe the Mast; or to make more way in calm Weather. The Words are, *Lace on the Bonnet*; that is, fisten it to the Course; *Strike off the Bonnet*; that is, take it off the Course.

BOOKBINDING, the Art of binding, or covering Books. No doubt, the Art of *Binding* is almost as ancient as the Science of Composing Books; and that both the one and the other follow'd immediately the first Invention of Letters; see **LETTERS**. Whatever the Matter were whereon Men first wrote, there was a Necessity for uniting the several Parts together; as well for the making one Piece, as for the better preserving 'em: Hence the Origin of *Binding*; for which, in all appearance, we are indebted to the *Egyptians*, that learned People, among whom the Arts and Sciences began to flourish so early.

The Manner of binding Books in *Volumes*, i. e. of sewing the Leaves together, to roll 'em on round Pieces or Cylinders of Wood, appears the most Antient; tho' that of binding 'em square, and of sewing several Quires over one another, lays claim to good Antiquity. The first of the two, which we may call *Egyptian binding*, held a long time after the Age of *Augustus*; but 'tis now diffus'd, excepting in the *Jewish Synagogues*, where they continue to write the Books of the Law on *Velloms* sew'd together; making, as it were, only one long Page, with two Rollers, and their Clasp of Gold or Silver at each Extremity. The Form now in use, is the *square Binding*, which is said to have been invented by one of the *Attali*, Kings of *Pergamus*; to whom we likewise owe the manner of preparing *Parchment*; call'd in *Latin*, from the Name of his Capitol, *Pergamena*, or *Charta Pergamæa*; See **PARCHMENT**.

Manner of binding Books. The first Operation is to fold the Sheets according to the Form, viz. into two for Folio's, four for Quarto's, eight for Octavo's, &c. which they do with a slip of Ivory or Box, call'd a *Folding-Bick*: In this the Workman is directed by the Catch-Words and Signatures at the Bottom of the Pages; see **PRINTING**. The Leaves thus folded, and laid over each other in the Order of the Signatures, are beaten on a Stone with a Hammer, to press and flatten 'em, so as they may take less Room in

the *Binding*: They are then sew'd in the *Sewing-Press*, with a long Needle a little crook'd. What they call *sewing*, is the fixing to the Back certain Cords, call'd *Bands*, at a proper Distance from each other, and in a convenient Number; which is done by drawing a Thread thro' the Middle of each Sheet, and giving it a turn round each Band, beginning with the first and proceeding to the last: They ordinarily put six Bands in a Folio, and five in the rest. To cut the Edges of the Book, 'tis fasten'd in a *Cutting-Press*, between two Boards, somewhat longer than the Book, and the Knife gradually conducted over the Extremities of the Leaves, by means of a Skrew to which it is fasten'd: Of the two *Cutting-Boards*, that behind is higher than the other, and serves to sustain the Edges of the Book; that before, which is lower, serving to direct the Knife, which slides underneath. See **PRESS**.

The Edges finish'd, the Book is put into Boards; that is, the Pastboards are fitted to it, whereon the Leather, the Book is to be cover'd withal, is afterwards apply'd. The Pastboard is first well beaten on the Stone with a Hammer, and is fitted on by means of the Bands; the Ends whereof are pass'd thro' three Holes, punch'd on the Edge of the Pastboard against each Band: The Pastboards are then cut even with the Edges of the Book, by means of a long sharp Instrument with a wooden Handle, which the Workman applies to his Shoulder, and conducts the other End with his Hand, by the Edge of a Ruler laid on the Pastboard. After this, in the *French Binding*, a Book is put in Parchment, i. e. a slip of Parchment, the Length of the Book, is apply'd on the Inside of each Pastboard; so, however, as that being cut or indented in the Places against the Bands, it comes out between the Edge of the Pastboard and the Leaves of the Book to cover the Back: This Preparation, call'd *Indorsing*, seems peculiar to the *French Binders*; who are enjoin'd by Ordinance to back their Books with Parchment, on the Penalty of 30 *Livres*, and the *Re-binding* of the Book: 'Tis done in the Press, where the Back being grated with an Iron Instrument with Teeth, to make the Past take hold, wherewith the Parchment is first fasten'd; they afterwards add strong Glue to fortify it.

The Headband is now added; which is an Ornament of Silk of several Colours, or even, sometimes, of Gold or Silver, plac'd at each Extremity of the Back, across the Leaves; and wove, or twisted, sometimes about a single, and sometimes a double piece of roll'd Paper. This, besides its being an Ornament, also serves to fix the Sheets at Top and Bottom. In this State there remains nothing but to Bevil the inner Edges of the Pastboards; take off the four Angles, to facilitate the opening of the Book; and to blacken, gild, or marble the Edges: in order to fit the Book for covering. See **MARBLING**, &c.

Manner of Gilding Books on the Edges. The Book is put between two Boards, and very thinly gill'd with the Press; in which State, the Edge is scrap'd with a little crook'd Iron Instrument, which, being moderately sharp, takes off any unevenness left in the Cutting. On the Edge thus scrap'd is laid a Ground for the Gold. This Ground is a Composition of the *Armenian Bole*, red Chalk, black Lead, and a little Tallow beaten together, and scap'd to hot Size, made of Parchment, much the same with that used in Gilding in Water; see **GILDING**. The Ground being well dried, is glazed lightly with the Whites of Eggs beaten; and over this the Gold is apply'd. The Gold here us'd, is in the Leaf, as prepar'd by the *Gold-beaters*. The Instrument wherewith they take it up, consists of two Branches of Iron, moveable on a Rivet in the Middle; somewhat like an X, or a Pair of Scissors without Rings. When the Workman has laid the Leaf Gold in fit order, he rubs the Ends of the Branches against his Check, which gives 'em the degree of Warmth necessary to make the Gold stick thereto: The Gold thus taken up, is apply'd on the Edge of the Book, and spread smooth with a Hair Brush: And the Edge thus cover'd with Gold, is dry'd by the Fire, without taking it out of the Press, and afterwards burnish'd; see **BURNISHING**. On the Gold thus apply'd, they antiently made Ornaments, with hot Irons of various Forms and Devices; the Practice of which seem'd to have been retriev'd in France about the beginning of the XVIIIth Century, and carry'd to a good Perfection by the Abbot de *Senlis*, and others; and call'd by a new-invented Name, *Antiquising*: But as the Modern Taste seems rather inclin'd to Simplicity, 'tis probable these *Antiquo-Modern* Ornaments will be dropp'd again.

For the Covers; tho' the Skins us'd herein, undergo several Preparations in the Hands of other Workmen; yet there are some still left for the *Binder*, and peculiar to his Art: These we shall explain, in *Calf*, as being the Leather most us'd; and, as being that to which all the rest, with a little Variation, may be refer'd. The *Calfskin*, then, being well soak'd in Water, is scrap'd with a kind of blunt two-handed Knife, and cut into square pieces of the proper Sizes

with Shears, and in this State laid on the Stone, and the Edges pared thin on the Side to be apply'd to the Pathboard, with a Knife for that purpose. It may be easily imagin'd, that some of these Preparations, except the last, are us'd in Morocco, Sheep, or in Vellum, Velvet, &c. wherewith Books are sometimes cover'd; in regard the Water wou'd spoil 'em. The Cover is next finish'd over with Paste made of Wheat-Flower; then stretch'd over the Pathboard on the Outside, and doubled over the Edges within-side: after having first taken off the four Angles, and indented and plaited it at the Headbands. They then card the Book, or bind it firmly between two Boards with a kind of Whipcord, to make the Cover stick the stronger to the Pathboards and the Back; as also to firm the Bands or Nerves the more accurately: In this Operation the Workman arms his Hand with Leather, to enable him to pinch it the harder; and uses a pair of Pinchers to bring the Thread nearer each Band. The Book is now set to dry; and when dry, uncurled and put in the Press between two thicker Boards; then beaten on the Flat with a Hammer; Paper gild on the Pathboards within-side; and the Cover marbled or sprinkled, if requir'd, with a Pencil dipper'd in a black Colour, and struck against the Finger or a Stick for the Purpose, so as to throw off little Specks and Stains of the Colour. Some mark the Covers with Clouds, in Imitation of Marble, by means of Aqua fortis applied thereon. The Cover is now glaz'd twice with the White of an Egg beaten; and at last polish'd with a Polishing-Iron, polish'd hot over the glaz'd Cover, see POLISHING. If the Book be requir'd to be Letter'd, they glue a piece of red Morocco on the Back, between the first and second Band, to receive the Title in Gold Letters; and sometimes a second between the next Bands underneath, to receive the N^o of the Volume. The Binding, properly so call'd, is now complete; and there remains nothing but the Gilding Work on the Back and Cover; which, as it makes a Part of the Bookbinder's Business among us, (tho with the French, &c. it is a distinct Profession) we shall here subjoin.

Manner of Gilding Books on the Backs and Covers. In ordinary binding, they gild little else but the Backs, and the outward Edges of the Cover. On the Backs are gilt the Title of the Book, &c. with Flowers, Roses, Knots, Stars, &c. between the Bands; on the Covers are sometimes added, Compartments, Arms, &c. All these Ornaments are made with each its former Gilding-Iron, engraven in Relief; either on the Points of Punchions, as those of Letters, Roses, Stars, &c. or around little Cylinders of Steel, as the Lines, Embroideries, &c. The Punchions make their Impression by being press'd flat down; and the Cylinders by being roll'd along by an Iron Ruler; by the means of a double Branch; in the Middle whereof, they

are fitted on an Iron Stay, or Axis, that passes the Middle of their Diameters.

To apply the Gold, they glaze those Parts of the Leather whereon the Irons are to be apply'd, lightly over with a Pencil or Sponge; and, when half dry, lay over them pieces of Leaf Gold cut out near the Size; and on these Stamp the Punchions, or roll the Cylinders, both the one and the other reasonably hot. If the Figures be large, and require a great Relief, as Arms, &c. they are beat down with a Mallet or Hammer. The Gilding thus finish'd, they rub off the superfluous Gold with a pretty stiff Brush; leaving nothing cover'd with Gold, but the Places whereon the hot Irons had left their Impressions.

BOOK-KEEPING. Books are either kept single, as among Retail Dealers; or double, as among great Merchants: For the first, a Journal or Day book, and a Ledger or Post-book are sufficient; for the second, there are several others requir'd. All Authors agree, that it was the Italians, particularly those of Venice, Genoa and Florence, who first introduc'd the Method of keeping Books double, or in two Parts: Hence, among us, 'tis call'd *The Italian Method*. In this, there are three Books indispensibly necessary; viz. the *Wast-book*, *Journal*, and *Ledger*: Besides, there are others, to the Number of thirteen, call'd *Auxiliary Books*, used as occasion requires; viz. the *Cash-book*, *Debt-book*, *Book of Numerer's*, of *Invoices*, of *Accompts-Current*, of *Commissions*, *Orders*, *Advices*, of *Acceptances*, of *Remittances*, of *Expences*, of *Copies of Letters*, of *Vessels*, and of *Workmen*.

1. The *Wast-book*, or Memorandum-book, is the first, and most essential: In this, all kinds of Matters are, as it were, mix'd and jumbled together; to be afterwards separated and transfer'd into the others: so that this may be call'd the Elements of all the rest. It may be kept two ways; the first by entering things down simply as they happen, v. g. *Bought of such a one, sold to such a one, paid such a one, lent so much*, &c. the second by entering, at once, each Article, Debtor and Creditor: This last is esteem'd the best; in regard, forming a kind of little Journal, it saves the keeping any other.

2. *Journal-Book*, or *Day-book*, wherein the Affairs of each Day are enter'd orderly down, as they happen, from the *Wast-book*. Each Article in this Book to consist of seven Parts; viz. the Date, Debtor, Creditor, Sum, Quantity and Quality, how payable, and the Price. By an Ordinance of the Year 1673, all Traders in France, whether by Wholesale or Retail, are oblig'd to keep a Journal, containing all their Affairs; Debts active and passive, Bills of Exchange, &c. For want of keeping this, and surrendring it up, on a Failure, they are to be reputed fraudulent Bankrupts, and subjected to the Penalties thereof.

Wine Dr. to Cash	— L. 160	—	Bought of Duval, ready Money,	16 Pipes of	l.	s.	d.
Burgundy, at	—	—	L. 10.	—	160	0	0

3. *Ledger*, or *Great Book*; call'd also *Post-book*, *Book of Extracts*, &c. is a huge Volume, usually rul'd into six Columns: This is the *Wast-book* fill further digested; and is extract'd immediately from the Journal. In this all the Accomps dispers'd in the Journal, are drawn out and stated in *Debtor* and *Creditor*. To form each Account, two Pages are requir'd, opposite to each other; that on the Left

servng for Debtor, the other for Creditor: Each Article to consist of five Parts, or Members; the Date, the Person whom we credit, or are credited by; the Subject, i. e. the thing credited or indebted for; the Page where it is found, and the Sum or Amount of the Article. Two Instances, the one of an Article of Credit, the other of Debt; will illustrate the Form and Use of this Book.

Model of an Article in Debtor.

1701.	Anthony Roberts Dr.	l.	s.	d.
May 14.	To Cash, paid by his Order to Wilks	£. 16	19	0

To facilitate the Use of the *Ledger*, there is an Alphabet, to serve as an Index or Repertory; consisting of 24 Leaves, each cut on the Edge, and mark'd with one of the 24 Letters; wherein, the initial Letters of the Persons Names with whom you have Accomps, are inserted, with the Page of the *Ledger*, where the Account is stated.

The *Cash-book* is the most important of all the *Auxiliary ones*; 'tis so call'd, because it contains, in Debtor and Cre-

Model of an Article in Creditor.

Debt-Book, or Book of Payments. A Book wherein is enter'd the Day whereon all Sums fall due, whether to be paid, or receiv'd by Bills of Exchange, Merchandizes, or otherwise: To the end, that by comparing Receipts and Payments, Provision may be made in Time for a Fund for

Payment; by receiving Bills, &c. due, or taking other Precautions. Two Models will suffice for the Use and Form of this Book: it must only be observ'd, that like the Ledger it must be on two opposite Pages; Moneys to be receiv'd on the Left hand, those to be paid on the Right.

Model of the Page of Receipt.

	My own Bill of 25th of October, to Bearer.	100	0	0	

Book of Numer's, or Wares, is kept for the easy Knowledge of all the Goods brought in, sent out, or remaining in a Warehouse. On the Left hand Page are enter'd the Quantity, Quality, and Number or Mark of the Goods

brought in; on the Right, the Discharge of the Goods out of the Warehouse, against the respective Articles of the first. Thus,

N ^o 1	A Bale of white Pepper — weighing	400	l.
2	A Piece of Crimson Damask. — Ells	63	

March 1	Sold to Charles Mitchell.
Apr. 10	Sent to Nichols of Bristol.

Book of Invoices. A Book to save the Journal from the Endures inevitable, in taking Accounts or Invoices of the several Goods receiv'd, sent, or sold; where 'tis necessary to be very particular. The Invoices here enter'd, are to be those of Goods bought, and set to Account of some other; those of Goods sold by Commission; of Goods sent away to be sold on our Account; and those of Goods in Partnership, whereof we have the Direction, or whereof others have the Direction.

Book of Accounts Current. is kept in Debtor and Creditor, like the Ledger; and serves for Accounts sent to Correspondents, to be regulated in concert with 'em, e'er they are enter'd in the Ledger: And 'tis properly a Duplicate of the Accounts Current, kept to have recourse to on occasion.

Book of Commissions, Orders, or Advices. In this are enter'd all Commissions, Orders, &c. receiv'd from Correspondents. The Margins hereof are to be very large; to give room against each Article to insert the necessary Memoirs relating to their Execution. Some content themselves with cancelling the Articles when executed.

Book of Acceptances. is destin'd for the registering all Bills of Exchange, notify'd by Letters of Advice from Correspondents; to be able to know, on the Bill's being presented, whether they have Orders to accept 'em or not. When they chuse to decline accepting a Bill, against the Article thereof, in the Book they put *P*, i. e. Protest; that on offering the Bill, the Bearer may be told he may protest it: On the contrary, if they accept it, they write against it an *A*; adding the Date, or Day of Acceptance. And this, upon being transfer'd to the Debt-Book, is cancell'd.

Book of Remittances. A Book serving to Register Bills of Exchange, as they are remitted by Correspondents, to require the Payment thereof. If they be protested for want of Acceptance, and return'd to those who remitted 'em; mention is made thereof against each Article, by adding a *P* in the Margin, and the Date of the Day when they were return'd; then cancell'd. The Book of Acceptances and Remittances, have so near a Relation to each other, that many Merchants, &c. make but one of the two, which they keep in Debtor and Creditor; putting Acceptances of the Side of Debt, and Remittances to that of Credit.

Book of Expenses. A Detail of the petty Expenses, both Domestick and Mercantile; which, at the End of each Month are summ'd up, and make an Article for the Journal.

Book of Vessels. is kept in Debtor and Creditor; a particular Account being kept for each Vessel. To the Side of Debtor, are put Victualling, Fitting out, Wages, &c. To the Side of Creditor, are put every thing the Vessel has produc'd; whether by way of Freight or otherwise. Lastly, the Total of each is enter'd in the Journal; upon balancing the Account of each Vessel.

Book of Workmen. is particularly in use among Merchants who have Manufactures or Works in their Hands. 'Tis kept Debtor and Creditor for each Workman employ'd. On the Side of Debt is put the Matters given 'em to work; and on that of Credit, the Works they return.

These Books are kept the same, as to Substance, in most Trading Cities in Europe; but not as to Coin: Each being regulated by that Coin which has Course in the State where they are. See COIN.

BOOKS, in Terms of Commerce, the Registers wherein Merchants, &c. keep their Accounts. See BOOK-KEEPING.

BOOM, in the Sea-Language, a long Piece of Timber, with which the Clew of the Studding-sail is spread out; call'd also the *Studding-sail Boom*. It is sometimes likewise

used to spread, or boom out the Clew of the Main or Fore-sail. They say a Ship comes *Booming*, when she makes all the Sail she can.—Also those Poles with Baffles or Baskets on the Top, which are plac'd to direct how to steer into a Channel, are call'd *Booms*, and by some *Beacons*.

BOOT, *Brudequin*, a kind of Torment for Criminals; to exert a Confession, by means of a Boot, or rather a Stocking, or Buskin of Parchment; which being put on the Leg moist, and brought near the Fire, in shrinking, squeezes the Leg violently, and occasions intolerable Pain. There is also another kind of Boot, consisting of four thick strong Boards bound round with Cords: Two of these are put between the Criminal's Legs, and the two others plac'd, one on the Side of one Leg, and the other on 't'other; then, squeezing the Legs against the Boards, by the Cords, the Criminal's Bones are broken, &c. The Boot is now diffus'd in England; but subsists still in some other Countries, particularly Scotland.

BOOTES, in Astronomy, a Constellation of the Northern Hemisphere near the Pole it self; see CONSTELLATION.

The Stars in the Constellation *Bootes*, in *Ptolemy's* Catalogue are 23; in *Tychon's* 28; and in *Mr. Flamsteed's* Catalogue 45. Their Longitudes, Latitudes, Magnitudes, &c. are as follow;

BORDURE, in Heraldry, a kind of Addition on the Limb of a Shield, in Form of a Hem, or Girdle, encompassing it all round, and serving as a Difference; see DIFFERENCE. The *Bordure* must be about one sixth Part of the Breadth of the Shield.

A simple *Bordure*, is that which is of the same Colour or Metal throughout; and is the first Addition of younger Brothers: There are others, *Compounded*, *Counter'd*, *Ingrailed*, *Indented*, and *Charg'd* with other Pieces; which make different Additions for younger Brothers, in several Degrees. If the Line which constitutes the *Bordure* be straight, and the *Bordure* Plain, as they call it in Blazoning, the Colour of the *Bordure* alone is named; He beareth Gules, a *Bordure* Or. If a *Bordure* be charg'd with any Parts of Plants or Flowers they lay, *Verdoy* of Trefoils. If it consist of Ermins, *Vaisry*, or any of the Furs, the Term is, *Puffow* of Ermins: If the *Bordure* be charg'd with Martlets, the Word is *Charg'd* with an Ensalon of Martlets, &c.

BOREAS, a Greek Name, now in popular use, for the North Wind; the *Pezron* observes, antiently, and with much greater Propriety, it signify'd the North-East Wind, at the Time of the Summer Solstice: He adds, that the Word comes from the *Celtic* Word *Bore*, *Morning*; in regard their principal Light, in that Season, came from that Quarter, whence also those Winds usually blew. The common Etymologies fetch it either from the Greek *Bos*, *Clamour* or *Noise*; or *Bos*, *Food*; because it occasions an Appetite, or because it is good for the Fruits of the Earth, which yield us Food: Others from the *Hebrew*, *Borjab*, Food; or *Bori*, Calmness; *bor*, Parity; or *bor*, Corn. The Antients suppos'd *Boreas* only blew out of *Thrace*.

BORÉE, or **BOUREE**, a kind of Dance, compos'd of three Steps join'd together with two Motions; and begun with a Crotchet, rising. The first Couplet contains twice four Measures, and the second twice eight. It consists of a balance Step and a *Consee*: 'Tis suppos'd to come from *Auvergne*.

BOROUGH, or **BOROW**, or **BURON**, is frequently us'd for a Town Corporate; or a Corporation which is not a City. See CITY. In which Sense, a *Borough* and Corporation are the same thing; see CORPORATIONS, &c.

Borough, in its Original Saxon *Borboe*, was primarily meant of a Company consisting of ten Families, who were bound and combin'd together as each other's Pledge. *Bracton*, l. 3. Tr. 2. c. 19. Afterwards, as *Verfeux* has it, *Burg*, and *Burgh*, came to signify a Town that had something of a Wall or Inclosure about it. But, in later Times, the same Appellation was bestow'd on several of the *Villes Insigniores*, or Country Towns of more than ordinary Note, not wall'd. See TOWN, VILLAGE, &c.

BOROUGH, or *Burgh*, is now particularly appropriated to such Towns, and Villages as send *Burgessees*, or Representatives to Parliament: See BURGESSES.

Boroughs are equally such, whether they be incorporated or not; there being great Numbers of our *English Boroughs* not incorporated: And, on the contrary, several Corporations that are not *Boroughs*; ex. gr. *Kingston*, *Deal*, *Kendal*, &c.

BOROUGH, are distinguish'd into those by *Charter*, or *Statute*; or by *Prescription*, or *Custom*. See PRESCRIPTION, &c.

The Number of *Boroughs* in *England*, is 149; some whereof send one, some two Representatives. See PARLIAMENT.

BOROUGH-ENGLISH, in Law, a Customary Descent of Lands or Tenements in some Places, whereby they come to the Youngest, instead of the Eldest Son; or, if the Owner have no Issue, to the Youngest, instead of the Eldest Brother: for that the Youngest is suppos'd, in Law, the least able to shift for himself.

BOROUGH-HEAD, or *Headborough*, is the Chief Man of the Decury, or Hundred; choic'd by the rest to speak and act in their behalf. In many Parishes it signifies also a kind of Constable; where many of them are choic'd as his Assistants, to serve Warrants, &c.

ROYAL BOROUGHS, in *Scotland*, are Corporations made for the Advantage of Trade, by Charters, granted by several of their Kings; having the Privilege of sending Commissioners to represent 'em in Parliament, besides other peculiar Privileges. These form a Body of themselves, and send Commissioners, each, to an annual Convention at *Inverkeithing*; to consult the Benefit of Trade, and the general Interest of the *Boroughs*.

BOSCAGE, a Place set with Trees, a Grove or Thicket. In a Law Sense it signifies Mast, or such Sustainance as Woods and Trees yield to Cattel: And, among Painters, a Picture representing much Wood and Trees.

BORAX, a Mineral Salt, used in soldering, brazing, and casting Gold and other Metals; known to the Antients under the Name of *Chrysolite*. *Pliny* divides *Borax* into Natural and Artificial: The Natural, according to him, is only a slimy Humor running in Mines of Gold, Silver, Copper, and even Lead; which being congeal'd and harden'd by the Winter's Cold, becomes of the Consistence of Pumice-Stone. For Artificial *Borax*, he says, 'tis made by letting Water run in the Veins of the Mine, all the Winter long, till June; and letting the Mine dry, the rest of the Year. So that Artificial *Borax*, according to him, is no more than the Mineral purify'd and corrupted. The same Author distinguishes *Borax* into Black, Green, Yellow and White; ascribing their several Colours, as well as Values, from the several Mines whereof they are form'd. The Natural, according to him, is heavier than the Factitious.

The Moderns, in like manner, distinguish two Kinds of *Borax*; Natural, call'd Crude; and Artificial, which is purify'd and refin'd. The Natural is a Mineral Salt, of the common Form, dug out of the Earth in several Parts of *Persia*; and found also at the Bottom of a Torrent, running in the Mountains of *Parthia*, near the Frontiers of *White Tartary*: When taken up, 'tis expos'd to the Air; where it acquires a kind of reddish Fat, which serves to feed it, and prevent its calcining. When in its Perfection, 'tis sent to *Anadab*, in the Territories of the Great *Mogol*, where the *European* Merchants buy it. There is another kind of Artificial *Borax*; drier, and of a greyish Colour, like *English* Coppers; only differing from the former, by its being longer expos'd to the Air.

For Artificial *Borax*, it was the *Venetians* who first found out the Art of preparing it; or, rather, of purifying the Natural: 'Tis done by dissolving it in Water; then filtrating and crystallizing it: using, for that purpose, Cotton Matches; about which the *Borax* crystallizes, like Sugar candy and Verdigrise on Wood. The *Dutch*, after refining it, reduce it into little Pieces, like tagged Papers; and 'tis thus commonly us'd.

Borax, refin'd, either in the *Dutch* or *Venetian* manner, should be clear and transparent, almost insipid to the Taste; and above all, Care must be taken it have no Mixture of *English* Alum. *Borax* is of some use in Medicine, as it enters the Composition of the Unguent *Cirrin*. 'Tis also used in the Preparation of a *Fucus* for the Ladies.

Agricola says, there is a fossile Nitre, as hard as that whereof the *Venetians* make *Borax*: In which he has Reason; this Nitre being nothing but the *Persian Borax* abovemention'd. What he adds, that the *Venetian Borax* is made of the Urine of young People who drink Wine, bear in a Mortar to the Consistence of an Unguent; and then mix'd with Iron Rait and Nitre: is not only false, but is a Misrepresentation of a Passage in *Pliny*, *Hist. Nat. L. 35. c. 5.*

BORDEKS, among Florists, are such Leaves as stand about the middle Thrum of a Flower. See FLOWER.

BORD-HALFPENNY, or *Brad-halfpenny*. Money paid in Markets, and Fairs, for setting up Boards, Tables, and Stalls, for the Sale of Wares.

BORD-LANDS, Lands antiently kept by the Lords in their Hands, for the Maintenance of their *Board* or Family. This was also antiently call'd *Bordage*.

BORN-SERVICE, A Tenure of *Bord-Lands*; where the Tenants are to pay for such per Acre, in lieu of finding Provision for their Lord's *Board*, or Table.

EOSPHORUS, in Geography, a Straight, Channel, or narrow Sea, which, it is supposed, a Bullock may swim over.

This Name is now confin'd to two Straights in the Mediterranean Sea; viz. the *Bosphorus of Thrace*, commonly call'd, the Straights of *Constantinople*, or Channel of the *Black Sea*; and the *Cyanean Bosphorus*, now more commonly call'd the Straights of *Kephe*, or *Kiderleri*, from two Cities standing on it.

The Word is originally *Greek*, and is form'd from *βου*, *bos*, and *ειναι*, *I carry*; or from *βου* and *πρωγ*, *Proffage*. The Etymology of the Word is pretty well agreed on; but the Reason why it was given, is extremely controverted; *Nymphis* tells us, on the Authority of *Accaron*, that the *Phrygians*, desiring to pass the *Thracian Straight*, built a Vessel, on whose Prow was the Figure of a Bullock. *Pliny*, *Dionysius*, *Val. Flaccus*, *Polignus*, *Callimachus*, &c. say, that so being transform'd into a Cow by *Juno*, pass'd this Straight; which hence was call'd *Bosphorus*. *Arrian* tells us, that the *Phrygians* were enjoin'd by the Oracle, to follow the Rout which a Bullock should mark out to 'em; and that upon stirring one up, it jump'd into the Sea to avoid their Pursuit, and swam over this Straight. Others say, that an Ox, tormented by a Gad-fly, threw it self in and swam over; and others, that antiently the Inhabitants of these Coasts, when they would pass over, join'd little Boats together, and had 'em drawn over by Bullocks, &c. The *Cyanean Bosphorus* seems to have been so call'd, from its resemblance to the *Thracian*.

BOSSAGE, or *Bossage*, in Architecture, is us'd for any Stone that has a Projection, and is laid in its Place in a Building uncut; to be afterwards carv'd into Mouldings, Capitals, Arms, &c. *Bossages*, are also what we otherwise call Rustick Work; consisting of Stones which seem to advance beyond the naked of a Building, by reason of Indentures, or Channels left in the Joinings; us'd chiefly in the Corners of Buildings, and thence call'd Rustick *Quoins*. The Cavity or Indenture is sometimes round, sometimes square, sometimes chamfrain'd, or bevel'd; sometimes in the Diamond Form: Sometimes it is inclos'd with a Cavetto, sometimes with a Liffet.

BOTANY, the Science of Herbs; or that part of Medicine, and Agriculture, which treats of Plants, whether Medicinal or others; their several Kinds, Forms, Virtues and Uses. The Word comes from the *Greek βότανον*, *Herb*; and that from *βοτρε*, *V'Herbs*; and *βοτρε* from *βου*, *I feed*; because most Animals feed on Herbs. See **MEDICINE**, and **GARDENING**.

The most eminent *Botanists* among the Antients, were *Hippocrates*, *Paracelsus*, *Dioscorides*, *Pliny*, *Galen*, &c. In the XVth Century, the ancient *Botany*, which had been lost a great many Ages, was industriously reviv'd; principally by *Leonicenus*, *Brethovius*, *Cordus*, *Fucifius*, *Mattibolus*, *Dalchampsius*, &c. In the same Century a Number of other Hands were added to the *Art*; by whose Industry, the *Art* was first brought into a System or Body; as *Gesner*, *Dodonæus*, *Cesalpinius*, *Clusius*, *Lobel*, *Columna*, *Prosper Alpinius*, the two *Beubius*, *Plukenet*, &c. Others have come since, and contributed to bring it still nearer Perfection; viz. *Morison*, *Malpighi*, *Herman*, *Ray*, *Magnol*, *Tournefort*, *Steen*, &c. See **HERB**, **PLANT**, &c.

BOTE, in our old Law-Books, signifies Compensation, Recompence, or Amends: Hence *Non-bote* or *Non-bere*, amends for a Man slain, who was bound to another; hence also *Boteless*; where no Judgment or Favour will acquit a Man; as, v. g. for Sacrilege, &c. Hence also our common Phrase, *To bote*. See **HERD**-**BOTE**, **FLOW**-**BOTE**, **HOUSE**-**BOTE**, &c.

BOTTOMAGE, or **BOTTOMRY**, is when the Master of a Ship borrows Money upon the *Bottom* or *Keel* of it; so as to forfeit the Ship it self to the Creditor, if the Money be not paid at the Time appointed, with the Interest of forty or fifty Pounds per Cent. at the Ship's safe Return: But if the Ship miscarry, the Lender loses his Money, and therefore the Interest is usually in great. Others stait it thus; one Man lends Money to a Merchant who wants it to traffick, and is to be paid a greater Sum at the Return of the Ship; standing to the Hazard of the Voyage: So that tho' the Interest be illegal, yet it is not esteem'd Usury.

BOTTONY, a Term in Heraldry, for one of their Crosses, of this Figure; Argent a Cross *Battouy* Sable, by the Name of *Wivressed*.

BOUCHE of *Court*, or vulgarly **BUDGE** of *Court*, is to have Meat and Drink free there: In which Sense the *French* say, *Avoir Bouche à la Court*, to be in Ordinary at Court. This Privilege is sometimes only extended to Bread, Beer and Wine. 'Twas a Custom antiently in use, as well to the Houses of Noblemen, as in the King's Court. See **MOURN**.

BOULDER-WALLS, a kind of *Walls* built of round Flints or Pebbles, laid in a strong Mortar; us'd where the Sea has a Beach cast up, or where there are plenty of Flints. See **WALL**.

BOULTINE, in Architecture, the Workman's Term for a Moulding, whose Convexity is just $\frac{1}{2}$ of a Circle; placed next below the Plinth, in the *Tufcan* and *Doric* Capital. See **QUARTER-ROUND**, and **ECHINUS**.

BOURGERMESTERS, or *Burgmeesters*, the Chief Magistrates in the Cities of *Germany*, *Holland* and *Flanders*. To them belongs the giving of Orders for the Government, Administration of Justice, Policy, and Finances of the Place: Tho' the Authority and Office of a *Bourgermeister* is not every where alike; each City having its Particular Laws and Statutes. The Word is form'd from the two *Flensish* Words, *Borger*, Burgess or Citizen, and *Meester*, Master. Some express it in *Latin*, by *Consul*, others by *Senator*. *M. Braneau* observes, that *Bourgermeister*, in *Holland*, answers to what we call Alderman and Sheriff in *England*; Attorney at *Compiègne*, Capitoul at *Toulouse*, Consul in *Languedoc*, &c.

BOUTANT, in Architecture. An *Arc-boutant*, is an Arch or Buttress, serving to sustain a Vault; and which is it self sustained by some strong Wall or Massive-work. A Pillar *boutant*, is a large Chain or Jaumb of Stone, made to support a Wall, Terrace, or Vault. The Word is *French*, and comes from the Verb *Bouter*, *to but*, or *a-but*.

BOUTS RIMEZ, a popular Term in the *French* Poetry; signifying certain *Rhimes*, dispos'd in Order, and given to a Poet together with a Subject, to be fill'd up with Verses ending in the same Word, and in the same Order. The Invention of the *Bouts Rimez*, is owing to one *Du Lor*, a Poet, in the Year 1649. In fixing the *Bouts*, 'tis usual to chuse such as seem the wildest, and have the least Connexion. Some good Authors fancy, that these *Rhimes* are of all others the least perplexing; and furnish the most new Matter of all others. *Sarrasin* has a Poem on the Defeat of the *Bouts Rimez*. The Academy at *Toulouse* have contributed towards keeping in Countenance the *Bouts Rimez*; by proposing each Year a Set of 24, to be fill'd up on the Glories of the *Grand Monarque*: The victorious Sonnet to be rewarded with a fine Medal. An Instance hereof is the following one, fill'd up by *P. Commire*.

Tout est grand dans le Roi, l'Aspect seul de son
Rend nos fiers Ennemis plus froids que des
Et Guillaume n'attend que le Temps des
Pour se voir Scemblem sur un bras de
Qu'on ne nous vante plus les Miracles d'
Louis de bien regnir lui seroit des
Horace en vain l'égale aux Dieux dans ses
Moins que mon Heros il étoit sage &

juste, &c.

BOW, a Beam of Wood, or Brass, with three long Screws, that govern or direct a Lath of Wood or Steel to any Arch: Us'd commonly to draw Draughts of Ships, Projections of the Sphere; or, wherever it is requisite, to draw large Arches.

Bow is also an Instrument formerly us'd at Sea; consisting of a large Arch of 90 Degrees graduated; three Vanes, and a Shank or Staff; a Shade-Vane, a Sight-Vane, and an Horizon-Vane.

Bow of a Ship, is that Part of her which begins at the Loof, and compassing Ends at the Stern, and ends at the Sternmost Part of the Fore-Castle. If a Ship hath a broad Bow, they call it a *bald Bow*; if she hath a narrow thin Bow, they say she hath a *lean Bow*. The Piece of Ordnance that lies in this Place, is call'd the *Bow Piece of Ordnance*; and the Anchors that hang there, are call'd, her *Great* or *Little Bower*.

BOWBEARER, an under Officer of the Forest, who is to observe and take notice of all manner of Treasons to Vert or Venison; and to attach, or cause to be attach'd, the Offenders, in the next Court of Attachment.

BOWER, an Anchor carry'd at the Bow of the Ship, is call'd her *Bower*: There are usually carry'd two there, the first and second *Bower*; but the greatest Anchor is carry'd in the Hold.

BOWLING, or rather **BOW-LINE**, a Rope fasten'd to the Leach, or middle Part of the Outside of the Sail in a Ship, fix'd in three or four Parts of the Sail; call'd the *Bowling-bridle*: The Mizen *Bowling* is fasten'd to the lower End of the Yard. All Sails have the *Bowling*, except the Sprit-sail, and Sprit-sail-top-sail; and therefore those Sails cannot be used close by a Wind; the use of the *Bowling* being to make the Sails stand sharp, or close, or by a Wind. The Terms are, *Sharp the Bowling*, *Howl up the Bowling*, *Set fast the Bowling*; that is, Pull it up hard, more forward on: But when they say, *Ease the Bowling*, *check*, or *run up the Bowling*; they mean, Let it more slack. A *Bowling-Knot*, is a Knot that will not slip; by which the *Bowling-Bridle* is fasten'd to the Crengles.

BOWSE.

BOWSE, a Sea Term, signifying as much as Hale or Pull: Thus hauling upon a Tack, is call'd *bowsing* upon a Tack; and when they would have the Men pull all together, they cry, *Boose away*.

BOW-SPRIT, or *Bolt-sprit*, the Mast of a Vessel standing foremost on the Bow; resting flopsways on the Head of the Main Stern, and having its lower End fasten'd to the Partners of the Fore-mast, and farther supported by the Fore-stay: It carries the Sprit-sail, Top-sail, and Jack-staff. The *Bow-sprit* should be two Thirds of the Length of the Main-mast, and its Thickness equal to the Mizzen-mast: When it is twelve Fathoms five Foot long, its Yard must be eight Fathoms two Foot long; and the Top-mast of the *Bow-sprit*, three Fathoms one Foot.

BOYAR, or *BOIAR*, a Term us'd for a Lord or Grandee, in *Moskovy*. According to *Bezman*, *Boyars* are what in other Countries are call'd the upper Nobility: He adds, that the Czar of *Moskovy*, in his Diplomas, names *Boyars* before *Waywodes*.

BOYAU, in Fortification, a Gut, or Branch of the Trenches: Or a Ditch cover'd with a Parapet, serving for a Communication between two Trenches. *Boyau* is also a Line, drawn winding about, in order to inclose several Tracts of Ground, or to attack some Works. See *DITCH*, *TRENCH*, &c.

BOYLE'S LECTURES, a Course of *Sermons* or *Lectures*, set on foot by the Honourable *Robert Boyle* Esq; in 1691. Their Design, as express'd by the Intitutor, is to prove the Truth of the Christian Religion against Infidels, without descending to any Controversies among Christians; and to answer new Difficulties, Scruples, &c. For the Support of this *Lecture*, he assign'd the Rent of his House in *Crooked-Lane*, to some Learned Divine within the Bills of Mortality; to be elected for a Term, not exceeding three Years, by the late Archbishop *Tennison*, and others. But the Fund proving precarious, the Salary was ill pay'd: To remedy which Inconveniences, the said Archbishop procur'd a yearly Stipend of 50 Pound, for ever, to be paid Quarterly; charg'd on a Farm in the Parish of *Brill*, in the County of *Bucks*.

BRACE, is commonly taken for a Couple or Pair; and apply'd by Hunters to several Beasts of Game; as a *Brace* of Bucks, Foxes, Hares, &c. Also a *Brace* of Greyhounds, is the proper Term for two.

BRACE, in Architecture, a Piece of Timber, fram'd in with Bevil Joints. Its use is to keep the Building from swerving either way. When a *Brace* is fram'd into a King-piece, or principal Rafter, it is called by some a *Strut*.

BRACE, *Braccio*, or *Brasse*, a long Measure, answering to our *Fathom*; see *FATHOM*.

BRACED, a Term in Heraldry, for the intermingling of three Chevronells, thus; Azure a Chief Or, and three Chevronells *braced* in the Base of the Escutcheon, by the Name of *Frauz*.

BRACES, are Ropes belonging to all the Yards of a Ship, except the Mizzen, two to each Yard: There is a Pendant seiz'd to the Yard-Arms, at whose other End there is a Block, through which the *Brace* is reeved. Their use is to *square the Yard*; that is, to set it square; *To brace the Yard*, that is, to bring it to either Side; *To traverse the Yard*, that is, to set it any way overhwart; and *To right the Yard*, is, to bring it so that it shall stand at Right Angles with the Length of the Ship: All *Braces*, come afterward on; the Main-*brace* comes to the Poop, the Main-top-sail-*brace* to the Mizzen-top, and thence to the Main Shrouds; the Fore and Fore-top-sail *Braces* come down by the Main, and Main-top-sail Sees, and so of the rest: But the Mizzen Bowling serves for a *Brace* to that Yard; and the Cross-Jack *Braces* are brought forward to the Main Shrouds, whenever a Ship sails close by a Wind. See *YARDS*.

BRACHMANS, the Philosophers, or Sages of the *East-Indies*: These have been famous in all Antiquity for their Severity of Life. The *Greeks* gave 'em the Name of *Gymnosophists*; the *Clement*, *Porphyry*, &c. make the *Brachmans* only a Branch of the *Gymnosophists*; whom they divide into two Sects, the *Brachmans* and *Samaneis*. There are some in the *Indies* who still bear the same Name, and live in the same manner as the Antients. The *Portuguese* call 'em *Bramas*; we, usually, *Bramines*. Some say, the *Brachmans* derive their Name from the Patriarch *Abraham*; whom, in their Language, they call *Brachme*: Others borrow it from their God *Brachma*; which some take to be the same with *Abraham*. Hence *Postel* gives 'em the Name of *Abrahamians*. *F. T. Bonafin* fetches it from the Hebrew, *Barach*, *signis*, *auspiciis*, to fly or escape; because the *Brachmans* retire into the Country, and live in Defarts. The same Author gives us another Derivation of *Brachmans*, viz. from the Hebrew *Barach*, *beneficere*, *orare*, to bless, pray; this being their principal Occupation.

Porphyry observes, that the *Brachmans* succeeded into the Order, &c. by Right of Family; whereas the *Samaneans* were elected into it: The former therefore were all of the same Family, the latter of various: The *Brachmans* were perfectly at Liberty, paid no Taxes, nor were under the Command of any Person: They liv'd on Herbs, Pulse and Fruits; abstaining from all Animals, and thinking it an Impiety to touch 'em. The greatest part of the Day and Night they spent, in singing Hymns in honour of the Deity; Praying and Fasting continually. The greatest Part of 'em liv'd in Solitude, without marrying, or possessing any Estates. There was nothing they appear'd to wish so earnestly for as Death; looking on Life as a burdensome thing, and waiting with Impatience for the Separation of their Soul and Body. This is the Idea *Porphyry* gives of 'em. *Kircher* observes, that the *Brachmans* held the Opinion of *Pythagoras*, relating to the Soul and its Transmigration; and lead a Life in all respects agreeable to his: Or rather, 'twas from the *Brachmans* that *Pythagoras* borrow'd his Opinions, his manner of Living, &c. The modern *Brachmans* themselves, fetch their Origin from the famous Philosopher *Xaca*.

The Modern *Bramines* are the Priests or Divines of the Idolatrous *Indians*: These are much conversant in Astrology and Astrology. They have so great a Veneration for Cows, that they look on themselves as bless'd, if they can but die with the Tail of one of 'em in their Hand. They sometimes make Processions of 400 Leagues, drawing after 'em whole Cities and Towns; feeding the People, when stop'd at the Passages of Rivers overflow'd, in a manner which they take to be Miraculous; giving 'em every thing they desire, without making any Provision. *A. Rogers* distinguishes six Sorts of 'em; the *Wistnora*, the *Servia*, the *Smaertes*, the *Schaerwaacke*, the *Pasenda*, and the *Tellea*.

M. Metshell observes, that whenever they write any thing, they put a Figure of one in the first Place; to shew, as they say, that they acknowledge but one God. They account the World the Body of God, the highest Heavens his Head, the Fire his Mouth, the Air his Breath, the Water his Seed, and the Earth his Legs and Feet. They maintain a pre-existent Sense; and from that, account for the Temper and Manners of Men in this: They also maintain the *Metempsychosis*, but in a grosser Sense than *Pythagoras*; believing, that the Souls of all Men pass into Reptiles, Insects, and Vegetables, for their Punishment and Purgation. They compute the World to be about 3892850 Years old; and seem to have some obscure Traditions of the *Mystic Paradise*, *Adams Eve*, and the Deluge. They have also a Notion of God's being incarnate, and living some time among Men. Their Religion consists in leading a pure Life, washing away their Sins in the River *Ganges*, muttering over divers Prayers, and doing strange and incredible Penances. They burn their Dead with much Ceremony; and throwing his Ashes on the Place where he first laid after his Death, they judge, from some Impression they imagine made on it, into what Body his Soul was gone; viz. if the Impression of the Foot of a Dog or Ox, &c. appear, they give out he is transmigrated into one of those Animals; if there be no Impression, he is then gone to the Starry Region. They have abundance of *Cabalistic* Notions; v.g. say they, the Numbers 28, 3, 5, 2, 7, — 6, 3, 2, 4, 3, 1, — 3, 4, 2, 8, 1, — 4, 5, 3, 0, 5, 3, written in the same Order in the Squares of a square Figure, and your Enemy's Name written under it, while you wear it he can't hurt you, &c. See *Phil. Trans. N.º 268*. See *LIGATURE*.

BRACHIEUS, or *Brachia*, a Name given to two Muscles of the Elbow, the one external, the other internal.

The *Brachieus Externus* arises about the middle and posterior Part of the *Humerus*; it joins its Fibres with the *Musculus Longus* and *Brevis*; and being externally Tendinous, they, together, cover all the Elbow, and are inserted into the *Olecranon*.

Brachieus Internus, lies partly under the *Biceps*; it arises by a fleshy Beginning from the middle and internal Part of the *Humerus*; and is inserted into the upper and fore-Part of the *Cubitus*, by a very short but strong Tendon: It serves to bend the Arm.

BRACHYGRAPHY, from *Brachy*, *brevis*, short, and *grapho*, *scribo*, to write; is the Art of Short-hand Writing.

BRADS, a kind of Nails used in Building, having no spreading Heads as other Nails have: Of these some are call'd Joiners *Brads*, and are for hard Waincot; others *Batten Brads* for soft Waincot; and some *Bill Brads* or *Quarter-Heads*, us'd when a Floor is laid in balbe, or for shallow Joists subject to warp. See *NAILS*.

BRAILS in a Ship, small Ropes reev'd through Blocks, which are seiz'd on either side the Tics, a little distance off upon the Yard, so that they come down before the Sails of a Ship, and are fasten'd at the Skirt of the Sail to the Crengles: Their use is, when the Sail is fur'd across, to hale up its Bunt, that it may be the more readily be taken up or let

fall: These *Brails* belong only to the two Courses and the Mizen-fall. The Word is, *Hold up the Brails*; or, which is all one, *Braile up the Sails*; for the Meezing is, that the Sail should be haled up, in order to be fur'd, or bound close to the Yard.

BRAIN, in its general Sense, that large, soft, whitish Mass, inclos'd in the *Cranium* or Skull; wherein all the Organs of Sense terminate, and the Soul is supposed principally to reside. The *Brain* is encompass'd with two *Meninges*, or Membranes, call'd *Dura* and *Pia Mater*; see *MEMBRANES*. Its Figure is the same with that of the Bones that contain it; viz. roundish, oblong, and flat on the Sides: It is divided into three principal Parts, viz. the *Cerebrum*, or *Brain* strictly so call'd, the *Cerebellum*, and the *Medulla oblongata*: The two latter of which see under their proper Heads, *CEREBRUM* and *MEDULLA*.

The *Cerebrum*, or *Brain*, properly so call'd, is that large globulous Part which fills the fore and upper Part of the Skull: It is divided by a Duplication of the *Dura Mater*, call'd from its Figure *Falx*, into two equal Parts, call'd *Right* and *Left Hemispheres*: The Figure of the *Brain* be pretty far from a Sphere. It is also separated from the *Cerebellum* by another Duplication of the same *Dura Mater*. The *Brain* consists of two Kinds of Substance, the one Cerebritious, or of an Ash-colour, soft and moist; which being the Exterior, is call'd the *Cortex*, or Cortical Part of the *Brain*: The Thickness of this is about half an Inch, tho by reason of the *Sinns* and *Sutures* in the *Brain* it appears more. The other, or inner Substance, is white, more solid, as well as more dry than the *Cortex*, and is call'd the *Marrow* or *Medullary*, and sometimes the *Fibrous* Part, in contra-distinction to the other, which is call'd the *Glandulous* Part.

The *Cortex*, according to *Malpighi*, is form'd from the minute Branches of the Carotid and Vertebral Arteries; which being woven together in the *Pia Mater*, lead from each Point thereof, as from a Basis, little Branches, which, being twisted together into the Form of a Gland, inclose the *Medulla*, ordinarily to the Thickness of half an Inch; but in some places make deeper *Sinns* and Furrows within it. These Branches make Circumvolutions like the Intestines; each of which may be resolv'd into others, like, but less than the first: This Part, therefore, most other Authors take to be Glandulous; or, an Assemblage of innumerable minute Glands, contiguous to each other, destin'd for the Secretion of Animal Spirits from the Blood, brought hither by the Carotids, &c. These Glandules, *Malpighi* observes, are of themselves oval, but by the mutual Compressure become angular; they run waving within each other: Several of these connected, form others somewhat larger; and these again unite into others, from the Aggregate whereof are form'd Tubes, of which the outer *Cortex* is compos'd. These little Glands consist of the Branches of the Arteries which bring the Blood; of the Veins arising at their Extremities, which carry it back again; of Secretory Tubes secreting the Animal Spirits, and of Excretory Ducts for discharging 'em into the *Medulla*: The these are too minute to have ever been seen. See *CORTIX*.

The Inner, or Medullary Part of the *Brain*, consists of infinitely fine Fibres, arising from the least and minutest Branches or Filaments of the Glands of the *Cortex*; as is distinctly seen in the *Cerebellum*, tho scarce visible in the *Cerebrum*: These receive the Fluid separated and subtiliz'd, from the Glands of the *Cortex*; and by means of the Nerves, which are no more than Productions of this Part, distribute it all over the Body. Authors, here, however, are divided; the generally, with *Malpighi*, making the Substance of the *Cortex* Glandulous, as above; others, with *Rayss* and *Leeuwenhoek*, denying any thing like Glands in it; and allowing nothing but little *Cryttes*, or Sinks, opening laterally to the Arteries; and thence receiving a Juice already secret'd from the Blood, and transmitting it to the *Medulla*. This Doctrine, it seems, is the Result of Anatomical Injections and Microscopical Observations; but the other appearing the most consistent with the Oeconomy of Nature in other things, is generally adher'd to.

The *Cortex* covers the whole Medullary Substance both of the *Brain* and *Cerebellum*; so as wherever the Cortical Substance ends, there the Medullary commences; and this in the Appendices, Ventricles, Intestitics, and *Sinns* of the *Medulla*, as well as in the External Surface. Something Medullary, therefore, arising from every Point of the *Cortex*; as at its first rise, it must needs be exceedingly fine and tender: But being join'd with other Parts of the same kind, it gradually thickens, and at length becoming sensible, constitutes the *Medulla Cerebri*, the *Corpus Callosum*, the *Medulla oblongata* and its Legs, the *Tuberculi* of the Optic Nerves, the *Medulla Cerebelli*, and its Production into the *Medulla oblongata*; which, with these Additions, forms the *Corpus Pyramidalis* and *Olivaris*, and is extended into the Spinal Marrow. And from the same Medullary Substance, both in the *Cranium*, and in the Case

form'd by the Union of the *Vertebra*, arise all the Nerves. See *NERVES*; see also *CORPUS PYRAMIDALIS*.

The primary *Fibrille*, or Filaments, when united, seem to form one compact Body or Mass; yet *Boerhaave* shews, they are really distinct and separate from each other; that thus arising from each Part of the *Cortex*, and tending as it were to the Centre of the Sphere, they first form the *Medulla*; that others, reflected hence and collected above, form the *Corpus Callosum* and *Forax*; and below, from the *Corpus Callosum* and Legs of the *Medulla oblongata*, that the like *Fibrille* arising from the *Cerebellum*, join with 'em: the Result of which Juncture, is the *Medulla Spinalis*. And lastly, that the like *Fibrille* arising from the *Cortex*, continued within the Cavities of the *Medulla*, join with 'em, and add fresh Consistence thereto.

Hence we see the Reason of the Bulk, Figure, and Position of the *Cortex* of the *Brain*, as well as the Use and Necessity of the Cavities call'd *Ventricles* of the *Brain*: Of these *Ventricles* there are four, one in each Hemisphere; separated by a thin transparent Substance, running all along from the *Forax* under the *Corpus Callosum*, and distinguish'd by the Name of the *Septum Lucidum*: These are call'd the *Lateral Ventricles*. The third is under the *Forax*, and call'd *Rima*; the fourth between the *Cerebellum* and *Medulla oblongata*: To these are owing the *Callus* or *Knots* found in various Parts of the *Brain*; as fresh Accessions of Fibres arrive from the several Places to the *Cerebellum*.

From the whole, it appears past doubt, that the Fibres of the *Brain* are exceedingly minute Canals; that they receive an Humor, infinitely the most subtil, fluid, moveable and solid of any in the whole Body; prepar'd and excreted by the artful Structure of the *Cortex*, driven into these Tubules by the force of the Heart, and from every Part hereof collected into the *Medulla oblongata*: And this is what some call *Animal Spirits*, others the *Nervous Juice*; the great Instrument of Sensation, muscular Motion, &c. See *SPIRITS*, *MUSCLE*, *SENSATION*, &c.

In the Space between the two Hemispheres of the *Brain*, under the *Falx*, or rather under the *Lowermost Sinus* of the *Dura Mater*, is a white Substance, whose Texture more compact than the rest of the *Medulla* of the *Brain*; and for that reason call'd *Corpus Callosum*, which runs along the whole Tract of the *Falx*, and receives from each side the Terminations of the *Medulla*, interspers'd between the several Windings of the *Cortex*, and suppos'd by some to be a kind of Bale or Support to it: The manner wherein this is form'd, is shewn above. We shall only add, that on occasion hereof, some Authors, M. *Arbue* for Instance, instead of two Substances, viz. the *Cortex* and *Medulla*, divide the *Brain* into three; viz. the Uppermost, or *Cerebritious*, which infiltrates the *Cortex*; the Middle, which is whiter and denser than the first, and therefore call'd the *Callus*; and the Lower or Inmost, which being intermix'd with *Radii* or *Striae* of the White and Cerebritious Substance, he calls the *Striated Part*: He adds, that the Fluid secreted in the *Cortex*, is convey'd into innumerable minute hollow Medullary *Fibrille*, of the same nature with the *Callous* Substance, and contiguous thereto. This middle, or callous Part, he observes, is not distinguish'd by any appearance of Fibres, but is uniform, homogeneous, elastic, and not unlike the Pith of the Elder Tree; for which Reason, he thinks it a probable Conjecture, that it consists of innumerable Cells, communicating with each other, divided by the Interposition of membranaceous, flexil, elastic, vibratile Particles or Columns; which being flow'd over by the Spirits, and continually expos'd to the Shakings thereof, constitute the Fibres of the *Brain*.

Now the secreted Fluid flowing equally from each Point of the Cerebritious Substance into the *Callous*, must equally fill and distend the Cells thereof: And lest any Place should want its share, Provision is made for a strict Communication; not only by the Apertures of the Cells into each other, but also by the Structure of the *Brain*; the upper Parts communicating with the under, by the *Septum Lucidum*; the Lateral with the Lateral, by the *Lata Commissura*; lastly, the fore Parts by the hind Parts, by the *Crua*, *Brachia*, and Roots of the *Forax*. These Cells, he continues, being fill'd, the Spirits will proceed to the contiguous *Striae* of the Medullary Substance; which arising from the *Cortex*, compose the *Striated Part* of the *Brain*: And these *Striae* render'd narrower and slenderer, and passing without the Surface of the *Brain*, constitute the first Principles of the Nerves, &c.

The other Parts of the *Brain*, are the *Forax*, a Production of the *Medulla*; which, at its Extremity next the *Cerebellum*, sends out two Processes or Legs, by whose Juncture is form'd a kind of Arch, thence call'd *Forax*, which separates the third Ventricle from the two upper ones: At the Bottom of the *Forax* are two Holes, by which the third Ventricle has a Communication with the others; that before is call'd *Valva*, and that behind *Ans*. The third

Ventricle, or *Rima*, which is in the *Medulla oblongata*, has likewise two Apertures; the one the Office of the *Infundibulum*, or Funnel, which is a Canal reaching to the *Glandula Pituitaria*: The other is a Duct, whereby the third Ventricle communicates with the fourth in the *Medulla oblongata*, under the *Cerebellum*. The fourth Ventricle is in the form of a Quill, whence it is sometimes call'd *Calamus*.

In the Lateral Ventricles are found the *Plexus Choroidei*, which is an Assemblage of minute Veins and Arteries; and four Eminences, the first the *Corpora Striata*, the others the *Thalamus Nervorum Opticorum*.

At the Entrance of the Canal reaching from the third Ventricle to the fourth, is situated the *Pineal Gland*; so call'd from the Figure of a Pine-Apple, which it resembles: This Gland, *Des Cartes* supposes to be the Seat of the Soul. Behind the Pineal Glands are four Eminences; two upper and greater, call'd *Nates*; and two smaller and lower, call'd *Telles*. See *MEDULLA OBLONGATA*, to which all these Parts properly belong; see also each Part under its proper Head, *NATES*, *TESTES*, *THALAMI*, *PINEAL PLEXUS*, *CALAMUS*, &c.

The Vessels of the *Brain*, are Nerves, Arteries, and Veins. By turning up the *Brain*, the Origin or Base of the Nerves proceeding from it, are distinctly seen: These are in Number ten Pair, viz. the *Olfactory*, *Optic*, *Movers of the Eyes*, *Patetic*; the fifth Pair, and sixth Pair, call'd also the *Gustatories*, the *Auditory Nerves*, *Par vagus*, and the ninth and tenth Pair.

The Blood-Vessels of the *Brain*, are the two *Internal Carotid*, and the *Vertebral Arteries*. The first piercing the *Dura Mater*, communicate with the *Cerebrals*; and proceeding thence, send a Branch to the *Plexus Choroidei*; till arriving at the *Pia Mater*, and making several Turns and Circumvolutions thereon, they terminate, at last, in the little Glands that constitute the Cortex. The Vertebral Arteries passing the *Dura Mater*, go along the under side of the *Medulla oblongata*; till giving Branches to the Spinal Arteries, they join in one Branch call'd the *Cervical Artery*, which communicates with the *Cerotides* by two Branches, as before. The Veins of the *Brain* don't run along by the Sides of the Arteries, as in other Parts of the Body, but rise from their Extremities in the Cortex; whence they discharge themselves into the Sinus of the *Dura Mater*. See *CAROTID*, *CERVICAL*, &c.

For the great Bulk of the *Brain*, this Reason may be assign'd; viz. that on account of the exceeding Subtlety and Fineness of the Animal Spirits, and the Slowness in which their Secretion must be effected; together with the great Quantity of 'em requir'd in discharging the animal Functions; there must of necessity be an infinite Number of Glands to separate and prepare 'em. From the same Principle, we see why the *Brain* is much bigger in Men than in other Animals; and in other Animals, why, *ceteris paribus*, it is biggest in those which discover the greatest share of Sagacity, v.g. in Monkeys, &c. A considerable Stock of Animal Spirits being to be employ'd in the Affairs of Cognition, Memory, &c. Accordingly, Anatomists observe, that in Fools the *Brain* is smaller (*ceteris paribus*) than in Men of Sense: This, some may account for, by supposing it the Cause of the Folly; a sufficient Stock of Spirits being wanting to reason, &c. strongly: And others from the Oeconomy of Nature, which proportion'd the Stock of Spirits to the Expence that would be requir'd.

From the Texture, Disposition, and Tone of the Fibres of the *Brain*, Philosophers ordinarily account for the Phenomena of *Sensation* and *Imagination*; which see. Dr. *Astruc* goes farther, and from the Analogy between the Fibres of the *Brain*, and those of Musical Instruments, solves the Phenomena of Judgment and Reasoning, and the Defects and Perfections of both. He lays it down as an Axiom, that every simple Idea is produc'd by the Oscillation of one determinate Fibre; and every compound Idea from cotemporary Vibrations of several Fibres: That the greater or less degree of Evidence follows the greater or less Force wherewith the Fibre oscillates. He hence proceeds to shew, that the Affirmation or Negation of any Proposition, consists in the equal or unequal Number of Vibrations, which the Moving Fibres, representing the two Parts of the Proposition, viz. the Subject, make in the same Time: i. e. If the Vibrations of the Fibre that gives the Idea of the Subject, and those of the Fibre which gives the Idea of the Attribute of Proposition, be *isochronal*, or make an equal Number of Vibrations in the same Time, we are determin'd to the Affirmation of the Proposition; if *heterochronal*, or their Vibrations be unequal, the Soul will be determin'd to a Negation, &c. Hence result *Consonance*, *Dissonance*, *Harmonical Fibres*, &c. The Evidence and Certainty of a Judgment, Affirmative or Negative, he deduces from the greater or less Consonance or Dissonance of the Fibres of the Subject and Attribute; and a right or wrong Judgment in the natural or deprav'd Tone of the Fibres of the *Brain*.

Hence he takes occasion to observe, that the Fibres of the *Brain*, from their Analogy to those of Musical Instruments, may be perverted several ways; viz. by being render'd too dry or too moist, too stiff or too lax, &c. In a Plethory, he thinks the Fibres too dry, and too much distended by the Heat of the Blood, &c. In a Mania, these Fibres he thinks too rigid, as well as too dry and distended: In a Lethargy, they are too much soften'd by Phlegm; in Idiocy, or Foolishness, they are sometimes too soft, and sometimes too hard. Lastly, He thinks that in a Melancholy, by the repeated successive Vibrations which the attentive Meditation of a Thing induces, two or more Fibres, which of themselves exhibit dissimilar and unequal Ideas, are (the other Parts remaining sound) sensibly brought to an *Isobronism*: So as the Soul judging well in other respects, yet in this always makes a false Judgment.

The *Brain* does not appear absolutely necessary to animal Life. We have several Instances in Authors, particularly in the *Physiognomical Transmutations*, of Children brought forth alive, and surviving their Birth for some time, without any *Brain*: And we have Anatomical Instances, of Animals surviving the loss of their *Brain*. Of the first kind, we have a History from *Paris*, of a Child, deliver'd at Maturity; and living four Days, not only without a *Brain*, but even a *Head*: instead of both which, was a Mass of Flesh like Liver found. M. *Devis* gives us another Instance, of a Child born in 1673; which, setting aside the *Head*, was well form'd; but without any *Brain*, *Cerebellum*, or *Medulla oblongata*: It had not any Cavity for a *Brain*, the Skull, if such it might be call'd, being solid: Nor was this any way connect'd to the *Vertebree*; so that the Marrow in the *Spine* had no Communication with the *Head*: The *Optic Nerves* terminated in the solid Bone. M. *de Duce* gives a third Instance, in 1695, where there was neither *Cerebrum*, *Cerebellum*, or *Medulla oblongata*, nor even *Spinal Marrow*; the Cavity that should contain them being extremely shallow, and full of a black livid Substance, like congeal'd Blood: He adds, this was the third Subject of this kind he had met with. Dr. *Preston*, indeed, tells us, that M. *du Verney* found here a *Spinal Marrow*, of the much less Consistence than ordinary; in which, however, he could distinguish all the four Tunics, and the two Substances; viz. the Cortical and Fibrous Part, as in the *Brain*. In a word, he takes this to be a *Brain* it self, as much as that in the Skull; may more so, being more necessary to Life, and more sensible, than either the *Brain* or *Cerebellum*: A Wound or Compression in the first being always mortal; not so in the latter, as appears from the Experiments of M. *du Verney* and M. *Chirac*; the first of whom took out the *Brain* and *Cerebellum* of a Pigeon; notwithstanding which, it liv'd, sought Food, had Sense, and perform'd the common Functions of Life: The latter took out the *Brain* from a Dog, yet it liv'd; upon taking out the *Cerebellum* it dy'd; but blowing into the Lungs, he observes, he could keep the Animal alive, an Hour after the Loss of the *Cerebellum*. Upon separating the *Medulla oblongata* of another Dog from the *Spinal Marrow*, and removing it with the *Brain* and *Cerebellum*, he kept the Dog alive by blowing into the Lungs. To which may be added, many Instances given by Mr. *Boyle*; not only of Animals living a long time after the Separation of the *Head* from the Body, but even of the Copulation and Impregnation of some Insects under those Circumstances: Whence it appears, that the *Spinal Marrow* is sufficient, on Occasion, for the Business of Sensation, Motion, Secretion of Animal Spirits, &c.

BRAN, the Skins or Husks of Corn ground, separated from the *Farina*, or Flower, by a Sieve. Of *Wheat-Bran* it is the Search-makers make their Search; which is nothing else but the *Fecules* remaining at the Bottom of the Vessels, wherein the *Bran* has been steep'd in Water. See *STARCH*.

BRANCHES, in Architecture, the Arches of Gothic Vault. These Arches, traversing from one Angle to another, Diagonal-wise; form a *Cross* between the other Arches which make the Sides of the Square, whereof the Arches are Diagonals. See *VAULT*, *OSIVE*, &c.

BRANCHES of a *Bridle*, in the Manage, two crooked Pieces of Iron which support the Mouth bit, the Chain, and the Curb; and which are fasten'd, on one Side to the Headstall, on the other to the Reins: serving to keep the Horse's Head under Command. What way soever the *Branches* of the Bit incline, the Horse's Mouth always goes to the contrary. The Duke of *Newcastle* is very particular on the Head of *Branches*; explaining their several Kinds, and their Effects, which are perfectly like those of a *Lever*. The *Branch* is always to be accommodated to the Design, either of bringing in, or raising a Horse's Head; and to the Degree: Accordingly, we have *strong* and *hardy Branches*, *gentle Branches*, *rude Branches*, &c.

With regard to their Form and Structure, *Branches* are either straight, in form of a Pistol, for young Horses, to form their Mouth; or, after the Countess of France's Fashion, for Horses that already carry the Head well: Others are in form of a Gigot or Leg; others of a bent Knee; others in the French Fashion, &c.

Note, These are *Laws* in the Manage. 1. That the fitter the *Branch* is from the Horse's Neck, the more effect it will have. 2. That short *Branches*, *ceteris paribus*, are ruder, and their Effects more fadden than those of others. 3. That the *Branch* be proportion'd to the Length of the Horse's Neck.

BRANCH, or *BOUGH*, in Botany, a Jet or Arm of a Tree, emitted from its Trunk: *Quintiny* calls it, a Part of a Tree, which coming from the Trunk, helps to form the Head. The Word, according to *Salmafus*, comes from the Latin *Branches*; in the lower Latin, they said *Berga*: Others derive it from *Brachium*, an Arm; and others from *Branchie*, the Gills of Fishes.

The *Branches* of Trees are observ'd, almost constantly, to shoot from the Trunk at an Angle of 45 Degrees: The Reason is, that the whole Spreading being generally confin'd within an Angle of 90 Degrees, as the most becoming and useful Disposition; that space could not be well fill'd up any other way, than by forming all the Intersections which the Shoots and *Branches* make, with Angles of 45 Degrees only. A strong Argument, that the Plastick Capacities of Matter, are under the Guidance of a wise Being.

Branches are distinguish'd into various Kinds: A *Wood Branch*, *Quintiny* says, is such a one, as shooting out from a Cut of the preceding Year, is naturally of a considerable Thickness. A *Fruit Branch*, is that which shoots out of a moderate Length and Breadth from the same Cut: *Fruit Branches*, he adds, have large Eyes, and are very near each other. A *Branch half Wood*, is that, which being too slender for a *Wood Branch*, and too gross for a *Fruit Branch*, is cut, at the Length of two or three Inches, to make it produce a better Jet, whether Wood or Fruit. Spurious *Wood Branches*, are such as come contrary to the Order of Nature; or otherwise than from Cuts of the preceding Year; or which coming on such Cuts, are big in the Place where they should be small. To understand this Order of Nature, it must be observ'd, 1. That *Branches* should never come, except on those of the last Cut; such, therefore, as shoot from other Parts are spurious. 2. That the Order of the new *Branches* is, if there be more than one, that the extreme *Branch* is thicker and longer than that immediately under it; and this bigger and longer, again, than the third, &c. Hence, if any be big where it should be small, it is call'd *Scurious*. There are, however, some Exceptions: In Trees that are vigorous, and yet bear a handsome Figure, there can't well be too many *Fruit Branches*, provided they make no Confusion; but for *Wood Branches*, there should not ordinarily be above one suffic'd to grow, of the several which shoot from each Cut of the preceding Year. See PRUNING.

BRANCHIA, a Name given by the Greek Naturalists to the Gills of Fishes; which are Parts compos'd of Cartilages and Membranes, in form of a Leaf, and serving instead of Lungs to respire by. *Galen* observes, they are full of little Foramina, big enough to admit Air and Vapours, but too fine to give Passage to Water. *Pliny* held, that Fishes respire'd by their Gills; but observes that *Aristotle* was of another Opinion: To whom we may add *Dr. Needham*. The Word *Branchia*, comes from the Greek *βραχια*, which signify'd the same thing.

BRANDY, a spirituous, inflammable Liqueur, drawn from Wine, and other Liqueurs by Distillation; ordinarily in *Balneo Marie*; sometimes also by the Flame of a Fire. See DISTILLATION. The Vessels used herein, are usually Copper; and some Distillers, to cool the Liqueur more readily, make the Neck of the Matras, which is very long, and winding like a Serpent, pass through a Vessel of cold Water.

To distil *BRANDY*, they fill the Cucurbit half full of the Liqueur from which it is to be drawn; and raise it, with a little Fire, till about one sixth Part be distill'd; or till they perceive that what falls into the Receiver is not at all inflammable. The Liqueur thus distill'd the first time, is call'd *Spirit of Wine or Brandy*; which Spirit, purify'd by another, or several more Distillations, is what we call *Spirit of Wine rectify'd*. The second Distillation is made in *Balneo Marie*, and in a Glass Cucurbit; and the Liqueur put therein, distill'd to about one half the Quantity: Which half is further rectify'd, as long as the Operator thinks fit. To abridge these several Distillations, which are long and troublesome, they have invented a Chymical Instrument, whereby the Rectification of Spirit of Wine is perform'd at one single Distillation: The Description and Figure of which Instrument may be seen in *Glauber's Chymistry*.

To try the Goodness of Rectify'd Spirit of Wine, it must be lighted into a Blaze: if then it consumes wholly, without leaving any Impurity behind; or, which is safer still; if after putting a little Gun-powder in the Bottom of the Spirit, the Gunpowder take fire when the Spirit is consum'd, the Liqueur is good. Those who deal in *Brandy*, (we speak only of that made with Wine) chuse it white, clear, of a good Taste, and such as will bear the Test or Proof; i.e. such as in pouring into a Glass, forms, a-top of it, a little white Lather, which, as it diminishes, makes a Circle, call'd by the French *Brandy Merchants*, the *Chapelet*, or *Bead-Roll*: there being no *Brandy* but that well defecimated, and wherein there is no Humidity left, wherein the *Chapelet* is entirely form'd.

The chief use of *Brandy*, is as a Drink; especially in the cold Northern Countries; and among the Negroes in *Guinea*, who sell one another for a few Bottles of *Brandy*; and among the Savages of *Canada*, and other Parts of *N. America*, who are infinitely fond of it. It is of some use too in Medicine; being said to strengthen the Nerves: And in Dying, when rais'd into rectify'd Spirit of Wine; being accounted one of the Dyers Non-colouring Drugs.

Besides the *Brandy* made of Wine; there is other made of Male-Liquors, of Cyder, Syrop, Sagar and Meiofics, of Fruits, Berries, &c.

The greatest Part of the *Brandies* in use, and those too, the best, are prepared in France: Of the French *Brandies*, those of *Nantes* and *Poitou* are the most esteem'd; as being of a better Taste, finer and stronger, and enduring the Test of the *Chapelet* longer than any of the rest: Those of *Anjou*, *Touraine* and *Orleans*, claim the second Place.

Brandy makes a very considerable Article in the French Commerce: The Number of Foreign Vessels, wherewith all their Ports are full in Time of Peace, and which are laden, in good measure, with *Brandy*, is incredible. *Nantes* alone furnishes 17,000 Gallons per Annum, and *Bordeaux* above twice as much; the other Places in proportion. The Dutch take off their Hands almost as much as all the rest of Europe. *Poland* and *Sweden* are the only Nations which are not their Customers; these preferring the *Brandies* of their own Countries, made of Grains, to the Wine-*Brandies* of France.

Of *Brandy*, both plain and rectify'd, are prepared various Kinds of strong Liqueurs, with the Addition of other Ingredients, Sugars, Spices, Flowers, Fruits, &c. which are afterwards clarify'd, by passing 'em thro a straining Bag, or filtering 'em thro Brown Paper. See CLARIFICATION. A great part of these are brought from *Montpellier*; where they are suppos'd to be better prepar'd than any where else. See WATER.

BRASIL, or *BRAZIL*, a Wood so call'd, because first brought from *Brazil*, a Province of *S. America*: It is denominated variously, according to the Places whence it is brought. Thus we have *Brazil* of *Fernambouc*, *Brazil* of *Japoa*, of *Lamoa*, of *St. Marthe*; and lastly *Brazillet*, brought from the *Antilles*.

The *Brazil-Tree* ordinarily grows in dry barren Places, and in the middle of Rocks; it is very thick and large, usually crooked and knotty: Its Flowers, which are of a beautiful red, exhale a very agreeable Smell, which strengthens the Brain. The Tree be very thick; it is cover'd with so thick a Bark, that when the Savages have taken it off the Wood, a Trunk, which before was the Thickness of a Man, is scarce left equal to that of his Leg.

Brazil Wood is very heavy, dry, crackles much in the Fire, and scarce raises any Smoak, by reason of its extreme Dryness. None of the several Kinds have any Pith, except that of *Japoa*: that of *Fernambouc* is esteem'd the best. It must be chosen in thick Pieces, close, sound, without any Bark; and such as, upon splitting, of pale becomes reddish; and when chew'd has a sugar Taste. It is much us'd in Turned Works, and takes a good Polish; but its chief use is in Dying, where it serves for a red Colour: 'Tis a furious Colour, however, it gives; and easily evaporates and fades: Nor is the Wood to be us'd without Alum and Tartar. From the *Brazil* of *Fernambouc*, is drawn a kind of *Carmine*, by means of Acids. There is also a liquid *Lacca* made of it, for Miniature. See RED.

BRASS, *Orichalcum*, or, as the French call it, *Tellow Copper*; a factitious Metal, compos'd of Copper, and *Lapis Calaminaris*. The Method of Preparation is as follows. The *Lapis* being calcin'd, and ground fine as Flour, is mix'd with ground Charcoal; and incorporated, by means of Water, into a Mass: Thus prepar'd, about seven Pounds of the *Calamine* is put into a Melting-Pot of about a Gallon; and over it, about five Pounds of *Copper*; which is let down into a Wind-Furnace eight Foot deep, remaining there about 11 Hours; in which Time 'tis converted into *Brass*. After melting, it is cast into Plates, or Lamps: 45 Pounds of crude *Calamine*, produces 30 Pounds burnt, or calcin'd. They sometimes use *Brass-bruff* instead of Copper;

Copper; but that is not always to be procur'd in Quantities sufficient, being no more than a Collection of Pieces of old *Brass*. Pure *Brass* is not malleable unless hot; when cold it breaks: After melting thro', 'tis no longer in a Condition to bear the Hammer at all: to work it, they put 7 Pounds of Lead to 100 of *Brass*; which renders it more soft and pliable. *Brass* is us'd in the casting of Guns: The best Proportion for Gun-Metal, 'tis said, is for 11 or 12 thousand Weight of Metal, to use ten thousand Pound of Copper, nine hundred Pounds of Tin, and six hundred Pound of *Brass*. See COPPER.

The best *Brass* Guns are made of malleable Metal, not of pure Copper and Calamine alone; but it is necessary to add coarser Metals, to make it run close and sounder, such as Lead and Pot-Metal. Bell-Metal is a Composition of *Brass* and Tin: and Pot-Metal of *Brass* and Lead; 20 Pound of Lead, is usually put into 100 Pound of Pot-Metal. The Manufacture of *Brass*, was kept a Secret in Germany for many Ages.

BRASS OF COINTELL, has been famous in all Antiquity: *J. Alamanus* having suck'd and burnt that City, 146 Years before our Saviour's Time, 'tis said this precious Metal was found from the immense Quantities of Gold, Silver and Copper wherewith *Carinth* abounded, thus melted and run together by the Violence of the Conflagration. The Statues, Vessels, &c. form'd of this Metal were ineffimable. Those who speak of it accurately, distinguish it into three Kinds; in the first, Gold is the prevailing Metal, in the second Silver; in the third, Gold, Silver, and Copper, are equally blended.

BRASING, the Soldering or joining of two Pieces of Iron by means of thin Plates of *Brass*, melted between the two Pieces to be join'd. If the Work be very fine, as when the two Leaves of broken Saws are to be join'd, it is cover'd with beaten *Borax*, moisten'd with Water that it may incorporate with the *Brass-dust* which is here added; and the Piece is expos'd to the Fire without touching the Coals, till the *Brass* be observ'd to run. Lastly, to *brase* with a still greater degree of Delicacy; they use a Solder made of *Brass*, with a tenth Part of *Tin*; or another, one third *Brass*, and two thirds *Silver*; or *Borax* and *Resin*: Observing, in all these manners of *brasing*, that the Pieces be join'd close throughout; the Solder only holding in those Places that touch. See SOLDERING.

The Method of *brasing* among *Ferriers*, &c. is by heating the two Pieces, when hot, over one another.

BREACH, in Fortification, is the Ruins made in any Part of the Works of a Town, &c. either by playing Cannon, or springing Mines; in order to storm the Place, or take it by assault. They say, *Make good the Breach*, *Fortify the Breach*, *Make a Lodgment on the Breach*, *Clear the Breach*, &c.

BREAK-BULK, is to begin to take the Ship's Lading or Cargo out of the Hold.

BREAK-GROENT, in Fortification, signifies to begin Works for carrying on a Siege of a Town or Fort, &c.

BREAST, *Mamma*, in Anatomy, a prominent fleshy Part of the human Body, on the Outside of the *T'borax*; whose use is to separate the Milk. The *Breasts* are much more perfect, more conspicuous, and of more use in Women than in Men: Their Magnitude is various; always biggest in Times of Gestation and Lactation. Their Figure represents a large Section of a Globe, having in the middle a Prominence terminating in a blunt Point, call'd the *Papilla*, or Nipple; in the Extremity of which are Perforations, to which reach Lactal Tubes: About the Nipple is a pale brownish Circle, call'd the *Arcula*.

The internal Substance of the *BREASTS*, is compos'd of a great Number of Glands, of various Sizes, and an oval Figure, intermix'd with Globules and Vessels of Fat. Their excretory Ducts, as they approach the Nipple, join and unite together, till at last they form seven, eight, or more small Pipes, call'd *Tubuli Lactiferi*, which have several cross Canals, by which they communicate with one another, to obviate the Inconveniencies that might accrue from the casual Obstruction of one or more of 'em. These Tubes are not every where of equal Capacity, but in some Places more, in others less dilated; so as to form Cells, which seem contriv'd to hinder the spontaneous Efflux, and to create a Necessity of Sucking to fetch out the Contents. The *Breasts* have Arteries and Veins from the Subclavian and Intercoastal; and Nerves from the Vertebral Pairs, and from the sixth Pair of the Brain: Of the Concurrence of these *Tubuli* or Pipes, is the Substance of the *Papilla* in great measure form'd; among which is interspers'd a glandulous Substance, serving to keep 'em from pressing too close on each other; and with it are intermix'd abundance of Fibres drawn from the external Teguments of the *Papilla*; by means whereof, the Lactal Tubes are constrict'd, and the Motion of the Milk modify'd. Besides these Vessels, are abundance of fatty Globules, call'd *Ductus Astepti*, which some would

have only to fill up the Interstices of the Glands: but *Dr. Drake*, after *Mastigibgi*, thinks they contribute to the Composition of the Milk; which seems nothing else but Water and Oil artfully united. See MILK. In Virgins the Tubes which compose the Glands of the *Breasts*, like a Spincter-Muscle, contract so closely, that no part of the Blood can enter them: But when the Womb grows big with a *Fetus*, and compresses the descending Trunk of the great Artery; the Blood flows in a greater Quantity, and with a greater Force thro' the Arteries of the *Breasts*, and forces a Passage into their Glands; which being at first narrow, admits only of a thin Water: but growing wider by degrees, as the Womb grows bigger, the Glands receive a thicker Serum; and after Birth they run with a thick Milk; because that Blood which before flow'd to the *Fetus*, and for three or four Days afterwards by the *Uterus*, beginning then to stop, does more dilate the Mammillary Glands. In Men, the *Breasts* are very small, and chiefly for Ornament; the Physical Histories give Instances of those who have had Milk in them.

BREATHING. See RESPIRATION.

BREEZE, a shifting Wind, blowing from the Sea and Land alternately for some certain Hours of the Day or Night; only sensible near the Coast. The *Sea-Breeze*, *Dampier* observes, commonly rises in the Morning about nine, proceeding slowly in a fine small black Curl on the Water towards the Shore: It increases gradually till 12, and dies about five. Upon its ceasing the *Land-Breeze* commences, which increases till 12; and is succeeded in the Morning by the *Sea-Breeze* again. See WIND.

BREGMA, the same as *Parietalis Offa*; see CRANIUM.

BREST, in Architecture, a Term us'd by some, for that Member of a Column, otherwise called the *T'borus* or *Tore*. See TORUS.

BREVVY-SUMMERS, in Timber-Building; are Pieces in the outward Parts of the Building, and in the middle Floors, (not in Garrets or Ground-Floors) into which the Girders are fram'd. In the inner Parts of a Building, the Pieces into which the Girders are fram'd, are call'd *Summers*.

BREVE, in Grammar. Syllables are distinguish'd into *Long* and *Breves*, according as they are pronounce'd quicker or more slow: The Time of a *Breve* is half that of a *Long*; or, as the Grammarians express it, a *Breve* is one Time, and a *Long* two. See ACCENT.

BREVE, in Musick, is a Note or Character of Time, form'd like a Square, without any Tail; and equivalent to two *Measures*, or *Mimsis*. See CHARACTERS of Musick.

BREVE VAS. See VAS BREVE.

BREVIARY, an Office perform'd daily in the *Roman* Church, and which the Ecclesiasticks are to repeat at home, when they can't attend in Publick. The *Breviary* of *Rome* is general, and may be us'd in every Place; but on the Model of this have been built various others, peculiarly appropriated to each Diocese, and each Order of Religious.

The *Breviary* is compos'd of *Matins*, *Lands*, *prime*, *third*, *sixth*, *ninth* Vespers, and the *Complets* or *Post Communio*; that is, of seven different Hours: on account of that saying of *David*, *Septies in Die laudem dixi tibi*. The Obligation of reciting the *Breviary* every Day, which was at first universal, by degrees was reduc'd to the Clergy and Beneficiaries alone, who are bound to do it on Pain of mortal Sin, and of refunding their Revenues, in proportion as they are delinquent herein. In the XIVth Century, there was a particular Reserve to Bishops, to pass on occasion, three Days without rehearsing the *Breviary*.

The Institution of the *Breviary* not being very ancient, the Lives of the Saints were insert'd in it, agreeable to the Opinions of the Times; i. e. full of ridiculous ill-attested Facts; which gave a handle to several Reformation's thereof by several of their Councils, particularly those of *Trent* and *Cologne*; several Popes, as *Pius V.* *Clement VIII.* and *Urban VIII.* as also by several of their Cardinals and Bishops, each of whom lopp'd off some of the Extravagancies, and brought it nearer the Simplicity of the Primitive Offices; as owning that in the ancient Church there was nothing read but from the Scriptures. Cardinal *Quignoz* carry'd the Reformation the farthest; leaving out the Office of the Virgin, the Verses, Responses, and a great part of the Lives of the Saints.

The *Breviaries* that now obtain, are almost infinite: Their difference consists principally in Form and Disposition, and the Number and Order of Psalms, Hymns, Paternosters, Ave Marias, Credos, Magnificats, Cantemus's, Benedic'tus's, Canticum's, Nunc Dimittis's, Misereres, Alleluiah's, Gloria Patri's, &c.

The most Eminent, besides the *Roman Breviaries*, are, that of the *Benedictines*, that of the *Bernardines*, of the *Chartreux*, of the *Premonstrants*, of the *Dominicans*, the *Carmelites*, the *Franciscans*, and *Jesuits*; that of *Cluni*, of the Church of *Lyons*, the Church of *Avignon*, and the *Mozarabic Breviary*, us'd in *Spain*. But in effect, there is scarce a Church in the Communion of *Rome*, in *France*, *Flanders*,

Spain, Germany, &c. but what has something particular in the Form and Manner of its *Breviary*: The Differences are generally inconsiderable.

The *Breviary of the Greeks*, which they call *εὐαγγέλιον*, *Horologium*, *Dial*, is the same, to a Trifle, in almost all the Churches and Monasteries that follow the *Greek Rites*. The *Greeks* divide the *Psalter* into 20 Parts, *ὀψώνια*; which are a kind of Rests, Pauses, or Stations: and each Pause is again subdivided into three Parts. In the general, the *Greek Breviary* consists of two Parts; the one containing the Office for the Evening, call'd *ὀψώνιον*; the other that for the Morning, consisting of Matines, Lauds, first, third, sixth, ninth Vespers, and *Compline*.

The *Breviary of the Maronites*, has some more considerable Differences. Among the People who speak the *Slavonic Language*, or any of its *Dialects*, the *Breviary* is rehear'd in the vulgar Tongue; as among the *Maronites* in *Syria*, among the *Armenians* in *Armenia*. Those who rehearse the *Breviary* in the *Slavonic*, are divided as to the Rite: some following the *Roman* or *Latin* Rite, as the Inhabitants of *Dalmatia*, and the neighbouring Coasts: Those who live farther within the Continent, as in *Hungary*, *Bosnia*, *Sclavonia*, &c. and in *Poland*, *Lithuania*, and *Moskovy*, follow the *Greek Rite*. The *Breviaries of the Coptite* and *Abyssinians*, are much alike.

Menage derives the Word *Breviary* from this; that the ancient Monks, in their Journeys, &c. had little Books, wherein were collected the *Psalms*, *Lessons*, &c. read in the Choir out of large Volumes: And *F. Mabillon* tells us, he has seen two such Books in the Archives of the *Benedictines*; they were not above three Fingers broad: he observes, their Letter was exceedingly small, and consisted mostly in Abbreviations; expressing a whole Period in a few Syllables: Whence they had a good Title to the Appellation of *Breviaries*, q. d. *Abridgements*.

BREVIATOR, an Officer under the Eastern Empire; whose Office was to write and transcribe *Briefs*. *Cato* observes, that at *Rome* those are still call'd *Breviators*, who dictate and write the *Pope's Briefs*.

BREVIS Cubiti, is a Muscle that rises from the superior and posterior Part of the *Humerus*; which joining its fleshy Fibres with the *Brachialis Externus* and *Longus*, and becoming Tendinous, covers the Elbow, and is inserted into the *Olecranon*, to extend the Arm.

BREVIS Palmaris, lies under the *Aponurosis* of the *Palmaris*, and arises from the Bone of the *Metacarpus*, that sustains the little Finger; and from that Bone, and that of the *Corpus* which lies above the rest, it goes transversely, and is inserted into the eighth Bone of the *Corpus*. It helps in making the Palm of the Hand concave.

BREVIS Radii, comes from the External and Upper-part of the *Ulna*; and passing round the *Radius*, is inserted into its upper and fore-part, below the Tendon of the *Biceps*. This, with the *Longus Radii*, are call'd the *Supinatorres*: their Office being to turn the Palm upwards.

BREWING, the Preparation of Ale, or Beer from Malt. The Process is as follows: A Quantity of Water being boil'd, is left to cool, till the height of the Steam be over; when, so much is pour'd to a Quantity of Malt in the *Mashing-Tub*, as makes it of a Consistence stiff enough to be just well row'd up: After standing thus $\frac{1}{2}$ of an Hour, a second Quantity of the Water is added, and row'd up as before. Lastly, the full Quantity of Water is added; and that in proportion as the Liquor is intended to be strong or weak: This part of the Operation is call'd *Mashing*. The whole stands two or three Hours, more or less, according to the Strength of the Wort, or the Difference of Weather, and is then drawn off into a Receiver; and the *Mashing* repeated for a second Wort, in the same manner as for the first; only the Water to be cooler than before, and to stand only half the Time. The two Worts then mix'd, the intended Quantity of Hops are added, and the *Liquor close cover'd* up, gently boil'd in a Copper the space of an Hour or two; then let into the Receiver, and the Hops strain'd from it into the Coolers. When cool, the *Barm* or *Yeast* is apply'd; and it is left to work, or ferment, till it be fit to tun up.

For Small Beer there is a third *Mashing*, with the Water near cold, and not left to stand above $\frac{1}{4}$ of an Hour, to be hopp'd and boil'd at Discretion. For Double Beer or Ale, the two *Liquors* resulting from the two first *Mashings*, must be us'd as *Liquor* for a third *Mashing* of fresh Malt for Fine Ale. The *Liquor* thus brew'd, is further prepar'd with *Molasses*.

For *Yeast*, some use *Cattle Soap*, others *Flour* and *Eggs*, others an essential Oil of *Barley*; others a Quintessence of *Malt*, others of *Wine*, and others the *Sol Panarisum*.

For the Preparation of the *Matter*, and the Properties of the *Liquors* thus brew'd, see *MALT* and *MALT-LIQUOR*; see also *BEER* and *ALE*. For the *Brewing* of *Malt Spirit*, see *DISTILLATION*.

BREIBERY, in Law, a great Misprision, when any Per-

son in Judicial Place, takes any Fee, Pension, Gift, Reward, or Brocage for doing his Office, but of the King only.

BRICK, a fat reddish Earth, form'd into long Squares, 4 Inches in Breadth, and 8 or 9 in Length, by means of a wooden Mould; and then bak'd or burnt in a *Kiln*, to serve for the Uses of Building.

Bricks appear to be of a very ancient standing; the Tower of *Babel* being built thereof, as appears both from Sacred History, and from the Remains thereof still in being. Under the first Kings of *Rome*, they built with massive squar'd Stones, which they learnt from the *Tuscan*: Towards the latter Time of the Republick, they began to use *Brick*; borrowing the Practice from the *Greeks*: And the greatest, as well as the most durable Buildings of the succeeding Emperors, as the *Pantheon*, &c. were built therewith. In the Time of *Galban*, the Buildings were compos'd of an Order of *Brick* and an Order of *Tuscan*, a soft gritty Stone, alternately. After him, they laid aside the use of *Bricks*, and resumed *Flints*. In the East they bak'd their *Bricks* in the Sun: The *Romans* us'd 'em crude; only leaving 'em to dry in the Air a long space of Time, viz. four or five Years. The *Bricks* us'd by the *Greeks* were principally of three Kinds; the first call'd *Isobry*, i. e. of two Palms: the second *trispalmar*, of four Palms; and the third *quispalmar*, of five Palms. They had other *Bricks*, just half each of these, which they join'd together to render their Works more solid, as well as more agreeable to the Eye, by the diversity of Figures and Sizes of the *Bricks*.

The *Bricks* among us are various; acquiring various Names, according to their various Forms, Dimensions, Uses, Method of making, Place, &c. The principal are, 1. *Compass Bricks*, of a circular Form, us'd in heaving of Walls. 2. *Concave*, or *hollow Bricks*, on one side flat, like a common *Brick*, on the other hollow'd: They are us'd to convey Water. 3. *Cogging Bricks*, are us'd to make the indented Work, under the Coping of Walls built with great *Bricks*. 4. *Coping Bricks*, which are form'd on purpose for coping of Walls. 5. *Dutch*, or *Flemish Bricks*, us'd to pave Yards and Stables, and for Soapboilers Fats, and Cisterns. 6. *Clinkers*, are such *Bricks* as are glazed by the heat of the Fire in making. 7. *Feather-edg'd Bricks*, are like the common *Statute Bricks*, only thinner on one Edge than on the other, and are us'd to pen up the *Brick Pannels* in Timber Buildings. 8. *Samel* or *Sandal Bricks*, are such as lie outmost in a *Kiln* or *Clamp*, and consequently are soft and useless; as not being thoroughly burnt. 9. *Great Bricks*, are 12 Inches long, 6 broad, and $\frac{1}{2}$ thick: The Weight of one is about 15 Pounds; so that 100 will weigh 1500, and 1000 of them 15000 Pounds Weight: Their use is to build Fence-Walls, together with, 10. *Pilester*, or *Buttress Bricks*, which are of the same Dimensions with them, only they have a Notch at one End, of half the Breadth of the *Brick*: Their use is to bind the Work at the Pilaster of Fence-Walls, which are built of *Great Bricks*. 11. *Paving Bricks*, or *Tiles*, are of several Sizes in several Countys and Places. 12. *Place Bricks*, are such as are made in a Place prepared on purpose for them, near the Building they are to be us'd in. 13. *Statute*, or *small Common Bricks*; these ought to be 9 Inches long, 4 $\frac{1}{2}$ broad, and $\frac{1}{2}$ thick; 100 of these usually weigh about 550 Pounds, and 1000, 5500 Pounds; and about 407 in number, are a Tonn Weight: These are commonly us'd in paving Cellars, Hearths, Sinks, &c. 30 or 32, if true measure, will pave a Yard Square, and 550 will pave a Square of 100 Foot, laid flat; but if laid Edg-ways, there must be double the Number.

Barbara, in his Comment on *Vitruvius*, recommends another Form of *Bricks*, viz. *Triangular ones*, every Side a Foot long; and some an Inch and half thick: These, he observes, wou'd have many Conveniences above the rest; as being more commodious in the Management, of less Expence, and of fairer Shew; adding much Beauty and Strength to the *Mural Angles*, where they fall gracefully into an indented Work. And *Sir H. Wotton* wonders they have never been taken into use; being recommended by so great an Authority.

The Earth whereof *Bricks* are made, must not be sandy, which will make 'em both heavy and brittle; nor must it be too fat, which will make 'em crack in drying. They should be made either in the Spring or Autumnal Season: when made, they must be shelter'd from the Sun if it be too hot, and yet be expos'd to the Air to dry. If they be made in frosty Weather, they are to be cover'd with Sand; if in hot Weather, with wet Straw. When they are well dried, they are burnt.

Bricks are burnt, either in a *Kiln* or *Clamp*: Those in the first, being set in it, and the *Kiln cover'd* with Pieces of *Bricks*, they put in Wood, to dry them with a gentle Fire; and this they continue till they are pretty dry, which

is known, by the Smoak's turning from a whitish dark, to a black transparent Smoak. They then cease to put in Wood, and proceed to burn with Bush, Furze, Straw, Heath, Brake, or Fern Faggots; having first damm'd up the Mouth of the Kiln with pieces of Bricks put'd upon one another, and clos'd with wet Bricks-Earth, instead of Mortar: They then continue to put in more Faggots, till the Kiln and its Arches look white, and the Fire appear a-top of the Kiln. Then they slacken the Fire for an Hour, and let all cool by degrees: 48 Hours burning is generally sufficient. About London, they burn Bricks in Clamps, built of the Bricks themselves, after the manner of Arches in Kilns; with a Vacancy between each Brick's Breadth, for the Fire to play thro; but with this Difference, that instead of arching, they truss or span it over, by making the Bricks project one over another, on both sides the Place, for the Wood and Coals to lie in, till they meet, and are bounded by the Bricks at the Top, which close all up. The Place for the Fuel is carry'd up straight on both sides, till about three Foot high; then they fill it almost with Wood, and over that lay a covering of Sea-Coal; then over-span the Arch: But they strew Sea-Coal also over the Clamp, betwixt all the Rows of Bricks; then they fire the Wood, and that fires the Coal: and when all is burnt out, they conclude the Bricks burnt enough.

Goldman observes, that Bricks will have double the Strength, if, after one burning, they be steep'd in Water, and burnt afresh. If the Earth be too fat, it must be temper'd with Sand; and that trod out again, first by Cattle, then Men. Bricks made of common Earth, melt, nay vitrify, by too much Heat: For which Reason, the Kilns are made of Stones that will themselves calcine, that the Vehemence of the Fire may be broken by 'em: Besides which, they usually place other Bricks, made of an argillous Earth which would melt, next the Fire.

Oil of Olives, is an Oil of Olives, imbib'd by the Substance of Bricks, and afterwards distill'd from it. The Pieces of Brick being heated red hot in live Coals, are extring'd in an Earth half saturated with Oil of Olives: Being then separated and pounded grossly, the Brick imbibes the Oil. 'Tis then put in a Retort, and plac'd in a Reverberatory Furnace; and by Fire is drawn an Oil, which the Apothecaries call *Oilum de Lateribus*; and the Chymists, *Oil of Philosophers*, us'd to resolve Tumors, in the Spleen, in Palsies, and Epilepsies.

BRIDGE, a Work of Masonry, or Timber, built over a River, Canal, or the like, for the Convenience of crossing the same. Some learned Men make *Janus* to have been the first Inventor of Bridges, Ships, and Crowns; because in several Greek, Sicilian, and Italian Coins, there are represented on one side a *Janus* with two Faces, and on the other a Bridge, or a Crown, or a Ship. According to the Testimony given thereof by *Athenæus*, Lib. 15. one of the most notable Exploits of *Julius Cæsar*, was the expeditious making a Bridge of Boats over the Rhine. *Nerxes* is said to have made a Bridge of Ships over the Hellespont. See *POSTON*.

BRIDGE of Communication, is a Bridge made over a River; by which two Armies or Forts, separated by the River, have a free Communication with one another.

DRUM-BRIDGE, is such a one as may be drawn, or taken up, by means of a Sweep or Counterpoise; and which shuts up against the Gate, &c. There are others with Pitfalls, and Beams, sustain'd by two large Stakes 15 Foot high; one Part whereof lowers as the other rises.

BRIDLE of an Horse, is an Assemblage of various Members, or Parts; as the Bit or Snaffle, (see *BIT*); the Head-stall, or Leathers from the Top of the Head to the Rings of the Bit; the Filler, over the Forehead, and under the Foretop; Throat-band, which buttons from the Head-band under the Throat; Reins, the Part held in the Hand; Nose-band, going thro Coops at the back of the Head-stall, and buckled under the Cheeks; the Trench, the Cavesson, Martingal, and Chast-halter.

BRIEF, or BREVE, in Law, a Writ whereby a Man is summon'd or attach'd to answer any Action; or more largely, it is taken for any Writ in Writing, issued out of any of the King's Courts of Record at *Westminster*, whereby any thing is commanded to be done in order to Justice, or the Execution of the King's Command: and 'tis call'd Brief, or Breve, quia brevier intentionem preteritis exponit; because couch'd in a few plain Words, without Preamble, &c.

The Word Brief is also us'd for Letters Patent, or a License granted to a Subject, to make a Collection for any Publick or Private Lofs; see *WRIT*.

APOSTOLICAL BRIEFS, are the Letters which the Pope dispatches to Princes, and other Magistrates, touching any Publick Affairs: They are so call'd, as being very concise, written on Paper, without Preface or Preamble; in which they accreditingly sign'd from Bulls, which are more ample,

and always wrote on Parchment, and seal'd with Lead or green Wax; whereas Briefs are seal'd with red Wax, and with the Seal of the *Fisherman*, or *St. Peter* in a Boat, in the Condition of a Fisherman; a Seal never apply'd but in the Pope's Presence. The Brief is headed with the Name of the Pope apart; and commences with *Dilecto filio salutem, &c. Apostolicam Benedictionem, &c.* and proceeds directly to the Matter in hand, without further Preamble. They are not subscrib'd by the Pope, nor with his Name, but with that of his Secretary. Pope *Alexander VI.* instituted a College of Secretaries for Briefs; since which time, they have been made much longer and more ample than before. Formerly Briefs were only dispatch'd about Affairs of Justice, but now they are likewise us'd for Graces and Dispensations.

BRIGADE, in the Military Art, a Party or Division of a Body of Soldiers, whether Horse or Foot. There are two sorts of Brigades, according to the *French* way of accounting. A Brigade of an Army; which is a Body of Horse of 10 or 12 Squadrons; or of Foot, of 5 or 6 Battalions. And this way an Army is sometimes divided into eight Brigades; four of Horse, and four of Foot. A Brigade of a Company of Cavalry is its third Part, when it consists only of 50 Officers; but its sixth when it consists of 100.

The Word Brigade is *French*; some derive it from *Brigand* or *Brigue*, a secret Intrigue. *Da Cange* fetches it from *Brigand*, an ill-disciplin'd Soldier, who scours the Country, and plunders it of every thing, without waiting for the Enemy; as the Armies of *Arabs*, *Tartars*, &c. The Origin of the Word *Brigand* is, again, deduced from *Brigandine*; a Weapon wherewith the Army rais'd by the *Parisians*, during the Captivity of their *K. John* in *England*, notorious for their Robberies, were arm'd.

BRIGADIER, an Officer that commands a Brigade of Horse and Foot in an Army: He is very considerable, and goes next to the *Maréchal de Camp*.

BRIGADIER-MAJOR, is an Officer appointed by the Brigadier to assist him in the Management and ordering his Brigade; and he sits there, as a Major-General does in an Army.

BRIGANDINE, a Coat of Mail, or a kind of ancient defensive Armour; consisting of thin jointed Scales or Plates, plain and easy to the Body. Some confound it with *Haubergeon*, and some with a *Brigantine*, a low long Vessel.

BRIGANTINE, is a small, flat, open, light Vessel, which goes both with Sails and Oars, and is either for Fighting or giving Chase. It hath usually 10 or 12 Benches on a side for the Rowers, a Man and an Oar to each Bench. They are principally us'd by the *Corfairs*: All the Hands aboard being Soldiers; and each having his Mullet ready under his Oar.

BRINGERS-UP, in a Battalion, are the whole last Rank of Men in it, or the last in every File.

BROCADE, or BROCARD, in Commerce, a Stuff, or Cloth of Gold, Silver, or Silk, rais'd and enrich'd with Flowers, Foliages, or other Figures, according to the Fancy of the Manufacturer. Formerly, the Term was restrict'd to Cloths wove, either wholly of Gold, both Wool and Warp; or of Silver, or of both together: But by degrees, it came likewise to pass for such as had Silk intermix'd, to fill up, and terminate the Flowers of Gold and Silver. At present, any Stuff of Silk, Satin, or even simple Tuffaty, when wrought, and enrich'd with Flowers, &c. obtains the Denomination of Brocade.

BROKERS, are of two Kinds: The first *Exchange-Brokers*, who deal in Matters of Money and Merchandize, between *Englishmen* and Strangers; by drawing the Bargain to Particulars, and the Parties to Conclusion: for which they have a Fee or Reward. These, in our old Law-Books, are call'd *Broggers*; and in *Scotland*, *Broccarii*; i. e. according to *Skene*, Mediators or Intercessors in any Contract, &c. These make it their Business to know the Alteration of the Course of the Exchange, to inform Merchants how it goes, and to notify to those, who have Money to receive or pay beyond Sea, who are proper Persons for negotiating the Exchange with; and when the Matter is accomplish'd, that is, when the Money is paid, they have for Brokerage two Shillings per 100 Pounds Sterling.

In France, till the Middle of the XVIIth Century, these Exchange-Brokers were called *Courtiers de Change*; but by an Arret of Council, in 1639, the Name was chang'd for that more creditable one of *Agents de Change, Banque, & Finance*: And in the Beginning of the XVIIIth Century, to render the Office still more honourable, the Title of *King's Counsellors* was added. At *Grand-Cairo*, and several Places of the *Lowry*, the *Arabs* who do the Office of Exchange-Brokers, are call'd *Comis*: The manner of whose negotiating with the *European* Merchants, has something in it so very particular, that we have refer'd it to a distinct Article: See *CONSUL*. The Exchange-Brokers at

Amsterdam, call'd *Makelaers*, are of two Kinds; the one like the *Engliff*, call'd *Sesura Brokers*, because of the Oath they take before the *Bourgermeesters*; the others negotiate without any Commission, and are call'd *Walking Brokers*. The first are in Number 595; whereas 375 are Christians, and 20 Jews: The others are near double that Number: So that in *Amsterdam* there are near 1000 *Exchange-Brokers*. The difference between the two consists in this; that the Books and Persons of the former are believed and own'd in the Courts of Justice; whereas, in Case of Dispute, the latter are disown'd, and their Bargains annull'd. The Fee of the sworn *Exchange-Brokers* of *Amsterdam*, is fix'd by two Regulations, of 1613, and 1625, with regard to Matters of Exchange, to 18 Sols for 100 Livres, or 600 Florins; i. e. 3 Sols for 100 Florins, payable, half by the Drawer, and half by the Person who pays the Money. But Custom has made considerable Alterations herein.

In the East, all Affairs are transacted by *Brokers*, whom the *Persians* call *Delal*, i. e. Great Talkers. The manner of making their Markets is very singular: After the *Brokers* have launch'd out into long, and usually impertinent Discourses; coming towards a Conclusion, they only talk with their Fingers. The Buyer and Seller's *Broker*, each take the other by the Right Hand, which they cover with their Coat, or a Handkerchief: The Finger stretch'd out, stands for six; bent, for five; the Tip of the Finger for one; and the whole Hand 100; and the Hand clench'd, 1000. They will express even Pounds, Shillings, and Pence by their Hands. During all this mystick Commerce, the two *Brokers* appear as cold and compos'd, as if there were nothing passing between 'em.

The other kind of *Brokers*, are *Pawn-Brokers*, who let out Money to necessitous People upon *Pawns*: These are more properly call'd *Frisers*. The Word comes from the Saxon *Breacan*, to break; whence *Broker*, a broken Dealer: None but broken Tradesmen and Freeman of the City, being formerly allow'd to be *Brokers*.

In the Cities of *Italy*, there are Companies establish'd by Authority, for the letting out Money on *Pawns*; call'd *Mounts of Piety*: An honourable Title, little becoming such Institutions; inasmuch as the Loan is not *gratis*. In some Parts of *Italy*, they have likewise *Mounts of Piety* of another kind, wherein they only receive ready Money, and return it again with Interest at so much *per Annum*. At *Bologna* they have several of these *Mounts*; which are distinguish'd into *Frank* and *Perpetual*. The Interest of the former is only four *per Cent*. in the latter at seven.

Stock Brokers, are they who buy and sell Shares in the Joint-Stocks of a Company or Corporation, for any Person that shall desire them.

BRONCHIA, in Anatomy, the little Tubes into which the Bottom of the *Trachea* is branch'd, at its Entrance into the Lungs; and which are distributed thro' every Part thereof, serving for the Conveyance of the Air in Respiration. The *Bronchia* consists of Cartilages like the *Trachea*; only here the Cartilages are perfectly circular, without any membranous hard Part: They are join'd together by the Membranes that invest 'em, and are capable of being shot out lengthwise in Inspiration; and of being drawn into each other in Expiration. The Word is *Greek*, where it signifies the same thing. See *LUNGS*.

BRONCHIAL, a particular Artery of the Lungs, call'd the *Bronchial Artery*. It arises from the descending Trunk of the *Aorta*, and distributes it; and embracing the *Trachea*, pursues the Course of the *Bronchia*, accompanying all their Branches thro' their whole Progress. There is also a *Bronchial Vein*, which accompanies the Artery, and divides into the same Number of Branches with it: The Artery brings Blood to the *Bronchia*, for the Nutrition thereof, and of the Vessels of the Lungs; and the Vein carries it off again to the *Cava*, where it soon terminates. The *Bronchial Artery* is sometimes single; but more frequently double; sometimes triple.

BRONCHIC-Moles; see *SPERMATHOZOIDI*.

BRONCHOCELE, a Tumor, with a large round Neck, rising on the *Bronchial Part* of the *Trachea*, very frequent in the *Abs*: The *Latin* call it *Hernia Gastrica*. The Word is form'd from the *Greek* *βρογχος*, *Bronchia*, Windpipe; and *κεφα*, swelling.

BRONCHOTOMY, or *Laryngotomy*, in Chirurgery, the Operation of cutting into the Windpipe to prevent Suffocation, &c. in a *Syninancy*. 'Tis thus perform'd; the Body of the Patient being prepar'd, an Incision is made between the *Annuli*, or Rings of the *Alpera Arteria*, an Inch below the Bottom of the *Larynx*; the Skin and Integuments divided, and the Muscles remov'd; a Silver Tube is apply'd, and the Cause of the Disease remov'd; and the Wound heal'd; nourishing Clysters being apply'd in the mean time, if Deglutition be impracticable. See *LARYNGOTOMY*. The Word comes from the *Greek* *βρογχος*, Windpipe; and *τομή*, *seco*.

BROOMING, or *Brauning* of a Ship; is burning of the Filth she has contracted on her Sides, with Straw, Reeds, &c. when she is on a Carcen, or on the Ground; so that it is a kind of Graving.

BROTHER, a Term of Relation between two Male Children, sprung from the same Father or Mother. The Antients apply'd the Term *Brother* indifferently to almost all who stood related in Collateral Lines, as Uncles and Nephews, Cousins German, &c. This we learn, not only from a great many Passages in the Old Testament, but also from profane Authors: *Cicero*, in his *Philippick*, says, "Antonia was both Wife and Sister of Mark Anthony;" "because she was Daughter of his Brother C. Antonius." And as to Cousins German, *Tullius Hostilius*, in *Dionysius Halicarnassens*, calls the *Horatii* and *Curatii* *BROTHERS*; because they were Sister's Children. Among us, 'tis customary for Kings to give the Title *Brother* to each other: The Union in Coronation being esteem'd to settle a kind of *Brotherhood*. Nor is the Custom modern; *Mevander* mentions a Letter of *Croesus*, King of *Persia*, to the Emperor *Jostinian*, beginning thus, *Croesus King of Kings*, &c. to the Emperor *Justinian My Brother*. Kings now also give the same Appellation to the Electors of the Empire: And the like was given by the King of *France* to the present King of *Sardinia*, while only Duke of *Savoy*.

The *Latin* Word is *Frater*; which *Scaliger* and *Vossius* derive from *ferre*, or *ferreus*; which properly signifies a Person who draws Water in the same Well: i. e. *frater*, in *Greek*, signifying *Well*; and *εστραία*, a Company of People, who have a Right to draw Water out of the same Well. The Word came originally from the City *Argos*, where there were only a few Wells distributed in certain Quarters of the City; and which those of the same Neighbourhood alone repair'd. In the Civil Law, *Brothers*, *Frates*, in the plural, comprehends *Sisters*; as, *Lucius & Titus, Frates*, L. 38. de Famil. *Tres Frates, Titius, Mevius, & Seia*, L. 55. de Pañis.

BROTHER, is particularly us'd between Monks of the same Convent; as, *Brother Zachary, Brother Bonaventure*, &c. In *Engliff* we more usually say *Friar Zachary*, &c. from the French *Frere, Brother*. This Appellation they borrow from the Primitive Christians, who all call'd each other *Brothers*: But 'tis principally us'd for such of the Religious as are not Priests; for those in Orders are generally honour'd with the Title of *Fathers, Patres, Pères*; whereas the rest are only simply *Brothers*. The Monks of *St. Dominic*, are particularly call'd *Preaching Brothers*; or, *Friars Predicans*: Those of *St. Francis*, *Minor Friars*; those of *Charity*, *Ignorant Friars*, &c. See *FRANCISCANS*, *DOMINICANS*, &c. In the Military Orders, the Knights are also call'd *Brothers*: In the Order of *Malta*, there is a particular Class, call'd *Serving Brothers*; consisting of such as cannot give Proof of their Nobility. In *Latin* they are call'd, *Frates Clientes*. See *MALTA*.

BROTHERS by Adoption, see *ADOPTION*. *Frates Consanguinei*, are two *Brothers*, who have only the same Father: And *Frates Uterini*, those who are only descended from the same Mother.

BROTHERS of the Rosy-Cross; see *ROSCRUCIAN*.

BROWNISTS, a Religious Sect, which sprung out of the Church of *England*, towards the Close of the XVth Century; Their Leader, *Robert Brown*, originally of *Northampton*. The Occasion of their Separation was not any Fault they found with the Faith, but with the Discipline and Form of Government of the Establish'd Church. They equally charg'd Corruption on the Episcopal Form; and on that of the *Presbyterians*, by Confutations, Classes, and Synods: Nor would they join with any other Church; because they were not assur'd of the Conversion and Piety of the Members that compos'd 'em; on account of the Toleration of Sinoers, with whom they maintain'd it an Impiety to communicate. They condemn'd the solemn Celebrations of Marriages in the Church; maintaining, that Matrimony being a Political Contract, the Confirmation thereof must come from the Civil Magistrate. They would not allow any Children to be baptiz'd of such as were not Members of the Church, or of such as did not take sufficient Care of those baptiz'd before. They rejected all Forms of Prayers; and held that the Lord's Prayer was not to be recited as a Prayer; being only given for a Rule or Model, whereon all our Prayers are to be form'd. See *SEPARATIST*.

BRUMALIA, a Feast of *Bacchus*, celebrated among the ancient *Romans* for the space of 30 Days; commencing on the 24th of *November*, and ending the 26th of *December*. The *Brumalia* were instituted by *Romulus*; who us'd, during this Time, to entertain the Senate. The Word comes from *Bruna*, Winter; in regard of the Time when the Feast was held: Others will have it from *Brunus*, or *Bromius*, Names of *Bacchus*.

BRONYA, the Root of a Plant of the same kind with the *Melchoaca*: It was formerly in great Reputation as a Purgative; but has now lost the greatest part thereof; yet

it evacuates pretty strongly, sometimes by Vomiting, but more frequently by Urine: Whence some Authors recommend it, as excellent for purging Scrofulas; and even as a Specifick in the Dropsy. *M. Boudiac* found, by a Chymical Analysis, that it consisted only of saline Principles, without any Resin; wherein it differs from *Alcobolan*, which, in other respects, it much resembles. He adds, it has more virtue taken in Substance than in any other manner; which is common to this and other Purgatives.

BUBBLE, in Commerce, a Cant Name, lately given to a sort of Projects, for the raising of Money on imaginary Grounds; very frequent in the Years 1720, —21. See Stocks.

The pretended Design of these Undertakings, was to raise a Stock, for the retrieving, setting on foot, or carrying on some promising and useful Branch of Trade, Manufacture, Machinery, or the like. In order to which, Proposals were given out, shewing the Advantages of the Design, and inviting Persons into it. The Sum necessary to carry on the Affair, together with the Profits expected from it, were divided into a certain Number of *Shares*, or *Subscriptions*, to be purchas'd by Persons dispos'd to adventure therein. The real Design, in some, was to raise a Sum for the private Advantage of the Projectors; to be laid out by them in the *South-Sea Stock*, &c. in hopes, by the Rise thereof, to be able to refund the Subscribers Money, with Profit to themselves. In others the Design was, absolutely to defraud the Adventurers of their Subscription-Money, without any View to Restitution. There was a third kind somewhat different; and the Projectors of these, to proceed the more securely, propos'd to have Books open'd, and Subscriptions taken in at some time to come; and in the mean time took Money, by way of Premium, to entitle Persons to be admitted Subscribers, as soon as the Affair should be ripe, for dividing into Shares. Several thousand Shares were, thus, very frequently bespoke in one Day; and Premiums, from one Shilling to some Pounds, pay'd thereupon, to the Profits of the Projectors. See SUBSCRIPTION.

The number of *Bubbles*, and their Qualities, were very extraordinary: Some of 'em too authoriz'd by Patents; and in others, the Projectors and their Proprietors form'd into Corporations: Some for Fisheries, some for Insurances, some for the digging of Mines, &c. Posterity, doubtless, will be surpris'd to hear of others for cleaning the Streets, others for furnishing Shoes, others for Stockings, others for Physick, others for the Maintenance of Bastard Children, others for the buying bad Titles, others for the lending of Money, &c.

BUBBLES, in Physicks, little round Drops or Vesicles of any Fluid fill'd with Air, and form'd on its Surface, upon the Addition of more of the Fluid, as in raining; or in its Substance, upon a vigorous incline Composition of its Parts. *Bubbles* are dilatable or compressible, i. e. take up more or less room, as the included Air is more or less heated, or more or less press'd from without; and are round, because the included *Aura* acts equally from within all around. Their Coat or Cover is form'd of the minute Particles of the Fluid, retain'd either by the Velocity of the Air, or by the brisk Attraction between those minute Parts and the Air. 'Tis these little *Bubbles*, rising up from Fluids, or hanging on their Surface, which form the white Skum a-top; and 'tis these same *Bubbles* which form the Steam or Vapour rising up from Liquors in boiling, &c. the manner of which see under BOILING, VAPOUR, &c.

BUBO, in Medicine, a Tumor arising on the Glands of the Groin and Armpits, with Inflammation and Pain; owing to the overflowing of the Blood in those Glands, mix'd with some peccant Humour. There are two kinds of *Bubo*'s, the one call'd *Benign*, or *Mild*, the other *Malignant*. Malignant, are divided into *Peffential* and *Veneral*: Peffential arise on a Peffential Fever, &c. Veneral *Bubo*'s are the Product of impure Embraces; and frequently the Forerunner of the Pox. When a *Bubo* is compress'd with a Circle of several Colours, 'tis a Sign it is Peffential, and generally Mortal. The Word comes from the Greek *βουβων*, *Inguen*; the usual Place of such Tumors.

BUBONOCELE, a Tumor arising in the Groin; occasion'd by the Defect of the Epiploon or Intestines. 'Tis a Species of *Hernia* or Rupture; the Chirurgeons call it an Incomplete one; and is common to Women as well as Men. The Word comes from the Greek *βουβων*, *Inguen*, and *κύστωρ*, Tumor.

BUCANEERS, or **BOUCANEERS**, a popular Term in the *West Indies*, us'd properly for a kind of Savages who prepare their Meat on a Grate, or Hurdle made of *Brazil* Wood, plac'd in the Smoak at a good height from the Fire, and call'd *Boucan*: whence also the little Lodges rais'd for the Preparation of their Food are call'd *Boucans*; and the Action of dressing it *Boucaning*. Meat *boucan'd*, is said to have an excellent Taste, the vermilion Colour of a Rose, and a charming Smell; all which it retains many Months. *Oxmelin*, from whom we have this, adds, that the neigh-

bouring People send their Sick thither, that by eating their *boucan'd* Meat they may be recover'd.

The Origin of the Word is refer'd to the *Caribbee Indians*, who using to cut their Prisoners of War in pieces, and lay 'em on Hurdles with Fire underneath; which they call'd *Boucaning*, i. e. Roasting and Smoking together; hence our *Bucaneers* took both their Name and their Custom; with this Difference, that what the former did to Men, these did to Animals caught in Hunting. The *Spaniards* call those in their Territories *Matadores*; from *Toros*, killers of Bulls, and *Monsters*, runners in the Wood: The *English* call theirs *Cow-killers*, or *Cow-killers*. The *Bucaneers* are of two distinct Professions; the one only hunt Bulls for their Skins, the other Boars for their Fleck. The Art of *boucaning*, *Oxmelin* describes thus; the Boar being Bea'd, and the Bones stripp'd out, is cut into Pieces of the Length of the Arm and salted, and the next Day laid on the *Boucan*; which consists of 20 or 30 Bars laid across, half a Four from each other: Under this they raise a thick Smoak, adding the Skin and Bones of the Boar to heighten it. This is found vastly better than any simple Fuel; in regard the Volatile Salts of those Parts, are by this means communicated to the Fleck, which give it such a Relish, as that after a little of this *boucaning*, the nicest Palate will eat it without further Preparation.

BUCALLES-GLANDULÆ, are Glands dispersed over the inner Side of the Checks and Lips, which separate a Spittle useful in Mastication and Digestion. See MOUTH.

BUCCELLARII, a kind of Soldiers kept by the Greek Emperors, in the Provinces and Countries; so call'd because subsisted by the Emperor, or because he was at the Expence of their eating; from *Buccella*, a Diminutive of *Bucca*, Mouth: These being in that Country, what the *Commons* eat, or Beef-Eaters are at Court. The *Buccellarii*, in the Army where the Emperor commanded, march'd before and behind him, as his Guard. There were also another kind of *Buccellarii*, under the Greek Emperors; viz. the *Ελληνικαίαι*, *Greeks of Galatia*, who furnish'd the Soldiery with Bread.

The first kind of *Buccellarii*, according to some Authors, were Men whom the Emperors employ'd in putting certain Persons to Death secretly. The *Nomic Glosses* interpret the Word *Εσσην*, as also *Stationary Soldier*; or a Person retain'd in the Service of any one: And the *Besliicks* explain it in the same Sense; deriving it from *Βίσις*, *Mouth*, *Bread*; as signifying a Person who eat the Bread of another, on account of his Service. Among the *Visigoths*, *Buccellarius* was a general Name for all Clients or Vassals, who liv'd at the Expence of their Lords.

BUCINA, an ancient Military, or rather Musical Instrument, us'd in War. 'Tis usually taken for a kind of Trumpet; which Opinion *Festus* confirms, by defining it a crooked Horn, plac'd on like a Trumpet. *Viginius* also observes, that the *Bucina* was bent into a Circle; in which it differ'd from a Trumpet, *Tuba*, *Varro* adds, they were call'd Horns, *Cornua*, because originally made of the Horns of Cattel; as is still done among some People. *Servius* seems to say, that they were at first made of Goats Horns: And the Scriptures call the Instruments us'd, both in War and in the Temple, *Keren Jobel*, Rams Horns; and *Sophoroth Haijobelin*, *Bucina*, of Rams. The Musical Instruments us'd in a Military March, are *Bucinae*, Trumpets, Limas, Clarions, Cornets, Fifes, Drums, Tymbals, &c. which see. The Marine *Bucina*, given by Poets and Painters to Tritons and Sea-Gods, are Shells twist'd in form of Snails. The Word comes from *Bucca*, Mouth; because plac'd on by the Mouth.

BUCINATOR, or *Trumpeter*, in Anatomy, a Muscle on each side the Face, common to the Lips and Checks; making the inner Substance of the latter: Its Fibres run from the *Processus Corone* of the lower Jaw, to the Angle of the Mouth, and adhere to the upper Part of the Gums of both Jaws: Thro its middle pass the upper *Ductus Salivales*. By this is contract'd the Cavity of the Mouth, and the Meat is thrust forward to the Teeth in Mastication. It has its Name from *Bucina*, Trumpet; because, when swell'd, it enlarges the Checks, as in sounding a Trumpet.

BUCENTAURE, or **BUCENTAUR**, the Name of a large Vessel, us'd by the *Venetians* in the Ceremony of espousing the Sea, perform'd each *Assension*-Day with much Pomp. *P. Justimani*, gives a very precise Description of the *Bucentaur*; and adds, that its Origin is carry'd up as high as the Year of Christ 1311; the others carry it higher, to the Year 1177, when the Emperor *Frederick Barbarossa* came to *Venice*, to make Peace with the Republick and the Pope: At which Time the Pope, in Consideration of the Services the State had done him, in sheltering him in their City when he had been driven out of his own, granted them several Privileges; and made a present to the *Doge* of a Gold Ring, which is the Origin of that yearly gift by the *Doge*, from the *Bucentaur*, into the Sea. The Word comes from the Greek, *βουκινω*; com-

pos'd of *βι*, a Particle of Augmentation, us'd to denote an enormous Greatness; and *αἰωνῶς*, Centaur. *Justiniani* adds two other Etymologies of this: the first from *bis*, and *taurus*, or rather *Centaurus*, the name of one of *Æneas's* Vessels in *Virgil*: The other from *Buceantaurus*, for *Duceantaurus*, a Word forg'd to signify a Vessel capable of holding 200 Men.

BUCEPHALUS, *Bullock's Head*, from the Greek *βου*, *bou*, and *κεφαλή*, Head. It was the Custom among the Antients to impress some Mark on their Horses; the most common were a Z, *Sigma*, a K, *Kappa*, and a *Bullock's Head*. Hence those mark'd with Z's, were call'd *Zephegi*; those with a K, *Korinthiæ*; and those with a *Bull's Head*, *Buccephali*. This Mark was stamp'd on the Horse's Buttocks, and his Harness; as appears from the Scholiast on *Aristophanes's Clouds*, *Hesychius*, &c.

BUCKLER, a piece of defensive Armour, us'd by the Antients to shroud their Bodies from the Blows of their Enemies. See the *Buckler of Achilles* describ'd in *Homer*, that of *Æneas* in *Virgil*, that of *Hercules* in *Hesiod*: *Ajax's Buckler* was lind with seven Bulls Hides. The Shield succeeded the use of the *Buckler*: Yet the *Spaniards* still retain the *Sword and Buckler* in their Night-Walks. The Word comes from *Bucularium*; on account of the Buckles wherewith the Antients adorn'd their *Bucklers*. In the Days of corrupt *Latin*, we frequently find *Buculus Clypei*, the Buckle of the *Buckler*. *Thomasius* derives it from *Bucca*, Mouth or Throat; because it was usual to have Heads, &c. represented on *Bucklers*. See **SHIELD**.

Bucklers on Medals, are either us'd to signify publick Vows render'd to the Gods for the Safety of a Prince; or that he is esteem'd the Defender and Protector of his People: These were call'd *Votive Bucklers*, and were hung at Altars, &c.

BUCOLICKS, *Pastorals*, a Term us'd for a kind of Poems relating to Shepherds, and Flocks. *Bucolick* Poetry is the most ancient of all the Kinds of Poetry; and is suppos'd to have had its Origin in *Sicily*, amidst the Mirth and Diversions of the Shepherds; and to have been inspir'd by Love and Idleness: By degrees, their Rural Gallantries were brought under Rules, and became an Art. The Concerns of the Flocks, the Beauties of Nature, and the Pleasure of a Country Life, were their principal Subjects. *Moses* and *Bion*, were the most agreeable among the ancient *Bucolick* Poets. *Fonselle* observes, that *Theocritus's* Style is sometimes a little too *Bucolick*. Some Authors attribute the Invention of *Bucolick* Poetry to a Shepherd call'd *Daphnis*; and others to *Bucolius*, Son of *Læomedon*: But this appears all Fiction. The Word is deriv'd from the Greek *βου*, and *κόλος*, *cibus*, Meat; hence *βουκόλος*, to feed Cattle; and *βουκόλιον*, *bulbatus*, Herdsman.

BUD, is a weaned Calf of the first Year; so called, because the Horns are then in the *Bud*.

Buds, among Gardeners, the first Tops of most Salad Plants, &c. which are preferable to all other less tender Parts. See **CYON**.

BUFF, in Commerce, a sort of Leather prepar'd from the Skin of the *Buffalo*, a wild Beast resembling an Ox, but longer and bigger; having large thick Horns, short black Hair, and a very small Head; common enough in the *Levant*, particularly about *Smyrna*, *Constantinople*, &c. where, as well as in *Italy*, they are frequently tam'd, and wrought, as we do Oxen.

The Skin of this Animal being dress'd in Oil, after the manner of *Shummy*, or *Obsonet*, makes what we call *Buff-Skin*; antiently much us'd among the Military Men, for a kind of Coats or Doublets; and still retain'd by some of our Grenadiers, as well as the *French Gen'armery*, on account of its exceeding Thickness and Firmness. 'Tis also us'd for Waste-Belts, Pouches, &c. This Skin makes a very considerable Article in the *English*, *French*, and *Dutch* Commerce, at *Constantinople*, *Smyrna*, and the Coasts of *Africa*.

The Skins of Elks, Oxen, and other like Animals, when dress'd in Oil, and prepar'd after the same manner as that of the *Buffalo*, are likewise denominat'd *Buff*; and us'd for the same Purposes. In *France*, there are a good number of considerable Manufactures destin'd for the Preparation of such Skins; particularly at *Corbeil*, *Paris*, and *Rouen*: Their first Institution is owing to the *Seur Fabac*, a Native of *Cologne*. The manner of Preparation see under the Article **GRANDIOS**.

BUFFET, or **BUFET**, was antiently a little Apartment, separated from the rest of a Room, by slender Wood-en Columns, for the disposing China and Glass Ware, &c. call'd a Cabinet: 'Tis now, properly, a large Table in a Dining Room, call'd also a Side-Board, for the Plate, Glasses, Bottles, Basons, &c. to be plac'd, as well for the Service of the Table as for Magnificence. The *Buffer*, among the *Italians*, call'd *Credezza*, is enclos'd within a Balustrade, Ellow high.

BUFFOON, an Actor in Farce, or a Mimick, who divers the Publick by his Pleasancies and Follies. This is reputed the Talent of the *Italian* Comedians. Some Authors make the Origin of *Buffoonry* very antient, deriving it from a Feast instituted in *Attica*, by *K. Erichon*, on occasion of a Priest, call'd *Buphon*: Who after having sacrific'd the first Bullock on the Altar of *Jupiter Polon*, or Guardian of the City, fled hastily away, without any apparent Reason; leaving the Ax and other Instruments of Sacrifice on the Ground, nor cou'd either be stopp'd, or ever found afterwards. The Instruments were hercupon deliver'd up to the Judges, and solemnly try'd; the Ax found Guilty, and the rest acquitted. This Sacrifice was kept up in the same manner the following Years: The Priest fled, as the first; and the Ax condemn'd. As the whole Ceremony was perfectly Burlesque, the Words *Buffoons* and *Buffoonries* have been since apply'd to all ridiculous Mummings and Farces: This History is related by *Rhodogianus Menage*, after *Salmastius*, derives the Word from *Buffo*; a Name given to those who appear'd on the *Roman* Theater with their Cheeks blow'd up; that receiving Blows thereon, they might make the greater Noise, and set the People a laughing.

BUGGERY, *Sir Edward Coke* defines, *Carnalis Copula contra Naturam*, & hoc vel per confusionem Specierum; viz. a Man and Woman with a brute Beast: vel *Sexuum*, a Man with a Man, or a Woman with a Woman: each kind is Felony, without Benefit of Clergy. In ancient Times, such Offenders were burnt by the Common Law. *Buggery* is generally excepted out of a General Pardon. The Practice is said to have been introduc'd into *England* by the *Lombards*: It is suppos'd to take its Name from the ancient *Bulgarians*.

BUILDING, *D'Aviler* defines, any Place croc'd by Art, whether for Convenience, for Religion, or Magnificence. See **HOUSE**, **TEMPLE**, **THEATER**.

A *Regular Building*, is that whose Plan is Square, its opposite Sides equal, and the Parts dispos'd with Symmetry. An *Irregular Building*, is that, on the contrary, whose Plan is not contain'd within equal or parallel Lines, either by the Nature of its Situation, or the Artifice of the *Builder*; and whose Parts have not any just Relation to one another in the Elevation. An *Inflated Building*, is that which is not attach'd, join'd, or contiguous to any other; or is encompass'd with Streets, or any open Square, or the like; as *St. Paul's*, the *Monument*, &c. A *Building* is said to be *engag'd*, when it is encompass'd with others, and has no Front towards any Street or publick Place, nor any Communication without, but by a back Passage. An *inerr'd*, or *sunk Building*, is that whose Area is below the Level of the adjacent Street, Court, or Garden, &c. and whose lowest Courses of Stone are hid.

Felibius considers three Kinds of *Buildings* in Architecture; 1. *Sacred Buildings*; as the Temples of the Antients, and our Churches and Chappels. 2. *Public Buildings*; as Basilicks, or Courts of Justice, Tombs, Theaters, Amphitheatres, Triumphant Arches, Gates, Bridges, Aqueducts, &c. 3. *Palaces*, and private Houses: Each of which see under their proper Heads, **BASILIC**, **CHURCH**, **AMPHITHEATER**, &c.

BUILDING is also us'd for the constructing or raising of an Edifice; in which Sense it comprehends, as well the Expenses, as the Invention and Execution of the Design thereof. See **ARCHITECTURE**.

In *Building* there are three Things in view, viz. *Commodity*, *Firmness*, and *Delight*: To attain these Ends, *Sir Henry Wotton* considers the whole Subject under two Heads, viz. the *Seat or Situation*, and the *Work*. For the *Situation*, either that of the *Whole* is to be consider'd, or that of its *Parts*.

For the first, regard must be had to the *Quality*, *Temperature*, and *Salubrity* of the Air; the *Convenience* of *Water*, *Fuel*, *Carriage*, &c. and the *Agreeableness* of the Prospect. For the second, the chief Rooms, *Studies*, *Libraries*, &c. to lie towards the East; Offices that require Heat, as *Kitchens*, *Disillatories*, *Brew-houses*, &c. to the South: Those that require a cool fresh Air, as *Ceilers*, *Pantries*, *Granaries*, &c. to the North: As also Galleries for *Painting*, *Museums*, &c. which require a steady Light. He adds, that the antient *Greeks* and *Romans*, generally situated the Front of their Houses to the South: But the modern *Italians* vary from this Rule. Indeed, in this Matter, regard must still be had to the Country; each being oblig'd to provide against its respective Inconveniences: So that a good Parlour in *Egypt*, might make a good Cellar in *England*. See **SITUATION**.

For the second Head, the *Situation* being fix'd on, the next thing to be consider'd is the *Work*: Under this come, first the principal Parts, then the *Accessories*, or *Ornaments*.

Under the *Principals*, are, first, the *Materials*; then the *Form* or *Disposition*. The *Materials* are either Stone, as

Marble, Free-stone, Brick, for the Walls, &c. or of Wood, as Fir, Cypress, Cedar, for Posts and Pillars of upright use; Oak, for Beams, Summers, Crop-work, or for Joining and Connexion. See STONES, BRICK, WOOD, TIMBER, &c.

For the Form or Disposition of a Building, it must either be Simple or Mix'd: The simple Forms are either Circular or Angular; and the Circular ones either complicate, as just Spheres, or deficient, as Ovals.

The circular Form is very commodious, of the greatest Capacity of any; strong, durable beyond the rest, and very beautiful: but then it is found of all others the most chargeable; much room is lost in the bending of the Walls, when it comes to be divided; besides an ill Distribution of Light, except from the Centre of the Roof: On these Considerations it was, that the Antients only us'd it in Temples and Amphitheatres, which needed no Comparison. Oval Forms have the same Inconveniences, without the same Conveniences; being of less Capacity.

For Angular Figures, Sir H. Watson observes, that Building neither loves many nor few Angles: The Triangle, v.g. is condemn'd above all others, as wanting Capacity and Firmness; as also, being irrefusable into any other Regular Figure in the inward Partitions, besides its own. For Figures of 5, 6, 7, or more Angles, they are fitter for Fortifications than Civil Buildings. There is, indeed, a celebrated Building of *Vignola*, at *Caprarole*, in Form of a Pentagon; but the Architect had prodigious Difficulties to grapple with, in disposing the Lights, and saving the Vacuities. Such Buildings then, seem rather for Curiosity than Convenience; and for this Reason, Rectangles are pitch'd on, as being a Medium between the two Extremes. But again, whether the Rectangle is to be a just Square or an Oblong, is disputed. Sir Henry Watson prefers the latter, provided the Length don't exceed the Breadth by above one third.

Mix'd Figures, partly Circular and partly Angular, may be judg'd of from the Rules of the Simple ones; only they have this particular Defect, that they offend against Uniformity. Indeed Uniformity and Variety may seem to be opposite to each other: but Sir H. Watson observes, they may be reconcil'd; and for an Instance, mentions the Structure of the Human Body where both meet. Thus much for the first grand Division, viz. the Whole of a Building.

For the second Division, or the Parts of a Fabric, *Baptista Alberti* comprises 'em under five Heads; viz. the Foundation, Walls, Apertures, Compartitions, and Cover.

For the Foundation, to examine its Firmness, *Vitrucvius* orders the Ground to be dug up; an apparent Solidity nor to be trusted to, unless the whole Mold cast thro' be found solid: He does not indeed limit the Depth of the Digging; *Palladio* limits it to a sixth Part of the Height of the Building: This Sir Henry Watson calls the Natural Foundation, whereon is to stand the Substruction, or Ground-work, to support the Walls, which he calls the Artificial Foundation: This then is to be level; its lowest Ledge, or Row of Stone only, close laid with Mortar, and the broader the better; at the least, twice as broad as the Wall: Lastly, some add, that the Materials below should be laid just as they grew in the Quarry; as supposing 'em to have the greatest Strength in their natural Posture. *De Lorme* enforces this, by observing, that the breaking or yielding of a Stone in this Part, but the Breadth of the Back of a Knife, will make a Cleft of above half a Foot in the Fabric above. For *Palladianism*, or piling the Ground-Plot, so much commended by *Vitrucvius*, we say nothing; that being requir'd only in a moist marshy Ground, which should never be chosen: Nor perhaps are there any Instances of this kind, where it was not Necessary that drove 'em to it. See FOUNDATION.

For the Walls, they are either entire and continued, or intermitted; and the Intermittions are either Columns or Pilasters. Entire, or continu'd Walls, are variously distinguish'd; by some, according to the Quality of the Materials, as they are either Stone, Brick, &c. others only consider the Position of the Materials; as when Brick, or square Stones are laid in their Lengths, with Sides and Heads together, or their Points conjoin'd, like a Network, &c. See MASONRY. The great Laws of Muring, are, that the Walls stand perpendicular to the Ground-work; the Right Angle being the Cause of all Stability; that the massiest and heaviest Materials be lowest, as fitter to bear than be born; that the Work diminish in Thickness, as it rises; both for ease of Weight and Expence: that certain Courses, or Ledges of more strength than the rest, be interlaid, like Bones, to sustain the Fabric from total Ruin, if the Under-parts chance to decay: And lastly, that the Angles be firmly bound; these being the Nerves of the whole Fabric, and commonly fortify'd, by the *Italians*, on each side the Corners, even in Brick Buildings, with Squar'd Stones; which add both Beauty and Strength. See WALL.

The Intermittions, as before observ'd, are either Columns or Pilasters; whereof there are five Orders, viz.

Tuscan, Doric, Ionic, Corinthian, Composite; each of which see distinctly consider'd under its respective Head. Columns and Pilasters are frequently, both for Beauty and Majesty, form'd Archwise; the Doctrine of which, see under ARCH.

For the Apertures, they are either Doors, Windows, Staircases, Chimneys, or Conduits for the Sullage, &c. which see under their Heads, Doors, Window, &c. Only with regard to the last, it may be observ'd, that Art should imitate Nature in these ignoble Conveyances, and separate them from Sight, where a running Water is wanting, into the most remote, lowest, and thickest Part of the Foundation; with secret Vents, passing up thro' the Walls, like a Tunnel, to the open Air; which the *Italians* all commend for the Discharge of noiseful Vapours.

For the Comparition, or Distribution of the Groundplot into Apartments, &c. Sir H. Watson lays down these Preliminaries; That the Architect never fix his Fancy on a Paper Draught, how exactly soever set off in Perspective; much less on a mere Plan, without a Model, or Type of the whole Structure, and every Part thereof, in Plasterboard or Wood; that this Model be as plain and unador'd as possible, to prevent the Eye's being impos'd on, and that the bigger this Model, the better. In the Comparition it self, there are two general Views, viz. the Gracefulness, and Usefulness of the Distribution, for Rooms of Office and Entertainment; as far as the Capacity thereof, and the Nature of the Country will allow. The Gracefulness will consist in a double Analogy or Correspondency; first, between the Parts and the Whole, whereby a large Fabric should have large Partitions, Entrances, Doors, Columns, and, in brief, all the Members large: The second, between the Parts themselves, with regard to Length, Breadth, and Height. The Antients determin'd the Length of their Rooms, that were to be Oblongs, by double their Breadth; and their Height by half their Breadth and Length added together. When the Room was to be precisely Square, they made the Height half as much more as the Breadth; which Rules, the Moderns take occasion to dispense with; sometimes squaring the Breadth, and making the Diagonal thereof the Measure of the Height; and sometimes more. This deviating from the Rules of the Antients, is ascrib'd to *M. Angelo*.

The second Consideration in the Comparition, is the Usefulness; which consists in the having a sufficient number of Rooms of all Kinds, with their proper Communications, and without Distraction. Here the chief Difficulty will lie in the Lights and Staircases. The Antients were pretty easy on both those Heads, having generally two cloister'd open Courts, one for the Women's Side, the other for the Men: Thus the Reception of Light into the Body of the Building was easy; which among us must be supply'd, either by the open Form of the Building, or by graceful Refuges or Breaks, by terracing a Story in danger of Darkness, and by Abajours, or Sky-Lights. For casting the Staircases, it may be observ'd, that the *Italians* frequently distribute the Kitchen, Bake-house, Buttery, &c. under Ground, next above the Foundation, and sometimes level with the Floor of the Cellar; raising the first ascent into the House 15 Foot, or more; which, beside the removing of Annoyances out of the Sight, and gaining so much room above, does, by elevating the Front, add a Majesty to the whole. Indeed, Sir H. Watson observes, that in *England* the natural Hospitality thereof, won't allow the Buttery to be so far out of sight; besides that, a more luminous Kitchen, and a shorter Distance between that and the Dining-Room, are requir'd, than that Comparition will well bear. In the Distribution of Lodging Rooms, 'tis a popular and ancient Fault, especially among the *Italians*, to cast the Partitions so, as when the Doors are all open, a Man may see through the whole House; grounded on the Ambition of shewing a Stranger all the Furniture at once: an intolerable Hardship on all the Chambers, except the Innos, where none can arrive but thro' all the rest, unless the Walls be extreme thick for secret Passages: nor will this serve the Turn, without at least three Doors to each Chamber; a thing inexcusable, except in hot Countries: Besides its being a weakening to the Building, and the Necessity it occasions of making as many common great Rooms as there are Stories, which devours a great deal of room, better employ'd in Places of Retreat; and must likewise be dark, as running thro' the Middle of the House. In the Comparition, the Architect will have occasion for frequent Shifts; thro' which his own Sagacity, more than any Rules must conduct him. Thus he will be frequently put to struggle with Scarcity of Ground; sometimes to damn one room for the Benefit of the rest, as to hide a Buttery under a Staircase, &c. at other times, to make those the most beautiful which are most in Sight; and to leave the rest, like a Painter, in the Shadow, &c.

For the Covering of the Building; this is the last in the Execution, but the first in the Intention: for who would build,

build, but to *falter*? In the *Covering*, or *Roof*, there are two Extremes to be avoided, the making it too heavy or too light: The first will press too much on the Under-work; the latter has a more secret Inconvenience; for the Cover is not only a bare Defence, but a Band or Ligature to the whole *Building*; and there requires a reasonable Weight. Indeed, of the two Extremes, a House top-heavy is the worst. Care is likewise to be taken, the Pressure be equal on each Side; and *Palladio* wishes, that the whole Burden might not be laid on the outward Walls, but that the Inner likewise bear their Share. The *Italians* are very curious in the Proportion and Gracefulness of the Pent or Slopeness; dividing the whole Breadth into nine Parts, whereof two serve for the height of the highest Top or Ridge from the lowest: But in this Point, regard must be had to the Quality of the Region; for, as *Palladio* insinuates, those Climates which fear the falling of much Snow, ought to have more inclining Pentices than others. See COVERING.

Thus much for the principal or essential Parts of a *Building*: For the Accessories, or Ornaments, they are fetch'd from Painting and Sculpture. The chief things to be regarded in the first, are, that no Room have too much, which will occasion a Surfeit; except in Galleries, &c. that the best Pieces be placed where there are the fewest Lights; Rooms with several Windows are Enemies to Painters, nor can any Pictures be seen in Perfection, unless illuminated, like Nature, with a single Light: That in the Disposition regard be had to the Posture of the Painter in working, which is the most natural for the Posture of the Spectator; and that they be accommodated to the Intentions of the Room they are us'd in: See PAINTING. For Sculpture, it must be observ'd, that it be not too abundant; especially at the first approach of a *Building*, or at the Entrance; where a *Doric* Ornament, is much preferable to a *Corinthian* one; and that the Niches, if they contain Figures of white Stone, be not colour'd in their Concavity too black, but rather dusky; the Sight being displeas'd with too sudden Departments from one extreme to another. That fine Sculptures have the Advantage of nearness, and coarser of Distance; and that in placing of Figures aloft, they be inclin'd a little forwards: Because, the visual Ray extended to the Head of the Figure, is longer than that reaching to its Feet, which will of necessity make that Part appear further off; so that to reduce it to an erect Posture, it must be made to stoop a little forwards. *M. le Clerc*, however, won't allow of this Relinquishing, but will have every Part in its just Perpendicular. See STATE.

To judge of a *Building*, *Sir H. Wotton* lays down the following Rules: 1. That before fixing any Judgment, a Person be inform'd of its Age; that, if the apparent Decays be found to exceed the Proportion of Time, it may be concluded, without further Inquisition, either that the Situation is naught, or the Materials or Workmanship too slight. If it be found to bear its Years well, let him run back, from the Ornaments and Things which strike the Eye first, to the more essential Members; till he be able to form a Conclusion, that the Work is commodious, firm, and delightful; the three Conditions, in a good *Building*, laid down at first, and agreed on by all Authors. This, he esteems the most Scientific Way of judging. *Vassari* proposes another, viz. by passing a running Examination over the whole Edifice, according to the Structure of a well-made Man; as, whether the Walls stand upright on a clean Footing and Foundation; whether the *Building* be of a beautiful Stature; whether, for the Breadth, it appear well barnish'd; whether the principal Entrance be on the middle Line of the Front, or Face, like our Mouths; the Windows, as our Eyes, set in equal Number and Distance on both Sides; the Offices, like the Veins, usefully distributed, &c. Lastly, *Vitruvius* gives a third Method of judging; summing up the whole Art under these six Heads: Ordination, or the setting the Model and Scale of the Work; Disposition, the just Expression of the first Design thereof; (which two, *Sir H. Wotton* thinks he might have spar'd, as belonging rather to the Artificer than the Censurer;) Eurythmy, the agreeable Harmony between the Length, Breadth, and Height of the several Rooms, &c. Symmetry, or the Agreement between the Parts and the Whole; Decor, the due Relation between the *Building* and the Inhabitant: Whence *Palladio* concludes, the principal Entrance ought never to be limited by any Rule, but the Dignity and Generosity of the Master. And lastly, Distribution, the useful calling of the several Rooms, for Office, Entertainment, or Pleasure. These last four are ever to be run over, e'er a Man puts any determinate Censure: And these alone, *Sir Henry* observes, are sufficient to condemn or acquit any *Building* whatever. See EURYTHMY, SYMMETRY, &c.

Dr. Fuller gives us two or three good Aphorisms in *Building*; as,

18, *Let not the common Rooms be several, nor the several Rooms common*. i. e. The common Rooms not to be

private or retir'd, as the Hall, Galleries, &c. which are to be open, and the Chambers, &c. retir'd.

2d, *A House had better be too little for a Day, than too big for a Year*. Houses therefore to be proportion'd to ordinary Occasions, not extraordinary.

3d, *Country Houses must be Substantives, able to stand of themselves*. Not like City *Buildings*, supported and shelter'd on each Side by their Neighbours.

4th, *Let not the Front look against on a Stranger; but accept him right, at his Entrance*.

5th, *Let the Offices keep their due Distance from the Mansion House; those are too familiar, which are of the same Pile with it*.

BULB, in Botany, an oblong Root, nearly round, composed of several Skins, or Coats, laid one over another; and cas'd, as it were, within one another; sending forth from its lower Part a great number of Fibres. The Roots of the common Onion, the Daffodil, the Hyacinth, are of the bulbous Kind. The Name is also given to tuberculous Knots, compos'd of a solid continued Substance, without any Skins laid over one another: Thus, the Roots of Saffron and Colchique are call'd *bulbous* Roots. See ROOT.

Dr. Grew observes, that in *bulbous* Plants, as well as many Perennial ones, the Root is annually renew'd, or repair'd, out of the Trunk or Stalk it self: That is, the Basis of the Stalk, continually and insensibly descends below the Surface of the Earth; and hiding it self therein, is, both in Nature, Place, and Office, chang'd into a true Root. Thus, in *Brownwort*, the Base, sinking by degrees, becomes the upper Part of the Root; the next Year the lower Part; and the next another roots away; a fresh supply coming.

BULIMY, or **BOULIMIA**, a Disease, occasioning a disorderly and ravenous Appetite; call'd also *Appetitus Caninus*. In the *Physioloical Transactions*, we have an Account of a Person affected with a *Bulimy*, inasmuch that he would eat up an ordinary Leg of Venal at a common Meal, and feed on Sow-thistles, &c. cur'd by giving up several Worms, of the Length and Thickness of a Tobacco-Pipe. The Word comes from the Greek *βουλο*, *bolos*, and *λιμος*, *hunger*; as if the Patient had an Appetite sufficient to eat an Ox.

BULK of a Ship, is her whole Content in the Hold, for stowage of Goods. See BREAK-BULK.

Bulk-Heads, are Partitions made across a Ship, with Boards of Timber, whereby one Part is divided from another. The *Bulk-Head afore*, is the Partition between the Fore-Castle, and Grating in the Head, and in which are the Chafe-Ports.

BULL, a Letter dispatch'd from the *Roman* Chancery, seal'd with Lead; answering to the Edicts, Letters Patents, and Provisions, of secular Princes. If the *Bulls* be Letters of Grace, the Lead is hung on Silk Threads; if they be Letters of Justice, and Executory, the Lead is hung by a Hempo Cord.

The *Bull* is the third kind of *Apostolical Rescripts*, and the most in use, both in Affairs of Justice and Grace. It is wrote on Parchment; by which it is distinguish'd from a simple *Signature*, which is on Paper. A *Bull* is properly a *Signature* enlarg'd: What the latter comprehends in a few Words, the former dilates and amplifies. Yet the *Bull* is not to take in more Matter than the *Signature*; being only to amplify the Style in Clauses of Ceremony. The *Bull*, in the Form wherein it is to be dispatch'd, is divided into five Parts; viz. the Narrative of the Fact; the Conception; the Clause; the Date; and the Salutation, in which the Pope takes on himself the Quality of *Servant of Servants*, *Servus Servorum Dei*. Properly speaking, 'tis the Seal, or pendant Lead alone that is the *Bull*; it being that which gives it the Title and Authority. The Seal presents, on one Side, the Heads of *St. Peter* and *St. Paul*; on the other, the Name of the Pope, and the Year of his Pontificate. *Bulls* are wrote in an old round Gothic Letter.

By *Bulls*, Jubilees are granted; without 'em no Bishops, in the *Romish* Church, are allow'd to be consecrated. In *Spain*, *Bulls* are requir'd for all kinds of Benefices; but in *France*, &c. simple *Signatures* are sufficient; excepting for Bishopsricks, Abbeys, Dignities, and Priors Conventual. According to the Laws of the *Roman* Chancery, no Benefice exceeding 24 Ducats per Annum, should be consecr'd but by *Bulls*: But the *French* would never submit to this Rule, except for such Benefices as are tax'd in the Apostolical Chamber; for the rest, they reserve the Right of dissembling the Value, expressing it in general Terms; *Cujus & illi forsan annexorum fructus 24 Ducatorum Anni, de camera secundum communem estimationem, Valorem Annuum non excedunt*. The *Bulls* brought into *France*, are limited and moderated by the Laws and Customs of the Land, before they are register'd; nor is any thing admitted till it have been well examin'd, and found to contain nothing contrary to the Liberties of the *Gallican* Church: Those Words, *proprio motu*, in a *Bull*, are sufficient to make the whole be rejected. Nor do the *Spaniards* admit 'em implicitly; but, having been examin'd by the

King's Council; if there appear any Reasons for not executing 'em, notice thereof is given to the Pope by a Supplication; and the Bull, by this means, remains without Effect: And the like Method of proceeding with the Court of Rome, is observ'd by the rest of the Courts of Europe.

To fulminate Bulls, is to make the Publication thereof, by one of the three Commissaries to whom they are directed; whether he be Bishop or Official. This Publication is sometimes oppos'd; but when it is, the Fault is not charg'd on the Pope who issu'd it, but an Appeal is brought to him against the Person who is suppos'd to make it: Thus the Fault is laid, where 'tis known not to be just, to evade affronting the Pontiff.

The Bull in *Cena Domini*, is a Bull read every Year, on *Monday-Thursdoy*, in the Pope's Presence; containing various Excommunications and Exorcisms, against Heretics, those who disobey the See, who disturb or oppose the Exercise of Ecclesiastical Jurisdiction, &c.

After the Death of a Pope, no Bulls are dispos'd during the Vacancy of the See: To prevent any Abuses therefore, as soon as the Pope is dead, the Vice-Chancellor of the Roman Church takes the Seal of the Bulls; and, in the Presence of several Persons, orders the Name of the deceas'd Pope to be cras'd; and covers the other Side, on which are the Faces of St. Peter and Paul, with a Lincen Cloth; sealing it up with his own Seal, and giving it thus cover'd to the Chamberlain, to be preserv'd, so as no Bulls may be seal'd with it in the mean time.

The Word Bull, is deriv'd from *bullare*, to seal Letters; or from *bulle*, a Drop or Bubble: Others derive it from the Greek *βουλή*, Council; *Peuron* from the Celtic Bull, and *bul*, Bubble.

Golden Bull, is an Ordinance, or Statute, made by the Emperor Charles IV. in 1356. said to have been drawn up by that celebrated Lawyer Bartoli: This is the Fundamental Law of the Empire. Till this time, the Form and Ceremony of the Election of an Emperor, were dubious and undetermin'd; and the Number of Electors not fix'd. This solemn Edict regulated the Functions, Rights, Privileges, and Preeminences of the Electors. The Original, which is in Latin, on Vellum, is kept at Frankfort. On the Backside are several Knots of black and yellow Silk; to which hangs a Seal of Gold.

'Tis call'd the Golden Bull, because the Emperors of the East us'd, anciently, to seal their Edicts with a Golden Seal, call'd Bulls. This Ordinance, containing 30 Articles, was approv'd of by all the Princes of the Empire, and remains still in force. The Election of the Emperor was to be in the Hands of seven Electors; three of 'em Ecclesiasticks, viz. the Archbishops of Mentz, Treves, and Cologne; and four Seculars, viz. the King of Bohemia, Prince Palatine, Duke of Saxony, and Marquis of Brandenburg. See ELECTORS.

Golden Bulls were in use among the Eastern Emperors for a considerable Time; Leadens ones being confin'd to Matters of smaller moment. *Speelman* mentions a Golden Bull, in a Treaty of Alliance between our Henry VIII. and Francis I. of France; and there are other Instances in *Du Cange* and *Altefferus*.

BULLET, an Iron or Leadens Ball, or Shot, wherewith Fire-Arms are loaded. Bullets are of various Kinds, viz. Red Bullets, made hot in a Forge; intended to set Fire to Places where combustible Matters are found. Hollow Bullets, or Shells, made Cylindrical, with an Aperture and a Fusée at one End, which giving Fire to the Inside, when in the Ground it bursts, and has the same Effect with a Mine. Chain Bullets, which consist of two Balls, join'd by a Chain three or four Foot apart. Branch Bullets, two Balls join'd by a Bar of Iron 5 or 6 Inches apart. Two-headed Bullets, call'd also Angels, two halves of a Bullet join'd by a Bar, or Chain: These are chiefly us'd at Sea, for cutting of Cords, Cables, Sails, &c. Some derive the Word from the Latin *Botellus*, others from the Greek *βόλον*, to throw. According to *Mersenne*, a Bullet shot out of a great Gun, flies 92 Fathom in a Second of Time, which is equal to 589½ English Feet; and, according to *Huygens*, would be 25 Years in passing from the Earth to the Sun: But according to some very accurate Experiments of Mr. *Derham*, it flies, at its first Discharge, 510 Yards in five half Seconds; which is a Mile in a little above 17 half Seconds: Allowing therefore the Sun's Distance 860 513 98 English Miles, a Bullet would be 32 Years and a half in its Passage. See SOUND.

BULLION, Gold and Silver in the Mass or Billet. It is also the Place where Gold and Silver is brought to be try'd and exchange'd.

BULWARK, the same, in the antient Fortification, with a Bastion in the Modern; see BASTION.

BUMICILLA, a Sect of Mahometans in Africa. These are said to be great Sorcerers; they fight against the Devils, as they say; and frequently run about cover'd with Blood and Bruises, in a terrible Fright: They sometimes counterfeit a Combat with 'em at noon Day; and, in the Presence of Numbers of People, for the Space of two or three

Hours, with Darts, Javelins, Scimiters, &c. laying desperately about them, till they fall down on the Ground oppress'd with Blows: After resting a Moment, they recover their Spirits and walk off. What their Rite is, is not well known; but they are said to be an Order of Religious.

BUNT of a Sail, is the middle Part of it, which is purposely form'd into a kind of Bag, or Cavity, that the Sail might receive the more Wind: It is chiefly us'd in Top-sails; for Coarcs are for the most part cut square, or at least with a small Allowance, for Bunt or Compass. They say, the Bunt holds much Leeward Wind; that is, the Bunt hangs too much to Leeward. The Bunt-lines are small Lines made fast to the Bottom of the Sails, in the middle Part of the Bolt-Rope, to the Crengle; and so are reeved thro a small Block, seized to the Yard: Their use is to trice up the Bunt of the Sail, for the better furling it up.

BUOY, at Sea, a piece of Wood or Cork, sometimes an empty Cask well clos'd, swimming on the Water, and fasten'd by a Chain or Cord to a large Stone, piece of broken Cannon, &c. thrown into the Sea, to mark the dangerous Places near a Coast, as Rocks, Shoals, Wrecks of Vessels, Anchors, &c. In lieu of these Buoys, are sometimes placed pieces of Wood, in form of Masts, in the conspicuous Places. Sometimes large Trees are planted in a particular manner; in number, two at the least, to be taken in a right Line, the one hiding the other; so as the two may appear to the Eye no more than one.

Buoy is also a piece of Wood, or a Barrel, at Sea, fasten'd so as to float directly over the Anchor; that the Men who go in the Boat to weigh the Anchor, may certainly know where it lies.

BURDEN, the Drone or Base in some Musical Instruments, and the Pipe or Part that plays it; as in an Organ, a Bagpipe, &c. See DRONE. Hence the Burden of a Song, &c. is that Part repeated at the End of each Stanza. The Word comes from the French *Bourdon*, a Staff; or a Pipe made in form of a Staff, imitating the grots murmur of Bees or Drones. This is what the Antients call'd, *Prostambanomenos*.

BURDEN of a Ship, is its Content, or the Number of Tons it will carry. To determine the Burden of a Ship, multiply the Length of the Keel, taken within Board, by the Breadth of the Ship, within Board, taken from the Midship Beam from Plank to Plank, and the Product by the Depth of the Hold, taken from the Plank below the Keelson, to the under Part of the upper Deck Plank; and divide the last Product by 94, and the Quotient is the Content of the Tonnage requir'd. See SHIP.

BURGAGE, is a Tenure proper to Cities, Boroughs, and Towns, whereby the Burghers, Citizens, or Townsmen, hold their Lands or Tenements of the King, or other Lords, for a certain yearly Rent. *Swinsburn* says, it is a kind of Soccage.

BURGESSES, the Inhabitants of a Borough, or wall'd Town; to the Word is also apply'd to the Magistrates of such Towns; as the Bailiff and *Burgesses* of *Leominster*. The Word *Burgesses* is now ordinarily us'd for the Representatives of such Borough-Towns in Parliament: *Filius vero Burgensis, statum habere tunc intelligitur cum discrete severis denarios numerare & panis unare, &c.* In other Countries, *Burges* and *Citizen* are confounded together, but with as they are distinguish'd. See BOURGON.

BURG-GRAVE, a Judge or Governor in several Cities and Castles of Germany: The *Burg-graue* is perpetual. The Word is form'd from *Burg*, City, and *Grave*, Judge or Court.

BURGLARY, signifies the robbing of an House; but, in a legal Sense, is a Felonious entering into another Man's Dwelling, wheroin some Person is, or into a Church in the Night time; to the end to commit some Felony, or to kill some Person, or to steal something thence, or to do some other felonious Act, altho he executes it not. The same Offence by Day, we call House-breaking, &c. It shall not have Benefit of Clergy.

BURGMOTE, a Court of a City or Borough; see MORE.

BURLESQUE, a kind of Poetry, merry, jocular, and bordering on the Ridicule. The Word, and the Thing too, seem to be both Modern. *F. Vassaff* maintains, in his Book *De Indicia Dictione*, that it was absolutely unknown to the Antients; against the Opinion of others, that one *Rainvostius*, in the Time of *Ptolemy Lagus*, turn'd the ferocious Subjects of Tragedy into Ridicule; which, perhaps, is a better Plea for the Antiquity of Farce than *Burlesque*. The *Italians* seem to have the justest Claim to the Invention of *Burlesque*. The first in this kind was *Bernius*; he was follow'd by *Lalli*, *Coperali*, &c. From Italy it pass'd into France, and became there so much the Mode, that in 1649 appear'd a Book under the Title of *The Passion of our Saviour in Burlesque Verse*. Thence it came to England; but the good Sense of the English never adopted or own'd it, notwithstanding one or two have excell'd in it.

BURN, in a Medicinal Sense, a Solution of the Continuity of a Part of the Body, by the Impression of Fire: or a Mark remaining on the Thing burnt. Of Burns, Physicians make several Degrees: The first, when there are only a few Pustules rais'd on the Skin, with a Redness, and a Separation of the *Epidermis* from the genuine Skin. The second when the Skin is burnt, dried, and shrunk, but without any Crust or Scab. The third, is when the Flesh, Veins, Nerves, &c. are shrunk, and form a Scab. *Lustitanius* recommends an Unguent, made of the Ashes of Laurel Leaves burnt, with Hog's Fat dropp'd on 'em, for a Burn; or, on an occasion, the drug *Populeum*, with Vine Leaves laid over it. *Panarole* observes, that Clay laid on a Burn abates the Pain; and the Brewers in *Holland*, use a Decoction of Ivy for the Cure of Burns.

Burns, however, are not only Discaes, but in some Cases Remedies. *M. Homberg* observes, that in the Ill of *Yaws*, the Natives cure themselves of a Cholick, otherwise Mortal, by burning the Soles of their Feet; and cure themselves of a *Panaris*, by dipping their Finger in boiling Water several times. Travellers relate many other Cases of other Discaes cur'd by burning: And we see the Effects of it our selves, in Horses, Hounds, Birds of Prey, &c. A kind of Mole, brought from the *Indies*, has been likewise us'd for the Goat; apply'd, by burning it on the Part affected: and *M. Homberg* gives us Instances of two Women cur'd, the one of a violent Discaes in the Head and Eyes, and the other of a Discaes in the Legs and Thighs, by the accidental burning of those Parts. He adds, that burning may cure in three manners; either by putting the peccant Humors into a greater Motion, and making 'em take new Routs; or by dissolving and breaking their Viscidity, or by destroying the Canals which brought them in too great Quantities. See CAUSTIC, and CAUTERY.

BURNING, the Action of Fire on some *Psalmum* or Fuel, whereby the minute Parts thereof are torn from each other, put into a violent Motion; and, assuming the Nature of Fire themselves, fly off *in Orbem*. See FIRE.

BURNING, or BRENNING, in our ancient Customs, was an infectious Discaes, got in the Stews, by conversing with lewd Women; suppos'd to be the same that we now call the Venereal Discaes: Whence that Discaes is argu'd to be much more ancient than the common Epocha of the Siege of *Naples*. See VENEREAL DISEASE, and CLAP.

The chief Objection against Burning being the same with the Venereal Discaes, is, that the Remedies prescrib'd against the former, would be inefficacious in the latter: But, beside that it is not to be expected, the Measures of the ancient Physicians should be calculated for the removing of any Malignity in the Mass of Blood or other Juices, as in the Modern Practice; inasmuch as they look'd on the Discaes as merely local, and the whole of the Cure to depend on the Removal of the Symptoms: Besides this, it is matter of frequent Observation, that some Discaes grow more violent, and others more remiss in course of Time: So that the Remedies which might have avail'd for the ancient *Brenning*, may now fall as to the modern *Pox*.

The Process for the Cure, as deliver'd by *J. Arden*, Chirurgion to *K. Henry IV.* is thus—*Contra Incendium Virgæ Virilis interius ex calore & excoriatione fiat talis Syringa (i. e. injectio) lenitior. Accipe lac Mulieris masculinum nutritivum & parum zacarium, Olfum Viole & Prisaue: quibus commixtis per Syringam Infundatur.*

In an ancient MS. written about the Year 1500, is a Receipt for *Brenning* of the *Pynnyl* just Men clepe the *A-pogalle*; Galle being an old Word for a running Sore. And in another MS. written 50 Years after, is a Receipt for *Burning* in that Part by a Woman. *Simon Fish*, a zealous Promoter of the Reformation, in his *Supplication of Beggars*, presented to *K. Henry VIII.* 1530, speaking of the *Romish* Priests, says, *They catch the Pocks of one Woman, and bare 'em to another; they be burnt with one Woman, and bare it to another: They catch the Lepsey of one Woman, and bare it to another.* And *Boord*, a Priest and Physician in the same Reign, begins one of his Chapters of his *Breviary of Health*, thus: *'Tis 10th Chapter doth shew of the burning of an Harlot.* The same Author adds, that if a Man be burnt with an Harlot, and do meddle with another Woman within a Day, he shall burn the Woman he shall meddle withal: And as an immediate Remedy against the *Burning*, he recommends the washing the *Pudenda* two or three times with *Whitewine*, or *elle* with *Sack* and *Water*.—In another MS. of the Vocation of *John Bale* to the Bishoprick of *Osory*, written by himself, he speaks of *Dr. Hugh Weston* (who was Dean of *Windsor* in 1556, but deprived by Cardinal *Pole* for Adultery) thus: "At this Day is leacherous *Weston*, who is more practis'd in the Art of *Breech-burning* than all the Whores of the Stews.—He not long ago burnt a Beggar of *St. Botolph's Parish*." See STREWS.

BURNING-GLASS, or Burning Mirror, a Machine, whereby the Sun's Rays are collected into a Point; and

by that means their Force and Effect extremely heighten'd, so as to burn Objects placed therein. *Burning Glasses* are of two Kinds, the first Convex, which transmit the Rays of Light, and in their Passage refract or incline them towards its Axis; having the Property of *Lens's*, and acting according to the Laws of Refraction: See LENS, and REFRACTION. The second, which is the more usual, are Concave; very improperly call'd *Burning Glasses*, being usually made of Metal: These reflect the Rays of Light, and in that Reflexion, incline them to a Point in their Axes; having the Properties of *Mirrors*, and acting according to the Laws of Reflexion: which see under MIRROR and REFLECTION.

The first, or Convex kind, Authors suppose to have been unknown to the Antients; but the latter are generally allow'd. *Historians* tell us, that *Archimedes*, by means hereof, burnt a whole Fleet. Now tho' the Effect related be very improbable, yet does it sufficiently prove such things were then known. The Machines here us'd, no body doubts, were Metallick and Concave; and had their Focus by Reflexion: It being agreed, that the Antients were unacquainted with the Refracted Foci of Convex Glasses. Yet, *M. de la Hire* has discover'd even those, in the Clouds of *Aristophanes*; where *Strepsiades* tells *Socrates*, of an Expedient he had to pay his Debts, by means of a round transparent Stone or Glass, us'd in lighting of Fires; by which he intended to melt the Obligation: which in those Days was written on Wax. The Glass here us'd to light the Fire, and melt the Wax, *M. de la Hire* observes, could not be Concave; since a reflected Focus coming from below upwards, would have been exceedingly improper for that Purpose: And the old Scholiast of *Aristophanes*, confirms the Sentiment. *Pliny* makes mention of Globes of Glass and Crystal, which being expos'd to the Sun, burnt the Clothes and Fleth on Peoples Backs; and *Lactantius* adds, that a glass Sphere, full of Water, and held in the Sun, lighted the Fire even in the coldest Weather: which inconceivably proves the Effects of Convex Glasses. Indeed, there is some Difficulty in conceiving how they should know they burn, without knowing they magnify; which 'tis granted they did not, till towards the Close of the XIIIth Century, when Spectacles and Telescopes were first thought on. For as to those Passages in *Plautus* which seem to intimate the Knowledge of Spectacles, *M. de la Hire* observes, they don't prove any such thing: And he solves this, by observing, that their *Burning Glasses* being Spheres, either solid, or full of Water, their Foci would be one fourth of their Diameter distant from 'em: If then their Diameter were suppos'd half a Foot, which is the most we can allow, an Object must be at an Inch and a half's Distance to perceive it magnify'd: Those at greater Distances do not appear greater, but only more confus'd, thro' the Glass than out of it. 'Tis no wonder, therefore, the magnifying Property of Convex Glasses was unknown, and their burning one known: 'Tis more wonderful there should be 500 Years between the Invention of Spectacles and Telescopes.

Every Concave Mirror, or *Sphenium*, collects the Rays dispers'd thro' its whole Concavity, after Reflexion, into a Point or Focus, and is therefore a burning Mirror.

Hence, as the Focus is there where the Rays are the most closely contracted, if it be a Segment of a large Sphere, its Breadth must not subtend an Arch above 18 Degrees; if it be a Segment of a smaller Sphere, its Breadth may be 30 Degrees. Indeed, *Kircher* observes, that of all *Burning Mirrors*, those are the best, whose Breadth does not subtend an Arch of 18 Degrees; so that Experience and Demonstration go together.

As the Surface of a Mirror, which is a Segment of a larger, receives more Rays than another of a less, if the Latitude of each subtend an Arch of 18 Degrees; or even more, or less, provided it be equal: the Effects of the greater Mirror will be greater than those of the less.

And, as the Focus is contain'd between the fourth and fifth Part of the Diameter, Mirrors that are Segments of greater Spheres, burn at a greater Distance than those which are Segments of a smaller.

Since, lastly, the *Burning* depends on the Union of the Rays, and the Union of the Rays on the Concave Spherical Figure; 'tis no wonder, that even wooden Mirrors, gilt, or those prepared of Alabaster, &c. cover'd with Gold; nay, even that those made of Paper, and cover'd with Straw, should be found to burn.

Among the Antients, the *Burning Mirrors* of *Archimedes* and *Proculus* are eminent; by one of which, the Roman Ships besieging *Syracuse*, under the Command of *Marcellus*, according to the Relations of *Zonaras*, *Tzetzes*, *Galen*, &c. and by the other, the Navy of *Vitellian* besieging *Byzantium*, according to *Tzetzes*, were burnt. Among the Moderns, the most remarkable *Burning Mirrors*, are those of *Settala*, of *Villette*, and *Tschirnhaus*. *Settala*, Canon of *Padua*, made a Parabolical Mirror, which ac-

ording to *Sebotus*, burnt Pieces of Wood, at the Distance of 15 or 16 Paces.

M. *Tschirnhaus's* Mirror, at least, equals the former, both in Bigness and Effect: The following Things are noted of it in the *Acta Eruditorum*. 1. Green Wood takes fire instantaneously, so as a strong Wind can't extinguish it. 2. Water boils immediately, and Eggs in it are profandy edible. 3. A Mixture of Tin and Lead, three Inches thick, drops presently: An Iron or Steel Plate becomes red-hot presently, and a little after burns into Holes. 4. Things not capable of melting, as Stones, Bricks, &c. become soon red-hot, like Iron. 5. Slate becomes first white, then a black Glass. 6. Tiles are converted into a yellow Glass, and Shells into a blackish yellow one. 7. A Pumice Stone emitted from a *Volcano*, melts into a white Glass: And, 8. A piece of a Crucible also vitrifies in eight Minutes. 9. Bones are soon turn'd into an opaque Glass, and Earth into a black one. The Breadth of this Mirror is near three *Leipsick* Ells, its *Focus* two Ells distant from it: It is made of Copper, and its Substance is not above double the Thickness of the Back of a Knife.

Villette, a French Artificer of *Lyon*, made a large Mirror, bought by *Taenraier*, and presented to the King of *Persia*: a second, bought by the King of *Denmark*: a third presented by the French King to the *Royal Academy*; a fourth has been in *England*, where it was publicly expos'd. The Effects hereof, as found by *Dr. Harris* and *Dr. Desaguliers*, are, that a Silver Sixpence is melted in 7" and 1/2; a King *George's* Halfpenny in 16", and runs with a Hole in 34". Tin melts in 3", Cast Iron in 16", Slate in 5"; a fossil Shilling calcines in 7"; a piece of *Pompey's* Pillar at *Alexandria*, vitrifies in the black Part in 50", in the white in 54; Copper Ore in 8": Bone calcines in 4", vitrifies in 35". An Emerald melts into a Substance like a Turquoise Stone; a Diamond weighing 4 Gr. loses 2/3 of its Weight: The *Asbestos* vitrifies; as all other Bodies will do, if kept long enough in the *Focus*: When once vitrify'd, the Mirror can go no further with them. This Mirror is 47 Inches wide; and is ground to a Sphere of 76 Inches Radius: so that its *Focus* is about 38 Inches from the Vertex. Its Substance is a Composition of Tin, Copper, and Tin-Glass.

Every *Lens*, whether Convex, Plano Convex, or Concave Convex, collects the Sun's Rays, dispers'd o'er its Convexity, into a Point, by Refraction; and is therefore a *Burning Glass*. The most considerable of this kind known, is that made by *M. de Tschirnhausen*: The Diameter of his *Lenses* are three and four Feet; the *Focus* at the Distance of 12 Feet, and its Diameter an Inch and half. To make the *Focus* the more vivid, 'tis collected a second time by a second *Lens* parallel to the first; and plac'd in that Place where the Diameter of the Cone of Rays form'd by the first *Lens*, is equal to the Diameter of the second: So that it receives 'em all; and the *Focus* from an Inch and a half, is contracted into the Space of eight Lines, and its Force increas'd proportionably. Its Effects, among others, as related in the *Acta Erud. Lipsi.* are, That it lights hard Wood, even moisten'd with Water, into a Flame, instantly; that Water, in a little Vessel, begins to boil presently; all Metals are melted; Brick, Pumice Stone, *Delphic* Wares, and the *Asbestos* Stone, are turn'd into Glass; Sulphur, Pitch, &c. melted under Water: The *Asthes* of Vegetables, Woods, and other Matters, transmuted into Glass. In a word, every thing apply'd to its *Focus*, is either melted, turn'd into Ash, or into Smoke; and the Colours of Jewels, and all other Bodies, Metals alone excepted, are chang'd by it. He observes, that it succeeds best when the Matter apply'd is laid on a hard Coal well burnt.

The Force of the Solar Rays here found so stupendous; yet the Rays of the Full Moon, collected by the same *Burning Glass*, don't exhibit the least Increase of Heat.

Further, as the Effects of a *Burning Lens* depend wholly on its Convexity, 'tis no wonder that even those prepar'd of Ice produce Fire, &c. A *Lens* of that kind is easily prepar'd, by putting a piece of Ice into a Skuttle, or hollow Segment of a Sphere, and melting it over the Fire, till it accommodate it self to the Figure thereof.

Nor will those ignorant of *Dioptrics*, be less surpris'd to see Flame, and the Effects thereof, produced by means of the Refraction of Light in a Glass Bubble fill'd with Water. See *LENS*.

Wolfius tells us, that an Artificer of *Dresden* made *Burning Mirrors* of Wood, bigger than those of *M. Tschirnhaus* or *Villette*, which had Effects at least equal to any of 'em. *Traberus* teaches how to make *Burning Mirrors* of Leaf Gold; viz. by turning a Concave, laying its Inside equally with Pitch, and covering that with Square Pieces of the Gold, two or three Fingers broad, fastening 'em on, if need be, by Fire. He adds, that very large Mirrors may be made, of 30, 40, or more Concave Pieces, artfully join'd in a turn'd wooden Dish or Skuttle; the Effects of

which will not be much less, than if the Surface was continuous.

Zabius adds, further, that *Newman*, an Engineer at *Vienna*, in 1699, made a Mirror of Pastboard, cover'd with side with Straw glud'd to it; by which all kind of Metals, &c. were melted. See *MIRROR*.

BURNING of Land, call'd also vulgarly *Denfiring*, *quasi Devonfiring*, or *Denbyfiring*, as being most used there: A Method of preparing and fertilizing Lands barren, sour, heathy and rushy, for Corn; by prying off the Turf, and drying, and burning it on the Ground. The same Method also obtains for Meadows and Pasture Ground, moist, clayey, or rushy.

BURNING Mountains. See *VULCANO*, *EARTHQUAKE*, *MOUNTAIN*, &c.

BURNISHING, the Action of smoothening or polishing a Body, by a violent rubbing it with any thing. Thus Bookbinders *burnish* the Edges of their Books, by rubbing 'em with a Dog's Tooth. Gold and Silver are *burnish'd* with a Wolf's Tooth, a Dog's Tooth, or the bloody Stone, *Tripoli*, a piece of white Wood and Emery. Hence *Burnisher*, is a round polish'd piece of Steel, serving to smooth and give a Lustre to Metals: Of these there are various Kinds, of various Figures; fruit, cooked, &c. Half *Burnishers*, are us'd to folder Silver, as well as to give it a Lustre.

Deer are said to *burnish* their Heads, when rubbing off a white downy Skin from their Horns against a Tree, they thrust 'em into a reddish Earth, to give 'em a new Colour and Lustre.

BURR, or *BURR-DOCK*, is an Herb, whose broad Leaves, Roots, and Seeds, are sometimes us'd in Physick.

BEAR-PAMP, or *Bilde Pamp*, a kind of Pamp so call'd, because it holds much Water; see *PAMP*.

BURSARS, in *Scotland*, are Youths chosen, and sent as Exhibitors to the Universities, one each Year, by each Presbytery; by whom they are to be subsisted for the Space of four Years, at the Rate of 100 *l. per Annum*. Scots.

BUSHEL, a Measure of Capacity for things Dry; as Grains, Pulse, dry Fruits, &c. The *English Bushel* contains 4 Pecks, or 8 Gallons, or 2/3 of a Quarter. See *MEASURE*.

At *Paris*, the *Bushel* is divided into two *half Bushels*; the *half Bushel* into two Quarts; the Quart into two half Quarts; the half Quart into two Litrons; and the Litron into two half Litrons. By a Sentence of the *Provoost* of the Merchants of *Paris*, the *Bushel* is to be eight Inches, two Lines and a half high, and ten Inches in Diameter; the Quart four inches nine Lines high, and six Inches nine Lines wide; the half Quart four Inches three Lines high, and five Inches Diameter; the Litron three Inches and a half high, and three Inches ten Lines in Diameter. Three *Bushels* make a *Minot*, six a *Mise*, 12 a *Septier*, and 144 a *Muid*: See *MUID*. In other Parts of *France* the *Bushel* varies: 14; *Bushels* of *Amboise* and *Yours*, make the *Paris* *Septier*. 20 *Bushels* of *Angoumois*, make three *Paris* *Septiers*; 20 *Bushels* of *Blois*, make one *Paris* *Septier*; 2 *Bushels* of *Bourdeaux*, make one *Paris* *Septier*; 32 *Bushels* of *Rochel*, make 19 *Paris* *Septiers*. Note, Oats are measur'd in a double Proportion to other Grains; so that 24 *Bushels* of Oats make a *Septier*, and 248 a *Muid*. The *Bushel* of Oats is divided into four Picotins, the Picotin into two half Quarts, or four Litrons. For Salt, four *Bushels* make one *Minot*, and six a *Septier*. For Coals, eight *Bushels* make one *Minot*, 16 a *Mise*, and 320 a *Muid*. For Lime, 3 *Bushels* make a *Minot*, and 48 *Minots* a *Muid*.

De Cange derives the Word from *Bustellus*, or *Bustellus*, or *Bustellus*, a diminutive of *Buz*, or *Buss*, us'd in the corrupt *Latin* for the same thing. Others derive it from *Bustulus*, an Urn wherein Lots are cast.

BUSKIN, *Cosburnus*, a kind of Stocking among the Antients, in manner of a little Boot, covering the Foot and Mid-leg, and ty'd beneath the Knee; very rich and fine, and us'd principally on the Stage by the Actors in Tragedy. The *Buskin* is said to have been first introduc'd by *Sophocles*: It was of a Quadrangular Form, and might be worn indifferently on either Leg. It was so thick, as by means hereof, Men of ordinary Stature might be rais'd to the Pitch and Elevation of the Heroes they personated. In which it was distinguish'd from the *Sock*, worn in Comedy; which was a low, popular Dress. *Demphier* observes, that it was not Actors alone who wore the *Buskin*, but Girls likewise us'd 'em to raise their Height; Travellers and Hunters to defend themselves from the Mire, &c. As the *Buskin* was the distinguishing Mark of Tragedy on the Stage, we find it in *Classick Authors* frequently us'd to signify Tragedy it self.

BUST, or *BUSTO*, in Sculpture, &c. a Term us'd for the Figure, or Portrait of a Person in *Relievo*; showing only the Head, Shoulders, and Stomach; the Arms being lopp'd off; ordinarily placed on a Pedestal, or *Console*. *Feltham* observes, that tho' in Painting one may say a Figure appears

in *Buffo*; yet it is not properly call'd a *Buff*, that Word being confin'd to things in *Relievo*. The *Buff* is the same with what the *Latins* call'd *Hermes*, from the Greek *Hermes*, *Mercury*; the Image of that God being frequently represented in this manner among the *Athenians*.

Bussy, is also us'd, especially by the *Italians*, for the Trunk of a human Body, from the Neck to the Hips. Some derive the Word from the German *Buffst*, Stomach; *Ménage* fetches it from *Buffyne*, a piece of Wood, Ivory, Whalebone, or the like, which the Women apply to that Part of the Body; call'd by the *Italians* *Buffo* to keep themselves flighty.

Bussy, or *Bustum*, in Antiquity, a Pyramid or Pile of Wood, whereon were anciently plac'd the Bodies of the Deceas'd, in order to be burnt. The *Romans* borrow'd the Custom of burning their Dead from the *Greeks*. The Deceas'd, crown'd with Flowers, and dress'd in his richest Habits, was laid on the *Bustum*. The nearest Relations lighted it with Torches; turning their Faces from it, to shew that it was with Reluctance that they did this last Office. After the *Bustum* was consum'd, the Women appointed to collect the Ashes, enclos'd 'em in an Urn, which was deposited in the Tomb. Some Authors say, it was only call'd *Bustum* after the burning, quoth *Beneustum*: before the Burning it was call'd *Pyra*; during it, *Rogus*; and afterwards *Bustum*.

BUSTUARI, a kind of Gladiatoer, among the ancient *Romans*, who fought about the *Bustum*, or Pile of a deceas'd Person, in the Ceremony of his Obsequies. The Practice at first was, to sacrifice Captives on the Tomb, or at the *Bustum* of their Warriors: Instances of which we have in *Homer*, at the Obsequies of *Petrolus*, and among the *Greek* Tragedians. Their Blood was suppos'd to appease the Infernal Gods; and render 'em propitious to the *Manes* of the Deceas'd. In after Ages, this Custom appear'd too barbarous; and in lieu of these Victims, they appointed Gladiatoers to fight; whose Blood, 'twas suppos'd, might have the same Effect. According to *Val. Maximus* and *Plorus*, *Marcus* and *Decius*, Sons of *Brutus*, were the first, at *Rome*, who honour'd the Funerals of their Father with these kind of Spectacles, in the Year of *Rome* 489. Some say, the *Romans* borrow'd this Custom from the *Hebræans*; and they from the *Greeks*. The Word comes from *Bustum*, which see.

BUTCHERY, a Place set apart, either for the Slaughter of Cattel, or for the exposing their Flesh to sale; otherwise call'd *Shambles*. *Nero* built a noble one at *Rome*; on which Occasion was struck that Medal, whose Reverse is a Building supported by Columns, and enter'd by a Person of four Steps; is the Legend, MAC. AUG. S. C. *Maeclium Augusti Senatus-Consulto*.

Among the ancient *Romans* there were three Kinds of Establish'd Butchers; viz. two Colleges, or Companies, compos'd each of a certain number of Citizens, whose Office was to furnish the City with the necessary Cattel, and to take care of preparing and vending the Flesh. One of these Communities, was at first confin'd to the providing of Hogs, whence they were call'd *Suerii*; and the other were charg'd with Cattel, especially Oxen; whence they were call'd *Pecuarii*, or *Bovarii*. Under each of these was a subordinate Class, whose Office was to kill, prepare, &c. call'd *Lauis*, and sometimes *Carnifices*. *Briffon*, *Modius*, and others, mention a pleasant way of selling Meat, us'd for some Ages among this People: The Buyer was to shut his Eyes, and the Seller to hold up some of his Fingers; if the Buyer guess'd aright, how many it was the other held up, he was to fix the Price; if he mistook, the Seller to fix it. This Custom was abolish'd by *Appianus*, Prefect of *Rome*; who in lieu thereof introduc'd the Method of selling by Weight.

Ménage, after *Turnebius*, derives the Word from *Bucarius*, of *Bucca*; because the *Butcher* cuts Meat for the Mouth: Thus also we find, *becarius* from *beccus*. *Lancelot* derives it from the Word *bovius*, Killer of Cattel; *Labbe*, a *Bovina* seu *Bubula* carne.

BUTLERAGE of Wines, the Imposition upon Sale Wine, brought into the Land; which the King's *Butler*, by virtue of his Office, may take of every Ship, viz. two Shillings of every Tonn imported by Strangers.

BUTMENTS, in Architecture, those Supporters or Props, on, or against which the Feet of Arches rest: Also little Places taken out of the Yard, or the Ground-plot of an House, for a Battery, Scullery, &c. are sometimes call'd *Butments*. The Word comes from the French *Buter*, to abut or terminate on any thing.

BUTT, in the Sea Language, the End of any Plank, which joins to another on the Outside of a Ship, under Water: Hence when a Plank is loose at one end, they call it *springing a Butt*; to prevent which, Ships are usually bolted at the *Butt-Heads*, that is, at the Plank's End.

BUTT, or *Pipe of Wine*; a Measure containing two Hogheads, or one hundred twenty six Gallons.

A *Butt* of Currants, is from fifteen to twenty two hundred Weight.

BUTTER, a fat, unctuous Substance, prepared, or separated from Milk; which is an Assemblage of three different Substances, *Butter*, *Cheese*, and a *Scrums*, or *Whey*. See *MILK*. The Word comes from the *Greek* *βουτυρον*; as supposing it prepar'd only from Cow's Milk. It was late e'er the *Greeks* appear to have had any Notion of *Butter*; *Homer*, *Theocritus*, *Euripides*, and the other Poets, make no mention of it; and yet are frequently speaking of Milk and *Cheese*: And *Aristotle*, who has collected abundance of Curiosities relating to the other two, is perfectly silent on this. *Pliny* tells us, that *Butter* was a delicate Dish among the barbarous Nations; and was that which distinguish'd the Rich from the Poor: The *Romans* us'd *Butter* no otherwise than as a Medicine, never as a Food. *Scohookius* observes, that 'tis owing to the Industry of the *Dutch*, that there is any such thing as *Butter* in the *East Indies*: that, in *Spain*, *Butter* is only us'd Medicinally, for Ulcers; and adds, that the best Opiate for making the Teeth white, is the rubbing 'em with *Butter*. *Cl. Alexandrinus* observes, that the ancient Christians of *Egypt* burnt *Butter* in the Lamps at their Altars, instead of Oil; and the *Abyssinians*, according to *Godignus*, still retain a Practice much like it: *Clemens* finds a Religious Mystery in it. In the *Roman* Churches, it was anciently allow'd, during *Christians* time, to use *Butter* instead of Oil; by reason of the great Consumption thereof other ways. *Scohookius* has a just Volume, *De Butyro & Aevulone Casi*; where the Origin and Phenomena of *Butter* are handled in form: He enquires whether *Butter* was known in *Abraham's* Days, and whether it was the Dish he entertain'd the Angels withal: He examines how it was prepar'd among the *Scythians*; whence arise its different Colours; teaches how to give it its natural Colour; how to churn it, salt it, keep it, &c.

BUTTER, in Chymistry, is us'd to express several Preparations in Chymistry, as *Butter* of Antimony, of Arsenic, of Wax, of *Saturis*, &c. so call'd from their Form, Consistence, &c. See *ANTIMONY*, *ARSENIC*, *WAX*, &c.

BUTTOCK of a Ship, is her full Breadth right aft from the Jack upwards. According as a Ship is built, broad or narrow at the Transom, she is said to have a broad or narrow *Buttock*.

BUTTONS, an Article in Dress, whose Form, and Use is too familiar to need a Description. The Matter whereof *Buttons* are made is various; as Metal, Silk, Mohair, &c. *Metal Buttons*, again, are various; both with regard to the Matter, and Manner of making: Besides those cast in Moulds, much in the manner of other small Works, (see *FOUNDREY*) there are now made great Quantities, with thin Plates, or Leaves of Gold, Silver, and Brass; especially of the two last. The Invention of these *Buttons* being very late, as not having been set on foot before the Beginning of the XVIIIth Century; and their Structure very Ingenious, tho' of ill use, we shall here subjoin it.

Manner of making plated BUTTONS. The Metal to be us'd being reduc'd into thin Plates, or Leaves, of the Thickness intended, (either by the Goldsmith or Brasier) is cut into little round Pieces, of a Diameter proportionable to the wooden Mould they are to cover: This cutting is perform'd with a sharp Panch, on a leaden Block or Table. Each piece of Metal thus cut, and taken off from the Plate, is reduc'd to the Form of a *Button*, by beating it successively in several spherical Cavities, with a round Piece of Iron in form of a Punchion; still beginning with the flattest Cavity, and proceeding to the more Spherical, till the Plate have got all the *Relievo* requir'd: And the better to manage so thin a Plate, they form 10 or 12 to the Cavities at once; and also boil the Metal to make it more ductile. The Inside thus form'd, they give an Impression to the Outside, by working it with the same Iron Punchion, in a kind of Mould, like the Minter's Coins, engraven *en creux*, or indentedly; and fasten'd to a Block or Bench. The Cavity of this Mould, wherein the Impression is to be made, is of a Diameter and Depth suitable to the sort of *Buttons* to be struck in it; each Kind requiring a particular Mould. Between the Punchion and the Plate is plac'd some Lead, which contributes to the better taking off all the Strokes of the Graving; the Lead, by reason of its Softness, easily giving way to the Parts that have *Relievo*; and as easily infusing it self into the Trace, or Engraving of the Dentures: The Plate thus prepar'd, makes the Upper-part, or Shell of the *Button*. The lower Part is form'd of another Plate, made after the same manner, but flatter, and without any Impression. To this last, is folder'd a little Eye made of Wire of the same Metal; for the *Buttons* to be fasten'd by. The two Plates are folder'd together, with a wooden Mold, cover'd with Wax, or other Cement, between; in order to render the *Buttons* firm and solid: For the Wax entering all the Cavities form'd by the *Relievo* of the other side, sustains it, prevents

vents its flattening, and preserves its Boſſe or Deſign. Ordinarily, indeed, they content themſelves to cover the naked Mould with the Shell; and in this Caſe, for the fattening, paſs a Thread or Gut acroſs thro the middle of the Mould.

BUTTRESS, a kind of Buttment built archwiſe; or a Maſs of Stone or Brick, ſerving to prop or ſupport the Sides of a Building, Wall, &c. on the Outſide, where it is either very high, or has any conſiderable Load to ſuſtain on the other ſide, as a Bank of Earth, &c. The Theory and Rules of *Buttreſſes*, are one of the *Deſiderata* in Architecture.

BUTTRICK, or **BUTTRICE**, is likewiſe a Tool, that Farriers make uſe of to pierce the Sole of an Horſe's Foot,

which is overgrown; to pare the Hoof; to fit the Shoe, and to cut off the Skirts of the ſaid Sole, that overcaſt the Shoe.

BY-LAWS, or **BILAWS**, Orders made in Court-Loets, Court-Barons, &c. by common Conſent, for the Good of thoſe who preſcribe them; and which extend further than the Publick Law binds. In Scotland, they are call'd *Laws of Burlew*, or *Birlow*; which are made and determin'd by Conſent of Neighbourſ, elected by common Conſent in *Burlew*-Courts; wherein Cogniſance is taken of Complaints 'twixt Neighbour and Neighbour. The Men thus choſen are Judges or Arbitrators, and call'd *Burlew-Men*.

C A B

C A C

C, THE third Letter of the Alphabet; form'd, according to *Sealiger*, from the α of the Greeks; by retrenching the Stem or right Line: Others derive it from the κ *Capp* of the Hebrews, which has, in effect, the ſame Form; allowing only for this, that the Hebrews, reading backwards, and the Latins, &c. forwards, each have turn'd the Letter their own way. However, the *c* not being the ſame as to Sound with the Hebrew *Capp*; and it being certain the Romans did not borrow their Letters immediately from the Hebrews, or other Orientals, but from the Greeks; the Derivation from the Greek κ is the more probable. F. *Montfaucon*, in his *Palæographia*, gives us ſome Forms of the Greek κ , which come very near that of our *C*; this, for Inſtance, ϵ : And *Suidas* calls the *C*, the Roman *Kappa*. All Grammarians agree, that the Romans pronounc'd *q* like our *c*, and *c* like our *k*. F. *Mabillon* adds, that *Charles the Great* was the firſt who wrote his Name with a *C*; whereas, all his Predeceſſors of the ſame Name wrote it with a *K*: The ſame Difference is obſerv'd in their Coins.

C was a Numeral Letter among the Romans, ſignifying an hundred: according to the Verſe,

Non plus quam centum C litera fertur habere.

Some add, that a Daſh over it, made it ſignify an hundred thouſand; but it wou'd be hard to find an Inſtance hereof among the Antients. In proper Names, *C*, was uſ'd for *Cains*; as, *C. Ceſar*, &c. Their Lawyers uſ'd it ſingle for *Codice* and *Conſule*, &c. double, *CC*, for *Conſultibus*. *C* was alſo uſ'd in their Courts, as a Letter of Condemnation, and ſtood for *condemnus*; in oppoſition to *A*, which ſignify'd *absolvo*. See *A*.

In Muſick, a Capital *C* denotes the higheſt Part in a thorough Baſe.

CABBALA, or **CABALA**, or **KABBALA**, a Term uſ'd in various Senſes, which Authors geneſally conſound. It is originally Hebrew, קבלה *Kabbalah*; and, properly, ſignifies Tradition: whence the Verb קבל *Kibbel*, to receive by Tradition, or from Father to Son; eſpecially in the Chaldee and Rabbinical Hebrew. Hence *Cabbala* is primarily uſ'd for a Sentiment, Opinion, or Explication of Scripture; or a Cuſtom or Practice tranſmitted from Father to Son.

As to the Origin of the *Cabbala*: The Jews believe, that God gave to *Moses* on Mount *Sinai*, not only the Law, but alſo the Explication of that Law; and that *Moses*, after his coming down, retiring to his Tent, rehear'd to *Aaron* both the one and the other. When he had done, *Aaron* ſtanding on the Right Hand, his Sons, *Elaſer* and *Ithamar*, were introduc'd to a ſecond Rehearaſal: This over, the 70 Elders that compos'd the *Sanhedrim* were admitted; and laſtly the People, as many as pleas'd: To all which, *Moses* again repeated both the Law and Explication, as he receiv'd 'em from God. So that *Aaron* heard it four times, his Sons thrice, the Elders twice, and the People once. Now, of the two Things which *Moses* taught 'em, the Law, and the Explication, only the firſt was committed to Writing; which is what we have in *Exodus*, *Leviticus*, and *Numbers*: As to the ſecond, or the Explication of thoſe Laws, they were contented to impreſs it well in their Memory, to teach it their Children; they, to theirs, &c. Hence, the firſt Part they call ſimply the Law, or the Written Law; the ſecond, the Oral Law, or *Cabbala*. Such is the original Notion of the *Cabbala*.

Some Rabbins, however, pretend their Fathers receiv'd the *Cabbala* from the Prophets, who receiv'd it from the Angels. R. *Ab. ben Dier* ſays expreſsly, that the Angel *Razael* was *Adam's* Maſter, and taught him the *Cabbala*;

that *Japhiel* was *Shem's* Maſter; *Tjodckiel*, *Abraham's*; *Raphael*, *Iſaac's*; *Peliel*, *Jacob's*; *Gabriel*, *Joſeph's*; *Meratron*, *Myles's*; *Maſiel*, *Elias's*, &c.

Among theſe Explications of the Law, which, in reality, are little elſe but the ſeveral Interpretations and Deciſions of the Rabbins on the Laws of *Moses*, ſome are *Myytical*; conſiſting of odd abſtruſe Significations given to a Word, or even to the Letters whereof it is compos'd: whence, by different Combinations, they draw Meanings from Scripture, very different from thoſe it ſeems naturally to import. The Art of interpreting Scripture, after this manner, is call'd more particularly *Cabbala*: And 'tis in this laſt Senſe the Word is more ordinarily uſ'd among us.

This *Cabbala*, call'd alſo *Artificial Cabbala*, (so diſtinguiſh it from the firſt Kind, or ſimple Tradition) is diſtinguiſh'd into three Sorts: The firſt, call'd *Gematris*, conſiſts in the taking Letters as Figures, or Arithmetical Numbers, and in explaining each Word by the Arithmetical Value of the Letters whereof it is compos'd; which is done various ways. See *GEMATRIA*.

The ſecond is call'd *Notariæon*, and conſiſts either in the taking each Letter of a Word for an entire Diſtion; as, *g.* from *כראשיה* the firſt Word of *Geneſis*, for *חכימות* *Chochimot*: Or in making one entire Diſtion out of the Initial Letters of many; as out of theſe, *תתור* *Tetor*, *נבכור* *Nebkor*, *יעלמי* *Yelmi*, *אני* *Ani*, *אתור* *Ator*; by only taking the Initial Letters, they form the *Cabbalytic* Name of God, *אננה* *Anne*, mention'd by *Galatians*. See *NOTARIÆON*.

The third kind, call'd *Themura*, *q. d.* changing, conſiſts in the changing and tranſpoſing the Letters of a Word; which is done various Ways: 1. By ſeparating 'em; and thus, *g.* from *Breſebit*, *i. e.* in *Principio*, they make *Breſebit*, *i. e.* *poſtul Fundamentum*; juſt as in playing with Words, we ſometimes ſeparate *Sum-mus*, *Ter-minus*, *Sub-timus*, &c. 2. By tranſpoſing the Letters, and ranging 'em in a different manner: thus, from the ſame Word *Breſebit*, they make another Signification, *i. e.* in *Triſtri*; and becauſe this is taken from the firſt Word in the Hiſtory of the Creation of the World, they thence conclude, the World was created on the firſt Days of the Month of *Triſtri*. 3. By taking one Letter for another, with reſpect to the different Relations they acquire, in conſidering the Alphabet different Ways: thus, by dividing the Hebrew Alphabet of 22 Letters, into two Parts, and taking the firſt of either of theſe for the firſt of the other, the ſecond for the ſecond, &c. by this means, of *Tabele*, an unknown Name mention'd in *Iſtaib*, they form *Remle*, the Name of a King of *Iſrael*. Another manner of changing the Letters, is by taking the Alphabet two ways, firſt in the common way, then backwards, and changing mutually the two firſt Letters, then the two ſecond, &c. By this means, of *קרי* *Qri* the Hebrews of thoſe who riſe againſt me, they make *קרי* *Qri* the Chaldeans; and thence conclude, that thoſe God here ſpoke of are Chaldeans. Theſe two laſt Kinds are alſo call'd *צירוף* *Ziruf* Affociation, Combination.

The *Cabbala* hitherto ſpoke of, may be call'd *Speculative Cabbala*; in oppoſition to the following, which may be call'd *Practical Cabbala*.

CABBALA, is alſo taken for the Uſe, or rather Abuſe, which Magicians make of ſome Paſſages of Scripture. All the Words, Terms, Magic Figures, Numbers, Letters, Charms, &c. uſ'd in Magic, as alſo in the Hermetical Science, are compris'd under this Species of *Cabbala*. But 'tis only the Chriſtians that call it by this Name, on account of the Reſemblance this Art bears to the Explications of the Hebrew *Cabbala*: For the Jews never uſe the Word *Cabbala*.

balis in any such Sense, but ever with the utmost Respect and Veneration. 'Tis not, however, the Magic of the *Jews* alone which we call *Cabbala*, but the Word is also us'd for any kind of Magic: in which Sense it is, that the Abbe de *Villars* takes it, in his *Comte de Gabalis*; where he exposes the ridiculous Secrets of the *Sacred Cabbala*, as the *Cabbalists* call it. These suppose there are elementary People, under the Names of *Symps*, *Gnomes*, *Salamanders*, &c. and hold, that this Science introduces Souls into the *Sanctuary of Nature*. They pretend, the *Hebrews* knew these aerial Substances; that they borrow'd their *Cabbalistic* Knowledge from the *Egyptians*; and have not yet forgot the Art of conversing with the Inhabitants of the Air. See SYMBOLE.

CABBALLA, or **CABBALISTS**, is also us'd to express that Sect among the *Jews*, which follows and practises the *Cabballe*; or interpret Scripture according to the Art of *Cabballe*, taken in the second Sense above laid down. The *Jews* are divided into two general Sects; the *Karaites*, who refuse to receive either Tradition, or the *Thalmud*, or any thing but the pure Text of Scripture. See CARAIYES. And the *Rabbinists* or *Thalmudists*; who, beside this, receive the Traditions, and follow the *Thalmud*; see THALMUD. And these latter are again divided into two other Sects; pure *Rabbinists*, who explain the Scripture in its natural Sense, by Grammar, History, and Tradition; and *Cabbalists*, who to discover hidden mystical Senses, which they suppose God to have couch'd therein, make use of the *Cabbala*, and the mystical Rules and Methods abovemention'd. There are *Viticiaries* among the *Jews*, who believe that Jesus Christ wrought his Miracles by virtue of the Mysteries of the *Cabbala*. Some learned Men are of Opinion, that *Pythagoras* and *Plato* learn'd the *Cabbalistic* Art of the *Jews* in *Egypt*; and fancy they see evident Footsteps thereof in their Philosophy: Others, on the contrary, say, it was the Philosophy of *Pythagoras* and *Plato*, that first furnish'd the *Jews* with the *Cabbala*. Be this as it will, 'tis certain that in the first Ages of the Church, most of the Hereticks gave into the vain Notions of the *Cabbala*: Particularly the *Gnostics*, *Valentinians*, and *Basiliidians*. Hence arose the *ABRAXAS*, and the multitude of *Talisman*s, wherewith the Cabinets of the Virtuosi are stock'd. See TALISMAN, &c.

The Word *Cabbala* is not only apply'd to the whole Art; but also to each Operation perform'd according to the Rules of that Art. R. *Jac. ben Aicher*, firm'd *Basit Hattarin*, has compil'd most of the *Cabbala*'s invented on the Books of *Moses* before his Time.

CABINET, the most retir'd Place in the finest Apartment of a Building; set apart for Writing, Studying, or preserving any thing very precious. A compact Apartment consists of an Hall, Antichamber, Chamber, and Cabinet; with a Gallery on one side. See APARTMENT. Hence a *Cabinet* of Paintings, of Curiosities, *Mosaic Cabinets*, *Cabinets* of a Garden, &c.

CABINS, or **CABANES**, in a Ship, are little Lodges and Apartments for the Pilots and other Officers of the Ship to lie in; very narrow, and in form of Armories or Presses; us'd in several Parts of the Ship, particularly the Poop and the Sides. The Word comes from the *Italian Capanna*, a little Straw Hat; and that from the *Greek καμιν*, a Stall or Manger.

CABRIA, or **CABBIRE**s, were Feasts held by the ancient *Greeks* of *Lemnos* and *Tebes*, in honour of some *Samaritanian* Deities, call'd *Cabires*. These Gods, according to the Scholast of *Apollonius*, were four; *Axiurus*, who was *Ceres*; *Asioceris*, *Proserpine*; *Asioceris*, *Phyto*; and *Cassialus*, *Mercury*: The Feast was very ancient, and prior even to the Time of *Jupiter*; who is said to have restor'd it: It was held by Night. Children above a certain Age were here consecrated; which Consecration was supposed to be a Preservative against all Dangers of the Sea, &c. The Ceremony of Consecration, consisted in placing the initiated Youth on a Throne, the Priests dancing round him: The Badge of the Initiated was a Girdle or Scarf. When a Person had committed any Murder, the *Cabiria* gave him an Asylum. *Menippus* is very particular in the Proof of each of these Points.

CABLE, a thick long Rope, ordinarily of Hemp, serving to hold Ships firm at Anchor, to tow Vessels in large Rivers, &c. The Term is sometimes also apply'd to the Cordage us'd to raise masty Loads, by means of Cranes, Wheels, and other like Engines: Tho, in strictness, *Cable* is not apply'd to Ropes of less than three Inches Circumference. See CORDAGE, ROPE, &c.

Every *Cable*, of whatever Thickness it is, is compos'd of three *Hawfers*; each *Hawfer* of three *Strands*; each *Strand* of three *Twists*; each *Twist* of a certain Number of *Caberns*, or Threads of Rope-Yarn, more or less, as the *Cable* is to be thicker or smaller.

To make a *Cable*: after forming the *Strands*, as in the Article of ROPEMAKING, they use *Staves*; which they first pass between the *Strands* whereof the *Hawfers* are com-

pos'd; and afterwards between the *Hawfers* whereof the *Cable* is compos'd: that the one and the other may turn the better, and be intertwisted the more regularly together. And to prevent any crangling, a *Weight* is hung at the End of each *Hawfer* and *Strand*. The *Cable* being twisted as much as needs, is untwisted again three or four Turns, that the rest may the better retain its State.

The number of *Threads* each kind of *Cable* is to be compos'd of, is ever proportion'd to its Length and Thickness; and 'tis by this Number of *Threads*, that its Weight and Value are ascertain'd. A *Cable* of 5 Inches Circumference, or 1 Inch Diameter, consists of 48 ordinary *Threads*, and weighs 1925 Pounds; one of 10 Inches Circumference, of 485 *Threads*, and weighs 1940 Pounds; a *Cable* of 20 Inches, of 1945 *Threads*, and weighs 7772 Pounds.

The *Seamen* say, *The Cable is well laid*, when it is well wrought, or made. *Serve the Cable*, or *plait the Cable*, i. e. bind it about with *Ropes*, *Clouts*, &c. to keep it from galling in the *Hawse*. *To splice a Cable*, is to make two Pieces fast together, by working the several *Strands* of the *Rope* one into another. *To coil the Cable*, is to roll it up round in a *Ring*; of which, the several *Rolls* one upon another are call'd *Cable Tires*. They say, *Pay more Cable*, that is, let it more out from the *Ship*; that the *Boat* which carries the *Anchor* may the more easily drop it into the *Sea*: And sometimes they say, *Pay cheap the Cable*, that is, put or hand it out apace. In the same Sense they say also, *Veer more Cable*; that is, let more out. When two *Cables* are splic'd together, it is call'd a *Splice of a Cable*.

Every Merchant *Vessel*, how small soever, has three *Cables*, viz. the *Main* or *Master Cable*, which is that of the chief *Anchor*; the *Common Cable*, and the *small one*. The ordinary Length of these *Cables*, is 110 or 120 Fathoms, or Braces. Hence, at Sea,

CABLE, or **CABLE'S-LENGTH**, is also us'd for a Measure of 120 Fathom. See FATHOM.

The Word *Cable*, comes from the *Hebrew Chebel*, Cord. *De Cange* derives it from the *Anabic*, *Habl*, Cord, or *habala*, *vincire*. *Aienage*, from *Capulum*, or *Cabulum*; and that from the *Greek κωμωδ*, or the *Latin*, *Comellus*.

CABLED-FLUTES, in Architecture, such *Flutes* as are fill'd up with Pieces in form of *Cables*. See FLUTING.

CABLED, in Heraldry, is when a *Cross* is form'd or cover'd with *Ropes*, or twisted *Cables*. See CROSS.

CABOSSED, or **CABOCHED**, in Heraldry, a term originally *Spanish*; us'd where the Head of a *Beast* is cut off behind the *Ears*, by a Section parallel to the *Face*; or by a perpendicular Section: in contra-distinction to *Couping*; which is done by a horizontal Line; besides that, 'tis farther from the *Ears* than *Cabosing*. See COUPEING.

CACAO, or **COCOA**, in Natural History and Commerce, a kind of Nut, about the Size of a moderate *Almond*; the Seed or Fruit of a Tree of the same Name, growing in several Parts of the *West-Indies*; chiefly in the Provinces of *Gustinnala* and *Nicaragua*, and the *Antilles* Islands. The native *Mexicans* call the *Cacao* Tree, *Cucubus guabuzi*; and the *Spaniards*, *Cacaotal*. It resembles our *Cherry-Tree*; but is so very delicate, and the Soil it grows in so hot, that to guard it from the Sun, they always plant it in the Shade of another Tree, call'd *Mother of Cocoa*. The Fruit is enclos'd in a kind of Pod, of the Size and Figure of a *Cucumber*; except that it begins and ends in a Point. Within the Pod, which is half a Finger thick, is form'd a Tissue of white Fibres, very succulent, a little acid, and proper to appease Thirst. In the middle of these Fibres are contain'd 10, sometimes 12, and sometimes more, as far as forty, Grains or Seeds, of a Violet Colour, and dry as *Acorns*. Each Grain, which is cover'd with a little Bark or Rind, when stripp'd thereof, separates into five or six unequal Pieces, in the middle whereof is a Kernel or Pippin, having a tender Bud, very difficult to preserve. Of this Seed, with the Addition of *Vanille*, and some other Ingredients, the *Spaniards*, and, after their Example, the rest of *Europe*, prepare a Kind of Conserve, or *Cake*; which, diluted in hot Water, makes that delicious, wholesome Drink, call'd *Chocolate*: For the Preparation, &c. *whereof*, see CHOCOLATE.

This precious *Almond*, the *Spaniards* make so considerable a Trade of, that there are some make 5000 *l*. Sterling, per *Annum*, from a single Garden of *Cacao*'s. There are two Kinds of *Cacao*'s; the most common, which is likewise the best, is of a dark Colour, bordering on red, and round: The other, call'd *Pastase*, is white, larger, thicker, and flatter; its Quality is Dedicative. Some *Druggists*, however, sell four Kinds; viz. the *great* and *little Caragne*, and the *great* and *little Cacao* of the *Islands*: which, however, may be probably reduc'd to the two Kinds above mention'd: It being only the *Greame*s and *Smallness* that multiplies the Names and Kinds.

The *Cacao* Nuts, are esteem'd by the *Mexicans* as *Anodine*; and us'd, eaten raw, to assuage Pains of the *Bowels*. They also procure a kind of Butter or Oil from 'em, as sweet

fewer as that of Almonds, and drawn in the same manner; excellent for Burns.

In some Parts of America, the *Cocoa* Grains are us'd by the *Indians* as Money; 12 or 14, are esteem'd equivalent to a *Spanish Real*, or 63 $\frac{1}{2}$ Sterling. See COINS.

CACHEXIA, or **CACHEXI**, in Medicine, an ill Habit or Disposition of Body; wherein, the Nutrition is deprav'd throughout the whole Habit, at once; frequently leading towards a Dropsy; and accompany'd with a Swelling, or Bloating of the fleshy Parts; a paleness or lividness of Complexion, &c. It ordinarily arises from a Debility, or Pouliness of the *Ventricle* or *Viscera*; sometimes from an Ulcer in the Reins, in Persons that have the Stone. The external Causes are unwholesome Food, frequent Drunkenness, excessive Study, much waking, suppression of the Menes, immoderate Loss of Blood, Chronic Fevers, Obstructions, &c.

Boerhaave ascribes the Disorder, either to the vitiated State of the nutritious Juice, to some Disorder of the Vessels that are to receive it, or to the Defect of the Faculty that should apply it. The Juice, he observes, may be deprav'd, either from the Quality of the Food; as if it be visciduous, leguminous, fat, stituous, sharp, aqueous, or furious; from the want of Motion; from the Organs vitiated by too much Weakness, or too much Strength: And these, again, may be occasion'd by immoderate Secretions and Evacuations of any kind, the Schistosity of some of the Viscera, or the Retention of something that should be fecer'd: And hence, a Diminution of the Solids, or a Repletion of the Liquids with things that can't pass: Whence two notable ill Effects of this Evil; viz. a Leucoplegmatia, and an Anasarque Dropsy. Now, according to the various Colour, Quantity, Tenacity, Acrimony, and Fluidity of the nutritious Liquor, arise various Disorders, as the Effects of the *Cachexia*; v. g. paleness, yellowness, lividness, greenness, blackness, or redness of the Skin; heaviness, windiness, palpitation of the Heart and Arteries, increas'd with the least Motion; crude thin Urine; spontaneous watry Sweats; and, at length, a Leucoplegmatia and Dropsy. For the Vessels that receive the nutritious Juice, there can't well be assign'd any universal Fault; unless their too great Contractibility and Laxity, and the Disorders arising from 'em, may be admitted as such. Lastly, Nutrition is impeded and perverted, by a Defect in the Faculty that should apply it; as when the circulating Force is either too languid or too violent. The Word comes from the Greek *καχξία*; form'd from the Greek *κακός*, ill, and *ξία*, Disposition. The *Cachexia* is more frequently call'd *Cachochymia*, which see.

CACHOU, a medicinal Aromatic Drug, rank'd among the Number of Perfumes; call'd also *Terra Japonica*. Notwithstanding the great use of *Cachou*, before that of Coffee and Tea; and its being still frequently us'd by many People, especially in France, its Nature and Origin is yet but little known; even among the ablest Physicians: Some from its being call'd *Japon Earth*, rank it among the medicinal Earths, and pretend 'tis found on the Tops of Mountains, cover'd with the Roots of Cedars, whose Food it is; and that being wash'd in the River, and dry'd in the Sun, 'tis form'd into a kind of Paste; which brought into Europe, serves as the Basis of several Pastels, or Fucus's, call'd *Cachou*. Others, with more Probability, range it among the Gums; and maintain it to be form'd of the inspissated Decoction of a Tree in the *East Indies*, call'd *Cachous*; growing chiefly in the Kingdom of *Cochinchina*. Lastly, others, to whose Opinion we rather incline, take it to be a fictitious Composition of several other Drugs; especially the Juice of *Arca*, Extract of *Liquorice*, and *Calamus Aromaticus*, and the Bark of a Tree, call'd by the *Indians* *Catechu*; which may probably be the same with that above mention'd.

Be it Earth, Gum, or Composition, *Cachou* is of much efficacy in Medicine: Among other Effects attributed to it, 'tis suppos'd to stop a Cough, and fortify the Stomach; besides its sweetening and persuming the Breath, when taken in an impalpable Powder, mix'd with Gum *Tragacanth*.

CACOCHYMIA, a deprav'd Habit of Body, consisting in its being replete with ill Humors, from various Causes; see **CACHEXIA**. When the Repletion is merely with Blood, 'tis call'd a *Pletthora*; see **PLETHORA**. *Gorrius* gives the Name *Cacochymia* to the Abundance and Excess of any ill Humor; whether it be Bile, Pituita, &c. provided there be only one that thus offends in Quantity: *Pletthora* he calls the Abundance or Excess of all the Humors together. The Word comes from the Greek *κακός*, ill, and *χυμ*, Juice. See **PLETHORA**.

CACOPHONIA, or **CACOPHONY**, in Grammar, the meeting of two Letters, or two Syllables, that make a harsh disagreeable Sound. The Word is sometimes also us'd in Singing; it comes from the Greek *κακός*, and *φωνή*, Voice.

CADARIANS, a Sect of *Mabometans*, who attribute the Actions of Men to Men alone, and not to any secret Power determining the Will; contrary to the rest of the

Musulmen, who are strict *Predestinarians*. The Author of this Sect, was *Maabed ben Kalid Al Giobur*. The Word comes from the Arabic *قادر*, *Kadara*, Power. *Ben Anna* calls the *Cadarians*, the *Magi*, or *Mauichees* of the *Musulmen*.

CADE, a Cag, Cask, or Barrel; us'd in the *Book of Rates* for a determinate Number of some sorts of Fish; as a *Cade* of Herrings, is a Vessel containing the Quantity of 500 Herrings, and of Sprats 1000. See MEASURE.

CADENCE, according to the ancient Musicians, is a Series of a certain Number of Musical Notes, in a certain Interval, which strikes the Ear agreeably; and especially at the Cloze of a Song, Stanza, &c. A *Cadence* ordinarily consists of three Notes. There are three Kinds of *Cadences*: The principal, or final *Cadence*; usually consisting of a fourth and a fifth to make an *Octave*, as being the most excellent of Consonances: The Entry, or mediate, sometimes call'd the attendant *Cadence*; in regard the final one is always expected: and the dominant, or prevailing *Cadence*; so call'd, as being higher than either of the other: as the Mediate has its Name from its being in the middle, between the Dominant and Final. The modern Musicians make *Cadence* the Relation of two Notes sung together, as *ut* and *re*; and when the last of these Notes is follow'd with two Crotchets, the *Cadence* is said to be double.

CADENCES, in the modern Music, may be defin'd, a certain Conclusion of a Song, or of the Parts thereof in divers Places of a Piece; which divide it, as it were, into too many Members or Periods. The *Cadence* is, when the Parts fall and terminate on a Chord or Note; the Part forming naturally to expect it. A *Cadence* is either perfect or imperfect: A perfect *Cadence*, is that which consists in two Notes, sung after each other, or by Degrees join'd in each of the two Parts; 'tis call'd perfect, because it satisfies the Ear better than the other. The *Cadence* is imperfect, when its last Measure is not in *Octave*, nor in *Unison*, but in a Sixth or Third: As when the Bass, in lieu of descending a Fifth, only descends a Third; or when descending a Fifth, or, which is the same thing, ascending a Fourth, it makes an *Octave* with the Treble, in the first Measure, and a third Major with the Second: 'Tis call'd imperfect, because the Ear does not acquiesce in this Conclusion, but expects the Continuation of the Song. The *Cadence* is said to be broke, when the Bass, in lieu of falling a Fifth, which the Ear expects, rises a Second, either Major or Minor. Every *Cadence* is in two Measures: Sometimes it is suspended; in which Case 'tis call'd a *Repose*, and only consists of one Measure: as when the two Parts stop at the Fifth, without finishing the *Cadence*.

M. Rouffeu distinguishes two Kinds of *Cadence*, with regard to the Bass Viol: A *Cadence* with, and without a Rest. The *Cadence* with a Rest, is when the Finger that should shake the *Cadence*, stops a little before it shakes, on the Note immediately above that which requires the *Cadence*: The *Cadence* without a Rest, is when that stop is omitted. There are also simple *Cadences*, and double ones; the Double ones are various: The more Double are those made on a long Note; the less Double, those on a Short Note. The final *Cadence*, should always be preceded by a double one. The *Cadences* are always to be accommodated to the Character of the Air. The Word comes from *Cadencia*, fall; a *Cadence* being the Fall or Conclusion of a piece of Harmony; proper to terminate either the Whole, or a Part. Some Musicians call a *Shake* a *Cadence*; but that is to confound Terms. From this Musical *Cadencia*, arises,

CADENCES, in Singing, are the same with *Points* and *Virgula's* in Discourse. The Singing-Masters say, the *Cadence* is a Gift of a Master, proper for making the Shakes delicate. When the Voice is harsh, the two Notes whereof the *Cadence* consists, must be struck in the Throat, the one after the other; as also on the Harpsichord, in striking the two Fingers on the two Stops that make the Shake.

CADENCE in Dancing, when the Steps follow the Notes and Measures of the Music.

CADENCE, in the Manage, the equal Measure and Time a Horse is to keep in his Motions, Airs, &c.

CADENCE, in Oratory, when the Sounds end agreeably to the Ear.

CADENCE, in Poetry, a certain Measure of Verse, varying as the Kinds of Verse vary; differing, v. g. in Sapphics, from what it is in Heroics or Iambics. See METRE, QUANTITY, &c.

CADETS, the younger Brothers of a Family: a Term naturaliz'd in our Language from the French. At *Paris*, among the Citizens, the *Cadets* have an equal Portion with the Eldest: In other Places, the Eldest has all. According to the Custom of *Spain*, one of the *Cadets*, in great Families, takes the Mother's Name. See **БРОТНКА**.

CADETS, are also a kind of young Volunteers, who enter into the Army without being put on the List, or receiving Pay; only to learn the Art of War, and fit themselves for Employments. Formerly there were only allow'd two

Cadets in each Company. In 1682, the King of France establish'd Companies of *Cadets*, wherein the young Gentry were train'd up to War.

CADI, or KADHI, a Name given to the Judges of Civil Causes, among the *Turks* and *Saracens*. The Term, however, is ordinarily restrain'd to the Judges of Cities; those in Provinces being call'd *Mollas*.

CADIL-ESCHER, or CADILESCHER, a Chief Justice among the *Turks*. Each *Cadilefcher* has his particular District: *Ricatus* makes but three in the Empire; that of *Europe*, *Asia*, and *Cairo*. The Word comes from the Arabic *Kadi*, Judge; the Particle *At*; and *Ajchar*, Army; as being their first Institution, Judges of the Soldiers.

CADIZADELITES, a Sect among the *Mussulmen*. The *Cadizadelites* are a kind of *Stoic Mahometans*, who avoid all Feasting and Diversion, and affect an uncommon Gravity in all they do or say: Those of 'em who inhabit the Frontiers of *Hungary*, &c. agree in many Things with the Christians; and drink Wine, even in the Fest of *Ramazan*. They read the *Sclavonic* Translation of the Bible, as well as the *Alcoran*. *Mahomet*, according to them, is the H. S. who defended on the Apollites in the Day of Pentecost.

CADMIUM, in Pharmacy, a Mineral, whereof there are two Kinds, *viz.* *Natural* and *Artificial*: the *Natural Cadmium*, again, is of two Kinds; the one containing Metallic Parts, call'd *Cobalt*; which see: The other containing none, call'd *Calamine*, or *Lapis Calaminaris*; which see. The *Artificial Cadmium* is prepar'd from Copper, in Furnaces; of this there are five Kinds; the first call'd *Botrytis*; as being in form of a Bunch of Grapes; the second, *Ostracitis*, as resembling a Sea-shell; the third, *Placitis*, because resembling a Crust; the fourth, *Caputis*; and the fifth, *Calovitis*, which hangs round certain Iron Rods, where with the Matter of the Copper is stirr'd in the Furnace; which being shaken off, bears the Figure of a Quill, call'd in Latin, *Calamus*. The *Cadmium Botrytis* is found in the Middle of the Furnace; the *Ostritis* at the Bottom; the *Placitis* at the Top; and the *Caputis* at the Mouth of the Furnace.

Cadmia is defecative and detensive, us'd in moist sinking Ulcers; which by means hereof are brought to cicatrize. The *Botrytis* and *Placitis*, are also very good in Dileases of the Eyes.

CADRITES, a kind of Religious among the *Mahometans*. Their Founder was *Abdul Cadri*, a great Philosopher and Lawyer; whence they fetch their Name, *Cadrites*. They live in Common, and in a kind of Monasteries; which, however, they are allow'd to quit, if they request it, and to marry; on condition of their wearing black Buttons on their Garments, to distinguish 'em from the rest of the People. In their Monasteries, each *Friday*, they pass the greatest Part of the Night in running round, holding each others Hand, and crying incessantly *Hebi, living*, one of the Names of God: One of their Number plays all the Time on a Flute, to animate 'em in this extravagant Dance.

CADUCEUS, *Mercury's* Rod; or a Wand, twisted with two Serpents. The Poets attribute wondrous Virtues to the *Caduceus*; as that of throwing People into a Sleep, raising the Dead, &c. It was also us'd by the Ancients as a Symbol of Peace and Concord: Thus, we read, the *Romans* sent the *Carthaginians* a *Javelin* and a *Caduceus*, offering 'em their Choice, whether of War or Peace. The Word is deriv'd a *Cadene*, because it laid Contentions and Wars. Among the *Romans*, those who denounc'd War were call'd *Feciales*; and those who went to demand Peace, *Caducessores*; because they bore a *Caduceus* in their Hand. The *Caduceus* found on Medals, is a common Symbol, signifying good Conduct, Peace, and Prosperity. The Rod expresses Power, the two Serpents Prudence, and the two Wings Diligence.

CADUCUS MORBUS, in Medicine; see EPILEPSY.
CÆCUM, or rather CÆCUM, *Intestinum*, or *Blind-Gut*, is the first of the great Guts. It is four or five Fingers breadth long, and about the Bigness of a Swan's Quill; call'd *Cæcum*, because only open at one end, where it is ty'd to the Beginning of the Colon, as an Appendage thereto; so that the Excrements come and go out at the same Orifice. Its other End is not tied to the Mesentery, but to the right Kidney, by means of the *Peritonæum*. The true use of this Part is not yet determin'd. Some account it as a second Stomach; wherein the Food, after having detusch'd all its Chyle thro' the Lacteals, undergoes a farther Digestion, so as to part with more Chyle through the Lacteals below it. Dr. *Lifter* assigns the use of the *Cæcum* to be, to keep the Excrements which pass into its Cavity, (as most of those of sound Animals he thinks do) till they are sufficiently drain'd, bak'd, and harden'd, to receive the Figure to be given 'em by the Colon and *Rectum*. He adds, to confirm this, that wherever there are elegantly figur'd Excrements of the first kind, there is a capacious *Cæcum*; and *vice versa*. This indeed is true, that some Ani-

mals, which are naturally loose, have either no *Cæcum* at all, or very little; as the *Talpa*, *Levinus Terrestris*, *Gula*, &c. Nature's End, in thus providing for the Figuration of the Excrements, he takes to be, first, to prevent Diarrhœas; secondly, to abide Hunger the better; (thus it is that Snails, in Winter, rest with full Intestines;) Lastly, to heighten the Digestion and Fermentation in the Stomach and small Guts.

Dr. *Mugroove* gives us an Account, in the *Philosophical Transactions*, of the *Cæcum* of a Dog being cut out, without any Prejudice to the Animal. M. *Giles* gives us another, of the *Cæcum* of a Lady being divided so as to form a Tumor, that held almost three Chopines of a thin, greyish, almost liquid Substance, whereof the dy'd. And Mr. *Knowles*, a third, of a Boy's *Cæcum* being vastly extended and stuff'd with Cherry-stones, which likewise prov'd Mortal.

Some say, the Name, *Cæcum*, is mistaken; not allowing this to be the *Cæcum* of the Antients, which they imagine to be the thick globous Part, of the Colon, immediately appended to the *Ileum*; and therefore give this Part the Name of *Appendicula Vermiformis*. See INTESTINES.

CAG, or KEG, is a Barrel, or Vessel, containing from four to five Gallons. See MEASURE.

CAIMACAM, *Lieutenant*, a Dignity in the *Ottoman* Empire. There are ordinarily three *Caimacams*; one constantly attending the Grand Signior, another the Grand Vizier, and a third residing constantly at *Constantinople*, in quality of Governor; who examines Affairs of Policy, and regulates 'em in great measure. The *Caimacam* that attends the Vizier, only officiates when at a distance from the Grand Signior; his Function ceasing, when the Vizier is with the Sultan. The *Caimacam* of the Vizier is his Secretary of State, and the first Minister of his Council. The Word is compos'd of the two Arabic Words, *Caim* *mechum*, he who holds the Place, or discharges the Function of another.

CAINITES, or CAINIANS, a Sect of ancient Hereticks, so call'd from *Cain*; whom they esteem'd as their Father. The *Cainites* were a Branch of the *Gnostics*: They held, that *Cain* and *Ephraim*, *Isa*, and those of *Sodom*, were born of a most eminent Celestiall Virtue; that *Abel*, on the contrary, was born of a Virtue much less eminent: To *Cain*, and others of the same Order, who, according to them, had a mighty Knowledge of all Things, they associated *Judas*; whom they held in no small esteem, that they had a Book among 'em call'd the Gospel of *Judas*. S. *Epiphanius* relates, and at the same time refutes their Errors.

CALAMINARIS LAPIS, *Calamine Stone*, *Calamine*, or *Cadmia*, a kind of fossil bituminous Earth, of some use in Medicine, but of more in Foundry; being us'd to dye Copper yellow, *i. e.* to convert it into Brass. It is either of a greyish Colour, as that of *Germany* and *England*; or reddish, as that about *Liege*, and in some Parts of *France*; accounted the best, because yellow by Calcination. It is dug out of Mines, usually in small Pieces; having always Eyes, sometimes Veins, of Lead usually; tho' not always found in Lead-Mines. We have Mines of *Calamine* at *Wrixton* in *Somerfetshire*. It is generally dug in barren rocky Ground; its Courses running, usually, at 6 o'Clock, as they call it, *i. e.* from East to West; sometimes at 9, and sometimes at 12; or perpendicular, which is accounted the best. When dug, it is wast'd, or budded, as they call it, in a running Water, which carries off the impure and earthy Parts; leaving the Lead, *Calamine*, and other sparry Parts at bottom: They then put it in a Sieve, and shaking it well in Water, the Lead mix'd with it sinks to the bottom, the sparry Parts get to the top, and the *Calamine* lies in the middle: Thus prepar'd, they bake it in an Oven four or five Hours; the Flame being so contriv'd as to pass over, and so to heat and bake the *Calamine*; stirring and turning it all the while with Iron Rakes. This done, they beat it to Powder; picking out of it what Stones they find; and thus it is fit for use. For the manner of applying it in the Preparation of Brass. See BRASS.

Besides the two *Natural Calamines*, there are *Artificial* ones: The best is that call'd *Pompholix*; which see.

Calamine is of some medicinal Virtue, being astringent, defecative, and detensive; much us'd for taking off Films from the Eyes of Hoarles, &c.

CALAMITA, in Pharmacy, a Term sometimes us'd for *Syrax*, because frequently put up in Quills. See SYRAX.

CALAMITES, See CADMIA, and CALAMINARIS.

CALAMUS Aromaticus, call'd also *Calamus Vernus*, and *Calamus Amarus*, and *Acorus*; a kind of Rush, of the Thickness of a Goose's Quill, two or three Fout high, growing in the *Lowans*. Its chief, and almost only use, is for Treacle: It must be chosen grey-whitish without, and reddish within; its Pulp white, and its Taste insupportably bitter.

Calamus Scripatorius, in Anatomy, is a Dilatation of the fourth Ventricle of the Brain; so called from its Figure, which resembles that of a Quill.

CALATRAVA, a Military Order, instituted in 1248, by *Sancho III.* King of *Castile*, on the following Occasion: The *Moor*s going to attack the little City *Calatrava*, and the *Templers*, who held it, surrendering it up to the King, on a Supplication of their Inability to defend it, *Diego Velazquez*, a *Cistercian* Monk, but a Man of Quality, persuaded *Raimond* Abbot of *Fitera*, a Monastery of *Cistercians*, to beg *Calatrava* of the King. He obtain'd it; and *Raimond* and *Diego* put themselves in it; being follow'd by a great number of People, who join'd 'em out of Zeal, for the Defence of *Calatrava*. The *Moor*s abandoning the Enterprize, many of those who came to the Defence of the City, enter'd the Order of the *Cistercians*; and that under a Habit more fit for Military than Monastic Exercises. Accordingly, they began to make Excursions on the *Moor*s; which was the Rule of the Order of *Calatrava*. The first Grand Master was *Garcias*; under whose Government the Order was confirm'd by *Alexander III.* in 1164. In 1489, *Ferdinand* and *Isabella*, with the Consent of Pope *Innocent VIII.* remitted the Grand-Mastership of *Calatrava* to the Spanish Crown: So that the Kings of *Spain* are now become perpetual Administrators thereof. The Knights bear a Cross Guise, fleurde-lis'd with Green, &c. Their Rule and Habit was originally that of the *Cistercians*; but their Dress was a little shorten'd on account of their Exercises; and in process of Time they were permitted a secular Habit.

CALCANEUS, in Anatomy, the same as *Os Calcis*, or the *Heel-Bone*: It lies under the *Affrogatus*, to which it is articulated by *Gingimus*; behind it is a large Protuberance, which makes the *Heel*, and into which the *Tendo Achillis* is inserted.

CALCANTHUM, is Vitriol Rubify'd. Some maintain *Calcanthum* and *Calceolar* to be the same Thing; but *Pomerey* is of another Sentiment, and takes *Calcanthum* to be nothing else but Vitriol. See *VITRIOL*, and *CHALCITIS*.

CALCINATION, the Action of calcining any Matter; i. e. of reducing it into a *Calx*, or a very subtle Powder, or even only into *Ashes*, by Fire; sometimes also termed *Chymical Pulverisation*. *Calcination* is the next degree of the Power of Fire beyond that of *Fusion*: For when Fusion is longer continu'd, not only the more subtle Particles of the Body it self fly off, but the Particles of Fire likewise do imbricate themselves in such Multitude, and are so dispersed and blended throughout its whole Substance, that the Fluidity which was first caus'd by the Fire, can no longer subsist: From this Union arises a third kind of Body, which being very porous and brittle, is easily reduc'd to Powder. For the Fire having penetrated every where into the Pores of the Body, the Particles are both hinder'd from mutual contact, and divided into minute Atoms; so that they are easily reducible into the finest Powder.

Chymists, *Goldsmiths*, and *Founders*, distinguish two Kinds of *Calcination*; the one call'd *Actual*, the other *Potential*. *Actual Calcination*, is that effected by actual Fire, of Wood, Coals, or other Fuel, rais'd to a certain Heat, according to the Nature of the Substance to be calcin'd. *Potential Calcination*, is that procur'd by potential Fire, viz. by Waters, Drugs, &c. which have, as it were, the Force of Fire; as Strong Waters, Corrosive Spirits, &c. *Gold* is calcin'd in the Fire of a Reverberatory, with Mercury, and Sal Ammoniac. See *GOLD*. Silver with common Salt and Alkali Salt. See *SILVER*. Copper with Salt and Sulphur; Iron with Sal Ammoniac and Vinegar; Tin with Antimony, Lead and Sulphur; Mercury with Aqua fortis: This last, also, with most other Minerals, calcines with Fire alone, without any other Ingredient.

CALCINATION Philosophical, is when Horns, Hoofs, &c. are hang over boiling Water, or other Liquor, till they have lost their Mucilage, and are easily reducible into Powder.

CALCULATION, the Act of computing several Sums, by adding, subtracting, multiplying, or dividing. See *ARITHMETIC*. An Error in *Calculation* is never protected or secur'd by any Sentence, Decree, &c. In stating Accounts there is always understood, *subto errore calculi*. The Word *Calculi* is us'd in this Sense, in allusion to the Practice of the Antients, who us'd *Calculi*, or little Stones, in making Computations, in taking Suffrages, and in keeping Accounts, &c. as we now use Counters, Figures, &c.

CALCULATION is particularly us'd to signify the Computations in Astronomy and Geometry; for making Tables of Logarithms, Eclipses, Ephemerides, &c. See *ECLIPSE*, &c.

CALCULATION of Clock and Watch-Work. See *CLOCK* and *WATCH-WORK*.

CALCULUS, in Medicine, the Disease of the Stone in the Bladder, or Kidneys; See *STONE*, *LITHOTOMY*, &c. In the Bladder 'tis usually call'd *Lithiasis*; and in the Kidneys *Nephritis*; which see. The Term is pure *Latin*, and signifies, literally, a little Pebble, or Flint. Whence also, the Term *Calculation*. See *CALCULATION*.

CALCULUS, or *Methodus Differentialis*, in Mathematics, is a Method of differencing Quantities; or of finding an infinitely small Quantity, which being taken infinite times, shall be equal to a given Quantity: or, as others define it, the Arithmetic of infinitely small Differences between variable Quantities.

The Foundation, then, of this *Calculus*, is an infinitely small Quantity, or an Infinitesimal, which is a Portion of a Quantity, incomparable to that Quantity; or that is less than any assignable one, and therefore accounted as nothing: the Error accruing by omitting it being less than any assignable one, i. e. less than nothing. Hence two Quantities, only differing by an Infinitesimal, are equal. The better to conceive the Nature of an Infinitesimal, suppose, that in measuring the Height of a Mountain, while you are looking thro the Sights, the Wind blows off the smallest Grain of Dust; the Height of the Mountain is, then, less by the Diameter of the Dust than before: But as the Mountain is still found the same Height, whether the Dust be there or not, its Diameter has nothing to do in the present Case, and passes for nothing, i. e. is infinitely small. Thus, in Astronomy, the Diameter of the Earth is an Infinitesimal, in respect of the Distance of the Fix'd Stars: And the same holds in abstract Quantities. The Name *Infinitesimal*, therefore, is merely relative, and involves a Relation to another Quantity; not any real Ess or Being.

Now Infinitesimals are call'd *Differentials*, or differential Quantities, when they are consider'd as the Differences of two Quantities. *Sir Isaac Newton* calls 'em *Fluxions*; considering them as the momentary Increments of Quantities; e. g. of a Line generated by the Flux of a Point; or of a Surface by the Flux of a Line, &c. The differential *Calculus*, therefore, and the Doctrine of *Fluxions* are the same thing under different Names: The former, given by *M. Leibnitz*, and the latter by *Sir Isaac Newton*; each of whom lay claim to the Discovery. See *FLUXIONS*. There is, indeed, a Difference in the manner of expressing the Quantities, resulting from the different Views wherein the two Authors consider the Infinitesimals; the one as Increments, the other as Differences: *Leibnitz*, and most Foreigners, express the Differences of Quantities by the same Letter as variable ones; only prefixing the Letter *d*; thus the Differential of *x* is call'd *dx*; and that of *y*, *dy*: Now *dx* is a positive Quantity, if *x* continually increase; negative if it decrease.

The *English*, with *Sir Isaac Newton*, instead of *dx*, write *ẋ* (with a Dot over it) for *dy*, &c. which Foreigners object against, on account of that Confusion of Points, which they imagine arises, when Differentials are again differenc'd; besides, that the Printers are more apt to overlook a Point than a Letter.

Stable Quantities being always express'd by the first Letters of the Alphabet $da = 0, db = 0, dc = 0$; wherefore $d(x + y - a) = dx + dy$, and $d(x - y + a) dx - dy$. So that the Differencing of Quantities is easily perform'd, by the Addition or Subtraction of their Components.

To difference Quantities that mutually multiply each other; The Rule is, first, Multiply the Differential of one Factor into the other Factor, the Sum of the two Factors is the Differential sought: thus, the Quantities being *xy*, the Differential will be $x dy + y dx$, i. e. $d(xy) = x dy + y dx$. Secondly, if there be three Quantities mutually multiplying each other, the Product of the two most then be multiply'd into the Differential of the third: thus, suppose oxy , let $ox = t$, then $oxy = ty$; consequently $d(oxy) = t dy + y dt$: But $dt = v dx + x dv$. These Values, therefore, being substituted in the antecedent Differential, $t dy + y dt$, the Result is $d(oxy) = v x dy + oy dx + x y dv$. Hence 'tis easy to apprehend how to proceed, where the Quantities are more than three.

If one variable Quantity increase, while the other *y* decrease, 'tis evident $y dx - x dy$ will be the Differential of $\frac{x}{y}$.

To difference Quantities that mutually divide each other: The Rule is, first, multiply the Differential of the Divisor into the Dividend, and, on the contrary, the Differential of the Dividend into the Divisor; subtract the last Product from the first, and divide the Remainder by the Square of the Divisor; the Quotient is the Differential of the Quantities mutually dividing each other. See *FLUXIONS*.

CALCULUS Exponentialis, is a Method of differencing exponential Quantities, and summing up the Differentials or Fluxions of Exponential. By exponential Quantity, is here understood a Power, whose Exponent is variable; e. g. x^a .

To difference an exponential Quantity: There is nothing requir'd but to reduce the exponential Quantities to Logarithmic ones; which done, the differencing is manag'd as in Logarithmic Quantities: Thus, suppose the Differential of the Exponential Quantity x^y requir'd, let

$$\begin{aligned} & \frac{x^2}{2} = 3 \\ \text{Then will } & y/x = 1/3 \\ & 1xy dx : x = dx : 3 \\ & 3xy dx + 3y dx : x = dx : 3 \\ & \frac{3xy dx + 3y dx}{y-1} : x = dx : 3 \end{aligned}$$

That is, $3xy dx + 3y dx = dx$. See EXPONENTIAL.

CALCULUS INTEGRALIS, is a Method of integrating, or summing up Fluxions or Differential Quantities; i. e. from a Differential Quantity given, of finding the Quantity from whose differentiating the given Differential results. The *Integral Calculus* therefore, is the Inverse of the Differential one: whence the *English*, who usually call *Differentials*, *Fluxions*, give this *Calculus*, which ascends from the Fluxions, to the flowing or variable Quantities; or, as Foreigners express it, from the Differences to the Sums; by the Name of the *Inverse Method of Fluxions*. See FLUXIONS. Hence, the Integration is known to be justly perform'd, if the Quantity found according to the Rules of the *Differential Calculus*, being different'd, produce that propos'd to be summ'd. See SUMMATORY *Calculus*.

Suppose f the Sign of the Sum, or Integral Quantity; then $f y dx$ will denote the Sum, or Integral of the Differential $y dx$.

To integrate, or sum up a Differential Quantity. 'Tis demonstrat'd, first, that $f dx = x$: secondly, $f(dx + dy) = x + y$: thirdly, $f(x dy + y dx) = xy$: fourthly, $f(m x m - 1 dx) = x^m$: fifthly, $f(\pi : m) x (\pi - m) : m dx = x^m$: sixthly, $f(y dx - x dy) : y^2 = x/y$. Of these the fourth and fifth Cases are the most frequent; wherein the differential Quantity is integrated, by adding a variable Unity to the Exponent, and dividing the Sum by the new Exponent multiply'd into the Differential of the Root; v. g. in the fourth Case, by $m - 1 + 1 dx$, i. e. by $m dx$.

If the Differential Quantity to be integrated, don't come under any of these Formula's, it must either be reduc'd to an integrable Finite; or an infinite Series, each of whose Terms may be summ'd.

It may be here observ'd, that, as in the Analysis of Finites, any Quantity may be rais'd to any degree of Power; but, *vice versa*, the Root can't be extract'd of any root: So in the Analysis of Infinites, any variable or flowing Quantity may be different'd; but, *vice versa*, any Differential can't be integrated. And as in the Analysis of Finites, we are not yet arriv'd at a Method of extracting the Roots of all Equations; so neither has the *Integral Calculus* arriv'd at its Perfection: And as in the former we are oblig'd to have recourse to Approximation; so in the latter we have recourse to infinite Series, where we can't attain to a perfect Integration.

CALCULUS LITERALIS, or *Literal Calculus*, is the same with *Specious Arithmetic*; so call'd, from its using the Letters of the Alphabet, in contra-distinction to *Numerical Arithmetic*, which uses Figures. In the *Literal Calculus*, given Quantities are express'd by the first Letters, a, b, c, d ; and Quantities sought by the last z, y, x , &c. Equal Quantities are denoted by the same Letters.

CALCULUS STRUS, is a new kind of *Calculus*, propos'd by M. Leibnitz, built on the Consideration of the Situation of Quantities; not of their Magnitudes, as in the rest. This *Calculus* he makes the Foundation of a new Analysis, which he calls *Analysit Strus*.

CALEFACTION, a School Term for the Action of Fire in heating a Body: 'tis us'd particularly in Philology and Pharmacy; where *Calectation* is distinguish'd from *Coctio*; the first being apply'd, where the thing is only heated without boiling. See COCTION.

CALENDAR, a Distribution of Time, accommodated to the Uses of Life; or a Table, or Almanack, containing the Order of Days, Weeks, Months, Feasts, &c. happening throughout the Year. See TIME, YEAR, MONTH, FEAST, &c.

The *Roman Calendar*, which continues still in use, owes its Origin to *Romulus*; but has undergone various Reformation since his Time. That Legislator distributed Time into several Periods, for the use of the People under his Command: But as he was much better vers'd in Matters of War than of Astronomy, he only divided the Year into ten Months; making it begin in the Spring, on the first of *March*: imagining, the Sun made his Course thro' all the Seasons in 304 Days. His *Calendar* was reform'd by *Numa*, who added two more Months, *January* and *February*, placing 'em before *March*: So that his Year consisted of 355 Days, and began on the first of *January*. He chose, however, in Imitation of the *Greeks*, to make an Intercalation of 45 Days, which he divided into two; intercalating a Month of 22 Days at the end of each two Years; and at the end of each two Years more, another Month of 23 Days;

which Month, thus interpos'd, he call'd *Mercedonius*, or the intercalary *February*. But these Intercalations being ill observ'd by the Pontiffs, to whom *Numa* committed 'em, occasion'd great Disorders in the Constitution of the Year; which *Cesar*, as Sovereign Pontiff, endeavour'd to remedy: To this End he made choice of *Siggenius*, a celebrated Astronomer of those Times; who found, that the Dispensation of Time in the *Calendar*, could never be settled on any sure footing, without having regard to the annual Course of the Sun. Accordingly, as the Sun's yearly Course is perform'd in 365 Days six Hours, he reduc'd the Year to an equal number of Days: The Year of this Correction of the *Calendar*, was a Year of Confusion; they being oblig'd, in order to swallow up the 65 Days that had been imprudently added, and which occasion'd the Confusion, to add two Months besides the *Mercedonius*, which chanc'd to fall out that Year; so that it consist'd of 15 Months, or 445 Days. This Reformation was made in the Year of *Rome* 708; 42 or 43 Years before Christ.

The *Roman*, call'd also the *Julian Calendar*, from its Reformer *Julius*, is dispos'd into Quadrannual Periods; whereof the three first Years, which he call'd *Communes*, consist of 365 Days; and the fourth, *Bissextile*, of 366; by reason of the six Hours, which in four Years make a Day, or somewhat less: for in 134 Years, an Intercalary Day is to be retrench'd. On this account it was, that Pope Gregory XIII. with the Advice of *Clevois* and *Cicconius*, appointed that the hundredth Year of each Century should have no *Bissextile*, excepting each 10th Century: that is, a Subtraction is made of three *Bissextile* Days in the Space of four Centuries; by reason of the 11 Minutes wanting in the six Hours whereof the *Bissextile* consists. See BISSEXTILE.

This Reformation of the *Gregorian Calendar*, or the *New Style*, as we call it, common'd on the 4th of *October*, 1582, when ten Days were thrown out at once; so many having crept into the Computation since the Time of the Council of *Nice*, in 325; by the Defect of 11 Minutes.

Julian Christian Calendar, is that wherein the Days of the Week are determin'd by the Letters A, B, C, D, E, F, G; by means of the Solar Cycle, and the New and Full Moons, especially the *Paschal Full Moon*, with the Feast of *Easter*, and the other Moveable Feasts depending thereon; by means of Golden Numbers, rightly dispos'd thro' the *Julian Year*. See GOLDEN NUMBER.

In this *Calendar*, the Autumnal Equinox is suppos'd to be fix'd to the 21st Day of *March*; (see EQUINOX); and the Cycle of 19 Years, or the Golden Numbers, constantly to indicate the Places of the New and Full Moons: yet both are erroneous. See CYCLE. And hence arose a very great Irregularity in the Time of *Easter*; See *EASTER*. To shew this Error the more apparently, let us apply it to the present Year: In this Year, then, the Vernal Equinox falls on the 10th of *March*; and therefore comes too early by 11 Days. The *Paschal Full Moon* falls on the 7th of *April*; and therefore too late, with regard to the Cycle, by three Days: *Easter*, therefore, which should be on the 10th of *April*, will be on the 17th. The Error, here, lies only in the post-Position of the Moon, thro' the Defect of the Lunar Cycle. If the Full Moon had fell on the 11th of *March*, *Easter* wou'd have fallen on the 15th of *March*: and therefore the Error arising from the Anticipation of the Equinox, wou'd have exceedingly augmented that arising from the post-Position.

These Errors, in Course of Time, were so multiply'd, that the *Calendar* no longer exhibited any regular *Easter*. Pope Gregory XIII. therefore, by the Advice of *Aloysius Lilius*, in 1582, threw 10 Days out of the Month of *October*, to restore the Equinox to its Place, viz. the 21st of *March*; and thus introduc'd the Form of the *Gregorian Year*, with such a Provision, as that the Equinox should be constantly kept to the 21st of *March*. The New Moons and Full Moons, by Advice of the same *Lilius*, were not to be indicated by Golden Numbers, but by Epacts. See EPACT. The *Calendar*, however, is still retain'd in *England*, and the other Protestant States of the North; without this Correction.

Gregorian Calendar, is that, which by means of Epacts rightly dispos'd thro' the several Months, determines the New and Full Moons, and the Time of *Easter*; with the Moveable Feasts depending thereon, in the *Gregorian Year*. The *Gregorian Calendar* therefore differs from the *Julian*, both in the Form of the Year, (see YEAR); and in that Epacts are substituted in lieu of Golden Numbers: For the Use and Disposition whereof, see EPACT.

Tho' the *Gregorian Calendar* be preferable to the *Julian*, yet is it not without its Defects: (perhaps, as *Lycio Brabe* and *Cassini* imagine, 'tis impossible ever to bring the thing to a perfect Justice.) For, first, the *Gregorian Intercalation* does not hinder, but that the Equinox sometimes lags behind the 21st of *March*, as far as the 23d, and sometimes anticipates it, falling on the 19th: And the Full Moon, which falls on the 20th of *March*, is sometimes the

Pafchal; yet not fo accounted by the *Gregorians*. On the other hand, the *Gregorians* account the Full Moon of the 22d of *March*, the Pafchal; which yet, falling before the Equinox, is not Pafchal. In the firft Cafe therefore, *Eafter* is celebrated in an Irregular Month; in the latter, there are two *Easters* in the fame Ecclefiaftical Year. In like manner, the Cyclical Computation is founded on mean Full Moons; which yet may precede or follow the true ones by fome Hours. The Pafchal Full Moon may, alfo, fall on *Saturday*, which is yet refer'd by the Cycle to *Sunday*: Whence, in the firft Cafe, *Eafter* is celebrated eight Days later than it fhould be; in the other it is celebrated on the very Day of the Full Moon, with the *Jews* and *Quartadeciman* Hereticks; contrary to the Decree of the Council of *Nice*. *Scaliger*, and *Cotfivius*, fhew other Faults in the *Gregorian Calendar*; arifing from the Negligence and Inadvertency of the Authors. This *Calendar* is adher'd to by the *Romaniſts*, throughout *Europe*, &c. and us'd wherever the *Roman* Bevirity is us'd. The Proteftant States of *Germany* and *Holland* have likewife come into it. See *Reform'd Calendar*.

Reform'd, or Corrected Calendar; that which fetting afide all Apparatus of Golden Numbers, Epafhs, and Dominical Letters, determines the Equinox, with the Pafchal Full Moon, and the Moveable Feafts depending thereon, by Aftronomical Computation, according to the *Rudolphine* Tables.

This *Calendar* was introduc'd among the Proteftant States of *Germany*, in the Year 1700; when 11 Days were at once thrown out of the Month of *February*: So that in 1700, *February* had but 18 Days: By this means, the *Corrected Style* agrees with the *Gregorian*. This Alteration in the Form of the Year they admitted for a Time; in expectation that the real Quantity of the Tropical Year being at length more accurately determin'd by Obfervation, the *Romaniſts* would agree with 'em, on fome more convenient Interchange.

Conſtruction of a CALENDAR, or Almanack.

1. Compute the Sun's and Moon's place for each Day of the Year; or take 'em from *Ephemerides*. See *SUN*, and *MOON*.
2. Find the Dominical Letter, and by means thereof, distribute the *Calendar* into Weeks. See *DOMINICAL LETTER*.
3. Compute the Time of *Eafter*, and thence fix the other Moveable Feafts. See *EASTER*.
4. Add the Immoveable Feafts, with the Names of the Martyrs.
5. To every Day add the Sun's and Moon's Place, with the Rifing and Setting of each Luminary; the Length of Day and Night; the *Crepufcules*, and the Aspects of the Planets.
6. Add in the proper Places, the chief Phafes of the Moon. See *PHASES*. The Sun's Entrance into the Cardinal Points; i. e. the Solitices and Equinoxes; together with the Rifing and the Setting, eſpecially Helical, of the Planets and chief Fix'd Stars. Means for each whereof, will be found under the proper Heads in this Dictionary.

The Duration of the *Crepufcules*, or the End of the Evening, or Beginning of the Morning Twilight; together with the Sun's Rifing and Setting, and the Length of Days, may be transfer'd from the *Calendars* of one Year, into thofe of another: the Differences in the feveral Years being too fmall to be of any Conſideration in Civil Life.

Hence it appears, that the Conſtruction of a *Calendar* has nothing in it of Myſtery or Difficulty; if Tables of the heavenly Motions be but at hand.

The *Gelealeſs Calendar*, is a Correction of the *Perſian Calendar*, made by Order of Sultan *Geleleddan*, in the 46th Year of the Hegyra; of Chriſt 1089.

The Name *Calendar* is here given, from the Word *Calende*, wrote antiently in large Characters at the Head of each Month.

CALENDAR, is alfo us'd for the Catalogue, or *Faſti*, antiently kept in each Church, of the Saints; both univerſal, and thofe particularly honour'd in each Church; with their Biſhops, Martyrs, &c.

There are ſtill fome of theſe *Calendars* extant; particularly a very antient one of the Church of *Rome*, made about the middle of the IVth Century; comprehending alfo the Feſtivals both of the Heathens and Chriſtians, which were then very few in number. *F. Mabillon* has alfo printed the *Calendar* of the Church of *Carthage*; made about the Year 483. The *Calendar* of the Church of *Ethiopia*; and that of the *Coptes*, publiſh'd by *Ludolphus*, ſeem to have been made after the Year 760. The *Calendar* of the *Syrians*, printed by *Genebrard*, is very imperfeſt: That of the *Malabarites*, publiſh'd by *F. Papebroch*, in moſt reſpects agrees with that of the *Greeks*, publiſh'd by *Genebrard*. The *Calendar* publiſh'd by *Dom. d'Auberry*, under the Title of *The Solar Year*, is no more than the *Calendar* of the Church of *Arms*. The *Calendar* publiſh'd in 1687, at *Auburg*, by *Beckius*, is apparently that of the antient Church of *Auburg*, or rather *Strasburg*, wrote towards the Cloſe of the 10th Century. The *Malabarique Calendar*, ſtill us'd in the five Churches of *Malabar*; the *Ambroſian*

of *Milan*; and thoſe of *England*, before the Reformation; have nothing in 'em but what is found in thofe of the other *Western* Churches; viz. the Saints honour'd throughout, and thofe peculiar to the Church where they are us'd.

Theſe antient *Calendars* are not to be confounded with the antient *Martyrologies*: For each Church had its peculiar *Calendar*; whereas the *Martyrologies* regarded the whole Church in general: containing the Martyrs and Confefſors of all the Churches. From all the feveral *Calendars* was form'd one *Martyrology*: fo that *Martyrologies* are poſterior to *Calendars*. See *MARTYROLOGY*.

CALENDS, CALENDAE, in the *Roman* Chronology, the firſt Day of each Month. See *MONTH*. The *Calends* were reckon'd backwards, or in a retrograde Order: Thus, v. g. the firſt of *May* being the *Calends* of *May*, the laſt, or 30th of *April*, was the *Prædie Calendarum*, or ſecond of the *Calends* of *May*; the 29th of *April*, the third of the *Calends*, or before the *Calends*: and ſo back to the 13th, where the Ides commence; which are, likewiſe, number'd invertedly to the fifth, where the Nones begin; which are number'd after the ſame manner to the firſt Day of the Month, which is the *Calends* of *April*. See *NONES*, and *IDES*. The Rules of Computation by *Calends*, are included in the following Verſes.

*Primo Dies Menſis conſueque eſt diſta Calendarum:
Sec Majus Nones, October, Julius, Et Mars;
Quatuor at reliqui: Dabit Idus quilibet Octo.
Iude Dies reliquis omnes die eſſe Calendarum;
Quas retro numerant dies a Menſe ſequentem.*

To find the number of the *Calends* we are in, ſee how many Days there are yet remaining of the Month, and to that Number add two: For Example; ſuppoſe it the 22d of *April*; 'tis then the 10th of the *Calends* of *May*. For *April* contains 30 Days; and 22 taken from 30, there remains 8; to which two being added, the Sum is 10.

The Word comes from the Latin *Calare*, to call, proclaim; becauſe on the Day of the *Calends*, or firſt of the Month, the Pontiff, with a loud Voice, proclaim'd the Day whereon the Nones were to be; whether on the fifth or ſeventh Day of the Month: Or rather, becauſe originally the inferior Pontiff had it in charge to declare when the New Moon ſhould firſt appear, in order to watch it to the People; which they call'd *Calare*, apparently from the *Greek* *καλλω*, *evoca*. The *Calends*, according to *Varro*, were dedicated to *Juno*. On the *Calends* of *March*, the *Romans* us'd to take their Leaves, &c. in regard the Year, as fix'd by *Romulus*, commenc'd on that Day. The *Calends* of *March* was a fatal Day to Debtors, becauſe then their Leaves expir'd; which occaſion'd *Horace* to call them *Trifles*.

The *Roman* Writers themſelves are at a loſs for the Reaſon of this abſurd and whimſical manner of computing the Days of the Month; yet it is ſtill kept up in the *Roman* Chancery; and by ſome Authors, out of a vain Affectation of Learning, prefer'd to the common, more natural, and eaſy manner. See *YEAR*, *DAY*, *NONES*, *IDES*.

CALENTURE, is an inflammatory Fever, frequent at Sea, attended with a Delirium; wherein the Patients imagine the Sea to be green Fields; and, if not prevented, will leap over-board: which way they are frequently loſt.

CALIDUCTS, a kind of Pipes, or Canals, diſpos'd along the Walls of Houſes and Apartments; us'd by the Antients for the Conveyance of Heat to ſeveral remote Parts of the Houſe, from one common Furnace. See *STOVES*, *FIRE*, &c.

CALIDUM Innatum, or Innate Heat; a Term the Antients had many vague Notions about; but Geometrical Reaſoning has taught us to affix a more diſtinct Idea hereto: For 'tis hence we know, that this innate Heat is no more than the Attrition of the Parts of the Blood; occaſion'd by its circulatory Motion, eſpecially in the Arteries; wherein, being propell'd from a circular Baſe, towards the Apex of an hollow Cone, with a Force begun in the Heart, it meets with a double Reſiſtance; viz. againſt the Sides of the Arteries, and againſt the preceding Blood. For where as the Blood contains in it Parts that are fired to excite Heat, whenever they can get at liberty; that is, if the Parts incloſing them can be put aſunder; and whereas the Parts incloſing ſuch Corpuscles cannot be got aſunder, unleſs by ſome Niſus of the Parts of Blood with one another, whereby the Attrition and Abrasion of the cohering Particles is produc'd; it follows, that the Heat will be ſo much the greater, by how much ſuch a Niſus, and Attrition of the Parts among one another is increas'd. And with the ſame Reſiſtances, (that is, the Sections of the Arteries, and the Quantity of Blood remaining the ſame) and an increas'd Force of the Heart, and circular Motion of the Blood, the Niſus and Attrition of the Parts of Blood among one another, muſt neceſſarily be increas'd; both by the preceding Blood being ſtruck harder upon; by the Protruſion of a ſucceeding Blood, coming on with an increas'd Velocity; and the occaſioning thereby alſo more frequent Strokes

Strokes against the Sides of the Arteries; by which means, an increas'd Velocity of Blood increases the Heat; and consequently does its Heat depend upon its Circulation. From hence it appears, that at the same Distances from the Heart, the Heat of equal Quantities of Blood will be as their Velocities; and, that in the same Velocities of Blood, the Heat will be reciprocally as the Distances from the Heart. For since, in homogeneous and simple Bodies, nothing else is requir'd to disengage the Particles exciting Heat, but a Nilus and Attrition of Parts, produc'd by the Force of the Heart; to which is always proportional the Velocity of the Blood; and the Re-action, or Resistance of the Arteries and the antecedent Blood; it follows, that if the Resistance or Re-action is not alter'd, which it will not be at the same distance from the Heart; then the Heat of the Blood will not be alter'd, unless by an Alteration of the Impetus, or Velocity impress'd upon the Blood from the Heart: That is, as Effects are proportional to their Causes, the Heat of the Blood, at the same Distances from the Heart, will be proportional to its Velocity. In the same manner it appears, that if the Velocities impress'd by the Heart be equal, there can be no change in the Heat of the Blood, but from a diversify'd Resistance, or Re-action of the Arteries and antecedent Blood. But the Resistance of the preceding Blood is proportional to its Quantity; and its Quantity is reciprocally proportional to the Distance from the Heart; (for the nearer the Blood is to the Heart, so much the greater will be its Quantity between any given Place and the Extremity of the Artery.) And therefore the Resistance of the Arteries will also be to much the greater, by how much nearer they are to the Heart: For in this case, the Resistance is proportional to the Velocity; and the Velocity of the Blood is greatest at the least Distances from the Heart. Hence the Heat of the Blood may be consider'd as a Rectangle, under the Velocity and the Distance: that is, if in two Persons the Velocity be as three, and the Distances wherein we would determine the Heat, be as much more in one as in another; that is, as two to one; the Heat of one will be six, and the other three: that is, the Heat of the first will be double that of the second. If the Distance of the first be as two, and the Velocity as four; but the Distance of the second as three, and the Velocity as one; the Heat of the first will be as eight, and of the second as three: and so the Heat of the first, will be more than double the Heat of the second.

CALIPPIC PERIOD, in Chronology, a Series of 76 Years, returning perpetually round; which elapsed, the Middle of the New and Full Moons, as its Inventor *Calippus*, an *Athenian*, imagin'd, return'd to the same Day of the Solar Year. *Meton*, 100 Years before, had invented the Period or Cycle of 19 Years; (see *METONIC CYCLE*) affirming the Quantity of the Solar Year, 365 d. 6 h. 18' 50" 31' 34"; and the Lunar Month 29 d. 12 h. 45' 47" 26' 48" 30". But *Calippus* considering that the *Metonic* Quantity of the Solar Year was not exact, multiply'd *Meton's* Period by 4, and thence arose a Period of 76 Years, call'd the *Calippic*. The *Calippic Period* therefore contains 27759 Days: And since the Lunar Cycle contains 235 Lunations, and the *Calippic Period* is quadruple of this, it contains 940 Lunations. See *PERIOD*.

It is demonstrat'd, however, that the *Calippic Period* itself is not accurate; that it does not bring the New and Full Moons precisely to their Places, but brings 'em too late by a whole Day in 553 Years.

CALIPH, or **CALYPH**, or **KALIPH**, the first Ecclesiastical Dignity among the *Saracens*: or, as *d'Herbelot* defines it, the Name of a Sovereign Dignity among the *Mahometans*, vested with absolute Power over every thing, relating both to Religion and Policy. The Word is *Arabic*, and signifies Successor, or Heir: And, in effect, *Abubeker*, the first *Caliph*, was *Mahomet's* Successor; whose Successors, again, assum'd the Title of *Caliphs of Syria*. In a little time, however, there arose several other *Caliphs*, who usurp'd the Supreme Power in *Persia*, *Egypt*, and *Africa*. *Pisafire*, who reign'd in 948, was the last *Caliph of Syria*: after whom, the *Turks* becoming Masters thereof, the *Caliph* sunk into Sovereign Pontiff. And the same happen'd in *Egypt*, where the *Caliph* has only left the Title of *Grand Priest* of *Mahomet*. *Vatier* observes, that they call'd themselves *Vicars of God*; and that the *Mahometan* Sultans and Kings fell down before 'em, and kiss'd their Feet: For which Reason, *V. de Beauvau*, calls 'em their *Popes*. The *Caliph of Bagdad*, tho otherwise little more than a Name, still retains the ancient Right of adopting and confirming the Kings of *Arabia* and *Syria*. *Nicod* observes, that the Governors of *Cairo* had formerly the Title of *Caliph*. There were also *Caliphs of Carvan*, in *Tunis*; and of *Spain*; who also bore the Title of King.

The Word comes from the *Arabie*, *Hhalapba*, which signifies not only to succeed, but also to be in the Place of another; not only as *Heir*, but as *Vicar*. In which Sense,

Erpenfius observes, it is, that the Emperors and Sovereign Pontiffs were call'd *Caliphs*, as being God's Vicars and Lieutenants: contrary to the more popular Opinion, that they take the Name *Caliph*, as being *Mahomet's* Successors.

CALIX, **CHALICE**, or **CALICE**, the *Cup*, or Vessel us'd to administer the Wine in, in the Eucharist; and, by the *Romanists*, in the Mass. *Bede* affirms, that the *Chalice*, us'd by *Jesus Christ* at the Supper, had two handles, and held just half a Pint; which the Antients imitated. In the primitive Times the *Chalices* were of Wood: *Pope Zephyrine* first appointed 'em to be of Silver and Gold. Others say, *Urban I.* and *Leo IV.* forbid Tin and Glass; as did likewise the Council of *Calcutt* in *England*: *Horn*, *Lindanus*; and *Beatus Rhenanus*, who had seen some of the ancient *Chalices* in *Germany*, observe, that they had a Pipe, or Tube; fitted artfully to 'em, thro which the People suck'd, instead of drinking. The Word comes from the *Greek* *κάλυξ*.

CALIX, in Botany, is apply'd to a Flower, whose Body, or even a Part of it, is form'd in manner of a Cup or *Chalice*; as the *Cup* or *Body* of a *Tulip*, &c.

CALIX is more particularly us'd for that outward greenish Cover which encompasses and defends the Foliage, or Leaves of a Flower. See *FLOWER*. The *Calix* is sometimes of one entire Piece; as in *Pinks*, &c. and in some broke into several, as in *Roses*, &c. The *Calix* is also call'd *Perianthium*. See *PERIANTHIUM*.

Saffron has no *Calix*; its Flower comes out of the Earth before its Leaves. See *SAFFRON*.

CALIXTINS, a Name given to those among the *Lutherans*, who follow the Sentiments of *George Calixtus*, a celebrated Divine, who oppos'd the Opinions of *St. Augustin*, on Predestination, Grace, and Free Will: So that the *Calixtins* are esteem'd a kind of *Semi-Pelagians*. *Calixtus* maintain'd, that there is in all Men a certain Power of Understanding and Willing; with Natural Knowledge sufficient: And that a good use being made of these, God will give us all the Means necessary to arrive at the Perfection to which Revelation directs 'em.

CALIXTINS, is also a Term, apply'd by the *Romanists* to such as communicate in both Kinds; as the People of *Bohemia*, &c. tho, in other Respects, of the same Faith with themselves: These they don't make Heretics, but only Schismatics: The Word is deriv'd from *Calix*, *Cup*.

CALKING, or **CAUKING** of a Ship, implies the driving in *Oakum*, or somewhat of that kind into the Seams, or Commissures of the Planks, to prevent the Ship's leaking.

CALL, (in Hunting) is a Lesson blown upon the Horn, to comfort the Hounds. Amongst *Fowlers*, *Colls* are artificial Pipes, made to catch several sorts of Birds, by imitating their Notes.

CALLENDER, or **CALANDER**, a Machine us'd in the Manufactures, for pressing certain Cloths, Stuffs of Silk or Woollen, and even Linens; and to make 'em smooth, even, and glossy: 'Tis also us'd for watering, or giving the Waves to *Tabbies* and *Mohairs*. It consists of two large wooden Rollers, round which the Pieces of Stuff are wound: these are put between two large close-polish'd Planks of Wood; the lower serving as a fix'd Base; and the upper moveable, by means of a Screw like that of a Crane; with a Rope, fasten'd to a Spindle which makes its Axis: This upper Part is of a prodigious Weight, sometimes 50 or 60 thousand Pound. 'Tis this Weight that gives the Polish, and that makes the Waves on the Stuffs about the Rollers, by means of a shallow Indenture or Engraving cut in it. The Rollers are taken off, and put on again, by inclining the Machine. The Word comes from the Latin *Cylindrus*; in regard the whole Effect of the Machine depends on a Cylinder. *Borel*, indeed, derives the Name of it from that of a little Bird, of the Swallow Kind; in regard of the Agreement between the Feathers of the Bird, and the Impression of the Machine.

CALLIGRAPHUS, was antiently a Copist or Scrivener, who transcrib'd fair, and at length what the *Notaries* had taken down in Notes, or Minutes; which comes pretty near to what we call *Ingraffing*. The Minutes of Acts, &c. were always taken in a kind of Cypher, or Short-Hand; such as the Notes of *Tiro* in *Gruter*: by which means the *Notaries*, as the *Latins* call'd 'em, or the *Συνογράφοι* and *Ταχόγραφοι*, as the *Greeks* call'd 'em, were enabled to keep pace with a Speaker, or Person who dictat'd. These Notes being understood by few, were copy'd over fair, and at length by Persons who had a good Hand, for file, &c. and these were call'd *Calligraphi*; a Name frequently met with in the Primitive Writers. It comes from the *Greek* *κάλλω*, beauty, and *γράφω*, I write; q. d. *ὁ καλῶς γράφει, ὁὗο ὠρίως* for Beauty or Ornament sake.

CALLIFER, or rather **CALIBRE**, the Aperture of a Piece of Artillery, or any other Fire-Arm; or the Diameter of the Mouth of a Cannon, &c. or of the Ball it carries. Hence,

CALLIPER, or **CALIBRE-Compassez**, is a Rule or Instrument, wherein a Right Line is so divided, as that the first Part being equal to the Diameter of an Iron or Lead Ball of one Pound Weight, the other Parts are to the first, as the Diameters of Balls of two, three, four, &c. Pounds, are to the Diameter of a Ball of one Pound. The *Calliper* is us'd by Engineers, from the Weight of the Ball given, to determine its Diameter, or *Calliper*; or *vice versa*.

The *Calliper*, (Tab. Fortification, Fig. 2.) consists of two thin pieces of Brass, six Inches long, join'd by a Rivet, so as to move quite round each other: The Head, or one End of the Piece is cut circular; and one half of its Circumference divided into every ad Deg. On the other Half are Divisions from 1 to 10; each, again, subdivided into 4: The use of which Divisions and Subdivisions is, that when the Diameter of a Bullet, &c. not exceeding 10 Inches, is taken, the Diameter of the Semicircle, will, among the Divisions, give the Length of that Diameter taken between the Points of the *Callipers*, in Inches and fourth Parts.

The Degrees on the Head, serve to take the Quantity of an Angle; the Method of which is obvious. If the Angle be inward, apply the outward Edges to the Planes that form the Angle; the Degree cut by the Diameter of the Semicircle, shews the Quantity of the Angle sought. For an outward Angle, open the Branches till the Points be outwards, and applying the inward Edges to the Planes that form the Angle, the Degree cut by the Diameter of the Semicircle shew the Angle requir'd; reckoning from 180, towards the Right Hand.

On one Branch of the *Callipers*, on the same Side, are, first, 6 Inches; and each of these subdivided into ten Parts. Secondly, a Scale of unequal Divisions, beginning at two, and ending at 10; each subdivided into four Parts. Thirdly, two other Scales of Lines, shewing, when the Diameter of the Bore of a Piece is taken with the Points of the *Callipers* outwards, the Name of the Piece, whether Iron or Brass; i. e. the Weight of the Bullet it carries; or that 'tis such or such a Pounder, from 1 to 42 Pounds.

On the other Branch of the *Callipers*, on the same Side, is a Line of Chords to about 3 Inches Radius; and a Line of Lines on both Branches, as on the Sector; with a Table of the Names of the several Pieces of Ordnance. On the same Face is a Hand grav'd, and a Right Line drawn from the Finger towards the Centre of the Rivet; shewing, by its cutting certain Divisions made on the Circle, the Weight of Iron Shot, when the Diameter is taken with the Points of the *Callipers*. Lastly, on the Circle, or Head, on the same Side, are grav'd several Geometrical Figures inscrib'd in each other, with Numbers; as a Cube, whose Side is supposed one Foot; a Pyramid on the same Base and Altitude, and the Proportions of their Weight, &c. a Sphere, inscrib'd in a Cube; a Cylinder, Cone, Circle, Square, &c.

In Architecture, **CALLIPER**, or **CALIBRE**, is us'd for the Bulk, Thickness, Volume, or Diameter of any round thing, &c. Thus, they say, these two Columns are of the same *Calibre*, i. e. the same Diameter.

The Gagers also sometimes use *Callipers*, to embrace the two Heads of any Cask, in order to find its Length.

CALLOSITY, a little *Callus* form'd in any part of the Skin; or a white, solid, dry, insensible Flesh; generated by the Congestion of a dry, pituitous Excrement, covering the Circumference of an Ulcer, Wound, &c. and in the Place where good Flesh should grow. The Chirurgion is always to take care that Ulcers close without *Callifuges*. See **CALLUS**.

CALLUS, a kind of Nodus, or Ligature, which joins the Extremities of a fractur'd Bone. The Formation of a *Callus* may be as follows. The Juice that feeds the Bone, running along its Fibres, becomes extravasated in the Place where those Fibres are broke: So that stopping, and gathering together round the Extremities of the Fracture, it there dries, knits, and hardens, to a Consistence like a strong Glue; leaving only a little Inequality in the Place where it is form'd.

Callus's frequently grow so firm as to supply the Place of Bones. In the *Phil. Transact.* we have an Instance of a *Callus* supplying the Place of the *Os Humeri*; taken out, upon its being Curious, by Mr. *Foster*; and another of a *Callus*'s supplying the Place of the *Os Femoris*; and the Person as strong as ever, and walking without any Lameness, by Mr. *Sterman*.

CALLUS, is also a hard dense Knob, or Substance, rising on the Hands, Feet, &c. by much Friction and Pressure against hard Bodies.

CALOGERI, **CALOGERS**, or **CALOYERS**, Monks, or Religious, in *Greece*, both Male and Female; inhabiting, particularly, Mount *Atlas*, but disseminated throughout all the Churches of the East. They follow the Rule of St. *Basil*, and make Vows like the Western Religious. There has never been any Reform among 'em, but they still retain their original Institution, keep their former Habit, &c. to a Title. *Tavernier* observes, they live a very

retir'd austere Life, eating no Flesh; and keeping four Lents, besides a great Number of Fasts, with great Strictness. They eat no Bread till they have earn'd it by the Labour of their Hands. During their Lents, some don't eat above once in three Days, others but twice in seven. Most of the Night they spend in Weeping, &c. Some Authors observe, that the Word *Calogeri* is apply'd particularly to such, among their Religious, as are become Venerable by Age, and the Austerity of their Life. It may be added, that the *Calogers*, among us, be a general Name, and comprehend all the *Greek Monks*; yet, in *Greece* it self, their Priests, or Regulars, are call'd *Ieromonachos*.

The *Turks* use the Word *Calogers* for their Derrices, or Religious Muffulmen. The Word comes from the *Greek* *καλός*; which is form'd from *καλός* and *μοναχός*, i. e. a good old Man.

CALOMEL, in Pharmacy, the Name ordinarily given to *Mercurius Dulcis*. It rather seems to have first belonged to the *Eriophis Mineral*; from *καλός*, *pulcher*, fair; and *μελας*, *niger*, black: for that white or pale Bodies rubb'd herewith, become black. But some will have it given to *Mercurius Dulcis*, from the Authority of a whimsical Chymist, who employ'd a Black in his Laboratory; whole Complexion, as well as that of the Mercury, he alluded to in the Term: the Medicine being fair, and the Operator black. See **MERCURIUS DULCIS**.

CALOTTE, in Architecture, a round Cavity or Depressure, in form of a Cup, or Cap, lathed and plaster'd; us'd to diminish the Rise or Elevation of a moderate Chapel, Cabinet, Alcove, &c. which, without such an Expedient, would be too high for other pieces of the Apartment. It takes its Name from

CALOTTE, a Cap or Coif of Hair, Satin, or other Stuff; us'd first for Necessity, but now become an Ecclesiastical Ornament, in *France*, &c. It was first worn by Cardinal *Richelieu*: The red *Calotte* is the Badge of a Cardinal.

CALQUING, or **CALKING**, a Term in Painting, &c. us'd where the Backside of any Design is cover'd with a black or red Colour; and the Strokes or Lines trac'd thro' on a wax'd Plane, Wall, or other Matter; by passing lightly over each Strok of the Design with a Point, which leaves an Impression of the Colour on the Plane or Wall.

CALITROP, *Chaussé-trappe*, an Instrument with four Iron Points, dispos'd triangularwise; so as there are always three Points bearing on the Earth, the fourth being in the Air: *Budeus* calls it *Calciatrappe*. Several of these are fix'd in the Ground where the Cavalry is to pass, to flick into the Hoofs Feet, and embarras 'em.

CALVA, or **CALVARIA**, the Scalp, or upper Part of the Head; so call'd from its growing bald first. See **HEAD**.

CALVARY, a Term us'd in Catholic Countries for a kind of Chapel of Devotion, rais'd on a Hillcock near a City; in Memory of the Place where Jesus Christ was crucify'd near *Jerusalem*. Such is the Church of St. *Valerian*, near *Paris*; which is accompany'd with several Chapels, in each whereof is represented in Sculpture one of the Mytheries of the Passion. The Word comes from the Latin *Calvarium*, and that from *Calvus*; in regard the Top of that Hillcock was bare, and destitute of Verdure: which is also signify'd by the Hebrew Word *Gogotha*.

CALVINISM, the Doctrine and Sentiments of *Calvin* and his Followers, with regard to Matters of Religion. *Calvinism* subsists in its greatest Purity, in the City of *Geneva*; whence it was first propagated over *France*, the *United Provinces*, and *England*. In *France* it was abolish'd by the Revocation of the Edict of *Nantz*, in 1685. It has been the prevailing Religion in the *United Provinces*, ever since the Year 1572. In *England* it has dwindled since the Time of Queen *Elizabeth*; and is now confin'd among the Dissenters: Tho' it still subsists, a little alloy'd, in the Articles of the *Establish'd Church*; and in its Rigour in *Scotland*. Of the thirteen *Swiss Cantons*, there are six who profess *Calvinism*; which likewise obtains in the *Palatinate*. The distinguishing Tenets of *Calvinism*, are, 1st, That Predestination and Reprobation are prior to the Preference of good or evil Works. 2^{dly}, That Predestination and Reprobation depend on the mere Will of God; without any regard to the Merits or Demerits of Mankind. 3^{dly}, That God gives those whom he has predestinated a Faith which they cannot lose; a necessitating Grace, which takes away the Freedom of Will; and that he imputes no Sin to 'em. 4^{thly}, That the Righteous cannot do any good Work, by reason of Original Sin, which cleaves to 'em. 5^{thly}, That Men are justify'd by Faith only. The modern *Calvinists* reject or palliate some of these Articles.

In *France*, the *Calvinists* are distinguish'd by the Name of *Huguenots*; and, among the common People, by *Perpalliers*. In *Germany* they are confound'd with the *Lutherans*, under the general Title *Protestants*; only sometimes distinguish'd by the Name *Reformed*. F. *Goulier* attributes an hundred Heretics to 'em; but F. *Francis* Few

Ardent improves vastly on the List; making 'em no less than one thousand four hundred.

CALVITIES, in Medicine, Baldness, or a falling off of the Hair, without being able to grow again; the Moisture of the Head, which should feed it, being dry'd up by some Disease, by old Age, or by immoderate use of Powder. See **HAIR**.

CALX, literally signifies, *Line*; or a Stone burnt, or calcin'd in a Kila for that Purpose, to be us'd in the making of Mortar, &c. See **LIME**, **MORTAR**, &c.

CALX, in Chymistry, is a kind of Ashes, or fine friable Powder, which remains the Violence of a Fire for a long time; and by that means have lost all their humid Parts. Or, **CALX**, is what remains of a Body after Calcination. See **CALCINATION**. Gold and Silver, after they have been reduc'd to a *Calx*, may be again recover'd to their former Form and Nature. *Calx of Tin*, is call'd *Putty*; of considerable use in polishing Steel Mirrors, &c. *Calx of Brass*, is call'd *As ustum*. See **AS USTUM**. *Calx of Lead*, is call'd *Cerusi*. See **CERUSS**. For *Calx of Antimony*, see **ANTIMONIUM Diaphoreticum**.

CALX, in Anatomy; See **CALCANEUS**.

CAMAIEU, a Stone, whereon are found various Figures, and Representations of Landships, &c. form'd by a kind of *Lapis Nature*; so as to exhibit Pictures without Painting. The Word is us'd also for those precious Stones, as Onyx's, Sardines, and Agats, whereon the Lapidaries employ their Art to aid Nature, and perfect those Representations. The Word comes from *Camecebus*, a Name the Orientals give to the Onyx, when they find, in preparing it, another Colour; as who should say, a *second Stone*.

CAMAIEU is also us'd for a Painting, wherein there is only one Colour; and where the Lights and Shadows are manag'd on a Gold or Azure Ground: When the Ground is yellow, the *French* call it *Craze*; when grey, *Grisaille*. This kind of Work is chiefly us'd to represent Baso Relievo's: The *Greeks* call Pieces of this Kind *μωυζήματα*; the Word is borrow'd from the Stone, call'd by the Latins *Cament*, and by us *Camsey*; which see. Some derive it from the *Greek* *καμν*, *low*; because Bas-Relievo's are usually express'd herein.

CAMALDOLI, an Order of Religious, founded by St. *Romuald*, in 1009, in the horrible Desert of *Camaldoli*; situate in the State of *Florence*, on the *Apennines*. Their Rule is that of St. *Benedict*; and their Houses, by the Statutes, are never to be less than five Leagues from Cities. The *Camaldolites* han't bore that Title from the Beginning of the Order: Till the Close of the XIIIth Century they were call'd *Romualdins*, from the Name of their Founder. Till that Time, *Camaldolite* was a particular Name for those of the Desert of *Camaldoli*; and *D. Grandis* observes, was not given to the whole Order, in regard it was in this Monastery that the Order commenc'd; but because the Regulation was best maintain'd here.

CAMBER-BEAM, in Building, a piece of Timber cut Archwise, or with an Obtuse Angle in the Middle, commonly us'd in Platforms; as Church Leads, and other Occasions, where long and strong Beams are requir'd. A *Camber-Beam* is much stronger than another of the same Size; since being laid with the hollow Side downwards, as they usually are, they represent a kind of Arch.

CAMBRING: The Seamen say, a *Deck lies Cambering*, when it doth not lie level, but higher in the Middle than at either End: Also, if the Ship's Keel is bent in the Middle upwards, (which may happen from her lying a-ground on a place, where neither her Air nor Fore-part do touch it; and from many other Reasons taken from her Make) they say, *She lies Camber-keel'd*.

CAMELEON, in Natural History, a little Animal, famous among Ancient and Modern Writers, for a Faculty, it is suppos'd to have, of changing its Colour, and assuming those of the Objects near it.

The *Cameleon*, or *Chameleon*, is of the Lizard Kind; only its Head is somewhat bigger than the common Lizard. It has four Feet, and a long flat Tail; whereby it can hang to the Branches of Trees, as well as with its Feet. In *Egypt* there are some a Foot long, including the Tail; but those of *Arabia* scarce exceed half that Length. Its Snout is long, its Back sharp; its Skin, from the Head to the last Joint of the Tail plaited, and rough, say some, like a Saw: Dr. *Goddard* says, 'tis grain'd, like a Shagreen; the biggest Grains, or globular Inequalities, being about the Head; the next on the Ridge of the Back. Its Head is without any Neck, as in *Fishes*: It has two little Apertures in the Head, that serve for Nostrils; it has no Ears, nor does it either make or receive any Sound. Its Eyes are big, and versatile this or that way, without moving the Head: ordinarily, it turns one of 'em quite the contrary way to the other. The Tongue is half the Length of the Animal; consisting of a white Flesh, round as far as the

Tip, which is flat and hollow; somewhat like an Elephant's Proboscis, or Trunk; and accordingly, some call it a *Trunk*. This it can dart out very nimbly, and draw back again, over a Bone which reaches from the Root, half its Length; such as a Silk Stocking is drawn off, and on the Leg.

'Tis a common Tradition, that the *Cameleon* lives on Air; but Experience shews the contrary. The great Use of its Tongue is to catch Flies, by shooting it briskly upon 'em, and entangling 'em in its Proboscis: Some say, the Tongue is Tipp'd with a glutinous Matter, which the Flies stick to; that at the *Academy of Sciences*, they frequently observ'd to catch and swallow Flies: They found also the Signs of 'em in its Excrements; and, when it was dissected, the Stomach and Intestines were found full of 'em. *M. Perrault* assures us, when at *Reit*, and in the Shade, its Colour is somewhat various: That at *Paris*, was of a bluish grey; but, when expos'd to the Sun, this grey chang'd into a browner or darker grey; and its less illumin'd Parts into divers Colours; forming Spots, half the bigness of a Finger's End, some of 'em of an Isabella Colour: The Grains of the Skin, not illumin'd at all, resembled a Cloth, mix'd of divers Colours. That at *London*, describ'd in the *Philosophical Transactions*, by Dr. *Goddard*, was mix'd of several Colours, like a medley Cloth: The Colours discernable, were a Green, a sandy Yellow, and a deeper Yellow, or Liver Colour; but one might easily imagine some Mixture of most, or all Colours. He adds, that upon Excitation, or Warming, it suddenly became full of black Spots, of the bigness of a great Pin's Head, equally dispers'd on the Sides, &c. all which afterwards would vanish. *M. Perrault* observes somewhat like this of the *Paris Cameleon*; viz. that upon handling and stirring it, it wou'd appear speckled, or stain'd with dark Spots, bordering on green. He adds, that wrapping it up in a Linen Cloth, for two or three Minutes, it wou'd be taken out whitish; the not constantly so: Nor did it take the Colour of any other Stuff it was wrapp'd in. So that what *Theophrastus* and *Plinarch* wrote, that it assumes all the Colours it comes near, excepting white, is contrary to Experience. *Monsieur* assures us, that the *Cameleon*, when plac'd in the Sun, appears green; tho' in a Place where there is no Grass, or other green Object; that by the Candle it appears black, the plac'd on white Paper; and that, when shut up in a Box, it becomes yellow and green: and he asserts, it never takes any other than these four Colours.

Naturalists are very little agreed, as to the Reason or Manner of the Change of Colour: Some, as *Seneca*, maintain 'tis done by Suffusion; others, as *Solimus*, by Reflexion; others, as the *Cartesians*, by the different Disposition of the Parts that compose the Skin, which give a different Modification to the Rays of Light: Others, as Dr. *Goddard*, ascribe the Change to the Grains of the Skin; which, in the several Postures, he thinks, may shew several Colours; and, when the Creature is in full Vigour, may have, as he terms it, *ratiocinem Speculi*; that is, the Effect of Mirrors, and reflect the Colours of Bodies adjacent.

These Hypotheses are all deficient enough, and there is still room for a new one of our own: The *Cameleon*, then, is represented to us as an exceedingly lean skinny Animal; inasmuch that the *Italians* call it a *living Skin*. *M. Perrault* observes, of that which he dissected in the King's Library, that one Hour it appear'd to be a mere Skin, and nothing else; and yet the next it would appear fat and plump. Hence we gather, that it must have an extraordinary Command over the Skin, as to Tension or Laxness; since by swelling its Bulk its Skin will be fill'd, the Fibres thereof stretch'd, and the Pores lessen'd: and again, by withdrawing its grossness, the Skin will be left lank and shrivell'd, one Part wrapping over another: Which is confirm'd by what we have already observ'd, that its Skin is usually seen to be full of *Ruges*, or little Plaits. Now, the Animal having it in its Power to fill the Skin more or less, has it in its Power not only to alter the Tone and Texture of the Fibres, upon which their reflexive Quality, in a great measure depends; but also to bring Parts into light which before lay conceal'd, or to conceal such as before lay open: and 'tis more than probable, that the Parts which are ordinarily cover'd, are of a somewhat different Colour from those constantly open to the Air.

On these Principles, we believe, all the Phenomena in the *Cameleon's* Colour may be sol'd. The Animal, 'tis evident, has a Power to reflect different colour'd Rays from the same Parts; also to make certain Parts reflect, and to prevent others reflecting: and hence that variety, that medley of Colours. See **RAY**, **COLOUR**, **REFLEXION**, &c.

Matthioli relates several superstitious Notions of the Ancients touching the *Cameleon*; as that its Tongue torn out, while alive, help'd the Bearer to gain his Law-Suit; that burning its Head and Throat with Oaken Wood, or roasting its Liver on a red Tile, made it thunder and rain. That its Right Eye, torn out while living, and steep'd in Goat's Milk, took away Pearls in the Eye; that its Tongue

ty'd about a Woman with Child, made her Delivery safe. That its right Jaw remov'd all Fear; that its Tail stopp'd the Course of Rivers: *Phy* assures us, *Democritus* had compos'd a whole Book of such Fables.

CAMELEON, in Astronomy, is one of the Constellations of the Southern Hemisphere, added by the Moderns. See CONSTELLATION.

CAMELOT, or **CAMLET**, a Stuff, sometimes of Wool, sometimes Silk, and sometimes Hair, especially that of Goats, with Wool or Silk; in some, the Warp is Silk and Wool twisted together, and the Wool Hair. *England*, *France*, *Holland*, and *Flanders*, are the chief Places of this Manufacture; *Bruxels* exceeds 'em all in the Beauty and Quality of its *Camelots*: Those of *England* are reputed the best.

Figured **CAMELOTS**, are those of one Colour, whereon are stamp'd various Figures, Flowers, Foliages, &c. by means of hot Irons, which are a kind of Moulds, pass'd, together with the Stuff, under a Press. These are chiefly brought from *Antient* and *Flanders*: the Commerce of these, was antiently much more considerable than at present.

Water CAMELOTS, those which, after weaving, receive a certain Preparation with Water; and are afterwards pass'd under a hot Press, which gives 'em a Smoothness and Lustre.

Waved CAMELOTS, are those whereon Waves are impress'd, as on Tabbies, by means of a Callendar, under which they are pass'd and repass'd several times. See CALLENDAR.

The Manufactures, &c. of *Camelots*, are to take care they don't acquire any false or needless Plaits; it being almost impossible to get 'em out again: This is notorious, even to a Proverb; thus we say, a Person is like *Camelot*, he has taken his Plaits.

Motage derives the Word from *Zambelot*, a Levantine Term for Stuffs, made with a fine Hair of a *Turkish* Goat: whence the Word *Turkish Camelot*. Others call it *Capelote*, from *Capelle*, She-Goat. *Bochart* makes *Zambelot*, a Corruption of the Arabic *Giamel*, or *Camel*. Others fetch *Camelot* from the bare Latin *Camelus*: So that *Camelot* should properly signify, a Stuff made of Camel's Hair.

CAMERA OBSCURA, *Dark Chamber*, in Opticks, a Machine or Apparatus, representing an Artificial Eye; whereon the Images of External Objects are exhibited distinctly, and in their native Colours; either invertedly or erect. See ARTIFICIAL EYE.

The first Invention of the *Camera Obscura*, is ascrib'd to *Sep. Porta*.

The Use of the **CAMERA OBSCURA** is manifold: It serves to very good Purposes in explaining the Nature of Vision; and hence it is that some call it the *Artificial Eye*. It affords very diverting Spectacles; both by exhibiting Images perfectly like their Objects, and each closth'd with their native Colours; and by expressing, at the same time all, their Motions: which latter, no other Art can imitate.

By means of this Instrument, especially the third Contrivance under mention'd, a Person unacquainted with Designing, will be able to delineate Objects to the last accuracy and justness; and another well vers'd in Painting, will find many Things herein to perfect his Art.

The Theory of the **CAMERA OBSCURA**, is contain'd in the following Proposition.

If an Object *A B*, (Tab. Opticks, Fig. 16.) radiate thro' a small Aperture *C*, upon a white Wall opposite thereto; and the Place of Radiation behind the Aperture *b C a* be dark: the Image of the Object will be painted on the Wall, in an inverted Situation.

Demonstr. For the Aperture *C* being very small, the Rays issuing from the Point *B*, will fall on *b*; those from the Points *A* and *D*, will fall on *a* and *d*: wherefore, since the Rays issuing from the several Points are not confounded; when reflected from the Wall, they will carry with 'em a certain Species of the Object, and exhibit its Appearance on the Wall. But since the Rays *A C* and *B C* intersect each other in the Aperture, and the Rays from the lowest Points fall on the highest; the Situation of the Object will of necessity be inverted.

Corollary. Since the Angles at *D* and *a* are Right, and the Vertical ones at *C* are Equal; *B* and *b*, and *A* and *a*, will be also Equal; consequently, if the Wall, whereon the Object is delineated, be parallel to it, *a b*: *AB*: *d C*: *DC*. That is, the Height of the Image will be to the Height of the Object; as the Distance of the Object from the Aperture, is to the Distance of the Image from the same.

Construction of a CAMERA OBSCURA, wherein the Images of External Objects shall be represented distinctly, and in their genuine Colours, either in an inverted, or an erect Situation. 1. Darken a Chamber, one of whose Windows looks into a Place set with various Objects; leaving only one little Aperture open in the Window. 2. In this Aperture fix a Lens, either Plano-convex, or Convex on both Sides; to be a Portion of a large Sphere. 3. At a due Distance, to be determin'd by Experience, spread a Paper,

or a white Cloth, unless there be a white Wall for the Purpose; for on this, the Images of the desir'd Objects will be delineated invertedly. 4. If 'tis rather desir'd to have 'em appear erect, 'tis done either by means of a concave Lens, placed between the Centre and the Focus of the first Lens; or by receiving the Image on a Plane Spectulum, inclin'd to the Horizon, under an Angle of 45° ; or by means of two Lens's included in a Draw-Tube, in lieu of one. Note, If the Aperture don't exceed the Bigness of a Pea, the Objects will be represented, even tho' there be no Lens at all us'd.

To render the Images clear and distinct, 'tis necessary the Objects be illumin'd by the Sun's Light: They will be still brighter, if the Spectator first stay a quarter of an Hour in the Dark. Care must be likewise taken, that no Light escape thro' any Chinks; and that the Wall be not too much illumin'd. Farther, the greater Distance there is between the Aperture and the Wall; the larger and more distinct will the Images be: but the Rays becoming, thus, too much dilated, the Brightness of the Image is weaken'd, till at length it becomes invisible.

Construction of a portable CAMERA OBSCURA. 1. Provide a little Chest, or Box of dry Wood, (Tab. Opticks, Fig. 17.) of the Figure of a Parallelopiped; its Breadth about 10 Inches, and its length two or more Feet; according to the different Magnitude of the Diameter of the Lens's. 2. In the Plane *B D* fit a sliding Tube *E F* with two Lens's; or, to let the Image at a less Distance from the Tube, with three Lens's convex on both Sides: The Diameter of the two outer, or forwarder, to be $\frac{1}{2}$ of a Foot; that of the Inner less, e.g. $\frac{1}{3}$. 3. Within the Chest, at a proper distance from the Tube, set up an oil'd Paper, perpendicularly, *G H*, so as Images thrown upon so may be seen thro' it. 4. Lastly, in *I* make a round Hole, it as a Person may look conveniently thro' it with both Eyes.

If then the Tube be turn'd towards the Objects, (the Lens's being at their proper Distance, to be determin'd by Experiment) the Objects will be delineated on the Paper *G H*, erect, as before.

Another Portable CAMERA OBSCURA.

1. In the middle of a *Cylinder*, or Chest, (Tab. Opticks, Fig. 18.) raise a little Turret, either round or square *H I*, open towards the Object *A B*. 2. Behind the Aperture, incline a little plain Mirror *a b*, to an Angle of 45° , which may reflect the Rays, *A a* and *B b*, upon a Lens convex on both Sides *G*, included in a Tube *G L*. 3. At the Distance of the Focus thereof, place a Table cover'd with a white Paper *E F*, to receive the Image *a b*. 4. Lastly, in *N M* make an oblong Aperture to look through.

CAMISARD, in the Art of War, an Attack, by surprise, in the Night, or at the Point of Day; when the Enemy are suppos'd a-bed. The Word is said to have took its rise from an Attack of this Kind; wherein, as a Bagd, or Signal to know one another by, they bore a Shift, *Cheuse*, or *Camise*, over their Arms.

CAMISARD, a Term whereby the *French* distinguish the *Calvinists* of the *Genevois*; from a League or Faction form'd by 'em against the *French*, in 1688, and the following Years; wherein either their Attacks were so sudden, and had so much of the *Camisade* in 'em; or they plunder'd Linen for Shifts, or wore Clothes that resembled Shifts, so as to occasion the Name; for Authors give all these Derivations: to which may be added another more probable than any, viz. from *Camis*, a high, or beaten Road; the Roads being infested by the *Camisards*.

CAMP, a Spot of Ground, where an Army rests, intrenches it self, or plants a Piquet-Watch, to lodge secure in Tents or Barracks. The *Camp* is sometimes cover'd by an Intrenchment; sometimes only by the advantage of its Post: Sometimes 'tis inclos'd with *Chevrons de Fraise*, laid across each other; the ordinary Practice of the old Prince of *Orange*. The chief Skill of a General lies in the Art of *Incamping* well: This the *Romans* were unacquainted with, till the War with *Pyrrhus*; from whose *Camp* they learn'd to model their own. Till then, they knew not how to post themselves to advantage, nor with any Order in their *Camp*.

An *Incampment*, or *standing Camp*, is always to have the Advantage of Water and Forage, and the means of covering and retrenching it self. *Ribbo*, describing the great *Mogul's Camp*, says, 'tis 20 *English* Miles round, and contains more Space than the largest City in *Europe*: that 'tis compos'd of 800000 Men, and 40000 Elephants.

Flying-CAMP, is a strong Body of Horse or Dragons, to which are sometimes added Foot; commanded usually by a Lieutenant-General. This is always in Motion; both to cover the Garrisons in Possession, and to keep the Adversary in continual Alarm.

CAMPAIGN, a Military Term, signifying the Space of Time during which Armies are maintain'd every Year in the Field. The *Germans* begin their *Campaign* very late; usually waiting 'till Harvest: The *French* are always early, and begin sometimes in Winter.

CAMPANULOUS, or CAMPANIFORMIS, those Plants whose Flowers resemble the Shape of a Bell; from *Campana*, a Bell. See **FLOWERS**, and **PLANT**.

CAMPECHE, a kind of Wood brought from *America*, us'd in Dying. The Heart of the Tree, which alone is us'd, is at first red; after it has been fell'd some time, it becomes black; and, if steep'd in Water, gives a black Tincture, such as may be wrote withal. 'Tis very heavy, burns admirably, and gives a clear lasting Flame.

CAMPHOR, or CAMPHIRE, a white, shining, transparent, odoriferous, volatile Gum, or Resin, of a bitterish Taste, and very hot in the Mouth; flowing from a Tree frequent in the Island of *Borneo*, and the neighbouring mountainous Coasts of *India*, resembling a Walnut Tree. It distils from the Tree in manner of a Gum; and, 'tis said, most plentifully in the Time of Earthquakes and Storms. *M. Lennery* says, the *Campbor* is found at the Foot of the Tree; where it thickens into little Grains of different Figures and Sizes; very dry, friable, light, of a bitterish Taste, &c. These little Grains falling on one another, adhere lightly together, and form Masses; which being squeeze'd a little by the Fingers, granulate again into small Corpuscles, like Salt.

Some Authors make two different Kinds of *Campbor*, according to the different Parts of the Tree where they are found: That in the Veins of the Wood, is said to be different from that which oozes out upon breaking the Bark. The *Campbor*, as is said, being at first red, is whiten'd either by the Sun or the Fire. In effect, we have but little of the Raw Natural *Campbor* among us; the *Dutch* take care that it comes all refin'd by Sublimation; and prepar'd to our Hands.

Manner of Refining crude CAMPHOR.

The Method us'd to refine it, is to lay it to sublimate in subliming Pots: when the Vessel is half full, it is stopp'd, and plac'd over a gentle Fire; where only the purest Part rises at first; but, by degrees, the whole is sublim'd, except a *Coput Mortuum*, or earthy Part sticking at Bottom: They then melt it with a gentle Heat, and run it into Moulds to give it what Figure they please. 'Tis so volatile, and apt to evaporate in Smoke, that the Merchants ordinarily inclose it in Lino-feed, that the Viscosity of that Grain may keep its Particles together.

Campbor has various Uses; as in Fireworks, in making Varnish, &c. In the Courts of the Eastern Princes, 'tis burnt, together with Wax, to illumine the Night. 'Tis exceedingly inflammable, so as to burn and preserve its Flame in Water; and in burning it consumes wholly, leaving no Scorum behind: But its principal use is in Medicine. 'Tis the most efficacious Diaphoretic known; its great Subtility diffusing it self thro the Substance of the Parts, almost as soon as the warmth of the Stomach has set it in Motion. 'Tis us'd in a Curie of the Bores, as a Detergent in Wounds, to resist a Gangreen, &c. When mix'd with the subtilie Salts of *Cantharides*, it prevents their injuring the Bladder; its exquisite Fineness inslating it to follow them into the fine Meanders thereof, and to breach their Asperities. *Dr. Quincy* observes, that *Campbor* begins to be mix'd, and that to good purpose, with *Mercurials*, to guard against their stimulating Properties, and to fend 'em into the finest Passages, to operate by Fusion, and the bare Force of Impulse. For not only *Mercurius Dulcis* or *Colomet*, may be hereby restrain'd from manifest Operation in the Glands about the Mouth; but also the Mineral *Turbith*, which of it self acts very strongly by Stool and Vomit, when mix'd with *Campbor*, will be much less felt in those Respects; and will go into the farthest Circuit of Motion, and promote the cutaneous Discharge, in a more efficacious manner than any Medicine of less specific Gravity.

M. Lennery endeavour'd at a Chymical Analysis of *Campbor*; but either its Parts were too fine and volatile to be carry'd to any greater degree of Purity or Subtility by any Chymical Process; or it was owing to the close Union of its Principles, which, in all appearance, must be an Oil and a volatile Salt; that they could not be separated.

Campbor, he observes, does not dissolve in aqueous or phlegmatic Liquors; but in sulphurous ones it does: not in Alcalines, nor even in some Acids: But in Spirit of Nitre it dissolves perfectly; and is the sole Resin that does so. This Dissolution is ordinarily call'd Oil of *Campbor*; and 'tis to this the medicinal Virtue of *Campbor* in Wounds, Gangreens, and Caries are ascrib'd. They say not to take it internally, for fear of its sharpness and corrosiveness: tho *M. Lennery* has found good Effects from two or three Drops by the Mouth, in Obstructions and Pits of the Mother: indeed, he generally mix'd it with as much Oil of *Ambor*.

There is a common Verbe to the Discredit of *Campbor*, as if its Smell emulcated:

Camporea per Nares castrat odore Mares.

But the Proverb, according to *Sealiger* and *Tulpius*, is false. *Campbor*, being boil'd in *Aqua vite*, in a close Place, till

the whole be evaporated; if a lighted Torch or Candle be introduc'd, the Air in the whole Place will immediately catch Fire, and appear in a Flame, without doing any Damage to the Place or the Spectators.

It has been found, in *Ceylon*, that the Root of the Tree which yields Cinnamon, yields, by Incision, a Liquor that has a strong smell of *Campbor*, and many of its Virtues; whence Naturalists, by mistake, have suppos'd that all *Campbor* came from that Tree. There is a smell of *Campbor* in several Plants, as in *Campboreis*, *Abroroum*, *Rosemary*, &c.

Artificial CAMPHOR, is prepar'd with Sandarach, and white Vinegar distill'd, kept 20 Days in Horse-dung, and afterwards expos'd a Month to the Sun to dry; at the End of which, the *Campbor* is found, in form of the Crust of a white Loaf: 'Tis also call'd *Juniper Gum*, *white Vermish*, and *Mestlic*.

The Word *Campbor* comes from the Arabic *Capur*, or *Capur*; which signify the same thing.

CAMPUS MARTII, or MAIL, in our ancient Customs, an anniversary Assembly of our Ancestors, on *May-Day*; where they confederated together to defend the Kingdom against Foreigners and all Enemies. *Jeg. Edw. Confess. Denuo in Campo Martio convenere, ubi illi qui Sacramentis inter illos pacem confirmaverit, Regi omnem culpam impo-suere sui.* Duncum.

CAMUS, a Person with a low, flat Nose, hollow'd or sunk in the Middle. The *Tartars* are great Admirers of *Camus* Beauties. *Rubrugus* observes, that the Wife of the great *Ginghis Kan*, a celebrated Beauty, had only two Holes for a Nose.

CANAL, in Anatomy, a Conduit or Passage, through which any Juices or Fluids of the Body flow. See **DUCT**, and **CHANNEL**.

CANAL of a Larmier, the hollow'd Piston or Soffit of a Cornice; which makes the Pendant Mouchette. See **LARMIER** and **SOFFIT**.

CANAL of the Volvute, in the Ionic Capital, is the Face of the Circumvolutions, enclos'd by a Lintel.

CANALES Semicirculares, in Anatomy, are three *Canals*, in the Labyrinth of the Ear: See **EAR**. They are of three different Sizes, *Major*, *Minor*, and *Minimus*. In different Subjects, they are frequently different; but are always alike in the fame: The Reason, *Valslton* ingeniously conjectures to be, that as a Part of the tender Auditory Nerve is lodg'd in these *Canals*, so they are of three several Sizes, the better to suit all the Variety of Tones; some of the *Canals* suiting some Tones, and others others. And tho there be some difference in the Form and Size of these *Canals* in different Persons; yet left there should be any Disorder in the Auditory Organs of the same Man, these *Canals* are always in exact Conformity to one another, in the same Man.

CANALIS, or CANALICULUS Arteriosus, in Anatomy, a Vessel, observ'd in *Fetus's*, but which after Delivery, grows useless, and disappears. It is a little Tube, which joining the Pulmonary Artery and *Aorta*, serves to convey the Blood out of one into 't'other, without passing thro the Lungs. See **Foetus**, and **CIRCULATION**.

CANCELLER, in Falconry, is when a light Snow Hawk, in her stooping, turns two or three times upon the Wing, to recover her self before the fizes.

CANCELLING, in the Civil Law, an Act whereby a Person consents, that some former Act be render'd null and void; this is otherwise call'd *Rescission*. In the proper Sense of the Word, *cancel*, is to bar an Obligation, by passing the Pen from top to bottom, or across it; which makes a kind of Chequer or Lattice, which the *Latins* call *Cancelli*. The Word comes originally from the Greek *κισσῶνα*, to compass, or pale a thing round.

CANCER, in Astronomy, one of the 12 Signs of the Zodiac; ordinarily represented on the Globe in form of a Crab, and thus mark'd, ♋. See **SIGN**, and **CONSTELLATION**.

The Stars in the Constellation of *Cancer*, *Ptolomy* makes 13; *Zycho* 15; but *Mr. Flamstead* no less than 71. Their Order, Names, Places, Longitude, Latitude, Magnitude, &c. he lays down in the *Britannick Catalogue*, as follows.

Stars in the Constellation CANCER.

Stolterfish, as are barren, or live in Cellibacy. The Reason of its appearing in the Breast more than other Parts, is, that being full of Glands, with Lymphatics and Blood-Vessels among 'em, the smallest Contusion, Compression, or Punction, extravasates those Liquors; which growing, by degrees, acrimonious, form the *Cancer*. Hence, the Masters of the Art say, that a *Cancer* is that in the Glands, which a Caries is in the Bones, and a Gangreen in the fleshy Parts. The *Cancer*, however, is sometimes found in other soft, spongy Parts of the Body; and there have been some found in the Teeth, Belly, Neck of the Matrix, Uterus, Lips, Nose, Cheeks, Abdomen, Thighs, and even the Shoulders, as *Stolterfish* shews.

Cancers are divided, according to their several Stages, into Occult and Ulcerated; the first is form'd as above. Ulcerated *Cancers*, are known by their roughness and fallness of Holes, thro' which oozes a filthy, stinking, glutinous Matter, frequently yellowish; by their pungent Pain, which resembles the pricking with a thousand Pins; by their blackness; and the swelling of the Lips of the Ulcer; and the Veins about it, which are blackish, swell'd, various, resembling, as above, the Foot of a Cray-fish. Sometimes the Extremities of the Blood-Vessels are grow'd off, and the Blood issues out. In a *Cancer* of the Breast, the adjacent Flesh is sometimes so consum'd, that one may see into the Cavity of the Thorax. It occasions a slow Fever, a Loathing, oftentimes Faintings, sometimes a Dropsy, and lastly Death. The immediate Cause of a *Cancer*, seems to be a too corrosive volatile Salt, approaching to the Nature of Arsenic, form'd by the Stagnation of Humours, &c. *Stolterfish* observes, that it has been frequently cur'd by Mercury and Salivation. A *Cancer* arising on the Legs, is call'd a *Lycus*; on the Face, or Nose, a *Noli me tangere*: Some take the ulcerous *Cancer* to be nothing else but an infinite Number of little Worms, which devour the Flesh by degrees. The *Cancer* is allow'd the most horrible Evil that befalls the Body: 'Tis usually cur'd while yet a small Tumour, by Excision of the bigness of a Nut, or at most of a small Egg, by Excirpation: When it seizes the Breast, or is burst into an Ulcer, Amputation takes place.

CANDIDATE, a Person who stands for some Post, or aspires to enter any Body, or Society. The Word comes from the Latin *Candidatus*, of *Candidus*, white: Those who aspir'd to Offices in ancient Rome, being call'd *Candidati*, from their wearing a very white shining Habie at the Assemblies, in order to distinguish themselves from the Crowd. In the Time of *Gordian*, and afterwards, the Term *Candidati* was likewise given to the Soldiers who compos'd the Emperor's Guard; who were chosen out of all the Legions, and much consider'd at Court. *Cadrenus* observes, that it was the younger *Gordian* who instituted these, as also the *Protectors* and *Scolares*. The *Scolares* were chose out of the Troops, and consist'd of Persons who best understood the Art of War: Out of these *Scolares* were chose the *Candidati*, who were such as appear'd the most vigorous, and had most of the martial Air; proper to inspire Terror, says the Chronicler of *Alexandria*. The *Protectors* were a middle Order, and were properly the Emperor's Body Guards.

CANDLE, a Composition of Tallow, or Wax, around a Wick; us'd for the giving of Light. A Tallow Candle, to be good, must be half Sheep's Tallow, half Cows; that of Hogs making 'em gutter, give an ill smell, and a thick black Smoke. See TALLOW.

Tallow Candles are of two Kinds; the one *disp'd*, the other *unsund'd*: The first, which are those in ordinary use, are of an old standing; the latter are said to be the Invention of the *Sieur le Breze*, at *Paris*. The Manufacture of the two Kinds is very different, excepting in what relates to the melting of the Tallow, and making the Wick, which is the same in each.

Method of making CANDLES. The Tallows being weigh'd and mix'd in their due Proportion, are cut or hack'd into Pieces, to facilitate their melting, and thrown into a Peel or Boiler, having a Cavity of some depth running round the Top, to prevent its boiling over. Being, thus, perfectly melted, and skim'd, a certain Quantity of Water is thrown in, proportion'd to the Quantity of Tallow, which serves to precipitate the Impurities of the Tallow, which had escap'd the Skimmer, to the Bottom of the Vessel. The Tallow, however, intended for the three first Dips, must have no Water; in regard, the dry Wick, imbibing the Water readily, makes the Candles spit and crackle in the burning. The melted Tallow is now empty'd thro' a Sieve into a Tub, having a Tap for letting it out, as occasion requires. The Tallow thus prepar'd, may be us'd after having stood three Hours; and will continue fit for use 24 Hours in Summer, and 15 in Winter.

For the Wicks, they are made of spun Cotton, which the Chandlers buy in Skeins; and wind off three or four together, according to the intended Thickness of the Wick, into Pelotons, or Clucs, whence they are cut out with an

Tropic of CANCER, in Astronomy, a lesser Circle of the Sphere, parallel to the Equator; and passing through the beginning of the Sign *Cancer*. See TROPICK; see also SPHERE.

CANCER, in Medicine, a hard, rugged, round, immovable Tumor, of an Ash, Livid, or Lead Colour; incomple'st round with branch'd turgid Veins, full of black muddy Blood; so call'd, as some will have it, from the Resemblance it bears to the Crab-fish, call'd *Cancer*; or, as others say, because, like that Fish, when once it has got hold, 'tis scarce possible to drive it off. It begins without any Pain, and appears, at first, like a Chicory Pea; but grows apace, and becomes very painful. The *Cancer* arises principally on the six glandulous Parts, as the Breasts and Emunctories: 'Tis most frequent in Women, especially such, says

strument contriv'd for that Purpose, into Pieces of the Length of the Candle requir'd; then put on the Rods, or Broches, or else plac'd in the Moulds, as the Candles are intended to be dipp'd or moulded.

Making of dipp'd Candles.

The liquid Tallow being drawn off from the Tub above-mention'd, into a Vessel call'd the Mould, Sink, Abyss, &c. of an angular Form, perfectly like a Prism, except that it is not equilateral; the Side on which it opens being only ten Inches high; and the others, which make its height, 15. On the Angle, form'd by the two great Sides, it is supported by two Feet, and is plac'd on a kind of Bench, in form of a Trough, to catch the Droppings, as the Candles are taken out, each Dip. At a convenient Distance from this, is seated the Workman, who takes two Rods, or Broches, at a time, frang with the proper Number of Wicks; viz. sixteen, if the Candles are to be of eight in the Pound; twelve if of six in the Pound, &c. and holding 'em equidistant, by means of the second and third Finger of each Hand, which he puts between 'em, he immerses the Wicks two or three times for their first Lay; and, holding 'em some time over the opening of the Vessel to let 'em drain, hangs 'em on a Rack, where they continue to drain and grow dry. When dry, they are dipp'd a second time, then a third, as before; only for the third Lay they are but immers'd twice, in all the rest thrice. This Operation is repeated more or less, according to the intended Thickness of the Candle. With the last Dip they Neck 'em; i. e. plunge 'em below that part of the Wick where the other Lays end.

It must be observ'd, that during the Operation, the Tallow is stirr'd from time to time, and the Stock supplied with fresh Tallow. When the Candles are finish'd, their piqu'd Ends, or Bottooms, are taken off; not with any cutting Instrument, but by passing them over a kind of flat brazen Plate, heated to a proper pitch by a Fire underneath; which melts down as much as is requisite.

Method of making Mould Candles.

These Candles are made in Moulds, of different Matters: Brass, Tin, and Lead are the most ordinary. Tin is the best, and Lead the worst. Each Candle has its Mold, consisting of three Pieces, the Neck, Shaft, and Foot: the Shaft is a hollow Metal Cylinder, of the Diameter and Length of the Candle propos'd; At the Extremity of this is the Neck; which is a little Metallic Cavity, in form of a Dome; having a Moulding within-side, and pierc'd in the Middle with a Hole big enough for the Wick to pass through. At the other Extremity is the Foot, in form of a little Tunnel, thro which the Liquid Tallow runs into the Mold. The Neck is folder'd to the Shaft, but the Foot is moveable, being apply'd when the Wick is to be put in, and taken off again when the Candle is cold. A little beneath the Place where the Foot is apply'd to the Shaft, is a kind of String of Metal, which leaves to support that part of the Mold, and to prevent the Shaft from entering too deep in the Table to be mention'd hereafter. Lastly, in the Hook of the Foot, is a Leaf of the same Metal, folder'd within-side, which advancing into the Centre, serves to keep up the Wick; which is here hook'd on, precisely in the Middle of the Mould. The Wick is introduc'd into the Shaft of the Mould, by a piece of Wire, which being thrust thro the Aperture of the Hook, till it come out at the Neck, the Wick is ty'd to it; so that in drawing it back, the Wick comes along with it, leaving only enough a-top for the Neck; the other End is fasten'd to the Hook, which thus keeps it perpendicular. The Moulds, in this Condition, are dispos'd in a Table pierc'd full of Holes, the Diameter of each being about an Inch: these Holes receive the Moulds inverted, as far as the String in the Foot. Being thus plac'd perpendicularly, they are fill'd with melted Tallow, (prepar'd as before) drawn out of the Tap into a Tin Pot; and thence pour'd into the Foot. After the Moulds have stood long enough to cool, for the Tallow to have come at its Consistence, the Candle is taken out, by taking off the Foot, which brings the Candle along with it. Those who aim at Perfection in their Work, bleach or whiten their Candles, by fastening them on Rods or Broches, and hanging them out to the Dew, and earliest Rays of the Sun, for eight or ten Days: Care being taken to keep 'em in the Day-time from the too intense Heat of the Sun; and in the Night from Rain, by wax'd Cloths.

Wax Candles are made of a Cotton or Flaxen Wick, slightly twist'd, and cover'd with white or yellow Wax: Of these there are several Kinds; some call'd *Tapers*, us'd to illuminate Churches, Processions, Funeral Ceremonies, &c. See *TAPER*; and others us'd on ordinary Occasions. For the first Kind, their Figure is Conical, still diminishing from the Bottom, which has a Hole to receive the Hook of the Candlestick, to the Top which ends in a Point: The latter are cylindrical. The first are either made with a Ladle, or with the Hand.

Manner of making Wax Candles with the Ladle.

The Wicks being twist'd, and cut, of the proper Length, a Dozen of 'em are ty'd by the Neck, at equal Distances, round an Iron Circle, suspended directly over a large Basin of Copper, tin'd, and full of melted Wax: a large Ladle full of this Wax, is pour'd gently, by Inclination, on the Tops of the Wicks, one after another; so that running down, the whole Wick is thus cover'd: the Surplus returning into the Basin; where 'tis kept warm by a Pan of Coals underneath it. They thus continue to pour on the Wax, till the Candle arrive at its destin'd Bigness. It must be observ'd, that the three first Ladles are pour'd on at the Top of the Wick, the fourth at the Height of 1, the fifth at 2, and the sixth at 3; by which means the Candle arrives at its pyramidal Form. The Candles are then taken down hor, and laid aside of each other, in a Feather-Bed folded in two, to preserve their Warmth, and keep the Wax soft: They are then taken and roll'd, one by one, on an even Table, usually of Walnut-tree, with a long square Instrument of Box, smooth at Bottom. The Candle being thus roll'd and smooth'd, its big End is cut off, and a conical Hole made in it.

Manner of making Wax Candles by the Hand.

The Wick being dispos'd, as in the former, they begin to soften the Wax, by working it several times in hot Water, contain'd in a Brass Caldron, tin'd, very narrow and deep. A piece of the Wax is then taken out, and dispos'd, by little and little, around the Wick, which is hang on a Hook in the Wall, by the Extremity opposite to the Neck: so that they begin with the big End, diminishing still, as they descend towards the Neck. In other respects, the Method is the same here, as in the former Cafe; only that they are not laid in the Bed, but are roll'd on the Table, just as they are form'd. It must be observ'd, however, that in the former Cafe, Water is always us'd to moisten the several Instruments, to prevent the Wax from sticking; and in the latter, Lard, or Oil of Olives, for the Hands, Table, &c.

Cylindrical Wax Candles, are either for the Table, or drawn. The first kind are made of several Threads of Cotton, loosely spun, and twist'd together, cover'd with the Ladle, and roll'd, as the Conical ones, but not pierc'd.

Wax Candles drawn, are so call'd, because actually drawn, in the Manner of Wire, by means of two large Rollers, or Cylinders of Wood, turn'd by Handles, which turning backwards and forwards several times, pass the Wick thro melted Wax, contain'd in a Brass Basin; and at the same time thro the Holes of an Instrument, like that us'd for drawing Wire, fasten'd at one Side of the Basin: so that, by little and little, the Candle acquires any Bulk, at pleasure, according to the different Holes of the Instrument thro which it pass'd: By this Method, may four or five hundred Ells length be drawn, running. The Invention of this, we owe to *Pierre Blesimare, of Paris*, about the Middle of the last Century.

The Word *Candle* comes from the Latin *Candor*, of *Candeo*; whence, the Greek *κάνθηρα*. Sale, or Ausion by *Inch of Candle*; is, when a Piece of Candle being lighted, People are allow'd to bid while it burns, but as soon as extinct, the Commodity is adjudg'd to the last Bidder. There is also a kind of *Excommunication by Inch of Candle*; wherein, the Time a lighted Candle continues burning, is allow'd the Sinner to come to Repentance, but after which, he remains excommunicated to all Intents and Purposes.

CANDLEMAS, a Feast of the Church, held on the second of February, in honour of the Purification of the Holy Virgin. *Bede says*, "Tis happy for the Church to have chang'd the Lustrations of the Heathens, held in the Month of February, around the Fields, for the Processions with Candles, &c." This Custom was instituted by Pope *Gelasius*, who abrogated the *Superstitious*. The Feast takes its Name from the Number of lighted Candles, at the Procession; antiently us'd among us, and still among the *Romanists*.

CANDYING, properly signifies the turning of any thing white: 'Tis particularly us'd by the Confectioners, where white Sugar, us'd in their Preparations, is thicken'd and crystalliz'd on the Surface of the Vessel, in manner of Ice.

Sugar-candy, or candied, is a Preparation of Sugar, crystalliz'd by melting six, or seven times. See *SUGAR*.

CANE, or CANNA, a Measure of Length, frequent in Italy, and the South Parts of France; more or less long, according to the Places where it is us'd. At Naples, the *Canna* is equal to 7 Foot 3½ Inches, *English Measure*: the *Canna of Tolouse*, and the upper *Longuedoc*, is equal to the *Vare of Arrigon*, and contains 5 Feet 8½ Inches; at Montpellier, in *Provence*, *Dauphine*, and the lower *Longuedoc*, to 6 *English* Feet 5½ Inches. See *MEASURE*.

CANEPHORA, a young Girl, who in the antient Sacrifices bore a Basket, wherein every thing necessary for the Sacrifice was contain'd. The Baskets were usually crown'd

crown'd with Flowers, Myrtles, &c. The *Canebora*, in these Ceremonies, always march'd the first; the Philosopher or Priest next, and the Choir of Music follow'd. The *Canebora* were always Girls of Condition; and were attended by an old Woman who carry'd 'em a Seat.

CANEPHORJA, was a Ceremony, which made Part of a Feast, celebrated by the Maids the Eve of their Marriage-Day; call'd also *Profelis*; which fee. The *Canebora*, as practis'd at Athens, consist'd in this; that the Maid conducted by her Father and Mother, went to the Temple of *Minerva*; carrying with her a Basket full of Profins, to engage the Goddess to make the Marriage happy; or rather, as the Scholiast of *Theocritus* has it, the Basket was intended as a kind of honourable Amends made to that Goddess, the Protectress of Virginity, for abandoning her Party; or a Ceremony to appease her Wrath.

CANICULA, a Name proper to one of the Stars of the Constellation *Canis Minor*; call'd also simply the *Dog-Star*: by the *Greeks*, *Procyon*. *Canicula* is the 10th in Order in the *Britannic Catalogue*, in *Tycho's* and *Ptolemy's* 'tis the 14. 'Tis situate in the Thigh of the Constellation; its Magnitude between a first and second: Its Longitude, Latitude, &c. see among those of the other Stars of that Constellation. *Canicula* rises on the 16th of July: Its rising and setting with the Sun, occasions what we call

CANICULAR, or *Dog-Days*, the Time during which the Sun rises and sets with *Canicula*, which it does from the 24th of July to the 28th of August. Some Authors tell us from *Hippocrates* and *Pliny*, that the Day *Canicula* rises, the Sea boils, Wine turns, Dogs begin to grow mad, the Bile increases and irritates, and all Animals grow lauguid; and that the Diseases ordinarily occasion'd in Men, are burning Fevers, Dysenteries, and Phrenesies. The *Romans* sacrific'd a brown Dog every Year to *Canicula* at its rising, to appease its Rage. They suppos'd *Canicula* to be the Occasion of sultry Weather, usually felt in the Dog-Days; but by Mirrake: in five or six thousand Years more, *Canicula* may chance to be charg'd with bringing Frost and Snow; for it will rise in November or December. The *Egyptians* and *Ethiopians* began their Year at the rising of *Canicula*; reckoning to its rise again the next Year, which is call'd the *Annus Canarius*.

CANINE Appetite, an inordinate Hunger, to the Degree of a Disease. See *BULIMIA*.

CANINE DENTIES, in Anatomy, are two Teeth in each Jaw; one on each side the *Incisores* and *Molares*. They are pretty thick and round, and end in a sharp Point; have each one Root, which is longer than the Roots of the *Incisores*. Their proper use is to pierce the Aliment; because the Fore-Teeth are not only apt to be pulled outwards by the Things we hold and break with them, but likewise because they are less subject to Blows than the *Molares*: therefore above two thirds of them are bury'd in their *Alveoli*, or Sockets; by which their Resistance of all lateral Pressures, is much greater than that of the *Molares*.

CANINUS *Majestus*, the fume as *Elevator Labii Superioris*; See *ELEVATOR*.

CANIS MAJOR, the Great Dog, in Astronomy, a Constellation of the Southern Hemisphere. See *CONSTELLATION*.

The Stars in the Constellation *Canis Major*, *Ptolemy* makes 28; *Tycho* observ'd only 15; in the *Britannic Catalogue* they are 32. Their Order, Names, Places, Longitude, Latitude, Magnitude, &c. are as follows.

Stars in the Constellation CANIS MAJOR, or Great Dog.

Names and Situation of the Stars.	Sign.	Longitude.	Latitude.	Magnit.

CANIS MINOR, *Caniculus*, or the Little Dog, in Astronomy, a Constellation of the Southern Hemisphere; call'd by the *Greeks*, *Procyon*. See *CONSTELLATION*.

The Stars in the Constellation *Canis Minor*, in *Ptolemy's Catalogue* are 2; in that of *Tycho Brahe* 5; in the *Britannic Catalogue* 15. Their Order, Names, Places, Longitude, Latitude, Magnitude, &c. are as follows.

Stars in the Constellation CANIS MINOR.

Names and Situation of the Stars.	Sign.	Longitude.	Latitude.	Magnit.
In the Head		17 19 58	62 56 42	6

CANKER, is a Speck made by a sharp Humour, which gnaws the Flesh almost like a *Caulis*; very common to Children, in their Mouth especially. It is also a Disease incident to Trees; proceeding chiefly from the Nature of the Soil. See *DISEASES OF PLANTS*.

CANNON, in War, a Piece of Artillery; or a Military Machine for throwing Iron, Lead, or Stone Bullets, by force of Gun-powder, to a Place directly opposite to the Axis of the Cylinder, whereof it consists. See *GUN*, and *ORNBANCE*.

The Parts and Proportions of a Cannon about 11 Foot long, are, its Barrel, or Cavity, 9 Foot; its Fulcrum, or Support, 74; and its Axis 7; the Bore, or Diameter of the Mouth 6 Inches, and two Lines the play of the Ball: The Diameter of the Ball therefore 6 Inches, and its Weight 33 Pounds. The Metal thick about the Mouth, 2 Inches; and at the Breech 6. It weighs about 5600 Pounds; its Charge is from 18 to 20 Pounds. It carries, Point-blank, 600 Paces; and loads ten times in an Hour, sometimes fifteen; in a Day 120. Its Bed is 15 Foot broad, and 20 long, for the Rebound. It requires 20 Horses to draw it.

For a *Battering-Piece*, whose Ball is 36 Pounds, there must be two Cannoners, three Chargers, and 30 Pioneers.

Cannons are distinguish'd from the Diameters of the Balls they carry; but this Distinction is different in different Nations. The Proportion of their Length to their Diameter, depends rather on Experience, than any Reasoning *a priori*; and has been accordingly various, in various Times and Places: The Rule is, that the Gun be of such a Length, as that the whole Charge of Powder be on Fire *after* the Ball quit the Piece. If it be made too long, the Quantity of Air to be driven out before the Ball, will give too much Resistance to the Impulse; and that Impulse ceasing, the Friction of the Ball against the Surface of the Piece, will take off some of its Motion. Formerly, *Cannons* were made much longer than at present; till some were by chance 2½ Foot shorter than ordinary, taught 'em that the Ball moves with a greater Impetus through a less Space than a larger. This *Gustavus K. of Sweden* prov'd by Experience in 1624: An Iron Ball, 48 Pounds Weight, being found to go farther from a new short Cannon, than another Ball of 96 Pounds out of an old, longer Piece; whereas, in other respects, 'tis certain the larger the Bore and Ball, the greater the Range.

The Names of the several Cannons, their Length, their Weight, and that of their Balls, as they obtain among us, are as in the following Table.

NAMES OF CANNON.	Weight of an Iron Ball.	Weight of the Cannon.	Length of the Cannon.
Cannon Royal	48 lib.	8000 lib.	12 Feet
Demi-Cannon large	36	6000	12
Demi-Cannon ordinary	32	5600	12
Demi-Cannon least	30	5400	11
Culverin largeft	30	4800	12
Culverin ordinary	17 lib. 5 oz.	4500	12
Culverin least	15	4000	11
Demi-Culverin ordinary	10	2700	11
Demi-Culverin least	9	2000	10
Saker ordinary	6	1500	10
Saker least	4	1400	8
Minion largeft	3	1000	8
Minion ordinary	3	800	7
Falcon	2	750	7
Falconet	1	400	6
Rabinet	1	300	5
Base	8	200	4. 6

The greatest Range of a Cannon, is ordinarily fix'd at an Elevation of 45°. Dr. Halley shows it to be at 44°. See PROJECT. M. S. Julien adjusts the Ranges of the several Pieces of Cannon, from the Weight of the Ball they bear: the Charge of Gun-powder being always supposed in a sub-duple Ratio of the Weight of the Ball: Thus,

Weight of a leaden Ball.	Horizontal Range.	Greatest Range.	Weight of a leaden Ball.	Horizontal Range.	Greatest Range.
14 lib.	600 Paces.	6000	12	450	5000
24	700	6000	8	400	1600
16	800	8000	12	150	1500

The same Author adds, that a Ball thrown to the Distance of 600 Paces, sinks 9, 10, 11, 12, nay, 13 Foot with-in Ground. For the Method of casting Cannons, see FOUNDRY.

For the Metal of Cannons, 'tis either Iron, or, which is more usual, a Mixture of Copper, Tin, and Brass: the Tin is added to the Copper, to make the Metal more dense and compact: So that the better or heavier the Copper is, the less Tin is requir'd. Some to 100 Pounds of Copper, add 10 of Tin, and 8 of Brass: Others, 10 of Tin, 5 of Brass, and 10 of Lead. Braumius describes a Method of making Cannon of Leather, on occasion: And 'tis certain the Swedes made use of such in the long War of the last Century; but these burst too easily to have much effect. 'Tis found by Experience, that of two Cannons of equal Bore, but different Lengths; the longer requires a greater Charge of Powder than the shorter, in order to reach the same Range. The ordinary Charge of a Cannon, is to have the Weight of its Gun-powder half that of its Ball. After each thirty Discharges, the Cannon is to be cool'd, with two Pints of Vinegar, mix'd with four of Water, pour'd into the Barrel; the Touch-hole being first stopp'd.

Cannons are made Cylindrical, that the Motion of the Ball might not be retarded in its Passage; and that the Powder, when on Fire, might not slip between the Ball and the Surface of the Cannon, which wou'd hinder its effect. Wolves would have the Cannon always decrease, as it goes towards the Mouth or Orifice: In regard, the Force of the Powder always decreases, in proportion to the Space thro which it is expanded. The new Cannons, after the Spanish manner, have a Cavity, or Chamber at bottom of the Barrel, which helps their Effect. A Cannon is found to recoil two or three Paces after Explosion; which some account for from the Air's rushing violently into the Cavity, as soon as it is discharg'd of the Ball: but the real Cause, is, the Powder's acting equally on the Breech of the Cannon, and the Ball. See MORTAR, GUN, BOMB-PROJECT, GUN-POWDER, &c.

Larrey makes Brass Cannon the Invention of J. Owen; and says, the first known were in England, in 1535. Cannons, however, he owns, were known before; and observes, that at the Battel of Cressy, in 1346, there were five Pieces of Cannon in the English Army; which were the first that had been seen in France: And Meseray adds, that King Edward truck Terror into the French Army, by five or six Pieces of Cannon; it being the first time they had been such thundering Machines. The first Cannons were call'd Bombards, from the Latin *bombus*; by reason of the Noise. The Word Cannon, *Message* derives from the Italian *Canone*, an Augmentative of *Canal*; in regard, a Cannon is long, straight, and hollow, like a *Canal*.

CANOE, a little Vessel, or Boat, us'd by the Indians, made all of one Piece, of the Trunk of a Tree hollow'd. The

Savages frequently make 'em of Bark, chiefly that of the Birch-Tree; yet big enough to hold four or five Persons. See BOAT.

CANON, a Person who possesses a Prebend, or Revenue allotted for the Performance of Divine Service, in a Cathedral, or Collegiate Church. *Canons* are of no great Antiquity: Pasquier observes, that the Name *Canon* was not known before Charlemagne; at least, the first we hear of, are in Gregory de Tours, who mentions a College of *Canons*, instituted by Bauduin XVI. Archbishop of that City; in the Time of Clovisarius I. For, antiently, *Canons* were only Priests, or inferior Ecclesiasticks, who liv'd in Community; residing by the Cathedral Church, to assist the Bishops; depending entirely on their Will, supported by the Revenues of the Bishoprick; and living in the same House, as his Domesticks, or Counsellors, &c. They even inherited his Moveables, till the Year 816; when this was prohibited by the Council of *Aux la Chapelle*. By degrees, these Communities of Priests, shaking off their Dependence, form'd separate Bodies; whereof the Bishops, however, were still Heads. In the Xth Century, there were Communities or Congregations of the same kind, establish'd even in Cities, where there were no Bishops: These were call'd *Collegiates*; in regard, they us'd the Terms *Congregation* or *College* indifferently: The Name *Chapter*, now given to these Bodies, is much more modern. Under the second Race of the French Kings, the *Canon* or Collegiate Life, had spread it self all over the Country; and each Cathedral had its Chapter, distinct from the rest of the Clergy. But they were not yet destin'd to a Life so easy as now-a-days. They had the Name *Canon*, from the Greek *κανον*, which signifies three different things, a *Rule*; a *Penion*, or *fix'd Revenue to live on*; and a *Catalogue*, or *Matricula*. Hence, some say, they were call'd *Canons*, by reason of the *Penion* or Prebend; (whence some also call 'em *Sportulantes Præbiteri*;) Others say, they were call'd *Canons*, because oblig'd to live according to Canonical Rules and Institutions, which were given 'em; and others, as M. de Morca, because their Names were infer'd in the *Matricula*, or Catalogue of the Cathedral. In time, the *Canons* freed themselves from their Rules, the Observance relax'd, and, at length, they ceas'd to live in Community, yet still form'd Bodies; pretending to other Functions besides the Celebration of the Common Office in the Church, yet assuming the Rights of the rest of the Clergy; making themselves a necessary Council of the Bishop; taking upon them the Administration of the See during a Vacancy, and the Election of a Bishop to supply it. There are even some *Chapter*s exempt from the Jurisdiction of the Bishop, and owning no Head but their Dean. After the Example of Cathedral *Chapters*, Collegiate ones also continu'd to form Bodies, after they had abandon'd living in Community.

Antient CANONS, and those still subsisting in the Roman Church, are of various Kinds; as, *Cardinal Canons*, which are those attach'd, and, as the *Latins* call it, *Incardinati* to a Church, as a Priest is to a Parish. *Domiciliary Canons*, were young *Canons*, who not being in Orders, had no Right in any particular Chapters. *Expectative Canons*, were such as without having any Revenue or Prebend, had the Tithes and Dignities of *Canons*, a Voice in the Chapter, and a Place in the Choir; till such time as a Prebend should fall. *Foreign Canons*, were such as did not officiate in the *Canonies* to which they belong'd: To these were oppos'd *Mansuatory Canons*, or *Canons Residentiary*. *Honorary Canons*, are the same with *Lay Canons*: In a Manuscript Ordinary, at Rouen, is mention made of *Canons of thirteen Marks*; which, perhaps, was the Revenue of their *Canonate*. In the Church at London, were *Canons Minor*, or *little Canons*, who officiated for the great ones. At Lucca there are *Mixed Canons*. There were also *Canons of Poverty*; *Canons ad Succurrendum*, who were made *Canons* at the Point of Death, to partake of the Prayers of the Chapter. *Tertiary Canons*, or those who had only the third Part of the Revenues of the *Canonate*.

Charlemagne ordain'd, that those who were admitted into the Cleric, that is, into the *Canonic* Life, should be oblig'd to live Canonically, and according to the Rule prescrib'd 'em; obeying their Bishops as Monks do their Abbat: By this Means it was, that the Spirit of Monachism became introduc'd into Cathedrals; for the Clerks being ty'd to certain Rules, became half Monks; and instead of applying themselves to the Function of the Prieft-hood, shut themselves up in Cloisters: whence the Houses where they resided took the Name of *Monasteries*, and were to be kept inclos'd; as appears by the Synodical Statutes of *Hincmar*, in 874. So that there were two kinds of Monasteries; the one for Monks, the other for *Canons*. Singing, in a little time, became their chief employ; and 'tis now almost the whole Business they have left: the Bishops looking on 'em as little else but their Chaplains.

In the VIIIth Century, S. *Cyrodogand* made a Rule for the *Canons*, which was receiv'd by 'em all, and is still extant

tant, in 34 Articles, drawn chiefly from that of *St. Benedict*, but accommodated to the Cleric Life. In this were prescribed their Penances, Habits, &c. There was a second Rule made in 816, at the Request of *Charlemagne*, by the Bishops then conven'd at *Aix la Chapelle*, on account of the *Roman Indiction*; compos'd of Extracts from the Fathers and Councils.

CANONS Regular, are *Canons* that still live in Community; and who, like *Religious*, have, in process of Time, to the Practice of their Rules, added the solemn Profession of Vows: They are called *Regulars*, to distinguish them from those *Canons* who abandon living in Community; and at the same time, the Obedience of the *Canons* made as the Rule of the Clergy, for the Maintenance of the ancient Discipline. See **REGULAR**.

Canons subsisted in their Simplicity till the XIth Century, when some of them separating from the Community, took with them the Name of *Canons*, or *cephalous Priests*, because they declin'd to live in Community with the Bishop; and those who were left, thenceforth acquir'd the Denomination of *Canons Regular*. The *Regulars* have adopted most of the Professions of the Rule of *St. Augustin*. 'Tis disputed to which Class the *Canons Regular* belong, whether to the Clergy or the Religious; both the Cleric and Monastic State being united in 'em. The Point of Priority and Precedence is hotly contested, both between the *Regular Canons* and the Priests; and the *Regular Canons*; and simple Monks: The double Capacity of the *Canons*, is the Foundation of this Controversy.

CANONS Secular, or *Lay Canons*, are such among the Laity, as have been admitted, out of Honour and Respect, into some Chapters of *Canons*; such are the Counts of *Angou*, in the Church of *St. Martin de Tours*; the Kings of *France*, of *St. Hilary in Poitiers*, &c. the Emperor, of *St. Peters*, &c.

CANONES, in the *Romish Church*, a Maid who enjoys a Prebend, affected by the Foundation, to Maids; without being oblig'd to renounce the World, or make any Vows: There are few of these, except in *Flanders* and *Germany*: They are rather look'd upon as a Seminary and Retreat of Girls for Marriage, than an Engagement for the Service of God.

CANONESSES of *St. Augustin*, are a kind of Religious, who follow the Rules of *St. Augustin*; of which there are various Congregations. See **AUGUSTINE**.

CANONRY, or **CANONATE**, the Benefice fill'd by a *Canon*. The *Canonate* is distinguish'd from Prebend, in that the Prebend may subsist without the *Canonate*, whereas the *Canonate* is inseparable from the Prebend: 'Tis to the *Canonate*, not the Prebend, that the Right of Suffrages and other Privileges are annex'd. See **PREFEND**.

CANON, in its more proper Sense, is a LAW, or Rule of Ecclesiastical Discipline; and particularly, a Decree of a Council. *Canons* are Decisions of Matters of Religion; or Regulations of the Policy and Discipline of a Church, made by Councils, either General, National, or Provincial; as the *Canons* of the Council of *Nice*, of *Trent*, &c. See **COUNCIL**, and **CANON LAW**.

There have been various Collections of the *Canons* of the Eastern Councils; but four principal ones, each ampler than the preceding ones. The first, according to *Usher*, A.D. 528, containing only those of the first Oecumenical Council, and the five Provincial ones: They were but 154 in number. To these, *Dionysius Exiguus*, in the Year 520, added the 50 *Canons* of the Apostles, and those of the other General Councils. The *Greek Canon*, in this second Collection, end with those of the Council of *Calcedon*; to which are subjoin'd, those of the Council of *Serdica*, and the *African Councils*. The fourth and last Collection, comes down as low as the second Council of *Nice*; and 'tis on this that *Balsamon* and *Zenaras* have commented.

There is a great Dispute about the Apollitical *Canons*, usually ascrib'd to *St. Clement*, *Bellarmin*, *Baronius*, &c. will have them to be genuine *Canons* of the Apostles: *Hincmar*, *de Marca*, *Beveridge*, &c. take them to be fram'd by the Bishops, who were the Apostles Disciples in the 11d or 11th Century. *Doyle*, &c. maintain them to have been forg'd by some Heretic in the VIth Century. The *Greek Church* allow 85 of them, and the *Latin* only 50.

CANON is also us'd for the author'd Catalogue of the Sacred Writings; See **SCRIPTURE**, **BIBLE**, **TESTAMENT**. The ancient *Canon*, or Catalogue of the Books of the Old Testament, was made by the Jews, and is ordinarily attributed to *Esdras*. This is the *Canon* allow'd to have been follow'd by the Primitive Church, till the Council of *Trent*; and, according to *St. Jerome*, consisted of no more than 22 Books; but that Council enlarg'd the *Canon* very considerably, taking into it the Books which we call *Apocryphal*, and enjoining all these to be receiv'd as Books of Holy Scripture, upon Pain of Anathema, and being attain'd of Herefy. The *Romanists*, in defence of this *Canon*, say,

that 'tis the same with that of the Council of *Hippo*, held in 395, and with that of the third Council, at which were present 47 Bishops, and among the rest, *St. Augustin*; who declar'd they receiv'd it from their Fathers. Some of the Fathers distinguish the inspir'd Writings into three Classes, *Proto-Canonical*, *Deutero-Canonical*, and *Apocryphal*. See **DEUTERO-CANONICAL**, and **APOCRYPHAL**.

Passébal CANON, a Table of the Moveable Feasts, shewing the Day of Easter, and the other Feasts depending on it, for a Cycle of 19 Years. The *Passébal Canon* is suppos'd to be the Calculation of *Eusebius* of *Cæsarea*, and to have been done by Order of the Council of *Nice*. See **EASTER**, **FEAST**, **CYCLE**, &c.

CANON is also us'd in some Orders of Religious, for the Book that contains their Rules, Constitutions, &c. *Canon*, again, is us'd for the Catalogue of Saints acknowledg'd and canoniz'd in the *Romish Church*. See **SAINTE**, and **CANONIZATION**.

CANON is also us'd, by way of Excellence, in the *Romish Church*, for the secret Words of the Mass, from the Preface to the *Pater*; in the Middle of which the Priest makes the Consecration: The common Opinion is, that the *Canon* commences with *Te igitur*, &c. The People are to be on their Knees, hearing the *Canon*; and are to rehearse it to themselves, so as not to be heard. The *Canon* is pretended to have been put into its present Form by *St. Jerome*, by Order of *Pope Siricius*. The Council of *Trent* declare the *Canon* of the Mass to have been fram'd by the Church; and to be compos'd of the Words of *Jesus Christ*, his Apostles, and the first Popes: Some call it *Aktion*.

CANON, in *Musick*, is a Rule, or Method of determining the Intervals of Notes. See **INTERVAL**.

Ptolemy, rejecting the *Aristoxenian* Way of measuring the Intervals in *Musick*, by the Magnitude of a Tone, (which was suppos'd to be form'd by the Difference between a *Diapente* and a *Diateseron*) thought that musical Intervals should be distinguish'd, according to the Ratio's or Proportions which the Sounds terminating those Intervals bear to one another, when consider'd according to their degree of Acuteness or Gravity; which, before *Aristoxenus*, was the old *Pythagorean* Way. He therefore made the *Diapason* consist in a double Ratio; the *Diapente* in a Sesquialtral; the *Diateseron*, in a Scliquitertian, and the Tone it self in a Scliquioctave; and all the other Intervals, according to the Proportion of the Sounds that terminate them: Wherefore, taking the *Canon*, (as 'tis call'd) for a determinate Line of any length, he shews how this *Canon* is to be cut accordingly, so that it may represent the respective Intervals: and this Method answers exactly to Experiment, in the different Lengths of musical Chords. From this *Canon*, *Ptolemy* and his Followers, have been call'd *Cannonici*; as those of *Aristoxenus*, were call'd *Musici*. See **MUSICK**.

CANON in *Trigonometry*, and *Algebra*, a general Rule for the Solution of all Cases, of a like Nature with the present Inquiry: Thus, every last Step of an Equation is a *Canon*; and, if turn'd into Words, becomes a Rule to solve all Questions of the same Nature with that propos'd. For the Construction of the *Canon* of Sines; see **SINES**. For Tangents, see **TANGENT**. For Logarithms, see **LOGARITHM**, &c.

Natural CANON of *Triangles*, is the *Canon* of Sines, Tangents, and Secants taken together: So call'd, because serving principally for the Solution of *Triangles*. See **TRIANGLE**.

Artificial CANON, is the *Canon* of Artificial Sines, Tangents, &c. i. e. of Cosines, Cotangents, &c. See **COSINE**, **COTANGENT**, &c.

CANON LAW, a Collection of Ecclesiastical Statutes, Constitutions, Decisions, and Maxims, taken from the ancient Councils, the Decrees of Popes, and the Reports and Resolutions of the Primitive Fathers. See **LAW**.

The *Canon Law* that obtain'd throughout the West, till the XIth Century, was the Collection of *Canons* made by *Dionysius Exiguus*, in 520; the *Capitularies* of *Charlemagne*, and the Decrees of the Popes, from *Siricius* to *Anastasius*. No regard was had to any thing not compris'd in these; and the *French* still maintain the Rights of the *Gallican Church*, to consist in their not being oblig'd to admit any thing else, but to be at Liberty to reject all Innovations made in the *Canonical Jurisprudence* since that Compilation; as well as all Papal Decrees before *Siricius*. Indeed, between the VIIIth and XIth Centuries, the *Canon Law* was mix'd and confounded with the Papal Decrees, from *St. Clement* to *Siricius*; which still then had been unknown: This gave occasion to a new Reform, or Body of the *Canon Law*; which is the Collection still extant, under the Title of *The Concordance of the discordant Canons*, made in 1151, by *Gratian*, a Benedictin Monk, from Texts of Scripture, Councils, and Sentiments of the Fathers, in the several Points of Ecclesiastical Policy. This Work he divided according to the Order of Matters,

not of Times and Councils, as had been done before : So that upon the Appearance of this, all the ancient Collections immediately sunk. It is divided into three Parts : the first into 108 Distinctions ; the second into 36 Causes, and the third into five distinct Parts : The second Part of the *Canon Law*, consists of the Decrees of the Popes, from 1150, to Pope Gregory IX. in 1229. In 1297, Pope Boniface continu'd the Papal Decrees as far as his Time : This Part the French make particular Exception to, by reason of that Pope's Differences with their King Philip the Fair. To these, Pope John XXII. added the Clementines, or the five Books of the Constitutions of his Predecessor Clement V. And to all these were after added, 20 Constitutions of the said Pope John, call'd the *Extravagants* ; and some other Constitutions of his Successors. All these compose the *Body, or Corpus of the Canon Law* ; which, including the *Comments*, makes three Volumes in Folio ; the Rule and Measure of Church Government : Indeed, with us, since the Reformation, the *Canon Law* has been much abridg'd and restrain'd ; only so much of it obtaining, as is consistent with the Common and Statute Laws of the Realm, and the Doctrine of the Establish'd Church. See *COMMON LAW, STATUTE, &c.*

CANONIZATION, a Declaration of the Pope, whereby, after a great deal of Solemnity, he enters into the List of Saints, some Person who has liv'd an exemplary Life, and suppos'd to have wrought Miracles. See *SAINTE*, and *MIRACLES*.

F. *Mabilion* observes, that the Term *Canonization* is not of so much Antiquity as the Thing : The Word being never met with before the XIIIth Century ; tho' St. *Ulric*, Bishop of *Auburg*, was canoniz'd in 985. *De Causis* adds, that *Canonization* was, at first, no more than a bare Order of the Pope, whereby those who had distinguish'd themselves by their Piety, &c. were appointed to be inserted in the *Canon of the Mass*. *Mabilion* distinguishes two Kinds of *Canonization* ; a General, and Particular : The first made by a General Council, or a Pope ; the second, by a Bishop, a particular Church, or a particular Council : And there are Instances likewise of *Canonizations*, at least of something very like them, by Abbots. At first, only Martyrs were canoniz'd ; by degrees they came to Confessors. See *MARTYR, &c.*

Canonization antiently consisted in inserting the Saint's Name in the Sacred *Dyptiques*, or *Canon of Saints* ; in appointing a proper Office for invoking him, and erecting Churches under his Invocation, with Altars for Mass to be celebrated on ; taking up the Body from the Place of its first Burial, and the like Ceremonies : By degrees, other Ceremonies were added ; Processions made, with the Saint's Image carry'd in triumph ; the Day of his Death declar'd a Feast. And to render the Thing still more solemn, *Honorius III.* in 1225, added several Days Indulgence.

'Tis a great Dispute among the Learned, when the Right of *Canonization*, which 'tis own'd was antiently common to Ordinaries, especially Metropolitans and Princes, with the Pope, became first peculiar to the Pope : Some say, *Alexander III.* made this Reserve to the Holy See. The Jesuits of *Antwerp*, in their *Proptyleus*, say, 'twas not establish'd till two or three Ages ago ; and then by a mere Custom, which pass'd tacitly into a Law ; which appears not to have been generally receiv'd in the Xth and XIth Centuries. This, however, is pretty certain, that it was generally allow'd before Pope *Alexander III.* the Archbishop of *Vienne* in *France*, and his Suffragan, acknowledge it in an authentic manner in the Year 1231, by a Letter written to *Gregory IX.* desiring him to canonize *Stephen*, Bishop of *Die*, who dy'd in 1208. *Quis nemo*, say they, *quantalibet Meritorum prerogativa pollet, ab Ecclesia Dei pro sancto habendus, aut venerandus est, nisi prius per sedem Apostolicam ejus sanctitas fuerit approbata.* The Term *Canonization* takes its rise from the Custom of inserting the Names of the Saints in the *Canon of the Mass*, as above-said, before there were any Martyrologies in the Church. See *MARTYROLOGY*.

CANTALIVERS, in Building, Pieces of Wood fram'd into the Front, or other Sides of a House, to sustain the Moulding and Eaves over it : These seem, in effect, to be the same with Modillions, except that the former are plain, and the latter carv'd. They are both a kind of Carroufles, set at equal Distances under the Corona of the Cornice of a Building. See *MODILLION* ; see also *CORNICE*, and *CORONA*.

CANTALIVER-CORNICE, is a Cornice with *Cantalivers* or Modillions under it ; see *CANTALIVERS*.

CANTATA, in Music, a Song, or Composition, intermix'd with Recitatives, little Airs, and different Motions ; ordinarily intended for a single Voice, with a thorough Bass ; sometimes for two Voices, or other Instruments. See *SONG*.

The *Cantata* pass'd from *Italy* into *France*, and thence to us : It has something in it extremely fantastical and capricious, and seems only to please by its Novelty. The Word is *Italian*, where it signifies the same thing.

CANTHARIDES, in Medicine, a Drug much us'd for the raising of Blisters. See *BLISTER*. *Cantharides* are the Principal of the Tribe of Epispasticks, or Vescicatories. See *EPISPASTIC, &c.*

Cantharides are a kind of venomous Insects, with Feet and Wings, like little Flies ; hence also call'd *Spanish Flies*. They are form'd of a kind of little Worms, hatch'd on Wheat, the Leaves of the Poplar, &c. There are various Kinds of *Cantharides* : the best are those which appear with different Colours, having yellow Lines running across their Wings ; thick, and fresh. They are kill'd by laying them over a very strong Vinegar, which is made to heal for that purpose ; after which they are dry'd, and may be preserv'd two Years. *Cantharides* are very sharp and corrosive, abounding with a subtle, caustick, volatile Salt ; whereby they become exceedingly injurious to the Bladder, so as to ulcerate it, even when apply'd externally, if suffer'd to lye on too long. They are much commended in Fevers ; as they raise and strengthen a low trembling Pulse, give Relief in delirious Ravings, soporiferous Stupors, Loss of Reason, &c. (the common Symptoms of high and dangerous Fevers) reduce continual Fevers to regular and distinct Remissions ; and so make way for the Bark : cleanse and open the obstructed Glands, and Lymphaticks ; bring on critical Sweats, &c. Dr. *Morgan* accounts for these Effects of *Cantharides* thus : ' The subtle and volatile pungent Parts of which the *Cantharides* consist, being carry'd into the Blood, and passing with the Lymph or Serum into the glandular Pipes, act there by dissolving, attenuating, and rarifying the viscid Cohesions of the Lymph ; and by stimulating the nervous Coats of the Vessels throw off their stagnant Viscidities, and thus restore the Circulation and free Drain of Lymph from the Arteries to the Veins ; cleanse the Excretory Glands, and bring on critical Sweats, and Urines. Thus, the extremely subtle, active, and pungent volatile Salts, deriv'd from the *Cantharides*, purge the Glands and Lymphaticks universally ; much after the same manner as common Catharticks do the Guts.' *Philosop. Princip. of Medicine*, p. 304.

Cantharides are seldom, if ever, to be us'd internally : In the *Philosop. Transact.* indeed, we have Instances of their internal Application, and that with success, by Mr. *Younge*, in Dropsical and other Cases ; sometimes mix'd with Camphor, and sometimes without ; only well wash'd down with large Draughts of Posset, Pilsan, Emulsions, or the like. The form wherein he tells us he uses to administer this fiery Insect, is that of a soft Pill, or Bolus, compos'd of three *Cantharides prepar. Troch.* 2 *Myrrha sls.* *Sem. Amel.* gr. vi. *Rob. Cynosb. q. l.* This, in stubborn Suppressions of the *Menstr* and *Lochia*, in difficult Childbirth, and Retention of the *Secundine*, he finds does Wonders : He adds, that the Heat or Pain it occasions in the Neck of the Bladder, is much short of what he has an hundred times seen, and sometimes felt, from the Application of an Epispastick to the Back. But their principal use is in Vescicatories, to raise Blisters on the Skin ; and by that means to turn off and discharge some Flux of ill Humours. See *VESICATORY*.

Cantharides take their Name from *Cantharus*, an Animal, otherwise call'd *Scarabeus venosus*. *Cantharides* are sometimes apply'd to the Temples for the Tooth-ach : The Farriers use them in several Diseases of Horses. They must be chosen new, dry, and whole : they won't keep above two Years, without mouldering into a Dust, of no use.

CANTHUS, in Anatomy, the Corner, or Angle of the Eye ; see *EYE*. That Corner next the Nose, is called the *great, inner, and domestick Canthus* ; and by some Physicians the *Fountain* : The other, towards the Temples, is call'd the *little, or external Canthus*. See *LAZARUS* derives the Word from the Greek *κάνθος*, to itch.

CANTHUS, in Chymistry, the Lip of a Vessel ; or that Part of the Mouth of a Vessel, which is a little hollow'd, or depress'd, for the easy pouring off a Liquor : Hence to pour by Decantation, is to pour thro' that place. See *DECANTATION*.

CANTON, a Quarter of a City, or Country, consider'd as separated and detach'd from the rest of that City, &c. Hence the *Swiss Cantons*, or the Divisions of *Switzerland*, thirteen in number ; each a Republick in it self, and together forming the *Helvetic Body*. The Word, probably, comes from the Italian *Canton*, a large Part of an angular Stone.

CANYON, in Heraldry, one of the nine honourable Ordinaries. See *ORDINARY*. The *Canyon* is a square Portion of the Escutcheon parted from the rest : It has not any fix'd Proportion ; tho' regularly it should be less than a Quarter : 'tis often only a ninth Part, and us'd as an Addition, or Difference, frequently, to express Bastardy. 'Tis sometimes plac'd at the right Corner, and sometimes at the left ; in which latter Case, it is call'd a *Canyon sinister*. Its form is express'd in the

the adjoining Figure: Thus, he bears *Ermin*, a *Canton Argent*, charged with a *Chetevon Gale*.

CANTON, is also us'd for the Spaces left between the Branches of a Crofs or Saltire.

CANTONED is us'd in Architecture, when the Corner of a Building is adorn'd with a Pilaster, an angular Column, ruffick Quains, or any thing that projects beyond the naked of the Wall.

CANTONER, in Heraldry, is who the four *Cantons*, or Spaces round a Crofs, or Saltire, are fill'd up with any Pieces. He bears *Gules*, a *Crofs Argent*, *canton'd with four Scallop Shells*. The Word is also us'd when there are little Pieces in the *Cantons*, or Spaces of any principal Figure of an Escutcheon.

CANVAS, or CANEVAS, properly, a coarse Cloth, usually very open, and wove regularly in little Squares; us'd for the Ground of Tapestry Work, Painting, &c. Hence *Canvas* is us'd, especially among the *French*, for the Model, or first Words whereon an Air, or Piece of Music is compos'd, and given to a Poet to regulate and finish. The *Canvas* of a Song, is certain Notes of the Composer, which show the Poet the Measure of Verses he is to make. Thus, *De Lot* says, he has *Canvass* for ten Sonnets against the *Muses*.

CANULA, or CANNULA, in Chirurgery, a little Tube, or Pipe, which the Chirurgeons leave in Wounds and Ulcers, that they dare not, or chuse not to heal up; because still suppurating. The *Canula* is of Gold, Silver, or Lead; and is perforated, that the Pus entering within it, may fall upon a Sponge, dipp'd in Spirit of Wine, and plac'd at the Orifice, to keep the Ulcer warm, and to prevent the external Air from entering: Some of these *Canules* have Rings, whereby to keep them fast in the Wound; and others have Holes with Ribbons thro' 'em, to bind 'em down. Some are round, others oval, others crooked.

There is a particular kind of these *Canules*, form'd taper-wisely, with a Skrew fasten'd to one End, in manner of a Cock: Its use is, for the Discharge of the Water out of the Abdomen, after Tapping, in an *Astic*, or Dropsy. To this End it is insert'd into the Body, thro a Hole near the Navel; made with a pointed Instrument, and sometimes a Punch; and is fasten'd in its Place by a Bandage, and guarded from any Injury of the Clothes, &c. by a Case, or Cover. It has this advantage over the common Tapping; that by means thereof, the Water is drawn out when, and in what measure the Patient pleases. See TAPPING, and DROPSY.

There are likewise a kind of *Canules* for the Application of a Small Causteries; they are made very shallow, and are, in effect, little more than Hoops; thro the Aperture whereof, the actual Caustery is convey'd; which, by this means, is kept from damaging the adjacent Parts. See CAUSTERY, and CAUSTIC.

CAP, a Garment serving to cover the Head, and made nearly of the Figure thereof: The *Era* of Caps and Hats, is refer'd to the Year 1249; the first seen in these Parts of the World being at the Entry of *Charles VII.* into *Rouen*: From that time they began, by little and little, to take place of the Hoods, or Chaperons, that had been us'd till then. *M. le Gendre*, indeed, goes further back; they began, says he, under *Charles V.* to let fall the Angles of the Hood upon the Shoulders, and to cover the Head with a Cap, or Bonnet: When this Cap was of Velvet, they call'd it *Mortier*; when of Wool, simply *Bonnet*: the first was lac'd, the latter had no Ornament besides two Horns, rais'd a moderate Height, one of which serv'd in covering and uncovering. None but Kings, Princes, and Knights, were allow'd the Use of the *Mortier*. See MORTIER.

The Cap was the Head-dress of the Clergy and Graduates. *Pasquier* says, that it was antiently a part of the Hood wear'd by the People of the Robe; the Skirts whereof being cut off, as an Incumbrance, left the round Cap an easy commodious Cover for the Head; which round Cap being afterwards assum'd by the People, those of the Gown chang'd it for a square one, first invent'd by a *Frenchman*, call'd *Patrouillet*: He adds, that the giving of the Cap to the Students in the Universities, was to denote that they had acquir'd full Liberty, and were no longer subject to the Rod of their Superiors; in Imitation of the antient *Romans*, who gave a *Pileus*, or Cap, to their Slaves, in the Ceremony of making them free: whence the *Proverb*, *Vosce servos ad Pileum*. Hence, also, on Medals, the Cap is the Symbol of Liberty, whom they represent holding a Cap in her right Hand, by the Point.

The *Chinese* have not the use of the *Hat*, like us; but wear a Cap of a peculiar Structure, which the Laws of Civility will not allow them to put off; 'tis different for the different Seasons of the Year: That us'd in Summer, is in form of a Cone, ending at top in a Point. 'Tis made of a very beautiful kind of Mat, much valu'd in that Country, and us'd with *Satin*; to this is add'd, at top, a large Lock of red Silk, which falls all around as low as the Bottom: fo

that, in walking, the Silk fluctuating regularly on all Sides, makes a graceful Appearance: Sometimes, instead of Silk, they use a kind of bright red Hair, the *Lufre* whereof no Weather effices. In Winter they wear a *Plush Cap*, border'd with *Martlet's* or *Fox's* Skin; the red like those for the Summer. Nothing can be neater than these Caps; they are frequently fold for eight or ten Crowns: but they are so short that the Ears are expos'd. See TURBANS; see also HATS.

Square-CAP. The Cap, or Bonnet, is a Mark, or Ornament of certain Chanciers: Thus Churchmen, and the Members of Universities, Students in Law, Physick, &c. as well as Graduates, wear *square Caps*. In most Universities, Doctors are distinguish'd by peculiar Caps, given them in assuming the Doctorate. *Wickliff* calls the Canons of his Time *Biswearis*, from their *square Caps*. *Pasquier* observes, that in his Time, the Caps wore by the Churchmen, &c. were call'd *square Caps*; tho, in effect, they were round, yellow Caps.

The Cap is sometimes also us'd as a Mark of Infamy: In *Italy*, the Jews are distinguish'd by a yellow Cap; at *Lucca* by an orange one. In France, those who had been Bankrupts, were oblig'd ever after to wear a green Cap; to prevent People from being impos'd on in any future Commerce. By several Arrats in 1784, 1622, 1628, 1688, it was decreed, that if they were at any time found without their green Cap, their Protection should be null, and their Creditors empower'd to cast them into Prison: but the Thing is not now executed. See BANKRUPT.

CAP, in a Ship, is a square Piece of Timber, put over the Head, or upper End of a Mast, having a round Hole to receive the Mast. By these Caps, the Top-masts, and Top-gallant-masts, are kept steady and firm in the Treffle-trees, where their Feet stand; as those of the lower Masts do in the Steps. See MAST.

Priest's-CAP, in Fortification. See BONNET à Pretre.

CAPACITY, in a Logical Sense, an Aptitude, Faculty, or Disposition to retain, or hold any thing. Our Law allows the King two Capacities, a *Natural*, and a *Political*; in the first he may purchase Lands to him and his Heirs; in the latter to him and his Successors. The Clergy have the like.

CAPARASON, or CAPARISON, the Covering, or Clothing laid over a Horse; especially a Sumpter, or Horse of State. Antiently, *Caparasons* were a kind of Iron Armour, wherewith Horses were cover'd in *Barcel*. The Word is Spanish, being an Augmentative of *Cape*, *Capot*, Head.

CAPE, or PROMONTORY, in Geography, a Head-Land; or a piece of Land running out beyond the rest, into the Sea. *Sicily* was call'd by the Antients *Trinacria*, by reason of its three Capes, or Promontories; represented on Medals, by three Mens Legs join'd together at the head of the Thigh, and bent in the Knee; which pretty nearly resembles the Triangular Figure of that Island. See PROMONTORY, CHERSONESUS, &c.

CAPE, in Law, a Writ touching Plea of Lands and Tenements; so term'd, (as most other Writs are) from the Word which carries the chief Intention or End of it. The Writ is divided into *Cape Magnam*, and *Cape Parvam*; which in their Effect or Consequence are alike, as to the taking hold of Things immovable: in the following Circumstances they differ; 1st, In that the *Cape Magnam*, or grand Cape lies before; and the *Cape Parvam*, or petit Cape, after. *Cape Magnam* summons the Defendant to answer to the Default; and besides to the Demandant: *Cape Parvam* only to the Default. *Ingham* says, 'tis call'd petit Cape, not because of small force; but because contain'd in few Words.

Cape Magnam is thus defin'd in the old *Nat. Brev.* 'Where a Man hath brought a *Prescipe quod reddet* of a Thing that touches Plea of Land, and the Tenant makes default at the Day to him given in the original Writ; then this Writ shall be for the King to take the Land into his Hands; and if the Tenant come not at the Day given him by the Writ, he loses his Land.'

Cape Parvam, or petit Cape is thus defin'd, *Ibid.* 'Where the Tenant is summon'd in Plea of Land, and comes at the Summons, and his Appearance is recorded; and at the Day given him, prays the View; and having it granted, makes default: then shall this Writ issue for the King, &c.'

CAPE ad Valentiam, a Species of Cape Magnam, so call'd from the End to which it tends: It is thus describ'd, 'Where I am implor'd of Lands, and I vouch to warrant another, against whom the Summons ad *Warrantandum* hath been awarded, and the Sheriff comes not at the Day given; then, if the Defendant recover against me, I shall have a Writ against the *Vouchee*; and shall recover so much in value of the Lands of the *Vouchee*, if he has so much: otherwise, I shall have Execution of such Lands and Tenements as descend to him in Fee; or, if he purchase afterwards, I shall have a Re-summmons against

' against him : And if he can say nothing, I shall recover the Value.'

CAPPELLA, in Astronomy, a Star of the first Magnitude in the preceding Shoulder of *Auriga*. In *Ptolemy's* and *Zycho's* Catalogues, 'tis the third in order of that Constellation. In the *Britannic Catalogue*, the fourteenth : Its Longitude is 17°, 31', 41" ; its Latitude 22°, 51', 41" . See *AURIGA*.

CAPER. See *CAPRE*.

CAPHAR, a Toll or Duty, impos'd by the *Turks* on the Christian Merchants, who carry or send Merchandises from *Aleppo* to *Jerusalem*. The Toll of *Caphar* was first levied by the Christians themselves when Masters of the Holy Land, for the Support of Troops and Forces, posted in the more difficult passes, to watch the *Arabs*, and prevent their Pillages. But the *Turks*, who have continu'd, and even rais'd the Toll, abuse it ; exacting arbitrary Sums of the Christian Merchants and Travellers, on pretence of guarding them from the *Arabs* ; with whom they yet frequently keep an Understanding, and even favour their Robberies.

CAPHORA. See *CAMPHOR*.

CAP-AGA, or **CAP-AGASSI**, a *Turkish* Officer. The *Cap-aga* is Governor of the Gates of the Seraglio ; or grand Master of the Seraglio : This is the first Dignity among the white Eunuchs. The *Cap-aga* is always near the Person of the Grand Signior : He introduces Ambassadors to their Audience : No body enters, or goes out of the Grand Signior's Apartment but by his means. His Office gives him the Privilege of wearing the Turban in the Seraglio, and to go every where on Horseback. He accompanies the Grand Signior to the Apartment of the Sultana, but stops at the Door without entering. His Appointment is very moderate ; the Grand Signior bears the Expence of his Table, and allows him at the Rate of about 60 *French Livres per Day* : But his Office brings him in abundance of Presents ; no Affair of Consequence coming to the Emperor's Knowledge, without passing thro his Hand. The *Cap-aga* cannot be *Belew* when he quits his Post. See *AGA*.

CAPIAS, a Writ, of two sorts ; one before Judgment, call'd *Capias ad Respondendum* ; in an Action Personal, when the Sheriff, upon the first Writ of Distress, returns, *Nihil habet in balibus nostris*. The other is a Writ of Execution after Judgment, which is also of various Kinds ; as, *Capias ad Satisfaciendum*, *Capias pro Fine*, *Capias Ut legatum*, after Judgment, &c.

Capias ad Satisfaciendum, is a Writ of Execution after Judgment ; lying where a Man recovers in an Action Personal, as for Debt, Damage, &c. in which Cases, this Writ issues to the Sheriff, commanding him to take the Body of him against whom the Debt is recover'd ; who is to be kept in Prison till he make Satisfaction.

Capias conductus ad presensendum, an original Writ, which lies, by the Common Law, against any Soldier who has covenanted to serve the King in War, and appears not at the Time and Place appointed. It is directed to two of the King's Sergeants at Arms, to arrest and take him wherever he may be found ; and to bring him *Coram Consilio nostro*, with a Clause of Assistance.

Capias pro Fine, is where one being by Judgment fin'd to the King, upon some Offence against a Statute, does not discharge it according to the Judgment : By this Writ, therefore, his Body is to be taken, and committed to Prison till he pay the Fine.

Capias Ut legatum, a Writ which lies against one outlaw'd, upon any Action, Personal or Criminal ; by which the Sheriff apprehends the Party outlaw'd, for not appearing on the Exigent, and keeps him in safe Custody till the Day of Return ; when he presents him to the Court, to be there further order'd for his Contempt. See *OUTLAW*.

CAPIGI, a Porter, or Doorkeeper of the *Turkish* Seraglio. There are about 500 *Capigis*, or Porters in the Seraglio, divided into two Companies ; one consisting of 300, under a Chief call'd *Capigi-Bassa* ; who has a Stipend of three Ducats per Day : The other consists of 200, distinguish'd by the Name of *Curciapigi*, and their Chief *Curciapigi-Bassa*, who has two Ducats. The *Capigis* have from seven to fifteen Officers per Day ; some more, others less. Their Business is to assist the Janizaries in the Guard of the first and second Gates of the Seraglio : Sometimes all together ; as when the Turk holds a General Council, receives an Ambassador, or goes to the Mosque ; and sometimes only in part ; being rang'd on either side, to prevent People entering with Arms, any Tumults being made, &c. The Word, in its Original, signifies Gate. See *SKRAGLIO*.

CAPILLAMENT, literally signifies *Hair* ; being form'd of the Latin *Capillus*, of *Capus* ; q. d. *Hair of the Head*. Hence the Word is figuratively apply'd to several things, which, on account of their Length and Fineness, resemble Hairs ; As,

CAPILLAMENTS of the Nerves, are the fine Fibres, or Filaments, whereof the Nerves are compos'd. 'Tis not Vision perform'd chiefly by the Vibrations of this Medium, excited in the Bottom of the Eye by the Rays of Light ; and propagated thro the solid, pellucid, and uniform *Capillaments of the Optic Nerves*, to the *Sensorium* ? *Newt. Opt. p. 328*. See *FIBRE*, and *NERVE*.

CAPILLAMENTS, in Botany, more usually call'd *Stamens* ; are those small Threads, or Hairs, which grow up in the Middle of the Flower ; and are headed with little Knobs, call'd *Apices*. See *STAMINA*, and *APICES*.

CAPILLARY, of the Latin *Capillus*, a Hair ; is apply'd to several Things, to intimate their exceeding Smallness, Fineness, &c. resembling that of a Hair : As *Capillary Vessels*, *Capillary Feuchter*, &c.

CAPILLARY Vessels, in Anatomy, are the least, minutest, insensible Ramifications of the Veins and Arteries ; which, when cut, or broke, yield but very little Blood. See *VEIN*, and *ARTERY*. The *Capillary Vessels* shou'd be conceiv'd as vastly finer than Hairs. See *INOSCELEATION*, *CIRCULATION*, &c.

CAPILLARY, or **CAPILLACEOUS Plants**, are a Species of Plants, thus denominated from their Form, and manner of growing. The *Capillaries* have no principal Stalk, or Stem, with Branches, &c. shooting out of the same ; but grow from the Ground, like Hairs from the Head : They bear their Seed in little Tufts, or Prominences, on the back-side of their Leaves. The principal of these, is the *Capillus Veneris*, or *Adiantum* ; from which the rest take their Name. See *PLANT*.

The *Capillaries* are distinguish'd into those with an undivided Leaf, as the *Hemionitis*, and the *Phyllitis* ; or with a singly divided Leaf, and these have the Leaf either cut, or jagged in, but not divided into *Pinnæ*, clear homo to the main Rib ; as, *Polypodium*, *Lanchitis*, *Scolopendria*, *Adiantum*, *Aeroglyphon* &c. Or else divided quite homo to the Rib, and hanging like *Pinnæ* ; as the *Coma felix Marina*, and the *Trichomanes* : Others have the Leaf doubly divided, or at least once subdivided, the first Division being into Branches, and the second into *Pinnæ* ; as the *Hemionitis Multifida*, the *Filix Mas*, *Filix Palustris*, *Filix Scandens*. The *Adiantum album*, and *nigrum*, and others, have the Leaf trebly divided, or thrice subdivided ; first into Branches, then into little Twigs, and after this into *Pinnæ* ; these are, the *Felix Scandens of Brasil*, the *Felix Florida*, or *Opuntia Regalis* ; the *Felix mas Ramosa*, the *Felix Fœmœa Vulgaris*, the *Adiantum album Florida*, and the *Driopteris nigra*.

All the *Capillaries* are reputed of use in Medicine, especially in the making of Syrops ; to which, wonderful Virtues are attributed. But, in effect, only the *Capillary of Montpellier*, *Adiantum album Montpelitense*, and that of *Canada*, *Adiantum album Canadense*, are regularly us'd for that Purpose : The rest only serve to counteract 'em.

The Antients thought that the *Capillaries* were all without Seed ; and some of the Moderns, particularly *Dodonæus*, have given into the Opinion. But *Beubrunus*, and other of the more accurate Observers, maintain they have all their Seed. *Cassius* says, he has seen them with a Microscope : Since him, Mr. *W. Cole* has observ'd 'em with still more Curiosity ; he tells us, the *Capillæ*, or Seed Vessels, are in some less by half than a small grain of common Sand, in others much less ; yet some of them contain about 100 Seeds. See *SEED*.

CAPILLARY Tubes, in Physicks, are little Pipes, whose Orals are the narrowest possible ; nor such, whose Diameters do not exceed that of a common Hair ; for none such can be made : The Diameter of *Capillary Tubes*, is a half, third, or fourth of a Line. See *TUBE*.

The Ascend of Water, &c. in CAPILLARY Tubes, is a famous Phenomenon which has long embarrass'd the Philosophers : Let one End of a small Tube, open at both Ends, be immerg'd in Water, and the Liqueur within the Tube will rise to some sensible Height above the external Surface ; or, immerge two or more Tubes in the same Fluid, one of them a *Capillary* one, and the other considerably larger ; the Water will ascend considerably higher in the *Capillary Tube* than the other ; and this in the reciprocal Ratio of the Diameters of the Tubes. This Effect, Authors have commonly imputed to the unequal Pressure of the Air in unequal Tubes : The Air, say they, consists of ramose, spongy Parts, intermingled and embarrass'd among each other : now, a Column of such Air being suppos'd perpendicularly incumbent on the Canal of a small *Capillary Tube* ; part of the Pressure of the Column will be spent on the Sides, or Surface of the Tube ; so that the Column will not act with its whole Weight on the subjacent Fluid, but will lose a greater or less proportion of its Weight, as the Diameter of the Tube is the smaller. But this Solution is destroy'd, by the Experiment's succeeding in *Vacuo*, as well as in open Air.

Others, as Mr. *Hanksee*, &c. have recourse to the Attraction of the *Annuli* of the concave Surface of the Tube; to which Opinion the ingenious Dr. *Morgan* subscribes: Part of the Gravity of the Water in the Tube, says that Author, being taken off, by the attractive Power of the internal concave Surface of the Glass; the Fluid within the Tube, by the external greater Weight or Pressure, must ascend so far, as to compensate for this Diminution of Gravity by the Attraction of the Glass. He adds, that as the Power of Attraction in Tubes, is in a reciprocal Ratio of the Diameters; by lessening the said Diameter, or by supposing the Tubes still smaller and smaller, Water, or any other Fluid, may be thus rais'd to any assignable Height. *Phil. Princ. of Medicine*, p. 88, &c.

But this Author is somewhat overlen: For since in every *Capillary Tube*, the Height to which the Water will spontaneously ascend, is reciprocally as the Diameter of the Tube; it follows, that the Surface containing the suspended Water is always a given Quantity. But the Column of Water suspended in every Tube, is as the Diameter of the Tube: Therefore, if the Attraction of the containing Surface be the Cause of the Water's Suspension; it will follow, that equal Causes produce unequal Effects; which is absurd. And, again, not only his Solution, but his Phenomenon also is stretch'd too far: For 'tis not in all Fluids the Phenomenon obtains; but in Mercury the very contrary is found: the Fluid in a Tube, not rising so high as the Level of that in the Vessel; and the Defect being found the greater as the Tube is smaller.

We must, therefore, recur to Dr. *Jurine's* Solution of this Phenomenon, which is well supported by Experiments: The Suspension of the Water, on that Gentleman's System, is owing to the Attraction of the Periphery of the concave Surface of the Tube, to which the upper Surface of the Water is contiguous and adheres: This being the only Part of the Tube, from which the Water must recede upon its subsiding; and consequently the only one which, by the Force of its Cohesion and Attraction, opposes the Descent of the Water. This he shows to be a Cause proportional to the Effect; in regard, to the Periphery, and the suspended Column, are both in the same Proportion as the Diameter of the Tube. The Suspension thus accounted for, the seemingly spontaneous Ascent will easily be sol'd: For since the Water that enters a *Capillary Tube* as soon as its Orifice is dip'd therein, has its Gravity taken off by the Attraction of the Periphery, with which its upper Surface is in Contact, it must necessarily rise higher; partly by the Pressure of the stagnant Water, and partly by the Attraction of the Periphery, immediately above that which is already contiguous to it. See ASCENT.

CAPILLARY FRACTURE, See CAPILLATION.

CAPILLATION, or *Capillary Fracture*, according to some Writers, is a Fracture in the Skull, so small that it can scarce be perceiv'd; but yet often proves mortal. See FISSURE.

CAPISTRUM, in Surgery, a Bandage for the Head. See BANDAGE.

CAPITAL, of the Latin *Caput*, is us'd on various Occasions, to express the Relation of a Head, Chief, or Principal: Thus,

CAPITAL City, intimates the principal City of a Kingdom, Province, or State: as *London* is the *Capital*, or *Capital City of England*; *Moscow* of *Russia*; *Constantinople* of the *Ottoman Empire*; *Rouen* of *Normandy*, &c. See METROPOLIS, and CITY.

CAPITAL, or *Capital Stock*, in Commerce, is the Fund, or Stock of a trading Company or Corporation; or the Sum of Money they jointly furnish, or contribute to be employ'd in Trade. See STOCK, and FUND. The *Capital of the East India Company*, at its first Erection, was 36989 l. Sterling, which was afterwards doubled; and is now computed at 73978 l. 500 Pounds in the *Capital Stock* of the Company, entitles the Person to a Vote in the General Courts thereof. The Power given by Parliament to the *South Sea Company*, to increase their *Capital*, was the Source of all the Mischiefs which ensu'd. See COMPANY.

CAPITAL Crime, is that which subjects the Criminal to a Capital Punishment; i. e. to the Loss of his Head, or his Life. See CRIME, and PUNISHMENT.

CAPITAL Medicines, in Pharmacy, are the great, or principal Preparations of the Shops; remarkable for the number of Ingredients, extraordinary Virtues, &c. such as *Vesice Treacle*, *Mithridate*, &c. See MITHRIDATE, &c.

CAPITAL Lees, are the strong Lees made by the Soap-boilers, from Pot-Ashes. See SOAP. They are also us'd in Surgery, as a Caustic; and to make the *Lapis Infernalis*.

CAPITAL Letters. See CAPITALS.

CAPITAL, in Architecture, the uppermost Part of a Column or Pilaster, serving as the Head or Crowning thereof; plac'd immediately over the Shaft, and under the Entablature. See SHAFT, and ENTABLATURE.

CAPITAL of a Column, properly, is that whose Plan is round. See COLUMN.

CAPITAL of a Pilaster, is that whose Plan is square; or at least rectangular. See PILASTER.

The *Capital* is a principal, and essential Part of an Order, of Column or Pilaster: It is made different in the different Orders; and is that which chiefly distinguishes and characterizes the Orders. See ORDER.

The *Tuscan CAPITAL*, is the most simple and unadorn'd: Its Members, or Parts, are but three, viz. an *Abacus*; under this an *Ovolo*, or quarter Round; and under that, a *Neck*, or *Colarino*. The Neck terminates in an *Astragal*, or Fillet, belonging to the *Fist*, or Shaft.

The Character of this *Capital*, whereby it is distinguish'd from the *Doric*, &c. is that the *Abacus* is square, and quite plain, and has no Ogee or other Moulding; and that there are no Annulets under the *Ovolo*. Indeed, Authors vary a little as to the Character of the *Tuscan Capital*. *Vignola* gives the *Abacus* a Fillet, in lieu of an *Ovolo*. *Vitruvius* and *Scamozzi*, add an *Astragal* and Fillet, between the *Ovolo* and Neck; *Serlio* only a Fillet; *Pbilander* rounds the Corners of the *Abacus*. In the *Trajan Column* there is no Neck; but the *Astragal* of the Shaft, is confounded with that of the *Capital*. The Height of this *Capital* is the same with that of the Base, viz. one Module, or Semidiameter. Its Projecture is equal to that of the Circumference at the Bottom of the Column; viz. $\frac{1}{4}$ of the Module. See TUSCAN.

The *Doric CAPITAL*, beside an *Abacus*, an *Ovolo*, and a Neck, in common with the *Tuscan*, has three Annulets, or little square Members, underneath the *Ovolo*, in lieu of the *Astragal* in the *Tuscan*; and a Talon, Cima, or Ogee, with a Fillet over the *Abacus*. Authors vary, too, as to the Characters of this *Capital*: *Palladio*, *Vignola*, &c. put Rofes under the Corners of the *Abacus*, and in the Neck of the *Capital*. The Height of this *Capital*, *Vitruvius*, &c. makes one Module; and its Projecture 37 Minutes and an half. See DORIC.

The *Ionic CAPITAL* is compos'd of three Parts; an *Abacus*, consisting of an Ogee and a Fillet; under this a *Rind*, which produces the *Volutes*, or *Scrolls*, the most essential Part of this *Capital*; and at the Bottom, an *Ovolo*, or quarter Round: The *Astragal*, under that *Ovolo*, belongs to the Shaft; the middle Part is called a *Rind*, or *Bark*, from its supposed Resemblance to the Bark of a Tree laid on a Vase, whose Brim is represented by the *Ovolo*; and seeming to have been shrank up in drying, and to have twist'd into the *Volutes*. See VOLUTES, and SCROLLS. The *Ovolo* is adorn'd with *Eggs*, as they are sometimes call'd, from their oval Form: The *Greeks* call it the *Echinus*. See ECHINUS, Egg, &c. The Height of this *Capital*, *M. Perrault* makes 18 Minutes; its Projecture one Module, seven Tenths.

The Differences in the Character of this *Capital*, flow mostly from the different Managements of the *Volutes*; and consist in this: That in the *Antique*, and some of the *Moderns*, the Eye of the *Volute* answers not the *Astragal* of the Top of the Shaft, as *Vitruvius*, and most of the *Moderns* make it: That the Face of the *Volutes*, which usually makes a Flat, is sometimes curv'd and convex'd, so as the Circumvolutions go advancing outwards; as is frequent in the *Antique*. That the Border, or Rim of the Scroll in the *Volute*, is sometimes not only a plain Sweep, as ordinarily; but the Sweep is accompany'd with a Fillet. That the Leaves which invert the *Balustrade*, are sometimes long and narrow; sometimes larger and broader: That the two Faces of the *Volutes*, are sometimes join'd at the outer Corner; the *Balustrades* meeting in the inner, to make a Regularity between the Faces on the Front and Back of the Building, with those of the Sides. That among the *Moderns*, since *Scamozzi*, the *Ionic Capital* has been alter'd, and the four Faces made alike; by taking away the *Balustrade*, and hollowing all the Faces of the *Volutes* inwards, as in the *Composite*. That *Scamozzi*, and some others, make the *Volutes* to spring out from the *Ovolo*, as from a Vase; after the manner of the modern *Composite*; whereas, in the *Antique*, the *Bark* passes between the *Ovolo* and *Abacus*, quite straight, only twisting at its Extremities to form the *Volute*. And lastly, that of late Years, the Sculptors have add'd a kind of little Felloes, springing from the Flower, whose *Stalk* lies on the first Circumvolution of the *Volute*; and suppos'd to represent the Locks of Hair, hanging down on both sides of the Face. See IONIC.

The *Corinthian CAPITAL* is much the richest: It has no *Ovolo*; and its *Abacus* is very different from those of the *Tuscan*, *Doric*, or *Ionic*; as having its Faces circular, hollow'd inward, with a *Rose* in the middle of each Sweep. Instead of an *Ovolo*, and Annulets, here is only a Brim of a Vase; and the Neck is much lengthen'd and enrich'd with a double Row, of eight Leaves in each, bending their Heads downwards; and between them, small *Stalks* arising; whence spring the *Volutes*; which don't resemble those of the *Ionic Capital*; and which, instead of the four in the

Ionic, are here 16; four on each side, under the four Horns of the Abacus, where the Volutes meet in a small Leaf, which turns back towards the Corner of the Abacus. The Leaves are divided, each making three Ranges of lesser Leaves, whereof they are compos'd; each lesser Leaf is, again, generally parted into five, call'd *Olive Leaves*; sometimes into three, and call'd *Laurel Leaves*. The middle Leaf, which bends down, is parted into Eleven. In the Middle, over the Leaves, is a Flower, shooting out between the Stems and Volutes, like the Rose in the Abacus. The Height of this Capital is two Modules; and its Projecture one.

The Differences in the Character of this Capital, are, that in *Vitruvius*, &c. the Leaves are in form of the *Acanthus*; whereas in the Antique, they are more ordinarily Olive Leaves: That their Leaves are usually unequal, the undermost being made commonly tallest, sometimes shortest; tho' sometimes they are all equal. Sometimes the Leaves are ruffled; sometimes quite plain: The first Row generally belly out towards the Bottom, but are sometimes straight: Sometimes the Horns of the Abacus are sharp at the Corners, which seems agreeable to the Rules of *Vitruvius*; but they are more commonly cut off. There is some difference too in the Form and Size of the Rose. Again, the Volutes are sometimes join'd to each other; sometimes wholly separate: Sometimes the Spires of the Volutes continue twisting even to the End in the same Course; and sometimes turn back again near the Centre, in the form of an S. See CORINTHIAN.

The Composite Capital, is so called, because compos'd of Members borrow'd from the Capitals of other Columns. It takes a quarter Round, or Ovolo, from the *Doric*; an Astragal under this, together with Volutes, or Scrolls, from the *Ionic*; and a double Row of Leaves from the *Corinthian*, which it resembles in most other things; consisting, generally, of the same Members and the same Proportions. In the Middle of the Abacus is a Flower; and under the Horns, Leaves which return upward; as in the *Corinthian*. Indeed, instead of Stalks in the *Corinthian*, the Composite has small Flowers, lying close to the Vase or Bell; twisting round towards the middle of the Face of the Capital, and terminating in the Rose. The Height of the Composite Capital, is two Modules; and its Projecture one Module, as in the *Corinthian*.

The Differences of the Character of this Capital, consist in this; that the Volutes, which ordinarily descend, and touch the Leaves, are in some Works of the Antique separated from them: That the Leaves, which are generally unequal in Height, the lower Rank being tallest, are sometimes equal: That the Volutes of the Moderns generally spring out of the Vase; whereas, in the Antique, they ordinarily run straight the Length of the Abacus, over the Ovolo, without striking into the Vase: That the Volutes, whose Thickness is contracted in the Middle, and enlarg'd above and below in the Antique, have their Sides parallel in the Works of the Moderns: And lastly, that the Volutes, which have been hitherto, both by the Antients and Moderns, made as if solid, are now made much lighter and more airy; the Folds standing hollow, and at a distance from each other. See COMPOSITE.

For the Proportions of the several Members of the Capitals of Columns, see COLUMN. See also each Member under its proper Head; as, ABACUS, ACANTHUS, VOLUTE, EBANUS, &c.

Some Architects distinguish the *Tuscan* and *Doric* Capitals, which have no Ornaments, by the Title of *Capitals of Mouldings*; and the three others, which have Leaves and Ornaments, they call *Capitals of Sculpture*.

Angular Capital, is that which bears the Return of an Entablature, at the Corner of the Projecture of a Frontispiece.

Capital of a Balluster, is that Part which crowns the Balluster; which sometimes bears a Resemblance to the Capital of some Column; particularly the *Ionic*. See BALLUSTER.

Capital of a Triglyph, is the Flat-band over the Triglyph; called by *Vitruvius* *Tenia*. See TRIGLYPH. It is sometimes also a Triglyph which does the Office of a Capital to a *Doric* Pilaster.

Capital of a Niche, is a kind of little Canopy over a shallow Niche, covering or crowning a Statue. See NICHE.

Capital of a Bastion, in Fortification, is a Line drawn from the Angle of the Polygon, to the Point of the Bastion; or from the Point of the Bastion to the Middle of the Gorge. The Capitals are from 35 to 40 Fathom long, from the Point of the Bastion to the Point where the two Demigorges meet. See BASTION.

CAPITALS, in Printing, are the *Majuscule*, or initial Letters, wherein Titles, &c. are compos'd, and all Periods, Verses, &c. commence; call'd also *uncial* Letters. See UNCIAL. All proper Names of Men, Countries, Kingdoms, Terms of Arts, Sciences, and Dignities, are to begin with *Capital*. The *English* Printers have carried Ca-

pitals to a pitch of Extravagance; making it a Rule, to begin almost every Substantive with a *Capital*; which is a manifest Perversion of the Design of *Capitals*, as well as an Offence against Beauty and Diligence. Some of 'em begin now to retrench their superfluous *Capitals*, and to fall into the Measures of the Printers of other Nations. See LETTERS, CHARACTERS, and PRINTING.

CAPITATÆ Plantæ, in Botany, are such Plants whose Flowers are compos'd of many edg'd and hollow little Flowers; thus call'd by Mr. Ray, because their fealy Calyx (or Cup of the Flower) most usually swells out into a large and round Belly, containing within it the pappous Seed; as in *Carduus*, *Centaur*, *Knapweed*, *Cnicus*, *Cirsium*, *Lappagmai*, *Cyanus*, &c.

CAPITATION, or *Poll-Money*, a Tax, or Imposition rais'd on each Person, in consideration of his Labour, Industry, Office, Rank, &c. This kind of Tribute is very ancient, and answers to what the *Greeks* call'd ἀποδομις. The *Latins* call it *Tributum*; by which Taxes on the Person, are distinguish'd from Taxes on Merchandise; which were call'd *Velligalis*, *quis velcatorum*. *Capitationes* are never practis'd amongst us, but in Exigencies of State. See POLL, FUAGE, &c.

CAPITE, in Law, a Tenure, whereby a Person held of the King, immediately, as of his Crown; either by Knight's Service, or Socage. See TENURE, and SERVICE. But by a Statute, 12 Car. II. all such Tenures by Knight's Service of the King, or of any other Person, Knights Services in *Capite*, or Socage, with all Rights, &c. are annul'd. See SOCCAGE, and FEU.

CAPITOL, in Antiquity, a famous Fort, or Castle, on the *Tarpian* Mount at *Rome*, wherein was a Temple dedicated to *Jupiter*, thence denominat'd *Capitolinus*, in which the Senate antiently assembled; and which still serves as the City Hall, or Town-house, for the meeting of the Consecrators of the *Roman* People. The first Foundations of the Capitol were laid by *Tarquinius* the Elder, in the Year of *Rome* 139. His Successor, *Servius*, rais'd the Walls; and *Tarquinius* the Proud finish'd it, in the Year 221. But it was not consecrated, till the third Year after the Expulsion of the Kings, and Establishment of the Consulate. The Ceremony of the Dedication of the Temple, was perform'd by the Consul *Horatius*, in 246. The Capitol consisted of three Parts; a *Navis*, sacred to *Jupiter*; and two Wings, or Illes, to *Juno* and *Minerva*: It was ascended to by Stairs; *Lipfius* reckons 100 in number, by reason there were so many in the Ascent of the *Tarpian* Rock. The Frontispiece and Sides were incompos'd with Galleries, wherein those who had the Honour of a Triumph, entertain'd the Senate at a magnificent Banquet, after the Performance of Sacrifice to the Gods. Both inside and outside were enrich'd with infinite Ornaments; the Statue of *Jupiter*, with his golden Thunderbolt, his Scepter and Crown, were the most distinguish'd. In the same Capitol there were likewise a Temple to *Jupiter* the Guardian, and another to *Juno*; with the *Mine*: and on the Descent of the Hill, the Temple of *Concord*. The Capitol was burnt under *Vitellius*; and rebuilt under *Vespasian*. It was burnt a second time by Lightning, under *Titus*, and restor'd by *Domitian*. It had its Name *Capitol*, from a Man's Head found fresh, and yet bleeding, upon digging the Foundation of the Temple, built in honour of *Jupiter*. *Arnobius* adds, that the Man's Name was *Telus*, whence *Capitolium*.

Antiently, the Name *Capitol* was likewise affect'd to all the principal Temples, in most of the Colonies throughout the *Roman* Empire; as, at *Constantinople*, *Jerusalem*, *Corthage*, *Ravenna*, *Capus*, &c. That of *Trolois*, has given the Name of *Capitolis* to its Eccleisies, or Sheriffs.

CAPITOLINI Ludi, were annual Games, or Combats instituted by *Camillus*, in honour of *Jupiter Capitolinus*, and in Commemoration of the *Capitol's* not being surpris'd by the *Gauls*. *Plutarch* tells us, that a part of the Ceremony consisted in the Publick Cryers putting up the *Hetrurians* to Sale by Auction. They also took an old Man, tying a Golden *Bulla* to his Neck, such as were won by their Children, and expos'd him to the publick Derision. *Festus* says, they dress'd him in a *Præsteta*, and hung a Ball at his Neck; not as accounting him a Child, but because this was an Ornament of the Kings of *Hetruria*.

There was also another kind of *Capitoline* Games, instituted by *Domitian*, and celebrated each five Years; wherein there were Rewards and Crowns bestow'd on the Poets, and put on their Heads by the Emperor himself. These Games became so celebrated, that the manner of accounting Time by *Lustris*, which had obtain'd till then, was chang'd; and they began to count by *Capitoline* Games, as the *Greeks* by *Olympiads*. The Feast was not for Poets alone, but also for Champions, Orators, Historians, Comedians, Magicians, &c.

CAPITULAR, or *CAPITULARY*, an Act pass'd in a Chapter, either of Knights, Canons, or Religious. See CHAPTER.

The *Capitulars* of *Charlemaign*, *Charles the Bald*, &c. are the *Laws*, both Ecclesiastical and Civil, made by those Emperors, &c. in the General Councils, or Assemblies of the People: which was the way the Constitutions of most of the ancient Princes, &c. were made; each Person pre-fer, tho a Plebeian, setting his Hand to 'em. Some distinguish these from *Laws*; and say, they were only Supplements to *Laws*. They had their Name, *Capitularies*, because divided into Chapters or Sections. In these *Capitularies* did the whole *French Jurisprudence* anciently consist. In process of Time, the Name was chang'd for that of *Ordonnances*.

Some distinguish three kinds of *Capitularies*, according to the Difference of their subject Matter: Those on Ecclesiastical Affairs, are real Canons, extracted from Councils; those on Secular Affairs, real Laws; those relating to particular Persons, or Occasions, private Regulations.

CAPITULATION, a Treaty made with the Garrison, or Inhabitants of a Place besieg'd; whereby they surrender themselves up, on certain Articles, and Conditions stipulated between 'em. See *StEGE*.

CAPITULATION, is also one of the Treaties of the *Papal Contracts*, or the Contract drawn up by the Electors, before the Election of an Emperor; which the Emperor is to ratify before his Coronation, and to observe inviolable in the Course of his Reign. These *Capitulations* of the Empire, have only been in use since the Time of *Charles V.* and were occasion'd, by the Jealousy the *German Princes* entertain'd of the too great Power of the Emperor. *Frederic*, Duke of *Saxony*, firm'd the *Wife*, pass'd for the Author of the Imperial *Capitulations*; he declining the Empire, which was offer'd him after the Death of *Maximilian*, and advising the Electors to chuse *Charles V.* under such Conditions as might secure the Liberty of the Empire. The *Leopoldine Capitulation* contains 47 Articles.

CAPITULUM, in Botany, the Head, or flowering Top of any Plant; being compos'd of many Leaves and Threads, or *Stamens*, closely connected in a globous, circular, or discous Figure; as the Flowers of *Bluebottles*, *Scabious*, *Carduus*, &c. See *FLOWER*.

CAPNOMANCY, or **CAPNOMANTIA**, a kind of Divination, us'd by the Antients in their Sacrifices: the Rule was, when the Smoak was thin, and light, and rose straight up, 'twas a good Omen; if the contrary, 'twas an ill one.

There was another Species of *Capnomancy*, consisting in the Observation of the Smoak rising from Poppy and Jessamin Seed, cast upon lighted Coals. The Word comes from the *Greek* *καπνός*, Smoak; and *μαντις*, Divination.

CAPONNIERE, in Fortification, a cover'd Lodgment, four or five Foot broad, encompass'd with a little Parapet laden with Earth. The *Caponniere* is large enough to maintain 15 or 20 Soldiers; and is usually plac'd on the Extremity of the Counterscarp, having little Embrasures frequently made therein.

CAPRA, *She-Goat*, a Constellation in the Northern Hemisphere, consisting of three Stars, compriz'd between the 45th and 55th Degree of Latitude. The Poets say, 'tis *Amalthea's* Goat, which suckled *Jupiter* in his Infancy. *Horace* making mention of it, calls it, *Insana hydra Capre*.

CAPRE, or **CAPER**, the Bud, or Blossom of a Shrub of the same Name, gather'd green, e'er it expand into a Flower; dry'd in a dark Place, till wither'd, then infus'd in Vinegar; to which, at last, Salt is added; after which, it is put up in Barrels to be us'd as a Pickle, chiefly in Sauces; and sometimes also in Medicine, as being very Aperitive, and entering several Compositions in Pharmacy. All the *Capers* throughout *Europe*, are brought from about *Toulon*, in *France*; except some small salt *Capers* from *Mojorca*, and a few flat ones from about *Lyon*. The Bark of the *Caper-Tree*, when dry'd, is prescrib'd by the *French Physicians* in Opipulations of the Spleen.

CAPRE Scintillæ, in Meteorology, a fiery Meteor, or Exhalation, which sometimes appears in the Atmosphere, and is not fir'd in a straight Line, but with Inflections, and windings in and out. See *METEOR*.

CAPREOLUS, in Botany, the Clasper, or Tendril, by which the Vines, and such-like creeping Plants, fasten themselves to those things which are design'd to support them. See *CLASPER*.

CAPREOLATÆ Plantæ, are such Plants as turn, wind, and climb along the Surface of the Earth, by means of their *Capreolæ*, or Tendrils; as Gourds, Melons, Cucumbers, &c. See *CLASPERS*.

CAPRICORN, in Astronomy, one of the Signs of the Zodiac, mark'd thus ♄. See *Sign*.

The Antients account'd *Capricorn* the 10th Sign; and when the Sun arriv'd thereat, it made the Winter Solstice, with regard to our Hemisphere; But the Stars having advanc'd a whole Sign towards the East, *Capricorn* is now the 11th Sign; and 'tis at the Sun's Entry into Sagittary, that

the Solstice happens: tho the ancient manner of speaking is still remain'd. See *SOLSTICE*, and *PRECESSION*. This Sign is represented on ancient Monuments, Medals, &c. as having the Fore-part of a Goat, and the Hind-part of a Fish; which is the Form of an *Ægyptian*: sometimes, simply under the Form of a Goat.

The Stars in the Constellation *Capricorn*, in *Ptolemy's* and *Tycho's* Catalogues, are 23; Mr. *Flamsteed*, in the *British Catalogue*, makes near double that Number, viz. 51: The Order, Names, Longitudes, Latitudes, Magnitudes, &c. whereof, are as follow.

Stars in the Constellation CAPRICORN.

Names and Situation of the Stars.	Longitude.		Latitude.		Magn.
	°	'	°	'	
In the Extrem. of the preced. Horn	27	18	6	58	7
	28	10	48	7	13

Subseq. in Root of the Tail	19	13	14	2	19
	20	36	58	1	38
Subseq. in North. Part of the Tail	21	29	15	0	39

Tropic of CAPRICORN, a lesser Circle of the Sphere, parallel to the Equator; passing thro the Beginning of *Capricorn*. See *TROPIC*.

CAPRIOLE, in Horsemanship, the *Goat-leap*; is when an Horse, at the full Height of his Leap, jerks or strikes out with his hind Legs as near and even together, and as far out as he can stretch them; in which Action, he clicks, or makes a noise with them. The *Capriole* is the most difficult of all the high Ais: There are several kinds of *Caprioles*; as, a *right Capriole*, *back Capriole*, *side Capriole*, *broke Capriole*, *open Capriole*, &c. The Word comes from *Capriolus*.

CAP SQUARES, in Gunnery, are these strong Plates of Iron, which come over the Trunnions of a Gun, and keep her in the Carriage: They are fastned by hinges to the Paizeplate, that it may lift up and down. They form a part of an Arch in the Middle, to receive a third Part of the Thickness of the Trunnions; for two thirds of them are let into the Carriage, and the other End is fastned by two Iron Wedges, which are call'd the Forelocks, and Keys.

CAPSTAN, or **CAPSTAND** of a Ship, a large Cylinder, or Barrel, plac'd perpendicularly on the Deck of a Ship, and turn'd by four Levers, or Bars, which cross it; and by means of a Cable, which winds round the Cylinder, serves to draw up vast Burdens, fastned to the End of the Cable. By the *Capstan* it is, that Vessels are drawn a-shoar, and hoisted up to be refitted; the heaviest Goods are unloaded; and Anchors weigh'd, Sails hoisted, &c. There are two *Capstans* in a Vessel; the *Main* plac'd behind the Mainmast, standing on the first Deck, and reaching four or five Feet above the second: 'Tis also call'd *double Capstan*, because serving two Decks for drawing of Anchors; and because its Force may be doubled by applying Hands on each Deck. It has Bars, Whelps, a Panch, &c. for turning and stopping it.

The *Jeer Capstan*, or *little Capstan*, stands on the second Deck, between the Mainmast and the Mizzen: Its use is, chiefly, to heave upon the jeer Rope, or to heave upon the Viol, to hold off by when the Anchor is weighing; and other Occasions, where a less Force is requir'd, than to weigh the Anchors, &c. The Terms belonging to the use of the *Capstans*, are, *Come up Capstan*; that is, slack the Cable which you heave by; in which Sense also they say, *Lanch out the Capstan*: *Preel the Capstan*, is, stop it from going back.

The French call that an *English Capstan*, where there are only half Bars us'd; and which, for that Reason, is only half perforated: 'Tis is thicker than the others. There is also a *Flying Capstan*, which may be mov'd from place to place.

CAPSULA, a Diminutive of the Latin *Capsa*, literally signifying a little Box, or Case; particularly a Bag, or Saccel, wherein Boys carry their Books, &c. to School: Whence *Capsarius*, or *Capsularius*, among the Romans, was a Servant who attended the Youth of Condition to the School or Academy, and carry'd their Bag, &c.

CAPSULA, among the Botanists, is that part of a Fruit wherein the Seed is contain'd; as in Peas, Apples, &c. which have a little Coat, in form of a Purse, wherein the Kernel, or Pippin, are inclos'd. See **FRUIT**.

CAPSULATE Plants, *Capsulate Plants*, are such as have a tetrapetalous regular Flower, consisting of four distinct Petals in each Flower, and which bear their Seeds in short *Capsule*; by which they are distinguish'd from the *Siliques*, which have their Seed in long Cases, or *Capsule feminales*; and all the other Branches of this Genus of Plants.

CAPSULÆ Arteriales, in Anatomy, call'd also *Renes succenturiati*, and *Glandule Renales*; are two Glands situate near the Reins, call'd *Arteriales* from a black Liqueur found in their Cavity; and *Succenturiati* and *Renales*, from their Position. See **SUCCENTURIATI**, **BILARES**, and **RENALES**.

They are about the bigness of a *Nix Vomica*; their Figures are somewhat various; in some round, in others triangular, square, &c. The Membrane wherewith they are cover'd is very fine: Their Cavity is pretty large for their bulk. Their use is very obscure; probably 'tis to secrete the black Humour found in their Cavity; which being afterwards discharge'd by their Duct into the Emulgent, mixes with the Blood; and serves, according to some, as a Ferment; according to others, only to dilate its Thickness: In a *Fœtus*, they are almost as big as the Kidneys. See **BILL**.

CAPSULA Communis, or of the *Porta*, is a Membrane arising from the *Peritonæum*, and inclosing the Trunk of the *Vena Porta*, after its Entrance into the Liver, as a Case, or Cover; dividing it self into the same Number of Branches; and accompanying all, even its smallest Ramifications. See **PORTA**. The same *Capsula*, or Membrane, likewise incloses the *Porus Biliaris*; whence it takes the Name of *Capsula Communis*. See **PORUS BILIARIS**.

CAPSULA Cordis, a Membrane investing the Heart; more usually call'd the *Pericardium*. See **PERICARDIUM**.

CAPSULÆ Seminales, are the same with *Vesiculæ Seminales*. See **VESICULÆ Seminales**.

CAPSULA, in Chymistry, is an Earthen Vessel, in form of a Pan; wherein things are frequently plac'd, that are to undergo very violent Operations of the Fire.

CAPTAIN, a Military Officer, whereof there are various Kinds and Degrees, distinguish'd by their various Commands: As,

CAPTAIN of a Company, or *Troop*; the Officer who commands a Company of Foot, or Troop of Horse, under the Colonel. See **COMPANY**, and **TROOP**.

In the like Sense, we say, *A Captain of Dragoons*, of *Grenadiers*, of *Marines*, of *Invalids*, &c. See **DRAGOON**, **GRENADEIER**, &c.

In the Horse and Foot Guards, the *Captains* are styl'd *Colonels*; being usually Persons of the prime Nobility, and General Officers of the Army. See **COLONEL**, and **GUARDS**.

In the Colonel's Company of a Regiment, i. e. the first

Company, or that whereof he himself is *Captain*, the commanding Officer is call'd *Captain Lieutenant*. See **CAPTAIN Lieutenant**.

Lieutenant CAPTAIN, is the *Captain's Second*; or the Officer who commands the Company under the *Captain*, and in his absence. See **LIEUTENANT**. In some Companies, &c. he is call'd *Captain Lieutenant*.

CAPTAIN Lieutenant, is he who commands a Troop, or Company, in the Name and Place of some other Person, who has the Commission, with the Title, Honour, and Pay thereof; but is dispens'd withal, on account of his Quality, from performing the Functions of his Post. Thus, the Colonel, being usually likewise *Captain* of the first Company of his Regiment; that Company is commanded by his Deputy, under the Title of *Captain Lieutenant*. So also in *England*, *France*, &c. the King, Queen, Prince, Dauphine, &c. have usually the Titles, Dignities, &c. of *Captains of the Guard*, *Genus d'Armes*, &c. the real Duty of which Offices, is perform'd by *Captains Lieutenant*.

Reformed CAPTAIN, is one, who, upon a Reduction of the Forces, has his Commission and Company suppress'd; yet is continu'd *Captain*, either as *Second* to another, or without any Post or Command at all. See **REFORMED**.

CAPTAIN General, of an Army, is the General, or Commander in chief. See **GENERAL**.

CAPTAIN of Militia, is he who commands a Company of Train'd-Bands, or Light-Horse. See **MILITIA**.

CAPTAIN, in the *Turkish* Empire, and Army. See **CAPTAN**.

CAPTAIN of a Ship, is a Sea Officer; whereof there are two Kinds; the one of a Ship of War, the other of a trading Vessel.

CAPTAIN of a Man of War, is the commanding Officer of a Ship, Galley, Fire-ship, or the like: In such Vessels, the Pilot commands the Seamen, and the *Captain* the Soldiers, or *Marines*. See **MARINES**.

CAPTAIN of a Merchant Ship, is the Master thereof; or he who has the Command or Direction of the Ship, her Crew, Lading, &c. This Officer is more ordinarily call'd the *Master*; especially in ordinary Voyages. See **MASTER of a Ship**.

On the *Mediterranean*, he is call'd the *Patron* or *Patron*; and in great Voyages, as to the *East Indies*, *South Sea*, &c. the *Captain*.

The Proprietor of the Vessel appoints the *Captain*, or *Master*; and the *Captain* is to form the Crew, chuse and hire the Pilots, Mates, Seamen, &c. who when the Proprietor and Master reside on the same Spot, this is usually done in Concert with the Proprietor. See **SHIP**.

CAPTION, in Law: When a Commission is executed, and the Commissioners Names subscrib'd to a Certificate, declaring when and where the Commission was executed, this is call'd *Caption*. The *Caption* usually commences with these Words, *Virtute istius commissionis nos*, &c. or, *Executio istius commissionis patet in quadam scheda annexata*, &c.

CAPTIVE, a Slave, or Person taken by the Enemy; particularly the *Pyrates*, and *Corsairs*. See **SLAVE**, **PIRATE**, &c.

CAPTURE, a Prize, or Prey; particularly that of a Ship taken at Sea: Thus we say, The French *Captures*, to the Number of 25, were brought into Port; see **PRIZE**. It is also an Arrest, or Seizure of a Criminal, Debtor, &c. at Land. See **SEIZURE**, and **ARREST**.

CAPUCHINS, Religious of the Order of St. Francis, in its strictest Observance. See **FRANCISCAN**. The *Capuchins* are thus call'd, from *Capuce*, or *Capuchon*, a stuff Cap, or Cope, wherewith they cover their Head. They are clothed with Brown, or Gray; always bare-footed; are never to go in a Coach, nor ever shave the Beard. The *Capuchins* are a Reform made from the Order of *Minors*, commonly call'd *Cordeletiers*, set on foot in the XVth Century, by *Matthew Basile*, a religious Observant of the Monastery of *Monteserme*; who, being at Rome, was advertised several times from Heaven, to practise the Rule of St. Francis to the Letter. Upon this, he made Application to Pope *Clement*, in 1525, who gave him Permission to retire into a Solitude; and not only him, but as many others as would embrace the strict Observance; which some did, in effect. In 1528 they obtain'd the Pope's Bull. In 1529, the Order was brought into compleat form; *Matthew* was elected General, and the Chapter made Constitutions.

In 1543, the Right of Preaching was taken from the *Capuchins* by the Pope; but in 1545, 'twas restor'd to them again with Honour. In 1578, there were already 17 General Chapters in the Order of *Capuchins*.

CAPUT, a Latin Term, literally signifying *Head*; retain'd in its primitive Form and Use in divers Arts: As,

CAPUT Baronie, the Head of the Barony; in our Customs, is the ancient, or chief Seat or Castle of a Noblemans; which is not to be divided among the Daughters, in case there be no Son to inherit; but is to descend entire

to the Eldest Daughter, *ceteris filiabus aliunde satisfactis*. See BARON.

CAPUT DRACONIS, or the *Dragon's Head*, in Astronomy, the Name of the Moon's ascending Node. See DRAGON'S-HEAD; see also NODE.

CAPUT GALLINGINIS, or *Galli Gallinacei*, Cock's Head, is a kind of *Scrum*, or spongy Border, at the Extremities or Apertures of each of the *Vesiculae Seminales*; serving to prevent the Seed coming from one side, from rushing upon, and so stopping the Discharge of the other. Some will have its use to be, to prevent the Impulse of the Seed from dilating the Orifices of the *Vesiculae*, and so issuing out, except when assisted by the Compression of the surrounding Parts; as in Copulation: But this, according to Dr. Drake, is rather the Office of a distinct Caruncle plac'd at each Orifice, and acting as a Valve. See VESICULAE SEMINALES, SEED, and GENERATION.

CAPUT MORTUUM, in Chymistry, the *Feces* remaining of any Body, after all the volatile and humid Parts, as the Phlegm, Spirit, Salt, &c. have been extracted therefrom, by Force of Fire. What remains after Distillation, is only properly call'd *Feces*. See FACES. For it is *Caput Mortuum*, it must likewise have pass'd the Retort. See DISTILLATION, and RETORT.

The *Caput Mortuum*, call'd also *Terra demanata*, is found in form of a fitable, porous Matter, without Taste or Smell: 'Tis rank'd among the Chymical Elements; and suppos'd to constitute the dry, fix'd, earthy, and solid Part of all mix'd Bodies. As an Element, it is more commonly express'd by the Name *Earth*. See EARTH.

'Tis what the Chymists call a *passive Element*, or *Principle*; serving as the Basis or Support of the active ones. See PRINCIPLE.

The Term is sometimes more immediately restrain'd to the Remains of Vitriol, after Distillation; otherwise call'd *Calcebar Vitrioli*. See CALCEBAR.

The *Caput Mortuum* is never pure, but there is still some active Principle remaining in it, and particularly a fix'd Salt. See SALT. Thus the *Calcebar Vitrioli*, expos'd to the Air, is re-converted into Vitriol. See VITRIOL; see also ELEMENT.

CAR, CARR, or CARRE, a kind of rolling Throne, us'd in Triumphs, and at the splendid Entries of Princes. See CHARIOT.

Plutarch relates, that *Camillus* having enter'd *Rome* in Triumph, mounted on a *Car* drawn by four white Horses, it was look'd on as too haughty an Innovation. See TRIUMPH.

CAR, is also us'd for a kind of light open *Chariot*. *Pontanus*, L. III. de *Stellis*, observes, that *Erichonius* was the first that harness'd Horses, and join'd 'em in a *Car*, or *Chariot*. See CHARIOT.

The Word is from the ancient *Gaulish*, or *Celtic*, *Carr*; mention'd by *Cæsar*, in his Commentaries, under the Name *Carrus*.

The *Car*, on Medals, drawn either by Horses, Lions, or Elephants, usually signifies, either a *Triumph*, or an *Apoteosis*: Sometimes a Procession of the Images of the Gods, at a solemn Supplication; and sometimes of those of some illustrious Family at a Funeral. The *Car* cover'd, and drawn by Mules, only signifies a *Consecration*, and the Honour done any one of having his Image carry'd at the Games of the *Circus*. See CONSECRATION, &c.

The *Car* us'd by the Ladies, was call'd *Pileatum*, *Carpetum*, and *Basterna*. See BASTERNA.

CARABE, or KARABE, yellow Amber reduc'd to Powder. See AMBER.

CARABINE, a Fire-Arm, or little *Harquebus*, with a Lock; anciently us'd in the Army, but now disus'd, by reason of the Time lost in cocking it. There are some of these *Carabines* still in use, having the inside of the Barrel furrow'd spirally, which carry the Ball to a very great distance. The *Carabine* was formerly the Arms of the Light Horse, who were hence also call'd *Carabineers*: These made separate Companies, and sometimes Regiments in an Army; serving to guard the Officers, to seize Posts, and to do other Offices requiring Expedition. There are still some of these *Carabineers* in the *French* Horse; two in each Company.

Gaga derives the Word from the Spanish *Cara*- and the Latin *binus*: Intimating the *Carabineers* to be People with two Faces, from their manner of Fighting; sometimes advancing, and sometimes retiring.

CARACOL, in the *Manège*, a Motion which the Cavalier makes half round; or a half turn from Left to Right; changing Hands; that his Enemy may be uncertain on which side he intends to attack; whether in Front, or Flank.

CARACOL, is also the half turn each Horseman in an Army makes after his Discharge, to pass from the Front of the Squadron to the Rear. The Word comes from the *Arabic*, and that from the *Hebrew*, *Carac*, *twist*. But

we have it immediately from the *Spanish*; where it signifies properly a *Snaul*, and figuratively the Evolution describ'd above.

CARACOL is sometimes also us'd in Architecture, for a *Staircase* in a Helix, or spiral Form. See STAIRCASE.

CARACT, CARAT, or KARAT, is properly the Name of the Weight, which expresses the degree of Goodness, Title, Perfection, or Imperfection of Gold. See GOLD.

The Coiners fix the highest Purity and Perfection of Gold at 24 *Carats*; and the several Degrees are estimated from the Divisions hereof, which are call'd *Grains*: But 'tis observ'd, that what care soever is taken in purifying Gold, to clear it from Dross, it can never be brought to 24 *Carats*; but still comes short $\frac{1}{2}$ of a *Carat*, or a Grain: this Grain they call a *Sixteenth*; and this sixteenth they subdivide into two *Eighths*; and each of those eighths into two *Sixteenths*: On which Calculation, they say, Gold may be purify'd as far as the first Sixteenth of the second Eighth, but no further. See GRAIN.

Gold of 22 *Carats*, is that which has 22 Parts of fine Gold, and two of Silver, or other Metal; or that which in refining loses 2 Parts in 24 of its Weight. The Goldsmiths generally work on Gold of 22 *Carats*.

The *Carat Fine*, as above, is the 24th Part of the Goodness of a Piece of Gold; the *Carat Price*, is the 24th Part of the Value of a Piece of Gold: as, if the Piece be 384, the *Carat Price* is 16 Pounds. We also sometimes say, the *Carat Weight*, which is the 24th Part of the Weight of the Piece, or 192 Grains.

Mnase, from *Alicia*, derives the Word *Carat* from the *Greek megas*, which was a kind of small Weight: But *Seyou*, with more probability, from *χρῆμα*, a Tribute-Penny, or small Coin struck for that purpose. Others derive it simply from the Latin *Character*.

CARACT is also the Weight us'd in weighing Diamonds and precious Stones; and consists of four Grains. See DIAMOND, and GRAIN.

Thus, the Great *Mogol's* Diamond is said to weigh 279 *Carats*. These Grains are somewhat less heavy than those us'd in Gold, &c. In this Sense, the Word is suppos'd to be deriv'd from the *Greek megas*, a Fruit which the *Latins* call *Siliqua*, and we *Carab-bean*; each of which may weigh about four Grains of Wheat: whence the Latin *Siliqua* has also been us'd for a Weight of four Grains.

CARAITES, a Sect among the ancient *Jews*; whereof there are still some subsisting in *Poland*, *Russia*, *Constantinople*, *Cairo*, and other Places of the *Levant*: Some call them *Carraini*; others *Carrei*, and *Caraita*.

Leon de Modena, a Rabbini of *Venice*, observes, that of all the Heresies among that People, before the Destruction of the Temple, there is none now left but that of the *Carraini*; a Name deriv'd from *Miera*, which signifies the pure Text of the Bible; because of their keeping to the *Pentateuch*, observing it to the Letter, and rejecting all Interpretation, Paraphrase, and Constitution of the Rabbins. *Aben Esra*, and some other Rabbins, treat the *Caraites* as *Sadducees*; but *Leon de Juda* calls them, more accurately, *Sadducees reform'd*; in regard they believe the Immortality of the Soul, Paradise, Hell, Resurrection, &c. which the ancient *Sadducees* deny'd. He adds, however, that they were doubtless originally real *Sadducees*, and sprung from among them: But *M. Simon*, with more probability, supposes them to have risen hence, That the more knowing among the *Jews*, opposing the Dreams and Reveries of the Rabbins, and using the pure Text of Scripture to refute their groundless Traditions, they had the Name *Carraini* given them; which signifies as much as the barbarous Latin, *Scripturarii*, i. e. People attach'd to the Text of Scripture. For the other *Jews* give them the odious Name *Sadducees*, from their Agreement with those Sectaries on the Head of Traditions. See SADDUCEES.

Sealiger, *Vossius*, and *Spanheim*, rank the *Caraites* among the *Sabæans*, *Magi*, *Manichees*, and *Mussulmen*, but by mistake; *Wolfgang Fabricius*, &c. say, the *Sadducees* and *Esfemi* were call'd *Caraites*, in opposition to the Pharisees; others take them for the Doctors of the Law, so often mention'd in the Gospel: But these are all Conjectures. *Josephus* and *Philo* make no mention of them; which shews 'em to be more modern than either of those Authors. In all probability, this Sect was not form'd till after the Collection of the second Part of the Talmud, or the *Gemara*; perhaps not till after the compiling of the *Mishna* in the III'd Century. The *Caraites* themselves, pretend to be the Remains of the ten Tribes led captive by *Salmanassar*. *Wolffius*, from the *Memoirs of Maroboeus*, a *Caraita*, refers their Origin to a Massacre among the *Jewish* Doctors, under *Alexander Jannæus*, their King, about 100 Years before Christ: For *Simeon*, Son of *Selutsael*, and the Queen's Brother, making his Escape into *Egypt*, there forg'd his pretended Traditions; and at his Return to *Jerusalem*, publish'd his Visions; interpersing the Law

after his own Fancy, and supporting his Novelities on the Notices which God, he said, had communicated by the Mouth of *Moses*, whose Depository he was: He gain'd many Followers; and was oppos'd by others, who maintain'd, that all which God had reveal'd to *Moses* was written. Hence the *Jews* became divided into two Sects, the *Caraites*, and *Traditionaries*: Among the first, *Juda*, Son of *Yabbaï*, distinguish'd himself, among the latter, *Hillel Wolfius* reckons not only the Sadducees, but also the Scribes, in the Number of *Caraites*. But the Advers of the Pharisees prevail'd against 'em all; and the Number of *Caraites* decreas'd: *Avon* indeed, in the VIIIth Century, retriev'd their Credit a little; and *Rabbi Scholomon* in the IXth. Matters went pretty well with them till the XIVth, but since that Time they have been on the declining hand.

The *Caraites* are but little known; their Works coming only into very few Hands, even among the greatest *Hebraists*. *Buxtorf* never saw more than one; *Selden* two; *M. Trigrand* says, he has recover'd enough to speak of them with assurance. He asserts, that soon after the Prophets had ceas'd, the *Jews* became divided on the Subject of Works, and Supererogation: some maintaining their Necessity from Tradition; whilst others, keeping close to the written Law, set 'em aside; and it was from these last that *Caraitism* commenc'd. He adds, again, that after the Return from the *Babylonish* Captivity, the Observation of the Law being to be re-establish'd, there were several Practices found proper for that End; and these once introduc'd, were look'd upon as essential, and appointed by *Moses*; which was the Origin of *Pharisaism*; as a contrary Party, continuing to keep close to the Letter, founded *Caraitism*. See PHARISEES.

The modern *Caraites*, *Leon de Modena* observes, have their Synagogues, and Ceremonies; pretending to be the sole proper *Jews*, or Observers of the Laws of *Moses*; calling the rest by the Term *Rabbanim*, or Followers of the *Rabbins*: These hate the *Caraites* mortally; refusing to ally, or even converse with them, and treating them as *Manzerim*, or Bastards; because of their rejecting the Constitutions of the *Rabbins* in Marriages, Repudiations, Purifications of Women, &c. This Aversion is so great, that if a *Carait* would become a *Rabbinist*, he would never be receiv'd by the other *Jews*. See RABBINS.

The *Caraites*, however, don't absolutely reject all kind of Traditions; but only such as don't appear well ground'd. *Selden*, who is very express on this Point, in his *Use of Hebrews*, observes, that besides the mere Text, they have certain Interpretations, which they call *Hereditary*, and which are proper Traditions. Their Theology only seems to differ from that of the other *Jews*, in that it is purer, and clearer of Superstition: They give no credit to the Explications of the *Cabbalists*, chimerical Allegories, nor to any Constitutions of the Talmud, but what are conformable to the Scripture, and may be drawn from it by just and necessary Consequences: Of these we shall give three notable Instances.

The first relating to the *Mezuzot*, or Parchments which the *Jews* tie at the Gates thro which they use to pass. The second regarding the *Tophthim* or *Phylacteries*, mention'd in the New Testament: And the third, the Prohibition of eating Milk, with Flesh. The two first, the *Jews* pretend, are formally ordain'd in *Deuteronomy*, where 'tis said, "Thou shalt bind them as a Sign on thy Hands, and they shall serve thee as Frontlets (Headstalls) between thy Eyes; thou shalt write them on the Posts of thy House." The *Caraites* *Aaron*, in his Comment on these Words, maintain, they are not to be taken literally, as the *Rabbins* do, but figuratively; as intimating, that the *Jews*, whether entering or going out, should be always mindful of them. For the *Tophthim*, the *Caraites* rally the *Rabbinists* on their praying with their *Phylacteries*, or Thongs of Leather fasten'd to their Forehead; comparing them to bridled Asses. This Passage the *Caraites* interpret figuratively; and in their Interpretation agree with *S. Jerome*, who takes notice of the Delusion of the *Pharisies*, "in writing the Decalogue on Parchment, rolling it up, and tying it to their Forehead with Thongs, to have it always before their Eyes." For the third Point, the *Rabbins* say, 'tis command'd in that Text, "Thou shalt not fetch a Kid in his Mother's Milk;" but the *Caraites* get clear of it by explaining the Passage by another, "Thou shalt not take the Mother when with young," which is natural. Nor have the *Jews* any thing to object in behalf of their Interpretation, but its being that of their Doctors. Thus the *Caraites* exempt themselves from an infinite Number of Ceremonies and Superstitions, which the *Rabbins* have establish'd among the other *Jews*. See TRADITION.

Yet, in many Things, they retain all the Superstition of the *Rabbins*. *Schupers*, in his Treatise de *Secta Karaitarum*, treating of their *Dogmata*, observes, that they are in all respects as precise and ceremonious as the most rigid

Traditionary, in what relates to the Observation of the Sabbath, Passover, Feast of Attonement, of Tabernacles, &c. That they observe Prayers and Fasting; and wear the *Zitzit*, or pieces of Fringe, on the Corners of their Garments. They hold, that all Sin is effac'd by Repentance; in which they differ from the *Rabbins*, who hold, that some are only effac'd by Death. As for Circumcision, they don't believe it necessary, with the Traditionaries, that there be Blood shed; Add, that when a Child dies before it be eight Days old, the *Rabbinists* circumcise it after 'tis dead, that it mayn't appear uncircumcis'd at the Resurrection; whereas the *Caraites*, when they perceive the Child in danger, chuse rather to circumcise it e'er the eighth Day. In Matters of Divorce, the *Caraites* agree with the other *Jews*; and observe the same Rules and Restrictions in the killing and dressing of Beasts; but differ from 'em in the Kinds of legal Impurities and Pollution.

Peringer observes of the *Caraites* in *Lithuania*, that they are very different, both in Aspect, Language, and Manners, from the *Rabbinists*, wherewith that Country abounds. Their Mother Tongue is the *Turkish*; and this they use in their Schools and Synagogues. In Village they resemble the Mahometan *Tartars*. Their Synagogues are posited North and South; and the Reason they give for it, is, that *Salmanassar* brought them from the Northward; So that, in Praying, to look to *Jerusalem*, they must turn to the South. He adds, that they admit all the Books of the Old Testament; contrary to the Opinion of many of the Learned, who hold that they reject all but the *Pentateuch*.

Caleb, a *Carait*, reduces the Difference between them and the *Rabbinists* to three Points: 1st, In that they deny the Oral Law to come from *Moses*, and reject the *Cabala*. 2d, In that they abhor the *Talmud*. 3d, In that they observe the Feasts, as the Sabbaths, &c. much more rigorously than the *Rabbins* do. To this may be added, that they extend the Degrees of Affinity, wherein Marriage is prohibited, almost to Infinity. See CABALA.

CARANNA, is a hard, brittle, resinous Gum, brought from some Parts of the *West Indies*, as *Cathogena* and *New Spain*; of an aromatical Flavour, and us'd in Medicine.

CARAVAN, or CARAVANNE, in the East, is a Troop, or Company of Travellers, Merchants, and Pilgrims, who for the greater Security march in a Body, thro the Deserts, and other dangerous Places, infested with *Arabs* and Robbers. See CARAVANSERA.

There is a Chief, or *Aga*, who commands each *Caravan*, and has under him a Number of Janizars, or other Forces, sufficient for their Defence. The *Caravans* incamp every Night near Wells or Rivulets, known to the Guides; and observe a Discipline as regular as in War. They chiefly use Camels for their Vehicles, by reason of their enduring a world of fatigue, eating little, and passing three or four Days without drinking.

The Grand Signior gives one fourth Part of the Revenues of *Egypt*, to defray the Expence of the *Caravan* that goes yearly to *Mecca*, to visit *Mahomet's* Tomb: The Devotees, in this *Caravan*, are about 40000; accompany'd with Soldiers to protect them from the Pillage of the *Arabs*, and follow'd with eight or nine thousand Camels, laden with all necessary Provisions for so long a Passage across Deserts. Days Journeys are distinguish'd in the East, into Journeys of Horse-*Caravans*, and *Caravans* of Camels: these of Horses are equal to two of Camels. There are several *Caravans* go yearly from *Aleppo*, *Cairo*, and other Places, to *Persia*, *Mecca*, *T'bees*, &c.

There are also Sea *Caravans* establish'd on the same Footing, and for the same Purposes: Such is the *Caravan* of Vessels, from *Constantinople* to *Alexandria*.

The Word comes from the Arabic *Cairavan*, or *Cairaan*; and that from the Persian *Kerrav*, which signifies the same thing.

The Term *Caravans* is also us'd for the Voyages or Campaigns, which the Knights of *Malta* are oblig'd to make at Sea, against the *Turks* and *Corsairs*; in order to arrive at the Commandries and Dignities of the Order. They are thus call'd, because the Knights have frequently seiz'd the *Caravan* going from *Alexandria* to *Constantinople*.

CARAVANSERA, a large publick Building, or Inn, destin'd to receive and lodge the *Caravans*: see CARAVAN.

Of these *Caravanseras*, or, as *Chardin* calls 'em, *Caravanserais*, there are a great Number throughout the East; erected out of the Charity and Magnificence of the Princes, &c. of the several Countries.

Those of *Schiras* and *Cashin*, in *Persia*, are said to have cost 60000 Crowns: They are open to People of all Religions and Countries, without any Questions ask'd, or any Money requir'd.

The *Caravanserais* are usually huge square Buildings, with a spacious Court in the middle thereof. They are encompass'd with Galleries and Arches, under which runs a

kind of *Banquette*, or Elevation, some Feet high, where Travellers rest themselves, and make their Lodging as well as they can: their Baggage, and the Beasts that carry 'em, being fasten'd at the Foot of the *Banquette*. Over the Gate, there are frequently a sort of little Chambers; which the *Caravansera* lets out, at a very dear rate, to such as have a mind to be to themselves.

The *Caravansera's* serve in lieu of Inns; yet there is this essential Difference between them and our Inns, that the Traveller finds nothing at all in the *Caravansera*, neither for himself nor his Cattle; but must carry all his Provisions and Necessaries with him. They are chiefly built in dry, barren, desert Places; and are generally furnish'd with Water from a great Distance, and at a vast Expence: There being no *Caravansera* without its Well of Water. There are several of 'em in Cities; where they serve not only as Inns, but as Shops and Warehouses. There are few Cities in the East without their *Caravansera's*; especially within the Dominions of *Turky*, *Perfia*, and the Great *Mogul*. Those of *Spahan* and *Agra*, *Sciras* and *Casbin*, are distinguish'd for their Magnificence and Commodiousness.

In *Turky*, none but the Grand Signior's Mother and Sister, with the Vissers and Bastaws who have been in three Battles against the Christians, are allow'd to build a *Caravansera*. The Word comes from the Turkish *Karwan*, or *Kerwan*, *Carawan*; and *Serasi*, House, Palace, Inn.

CARAVANSERAKIER, the Director, Steward, or Intendant of a *Caravansera*. At *Spahan*, there are *Caravansera's* in manner of Halls, or Exchanges, where Goods are laid up, and expos'd to view; for which the *Caravansera* is accountable, in consideration of a certain Fee. See CARAVANSERA.

CARAWAY, or CARWAY, a Medicinal Seed, produc'd from a Plant of the same Name, by Botanists call'd *Carvi officinarum*, or *Cuminum Prutesc.* See SEED.

The Seed or Grain of the *Carvi* or *Caraway*, is narrow, longish, farrow'd on the Back, and of a brisk aromatic Taste. It is effect'd Stomachic, and Diuretic; dispels Wind, strengthens Digestion, &c. The *English* and *German* make great use of it; particularly in Biskets, Comfits, and other Foods and Confections.

CARBUNCLE, in Medicine, a Malignant Tumor, arising sometimes on one Part, and sometimes another; accompany'd with a painful Heat, Mortification, Lividities, and at last a Blackness: It begins with one or more Pustules, under which is form'd a putrid Ulcer; sometimes with a Scab, without any Pustle; the Ulcer being form'd under the Scab. Round the Tumor is a Kernel, very painful; sometimes red, and sometimes livid, or blackish. The *Carbuncle* is owing to a sharp, caustic, malignant, saline Humor, which gnaws and corrupts the Part whereon it is dispos'd.

The *Greeks* call it *Antros*, the French *Gharbon*, Coal, from the Resemblance of its Scab to a Coal. It is sometimes pefillential, and sometimes not. When it arises without Pustles, it is properly call'd *Pruna*; when with, *Ignis Persicus*.

CARBUNCLE, in Natural History, a fabulous Kind of precious Stone, whereof *Pliny* and the Ancients relate Wonders. The *Carbuncle*, in reality, is only a large *Ruby*, of a deep red Colour: the Term being never apply'd, but when the Stone exceeds 20 Carats Weight. See RUBY.

The Ancients, and most of the Moderns after them, have all along suppos'd the *Carbuncle* to be taken from the Dragon's Head: And we read of many a Cavalier, who went to combat with Dragons, on purpose to gain this invaluable Jewel. *Vartomon* assures us, that the King of *Pepu* us'd no other Light in the Night time, but that of his *Carbuncle*, which cast a blaze like that of the Sun.

The Name is form'd of the Latin *Carbunculus*, q. d. a burning Coal: For which Reason the *Greeks* call it *σφαζ*, Coal. *Pliny*, treating of the *Carbuncle*, Lib. XXXVII. cap. 7. distinguishes twelve Sorts thereof.

CARBUNCLE, in Heraldry, a Charge, or Bearing, consisting of eight Radii, or Spokes; four whereof make a common Cross, and the other four a Saltier; as in the adjoining Figure. Some call these Radii *Bastons*, or *Staves*; because round, and enrich'd with Buttons, or pearl'd, like Pilgrims Staves; and frequently tipp'd, or terminated with Flower-de-Luces. Others blazon 'em, Royal Scepters, plac'd in Saltier, Pale and Fesse.

CARBUNCULATION, is the blasting of the new-frosted Buds of Trees or Plants, either by excessive Heat, or excessive Cold. See BLIGHT.

CARCASS, or CARCASS, the Corpse, or Body of a dead Animal, whose Flesh is, molt of it, cut off, consum'd, or dry'd. See SKELETON.

Thus, we say, The *Carcasses* of the Soldiers, Horses, &c. were seen long afterwards on the Field of Battel.—The

Carcass of a Fowl, Capon, Partridge, Leveret, Rabbit, &c. is what remains thereof, after the four Members, or Limbs, have been cut off, viz. the Legs and Wings.

CARCASS, in Architecture, is the Shell, or Ribbs of a House; consisting the Partitions, Floors, Rafters, &c. made by the Carpenter, &c. See HOUSE, BUILDING, and TIMBER. The *Carcass* is otherwise call'd the *Framing*, see FRAMING.

CARCASS, or CARCUS, in War, a kind of Bomb, usually oblong, or oval, rarely circular; consisting of a Shell, or Case, sometimes of Iron, with Holes; more commonly of a coarse strong Stuff, pitch'd over, and girt with Iron Hoops; fill'd with combustible Matcers, as Hand Grenades, Ends of Muskets, loaded Pistols, and Preparations of Gunpowder, &c. Its use is to be thrown out of a Mortar, to set Houses on Fire, and do other Execution. See BOMB, and MORTAR.

For the Composition of a *Carcass*, to burn, *Wolffius* prescribes ten Parts of Gunpowder pound'd; two of Nitre; one of Sulphur, and one of Colophony: Or six of Gunpowder; four of Nitre; four of Sulphur; one of beaten Glass; $\frac{1}{2}$ one of Antimony; $\frac{1}{2}$ one of Camphor; one of Sal Armoniac; and $\frac{1}{2}$ of common Salt. For the Shell, or Case, he takes two Iron Rings, some chafe Plates; fitting one at one Extreme, near the Aperture at which the *Carcass* is to be fir'd, and the other at the other; others make the Aperture in one of the Plates. These he braces with Cords drawn lengthwise; and across these, at right Angles, laces others; making a Knot in each Intersection: Between the Folds of the Cords, he makes Holes, and into these fits Copper Tubes, filling 'em half full of Powder and leaden Bullets, ramming the whole with Tow, &c. The Shell thus prepar'd, he immerses it, the Aperture first slope, in a liquid Matter; consisting of four Parts of melted Pitch, 20 of Colophony, one of Oil of Turpentine, and as much ground Gunpowder as will reduce it to the Consistence of a Paist. After Immersion, 'tis to be cover'd over with Tow, and immerg'd afresh, till it become of the Bigness proper for the Mortar.

It has the Name *Carcass*, because the Circles which pass from one Ring, or Plate, to the other, seem to represent the Ribbs of a human *Carcass*.

CARCINOMA, in Medicine, a Tumor, more usually call'd a *Cancer*. See CANCER.

The Word comes from *καρκος*, *Cancer*, and *ωμα*, *deposu*, to be depos'd.

CARCASS, in War, the same as *Carcass*; see CARCASS. CARDAMOMUM, or CARDAMUMS, a Medicinal Seed, of the Aromatic kind, contain'd in *Capsula*, or Pods, brought from the *East Indies*.

This Seed is distinguish'd into three Kinds, according to the several Sizes of the Pods; viz. great, middle, and small: but the Taste, Smell, Colour, and Form of the Grain, is the same in all; being of a purple Colour, angular, of a sharp biting Taste, and a strong penetrating Smell. The first kind is also call'd *Grains of Paradise*; but the last excels the rest, both in Smell, Taste, and Virtue: 'Tis this that enters the Composition of Venice Treacle. The *Cardamoms* do warm, and deterge; they strengthen the nobler Parts, dissipate Wind, and help Digestion; and are us'd in Diseases of the Brain, Stomach, and Womb.

The Plants of the *Cardamum* Family, afford something very remarkable, as to the manner of their Propagation: When ripe, their Pods fly open, and dart out their Seed upon a slight touch of the Hand. Nay, what is more, Mr. *Ray* tells us, the *Cardamum Impatiens* breaks its Pod, and emits its Seed not only if touch'd, but if only the Hand be stretch'd out, as if about to touch it: and *Jobstus* and *Gerrard* affirm it to be true. See SEED, and SEMINATION.

CARDIAC, in Medicine, vulgarly call'd *Cordial*, a Remedy antiently suppos'd to exert it self immediately in comforting and strengthening the Heart: but the modern Physicians rather suppose it to produce its Effect, by putting the Blood into a gentle Fermentation, whereby the Springs, before decay'd, are repair'd and invigorated; and the Tone and Elasticity of the Fibres of the Vessels restor'd: the Consequence of which, is a more easy and brisk Circulation. See CORDIAL, STRENGTHENER, &c.

The Word comes from the Greek *καρδια*, *Cor*, the Heart being reputed the immediate Seat of its Operation.

CARDIACUS Plexus, in Anatomy, a Plexus, or piece of Network, form'd of a Ramification of the *Par vagus*, or eighth Pair of Nerves. See PLEXUS CARDIACUS, NERVE, and PAR VAGUS.

CARDIALGIA, CARDIALGY, or CARDIACUS Dolor, in Medicine, a violent Pain, felt towards the upper Orifice of the Stomach, accompany'd with a Palpitation of the Heart, Fainting, and a Propension to Vomit; better known by the Name of *Cardiac Passio*, or *Heart-burn*. See HEART.

'Tis occasion'd by sharp Humours, which prick and vellecite that Orifice, and the adjoining Parts. The Word comes from the Greek *καρδα*, Heart, and *αγν*, Pain.

Blanchard makes the Disease consist in a Gnawing, and Contraction of the *Par vagum*, and the intercostal Nerves implanted in the Stomach; proceeding from a pungent vellecitating Matter in the Stomach it self; which, by reason of the Consent of Parts, affects the Heart; straining and contracting it so, as sometimes to occasion swooning. See CONSENT OF PARTS.

CARDINAL, a Term serving to express the Relation, or Quality of Prime, Principal, most Considerable; or, the Foundation of any thing. Thus, we say, the four Cardinal Virtues, *viz.* Prudence, Justice, Fortitude, and Temperance; which are the Basis of all others. So, the Cardinal Points, Cardinal Winds, &c.

The Word is form'd of the Latin *Cardo*, a Hinge; it being on these Fundamental Points, that all the rest of the same kind seem to turn.

CARDINAL Points, in Cosmography, are the four Intersections of the Horizon, with the Meridian, and the prime vertical Circle. See POINT.

Of these, two, *viz.* the Intersection of the Horizon and Meridian, are call'd North and South, with regard to the Poles they are directed to. See NORTH, and SOUTH.

To determine the Places of those Points, see MERIDIAN Line. The other two, *viz.* the Intersection of the Horizon and first Vertical, are call'd East and West. See EAST, and WEST.

The Cardinal Points, therefore, coincide with the four Cardinal Regions of the Heavens; and are 90° distant from each other. The intermediate Points are call'd Collateral Points; see COLLATERAL POINTS.

CARDINAL Points of the Heaven, or, of a Nativity, are the Rising and Setting of the Sun; the Zenith and Nadir. See RISING, SETTING, ZENITH, and NADIR.

CARDINAL Winds, are those that blow from the Cardinal Points. See WIND.

CARDINAL Numbers, in Grammar, are the Numbers one, two, three, &c. which are indeclinable; in opposition to the Ordinal Numbers, second, third, fourth, &c. See NUMBER.

CARDINAL, is particularly us'd for an Ecclesiastick Prince, or one who has a Voice, both active and passive, in the Romanish Conclave, at the Election of a Pope. See CONCLAVE.

The Cardinals compose the Pope's Council, or Senate; in the Patrieum is a Constitution of Pope John, which regulates the Rights and Titles of the Cardinals; and which declares, that as the Pope represents Moses, so the Cardinals represent the 70 Disciples, who, under the Pontifical Authority, decide private and particular Differences.

Cardinals, in their first Institution, were only the principal Priests, or Incumbents of the Parishes of Rome. In the primitive Church, the chief Priest of a Parish, who immediately follow'd the Bishop, was call'd *Presbyter Cardinalis*; to distinguish him from the other petty Priests, who had no Church, nor Preference: The Term was first apply'd to them in the Year 150; others say, under Pope Sixtus, in the Year 300. These Cardinal Priests were also allow'd to baptize, and administer the Eucharist. When the Cardinal Priests became Bishops, their Cardinalate became vacant; they being then suppos'd to be rais'd to a higher Dignity. Under Pope Gregory, Cardinal Priests, and Cardinal Deacons, were only such Priests or Deacons, as had a Church or Chapel under their Care: And this was the original use of the Word. Leo IV. in the Council of Rome held in 853, calls them *Presbyteros sui Cardinalis*; and their Churches, *Parochias Carduales*.

The Cardinals continu'd on this footing till the 11th Century: But as the Grandeur and State of his Holiness became exceedingly augmented, he would have his Council of Cardinals make a better figure than the ancient Priests had done. 'Tis true, they still preserv'd their ancient Title; but the Thing express'd by it was no more. 'Twas a good while, however, 'er they had the Precedence over Bishops, or got the Election of the Pope into their Hands: but when they were once possess'd of those Privileges, they soon had the red Hat and Purple; and growing still in Authority, became at length superior to the Bishops, by the sole Quality of being Cardinals.

Du Cange observes, that originally there were three Kinds of Churches: The genuine Churches were properly call'd *Parishes*; the second *Decanaries*, which were Chapels join'd to Hospitals, and serv'd by Deacons; the third were simple *Oratories*, where particular Masses were held, and were charg'd by local and resident Chaplains. He adds, that to distinguish the Principal, or Parish Churches from the Chapels, and Oratories, the Name *Cardinales* was given them. Accordingly, Parish-Churches gave Titles to Cardinal Priests; and some Chapels also, at length, gave the Title of Cardinal Deacons. Others observe, that

the Term *Cardinal* was given not only to Priests, but also to Bishops and Deacons, who were attach'd to certain Churches; to distinguish 'em from those who serv'd 'em *en passant*, and by Commission. Titular Churches, or Benefices, were a kind of Parishes, *i. e.* of Churches assign'd each to a Cardinal Priest; with some stated District depending on it, and a Font for administering of Baptism, in Cases where the Bishop himself could not administer it. These Cardinals were subordinate to the Bishops; and accordingly, in Councils, particularly that held at Rome in 868, subscrib'd after them. It was not, however, only at Rome, that Priests bore this Name; for we find there were Cardinal Priests in France: Thus, the Curate of the Parish of St. John de Vignes, is call'd in old Charters the Cardinal Priest of that Parish. The Title of Cardinal is also given to some Bishops, *quatenus* Bishops; *e. gr.* to those of Mentz and Milan: The Archbishop of Bourges is also, in ancient Writings, call'd Cardinal; and the Church of Bourges a Cardinal Church. The Abbot of Vendome calls himself *Cardinalis Natus*.

The Cardinals are divided into three Classes, or Orders; containing 6 Bishops, 50 Priests, and 14 Deacons; making, in all, 70; which constitute what they call the Sacred College. See COLLEGE. The Cardinal Bishops, who are, as it were, the Pope's Vicars, bear the Titles of the Bishopricks affect'd to 'em; the rest take such Titles as are assign'd 'em: The Number of Cardinal Bishops has been fix'd; but that of Cardinal Priests and Deacons, and consequently the Sacred College it self, is always fluctuating. Till the Year 1125, the College only consisted of 52, or 53: The Council of Constance reduc'd them to 24; but Sixtus IV. without any regard to that Restriction, rais'd them again to 52, and Leo to 65. Thus, as the Number of Cardinal Priests was anciently fix'd to 28, new Titles were to be establish'd, in proportion as new Cardinals were created. For the Cardinal Deacons, they were originally no more than seven, for the 14 Quarters of Rome; but they were afterwards increas'd to 10, and again diminish'd.

Some say, the Cardinals were so call'd from the Latin *Incardinatio*, the Adoption any Church made of a Priest of a foreign Church, driven thence by Misfortune; and add, that the use of the Word commenc'd at Rome and Ravenna; the Revenues of the Churches of which Cities being very great, they became the common Refuge of the unhappy Priests of all other Churches. According to *Omniphorus*, it was Pope Pius IV. who first enact'd, in 1562, that the Pope should be chosen only by the Senate of Cardinals: whereas, till that Time, the Election was by all the Clergy of Rome. Some say, the Election of the Pope rest'd in the Cardinals, exclusive of the Clergy, in the Time of Alexander III. in 1160. Others go higher still, and say, that Nicholas II. having been elected at Stenusa, in 1058, by the Cardinals alone, occasion'd the Right of Election to be taken from the Clergy, and People of Rome; only leaving 'em that of confirming him by their Consent; which was at length, however, taken from them. P. *Papebroch* conjectures, that it was Honorius IV. who first introduc'd Bishops into the Sacred College; by admitting the Bishops Suffragans of the Pope, to whom, of right, it belong'd to name him; and of these constituting the first Class of Cardinals.

The Cardinals began to wear the red Hat at the Council of Lyons, in 1243. The Decree of Pope Urban VII. whereby 'tis appointed that the Cardinals be address'd under the Title of Eminence, is of the Year 1630: till then they were call'd *Illusterrissimi*. See EMINENCE.

The Term *Cardinal* has also been apply'd to Secular Officers: thus, the Prime Ministers in the Court of the Emperor Theodosius, are call'd *Cardinales*. And *Cassiodorus*, L. VII. *Formul.* makes mention of the Cardinal Prince of the City of Rome. And in the List of Officers of the Duke of Bretagne, in 1447, we meet with one *Raoul de Thorel, Cardinal of Quillart*, Chancellor, and Servant of the Vicount de Rohan: which shews it to have been an inferior Quality.

CARDING, in the Manufactures, a Preparation of Wool, Cotton, Hair or Linc, by passing it between the Iron Points, or Teeth, of two Instruments, call'd *Cards*, to comb, disentangle, and range the Hairs or Fibres thereof; and to dispose it for spinning, &c. See SPINNING, and WOOL.

Before the Wool be carded, 'tis oil'd, or greas'd with Oil; whereof, one fourth of the Weight of the Wool is requir'd, for Wool destin'd for the Wool of Seals; and one eighth for that of the Warp. See CROTCH, WOOL, WARP, &c.

CARDO, in Anatomy, the second Vertebra of the Neck; so call'd because the Head turns upon it. See ESTROPHESUS, and VERTEBRA.

CARDS, or *Playing CARDS*, are little Pieces of fine thin Pastboard, whereon are printed divers Points and Figures; a certain Number, or Assemblage of which, serve for the Performance of divers Games; as *Basset, Ombré, Picquet, Whisk*, &c.

The Method of making playing *Cards*, seems to have given the first Hint to the Invention of Printing; as appears from the first Specimens of Printing at *Haerlem*, and those in the *Bodleian Library*, &c. See **PRINTING**; see also **PASTBOARD**.

The cutting of the Moulds, or Blocks, for these *Cards*, is precisely the same as that us'd for the first Books; viz. a Sheet of wet or moist Paper is laid on the Form or Block, which is first lightly brush'd over with Ink, made of Lampblack mix'd with Starch and Water; and then rubb'd off with a round Lint, in the Hand. The *Court-Cards* they colour by help of several Patterns, call'd *Stenciles*; consisting of Papers cut thro' with a Penknife; within the Apertures, or Incisions of which, the several Colours, as red, &c. are severally apply'd; (for at the first Printing, the *Card* has only a mere Out-line.) These Patterns are painted with Oil Colours, to keep them from wearing out by the Brushes: Being laid on the *Postboard*, they slide a Brush full of Colour loose over the Pattern; which leaving the Colour within the Apertures, forms the Face or Figure of the *Card*. This, very probably, was the way of their first Printing at *Haerlem*; as might have been discover'd long ago, if it had been consider'd, that the great Letters in our old Manuscripts of 900 Years ago, are apparently done by the Illuminers, after this Method of *Card-making*.

CARDS, in Commerce, and the Manufactures; see **CARDING**. **CARDUUS**, in Natural History and Botany, a Name common to divers Species of Plants, in *English* call'd *Thistle*. See **THISTLE**.

The Plants of this Class most in use, are the *Carduus Benedictus*, and *Carduus Fullonum*.

CARDUUS Benedictus, is a Medicinal Plant, of the Thistle kind, chiefly us'd in Infusion, as a gentle Emetic in Fevers, and certain Nauasas. Antiently it was much in vogue, as a Cardiac, Sudorific, and Alexipharmic; and in those Qualities, was prescrib'd in Stomachic Cafes; but it is now succeeded by others, less nauasous, and more effectual; tho' still retain'd in some of the official Compositions, with those Intentions. Some distil a Water from it, which they use in cordial and sudorific Potions. Its Salt has much the same Virtues.

CARDUUS Fullonum, is also call'd the *Fuller's Weed*, or *Teazle*. See **TEAZLE**.

CAREENING, a Term, in the Sea Language, us'd for the laying a Vessel on one side, to caulk, stop up Leaks, or refit her. The Word is form'd of the Latin *Carina*, the Bulk or Body of a Ship.

A Ship is said to be brought to a *Careen*, when the greatest Part of her Lading, &c. being taken out, and another Vessel lower than her self laid by her side, she is haled down to it as low as occasion requires, e. g. a fourth or fifth Strake; and there kept, by the Weight of Ballast, Ordnance, &c. as well as by Ropes, lest it should strain her Masts too much. This is done with design to trim her Sides, or Bottom, to caulk her Seams, or to mend any Fault she has under the Water; Hence, if a Ship lie on one Side in sailing, she is said to *sail on the Careen*. Ships of War are generally *careen'd* every three Years.

The *Half Careen*, is when they can only *careen* half the Ship; not being able to reach so low as the bottom of the Keel.

CARET, in Grammar, a Character of this Form, (^) denoting that there is something inserted, or interin'd, which should regularly have come in where the Character is plac'd. See **CHARACTER**.

CARGO, the Lading or Freight of a Ship: See **FREIGHT**, and **LADING**.

The *Cargo* of this Vessel is of such or such a Commodity. This is the proper Season for a *Cargo* of Codfish, of Wines, &c.

Cargo is sometimes also us'd for an Invoice of the Goods wherewith a Ship is laden. See **INVOICE**.

CARIATIDES, or **CARIATES**, in Architecture; see **CARYATIDES**.

CARICOUS Tumor, is a Swelling resembling the Figure of a Fig; such, frequently, are the *Piles*. See **PILES**, and **HEMORRHOIDS**.

The Word comes from *Carica*, a Fig; or from *Caria*, a Country where they are frequent, or from whence they are sometimes said to be brought.

CARIES, in Chirurgery, &c. a kind of Rotteneff, peculiar to a Bone; arising, either from a constant Afflux of vicious Humours, or from their Acrimony; or from a Bruise, Compound Fracture, Luxation, Venereal Disorders, corrosive Medicines, being stipp'd, or laid bare of their Flesh, and long expos'd to the Air, &c. 'Tis a common Observation, that nothing is more difficult to cure than an Ulcer, when the adjacent Bone is become *carious*. See **ULCER**.

The Word in the original Latin, signifies *Rotteneff*. The usual Medicines in a *Caries*, are Tinctures of Euphorbium, Myrrh, and Aloes; or Powders of the same, with the Addition of Iris, Birthwort of either kind, Gen-

tian, &c. and particularly the Powder of Diapente. After using the Tinctures, the Powders are apply'd on Lint, in form of a Pledget. An Actual Caustery, apply'd to the *carious* Part through a Canula, &c. is frequently found successful. See **CAUSTERY**.

Anatomists, in dissection of Bodies, sometimes find *carious* Bones; particularly those of the Jaws, Legs, &c. where nothing of that Kind was suspected during the Person's Life-time; nor any Disorder felt therefrom: Whence Mr. *Chefelden* conjectures, that the Cure of a *carious* Bone might be directly attempted, without waiting, as our Chirurgeons usually do, for an *Excystation*.

CARINA, a Latin Term, properly signifying the Keel of a Ship; or the long piece of Timber running along the Bottom of the Ship, from Head to Stern; upon which the whole Structure is built, or fram'd. See **KEEL**.

CARINA, is also frequently us'd for the whole Capacity or Bulk of a Ship; containing the *Hull*, or all the Space below the Deck. See **HULL**. Hence, the Word is also us'd, by a Figure, for the whole Ship. See **SHIP**.

CARINA, among Anatomists, is us'd for the first Rudiments, or Embryo of a Chick, when in the Shell; see **EMBRYO**.

The *Carina* consists of the entire *Vertebre*, as they appear after ten or twelve Days Incubation. See **EGG**.

'Tis thus call'd, because crook'd, in form of the Keel of a Ship. See **GENERATION**. Botanists, for the same Reason, use the Word *Carina*, to express the lower *Petalus* of a papillose Flower. The Leaves also of the *Azphodelus*, they say, are *carinated*.

CARINA, is also us'd in the antient Architecture. The *Romans* gave the Name *Carina* to all Buildings in form of a Ship; as we still call *Nave*, from *Navis* Ship, the middle or principal Vault of our Gothic Churches; because it has that Figure.

CARINE, were also Weepers; or Women hir'd, among the antient *Romans*, to weep at Funerals: They were thus call'd from *Caria*, the Country whence most of 'em came. See **FUNERAL**.

CARIPI, a kind of Horse-Guards among the *Turks*. The *Caripi*, to the Number of about 1000, are not Slaves, nor bred up in Scraggios or Seminaries, like the rest; but are generally Moors, or renegade Christians, who having follow'd Adventures, and being poor, and their Fortune to seek, by their Dexterity and Courage have arriv'd at the Rank of Horse Guards to the Grand Signior. They march with the *Ulaggi* on the Left hand, behind him; their pay 12 Aspers per Day.

The Word *Cariipi* signifies *Poor*, and *Stranger*.

CHARISTIA, or rather **CHARISTIA**, a kind of Feast, among the old *Romans*, held on the 19th of *February*, in honour of the Goddess *Concord*. The *Caristia* were instituted to re-establish Peace and Amity, in Families embroil'd, or at variance in themselves. It consisted in a great Entertainment made in each Family, to which no Strangers were admitted, but only Relations and Kindred. The Joy and Freedom inspir'd by the Repast, was look'd upon as a proper means to reunite divided Minds; to which the good Offices of so many Friends wou'd greatly contribute. The Word comes from the Greek *charis*, Grace, Union, Peace. This Feast was also called *Dies Caræ Cognationis*. *Vigener* calls it the *Good Cheer*.

CARLINE, or **CAROLINE**, a Plant, of the Thistle kind, said to have been discover'd by an Angel to *Charlemagne*, to cure his Army of the Plague: whence its Denomination. Its Root is of service as a Diuretic and Sudorific, in all pestilential Disorders.

CARLINGS, in a Ship, two pieces of Timber lying fore and aft, along from one Beam to another, directly over the Keel; serving as a Foundation for the whole Body of a Ship: on these the Ledges rest, whereon the Planks of the Deck, and other Matters of Carpentry are made fast. The *Carlings* have their Ends let into the Beams call'd *Culvertial*. The great *Carlings*, is that whereon the Main-mast stands: we also say, *Carlins* of the *Coffins*, *Betts*, &c.

CARLING Knees, are Timbers going athwart the Ship, from the Sides to the Hatch-way, serving to sustain the Deck on both Sides.

CARMELITES, an Order of Religious, making one of the four Orders of *Mendicants*, or begging Friars; and taking both its Name, and Origin from *Carnech*, a Mountain of *Syria*, formerly inhabited by the Prophets *Elias* and *Elisha*, and by the Children of the Prophets; from whom this Order pretends to descend in an uninterrupted Succession. The manner in which they make out their Antiquity, has something in it too ridiculous to be rehears'd. Some among 'em pretend they are Nephews to J. C. Others go further, and make *Pythagoras* a *Carmelite*, and the antient *Druids* regular Branches of their Order.

Pobias, a Greek Monk, speaks the most reasonably; he says, that in his Time, viz. in 1183, *Elias's* Cave was still extant on the Mountain; near which were the Remains of

a Building, which intimated there had been satiently a Monastery; that some Years before, an old Monk, a Priest of Calabria, by Revelation, as he pretended, from the Prophet Elias, fix'd there, and assembled ten Brothers. In 1209, Albert, Patriarch of Jerusalem, gave the Solitaries a rigid Rule; which *Papebroch* has since printed. In 1217, or, according to others, 1226, Pope *Honorius III.* approv'd and confirm'd it; tho' it was alter mitigated by *Innocent IV.* *S. Louis* brought some of these *Carmelites* with him from the Holy Land into France. Many of the *Popes* give them the Titles of *Brothers of the Blessed Virgins*. This Order is eminent for the Devotion of the *Scapulary*, for its Missions, and for the great Number of Saints it has flock'd to the *Remitt* Church withal. In the last Century, there were four Canonizations in this Order, viz. of *S. Theresa*, *S. Andrew Corsin*, *S. Mag. de Pazzi*, and *S. J. de la Croix*.

The Order of the *Carmelites* is divided into two Branches, viz. *Carmelites of the ancient Observance*, call'd the *mitigated*, or *moderate*; and those of the *strict Observance*, call'd *Bare-footed Carmelites*. The ancient Observance has only one General, under whom are 40 Provinces; and the Congregation of *Maurus*, which has a Vicar-General. The strict Observance has two Generals; one in Spain, having six Provinces under his Command; and another in Italy, with 12 in several Parts of Europe.

Bare-footed CARMELITES, are a Reform of the ancient *Carmelites*, set on foot in 1540, by *S. Theresa*; so call'd from their going *bare-footed*. She began with the Convents of Nuns, whom she restor'd to the primitive Austerity of the Order, which had been mitigated by *Innocent IV.* in 1245; and at length carry'd the same Reform among the Friars. *Pius V.* approv'd the Design, and *Gregory III.* confirm'd the Reform in 1580. There are two Congregations of *bare-footed Carmelites*, which have each their General, and their several Constitutions: The one the Congregation of Spain, divided into six Provinces; the other call'd the Congregation of Italy, comprehending all the rest, not depending on Spain.

Knights of Mount CARMEL, are a Military Order of *Knights Hospitaliers*, instituted in 1607, by *Henry IV.* of France, under the Title, Habit, and Rule of our Lady of *Mount Carmel*; and in consequence of the Bull of Pope *Paul V.* in 1608, united to the Order of *St. Lazarus* of Jerusalem, with all its Commandaries, Priors, and other Goods, for its Endowment.

The Founder propos'd it to consist of 100 French Gentlemen, who should be oblig'd, in Times of War, to march close to the Kings of France, as their Guard. Authors are much divided, whether to call this a new Institution, or a Reiteration of that of *S. Lazarus*; tho' 'tis generally carry'd from the former. See *Lazarus*.

CARMEN, an antient Term among the *Latins*, us'd, in its general Sense, to signify; a Verse; but in its proper Sense a *Spell*, or *Charm*, form of Expiation, Exorcism, &c. couch'd in a few Words, plac'd in a mystic Order, on which its efficacy depended. See *VERSE*, *CHARM*, &c.

Some fetch the Origin of the poetical *Carmena* hence; and say, they took that Name from their Resemblance to these Spells: Others, on the contrary, say, that the Spells had their Origin from the Poetical Verses, and took their Name from their resemblance thereto.

Vigener derives *Carmen* from *Carmen*, because that Prophetess couch'd her Predictions in Verses, or short Periods: but others say, the Prophetess took the Name *Carmen*, from *Carmen*, on the same account. See *CARMENTALIA*.

Petron fetches the Original of *Carmen*, from the Celtic *Carm*, the Shout of Joy, or the Verses which the antient Bards sang, to encourage the Soldiers before the Combat: adding, that the Greek *χαρμος*, signifies *Combat* and *Joy*, which is true; but then it does not come from the Celtic *Carm*, but from *χαρμος*, *gaudeo*.

CARMENTALIA, a Feast among the old *Romans*, celebrated annually on the 15th of *January*, in honour of *Carmen*, or *Carmen*, a Prophetess of *Arcadia*, Mother of *Evander*, with whom she came into Italy 60 Years before the *Trojan War*. This Feast was establish'd on occasion of a great Fecundity among the *Roman Dames*, after a general Reconciliation with their Husbands, with whom they had been at variance, in regard of the use of Cosches being prohibited them by an Edict of the Senate. 'Twas the Women who celebrated this Feast: He who offer'd the Sacrifice, was call'd *Sacerdos Carmentalis*.

Authors are divided about the Origin of the Word *Carmen*; *Vigener* says, the Prophetess was so call'd *Quasi Carens Mente*, out of her Senses, or out of her self; by reason of the Enthusiasm she frequently fell into. Others say, she took her Name from *Carmen*, Verse; because her Prophetess were couch'd in Verses; but *Vigener*, on the contrary, maintains *Carmen* to be deriv'd from *Carmen*. See *CARMEN*.

CARMINATIVES, in Medicine, are Remedies, whether Simple or Compound, us'd in a Cholic, or other Salutent Distemper; to dispel the Wind.

The four *Carminative Flowers*, are those of Camomile, Melilot, Motherwort, and Dill.

The Word comes from the Latin *Carminare*, to card, cleanse, purge; the Dr. *Quincy* makes its Origin more mysterious: he says, it comes from the Word *Carmen*, taking it in the Sense of an Invocation, or Charm; and makes it to have been a general Name for all Medicines which operated like Chams, i. e. in an extraordinary manner. Hence, as the most violent Pains were frequently those arising from put-up Wind, which immediately cease upon Dispersion; the Term *Carminative* became in a peculiar Sense apply'd to Medicines which gave Relief in windy Cases, as if they cur'd by Incantation. But this Derivation appears a little too much strain'd.

CARMINE, a red Colour, very vivid, bordering somewhat on the Purple, us'd by Painters in Miniature; and sometimes Painters in Oil, tho' rarely, by reason of its excessive Price. *Carmine* is the most valuable Product of the Cochineal Mite; which is a Fecula or Sediment, residing at the botom of the Water, wherein is steep'd Cochineal Couan, and Autour: Some add Rocou, but this gives the *Carmine* too much of the Orange cast. To be good, it must be almost in an impalpable Powder. See *RED*, *MINIATURE*, &c.

Some make *Carmine* with Brasile Wood, Fernambouc, and Gold Leaf, beat in a Mortar, and mixtur'd in Whitewine Vinegar; the Scum arising from this Mixture, upon boiling, when dry'd, makes *Carmine*: But this Kind is vastly inferior to the former.

CARNATION, *Flesh-Colour*, in Painting, is understood of all the Parts of a Picture in general which represent Flesh; or which are naked and without Drapery. *Titian* and *Corregio*, in Italy, and *Rubens* and *Van Dyke* in Flanders, excell'd in Carnations. See *COLOURING*.

It must be here observ'd, that the Word *Carnation* is not properly us'd for any particular Part of the Person painted; but for the whole Nudity of the Piece.

CARNAVAL, or *CARNIVAL*, a Season of Mirth and Rejoicing, observ'd with great Solemnity by the *Italians*, and particularly at *Venice*. The *Carnaval* Time commences from Twelfth Day, and holds till Lent.

Fests, Balls, Operas, Concerts of Music, Intrigues, Marriages, &c. are chiefly held in *Carnaval* Time. The Word is form'd of the Italian *Carnovale*; which *M. Du Cange* derives from *Carn-a-val*, by reason the *Flesh* then goes to Pot, to make amends for the Season of Abstinence ensuing. Accordingly, in the corrupt Latin, he observes, it was call'd *Carnelovenant*, and *Carnisprivium*; as the *Spaniards* still denominate it *Carnes tollendas*.

CARNEL. The building of Ships first with their Timber and Beams, and after bringing on their Planks, is call'd *Carnel-work*, to distinguish it from *Clutch-work*.

These Vessels also which go with Mizen-sails instead of Main-sails, are by some call'd *Carnels*.

CARNIVOROUS, an Epithet apply'd to those Animals which naturally seek, and feed on *Flesh*. See *ANIMAL*, and *FOOD*.

'Tis a Dispute among Naturalists, whether or no Man be naturally *Carnivorous*; some contending that the Fruits of the Earth were intended as his sole Food, and that 'twas Necessity in some Places, and Luxury in others, that first prompted them to feed upon their Fellow-Animals. *Pythagoras* and his Followers look'd on it as a great Impiety; and strictly abstain'd from all *Flesh*, from the Notion of a *Metempsychosis*: and their Successors, the *Brachmans*, continue the same to this Day. See *PYTHAGORIANS*, and *BRACHMANS*.

The Consideration *Gassendus* chiefly insists on, why Man should not be *Carnivorous*, is the Structure and Conformation of our Teeth; most of 'em being either *Incisores* or *Molitores*; not such as *Carnivorous* Animals are furnish'd withal, proper to tear *Flesh*; except the four *Canini*: As if Nature had rather prepar'd us for cutting Herbs, Roots, &c. than for tearing *Flesh*. See *TEETH*. To which may be added, that when we do feed on *Flesh*, 'tis not without a preparatory Coction, by boiling, roasting, &c. And even then, as *Dr. Drake* observes, they are the hardest of Digestion of all other Foods, and are prohibited in Fevers, and many other Distempers: And lastly, that Children are rather averse to all Animal Foods, till their Palates become vitiated by Custom; and the breeding of Worms in them, is generally ascrib'd to the too busy eating of *Flesh*.

To these Arguments *Dr. Wallis*, in the *Philosophical Transactions*, subjects another; which is, that all Quadrupeds which feed on Herbs or Plants, have a long *Colon*, with a *Cecum* at the upper End of it, or somewhat equivalent, which conveys the Food, by a long and large Progress, from the Stomach downwards, in order to a slower Passage and longer

l agree Stay in the latefines; but that in *Carnivorous* Animals such *Cecum* is wanting, and instead thereof there is a more short and slender Gut, and a quicker Passage thro the latefines. Now, in Man, the *Cecum* is very visible; a strong Presumption that Nature, who is still consistent with her self, did not intend him for a *Carnivorous* Animal: 'Tis true, the *Cecum* is but small in Adults, and seems of little or no use; but in a *Fetus* 'tis much larger in Proportion: and 'tis probable, our customary Change of Diet, as we grow up, may occasion this shrinking. See *Cæcum*, and *Colon*.

CARNOSA Membrana, } in Anatomy; see **PANNICULOSUS Carnosus**, }
CARNOSUS Panniculus, }

CARNOSITY, is us'd by some Authors for a little fleshy Excrecence, Tubercle, or Wen, form'd in the Urethra, Neck of the Bladder, or Yard, which stops the Passage of the Urine. *Carnosities* are very difficult of cure: They are not easily known, but by introducing a Probe into the Passage, which there meets with resistance. They usually arise from some Venereal Malady ill manag'd.

CARO, *Flesh*, in Anatomy, &c. is properly understood of such Parts of the Body, where the Blood-Vessels are so small, as only to retain Blood enough to preserve their Colour red. Anatomists usually define *Flesh*, a similar, fibrous, and thick Part; and distinguish it into five Kinds, *viz.* 1. *Muscular*, *Similar*, or *Fibrous*; such as is the Substance of the Heart, and other Muscles. See **MUSCLES**. 2. *Perineuriosus*, as the Lungs, Liver, and Spleen were antiently suppos'd to be; but since the use of Glasses, it's now known, that all the Viscera and other Parts are Vascular, and nothing but a Plexus, or Coageries of small Vessels and Canals. 3. *Viscerous*, as that of the Stomach and Guts. 4. *Glandulous*, as that of the Pancreas, Breasts, Tonils, &c. 5. *Spiruous*, as the Flesh of the Lips, Gums, Glans of the Penis, &c.

CARO, is also us'd, in Botany, for the Pulp, Flesh, or soft Substance contain'd within any Plant, or its Fruit; such as the Pulp of Cassia, Tamarinds, Prunes, &c.

CARO Musculosa quadrata, in Anatomy, a Muscle so call'd by *Fallopins* and *Spigelius*, but more popularly *Palmaris brevis*. See **PALMARIS**.

CAROLINES, an Epithet given to the four Books compos'd by Order of *Charlemagne*, to refute the Ill Council of Nice.

The *Carolines* contain 120 Heads of Accusation against that Council, and are couch'd in very harsh, reproachful Terms. Some Authors doubt of the Antiquity and Genuine-ness of these Books: They are attributed by some to *Augustine*, Bishop of *Metz*; by others to *Alcinus*; but others, with more Reason, ascribe 'em to the Bishops of *France*; alledging, that Pope *Adrian* having sent *Charlemagne* the Acts of the Council in 790, he gave them to be examin'd by the *French* Bishops; and that the *Carolines* was the Answer they return'd. The *Carolines* were sent to the Pope about the Time of the Council of *Frankfort*; and were first printed in 1549, by *M. Du Tillet*, Bishop of *Meaux*, under the Name of *Ephraïm*.

CAROLUS, an antient Gold Coin, struck in the Reign of *K. Charles I.* Its Value, &c. see under **CORN**.

CAROTIDS, in Anatomy, two Arteries of the Neck, one on each Side, serving to convey the Blood from the Aorta, to the Brain. See **ARTERY**, **BLOOD**, and **BRAIN**.

The right *Carotid* arises from the Subclavian, just where that springs out of the Porta; but the left immediately out of the Aorta. They both lie pretty deep, and being defended by the *Alpera Arteria*, pass free from any Compressure, and without sending out almost any Branches, insight to the *Cranium*. Just before their Arrival there, they send forth the external *Carotid*; and passing the *Ossis Petrosum*, proceed on with some Circumvolutions; till laying aside their muscular Membrane, and giving Branches to the *Dura Mater*, they pass along the *Cranium*, defended by the Sides of the *Sella Turcica*, and *Dura Mater*: and sending Branches to the outer Parts of the *Pia Mater*; and the Nerves, they at last reach the *Cerebrum*; where dividing into infinite Ramifications, they are lost in the cortical Part; or perhaps proceed even into the medullary Part thereof. See **CORTEX**, **MEDULLA**, &c.

The Antients plac'd the Seat of Droufines in these Arteries, whence they had the Name *Carotidi*, *viz.* signifying Droufines: for the same Reason they were call'd *Lebræ* and *Apoplectæ*.

CARP-Fishing. See **CARP-FISHING**.

CARPEA, a kind of Dance, or Military Exercise, in use among the *Armenians* and *Magnians*, perform'd by two Persons; the one acting a Labourer, the other a Robber. The Labourer, laying by his Arms, goes to sowing and ploughing; still looking warily about him, as if afraid of being surpris'd: The Robber at length appears, and the Labourer, quitting his Plough, betakes himself to his Arms, and fights in defence of his Oxen. The Whole perform'd to the Sound of Flutes, and in Cadence.

Sometimes the Robber was overcome, and sometimes the Labourer; the Victor's Reward being the Oxen and Plough. The Design of the Exercise, was to teach and accustom the Peasants, to defend themselves against the Attacks of Ruffians.

CARPENTERS-Work, in a Building, includes the *Framing*, *Flooring*, *Roofing*; the *Foundation*, *Carcass*, *Doors*, *Windows*, &c. See **FRAMING**, **FLOORING**, **ROOFING**, **FOUNDATION**, **CARCASS**, **DOOR**, **WINDOW**, &c.

CARPENTER'S Joint-Rule. See **RULE**.

CARPENTRY, the Art of cutting, framing, and joining large Pieces of Wood, for the Uses of Building; see **BUILDING**.

Carpentry is one of the Arts subservient to Architecture, and is divided into two Branches, *House* *Carpentry*, and *Ship* *Carpentry*: The first employ'd in Raising, Roofing, Flooring, &c. of Houses, &c. See **HOUSE**.

The second in the Construction of Vessels for Sea; as Ships, Barks, Barges, Boats, &c. See **SHIP**, &c.

The Rules and Practices in *Carpentry*, as to *Planing*, *Sawing*, *Mortising*, *Tenoning*, *Scribing*, *Paring*, *Moulding*, &c. are much the same as those in *Joinery*; so likewise are the *Tools*, or Instruments, and the *Staff*, the same in both: All the Difference between the two Arts consisting in this, that *Joinery* is us'd in the smaller and more curious Works; see **JOINERY**: and *Carpentry* in the larger, stronger, and coarser. See **SAWING**, **SCRIBING**, **MOULDING**, **PLANING**, &c. See also **SAW**, **CHISEL**, **PLANE**, &c.

Fr. Pyrrard assures us, that the Art of *Carpentry* is in its greatest Perfection in the *Maldivos* Islands: Their Works, there, he observes, are so artfully manag'd, that they will hold tight and firm without either Nails or Pins. He adds, they are so curiously put together, that no body can take 'em asunder, but those acquainted with the Mystery.

The Word is deriv'd from the Latin *Carpentum*, a Car, or Cart.

CARPET Tapis, a sort of Covering, work'd either with the Needle, or on a Loom; to be spread on a Table, Trunk, an Estrade, or even a Passage, or Floor. *Persian* and *Turky* *Carpets* are those most priz'd; especially the former. *Carpets* that had a Hair or Shag on one side only, were call'd by the Antients *Tæpetes*; such as had a Shag on both sides, were call'd *Amphitæpetes*.

Among Jockeys, to *Wave the Carpet*, is to Gallop very close, or near the Ground; a Fault Foreigners charge on the *English* Horses. See **GALLOP**.

An Affair, Proposal, &c. are said to be brought on the *Carpet*, when they are under Consideration, &c.

CARPOBALSAM, or **CARPOBALSAMUM**, is the Fruit of the Balm, or Balm Tree; very much resembling both in Figure, Size, and Colour, that of *Turpentine*. See **BALM**.

'Tis much doubted, whether the *Carpobalsam* sold in the Shops be the same with that of the Antients; as not having the same Marks. The Apothecaries use to substitute *Cubebes* in lieu of it, as having the same Qualities. The Word comes from the Greek *καρπῶν*, *Fruit*, and *βάλσαμῶν*, *Balm*.

CARPOCRATIANS, a Branch of the antient *Gnosticks*, so call'd from *Carpocrates*, who in the Ill Century reviv'd, and improv'd upon the Errors of *Simon Magus*, *Menander*, *Saturnius*, and other *Gnosticks*. He own'd, with them, one sole Principle and Father of all Things, whose Name, as well as Nature, was unknown. The World, he taught, was created by Angels, vastly inferior to the first Principle. He oppos'd the Divinity of Jesus Christ; making him a mere Man, the possessor of uncommon Gifts, which set him above other Creatures. He inculcated a Community of Women; and taught, that the Soul could not be purify'd, till it had committed all kinds of Abominations; making that a necessary Condition of Perfection. See **GNOSTICS**, and **CERINTHIAN**.

CARPUS, in Anatomy, the *Wrist*; or that Part between the Palm of the Hand, and the Arm. See **HAND**.

The *Wrist* consists of eight Bones of different Figures and Bulks, plac'd in two Ranks, four in each: The first Rank is articulated with the two *Radius*; the second with the Bones of the *Metacarpus*. They are strongly ty'd together by the Ligaments which come from the *Radius*, and by the annular Ligament, through which the Tendons which move the Fingers pass: Altho this Ligament be thought but one, yet it gives a particular Case to every Tendon which passes through it. The Word comes from the Greek *καρπῶν*. The *Arabians* call it *Rafista*; the *Latins* *Carpus*.

CARRIAGE, a Vehicle for the Conveyance of Persons, Baggage, Merchandizes, &c. from one Place to another. See **VEHICLE**.

CARRIAGE of a Cannon, is the Frame, or Timber-work whereon it is mounted; serving to point and direct it for shooting, and to convey it from place to place. See **CANNON**.

The CARRIAGE of a Ship Gun, consists of two Wheels, without Spokes.

The CARRIAGE of a Field-Piece, consists of two Wheels, which carry long and strong wooden Beams, or Checks, between which the Cannon is as it were fram'd, moving on its Trucions as on a Center: When 'tis requir'd to move them, they add a Van-Train, compos'd of two smaller Wheels.

The ordinary Proportion, is for the Carriage to have 1/2 of the Length of the Gun; the Wheels to be half the Length of the Piece in height: four times the Diameter, or Caliber, gives the Depth of the Planks at the fore End; in the Middle 3/2.

In Agriculture, Carriage is a Furrow cut for the Conveyance of Water, or the Draining of the plow'd Ground, &c.

CARRIERE, or CARRIER, or CAREER, in the Manage, a Place inclos'd with a Barrier, wherein they run the Ring. See BARRIER.

The Word is also us'd for the Horse-course it self, provided it don't exceed 200 Paces.

In the ancient Circus, the Carrier was the Space the Bige, or Quadrigæ, were to run at full speed, to gain the Prize. See CIRCUS.

CARRIER, in Falconry, is a slight or tour of the Bird, about 120 Yards: If it mount more, it's call'd a double Carrier; if less, a semi-Carrier.

CARROUSAL, or CAROUSAL, a Course, or Contest of Chariots and Horses: or a magnificent Entertainment, on occasion of some publick Rejoicing: consisting in a Cavalcade of several Persons, richly dress'd, and equip'd after the manner of the ancient Cavaliers, divided into Squadrons, meeting in some publick Place, and practising Juits, Tournaments, and other noble Exercises. See JUST, and TOURNAMENT.

The Mares introduc'd Cyphers, Liveries, and other Ornaments of their Arms, with Trappings, &c. for their Horses. The Gobs added Crests, Plumes, &c.

The Word comes from the Italian *Carosello*, a Diminutive of *Carro*, Chariot. *Tertullian* ascribes the invention of *Carrossels* to *Circe*; and will have 'em instituted in honour of the Sun, her Father: whence some derive the Word from *Carrus*, or *Currus Siliis*.

CARR-TAKERS, are Officers of the King's Household, who, when the Court travels, have charge to provide Waggon, Car, &c. to transport the King's Furniture and Baggage.

CARTE BLANCHE, a French Term, seldom us'd but in this Phrase, To give, or send any one the *Carte blanche*; i. e. to send him a blank Paper, sign'd, for him to fill up with what Conditions he pleases.

CARTESIAN PHILOSOPHY, or CARTESIANISM, the System of Philosophy advanc'd by *Des Cartes*, and maintain'd by his Followers, the *Cartesians*. See PHILOSOPHY; see also CARTESIANS.

The *Cartesian Philosophy* is founded on two great Principles, the one *Metaphysical*, the other *Physical*. His *Metaphysical Principle* is this, *I think, therefore I am*. This Principle has been attack'd and defended, with a world of Spirit; and a world of Zeal and Partiality on either side: For, tho' it be true, that we are as sure by an inward Perception or Consciousness that we exist, as that we think; yet 'tis true, too, that the Conclusion of this Reasoning *I am*, is drawn from the Antecedent *I think*: since to think, supposes to be, or exist; and the Mind sees clearly, the necessary Connection between thinking and being.

But this Principle *Des Cartes* should not have propos'd as a new Discovery: The World knew e'er he taught it, that in order to think, 'tis requir'd to be; and that he who actually thinks, actually exists. See EXISTENCE, and THINKING.

The *Physical Principle of Cartesianism* is this, that there is nothing but Substances: which appears a dangerous Principle to the Divines; and is accordingly controverted every Day in the Schools of the Catholics; who undertake to prove, that there are absolute Accidents. See ACCIDENT.

Substance he makes of two Kinds; the one a Substance that thinks; the other, a Substance extended. Actual Thought, therefore, and actual Extension, are the Essences of Substance: So that the thinking Substance cannot be without some actual Thought; nor can any thing be retrench'd from the Extension of a Thing, without taking away too much of its Substance.

The first Article of this is refuted by *Mr. Locke*, who shews, that thinking is not essential to the Soul, or that its Essence does not consist in Thought; but that there are various Occasions wherein it does not think at all. See IDEA. The latter is still oppos'd by the Jesuits, &c. as inconsistent with the Doctrine of Transubstantiation; but is much better confuted by the modern Writers, from the Principles of the *Newtonian Philosophy*. See MATTER, EXTENSION, &c.

The Essence of Matter thus fix'd in Extension, *Des Cartes* naturally concludes there is no Vacuum, nor any possibility thereof in Nature; but that the World is absolutely full: For mere Space is precluded, by his Principle; in regard, Extension being imply'd in the Idea of Space, Matter is so too. If there were any such thing as a Vacuum, says he, it might be measur'd: The Vacuum, therefore, is extended, and of consequence is Matter; every thing extend'd being Matter. See VACUUM, and PLENUM.

These Principles of Physics once suppos'd, *Des Cartes* explains mechanically, and according to the Laws of Motion, how the World was form'd; and whence the present Appearances of Nature. He supposes, that God created Matter of an indefinite Extension; and that he divided this Matter into little square Portions, or Masses full of Angles; that he impress'd two Motions on this Matter; one, whereby each Part revolv'd round its Centre; another, whereby an Assemblage, or System of 'em, run'd round a common Centre: Whence arose as many different Vertices, or Eddies, as there were different Masses of Matter, thus moving round common Centers.

These things, thus set a-going, the Consequences, according to *Des Cartes*, in each Vortex, will be as follows: The Parts of Matter cou'd not move and revolve among each other, without having their Angles gradually broke; and this continual Friction of Parts and Angles, must produce three Elements: the first, an infinitely fine Dust, form'd of the Angles broke off; the second, the Spheres remaining, after all the angular Irregularities are thus remov'd: these two make the Matter of his first and second Element. And those Particles not yet render'd smooth and spherical, and which still retain some of their Angles and hamous Parts, make the third Element. See ELEMENT.

Now the first, or subtilist Element, according to the Laws of Motion, must take up the Center of each System, or Vortex; by reason of the Smallness of its Parts: And this is the Matter which constitutes the Sun, and the Fix'd Stars above, and the Fire below. See SUN, FIRE, &c. The second Element, compos'd of Spheres, makes the Atmosphere, and all the Matter between the Earth and the Fix'd Stars; in such manner, as that the largest Spheres are always next the Circumference of the Vortex, and the smallest next its Center. See AIR, and ÆTHER. The third Element, or the hooked Particles, is the Matter that composes the Earth, all terrestrial Bodies, Comets, Spots in the Sun, &c. See EARTH, COMET, SPOTS, &c.

This System, tho' very artfully concerted, yet carries with it more of the Air of a Romance, than of a just Philosophy. Accordingly, both Divines and Philosophers cry out on it: the first, that it leads to Atheism, by furnishing the Maintainers of an Eternal Matter, with means how, from the Laws of Motion, to account for the Production of the World: Tho', 'tis certain, *Des Cartes* suppos'd a Deity; and so must all who admit his Philosophy; else whence will they derive that Motion of Matter, which of it self is destitute of any such Principle?

But the Philosophers have much better Pleas against it; and the Elements, subtle Matter, hooked Atoms, Vortices, and other Machines, are now nearly on the same footing with the occult Qualities of the ancient *Peripateticks*. See SUBTILE MATTER, VORTICES, HOOKED PARTICLES, &c.

Indeed, *Des Cartes*, by introducing Geometry into Physics, and accounting for Natural Phenomena from the Laws of Mechanicks, did infinite service to Philosophy; and contributed, both by his Practice and Example, to purge it from that venerable Rust, which in a long Succession of Ages it had contracted: Accordingly, to him, in some measure, is owing the present System of Mechanical, or *Newtonian Philosophy*; see *NEWTONIAN PHILOSOPHY*.

Cartesius was ready to be prohibited by an Arrest of the Parliament of Paris; and had been so, in effect, but for a Burlesque Address presented to the First President.

CARTESIANS, a Sect of Philosophers, who hold or assert *Cartesian Principles*. See *CARTESIAN PHILOSOPHY*.

Monsieur *René des Cartes*, the noble Founder of this Sect, was of *Bretagne*, born in the Year 1596. His Monument informs us, "That having master'd all the Learning of the Schools, which prov'd short of his Expectation, he betook himself to the Army, in Germany and Hungary; and there spent his vacant Winter Hours, in comparing the Mytheries and Phenomena of Nature, with the Laws of Mathematicks; daring to hope, that these might unlock the other. Quitting, therefore, all other Pursuits, he retir'd to a little Village near *Lymond*, in *Holland*; where spending 25 Years in continual Reading and Meditation, he effected his Design."

He was a Person of the greatest Genius, Penetration, and Judgment, both as to the Invention, and orderly ranging and disposing of Things. He began a new Method of Philosophy, and finish'd it, on his own Foundation. The History of his Life, is best learnt from his own incomparable

Treatise de Merbodo. His Reputation in Foreign Nations, appears from his Monument; which consists of four Faces, inscrib'd with to many Encomiums. It was erected in *Sweden*, where he dy'd, in the Year 1650, by *Monfieur Chomont*, the King of *France's* Resident in that Court. But his Bones were afterwards remov'd to *Paris*, by Order of *Louis XIV.* and a stately Mausoleum built over 'em, in the Church of *St. Genevieve*.

CARTHUSIANS, an Order of Religious instituted by *S. Bruno*, about the Year 1086. The Rule given them by their Founder is exceedingly rigorous; their Houses were usually built in Deserts, their Fare coarse, and their Discipline severe. 'Tis observ'd, that the monastical Piety is better preserv'd in this, than in any of the other Orders. *M. l'Abbe de la Trappe* endeavours to shew, that the *Carthusians* don't live up to the Austerity enjoyn'd by the ancient Statutes of *Guignes* their fifth General. *M. Mafon*, a present General of the Order, answers the *Abbat*; and shews, that what he calls the Statutes, or Constitutions of *Guignes*, are, in reality, only Customs compil'd by *Father Guignes*; and that they did not become Laws till long after. The *French* call the *Carthusians*, *Chartreux*; and their Houses *Chartreuse*. See **CHAETREUX**.

CARTILAGE, in Anatomy, a smooth, solid, uniform, elastic Part of an Animal; softer than a Bone, but harder than any other Part.

Cartilages seem to be nearly of the same Nature with Bones, and only to differ as more or less hard. See **BONE**. There are some very hard, and which even become bony with Time; as those, e. g. which form the *Sternum*; see **STERNUM**. Others are softer, and serve to compose entire Parts; as those of the Nose, Ears, &c. where an easy gentle Motion is requir'd; their natural Elasticity serving them for Antagonist Muscles. See **NOSE**, &c. There are others softer still, partaking of the Nature of Ligaments, and thence call'd *Ligamentous Cartilages*. See **LIGAMENT**.

There are *Cartilages* of various Figures, acquiring various Names from the Things they resemble: One is call'd *Annularis*, because it resembles a Ring; another *Xyphoides*, from its resembling the Point of a Dagger; a third *Scutiformis*, because made like a Buckler; and so of the rest. See each under its proper Head, **ANNULAR**, **SCUTIFORM**, &c.

Cartilages have no Cavities for Marrow; nor any Membranes, or Nerves, for Sensation. Their Uses are to prevent the Bones from being damag'd or wounded by a continual Friction; to join 'em together by a *Synchondrosis*; and to contribute, in great measure, to the well forming of several Parts; as the *Nose*, *Ears*, *Trachea*, *Eyelids*, &c.

CARTON, or, as we pronounce it, **CARTOON**, in Painting, a Design, made on strong Paper, to be afterwards calqued thro, and transfer'd on the fresh Plaster of a Wall, to be painted *in Fresco*. See **DESIGN**, **CALQUING**, and **FRESCO**.

CARTON is also us'd for a Design colour'd, for working in Mosaic, Tapestry, &c. The *Cartoons* preserv'd at *Hampton-Court*, are Designs of *Raphael Urbini*; intended for Tapestry, but uncolour'd. The Word, in the original *French*, signifies *thick Paper*, or *Passboard*.

CARTOUCH, an Ornament in Architecture, Sculpture, &c. representing a Scroll of Paper. It is usually a Table, or flat Member, with Wavings; whereon is some Inscription, or Devise, Ornament of Armory, Cypher, or the like.

Cartouches are sometimes drawn on Paper, as in the Titles of Maps, &c. and sometimes made of Stone, Brick, Plaster, Wood, &c. for Buildings. The Word comes from the Italian *Cartoccio*, which signifies the same thing.

CARTOUCHE, or **CARTIDGE**, in War, the Charge or Load of a Fire-Arm, wrapp'd up in a thick Paper, Pastboard, or Parchment; to be the more readily charg'd, or convey'd into the Piece.

Those of Cannon, or Mortars, are usually in Cases of Pastboard, or Tin, sometimes of Wood, half a Foot long; taking up the Place of the Bullet in the Piece, to whose Caliber the Diameter is proportion'd. These *Cartouches* are fill'd occasionally with Musket-Balls, Nails, Chains, &c. which, upon Explosion, spread far and wide. The Cannon bid in the retir'd Flanks, is usually charg'd with these *Cartouches*, to make the greater havoc among the Besiegers.

Those of Muskets, Pistols, and small Arms, only contain the Charge of Powder, with a Ball wrapp'd up in thick Paper.

CARVING. See **SCULPTURE**.

CARUNCULA, a Term in Anatomy, properly signifying a little piece of Flesh; being a Diminutive of the Latin *Caro*, Flesh. The Name *Caruncula*, is apply'd to several different Parts of the Body; as,

CARUNCULA Cuticularis, a Name which some Anatomists give the *Nymphæ*. See **NYMPHÆ**.

CARUNCULA Lacrymalis, are two little Eminences, one on each great *Cantibus*, or corner of the Eyes; separating the two *Puncta Lacrymalia*. See **CANTHUS**.

Bartholine, and some other Anatomists, mistake the *Caruncule* for Lacrymal Glands; which they suppose plac'd on the *Punctum Lacrymale*, to prevent the continual shedding of Tears. But *Dionis* shows the Mistake, and maintains 'em to be no Glands, but only the Reunion or Duplication of the inner Membrane of the Eyelids. Some Anatomists say, they help to keep the two *Puncta* open, when the Eyes are shut. See **LACRYMALIA Puncta**.

CARUNCULÆ Myrtiliformes, in Anatomy, are four little *Caruncules*, or fleshy Knobs, about the face of Mulberries, whence their Name; found adjoining to, or rather in the Place of the *Hymen*, in the Parts of Generation in Women. Some suppose 'em to be largest in Maids, and to grow less and less by the use of Venus; but others, with more probability, make them the Consequences of Venus in the first Copulation; deriving 'em from the broken Membrane of the *Hymen*, whose Fragments shrink up they appear to be. See **HYMEN**.

CARUNCULÆ Papillares, or *Massillares*, are little Protruberances on the inside of the Pelvis of the Kidneys, made by the Extremities of the Tubes which bring the Serum from the Glands in the exterior Parts, to the Pelvis. They were first discover'd by *Carpus*; and thus call'd, from their resembling a little Teat, or Pap. They are in form of Acorns heads, and less red than the Flesh: They are about the bigness of a Pea, but larger at top than at bottom; ending as it were in a Point, in the Place where they are perforated, to let the Urine fall into the Basin. See **KIDNEYS**, **PELVIS**, &c.

CARUS, in Medicine, a Species of an Apoplexy, consisting in a profound Sleep, with a sudden Deprivation of Sensation, and Motion, and an acute Fever.

The *Carus* differs from a *Coma* in this, that the Patient, in the latter, answers when interrogated; but not in the former; See **COMA**: From a Lethargy it is distinguish'd by the Fever which attends it, which the Lethargy is free from; and by the return of Sensation, which the lethargic Person finds when agitated or prick'd; See **LETHARGY**: From a proper Apoplexy, by the freedom of Respiration, which is always hurt in an Apoplexy; see **APOPLEXY**: From an Epilepsy, in that there is no Motion or Fruct at the Mouth in the *Carus*: From a Syncope, by the Pulse, which is high, and the Face ruddy; whereas the Pulse is low, and the Face cadaverous in the Syncope: From an hysterick Suffocation, in that the Patient hears and remembers things in the latter, not in the former. See **SYNCOPE**, **EPILEPSY**, &c.

The Cause of the *Carus* is usually refer'd to an Interruption of the Motion of the Animal Spirit; occasion'd either by their being exhausted, or obstructed by some cold, heavy, pituitous Humour; or by a Contusion, from some external Force. The Word comes from the *Greek καρη*, Drowsiness, heaviness of the Head.

CARYATIDES, or **CARIATES**, in Architecture, a kind of Order of Columns, or Pilasters, under the Figures of Women, dress'd in long Robes. See **ORDER of Columns**.

The Origin of the *Caryatides* is related by *Vitruvius*: The *Greeks*, he observes, having taken the City of *Caria*, led away their Women Captives; and to perpetuate their Servitude, represented them in their Buildings, as charg'd with Burdens, such as those supported by Columns.

The *Caryatides*, *M. le Clerc* observes, are not now represented as among the Antients, viz. as Symbols of Slavery, with Hands ty'd before and behind; those Characters being suppos'd injurious to the Fair Sex. Among us, they are represented as Images of Justice, Prudence, Temperance, &c. Their Legs are always to be close to each other, and even across; their Arms laid flat to the Body, or to the Head, or at least as little spread as possible; that as they do the Office of Columns, they may have, as near as possible, the Figure thereof. Sometimes their Arms are cut off, for the greater Delicacy; as in the Hall of the *Swiss* Guards in the *Lowere*: but *M. le Clerc* does not approve of such Mutilations.

When insulated, they should never have any great Weight to support; and their Entablature and Pedestal are ordinarily to be *ionic*.—When they join to a Wall, &c. 'tis advisable to put a Console over them, which may appear to sustain the Weight of their Entablature; otherwise, as they represent Women, they don't seem so proper to sustain great Loads.—When they are made in form of Angels, he would have them support the Entablature, which in that Case is to be *Corinthian*, with their Hands.

The Antients made the *Caryatides* frequently to support Baskets, or Corbels of Flowers; and those they call'd *Cansere*, or *Cistifera*.

CASCADE, a Cataract, or Fall of Water; either natural, as that of *Tivoli*, &c. or artificial, as those of *Versailles*, &c. and that, either falling with a gentle Descent, as those of the *Seaxus*; in form of a Buffer, as at *Triannon*; or by degrees, in form of a Perron, as at *St. Clou*; or from Basin to Basin, &c. The Word comes from the Italian

thereof: As the Greek Fashion, the Roman Fashion, &c. F. *Joubert* makes it the most ancient of all Coverings of the Head, as well as the most universal. Kings, Emperors, and even Gods themselves are seen therein. That which covers the Head of *Rome*, has usually two Wings, like those of *Mercury*: And that of some Kings, is furnished with Horns, like those of *Jupiter Ammon*; and sometimes barely Bulls, or Rams Horns, to express uncommon Force.

CASK, in Heraldry. See **HELMET**.
CASK, is also us'd as a common Name for Vessels of divers Kinds, in contra-distinction from the Liqueur, or other Matter contain'd therein. Thus, a Hoghead of Spirits, &c. is said to weigh 4 C. $\frac{1}{2}$ and 25 L. Cask and Liqueur; a Panchion, 6 C. $\frac{1}{2}$ and 2 L. Cask and Liqueur.

A **CASK** of Sugar, is a Barrel of that Commodity, containing from 8 to 11 Hundred; a **Cask** of Almonds, is about 3 Hundred weight.

CASSATION, in the Civil Law, the Abrogation, or annulling of any Act or Procedure. The Occasions of *Cassation* are, 1^o, When a Decree is directly contrary to another Decree; and both against the same Party. 2^o, When Decrees are directly contrary to the express Decision of Statutes, or Customs. 3^o, When the Formalities prescrib'd by the Laws have not been follow'd. The Word comes from the Latin *Cassare*.

CASSIA, a medicinal Drug, in frequent use as a gentle Purgative. There are four Kinds of *Cassia*, alike in Properties, and nearly in Figure; being all in long black Pods; but very different, if consider'd with regard to the Trees that produce them. These *Cassias* are, *Cassia of the Levant*, that of *Egypt*, that of *Brasil*, and of the *Antilles* Islands.

Cassia of the Levant, is the Fruit of a very high Tree, whose Bark is Ash-colour'd, its Wood very solid, and its Grain close; towards the Center, the Wood is of an Ebony black, towards the Circumference yellowish: Its Flowers are yellowish, and produce a Fruit in form of a long Pod, round and massive; of a reddish Colour, bordering on black. When ripe, it is full of a black, sweetish Pulp, divided by little woody Cells: In this Pulp are found little hard Grains, in manner of Stones, shap'd like Hearts, which are the Seed of the Tree. This *Cassia* must be chose new, in large Pods, heavy, and of a tan Colour; the Bark, when broke, fine and white within, full of a black soft Pulp of a sweetish Taste.

Cassia of Egypt, is like that of the *Levant*, except that the Tree is higher, and the Leaves narrower; the Fruit smaller, and the Bark softer.

Cassia of Brasil, is the largest of all: Some of the Pods are found four or five Inches in Circumference. This Kind is not very common in the Shops.

Cassia of the Islands, is that now chiefly us'd; tho heretofore the popular *Cassia* was the *Levantine*. It is sent from the *Antilles*; where 'tis produc'd in such abundance, that the Vessels, in their home Voyages, use it as Ballast: whence it is, that we find it so often foul and dirty: The Tree that yields it resembles a Peach-Tree. Its Flowers, which are yellow, grow in Clusters; and, as they decay, leave behind them a Fruit or Pod an Inch thick, and a Foot (sometimes two) long. The Fruit, while in its growth, is green; when ripe, it becomes a dark Violet. 'Tis chosen in the same manner as that of the *Levant*.

When the Pod is entire, and the Pulp not yet taken out, 'tis call'd *Cassia Fistula*, or *Cassia in the Case*. For use, the Pulp is taken out, and pulp'd thro a Hair Sieve. The Apothecaries put off little of this better Kind, but what is old, and boil'd up with Sugar to make it keep.

Cassia, when green, as also the Flowers of the *Cassia* Tree, are commit'd in the *Levant* and the *Islands*; and have almost the same Effects with the common *Cassia*, the Basis of most purgative Electuaries.

The *Tincture* of **CASSIA**, is a slight Infusion of the Pulp with the Seed.

The *Extract* of **CASSIA**, is nothing but the Pulp separated from the Shell and the Seeds; with the Addition of a certain Quantity of Sugar to preserve it from turning sour.

CASSIA LIGNA, is the Bark of a Tree much like that which bears the Cinnamon; growing profusiously with it in the Island of *Ceylon*. The two Barks are gather'd and dry'd in the same manner; their Smell and Taste are nearly alike; they are equally sweet, poignant and agreeable; and their Colour, Form, and Thickness scarce differ at all. But the *Cassia* is the fatter, and more mucilaginous; and in chewing dissolves in the Mouth, without leaving any thing woody behind; whereas the woody Part of Cinnamon still sticks, tho ever so well chew'd. Some Authors will have the Tree which bears Cinnamon bear the *Cassia* too; and make the only Difference between them to consist in this, that the first comes from *Ceylon*, and the latter from the Coast of *Coromandel*. See **CINNAMON**.

CASSIOPIA, in Astronomy, one of the Constellations of the Northern Hemisphere. See **CONSTELLATION**.

In 1572, there appear'd a new Star in this Constellation, which at first surpass'd in Magnitude and Brightness *Jupiter* himself; but it diminish'd by degrees, and at last disappear'd, at the End of 8 Months. It alarm'd all the Astronomers of that Age, many of whom wrote Differtations on it; among the rest, *Tycho Brahe*, *Kepler*, *Masurius*, *Licetus*, *Grammelm*, &c. *Beza* the Landgrave of *Hesse*, *Roya*, &c. wrote to prove it the same Star which appear'd to the *Magi* at the Birth of Jesus Christ, and that it came to declare his second coming: They were answer'd by *Tycho*. See **STAR**.

The Stars in the Constellation *Cassiopeia*, in *Protonoy's* Catalogue, are 13; in *Tycho's* 28; in the *Britannic Catalogue*, Mr. *Flamsteed* makes them 56. The Order, Names, Longitudes, Latitudes, Magnitudes, &c. whereof, are as follow.

Stars in the Constellation CASSIOPEIA.

Names and Situation of the Stars.	Right ascension	Longitude.	Latitude North.	Magnitude
	° ' "	° ' "	° ' "	
	γ 21 6 44	56 46 0	6

CASSOCK, or **CASULA**, a kind of Gown, or Robe, wore over the rest of the Habit; particularly by the Clergy. The Word *Cassock* comes from the French *Coffeque*, a Workman's Coat; some derive that again, by Corruption, from a Garment of the *Coffaques*: *Cocarravia*, from the Hebrew *Casab*, to cover; whence the Latin *Casb*, Cottage; and *Casula*, a Diminutive of *Casa*, another Name of the *Cassock*.

CASTANETS, **CASTAGNETTES**, or **CASTANET-TAS**, a kind of Musical Instrument, wherewith the *Moori*, *Spaniards*,

Spaniards, and *Bohemians*, accompany their Dances, *Sarabands*, and *Guitarras*. It consists of two little round Pieces of Wood drill, and hollow'd in manner of a Spoun, the Concavities whereof are placed on one another fastned to the Thumb, and beat from to time with the Middle Finger, to direct their Motions and Cadences. The *Castagnettes* may beat eight or nine times in the Space of one Measure, or Second of a Minute.

CASTALDUS, ? See **GASTALDUS**.

CASTALDY, ?

CASTELLAN, the Name of a Dignity or Charge in *Poland*: The *Castellans* are Senators of the Kingdom, but Senators of the lower Class, and, in Diets, sit on low Seats, behind the *Palatines* or great Senators. They are a kind of Lieutenants of Provinces, and command a Part of a *Palatinate* under the *Palatine*. See **PALATINE**.

CASTING, in Foundry, is the running of a melted Metal into a Mould prepar'd for that Purpose. See **FOUNDRERY**, and **MOULD**.

CASTING of Gold, Silver, or Copper in Plates. See **COINING**.

CASTING of Lead on Cloth, is the using a Frame or Mould cover'd with Woolen-Cloth and Linnen over it, to cast the Lead into very fine Sheets. See **PLUMBERY**.

CASTING of Metals, of Letters, &c. See **FOUNDRERY**.

CASTING in Sand or Earth, is the Running of a Metal between two Frames or Moulds fill'd with Sand or Earth, wherein the Figure the Metal is to take, has been impress'd, *in creux*, by means of the Pattern. See **FOUNDRERY**.

The Goldsmiths also use the Bone of the *Cuttle-Fish*, to mould and cast their lesser Works of Gold and Silver; that Bone, when dried, being reducible to a kind of a fine Pumice, very susceptible of all Impressions. See **CUTTLE-FISH**.

CASTING in Stone or Plaster, is the filling a Mould with fine liquid Plaster, that had been taken in pieces from off a Statue or other Piece of Sculpture, and run together again. There are two Things to be observ'd with regard to the Mould: The first, that it be well soak'd with Oil before the Plaster be run, to prevent its sticking: The second, that each Piece whereof it consists, have a Pack-thread, to draw it off the more easily when the Work is dry. See **STATUE**, and **FOUNDRERY**.

CASTING of Candles, is the filling the Moulds with Tallow; see **CANDLES**.

CASTING in Falconry, is any thing given an Hawk to purge and cleanse his Gorge: Of these there are two Kinds, *viz.* *Plumage*, *i. e.* Feathers; and *Cotton*: the latter whereof is generally in Pellets about the bigness of Hazel-Nuts, made of soft fine Cotton, and convey'd into her Gorge after Supper. In the Morning she will have cast them out; at which time they are to be observ'd, and from the Colour and Condition they are found in, the State of its Body is conjectured. If they be cast out round, white, not stinking, nor very moist, 'tis an Indication all is well; if otherwise, particularly if black, green, slimy, or the like, 'tis otherwise. The *CASTING* of Plumage is observ'd after the same manner as the former.

CASTING, in Joinery, &c. Wood is said to *cast* or *warp*, when, either by its own Drought or Moisture, or the Drought or Moisture of the Air, or other Accident, it shoots or shrinks; is in prejudice to its Firmness and Straightness. See **WARPING**.

CASTLE, a Place fortified by Nature or Art, either in City or Country, to keep the People in their Duty, or resist an Enemy. See **FORTRESS**, and **FORTIFIED PLACE**.

A **CASTLE,** is a little *Citadel*; see **CITADEL**.

CASTLE is also used, in the Sea-Language, for a part in large Vessels.

The *Fore-Castle*, or *Prove-Castle*, is the Rifle or Elevation at the Prow, over the uppermost Deck, towards the Mizzen; the Place where the Kitchens are.

The *Hind-Castle*, or *Stern-Castle*, is the whole Elevation which reigns on the Stern over the last Deck; where the Officers Cabbins, and Places of Assembly are, See **FORE-CASTLE**, &c.

CASTLE-WARD, or *Castle-Guard*, an Imposition laid on such as dwell within a certain Compass about any *Castle*, towards the Maintenance of such as watch and ward the *Castle*. The Word is also sometimes us'd for the Circuit it self, inhabited by such as are subject to this Service.

CASTOR, in *Astronomy*, a Moity of the Constellation *Gemini*. See **GEMINI**.

CASTOR and Pollux, in *Meteorology*, a Meteor; which in Storms at Sea appears sometimes sticking to part of the Ship, in form of one, two, or even three or four Fire-Balls: When one is seen alone, 'tis call'd *Helena*; two are call'd *Castor* and *Pollux*, and sometimes *Tyndarides*. See **METEOR**.

Castor and *Pollux*, are commonly judg'd to portend a Cessation of the Storm, and a future Calm; being rarely seen till the Tempest is nigh spent. *Helena* portends ill, and witnesses the leverest part of the Storm yet behind.

CASTOREUM, in *Pharmacy*, a liquid Matter, in-

closed in Bags or Purles near the *Anus* of the *Castor* or *Beaver*; fallly taken for that Animal's Stones.

These Purles are about the bigness of a Goose-Egg, and found indifferently in Males and Females; the Liqueur inclosed, serves to give the *Castor* an Appetite, being press'd out of its Receptacles, on occasion, by the Foot: When taken off, the Matter dries and condenses, so as it may be reduced to a Powder; by hanging in the Chimney it becomes of the Consistence of Wax. 'Tis oily, of a sharp, bitter Taste, and a strong disagreeable smell. 'Tis us'd to fortify the Head and nervous Parts, it excites the languishing Spirits, rectifies Poisons, and provokes the *Menses* in Women. 'Tis used in *Lezbergies*, *Apoplexies*, *Vertigies*, *Tremblings*, *Suffocations of Women*, and other Occasions. *Barboline*, and other Authors, ascribe to it a wonderful Property of precipitating things to the bottom of the Water.

For the Choice of *Castoreum*; the best is that of *Densie*, that of *Canada* is much inferior; the largest Lumps, and those that smell strongest, are the most esteem'd, especially when heavy and well fleshed. Care is to be taken that it hasn't been adulterated with Honey or other Drugs, to increase its weight, which is known by squeezing it; the sophisticated being softish, and yielding a liquid, stinking Honey; and the natural, hard and heavy, of a brisk Smell, and full of Filaments.

Castoreum is used in the Composition of *Venice Treacle* and *Mithridate*, besides various other *Hysteric* and *Cephalick Medicines*. They draw an Oil from it call'd *Oil of Castor*; and it is also used, while in its liquid State, to make several Kinds of Unguents.

The *Russian* Way of curing *Castoreum*, is describ'd in the *Philosophical Transactions* thus: 'To get the Milk out of the *Beaver's* Stones, (the Bags it shou'd be) put a proper Quantity of Water, with half a Shovel full of Wood-Ashes, tie the Bags in Couples, and put them in the boiling Water for half a quarter of an Hour. Lay Birch-Bark on the Fire, and smoke the Bags well over it for an Hour, till they be well dried; hang them up for a Week or more, till perfectly dry and hard, they may then be pack'd up for Use or Exporation.'

Castor Skin, the Fur or Skin of an amphibious Animal call'd *Castor* or *Beaver*, sometimes found in *England*, *France*, *Germany*, and *Poland*, but most abundantly in the Province of *Canada* in *North-America*. See **FUR**, **SKIN**, &c.

Its chief Use is in the Composition of Hats, and Furs. See **HAT**, &c. Beside this, in 1669, an Attempt was made to employ it in other Merchandizes; accordingly a Manufactory was settled in the *Fauxbourg S. Antoine* near *Paris*, where they made Cloths, Flannels, Stockings, &c. of *Castor*, with a mixture of Wool. The Manufactory flourish'd for a while, but soon decay'd, it being found by Experience that the Stuffs lost their Dye when wet, and that when dry again they were harsh, and stiff as Felt.

The Merchants distinguish three Kinds of *Castor*, tho' all equally the Spoils of the same Animal; these are *New Castor*, *Dry Castor*, and *Fat Castor*: *New Castor*, call'd also *Winter Castor*, and *Muscouite Castor*, because ordinarily reserv'd to send into *Muscovy*, is that taken in the Winter-Huntings. This is the best, and most esteem'd for rich Furs, as having lost none of its Hair by Moulting. *Dry Castor* or *lean Castor*, is the Residue of the Summer-Huntings; when the Beast is moulting, and has lost part of its Hair: This being much inferior to the former, is little used in Furs; but mostly in Hats. *Fat Castor*, is that which has contracted a certain fat, unctuous Humour, by Sweat exhaled from the Bodies of the Savages, who have wore it for some time: This, tho' better than the *dry*, is yet only used for Hats.

After the Hair is cut off the Skin to be used in Hats, the Pelt or Skin it self, is us'd in various Works, *viz.* in the covering of Mails and Trunks, in Slippers, &c. See **COMPANY of Canada**.

CASTRAMETATION, the Art of Incamping, *i. e.* of placing and disposing a Camp or Army. See **CAMP**.

The Word is more us'd for the Incampments of the Antients, than those of the Moderns. It comes from the *Latin* *Castrum*, Camp; and *Mesure*, to measure.

CASTRATION, in Chirurgery, the Operation of Gelding, *i. e.* of cutting off the Testicles, and of putting an Animal out of a Capacity of Generation. See **TESTICLES**.

Castration is much in Use in *Asia*, especially among the *Turks*, who practise it on their Slaves, to prevent any commerce with their Women. The *Turks* *castrate* to the Purpose, making a general Amputation both of Testicles and Yards. *Castration* also obtains in *Italy*, where 'tis us'd with a View to preserve the Voice for singing. See **EU-NUCH**.

Castration is sometimes found necessary on medicinal Considerations, as in Diseases of the Testicles, especially the *Sarcocete* and *Varicocete*. See **SARCOCELE**, &c.

Castration is also practis'd on Women: *Athenens* mentions, that King *Audamantus* was the first who *castrated* Wo-

Women. *Hefycibus* and *Suidas* say, *Gyges* did the same Thing. *Galen* observes, that Women may be castrated without Danger of Life. *Zalescampius*, on the forementioned Passage of *Athenens*, holds, that it is only to be understood of simple Pad-locking.

Castration is also us'd, tho' figuratively, for the Retrenching any part of a Thing: Thus we say, a *castrated Book*, i. e. an imperfect Book, &c.

CASU CONFIMALI, a Writ of Entry, where a Tenant by Courtesy, or for Life, aliens in Fee or in Tail, or for another's Life: It takes its Name hence, that Authority being given by Stat. *West.* 2. to the Clerks in *Chancery*, to make new Forms, as often as any new Case should start up, not under any of the old Forms; they find'd this Writ to the likeness of the other call'd *Casus provisio*; which see.

CASU PROVISIO, a Writ of Entry, given by the Statute of *Gleeseter*, in Case where a Tenant in Dower aliens in Fee, or for Term of Life; or in Tail; and lies for him in Reversion against the Alien.

CATABAPTIST, a Person averfe from Baptifm; particularly from that of Infants. See *BAPTISM*.

The Word is compos'd of the Preposition *contra*, which, in Composition, signifies against, contrary, thro', of, in; also according to, towards, for, with, &c. and *Baptis*, I wash.

CATABAZON, in Astronomy, the Moon's descending Node; call'd also *Dragon's Tail*. See *DRAGON'S TAIL*.

CATACAUSTIC Curves, in the higher Geometry, the Species of *Conicæ Curvæ* form'd by Reflection; see *CAUSTIC CURVE*.

CATACHRESIS, in Grammar, a kind of Figure, making the first Species of *Metaphora*. See *METAPHORA*.

The *Catarchresis* is, when for want of a Word proper to express a Thought, we use, or rather abuse a Word that comes somewhat near it; as when we call a Person who has kill'd his Mother, Master, or Prince, *Parricide*; which Word, in Property, is only applicable to him who has murder'd his Father. See *PARRICIDE*. Thus, to ride on *Horfeback* on a *Switche*, contains a *Catarchresis*; so, a *Silver Jubilee*, &c. There are *Catarchreses* allow'd in all Styles, and all Manners of Writing. The Word comes from the *Greek καταχρησμός*, *Abusus*, I abuse.

CATACLYSMUS, a *Greek* Name for a Deluge, or Inundation of Waters; see *DELUGE*, and *INUNDATION*.

CATACOMBS, Grottos, or subterraneous Places for the Burial of the Dead.

The Term is particularly us'd in *Italy*, for a vast Assembly of subterraneous Sepulchres, three Leagues from *Rome*, in the *Via Appia*; suppos'd to be the Sepulchres of the Martyrs: Accordingly, they are visited out of Devotion, and Reliques thence taken, and dispers'd throughout the Catholic Countries; after having been first baptiz'd by the Pope, under the Name of some Saint. See *RELICKS*.

These *Catcombs*, are said by many to be Caves, or Cells, wherein the Primitive Christians hid, and assembled themselves together; and where they interr'd such among them as were martyr'd. Each *Catcomb* is three Foot broad, and eight or ten high; running in form of an Alley, or Gallery, and communicating with each other: In many Places, they extend within a League of *Rome*. There is no Machinery or Vaulting therein, but each supports it self: The two Sides, which we may look on as the *Parietes*, or Walls, were the Places where the Dead were deposited; which were laid lengthwise, three or four Rows over one another, in the same *Catcomb*, parallel to the Alley. They were commonly clos'd with large thick Tiles, and sometimes pieces of Marble, cemented in a manner imitable by the Moderns. Sometimes, the very rarely, the Name of the Deceased is found on the Tile: Frequently, a Palm is seen, joined, or engraven; or the Cypher Xp, which is commonly read *pro Christo*. See *SAINTS*.

Some Authors will have the *Catcombs* to be the same with the *Pantheons* mention'd by *Festus Pompeius*; maintaining, that whereas it was the Practice of the ancient *Romans* to burn their Dead, the Custom was, to avoid Expence, to throw the Bodies of their Slaves to rot in Holes of the Ground: and that the *Roman* Christians, observing, at length, the great Veneration paid to Reliques, resolv'd to have a Stock of their own: Entering, therefore, the *Catcombs*, they added what Cyphers and Inscriptions they pleas'd, and then shut them up again, to be open'd on a favourable Occasion. Those in the Secret, add they, dying, or removing, the Contrivance was forgot, till Chance open'd them at last. But this Opinion has even less of probability than the former. Mr. *Morre*, in the *Philosophical Transactions*, gives it as his Opinion, that the *Catcombs* were the Burial Places of the first *Romans*, and dug in consequence of these two Opinions; that Shades hate the Light; and that they love to hover about the Places where the Bodies are laid.

Laying up the Bodies in Caves, is certainly the original way of disposing of the Dead; and appears to have been propagated by the *Phœnicians*, throughout the Countries

to which they sent Colonies: The interring as we now do, in the open Air, or in Temples, was first introduc'd by the Christians. When an ancient Hero dy'd, or was kill'd in a Foreign Expedition, as his Body was liable to Corruption, and for that Reason unfit to be transported insire, they fell on the Expedient of burning, in order to bring home the Ashes, to oblige the Manes to follow; that so his Country might not be destitute of the Benefit of his Tutelage.

'Twas thus Burning seems to have had its original; and by degrees it became common to all who could bear the Expences of it, and took place of the ancient Burying: Thus *Catcombs* became diffus'd among the *Romans*, after they had borrow'd the manner of Burning from the *Greeks*; and now, non but Slaves were laid in the Ground. See *BURIAL*.

Places thus prepar'd, might afford convenient Reformations for the primitive Christians; but could never be built by them. When the Empire became Christian, they were again diffus'd; till the reading of I know not what Author, who mentions them, occasion'd 'em to be again look'd into. As to the fam'd Cypher Xp, 'tis observ'd to have been in use among the Antients, long before Christianity arose. The Abbot *Benedict* says, it was compos'd of the two *Greek* Letters X P, under which something mystical was comprehended; but no Author gives any account what that Mystery was.

Antiently, the Word *Catcomb* was only understood of the Tomb of St. *Peter* and St. *Paul*; and M. *Clostellan* observes, that among the more knowing of the People of *Rome*, the Word *Catcomb* is never apply'd to the subterraneous Burying-Places abovemention'd, but only to a Chapel in St. *Sebastian*, one of the seven titular Churches; where the ancient *Roman* Calendars say, the Body of St. *Peter* was deposited, under the Consulate of *Tylius* and *Bassus*, in 258.

Some derive the Word *Catcomb* from the Places where Ships are laid up; which the modern *Latins* and *Greeks* call *Comber*. Others say, that *Cata* was us'd for *ad*, and *Combos* for *ad-tumbas*: Accordingly, *Dodius* says, they antiently wrote *Catantombas*. Others fetch it from the *Greek κατα, and μυθός, Catus, Recessus*.

CATACOUSTICS, call'd also *Cataphonics*, the Science of reflected Sounds; or that Part of Acoustics which considers the Properties of *Echoes*. See *ACOUSTICS*; see also *ECHO*, and *SOUND*.

CATADIOPTRIC. See *CATOPTRIC*.

CATADUPA, a *Canaan*, or *Water-fall*; see *CATARACT*. The People the Antients gave the Term *Catadupe*, to People inhabiting near Cataracts; and these they suppos'd to be deaf with the constant Din. The Word comes from the *Greek καταδουρα*, of the Preposition *κατα*, which in Composition signifies tendency, or inclination downwards; and *δουρα*, to make a Noise.

CATAPALCO, an *Italian* Term, literally signifying Scaffold. It is chiefly us'd for a Decoration of Architecture, Sculpture, and Painting; rais'd on a Timber Scaffold, to shew a Coffin, or Tomb, in a Funeral Solemnity.

CATAGMATIC, Medicines proper to solder, and unite broken Bones, by promoting the Formation of a *Callus*; see *CALLUS*, and *BONE*.

The principal *Catagmatic*, are the *Armenian Bole*, *Gum Tragacanth*, *Othocolla*, *Cyprus Nuts*, *Frankincense*, *Aloes*, and *Acacia*. The Word comes from the *Greek καταγμα, Fractura*.

CATALECTIC, a Term in Poetry. The Antients call'd *Catalectic Verses*, those which wanted either Feet or Syllables; in opposition to *Acatalectics*, which are complete Verses, wanting nothing. The Word comes from the *Greek κατα, and λείπω, I end*.

CATALEPSIS, *CATOCHE*, or *CATOCHEIS*, in Medicine, a kind of Apoplexy; or a Disease, wherein the Patient is taken speechless, senseless, and fix'd in the same Posture wherein the Disease first seiz'd him; his Eyes open, without seeing, or understanding. See *APOPLEXY*.

This Disease is very rare, nor is its Cause easy to assign. *Boerhaave* takes the immediate Cause to be an Immobility of the common Sensory, in the Situation of the first Access; whence an absolute Rest of the Blood in the Brain, and a Cessation of all the Functions of the Brain, as well as those depending thereon; the Muscles alone remaining in their first Tension; and Respiration, and the Pulse preserv'd, tho' generally weak. It is usually preceded by a long intermitting Fever, a melancholic dry Temperature, a Suppression of the Menfes, or Hemorrhoids, great Frights, and intense, continu'd Meditation on one Object. Upon Dissolution, the Arteries and Veins of the *Cerebrum* are found very turgid, and the Blood close ram'd in them: 'Tis frequently cur'd by copious Hemorrhages of the Nose; Sternutatories, Vomitives, and Vesicatories, are likewise apply'd to good purpose. It seldom passes into any other Disease; sometimes indeed into an Epilepsy, Convulsions, Madness, or Atrophy; but it commonly ends in Death. The Word is *Greek, καταληψις*, which signifies the same thing.

CATALOGUE, a List, or Enumeration of the proper Names of several Books, Men, or other Things; dispos'd according to a certain Order. The Jesuits of *Antwerp* have given us a *Catalogue of the Popes*; which makes what they call their *Prophylæum*, &c. See *PROPHYLÆUM*.

CATALOGUE of the Stars, is a List of the Fix'd Stars, dispos'd in their several Constellations; with the Longitudes, Latitudes, &c. of each. See *STAR*.

The first who undertook to reduce the Fix'd Stars into a *Catalogue*, was *Hipparchus Rhodius*, about 120 Years before Christ; in which he made use of the Observations of *Tymocharis* and *Aristyllus*, for about 180 Years before him. *Ptolemy* retain'd *Hipparchus's Catalogue*; he himself made abundance of Observations, with a View to a new *Catalogue*, about the Year of Christ 850. *Albateginus*, a *Syrian*, brought down the same to his Time. *Ano* 1437, *Ulugh Beigh*, King of *Perchia* and *India*, made a new *Catalogue* of the Fix'd Stars; since translated out of *Arabic* into *Latin*, by *Dr. Hyde*. The third who made a *Catalogue* from his own Observations, was *Tycho Brahe*; who determin'd the Places of 777 Stars, for the Year 1600; which *Kepler*, from other Observations of *Tycho*, afterwards increas'd to the Number of 1000, in the *Rudolphine Tables*. At the same time, *William*, Landgrave of *Hesse*, with his Mathematician, *Christophor Rothmannus*, and *Justus Byrgius*, determin'd the Places of 400 Fix'd Stars, by his own Observations; which *Hewelius* prefers to those of *Tycho's*. *Ricciolus*, in his *Astronomia reformata*, determin'd the Places of 101 Stars, for the Year 1700; from his own Observations: for the rest, he follow'd *Tycho's Catalogue*; altering it where he thought fit. *Ano* 1677, *Dr. Halley*, in the Island of *St. Helena*, observ'd 350 Southern Stars, not visible in our Horizon. The same Work was repeated by *F. Neel*, in 1710, who publish'd a new *Catalogue* of the same Stars constructed for the Year 1687. The next was *J. Hevelius*, who made a *Catalogue* of 1888 Fix'd Stars: whereof 950 had likewise been observ'd by the Antients; 355 by *Dr. Halley*; and only 603 by himself.

The last, and greatest, is the *Britannic Catalogue*, compil'd from the Observations of the accurate Mr. *Flemstead*; who for a long Series of Years devoted himself wholly thereto. As there was nothing wanting either in the Observer, or Apparatus, we may look on this as a perfect Work, so far as it goes. 'Tis pity the Impression had not pass'd thro' his own Hands: That now extant, was publish'd by Authority, but without the Author's Consent: it contains 2734 Stars. There is another publish'd this present Year, 1725, pursuant to his Testament: And *Dr. Halley*, his Successor in the *Observatory Royal*, is now engag'd in supplying the Omissions of either, by his own Observations. See *OBSERVATORY*.

CATAMENIA. See *MENSES*.

CATAMITE, a *Ganymede*, or Boy kept for Sodomy; see *SODOMY*. The Word is form'd of *κατα*, and *μυθεῖν*, *bir'd*.

CATAPAN, or CATIPAN, a Name the later Greeks, about the XIIIth Century, gave the Governor of their Dominions in *Italy*. *Ugbeol*, and others, say, *Catipan* was the same with *Cepitaneus*; form'd therefrom by *Metathesis*, or Transposition. Others derive it from *κατα*, *justa*, and *οικον*: In which Sense, *Catapan* was Governor General, or Magistrate, who had the Direction of all: Others will have it deriv'd from *κατα* *κατακρητες*, after the Emperor. In which Sense, *Catapan* was a second Master, *Secundus Dominus*. *Lu Ceage* derives it from *κατα* *οικον*; which the Greeks apply'd to every Governour; and even every Man of Quality.

CATAPASM, a Mixture of Powders, either Odoriferous, as for the perfuming of Clothes; or Fortifying, and apply'd to the Stomach, Heart, or Head; or Escharotic, for eating off dead Flesh. The Word comes from the Greek *καταμασσω*, to *caster*.

CATAPELTA, an Instrument of Punishment, in use among the Antients. It consist'd in a kind of Press, compos'd of Planks, between which the Criminal was crush'd.

CATAPHTORA, in Medicine, a Disease, the same with *COMA*. See *COMA*.

According to *Blanchard*, there is this Difference between the two, that *Cataphtora* is the Genus of all Kinds of Stupors, unattended with Fevers. See *LETHARGY*, and *CARUS*.

CATAPHRYGIANS, ancient Hereticks; so call'd, as being *Phrygius*. They were Orthodox in every thing, setting aside this, that they took *Montanus* for a Prophet, and *Priscilla* and *Maximilla* for true Prophetesses, to be consult'd on every thing relating to Religion; as supposing the Holy Spirit had abandon'd the Church.

CATAPLASM, popularly call'd *Ponlice*, an external Medicine, in form of a Pulp; of a soft Consistence, like an Unguent, or Ointment; compos'd of various Liquors, Parts of Plants, Oils, Unguents, &c. according to the Variety of Intentions. Its ordinary Effects are, to alluage Pain, soften, resolve, dissolve, or separate Matter collect'd in the external Parts of the Body. The ordinary *Cataplasms* for these

Intentions, is compos'd of white Bread, Milk, Yolks of Eggs, Saffron, and Oil of Roses. The Word comes from the Greek *καταπλασσω*, *illino*, I smear, or apply outwardly.

CATAPULTA, a Military Machine, us'd among the Antients for the throwing large Darts and Javelins, 12 or 15 Foot long, on the Enemy. The *Catapulta* is said to be the Invention of the *Syrians*. Some Authors make it the same with the *Balista*; others different. The first derive it *κατὰ τὴν μάχην*, a Shaft, or Dart; the last from *καταπαύω*, See *BALISTA*.

CATAPUTIA, a Medicinal Plant, commonly call'd the lesser Spurge. It purges with such a Violence, both upwards and downwards, that few Persons of any Credit venture to prescribe it.

CATARACT of Water, a Fall, or Precipice, in the Channel, or Bed of a River; caus'd by Rocks, or other Obstacles, stopping the Course of its Stream; from whence the Water falls with a great Noise and Impetuosity: Such are the *Cataracts* of *Nile*, the *Doune*, *Rhine*, &c. *Strabo* calls that a *Cataract*, which we call a *Cascade*; and what we call a *Cataract*, the Antients usually call'd a *Catadupa*.

Hermelinus has an express Differentiation, *De admirandis Mundi Cataractis supra & subterranis*; where he uses the Word in a new Sense; signifying, by *Cataract*, any violent Motion of the Elements. The Word comes from the Greek *καταρραση*, *cum impetu accidit*.

CATARACT, in Medicine, a Suffusion of Sight, arising from a little Film, or Speck, which swimming in the aqueous Humour of the Eye, and getting before the Pupil, intercepts the Rays of Light. See *SIGHT*.

The *Cataract* is suppos'd to be form'd from a Condensation of the more viscous Parts of the aqueous Humour, between the Uvea and the Crystalline; the some take it to be a Pellicle, detach'd from the Crystalline itself; which is only an Assemblage of several little Pellicles, laid over one another. See *CRYSTALLINE*.

There are two Kinds of *Cataracts*, the *Genuine* and *Spurious*; the first owing to a Humour amass'd in the Eye, coagulated and fix'd therein, and destroying its use: the latter arises from Fumes or Vapours, carry'd to the Eye by some Accident; as by a Fever, &c. The Genuine *Cataract* has several Degrees and several Names: At first the Patient sees, as it were, Clouds, Moles, Flies, &c. diffus'd over the Objects in view: Thus far the *Cataract* is call'd *Imaginary*; there being nothing yet appearing to the Eye of another Person. As the *Suffusion* increases, the Pupil begins to appear of a Sea-green Colour; sometimes like the Air, full of Clouds; and then the *Cataract* is call'd *Water*, or *Water-fall*. When the Evil is arriv'd at its height, and the Matter sufficiently coagulated, the Patient loses all Sight; the Pupil ceases to be transparent, but becomes white, or brown, or some other Colour; which last is what we properly denominate a *Cataract*.

Couching of CATARACTS. For the Care of a *Cataract*, recourse is had to the Operation of *Couching*; which is perform'd by running a Steel Needle into the Eye, thro the *Adnata*, by the Edge of the *Cornea*, on the Side of the little *Cantinus*, till it arrive at the Middle of the *Cataract*; then, turning the Needle round, they twist the *Cataract* about its Point, till being thus reduc'd into a little compact, 'tis brought down beneath the Pupil, and couch'd, or lodg'd in the Bottom of the Eye, and there left: Thus, the Impediment being remov'd, the Light gets admission. To render the Operation effectual, care must be taken, that the Pellicle or *Cataract* be ripe, or arriv'd at its Consistence, so as it may be easily roll'd up; that its Parts be crush'd, or broke in rolling up, and lodg'd so secure, as not to rise up again by its Elasticity; and perhaps also, that it dissolve and consume at the Bottom of the Eye.

This is the popular Theory of *Cataracts*, which some modern Physicians oppose, and substitute a new one in its place: Their Opinion is, that instead of *Couching*, or laying a little Membrane, or Pellicle, 'tis the Crystalline itself that is thus couch'd, and lodg'd in the Bottom of the vitreous Humour. This they suppose to have been condens'd, and to have lost its Transparency; whence, instead of being an Instrument of Vision, it proves an Obstacle to it, by shutting out the Rays from the *Retina*. This Alteration of its Transparency, is accompany'd with a Change of Colour; it becomes greenish; and on this account is call'd by the Greeks *Glaucoma*. The *Glaucoma* and *Cataract* therefore, in their Opinion, are the same Things; tho in the other Hypothesis they are very different; the first being reputed incurable, but not the latter. See *GLAUCOMA*.

The chief Reason urg'd in behalf of this latter Hypothesis, in the French Academy Royal, where it was propos'd, is, that after the Operation of *Couching*, the Person can't see without a convex Lens. Now if no more were done, than the taking away a Pellicle from before the Crystalline, it wou'd be in the same Condition as before, and wou'd make the same Refractions; nor wou'd any Lens be necessary: Whereas, supposing the Crystalline couch'd, 'tis evident the

Lens will be requir'd to supply its Place. To this it is answer'd, that there have been Instances of Persons who have seen, after *Conceiving*, without any Lens; at least, 'tis granted, that immediately after the Operation, several Persons have seen very distinctly: And the Lens's soon become necessary, yet the first Moment wherein they saw without, seems to be a Proof that the Crystalline was not *conceal'd*.

M. de la Hire, in Confirmation of the ancient System, assigns this Reason for the Necessity of a Lens, after the Operation, *viz.* that the Visc which produc'd the *Cataract* is still subsisting in the aqueous Humour; which being too thick and muddy, lets too few Rays pass: a Failing to be repair'd by a Lens, which throws a greater Quantity of Rays on the Retina. He adds some Experiments made on the Eyas of Oxen; the Result of which was, that the Crystalline could never be laid perfectly in the Bottom of the Eye, but there still stuck up, so as to stop up part of the Passage of the Rays; partly on account of its Bulk, and partly on that of its being sustain'd by the aqueous and vitreous Humour: He adds, that in the Operation of *Couching*, the Needle is apt to scratch the interior Surface of the Crystalline, and open the Membrane wherewith it is envelop'd; the Consequence of which will be Wrinkles, which will render the Refractions irregular, and change the Direction of the Rays which should all meet in the same Point; so as to spoil the Representation of Objects. Lastly, 'tis insist'd, that if the Crystalline be couch'd, the Patient would not see at all, for want of the necessary Refractions. See **CRYSTALLINE**.

M. Antoine, on the other hand, relates, that upon opening a Person whom he had *couch'd* on both Eyes, he found the two Crystallines actually *couch'd*, and lodg'd at the Bottom, between the vitreous Humour and the Uvea, where they were left by the Needle; and yet the Person saw without either: which shews, both that the Operation of *Couching* the Crystalline is practicable, and that Vision may be perform'd without it. In effect, the vitreous and aqueous Humour, upon removing the Crystalline, may be supposed to run into the Cavity, to assume the Figure of its Mould, and perform the Refractions and Offices of the Crystalline; it being found, by Experiment, that the Refraction is the same in each Humour. See **EYE**.

To shew, however, that there are *Cataracts* distinct from *Glaucomas*, *M. Litre* produc'd before the Society an Eye of a Man blind 22 Years; wherein was a distinct *Cataract*, or Pelticle, which clos'd the Aperture of the Pupil. See **PUPIL**, **VISION**, &c.

CATARRRH, in Medicine, a Flux, or Diffusion of a sharp serous Humour from the Glands about the Head and Throat, upon the Parts adjacent. See **FLUXION**.

Catarrrhs are, generally, occasion'd by a Diminution of insensible Perspiration on taking cold; by the Effect wherof is, that the Lymph, that should pass by the Skin, ounces out upon those Glands; and being thus extravasated, occasions Irritations, Coughs, and all the usual Symptoms. See **TUSSIS**. *Dogery* deduces all Diseases from *Catarrrhs*; which he looks upon as the Seminary of most Disorders of the Body. *Emmeller* distinguishes a *hot* and a *cold Catarrrh*; the first attended with an unnatural Heat and Pain, and a Phlogosis of the whole Body; the excreted Lymph being exceeding thin and sharp: In the *cold*, all the Symptoms are more remiss.

There is also a *suffocative Catarrrh*, seated in the Larynx, and Epiglottis, which it constricts; and thus, obstructing Respiration, endangers Strangling.

Catarrrhs are cured by loosing the Serofities, and augmenting Transpiration, by means of Diaphoreticks, soporiferous Medicines, and Diureticks. Smoking of Tobacco is recommended as excellent in all *catarrhal* Affections: In *obstinate Catarrrhs*, recourse is sometimes had to Issues and Blisters.

Catarrrhs don't arise from the Head only, but sometimes also from other Parts of the Body; the lymphatic Vessels, wherin the Serofities are contain'd, as well as the Glands that separate them, being distributed all over the Body.

The Word comes from the Greek *καταρρη, δεσμο*, I flow down.

CATASTASIS, in Poetry, the third part of the ancient Drama; being that wherein the Intrigue, or Action set on foot in the *Epitasis*, is supported, carried on, and heighten'd, till it be ripe for the unravelling in the *Catastrophe*. See **EPITASIS** and **CATASTROPHE**.

The Word comes from the Greek *καταστασι*, Confirmation, this being as it were, the Mean, Tenor, State, or Constitution of the Piece. See **DRAMA** and **TRAGEDY**.

CATASTROPHE, in Poetry, the Change or Revolution of a dramatic Poem, or the Turn which unravels the Intrigue, and terminates the Piece. See **DRAMA**, **TRAGEDY**, &c.

The *Catastrophe* is either Simple or Implex; whence also the *Fable* and *Action* are denominated. See **FABLE**.

In the first there is no change in the State of the principal

Persons, nor any discovery or unravelling; the Plot being only a mere Passage out of Agitation, to Quiet and Repose. This *Catastrophe* is rather accommodated to the Nature of the Epoca, than of Tragedy. Indeed we meet with it in some of the Antients, but it is out of doors among the Moderns. In the second, the principal Person undergoes a Change of Fortune; sometimes by means of a Discovery, and sometimes without.

The Qualifications of this Change are, that it be probable, and necessary: in order to be probable 'tis requir'd it be the natural Result or Effect of the foregoing Actions, *i. e.* it must spring from the Subject it self, or take its Rise from the Incidents; and not be introduc'd merely to serve a Turn. The Discovery in the *Catastrophe*, must have the same Qualifications as the *Catastrophe* it self, wherof it is a principal Part: It must be both probable and necessary. To be probable, it must spring out of the Subject it self; not effected by means of Marks or Tokens, Rings, Bracelets, or by a mere Recollection, as is frequently done both by the Antients and Moderns. To be necessary, it must never leave the Persons it concerns in the same Sentiments they had before, but still produce either Love or Hatred, &c. Sometimes the Change consists in the Discovery; sometimes it follows at a distance, and sometimes results immediately from it, which is the most beautiful Kind: and thus it is in *OEdipus*. See **DISCOVERY**.

Mr. Dryden thinks a *Catastrophe* resulting from a mere Change in the Sentiments and Resolutions of a Person, without any further Machinery, may be so manag'd as to become exceedingly beautiful, nay preferable to any other. 'Tis a Dispute among the Critics, Whether the *Catastrophe* should always fall out happily, and favourably on the side of Virtue, or not? *i. e.* Whether Virtue is always to be rewarded, and Vice punish'd, in the *Catastrophe*: But the Reasons on the Negative side seem the strongest. *Aristotle* prefers a shocking *Catastrophe*, to a happy one; in regard, the moving of Terror and Pity, which is the Aim of Tragedy, is better effected by the former than the latter.

Buffu divides the *Catastrophe*, at least, with regard to the *Epoca*, into the Unravelling, or *Denouement*, and the *Achevement*, or Finishing; the last of which he makes the Result of the first, and to consist in the Hero's Passage out of a State of Trouble and Agitation, to Rest and Quiet. This Period is but a Point, without Extent, or Duration; in which it differs from the first, which comprehends every thing after the Knot, or Plot laid. He adds, that there are several Unravellings in the Piece, in regard there are several Knots, which begot one another: The *Finishing*, is the End of the last Unravelling. See **KNOT**, **TRAGEDY**, **COMEDY**, **FABLE**, &c.

The *Catastrophe* made the fourth and last Part in the ancient Drama; or that immediately succeeding the *Catastasis*. See **CATASTASIS**.

CATCH-LOAD, is such *Land*, particularly in *Norfolk*, which is not certainly known to what Parish it belongs; so that the Parson who first gets the Tithes there, enjoys it for that Year.

CATCH-POL, a Term now us'd, by way of Reproach, for a Bailiff's Follower, or Assistant; see **BAILIFF**. Antiently, it was a Term of Credit, apply'd to those we now call *Serjeants of the Mace*, *Bailiffs*, or any other that use to arrest Men on any Action. See **SERGEANT**, &c.

CATECHU, in Medicine, a sort of medicinal Earth, call'd also *Cachou*, and *Japan Earth*. See **CACHOU**, and **JAPAN EARTH**.

CATECHUMEN, a Candidate of Baptism; or a Person who prepares himself for the receiving thereof: See **BAPTISM**.

Authors distinguish three Kinds of *Catechumens*, among the Antients, *viz.* those who were only Hearers, distinguish'd by the Name *Audientes*; those who bow'd, *Genus flectentes*; and those qualify'd for Baptism, call'd *Competentes*; who were also *Genus flectentes*, because of their bowing at the Rehearsal of certain Prayers over them. Others make but two Orders, *viz.* the *Genus flectentes* as the first; and the *Audientes*, or Hearers, call'd *Imperfecti*: The *Imperfecti* were those of the Heathens, who presented themselves for Baptism. *Perfecti*, were those sufficiently instructed in the Faith. Some add another Kind of *Catechumens*, call'd *Elekti*; as being chosen and nominated for that End: Others, lastly, distinguish the three Orders into *Audientes*, or those admitted to the hearing the Catechism, and other Instructions; the *Elekti*, those sufficiently instructed, and chosen to receive Baptism; and *Competentes*, who were in a State and Disposition for its Reception.

The *Catechumens* were not only distinguish'd by Name, but also by Place: They were dispos'd, with the Penitents, in the *Portico*, at the Extremity of the Church, opposite to the Choir. They were not allow'd to assist at the Celebration of the Eucharist; but after Sermon, the Deacon dismiss'd them with this Form, *Be Catechumeni, missa est*.

The Word comes from the Greek *κατασκευαστής*, I am instructed: Whence, *Catechumenus*, the Gallery, or upper Part of the Church; which was thus call'd, either because the *Catechumenus* sat here, or were here instructed.

CATEGOREMA, in Logic, &c. the same with *Categoroy*, or *Predicament*. See *CATEGORY*.

CATEGORY, or *Predicament*, in Logic, a System, or Assemblage, of all the Beings contain'd under any Genus, or Kind, rang'd in order: See *GENUS*. The School Philosophers distribute all Beings, all the Objects of our Thoughts or Ideas into certain *Genera*, or *Classes*, in order to get a more distinct and precise Notion thereof; which *Classes* they call *Categorics*, or *Predicaments*. See *PREDICAMENT*.

The Ancients, after *Aristotle*, generally make ten *Categorics*: Under the first, all Substances are compris'd; and all Accidents under the nine last, viz. Quantity, Quality, Relation, Action, Passion, Time, Place, Situation, and Habitude; which are usually express'd, or signifi'd, by the following Technical Dittich.

*Arbor, Sex, Servus, Ardore, refrigerat, ustos
Ruri, cras, flabo, nec tuncatus Ero.*

These ten *Categorics* of *Aristotle*, which Logicians make such Mysteries of, are now almost out of Doors; and, in effect, are of little use: the less, as being Things purely arbitrary, without any Foundation, but in the Imagination of a Man, who had no Authority to prescribe Laws for ranging the Objects of other Peoples Ideas. Accordingly, Some Philosophers think all Nature may be better consider'd under these seven Things, Spirit, Matter, Quantity, Substance, Figure, Motion, and Rest: And others make but two *Categorics*, Substance and Accident.

The Word *Category*, was borrow'd by the Schools from the *Forum*, or Courts of Justice: For as, in a Trial, the Plaintiff, or Prosecutor, in accusing the Criminal, or Prisoner, must charge him expressly, or affirm that he did this or that, in positive Terms; whence the Word *Category*, viz. *καταγορεύω*, to *avow*, or *declare*: So in the Doctrine of *Categorics*, every higher may be expressly, and absolutely predicated, or affirm'd of every lower.

CATENA, in Anatomy, a Muscle, otherwise call'd *Zebulis Anticus*; which see.

CATENARIA, in the higher Geometry, a Curve Line which a *Chain*, or Rope forms it self into, when hung freely between two Points of Suspension. See *CURVE*.

To conceive the general Nature or Character of this Curve, suppose, 1st, a Line heavy and flexible, (see *Tab. Geom. Fig. 25*.) the two Extremes of which, F and D, are firmly fix'd in those Points; by its weight it is bent into a certain Curve FAD, which is call'd the *Catenaria*. 2^{dy}, Let BD and *bd* be parallel to the Horizon, AB perpendicular to BD, and D δ parallel to AB; and the Points B b infinitely near to each other. From the Laws of Mechanics, any three Forces, in *Equilibrio*, are to one another, as the Lines parallel to the Lines of their Direction, (or inclin'd in any given Angle) and terminated by their mutual Concourses: Hence, if D δ expresses the absolute Gravity of the Particle D δ , (as it will, if we allow the *Chain* to be every way uniform) then D δ will express that Part of the Gravity, that acts perpendicularly upon D δ ; and by the means of which, this Particle endeavours to reduce it self to a vertical Position: So that if this Lineola *d δ* be constant, the perpendicular Action of Gravity upon the Parts of the *Chain* will be constant too; and may therefore be express'd by any given right Line *a*. Farther, the Lineola D δ will express the Force which acts against that Conatus of the Particle D δ (by which it endeavours to restore it self into a Position perpendicular to the Horizon) and hinders it from doing so. This Force proceeds from the ponderous Line DA, drawing according to the Direction D δ ; and is, *ceteris paribus*, proportional to the Line DA, which is the Cause of it. Supposing the Curve FAD, therefore, as before, whose Vertex (the lowest Point of the *Catena*) is A, Axis AB, Ordinate BD; Fluxion of the Axis D δ = B δ , Fluxion of the Ordinate *d δ* ; the Relation of these two Fluxions is thus, viz. *d δ* : D δ : : *a*: DA Curve; which is the fundamental Property of the Curve, and may be thus express'd (putting A B = *x*, and BD = *y*, and A D = *c*) $y = \frac{a}{c}x$. For more on this Subject, see *Philosophical Transactions*, N^o 331, where it is enlarg'd upon by Dr. Gregory.

CATERER. See *PURVEYOR*.

CATHARTICS, *Purgative Medicines*, or Remedies that promote Evacuation by Stool; see *PURGATIVES*.

Some use the Word *Cathartic* in a more general Sense, comprehending under it Emetics, or Vomitives; but this seems an Abuse: See *EMETICS*.

Cathartics, in the proper Sense of the Word, are of several Kinds, mild, moderate, and violent: The first purge gently, as *Cassia*, *Manna*, *Tamarinds*, *Rhubarb*, *Senes*, &c.

the second pretty briskly, as *Jallop*, and *Scamony*, &c. the third severely, as *Colocynth*, *Hellebore*, *Lauriola*, &c. See each under its proper Article, *CASSIA*, *MANNA*, *RHUBARB*, &c.

Cathartics are likewise divided into *Cholagogues*, *Pblegagogues*, *Melanagogues*, and *Hydroagogues*; the first suppos'd to purge the Bile, the second Pitta, the third Melancholy, and the fourth Serofities. See *CHOLAGOGUES*, *PHLEGAGOGUES*, &c. The Word comes from the Greek *καθαίρω*, purge, I purge.

For the Theory of *Cathartics*, and the manner wherein they operate, see *PURGATIVES*.

CATHEDRAL, a Church wherein is a Bishop's See, or Seat; see *BISHOP*.

The Word seems to take its title from the manner of fitting in the ancient Churches, or Assemblies of primitive Christians: In these, the Council, i. e. the Elders and Priests, was call'd *Presbyterium*; at their head was the *Bishop*, who held the Place of Chairman, *Cathedratis*; and the *Presbyters*, who sat on either side, were also call'd by the ancient Fathers, *Affessores Episcoporum*. The Episcopal Authority did not reside in the Bishop alone, but in all the Presbyters, whereof the Bishop was President. See *PRESBYTER*.

A *Cathedral* therefore, originally, was different from what it is now; the Christians, till the Time of *Constantine*, having no liberty to build any Temple: by their Churches they only meant their Assemblies; and by *Cathedrals*, nothing more than *Consistories*. Whence appears the Vanity of some Authors, especially the *Spaniards*, who pretend their *Cathedrals* to have been built in the Times of the Apostles. The Word comes from the Greek *καθεδρα*, Chair, of *καθίζω*, sedeo.

CATHERETIC Medicines, such as consume and carry off Catarrhs, proud Flesh, and Excrecences arising in Wounds, &c. such are the red *Precipitate*, *burnt Alum*, *blue Vitriol*, *Stone*, &c.

The Word is form'd from the Greek *καθε*, and *αιω*, I take away, carry off.

Some call these Medicines *Sarcophages*, Flesh-eaters. See *CAUSTIC*.

S. CATHERINE of Mount Sinai, a Military Order, instituted in 1603, on occasion of finding the Body of S. Catherine on Mount Sinai; which drawing a great Concourse of Pilgrims from all Quarters, an Order of Knights was establish'd, on the Foot of that of the *Holy Sepulchre*, to render the Journey more safe among the *Arabs*. See *SIFULCHRE*.

They receiv'd the Rule of St. *Basil*, and own'd St. Catherine for their Patroness: Their Vows were, to follow their Rule, guard the Body of their Patroness, secure the Roads in favour of Pilgrims, defend the Catholic Church, and obey their Grand Master. The Order is now extant, as well as that of the *Holy Sepulchre*.

CATHETER, among Chirurgeons, a hollow Probe, or Instrument, somewhat crooked, to thrust up the Yard into the Bladder; in order to assist in making Urine, when the Passage is stopp'd by the Stone, Gravel, Caruncles, &c.

The Word comes from the Greek *καθευω*, immitto, to send in.

Hence, *Catheretism* is the Operation of drawing the Urine out of the Bladder with a *Catheter*.

CATHETUS, in Geometry, a Perpendicular; or a Line, or Radius, falling perpendicularly on another Line, or Surface: See *PERPENDICULAR*.

Thus, the *Catheti* of a *reangled Triangle*, are the two Sides that include the right Angle. See *RECTANGLE*.

CATHETUS of Incidence, in Catoptrics, is a right Line drawn from a radiant Point, perpendicular to the Plane of the *Speculum*, or Mirror. See *INCIDENCE*.

CATHETUS of Reflection, or of the Eye, a right Line drawn from any Point of a reflected Ray, perpendicular to the Plane of Reflection, or of the *Speculum*. See *REFLECTION*.

CATHETUS of Obliquation, a right Line, drawn perpendicular to the *Speculum*, in the Point of Incidence or Reflection.

CATHETUS, in Architecture, is a perpendicular Line, passing thro' the middle of a Column: or that thro' the Eye of the Volute, in the Ionic Capital; call'd also *Axis*. See *AXIS*, and *VOLUTE*.

CATHOLICK, is us'd in the Sense of *Universal*, or *General*; see *GENERAL*, &c.

Theodosius the Great, first introduc'd the Term *Catholic* into the Church; appointing by an Edict, that the Title should be apply'd, by way of Pre-eminence, to those Churches who adher'd to the Council of *Nice*, in Exclusion of the *Arians*, &c. *Catholicism*, however, soon chang'd Hands; for under the Emperor *Constantius*, *Arianism* became to predominate, that the *Arians* were call'd the *Catholics*. See *ARIAN*, &c.

The Title of *Catholic King*, has been hereditary to the King of Spain, ever since the Time of *Ferdinand* and *Isabella*. *Colombiere* says, it was given on occasion of the

Expulsion of the Moors. The *Bollandists* pretend, the Title was bore by their Predecessors, the *Visigoth Kings of Spain*; and that *Alexander VI.* only renew'd it to *Ferdinand and Isabella*. Others say, that *Philip de Valois* first bore the Title; which was given him after his Death by the Ecclesiastics, on account of his favouring their Interests.

In some Epistles of the ancient Popes, the Title *Catholic* is given to the Kings of *France*, and of *Jerusalem*, as well as to several Patriarchs and Primates. The Word is form'd from the Greek *καθολικη*, *universally*; whence *καθολικη*, *universal*.

CATHOLIC Furnace, is a little Furnace, so contriv'd, as to be fit for all kinds of Operations, which do not require an intense Fire. See **FURNACE**.

CATHOLICON of Spain. See **MEMORIAN Sazry**.

CATHOLICON, in Pharmacy, a kind of soft Electuary; so call'd, as being suppos'd *universal*; or a Purger of all Humours. See **ELECTUARY**.

Different Authors give different Recipes for it: That call'd *Catholicon Nicholai* is most in use; it consists of 16 Ingredients, the chief whereof are Tamariacs, Cassia, Sena, and Rhubarb. It is said to be *double*, when there is a double Portion of Sena and Rhubarb.

The *Catholicon for Clysters*, only differs from this, in that it has no Rhubarb, and that Honey is us'd instead of Sugar. See **CLYSTER**.

CATKINS, in Natural History, a Substance growing on Nut-Trees, Birch-Trees, &c. in Winter time. See **PLANTS**.

CATLIN, among Surgeons, is a Disinfecting Knife, for cutting off any corrupted Part of a Body.

CATOPSIS, in Medicine, a Disorder of the Sight; more usually call'd *Myopia*. See **MYOPIA**.

CATOPTRICALS, the Science of *Reflex Vision*; or that Branch of Optics, which delivers the Laws of Light, reflected from Mirrors, or *Specula*. See **MIRROR**, and **REFLECTION**; see also **VISION**, **LIGHT**, and **OPTICS**. Under which Heads, the Doctrine and Laws of *Catoptries* are laid down.

The Word comes from the Greek *κατοπτρον*, *Speculum*; of *κατε*, and *οπτρον*, *videre*, I see.

CATOPTRICAL Dial, a Dial which exhibits Objects by reflected Rays. See **REFLECTING Dial**.

CATOPTRIC Telescope, a Telescope that exhibits Objects by Reflection; see **REFLECTING Telescope**.

CATOPTRIC Cistula, a Machine, or Apparatus, whereby little Bodies are represented extremely large; and near ones extremely wide, and diffus'd thro' a vast Space; and other agreeable Phenomena, by means of Mirrors, dispos'd by the Laws of *Catoptries*, in the Concavity of a kind of Chest.

Of these there are various Kinds, accommodated to the various Intentions of the Artificer: Some multiply the Objects; some deform 'em; some magnify, &c. The Structure of one or two of 'em, will suffice to shew how infinite more may be made.

To make a **CATOPTRIC Cistula**, to represent several distinct Scenes of Objects, when look'd in as several *Parasimia*, or *Holes*.

Provide a polygonous *Cistula*, or Chest, of the Figure of the Multilateral Prism ABCDEF, (Plate *Optics*, Fig. 19.) and divide its Cavity by Disposal Places E, F, C, D, A, intersecting each other in the Centre G, into as many triangular Locules, or Cells, as the Chest has Sides. Line the Diagonal Planes with plane Mirrors: In the lateral Planes make round Holes, thro' which the Eye may peep within the Locules of the Chest. The Holes are to be cover'd with plain Glasses, ground within-side, but not polish'd, to prevent the Objects in the Locules from appearing too distinctly. In each Locule are plac'd the different Objects, whose Images are to be exhibited; then covering up the Top of the Chest with a thin transparent Membrane, or Parchment, to admit the Light, the Machine is compleat.

For, from the Laws of Reflection, it follows, that the Images of Objects, plac'd within the Angles of Mirrors, are multiply'd, and appear some more remote than others; whence the Objects in one Locule, will appear to take up more room than is contain'd in the whole Chest. By looking, therefore, thro' one Hole only, the Objects in one Locule will be seen; but those multiply'd, and diffus'd thro' a Space much larger than the whole Chest: thus every new Hole will afford a new Scene: According to the different Angles the Mirrors make with each other, the Representations will be different; if by they be at an Angle greater than a right one, the Images will be monstrous, &c. See **ANAMORPHOSIS**.

The Parchment that covers the Machine, may be made pellucid, by washing it several times in a very clear Lye, then in fair Water, and bracing it tight, and exposing it to the Air to dry. If it's desir'd to throw any Colour on the Objects, it may be done by colouring the Parchment. *Zobnius* recommends Verdigrise, ground in Vinegar, for green; Decoction of *Brazil Wood*, for red, &c. He adds, it ought to be varnish'd, to make it shine:

To make a **CATOPTRIC Cistula**, to represent the Objects within it prodigiously multiply'd, and diffus'd thro' a vast Space.

Make a polygonous *Cistula*, or Chest, as before, but without dividing the inner Cavity into any Apartments or Locules: (Plate *Optics*, Fig. 20.) line the lateral Planes C B H I, B H L A, A L M F, &c. with plane Mirrors, and at the *Foramina*, or Apertures, pare off the Tin and Quicksilver, that the Eye may see thro': Place any Objects in the Bottom M I, v. g. a Bird in a Cage, &c.

Here, the Eye looking thro' the Aperture *bi*, will see each Object plac'd at bottom, vastly multiply'd, and the Images remov'd at equal Distances from one another. Hence, were a large multangular Room, in a Prince's Palace, lin'd with large Mirrors, over which were plain pellucid Glasses to admit the Light; 'tis evident the Effects would be very surprising and magnificent. See **MIRROR**, **REFLECTION**, &c.

CATOPTROMANCY, a kind of Divination, among the Antients; so call'd, because consisting in the Application of a Mirror; from *κατοπτρον*, *Speculum*, and *μαντις*, *Divinatio*. See **DIVINATION**.

Pausanias says, it was in use among the *Achaians*, where those who were sick, and in danger of Death, let down a Mirror, fasten'd by a Thread, into a Fountain before the Temple of *Ceres*; then, looking in the Glass, if they saw a gaily disfigur'd Face, they took it as a sure Sign of Death; on the contrary, if the Face appear'd fresh and healthy, 'twas a Sign of Recovery.

CAVA, in Anatomy, the Name of a Vein, the largest in the Body, terminating in the right Ventricle of the Heart; where it opens with a large Mouth, to convey to it the Blood brought from all the Parts of the Body, by the Branches of the other Veins, which all terminate in the *Cava*. See **VEIN**.

At its Entrance into the right Ventricle, it has three membranous Valves, call'd *Tricuspidales*, or *Triglobinet*, from their triangular Figure; so accommodated, as to allow the Blood's passage from the *Cava* to the Heart, and to prevent its return. See **HEART**, and **VALVES**.

The *Cava* is divided into the *ascending* and *descending* Parts: The *ascending Cava*, is that which arises from the lower Parts; so call'd, because the Blood hereby convey'd to the Heart, mounts, or *ascends*. The *descending Cava* comes from the upper Parts, and is so call'd, because the Blood hereby brought from the Brain, and other Parts, *descends*. See **BLOOD**, and **CIRCULATION**.

CAVALCADE, a formal, pompous March, or Procession of Horsemen, Carriages, &c. by way of Parade, or Ceremony. See **CARROUSAL**, **TILT**, **QUADRIL**, &c.

CAVALIER, or **CAVALIER**, a Horseman, or Person mounted on Horseback. Antiently, the Word was restrain'd to a *Knight*, or *Miles*. See **KNIGHT**, and **MILES**. The French still use *Chevalier* in the same Sense. See **CHEVALIER**.

CAVALIER, in Fortification, a Terrace, or Platform, commanding all round the Place. 'Tis rais'd 18, or 29 Foot high, atop of a Rampart, for placing the Cannon on, and securing the Country about. 'Tis sometimes also made in the Country, to play in upon the Town; and as much above the other Works, as a Man on Horseback is above a Footman; whence the Denomination.

In form, the *Cavalier* is sometimes round, and sometimes square; having always a Parapet to cover the Cannon: Its Breadth depends on the Number of Pieces to be lodg'd on it; there being always allow'd an Interval of 10 or 12 Foot between each two, for the Conveniency of loading and firing.

The *Cavalier* is also sometimes call'd a *double Bastion*.

CAVALIERS, or **CAVALIERS**, consider'd as a Faction; see **TORV**.

CAVALRY, a Body of Soldiers, who fight, or march on Horseback. See **SOLDIERS**; see also **GUARDS**.

The English *Cavalry* is divided into *Horse*, and *Dragoons*; the French into *Companies of Ordinance*, as the *Gardes au Corps*, *Gen's d'Armes*, *Light-Horse*, &c. and into *Regiments*, commanded by *Mesires de Camp*. The Dragoons, among the English, and the Regiments among the French, form what they call the *light Cavalry*. When an Army is rang'd in order of Battle, the *Cavalry* is posted on the Wings.

Bodies of *Cavalry*, rang'd in form of Battle, are call'd *Squadrons*. See **SQUADRON**.

The Romans, in their first Wars, were unacquainted with the use of *Cavalry*, and made their whole Force consist in *Infantry*; inso-much, that even in the Engagement they made their Horses dismount, and fight on Foot; never refusing their Horses, but to pursue the Enemy the better when routed. It was the *Cavalry* of *Pyrrhus*, that first occasion'd them to alter their Sentiments; but especially that of *Hannibal*, which struck them with such a Terror, that the invincible Roman Legions durst not attack them on even Ground.

The Word comes from the corrupt Latin *Caballus*, a Horse; whence *Cabellarius*, and *Cavallarius*, in the later Latin, and *καβαλλῆς*, in the Greek.

CAUDA *Dracouis*, the *Dragon's Tail*, in Astronomy, the Name of the Moon's defending Node; see NODE.

CAVEAT, in Law, a Bill enter'd, in the Ecclesiastical Court, to stop the Proceedings of one who would prove a Will to the Prejudice of another.

CAVERNOSA *Corpora*, in Anatomy, call'd also *Corpora spongia*, and *spongiosa*, are two cavernous Bodies, of an indeterminate Length and Thickness, whereof the *Penis* is principally compos'd. See PENIS.

Their internal Substance is rare, and spongy; and when fill'd with Blood and Spirits, dilates and swells: in which, the Tension, or Erection of the Yard consists. See ERECTION.

They have two distinct Beginnings from the lower Side of the *Ossa Pubis*; whence they increase in bulk, till their meeting with the *Corpus Cavernosum Urethrae*, where they join into one, and are retain'd by means of a *Septum* compos'd of their outer Tunics: Their other Extremities are compos'd with the *Glands*; see GLAND.

CAVERNOSUM *Corpus Urethrae*, a third spongy Body of the *Penis*; so call'd, because the *Urethra*, or urinary Passage of the *Penis* is inclin'd therewith. See URETHRA.

Its Figure, contrary to that of the two *Corpora Cavernosa*, is largest at its Extremities, and least in the Middle; its upper Part is in the *Perineum*, and is call'd its *Bulb*, from its Figure. Its external Membrane is thin, and divided lengthwise by a *Septum*. The middle Part of the *Corpus* is nearly cylindrical; but the Passage for the Urine is not along the Centre, but inclines to its upper Part, next the Body of the *Penis*; its lower Extremity dilating it self, forms the *Gland*. See GLAND.

CAVERNOSA *Corpora of the Clitoris*, are two nervous or spongy Bodies, like those of the *Penis*; having their Origin from the lower Part of the *Ossa Pubis*, on each side; and uniting together, constitute the Body of the *Clitoris*, as those do that of the *Penis*. See CLITORIS.

Indeed, they have no Perforation analogous to that of the *Penis*; but they have a *Septum*, or membranous Partition, running all along between 'em, and dividing 'em from the *Gland*, to its Devascularization at the *Ossa Pubis*, where they are call'd *Crura Clitoridis*: See CRURA CLITORIDIS.

CAVERNOSUM *Corpus of the Pudendum*. See RETICULARE *Corpus*.

CAVESON, in the Manage, a kind of Bridle, or Muff-roll, put on the Horse's Nose, which binds or locks him in, and serves in breaking, managing, and tutoring him.

The *Cavecons* for breaking young Horses, are usually of Iron, made semicircularly, of two or three Pieces turning on Joints; others are twisted, others flat, others hollow in the Middle, and indented like Saws, call'd *Mordants*: the these last are now banish'd the Academies. The Rope and Leather *Cavecons*, serve for passing the Horse between two Pillars. The Word comes from the Spanish *Caveco*, Head.

CAVETTO, in Architecture, a hollow Member, or Moulding, containing a Quadrant of a Circle, and having an Effect just contrary to that of a Quarter-round: it is us'd as an Ornament in Cornices.

M. Felibien observes, that the Workmen confound the *Cavetto* with a *Scotia*, but to ill Purpose; the *Cavetto* being in effect only half a *Scotia*: yet he himself is chargeable with the same Oversight. See SCOTIA.

When in its natural Situation, the Workmen frequently call it *Gula*, or *Gneule*; and when inverted, *Gorge*. See GULA, and GORGE.

The Word is Italian, and no more than a Diminutive of *Cavata*, hollow.

CAVIA, or KAVIA, call'd also *Caviat*, *Caviac*, and *Caviar*, a kind of Food, or Ragout, in mighty use and repute throughout *Moskovy*; and lately introduc'd upon the *English* Table.

The *Cavia*, or *Kavia*, is the Roe, or Eggs of the Fifth Sturgeon, taken out, salted, and dry'd at the Sun, or by the Fire. The *Italian* Merchants scitted at *Moskov*, drive an incredible Trade with *Cavia*; the Fish being caught in prodigious Quantities at the Mouth of the *Volga*, and other Rivers which empty themselves into the *Caspian Sea*. They cure, or prepare the Roes on the Spot, and thence send it up the *Volga* to *Moskov*, to be there distributed throughout that vast Empire; where it is of wonderful service to the People, on account of the three Lents there observ'd with great Severity. See STURGEON FISHERY.

The *English* import considerable Quantities of this Commodity from *Archangel*; the not so much for home Consumption, as to supply the *French* and *Italians*. To be good, it should be of a reddish brown Colour, and very dry. 'Tis eat with Oil and Lemon; sometimes with Vinegar: Some eat it alone with Bread; and others only as a Sauce, or Pickle, like Anchovies.

CAVIN, in Fortification, is a hollow Place, proper to favour the Approaches to a Fortress; so that one may ad-

vance therein, under Cover, towards the Enemy, as it were in a Trench. If it be within Mullet-shot, 'tis a Place of Arms, ready made to hand; and a Convenience for opening the Trenches, out of fear of the Enemy's Shot.

CAVITIES, among Anatomists. See VENTER, and REGION.

CAUL, in Anatomy, a Membrane in the Abdomen, covering the greatest part of the Guts; call'd, from its Structure, *Reticulum*, but most popularly *Omentum*. See OMENTUM.

CAUL is likewise a little Membrane, found on some Children encompassing the Head, when born.

Drelincourt takes the *Caul* to be only a Fragment of the Membranes of the *Fetus*; which ordinarily break at the Birth of the Child: See FŒTUS.

Lampridius tells us, that the Midwives sold this *Caul* at a good price to the Advocates and Pleaders of his Time; it being an Opinion, that while they had this about them, they shou'd carry with 'em a Force of Persuasion which no Judge could withstand: The Canons forbid the Use of it; because some Witches and Sorcerers, it seems, had abus'd it.

CAULICULES, CAULIGULLI, in Architecture, are eight lesser Branches, or Stalks, in the *Corinthian Capital*, springing out from the four greater or principal *Canals*, or Stalks. See *Corinthian CAPITAL*.

The eight Volutes of this Order, are sustain'd by four *Canals*, or primary Branches of Leaves; and from which arise these *Caulicules*, or lesser Foliages. See VOLUTE, and LEAVES.

Some Authors confound these with the *Volutes* themselves; some with the *Helices* in the Middle, and some with the principal *Stalks* whence they arise.

The Word comes from the Latin *Canalis*, the Stalk, or Stem of a Plant, whence the Leaves and Branches arise.

CAULIFEROUS *Herbs*, are such as have a true *Canalis*, Stalk, or Trunk, which a great many have not; as the *Capillaries*, &c. See STEM, STOCHE, CAPILLARIES, &c.

CAUSALITY, in Metaphysics, is the Power, or Action of a Cause in producing its Effect. See CAUSE.

'Tis a Dispute, among the School Philosophers, whether, and how the *Causality* is distinguish'd from the *Cause* and *Effect*: Some hold it a Mode, or Modal Entity, superadded to the *Cause*, &c. others contend for its being the *Cause* it self, only consider'd *principiatively* and *terminatively*, &c.

CAUSE, that whence any thing is; or by virtue whereof a thing is done: Thus a Wound is the *Cause* of Death, Crudity of a Disease, &c. *Cause* is a Term of a Relation to *Effect*; see EFFECT.

First CAUSE, is that which acts of it self, and from its own proper Force, or Virtue; in which Sense, God is the only *First Cause*. See GOD.

Second CAUSES, are those which derive the Power, and Faculty of acting, from a *First Cause*. Such *Causes* don't properly act all at all; but are acted on: and therefore are improperly call'd *Causes*: of which Kind are all those that we call *Natural Causes*. See NATURE.

F. *Malebranch* denies *Second*, or *Natural Causes*, to have any Force, Power, or Efficacy to produce any Effect; and thinks the Notice in it self inexcusable. 'Tis certain the Philosophers are strangely puzzled, and divided about the manner of their Agency: Some maintain 'em to act by their *Matter*, *Figure*, and *Motion*; see CORPUSCULAR; others by a *substantial Form*; see SUBSTANTIAL FORM: many by *Accidents*, or *Qualities*; some by *Matter* and *Form*; others by certain *Faculties* different from all these: See FACULTY, FORM, QUALITY, &c.

Some maintain, that the substantial Form produces Forms; and the accidental, Accidents; others, that Forms produce other Forms and Accidents; others, lastly, that Accidents alone are capable of producing Accidents, and even Forms. Again, those, for Instance, who say that Accidents may produce Forms, by the Virtue they have receiv'd from the Form to which they are join'd, don't all mean the same thing: Some will have it, that these Accidents are only the Force or Virtue of the substantial Form; others, that they receive the Influence of the Form, and only act by virtue thereof: others, lastly, that they are only *Instrumental Causes*.

Again, the Philosophers are divided as to the Action whereby *Second Causes* produce their Effects: Some maintain, that the *Causality* cannot be produc'd, since 'tis that produces; others will have 'em to act truly by their Action; but they are still at a loss about that Action.

Such Variety is there in the Sentiments even of modern Philosophers; and those too our Neighbours: nor are the Antients, and those at a Distance from us, better agreed: *Avicenna*, v. g. does not allow that corporeal Substances can produce any thing but Accidents. His System, according to *Ruvio*, is this: God produces, immediately, a most perfect spiritual Substance; this produces another less perfect;

fect; that a third; and thus to the last; which last produces all the corporeal Substances; and those corporeal Substances Accidents. But *Acicenna*, nor being able to conceive how corporeal Substances, which cannot penetrate one another, should be capable of altering one another, will have it, that only Spirits are capable of acting on Bodies; because nothing else can penetrate 'em. See OCCASIONAL CAUSE.

CAUSES, in the School Philosophy, are distinguish'd into, *Efficient* CAUSES, which are the Agents that produce any thing. See EFFICIENT CAUSE.

Material CAUSES, the Subjects whereon the Agent works, or whereof the Thing is form'd; thus, Marble is the *Material* or *Material Cause* of the Statue. See MATERIAL CAUSE.

Formal CAUSES, the Changes resulting from the Action, or that which determines a Thing to be this, and distinguishes it from every thing else: Thus, the Soul is the *Form*, or *Formal Cause* of Man, &c. See FORMAL CAUSE.

Final CAUSES, the Motives which induc'd a Man to act; or the End for which the Thing is done: thus, Victory and Peace are the *Final Causes* of War. See FINAL CAUSE.

Some add the *Exemplary* CAUSE, which is the Model the Agent forms, or proposes, and by which he conducts himself in the Action; but this is not properly any *Cause* at all. See EXEMPLARY CAUSE.

CAUSES, again, are distinguish'd into *Physical*, or *Natural*, and *Moral*.

A *Physical Cause*, is that which produces a sensible corporeal Effect: thus, the Sun is the *Physical Cause* of Heat.

A *Moral Cause*, is that which produces a real Effect, but in Things immaterial: thus, Repentance is the *Cause* of Forgiveness.

Others define a *Physical Cause* to be that which produces its Effect by a *Physical Virtue*; and a *Moral Cause*, that which determines the *Physical Cause*, tho' not necessarily, to produce the Effect: in which Sense, 'tis also call'd a *Dispositive*, *Excitative*, and *Impulsive Cause*.

Thus, the Sun is the *Physical Cause* of Light; a Stone that breaks the Skull, a *Physical Cause* of Death: and that the Advice, Intreaty, Commands, or Menaces which determine us, tho' not necessarily, to do, or not to do any thing, are *Moral Causes*.

In this Sense, a *Moral Cause* is only applicable to a free intelligent Agent; and 'tis this Notion of a *Moral* or *Physical Cause*, that is the most just, clear, and distinct. See MORAL CAUSE.

CAUSES, again, are consider'd, either as *Universal*, or *Particular*; *Principal*, or *Instrumental*; *Total*, or *Partial*; *Univocal*, *Equivocal*, &c.

An *Universal Cause*, is that which by the Extent of its Power may produce all Effects. See UNIVERSAL.

A *Particular Cause*, is that which can only produce a single Effect, or a certain kind of Effects.

A *Principal Cause*, is that which gives Motion to the Instrument, or which does not operate beyond its own natural Efficacy.

An *Instrumental Cause*, is that us'd by the Principal to produce its Effect; or which is excited to produce an Effect, beyond the Measure of its own Perfection.

A *Total Cause*, is that which produces the whole Effect.

A *Partial Cause*, that which concurs with some other in producing the Effect.

An *Univocal Cause*, is that which is of the same Kind and Denomination with its Effect; as a Man the *Cause* of a Man. See UNIVOCAL.

An *Equivocal Cause*, is that which is of a different Kind and Denomination from its Effect; as the Sun is the *Cause* of the Animals it produces. See EQUIVOCAL.

The *Cartesians* resolve all *Physical Causes* into *Occasional* ones.

Occasional Causes, are only the *Occasions*, not the direct *Causes* of their Effects. See OCCASION.

The Soul, say those Philosophers, is not able to act on the Body; nor the Body reciprocally on the Soul: to keep up an Intercourse betwixt 'em, God, on *occasion* of the Motion of the Body, impresses a Sensation on the Soul; and, on *occasion* of a Sentiment of the Soul, impresses a Motion on the Body. The Motions, therefore, of the Soul and Body, are only *Occasional Causes* of what passes in the one or the other: thus, say they, the Stroke or Percussion, is only the *Occasional Cause* of the Motion produc'd in the Body struck: 'Tis God is the direct *Efficient Cause*. And thus the Action of Objects on our Organs, is not the *Efficient Cause* of our Ideas and Perceptions, but merely the *Occasional Cause*, which determines God to act on the Mind, according to the Laws of the Union of Soul and Body. But the Consequences that follow from this fine Reasoning are very unlucky, not to say ridiculous: Thus, 'tis not the Cannon-Ball that kills the Man, or beats down the Wall, but 'tis God that does it: the Motion of the Cannoner, whose Arm, mov'd by the Power of God, apply'd Fire to the Powder, determin'd God to inflame that Powder; the Powder inflam'd, determin'd God to drive out the Ball;

and the Ball driven, with an inconceivable Force, determines God to break the Bones of the Wall, &c. A Coward, who is afraid to go any way at all; but the Motion of his Feet, determin'd by the Impression of a Squadron of Men on his Mind, with Bayonets at the Ends of the Muzzles, determines God to move the Coward's Legs, and to drive him from them.

It has been often said, in a moral Sense, that the World is a Comedy, and that each Man only acts in his Part; but it may be here said, in a strict Physical one, that the Universe is a Puppet-Show, and each Man a Punchinello, making a great deal of Noise without speaking, and bustling without moving.

CAUSTICS, in Medicine, &c. are such Things as have the Virtue of *Burning*, or are *Corrosive*; particularly those Medicines which by their violent Activity, and the Heat thence occasion'd, destroy the Texture of the Parts to which they are apply'd.

Caustics are us'd to eat off proud fungous Flesh; they also penetrate within hard callous Bodies, and liquify the Humours; and are particularly apply'd in Abscesses and Imposthumations, to eat thro' to the suppurated Matter, and give it vent.

The principal Medicines of this Class, are *burnt Alum*, *Sponge*, *Cantharides*, and other *Unguentaries*; as also *Oryzomena*, *Cata-viva*, *Vitriol*, *Albes* of the Fig-Tree, the *Ashe*, and *Wine Lees*; the *Salts* of the *Lixivium*, whereof Soap is made; *Sublimate*, *Mercury*, *red Precipitate*, &c. See each describ'd under its proper Article, ALUM, VITRIOL, CANTHARIDES, ORPIMENT, MERCURY, SUBLIMATE, PRECIPITATE, &c.

Crytals of the *Moon*, and *Lapis Infernalis*, made of Silver and Spirit of Nitro, become *Caustics* by that Mixture. See CRYSTAL, &c.

Those *Caustics* which burn thro' the Part, and leave a Scar, are particularly call'd *Cauteries*; tho' Dr. Quincy confounds the two together. See CAUTERY.

The Word comes from *causo*, *urens*; of *caus*, *uro*, I burn. *CAUSTIC-Glasses*. See BURNING-Glasses.

CAUSTIC Curve, in the higher Geometry, a *Curve* form'd by the Concourse, or Coincidence of the Rays of Light reflected, or refracted from some other *Curve*. See CURVE.

Accordingly, *Caustics* are divided into *Catacaustic*, and *Dia-caustic*; the one form'd by Reflection, the other by Refraction. See CATACAUSTIC, and DIACAUSTIC.

Caustic Curves, are the Invention of M. *Féberibusen*, who first propos'd 'em to the Academy of Sciences, in 1682. They have this remarkable Property, that when the *Curves* that produce them are Geometrical, they are equal to known right Lines.

Thus, the *Caustic* form'd in a Quadrant of a Circle by reflected Rays, which came at first parallel to the Diameter, is equal to $\frac{1}{2}$ of the Diameter; which is a sort of Rectification of *Curves* that preceded the Invention of the new Doctrine of Infinites; on which most of our other Rectifications are built. See RECTIFICATION.

The Academy appointed a Committee to examine the new *Curves*, viz. *Mess. Cassini*, *Mariotte*, and *de la Hire*, which last doubted much of the Description, or Generation, M. *Féberibusen* gave of the *Caustic* by Reflection, from a Quadrant of a Circle. The Author refus'd to discover all his Method; and M. *de la Hire* persisted in holding the Generation suspicious. M. *Féberibusen*, however, was so confident of it, that he sent it to the *Leipsic* Journalists, tho' without any Demonstration.

CAUTERY, in Chirurgery, a burning Medicine, or a Composition of several Things, which gnaw, burn off, eat thro', and sear the Parts; us'd, principally, in Abscesses, Imposthumations, Ulcers, and Caries of the Bones, to open a Passage for the Discharge of ill Humours, &c.

Cauteries are of two Kinds, *Actual*, and *Potential*.

Actual CAUTERIES, are those which produce an instantaneous Effect, as *Fire*, or a *red-hot Iron*, which are apply'd in the *Fistula Lacrymalis*, after Exstirpations of Cancers, Amputations of Legs, or Arms, &c. in order to stop the Hemorrhages, and produce a laudable Suppuration. The Iron us'd on these Occasions, are sometimes crooked at the Extremity, and that variously, according to the various Occasions: Whence some are call'd *Cathetery*, others *Punctual*, others *Olivary*, &c.

M. *Homburg* assures us, that a great Part of the Medicine of the People of *Tous*, and other Parts of the *East Indies*, consists in *Burning*, or the Application of actual *Cauteries*; and that there is scarce any Disease but they will happily cure thereby. See BURNING.

Potential CAUTERIES, are Compositions of *Caustic* Medicines, usually of Quick-lime, Soap, and Chimney Soot. See CAUSTICS.

The *Actual Caustery*, or hot Iron, is frequently apply'd for the making of Issues, in Parts where cutting is difficult

has a little round Hole, which is
an Ivy Berry, to keep it open for
Air. See *Issux*. *Paprus* describes
Velvet *Casteries*; so call'd because

is apply'd to the Nape of the Neck,
between the first and second Vertebra, the exterior Part
of the

The *Causes* comes from the Greek *καίω, ura*.
CAUSE, a massive Constitution of Stone, Stakes,
Fascines; or an Elevation of fat, viscous Earth, well beaten
to a Mole to retain the Waters of a Pond, or prevent a
River from overflowing the lower Grounds. See *ROAD*.

The Word comes from the French *Chausse*, anciently
wrote *Chausse*; and that from the Latin *Calcata*; according
to *Somner* and *Spelman*, *a calcando, aut a calcis quia*
hujusmodi via calcis nominatur. *Berger* rather takes the
Word to have its Rise *a pedum calcis, quibus servatur*.

CAXA, a little leaden Coin, mix'd with a little Copper
Skum, struck in *Chison*, but current chiefly at *Bantam*, in
the rest of the Island of *Java*, and in some of the neighbour-
ing Islands. See *CEN*.

'Tis some what smaller than the French *Double*, and has
a square Hole through the Middle; by means whereof,
several 'em are hung on the same String: This String,
which they call *Sauts*, contains 200 *Caxas*, equivalent to
nine French *Deniers*, or somewhat less than three Farthings
Sterling. Five *Sauts* ty'd together, i. e. a thousand
Caxas, make a *Sapacon*. Nothing can exceed the Brit-
tleness of the *Caxa*; a String never falls to the Ground,
without breaking at least 10 or 12 Pieces. Leaving 'em a
Night steep'd in salt Water, they cling so firm to one ano-
ther, that they are not to be separated without breaking
one half 'em. The *Malais* call 'em *Cas*, and the *Java-
nese*, *Pittis*.

The *Caxas* are of two Kinds, *great* and *small*: The
small are those we have been speaking of; 300000 where-
of, are equal to 56 Livres 5 Sols, *Dutch* Money. The
large are old *Caxas*; 6000 whereof are equal to the Piece
of Eight, or 41. 6 s. Sterling. These are nearly the same
with the *Caches* of *China*, and the *Cassies* of *Japan*.

CEILING, in Architecture, the upper Part, or Roof of
a lower Room; or a Lay, or Covering of Plaster over
Laths, nail'd on the Bottom of the Joists that bear the
Floor of the upper Room; or on Joists for that purpose.
See *HOUSE*, and *ROOF*.

The Word *Ceiling*, answers pretty accurately to the
Latin *Locumbar*, every thing over Head.

Plaster'd *Ceilings* are much us'd in *England*, more than
any other Country: Nor are they without their Advanta-
ges, as they make the Room lightsome; are good in Case
of Fire; stop the Passage of the Dust; lessen the Noise
over Head; and, in Summer, make the Air cooler. See
CELANDINE. See *CHELIDONIA*.

CELARENT, in Logic, a Syllogism whose second Pro-
position is an universal Affirmative; and the rest universal
Negatives. See *SYLLOGISM*.

CELATURA, the Art of Engraving. See *ENGRAVING*.

CELERES, in Antiquity, a Body, or Regiment of
Guards of the ancient *Roman* Kings, establish'd by *Ro-
mulus*; consisting of 300 Youths chosen from the best Fa-
milies of *Rome*, and approv'd by the Suffrages of the
Curie of the People, each of which furnish'd ten. See
CURIA.

The *Celeres* always attended near the King's Person, to
guard him, and to be ready to carry his Orders, and exe-
cute them. In War, they made the Vant-Guard in the
Engagement, which they always begun first: In Retreats,
they made the Rear-Guard.

The *Celeres* were a Body of Horse, yet they usually
dismounted, and fought on Foot: Their Commander was
call'd *Tribune of the Celeres*. They were divided into
three Troops, of 100 each, commanded by a Captain call'd
Centurio. Their Tribune was the second Person in the
Kingdom. See *TRIBUNE*, *CENTURIO*, &c.

Plutarch says, *Numa* broke the *Celeres*: If this be true,
they were soon re-establish'd; for we find them under most
of the succeeding Kings: Witness the great *Brutus*, who
expell'd the *Tarquins*, and who was *Tribune of the Celeres*.

The Word comes from *Celer*, quick, ready; and was
given them, because of their promptness to obey the King;
or, as some will have it, from the Name of their first
Tribune: Others say, from one *Celer*, a Comrade of *Ro-
mulus*, who assisted him in the Combat with his Brother
Remus, and is said to have slain that Prince.

Some say, the *Celeres* were the same with those after-
wards call'd *Trossuli*, on account of their taking the City
Trossulum in *Hetruria*, alone, without the Assistance of
any Infantry.

CELERITY, in Mechanics, is the Velocity of a mov-
ing Body; or that Affliction of a Body in Motion, whereby

it is enabled to pass over a certain Space, in a certain
Time. See *VELOCITY*; see also *MOTION*.

CELESTINS, an Order of Religious, reform'd from the
Bernardines, in 1224, by Pope *Celestin* V. then only *Pe-
ter de Monrebon*, or *Morron*, of *Asturia* in *Naples*; and
establish'd in 1264, by Pope *Urban* IV. and confirm'd by
Gregory X. in 1274.

They were introduc'd into *France*, by *Philip* the Fair,
who requested a Dozen of them from the General of their
Order, by his Ambassador at *Naples*, in 1300. 'Tis a
kind of Proverb with them, *Voila un plaisant Celestin*.

CELIAC Passion, or *CÆLIACA Passio*, in Medicine,
a kind of Flux of the Belly, wherein the Food does not
indeed pass perfectly crude, as in the *Lientery*, but half
digested; so that the two only differ from each other, as
more or less. See *LIENTERY*.

In the *Celiac* the Food is sometimes digested, without
the Chyle's being separated from the Excrements.

The Causes of the *Celiac* are either the Weakness of the
Ferment of the Stomach, the short stay the Food there
makes, the Obstruction of the Lactals, or the want of
Acridity in the Bile. See *FLUX*.

The Word comes from the Greek *καίω, Venter*; whence
καίωμαι, a Person subject to such Inconveniences. See *COLIC*.

CELIBATE, or *CELIBACY*, the State of a Person
who lives out of Marriage. See *MARRIAGE*.

The *Celibate* of the Clergy, which is still rigorously kept
up among the *Romanists*, is of a pretty ancient standing:
It was first propos'd by the Council of *Nice*, but without
passing; it was, however, in some measure admitted by the
Western Councils of *Elvira*, *Aries*, *Tours*, &c. Such
among the Priests as piqu'd themselves on the Faculty of
Continence, took the Hint; insomuch, as towards the Close
of the IVth Century, there were few but made a Profes-
sion of a voluntary *Celibate*. In 421, the Council of *Orange*
order'd those to be depos'd who did not abstain from their
Wives: But it was *Gregory* VII. who first brought Eccle-
siasticks to admit the *Celibate* as a Law. In the Council
of *Trent*, it was propos'd, to let the Clergy at liberty
again from the Yoke of *Celibate*; and this was even made
an Article of the Interim of *Charles* V. but the Pope could
not be brought into it.

St. Jerome, and *Epiphanius* observe, that in their Time
none were admitted into the Priesthood, but those who
were unmarried; or who abstain'd from their Wives. See
PRIEST, and *CLERGY*.

Scaliger derives the Word from the Greek *καίω, Bed*,
and *καίω, lingua*, I leave: Others say, it is form'd from
Celi beatitudo.

CELLITES, an Order of Religious, founded by *Alexius*,
a *Roman*: In *Italy* they are call'd *Alexians*; but in
Germany and the Low-Countries, where they have Monas-
teries, *Cellites*, i. e. People inhabiting in Cells.

CELLS, *Cells*, *Cellules*, are little Houses, Apartments,
or Chambers; particularly those wherein the ancient
Monks, Solitaries, and Hermits liv'd in Retirement. See
MONK, *SOLITARY*, *HERMIT*, &c.

The same Name is still retain'd in divers Monasteries.
The Dormitory is frequently divided into so many *Cells*, or
Lodges. See *DORMITORY*.

The *Carthusians* have each a several House, which serves
'em as *Cells*. See *CARTHUSIANS*.

The Hall wherein the *Roman* Conclave is held, is divid-
ed by Partitions into divers *Cells*, for the several Cardinals
to lodge in. See *CONCLAVE*.

Some derive the Word from the Hebrew *קלל*, i. e. a
Prison, or Place where any thing is shut up.

CELLS, in Anatomy, are little Bags, or Bladders, where
Fluids or other Matters are lodg'd; call'd also *Loculi*, *Cell-
ule*, &c. See *CELLULE*.

The Name is also given by Botanists to the Partitions in
the Hauks, or Pods where the Seed lies.

CELLS, are also the little Divisions, or Apartments in
Honey-Combs, where the Honey, young Bees, &c. are
distributed: these are always regular Hexagons. See *HIVE*,
HONEY, *COMB*, &c.

CELLULA, *Adepose*, in Anatomy, the *Loculi*, or little
Cells wherein the Fat of Bodies in good habit is contain'd.
See *ANAT.*

These are co-extended with the Skin it self, except on
the Forehead, the Eyelids, Penis, and *Scrotum*. In emaci-
ated Bodies, these Cells being unfurnish'd of their Fat, ap-
pear like a kind of flaccid, transparent Membrane. See *FAT*.
CEMENT, *CEMENT*, or *CIMENT*, in the general
Sense of the Word, is any Composition of a glutinous or
tenacious Nature, proper to bind, unite, or keep things in
Cohesion.

In this Sense, Mortar, Solder, Glue, &c. are *Cement*.
See *MORTAR*, *SOLDER*, *GLUE*, &c.

The Bitumen brought from the *Levont*, is said to have
been the *Cement* us'd in the Walls of *Babylon*. See *BITU-
MEN*.

The Word is form'd of the Latin *Cementum*, of *cedo*, I host. Tho M. Felbien observes, that what the ancient Architects call'd *Cementum*, was a very different thing from our *Cement*: The Name *Cement*, with them, stood for a kind of Malcony, or manner of laying the Stones; and even for the Quality of the Stones; as when the Walls were fill'd up with little Pebbles, Rubbish, &c. See MASONRY.

CEMENT, is particularly us'd in Architecture, for a strong, binding sort of Mortar, us'd to bind, or unite Bricks or Stones together, for some kinds of Mouldings, or to make a block of Bricks, for the Carving of Scrolls, Capitals, &c.

It is of two Sorts: The *hot Cement*, which is the most common, is made of Rosin, Bees-Wax, Brickdust, and Chalk, hold'd together. The Bricks to be cemented are heated, and rubb'd one upon another, with *Cement* between.

The *cold Cement* is less us'd: 'tis made of Cheshire Cheefe, Milk, Quick-lime, and Whites of Eggs.

CEMENT, is also us'd among Goldsmiths, Engravers, Jewellers, &c. for a Composition of fine Brickdust, well sifted, Rosin, and Bees-Wax, in use among those Artificers to keep the Metals to be engraven, or wrought on, firm to the Block, &c. as also to fill up what is to be chisell'd.

CEMENT, in Chymistry, is a Compound, us'd for the purifying of Gold; see GOLD, and PURIFICATION.

There are two Kinds of this *Cement*, *Common*, and *Royal*. The first made of Brickdust, Nitre, and Verdigrise; the second of Sal Gemme, and Armoniac, each one Part; two Parts of common Salt, and four of Baic: the whole reduc'd into a Paste with Urine. Hence,

CEMENTATION, or **CÆMENTATION**; a manner of purifying Gold, by means of *Cement*.

'Tis perform'd thus: Thin Plates, or *Lamine*, are stratt'd in a Crucible with *Royal Cement*; the Crucible is cover'd up, and encompass'd with Fire for 10 or 12 Hours, till being thus calcin'd, the Salts have imbib'd and consum'd the Impurities of the Gold.

This Method of *Refining*, is much inferior to that by means of Antimony; in regard, the Salts sometimes leave other Metals remaining with the Gold; and besides, frequently eat away the Gold it self. See **REFINING**.

CENOBITE, or **COENOBITE**, a Religious who lives in a Convent, or in Community, under a certain Rule; in opposition to *Anachorite*, or *Hermit*, who lives in Solitude. See **HERMIT**, &c.

Cassian makes this Difference between a *Convent* and a *Monastery*, that the latter may be apply'd to a single Religious, or Recluse; whereas the *Convent* implies *Cenobites*, or Numbers of Religious living in common. See **CONVENT**, and **MONASTERY**.

Flcury speaks of three Kinds of Monks in *Egypt*; *Anachorites*, who live in Solitude; *Cenobites*, who continue to live in Community; and *Sarabaites*, who are a kind of Monks Errant, that stroll from Place to Place.

He refers the Institution of *Cenobites* to the Times of the Apostles; and makes it a kind of Imitation of the ordinary Life of the Faithful at *Jerusalem*. Tho St. *Pascare* is ordinarily own'd the Initiator of the *Cenobitic Life*; as being the first who gave a Rule to any Community.

The Word comes from the Greek *κοινος*, *communis*, and *βη*, *Vita*, Life.

CENSOR, in Antiquity, one of the prime Magistrates in ancient *Rome*; so call'd à *confendo*, because he assess'd and valu'd every Man's Estate, registering their Names, and placing 'em in a proper Contury; that the *Romans* might know their own strength. See **CENSUS**.

Others say, the *Censors* were so call'd, as being Controulers, or Correctors of Manners and Policy.

They were first created in the Year of *Rome* 311, upon the Senate's observing, that the Consuls were too much taken up with Matters of War, to be at leisure for looking near enough into private Affairs. The two first were *Papirius* and *Sempronius*: Their Authority extended over every Person; and they had a Right to reprehend the highest. At first they were taken out of the Senate; but after the Plebeians had got the Consulate open to 'em, they soon arriv'd at the *Censorship*: *M. Rutilius* was the first; who having been twice Consul, and Dictator, in the Year 402 demanded the Office of *Censor*. The Custom was, to elect two; the one of a Patrician Family, the other a Plebeian: and upon the Death of either, the other was discharg'd from his Office, and two new ones elected. In the Year 414, a Law was made, appointing one of the *Censors* to be always elected out of the Plebeians; which held in force till the Year 622, when both *Censors* were chosen from among the People: after which time, it was shar'd between the Senate and People.

This Office was so considerable, that none aspir'd to it till they had pass'd all the rest: So that it was look'd on as surpassing, that *Cassius* should be admitted *Censor*, without having been either Consul or Pretor. The Term of this Office was at first establish'd for five Years; but that Institution only lasted nine: *Mamercinus* the Dictator, made

a Law, restraining the *Censure* to a Year and an half; which was afterwards observ'd very strictly.

The Business of the *Censors*, was to register the Effects, &c. of the *Roman* Citizens; to impose Taxes, in proportion to what each Person possess'd. *Citizens* reduces their Functions to, the numbering of the People; the correction and reformation of Manners; the estimating the Effects of each Citizen; the proportioning of Taxes; the superintendance of Tribute; the exclusion from the Temples; and the Care of the publick Places. They had also a Right to exclude from the Senate, such of the Senators as they judg'd unworthy of the Dignity; as well as to break and cashier the Knights who fail'd in their Duty, by taking from 'em the publick Haric. See **SENATOR**, **KNIGHT**, &c.

The Republic of *Venice*, has at this Day a *Censor* of the Manners of their People, whose Office lasts six Months.

CENSORS of *Books*, are a Body of Doctors, or other Officers, establish'd in divers Countries, to examine and give their Judgment of all Books, e'er they go to the Press; and to see they contain nothing contrary to the Faith, and good Manners. In *England* we had formerly an Officer of this kind, under the Title of *Licensor of the Press*; but since the Revolution the Press has been open.

M. *Boyle* compares Authors soliciting the Approbation of *Censors*, or Licensors, to those Shades wandering on the Banks of *Styx*, and waiting with Impatience for a Passage to the other Shore. He applies to 'em these two Verses of *Virgil*:

Tendentque Manus, Ripe ulterioris amore;
Navita sed tristis unum bos nunc accipit illis.

At *Paris*, the Faculty of *Theology* claim the Privilege of *Censors*, as granted to them by the Pope; and 'tis certain they had been in possession of it for many Ages; but in the Year 1624, a new Commission of four Doctors were created, by Letters Patent, the sole *Censors* and Examiners of all Books; and answerable for every thing contain'd therein. The Faculty, however, still maintain their Claim, by taking occasion, now and then, to give their Approbations to Books.

CENSURE, *Censures*, is popularly us'd for a Judgment, whereby any Action, Book, or other thing is condemn'd; or a Correction, or Reprimand made by a Superior, or Person in Authority. Hence,

Ecclesiastical CENSURES, are the publick Menaces which the Church makes, of the Pains and Penalties incur'd by disobeying what she enjoins; or rather, the Pains and Punishments themselves; as *Interdiction*, *Excommunication*, &c. See **INTERDICTION**, **SUSPENSION**, **DEGRADATION**, &c.

Till the Time of the Reformation, the Kings of *England* were subject to the *Censures* of the Church of *Rome*; but the Kings of *France* have always maintain'd themselves exempt from them. In effect, there is no Instance of *Excommunication* of any of their first Race of Kings, till *Lotharins* *Excommunication* by Pope *Nicolas* I. for putting away his Wife *Tetberge*; which is reckon'd the first Breach of the Liberties of the *Gallican* Church: Yet the Pope durst not hazard his *Excommunication* on his own Authority, but took care to have it confirm'd by the Assembly of the Bishops of *France*; and the same Precaution was afterwards observ'd by the other Popes. But in after Times the *French* Kings asserted their Rights to better purpose; for Pope *Benedict* XIII. having censur'd *Charles* VI. laid the Nation under an *Interdiction*: upon which, the Parliament of *Paris*, by an Arret, order'd the Bull to be torn: And *Julius* II. having excommunicated *Louis* XII. the Assembly General at *Tours* censur'd the Pope's *Censure*.

The Canonists distinguish two Kinds of *Censures*; the one de *jure*, the other de *facto*, or by Sentence.

CENSURA, is also a Custom in several Manors in *Cornwall* and *Devon*, whereby all the Rectors above the Age of 16, are call'd to swear Fidelity to the Lord, to pay two Pence per Poll, and a Penny per *Annum*, ever after, as *Cert-Money*, or common Fine. See **CERT-MONEY**.

CENSUS, among the *Romans*, was an authentic Declaration made by the several Subjects of the Empire, of their respective Names, and Places of abode, before proper Magistrates, in the City of *Rome*, call'd *Censors*; and in the Provinces *Censitores*, by whom the same were register'd. See **CENSOR**.

This Declaration was accompany'd with a Catalogue, or Enumeration in writing, of all the Estates, Lands, and Heritages they possess'd; their Quantity, Quality, Place, Tenants, Domicilicks, Slaves, &c.

Hence, also, *Census* came to signify a Person who had made such a Declaration: In which Sense it was oppos'd to *Inscensus*, a Person who had not render'd his Estate or Name to be register'd.

The *Census* was instituted by King *Servius*; and was held every five Years. It went thro all the Ranks of

People, tho' under different Names: that of the common People was call'd *Census*, or *Lustrum*; that of the Knights *Census*, *Recoгно*, *Recognitio*; that of the Senators, *Leclio*, *Relictio*.

In the *Voconian Law*, *Census* is us'd for a Man, whose Estate, in the *Censor's Books*, is valu'd at 100000 *Sesterties*.

CENTAUR, in Astronomy, a Part, or Moiety of a Southern Constellation, in form, half Man, half Horse, usually join'd with the *Wolf*. See CENTAURUS cum Lupo.

The Word comes from the Greek $\kappa\epsilon\tau\alpha\upsilon\tau\alpha\upsilon\tau\omicron\varsigma$; form'd of *κεταυ*, *taurus*, and *ταυρος*, *taurus*.

CENTAURUS cum Lupo, Centaur with the Wolf, in Astronomy, a Constellation of the Southern Hemisphere. See CONSTELLATION.

The Stars in the Constellation *Centaurus cum Lupo*, in *Prologus's Catalogue*, are 19; in *Tychon's* 45; in the *Britannic Catalogue*, they are 13. The Order, Names, Longitudes, Latitudes, Magnitudes, &c. whereof, are as follow.

Stars in the Constellation CENTAURUS cum LUPO.				
Names and Situation of the Stars.	Right Ascen.	Longitude.	Latitude.	Magnit.
Inform. before the Head	m 25 41 40	22 33 13	5	5
Preced. in the Head of the Centaur	m 25 32 1	20 33 3	4	5
South. in the Head	3 41 36	18 24 24	4	5
Middle	3 35 20	20 2 20	4	5
Subseq. and North. in the Head	3 26 53	18 56 15	4	5
In hind Shoulder of the Centaur	8 0 18	11 59 0	2	3
South. of a in anterior Foot of Wolf	20 21 34	13 57 45	5	6
Subseq. and North. of the same	20 19 49	11 28 1	5	6
Preced. of cont. before Neck of Lupo	23 10 26	17 6 56	4	6
Subsequent	23 37 3	17 37 52	4	6
Preced. of a in the Wolf's Nose	26 21 24	14 25 38	5	6
Contiguous to that	27 3 37	14 34 8	5	6
Subseq. in the Nose	m 28 10 10	13 7 23	5	6

CENTRE, or CENTER, *Centrum*, in Geometry, or CENTRE of a Circle, is a Point in the Middle of a Circle, or circular Figure, from which all Lines drawn to the Circumference are equal. See CIRCLE.

Euclid demonstrates, that the Angle at the Centre is double to that of the Circumference; i. e. the Angle made by two Lines drawn from the Extremes of an Arch to the Centre, is double that made by two Lines drawn from these Extremes to a Point in the Circumference. See CIRCUMFERENCE, and ANGLE.

CENTRE of a Parallelogram, or Polygon, the Point wherein its Diagonals intersect. See PARALLELOGRAM, and POLYGON.

CENTRE of Magnitude, is a Point equally remote from the extreme Parts of a Line, Figure, or Body; or the Middle of a Line, or Plane, by which a Figure or Body is divided into two equal Parts. See MAGNITUDE.

CENTRE of a Sphere, is a Point from which all the Lines drawn to the Surface, are equal. See SPHERE.

The Centre of the Semicircle, by whose Revolution the Sphere is generated, is also that of the Sphere. See SEMICIRCLE.

CENTRE of a Bastion, is a Point in the middle of the Gorge of the Bastion, whence the Capital Line commences; and which is ordinarily at the Angle of the inner Polygon of the Figure. See BASTION, &c.

CENTRE of a Battalion, the Middle of a Battalion; where is usually left a large square Space, for lodging the Clothes and Baggage. See BATTALION.

CENTRE of a Dial, is that Point where its Gnomon or Style, which is plac'd parallel to the Axis of the Earth, intersects the Plane of the Dial; and from thence, in those Dials which have Centres, all the Hour-Lines are drawn. If the Plane of the Dial be parallel to the Axis of the Earth, it can have no Centre at all, but all the Hour-Lines will be parallel to the Style, and to one another. See DIAL.

CENTRE of a Conic Section, is the Point wherein all the Diameters concur. See DIAMETER; see also CONIC SECTION.

This Point, in the *Ellipsis*, is within the Figure; and, in the *Hyperbola*, without. See CENTRE of an Ellipsis, &c.

CENTRE of an Ellipsis, is that Point where the two Diameters, the Transverse and the Conjugate, intersect each other. See ELLIPSIS.

CENTRE of an Hyperbola, is a Point in the Middle of the Transverse Axis. See HYPERBOLA; and TRANSVERSE AXIS.

CENTRE of a Curve, of the higher Kind, is the Point where two Diameters concur. See DIAMETER.

Where all the Diameters concur in the same Point, Sir *Isaac Newton* calls it, the general Centre. See CURVE.

CENTRE of Gravitation, or Attraction, in Physics, is that Point to which a revolving Planet, or Comet, is impell'd, or attracted by the Force, or Impetus of Gravity. See GRAVITATION, and ATTRACTION.

CENTRE of Gravity, in Mechanics, is a Point within a Body, thro' which if a Plane pass, the Segments on each

side will equi-ponderate, i. e. neither of them can move the other. See GRAVITY.

Hence, if the Deflect of the Centre of Gravity be prevented, or if the Body be suspended by its Centre of Gravity, it will continue at rest. See MOTION, and REST.

The whole Gravity of a Body may be conceiv'd united in its Centre; and therefore, in Demonstrations, 'tis usual, for the Body, to substitute the Centre.

Thro' the Centre of Gravity passes a right Line, call'd the Diameter of Gravity: the Intersection, therefore, of two such Diameters, determines the Centre.

The Plane whereon the Centre of Gravity is plac'd, is call'd the Plane of Gravity: so that the common Intersection of two such Planes, determines the Diameter of Gravity.

In homogenous Bodies, which may be divided lengthwise into similar and equal Parts, the Centre of Gravity is the same with the Centre of Magnitude. If, therefore, a Line, or a Cylinder be bisected, the Point of Section will be the Centre of Gravity.

Common CENTRE of Gravity of two Bodies, is a Point so situated, in the right Line, joining the Centres of the two Bodies, as that, if the Point be suspended, the two Bodies will equi-ponderate, and rest in any Situation: Thus, the Point of Suspension in a common Balance, or in a Roman Steelyard, where the two Weights equi-ponderate, is the common Centre of Gravity of the two Weights.

Laws of the CENTRE of Gravity.

1. If the Centres of Gravity of two Bodies A and B, (Tab. *Mechanics*, Fig. 15.) be join'd by the right Line AB, the Distances BC and CA, of the common Centre of Gravity C, from the particular Centres of Gravity B and A, are reciprocally as the Weights A and B: See this demonstrated under BALANCE.

Hence, if the Gravities of the Bodies A and B be equal, the common Centre of Gravity C, will be in the Middle of the right Line AB. Again, since $A : B :: BC : AC$; A will be to AC :: B : BC; whence, it appears, that the Powers of equi-ponderating Bodies, are to be estimat'd by the *Fallum* of the Mass, multiply'd into its Distance from the Centre of Gravity; which *Fallum* is usually call'd the *Momentum* of the Weights. See MOMENTUM.

Further, since $A : B :: BC : AC$, $A + B : A :: BC + AC : BC$.

The common Centre of Gravity, therefore C, of two Bodies, will be found, if the *Fallum* of one Weight A, into the Distance of the separate Centres of Gravity A B, be divided by the Sum of the Weights A and B. Suppose, e. g. $A = 12$, $B = 4$, $AB = 24$; therefore, $BC = 24$, $12 : 16 = 18$. If the Weight A be given, and the Distance of the particular Centres of Gravity A B, together with the common Centre of Gravity C; the Weight of B will be found = to A. $AC : BC$; that is, dividing the *Moment* of the given Weight, by the Distance of the Weight requir'd. Suppose, $A = 12$, $BC = 18$, $AC = 6$; then $B = 6$. $12 : 18 :: 12 : 6 = 4$.

2. To determine the common Centre of Gravity of several given Bodies a, b, c, d, (Fig. 13.) in the right Line AB. Find the common Centre of Gravity of the two Bodies a and b, which suppose in F; conceive a Weight $a + b$, apply'd in F; and in the Line FE, find the common Centre of the Weights $a + b$ and c; which suppose in G. Lastly, in BG, suppose a Weight $a + b + c$ apply'd, equal to the two $a + b$ and c; and find the common Centre of Gravity between this and the Weight d, which suppose in H; this H will be the common Centre of Gravity of the Bodies a, b, c, d. And in the same manner might the common Centre of Gravity of any greater number of Bodies be found.

3. Two Weights D and E, (Fig. 14.) being suspended without their common Centre of Gravity in C, to determine which of them preponderates, and how much. Multiply each into its Distances, from the Centre of Suspension; that Side on which the *Fallum* is greatest, will preponderate; and the Difference between the two, will be the Weight wherewith it preponderates.

Hence, the *Momentum* of the Weights D and E, suspended without the Centre of Gravity, are in a Ratio compounded of the Weights D and E, and the Distances from the Point of Suspension. Hence also the *Momentum* of a Weight suspended in the very Point C, will have no effect at all in respect of the rest DE.

4. To determine the Preponderation where several Bodies a, b, c, d, (Fig. 15.) are suspended without the common Centre of Gravity in C. Multiply the Weights c and d into their Distances from the Point of Suspension CE and EB; the Sum will be the *Momentum* of their Weights, or their Ponderation towards the right: Then multiply the Weights a and b into their Distances, AC and CD, the Sum will be the Ponderation towards the left: Subtracting, therefore, the one from the other, the Remainder will be the Preponderation requir'd.

5. Any Number of Weights a, b, c, d, being suspended without the common Centre of Gravity in C, and preponderating

directing towards the right; to determine the Point F, from whence the Sum of all the Weights being suspended, the Preponderation shall continue the same as in their former Situation.

Find the *Momentum* wherewith the Weights *c* and *d* preponderate towards the right; since the *Momentum* of the Sum of the Weights to be suspended in F, is to be equal to it, the *Momentum* now found, will be the *Factum* of C F into the Sum of the Weights: This, therefore, being divided by the Sum of the Weights, the Quotient will be the Distance C F, at which the Sum of the Weights is to be suspended, that the Preponderation may continue the same as before.

6. To find the Centre of Gravity in a Parallelogram and Parallelepiped. Draw the Diagonals AD and EG, (Fig. 14.) likewise CB and HE; since each Diagonal, AB and CB, divides the Parallelogram into two equal Parts, each passes thro the Centre of Gravity; consequently, the Point of Intersection I, is the Centre of Gravity of the Parallelogram. In like manner, since both the Plane CBFH and ADGE, divide the Parallelepiped into two equal Parts, each passes thro its Centre of Gravity; so that the common Intersection IK, is the Diameter of Gravity, the Middle whereof is the Centre.

After the same manner may the Centre of Gravity be found in Prisms and Cylinders; it being the middle Point of the right Line that joins the Centres of Gravity of their opposite Bases.

7. In regular Polygons, the Centre of Gravity is the same with the Centre of the circumscrib'd Parallelogram.

8. To find the Centre of Gravity of a Cone and a Pyramid. The Centre of Gravity of a Cone, is in its Axis AC, (Fig. 17.) If then A P = x , P ρ = d , x , the Weight in the same Cone is $ppx^2 dx : 2 a^2$; and therefore its *Momentum* $ppx^2 dx : 2 a^2$. Hence the Sum of the *Moments* $ppx^2 dx : 8 a^2$; which divided by the Sum of the Weights $ppx^2 : 6 a^2$, gives the Distance of the Centre of Gravity of the Portion MN, from the Vertex A = $6 a^2 : pp x^2 : 8 a^2$ $ppx^2 = \frac{2}{3} x = \frac{1}{2} A \rho$; wherefore, the Centre of Gravity of the entire Cone, is distant from the Vertex, $\frac{1}{2}$ of AC. And in the same manner is found the Distance of the Centre of Gravity from the Vertex of the Pyramid $\frac{1}{4}$ A C.

9. To determine the Centre of Gravity in a Triangle BAC, (Fig. 18.) Draw the right Line AD, bisecting the Base BC in D; since $\Delta BAD = \Delta DAC$, each may be divided into the same Number of Weights, apply'd in the same manner on each side to the common Axis AD: So that the Centre of Gravity of the ΔBAC , will be in AD. To determine the precise Point in that, let AD = a , BC = b , P = x , MN = g , then will
 $A P : M N :: A D : B C$
 $x : g :: a : b$

Hence, $g = b x : a$. Draw AE = c perpendicular to BC; then AD : AE = AP : A Q; and therefore, AQ = $c x : a$, and Qg = $c d x : a$. Whence, the *Momentum* $g x dx = c b x^2 dx : a^2$, and $g x dx = c b x^2 : 3 a^2$; which Sum divided by the Area of the Triangle $M N = c b x^2 : 2 a^2$, gives the Distance of the Centre of Gravity from the Vertex = $2 a b x^2 : 3 a b x^2 = \frac{2}{3} x$. If then for x , be substituted a , the Distance of the Centre of Gravity of the Δ , from the Vertex, will be found $\frac{2}{3} a$.

10. For the Centre of Gravity in a Parabola, (Fig. 19.) Its Distance from the Vertex A, is found the Space AF. In a cubical Paraboloid, the Distance of the Centre from the Vertex, is $\frac{1}{4}$ A P. In a Biquadratic Paraboloid, $\frac{1}{5}$ A P. In a Surdfold Paraboloid, $\frac{1}{7}$ A P. In the Exterior Parabola A S T, the Centre of Gravity is at the Distance A L. In the Cubical Paraboloid, a A Q. In a Biquadratic Paraboloid, $\frac{1}{5}$ A Q. In a Surdfold Paraboloid, $\frac{1}{7}$ A Q.

11. The Centre of Gravity in the Arch of a Circle, is distant from the Centre of the Arch by a Line, which is a third Proportional to the Quadrant and the Radius. In a Sector of a Circle, the Distance of the Centre of Gravity from the Centre of the Circle, is to the Distance of the Centre of Gravity of the Arch, as 2 to 3.

For the Centre of Gravity of Segments, Lines, Parabolic Conoids, Spheroids, truncated Cones, &c. as being Cases more operose, and at the same time more out of the way; we refer to *Wolffius's Elem. Mathes.* Tom. I.

12. To determine the Centre of Gravity in any Body mechanically. Lay the given Body H I, (Fig. 20.) on an extended Rope, or the Edge of a triangular Prism F G, bringing it this and that way, till the Parts on either Side are in *Equilibrio*; the Plane whose Side is K L, passes thro the Centre of Gravity. Balance it again on the same, only changing its Situation; then will the Cord M N, pass thro the Centre of Gravity; so that the Intersection of the two Lines M N and K L, determines the Point O in the Surface of the Body requir'd.

The same may be done by laying the Body on a horizontal Table, (as near the Edge as is possible, without its falling) in two Positions, lengthwise and breadthwise: the common Intersection of the two Lines contiguous to the

Edge, will be its Centre of Gravity. Or, it may be done by laying the Body on the Point of a Style, &c. till it rest in *Equilibrio*. 'Twas by this Method, *Borelli* found the Centre of Gravity in an human Body, to be between the *Noies* and *Pubis*; so that the whole Gravity of the Body is there collected, where Nature has plac'd the Genitals; An Instance of the Wisdom of the Creator, in placing the *Membrum Virile* in that Place, which of all others is the most convenient for the Affair of Copulation.

13. Every Figure, whether superficial or solid, generated by the Motion of a Line, or Figure, is equal to the *Factum* of the generating Magnitude, multiply'd into the Way of its Centre of Gravity, or the Line its Centre of Gravity describes. See the Demonstration hereof, under the Article *CENTRO BARI Method*.

The preceding elegant Theorem, is look'd on as one of the noblest Geometrical Discoveries made in the last Age; and is the Foundation of the *Methodus Centro-barica*. *Pappus*, indeed, gave the first Hint long ago; but it was the Jesuit *Galidius* that brought it to Maturity. *Leibnitz* shows it will hold, if the Axis, or Centre, be continually chang'd during the generating Motion: The Corollaries are too numerous to be here detail'd.

CENTRE of Motion, is a Point round which one or more heavy Bodies, that have one common Centre of Gravity, revolve. u. g. If the Weights P and Q, (Tab. *Mechanics*, Fig. 21.) revolve about the Point N, so as when P descends, Q ascends, N is said to be the Centre of Motion. See MOTION.

'Tis demonstrat'd in Mechanics, that the Distance IN, of the Centre of Gravity of any particular Weight, from the common Centre of Gravity, or the Centre of Motion N, is perpendicular to the Line of Direction I P.

CENTRE of Oscillation, a Point wherein, if the whole Gravity of a compound Pendulum be collected, the several Oscillations will be perform'd in the same Time as before: See OSCILLATION.

Hence, its Distance from the Point of Suspension, is equal to the Length of a simple Pendulum, whose Oscillations are Isochronal with those of the compound one. See PENDULUM.

Laws of the CENTRE of Oscillation.

1. If several Weights DFHB, (Tab. *Mechanics*, Fig. 22.) whose Gravity is suppos'd collect'd in the Points DEHB, constantly retain the same Distance between themselves and the Point of Suspension A; and the Pendulum thus compounded, performs its Oscillations about A; the Distance of the Centre of Oscillation O, from the Point of Suspension O A, will be had by multiplying the several Weights into the Squares of the Distances, and dividing the Aggregate by the Sum of the Moments of their Weight.

2. To determine the Centre of Oscillation in a right Line AB, (Fig. 23.) Let AB = a , AD = x , then will the infinitely small Particle DP = dx , the *Momentum* of its Weight $dx x$; consequently the Distance of the Centre of Oscillation in the Part AD, from the Point of Suspension A = $\int x dx : \int dx dx = \frac{1}{2} x^2 : \frac{1}{2} x = x$. If then for x be substituted a , the Distance of the Centre of Oscillation in the right Line AB = $\frac{1}{2} a$. In this manner is found the Centre of Oscillation of a Wire, oscillating about one of its Extremes.

3. To determine the Centre of Oscillation of the Rectangle R I H S, (Fig. 24.) suspended in the middle Point A, of the Side R I, and oscillating about its Axis R I. Let R I = S H = a , A P, then will P ρ = dx , and the Element of the Area; consequently one Weight = $a dx$, and its *Momentum* $a x dx$. Wherefore, $\int a x^2 dx : \int a x dx = \frac{1}{3} a x^3 : \frac{1}{2} a x^2 = \frac{2}{3} x$, indefinitely expresses the Distance of the Centre of Oscillation, from the Axis of Oscillation in the Segment R C D I. If then for x be substituted the Altitude of the whole Rectangle RS = b , we shall have the Distance of the Centre of Oscillation from the Axis = $\frac{2}{3} b$.

For the Centre of Oscillation in an Equilateral Triangle, oscillating about its Axis, parallel to its Base, its Distance from the Vertex, is found = $\frac{1}{2}$ of the Altitude of the Triangle.

Of an Equilateral Triangle oscillating about its Base, its Distance from the Vertex is found = $\frac{1}{2}$ the Altitude of the Triangle.

For the Centre of Oscillation in an Equilateral Triangle, suspended by an inflexible Thread, void of Gravity, and oscillating about its Axis parallel to its Base; its Distance from the Vertex, is found = $\frac{1}{2}$ the Altitude of the Triangle.

For the Centres of Oscillation of Parabolas, and Curves of the like kind, oscillating about their Axis, parallel to their Bases, they are found as follows.

In the Apollonian Parabola, the Distance of the Centre from the Axis, = $\frac{1}{2}$ of its Diameter.

In a Cubical Paraboloid, the Distance of the Centre of Oscillation from the Axis, = $\frac{1}{7}$ of the Diameter.

In a Biquadratic Paraboloid, the Distance of the Centre from the Axis, = $\frac{1}{7}$ of the Diameter.

In solid and plane Figures agitated laterally, *i. e.* about the Axis of Oscillation, perpendicular to the Plane of the Figure, the Investigation of the Centre of Oscillation is somewhat difficult; in regard, all the Parts of the Weight, by reason of their unequal Distance from the Point of Suspension, don't move with the same Velocity; as is shown by *Huygens*, in his *Horol. Officil.* He found, in this Case, the Distance of the Centre of Oscillation, from the Axis in a Circle, to be $\frac{1}{2}$ of the Diameter: In a Rectangle, suspended by one of its Angles, $\frac{2}{3}$ of the Diagonal: In a Parabola, suspended by its Vertex, $\frac{2}{3}$ of its Axis, and $\frac{2}{3}$ of the Parameter; suspended from a Point in the Middle of the Base, $\frac{2}{3}$ of the Axis, and $\frac{2}{3}$ of the Parameter: In the Sector of a Circle, $\frac{2}{3}$ of a right Line; which is to the Radius, as the Arch to the Subtense: In a Cone, $\frac{2}{3}$ of the Axis, and $\frac{2}{3}$ of the third proportional to the Axis, and the Semidiameter of the Base: In a Sphere, suspended from a Point in the Surface, $\frac{2}{3}$ of the Diameter: in the same, suspended from a Point without the Sphere, (as is usually the Case in Pendulums) $\frac{2}{3}$ of a third proportional to that compos'd of the Semidiameter and length of the Thread, and the Semidiameter it self: In a Cylinder, $\frac{2}{3}$ of the Altitude, and $\frac{2}{3}$ of the Line, which is to the Semidiameter of the Base, as that is to the Altitude.

CENTRE of Percussion, in a moving Body, is that Point wherein the Percussion is the greatest, wherein the whole percutient Force of the Body is suppos'd to be collect'd; or about which the Impetus of the Parts is balanc'd on every side. See PERCUSSION.

Laws of the CENTRE of Percussion.

1. The Centre of Percussion, is the same with the Centre of Oscillation, where the percutient Body revolves round a fix'd Point; and is determin'd in the same manner, *viz.* by considering the Impetus of the Parts, as so many Weights apply'd to an inflexible right Line, void of Gravity; *i. e.* by dividing the Sum of the *Foetus* of the Impetus of the Parts, multiply'd by their Distances from the Point of Suspension, by the Sum of the Impetus's. What, therefore, has been above shewn of the Centre of Oscillation, will hold of the Centre of Percussion, where the percutient Body moves round a fix'd Point. See CENTRE of Oscillation.

2. The Centre of Percussion is the same with the Centre of Gravity, if all the Parts of the percutient Body be carry'd with a parallel Motion, or with the same Celerity: for the *Momenta* are the *Foetus* of the Weights into the Celerities. Wherefore, to multiply equi-ponderating Bodies by the same Velocity, is the same thing as to take equi-multiples: But the equi-multiples of equi-ponderating Bodies, themselves equi-ponderate; therefore, equivalent *Momenta* are dispos'd about the Centre of Gravity: consequently the Centre of Percussion in this Case, coincides with that of Gravity; and what is shewn of the one, will hold of the other. See CENTRE of Gravity.

CENTRE of Conversion, in Mechanics, a Term first us'd by *M. Parent*. Its Signification is thus conceiv'd: If a Stick be laid on a flagrant Water, and drawn by a Thread fasten'd to it, so that the Thread always makes the same Angle with the Stick; always, *v. g.* a right Angle; the Stick will be found to turn on one of its Points, which will be immovable; which Point is term'd the Centre of Conversion. For the greater ease, the Thread may be conceiv'd fasten'd to one End of the Stick.

This Effect arises from the Resistance of the Fluid, and the manner wherein it divides: for, imagine the first Moment of Traction; 'tis certain, here, the Resistance of the Parts of the Fluid to be displac'd, tends to turn the Stick around the Point to which the Thread is fasten'd; as on a Centre: So that in the present Instance, the Staff wou'd describe precisely the Quadrant of a Circle: after which, the Fluid wou'd no longer bear the Stick lengthwise; but in a circular Motion, in such manner, as that the free End of the Stick, and the Parts nearest it, wou'd describe larger Arches of Circles than the rest, and have a greater Velocity. The Resistance, therefore, of the Fluid, which tends to impress a circular Motion on the Stick, around the Point to which the Thread is fasten'd, tends to impress a greater Velocity on the Parts next the other Extremity; or, which is the same thing, those Parts require a greater Velocity to surmount the Resistance of the Fluid: So that the Stick will not have that circular Motion around the Point to which the Thread is fasten'd; or, the Resistance of the Fluid is greater towards the free Extreme of the Stick, and still less towards the other Extreme. Now, all the Columns, or Threads of Water which resist the Stick, must be suppos'd of the same Length, or the same Mass. One may therefore find on the Stick such a Point, as that taking a great number of those Threads on that Side which resists the least, and a less number on that Side where they resist the most; there will be an exact Compensation, and the Forces be equal on each Side: 'Tis this Point is the Centre of Conversion. And as the same Reasoning has place

in all Motions of Traction made in the same manner, this Centre is always the same Point.

The grand Question here arising, is to know precisely in what Point the Centre of Conversion is found: This *M. Parent* has determin'd by an infinite deal of Calculation. If the Stick drawn by one Extremity be a frail Line divided into 20 Parts, reckoning from the Thread, the Centre of Conversion, he finds, will be nearly on the 15th. If it be a Line, but a Surface or a Solid, there will be some change in the Situation of the Centre of Conversion, according to the Surface or the Solid.

If in lieu of a Body swimming in a Fluid, we suppose it laid on a rough uneven Plane; the Resistance of this Plane to the Motion of the Body, will always be divided in the same manner, and determine the same Centre of Conversion. This Resistance is, precisely, what we call Friction, so prejudicial to the Effects of Machines. See FRICTION.

CENTO, in Poetry, a Work wholly compos'd of Verses, or Passages promiscuously taken from other Authors; only dispos'd in a new Form, or Order. *Proba Falconia* has wrote the Life of Jesus Christ, in Centos taken from *Virgil*. *Alex. Roffe* has done the like in his *Christiados*; and *Stephen de Pleurre* the same: An Influence of whose Centos on the Adoration of the Magi, is as follows.

Adoratio Magorum, Matt. 2.

6, &c. <i>Mat. 25.</i>	<i>Eccc autem prius sub luminis solis, & ventis,</i>	
2, &c. 696.	<i>Bella facem duces multas cum luce curavit:</i>	
5, &c. 126.	<i>Significque Vltas * oculi in regione ferrea,</i>	8, &c. 528.
8, &c. 337.	<i>Tum Reges * (credo quia sit divinitus illis</i>	1, &c. 415.
1, &c. 616.	<i>Ingenium, & rerum fato prestantia majus</i>	
7, &c. 97.	<i>Extrema venient * qua enique est capis laeti</i>	5, &c. 100.
11, &c. 333.	<i>Momenta portantes * molles sua thorace dabal</i>	7, &c. 17.
3, &c. 464.	<i>Dona delinse auro gravitas, * myrrhoque madentes</i>	12, &c. 100.
9, &c. 659.	<i>Aggesserit Deum Regem, * Regumque Parentem,</i>	6, &c. 528.
1, &c. 427.	<i>Mutaverit vias, * profectis ordine vetis:</i>	10, &c. 528.
6, &c. 26.	<i>Insuper per iter, * spatis in sua quisque recessit,</i>	13, &c. 126.

Anthonis has laid down the Rules to be observ'd in composing Centos. The Pieces, he says, may be taken either from the same Poet, or from several; and the Verses may be either taken entire, or divided into two; one half to be connected, with another half taken elsewhere: but two Verses never to be us'd running, nor much less than half a Verse to be taken. Agreeable to these Rules, he has made a pleasant Cento from *Virgil*.

The *Politics* of *Lippius* are only Centos; there being nothing of his own but Conjunctions and Particles.

The Word comes from the Latin *Centio*, a Cloak made of Patches; and that from the *Greek ushous*. The Roman Soldiers us'd these Centos, or old Stuffs patch'd over each other, to guard themselves from the Strokes of their Enemies.

Others say, that Centos were properly us'd for the patches of Leather, &c. wherewith their Galleries or Screens, called *Vines*, were cover'd; under which the Besiegers made their Approaches towards any Place.

Hence *Centonarii*, the Persons whose Business was to prepare these Centos.

CENTRAL, something relating to a Centre; see CENTRE. Thus, we say, Central Eclipse, Central Fire, Central Forces, Central Rule, &c. See CENTRAL Forces, CENTRAL Rule, &c. See also FIRE, ECLIPSE, &c.

CENTRAL Forces, the *Fires*, or Powers whereby a moving Body either tends towards the Centre of Motion, or recedes from it. See CENTRE of Motion; see also FORCE, and VIS.

Central Forces are divided into two Kinds, with regard to their different Relations to the Centre, *viz.* *Centripetal*, and *Centrifugal*.

CENTRIFUGAL Force, is that whereby a Body revolving round a Centre, endeavours to recede from it.

'Tis one of the establish'd Laws of Nature, That all Motion is of it self rectilinear; (see MOTION) and that the moving Body never recedes from its first right Line, till some new Impulse be superadd'd in a different Direction: After that new Impulse, the Motion becomes compound'd, but continues still rectilinear; tho' the Direction of the Line be alter'd. See COMPOUND Motion. To move in a Curve, it must receive a new Impulse, and that in a different Direction, every Moment; a Curve not being reducible to right Lines, unless infinitely small ones. If then a Body continually driven towards a Centre, be projected in a Line that does not go thro' that Centre, it will describe a Curve; in each Point whereof, A (*Tab. Mechanick*, Fig. 25.) it will endeavour to recede from the Curve, and proceed in the Tangent AD: and, if nothing hinder'd, wou'd actually proceed; so as in the same Time wherein it describes the Arch AE, it wou'd recede the length of the Line DE, perpendicular to AD, by its *Centrifugal Force*. The *Centrifugal Force*, therefore, is as the right Line DE, perpendicular to AD; supposing the Arch AE infinitely small. See INFINITE.

The Effect of the *Centrifugal Force* is such, that a Body, oblig'd to describe a Circle, describes the largest it possibly can: a greater Circle being as it were less circular, and less distant from a right Line than a small one. A Body therefore suffers more violence, and exerts its *Centrifugal Force* more when it describes a little Circle, than when a large one.

'Tis the same in other Curves as in Circles; for a Curve, whatever it be, may be esteem'd as compos'd of an infinity of Arches of infinitely small Circles, all describ'd on different Radii; so that 'tis those Places where the Curve has the greatest Curvity, that the little Arches are most circular: Thus, in the same Curve, the *Centrifugal Force* of the Body that describes it, varies according to the several Points wherein it is found.

CENTRIFUGAL FORCE, is that Power whereby a moveable Body, impell'd in the right Line AG, (Fig 24.) is drawn out of its rectilinear Motion, to proceed in a Curve: The *Centrifugal Force*, therefore, is as the right Line DE to AB; supposing the Arch AE infinitely small. Hence, the *Centrifugal* and *Centrifugal Forces* are equal.

Laws of CENTRIFUGAL Forces.

1. The following Rule, for which we are oblig'd to the Marquis de l'Hospital, opens at once all the Mysteries of *Central Forces*: Suppose a Body of any determinate Weight to move uniformly round a Centre with any certain Velocity; find from what height it must have fallen to acquire that Velocity: then, as the Radius of the Circle it describes, is to double that Height, so is its Weight to its *Centrifugal Force*. Hence, 'tis easy to infer, that,

2. If two Bodies, equal in weight, describe Peripheries of unequal Circles in equal Times, their *Central Forces* are as their Diameters AB, and HL. And hence, if the *Central Forces* of two Bodies, describing Peripheries of two unequal Circles, be as their Diameters, they pass over the same in equal Times.

3. The *Central Force* of a Body moving in the Periphery of a Circle, is as the Square of the infinitely small Arch A E, divided by the Diameter A B. Since then a Body, by an equable Motion in equal Times, describes equal Arches A E; the *Central Force* wherewith the Body is impell'd in the Periphery of the Circle, is constantly the same.

4. If two Bodies describe different Peripheries by an equable Motion, their *Central Forces* are in a Ratio, compounded of the duplicate Ratio of their Celerities, and the reciprocal one of their Diameters. Hence, if the Celerities be equal, the *Central Forces* will be reciprocally as their Diameters; and if the Diameters A B and H L be equal, i. e. if each Moveable proceed in the same Periphery, but with unequal Celerities, the *Central Forces* will be in a duplicate Ratio of the Velocities.

If the *Central Forces* of the two Bodies moving in different Peripheries be equal, the Diameters of the Circle A B, and H L, will be in a duplicate Ratio of the Celerities.

5. If two Bodies, moving in unequal Peripheries, be acted on by the same *Central Force*, the Time in the larger is to that in the smaller, in a subduplicate Ratio of the greater Diameter A B, to the less H L; wherefore, T : t :: D : d: That is, the Diameters of the Circles in whose Peripheries those Bodies are acted on by the same *Central Force*, are in a duplicate Ratio of the Times. Hence also the Times wherein like Peripheries or Arches are run over by Bodies impell'd by the same *Central Force*, are in proportion to their Velocities.

The *Central Forces* are in a Ratio, compounded of the direct Ratio of the Diameters, and the reciprocal one of the Squares of the Times, by the entire Peripheries.

6. If the Times wherein the Bodies are carry'd thro' the same entire Peripheries, or similar Arches, be as the Diameters of the Circles, the *Central Forces* are reciprocally as the same Diameters.

7. If a Body move uniformly in the Periphery of a Circle, with the Velocity it acquires by falling the Height A L; the *Central Force* will be to the Gravity, as double the Altitude A L, to the Radius C A. If therefore the Gravity of the Body be call'd G, the *Centrifugal Force* will be 2 A L G : C A.

8. If a heavy Body move equably in the Periphery of a Circle, and with the Velocity which it acquires by falling the height A L, equal to half the Radius; the *Central Force* will be equal to the Gravity. And again, if the *Central Force* be equal to the Gravity, 'tis carry'd in the Periphery of the Circle, with the same Gravity which it acquires in falling a height equal to half the Radius.

9. If the *Central Force* be equal to the Gravity, the Time it takes up in the entire Periphery, is to the Time of the Descent thro' half the Radius, as the Periphery to the Radius.

10. If two Bodies move in unequal Peripheries, and with an unequal Velocity, which is reciprocally in a subduplicate

Ratio of the Diameters; the *Central Forces* are in a Duplicate Ratio of the Distances from the Centre of the Forces, taken reciprocally.

11. If two Bodies move in unequal Peripheries, with Celerities that are reciprocally as the Diameters; their *Central Forces* will be reciprocally as the Cubes of their Distances from the Centre of the Forces.

12. If the Velocities of two Bodies moving in unequal Peripheries, be reciprocally in a subduplicate Ratio of the Diameters; the Times wherein they pass the whole Periphery, or similar Arches, are reciprocally in a triplicate Ratio of the Distances from the Centre of the Forces: Wherefore, if the *Central Forces* be reciprocally in a duplicate Ratio of the Distances from the Centre, the Times wherein the entire Peripheries, or similar Arches, are pass'd over, are reciprocally in a triplicate Ratio of the Distances.

13. If a Body move in a Curve Line, in such manner as that the Radius C B, Fig. drawn from it to the fix'd Point C, plac'd in the same Plane, describes Areas B A C, B C E, &c. proportional to the Times, or equal in any given Time, it is sollicit'd towards the Point C by a *Centrifugal Force*.

14. If a Body proceed according to the Direction of the right Line A D, and be sollicit'd by a *Centrifugal Force* towards a fix'd Point C, plac'd in the same Plane; it describes a Curve, whose Convexity is towards C, and whose several Arches, those comprehended between the two Radii A B and C B, are proportional to the Times.

15. However the *Central Forces* differ from one another, they may be compar'd together; for they are always in a Ratio compounded of the Ratio of the Quantities of Matter in the revolving Bodies, and the Ratio of the Distances from the Centre; and also in an inverse Ratio of the Squares of the periodical Times. If then you multiply the Quantity of Matter in each Body by its Distance from the Centre, and divide the Product by the Square of the periodical Time, the Quotients of the Division will be to one another in the said compound Ratio, that is, as the *Central Forces*.

16. When the Quantities of Matter are equal, the Distances themselves must be divided by the Squares of the periodical Times, to determine the Proportion of the *Central Forces*: In that Case, if the Squares of the periodical Times are to one another, as the Cubes of the Distances, the Quotients of the Divisions, as well as the *Central Forces*, will be in an inverse Ratio of the Squares of the Distances.

17. When the Force by which a Body is carry'd towards a Point is not every where the same, but is either increas'd or diminish'd, in proportion to the Distance from the Centre; several Curves will thence arise in a certain proportion. If the Force decreases, in an inverse Ratio of the Squares of the Distances from that Point, the Body will describe an *Ellipsis*; which is an oval Curve, in which there are two Points call'd the *Foci*, and the Point towards which the Force is directed falls into one of them: So that in every Revolution, the Body once approaches to, and once recedes from it. The Circle also belongs to that sort of Curves, and so in that Case the Body may also describe a Circle. The Body may also (by supposing a greater Celerity in it) describe the two remaining Conic Sections, viz. the *Parabola* and *Hyperbola-Curves*, which do not return into themselves: On the contrary, if the Force increases with the Distance, and that in a Ratio of the Distance it self, the Body will again describe an *Ellipsis*; but the Point to which the Force is directed is the Centre of the Ellipse; and the Body, in each Revolution, will twice approach to, and again twice recede from that Point. In this Case also, a Body may move in a Circle, for the Reason abovemention'd. See ORBIT, PLANET, and PROPRIETIES.

CENTRAL RULE, is a Rule, or Method discover'd by our Countryman, Mr. Thomas Baker, Rector of Nympton in Devon, whereby to find the Centre of a Circle; design'd to cut the Parabola in as many Points, as an Equation to be constructed hath real Roots.

Its principal Use is in the Construction of Equations; and he has apply'd it with good Success as far as Biquadratics. See CONSTRUCTION, and EQUATION.

The Rules are these,

$$1. \frac{L}{2} + \frac{g}{8L} = b = C D.$$

$$2. \frac{L}{4} + \frac{p p p}{6 L L} \pm \frac{p q}{4 L L} \pm \frac{r}{2 L L} = d = D E.$$

Or by Construction, because L = 1, as is suppos'd, to avoid Fractions,

$$1. \frac{1}{2} + \frac{p p}{8} \pm \frac{q}{2} = b = C D.$$

$$2. \frac{1}{4} + \frac{p p p}{6} \pm \frac{p q}{4} \pm \frac{r}{2} = d = D E.$$

CENTRO-BARYC Method of Guldinick, In Mechanics, is a Method of measuring, or determining the Quantity
B b b of

of a Surface, or a Solid, by means of its Centre of Gravity.

The Doctrine is compris'd in the following Theorem, with its Corollaries.

Every Figure, whether superficial or solid, generated by the Motion of a Line or a Figure, is equal to the Factum of the generating Magnitude into the way of its Centre of Gravity, or the Line which its Centre of Gravity describes. See Centre of GRAVITY.

Demonst. For suppose the Weight of the whole generating Magnitude collected in the Centre of Gravity; the whole Weight produc'd by its Motion, will be equal to the Factum of the Weight mov'd, into the Centre of Gravity. But when Lines and Figures are consider'd like homogeneous heavy Bodies, their Weights are as their Bolks; and therefore, the Weight mov'd is the generating Magnitude; and the Weight produced, that generated. The Figure generated, therefore, is equal to the Factum of the Magnitude, into the Way of its Centre of Gravity. *Q. E. D.*

Corol. I. Since a Parallelogram ABCD (Tab. *Mechanicks*, Fig. 26.) is describ'd, if the right Line AB, proceed according to the Direction of another AC, with a Motion still parallel to it self; and the Way of the Centre of Gravity F, is equal to the right Line EF, perpendicular to CD; that is, to the Altitude of the Parallelogram: Its Area is equal to the Factum of the Base CD, or the describing Line into the Altitude EF. See PARALLELOGRAM.

Corol. II. In the same manner it appears, that the Solidity of all Bodies, which proceed according to the Direction of any right Line AC, is had by multiplying the describing Plane by the Altitude. See PRISM, and CYLINDER.

Corol. III. Since a Circle is describ'd, if the Radius CL (Fig. 27.) revolve round a Centre C, and the Centre of Gravity of the Radius CL, be in the Middle F; the Way of the Centre of Gravity is a Periphery of a Circle *ax*, describ'd by a subduple Radius: Consequently the Area of the Circle, is equal to the Factum of the Radius CL, into the Periphery describ'd by the subduple Radius CF. See CIRCLE.

Corol. IV. If a Rectangle ABCD, (Tab. *Mechanicks*, Fig. 28.) revolve about its Axis AD; the Rectangle will describe a Cylinder, and the Side BC the Superficies of a Cylinder. But the Centre of Gravity of the right Line BC, is in the Middle F; and the Centre of Gravity of the generating Plane in the Middle G, of the right Line EG F. The way of this latter, therefore, is the Periphery of a Circle describ'd by the Radius EG; that of the former, the Periphery of a Circle describ'd by the Radius EF. Wherefore, the Superficies of the Cylinder is the Factum of the Altitude BC, into the Periphery of a Circle describ'd by the Radius EF, or the Base. But the Solidity of the Cylinder, is the Factum of the generating Rectangle ABCD, into the Periphery of a Circle describ'd by the Radius EG, which is subduple of EF, or of the Semidiameter of the Cylinder.

Suppose, v. g. the Altitude of the describing Plane, and therefore of the Cylinder BC = a ; the Semidiameter of the Base DC = r ; then will EG = $\frac{1}{2}r$: And supposing the Ratio of the Semidiameter to the Periphery = $1 : m$, the Periphery describ'd by the Radius of $\frac{1}{2}r$ = $\frac{1}{2}m ar$, therefore, multiplying $\frac{1}{2}m ar$ by the Area of the Rectangle AC = $a r$; the Solidity of the Cylinder will be = $\frac{1}{2}m ar^2$. But $\frac{1}{2}m ar^2$ = $\frac{1}{2}r$, the Area of the Circle describ'd by the Radius DG. 'Tis evident, therefore, the Cylinder is equal to the Factum of the Base into the Altitude. See CYLINDER.

Corol. V. In like manner, since the Centre of Gravity of the right Line AB, (Tab. *Mechanicks*, Fig. 17.) is in the middle M, and the Surface of a Cone is describ'd, if the Triangle ABC revolve about its Axis; if PM = $\frac{1}{3}C$; the Superficies of the Cone will be equal to the Factum of its Side AB, into the Periphery describ'd by the Radius PM; or the Subduple of the Semidiameter of the Base BC.

Suppose v. g. BC = r , AB = a ; the Ratio of the Radius to the Periphery $1 : m$; then will PM = $\frac{1}{3}r$, and the Periphery describ'd by this Radius = $\frac{1}{3}m ar$. Therefore, multiplying $\frac{1}{3}m ar$ into the Side of the Cone AB, the Product is the Superficies of $\frac{1}{3}amr$. But $\frac{1}{3}amr$ is also the Factum of $\frac{1}{3}a$ and $m r$; therefore, the Surface of the Cone is the Product of the Periphery, into half the Side. See CONE.

Corol. VI. If the Triangle ACB (Tab. *Mechanicks*, Fig. 29.) revolve about an Axis; it describes a Cone; but if CB divided into two MD, and the right Line AD be drawn, and AO = $\frac{1}{2}AD$; and the Centre of Gravity will be M O. The Solidity of the Cone, therefore, is equal to the Factum of the Triangle CAB, into the Periphery describ'd by the Radius PO; but AD : AO :: BD : OP. and AO = $\frac{1}{2}AD$ and DB = $\frac{1}{2}CB$. Therefore, OP = $\frac{1}{2}DB$ = $\frac{1}{4}CB$.

Suppose v. g. CB = r , AB = a ; the Ratio of the Radius to the Periphery = $1 : m$. Then will OP = $\frac{1}{4}r$ the Periphery describ'd by this Radius $\frac{1}{4}m ar$; the Triangle ACB

= $\frac{1}{4}r^2$; and therefore, the Solidity of the Cone $\frac{1}{4}m ar^2$ Ar = $\frac{1}{4}a m r^3$. But $\frac{1}{4}a m r^3$ = $\frac{1}{4}r$, $m r$, $\frac{1}{4}a$. Or, the Factum of the Base of the Cone into the third Part of the Altitude. See TRIANGLE.

This elegant Theorem, which may be rank'd among the chief Inventions in Geometry of the last Age, was taken notice of long ago by Pappus; but the Jesuit Galenus was the first who let it in its full Light, and exhibited its Use in a variety of Examples. Several other Geometers, after Galenus and Pappus, also us'd it in measuring Solids, and Surfaces generated by a Rotation round a fix'd Axis; especially before the late Invention of the *Calculus Summatorius*; and it may still take place in some Cases, where the summatory *Calculus* would be more difficult. M. Leibnitz has observ'd, that the Method will hold, tho the Axis or Centre be continually chang'd during the generative Motion.

CENTRUM, in Geometry, Mechanics, &c. See CENTRE.

CENTRUM Phonicum, in Acoustics, is the Place where the Speaker stands in the Polyfyllabical and articulate Echoes. See ECHO.

CENTRUM Phonicumprimum, is the Place, or Object that returns the Voice in an Echo. See ECHO.

CENTRUM Tendinosum, in Anatomy, a Point, or Centre, wherein the Tails of the Muscles of the Diaphragm meet. This Centre is perforated towards the right Side, for the *Vena Cava*; towards the left backward; its fleshy Part gives way to the Gula. The descending Trunk of the great Artery, Thoracic Duct, and *Vena Arteria*, pass between its two inferior Processes. See DIAPHRAGM.

CENTURY Box, a wooden Cell, or Lodge, made to shelter the Centry, or Sentry, from the Injuries of the Weather.

In a Fortification, they are usually plac'd on the flanked Angles of the Bastions, on those of the Shoulder, and sometimes in the middle of the Curtain.

CENTUMVIRI, among the Romans, a Court compos'd of 100 Magistrates, or Judges, appointed to decide Differences between the People. See DUCEMVIRI, QUINQUEMVIRI, &c.

CENTURION, *Centurio*, among the Romans, an Officer in the Infantry, who commanded a *Century*, or 200 hundred Men. See CENTURY.

The *Centurion* of the first Cohort of each Legion, was call'd *Principibus*: he was not under the Command of any Tribune, as all the rest were; and had four *Centuries* under his Direction. He guarded the Standard, and the Eagle of the Legion. See PRINCIPITUS.

CENTURY, a thing divided, or rang'd into an hundred Parts.

At the Time when the Roman People were assembled for creating of Magistrates, establishing of Laws, or deliberating of publick Affairs, they were divided into *Centuries*; and to the end their Suffrages might be more easily collected, they voted by *Centuries*: This was done in the *Campus Martius*; and these Assemblies were hence call'd *Comitia Centuriata*.

The Roman Cohorts were distributed into *Ducatus*, commanded by *Ducations*; and *Centuries*, by *Centurions*. Each Cohort consisted of six *Centuries*, and a Legion of sixty. See COHORT.

CENTURY, in Chronology, is the Space of 100 Years. Church History is computed chiefly by *Centuries*, commencing from our Saviour's Incarnation: In this Sense, we say, The first Century; the Fathers of the second Century; the Councils of the third Century, &c. See COUNCIL, FATHERS, &c.

CENYURIES of Madgeburg, a celebrated Ecclesiastical History, divided into thirteen *Centuries*, containing thirteen hundred Years, ending at 1298; compil'd by several learned Protestants of Madgeburg. The chief of the *Centurionists*, was Matthias Flavius Illyricus. 'Tis said Baronius undertook his Annals, purely to oppose the *Madgeburg Centurionists*.

CENTURY, or CENTAURY the lesser, in Medicine, an Herb, chiefly noted for a Stomachic, and restoring decay'd Appetites: It is seldom preferrib'd otherwise than by Infusion or Decoction; it is an Ingredient in the Venice Treacle; and, as a Stomachic, it enters as one of the Ingredients in the Official Bitter Draught; and is for the same Purpose order'd in extemporaneous Prescriptions, with others of the same Nature, for the making of bitter Wines, &c.

A strong Decoction hereof is said to be of service, drank for some time, in Obstructions of the Menes, and also to destroy Worms; a Property attributed to most Bitters. It is often preferrib'd externally in discutient Fomentations. The Tops, or Flowers, are only us'd.

The greater Century is never preferrib'd. CEPHALIC, in Medicine, is apply'd to any thing belonging to the Head, or its Parts. See HEAD. The Word is form'd of the Greek *κεφαλη*, Caput.

CEREBRALS, or **CEREBRAL Medicines**, are such as are proper for Disorders of the Head: These are generally of a volatile, spirituous, or aromatic Nature, or at least join'd with such; and are suppos'd to be of service, by the Volatility of their Particles, insinuating into the Nerves, and mixing with the Animal Spirits directly, as well as by the common Circulation.

Thus, Spirit of Lavender is suppos'd directly to act upon the Nerves of the Palate, &c. upon which account, it's frequently taken dropp'd on Sugar, or Bread: and Sal Volatile, by smelling to, is suppos'd to be assiduous to the Head, by its volatile Particles entering the Olfactory Nerves. As to Aromatic **Cerubals**, as the Species of Diambra, Powder of Dogwood, Nutmeg, &c. they act chiefly by their aromatic Parts warming the nervous System, and increasing their Vibrations, by which the nervous Fluid circulates more freely.

CEREBRAL Vein, in Anatomy, is a Vein of the Arm between the Skin and the Muscles, divided into two Branches, *External* and *Internal*. The *External* goes down to the Wrist, where it joins the *Basilica*, and turns up to the Back of the Hand: The *Internal* Branch, together with a Sprig of the *Basilica*, makes the *Mediana*. See **VEIN**.

It is thus call'd, in regard the Antients us'd to open it in Disorders of the Head.

CERHALOPHARINGÆI, in Anatomy, two Muscles of the Orifice of the *Oesophagus*, call'd the *Pharynx*. See **PHARYNX**.

They have their Orifice in the Articulation of the Head with the first Vertebra; and are inserted into the upper Part of the Pharynx, serving to draw it upwards and backwards.

CERPHALINA, in Medicine, is understood, in the general, of any *Head-ach*; but properly signifies, only a *itch* one: When it becomes inveterate, 'tis call'd *Cerphala*; and, when it only possesses half the Head, *Algrim*.

CERPEUS, in Astronomy, a Constellation of the Northern Hemisphere. See **CONSTELLATION**.

The Stars in the Constellation *Cerpeus*, in *Pralsey's Catalogue* are 13; in *Tychy's* 11; in the *Britannic Catalogue* 35. The Order, Names, Longitudes, Latitudes, Magnitudes, &c. whereof, are as follow.

Stars in the Constellation CERPEUS.

Names and Situation of the Stars.	Right Ascension	Longitude	Latitude	Magnitude
In the preced. Foot	♄ 28 50 35	75 27 46	4 5	
In the preced. Arm	♃ 0 39 5	73 56 57	4 5	
In the head of the preced. Arm	♃ 0 14 10	71 45 45	4	
	♃ 14 58 25	74 5 46	4	
In the preced. Shoulder	♃ 8 31 3	68 56 8	3 3	
	♃ 14 18 55	69 59 15	6	
	♃ 20 30 19	70 2 57	6	
In the Girdle, agt. the preced. Side	♃ 1 18 35	73 8 15	3	
	♃ 10 44 11	66 47 28	6	
	♃ 10 5 8	65 29 2	5	
10				
	♃ 4 14 37	70 15 33	5	
	♃ 9 35 24	64 2 27	7	
	♃ 7 16 41	70 22 40	6	
That preced. of the Tars	♃ 4 7 6	61 39 16	6	
	♃ 7 41 48	61 55 51	6	
15				
In Cephus's Neck	♃ 10 58 16	61 54 21	7	
	♃ 10 27 45	62 22 27	5 6	
In the Breast	♃ 19 55 16	61 45 41	5	
	♃ 15 33 22	64 18 27	6	
	♃ 16 25 2	64 36 41	6	
20				
Middle of 3 in the Tars	♃ 9 40 7	61 9 27	4 5	
North, and small, of the same	♃ 11 41 33	61 54 25	4	
South, in the Tars	♃ 8 45 5	59 58 31	6	
	♃ 8 40 54	68 25 29	5	
	♃ 18 35 2	65 24 27	7	
25				
That following the Tars	♃ 24 5 18	63 57 16	6	
	♃ 13 20 14	59 32 50	4 5	
	♃ 16 30 10	60 31 58	6	
Between the Feet, double	♃ 16 37 31	68 23 7	5 6	
	♃ 12 54 40	62 2 10	6	
30				
Preced. in the following Arm	♃ 13 24 51	66 59 34	6	
In the following Leg	♃ 18 58 46	62 35 40	4	
Later in the hind Arm	♃ 19 16 3	65 31 44	5	
	♃ 5 42 36	61 23 20	5	
In the hind Foot	♃ 25 48 15	64 36 47	3	
35				

CERI Corpus, in Law, a Return made by the Sheriff, upon a *Capias*, or other Process to the like purpose; signifying, that he hath taken the Body of the Party.

CERATE, in Medicine, a kind of Unguent, or Lintiment, made of Oil and Wax; us'd in several Diseases,

especially those of the Skin. It takes its Name from its capital Ingredient, Wax, call'd in Latin *Cera*.

Its Consistence is thicker than that of a Lintiment; the last having usually two Ounces of Wax to two of Oil; but the first four of Wax to two of Oil; see **LINIMENT**; yet 'tis thinner than a **Pisiter**. See **EMPLASTER**.

There are *Cerates* of various kinds, Refrigerative, Stomachic, &c. *Cerate of Sulphur*, of *Santal*, refrigerating *Cerate of Bricks*, *Droine Cerate*, &c.

There is a particular one, call'd the *refrigerative Cerate of Galen*, made of white Wax and Oil of Roses Omphecin.

CERATION, in Chymistry, the Preparation of any Matter, to render it fit and dispos'd to liquify, or melt, which of it self it was not.

This is frequently done, to enable things to penetrate into Metals, or other solid Bodies. The Word comes from *Cera*, Wax.

CERATOGLOSSUM, in Anatomy, a Pair of Muscles of the Tongue, thus describ'd by Mr. Cooper: 'The *Ceratoglossum* has a broad fleshy Origin, at the superior Part of the *Oss Hyoides*, laterally; whence it ascends to its Insertion at the Root of the Tongue. This, with its Partner, acting, draw the Tongue into the Mouth directly: If only one of them act, it moves the Tongue on one side.

The Word is deriv'd from the *Greek* *keras Cornu*, and *glossa*, *Lingua*; its Form bearing some resemblance to a Horn.

CERCELEE, in Heraldry. A *Cross Cercelee*, is a Cross which, opening at the Ends, turns round both ways, like a Ram's Horns. See **CROSS**.

CERDONIANS, ancient Heretics, who maintain'd most of the Errors of *Satanus Magnus*, *Saturni*, and other *Gnostics*. See **GNOSTICS**.

They took their Name from their Leader *Cerdon*, a *Syrian*, who came to *Rome* in the Time of Pope *Hyginus*; and there abjur'd his Errors: but in appearance only; for he was afterwards convicted of persisting in them, and accordingly call'd out of the Church again.

Cerdon asserted two Principles, the one Good, and the other Evil: This last, according to him, was Creator of the World, and the God that appear'd under the old Law. The first, whom he call'd *unknown*, was the Father of *Jesus Christ*; who, he taught, was only incarnate in appearance, and was not born of a Virgin; nor did he suffer Death but in appearance. He deny'd the Resurrection, and reject'd all the Books of the Old Testament, as coming from an evil Principle. *Marcion*, his Disciple, succeeded him in his Errors. See **MARCIONITES**.

CEREA, in Antiquity, Feasts of *Ceres*, instituted by *Tripolemus*, of *Eleusis* in *Africa*, Son of *Celeus* King of that Place, in gratitude for his having been instructed by *Ceres*, who was suppos'd to have been his Nurse, in the Art of cultivating Corn, and making Bread: so that the *Cerealia* took their Rise from *Greece*.

There were two Feasts of this Kind at *Athens*; the one call'd *Eleusinia*, the other *Theoprosoporia*. See **ELEUSINIA**, and **THEOPROSOPORIA**.

What both agreed in, and was common to all the *Cerealia*, was, that they were celebrated with a world of Religion and Purity; so that it was esteem'd a great Pollution to meddle, on those Days, in conjugal Matters.

'Twas not *Ceres* alone that was honour'd here, but also *Bacchus*. The Victims offer'd were Hogs, by reason of the waste they make in the Products of the Earth; whether there was any Wine offer'd, or not, is Matter of much debate among the Critics. *Plautus* and *Macrobis* seem to countenance the negative side; *Cato* and *Virgil* the positive. *Macrobis* says, indeed, they did not offer Wine to *Ceres*; but *Mastum*, sweet Wine; and that the Sacrifices made the 23^d of *September* to that Goddess's *Hercules*, was a Sow full of Cakes and sweet Wine; and that this is what *Virgil* means by *Miti Baccho*. Vid. *Salmastus*, *Lambin*, &c.

The *Cerealia* pass'd from the *Greeks* to the *Romans*, who held 'em for eight Days successively; commencing on the 13th of *April*. It was the Women alone who were concern'd in the Celebration, all dress'd in white: the Men, likewise in white, were only Spectators. They eat nothing till after Sun-set; in memory of *Ceres*, who in her search after her Daughter, took no repast but in the Evening.

There were also exhibited Combats on Horseback; tho' these were afterwards chang'd into Combats of Gladiators; which was look'd on as an ill Omen for the Republic. The People became Shakers in this Feast, by the Large-fishes, Pears, Nuts, &c. distributed among them. The *Ædiles* ordinarily presided over the *Cerealia*; yet sometimes the *Dilectus*, and sometimes the *Master of the Horse* were by a *Senator-Congulum* appointed to preside. It was held in the *Circus*, and began on the Day whereon the *Ludi Circenses* ended.

After the Battle of *Causes*, the Desolation was so great at *Rome*, that there were no Women to celebrate the Feast, by reason they were all in mourning; so that it was omitted that Year.

In the *Cerealia* they exhibited the Grief of *Ceres* for the Loss of her Daughter *Proserpine*; hearing the Statues of the Gods in Procession. 'Tis said, they likewise carry'd an Egg in pomp; apparently, say some, as being the Figure of the World, which, like the Egg, contains a vital Power, which it communicates to Seeds: the others will have it done as a Representation of the Egg wherof *Cassor* and *Pollux* were born.

CEREBRUM, in Anatomy, the *Brain*, properly so call'd; in contra-distinction from the *Cerebellum*. See **BRAIN**.

CEREBELLUM, or **CEREBEL**, in Anatomy, the hind Part of the *Brain*. See **BRAIN**.

The *Cerebellum* is esteem'd a kind of little *Brain* by it self, as the Word it self imports. It is plac'd in the hinder and lower Part of the Skull, underneath the hind Part of the *Brain*, or *Cerebrum*: It lies open to the *Cerebrum* at bottom; but at top is separated from it by a Duplicate of the *Dura Mater*. Its Figure somewhat resembles a flat Bowl, broader than long.

Its Substance is harder and more solid than that of the *Brain*, but of the same Nature and Kind; being compos'd like it, of a *Cortical*, or *Glandulous*; and a *Medulary* Part: the Branches of which last, when open'd, resemble those of a Tree, meeting in the Middle, and forming a kind of Stem, which runs quite thro' it.

Its Surface is unequal, and furrow'd, but not so much as that of the *Cerebrum*; appearing rather as if laminated, like some Shell; the middle Circles being the largest and deepest: between the *Laminae* are Duplicatures of the *Pia Mater*. The fore and hind Parts of the *Cerebellum* are terminated by *Apophyses*; call'd *Vermiformes*, from the resemblance they bear to Worms: it is join'd to the *Medulla oblongata* by two Processes, call'd by *Willis Padunculi*. See **PADUNCULI**.

Besides these, are two or three other medullary Processes, which passing across the *Medulla oblongata*, form an Arch; from the Discoverer call'd *Pons Varolii*. See **VAROLII**.

The Blood-Vessels of the *Cerebellum* are the same with those of the *Cerebrum*; and its use the same, viz. to separate the nervous Juice from the Blood, and convey it thro' the several Parts of the Body.

Dr. *Willis*, however, distinguishes between the Functions of the *Cerebrum*, and *Cerebellum*; making the first the Principle of voluntary Motions, and Actions; and the last the Principle of involuntary ones, viz. that of Respiration, the Motion of the Heart, &c.

'Tis commonly asserted, that a Wound either in the *Cortex*, or *Medulla* of the *Cerebellum*, is mortal; which it is not in the *Brain*, from which there have been entire Parts taken away without harm. The truth is, we have Instances of People living, not only without any *Cerebrum*, but also without any *Cerebellum*. See **BRAIN**.

CEREMONIA, an Assemblage of several Actions, Forms, and Circumstances, serving to render a thing more magnificent and solemn.

The Word comes from the Latin *Ceremonia*, quasi *Cere-rius munus*, on a count of the great Number of Ceremonies us'd in making the Offerings to *Ceres*.

Valerius Maximus derives it a *Cere* and *Munia*: *Cere* was a little Town near *Rome*, where the *Romans* made Offerings unto the Gods, with uncommon Ardor and Office-ousness, on occasion of the Fear they were in of the *Gauls*, who then lay before *Rome*.

CERINTHIAN, ancient Hereticks, who took their Name from *Cerintus*, Cotemporary with St. *John*.

Cerintus was a zealous Defender of the Circumcision, as well as the *Nazareans* and *Ebionites*. St. *Epiphanius* says, he was the Head of a Faction which rose at *Jerusalem* against St. *Peter*, on account of some uncircumcis'd Persons with whom that Apostle had eat. He believ'd that Jesus Christ was a mere Man, born of *Joseph* and *Mary*; but that in his Baptism, a celestial Virtue descended on him in form of a Dove; by means wherof he was consecrated by the Holy Spirit, and made Christ. 'Twas by means of this celestial Virtue, therefore, that he wrought so many Miracles; which, as he receiv'd it from Heaven, quitted him after his Passion, and return'd to the Place whence it came: So that Jesus, whom he call'd a pure Man, really dy'd and rose again; but that Christ, who was distinguish'd from Jesus, did not suffer at all.

Some Authors ascribe the Book of the *Apocalypse* to *Cerintus*; adding, that he put it off under the Name of St. *John*, the better to authorize his Reveries touching Christ's Reign in the Flesh: And 'tis even certain he publish'd some Works of this kind, under the Title of *Apocalypses*. See **APOCALYPTIS**.

St. *Epiphanius* observes, that when a *Cerintian* dy'd without Baptism, another Person was baptis'd in his stead. They receiv'd the Gospel of St. *Matthaeus*, to countenance their Doctrine of Circumcision, from Christ's being circumcis'd; but they omitted the Genealogy. They discard'd the Epistles of St. *Paul*, because that Apostle held Circumcision abolish'd.

CEROMA, a Mixture of Oil and Wax; or, a *Scarlet* with which the Wrestlers rubb'd themselves, not only to make their Limbs more sleek, and less capable of being laid hold of, but more pliable and fit for Exercise. See **SCARLET**.

CERTIFICATE, a Testimony given in Writing, to assure and notify the Truth of any thing to a Court of Justice, &c.

CERTITUDE, is properly a Quality of the Judgment of the Mind, importing an Adhesion of the Mind to the Proposition we affirm; or the Strength wherewith we adhere to it.

Certitude is of the same Nature with the Evidence that produces it: the Evidence is in the Things that the Mind sees and considers, i. e. in the *Ideas*: *Certitude* is in the Judgment the Mind makes of those Ideas. See **EVIDENCE**.

The Schoolmen distinguish two Kinds of *Certitude*: the one of *Speculation*, arising from the Evidence of the Thing; the other of *Adhesion*, which arises from the Importance thereof: This last they apply to Matters of Faith.

Further, the Schools distinguish three other Kinds of *Certitude*, with regard to the three different Kinds of Evidence whence they arise.

Metaphysical Certitude, is that arising from a Metaphysical Evidence: such is that a Geometrician has of the Truth of this Proposition, 'That the three Angles of a Triangle are equal to two right ones.'

Physical Certitude, is that arising from Physical Evidence: such is that a Man has that there is Fire on his Hand, when he feels it blaze, and feels it burn.

Moral Certitude, is that founded on Moral Evidence; such is that a Person has, that he has got, or lost a Cause, when his Attorney and Friends send him express Notice of it, or a Copy of the Judgment, &c. with regard to which, it may be observ'd, that Moral *Certitude* is frequently equivalent to Metaphysical *Certitude*. Thus, a Criminal who hears the Sentence read, frequently makes no doubt either of his Condemnation or Execution; and yet has nothing, here, beyond a Moral *Certitude*; the Physical *Certitude* only relating to the reading of the Sentence, and the Actions of the Executioner when he takes him into his Possession.

In the *Philosophical Transactions*, we have an Algebraic Calculation of the Degrees of Moral *Certainty*, arising from human Testimony in all its Cases; whether Immediate, Mediate, Concurring, Oral, or Written.

The Author thereof shews, that if the Report pass thro' several Reporters thence e'er it arrive, each conveying $\frac{1}{2}$ of *Certitude*; after 12 Transmissions, it will only be $\frac{1}{4096}$, or an equal Lay whether it be true or not: If the Propriety of *Certitude* be fix'd at $\frac{1000}{100000}$, it will come to half from the 70th Hand; if at $\frac{1000}{10000}$, from the 65th Hand.

For concurring Evidences, if two Reporters have each $\frac{1}{2}$ of *Certainty*, they will both give an Assurance of $\frac{3}{4}$, or $\frac{35}{40}$ to 1; if three, of $\frac{7}{8}$; and the Co-attestation of 10 would give $\frac{1023}{1024}$ of *Certainty*; that of a 20th, $\frac{1048576}{1048577}$. He shews, farther, that if there be six Particulars in a Narrative, all equally remarkable; and that he to whom the Report is given has $\frac{1}{2}$ of *Certitude* for the whole; there is 35 to 1 against the Failure in any one certain particular.

He proceeds to compute the *Certainty* of Tradition, both Oral and Written, in Whole and in Part; successively transmitted, and also co-attested by several Successions of Transmittents. See **TRADITION**.

CERT-MONEY, *Head-Money*, or a common Fine, paid yearly by the Residents of several Manors to the Lords thereof; and sometimes to the Hundred; *pro Certo Lote*, for the certain keeping of the Lect. This, in ancient Records, is call'd *Certum Lote*.

CERVICAL VESSELS, among Anatomists, are the Arteries, Veins, &c. which pass thro' the *Vertebrae* and Muscles of the Neck, up to the Skull.

They are thus call'd from the Latin *Cervix*, Neck. See **CERVIX**.

CERVICAL NERVES, are seven Pair of Nerves, so call'd, as having their Origin in the *Cervix*, or Neck. See **NERVE**.

The first Pair arises between the first and second *Vertebrae* of the Neck; and contrary to the rest, come out before and behind: whereas the other six Pair come out laterally from the Joints of the *Vertebrae*, thro' particular Perforations: This first Pair goes to the Muscles of the Head and Ear. The second Pair, according to Dr. *Willis*, contributes the main Branch towards the Formation of the *Diaphragmatic Nerves*; which, according to *Vestfens*, spring only from the fourth and sixth Pair. The three last

last Pair, joining with the two first of the *Dorsum*, or *Thorax*, make the *Brachial Nerves*. All the *Cervical Nerves* send innumerable Branches to the Muscles, and other parts of the Head, Neck, and Shoulders.

CERVICALES *Defendentes*, a Pair of Muscles, Antagonists to the *Sacro-Lumbares*; coming from the third, fourth, fifth, and sixth *Vertebra* of the Neck.

Most Authors reckon these, tho' improperly, a Production and Part of the *Sacro-lumbus*.

CERVIX, in Anatomy, the hind Part of the Neck; the fore Part being distinguish'd by the Name of *Collum*. See *NECK*.

CERVIX of the Uterus, the Neck of the *Uterus*, or Womb. See *UTERUS*.

The *Cervix*, in Males, is very narrow, except in the Time of the *Menses*; scarce wide enough to admit a Goose's Quill: Its Extremity is call'd the *Os uterini Internum*, which is kept seal'd up with a kind of glutinous Matter, issuing from the Glands about it. See *MATRIX*.

CERUMEN Aurium, Ear-Wax; a thick, viscous, bitter Matter, or Humor, separated from the Blood by proper Glands, plac'd in the outer Passages of the Ear. See *EAR-WAX*.

CERUSSE, a Preparation of Lead, popularly call'd *White Lead*; and, by the Chymists, *Calx of Lead*. See *LEAD*.

Ceruffe is made of very thin *Laminae*, or Plates of Lead, lay'd, as to receive and imbibe the Fumes of Vinegar, plac'd in a Vessel over a moderate Fire. The *Laminae* are, by means hereof, converted into a white Rust; which they gather together, and grinding it up with Water, form into little Cakes. *Cerdaus* shows how to make it of Urine.

Ceruffe makes a beautiful white Colour, and is much us'd by the Painters, both in Oil and Water Colours. It makes the principal Ingredient in the Fucus us'd by the Ladies for the Complexion. Taken inwardly, it is a dangerous Poison; and soon shews its Malignity on the Outside; spoiling the Breath and Teeth, and halting Wrinkles, and the Symptoms of old Age.

The best *Ceruffe*, is that of *Venice*; but this is rare; that chiefly us'd, is either *English* or *Dutch*, both of which have more Marl in 'em than *White Lead*; the latter, however, is the better of the two. *Fallopins* speaks of a Mineral *Ceruffe*, but every body else takes it to be fictitious.

The Word comes from the Greek $\alpha\upsilon\tau\omicron\varsigma$, Wax; *Ceruffe* bearing a resemblance to Wax.

CESAR, or **CÆSAR**, among the *Romans, was a long time us'd for the Heir intended, or presumptive of the Empire; as *King of the Romans* is now us'd for that of the *German Empire*.*

From the Time of *Marcus Aurelius*, to that of the Emperor *Valens*, none had the Title of *Augustus* given them, till they had been first created *Cæsars*. *Spartian* says, *Lucius Verus* was the first that was called *Cesar*, before he was made Emperor. The *Cæsars* were a kind of Adjuncts to the Empire, *Principes Imperii*: See *AUGUSTUS*.

Cesar was the second Dignity, till the Time of *Alexis Comnenus*: that Emperor created a new Dignity, in favour of his Brother *Isaac Comnenus*, which he call'd *Leibystocrator*, and to which he gave the Precedence over the *Cæsars*. *Cædus* describes the Creation of a *Cesar*, his Crown, Rights, Habit, &c.

The Term took its rise from the Names of the first *Roman Emperors*; and that some derive from *Cæsaries*, Head of Hair; urging, that the first who bore it, viz. *Cæsar Julius Cesar*, was distinguish'd by his fine Head of Hair, which occasion'd the Title. The more common Opinion is, that the Word *Cesar* comes à *cæso matris Utero*; because his Mother's Womb was cut open to give him passage.

J. Bireherodius says, it comes from this, that the first who bore the Name kill'd an Elephant in Battle; à *Cæso Elephante*: This Opinion he supports on the Credit of a Medal, on which is an Elephant with the Word *CESAR*.

CESAREAN Section, or *Cæsareus Partus*, an Operation whereby the Child is drawn from the Mother by violent means, with Incision. See *BIATH*.

It appears from Experience, that Wounds in the Muscles of the *Epigastrum*, or *Peritonæum*, and those in the Matrix, are not mortal; so that the Belly of the Mother may be sometimes open'd to give passage for the Child; but then 'tis not without great Danger; on which account, this Operation is very rarely practis'd; Those brought into the World in this manner, are call'd *Cæsari*, and *Cæsariæ*, à *cæso matris Utero*; as was *C. Julius Cesar*, *Scipio Africanus*, and *Manlius*. See *CESAR*.

F. Roussel has a Treatise expressly on the Subject of the *Cæsarean Section*.

CESAVIT, a Writ that lies in divers Cases; upon this general Ground, that he against whom it is brought, has for two Years neglected to perform such Service, or pay such Rent, as he is oblig'd to by his Tenure; and has

not upon his Lands or Tenements sufficient Goods or Chattels to be distrain'd. It only lies for annual Service, Rent, and such-like, not for Homage or Fealty. The Forms and Species of this Writ are various; as, *Cessavit de Cantaria*, *Cessavit de Feodifirma*, *Cessavit per Brevevium*.

CESSION, in a Legal Sense, an Act whereby a Person surrenders up, and transmits to another Person, a Right which belong'd to himself.

Cession is a general Term, the Species whereof are, a *Surrender*, *Relinquishment*, *Transfer* and *Subrogation*; which see.

Cession is particularly us'd in the Civil Law, for a voluntary and legal Surrender of a Person's Effects to his Creditors, to avoid Imprisonment.

This Practice still obtains in *France*, and other Countries; and is done by virtue of Letters Patent granted in favour of the Poor and Honest. The *Cession* carry'd with it a Mark of Infamy, and oblig'd the Person to wear a green Cap, or Bonnet; at *Lucca* an orange one; to neglect this, was to forfeit the Privileges of the *Cession*. This was originally intended to signify, that the *Cessionary* was become poor thro' his own Folly.

The *Italian Lawyers* describe the Ceremony of *Cession* to consist in striking the bare Breach three times against a Stone, call'd *Lapis Pitsperii*, in the Presence of the Judge. Formerly it consisted in giving up the Girdles and Keys in Court; the Antients using to carry at their Girdles the chief Utensils wherewith they got their living; as the Scrivener his Escritoire, the Merchant his Bag, &c.

The Form of *Cession* among the antient *Romans* and *Gauls* was as follows. The *Cessionary* gather'd up Dust in his left Hand, from the four Corners of the House, and standing on the Threshold, holding up the Door-Poist in his right Hand, threw the Dust back over his Shoulders; then stripping into his Shirt, and quitting his Girdle and Sacks, he jump'd with a Pole over a Hedge; hereby letting the World know, that he had nothing left, and that when he jump'd, all he was worth was in the Air with him.

This was the *Cession* in Criminal Matters: In Civil Cases, it was sufficient to lay a Switch, Fetch, or broken Straw on the Threshold. This was call'd *Cænecrude per Durpillum & Festucam*. See *INVESTITURE*.

Cession, in the Ecclesiastical Law, is one manner of vacating or voiding an Ecclesiastical Benefice. See *VACATION*, and *BENEFICE*.

By the *Canon Law*, if a Clerk has one Living, of 8 l. per Annum *valere*, or upwards, and takes a second, of what Value soever, the former is void without a Dispensation: that is, it is void *de Jure*, but not *de Facto*.

By the Statute, if a Clerk have one Benefice of 18 l. per Annum, or upwards, and takes another, of what Value soever, with Care of Souls, and without Dispensation, the former Living is, *ipso facto*, void: And this kind of Voidance of a Living is call'd *Cession*.

What is call'd *Cession* in other Benefices, is call'd *Creation* in relation to a Bishoprick; for if an Incumbent be made a Bishop, his Benefice is said to be void by *Creation*. See *BISHOP*.

CESSIONARY, a *Bankrupt*. See *BANKRUPT*, and *CESSION*.

CESSOR, in Law, one diltory, negligent, and delinquent in his Duty or Service, and who thereby incurs the Danger of the Law, and is liable to have the Writ *Cessavit* brought against him. See *CESSAVIT*.

Where 'tis said *the Tenant cessit*, 'tis meant he ceaseth to do his Duty, or Service to which he is bound.

CESTUI, a *French* Term, literally signifying *He*, or *Him*; frequently us'd in our old Law-Writings. Thus, *Cestui qui Trust*, is he who has Lands in Trust, &c. committed to him for the Benefit of another.

Cestui qui Vie, one for whose Life any Lands or Tenements are granted.

Cestui qui Use, he to whose Use another Man is inclosed in Lands or Tenements.

CESTUS, a Term us'd by Poets and Painters, for the Girdle which they attribute to *Venus* and *Juno*.

Among the Antients, *Cestus* properly signify'd the Maid's Girdle, which the Bridegroom woty'd when he led her into the House.

The Word comes from the Greek $\alpha\epsilon\sigma\tau\omicron\varsigma$, *Girdle*: whence also *Incestus*, a Term us'd at first for any Naughtiness by undoing the Girdle, &c. but now restrain'd to that between Persons near skin. See *INCEST*.

Cestus was also a large Leather Guntlet, garnish'd with Lead, us'd in the Combats or Exercises of the antient *Athlete*. See *ATHLETE*.

Calepin says, it was a kind of a Club with leaden Balls hanging from it, suspended by Leather Thongs; but he was mistaken, it being only a Leather Thong studded with Nails of Lead, or Iron; part of it twisted round the Hand and part of the Arm, to prevent their being broke or dislocated.

It was call'd *Cestus*, à *cedendo*, to strike, or beat.

CESURE, or **CÆSURA**, in the *Latin* Poetry, a Syllable remaining at the End of a Foot, and seeming as it were detach'd from it, to begin the following Foot; as in this Verse,

Arma Virumque ceno Trojæ qui primus ab oris :

where the Syllables *no* and *je* are *Cæsures*. In the modern Poetry, *Cæsura* is properly a Rest, form'd in the middle of long Verses. In *Alexandrine* Verses, of 12 or 13 Syllables, the *Cæsura* must always be the sixth; in Verses of 10 on the fourth; and in those of 12 on the fifth: Verses of eight Syllables must not have any *Cæsura*. See **VERSE**.

The *Cæsura*, by affording a Rest in the middle of a long Verse, to aid the Voice and Pronunciation, divides the Verse, as it were, into two Hemistichs. See **REST**, and **PAUSE**.

CETACEOUS, in Natural History, a Term apply'd to all large Fishes, and Sea Monsters, which bear a resemblance to the *Whale*. See **WHALE**.

The Word is form'd of the Latin *Cetus*, Whale. See **FISH**.

The Horn usually call'd the *Unicorn's Horn*, is found to be the Tooth of a *Cetaceous* Fish in the Icy Sea, call'd *Norval*. See **UNICORN**.

CETERIS, or **CÆTERIS PARIBUS**, a *Latin* Term, or Phrase, in frequent use among Mathematical and Physical Writers.

The Words literally signify, *the rest, or the other things being alike, or equal*; which expresses pretty nearly their Meaning as a Term.

Thus, we say, *The heavier the Bullet, ceteris paribus, the greater the Range*; i. e. by how much the Bullet is heavier, if the Length and Diameter of the Piece, and the Quantity and Strength of the Powder be the same, by so much will the utmost Range or Distance of a Piece of Ordnance be.

Thus also, in a Physical way, we say, *The Velocity and Quantity of Blood circulating in a given Time, thro any Section of an Artery, will, ceteris paribus, be according to its Diameter, and nearest to, or distance from the Heart*.

CETUS, in Astronomy, the *Whale*; a Constellation of the Southern Hemisphere. See **CONSTELLATION**.

The Stars in the Constellation *Cetus*, in *Ptolemy's Catalogue* are 22; in *Tycho's* 21; in the *Britannic Catalogue* 78. The Order, Names, Longitudes, Latitudes Magnitudes, &c. whereof, are as follow.

Stars in the Constellation CETUS.

CHACE, \int See **CHASE**.
CHACING, \int See **CHASING**.
CHACE of a Gun, is the whole Bore, or Length of a Piece of Ordnance on the Inside. See **GEN**, **CANNON**, **ORDNANCE**, &c.

CHACE, in the Sea Language, signifies *Pursuit*: Thus, *to give Chace to a Ship*, is to follow, and fetch her up.

CHACE-GUNS, or **CHACE-PIECES**, are those lying in the Head and Stern of the Ship.

CHACCOON, or **CHACONDE**, a kind of Dance, in the Air of a Saraband, deriv'd from the *Moor*. The Bass always consists of four Notes, which proceed in conjunct Degrees; and whereon they make divers Concords and Complements with the same Burden.

The Word is form'd of the Italian *Ciacono*, of *Cecoue*, a blind Man; this Air being said to be the Invention of a blind Man.

CHAF-WAX, or **CHAUFFE-WAX**, an Officer in Chancery, whose Business is to fit the Wax for the sealing of Writs, Patents, and other Instruments issu'd thence. See **CHANCERY**.

CHAGRIN, **CHAGRIN**, or, as it's vulgarly call'd, **SHAGREEN**; a kind of grain'd Leather, chiefly us'd in the Covers of Cases, Books, &c. It is very close and solid, and cover'd over with little roundish Grains, or *Paspille*. It is brought from *Constantinople*, *Tauris*, *Tripoli*, *Algiers*, and some Parts of *Poland*.

There is a Dispute among Authors what the Animal is whence the *Chagrin* is prepar'd: Some say 'tis a Horse, others a Mule, and some an Ass; and that only the hard Part of the Skin is us'd for this purpose. *Borel* says 'tis a *Sea-Calf*; others a kind of Fish, call'd by the Turks *Chagrain*, whose Skin is cover'd with Grains; and those so hard that they will rasp and polish Wood.

The manner of preparing the CHAGRIN.
 The Skin being just flea'd off, is stretch'd out, cover'd over with Mustard-seed, and the Seed bruis'd on it; and thus expos'd to the Weather for some Days; then tam'd.

The best is that brought from *Constantinople*, of a greyish Colour; the white is the worst. 'Tis extremely hard, yet, when steep'd in Water, becomes very soft and pliable; whence it becomes of great Use among Case-makers. It takes any Colour that is given it; red, green, yellow, black. It is frequently counterfeited by Miroquin form'd like *Chagrin*;

Chagrin; but this last is distinguish'd by its peeling off, which the first does not.

CHAIN, *Catena*, a Series of several Rings, or Links, fitted into one another. See **LINK**.

There are *Chains* of divers Matters, Sizes, Forms, and for divers Uses. Ports, Rivers, Streets, &c. are clos'd with Iron *Chains*: Rebelious Cities are punish'd by taking away their *Chains* and Barriers.

The Arms of the Kingdom of *Navarre* are *Chains Or*, in a Field *Gules*. The Occasion hereof is refer'd to the Kings of *Spain* leagu'd against the *Moor*s; who having gain'd a celebrated Victory against 'em in 1212, in the Distribution of the Spoils, the magnificent Tent of *Miramamun* fell to the King of *Navarre*; as being the first that broke and forc'd the *Chains* thereof.

A **GOLD CHAIN**, is one of the Ornaments or Badges of the Dignity of a Lord-Mayor of *London*; and remains to the Person, after his being divested of that Magistrature, as a Mark he has pass'd the Chair. See **MAYOR**, and **ALDERMAN**.

Something like this, *Chorier* observes, obtain'd among the ancient *Gauls*: The principal Ornament of their Persons in Power and Authority was a *Gold Chain*, which they wore on all Occasions; and even in Battle, to distinguish 'em from the common Soldiers. *Hist. de Dauph. Lib. III. p. 130.*

CHAIN is also a kind of little Tissue, serving to hang Watches, Twozer-Cases, and other valuable Toys upon. See **WATCH**.

The Invention of this piece of curious Work is owing to the *English*; whence, in foreign Countries, it is denominated the *English Chain*. 'Tis but of very late Years that Foreigners have undertook to imitate 'em, and yet with no extraordinary Success: those of *Paris* have come nearest. These *Chains* are usually either of Silver or Gold, some of gilt Copper; the Thread or Wire of each Kind to be very fine.

For the Fabrick, or Making of these **CHAINS**; a Part of the Wire is folded into little Links of an oval Form; the longest Diameter about three Lines, the shortest one. These, after they have been exactly folder'd, are again folded into two; and then bound together, or interwove, by means of several other little Threads of the same thickness; some whereof, which pass from one end to the other, imitate the Warp of a Stuff; and the others, which pass transverse, the Weave. There are at least four thousand little Links in a Chain of four Pendants; which are, by this means, bound so equally, and withal so firmly together, that the Eye is deceiv'd, and takes the whole to consist of one entire Piece.

CHAIN-SHOT, in War, two Bullets, or rather half-Bullets, link'd together by a Chain: their use is Sea is to shoot down Yards, or Masts; or to cut the Shrouds, or any other Rigging of a Ship.

CHAIN-PUMP. See **PUMP**, and **BUR-PUMP**.

CHAIN, in Surveying, is a Measure consisting of a certain Number of Links of Iron Wire, usually 100; serving to take the Dimensions of Fields, &c. by: See **MEASURE**, and **SURVEYING**.

This *F. Merfenne* takes to be the *Arripendium* of the Ancients. See **ACRA**.

The *Chain* is of various Dimensions, as the Length or Number of Links varies: That commonly us'd in measuring Land, call'd *Gunter's Chain*, is in Length four Poles, or Furlongs; or 66 Yards, or 100 Links; each Link being seven Inches $\frac{7}{8}$. See **PERCH**, **LINK**, **YARD**, &c.

That ordinarily us'd for large Distances, is in length 100 Feet; each Link one Foot.

For small Parcels, as Gardens, &c. is sometimes us'd a small *Chain* of one Pole, or 16 Foot and a half length; each Link one Inch $\frac{1}{2}$.

Some, in lieu of *Chains*, use Ropes; but these are liable to several Irregularities; both from the different Degrees of Moisture, and of the Force which stretches them. *Schwennerus*, in his Practical Geometry, tells us, he has observ'd a Rope 16 Foot long, reduc'd to 15 in an Hour's time, by the mere falling of a Hoar Frost. To obviate these Inconveniences, *Wulfius* directs, that the little Twists whereof the Rope consists, be twisted contrary ways, and the Rope dipp'd in boiling hot Oil, and when dry, drawn thro' melted Wax. A Rope thus prepar'd, will not get or lose any thing in Length, even tho' kept under Water all Day.

Use of the Chain in Surveying.

The manner of applying the *Chain* in measuring Lengths is too popular to need Description. In entering down the Dimensions taken by the *Chain*, the *Chains* and *Links* are separated by a Dot: Thus a Line 63 *Chains* 55 Links long, is writ 63.55. If the Links be short of 10, a Cypher is prefix'd; thus 10 *Chains*, 8 Links, are writ 10.08.

To find the Area of a Field, &c. the Dimensions whereof are given in *Chains* and *Links*. 1st, Multiply the Lines

by one another, according to the Rules given under **AREA**; and from the Product cut off five Figures towards the Right: so those remaining on the Left will be *Acres*. See **ACRE**. adly, Multiply the five Figures cut off by 4; and cutting off five again from the Product on the Right, those remaining on the Left will be *Roods*. See **ROOD**. Lastly, Multiply the five thus cut off by 40; and cutting off five, as before, on the Right, those remaining on the Left are square *Perches*. See **PERCH**.

To take an Angle DAE, (Tab. Surveying, Fig. 1.) by the *Chain*: Measure a small Distance from the Vertex A along each Leg, e. g. to *d* and *e*; then measure the Distance *de*: To lay this down, draw *AE* at pleasure, and from your Scale set off the Distance measur'd on it. See **SCALE**.

Then, taking in your Compasses the Length measur'd on the other Side, on the Vertex *A*, as a Centre, describe an Arch *de*; and on the Point *e*, as a Centre, with the measur'd Distance of *ed*, describe another Arch *db*. Thro' the Point where these intersect the former Arch, draw a Line *AD*. So is the Angle plotted; and its Quantity, if requir'd, may be measur'd on a Line of Chords. See **CNOX**.

To take the Plan or Plot of any Place, as *ABCDE*, (Fig. 2.) by the *Chain*. Draw a rough Sketch of the Place by Eye; and measuring the several Sides *AB*, *BC*, *CD*, *DE*, enter down the Length on the respective Lines; then if the Plan be to be taken within side of the Place, instead of measuring the Angles, as before, measure the Diagonals *AB*, *BD*. Thus will the Figure be reduc'd into three Triangles, whose Sides are all known, as in the former Case; and may be laid down on Paper, according to the Method above.

If the Plan be to be taken without side the Place, the Angles must be taken thus; e. g. for the Angle *BCD*, produce the Lines *BC* and *CD* to any certain equal Distance, e. g. to *a* and *b*, five *Chains* measure the Distance of *a b*. Thus have you an *Isosceles* Triangle *Ca b*, wherein the Angle *aCb* = *BCD* its opposite one is laid: thus is the Quantity of *BCD* found, and the Angle laid down as before.

By the *Chain* to find the Distance between two Objects inaccessible in respect of each other. From some Place, as *C*, (Fig. 3.) whence the common Distance to each Object *A* and *B*, is accessible in a right Line; measure the Distance *CA*, which suppose 50 *Chains*; and continue the Line to *D*, viz. 50 more: Measure also *BC*, which suppose 30 *Chains*; and produce the Line to *E*, viz. 30 more. Thus will be form'd the Triangle *CDE*, equal and similar to the Triangle *ABC*; consequently the Distance *DE*, being measur'd, will give the inaccessible Distance requir'd.

By the *Chain* to find the Distance of an inaccessible Object, e. g. the Breadth of a River. On one side place a Pole, four or five Foot high, perpendicularly, having a Sht atop, with a straight Piece of Wire, or the like, two or three Inches long, past thro' the same. This is to be slipp'd up or down, till, looking along it, you find it point full on the other Side of the River; then turning the Pole with the Wire in the same Direction, observe the Point on the dry Land, to which it points when look'd along as before; measure the Distance from the Pole to this last Point; 'tis the same with that of the first requir'd. See **SURVEYING**, **PROTRACTING**, **PLOTTING**, **THEODOLITE**, &c.

CHAIR, *Cathedra*, was antiently us'd for the Pulpit, or *Saggeflum*, whence the Priest spake to the People. See **PELLET**, and **CATHERED**.

It is still apply'd to the Place whence Professors and Regents in Universities deliver their Lectures, and teach the Sciences to their Pupils: Thus, we say, *The Professor's Chair*, *the Doctor's Chair*, &c. See **PROFESSOR**, &c.

Curule CHAIR, was an Ivory Seat plac'd on a Car, wherein were seated the first Magistrates of *Rome*, and thro' to whom the Honour of a Triumph was granted. See **CURULE**.

CHAIR is also us'd among the *Romanists* for some Feasts, held antiently in Commemoration of the Translation of the See or Seat of the Church, by *St. Peter*.

The perforated **CHAIR**, wherein the new-elected Pope is plac'd, *F. Mobilis* observes, is still to be seen at *Rome*; but the Origin thereof he does not attribute, as is commonly done, to the Adventure of *Pope Joan*; but says there is a Mystery in it; and 'tis intended, forsooth, to explain to the Pope those Words of Scripture, that God draws the Poor from out of the Dust and Ash.

CHAIR-MAN, the President, or Speaker of an Assembly, Company, &c. See **PRESIDENT**, &c.

The **CHAIR-MAN** of a Committee, &c. See **COMMITTEE**, &c.

CHAISE, a sort of light open *Chariot*, or *Calesb*. See **COACH**, and **CHARIOT**.

CHALASTIC Medicines, are such as have the Faculty of softening, and relaxing the Parts; when, on account of their extraor-

extraordinary Tension, or Swelling, they occasion Pain.

Of this Kind are Butter, and many Oils, &c. See EMULSION.

The Word comes from the Greek *χαλας*, I soften.

CHALAZA, among Naturalists, the *Treadle* of an Egg, or that flat, deated Part at each End; so call'd, as being antiently suppos'd to be the Sperm of the Cock. See Egg.

Its Use, according to *Harvey*, is to be as it were the Poles of this Microcosm, and the Connections of all the Membranes twist'd and knit together; whereby the Liquors are not only conserv'd, each in its Place, but also in its due Position to the rest.

Mr. *Derham* adds, that they also serve to keep one and the same Part of the Yolk uppermost, let the Egg be turn'd which way it will; which is done by the following Mechanism: The *Chalazæ* are specifically heavier than the Whites wherein they swim; and being braci'd to the Membrane of the Yolk, a little out of the Axis, cause one side of the Yolk to be heavier than the other. The Yolk being thus by the *Chalazæ* made buoyant, and kept swimming in the midst of two Whites, is by its own heavy side kept with the same Side always uppermost: which uppermost side he imagines to be that whereon the *Cicatricula* lies. See CICATRICULA.

CHALCANTHUM. See CALCANTHUM.

CHALCEDONY, or CALCEDONY, a precious Stone of a bluish or yellowish Colour, rank'd among the Kinds of *Agate*. 'Tis suppos'd to be the *white Agate* of the Antients; and we sometimes find Pieces of it blackish. See AGATE.

It is very fit for the Graver; and much us'd, either to engrave Arms, &c. upon, as being harder and preferable to Crystal, if good; or to paint them on the backside. In some Parts, Vases, Caps, Religious Beads, &c. are made thereof. The clearest and best is that with a pale cast of blue.

Belou says, 'tis so common among the *Turks*, that it serves them for threshing their Corn: but he mistakes. Hence,

CHALCEDONIUS is a Term us'd by the Jewellers, for a Defect found in some precious Stones; when, in turning them, they find white Spots, or Stains, like those of the *Chalcedony*: 'Tis Defect is frequent in *Grenates* and *Rubies*. - The Lapidaries remedy it by hollowing the Bottom of the Stone. See GRENATE, and RUBY.

CHALCIDIC, CHALDICUS, CHALCIDICUM, or, as *Festus* calls it CHALCEDONIUM, in the ancient Architecture, a large magnificent Hall belonging to a Tribunal, or Court of Justice.

In *Vitruvius*, it is us'd for the Auditory of a *Basilica*: In other of the ancient Writers, for a Hall, or Apartment, where the Heathens imagin'd their Gods to eat.

Festus says, it took its Name from the City *Chalcis*; but does not give the Reason. *Philander* will have it to be the Court, or Tribunal, where Affairs of Money and Coinage were regulated; from *καλις*, Brass, and *σις*, Justice. Others say, the Money was struck in it; and derive the Word from *καλας*, and *σις*, Hoop.

CHALCITIS, sometimes call'd *Colcothar*, is a kind of Mineral; or, as some call it, a Vitriol; reddish, like Copper; friable, not very hard, and having yellow shining Veins within. See COLCOTHAR.

It has the Taste of a Vitriol, melts alone in a Crucible, and dissolves very easily in watry Liquors. There are two other Minerals, call'd *Mist*, and *Sory*, very much like the *Chalcitis*. In effect, the Antients confounded them together; and not only the *Mist* and *Sory*, but also the *Melanteria*; or rather, they imagin'd a successive Transmutation of the four Minerals, which began with *Chalcitis*, became *Mist*, then *Melanteria*, and lastly *Sory*, where it fix'd.

The Moderns make these four distinct Matters; tho' the chief Difference between them, is suppos'd to lie in the different Tenacity or Grossness of their Substance.

Some say, the *Mist* is form'd on the *Chalcitis*, as Verdigrise on Copper, being properly its Rust; and that *Chalcitis* is form'd in the same manner on the *Sory*.

This is certain, they are all found in Copper Mines: But the modern Druggists know little of any of them but *Chalcitis*.

This is brought from *Germany*: It is very Caustic and Eucharotic. Its chief use is in the Composition of Venice-Treacle; in lieu of it are frequently substituted *Calcanthum rubefy'd*, or *Copperas*, or *Calamites*.

CHALCOGRAPHY, the Art of Engraving on Copper and Brass. See ENGRAVING.

CHALDEE, or CALDEE Language, that spoke by the *Chaldeans*, or People of *Chaldea*. See LANGUAGE.

The *Chaldee* is a Dialect of the Hebrew. See HEBREW.

CHALDEE Paraphrase, in the Rabbinical Style, is call'd *Targum*. See TARGUM.

There are three *Chaldee Paraphrases* in *Watson's Poly-*

glot; viz. that of *Onkelos*, that of *Jonathan Son of Uzziel*, and that of *Jerusalem*. See PARAPHRASE, and POLYGLOT.

CHALDEE Paraphrast. See PENYATEUCH.

CHALDRON, CHALDER, or CHAUDREN of Coals, a dry English Measure, consisting of 56 Bushels heap'd up, according to the sealed Bushel kept at *Guildhall, London*. See MEASURE.

The *Chaldron* should weigh 2000 Pounds. On Ship-board, 21 *Chaldrons* of Coals are allow'd to the Score. See COALS.

CHALICE, or Cup. See CALIX.

CHALK, a white Substance usually reckon'd as a Stone; but Dr. *Stare* thinks, without Reason; since, when examin'd by the Hydrostatical Balance, it is found to want much of the Weight and Consistence of a real Stone: so that he thinks it more justly rank'd among the *Boles* than Stones. See BOLE.

This he observes to be the Case, not only in *Chalk*, but various other Bodies, taken for granted to be Stones; some whereof are nearer Earth than Stones; others nothing but Earth, Sulphur, Metal, &c. See STONE, EARTH, &c.

Chalk is of two sorts; the hard, dry, strong *Chalk*, us'd for making of Lime: See LIME. The other a soft, unctuous *Chalk*, us'd to manure Lands; as easily dissolving with Rain and Frost: It is best for cold, sour Lands, and promotes the yielding of Corn; it sweetens Grass so as to cause Cattel to fatten speedily, and Cows to give thick Milk. See MANURE, and SOIL.

Chalk is us'd in Medicine, as an Astringent, an Absorbent, and a Sweetener; and is celebrated for curing the Heartburn, beyond any thing whatsoever.

CHALLENGE, a Cattel, Defence, or Invitation to Duel, or other Combat. See CATTLE, DUEL, and COMBAT.

CHALLENGE, in Law, is an Exception taken either against *Persons*, or *Things*: Against Persons; as in an *Affize*, to the Jurors, when any one, or more of them are excepted against, in Case of Felony, by the Prisoner at the Bar.

Against Things, as a Declaration. See DECLARATION.

Challenge to the Jurors, is either made to the *Array*, or to the *Palls*: To the *Array*, as when the whole Number is excepted against, as partially empanell'd. To the *Palls*, as when Particulars are excepted against, as not indifferent.

Challenge to the Jurors, is also divided into *Challenge Principal*, and *Challenge per Cause*; i. e. upon Cause or Reason alledg'd.

Challenge Principal, otherwise call'd *Challenge Peremptory*, is what the Law allows without Cause alledg'd, or further Examination; as a Prisoner at the Bar, arraign'd on Felony, may peremptorily challenge twenty, one after another, alledging no Cause but his own Dislike; and they shall be set aside, and new ones chosen in their room. In Case of High-Treason, no *Challenge Peremptory* was formerly allow'd; but by *Stat. 7. Gul. III.* liberly is given peremptorily to challenge 35.

Yet there seems to be a Difference between *Challenge Principal* and *Challenge Peremptory*; the latter being only in Matters Criminal, and without any Cause alledg'd; the former mostly in Civil Cases, and with assigning some such Cause, as being found true, the Law allows; u. g. if either Party alledges, that one of the Jurors is the Son, Brother, Cousin, or Tenant of the other, the Exception is good. Also in the Plea of the Death of a Man, or in any Action Real or Personal, where the Debt or Damages amount to 40 Shillings; It is a good *Challenge* to a Juror, that he cannot dispend 40 Shillings per Annum of Freehold.

Challenge upon Reason or Cause, is when the Party does alledge some such Exception as is sufficient upon acknowledgment of the Truth of it; u. g. if the Son of the Juror have marry'd the Daughter of the other Party.

The Word *Challenge* was antiently latin'd *Calumnias*.

CHALLENGE is also a Hunting Term: for when Hounds at first finding the Scent of their Game, presently open, and cry, the Huntsmen say, they *Challenge*.

CHALYBEAT, in Medicine, something that partakes of the Nature of *Steel*, or *Iron*; or that is impregnated with Particles of those Metals. See IRON; see also MARS, and STEEL.

Chalybeats act chiefly as Absorbents, and Decobstruents. Iron, M. *Lemery* observes, is a Mixture of an oily Substance with a metallic Matter; but the Oil is the predominant in the Mixture; and between the Parts mix'd are large Pores. Hence, Iron becomes easily dissolvable; and its Oil easily disengages it self: But when once decomposed, i. e. when once the Oil is separated from the pure, ferruginous, or metallic Part, no Dissolvent has any Effect on that *Caput Mortuum*. Hence appears the Absurdity of that common Practice, of calcining Iron to such a degree, as to convert it into what the Chymists call a *Crocus*, or Saffron. This Operation must of necessity take away all, or most of the oily Substance, and have left nothing but the indissoluble *Caput Mortuum*. Which Oil here separated, should properly have been separated by the

Heat of the Stomach; whence, according to *M. Lemery*, it would have carry'd into the Blood a new spirituous, salutary Juice: He observes also, that Iron acts as an Absorbent, from the Largeness of its Pores; and the Balsu wherewith all Kinds of Salts, even gross ones, insinuate themselves therein: even scorbutic Acids are absorb'd thereby.

Further, 'tis not enough that peccant Acids enter Iron; but in entering they also expel and express that salutary Juice, which is also put in Motion, and dispos'd to be evacuated by the natural Heat. Thus Iron doubly advantageous, both by the Oil it furnishes the Blood withal, and by the Salts it frees it from. The Action of the Particles of a *Chalybeat*, by their Elasticity, together with the *Momentum* they give the Blood by their Ponderosity, makes them not only preferable to most other Deobstruents, but also proper in other Cases; especially where there is a Viscidity of the Juices, the Blood depauperated, and where the Circulation is languid; as in most Hysteric and Hypochondriac Cases, &c.

CHAM, or KAN, the Title given to the sovereign Princes of *Tartary*.

The Word, in the *Sclavonic* Language, signifies *Emperor*. *Speeringius*, in his Dissertation on the *Dauphin* Term of Majesty, *Koung*, King, thinks the Tartarian *Cham* may be well deriv'd from it; adding, that in the North they say *Kan*, *Kouner*, *Kouge*, *Kouning*.

The Term *Cham* is us'd among the *Perfians*, for the great Lords of the Court, and the Governors of Provinces.

CHAMADE, in War, a certain Beat of a Drum, or Sound of a Trumpet, which is given the Enemy as a kind of Signal, to inform them of some Proposition to be made to the Commander; either to capitulate, to have leave to bury their Dead, make a Truce, or the like.

Aléange derives the Word from the Italian *Chiamate*, of *Clamare*, to cry.

CHAMBER, in Building, a Member of a Lodging, or Piece of an Apartment, ordinarily intended for sleeping in; and call'd by the Latins *Cubiculum*.

A complete Apartment is to consist of a *Hall*, *Antichamber*, *Chamber*, and *Cabinet*. See APARTMENT, &c.

The Word comes from the Latin *Camera*; and that, according to *Nicod*, from the Greek *καμαρα*, *Vault*, or *Curve*; the Term *Chamber* being originally confin'd to Places arch'd over. The *Spaniards* call it *Camera*; whence *Camerade*.

Bed-CHAMBER. See BED-CHAMBER.

Privy-CHAMBER. The Gentlemen of the *Privy-Chamber* are Servants of the King, who are to wait and attend on him and the Queen at Court, in their Diversions, Progresses, &c.

Six of these are appointed by the Lord Chamberlain, together with a Peer, and the Master of the Ceremonies, to attend all Ambassadors from crown'd Heads in their publick Entries. Their Number is 48.

Their Institution is owing to King *Henry VII.* As a singular Mark of Favour, they are empower'd to execute the King's verbal Command, and without producing any written Order; their Person and Character being deem'd sufficient Authority.

Presence CHAMBER, } See § PRESENCE Chamber.
Council CHAMBER, } COUNCIL Chamber.

CHAMBER in Policy, is us'd for the Places where certain Assemblies are held, as also for the Assemblies themselves.

Of these there are various Kinds; some establish'd for the Administration of Justice, others for Matters of Commerce, &c. Of the first Kind among us are the

Star-CHAMBER, *Camera Stellata*, or *Chamber de Estoiles*; so call'd, because the Roof was originally painted with Stars. It is of an ancient standing, but its Authority was very much heighten'd by *Henry VII.* and *Henry VIII.* who appointed, by two several Statutes, that the Chancellor, assist'd by others there nam'd, should have Power to hear Complaints against Retainers, Embracers, Misdoers of Officers, and other like Offences; which thro' the Power and Authority of those who committed them, did lift up the Head above other Fasits; and for which inferior Judges were not so meet to give Correction, and the common Law had not sufficiently provided.

By the Statute 17 Car. I. the Court call'd *Star Chamber*, and all Jurisdiction, Power, and Authority thereto belonging, are, from *August* the first, 1641, absolutely dissolv'd.

Painted CHAMBER. See PAINTED Chamber.

Imperial CHAMBER, is a Jurisdiction held antiently at *Spire*, but since transfer'd to *Veslar*. In this are determin'd the Differences among the Princes and Cities of the Empire. See EMPIRE.

It was at first ambulatory: In 1473 it was fix'd to *Augsburg*, then remov'd to *Frankfort*; and thence to *Worms*, in 1497; afterwards it was remov'd to *Nuremberg* and *Ratisbon*; again to *Worms* and *Nuremberg*; and from this last to *Essengen*; thence, in 1527, to *Spire*; where *Charles V.* render'd it sedentary, in 1530.

At its first Institution it consist'd of 16 Assessors; but the Reformation ensuing, occasion'd the Number to be increas'd: By the Treaty of *Osnaburg*, in 1648, there were appointed 50 Assessors; whereof 24 to be Protestants, and 26 Catholics; besides five Presidents, two of 'em Protestants, the rest Catholics.

As the Princes, or Circles of the Empire are not always exact in filling up the Vacancies in this Chamber, the Number of Assessors is now reduc'd to 16. See IMPERIAL.

This Chamber has a Right of judging by Appeal, and the last Resort, of all Civil Affairs of all the Subjects of the Empire, in the same manner as the *Aulic Council* residing at *Vienna*. See AULIC.

Processies are here almost Immortal, by reason of the infinite number of Ceremonies and Formalities wherewith they are embarras'd.

The Imperial Chamber is frequently afraid to pronounce Sentence, for fear of exposing its Awards to some Disgrace; the Princes sometimes not permitting such to be executed as displeas'd them.

Apostolical CHAMBER, at *Rome*, is that wherein Affairs relating to the Revenues and Domains of the Church and the Pope are transacted. See APOSTOLICAL.

CHAMBER of Audiences, or GRAND CHAMBER; a Jurisdiction in each Parliament of *France*. See PARLIAMENT.

At the first Institution of their Parliaments, there were two Chambers, and two Kinds of Counsellors; the one the grand Chamber for Audiences, the Counsellors whereof were call'd *Boyeurs*, who only judg'd; the other the Chamber of *Inspecti*; the Counsellors whereof were call'd *Rapporteurs*; who only reported Processies by writing.

CHAMBER of the Edict, or *M-partre*, was a Court establish'd by virtue of the Edicts of Pacification, in favour of those of the Reformed Religion; wherein the Number of Judges of either Religion were the same; and to which recourse was had in all Affairs wherein any of the Protestants were concern'd. This Chamber is now suppress'd.

CHAMBER of Accounts, is a sovereign Court, where Accounts are render'd of all the *Denners Royaux*; Inventories, and Avenues given to the King. Oaths of Fidelity taken, and other Things relating to the Finances transacted. The *French* have also,

Ecclesiastical CHAMBERS, which judge, by Appeal, of Differences arising on the raising of Tithes: Of these Ecclesiastical Chambers there are six; viz. at *Paris*, *Bordeaux*, *Rouen*, *Lyons*, *Tours*, *Youlouse*, *Bourges*, *Pau*, and *Nix*: they usually consist of the Archbishop of the Place, as President; other Archbishops and Bishops, a Deputy of each of the Diocesses, and three Counsellors of Parliament. The Chamber chules as many Counsellors out of the Clergy as it thinks proper; as also a Promoter.

CHAMBER of London. See CHAMBERLAIN.

CHAMBERS of Commerce, are Assemblies of Merchants and Dealers, where they treat about Matters relating to Commerce: Of these there are several, establish'd in most of the chief Cities of *France*, by Virtue of an Arret of the 30th of *August* 1701. Indeed there were some before this general Establishment, particularly one at *Marseilles*, and another at *Dunkirk*.

CHAMBER in War, is us'd for the Place where the Powder of a Mine is lodg'd. See MINE.

The Chamber of a Mine is a Cavity of five or six cubic Feet.

CHAMBER of a Mortar, or Cannon of the new Make, is a Cell, or Cavity at the bottom of the Barrel, or Chale, where the Charge of Powder is lodg'd. See MORTAR.

The different Form of the Chamber, is found by Experiment to have an Influence on the Range of the Piece. A Cubical Chamber carries the Ball a less Distance than a Circular one; and that less than a Cylindrical one.

CHAMBERLAIN, an Officer who has the Management, or Direction of a Chamber. See CHAMBER.

The Word *Chamberlain*, according to *Roqueuse*, originally signify'd, a Gentleman who was to sleep in the King's Bed-Chamber, at his Bed's Feet, in the Absence of the Queen.

There are almost as many Kinds of Chamberlains as Chambers: The principal are as follow.

Lord Great CHAMBERLAIN of England, an Officer of great Antiquity and Honour; being rank'd the sixth great Officer of the Crown: A considerable part of his Function is at the Coronation of a King; when he dresses him, carries the Coif, Sword, and Gloves to be us'd on that Occasion; the Gold Sword and Scabbard to be us'd by the King; the Robe Royal and Crown: He also undresses him, and waits on him at Dinner; having for his Fee the King's Bed, and all the Furniture of his Chamber, the Night-Apparel, and the Silver Basin wherein the King washes, with the Towels. See CORONATION.

To him likewise belongs the Provision of every thing in the House of Lords, in time of Parliament; to which End he has an Apartment near the Lords House. He has the Government of the Palace of *Westminster*; issues out Warrants

vants for preparing, fitting out, and furnishing *Westminster-Hall*, against Coronations, Trials of Peers, &c.

He disposes of the Sword of State, to be carry'd by whom he pleases; and when he goes to Parliament, is on the right Hand of the Sword, the Lord Marshal being on the left. On all solemn Occasions, the Keys of *Westminster-Hall*, of the *Court of Wards*, and *Court of Requests*, are deliver'd him.

To him belong Livery and Lodging in the King's Court; and he has certain Fees from every Bishop at his doing Homage to the King, and from every Peer at his Creation. Under his Command are, the *Genleman-Usher of the Black Rod*, the *Treasurer-Usher*, and *Door-keepers*.

This Honour was long held by the Earls of *Oxford*; viz. from the Time of *Henry I.* by an Estate Tail, or Inheritance; but in the three last Coronations by the Marquis of *Lindsey*, now Duke of *Avonshire*, by an Estate or Inheritance from a Daughter and Heir General, claim'd, but controverted.

LORD CHAMBERLAIN of the Household, an Officer who has the Oversight and Direction of all Officers belonging to the King's Chamber, except the Precinct of the *Bed-Chamber*; which is absolutely under the *Groom of the Stole*. See *Bed-Chamber*.

He has the Oversight of the Officers of the Wardrobe, of the removing of Wardrobes, Beds, Tents, Revels, Music, Comedians, Hunting, Messengers, Trumpeters, Drummers, Handicrafts, and other Tradesmen retain'd in the King's Service: As also of all Sergeants at Arms, Physicians, Apothecaries, Surgeons, Barbers, the King's Chamberlains, &c. and administers the Oath to all Officers above Stairs, &c.

There are also CHAMBERLAINS of the King's Courts, of the *Exchequer*, of *North Wales*, of *Chester*, of the City of *London*, &c. in all which Cases, this Officer is commonly the Receiver of all Rents and Revenues belonging to the Place whereof he is Chamberlain.

When there is no Prince of *Wales*, and Earl of *Chester*, the Chamberlain of *Chester* hath the Receipt and Return of all Writs coming thither out of any of the King's Courts.

In the *Exchequer*, there are two Officers of this Name, who were wont to keep a Controlement of the Pells of Receipt and Exitus; and kept certain Keys of the Treasury and Records: They kept also the Keys of that Treasury where the Leagues of the King's Predecessors, and divers ancient Books, as *Dooms-day Book*, and the *Black-Book* of the *Exchequer* remain. See *EXCHEQUER*.

The CHAMBERLAIN of *London* keeps the City Money, which is laid up in the *Chamber of London*, an Apartment in *Guild-Hall*: He also presides over the Affairs of Masters and Apprentices; and makes free of the City, &c.

His Office lasts but for a Year, being chosen annually on *Midsummer-Day*: but the Custom usually obtains, to re-choose the same Person; unless he have been chargeable with any Misdemeanor in his Office.

Vice-CHAMBERLAIN. See *Vice-Chamberlain*.

CHAMBRANLE, in Architecture and Joinery, the Border, Frame, or Ornament of Stone or Wood, us'd in the three Sides round Chamber-Doors, large Windows, and Chimneys.

The *Chambrante* is different in the different Orders: when 'tis plain and without Mouldings, 'tis call'd simply and properly, *Band, Case, or Frame*.

The *Chambrante* consists of three Parts; the two Sides, called *Moustrans*, or *Ports*; and the Top, called the *Traverse*, or *Supercilium*.

The *Chambrante* of an ordinary Door, is frequently call'd *Door-Case* of a Window, *Window-Frame* of a Chimney, *Mantle-Tree*. See *DOOR*, *WINDOW*, *MANTLE*.

CHAMFER, or **CHAMFRET**, in Architecture, an Ornament consisting of half a *Scotia*; being a kind of small Furrow, or Gutter on a Column, call'd also *Scapus*, *Stria*, &c. See *STRIA*.

Chamfering, or *Chamfraining*, is particularly us'd for the cutting of the Edge, or End of any thing a-slope, or bevel. See *BEVEL*.

CHAMELOT, in Commerce. See *CAMELOT*.

CHAMPAIN. See *CHAMPAGNE*, and *CHAMPION*.

A *Point CHAMPAIN*, in Heraldry, is a Mark of Dishonour in the Coat of Arms of him who kills a Prisoner of War after he has cry'd Quarter. See *POINT*.

CHAMPARTORS, in the Words of the Statute 33 *Edw. I.* are 'They who move Pleas or Suits, or cause them to be moved, either by their own Procurement or others; and sue them at their proper Costs, to have part of the Land in Variance, or part of the Gains; against whom lies a Writ of *Champarty*.'

CHAMPARTY, or **CHAMPERTY**, in Law, a Maintenance of any Man in his Suit, upon Condition of having part of the Thing, be it Lands or Goods; in case it be recover'd. See *MAINTENANCE*.

The Word comes from the French *Champ*, Field, and *parti*, divided; the Field, or Thing contested for, being suppos'd to be divided between the *Champion*, or Maintainer, and the Person in whose Right he sues.

This seems to have been an ancient Grievance; for notwithstanding several Statutes against it, and a Form of Writ accommodated to 'em, in the Time of *Edward I.* yet in that of *Edward III.* it was enact'd, That whereas redress on the former Statute was only to be had in the King's Bench, which then follow'd the Court; for the future it should likewise be cognizable by the Justices of the *Common Pleas*, and *Judges of Assize*.

CHAMPION, properly signifies, a Person who undertakes a Combat, in the Place or Quarrel of another; tho' the Word is also sometimes us'd for him who fights in his own Cause. See *COMBAT*.

Hottoman defines *Champion*, *Certator pro Alio datus in Duello, id est Campo datus, qui Circus erat decertantibus definitus*: Hence it is also called *Camfight*.

Du Cange observes, that *Champions*, in the just Sense of the Word, were Persons who fought in lieu of those who were oblig'd by Custom to accept the Duel; but had yet a just Excuse for dispensing with it, as being too old, infirm, Ecclesiasticks, &c. He adds, that the *Champions* were usually retain'd or hir'd for so much Money, and were held infamous.

There were also some Vassals, who by the Faith and Homage sworn to their Lords, were oblig'd to fight for 'em in case of need.

Some Authors hold, any Person was allow'd the Benefit of a *Champion*, excepting Parricides, and those accus'd of very heinous Offences.

This Custom of deciding Differences by Combat, was deriv'd from the North; whence it pass'd into *Germany*, and, with the *Saxons*, into *England*, and insensibly thro' the rest of *Europe*.

When two *Champions* were chose to maintain the Pro and the Con, 'twas always requir'd there should be a Sentence of the Judge to authorize the Combat: When the Judge had pronounc'd Sentence, the Accus'd threw a Gage, or Pledge, ordinarily a Glove, or Gantlet; which being taken up by the Accuser, they were both taken into safe Custody till the Day of Battel, appointed by the Judge. See *GAGE*.

If either of them fled after this, he was declar'd infamous, and deem'd to have committed the Crime imputed to him. Nor were the Accuser and Accus'd now allow'd to make up the Matter; at least, not without the Consent of the Judge; which was never granted, without making the Lord Satisfaction for the Right of Succession to the Effects of the Vanquish'd.

Before the *Champions* took the Field, their Heads were shav'd, and they made Oath, 'They believ'd the Person who retain'd them was in the right; and that they would defend his Cause to the utmost of their Power.' The Weapons they us'd when the Combat was on Foot, was a Sword and Buckler; some say, in *England*, only a Club and Buckler: when on Horseback, they were arm'd at all Points. Their Weapons were blessed in the Field by the Priest, with a word of Ceremony; and each took an Oath he had no Charm upon him.

The Action began with railing, and giving each other ill Language; at the Sound of a Trumpet they were to go to Blows: After the Number of Blows or Rencontres express'd in the *Cartel*, the Judges of the Combat threw a Rod into the Air, to advertise the *Champions* that the Combat was ended. If it lasted till Night, or ended with equal Advantage on either side, the Accus'd was reputed *Victor*.

The Punishment of the Vanquish'd, was that which the Crime merited whereof he was accus'd: If it were a Capital Crime, the Vanquish'd was disarm'd, led out of the Field, and immediately executed, together with the Party whose Cause he maintain'd. If the conquer'd *Champion* fought in the Cause of a Woman, she was burnt. See *DUEL*.

CHAMPION of the King, is an Officer whose Business it is, at the Coronation of a King of *England*, to ride into *Westminster-Hall*, arm'd Cap-a-pe, when the King is at Dinner, and throw down his Gantlet by way of Challenge; pronouncing, by a Herald, 'That if any Man shall deny, or gainsay the King's Title to the Crown, he is there ready to defend it in single Combat, &c.' Which done, the King drinks to him, sending him a gilt Cup with a Cover, full of Wine; which the *Champion* drinks, and has the Cup for his Fee.

This Office, ever since the Coronation of *Richard II.* has been continu'd in the Family of *Zymoocke*, who held the Mannor of *Scriewichy* in *Lincolnshire*, Hereditary from the Family of the *Marmions*, who had it before, by *grand Serjeanty*; i. e. that the Lord thereof shall be the King's *Champion*. See *SERJEANTY*.

CHAMPION- or rather CHAMPAIN-Lands, are Lands not inclos'd; or large Fields, Downs, or Praises, without Woods or Hedges. See DOWNS.

CHAMOIS Leather, popularly call'd SHAMMY, or CHAMMY; a kind of Leather, either dress'd in Oil, or tann'd; much esteem'd for its softness, pliancy, &c. See LEATHER.

It is prepar'd from the Skin of the *Chamois*, a kind of *Rupicapra*, or wild Goat, call'd also *Ursus*; inhabiting the Mountains of *Dauphin*, *Savoie*, *Piemont*, and the *Pyreneans*.

Besides the Softness and Warmness of the Leather, it has the Faculty of bearing Soap without damage, which renders it very useful on many Accoants.

In France, &c. some wear the Skin crude, without any Preparation: It is also us'd for the purifying of Mercury; which is done by passing it thro' the Pores of this Skin, which are very close. See MERCURY.

The true *Chamois Leather* is counterfeited with common Goat, Kid, and even Sheep Skin; the Practice of which makes a particular Profession, call'd by the People *Chamoisure*. The last, tho' the least esteem'd, is yet so popular, and such vast Quantities prepar'd, especially about *Orleans*, *Marseilles*, and *Toulouse*, that it may not be amiss to give the Method of Preparation.

The manner of CHAMMING, or of preparing Sheep, Goat, or Kid-skins in Oil, in Imitation of CHAMOIS.

The Skins being wash'd, drain'd, and smear'd over with Quick-lime on the fleshy side, are folded in two, lengthwise, the Wool outwards, and laid on Heaps, and so left to ferment eight Days; or, if they had been left to dry after fleeing, 15 Days.

Then they are wash'd out, drain'd, and half-dry'd; laid on a wooden Leg, or Horse, the Wool stripp'd off with a round Staff for the Purpose, and laid in a weak Pit, the Lime whereof had been us'd before, and had lost the greatest Part of its force.

After 24 Hours they are taken out, and left to drain 24 more; then put in another stronger Pit. This done, they are taken out, drain'd, and put in again, by turns; which begins to dispose them to take Oil: And this Practice they continue for 6 Weeks in Summer, or three Months in Winter; at the end whereof they are wash'd out, laid on the wooden Leg, and the Surface of the Skin on the Wool side peel'd off, to render them the softer; then, made into Parcels, steep'd a Night in the River, in Winter more; stretch'd, six or seven over one another, on the wooden Leg; and the Knife pass'd strongly on the Flesh side, to take off any thing superfluous, and render the Skin smooth.

Then they are stretch'd, as before, in the River; and the same Operation repeated on the Wool side; then thrown into a Tub of Water with Bran in it, which is brew'd among the Skins till the greatest Part stick to them; and then separated into distinct Tabs, till they swell, and rise of themselves above the Water.

By this means, the Remains of the Lime are clear'd out: They are then wrung out, hung up to dry on Ropes, and sent to the Mill, with the Quantity of Oil necessary to fill them: The best Oil is that of Stock-Fish.

Here, they are first thrown in Bunches into the River for 12 Hours, then laid in the Mill-Trough and fall'd without Oil till they be well softned; then oil'd with the hand, one by one, and thus form'd into Parcels of four Skins each, which are mill'd and dry'd on Cords a second time, then a third; then oil'd again and dry'd.

This Process is repeated as often as Necessity requires: when done, if there be any Moisture remaining, they are dry'd in a Stove, and made up into Parcels wrap'd up in Wool: after some time they are open'd to the Air, but wrap'd up again as before, till such time as the Oil ceases to have lost all its force, which it ordinarily does in 24 Hours.

The Skins are then return'd from the Mill to the *Chamoiser*, to be fow'd; which is done by putting them in a Lixivium of Wood-Ashes, working and beating them in it with Poles, and leaving 'em to steep till the Lye have had its Effect; then wrung out, steep'd in another Lixivium, wrung again, and this repeated till all the Grease and Oil be purg'd out. They are then half dry'd, and pass'd over a sharp-edg'd Iron Instrument, plac'd perpendicular in a Block, which opens, softens, and makes them gentle: lastly, they are thoroughly dry'd, and pass'd over the same Instrument again, which finishes the Preparation, and leaves 'em in form of *Chamois*.

Kid, and Goat-skins are *chamois'd* in the same manner as those of Sheep; excepting that the Hair is taken off, without the use of any Lime; and that when brought from the Mill, they undergo a particular Preparation, call'd *Remaling*, the most delicate and difficult of all the others.

It consists in this, that as soon as brought from the Mill, they are steep'd in a fit Lixivium; taken out, stretch'd on a round wooden Leg, and the Hair scrap'd off with the Knife; this makes them smooth, and, in working, call a

kind of fine Nap. The Difficulty is in scraping them evenly.

CHANCE, a Term we apply to Events, to denote that they happen without any necessary Cause. See CAUSE.

Our Aim is, to ascribe those Things to Chance, which are not necessarily produc'd as the Natural Effects of any proper Cause; but our Ignorance and Precipitancy lead us to attribute Effects to Chance, which have a necessary and determinate Cause.

When we say a Thing happens by Chance, we really mean no more, than that its Cause is unknown to us: not, as some vainly imagine, that Chance it self can be the Cause of any Thing. From this Consideration, Dr. Beattie takes occasion to expose the Folly of that old Tenet, *The World was made by Chance*.

The Case of the Painter, who unable to express the Foam at the Mouth of a Horse he had painted, threw his Sponge in Despair at the Piece, and, by Chance, did that which he could not before do by Design, is an eminent Instance of the Force of Chance: Yet, 'tis obvious, all we here mean by Chance, is, that the Painter was not aware of the Effect; or that he did not throw the Sponge with such a View: not but that he actually did every thing necessary to produce the Effect; inasmuch, that considering the Direction wherein he threw the Sponge, together with its Form, specific Gravity, the Colours wherewith it was smoo'd, and the Distance of the Hand from the Piece, it was impossible, on the present System of Things, the Effect should not follow.

Chance is frequently personify'd, and cross'd into a chimerical Being, whom we conceive as acting arbitrarily, and producing all the Effects, whose real Causes do not appear to us; in which Sense, the Word coincides with the *νους*, *Fortuna* of the Ancients. See FORTUNE.

CHANCE is also confounded with Fate, and Destiny. See FATE, and DESTINY; see also NATURE, GOD, &c.

CHANCE is also us'd for the manner of deciding Things, the Conduct or Direction whereof, is left at large, and not reducible to any determinate Rules or Measures; or where there is no ground for preference, as at Cards, Dice, Lotteries, &c.

For the Laws of CHANCE, or the Proportion of Hazard in Gaming; see GAME.

The ancient *Sors*, or Chance, M. Placette observes, was instituted by God himself; and in the Old Testament, we find several standing Laws and express Commands which prefer'd its use on certain Occasions: Hence, the Scripture says, *The Lot, or Chance, fell on St. Matthias*; when it was in question who should fill Judas's Place in the Apostolate.

Hence also arose the *sortes Sanctorum*; or Method of determining Things among the ancient Christians, by opening some of the Sacred Books, and pitching on the first Verse they call'd their Eye on, as a sure Prospect of what was to befall them. The *sortes Homerice, Virgiliane, Prænestine*, &c. us'd by the Heathens, were with the same View, and in the same manner. See SORTES.

St. Augustine seems to approve of this Method of determining Things future, and owns that he had practis'd it himself; grounded on this Supposition, that God presides over Chance, and on *Proverbs* 16. v. 33.

Many among the modern Divines, hold Chance to be conducted in a particular manner by Providence, and esteem it an extraordinary Way which God uses to declare his Will, and a kind of immediate Revelation. See PURGATION, JUDICIUM DEI, COMBAT, CHAMPION, &c.

CHANCE-MEDLEY, in Law, the accidental killing of a Man, not altogether without the Killer's Fault, tho' without any evil Intent.

Stamford calls it, *Homicide by Misadventure*: Weft calls it *Homicide mix'd*; and says, it is when the Killer's Ignorance or Negligence is join'd with the Chance: as supposing a Man leaping Trees by the Highway, and a Bough falling given to kill a Passenger; the Party here offends as not having given warning, whereby the Slain might have been induc'd to take more heed. See HOMICIDE.

CHANCEL, part of the Choir of a Church, between the Altar, or Communion Table, and the Balustrade, or Rails that inclose it; where the Minister is plac'd at the Celebration of the Communion. See CHURCH, COMMUNION, ALTAR, &c.

The Right of a Seat and a Sepulchre in the Chancel, is esteem'd very honourable. See SEPULCHRE.

The Word comes from the Latin *Cancellum*, which in the lower Latin is us'd in the same Sense, from *Cancelli Latice*, or Cross Bars, wherewith the *Chancels* were anciently inclos'd, as they now are with Rails.

CHANCELLOR, an Officer, suppos'd originally to have been a Notary, or Scribe, under the Emperors, and nam'd *Cancellarius*, because he sat behind a Lattice, call'd by the Latins *Cancelli*, to avoid being crowd'd by the People. See NOTARY, &c.

Nanda says, it was the Emperor himself who sat and render'd Justice within the Lattice; the *Chancellor* attending at the Door thereof, whence he took his Title.

Others lay, he had it from this, that all Letters, Addresses, Petitions, &c. to the King, being first examin'd by him, were cancell'd where amiss; Others, because all Patents, Commissions, and Warrants coming from the King, were examin'd and cancell'd by him. Others, because he cancell'd and annull'd the Sentences of other Courts.

De Cæge, from *Joannes de Tanna*, fetches the Original of *Chancellor* from *Palestine*, where the Houses being flat, and made in form of a Terrace, with Parapets or Pallisades call'd *Cancelli*; those who mounted these Houses to rehearse any Harangue, were call'd *Cancellarii*: whence the Name pass'd to those who pleaded at the Bar, whom he calls *Cancelli forenses*, and at length to the Judge who presided; and lastly to the King's Secretaries.

This Officer is now in great Authority in all Countries: the Person who bears it with us, is the

LORD HIGH CHANCELLOR of England, the first Person of the Realm, next after the King and Princes of the Blood, in all Civil Affairs. He is the chief Administrator of Justice next the Sovereign; being the Judge of the Court of Chancery. See **CHANCERY**.

All other Justices are ty'd to the strict Law, but the *Chancellor* has the King's absolute Power to moderate the Rigour of the Written Law, to govern his Judgment by the Law of Nature and Conscience, and to order all things *secundum æquum et bonum*. Accordingly, *Stamford* says, the *Chancellor* has two Powers, the one Absolute, the other ordinary; meaning, that tho' by his ordinary Power he must observe the same Form of Procedure as other Judges, yet in his absolute Power he is not limited by any written Law, but by Conscience and Equity. See **EQUITY**.

The Offices of *Lord Chancellor* and *Lord Keeper*, are by the Statute 5 *Elizabeth*, made the same thing; till that time they were different; and frequently substituted at the same Time in different Persons: Sometimes the *Lord Chancellor* had a *Vice-Chancellor*, who was Keeper of the Seal. See **KEEPER**.

The Keeper was created *per traditionem magni Sigilli*, but the *Lord Chancellor* by Patent; tho' now that he has the Keeper's Office, he is created in like manner by giving him the Seal. The *Chancellor* is likewise Speaker of the House of Lords. See **PARLIAMENT**.

Tho' he be sole Judge of the Court of Chancery, yet in Matters of much difficulty he sometimes consults the other Judges; so that this Office may be discharg'd by one who is no profess'd Lawyer, as antiently it commonly was. He has twelve Assistants, or Co-adjutors, antiently call'd *Clerici*, as being in Holy Orders, now *Masters in Chancery*, the first whereof is the *Master of the Rolls*. See **MASTER of the Rolls**, **MASTERS in Chancery**, &c.

CHANCELLOR of a Cathedral, is the Judge of the Bishop's Court, held in the Cathedral of each Diocess. See **BISHOP'S COURT**, and **CATHEDRAL**.

He was antiently call'd *Ecclesiasticus*, and *Episcopi Eodius*, the Church-Lawyer. See **ECCLESIASTICUS**, **ADVOCATE**, &c.

In the *Monasticon* his Office is thus describ'd, viz. to hear the Lessons and Lectures read in the Church, either by himself or his Vicar; to correct and set right the Reader when he reads amiss; to inspect Schools, to hear Causes, apply the Seal, write and dispatch the Letters of the Chapter, keep the Books, to take care there be frequent Preachings, both in the Church and out of it, and to assign the Office of Preaching to whom he lists.

CHANCELLOR of the Duchy of Lancaster, is an Officer, the Head of that Court; his Business is to judge and determine all Controversies between the King, and his Tenants of the Duchy Land; and otherwise to direct all the King's Affairs relating to that Court. See **DUTCHY COURT**.

CHANCELLOR of the Exchequer, is an Officer, suppos'd by some to have been created for qualifying Extremities in the Exchequer. See **EXCHEQUER**.

He sits in that Court and the Exchequer Chamber, and, with the rest of the Court, orders Things to the King's best benefit. He is always in Commission with the Lord Treasurer for letting Lands accruing to the Crown by Dissolution of Abbeys, and otherwise: He has Power, with others, to compound for Forfeitures on Penal Statutes, Bonds, and Recognizances enter'd into by the King.

He has a great Authority in managing the Royal Revenue, and in Matters of First-Fruits. See **REVENUES**.

The Court of Equity, in the Exchequer Chamber, is held before the Lord Treasurer, *Chancellor*, and Barons, as that of Common Law before the Barons only. See **BARON**, &c.

CHANCELLOR of an University, is he who Seals the *Diplomas* or Letters of Degrees, Provision, &c. given in the University. See **UNIVERSITY**.

The *Chancellor of Oxford* is their Chief Magistrate,

elect'd by the Students themselves: His Office is *durante Vita*, to govern the University, preserve and defend its Rights and Privileges, convok Assemblees, and do Justice among the Members under his Jurisdiction.

Under the *Chancellor* is the *Vice-Chancellor*, who is chosen annually; being nominated by the *Chancellor*, and elect'd by the University in Convocation. His Business is to supply the *Chancellor's* Absence.

At his Entrance upon his Office, he chooses four *pro Vice-Chancellors*, out of the Heads of Colleges, to one of whom he deputes his Power in his absence.

The *Chancellor of Cambridge*, is in most respects the same with that of *Oxford*, only he does not hold his Office *durante Vita*, but may be elect'd every three Years.

He has under him a Commissary, who binds a Court of Record of Civil Causes, for all Persons of the University under the Degree of Masters of Arts.

The *Vice-Chancellor of Cambridge* is chosen annually by the Senate, out of two Persons nominated by the Heads of the several Colleges and Halls.

CHANCELLOR of the Order of the Garter, and other Military Orders, is an Officer who seals the Commissions, and Mandates of the Chapter and Assembly of the Knights, keeps the Register of their Deliberations, and delivers Acts thereof under the Seal of the Order. See **GARTER**, &c.

CHANCERY, the grand Court of Equity and Conscience, instituted to moderate the Rigour of the other Courts, that are ty'd to the strict Letter of the Law. See **COURT**, **LAW**, and **EQUITY**.

The Judge of this Court is the *Lord High Chancellor*, whose Function see under **CHANCELLOR**.

The Proceedings of this Court are either *Ordinary*, like other Courts, according to the Laws, Statutes, and Customs of the Nation, and in *Latin*, by granting out Writs Remedial and Mandatory, Writs of Grace, &c. see **WRIT**, &c. Or *Extraordinary*, according to Equity and Conscience, and in *English*, by Bills, Answers, and Decrees, to examine Frauds, Combinations, Truists, secret Uses, &c. to soften the Severity of Common Law, and rescue Men from Oppression; to relieve 'em against Cheats, unfortunate Accidents, Breaches of Trust, &c.

Out of the Court of *Chancery*, are issu'd Writs or Summons's for Parliaments and Convocations, Edicts, Proclamations, Charters, Profections, Patents, Safe Conduits, Writs of *Moderata*, *Misericordia*, &c. See **WRIT**, **SUMMONS**, **CONVOCATION**, **EDICT**, **PROCLAMATION**, **CHARTER**, &c.

Here are also seal'd and enroll'd Letters Patent, Treaties and Leagues, Deeds, Writs, Commissions, &c. See **PATENT**, **DEED**, &c.

The Officers of this Court, beside the *Lord Chancellor*, who is supreme Judge, see, the *Master of the Rolls*, who, in the *Chancellor's* Absence, hears Causes and gives Orders; and twelve *Masters of Chancery*, who are Assistants, and sit by turns on the Bench; see **MASTERS**, &c.

For the *English* Part of this Court are Six Clerks, who have each under him about fifty or more, in the Nature of Attorneys of the Court: Two chief *Examiners*, for examining Witnesses, who have each five or six Clerks apiece: One principal *Register*, who has four or five Deputies: *Clerk of the Crown*, who makes Writs, Commissions, &c. *Warden of the Fleet*: *Sergeants at Arms*, who bears the Mace before the *Chancellor*; and the *Usher* and *Crier* of the Court. See **SIX CLERKS**, **REGISTER**, **WARDEN**, **SERGEANT**, &c.

To the *Latin* Part belong the twenty four *Cursitors*, and their Clerks, who make out original Writs; *Clerks of the petty Bag*; *Clerks of the Hanaper*; *Controller of the Hanaper*; *Clerk of Appeal*; *Clerk of the Faculties*; *Sealer Chafe Wax*; *Clerk of the Patents*, of *Presentations*, *Dismissions*, *Licences to alienate*, *Enrollments*, *Profections*, *Subpoenas*, *Affidavits*, &c. See each under its proper Article, **CURSITOR**, **CLERK**, **CHAFE-WAX**, &c.

CHANDELIERS, in Fortification, are wooden Stakes six Foot high, and six or seven apart, between which are plac'd Fascines, to cover the Workmen on Approaches. See **FASCINES**.

These are sometimes made to prevent the Enemy from seeing what passes within.

The Difference between *Chandeliers* and *Blinds* consists in this, that the former serve to cover the Pioneers before, and the latter also cover them over Head. See **BLINDS**.

CHANGE, in Commerce, &c. See **EXCHANGE**.

CHANGER, an Officer belonging to the Mint, who changes Money for Gold or Silver Bullion. See **MINT**.

Money-CHANGER, is a Banker, who deals in the Exchange, Receipt, and Payment of Monies. See **BANK**.

CHANGES, in Arithmetic, &c. the Permutations or Variations of any Number of Quantities; with regard to their Position, Order, &c. See **COMBINATION**.

To find all the possible Changes of any Number of Quantities, or how oft their Order may be vary'd.

Suppose two Quantities *a* and *b*. Since they may be either wrote *ab* or *ba*; tis evident their Changes are 2 = 2. 1. Suppose the Quantities *a b c*: their Changes will be as in the Margin; as is evident by combining *c a b* *c* first with *a b*, then with *b a*; and hence the Number of Changes arises 3. 2. 1 = 6. If the Quantities be 4, each may be combin'd four ways with each Order of three; whence their Number of Changes arises 6. 4. 3. 2. 1 = 24. Wherefore, the Number of Quantities suppos'd in the Number of Changes, will be $n \cdot n - 1. 1 \cdot 2 - 2. 2 - 3. 3 - 4 \&c.$ If the same Quantity occur twice, the Change of 2 will be found *bb*, of 3 *bab*, *abb*, *bba*; of 4 *cbab*, *cbacb*, *bcbcb*. And thus the Number of Changes in the first Case will be 1 = 2. 1. 1. 2. 1. in the second, 5 = 3. 2. 1. 2. 1; in the third 12 = 4. 3. 2. 1. 2. 1.

If a fifth Letter be added, in each Series of four Quantities, it will beget five Changes, whence the Number of all the Changes will be 60 = 5. 4. 3. 2. 1. 2. 1. Hence Changes will be $n \cdot n - 1. 1 - 2. 2 - 3. 3 - 4 \&c.$

From these special Formule may be collected a general one, viz. If *n* be the Number of Quantities, and *m* the Number which shows how oft the same Quantity occurs; we shall have ($n \cdot n - 1. n - 2. n - 3. n - 4. n - 5. n - 6. n - 7. n - 8. n - 9. \&c.$); $m - 1. m - 2. m - 3. m - 4. \&c.$) The Series being to be continu'd, till the continual Substitution of Unity from *n* and *m* leave 0. After the same manner we may proceed further, till putting *n* for the Number of Quantities, and *l, m, r, \&c.* for the Number that shows how oft any of them is repeated, we arrive at an universal Form, ($n \cdot n - 1. n - 2. n - 3. n - 4. n - 5. n - 6. n - 7. n - 8. \&c.$); $l - 1. l - 2. l - 3. l - 4. l - 5. \&c.$

So suppose, for Instance, $n = 6, l = 3, r = 0$. The Number of Changes will be (6. 5. 4. 3. 2. 1) : 3. 2. 1. 3 : 1) = (6. 5. 4) : 3. 2 = 5. 2 = 20.

Hence, suppose thirteen Persons at a Table, if it be requir'd how oft they may change Places, we shall find the Number 13. 12. 11. 10. 9. 8. 7. 6. 5. 4. 3. 2. 1 = 6227020800.

In this manner may all the possible Anagrams of any Word be found in all Languages, and that without any Study; suppose, *e. g.* it were requir'd to find the Anagrams of the Word *Amor*, the Number of Changes will be

<i>a</i>	<i>o</i>	<i>m</i>	<i>r</i>	<i>o</i>	<i>a</i>	<i>r</i>	<i>o</i>	<i>m</i>	<i>a</i>	<i>r</i>	<i>o</i>	<i>a</i>	<i>m</i>	<i>r</i>	<i>o</i>	<i>a</i>	<i>m</i>
<i>o</i>	<i>a</i>	<i>m</i>	<i>r</i>	<i>o</i>	<i>a</i>	<i>r</i>	<i>o</i>	<i>m</i>	<i>a</i>	<i>r</i>	<i>o</i>	<i>a</i>	<i>m</i>	<i>r</i>	<i>o</i>	<i>a</i>	<i>m</i>
<i>m</i>	<i>a</i>	<i>o</i>	<i>r</i>	<i>o</i>	<i>a</i>	<i>r</i>	<i>o</i>	<i>m</i>	<i>a</i>	<i>r</i>	<i>o</i>	<i>a</i>	<i>m</i>	<i>r</i>	<i>o</i>	<i>a</i>	<i>m</i>
<i>a</i>	<i>m</i>	<i>r</i>	<i>o</i>	<i>a</i>	<i>r</i>	<i>o</i>	<i>m</i>	<i>a</i>	<i>r</i>	<i>o</i>	<i>a</i>	<i>m</i>	<i>r</i>	<i>o</i>	<i>a</i>	<i>m</i>	<i>r</i>
<i>o</i>	<i>a</i>	<i>m</i>	<i>r</i>	<i>o</i>	<i>a</i>	<i>r</i>	<i>o</i>	<i>m</i>	<i>a</i>	<i>r</i>	<i>o</i>	<i>a</i>	<i>m</i>	<i>r</i>	<i>o</i>	<i>a</i>	<i>m</i>
<i>m</i>	<i>a</i>	<i>o</i>	<i>r</i>	<i>o</i>	<i>a</i>	<i>r</i>	<i>o</i>	<i>m</i>	<i>a</i>	<i>r</i>	<i>o</i>	<i>a</i>	<i>m</i>	<i>r</i>	<i>o</i>	<i>a</i>	<i>m</i>
<i>m</i>	<i>a</i>	<i>o</i>	<i>r</i>	<i>o</i>	<i>a</i>	<i>r</i>	<i>o</i>	<i>m</i>	<i>a</i>	<i>r</i>	<i>o</i>	<i>a</i>	<i>m</i>	<i>r</i>	<i>o</i>	<i>a</i>	<i>m</i>
<i>m</i>	<i>a</i>	<i>o</i>	<i>r</i>	<i>o</i>	<i>a</i>	<i>r</i>	<i>o</i>	<i>m</i>	<i>a</i>	<i>r</i>	<i>o</i>	<i>a</i>	<i>m</i>	<i>r</i>	<i>o</i>	<i>a</i>	<i>m</i>

The Anagrams therefore of the Word *Amor*, in the Latin Tongue, are *Romo, Mors, Moro, Ramo, Amro*.

Whether this new Method of Anagrammatizing be like to prove of much Service to that Art, is left to the Poets.

CHANNEL, in Anatomy, Chirurgery, &c. See CANAL. CHANNEL, or Bed of a River. See RIVER.

CHANNEL is also us'd for divers Arms of the Sea, where the Water runs within the Land; as also for certain narrow Seas, confin'd between two adjacent Continents, or an Island and Continent, &c. See SEA.

In this Sense, we say, *St. George's Channel; the British Channel; the Channel of the Black Sea*, of Constantinople, &c.

CHANNEL, in Building. See GUTTER, PIPE, PLUMBERY, &c.

CHANNEL is particularly us'd in Architecture, for a Part of the Ionic Capital, a little hollow'd, in form of a Canal; lying under the Abacus, and running the whole length of the Circumvolution of the Volute; inclos'd by a Lintel. See IONIC CAPITAL.

CHANNEL of the Larmier, is the Soffit of a Cornice; which makes the pendant *Mouche*. See LARMIER, and SOFFIT.

CHANNEL of the Volute, in the Ionic Capital, is the Face of its Circumvolution; inclos'd by a Lintel. See VOLUTE.

CHANNELINGS. See FLUTINGS.

CHANT, or CHAUNT. See SONG.

CHANT, *Cantus*, is particularly us'd for the Vocal Music of Churches.

In Church History we meet with divers Kinds of *Chant*, or *Song*: The first is the *Ambrosian*, establish'd by *St. Ambrose*. See AMBROSIAN CHANT.

The second the *Gregorian Chant*, introduc'd by *Pope Gregory the Great*, who establish'd Schools of *Chantors*, and corrected the Church Song.

This is still retain'd in the Church under the Name of *Plain Song*: At first it was call'd the *Roman Song*.

The *Plain*, or *Gregorian Chant*, is where the Choir and the People sing in Union, or all together in the same manner. See GREGORIAN CHANT.

CHANT-ROYAL. See COMEDY.

CHANT-LATE, in Building, a piece of Wood fasten'd near the Ends of the Rafter, and projecting beyond the

Wall, to support two or three Rows of Tiles, so plac'd to prevent the Rain-Water from trickling down the Sides of the Wall.

CHANTER, or CHAUNTOR, a Person who sings in the Choir of a Cathedral. See CHOIR, &c.

All great Chapters have *Chantors* and *Chaplains* to care and assist the Commes, and officiate in their Absence. See CHAPTER, CANON, &c.

St. Gregory first instituted the Office of *Chantors*, erecting them into a Body, call'd *Scolae Cantorum*: the *Augustinus* seems to attribute their Rise to *Pope Hilary*, who liv'd an hundred Years before *Gregory*.

But the Word grows obsolete in this Sense, and instead thereof we use the Word *Chorister*, or Singing Man. See CHORISTER.

CHAUNTOR is us'd, by way of Excellence, for the *Precentor*, or Master of the Choir; which is one of the first Dignities of the Chapter.

The *Chantor* bears the Cope and the Staff at solemn Festivals; and gives Tune to the rest at the beginning of Psalms and Anticims. See PSALMIST.

The Ancients call'd the *Chantor Primicerius*. See PRIMICERIOS.

To him formerly belong'd the Direction of the Deacons, and other inferior Officers.

CHANTRY, a Chapel endow'd for the maintaining a Priest, or Priests, to sing Mass for the Souls of the Founders.

CHAEOLOGY, the History or Description of the *Chaos*. See CHAOS.

Orpheus, in his *Chælogy*, sets forth the different Alterations, Secretions, and divers Forms Matter went thro till it became inhabitable; which amounts to the same with what we otherwise call *Cosmogony*. See COSMOGONY.

Dr. Burner likewise gives us a *Chælogy*, in his Theory of the Earth. He represents the *Chaos*, as it was at first, entire, undivided, and universally rude, and desord'rd; or the *Tobu Tobu*; then shows how it came divided into its respective Regions; how the homogeneous Matter gather'd itself apart from all of a contrary Principle; and lastly, how it harden'd and became a solid habitable Globe.

See ELEMENT.

CHAOS, among the ancient Philosophers, was describ'd a dark, turbulent Atmosphere; or a disorderly System, or Mixture of all sorts of Particles together, without any Form or Regularity: out of which the World was form'd. See WORLD.

Chaos is every where represented as the first Principle, Ovum, or Seed of Nature and the World. All the ancient Sophists, Sages, Naturalists, Philosophers, Theologues, and Poets, hold that *Chaos* was the Eldcift and First Principle, or *Arx* of all.

The *Barbarians, Phœnicians, Egyptians, Persians*, &c. all refer the Origin of the World to a rude, mix'd, confus'd Mass of Matter. The *Greeks, Orpheus, Hesiod, Menander, Aristophanes, Euripides*, and the Writers of Cyclic Poems, speak of the first *Chaos*: The *Ionics*, and *Platonic* Philosophers build the World out of it. The *Stoics* hold, that as the World was first made of a *Chaos*, it shall at last be reduc'd to a *Chaos*; and that all its Periods and Revolutions in the mean time, are only Transitions from one *Chaos* to another. Lastly, the *Latinis*, as *Ennius, Varro, Ovid, Lucretius, Statius*, &c. are all of the same Opinion. Nor is there any Sect or Nation whatever, that does not derive their *Antiquities*, the Structure of their World, from a *Chaos*.

The Opinion arose among the *Barbarians*, whence it spread to the *Greeks*, and from the *Greeks* to the *Romans* and other Nations.

Dr. Burner observes, that besides *Aristotle* and a few other *plendo-Pythagoreans*, no body ever assert'd, that our World was always, from Eternity, of the same Nature, Form, and Structure as at present: but that it had been the standing Opinion of the wise Men of all Ages, that what we now call the Terrestrial Globe, was an uniform'd; indigested Mass of heterogeneous Matter, call'd *Chæos*; and no more than the Rudiments and Materials of the present World.

It does not appear who first breach'd the Notion of a *Chæos*. *Moses*, the Eldcift of all Writers, derives the Origin of his World, from a Confusion of Matter, dark, void, deep, without form, which he calls *Tobu Tobu*; which is precisely the *Chæos* of the *Greek* and *Barbarian* Philosophers. And hence, possibly, might those Philosophers derive their *Chæos*, with some Alteration and Interpolation.

Moses goes no farther than the *Chæos*; nor tells us whence it took its Origin, or whence its confus'd State; and where *Moses* stops, there, precisely, do all the rest. See *AVVS*.

Dr. Burner endeavors to shew, that as the ancient Philosophers, &c. who wrote of the *Cosmogony*, acknowledg'd a *Chæos* for the Principle of their World; so do the Divines, or Writers of the *Theogony* derive the Origin or Generation of their Gods from the same Principle. See *COSMOGONY*, and *THEOGONY*; see also *GEN*.

Mr. *Wilson* supposes the ancient *Chaos*, the Origin of our Earth, to have been the Atmosphere of a Comet; which, the new, yet, all things consider'd, is not an improbable Assertion. He endeavours to make it out by many Arguments, drawn from the Agreement which appears to be between them.

So that, according to him, every Planet is a Comet, form'd into a regular and lasting Constitution; and plac'd at a proper Distance from the Sun, revolving in a nearly circular Orbit; and a Comet is a Planet either beginning to be destroy'd, or re-made; that is, a *Chaos* or Planet uniform'd, or in its primeval State, and plac'd, as yet, in an Orbit very eccentric. See COMET.

CHAPÉAU, or CHAPPEAU, *Hat*, in Heraldry, is us'd as a Mark of Ecclesiastical Dignity, especially of that of Cardinals, which is call'd absolutely the *red Chapéau*.

It is flat, and very narrow at top, but broad-brim'd, adorn'd with long silken Strings interlac'd; suspended from within with five Rows of Tassels, call'd by the Italians *Peci*, increasing in Number as they come lower. The Hat was given them by *Innocent IV.* in 1250, but was not us'd in Arms till the Year 1300. See CARDINAL.

Till that time, the Cardinals were represented with Mitres. See MITRE.

Archbishops and Patriarchs bear the green Hat, with four Rows of Tassels; Bishops wear it of the same Colour with three; Abbots and Apollitical Protonotaries with two.

The *Chapéau* is wore over the Shield by way of Crest, as Mitres and Coronets are. See CREST.

CHAPÉAU is sometimes also us'd as a Mark of Secular Dignity, particularly for the Cap, or Coronet arm'd with Ermin, born by Dukes, &c. See CORONET.

The Crest is born on the *Chapéau*; and by the *Chapéau* the Crest and Coat are separated; it being a Rule, that no Crest must touch the Shield immediately. See CREST, &c.

CHAPEL, or CHAPPEL, a kind of little Church, serv'd by an Incumbent under the Denomination of a *Chaplain*. See CHURCH, CHAPLAIN, &c.

There are two Kinds of *Chapels*, the one *Consecrated*, and held as *Benefices*; see BENEFICE: the other *Secular*, being of the Nature of *Oratories*. See ORATORY.

The first are built apart and at a distance from the Parish-Church; being neither Parishes, Cathedrals, nor Priories, but subsisting of themselves.

These are call'd by the Canonists *Sub-Dio*, and by us *Chapels of Ease*; as being erected at a distance from the Mother Church, where the Parish is large and wide, for the Ease and Convenience of some of the Parishioners who reside far off.

They are serv'd by some inferior Curate, provided either by the Rector of the Parish, or by those for whose Ease and Benefit they are intended.

The second Kind are frequently built in, or adjoining to a Church, as a Part thereof; having only a Desk, &c. to read Prayers in; and, in the *Romish* Churches, an Altar, &c. to celebrate Mass on: but without any Baptistry, or Font.

These the Canonists call *Sub-Tecta*. They are generally erected by some considerable Person, for the Use of their own Families; *Ut ibidem Familiaria Sepulchra sibi constituent.*

The twenty first Canon of the Council of *Agda*, held in 506, allows private Persons the use of *Chapels*; but with Prohibition to all Clerks to officiate in them without leave from the Bishop.

Free Chapels, are those *Chapels of Ease* which have a settled Revenue for perpetual Maintenance of the Curate, &c. by charitable Donatives of Lands, or Rents bestow'd on 'em; so as not to be any Charge either to the Rector, or the Parishioners.

There are several Collegiate Churches in *France*, which they call *Saintes Chapelles*, Holy *Chapels*; as those of *Paris*, *Dijon*, *Bourges*, *Bourbon*, &c. so call'd, by reason there are Relicks in them. See CHAPLAIN.

The *Word Chapel*, according to some, comes from the *Greek* *σκηνος*, little Tents, or Booths, set up by Traders in Fairs to shelter them from the Weather. *Papias* fetches it both from the *Greek* and *Latin*, *quasi capium nar, or, populium vel laudem*: Others derive it from the *Chape*, or Cope which serv'd to cover the Body: Others, *A pellicibus Caprarum*; because these Places were antiently cover'd with Goatskins. *Rebuff* derives it of *Capra*, *St. Martin's Cope*, which the Kings of *France* carry'd to War with them as their Standard, and preserv'd very carefully in particular Tents, thence call'd *Chapels*.

Hence, all those Places where Relicks were preserv'd came to be call'd *Chapels*; and the Persons who had the Care of them, *Chaplains*. See RELICKS.

CHAPEL is also a Name given to a Printing Workhouse; by reason, say some Authors, Printing was first actually perform'd in *Chapels*.

In this Sense, we say, *The Orders, or Laws of the Chapel*, the *Secrets of the Chapel*, &c. See PRINTING.

Knights of the Chapel, was an Order of Knights instituted by King *Henry VIII.* in his Testament, to the Number of 13; tho' these have been since increas'd to the Number of 26, call'd also *Pearl Knights*.

They are not really Knights of the Order of the Garter; but are, as it were, their Assistants or Deputies, serving to discharge all their Offices in the Funeral Services of the Kings of *England*. See GARTER.

They are subject to the Office of the *Canon of Windsor*, and live on Penions which the Order assigns them.

They bear the blue or red Cloke, with the Arms of *St. George* on the left Shoulder; but the Cloke is only Cloak, and they wear no Garter: which distinguishes them from the Knights of the Garter.

CHAPERON, CHAPERONNE, or CHAPERON, properly signifies a sort of Hood, or Covering of the Head, antiently wore both by Men and Women, the Nobles, and the Populace, and afterwards particularly affect'd to the Doctors and Licentiates in Colleges, &c.

Hence, the Name pass'd to certain little Shields, and other Funeral Devices, plac'd on the Forechads of the Horses that drew the Hearse to pompous Funerals, and which are still call'd *Chaperons*, or *Suffragans*; by reason such Devices were originally fasten'd on the *Chaperons*, or Hoods, wore by those Horses with their other Coverings of State.

CHAPITERS, in Law, were antiently a Summary, or Content of such Matters as are to be inquir'd of, or presented before Justices in Eyre, Justices of Assize, or of Peace, in their Sessions.

Chapters are now more usually taken for Articles deliver'd by the Mouth of the Justice in his Charge to the Inquest: Tho' it appears from *Bracton* and *Britton*, they were formerly Exhortations given by the Justices, for the good Observation of the Laws, and the King's Peace; first read in open Court, then deliver'd in Writing to the Grand Inquest: which the Grand Jury, or Inquest, were likewise to answer upon their Oaths, either affirmatively or negatively.

CHAPLAIN, properly signifies, a Person provided of a *Chapel*, or who discharges the Offices thereof. See CHAPEL.

CHAPLAIN is also us'd for an Ecclesiastical Person, in the House of a Prince, or a Person of Quality, who officiates in their *Chapels*, &c.

There are 48 *Chaplains* to the King, who wait four each Month, preach in the Chapel, read the Service to the Family, and to the King in his private Oratory, and say Grace in the Absence of the Clerk of the Closet.

While in waiting, they have a Table and Attendance, but no Salary.

The first *Chaplains* are said to have been instituted by the former Kings of *France*, for preserving the *Chape*, or *Cape*, with the other Relicks of *St. Martin*, which the Kings kept in their Palace, and carry'd out with them to War. The first *Chaplain* is said to be *Gul. de Meimes*, *Chaplain* to *S. Louis*.

Antiently, the King's Almoners were call'd *Chaplains*. See ALMONER.

CHAPLAIN in the Order of *Malta*, is us'd for the second Rank, or Class, in that Order; otherwise call'd *Diaco*.

The *Knights* make the first Class, and the *Chaplains* the second. See MALTA.

CHAPLAINS of the *Pope*, are the Auditors, or Judges of Causes in the sacred Palace; so call'd, because the *Pope* antiently gave Audience in his *Chapel*, to judge of Causes sent from the several Parts of Christendom.

He hirer summon'd, as Assessors, the most known Lawyers of his Time, who hence acquir'd the Appellation of *Capellani*, *Chaplains*.

'Tis from the Decrees formerly given by these, that the Body of *Decretals* is compos'd: Their Number *Pope Sixtus IV.* reduc'd to twelve. See DECRETAL.

If it be true, that the *Word Chapelain* was first apply'd to those who preserv'd *St. Martin's Chape*, as above, the *Word* must be deriv'd from *Capsa*, *Chape*, or *Capella*, of *Capella*, or *Capsa*, a Case, as others imagine.

Some say, the Shrines of Relicks were cover'd with a kind of Tent, *Cape*, or *Capella*, i. e. little Cape; and that hence the Priests who had the Care of them, were call'd *Chapelains*. In time, these Relicks were reposit'd in a little Church, either contiguous to a larger, or separate from it; and the same Name, *Capella*, which was given the Cover, was also given to the Place where it was lodg'd: and hence, the Priest who look'd to it came to be call'd *Chaplain*. See COPE.

CHAFFLET, a String of Beads, us'd in the *Romish* Church, to keep account of the Number of *Pater-Nosters*, and *Ave-Marys* to be rehears'd in Honour of God and the Holy Virgin.

Chaplets are otherwise call'd *Pater-Nosters*. There are *Chaplets* of Coral, of Diamonds, of *Callambon*, of Wood from *St. Lucia*, &c.

A *Rosary* is a *Chaplet* of fifteen Decads of *Ave-Marys*. See ROSARY.

Aveage derives the Origin of the Word from the Resemblance the Thing bears to a Hat, *Chapeau*; which is call'd by the *Italians* and modern *Latins*, *Capellina*; the first more frequently call it *Corona*.

Larrey and *P. Viret* ascribe the first Invention of the *Chaplet* to *Peter* the Hermit, well known in the History of the *Croisades*.

There is a *Chaplet* of our Saviour, consisting of 33 Beads, in honour of his 33 Years living on Earth, instituted by *F. Michael*, the *Camaldulan*.

The *Orientals* have a kind of *Chapelets*, which they call *Chains*, and which they use in their Prayers, rehearsing one of the Perfections of God on each Link, or Bead. The Great *Mogul* is said to have eighteen of these Chains, all precious Stones; some Diamonds, others Rubies, Pearls, &c.

The *Turks* have likewise *Chapelets*, which they bear in the Hand, or hang at the Girdle: But, *F. Dandini* observes, they differ from those us'd by the *Romanists*, in that they are all of the same Bigness, and have not that Distinction into Decads; to which they consist of six Decads, or 60 Beads. He adds, that they have frequently run over the *Chapelet*, the Prayers being extremely short; having only these Words, *Præse to God*; or these, *Glory to God*, for each Bead.

Besides the common *Chapelet*, they have likewise a larger one, consisting of 100 Beads, which has some Distinction, being divided by little Threads into three Parts, on one of which they repeat thirty times *Subbhan Allah*, i. e. God is to be praised; on another, *Ellamul lillah*, Glory to God; and on the third, *Alla eber*, God is Great. These three 30 times making only 90; to complete the Number 100, they add a Number of other Prayers for the Beginning of the *Chaplet*.

He adds, that the *Mahometan Chaplet* appears to have had its rise from the *Mes heracuth*, or *hundred Benedictions*; which the *Jews* are oblig'd to repeat daily, and which we find in their Prayer-Books: The *Jews* and *Mahometans* having this in common, that they scarce do any thing without pronouncing some *Laud*, or *Benediction*.

CHAPLET, in Architecture, is a little Ornament cut or carv'd in round Beads, Pearls, Olives, and Pater-Nosters; as is frequently done in *Bagnettes*.

A *Chaplet*, in effect, is little else but a *Baguette* enrich'd with Sculpture. See BAGUETTE.

CHAPPAR, a *Courier* of the King of *Persia*, who carries Dispatches from Court to the Provinces, and from the Provinces to Court. See COURIER.

The Poet, *M. Tavernier* tells us, are not establish'd and regulated in *Persia* as among us: When the Court sends out a *Chappar*, the Sophi's Master of the Horse furnishes him with a single Horse, who long soever his Journey be, and a Man to run after him: when his Horse is weary, he takes that of the first Horseman he meets with, who does not make the least Refusal, and sends his own home by the Man who follows him.

For the Master of the new Horse he has taken, he must run, or at least fend after the *Chappar* to re-take him, when the *Chappar* dismounts some other Horseman to change him.

The Word, in the original *Persian*, signifies *Courier*.

CHAPPE, in Heraldry, the Partition of an Escutcheon, by Lines drawn from the Centre of the upper Edge to the Angles below, as in the Figure adjoining, which they blazon, *Chappe Or*, and *Vert*.

The Sections of the Sides are to be of a different Colour from the rest. *Mackenzie* calls it, A *Chief Party per bend dexter*, or *sinister*, or both. See CHAPPEAU, or CHAPEAU.

CHAPPEL, or *CHAPEL*. See CHAPEL.

CHAPTER, Capitulum, a Community of Ecclesiastics, who form a Cathedral or Collegiate Church. See CATHEDRAL, and COLLEGIATE.

The Chief, or Head of the *Chapter*, is the *Dean*: The Body consists of *Canons*, or *Prebendaries*, &c. See DEAN; see also CANON, and PREBENDARY.

The *Chapter* has now no longer any Share in the Administration of the Diocess, during the Life of the Bishop; but succeeds to the whole Episcopal Jurisdiction during the Vacancy of the See.

The Origin of *Chapters* is deriv'd from hence, that antiently the Bishops had their Clergy residing with them in their Cathedrals, to assist them in the Performance of Sacred Offices, and in the Government of the Church; and even after Parochial Settlements were made, there were still a Body of Clerks who continu'd with the Bishop, and were indeed his Family, maintain'd out of his Income.

After the Monastick Life grew into request, many Bishops chose Monks rather than Seculars.

These Bodies, either of Monasticks or Seculars, had the same Privilege of choosing the Bishop, and being his Council; which the whole Clergy of the Diocess had before:

But, by degrees, their Dependance on the Bishop grew less and less; and then they had distinct Parces of the Bishop's Estate assign'd them for their Maintenance; till at last, the Bishop had little more left than the Power of visiting them. See BISHOP.

On the other hand, these *Capitular Bodies* by degrees also lost their Privileges; particularly that of choosing the Bishop, for which the Kings of *England* had a long struggle with the Pope: but at last, *Henry VIII.* got this Power vested in the Crown; and now the *Deans* and *Chapters* have only the Shadow of it.

The same Prince likewise expell'd the Monks from the Cathedrals, and plac'd Secular Canons in their room; those he thus regulated, are call'd *Deans* and *Chapters* of the new Foundation; such are *Canterbury*, *Winchester*, *Worcester*, *Ely*, *Carlisle*, *Durham*, *Recheber*, and *Norwich*: such also are the *Chapters* of the four new Sees, of *Peterborough*, *Oxford*, *Gloucester*, and *Bristol*. See DEAN.

CHAPTER, is also us'd for the Assemblies held by Religious and Military Orders, for deliberating on their Affairs, and regulating their Discipline.

Papius says, they are so call'd, *quod Capitula ibi legantur*.

The Establishment of General Chapters of Religious Orders, is owing to the *Cistercians*, who held the first in 1116, and were soon follow'd by the other Orders.

CHAPTER is also us'd for a Division of a Book; contriv'd for keeping Matters more clear and distinct.

The Antients were unacquainted with the Division of Books into Chapters and Articles. *Papius* says, the Name was given it, *quod sit averius fontana* Caput, or *quod Capiat totam summam*. *St. Augustine* compares Chapters to Inns; which refresh the Reader, as those the Traveller.

The three CHAPTERS, is a Phrase famous in Ecclesiastical History, signifying a Volume publish'd by *Theodore*, an Adherent of *Nestorius*, against *St. Cyril*; consisting of a Letter of *Bas*, Priest of *Edessa*, to *Marius*, a Bishop in *Persia*; of Extracts from the Works of *Diodorus of Tarsus*, and *Theodorus of Mopsuestia*, wherein the same Doctrines were taught, that were contended for by *Nestorius*: and of two Pieces of *Theodore*, the one against the Council of *Ephesus*, the other against the Anabaptism of *St. Cyril*.

These make the three Chapters; which have been, since, condemn'd by various Councils and many Popes.

CHAPTREL. See IMPOST.

CHARACTER, or *CARACTER*, in its general Sense, signifies a Mark, or Figure drawn on Paper, Metal, Stone, or other Matter, with a Pen, Graver, Chisel, or other Instrument, to signify, or denote any thing.

The Word is *Greek*, *χαρακτης*, form'd from the Verb *χαράσσω*, *insculpere*, *to engrave*, *impress*, &c.

The various Kinds of Characters may be reduc'd to three Heads, viz. *Literal Characters*, *Numeral Characters*, and *Abbreviations*.

LITERAL CHARACTER, is a Letter of the Alphabet, serving to indicate some articulate Sound, expressive of some Idea, or Conception of the Mind. See ALPHABET.

These may be divided, with regard to their Nature and Use, into *Nominal*, *Real*, and *Emblematical*.

NOMINAL CHARACTERS are those we properly call *Letters*; which serve to express the Names of Things. See LETTER.

REAL CHARACTERS, are those that instead of Names, express Things, and Ideas. See IDEA, &c.

Emblematical, or Symbolical CHARACTERS, have this in common with *real* ones, that they express the Things themselves; but have this further, that they in some measure personate them, and exhibit their Form: Such are the Hieroglyphics of the antient *Egyptians*. See HIEROGLYPHIC.

Literal Characters may be again divided, with regard to their Invention and Use, into *Particular* and *General*.

PARTICULAR CHARACTERS, are those peculiar to this, or that Nation; or that have been so: Such are *Roman*, *Italic*, *Greek*, *Hebrew*, *Arabic*, *Gothic*, *Chinese*, &c. *CHARACTERS*. See ROMAN, ITALIC, GREEK, HEBREW, GOTHIC, CHINESE, &c.

UNIVERSAL CHARACTERS, are also *real Characters*, and make what some Authors call a *Philosophical Language*.

That Diversity of Characters us'd by the several Nations to express the same Idea, is found the chief Obstacle to the Advancement of Learning; to remove this, several Authors have taken occasion to propose Plans of Characters that should be Universal, and which each People should read in its own Language. The Character here to be *Real*, not *Nominal*: to express Things, and Notions; not, as the common ones, Letters, or Sounds: yet to be mute, like Letters, and Arbitrary; not *Emblematical*, like Hieroglyphics.

Thus, every one should retain their own Language, yet every one understand that of each other, without learning it; only by seeing a *Real* or *Universal Character*, which should signify the same to all People; by what Sounds soever each express it in his particular Idiom. For Instance, by seeing the

the Character defin'd to signify to drink, an Englishman should read to drink; a Frenchman boire; a Latin bibere; a Greek vino, a few ΠΙΝΩ; a German trincken; and so of the rest: In the same manner as seeing a Horse, each People expresses it after their own manner; but all mean the same Animal.

This Real Character is no Chimera; the Chinese and Japanese have already somewhat like it. They have a common Character, which each of those Nations understand alike in their several Languages; though they pronounce them with such different Sounds, that they don't understand a Title of one another in speaking.

The first, and most considerable Attempts for a Real Character, or Philosophical Language in Europe, are those of Bishop Wilkins, and Delegerae: But these, with how much Art soever they were contriv'd, have yet prov'd ineffectual.

M. Leibnitz had some Thoughts the same way; he thinks those great Men did not hit the right Method. 'Twas probable, indeed, that by their means, People, who don't understand one another, might easily have a Commerce together; but they han't hit on true, Real Characters.

According to him, the Characters should resemble those us'd in Algebra; which, in effect, are very simple, yet very expressive; without any thing superfluous or equivocal; and contain all the Varieties reasonable.

The Real Character of Bishop Wilkins has its real Applause: Dr. Hook recommends it on his own Knowledge and Experience, as a most excellent Scheme; and to engage the World to the Study thereof, publishes some fine Inventions of his own therein.

M. Leibnitz tells us, he had under Consideration an Alphabet of Human Thoughts; in order to a new Philosophical Language, on his own Scheme: but his Death prevented its being brought to Maturity.

M. Lohve, in the *Philosophical Transactions*, gives us a Plan of an Universal Alphabet, or CHARACTER of another Kind: This was to contain an Enumeration of all such single Sounds, or Letters, as are us'd in any Language; by means whereof, People should be enabled to pronounce truly and readily any Language; to describe the Pronunciation of any Language that shall be pronounc'd in their hearing; so, as others accustom'd to this Language, tho they had never heard the Language pronounc'd, shall at first be able truly to pronounce it: And, lastly, this Character to serve as a Standard to perpetuate the Sounds of any Language.

In the *Journal Literaire*, Anno 1720, we have a very ingenious Project for an Universal Character: The Author, after obviating the Objections that might be made against the Feasibility of such Schemes in the general, proposes his own: His Characters are to be the common Arabic, or numeral Figures. The Combinations of these nine are sufficient to express distinctly an incredible Quantity of Numbers, much more than we shall need Terms to signify our Actions, Goods, Evils, Dates, Passions, &c. Thus is all the Trouble of framing and learning any new Character at once sav'd: the Arabic Figures having already all the Universality requir'd.

The Advantages are immense: for 1^o, We have here a stable, faithful Interpreter; never to be corrupted or chang'd, as the popular Languages continually are. 2^o, Whereas the Difficulty of pronouncing a foreign Language, is such as usually gives the Learner the greatest Trouble, and there are even some Sounds which Foreigners never attain to; in the Character here propos'd this Difficulty has no place: Every Nation is to pronounce them according to the particular Pronunciation that already obtains among them. All the Difficulty is, the accustoming the Pen and the Eye to affix certain Notions to Characters, that don't, at first sight, exhibit 'em. But this Trouble is no more than we find in the Study of any Language whatever.

The Inflections of Words, to be express'd by the common Letters: for Instance, the same Character shall express a *Filly*, or a *Colt*, a *Horse* or a *Mare*, an *old Horse*, or an *old Mare*, as accompany'd with this or that distinctive Letter, which shall shew the Sex, Youth, Maturity, or old Age: a Letter also to express the Bigness or Size of Things; thus, v.g. a Man with this or that Letter, to signify a *great Man*, or a *little Man*, &c.

The Effect of these Letters belongs to the Grammar, which once well understood, would abridge the Vocabulary exceedingly. An Advantage of this Grammar, is, that it would only have one Declension and one Conjugation: Those numerous Anomalies of Grammarians are exceeding troublesome, and arise hence, That the common Languages are conducted by the People, who never reason on what is best: but in the Character here propos'd, Men of Reason having the Introduction of it, would have a new ground, whereon to build regularly.

But the Difficulty is not in inventing the most simple, easy, and commodious Character, but in engaging the se-

veral Nations to use it; there being nothing they agree less in, than the understanding and pursuing their common Interest.

Literal Characters, again, may be divided with respect to the Nations among whom they have been invented and us'd, into *Greek Characters*, *Roman Characters*, *Hebrew Characters*, &c.

The Character now ordinarily us'd throughout Europe, is the *Latin Character* of the Antients.

The *Latin Character* was form'd from the *Greek*, and that from the *Phoenician*, which *Cadmus* brought into Greece.

The *Phoenician Character* was the same with that of the antient *Hebrew*, which subsisted to the Time of the *Babylonish Captivity*; after which they us'd that of the *Affyrans*, which is the square *Hebrew*, now in use; the antique being only found on some *Hebrew Medals*, commonly call'd *Samaritan Medals*. See SAMARITAN.

Postellus and others shew, that beside the *Phoenician*; the *Chaldee*, *Syriac*, and *Arabic Characters* were likewise form'd from the antient *Hebrew*.

The *French* were the first who, with the *Latin Office* of St. Gregory, admitted the Form of the *Latin Characters*. In a Provincial Synod, held in 1091, at *Leon in Spain*, the use of the *Gothic Characters* invented by *Ulfilas*, was abolish'd, and the *Latin ones* establish'd.

Medallists observe, that the *Greek Character*, consisting only of masculine Letters, has preserv'd its Uniformity on all Medals, as low as the Time of *Gallian*; there being no Alteration found in the Turn of the Character, notwithstanding the many considerable ones both in the Use and Pronunciation. From the Time of *Gallian*, it appears somewhat weaker and rounder: From the Time of *Constantinus to Michael*, the Space of 500 Years, we find only *Latin Characters*; and after *Michael*, the *Greek Characters* re-commence: but from that Time they begin to alter with the Language, which was then a Mixture of *Greek* and *Latin*. See GREEK.

The *Latin Medals* preserve both their Character and Language, as low as the Translation of the Seat of the Empire to *Constantinople*. Towards the Time of *Decius* the Character began to alter, and to lose of its Roundness and Beauty: Some time after it retriev'd it self, and subsisted tolerably to the Time of *Justin*; when it fell into the last Barbarity mention'd, under *Michael*; tho it afterwards grew worse, and degenerated into the *Gothic*: So that the rounder and better form'd the Character, the greater Presence it has to Antiquity.

NUMERAL CHARACTERS, are those us'd to express Numbers. See NUMBER.

There are two Kinds of Figures, or *Numeral Characters*, chiefly in use; the common Characters, and the *Roman*; to which may be added a third, call'd the *French Characters*.

The common CHARACTER is that ordinarily call'd the *Arabic*, as suppos'd to have been invented by the *Arab Astronomers*: tho the *Arabs* themselves call it the *Indian Character*; as if they had borrow'd it from the People of *India*. This indeed is pretty certain, that the Orientals are the Authors of it: which is confirm'd, as by other Circumstances, so from the manner of writing them, from left to right; which has been confessedly the manner of writing in all Ages in the East.

The *Arabic Characters* are ten, viz. 1, 2, 3, 4, 5, 6, 7, 8, 9, 0; the last call'd *Cypher*. See CYPHER.

The *Arabic Character* is us'd almost throughout Europe, and that on almost all Occasions; in Commerce, in Measuring, in Astronomical Calculations, &c.

Roman CHARACTERS consist of the Uccial or Masculine Letters of the *Roman Alphabet*; whence probably its Name: or, perhaps, from its being us'd by the antient *Romans* on their Coins, and in the Inscriptions of their publick Monuments, erected in honour of their Gods and great Men; on their Sepulchres, &c.

The *Numeral Letters* that compose the *Roman Character* are in Number seven, viz. I, V, X, L, C, D, M.

The I denotes one, V five, X ten, L fifty, C a hundred, D five hundred, and M a thousand.

The I repeated twice, makes two, II; thrice, three, III; four is express'd thus, IV. I before V or X, taking an Unit from the Number express'd by each of those Letters.

To express six, an I is added to a V, VI; for seven, two, VII; and for eight, three VIII: nine is express'd by an I before X, IX, agreeable to the preceding Remark.

The like Remark may be made of the X before L or C, except that the Diminution is by Tens, not Units: thus, XL signifies forty, and XC ninety; an L follow'd with an X sixty, LX, &c. The C before D or M, diminishes each by a hundred.

Besides the Letter D, which expresses five hundred, the Number may also be express'd by an I before a C inverted, thus IC; and thus, in lieu of the M, which signifies a thousand,

thousand, is sometimes us'd as I between two C's, the one erect, the other inverted, thus, CID: Agreeable to this, six hundred may be express'd IOC; and seven hundred, DCC, &c.

The *Roman Character* is now seldom us'd, but in Inscriptions of publick Monuments, on Medals, Coins, &c. in the Dates, Chapters, &c. of Books, &c.

The *French Character*, so call'd, because invented and chiefly us'd by the *French*, is more usually denoted, *Character of Account, or Finance*.

It consists of six Figures; part taken from the Letters of the usual current Hand, and partly imagin'd by the Inventor: The six Characters are *I, D, X, L, C, V*. The *J* consonant standing for one, the *b* for five, the *x* for ten, the *L* for fifty, the *C* for an hundred, and the last Character *v* for a thousand.

This Character is only an Imitation of the *Roman Character*; and its use is in most respects the same, particularly in what relates to the Combination of certain Letters, which plac'd before or after others, diminish or increase their Value. Indeed it has these Things peculiar in it, that when several Units occur successively, only the last is express'd: as *Idy*, That ninety, and the following Numbers to one hundred, are express'd thus, *iiiixxx* ninety; *iiiixxxv* ninety one; *iiiixxxvi*, &c.

It is principally us'd in the Chambers of Accounts; in the Accounts given in by Treasurers, Receivers, Farmers, and other Persons concern'd in the Management of the Revenue.

A Specimen of each of these Characters follows.

Arabic Characters.	Roman Characters.	French Characters.
Ninety	LXXXX, or XC	iiiixxx
Ninety one	LXXXXI, or XCI	iiiixxxv
Ninety two	LXXXXII, or XCII	iiiixxxvi
Ninety three	LXXXXIII, or XCIII	iiiixxxvii
Ninety four	LXXXXIV, or XCIV	iiiixxxviii
Ninety five	LXXXXV, or XCV	iiiixxxix
Ninety six	LXXXXVI, or XCVI	iiiixxxv
Ninety seven	LXXXXVII, or XCVII	iiiixxxvi
Ninety eight	LXXXXVIII, or XCVIII	iiiixxxvii
Ninety nine	LXXXXIX, or XCVIX	iiiixxxviii
One hundred	C	c
Two hundred	CC	cc
Three hundred	CCC	ccc
Four hundred	CCCC, or CD	ccc
Five hundred	D, or ID	dc
Six hundred	DC, or IDC	dcc
Seven hundred	DCC, or IDCC	dccc
Eight hundred	DCCC, or IDCCC	cccc
Nine hundred	DCCCC, or IDCCCC, or CM	cccc
One thousand	M, or CID	m

CHARACTERS, in Printing, are the Letters or Types by the various Arrangement whereof, are compos'd Forms; whence Impressions are taken, by means of a Press, on Paper. See LETTER, TYPE; see also FORM, PRINTING, &c.

For the Method of casting these Characters, see LETTER-FOUNDRY.

CHARACTER is also us'd in several of the Arts, for Abbreviations, and Symbols, contriv'd for the more concise, immediate, and artful conveyance of the Knowledge of Things. See ABBREVIATURE, and SYMBOL.

In this Sense of the Word, *Paulus Diaconus* refers the Invention of Characters to *Ennius*; who, he says, contriv'd the first eleven hundred. To these were many more added, by *Yulius Tyro*, *Cicero's* freed Man; and *Philargyrus*, *Fomius*, and *Aquila*, Freedmen of *Mecenas*.

Lastly, *L. Annæus Seneca* made a Collection of them, reduc'd them into order, and increas'd their Number to five thousand. *Tyro's* Notes may be seen at the End of *Gruter's* Inscriptions.

Valerius Probus, a Grammarian, in the Time of *Nero*, labour'd to good purpose in explaining the Notes of the Antients. *Diaconus* wrote an ample Treatise of the Explication of the Characters in Law, under the Reign of the Emperor *Constant I.* and *Goltzius* another for those of Medals.

Characters, or Symbols, are now chiefly us'd in the several Parts of Mathematics; particularly Algebra, Geometry, Trigonometry, and Astronomy; as also in Medicine, Chymistry, Musick, &c. The principal of each Kind we shall here subjoin.

CHARACTERS us'd in Arithmetic and Algebra. *a, b, c, d, e,* the first Letters of the Alphabet, are the Signs or Characters that denote the given Quantities; and *x, y, z,* &c. the last Letters, are the Characters of the Quantities sought. See QUANTITY.

Note, Equal Quantities are denoted by the same Character.

m, n, r, s, t, &c. are Characters of indeterminate Exponents, both of Ratios and Powers; thus $x^m, y^n, z^r,$ &c. denote indeterminate Powers of different Kinds; $mx, ny, rz,$ different Multiples, or Submultiples of the Quantities $x, y, z,$ &c. according as $m, n, r,$ are either whole Numbers or Fractions.

+ Is the Sign of real Existence, and is call'd the affirmative or positive Sign; importing the Quantities to which it is prefix'd, to be of a real and positive Nature. See POSITIVE.

It is also the Sign of Addition, and is read *Plus*, or more; thus $9 + 3$, is read 9 plus 3; or 9 more 3; that is, nine added to 3, or the Sum of 9 and 3, equal to 12. See ADDITION.

— Before a single Quantity, is the Sign of Negation, or negative Existence; shewing the Quantity to which it is prefix'd to be less than Nothing. See NEGATIVE.

Between Quantities, it is also the Sign of Subtraction, and is read *Minus*, or less; thus, $14 - 2$, is read, 14 minus, or abating 2; that is, the Remainder of 14, 2 after has been subtracted, viz. 12. See SUBTRACTION.

= Is the Sign of Equality; thus, $9 + 5 = 14 - 2$; signifies, 9 plus 3, to be equal to 14, minus 2. See EQUALITY.

This Character was first introduc'd by *Harriot*: *Des Cartes* in lieu of it uses ∞ . Before *Harriot* there was no Sign of Equality at all.

Wolffius, and some other Authors, use the Character = for the Identity of Ratios; or to shew the Terms to be in a Geometrical Proportion; which most Authors express thus: 11. See that Character.

x Is the Sign of Multiplication, denoting the Quantities on either side to be multiply'd into one another; thus, 4×6 , is read 4 multiply'd by 6; or the Factum, or Product of 4 and 6 = 24; or the Rectangle between 4 and 6.

Ordinarily, however, in Algebra, the Sign is omitted, and the two Quantities put together: Thus, $b \ d$ expresses the Product of the two Numbers denoted by b and d , which suppose 2 and 4, the Product whereof is 8, signify'd by $b \ d$.

Wolffius and others, make the Sign of Multiplication a Dot (\cdot) between the two Factors: Thus $6 \cdot 2$ signifies, the Product of 6 and 2 = 12. See MULTIPLICATION.

Where one or both the Factors are compounded of several Letters, they are distinguish'd by a Line drawn over 'em: thus, the Factum of $a + b - c$ into d , is wrote $d \times a + b - c$.

Guido Grandis, and after him *Leibnitz*, *Wolffius*, and others, to avoid the Perplexity of Lines, in lieu thereof distinguish the Compound Factors, by including 'em in a Parenthesis, thus $(a + b - c) \ d$.

÷ Is the Character of Division: thus $a \div b$ denotes the Quantity a to be divided by b .

Indeed, ordinarily in Algebra, the Quotient is express'd Fraction-wise; thus $\frac{a}{b}$ denotes the Quotient of a divided by b .

Wolffius, &c. make the Sign of Division ($:$) thus, $8 : 4$ denotes the Quotient of 8 divided by 4 = 2.

If either the Divisor or Dividend, or both, be compos'd of several Letters; v. g. $a + b$, divided by c ; instead of writing the Quotient Fraction-wise thus $\frac{a+b}{c}$ *Wolffius*, &c. include the compound Quantities in a Parenthesis; thus, $(a + b) : c$. See DIVISION.

⊙ Is the Character of Involution, or of producing the Square of any Quantity by multiplying it by it self. See INVOLUTION.

√ The Character of Evolution; or of extracting the Roots out of the several Powers; the Reverse of ⊙. See EVOLUTION.

> Is the Sign of Majority, or of the Excess of one Quantity beyond another: Some use this \succ , or this \triangleright .

< Is the Sign of Minority: these two Characters were first introduc'd by *Harriot*, and us'd since by *Wallis* and *Lamy*.

Other Authors use others; some this, \supset ; but the generality none at all. See MINORITY.

∞ The Sign of Similitude, commended in the *Miscellanea Berolinsensia*, and us'd by *Leibnitz*, *Wolffius*, and others; tho the generality of Authors use none. See SIMILITUDE.

The same Character is us'd in other Authors for the Difference between two Quantities, while 'tis yet unknown which is the greater. See DIFFERENCE.

√ Is the Character of Radicality, and shews the Root of the Quantity, to which it is prefix'd, is extracted, or to be extracted: Thus, $\sqrt{25}$, or $\sqrt[2]{25}$, denotes the Square Root of 25, viz. 5. and $\sqrt[3]{25}$, the Cube Root of 25. See ROOT.

This *Character* sometimes affects several Quantities distinguish'd by a Line drawn over them, thus $\sqrt{b+d}$, denotes the Sum of the Square Roots of b and d .

Wolffius, &c. in lieu hereof, include the Roots compos'd of several Quantities in a Parenthesis, adding its Index: thus $(a+b-c)^2$ denotes the Square of $a+b-c$, ordinarily written $a+b-c$.

The *Character* of Arithmetical Proportion disjunct; thus 7, 5; 13, 9, intimates 3 to be exceeded by 7, as much as 13 by 9; viz. by 4. See PROGRESSION.

This is the *Character* of Identity of Ratio, and Geometrical Proportion disjunct; thus 8:4::30:15, expresses the Ratio of 30 to 15, to be the same with that of 8 to 4; or that the four Terms are in Geometrical Proportion, viz. 8 to 4 as 30 to 15. See PROPORTION.

Wolffius, in lieu hereof, uses the *Character* of Equality =; which he prefers to the former, as more scientific and expressive.

The *Character* of Geometrical Proportion contin'd implying the Ratio to be carry'd on without Interruption: Thus, 2, 4, 8, 16, 32, &c. are in the same uninterrupted Proportion.

CHARACTERS in Geometry and Trigonometry.

|| Is the *Character* of *Parallelism*; implying two Lines or Planes to be equi-distant from each other. See PARALLEL.

- △ *Character* of a Triangle. See TRIANGLE, &c.
- *Character* of a Square.
- ▭ *Character* of a Rectangle.
- *Character* of a Circle.
- ∠ *Character* of Equality of Angles.
- ≡ *Character* of Equality of Sides.
- < *Character* of an Angle.
- ⊥ *Character* of a right Angle.
- ⊥ *Character* of a Perpendicular.
- ° The *Character* of a Degree; thus, 75° implies 75 Degrees.

The *Character* of a Minute, or Prime; thus, 50' implies 50 Minutes.

¹¹/₁₀₀, &c. The *Characters* of Seconds, Thirds, Fourths, &c. of a Degree: thus, 5'', 6'', 18''', 20''', denotes 5 Seconds, 6 Thirds, 18 Fourths, and 20 Fifths.

Note, The same *Characters* are sometimes us'd, where the Progression is by Tens; as 'tis here by Sixties. See DECIMAL, SEXAGESIMAL, &c.

CHARACTERS us'd in the Arithmetic of Infinites.

The *Character* of an Infinitesimal, or Fluxion; thus, \dot{x} , \dot{y} , &c. express the Fluxions, or Differentials of the variable Quantities x and y ; two, three, or more Dots, denote second, third, or higher Fluxions.

This Method of denoting the Fluxions, we owe to Sir Isaac Newton, the Inventor of Fluxions; 'tis adher'd to by the English; but Foreigners generally follow M. Leibnitz, and in lieu of a Dot prefix the Letter d to the variable Quantity; on pretence of avoiding the Confusion arising from the multiplication of Dots, in the differencing of Differentials. See FLUXIONS.

d The *Character* of a Differential of a variable Quantity; thus, dx is the Differential of x ; dy the Differential of y .

The *Character* was first introduc'd by M. Leibnitz; and is follow'd by all but the English, who, after Sir Isaac Newton, express the Differential by a Dot over the Quantity. See CALCULUS DIFFERENTIALIS.

CHARACTERS us'd in Astronomy.

Characters of the Planets; see PLANET.

- ♄ *Character* of Saturn.
- ♃ *Character* of Jupiter.
- ♂ *Character* of Mars.
- ♀ *Character* of Venus.
- ♁ *Character* of the Earth.
- ♈ *Character* of the Sign; see SIGN.
- ♌ *Character* of Libra.
- ♍ *Character* of Scorpio.
- ♎ *Character* of Sagittarius.
- ♏ *Character* of Capricornus.
- ♐ *Character* of Aquarius.
- ♑ *Character* of Pisces.
- ♊ *Character* of Mercury.
- ♋ *Character* of the Sun.
- ♌ *Character* of the Moon.
- ♍ *Character* of the Earth.
- ♎ *Character* of Libra.
- ♏ *Character* of Scorpio.
- ♐ *Character* of Sagittarius.
- ♑ *Character* of Capricornus.
- ♒ *Character* of Aquarius.
- ♓ *Character* of Pisces.

CHARACTERS us'd in Musick.
Characters of the Musical Notes, with their Proportions.

o	or Demisemiquaver	$\frac{1}{32}$.	J. J.

Characters of the artificial Notes.

⌘ *Character* of a sharp Note: This *Character* at the beginning of a Line, or Space, denotes all the Notes in that Line, or Space, to be taken a Semitone higher than in the natural Series. And the same affects all their Octaves, above and below, tho' not mark'd. See SHARP.

When the *Character* is prefix'd to any particular Note, it shews that Note alone to be a Semitone higher than it would be without such *Character*.

∨ *Character* of a flat Note: This *Character*, at the beginning of a Line, or Space, shews, that all the Notes in that Line, or Space, are to be taken a Semitone lower than in the natural Series; affecting, in like manner, all the Octaves, both above and below. See FLAT.

When prefix'd to any Note, it shews that Note alone to be a Semitone lower than it would otherwise be.

h *Character* of a natural Note. Where, in a Line or Series of artificial Notes, mark'd at the Beginning for either Sharps or Flats, the natural Note happens to be requir'd, it is denoted by this *Character*.

Characters of Sign'd Clefs.

- S *Character* of Treble Clef.
- H *Mean* Clef.
- U *Base* Clef.

Characters of Time. See TIME.

$\frac{2}{2}$, or $\frac{3}{2}$, or $\frac{3}{4}$; *Characters* of Common, or Duple Time; signifying the Measure of two Crotchets to be equal to two Notes, whereof four make a Semibreve.

C♯♯ *Characters* that distinguish the Movements in Common Time: The first implying slow; the second brisk; the third very quick.

$\frac{3}{8}$, $\frac{6}{8}$, $\frac{9}{8}$, $\frac{12}{8}$; *Characters* of the simple Triple Time; whose Measure is equal either to three Semibreves, or to three Minims, &c. See TRIPLE.

$\frac{6}{4}$, or $\frac{9}{4}$, or $\frac{12}{4}$; *Characters* of mix'd Triple Time; where the measure is equal to six Crotchets, or six Quavers, &c.

$\frac{3}{16}$, or $\frac{6}{16}$, or $\frac{9}{16}$, or $\frac{12}{16}$; *Characters* of compound Triple Time. $\frac{24}{16}$, or $\frac{36}{16}$, or $\frac{48}{16}$, or $\frac{60}{16}$; *Characters* of the fourth Species of Triple Time; call'd, The Measure of twelve Times.

CHARACTER is also us'd for a certain Manner, Air, or Assemblage of Qualities, resulting from several particular Marks, which distinguish a Thing from any other, so as it may be known thereby. See MANNER, &c.

Thus, we say, The Character of Achilles; Generosity and greatness of Mind was the Character of the Romans; Cicero had a Character of Politeness, which is wanting in Demosthenes; Every Passion has its peculiar Character.

The Writers of Characters are Theophrastus, whose Fragments are still extant; Du Moulin, in his Exemplar Morum; Passibil, in Characters Virorum & Virorum; M. de la Chambre, in his Characters of the Passions; and de la Bruyere, in his Characters and Manners of the Age.

CHARACTER, in Poetry, especially the Epopea and Drama, is the Refalt of the Manners, or that which each

Person has proper, and singular in his Manners, whereby he is distinguish'd from others. See MANNERS.

The Poetical Character, Boiss observes, is not properly any Virtue or Quality in particular; but a Composition of several, mix'd, and combin'd in various Degrees, according to the Occasions of the Fable, and the Unity of the Action. All the simple Qualities that enter this Compound, must not have the same Rank, nor be equal to each other; since, in that Case, one prevailing on one Occasion, and another on another, the Character will appear changing; and the Poem, as well as the Hero, animated with several Souls.

There must, therefore, be one to reign over all the rest; and this must be found in every Part: just as the same Hero, in several Paintings, should have the same Lines and Features, how different soever his Postures and Passions may be. See HERO.

This first Quality, in Homer's Achilles, is Wrath; in Ulysses, Disimulation; and in Virgil's Aeneas, Mildness: Each of which may, by way of eminence, be call'd the Character of those Heroes.

These are never to go alone, but always to be accompany'd with others, to give them the greater Lustre; either by hiding their Defects, as in Achilles, whose Anger is palliated by a world of Courage; or by making them centre in some solid Virtue, as in Ulysses, whose Disimulation makes a Part of his Prudence; and Aeneas, whose Mildness is chiefly employ'd in a Submission to the Will of the Gods.

These secondary Qualities of Courage, Prudence, and Submission, make the goodness of the Characters of those Heroes, and even of the Poems.

Boiss adds, that the Quality of Courage must always have a share in the Character of a Hero, to serve as a Support to the rest: The Heroic Character, therefore, he makes a Compound of three Kinds of Qualities. Those of the first kind are necessary and essential to the Fable; those of the second are the Supplements, or Embellishments of the first; and Courage, which sustains the other two, make the third.

The first, which is his Occasion, is to be some universal Quality, to have place on all Intervals, and to distinguish the Hero wherever he is found.

For the Unity of Character, we have Horace's express Command, Sit quodvis simplex durata et unum. Boiss adds, that the Character is not less the Soul of the Hero and the whole Action, than the Fable is of the Poem; and of consequence the Unity must be as exact in the one as the other: which accordingly we find observ'd both by Homer and Virgil.

The Unity of Character is somewhat different from that of the Manners: in the latter, the Unity or Equality consists in the not giving contrary Sentiments to the same Person, which is not sufficient to the Unity of Character; but to this must be added, that the same Spirit must always appear on all Occasions, whether contrary or otherwise: Thus, Aeneas, showing a deal of Goodness in the first Part of the Poem, and a world of Valour in the second, but without discovering any of his former Piety and Gentleness; there had been no Offence against the Evenness of the Manners, but to the Unity of the Character there had.

So that besides the Qualities which have their particular Place on different Occasions, there must be one to have place throughout, and to reign over all the others. Without this there is no Character: as would be the Case, should a Poet give his Hero the Piety of Aeneas, and the Courage of Achilles, without considering the Severity of the one, and the Mildness of the other.

A Hero, 'tis true, may be made as brave as Achilles, as mild or pious as Aeneas, and, if one will, as prudent as Ulysses; but 't would be a mere Chimera to imagine a Hero with the particular Courage of Achilles, the Piety of Aeneas, and the Prudence of Ulysses; at the same time. See UNITY.

The Unity of Character is not only to be kept in the Hero, and the several other Persons of the Piece; but also in that of the Poem itself: that is, all the Characters, how opposite soever, must center and re-unite in that of the Hero; and be so sway'd by it, as that this alone may seem to govern throughout the whole. Thus Homer makes Wrath prevail throughout the whole Iliad; and Artifice and Disimulation throughout the Odyssey: The Hero's Character is perceiv'd every where, has its full swing, and is favour'd by the Similitude of the Characters of some of the other Persons. Virgil had a great Difficulty to grapple with to preserve this Unity; in regard of the direct Opposition between the Humours of his Hero, and those of some other of his Persons, as Turnus, Mezentius, Dido, &c. He therefore takes care not to carry those opposite Characters to their full length, but moderates and restrains 'em: And as that Moderation could not flow naturally

turally from the Persons themselves; 'tis produc'd either by some Passion, as in *Dido*, or some Dependance, as in *Turmus* and *Mexentius*. To this Artifice he adds Epitodes, accommodated to the general Character, by which he intercepts the particular Actions which require an opposite Character.

Claudian's Conduct, in this respect, is unpardonable; from the horrible Characters of *Pluto* and the Furies, with all the Terrors of Hell, he passes to the Gallery and Pleasures of the Graces, gilded Palaces, flowery Fields, &c. He has as many different prevailing Characters in his three Books, as *Homer* and *Virgil* in their sixty. See *ERIC*, &c.

CHARACTER is also us'd for certain visible Qualities, which claim Respect, or Reverence to those vested therewith.

The Majesty of Kings gives 'em a Character, which procures Respect from the People. A Bishop should sustain his Character by Learning and solid Piety, rather than by worldly Lucre, &c. The Law of Nations secures the Character of an Ambassador from all Insults.

CHARACTER is also us'd, among Divines, especially those of the *Romish* Church, for a certain indelible Mark, or Impression, which certain Sacraments leave behind 'em in those who receive 'em. See SACRAMENT.

The Sacraments that leave this Character, are incapable of being repeated. The Character is generally suppos'd to be something Physical.

'Tis the Sacraments of Baptism, Confirmation, and Ordination, which leave such indelible Character.

CHARACTER of a Plant. See GENUS, CHARACTERISTIC, &c.

CHARACTERISTIC, in the general, is that which characterizes a Thing, or Person, i. e. constitutes its Character, whereby it is distinguish'd. See CHARACTER.

CHARACTERISTIC, is peculiarly us'd in Grammar, for the principal Letter of a Word; which is preserv'd in most of its Tenses and Moods, its Derivatives and Compounds.

The Characteristic frequently shews its Etymology; and ought constantly to be retain'd in its Orthography; Such is the Letter *r* in *Course*, *Fort*, &c.

The Characteristics are of great use in the Greek Grammar, especially in the Formation of the Tenses; as being the same, in the same Tenses of all Verbs of the same Conjugation, excepting in the Present Tense, which has several Characteristics; and the Future, the *Aoristus primum*, the *Preterit perfect*, and the *Plusquam perfect* Tense of the fourth Conjugation, which have two Characteristics. See TENSE, VERB, MOOD, &c.

CHARACTERISTIC of a Logarithm, is its Index, or Exponent. See INDEX, &c.

CHARACTERISTIC Triangle of a Curve, in the higher Geometry, is a rectilinear right-angled Triangle, whose Hypotenuse is a part of the Curve, nor sensibly different from a right Line. 'Tis so call'd, because Curve Lines are us'd to be distinguish'd hereby. See CURVE.

Suppose, e. g. the Semiordinate $p m$, (Tab. *Analysis*, Fig. 7.) infinitely near another $P M$; then will $P p$ be the Differential of the Abcisse: and letting fall a Perpendicular, $M R = P p$, $R m$ will be the Differential of the Semiordinate. Draw, therefore, a Tangent $T M$; and the infinitely small Arch $M m$, will not differ from a right Line; consequently $M m R$ is a rectilinear right-angled Triangle; and constitutes the Characteristic Triangle of that Curve. See TRIANGLE.

CHARAG, the Tribute which Christians and Jews pay to the Grand Signior.

It consists of 10, 12, or 15 *Francs per Ann.* according to the Estate of the Party. Men begin to pay it at 9 or 16 Years old; Women are dispens'd with, as also Priests, Rabbins, and Religious.

CHARCOAL, a sort of artificial Coal, or Fuel, consisting of Wood half burnt; chiefly us'd where a clear strong Fire, without Smoke, is requir'd; the Humidity of the Wood being here mostly dissipat'd, and exhald in the Fire wherein it is prepar'd. See FUEL, and COAL.

The Microscope discovers a surprising Number of Pores in Charcoal: They are dispos'd in order, and traverse it lengthwise; so that there's no piece of Charcoal, how long soever, but may be easily blown throu'. If a Piece be broke pretty short, it may be seen thro' with a Microscope. In a Range, the 18th Part of an Inch long, Dr. *Hook* reckon'd 150 Pores; whence he concludes, that in a Charcoal of an Inch Diameter, there are not less than 5 Millions, 7 hundred 24 thousand Pores.

'Tis to this prodigious Number of Pores, that the Blackness of Charcoal is owing: for the Rays of Light striking on the Charcoal, are receiv'd and absorb'd in its Pores, instead of being reflect'd; whence the Body must of necessity appear black: blackness in a Body being no more than a want of Reflexion.

Charcoal was antiently us'd to distinguish the Bounds of Estates and Inheritances; as being incorruptible, when let very deep within Ground. In effect, it preserves it self so long, that there are many Pieces found entire in the antient Tombs of the Northern Nations.

M. *Dodart* says, there is Charcoal made of Corn, probably as old as the Days of *Cesar*: he adds, that it has kept so well, that the Wheat may be still distinguish'd from the Rye; which he looks on as a Proof of its Incorruptibility.

The Method of making CHARCOAL.

The best is that made of Oak, cut into Lengths of about three Foot. The Ground whereon the Operation is to be perform'd, is bar'd of all the Turf, and other combustible Matter; and is in form Circular, a Stake being driven in the Centre. This Area is fill'd up with Wood, eight Foot high, plac'd alternately lengthwise, and perpendicularly; then cop'd atop into the Form of a Sugarloaf, and all Inequalities fill'd up with small Wood, till it lie very close: the whole to be cover'd over moderately thick with Turf, and other Rubbish.

A moveable Screen being then set up against the Wind; the Stake is pull'd up, and Fire set to the Pile, by pouring into the Cavity some Charcoal and other Coal fully kindled; the Vent, or Tunnel a-top, is then cover'd with Turf, and Vent-Holes made thro' the Stuff that covers the Pile, two or three Foot apart, quite round, a Foot from the Top. The next Day a new Range of Holes is made, a Foot and a half below the first; and thus on to the Bottom: observing, that as the Pile cools, and sinks to the Centre, it must be continually fed with short Wood, that no Part remain unburn'd; and that if any Part *chars* faster than other, the Vent-Holes there are to be stopp'd up.

A Pit is thus burnt in five or six Days: As it cools, the Smoke grows thinner and bluer. The Heap requires two or three Days to cool; which is promoted by stopping the Vents, and stripping off the Covering by degrees, about a Yard at a time: at first only taking off the coarsest Part and leaving the rest; that the Pile may neither cool too fast, nor endanger the Reduction of the whole into Ashes. Lastly, the Coals are taken out from around the Bottom, by which means the whole Mass, Coals and Rubbish, sinks down, and extinguishes the Fire at once.

Charcoal for Powder-Mills, is usually made of Eldar-Wood; the Process the same, but finish'd in two Days.

CHARDS, in Gardening. The Chards of Artichokes, are the Leaves of fair Artichoke Plants, ty'd and wrapp'd up, all over but the Top in Straw, during the Autumn and Winter: this makes 'em grow white, and lose some of their Bitterness.

CHARDS of Beets, are white Beets, cover'd with dry Dung, during the Winter Season, when they produce large Tops, with a downy Cotton Shoot; which is the true Chard, to be us'd in Potrages, Intermetics, &c.

CHARGE, in Gunnery, the Load of a Piece; or the Quantity of Powder and Ball, or Shot, wherewith it is prepar'd for Execution. See GUNPOUNDER, BALL, SHOT, &c.

The Rules for charging large Pieces in War, are, That the Piece be first clean'd or scour'd within side; that the proper Quantity of Gunpowder be next driven in and ram'm'd down; care, however, being taken, that the Powder be'n't bruis'd in ramming, which weakens its Effect; that a little Quantity of Paper, Hay, or the like, be ram'm'd over it, and that then the Ball, or Shot be intruded.

If the Ball be reddish, a Tampon, or Treacher of green Wood, to be driven in before it.

The Weight of Gunpowder necessary for a Charge, is commonly in a subdupe proportion to that of the Ball. See CANNON, and BULLET.

CHARGE, in Heraldry, is apply'd to any Figure, or Thing, bore, or represented in an Escutcheon, or Coat of Arms; whether it be Animal, Vegetable, or other Matter. See BEARING, ESCUTCHEON, &c.

Too many Charges are not deem'd so honourable as fewer. See CHARGED.

Charges peculiar to the Art and Usage of Armory, as the *Crest*, *Chief*, *Pale Fesse*, &c. are call'd *proper Charges*; and frequently *Ordinaries*. See ORDINARY.

Bloss restrains the Term Charges to those Additions, or Rewards of Honours frequently plac'd on Escutcheons; as *Costoms*, *Quarters*, *Gyron*, *Flisques*, &c.

CHARGE, in the Manage, a Cataplasim, Apparatus, or Unguent, made of Oil, Honey, Grease, Turpentine, and sometimes of Lees of Wine, and other Matters, apply'd externally to a Horse, &c. for the cure of Strains, Bruises, Swellings, &c.

CHARGE, or *Overcharge*, in Painting, is an exaggerated Representation of any Person; wherein the Likeness is preserv'd, but, withal, ridicul'd.

Few Painters have the Genius necessary to succeed in these Charges: The Method is, to pick out and heighten something already amiss in the Face, whether by way of

Defect, or Redundancy: thus, v. g. if Nature have given a Man a Nose a little larger than ordinary, the Painter falls in with her, and makes the Nose extravagantly long; or if the Nose be naturally too short, in the Painting it shall be a mere Stump; and thus of the other Parts.

CHARGED, in Heraldry, a Shield, carrying on it some Figure or Impress, is said to be *charged* therewith.

So, also, when one Bearing, or *Coat*, has some other Figure added upon, it is properly said to be *charged*.

CHARGE of Lead, is 36 Pigs; See **LEAD**, &c.

CHARIENTISMUS, in Rhetoric, a Figure wherein a naming Expression is foretold by a Jest. See **SARCASM**.

CHAR. } **CHAR.**

CHARIOT. } See **COACH**.

CHARISTIA, a Feast celebrated by the *Romans*, on the 11th of the Calends of *March*; i. e. on the 19th of *February*.

On this Day each Family made a Feast, to which none were admitted but those of the Family, and Relations: Its Design was, to put an end to all Differences, or Broils, if there were any, among Friends.

The Word comes from the Greek *χρημα*, *Grace*, *Favour*; q. d. a Day of Reconciliation, or of returning into Favour.

It was also call'd *Dies charge cognationis*. *Vigouere*, on *Livy*, calls it the *Day of good Cheer*.

CHARISTICARY, *Comendatory*, or *Donatory*, a Person to whom is given the Enjoyment of the Revenues of a Monastery, Hospital, or Benefice.

The *Charisticaries* among the *Greeks*, were a kind of Donatories, or Commendatories, who enjoy'd all the Revenues of Hospitals and Monasteries, without giving an Account thereof to any Person. The original of this Abuse is refer'd to the *Iconoclastes*, particularly *Constantine Copronymus*, the avow'd Enemy of the Monks, whose Monasteries he gave away to Strangers.

In after Times, the Emperors and Patriarchs gave many to People of Quality, not by way of Gift, to reap any Temporal Advantage from; but to repair, beautify, and patronize 'em.

At length Avarice crept in, and those in good Condition were given, especially such as were rich; and at last they were all given away, rich and poor, those of Men and of Women; and that to Laymen and marry'd Men.

M. Coustelier, in his *Ecclesie Græcæ Monumenta*, gives us the form of these Donations: they were given for Life, sometimes for two Lives.

CHARITATIVE, in the Canon Law, a *charitative Aid*, or *Subsidy*, is a moderate Allowance which a Council grants a Bishop upon any urgent Occasion; e. g. when his Revenues will not bear his Expences to a Council, &c.

CHARITY, one of the three grand Theological Virtues, consisting in the Love of God, and our Neighbour. See **VIRTUE**.

Charity is the Habit, or Disposition of loving God with all our Heart, and our Neighbour as our selves. It has two material Objects, therefore, as the Schools express it, *viz.* God, and our Neighbour.

Charity is peculiarly us'd for the Effect of a Moral Virtue, which consists in supplying the Necessities of others, whether with Money, Council, Assistance, or the like. See **BENEVOLENCE**.

CHARITY Schools, are Schools erected and maintain'd in various Parishes, by the voluntary Contributions of the Inhabitants, for teaching poor Children to read, write, and other necessary Parts of Education. See **SCHOOL**.

In most *Charity Schools*, the Children are likewise cloth'd and put out to Trades, Services, &c. on the same *charitable* Foundation.

Charity Schools are but of a few Years standing: They were began in *London*; and have since spread throughout most of the considerable Towns of *England* and *Wales*. In the Year 1710, the Account of the *Charity Schools* in and about *London* stood thus.

Number of Schools	88.	of Boys taught therein	2181.	of
Girls	1221.	Boys cloth'd	1863.	In all 2977.
		Girls	1114.	
		Boys not cloth'd	373.	In all 501.
		Girls	128.	

Note, Out of the whole, 967 Boys, and 407 Girls, had been put out Apprentices.

In *London* we have likewise a *Charitable Corporation* for the Relief of the Indigent Poor, erected by the late Queen; for enabling indigent Manufacturers and Traders to take up Money at common and legal Interest; there being a Fund of 50000 *l.* rais'd for that End.

Order of CHARITY. There are several Religious Orders which bear this Title: one instituted by *S. John de Dieu*, for the Assistance of the Sick: This Institute was approv'd of in 1530, by *Leo X.* and confirm'd by *Paul V.* in 1617. The Religious of this Order apply themselves wholly to the Service of the Diseases.

CHARITY of the Holy Virgin, is a Religious Order esta-

lish'd in the Diocess of *Chalons*, by *Gay Lord Joinville*, Sec. towards the Close of the XIIIth Century, approv'd under the Rule of *S. Augustin*, by the Popes *Boniface VIII.* and *Clement VI.*

In each Parish of *Paris*, is a Society of Women, who apply themselves to find out and relieve the Wants of the Poor of the Parish; and on this Account call'd, *Dames de la Charite*, and *Seurs de la Charite*.

CHARKING, or **CHARRING**, the burning of Wood to make Charcoal. See **CHARCOAL**.

CHARKS, Pit-Coal chark'd, or *charr'd*. See **COAL**.

CHARLES'S WAIN, in Astronomy, seven Stars in the Constellation *Ursa Major*; call'd also *Pleiades*. See **PLEIADES**; see also *URSA MAJOR*.

CHARLATAN, or **CHARLETAN**, an Empiric, or Quack, who retails his Medicines on a publick Stage, and draws the People about him with his Buffooneries, Feints of Activity, &c. See **EMPIRIC**.

The Word, according to *Cateline*, comes from the Italian *Ceretano*; of *Cereto*, a Town near *Spoleto* in *Italy*, where the Impostors are said to have first risen. *Ménage* derives it from *Circulatorius*, or *Circulator*.

CHARM, a Magic Power, or Spell, by which, with the Assistance of the Devil, Sorcerers and Witches are sappo'd to do wondrous Things, far surpassing the Powers of Nature. See **MAGIC**.

Phylacteries, Liguatures, &c. are kinds of Charms. See **PHYLACTERY**, **LIGATURE**, &c.

The Word comes from the Latin *Carmen*, Verse. See **CARMEN**.

We have the History of a notable Charm, wherewith great Things are pretended to have been done in the way of Poisoning, and Tormenting; describ'd by a famous Sorcerer, one *Bras de Fortien*, under Sentence of Death in *France*, as follows.

It consists of a new Earthen Pot, varnish'd, not bought nor bargain'd for; wherein is put Sheep's Blood, Wool, Hair of several Beasts, with poisonous Herbs, mix'd together with a great deal of Grimace, and superstitious Ceremonies, uttering certain Words, and invoking Devils. This Pot is hid in a secret Place in the Neighbourhood where the Mischief is to be done, and sprinkled with Vinegar, according to the Effect it is to produce. The Charm holds a certain time, and cannot be taken away, but either by the Party that lodg'd it, or some superior Power which overcomes it.

CHARNEL, a Portico, or Gallery, ordinarily about the Church-Yard; over which were antiently dispos'd the Bones of the Dead, when the Flesh was consum'd.

The *Charnels*, or *Charnel-Houles*, are now usually contiguous to the Church.

CHART, or *Sea-CHART*, a Hydrographical Map; or a Projection of some Part of the Sea, in *Plano*; for the Use of Navigation. See **MAP**, and **PROJECTION**.

The Invention of *Sea Charts*, *Fourmier* refers to *Henry* Son of *John* King of *Lusitania*. They differ very considerably from Geographical, or Land Maps, which are of no use in Navigation. Nor are *Sea Charts* all of the same Kind; some being what we call *Plain Charts*, others *Reduced*, or *Mercator's Chart*, and others *Globular Charts*.

Plain Charts, are those wherein the Meridians and Parallels, are exhibited by right Lines parallel to each other.

These *Protemy*, in his Geography, rejects for the following Faults; 1. that their Inventor judg'd 'em of good use, and Experience has confirm'd his Judgment; especially in short Voyages.

Their Defects are, 1. That since in reality all the Meridians meet in the Poles; 'tis absurd to represent 'em, especially in large *Charts*, by parallel right Lines. 2. That *Plain Charts* exhibit the Degrees of the several Parallels, equal to those of the Equator; and of consequence the Distances of Places lying East and West, much larger than they should be. And, 3. In a *Plain Chart*, while the same Rhumb is kept, the Vessel appears to be carry'd in a great Circle; which yet is false.

But notwithstanding these Defects in the *Plain Chart*, yet the Easiness of its Application has so reconcil'd it to the Mariners, that 'tis us'd almost alone; in exclusion of the more accurate ones.

Construction of a Plain Chart.

1. Draw a right Line, as *AB*, (Tab. *Hydrography*, Fig. 9.) and divide it into as many equal Parts, as there are Degrees of Latitude in the Portion of the Sea to be represented. 2. Add another to it at right Angles *BC*, divided into as many Parts, and those equal to one another and to the former, as there are Degrees of Longitude in the Portion of the Sea to be represented. 3. Complete the Parallelogram *ABCD*, and resolve its Area into little Squares; then right Lines, parallel to *AB* and *CD*, will be Meridians; and those parallel to *AD* and *BC* Parallels. 4. The Coasts, Islands, Bays, Sands, Rocks, &c. infer from a Tra-

hic of Longitudes and Latitudes, in the same manner as is laid down under *M.A.*

Hence, 1. the Latitude and Longitude of a Ship being given, her Place is easily exhibited in the *Chart*. 2. The Places *F* and *G*, to and from which the Ship sails, being given in a Map, the right Line *FG*, drawn from the one to the other, makes, with the Meridian *AB*, an Angle *AFG*, equal to the Inclination of the Rhumb: And since the Parts *F*, *E*, *A*, *G*, intercepted between equidistant Parallels, are equal; and the Inclination of the right Line *FG*, to all the Meridians or right Lines parallel to *AB*, is the same; the right Line *FG* truly represents the Rhumb. After the same manner it may be shewn, that they exhibit the *Latit. Mediodiurnicam*, or Miles of Longitude truly.

Coroll. *Plain Charts*, therefore, may be us'd to very good purpose in directing a Ship; provided care be taken there escape no Error in the Distance of the Places *F* and *G*. *Construction of a Scale to correct the Errors of the Distances in Plain Charts.*

1. Upon the right Line *AB*, (Tab. Fig. 10.) from the Map transfer five Degrees, and divide 'em into 500 equal Parts, or Geographical Miles. 2. On this describe a small Circle *ACB*, to be divided into 90 equal Parts: If then 'tis desired to know how many Miles make five Degrees in the Parallel 50; in the Compass take the Interval 50, and transfer it on to the Diameter *AB*; the number of Miles requir'd will here be shewn.

Coroll. If then a Ship sail on an Eastern or Western Rhumb, out of the Equator; the Miles answering to the Degrees of Longitude, will be found as in the preceding Article. If it sail on any Collateral Rhumb, still the falling is suppos'd to be an Eastern or Western Rhumb, in an intermediate Parallel, between the Parallel of the Place whence the Ship proceeds, and the Parallel of the Place at which she arrives.

'Tis true, this Reduction, by an arithmetically mean Parallel, is not accurate; yet is it frequently us'd in Practice, as being accommodated to the Apprehensions of the generality of Mariners. In effect, it does not err any thing considerable, if the whole Course be divided into Parts, whereof each does not exceed one Degree; whence it appears advisable, not to take the Diameter of the Semicircle *AB* above one Degree, and to divide it almost into Geographical Miles.

For the Application of the Plain Chart in sailing. See Plain SAILING.

Reduced CHART, or CHART of Reduction, is that wherein the Meridians are represented by right Lines converging towards the Poles; and the Parallels by right Lines parallel to one another, but unequal.

These, therefore, it appears by their Construction, must correct the Errors of the *Plain Charts*.

But since the Parallels should cut the Meridians at right Angles; these *Charts* are defective, inasmuch as they exhibit the Parallels inclin'd to the Meridians.

Hence another kind of *Reduced Charts* has been invented, wherein the Meridians are parallel, but the Degrees thereof unequal; call'd *Mercator's Charts*.

Mercator's CHART, is that wherein the Meridians and Parallels are represented by parallel right Lines; but the Degrees on the Meridians are unequal; still increasing, as they approach the Pole, in the same proportion as those of the Parallels decrease: by means whereof, the same Proportion is preserv'd between 'em as on the Globe.

This *Chart* has its Name from that of the Author who first propos'd it for use, and made the first *Chart* of this Projection, *N. Mercator*: but neither was the Thought originally his own, as having been hinted by *Ptolemy* near 2000 Years ago: Nor is the Perfection of it owing to him; our Countryman *Mr. Wright* being the first who demonstrated it, and shew'd a ready way of constructing it, by enlarging the Meridian Line by the continual Addition of Secants.

Construction of Mercator's CHART.

1. Draw a right Line, and divide it into equal Parts, representing Degrees of Longitude either in the Equator, or in the Parallel wherein the *Chart* is to terminate. From the several Points of Division erect Perpendiculars to represent Meridians; so as right Lines may cut 'em all under the same Angle, and therefore represent Rhumbs: Thus far as in the *Plain Chart*.

That the Degrees of the Meridians may have their just proportion to those of the Parallels, the former are to be increas'd; in regard the latter continue the Line, by reason of the Parallelism of the Meridians. See *DEGREE*.

With the Interval therefore of one Degree in the Equator *CD*, (Tab. *Hydrog.* Fig. 11.) describe the Quadrant *CDE*, and in *D* erect a Perpendicular *DG*; make the Arch *DL* equal to the Parallel of Latitude, and thro' *L* draw *CG*: this *CG* will be the enlarg'd Degree of the Meridian, to be transferr'd to the Meridian of the *Chart*: The rest as in *Plain Charts*.

In Practice, suppose it requir'd to draw a *Mercator's Chart* from the 40th Degree of North Latitude to the 50th, and from the 6th Degree of Longitude to the 18th. First draw a right Line representing the 40th Parallel of the Equator; which divide into 12 equal Parts, for the 12 Degrees of Longitude the *Chart* is to contain. Then take a Line of equal Parts, on a Scale whereof 100 Parts are equal to each of these Degrees of Longitude; and at each extreme of the Line raise two Perpendiculars, to represent two parallel Meridians to be divided, by the continual Addition of Secants, which are prov'd to increase in the same Proportion, as the Degrees of Longitude should decrease. See *SECANT*.

Thus, for the Distance from 40 Deg. of Latitude, take 131½ equal Parts, from the Scale which is the Secant of 40 Deg. 30 Min. For the Distance from 41 Deg. to 42 Deg. take 133½ equal Parts, from the Scale which is the Secant of 41 Deg. 30 Min. and so on to the last Degree of your *Chart*, which will be 154 equal Parts, viz. the Secant of 49 Deg. 30 Min. and will give the Distance from 49 Deg. of Latitude to 50 Deg. By this means, the Degrees of Latitude will be augmented, in the same Proportion as the Degrees of Longitude on the Globe decrease.

The Meridians being divided, add the Card, or Compass; choosing some convenient Place near the Middle thereof: From this draw a Line parallel to the divided Meridians, which will be the North Rhumb; and from this the other 31 Points of the Compass are to be set off. See *COMPASS*.

Lastly, lay down the Towns, Ports, Islands, Coasts, &c. from a Table of Longitudes and Latitudes; and the *Chart* is complete.

In *Mercator's Charts*, the Scale changes as the Latitude is chang'd: If then, v.g. a Ship sails between the 40th and 50th Parallels of Latitude, the Degrees of the Meridians between those two Parallels, are to be the Scale for measuring the Ship's Way: Whence it follows, that tho the Degrees of Longitude be equal in extent on the *Chart*, yet they must contain unequal Numbers of Miles, or Leagues; and that they will decrease as they approach nearer the Pole, because measur'd by a Magnitude continually increasing.]

This *Chart* is demonstratively true; yet to appearance false: It is found by Experience very accurate, and withal easy of Application. In effect, it has all the Qualifications requir'd to render it of service in Navigation; yet do the generality of Mariners decline the use of it, and rather chuse to keep the old erroneous *Plain Charts*.

For the Use of Mercator's CHART in sailing. See Mercator's SAILING.

Globular CHART, is a Projection so call'd, from the Conformity it bears to the *Globe* it self; lately propos'd to the World by Mess^{rs}. *Senex*, *Wijon*, and *Harris*; wherein the Meridians are inclin'd; and the Parallels equidistant both, and curvilinear; and the Rhumbs real Spirals, as on the Surface of the *Globe*.

This Projection is yet in its Infancy; and the Secret thereof in a few Hands: We have but little to say therefore as to its Merits or Failings; e'er long its Construction and Use will be made publick. In the mean time, we may be allow'd to expect great Matters from it, as it comes out under the Protection of his Majesty's Patent, and with the Recommendations of several able Navigators, and among others that of *Dr. Halley*; and as it has already stood the Test of a pretty severe Inquisition. The Cavilling of *Mr. Hasteden*, who has thought fit to censure it e'er he knows what it is, will weigh but little; and the less, as 'tis no longer a Secret what are the Motives that have inflam'd his Zeal. We shall only add, that the Projection is perfectly agreeable to Nature, and therefore easily conceivable; and that it has been found to answer very exactly, even in very large Distances; where its failure, if it have any, must needs be most conspicuous. See *GLOBULAR SAILING*.

CHARTS compos'd by Rhumbs and Distances, are those wherein there are no Meridians or Parallels; but all is affected by the Rhumbs, and the Scale of Miles.

These are chiefly us'd by the *French*, especially in the *Mediterranean*.

They are patch'd up, without any great Art, from the Observations of the Mariners; any regular Account therefore how to make them would be needless. They are only us'd in short Voyages.

CHARTA primarily signifies a sort of thick Paper, not unlike our Cap-Paper. See *PAPER*; see also *CHARTER*.

CHARTA Emporetica, in Pharmacy, &c. a kind of Paper made very soft and porous, us'd to sicre withal. See *EMPORETICA*, *FILTER*, &c.

CHARTA is also us'd in our ancient Customs for a *Charter*, or Deed in Writing. See *CHARTER*.

CHARTA Magna, the Great *Charter*, is an ancient Instrument, containing several Privileges and Liberties granted to the Church and State, by *Edward the Confessor*; together

ther with others relating to the Feudal Laws of *William the Conqueror*, granted by *Henry I.* all confirm'd by the succeeding Princes above thirty times. See *MAGNA CHARTA*.

CHARTA de Foresta. See *CHARTER of the Forest*.
CHARTA Simplex, is a single Deed, or Deed-Poll. See *DEED*.

CHARTA Pardonationis se defendendo, is the form of a Pardon for killing another Man in his own defence. See *MANSLEUGHTER*.

CHARTA Pardonationis Utlagarie, is the form of Pardon of a Man who is outlaw'd. See *OUTLAWRY*.

CHARTEL, or *CARTEL*, a Letter of Defence; or a Challenge to single Combat; much in use when those Combats were practis'd, for the deciding of difficult, and not otherwise to be determin'd Controversies at Law. See *COMBAT*, *DUEL*, *CHAMPION*, &c.

CHARTER, or *CHARTA*, an Instrument, or written Evidence of a thing under the Seal of a Prince, Lord, Church, Chapter, or Community.

Bracon Lays, Donations are sometimes made in *Charters*, in *perpetuum rei Memoriam*. He adds, that of *Charters* some are *Royal*, others of private Persons.

Of *Royal*, some are Private, some Common, some Universal.

Of private *Charters*, some are *de puro Feoffamento*, others of *conditional Feoffamento*, others of *Recognition*, *pure* or *conditional*, others of *Confirmation*, &c.

CHARTERS of the King, are those whereby a King makes a Grant to a Person, or Community; e. g. a *Charter of Exemption*, that a Person shall not be impanell'd on a Jury, &c.

CHARTER of Pardon, is that whereby a Person is forgiven a Felony, or other Offence against the King's Crown and Dignity. See *PARDON*.

CHARTER of the Forest, is that wherein the Laws of the Forest are compris'd and establish'd, together with the *Magna Charta*, or *Great Charter*. See *FOREST*.

Great CHARTER, or *Magna Charta*. See *MAGNA CHARTA*.
The Word *Charter* comes from the Latin *Charta*, antiently us'd for a publick or authentick Act, a Donation, Contract, &c. from the Greek *χάρτις*, *ibick Paper*, or *Past-board*, whereon publick Acts were us'd to be wrote.

CHARTER-HOUSE. See *CHARTREUSE*.

CHARTER-LAND, in Law, is such as a Man holds by *Charter*, that is, by Evidence in writing; otherwise call'd *Freehold*. See *FREEHOLD*.

This the Saxons call'd *Bockland*; which *Lambert* renders, *Terra ex scripto*. See *BOCKLAND*.

It was held on more easy Conditions than the *Fokland*; or *Terra sine scripto*, held without writing: the former being *hereditaria, libera & immunis*; whereas the latter *causam pensabat annuum atque officiorum quodam servitute erat obligatus*. See *FOLKLAND*.

CHARTERPARTY, in Commerce, the Instrument of Freightage; or Articles of Agreement for the Hire of a Vessel; or the Invoice or Cargo of a Vessel. See *FREIGHT*, &c.

The *Charterparty* is to be in writing; and to be sign'd both by the Proprietor, or the Master of the Ship; and the Merchant who freight it.

The *Charterparty* is to contain the Name and the Burden of the Vessel; those of the Master and the Freight; the Price or Rate of Freight; the Time of loading and unloading; and the other Conditions agreed on.

'Tis properly a Deed, or Policy, whereby the Master or Proprietor of the Vessel engages to furnish immediately a tight sound Vessel, well equip'd, caulk'd and stopp'd, provided with Anchors, Sails, Cordage, and all other Furniture to make the Voyage requir'd, as Equipage, Hands, Victuals, and other Manitions; in consideration of a certain Sum to be paid by the Merchant for the Freight. Lastly, the Ship, with all its Furniture, and the Cargo, are respectively subjected to the Conditions of the *Charterparty*.

The *Charterparty* differs from a *Bill of Lading*, in that the first is for the entire Freight, or Lading, and that both for going and returning; whereas the latter is only for a Part of the Freight, or at most only for the Voyage one way.

The President *Boyer* says, the Word comes from hence, that *per nuchum Charta incidebatur, & sic fiebat Charta partita*; because in the Time when Notices were less common, there was only an Act of Convention for both Parties: this they cut in two, and gave each his Portion, and join'd them together at their Return, to know if each had done his Part. This he observes to have been practis'd in his Time; agreeable to the Method of the *Romans*, who, in their Stipulations, us'd to break a Staff, each Party retaining a Moiety thereof as a Mark.

CHARTIS Reddendis, a Writ which lies against him that has *Charters* of Feoffment intrusted to his keeping, and refuses to deliver them to the Owner.

CHARTOPHYLAX, an Officer in the Church of *Constantinople*.

Codrus calls the *grand Chartophylax* the Judge of all

Causas, and the right Arm of the Patriarch. He adds, that he was the Depository or Keeper of all the *Charters* relating to the Ecclesiastical Rights; that he presided over Matrimonial Causes, and was Judge of all the Clergy. He drew up all Sentences and Decisions of the Patriarch, who sign'd and seal'd them; presided in the grand Council of the Patriarch, took cognizance of all Matters and Causes Ecclesiastical and Civil, whether among the Clergy, the Monks, or the People.

He took place of all the Bishops; tho himself only a Deacon; and, on occasion, discharg'd the Functions of the Priests: He had twelve Notaries under him.

The *Chartophylax* was the same at *Constantinople* with the *Chartulary at Rome*. See *CHARTULARY*.

There were, in reality, two Officers who bore this Title; the one for the Court, the other for the Patriarch; the first call'd also *Registrator*, and the latter *Scrivarius*: tho tho two are usually confounded together. *Leucocivius*, and others, confound *Chartophylax* with *Chartulary*.

The Word is form'd from *χάρτις*, and *φυλάξ*, *Custodius*; and signifies *Charter-keeper*.

CHARTREUSE, a Monastery of *Carthusians*; so call'd from the Name of a steep rocky Place, in a frightful Desert five Leagues from *Geneva* in *France*; where *S. Bruno* retir'd from the World, and first instituted the Order of *Carthusians*. See *CARTHUSIAN*.

The Name has since pass'd to all Houses of *Carthusians*; and that near *Geneva*, is now distinguish'd by the Name of the *great Chartreuse*.

That of *London*, corruptly call'd *Charterhouse*, is now converted into a College, call'd from its Founder *Sutton's Hospital*; first endow'd, with 4000 *l. per Annum*, since improv'd to 6000.

It is to consist of decay'd Gentlemen, Soldiers, and Merchants; eighty of whom have a plentiful Maintenance of Diet, Lodging, Clothes, Physick, &c. living together in a Collegiate manner; and of Scholars, or Youth, 44 of whom are taught, and supply'd with Necessaries, and such of them as are fit for the University sent thither, with an Exhibition of 20 *l. per Annum*, for eight Years; the rest put to Trades.

For the Superintendency of this Hospital, there are 12 Overseers, or Regulators, appointed by the King's Letters Patent under the Great Seal; and those of the prime Quality. The ordinary Officers are, a Master, Preacher, Register, Treasurer, School-Master, &c.

CHARTREUX, Religious of the Order of *S. Bruno*, call'd also *Carthusians*. See *CARTHUSIAN*.

CHARTULARY, *CHARTULARIUS*, a Title given to an ancient Officer in the Latin Church, who had the Care of *Charters* and Papers relating to publick Affairs.

The *Chartulary* presided in Ecclesiastical Judgments, in lieu of the Pope.

In the Greek Church, the *Chartulary* was call'd *Chartophylax*; but his Office was there much more considerable; and some even distinguish the *Chartulary* from the *Chartophylax* in the Greek Church. See *CARTHOPHYLAX*.

CHASE, in Law, is us'd for a driving of Cattel to or from any Place; as to a Distress, a Forelet, &c.

CHASE, or *GRACE*, is also a Place of Retreat for Deer and wild Beasts; of a middle kind, between a *Forest* and a *Park*; being usually less than a *Forest*, and not possess'd of so many Privileges; but wanting, e. g. Courts of Attachment, *Suamote*, and *Justice Seat*. See *FOREST*.

Yet is it of a larger Extent, and stock'd both with a greater Diversity of wild Beasts, or Game, and more Keepers than a *Park*. See *PARK*.

Crompton observes, that a *Forest* cannot be in the Hands of a Subject, but it forthwith loses its Name, and becomes a *Chase*; in regard, all those Courts lose their Nature when they come into the Hands of a Subject; and that none but the King can make a Lord Chief Justice in Eyre of the *Forest*. See *JUSTICE IN EYRE*.

Yet the same Author adds, that a *Forest* may be granted by the King to a Subject, in so ample a manner, as that there may be a Court of Attachment, *Suamote*; and a Court equivalent to a *Justice Seat*.

CHASE, in the Sea Language, is to pursue a Ship; which is call'd also *giving Chase*.

A *Stera Chase*, is when the *Chaser* follows the *Chas'd* a-stern, directly upon the same Point of the Compass. To lie with a Ship's Fore-foot in a *Chase*, is to sail, and meet with her by the nearest Distance, and so to cross her in her Way, or to come a-cross her Fore-foot.

A Ship is said to have a *good Chase*, when she is so built forward on, or a-stern, that she can carry many Guns to shoot forwards or backwards; and so hath either a *good forward*, or *good stern Chase*.

CHASE-GUNS, are such whose Ports are either in the Head (and then they are used in *chasing* of others) or in the Stern, which are only useful when they are pursu'd or *chas'd* by any other Ship. See *GUN*.

CHASE of a Gun, is the whole Bore, or Length of a Piece taken within side. See GUN.

CHASING, a Method of working, or enriching Gold, Silver, &c. properly call'd *Encausing*. See ENCHASING.

CHASM. See HIASUS.

CHATELET, antiently signify'd a little Castle, or Fortrefs, wherein the *Chatelain*, or Governour lodg'd. See CASTLE.

At present, the Term is us'd for certain Courts of Justice establish'd in several Cities in France: The *grand Chatelet* in Paris, v. g. is the Place where the Preſidial, or ordinary Court of Justice of the Prevot of Paris is kept; consisting of a Preſidial, a Civil Chamber, criminal Chamber, and a Chamber of Policy. The Term signifies the same at Montpellier, Orleans, &c.

The little *Chatelet* at Paris, is an antient Fort, now serving as a Prison.

The Word is a Diminutive of *Chateau*, form'd from *Castellum*, a Diminutive of *Castrium*; or from *Castellum*, a Diminutive of *Castellum*.

CHATELLE, *Catala*, *Catala*, a Norman Term, under which were antiently comprehended all moveable Goods; those immoveable being term'd *Fief*, or, as we now say, *Fee*.

But in the modern Sense of the Word, *Chattels* are all sorts of Goods, moveable or immoveable, except such as are in the Nature of Freehold, or Parcel thereof.

Chattels are either *Personal*, or *Real*.

Chattels Personal, are such as do either belong immediately to the Person of a Man, as his Horse, Sword, &c. or such Things as being injuriously withheld from him, a Man has no way to recover but by Personal Action.

Chattels Real, are either such as do not appertain immediately to the Person, but to some other thing, by way of Dependence; as Charters of Land, Apples upon a Tree, &c. or such as necessarily issue out of some immoveable Thing to a Person; as a Lease, or Rent for Years.

Speelman defines *Chattels* to be *Bona quaeunque mobilia & immobilia; proprii tamen ex bonorum pars, que in animalibus consistat, à quorum capitibus res ipse, alias capita, alias capitula deesse sunt.*

CHAUNTRY, or **CHANTRY**, was antiently a Church, or Chapel endow'd with Lands, or other yearly Revenue, for the Maintenance, formerly, of one or more Priests, daily saying or singing Mass for the Souls of the Donors, and such others as they appointed.

Hence, **CHAUNTRY RENTS**, are Rents paid to the Crown by the Servants, or Purchasers of *Chantry Lands*.

CHAUF-WAX. } See } **CHAPE-WAX.**

CHAUSSÉ-TRAPE. } See } **CHALTROP.**

CHAZINZARIANS, a Sect of Hereticks, who rose in Armenia in the Vllth Century.

They are also call'd *Sazarostre*, which, in Greek, signifies the same as *Chazinzarian* in Armenian, viz. *Adorer of the Cross*; they being charg'd with adoring the Cross alone.

In other Respects they were *Nestorians*; and admitted two Persons in Jesus Christ. They had further Singularities, recounted by *Nicephorus*, L. xviii. c. 54. particularly their holding an annual Feast, in Memory of the Dog of their false Prophet *Sergius*; which they call'd *Armbartzes*.

The Word is form'd of the *Armenian* *Chavus*, *Cross*. In the Greek Text of *Nicephorus*, they are call'd *Chazinzarianism*, *καθ' ἑσπεραν*.

CHECK ROLL, a Book containing the Names of such as are Attendants, and in pay to the King, or other great Persons; as their Household Servants.

It is otherwise call'd the *Chequer Roll*. See ROLL.

CLERK of the CHEQUER, is an Officer in the King's Household, who has the *Check* and Controulment of the Yeomen of the Guard, and all the Officers belonging to the Royal Family. See YEOMAN, &c.

CHEEK, in Falconry, is where a Hawk forsakes her natural Flight, to follow Rooks, Pies, or other Birds that come in flight.

CHECKER. See EXCHEQUER.

CHECKY, in Heraldry, is where the Shield, or a part thereof, as a *Bordure*, &c. is *chequer'd*, or divided into *Chequers*, or Squares.

Where there is but one Row of Squares, it is not properly call'd *Checky*, but *Countercompounded*. See COUNTERCOMPOUNDED.

Checky, according to *Colombiere*, is one of the most noble and antient Figures in all Armory; and ought never to be given, but to Persons who have distinguish'd themselves in War; for it represents a *Chess-Board*, which it self is a Representation of a Field of Battel. The Pawns and Men, plac'd on both Sides, represent the Soldiers of the two Armies; which move, attack, advance, or retire, according to the Will of the two Gamesters, who are the Generals. See CHESS.

Checky is always compos'd of Metal, and Colour. Some Authors would have it rank'd among the Sorts of Furs.

When the whole Escutcheon is *chequer'd*, it should ordinarily contain six Ranges: There is no need of blazoning to express 'em; only it must be observ'd, to begin to blazon by the first Square, which is in Chief on the Dexter side. So that if that be *Or*, and the next *Gules*, the House or Family is said to bear *Checky Or and Gules*. When the whole Shield is not *chequer'd*, but only the Chief, a Bend, Cross, or the like, the Number of Ranges should be express'd.

CHEEKS, a general Name, among Mechanicks, for almost all those Pieces of their Machines and Instruments, that are double, and perfectly alike.

The *Cheeks* of a Printing Press, are its two principal Pieces: they are plac'd perpendicular and parallel to each other; serving to sustain the three Sommers, viz. the Head, Till, and Winter, which bear the Nut, Spindle, and other Pieces of the Machine. See PRINTING PRESS.

The *Cheeks* of a Lathe, are two long pieces of Wood, between which are plac'd the *Puppets*, which are either pointed, or otherwise; serving to support the Work, and the Mandrils of the Workman. These two Pieces are plac'd parallel to the Horizon, separated from one another by the Thickness of the Tail of the Puppets, and join'd with Tenons to two other Pieces of Wood, plac'd perpendicularly; call'd the *Legs of the Lathe*. See LATHE.

Cheeks of the Glasser's Vice, are two pieces of Iron, join'd parallel at top and bottom; in which are the Axis, or Spindles, little Wheel, Cushions, &c. whereof the Machine is compos'd. See VICE.

CHEESE, a popular Food; being a Preparation of Milk curdled by means of Rennet, dry'd, and harden'd. See MILK, RENNET, &c.

Cheese is nothing but Milk purg'd of its Scum, or Whey; and sometimes too of the Cream, or butyrous Part of the Milk. See BUTTER.

Cheese, when new, is found to load the Stomach, by reason of its Moisture and Viscidity; and when too old, heats and inflames it by its Salts. The Physicians advise it to be eat in small Quantities; hence that *Latin* Verse,

Cafesus ille bonus quem dat avara manus.

Dr. Quincy says, it cannot be too old: 'Tis certain, the more it abounds with Salts, the more will it contribute to Digestion, and the clearing of the Stomach of other Food.

Indeed some condemn all use of *Cheese*; sheltering themselves under that antient Maxim, *Cafesus est nequam quod omnia condequit se-quam.*

CHEP. See CHEF.

CHEF d'Ouvree. See MASTERPIECE.

CHEG, **CHERIF**, the Prince, or High-Priest of Mecca, and the sovereign Pontiff of all the Mussulmans; being own'd as such by all the several Sects into which they are divided.

The Grand Signior, Sophies, Mogols, Kams of Tartary, &c. send him yearly Presents; especially Tapestry, to cover *Mahomet's* Tomb withal, and Tents for himself: for the *Cheg* has a Tent near the Mosque of Mecca, wherein he lives during the 17 Days of Devotion in the Pilgrimage to Mecca. The Tapestry and Tent are chang'd each Year, and Pieces thereof sent to the Princes who furnish new ones.

His Revenue is very considerable, consisting of Presents made by the *Mahometan* Princes, and Pilgrims, to the Mosque of Mecca and Medina.

The *Cheg* subsists all the Pilgrims during the 17 Days of Devotion; on which account, he is every Year furnish'd with a very considerable Sum of Money from the Grand Signior: The better to obtain this, he makes him believe, that there are constantly, during this Time, 70 thousand Pilgrims; and that should the Number fall short, the Angels, in form of Men, would make it up.

CHELONITES, in Natural History, a Stone found in the Bellies of young Swallows; much esteem'd by some for the falling Sickness.

There is also a Stone bearing the same Name found in the *Indian* Tortoises, which is said to have the Faculty of resisting Poison. Some confound it with the *Crapaudin*, or *Toadstone*.

The Stone takes its Name from *χελών*, a Swallow.

CHELSEY College, or *Hospital*. See HOSPITAL.

CHEMISE, in Fortification, is a Wall wherewith a Bastion, or any other Bulwark of Earth, is lin'd; for its greater Support and Strength.

Or it is the Solidity of the Wall, from the *Talus* to the Row. See WALL, &c.

Fire **CHEMISE**, is a piece of Linen Cloth, steep'd in a Composition of Oil of Petreola, Camphor, and other combustible Matters; us'd at Sea, to set fire to the Enemy's Vessel.

CERRY Brandy, a Drink made of Plain Brandy, with the Addition of *Cherries*. See BRANDY.

The *Cherries* commonly us'd therein are of the black Kind; with these, a Bottle being half fill'd, is fill'd up with Brandy, or Spirits. The whole to be shaken up now

and then; and in a Month's time it becomes fit for use. To sweeten it, and improve the Flavour, some chafe to put in Sugar, with a Quantity of Raspberries.

CHERSONESUS, in Geography, a *Peninsula*; or a Continent almost inclosed round with the Sea, only joining to the main Land by a narrow Neck, or *Isthmus*. See *PENINSULA*.

This Term is us'd by the Moderns, in Complaisance to the Antients, who call'd all their Peninsulas by this Name: Accordingly, such Places as were heretofore distinguish'd among them, retain the Name among us; as the *Cheersonesus of Peloponnesus*, of *Thrace*, *Cheersonesus Cimbrica*, *Aurea*, &c. The Word is *Greek*, *χερσονησος*, which signifies the same thing.

CHERUB, or **CHERUBIN**, a Celestial Spirit, which, in the Hierarchy, is plac'd next in order to the *Seraphim*. See *HIERARCHY*.

They are painted red, to signify that they are inflam'd with the Love of God.

The Word is form'd of the Hebrew *כְּרוּבִים* *Cheerub*; the Plural whereof is *Cheerubim*.

CHERUB is also the Name of an ancient Military Order in *Sweden*, otherwise call'd the Order of *Seraphim*. It was instituted by *Magnus IV.* in 1354; and abolish'd by *Charles IX.* It took its Denomination from the golden Figures of *Cheerubim*, whereof the Collar of the Order was compos'd.

CHESS, a fashionable Game, perform'd with little round Pieces of Wood, on a Board divided into 64 Squares; where Art and Address are so indispensably requisite, that Chance seems to have no place; and a Person never loses but by his own Fault.

On each side are eight Men, and as many Pawns, which are to be mov'd and shifted, according to certain Rules and Laws of the Game.

Donatus, on *Terence's Eunuch*, observes, that *Pyrrhus*, the most knowing and expert Prince of his Age, ranging a Battle, made use of the Men at *Chefs* to form his Designs; and to shew the Secrets thereof to others. *Vopiscus*, in his Life of *Proculus*, informs us, that one of the *Roman Emperors* had the Title *Augustus* given him, because of his gaining ten Games at *Chefs* successively. *Tamerlane* is recorded as a very expert Gamester at *Chefs*.

Chefs is doubtless a most ancient and universal Game: The common Opinion is, that it was invented by *Palamedes* at the Siege of *Troy*. Others attribute the Invention to *Diomedes*, who liv'd in the Time of *Alexander*: The *Romance of the Rose* ascribes it to one *Attalus*; but the Truth is, the Game is so very antient, there is no tracing its Author.

In *China* it makes a considerable Part of the Education of their Maids, and seems to take the Place of the Dancing among us. In *Spain*, whole Cities challenge each other at *Chefs*.

John of Salisbury relates, that in a Battle between the *French* and *English*, in 1117, an *English Knight* seizing the Bridle of *Louis le Gros*, and crying to his Comrades *The King is taken*, that Prince struck him to the Ground with his Sword, saying, *Ne fais tu pas qu'on aie euees ou ne grand pas le Roy?*

Cardinal *Cajetan*, and other Casuists, rank *Chefs* in the Number of prohibited Games; as requiring too much Application: And *Montaigne* blames it as too serious for a Game.

Servastus has a precise Treatise on the different Opinions of the Origin of the Latin *Schachis*; whence the French *Echecs*, and our *Chefs*, is form'd. *Menage* is also very full on the same Head. *Leucoclavius* takes it to come from *Ufoques*, a famous *Turkish* Robber: *P. Sirmund* from the German *Schach*, Thief; and that from *Calculus*. He takes *Chefs* to be the same with the *Ludus Latrunculorum* of the *Romans*, but mistakenly. This Opinion is countenanc'd by *Vossius* and *Salmasius*, who derive the Word from *Calculus*, as us'd for *Latrunculus*. *G. Ysidorus* derives it from the Hebrew *Schach*, *vallavit* & *mar*, *mortuus*; whence *Chefs* and *Chefs-mate*.

Fabricius says, a celebrated *Persian* Astronomer, one *Scavrenca*, invented the Game of *Chefs*; and gave it his own Name, which it still bears in that Country. *Nicod* derives it from *Secheque*, or *Seque*, a *Moorish* Word for Lord, King, and Prince: *Bochart* adds, that *Sech* is originally *Persian*, and that *Sechmat*, in that Language, signifies the King is dead. The Opinion of *Nicod* and *Bochart*, which is likewise that of *Scripserius*, appears the most probable.

CHEST, in Commerce, a kind of Measure, containing an uncertain Quantity of several Commodities. See *MEASURE*.

A *Chest of Sugar*, v.g. contains from 100 to 15 hundred Weight: A *Chest of Glass*, from 200 to 300 Foot; of *Coffin Soap*, from 24 to 30 hundred Weight; of *Indigo*, from 12 to a hundred Weight; five Score to the hundred.

CHEVAGE, or **CHIEFAGE**, according to *Bracton*, signifies a Tribute by the Head; or a kind of Poll-Money anciently paid by such as held Lands in Villanage, or otherwise, to their Lords, in acknowledgment. See *POLL*.

The Word seems also to have been us'd for a Sum of Money yearly given to a Man of Power, for his Patronage and Protection, as to their *Chefs*.

In the first Sense, *Coke* observes, there is still a kind of *Cheverage* subsisting in *Wales*, call'd *Anabyr*; paid to the Prince of *Wales* for the Marriage of his Daughters; and anciently by all, now only by some. *Landard* writes it *Chivoage*. The *Jews*, while allow'd to live in *England*, paid *Cheverage*, or Poll-Money; viz. three Pence per Head, paid at *Easter*.

The Word is form'd of the French *Chef*, Head.

CHEVAL de Frise, a large piece of Timber pierc'd, and travers'd with wooden Spikes, arm'd or pointed with Iron, five or six Foot long.

Its Use is to defend a Passage, stop a Breach, or make a Retrenchment to stop the Cavalry.

'Tis sometimes also mounted on Wheels, with Artificial Fires, to roll down in an Assault.

Errard observes, that the Prince of *Orange* us'd to inclose his Camp with *Chevaux de Frise*, laying them over one another.

The Term properly signifies a *Friseland Horse*; as having been first invented in that Country.

In a Medal of *Licinius*, is found a kind of *Cheval de Frise*, made with Spikes interpos'd; serving to express a fortified Camp.

CHEVALIER, a French Term, ordinarily signifying a Knight. See *KNIGHT*.

It is us'd, in Heraldry, to signify any Cavalier, or Horseman arm'd at all Points; by the *Romans* call'd *Cataphractus Equus*, now out of use, and only to be seen in Coat-Armour. See *EQUUS*, *MILES*, *CATAPRACTUS*, &c.

The Word is form'd of the French *Cheval*, Horse; and that of the Latin *Cavallus*.

CHEVELEE, a Term us'd by the French Heralds, to express what we commonly call *Streaming*; i.e. the Stream of Light darting from a Comet, by Astronomers call'd its *Beard*.

CHEVERON, or **CHEVRON**, in Heraldry, one of the honourable Ordinaries of a Shield; representing two Rafters of a Hoofe join'd together, without any Division. See *ORDINARY*, &c.

It defends from the Chief towards the Extremities of the Coat, in form of a Pair of Compasses half open: Thus, he bears

Gules, a Cheveron Argent.

The *Cheveron* is the Symbol of Protection, say some, or of Coaffancy, according to others: Some say it represents the Knight's Spurs; others the Head-Attire of Pichiefs; others a piece of the List, or the Barrier or Fence of a Park.

When it is alone, it should take up the third Part of the Coat: When 'tis accompany'd with any other Bearings, its Breadth must be adjust'd thereby.

It is bore divers ways; sometimes in Chief, sometimes in Base, sometimes enarch'd, sometimes revers'd, &c.

The *Cheveron* is sometimes charg'd with another *Cheveron*, $\frac{1}{2}$ of its Height.

Two *Cheverons* are allow'd in the same Field, but not more; when they exceed that Number, they are call'd *Cheveroncheux*, or *Cheveronels*. There are *Cheverons* of several Pieces.

A *Cheveron* is said to be *abais'd*, when its Point does not approach the Head of the Chief, nor reach farther than the Middle of the Coat; *mutilated*, when it does not touch the Extremes of the Coat; or *cloven*, when the upper Point is taken off, so that the Pieces only touch at one of the Angles; *broke*, when one Branch is separated into two Pieces; *couched*, when the Point is turn'd towards one side of the Escutcheon; *divided*, when the Branches are of several Metals, or when Metal is oppos'd to Colour; *invert'd*, when the Point is towards the Point of the Coat, and its Branches towards the Chief.

A Coat is said to be *Cheveroned*, when it is fill'd with an equal Number of *Cheverons*, of Colour and Metal.

COUNTERCHEVERON'd, is when it is so divided, as that Colour is oppos'd to Metal, and *vice versa*.

PER CHEVERON, or *Partis per CHEVERON*, is when the Field is divided by only two single Lines, rising from the two Base Points, and meeting in a Point above, as the *Cheveron* does.

CHEVERONEL, is a Diminutive of *Cheveron*; and as such only contains half a *Cheveron*.

CHEVRONEE, or **CHEVRONNY**, signifies the Paring of the Shield several times *Cheveronwise*. *Gibbon* says, *Cheveronage* of *his*.

CHIAOUS, an Officer in the Grand Signior's Court, doing the Business of an *Usher*.

He bears Arms offensive and defensive; and has the Care of Prisoners of Distinction. His Badge is a Staff cover'd with Silver, and he is arm'd with a Scimitar, Bow, and Arrow.

The Emperor usually chooses one of this Rank to send as Ambassador to other Princes.

The Word, in the original *Turkish*, signifies Envoy.

The *Chians* are under the Direction of the *Chians-Bajehi*, an Officer who affixes at the *Divan*, and introduces those who have Business there.

CHICANE, or *Chicanery*, in Law, an Abuse of Judiciary Proceeding, tending to delay the Cause, and deceive or impose on the Judge or the Parties.

The *French* call Solicitors, Attornies, &c. the *Gen's de Chicane*.

CHICANE is also us'd in the Schools, for vain Sophisms, Distinctions, and Subtilties, which immortalize Disputes, and obscure the Truth; as the *Chicane* of Courts does Justice.

Mesage derives the Word from *Cicum*, the Skin of a Pomegranate; whence the *Spaniards* have form'd their *Chico*, little, slender; *Chicane* being conversant about Trifles.

CHIEF, a Term denoting Head; or a principal Thing, or Person.

The Word is form'd of the *French* *Chef*, Head; of the *Greek* κεφαλη, *Caput*, Head: the *Mesage* derives it of *Capo*, form'd of the *Latin* *Caput*.

Thus, we say, the *Chief* of a *Party*; the *Chief* of a *Family*, &c. Agamemnon was the *Chief* of the *Greeks* who besieg'd *Troy*: The *Romans* sometimes refus'd *Triumphs* to their victorious *Generals*; by reason the *Conduct* of the *Chief* was not answerable to his *Success*. See *TRUMPHER*. The *Abbeys* that are *Chiefs* of their *Order* are all *Regular*; and 'tis here the *general Chapters* are held. See *ABBAY*.

CHIEF-Justice. See *JUSTICE*.

CHIEF Lord, is the *Feudal Lord*, or *Lord* of an *Honour*, on whom others depend. See *LORD*; see also *HONOUR*.

Holding in CHIEF. See *CAPITE*.

CHIEF, *Chief*, in *Heraldry*, is the upper *Part* of the *Escutcheon*, reaching quite across from *side* to *side*. See *ESCUTCHEON*.

Thus, we say, *The Arms of France* are three golden *Flower de Lys's*, in a *Field Azure*; two in *Chief*, and one in *Point*.

Chief is more particularly us'd for one of the *honourable Ordinaries*, bore in the *Coat*. See *ORDINARY*.

'Tis plac'd athwart the *Top* of the *Coat*, and is to contain one third *Part* of its *Height*. When the *Escutcheon* is cut in *Stone*, or in *Relievo*, the *Chief* stands out prominent beyond the rest; and is suppos'd to represent the *Diadem* of the *ancient Kings* and *Prelates*; or the *Cask* of the *Knights*.

It is frequently without any *Ornament*: sometimes 'tis charg'd with other *Bearings*; sometimes 'tis of a *Colour* or *Metal* different from that of the *Coat*.

The *Line* that bounds it at *Bottom* is sometimes *strait*, sometimes *indentet*, *engraill'd*, *embattel'd*, *lozenge'd*, &c. Thus, say they, *The Field is Gules*, a *Chief Argent*, &c. again, *He bears Gules*, a *Chief Crenele*, or *embattel'd Argent*.

Sometimes one *Chief* is born on another; express'd by a *Line* drawn along the upper *Part* of the *Chief*: When the *Line* is along the under *Part*, 'tis call'd a *Fillet*. The first is an *Addition* of *Honour*, the second a *Diminution*. See *DIFFERENCE*, &c.

The *Chief* is said to be *abais'd*, when 'tis detach'd from the upper *Edge* of the *Coat*, by the *Colour* of the *Field* which is over it; and which retrenches from it one third of its *Height*. We also say, a *Chief* is *cheveron'd*, *paled*, or *banded*, when it has a *Chevron*, *Pale*, or *Bend* contiguous to it, and of the same *Colour* with it self. A *Chief* is said to be *supported*, when the two thirds at top are of the *Colour* of the *Field*, and that at bottom of a different *Colour*.

In *CHIEF*. By this is understood any thing born in the *Chief part*, or top of the *Escutcheon*.

CHIEF-Pledge, the same as *Headborough*. See *HEADBOROUGH*.

CHIEF-Point. See *POINT*.

CHIEFTAIN, the *Chief*, *Leader*, or *General* of an *Army*, &c. See *CHIEF*, and *GENERAL*.

CHILBLAIN, in *Medicine*, a *Tumor* afflicting the *Feet* and *Hands*; accompany'd with an *Inflammation*, *Pain*, and sometimes an *Ulcer*, or *Solution* of *Continuity*. See *TUMOR*.

Chilblains, by Physicians call'd *Perizonies*, are occasion'd by excessive *Cold* stopping the *Motion* of the *Blood* in the *Capillary Arteries*. See *FERNIO*.

The *Tumor*, from white, generally inclines to *biueness*. *Petroleum* laid on the *Part*, either prevents *Chilblains*, or cures 'em.

CHILD, a Term of Relation to *Parent*. See *PARENT*; see also *MALE*, and *FEMALE*.

We say, *Natural Child*, *Legitimate Child*, *Putative Child*, *Bastard Child*, *Adoptive Child*, *Posthumous Child*. See *NATURAL*, *PUTATIVE*, *BASTARD*, *ADOPTIVE*, *POSTHUMOUS*, &c.

Mr. *Derham* computes, that *Marriages*, one with another, produce four *Children*; not only in *England*, but in other *Parts* also. See *MARRIAGE*.

In the *Genealogical History of Tuscany*, wrote by *Giamini*, mention is made of a *Nobleman* of *Sienna*, named *Picchi*, who of three *Wives* had 150 *Children*; and that, being sent *Embassador* to the *Pope* and the *Emperor*, he had 48 of his *Sons* in his *Retinue*.

In a *Monument* in the *Church-yard* of *St. Innocent*, at *Paris*, erected to a *Woman* who dy'd at 88 *Years* of *Age*, it is recorded, that she might have lean 288 *Children* directly issu'd from her. But this is far short of what *Hoke-will* relates of *Mrs. Honeywood*, a *Gentlewoman* of *Kent*, born in the *Year* 1527, and marry'd at 16 to her only *Husband* *R. Honeywood* of *Charney*, *Esq*; and dy'd in her 93 *Year*.

She had 16 *Children* of her own *Body*; of which three dy'd young, and a fourth had no issue: yet her *Grandchild*, in the second *Generation*, amounted to 114; in the third to 228, and in the fourth to 900, all in her *Lifetime*: So that she could say the fame as the *Dischid* does of one of the *Dalburg's* *Family* at *Bassl*.

Mater ait Nata die Nata filia Natam,

Ut moncat, Nate, plangere filiam.

Dr. *Harris* has an express *Treatise of the Diseases of Children*, *De Morbis acutis Infantum*. He takes 'em all to arise from the *Humours* in the *prime Vie* growing sour, and degenerating into *Acidities*: which is confirm'd from their four *Belches* and *Dejections*. All that is requir'd to cure them, is to combat this *Acidity*; which is to be effected two ways; by disposing it to be evacuated, and by actual *Evacuation* by *Rhubarb*, and other gentle *Purgatives*.

To dispose the peccant *Acid* for *Evacuation*, no *Sudorifics* or *Cordials* to be us'd, those *Remedies* being too violent; but *Crabs Eyes* and *Claws*, *Oyster-shells*, *Cattlefish-bones*, *Scag-shells*, *Chalk*, *Coral*, *Pearls*, *Bezoar*, burnt *Horn*, *Scrappings* of the *Unicorn's* *Horn*, *Armenian Bole*, *Terra Scgilata*, and *Lapis Hematites*; the *Goa Stone*, and a sort of *Confection* of *Hyacinth*. But of all these, he prefers old *Shells* that have lain long on the *Edge* of the *Sea*, expos'd to the *Sun*; which is better than any *Chymical* *Purmac*.

CHILD-Bed. } See *PARTURITION*, and *DELIVERY*.

CHILD-Birth. } See *PARTURITION*, and *DELIVERY*.

CHILD-Wit, a *Power* to take a *Fine* of a *Bond-Woman* unlawfully gotten with *Child*. Every reputed *Father* of a *bare Child*, got within the *Manner* of *Writtel* in *Essex*, pays to the *Lord* for a *Fine* 3 s. 4 d. where, it seems, *Child-wit* extends to *Free*, as well as *Bond-Women*; *Quicumque fecerit* *Child-wit*, *Archiepiscopus aut totum, aut dimidium Emendationis partem habebit, quietum esse de Child-wit. De Cange*.

CHILDERMASS-Day, call'd also *Yanocent's Day*, an anniversary *Fest* of the *Church*, held on the 15th of *December*, in memory of the *Children* of *Bethlehem*, massacred by order of *Herod*. See *FEAST*.

CHARITY-CHILDREN. See *CHARITY-School*, *HOSPITAL*, &c.

CHILIAD, an *Assemblage* of several Things rang'd by *thousands*.

The *Word* is form'd of the *Greek* χίλις, *Mille*, a *thousand*. **CHILIARCUS**, an *Officer* in the *Armies* of the *Antients*, who had the *Command* of a *thousand Men*.

The *Word* comes from the *Greek* χίλις, *thousand*, and *αγγελος*, *command*.

CHILIASTS, a *Sect* of *Religious*. See *MILLENNARIES*.

CHILMINAR, **CHELMINAR**, or *Tschelminar*, the noblest and most beautiful *Piece* of *Architecture* remaining of all *Antiquity*; being the *Remains* of the famous *Palace* of *Persepolis*, to which *Alexander the Great*, being drunk, set fire, at the *Persuasion* of the *Courtisan Thais*. See *RUINE*.

Authors and *Travellers* are exceedingly minute in their *Descriptions* of the *Chilminar*; particularly *Garcios de Silva Figueroa*, *Pietro de la Valle*, *Chardin*, and *Le Bruin*. A general *Idea* thereof, may be conceiv'd as follows.

There appear the *Remains* of near *fourscore Columns*; the *Fragments* whereof are at least *six Foot high*: but there are only *nineteen* that can be call'd entire; with a *twentieth* all alone, 150 *Paces* from the rest.

A *Rock* of *black hard Marble*, serves for the *Foundation* of the *Edifice*.

The first *Plan* of the *Building* is ascend'd to by *four-score* and *fifteen Steps* cut in the *Rock*. The *Gate* of the *Palace* is *twenty Foot wide*; on one *side* is the *Figure* of an *Elephant*, and on the other of a *Rhinoceros*, each *thirty*

*Foot high, and of shining Marble. Near these Animals are two Columns; and not far off the Figure of a Pegasus.

After this Gate is pass'd, are found a great Number of Columns of white Marble; the Remains whereof shew the Magnificence of the Work: the smallest of these Columns is fifteen Cubits high, the largest eighteen; each has forty Flutings, three large Inches broad; whence the heights of the whole may be guess'd at, with the other Proportions. Near the Gate is an Inscription on a square piece of Marble, smooth as Glass, containing about twelve Lines: The Characters are of a very extraordinary Figure, resembling Triangles and Pyramids.

These noble Ruins are now the Shelter of Beasts and Birds of Prey. Besides the Inscription abovemention'd, there are others in Arabic, Persian, and Greek. Dr. Hyde observes, that the Inscriptions are very rude and unartful; and that some, if not all of them, are in praise of Alexander the Great, and therefore later than that Conqueror.

M. Le Bruin tells us, that he took his Voyage to the East-Indies merely for the sake of viewing the Chimænar.

The Word comes from the Persian *Tchebelminar*, forty Towers, or Columns; on account of the forty Columns of an enormous size seen there.

CHIMERA, a fabulous Monster, which the Poets figur'd to have the Head of a Lion, the Belly of a Goat, and the Tail of a Serpent; and to have been kill'd by *Bellerophon*, mounted on the Horie Pegasus.

The Foundation of the Fable is this; that antiently in *Ircia* there was a *Vulcano*, or burning Mountain of this Name; the top whereof, which was desert, only inhabited by Lions; the middle, having good Pastures, by Goats; and the foot, being marshy, by Serpents. Thus *Ovid*,

—*Mediis in partibus Hircum*
Pectus, & ora Lææ, condant Serpentis babebit.

Bellerophon being the first who caus'd this Mountain to be inhabited, 'twas figur'd he flew the *Chimera*. *Pliny* says, the Fire thereof would kindle with Water, and extinguish with nothing but Earth or Dung.

CHIMES of a Clock, a kind of periodical Musick, produc'd at certain Seasons of the Day, by a particular Apparatus added to a Clock. See CROCK.

To calculate Numbers for the Chimes, and to fit and divide the Chime-Barrel, it must be observ'd, That the Barrel must be as long in turning round, as you are in finging the Tune it is to play.

As for the Chime-Barrel, it may be made up of certain Bars which run athwart it, with a convenient Number of Holes punch'd in them, to put in the Pins that are to draw each Hammer; by this means, the Tune may be chang'd, without changing the Barrel: Such is the *Royal Exchange Clock in London*, and others. In this case, the Pins, or Nuts, which draw the Hammers, must hang down from the Bar, some more, some less; and some standing upright in the Bar: The reason whereof is to play the Tune of the Tune rightly: for the Distance of each of these Bars may be a Semibreve; but the usual way, is to have the Pins which draw the Hammers fix'd on the Barrel.

For the placing of these Pins, you may proceed by the way of Changes on Bells, viz. 1, 2, 3, 4, &c. or rather, make use of the Musical Notes: where it must be observ'd, what is the Compass of the Tune, or how many Notes, or Bells, there are from the highest to the lowest; and accordingly, the Barrel must be divided from end to end.

Thus, in the following Examples, each of those Tunes are eight Notes in compass; and accordingly, the Barrel is divided into eight Parts. These Divisions are struck round the Barrel; opposite to which are the Hammer-Tails.

We speak here as if there was only one Hammer to each Bell, that it may be more clearly apprehended: but when two Notes of the same Sound come together in a Tune, there must be two Hammers to the Bell to strike it: So that if in all the Tunes you intend to chime of eight Notes compass, there should happen to be such double Notes on every Bell; instead of eight you must have sixteen Hammers; and accordingly you must divide the Barrel, and strike sixteen Strokes round it, opposite to each Hammer-Tail: Then you are to divide it round about, into as many Divisions as there are Musical Bars, Semibreves, Minims, &c. in the Tune.

Thus, the hundredth Psalm-Tune has twenty Semibreves, and each Division of it is a Semibreve: the first Note of it also is a Semibreve; and therefore on the Chime-Barrel must be a whole Division, from 5 to 5; as you may understand plainly, if you conceive the Surface of a Chime-Barrel to be represented by the following Tables; as if the cylindrical Superficies of the Barrel were stretch'd out at length, or extended on a Plane: and then such a Table, so divided, if it were to be wrapp'd round the Barrel, would shew the Places where all the Pins are to stand in the Barrel; For the Dots running about the Table, are the Places of the Pins that play the Tune.

Indeed, if the Chimes are to be complex, you ought to have a set of Bells to the Gamut Notes; so as that each Bell having the true Sound of *sol, la, mi, fa*, you may play any Tune with its Flats and Sharps; nay, you may by this means play both the Bass and Treble with one Barrel; and by setting the Names of your Bells at the head of any Tune, that Tune may easily be transferr'd to the Chime-Barrel, without any Skill in Musick: But it must be observ'd, that each Line in the Musick is three Notes distant; that is, there is a Note between each Line, as well as upon it.

The Notes of the 100 Psalm.

A Table for dividing the Chime-Barrel of the 100 Psalm.

CHIMIN, or CHEMIN, in Law, a Road, or Way. See ROAD. Hence,

CHIMINAGE, a Toll for Wayfarage thro' a Forest.

The Foudrills call it *Pedagium*. See PEDAG.

CHIMNEY, in Architecture, a part of an Apartment, wherein the Fire is made. See FIRE.

The Parts of a Chimney are the *Jambs*, or Sides, coming out perpendicularly, sometimes circularly, &c. from the Back; the *Mantle-Tree* rests on the Jambs: The *Tube*, or *Funnel*, which conveys away the Smoke; the *Chimney-piece*, or *Moulding*, on the fore-side of the Jambs over the *Mantle-Tree*; and the *Heart*, or *Fireplace*.

Palladio lectures the Proportions of a Chamber Chimney thus; Breadth on the Inside, 5, 6, or 7 Foot; Height to the Mantle-Tree, 4 or 4½; Depth, 2 or 2½ Foot.

According to *Wolffius*, the Breadth of the Aperture at bottom to be to the Height, as 3 to 2, to the Depth as 4 to 2. In small Apartments the Breadth is 3 Foot, in larger 5; in Bed-Chambers 4; in small Banqueting Rooms 5½, in large 6. But the Height never to exceed 2½, lest there being too much room for the Air and Wind, the Smoke be driven down into the Room. Nor must the Height be too little, lest the Smoke miss its way, and be check'd at first setting out. The same Author advises to have an Aperture, thro' which the external Air may, on occasion, be let into the Flame, to drive up the Smoke; which the internal Air would otherwise be unable to do. See STOVE.

The Mouth of the Tube, or that part join'd to the Chimney-Back, *Felbien* orders to be a little narrower than the rest; that the Smoke coming to be repell'd downwards, meeting with this Obstacle, may be prevented from getting into the Room.

Some make the Funnel twisted, to prevent the Smoke's descending too easily: but the better Expedient is to make the Funnel narrower at bottom than at top: the Fire impelling it upward more easily when contracted at bottom; and in mounting, it finds more space to disengage itself, and therefore has less occasion to return into the Chamber.

To prevent smooking CHIMNEYS, *M. Lucas* advises two Holes, or two Pipes, one over the other, to be left in each side of the Chimney; one flying upwards, the other downwards: thro' one of these, says he, the Smoke will pass in any position.

De l'Orme orders a Brass Ball full of Water, with one small Aperture, to be hung up in the Chimney, at a Height a little above the greatest Flame: here, as the Water grows hot, 'twill rarely and drive thro' the Aperture in a vapoury Stream, which will drive up the Smoke that would otherwise linger in the Funnel.

Others place a kind of moveable Vane, or Weathercock a-top of the Chimney: so that what way soever the Wind comes, the Aperture of the Chimney will be screen'd, and the Smoke have free egress. Indeed, the best prevention of a smoking Chimney, seems to lie in the proper Situation of the Doors of the Room, and the apt falling back of the Back, and convenient gathering of the Wings and Breast of the Chimney.

'Tis a Rule, in Building, that no Timber be laid within 12 Inches of the Fore-side of the Chimney Jambs; that all Joists on the Back of the Chimney be laid with a Trim-

met,

mer, at 6 Inches distance from the Back; and that no Timber be laid within the Funnel.

Chimneys are usually suppos'd a modern Invention; the Antients only making use of Stoves: But *Olivarius Ferrareus* endeavours to prove *Chimneys* in use among the Antients. To this End he cites the Authority of *Virgil*: *Et jam summa precul villarum culmina fumant*. And that of *Appian*, who says, 'That of those Persons forbid'd by the Triumvirate, some hid themselves in Wells, and *Chimney's*, *Cannon-floures*; some in the Tops of Houles, and *Chimney's*: but so he understands *εσκαμωτες σωαπιας*, *Fumaria sub tecto posita*. Add, that *Aristophanes*, in one of his Comedies, introduces his old Man, *Polycleon*, shut up in a Chamber, whence he endeavours to make his Escape by the *Chimney*. However, the few Instances remaining among the Antients; together with the Obscurity of the Rules of *Vitruvius* on this Head, make us rather conclude the Use of Stoves, whereof they had entire Apartments, made 'em neglect this Point of Building, which the Coldness of our Climates obliges us to have a principal regard to.

In the Year 1713, appear'd a French Book, entitled, *La Mécanique du Feu*, or The Art of augmenting the Effects, and diminishing the Expence of Fire, by M. *Gauger*; since publish'd in *English*, by Dr. *Desaguliers*: where in the Author examines what Disposition of *Chimneys* is most proper to augment the Heat; and proves Geometrically, that the Disposition of parallel Jamba, with the Back inclin'd, as in the common *Chimney*, is less fitted for reflecting Heat into the Room, than parabolical Jamba, with the bottom of the Tablette horizontal.

He gives seven several Constitutions of his new *Chimneys*, and the manner of executing them. See FIRE.

M. *Gauger*, however, does not appear to be the first Inventor of the *Chimney* he describes; the Description of a like Kind being found in a German Book, printed at *Leipsick*, in 1699.

The Word *Chimney* comes from the French *Cheminée*; and that from the Latin *Caminata*, a Chamber wherein is a *Chimney*: *Caminata*, again, comes from *Caminus*, and that from the Greek *καμινος*, a *Chimney*; of *καμινος*, *ωρο*, I burn.

CHIMNEY-Jamba, are the Sides of a *Chimney*, usually standing out perpendicularly, sometimes circularly, from the Back; or on the Extremities whereof the Mantle-Tree rests. See JAMB.

CHIMNEY-Piece, in Building, a Composition of certain Mouldings, of Wood or Stone, standing on the Fore-side of the Jamba, and coming over the Mantle-Tree. See MANTLE-Tree.

CHIMNEY-Money, or *Hearth-Money*, a Tax impos'd by a Stat. 24 Car. II. expressing, that every Fire-Hearth and Stove of every Dwelling, and other Houles within *England* and *Wales*, except such as pay not to Church and Poor, shall be chargeable with two Shillings per Annum, payable at *Michaelmas* and *Lady-Day*, to the King and his Heirs. See SMOAK, CHIMNEY, and FUAOE.

CHINA, or *CHINA-Ware*, a fine sort of Earthen Ware, properly call'd *Porcelain*. See PORCELAIN.

CHINA-CHINA, a Name sometimes given to the *Quinquina*, or *Peruvian Bark*. See QUINQUINA.

CHINA-ROOT, a Medicinal Root, brought from the *East-Indies*.

It is of a ruddy brown Colour, bordering on black, without side; and white, or reddish, within. It grows chiefly in fenny Places, usually cover'd with the Sea; which, upon its withdrawing, leaves great Quantities thereof on the Shore: the best is that which is firm, ruddy, and fresh.

It is esteem'd a sweetener of the Blood; and us'd as such in Decoction, in Venereal and Scorbutick Cases.

CHINESE, or *Chinese Tongue*, the Language of the People of *China*. See LANGUAGE.

F. le *Comte* observes, that the *Chinese* has no analogy with any other Language in the World: It only contains 330 Words, which are all Monosyllables; at least, they are pronounc'd so close, that there is no distinguishing above one Syllable, or Sound, in them. But the same Word, as pronounc'd with a stronger or weaker Tone, has different Significations: Accordingly, when 'tis accurately spoke, it makes a sort of Musick, which has a real Melody, that constitutes the Essence and distinguishing Character of that Language.

As to *Chinese Characters*, they are as singular as the Language: the *Chinese* have not, like us, any Alphabet, containing the Elements, or as it were the Principles of their Words: In lieu of an Alphabet, they use a kind of Hieroglyphicks; whereof they have above 8000. See LETTER.

CHIN-COUGH, a Disease Children are chiefly subject to. It consists in a violent and immoderate coughing, to a Danger of Suffocation. Letting of Blood, and Balsamicks, are the usual Cure.

CHIRAGRA, in Medicine, the Gout in the Hands. See GOVT.

The *Chiragra* has its Seat in the *Carpus*, or extreme Part of the Hand, or the Ligaments and Junctures of the Fingers.

The Word comes from the Greek *χειρ*, *manus*, Hand, and *αγρα*.

CHIROGRAPH, was antiently a Deed, which requiring a counterpart, was engros'd twice on the same piece of Parchment, counterwise; leaving a Space between, whereon was wrote *CHIROGRAPH*; thro' the middle whereof the Parchment was cut, sometimes first, sometimes indentedly; and a Moiety given to each of the Parties.

This was afterwards call'd *Dividenda*, and *Charte divide*; and was the same with what we now call *Charter-Party*. See *CHARTER-Party*.

The first use of these *Chirographs* with us, is in the Time of K. *Henry III*. See INDENTURE.

According to some, a Deed was properly a *Chirograph*, when it was subscrib'd by the Hand-writing of the Vender, or Debtor, and deliver'd to the Buyer, or Creditor. These Authors make the *Chirograph* differ from a *Syngraph*, in this; that in the latter the Word *Syngraph* was wrote in the middle, and cut thro', in the manner just observ'd of *Chirograph*. These Authors therefore make the *Syngraph* the *Chirograph*; and the *Chirograph* a different thing.

The Word is compounded of the Greek *χειρ*, Hand; and *γραφο*, scribe, I write.

Chirograph was also antiently us'd for a Fine; and the manner of engrossing the Fines, and cutting the Parchment in two pieces, is still retain'd in the Office, call'd the *Chirographer's Office*. See CHIROGRAPHER.

CHIROGRAPHER of Fines, an Officer in the Common Pleas, who engrosses Fines in that Court, acknowledg'd into a perpetual Record (after they have been examin'd and pass'd by other Officers); and who writes and delivers the Indentures thereof to the Party. He makes two Indentures, one for the Buyer, the other for the Seller; and a third indented Piece, containing the Effect of the Fine, and call'd the *Foot of the Fine*; and delivers it to the *Custos Brevirum*. The same Officer also, or his Deputy, proclaims all Fines in Court every Term, and endorses the Proclamations on the backside of the Foot; keeping, withal, the Writ of Covenant and the Note of the Fine. See TABLE of Fines.

CHIROMANCY, the Art of divining the Fate, Temperament, and Disposition of a Person, by the Lines and Lineaments of the Hand; otherwise call'd *Palmistry*.

We have a Number of Authors on this vain and trifling Art; as *Ariemundus*, *Fludd*, and *John de Indagine*: *Tajferus*, and M. de le *Chambre* have done the best.

This last insists on it, that the Inclinations may be known from inspecting the Hand; there being a very near Relation between the Parts of the Hand, and the internal Parts of the Body, the Heart, Liver, &c. whereon the Passions and Inclinations much depend. He adds, however, that the Rules and Precepts of *Chiromancy* are not sufficiently warrant'd, the Experiments whereon they stand not being well verifi'd. He concludes, that there must be a new Set of Observations, made with Justice and Exactitude; in order to give *Chiromancy* the Form and Solidity which an Art or Science demands.

The Word comes from the Greek *χειρ*, Hand, and *μαντια*, Divination.

CHIROTONIA, the Imposition of Hands, in conferring any Priestly Orders. See IMPOSITION.

The Word comes from the Greek *χειρ*, *manus*, the Action of stretching out the Hands. And because the Antients gave their Suffrages by stretching out the Hands, they gave the Name *Chirotonia* to the Election of Magistrates. See PLEBISCITA, ORDINANCES, &c.

This Custom was first establish'd in Greece; as appears from an Oration of *Demosthenes* against *Neera*, and that of *Aeschines* against *Cressippon*: thence it pass'd to the Romans. From profane Authors it pass'd to Ecclesiastical ones; and was us'd by them, not only in Elections, but also in Ordinations.

CHIRURGERY, popularly call'd *Surgery*, the third Branch of Medicine; consisting in Operations perform'd by the Hand, for the Cure of Wounds, and other Disorders. See MEDICINE.

Chirurgery is the Art of curing Wounds, and various Diseases, by the opening of Veins, application of Topics, Incisions, and Amputations of several Parts of the Body, &c. See OPERATION.

Chirurgery is divided into *Speculative*, and *Practical*; one whereof does that in effect, which the other teaches to do.

All the Operations of *Chirurgery* are reduc'd under four Kinds: the first whereof re-joins what has been separater; and is call'd *Synthesis*.

The second divides, with Discernment, those Parts whose Union is prejudicial to Health; and is call'd *Diuresis*.

The third extracts with Art foreign Bodies; call'd *Excrescens*. And the fourth, call'd *Practensis*, adds and applies what is wanting. See each Branch under its proper Head.

The principal Things that come under the Consideration of *Chirurgery*, are *Tumors, Ulcers, Wounds, Dislocations, and Fractures*. See *WOUND, ULCER, TUMOR, DISLOCATION, and FRACTURE*.

Chirurgery has the advantage of *Medicine* in the Solidity of its Foundation, the Certainty of its Operations, and the Sensibleness of its Effects; inasmuch, that those who deny *Medicine* to be of any Significance, yet allow the Usefulness of *Chirurgery*.

Chirurgery is very ancient; and even much more so than *Medicine*, wherof it now makes a Branch. It was, in effect, the sole *Medicine* of the first Ages; they betaking themselves to the Cure of external Disorders, e'er they came to examine or discover what related to the Cure of internal ones.

Apis, King of *Egypt*, is said to be the first Inventor of *Chirurgery*; after him, *Aesculapius* compos'd a Treatise of Wounds and Ulcers. He was succeeded by the Philosophers of the following Ages, in whose Hands *Chirurgery* wholly lay; *Pythagoras, Empedocles, Parmenides, Democritus, Cibron, Peon, Celsus*, who cur'd K. *Antiochus's* Eye, &c.

Chirurgery was cultivated with much more Exactness by *Hippocrates*, than by any of the preceding Physicians: It is said to have been perfected in *Egypt*, by *Physicianus*, who wrote several Volumes on that Subject. Among the *Greeks, Gorgias, Solistras, Heron, the two Apollonius's, Asapanus of Alexandria*; and at *Rome, Trypho* the Father, *Evangelus*, and *Meges*, made it flourish, each in their Time.

Arcubuto was the first *Chirurgion* the *Romans* receiv'd into their Commonalty; but him they soon after ston'd to Death in the *Campus Martius*, on account of his Cruelty in cutting off Limbs.

The more modern Authors, who have contributed most to the Perfection of *Chirurgery*, are *Parvus, Fab, ab Aquapendente, Harvey, Wharton, Glisson, Du Laurent, Dinebreuck, Vicussens, Barlett, Dionis, Cibrierre, &c.*

Scultetus has publish'd a Description of all the Instruments us'd in *Chirurgery*, under the Title of *Armanentarius Chirurgicorum*; and our Countryman, Mr. *Wylman*, Sergeant-*Chirurgion* to King *Charles II.* a Folio Volume of *Chirurgicall Treatises*, containing practical Observations, both in respect to the Internals and Externals, of a Number of Cases in each Branch of the Art, from his own Experience; under the Title of *Several Chirurgicall Treatises*. This Work has been made use of ever since, by the most knowing of our *English Chirurgions*; and has been the Foundation of most *Chirurgicall Treatises* since its Publication, Anno 1676.

The *French Chirurgions* being refus'd to be admitted into the Universities, notwithstanding that their Art makes a Branch of *Medicine*, one of the four Faculties; on pretence of its bordering a little on *Butchery*, or *Craeity*; associated themselves into a Brotherhood, under the Protection of *S. Cosmus* and *S. Damian*: on which account, according to the Laws of their Institution, they are oblig'd to dress and look to Wounds gratis, the first Monday of each Month.

They distinguish between a *Chirurgion of the long Robe*, and a *Barber Chirurgion*: The first has study'd *Physick*, and is allow'd to wear a *Gown*.

The Skill of the other, beside what relates to the Management of the Beard, is suppos'd to be confin'd to the more simple and easy Operations in *Chirurgery*; as *Bleeding, Toothdrawing, &c.* They were formerly distinguish'd by Badges; those of the *Gown* bore a Case of Instruments; the *Barber* a *Basin*.

The Word *Chirurgery* is form'd from the *Greek* *χρῆ, manus*, Hand; and *ῥησις, opus*, Operation.

CHISSEL, an Instrument much us'd in *Sculpture, Masonry, Joinery, Carpentry, &c.*

There are *Chissels* of different Kinds; tho' their chief difference lies in their different Size and Strength, as being all made of *Steel well sharpen'd and temper'd*: but they have different Names, according to the different uses to which they are apply'd.

The *Chissels* us'd in *Carpentry* and *Joinery*, are, 1. The *Former*, which is us'd first of all before the *Paring-Chissel*, and just after the Work is scrib'd. 2. The *Paring-Chissel*, which has a fine smooth Edge, and is us'd to pare off, or smooth the Irregularities which the former makes. This is not struck with a Mallet, as the former is, but press'd with the Shoulder of the Workman. 3. *Skew-former*, us'd for cleaning acute Angles with the Point, or Corner of its narrow Edge. 4. The *Mortice-Chissel*, which is narrow, but very thick and strong, to endure hard Blows; and 'tis cut to a very broad Basil: its use is to cut deep square Holes in the Wood, for *Mortices*. 5. The *Gouge*, which is a *Chissel* with a round Edge; one side wherof serves to prepare the way for an Auger, and the other to cut such Wood as is to be rounded, hollow'd, &c. 6. *Socket-Chissel*, which are chiefly us'd by *Carpenters, &c.* and their *Chis-*

Shank made with a hollow Socket at top, to receive a iron wooden Spig, fitted into it with a Shoulder. These *Chissels* are distinguish'd, according to the Breadth of the Blade, into half Inch *Chissels*, three quarters of an Inch *Chissels*, &c. 7. *Ripping-Chissel*, which is a *Socket-Chissel* an Inch broad; having a blunt Edge, with no Basil to it: its use is to rip, or tear two pieces of Wood asunder, by forcing in the blunt Edge between 'em.

CHITTING, in Gardening. A Seed is said to *chit*, when it first shoots its small Roots into the Earth. See *ROOT*.

CHIVALRY, or *CHEVALRY*, in Law, a Tenure of Land by *Knight-Service*; whereby the Tenant was anciently bound to perform a Service in War; to the King, or the mefn Lord of whom he held by that Tenure. See *SERVICE*.

By a Statute of 12 Car. II. all Tenures by *Chivalry*, in *Capite*, &c. are abolish'd. See *TENURE, KNIGHT, and KNIGHTHOOD*.

CHIVES, or *CHIEVES*, a Term in Botany, which Mr. *Ray* renders in Latin *Apices*, i. e. the small Knobs growing on the Ends of the fine Threads, or *Stamina* of Flowers. See *APICES*.

But Dr. *Grew* calls the *Stamina*, or Threads themselves, on which the *Apices* are fix'd, the *Chites*. See *STAMINA*.

CHLAMYS, or *CLAMYIS*, in Antiquity, a Military Habit, worn by the Antients over the *Tunicas*. See *TUNICA*.

Chlamys was the same, in Time of War, that the *Toga* was in Time of Peace: Each belong'd to the Patricians. See *TOGA*.

There were four or five kinds of *Chlamys*; that of Children, of Women, and that of Men; which was divided into that of the People, and that of the Emperor.

CHLOROSIS, in *Medicine*, a Disease vulgarly call'd the *Green-Sickness*, *White-Tumidie*, &c.

Its usual Subjects are *Girls, Maids, and Widows*; or even *Wives*, whose Husbands are deficient, &c. It gives a pale, fallow, or livid Tincture to the Complexion, with a Circle of Violet under the Eyes. The Patient is melancholy and uneasy; has frequently a low wandering Fever, with an unequal Pulse, Vomiting, Heaviness, Lethargy, Drowsiness, Difficulty of Breathing, Longing for absurd Foods, &c.

It comes on, commonly, antecedent to, or about the Time of the Eruption of the Menfes.

The Suppage of the Menfes is not always the Cause of this Distemper; for they sometimes flow regularly, tho' but seldom, in the Progress thereof.

According to *Eimmler*, the Suppression of the Menfes is rather the Effect than the Cause.

The Cure is chiefly to be attempted by Chalybeats and Bitters. In the colder Constitutions, Decoctions of *Gnaisacum* are found of use.

The Word *Chlorosis* signifies *Greenness, Verdure*; from *χλω, Herba, Grasis*.

CHOCOLATE, a Confection, or Paste, prepar'd of certain Drugs; the Basis, or Principal wherof, is the *Cacao Nut*. See *CACAO*.

The Name *Chocolate* is also given to a drink, prepar'd from this Paste, of a dusky Colour, soft, and oily; usually drank hot; and esteem'd not only an excellent Food, as being very nourishing, but also a good Medicine; at least a Diet, for keeping up the warmth of the Stomach, and assisting Digestion.

The *Spaniards* were the first who brought *Chocolate* into use in *Europe*; and that, perhaps, as much out of Interest, to have the better Market for their *Cacao Nuts, Achiot, Vanilla*, and other Drugs which their *West-Indies* furnish, and which enter the Composition of *Chocolate*; as out of regard to those extraordinary Virtues, which their Authors so amply eulogize. The Qualities above mention'd, are what the generality of Physicians and others allow of it.

The Manner of making *CHOCOLATE*.

The Method first us'd by the *Spaniards* was very simple, and the same with that us'd by the *Indians*: They only us'd *Cacao-Nut*, *Mais*, and raw *Sugar*, as express'd from the Canes, with a little *Achiot*, or *Roons*, to give it a Colour. Of these four Drugs, ground between two Stones, and mix'd together in a certain Proportion, those Barbarians made a kind of Bread, which serv'd 'em equally for solid Food and for Drink: eating it dry when hungry, and steeping it in hot Water when a-thirst.

This Drink the *Mexicans* call'd *Chocolate*, from *Choco*, Sound, and *ate*, or *ate*, Water; q. d. Water that makes a noise: from the Noise the Instrument us'd to agitate and prepare the Liqueur, made in the Water.

But the *Spaniards*, and other Nations, have since added a great Number of other Ingredients to the Composition of *Chocolate*; all of which, *Vanilla* alone excepted, spoil, rather than mend it.

Method of making CHOCOLATE, now in use among the Spaniards of Mexico.

The Fruit being gather'd from the *Cacao* Tree, is dry'd in the Sun, and the Kernel taken out, and roasted at the Fire, in Iron Peels pierc'd full of Holes; then pound'd in a Mortar; then ground on a Marble Stone, with a Grinder of the same Matter, till it be brought into the Consistence of a Paste; mixing with it more or less Sugar, as it is to be more or less sweet. In proportion as the Paste advances, they add some long Pepper, a little *Achiote*, and lilly *Vanilla*: Some add Cinnamon, Cloves, and Anis; and those who love Perfumes, Musk and Ambergris.

There is also a kind of *Mexican Chocolate* in the Composition whereof there enter Almonds and Filberts; but 'tis rather to spare the *Cacao*, than to render the *Chocolate* better; and accordingly, this is look'd on as sophisticated *Chocolate*.

The *Chocolate made in Spain*, differs somewhat from that made in *Mexico*: For besides the Drugs us'd in this last, they add two or three Kinds of Flowers, Pods of Campeche, and generally Almonds and Hazle Nuts. The usual proportion, at *Madrid*, is to a hundred Kernels of *Cacao*, to add two Grains of *Chili*, or *Mexican* Pepper, or in lieu thereof *Indian* Pepper; a handful of *Anis*; as many Flowers, call'd by the Natives *Vincacastides*, or little Ears; six white Roses in powder; a little *Machufia*; a Pod of Campeche; two Drachms of Cinnamon; a dozen Almonds, and as many Hazle Nuts; with *Achiote* enough to give it a reddish Tincture. The Sugar and *Vanilla* are mix'd at Discretion; as also the Musk and Ambergris. They frequently work their Paste with Orange-Water, which they think gives it a greater consistence and firmness.

The Paste is usually made up into Cakes, and sometimes into large Rolls.

Sometimes the Cakes are made up of pure *Chocolate*, without any Admixture; those who use it being to add what Quantity they please of Sugar, Cinnamon, and *Vanilla*, when in the Water.

Among us, in *England*, the *Chocolate* is chiefly made thus simple and unmix'd, (tho perhaps not unadulterated) of the Kernel of the *Cacao*; excepting that sometimes Sugar, and sometimes *Vanilla* is added: any other Ingredients are scarce known among us.

The newest *Chocolate* is esteem'd the best; the Drug never keeping well above two Years; but usually degenerating much before that time.

'Tis kept in brown Paper, dispos'd in a Box; and that in another, in a dry Place.

The Manner of preparing the *Mass* into a *Liquor*, with the Proportions, are various: Ordinarily, the *Chocolate* is boil'd in Water, sometimes in Milk; and sometimes, by good Oeconomists, in Water-Gruel: when boil'd, 'tis mill'd, or agitated with a wooden Machine for the purpose, and boil'd again, till it be of the proper Consistence for drinking; then sugar'd, if the *Mass* were pure; mill'd afresh; and pour'd off.

Note, the best *Chocolate* is that which dissolves entirely in the Water, leaving no Grounds, or Sediment at the bottom of the Pot.

There is a Dispute among the Casuists, whether or no *Chocolate* break the Fast? The Negative is very stiffly asserted by *Car. Bynessaccio*, who has wrote expressly on the Subject: the *Stabe*, an *English* Physician, has endeavour'd to shew, that there is more nutritious Juice in an Ounce of *Cacao*, than in a Pound of Beef or Mutton.

The Quantity of *Chocolate* made in *New Spain* is such, that there are annually us'd twelve Millions of Pounds of Sugar in the Preparation thereof. The *Spaniards* esteem it the last Misfortune that can befall a Man, to be reduc'd to want *Chocolate*: They are never known to quit it, excepting for some other *Liquor* that will fuddle.

CHOIR, that part of a Church, Cathedral, &c. where the Priests, and Choristers, or Singers, are dispos'd. See CHURCH.

The Choir is distinguish'd from the Chancel, or Sanctuary, where the Communion is celebrated; as also from the Nave, or Body of the Church, where the People assist.

The Patron is said to be oblig'd to repair the Choir of a Church; and the Parishioners the Nave.

The Choir was not separated from the Nave, till the Time of *Constantine*: From that Time the Choir was rais'd in with a Balustrade, with Curtains drawn over; nor to be open'd till after the Consecration.

In the XIIIth Century they began to enclose the Choir with Walls: But the ancient Balustrades have been since restor'd; out of a View to the Beauty of the Architecture. The Chantor is Master of the Choir. See CHANTOR.

In Nunneries, the Choir is a large Hall, adjoining to the Body of the Church; separated by a Grate, where the Religious sing the Office.

The Word, according to *Isidore*, is deriv'd a *Coronis circumstantibus*; because, antiently, the Choristers were dis-

pos'd round the Altar to sing: which is still the manner of building Altars among the *Greeks*.

CHOLAGOGUE, a Medicine which purges the Bile downward. See BILE, PURGATIVE, &c.

Of these fume are simple, others compound; and both the one and the other distinguish'd into three Kinds, with regard to their Activity; the benign, the moderate, and the violent.

Of the first kind are *Manna*, *Cassia*, *Roses*, *Tamarinds*, &c.

Of the second, *Sena*, *Rhubarb*, *Aloes*, &c.

Of the third, *Jalap*, *Scammony*, &c. See each under its Article, *MANNA*, *CASSIA*, *SENA*, &c.

The Word comes from *χολη*, *Bile*, and *αγω*, to lead. CHOLER. See BILE.

CHOLERA-Morbus, a sudden overflowing of the Bile, both upwards and downwards. See BILE.

It is suppos'd to have its rise from the great Abundance of bilious Humours, which being very acrimonious, velleitate the Membranes of the Stomach and Intestines; and by that means occasion unsafe and violent Contractions.

'Tis very dangerous: Whence the *French* antiently call'd it *Troyoff-Galand*.

It has its Name, either from the great Quantity of *Bile* it evacuates; or because the Matter is incessantly expell'd at the Intestines, which they antiently call'd *Cobolades*.

Dr. *Sydenham* observes, it generally attacks about the latter end of Summer; and proceeds, not infrequently, from Surfeits: That the Cure depends upon large Quantities of Chicken-Broth, drank so as to excite Vomiting plentifully; and that the Broth is also to be injected Clysterwise: after which, he says, the Cure is to be complicated by *Laudanum*, given at proper Intervals, and in proper Doses.

The Remedy in the *Indies* for the *Cholera Morbus*, or *Mandocbin*, is to keep the Patient from drinking; and to burn the Soles of his Feet.

CHOLIDOCHUS, in Anatomy, a Term apply'd to a Canal, or Duct, call'd also *Ductus Communis*; form'd of the Union of the *Porus Biliaris*, and *Ductus Cysticus*. See DUCT.

The *Cholidocus Ductus*, passing obliquely to the lower End of the *Duodenum*, serves to convey the Bile from the Liver to the Intestines.

Some have imagin'd, that it convey'd the Bile from the Liver to the Gall-Bladder: but it being observ'd, that 'tis the *Duodenum*, not the Gall-Bladder, that swells upon blowing thro' this Duct; 'tis evident the Bile contain'd therein, is convey'd no where else but to the *Duodenum*. See BILE, LIVER, GALL-Bladder, &c.

The Word comes from the *Greek* *χολη*, and the Latin *Duco*, I draw, lead, &c.

CHONDROGLOSSUM, in Anatomy, a very small Pair of Muscles of the Tongue, mention'd by *Verbeegen*, and several other Authors, exceedingly short and narrow; arising from the cartilaginous Processes of the *Os Hyoides*, and meeting in the Middle of the Basis of the Tongue, where they are insert'd, forming an Arch under it.

This Pair of Muscles is not found in all Subjects; whence some have question'd its Existence; but Nature takes so many Liberties, in Matters even of greater moment than a Pair of Muscles; that we need not on that score dispute the Veracity of so many Authors as profess to have seen it.

CHOP-CHURCH, or *Church-Clopper*, a Name, or rather Nickname given to Parsons who make a Practice of exchanging Benefices.

Chop-Church is us'd in an antient Statute as a lawful Trade, or Occupation; and some of the Judges say it was a good Addition. *Brook* holds, that it was no Occupation, but a thing permissible by Law.

CHOPIN, or CHOPINE, a *French* liquid Measure; containing half their Pint. See MEASURE.

The *Paris Chopin* is nearly equal to the *English* Pint. A *Chopin* of common Water weighs a *Paris* Pound.

CHORD, or CORD, primarily denotes a slender Rope, or Cordage. See CORDAGE.

The Word is form'd of the Latin *Chorda*, and that from the *Greek* *χορδη*, a great Gut, whereof Strings may be made.

CHORDS, or CORDS, in Music, are the Strings, or Lines, by whose Vibrations the Sensation of Sound is excited; and by whose Divisions the several Degrees of Tune are determin'd. See SOUND, and TUNE.

Some say, they are call'd *Cords*, or *Chords*, from the *Greek* *χορδη*, a Name the Physicians give to the Intestines; in regard, the Strings of Musical Instruments are ordinarily made of Guts: Others are made of Brass or Iron Wire; as those of Spinets, Harpsichords, &c.

Chords of Gold Wire, in Harpsichords, yield a Sound almost twice as strong as those of Brass: *Chords*, or Strings of Steel, yield a feebler Sound than those of Brass; as being both less heavy, and less ductile.

M. Perrault observes, that of late they have invented a way of changing the *Chords*, to render their Sound more strong, without altering the Tone.

The sixth *Chord* of Bass-Viola, and the tenth of large Theobas, consist of 50 Threads, or Guts: There are some of them 100 Foot long, twisted and polish'd with *Equif-tans*, or Horse-Tail.

For the Division of *Chords*, so as to constitute any given Interval, the Rules are as follow.

1. To assign such a Part of a Chord A B, as shall constitute any Concord, v.g. a Fifth, or any other Interval, with the whole.

Divide A B into as many Parts, as the greatest Number of the Interval has Units; v.g. the Fifth being 2:3, the Line is divided into 3. Of

these I take as many as the Lesser Number, v.g. 2 = A C; A C is the Part sought: That is, two Lines, whose Lengths are to each other as A B to A C, make a Fifth.

Hence, if it be requir'd to find several different Sections of the Line A B, v.g. such as shall be 8th and 3d G. I reduce the given Ratios 1:2, 2:3, and 4:5, to one Fundamental; the Series becomes 30:24, 20=15. The Fundamental is 30; and the Sections sought are 24; the Third G; 20, the Fifth; and 15, the Octave.

2. To find several Sections of a Line A B, that from the less, gradually to the whole, shall contain a given Series of Intervals in any given Order, viz. so as the least to the next greater contain a Third G; so that to the next greater, a Fifth; and that to the whole an Octave.

Reduce the three Ratios 4:5, 2:3, 1:2, to one Series; hence we have 8:10:15

:30. Divide the Line into the Number of Parts of the greatest Extreme of the Series, viz. 30; we have the Sections sought at the Points of Division, answering the several Numbers of the Series, viz. at the Points, C, D, and E; so as A C to A D is a Third, A D to A E a Fifth, to A B Octave.

3. To divide a Line A B into two Parts, to contain between them any Interval, v.g. a Fourth.

Add together the Numbers containing the Ratio of the Interval, v.g. 3:4; and the Line into as many Parts as the Sum, v.g. 7; the Point of Division answering to any of the given Numbers, v.g. 4 or C, gives the thing sought.

4. For the harmonical Division of *Chords*. To find two Sections of a Line, which with the whole shall be in harmonical Proportion, with regard to their Quantity.

Take any three Numbers in harmonical Proportion, as 3—4—6; and divide the whole Lines into as many Parts as the greatest of these three Numbers, v.g. 6; and at the Points of Division answering the other two Numbers, v.g. 3 and 4, you have the Sections sought.

5. To find two Sections of a Line, which together with the whole shall be harmonical, with respect to Quantity or Tune.

Take any three Numbers concord with each other, v.g. 2, 3, and 6, and divide the Line by the greatest; the Points of Division answering the other two give the Sections sought.

6. To divide a Chord A B, in the most simple manner, so as to exhibit all the original Consonants.

Divide the Line into two equal Parts at C, and subdivide the Part C B into equal Parts at D; and again, the Part CD into two equal Parts at E. Here A C to A B is an Octave; A C to A D a Fifth; A D to A B a Fourth; A C to A E a Third; A E to A D a Third; D C A E to E B a Sixth; A E to A B a Sixth C. See MONOCHORD; see also TUNE, CONCORD, HARMONY, &c.

Chord is also us'd in Music, for the Note, or Tone to be reach'd, or sounded; in which Sense, it is applicable to all the Intervals of Music. See CONCORD.

In this Sense, the Fifth is said to consist of five *Chords*, or Tunes. See FIFTH, &c.

Chord, *CHORDA*, in Geometry, a right Line connecting the two Extremes of an Arch. See ARCH.

Or, it is a right Line, terminated at each Extreme in the Circumference of a Circle, without passing thro' the Centre; and dividing the Circle into two unequal Parts, call'd Segments: such is the Line A B, Plate Geometry, Fig. 6.

The *Chord* of an Arch, is a right Line drawn from one Extremity of an Arch to the other; call'd also the *Subtense*.

The *Chord* of the Complement of an Arch, is the *Chord* that subtends the rest of the Arch; or so much as makes up the Arch a Semicircle. See COMPLEMENT.

The *Chord* is perpendicular to a Line drawn from the Centre of the Circle to the Middle of the Arch, as C E;

and has the same Disposition thereto, as the *Chord*, or String of a Bow, has to the Arrow: which occasion'd the ancient Geometricians to call this Line the *Chord* of the Arch, and the other the *Sagitta*, or Arrow; the former of which Names is still continu'd, tho the latter is diffus'd. What the Antients call'd *Sagitta*, is now term'd the *Sine* of the Complement. See SAGITTA.

Half the *Chord* of the double Arch B C, is what we call the *Right Sine*; and the Excess of the Radii b; and the *Sagitta* o F, the *Versed Sine*. See SINE.

The *Chord* of an Angle, and the *Chord* of its Complement to a Semicircle, are the same thing. The *Chord* of 50 Degrees is also the *Chord* of 130.

'Tis demonstrat'd, in Geometry, that the Radius C E, bisecting the *Chord* B A in D, does also bisect the Arch in E, and is perpendicular to the *Chord* A B; and vice versa. And again, if the right Line N E bisect the *Chord* A B, and be perpendicular thereto; it passes thro' the Centre, and does bisect both the Arch A E B, and the Circle A N B.

Hence we derive several useful Corollaries: as, 1. To divide a given Arch A B into two equal Parts. Draw a Perpendicular to the middle Point D E of the *Chord* A B; this bisects the given Arch A B.

2. To describe a Circle, that shall pass thro' any three Points A, B, C, Fig. 7. From A and C describe Arches intersecting in D and E; and also others, G and H, from C and B; draw the right Lines D E and H G. The Point of Intersection I, is the Centre of the Circle to be describ'd thro' A, B, and C.

Demonstr. For the Points A C and C B are in the Periphery of some Circle; and therefore, the Lines A C and C B are *Chords*. But E D is perpendicular to A C, and G H to B C; E D bisects A C, and G H bisects B C; wherefore each passes thro' the Centre. Now as D E and G H only intersect in I; I will be the Centre of a Circle, passing thro' the given Points A, C, and B.

Hence, assuming three Points in the Periphery or Arch of any Circle, the Centre may be found, and the given Arch compleat'd.

Hence also, if three Points of one Periphery do agree or coincide with three Points of another; the whole Peripheries agree, and therefore the Circles are equal.

Hence, lastly, every Triangle may be inscrib'd in a Circle.

The *Chord* of an Arch A B, (Fig. 7.) and the Radius C E being given; to find the *Chord* of the half Arch A C. From the Square of the Radius C E, subtract the Square of half the given *Chord* A D, the Remainder is the Square of C C; from which extract the square Root = D C: This subtracted from the Radius E C, leaves o E. Add the Squares of A E and E o; the Sum is the Square of A E; whence, the root being extracted, we have the *Chord* of half the Arch A E.

Line of *CHORDS*, is one of the Lines of the Sector and Plain Scale. See its Description and Use under the Words SECTOR, and PLAIN SCALE.

CHORD, *CHORDA*, in Anatomy, a little Nerve extended over the Membrane *Tympani*, or Drum of the Ear. See TYMPANUM.

Anatomists are not agreed about the Use of the *Chorda Tympani*: Some say, it serves to vary and modify the Sound of the *Tympanum*, in the same manner as the Strings, or Braces, stretch'd over the War-Drum. Others will have it to be no more than a Branch of the fifth Pair. See EAR.

CHORDAPSUS, in Medicine, a Disease of the Intestines, otherwise call'd *Misereere mel*: The some say 'tis only a Species of the *Misereere*. See MISEREERE.

Galen defines it, a Humour or Inflation of the small Intestines, which makes them appear fill'd, and stretch'd like a *Chord*. *Archigenes* makes it a kind of *Misereere*; consisting in a Tumor in a certain Place of the small Intestines, which sinks in, and gives way to the Hand when press'd: He adds, that it's exceeding dangerous, and ordinarily kills in three or four Hours, unless it come to Suppuration; which, however, does not take away all Danger.

'Tis probable, however, that the *Chordapsus* is in reality nothing else but the *Misereere*. *Celsus* informs us, that in his Time they were the same thing.

The Word comes from the Greek *χορδη*, *Chord*, and *αψος*, to touch.

CHORDEE, in Medicine, an Inflammation and Contraction of the *Frenum*, and under Part of the *Pennis*; so as to render Erection painful. See ERECTION.

It happens in Gonorrhoea, and is generally proportional to the Degree of the *Virus* receiv'd; so that in virulent Gonorrhoea, it is usually a very troublesome Symptom. See GONORRHOEA.

It proceeds from the Acrimony of the Matter which runs from the Urethra, irritating the under Part of the Yard; by which it is, as it were, ty'd or held forcibly downward in Erection, especially its *Frenum*. When the

Acrimony is considerable, it sometimes gives rise to unnatural Erections, or the Symptom call'd a Priapism. See PRIAPISM.

If the *Chordee* be violent, or does not decrease proportionally to the other Symptoms in Gonorrhoeas, an Emetic of Turpeth Mineral is usually given with success; it causing a Revulsion from the Part. See VENEREAL Disease.

CHOREA *Sancti Viti*, in Medicine, a Distemper which some Authors reckon as an hysterical Case; and others a Species of a *Furor Uterinus*.

It is suppos'd to proceed from a Turgency and Repletion of hot Juices, especially in the Uterine Vessels, which raises violent Motions; and that only Females are affected by it: But Dr. Sydenham more properly observes it to be an universal Convulsion, which sometimes continues several Weeks, nay Months, without intermission.

Those affected with this Disease, are continually in strange Motions with their Head, Legs, and Arms; so that they are unfit to feed themselves. It differs from other Convulsions, in that the Motions are not painful, nor any of the Extremities or Parts forcibly contracted, or extended for any time. Boys and Girls are most subject to this Disease, and that from ten Years of Age to Puberty; tho' the latter often than the former.

It sometimes precedes the first Eruption of the Menstrues; in which Case, proper Cathartics, with Calomel and Deobstruents, are generally us'd; otherwise, Evacuations and Antiepileptics, as in other nervous Distempers.

It takes the Name of *Chorea Sancti Viti*, or Saint Vitus's Dance, from the Chapel of S. Vitis; because it was suppos'd to seize Persons about May, which was the Time of the Year they visited that Chapel, and to make them leap and dance about in a strange manner.

CHOREPISCOPUS, an Episcopal Officer in the antient Church, about whose Function the Learned are extremely divided. See BISHOP.

M. de la Roque thinks, that the *Chorepiscopi* were the Country Bishops, and had the same Authority in Villages, that the Bishops had in Cities; but that, by degrees, as the Church flourish'd, the Country Bishops grew too proud for the Country Life; and imagin'd the Episcopal Honour debas'd, and render'd contemptible in a Rural Retreat. Accordingly, the *Sacred* Council prohibited the Consecration of Bishops in the Country, or in little Towns; that the Episcopal Character might always be sustain'd by the Splendor of great Cities.

M. du Bois adds, that tho' the *Chorepiscopi* exercis'd most of the Episcopal Functions in Country Towns, &c. yet they were not ordain'd like Bishops, nor vested with their whole Authority, but were only a Step above mere Priests.

M. le Maire is of Opinion, that the Office of a *Chorepiscopus*, which is that now discharg'd by the Rural Deans, was to overlook, under the Bishops, those Parishes that were at a distance from the See in the Country. He adds, they were abolish'd, by reason they usurp'd the Authority of the Bishops. See RURAL Dean.

Others, again, say, the *Chorepiscopi* were properly what we now call Bishops in *partibus*; to whom, in quality of Suffragans, were committed the Administration of Dioceses, during the Bishop's absence. See SUFFRAGAN.

Others rather think, the Institution of *Chorepiscopi* gave occasion to that of the *Episcopi in partibus*; which last, however, have Privileges the others had not.

Lastly, others take the *Chorepiscopi* to be no more than Priests, vested by the Bishops with most of their Authority in Country Places.

The Council of Antioch, held in 345, appoints, 'That those in Burghs and Villages, call'd *Chorepiscopi*, know the Bounds prescrib'd them: They may ordain Readers, Subdeacons, and Exorcists, but not Priests or Deacons, without the Bishop whereon they depend. The *Chorepiscopus* shall be ordain'd by the Bishop of the City.

Pope Leo, in 926, says, the *Chorepiscopi* mayn't ordain Priests, or consecrate Churches: yet Pope Nicholas, in a Letter to *Rosoni*, in the IXth Century, declares that the *Chorepiscopi* shall have the Episcopal Functions; and that the Ordinations of Priests and Deacons perform'd by them are valid.

The first time we read of *Chorepiscopi* in the East, is in the Beginning of the IVth Century; and in the West, about the Year 429. They ceas'd, both in the East and West, in the Xth Century.

The Word comes from the Greek *χωρα*, a *Region*, or little Country, and *επισκοπος*, Bishop.

CHORISCOPUS is also the Name of a Dignity still subsisting in some Cathedrals, particularly in *Germany*; signifying the same with *Chori Episcopus*, or Bishop of the Choir.

In the Church of *Cologne*, &c. the first Chanter is call'd *Chorepiscopus*.

The Word, in this Sense, does not come from *χωρα*, but *χορηγος*, *Choir*, &c.

CHOREUS, CHORÆUS, a Foot in the *Latin* Poetry, more commonly call'd *Trochæus*. See TROCHÆUS.

CHORIAMBUS, in the *Latin* Poetry, a Foot composed of a *Choreus*, or *Trochæus*; and an *Iambus*.

It consists of four Syllables; of which the first and last are long, the middle ones short.

CHORION, the exterior Membrane that invests the *Fetus* in the Womb. See FETUS.

'Tis very thick and strong; on the inside, where it joins another Membrane, call'd *Amnion*, very smooth; but rough and uneven without side; interspers'd with a great number of Vessels, and fasten'd to the Matrix, or Womb, by means of the *Placenta*, which adheres very closely to it. See PLACENTA.

This Membrane is found in all Animals.

The Word comes from the Greek *χορηγος*, *capere*, to contain.

The *Chorion*, with the *Amnion* and *Placenta*, make what we call the *Secundine*, or AFTER-BIRTH. See SECUNDINE.

CHORIST, or CHORISTER, a Chanter, or Singer in the Choir. See CHOIR.

CHOROBATES, a kind of Level us'd among the Antients; compos'd of a double Square, made in form of a T, describ'd by *Vitruvius*, Lib. viii. See LEVEL.

The Word comes from the Greek *χορηγος*, to over-run a Country.

CHOROGRAPHY, the Art of making a Map, or Description of some Country, or Province.

Chorography is distinguish'd from Geography, as the Description of a particular Country is from that of the whole Earth. See GEOGRAPHY.

From *Topography* it is distinguish'd, as the Description of the same Country, is from that of a single Place in it.

The Word comes from the Greek *χορηγος*, *Region*.

CHOROIDES, or CHOROIDEIDES, in Anatomy, a Term apply'd to several Parts of the Body; bearing some resemblance to the *Chorion*.

The Word is form'd from the Greek *χορηγος*, *Chorion*, and *ιδιον*, to resemble; or *ειδος*, *Image*, *Likeness*.

Thus, *Choroides* is us'd for the inner Membrane that immediately invests the Brain; so call'd as being intermingled with a great Number of Blood-Vessels, like the *Chorion*; but more usually call'd the *Pia Mater*, or *Meninx tenax*. See MENINX, and MATER.

Plexus, or *Lacis* CHOROIDES, is a Knot of Veins and Arteries in the fore Ventricles of the Brain, wove out of the Branches of the Carotid. See PLEXUS, and BRAIN.

Choroides is also apply'd to the inner and posterior Tunic of the Eye, contiguous to the *Sclerotica*. See EYE.

It is soft, thin, and black; and its inner, or concave Surface, very smooth and polite. It has its Name from its being interspers'd with Vessels.

To the *Choroides* is fix'd the *Uvea*. See UVEA.

M. *Mariotte* maintains, that Vision is perform'd rather in the *Choroides* than the *Retina*: in which he agrees with *Bar. Torinus*, and is seconded by M. *Mery*; but most other Authors are of a different Sentiment. See VISION, RETINA, &c.

Next under the *Choroides* is the *Retina*. *Ruyssch*, indeed, says, he has found another Tunic between the *Choroides* and *Retina*; and denominates it from himself, the *Tunica Ruysschiana*. He adds, that it grows so firmly to the *Choroides*, that 'tis overlook'd in the common Dissections.

But *Verbeeyen*, tho' he found the *Choroides* of a Bird divisible into two Membranes, could never separate those of the human Eyes; and therefore thinks they needed not any new Name.

The *Choroides* is black in Men; in Lions, Camels, Bears, Sheep, Cattle, Dogs, Cats, and most Fishes, of a shining Colour, like the Brilliant of Silver, or the Lustre of Oriental Pearl; and makes what Naturalists call the *Tapis*, or Colour of the Eye. See TAPIS.

CHORUS, in Dramatic Poetry, one, or more Persons, present on the Stage during the Representation, and suppos'd to be By-standers thereto, without any particular Share or Interest in the Action. See DRAMA.

Tragedy in its Origin, M. *Dacier* observes, was no more than a single *Chorus*, who trod the Stage alone, and without any other Actors; singing *Dithyrambs*, or Hymns in honour of *Bacchus*.

Thespis, to relieve the *Chorus*, added an Actor, who rehears'd the Adventures of some of their Heroes. *Aeschylus*, finding a single Person too dry an Entertainment, added a second; and at the same time reduc'd the singing of the *Chorus*, to make more room for the Recitation.

Every thing introduc'd between the four Songs of the *Chorus*, they call'd by the Term *Episode*; and those four Songs made the four Intervals, or Acts of the Piece. See EPISODE, ACT, &c.

But when once Tragedy began to be form'd, those Recitatives, or Episodes, which at first were only intended as accessory Parts, to give the *Chorus* a breathing Time, became now the principal Part of the Tragedy: And where-

as, before, they were taken from various Subjects, they were now all drawn from one and the same.

The *Chorus*, by degrees, became inserted and incorporated into the Action, to which it was only intended as an Addition or Ornament. Sometimes the *Chorus* was to speak, and then their Chief, whom they call'd *Corypheus*, spoke in behalf of all the rest: The singing was perform'd by the whole Company; so that when the *Corypheus* struck into a Song, the *Chorus* immediately join'd him. See *CORYPHEUS*.

Besides the four Songs, which made the Division of the Piece, and which were manag'd by the *Chorus*, the *Chorus* sometimes, also, join'd the Actors in the Course of the Representation, with their Plaints and Lamentations; on occasion of any unhappy Accidents that befall 'em.

But the proper Function of the *Chorus*, now that Tragedy was form'd, and that for which it seem'd chiefly retain'd, was to shew the Intervals of the Acts: While the Actors were behind the Scenes, the *Chorus* engag'd the Spectators; their Songs usually turn'd on what was just exhibited; and were not to contain any thing but what was suited to the Subject, and had a natural Connection with it: so that the *Chorus* concurr'd with the Actors for advancing the Action.

This a Fault observ'd in *Euripides's* Tragedies, that his *Chorus's* are detach'd from the Action, and not taken from the same Subject. There were some other Poets, who to save the Pains of composing *Chorus's*, and adapting them to the Piece, contented themselves with invented Songs, which had no relation to the Action. These Foreign *Chorus's* were the less pardonable, as the *Chorus* was esteem'd to act a Part in the Piece; and to represent the Spectators, who were look'd on as interested therein; insomuch that the *Chorus* was not always to be mute, even in the Course of the Acts.

In the modern Tragedies, the *Chorus* is laid aside; and the Fiddles supply its Place. *M. Dacier* looks on this Retrenchment as of ill consequence; and thinks it robs Tragedy of a great part of its Lustre. He adds, that 'tis ridiculous to have a Tragic Action broke, and interrupted by impertinent Flourishes from the Musick Box: and to have the Spectators, who are suppos'd to be mov'd by the Representation, become all of a sudden calm and easy, break off at the height of a Passion, and amuse themselves peaceably with a Foreign Entertainment. The Re-establishment of the *Chorus* he judges necessary, not only for the Embellishment and Regularity of the Piece; but also, in regard it was one of its principal Functions, to redress and correct any Extravagancies that might fall from the Mouths of the Actors, when under any violent Passion, by prudent, and virtuous Reflections.

That which occasion'd the Suppression of the *Chorus*, was its being incompatible with certain Complots, and secret Deliberations of the Actors. For 'tis in no wise probable, that such Machinations should be carry'd on in the Eyes of Persons interested in the Action. As the *Chorus*, therefore, never went off the Stage, there seem'd a Necessity of laying it aside, to give the greater Probability to this kind of Intrigues, which require Secrecy. See *TRAGEDY*.

M. Dacier observes, there was a *Chorus*, or *Grece*, also in the ancient Comedy; but that too is suppress'd in the new: chiefly because made use of to reprove Vices, by attacking Persons. See *COMEDY*.

The *Chorus* in Comedy was at first no more than a single Person, who spoke in the ancient Compositors for the Stage: The Poets, by degrees, added to him another; then two, afterwards three, and at last more: so that the most ancient Comedies had nothing but the *Chorus*, and were only so many Lectures of Virtue.

To give the *Chorus*, among the *Greeks*, was to purchase a Dramatic Piece of the Poet, and defray the Expences of its Representation.

The Person who did this was call'd *Choragus*. At Athens, the Charge of *Choragus* was laid on the Archon; at Rome on the Ediles. See *CHORAGUS*.

CHORUS is likewise us'd in Musick, where, at certain Periods of a Song, the whole Company are to join the Singer, in repeating certain Complots, or Verses.

CHOSE, i. e. *thing*, in Law, is us'd in various Circumstances, and with various Epithets; as,

CHOSE Locat, something annex'd to a Place, v. g. a Mill. *CHOSE Transitory*, something movable, and which may be transported from place to place.

CHOSE in Action, is not any thing Corporeal, but only a Right, v. g. an Annuity, Obligation, Covenant, &c.

Chose in Action may also be call'd *Chose in Suspense*, as having no real Existence, and not being properly in Possession.

CHRISM, Oil consecrated by the Bishop, and us'd in the *Rosses* and *Greek Churches*, in the Administration of Baptism, Confirmation, Ordination, and Extreme Unction. See *OIL*, *ORDINATION*, *EXTREME UNCTION*, &c.

The *Chrism* is prepar'd on *Holy Thursday* with a world of Ceremony. In *Spain*, 'twas antiently the Custom for the Bishop to take one third of a *Sol* for the *Chrism* distributed to each Church; on account of the Balsam that cost'd its Composition.

In *England* we had likewise *CHRISM Pence*, *Chrismatis Denarii*, or *Chrismales Denarii*; which was a Tribute paid to the Bishop by the Parish Clergy, for their *Chrism*, consecrated at *Easter* for the ensuing Year: but this was afterwards condemn'd as Simonical.

The Word comes from the *Greek χρισμα*, which signifies the same thing.

Du Gange observes, there are two Kinds of *Chrism*; the one prepar'd of Oil and Balsam, us'd in Baptism, Confirmation, and Ordination; the other of Oil alone, consecrated by the Bishop, us'd antiently for the Catechumens, and still in Extreme Unction.

The *Maronites*, before the Time of their Reformation, besides Oil and Balsam, us'd Musk, Saffron, Cinnamon, Roses, white Incense, and several other Drugs mention'd by *Reycolinus*, in 1541, with the Dolcs of each. The Jesuit *Dandini*, who went to Mount *Libanus* in quality of the Pope's Nuncio, ordain'd, in a Synod held there in 1596, that *Chrism*, for the future, should be made only of two Ingredients, Oil and Balsam; the one representing the human Nature of Jesus Christ, the other his Divine Nature.

The Action of imposing the *Chrism*, is call'd *CHRISMATION*: This the generality of the *Rosses* Divines hold to be the next Matter of the Sacrament of Confirmation.

The *Chrismation* in Baptism, is perform'd by the Priest; that in Confirmation by the Bishop: That in Ordination, &c. is more usually by'd *Unction*. See *UNCTION*.

CHRISOM, *CHRISMALE*, was antiently the Face-cloth, or piece of Linen laid over the Child's Head when he was baptiz'd.

Whence, in our Bills of Mortality, such Children which die in the Month are call'd *Chrismos*; and the Time between the Child's Birth and Baptism, was call'd *Chrismos*.

CHRIST, an Appellation usually added to *Jesus*; and, together therewith, denominating the *Messiah*, or Saviour of the World. See *JESUS*, and *MESSIAH*.

The Word in the original *Greek χριστος*, signifies Anointed, of *xxix*, *Isaings*, 1 anoint.

Sometimes the Word *Christ* is us'd singly, by way of *Autonomasia*, to denote a Person sent from God, an anointed Prophet, or Priest, &c.

Order of *CHRIST*, a Military Order, founded in 1518, by *Denis I.* King of *Portugal*, to animate his Nobles against the *Moor*.

Pope *John* confirm'd it in 1520, and appointed the Knights the Rule of *S. Bennet*. *Alexander VI.* permitted them to marry.

The Order became afterwards kindly reunited to the Crown of *Portugal*; and the King took upon him the Administration thereof.

The Arms of the Order are, Gules, a Patriarchal Cross, charg'd with another Cross Argent. They had their Residence, at first, at *Castromarin*; afterwards they remov'd to the City of *Tomar*, as being nearer the *Moor*s of *Andalusia*, and *Espannadora*.

Christ is also the Name of a Military Order in *Livonia*, instituted in 1205, by *Albert* Bishop of *Riga*. The End of their Institution was to defend the new Christians who were convert'd every Day in *Livonia*, but persecuted by the Heathens.

They wore on their Cloaks a Sword with a Cross over it; whence they were also denominat'd *Brothers of the Sword*. *CHRISTENING*. See *BAPTISM*.

CHRISTIAN, something that relates to *Christ*. See *CHRIST*.

The King of *France* bears the Title, or Sirname of the *Most Christian King*, *Rex Christianissimus*. The *French* Antiquaries trace the Origin of the Appellation up to *Gregory* the Great; who writing a Letter to *Charles Martel*, occasionally gave him that Title, which his Successors have since retain'd. See *TITLE*.

Lambecinus, a *German*, in the Ill'd Tome of the *Emperor's Library*, holds, that the Quality of *Most Christian* was not assign'd to the ancient *French* Kings, *Louis le Debonair*, Sec. as Kings of *France*, but as Emperors of *Germany*; but the *French* Historians have refus'd this Plea.

CHRISTIAN Religion, that instituted by *Jesus Christ*. See *RELIGION*, and *REVELATION*.

CHRISTIAN Name, that given at Baptism. See *NAME*.

CHRISTIAN Church. See *CHURCH*.

CHRISTIAN Court, or *Curia Christianitatis*, is the Ecclesiastical Jurisdiction; in contradistinction to Civil Courts, which are call'd King's Courts, *Curie Domini Regis*. See *COURT*.

CHRISTIAN is peculiarly and absolutely us'd for a Person who believes in *Christ*, and is baptiz'd in his Name.

The Name *Christian* was first given at *Antioch*, to such as believ'd in Christ, as we read in the *Acts*: Till that time they were call'd *Disciples*.

CHRISTIANS of *St. John*, a Sect of *Christians*, very numerous in *Belshars* and the neighbouring *Towns*.

They formerly inhabited along the *River Jordan*, where *St. John* baptis'd; and 'twas thence they had their Name. But after the *Mahometans* became Masters of *Palestine*, they retir'd into *Mesopotamia* and *Chaldea*.

They hold an Anniversary Feast of five Days; during which, they all go to their Bishops, who baptize them with the Baptism of *St. John*: Their Baptism is also perform'd in Rivers, and that only on Sundays.

They have no Notion of the third Person in the Trinity; nor have they any Canonical Books, but abundance full of Charms, &c. Their Bishopsrick defend by Inheritance, as our Estates do; tho they have the Ceremony of an Election.

CHRISTIANS of *S. Thomas*, or *San Thomas*, a Sect of ancient *Christians*, found in the *East-Indies*; when the *Europeans* touch'd at the Port of *Calcutt*; who pretend to be descended from thosc *S. Thomas* converted in the *Indies*: whence the Name.

The Natives call 'em, by way of Contempt, *Nazareans*; their more honourable Appellation is *Mappney*.

Some learned Men in *Europe* say, 'twas not *St. Thomas* the Apostle that converted that Country, but another *St. Thomas*: others say, 'twas a *Nestorian* Merchant, call'd *Thomas*. 'Tis certain they are *Nestorians*, and have been so a long time; inasmuch, that *Christians* of *St. Thomas*, is now esteem'd by many a Name of a Sect.

They have a Patriarch, who resides at *Mesul*. The Pope has made several Attempts to reduce 'em under his Obedience, but to no purpose.

CHRISTMAS, the Feast of the Nativity of *Jesus Christ*. See *FEAST*, *NATIVITY*, &c.

It appears from *S. Chrysostom*, that in the primitive Times, *Christmas* and *Epiphany* were celebrated as one and the same Feast: That Father observes, it was but a little while that *Christmas* had been celebrated at *Antioch* on the 25th of *December*, as a distinct Feast; and that the Use thereof came from the *West*. He adds, that the *Armenians* made but one Feast of them, as low as the XIIIth Century. See *EPHAPHY*.

CHRISTOLYTES, a Sect of Hereticks mention'd by *Damasenus*; so call'd, because they destroy'd *Christ*: maintaining, that he descended into Hell, Body and Soul; and that he left both there; ascending to Heaven with his Divinity alone.

The Word comes from the *Greek* $\chi\rho\iota\sigma\tau\acute{o}\varsigma$, and $\lambda\omicron\upsilon\varsigma$, *I resolve*.

CHROMA, in Rhetoric, a Colour, or fair Pretence. See *COLOUR*.

The Word is *Greek* $\chi\rho\omicron\mu\alpha$, which literally denotes Colour. *CHROMA*, in Musick. See *CHROMATIC*.

CHROMATIC, in the ancient Musick, the second of the *Genera*, or Kinds, into which the Consonant Intervals were subdivided into their concinnous Parts. See *GENUS*.

The other two Kinds were, the *Euharmonic*, and the *Diatonic*. See *ENHARMONIC*, and *DIATONIC*.

The *Chromatic* abounds in Semitones: It had its Name, either by reason the *Greeks* mark'd it with the Character of Colour, which they call $\chi\rho\omicron\mu\alpha$; or, as *P. Parras* says, because the *Chromatic* Kind is a Medium between the other two, as Colour is between black and white; or because the *Chromatic* Kind varies and embellishes the *Diatonic* Kind, by its Semitones; which have the same Effect in Musick, with the Variety of Colours in Painting.

Aristoxenus divides the *Chromatic* Genus into three Species; the *Molle*, *Hemiolion*, and *Tonicum*. *Ptolemy* into *Molle* or *Antiquum*, and *Intensum*. See *SPECIES*.

These Species were also call'd *Chrosi*, or Colours of the *Genera*: the *Molle* expresses a Progression by small Intervals, the *Intensum* by greater.

The *Chromatic* and *Euharmonic* Kinds, only contain the smallest of the *Diatonic* Degrees; so as they have the same proportion to the *Diatonic*, as Fractions have to Integers.

Boetius, and after him *Zarlus*, attribute the Invention of the *Chromatic* Genus to *Timotheus* a *Mitessian*, in the Time of *Alexander* the Great. The *Spartans* banish'd it their City, by reason of its softness.

Mr. *Melcolm* observes, that we are at a loss for what use the Antients could make of these Divisions, and Subdivisions into *Genera* and *Species*. All acknowledg'd the *Diatonic* to be the true Melody; the others seem only humorous Irregularities, calculated to please the Fancy by their novelty and oddness; and were besides so very difficult, that few, if any, are said to have ever pass'd them accurately. See *MUSIC*.

CHROMATIC is us'd, in Painting, for the Colouring; which makes the third Part of the Art of Painting. See *COLOURINGS*.

CHRONIC, CHRONICAL, in Medicine, is apply'd to a slow, or inveterate Disease, which lasts a long time; as the *Gout*, *Neurorhoids*, *Fistula*, *Droffy*, *Asthma*, &c. See *DISEASE*.

Chronic Diseases stand in opposition to *acute* Diseases, which are speedy, and hasten to a Crisis; as *Fevers*, *Small-Pox*, &c. See *ACUTE*.

Chronic Diseases are usually owing either to some natural Defect in the Constitution; or to an irregular manner of living. The Word comes from the *Greek* $\chi\rho\omicron\nu\omicron\varsigma$, *Time*.

Mood of the *Chronic* Diseases, says *Dr. Cheyne*, the Infirmities of old Age, and the short Periods of the Lives of *Englishtmen*, are owing to Repletion: This is evident hence, that Evacuation of one kind or another, is nine Parts in ten of their Remedy. See *REPLETION*, and *EVACUATION*.

The Sources of *Chronic* Distempers, says the same Author, are, 1. Viscidity in the Juices, or the overlargeness of their constituent Particles; which not being sufficiently broken by the concoctive Powers, stop, or retard the Circulation. Or, 2. Too great abundance of sharp acrimonious Salts; whereby the Juices themselves are render'd so corrosive, as to burst or wear out the Solids. Or, 3. A Relaxation, or want of a due Force and Springiness of the Solids themselves.

An Excess in the Quantity of our Meat and Drink begets the first; the bad Condition of the same Foods the second; and both together, with want of due Exercise, the third. See *FOOD*, *EXERCISE*, &c.

CHRONICLE, CHRONICON, a History digested in order of Time; tho the Term is seldom us'd but for old Histories, as *Holinshed's Chronicle*, *Stow's Chronicle*, &c. See *HISTORY*, &c.

CHRONOGRAM, a kind of Verse, the figurative, or numeral Letters thereof, being join'd together, make up the Year of our Lord, &c.

The Word is compos'd of $\chi\rho\omicron\nu\omicron\varsigma$, *Time*, and $\gamma\rho\alpha\mu\mu\alpha$, *Letter*.

CHRONOLOGY, the Art of measuring and distinguishing Time; or the Doctrine of Epochas, &c. See *TIME*, *EPOCHA*, &c.

Sturmius divides *Chronology* into five distinct Branches, viz. *Metaphysical*, *Physical*, *Political*, *Historical*, and *Ecclesiastical*; according to the various Relations, or Habitudes wherein Time is consider'd; viz. as in it self, as connected and subjected to the Affections, States, and Alterations of natural Things; as accommodated to Civil Uses; as match'd with Events that pass in the World; and particularly, as it relates to the Celebration of *Easter*. See *HOUR*, *DAY*, *WEEK*, *MONTH*, *YEAR*, *CALENDAR*, *CYCLE*, *PERIOD*, *EPOCH*, *EASTER*, &c.

There is more difficulty in *Chronology* than every one is aware of: It requires not only the Knowledge of Astronomy and Geography, and consequently that of Arithmetic, Geometry, and Trigonometry, both plain and Spherical; but also a word of Application to the ancient Monuments. Its use is very great: 'tis call'd one of the Eyes of History; and serves good Purposes in Theology.

The Word is compounded of the *Greek* $\chi\rho\omicron\nu\omicron\varsigma$, *Time*, and $\lambda\omicron\gamma\omicron\varsigma$, *Discourse*.

The more eminent Writers on *Chronology*, among the Antients, are *Julius Africanus* in the IIIrd Century; *Dionysius Exiguus*, *Eusebius*, and *Cyril*.

Among the Moderns, *Bede*, *Funesius*, *Mercator*, *Lilius*, *Clavius*, *Scaliger*, *Vinta*, *Petavius*, *Cressius*, *Alufter*, *Cotivius*, *Hardouin*, *Capellus*, *Usher*, *Marsham*, *Hobouen*, *Strauchius*, *I. Vossius*, and *Beveridge*.

CHRONOMETER, a general Name for any Instrument us'd in the measuring of Time: In this Sense, Clocks, Watches, Dials, &c. are *Chronometers*.

Tho there are some Instruments peculiarly call'd by the Name *Chronometer*; particularly one describ'd by *M. Savvius*, in his *Principles of Acoustics*.

The Word is compos'd of $\chi\rho\omicron\nu\omicron\varsigma$, *Time*, and $\mu\epsilon\tau\rho\epsilon\tau\rho\omicron$, *measure*.

CHRYSALIS, a Term us'd by the modern Writers of Natural History of Insects, in the same Sense with *Nymphs*. See *NYMPHA*.

The Word seems to imply a peculiar yellow, or golden Colour, usual in the *Nymphs*; from the *Greek* $\chi\rho\upsilon\sigma\omicron\varsigma$, *Gold*: but this is purely accidental, and is not found in all *Nymphs*.

Some confine the Word to the *Nymphs* of Butterflies and Moths.

CHRYSARGYRUM, a Tribute formerly levy'd on Courtiers, and other Persons of civil Life.

Zozimus says, that *Constantine* first fix it on foot; tho there appear some Traces of it in the Life of *Cotigula* by *Suetonius*; and that of *Alexander* by *Lamprius*. *Eozgrinus* says, *Constantine* found it establish'd, and had some Thoughts of abolishing it.

It was paid every four Years: Some say, all petty Traders were liable to it. It was abolish'd by *Auslavinus*.

M. *Golean* thinks, the *Chryfaryrum* was a general Tribute, levied every four Years, on Persons of all Conditions, Rich and Poor, Slaves and Freemen; nay, even on all Animals, as low as Dogs; for each whereof they paid six *Oboli*. *Heslaus* says, it was paid in Gold and Silver; whence its Name *χρυσος*, Gold, and *αργυρος*, Silver.

CHRYSOBERIL, a precious Stone; being a kind of pale Beril, with a Tincture of yellow. See *BERIL*.

CHRYSOCCOLLA, a Mineral us'd in the folding of Gold, &c. whence its Name. See *GOLD*, *SOLBERINO*, &c. It is found in Mines of Gold, Silver, Copper, and Lead: Its Colour is various, according to that of the Matter in which it is found; yellow if among Gold, white in Silver, green in Copper, and black in Lead. The *Arabs*, and Inhabitants of *Guzerat*, call it *Tincor*, or *Tincal*: In *Europe*, where 'tis found in various Places, 'tis confounded with the common *Borax*.

The best is that which is green, like an Emerald, found among Copper: that found among the other Metals is too much us'd.

Some reckon the *Chryfocolla* a Species of Nitre.

The Physicians use it in the Cure of Wounds: Some make an Artificial *Chryfocolla*, by mixing a little of the Natural, receiv'd in Water, with Wood.

The Term is form'd of the *Greek χρυσος*, Gold, and *κόλλα*, Glue. See *BORAX*.

CHRYSOCCOLA is also the Name of a sort of precious Stone, mention'd by *Pliny*, L. xxxvii. cap. 10. who also calls it *Ampbitamus*: He describes it as of a Gold Colour, and the Figure of a Square; adding, that it has the Virtue of attracting Iron, and even Gold.

But this, in all probability, is fabulous; and the Stone he speaks of is apparently no other than the *Chrysolite*.

CHRYSOOLITE, a precious Stone of a yellow Colour. See *PRECIOUS Stone*.

The *Chrysolite* is the *Topaz* of the Moderns. See *TOPAZ*. *CHRYSOOLITE* is also a general Name which the Antients gave to all precious Stones, wherein the yellow, or gold, was the prevailing Colour.

When the Stone was green, they call'd it *Chrysoprasus*: the red and blue too had their particular Denominations, which express'd their Colour; the Gold being signify'd by *Chryso*; which still began the Name.

We know but few of these *Chrysolites* now; or rather, they are refer'd to the Species of Stones which they approach the nearest: the green to the Emerald, the red to the Ruby; and so of the rest.

CRYSTAL. }
CRYSTALLINE. } See { CRYSTAL.
CRYSTALLIZATION. } { CRYSTALLINE.
CRYSTAL MINERAL, the same as *Sal Prunella*. See *PRUNELLA*.

CHUPMESSAHITES, a Sect among the *Mabometans*, who believe that *Jesus Christ* is God, and the true Messiah, the Redeemer of the World; but without rendering him any public or declar'd Worship.

Ricaut says, there are abundance of these *Chupmessahites* among the People of fashion in *Turky*, and some even in the *Seraglio*.

The Word, in the *Turkish* Language, signifies Protector of the Christians.

CHURCH, the Assembly of Persons united by the Profession of the same Christian Faith, and the Participation of the same Sacraments.

Bellarmin, and the *Romish* Divines, to this Definition add, *Under the same Pope, sovereign Pontiff, and Vicar of Jesus Christ on Earth*: in which Circumstance it is that the *Romish* and Reformed Notion of Church differ.

Anselme, and others, make a visible Head, or Chief, essential to a Church: Accordingly, among the Catholics, the Pope; in *England* the King, are respectively allow'd Heads of the Church. The Bishop of *Salisbury* sets aside the Notion of a visible Head: Christ alone, according to him, is Head of the Church; which Position he has maintain'd with infinite Address, in a celebrated Sermon before the King on those Words of our Saviour, *My Kingdom is not of this World*; and in the several Vindications thereof.

Sometimes, we consider Church in a more extensive Sense, and divide it into several Branches.

The Church Militant is the Assembly of Faithful on Earth; Church Triumphant, that of the Faithful already in Glory: to which the Catholics add the Church Patient, that of the Faithful in Purgatory.

The Term *Ecclesia*, *ἐκκλησία*, synonymous with our Church, is us'd in the *Greek* and *Latin* profane Authors for any kind of public Assembly; and even for the Place where the Assembly is held.

The Sacred and Ecclesiastical Writers sometimes also use it in the same Sense; but ordinarily restrain the Term to the Christians; as the Term *Synagogue*, which originally

signifies nearly the same thing, is in like manner restrain'd to the Jews. See *SYNAGOGUE*.

Thus, in the New Testament, the *Greek* *ἐκκλησία*, signifies almost always, either the Place destin'd for Prayer, as 1 *Cor.* xi. 14. or the Assembly of the Faithful diffus'd over the whole Earth, as *Ephes.* v. or the Faithful of a particular City, or Province, as 1 *Cor.* viii. 12. or even of a single Family, as *Rom.* xvi. or the Pastors or Ministers of a Church, as *Mat.* xviii. 17.

The Christian Church is frequently divided into *Greek* and *Latin*.

Greek, or *Eastern Church*, comprehends the Churches of all the Countries antiently subject to the *Greek*, or *Eastern* Empire; and thro' which their Language was carry'd, i. e. all the Space extended from *Greece* to *Mesopotamia* and *Persia*, and thence into *Egypt*; which has been divided ever since the Time of the Emperor *Phocas*, from the *Roman* Church. See *GREEK Church*.

Latin, or *Western Church*, comprehends all the Churches of *Italy*, *France*, *Spain*, *Africa*, the North, and all other Countries whither the *Romans* carry'd their Language.

Great Britain, part of the *Netherlands*, of *Germany*, and of the North, have been separated hence ever since the Time of *Henry VIII.* and constitute what we call the *Reform'd Church*, and what the *Romans* call the *Western* *Schism*; as the *Greek Church* does the *Eastern* one.

The Reformed Church is again divided into the *Lutheran Church*, the *Calvinist Church*, the *Church of England*, &c. See *LUTHERANISM*, *CALVINISM*, &c.

Church is also us'd for a Temple, built and consecrated to the Honour of God; and, antiently, under the Invocation of some particular Saint, whose Name it assum'd. See *TEMPLE*; see also *CONSECRATION*, &c.

In this Sense, Churches are variously denominated, according to their Rank, Degree, Discipline, &c. as *Metropolitan Church*, *Patriarchal Church*, *Cathedral Church*, *Patriarchal Church*, *Cardinal Church*, &c. See each under its proper Article, *METROPOLIS*, *PATRIARCH*, *CATHEDRAL*, *PARCHIAL*, *CARDINAL*, &c.

In Ecclesiastical Writers, we meet with *Grand Church*, for the chief Church of a Place; particularly in the *Greek* Liturgy, for the Church *S. Sophia* at *Constantinople*, the See of the Patriarch, founded by *Constantine*, and consecrated under *Justinian*: It was at that time so magnificent, that *Justinian* is said to have cry'd out in the Consecration thereof *ὡραία θεοῦ, ἡμεῖς οὐκ ἐπίσταμεθα*, Solomon. The Dome, which is said to have been the first that was built, is 230 Foot Diameter. See *DOME*.

The first Church publicly built by the Christians, some Authors maintain to be that of *S. Saviour* at *Rome*; founded by *Constantine*: others contend, that several Churches abroad, call'd by the Name of *S. Peter* *Vivus*, were built in honour of that Apostle during his Lifetime.

Mother Church, *Matrix Ecclesie*. See *MATRIX*, and *MOTHER*.

Church, with regard to Architecture, *Daviler* defines a large Vessel extended in length, with Nave, Choir, Isles, Chapel, Belfry, &c. See each Part under its proper Head, *NAVE*, *CHOIR*, *CHAPEL*, &c.

A simple Church, he calls that which has only a Nave and a Choir; a Church with Isles, that which has a row of Porticos, in form of vaulted Galleries with Chapels in its Pourtour.

Church in a Greek Cross, that where the Length of the Cross is equal to that of the Nave; so called, because most of the Greek Crosses are built in this form. Church in a Latin Cross, that whose Nave is longer than the Cross, as most of the Gothic Churches. Church in Rotonda, that whose Plan is a perfect Circle, in Imitation of the Pantheon. See *ROTONDO*, &c.

For the Form of the antient *Greek Churches*, when they had all their Parts, it was as follows: First was a Porch, or Portico, call'd the *naute Nave*, *νεῦσθ*, adorn'd with Columns on the outside, and on the inside surrounded with a Wall; in the middle whereof was a Door, thro' which they pass'd into a second Portico. The first of these Porticos was destin'd for the *Evangelium*, and Penitents in the first Stage of their Repentance; the second was much longer, destin'd for Penitents of the second Class, and the *Catechumen*, and hence call'd *νεῦσθ*, *νεῦσθ*, because those plac'd in it began to be subject to the Discipline of the Church. These two Porticos took up about one third of the space of the whole Church.

From the second Portico, they pass'd into the *Nave*, *ναῦς*, which took up near another third of the Church. In the middle, or at one side of the Nave, was the *Ambo*, where the Deacons and Priests read the Gospel and preach'd. See *AMBO*. The Nave was destin'd for the Reception of the People, who here assist at Prayers.

Near the Entrance of this was the *Baptistry*, or Font. See *BAPTISTRY*.

Beyond the Nave was the *Choir*, *zen*, set with Seats, and round: the first Seat on the right, next the Sanctuary, being for the Chantor, or *Cboragus*. See CHANTOR, &c.

From the Choir, they ascended by Steps to the *Saulisbury*, which was enter'd at three Doors. The Sanctuary had three *Apfides* in its length; a great one in the middle; under which was the *Altar*, crown'd with a *Baldachin*, supported by four Columns: See SANCTUARY, BALDACHIN, &c. Under each of the small *Apfides*, was a kind of a Table, or Cupboard, in manner of a Buffet. See APFIDES, &c.

Tho, of the *Greek Churches* now remaining, few have all the Parts above describ'd; most of 'em having been reduc'd to Ruins, or converted into Mosques.

M. *Frezier*, Engineer to the *French King*, and F. *Cordemoy*, a Regular Canon, have disputed the Form of the ancient and modern *Churches*, and the best manner of building them, with a good deal of Learning, in the *Journals de Trevoux*.

For the Form of the *Latin Churches*, tho it be various, yet may all the Variety be reduc'd to two Heads; viz. those in form of a Ship, and those of a Cross.

Church-Tard, a sacred Place, desin'd for the Increment of the Deceas'd. See BURIAL, FUNERAL, &c.

In the primitive Times, the Christians held their Meetings in *Church-yards*, as we are inform'd by *Eusebius*, Lib. vii. and *Tertullian*, who calls these *Church-yards* where the People us'd to meet to pray, *Areas*. *Eusebius* adds, that *Valerian* having confiscated the *Church-yards*, and Places desin'd for the Worship of God; *Gallian* restor'd 'em by a publick Rescript, reheas'd by the same Author. From these Passages, it seems as if *Church-yards*, and Places of Worship, were us'd indifferently for the same thing.

The Heathen Writers frequently upbraid the primitive Christians for their meeting in *Church-yards*; as if they serv'd other Purposes besides those of Religion. The Council of *Elvira* prohibits the keeping of Tapers lighted in *Church-yards*, during the Day-time; and by another Canon, the Women from passing the Night watching in *Church-yards*.

The Custom of blessing *Church-yards* is of an old standing: the Method was, for the Bishop to go round it with his Crozier, or pastoral Staff, and to sprinkle it with some consecrated Fluid. *Labineau* says, the Holy Water-Pot was carry'd before him.

Antiently, all were bury'd in *Church-yards*; none in *Churches*. From the Bodies of Martyrs, &c. being deposited here, the Christians chose particularly to build their *Churches* in them, when *Constantine* gave them the liberty: and hence *Tillemont* derives that Custom which still obtains in the *Romish Church*, never to consecrate any *Altar*, without depositing in it the Relicks of some Martyr.

Clozier observes, that under *Church-yard*, *Cemeteryum*, significs, was antiently comprehended, not only the strict Demeritory, or Place where the Dead were dispos'd; but all the Lands which encompass'd the Parish-*Churches*, and were contiguous to the real *Churches*. Perhaps it might be added, that all the *Church* Domains were compris'd under *Church-yard*. This will best account for that Confiscation of the *Church-yards*, charg'd on *Valerian*.

CHURCH-SCOT, or CHURCHESSET, a Payment, or Contribution, by the *Latin* Writers frequently call'd *Primitie seminum*; being, at first, a Quantity of Corn, paid to the Priest on St. *Martin's* Day, as the First-Fruits of Harvest. See PRIMITIE, and FIRST-FRUIT.

This was enjoin'd by the Laws of King *Malcolm* IV. and *Cannt.* c. 10. But after this *Church-Scot* came to signify a Reserve of Corn-Rent paid to the Secular Priests, or to the Religious; and sometimes was taken in so general a Sense as to include Poultry, or any other Provision that was paid in kind to the Religious. See TITHES.

CHURCH-Government, Discipline, &c. See ECCLESIASTICAL Government, &c.

CHURCH-REWS. See CHURCH-WARDENS.

CHURCH-WARDENS, antiently call'd *CHURCH-REWS*, are Officers chosen yearly by the Parson and his Parishioners, according to the Custom of the Place.

Their Business is to look to the *Church*, *Church-yard*, *Church-Revenues*, &c. to observe the Behaviour of the Parishioners with regard to Faults that come under the Jurisdiction of the Ecclesiastical Court; to present scandalous Livers to the Bishop; take care none preach without Licence, &c.

The *Church-Wardens* are a kind of Corporation; and are enabled by Law to sue and be sued for any thing belonging to the *Church*, or the Poor of the Parish. See PARISH.

CHYLE, or CHYME, in the Animal Oeconomy, a whitish Juice, into which the Food is immediately converted by Digestion, or, more properly, by that Branch thereof call'd *Chylification*. See CHYLIFICATION, DIGESTION, &c.

The *Chyle*, Dr. *Drake* observes, is nothing but a Mixture of the oily and aqueous Parts of the Food, incorporated with the saline ones; which, while they yet remain

mix'd with the grosser Parts in the Stomach, make a thick, whitish, partly fluid Mass, call'd *Chyme*: which, as soon as it is reduc'd to a Consistence loose enough to be obedient to the Pressure and peristaltic Motion of the Stomach, is gradually thrust out at the *Pylorus* into the *Duodenum*, and denominat'd *Chyle*.

Thus is the *Chyle* begun to be form'd in the Stomach; it is perfected in the Intestines by the Mixture of the Bile and the pancreatic Juice; and is thence receiv'd into the Lactal Veins, which carry it to the *Receptaculum Chyli*, or *Pecquet's* Reservatory: thence it passes into the Thoracic Duct, which terminates in the left Subclavian Vein; In this Vein, the *Chyle* first begins to mix with the Blood; into which it is afterwards converted by the Action call'd *Sanguification*. See BLOOD.

The Antients suppos'd the *Chyle* was chang'd into Blood in the Liver; others of 'em in the Heart; but the Moderns, with more reason, take the Change to be effected by the Blood it self, in all the Parts of the Body. See SANGUIFICATION.

Some take *Chyle* to be the immediate Matter of Nutrition; others the Blood. See NUTRITION.

The Word comes from the *Greek* *χολη*, Juice.

Dr. *Lifter* is of Opinion, that in the Digestion of Meat in the Stomach, there is made a Separation, or Solution of urinous Salts, no otherwise than in the rotting of Plants, or Animals: that the *Chyle* is highly impregnated with this urinous Salt; that it owes its whiteness to the Fermentation it acquires from that Mixture: That the salt *Chyle* is convey'd into the venal Blood, and with it enters the Heart; and is thence thrown out *Chyle*, as it comes in, by a continual Pulsation, into the Arteries: that as oft as it enters the Emulgent Arteries, it leaves behind part of its saline Liquor, or Urine, and consequently abates of its Colour: That when sufficiently freed of its Salts, it becomes a *Lymph*; which seems to be nothing else but the Residue of the *Chyle* not yet converted into Blood; as not yet sufficiently depurated of its saline Particles. See LYMPHA.

CHYLIFICATION, the Formation of the *Chyle*; or the Act whereby the Food is chang'd into *Chyle*. See FOOD, and CHYLE.

Chylification is begun by comminuting, or breaking the Aliment in the Mouth, mixing it with *Saliva*, and chewing it with the Teeth. See MASTICATION.

By such means, the Food is reduc'd into a kind of Pulp, which falling thro' the *Oesophagus* into the warm Stomach, mixes with the Juices thereof; and is thus dilu'd, begins to ferment, or putrefy, and assumes a very different form from what it had before; growing either acid or rancid.

Here it mixes with a Juice separated from the Blood by the Glands of that Part, whose Excretory Ducts open into the Stomach; as also with the Remains of the former Aliment: and thus it becomes better macerated, dilu'd, dissolv'd, and acquires still a greater likeness to the Animal Fluids, and is call'd *Chyme*. See CONCOCTION.

Add to this, that the fleshy Membrane of the Stomach continually contracting and pressing its Contents by its peristaltic Motion, occasions a more intimate Mixture, and by degrees works out the more fluid Parts thro' the *Pylorus* into the *Duodenum*; along the Sides whereof, and the rest of the *Intestina Tertia*, the Lactal Arcs are plant'd; into the minute Orifices whereof, the finer Part of the Mass is receiv'd. See PERISTALTIC Motion, INTESTINES, and LACTEALS.

The Fabrick of the Stomach being consider'd, the Heat of the circumambient Parts, the Pulsations of innumerable Arteries, the great Strokes of the *Aorta* underneath, the constant Compression of the *Diaphragma* and Abdominal Muscles; it must necessarily follow, that the finer Parts of the Aliment will be first expell'd the Stomach; and that the grosser will remain; till, by the repeated Action of the Fluids, and the Contraction and Pulsation of the Solids, they also become fine enough to go off: thus is the Stomach left empty; and by means of its muscular Coat, reduc'd to a State of Contraction, and Appetite renew'd. See HUNGER.

Thus will even the fleshy Membranes, Cartilages, &c. of Animals sed on, be squeez'd, and oblig'd to give out their Juices; and thus is a Fluid obtain'd, that shall have in some measure the same Properties with those of our Bodies.

The Juice being got thro' the *Pylorus* into the Intestines, its Liquefaction is still promoted by its mixture with two other Dissolvents, the pancreatic Juice and the Bile; which divide and subtilize those Parts that were left too gross; and by the peristaltic Motion of the Guts it is protrud'd forwards. In the Passage thro' the small Intestines, the finer Part of the Mass, which we call the *Chyle*, enters the Orifices of the Lactal Veins of the first Kind, wherewith the whole Mesentery is intermix'd; which either alone, or together with the Mesaric Veins, discharge themselves into the Glands at the Basis of the Mesentery.

Then the *Chyle* is taken up by the *Lacteals* of the second Kind, and convey'd into Glands between the two Tendons of the Diaphragm, known heretofore under the Name of the *Lumbary Glands*, now call'd *Pequet's Reservoir*; whence it is carry'd to the Heart by the Thoracic Duct and the Subclavian Vein; wherein it begins to be mix'd with the Blood, and to circulate, and in time become assimilated thereto. See CIRCULATION, ASSIMILATION, &c.

CHYLOSIS, in Medicine, the Action whereby the Aliment is converted into *Chyle*, or *Chymus*, in the Stomach, &c. whether it be by a Ferment in the Stomach, or the contractile Force of the Stomach, or both. See CHYLIFICATION, and DIGESTION.

CHYME, an Animal Juice, the same with that commonly call'd *Chyle*. See CHYLE.

Some, however, distinguish between *Chyme* and *Chyle*; restraining the Word *Chyme* to the Mass of Food, &c. while in the Stomach, & it is sufficiently comminuted and liquify'd to pass the *Pylorus* into the *Duodenum*, and thence into the *Lacteals*, to be further diluted and impregnated with the pancreatic Juice; where it commences *Chyle*.

CHEMISTRY, or more properly CHEMISTRY, the Art of separating the several Substances whereof mix'd Bodies are compos'd, by means of Fire; and of composing new Bodies in the Fire, by the Mixture of different Substances or Ingredients. See FIRE.

The great Object of *Chemistry*, is to analyse, or decompose natural Bodies; reduce them to their first Principles; discover their hidden Virtues, and demonstrate their inner Constitution, or the Centre, as they call it, wherein natural Substances concur. In a word, *Chemistry* is the Anatomy of natural Bodies, by means of Fire; which is the Definition *Hanneman* gives us of the Art.

The very learned *Boerhaave* defines *Chemistry* very scientifically: 'An Art whereby sensible Bodies contain'd in Vessels, or capable of being contain'd therein, are to be chang'd, by means of certain Instruments, and principally Fire, that their several Powers and Virtues are thereby discover'd, with a View to Philosophy, Medicine, &c.'

This Definition appears very prolix and circumstantial, and more like a Description than a Definition; but with all his Endeavours, he assures us, he could not frame a shorter, that would express the full Scope, Object, and Instruments of *Chemistry*, so as to distinguish it from every other Art: which is a Point all the Writers of *Chemistry* have stumbled at.

For *Chemistry* cannot justly be call'd the Art of restoring Bodies, as *Regius*, *Paracelsus*, &c. define it; since Mechanicks will also do that: Nor is the Matter intended, by saying, It is the Art of analysing Bodies by Fire; as *Helmont* has done; nor by Salt, as others would have it. These Definitions include only a Part, instead of the whole. And with as little Propriety is it term'd, The Art of separating the Parts from the Impure; inasmuch as it compounds as well as separates, and frequently mixes the Pure with the Impure.

Chemistry, on this footing, appears a very extensive Art: Its Object, or the *Materia Chymica*, is all sensible Bodies, capable of being contain'd in Vessels; and is accordingly divided into three Kingdoms, *Fossil*, *Vegetable*, and *Animal*. See BODY, FOSSIL, VEGETABLE, &c.

The Operations of *Chemistry*, include all the Changes produc'd in Bodies by natural Agents or Instruments, viz. *Decoction*, *Infusion*, *Exhalation*, *Calcination*, *Extraction*, *Distillation*, *Crystallization*, &c. See OPERATION, and ELEMENT; see also DECOCTION, INFUSION, EXHALATION, DISTILLATION, CALCINATION, EXTRACTION, &c.

The Effects, or Productions of *Chemistry*, may be reduc'd to *Magisteries*, *Essentials*, *Tinctures*, *Elusives*, and *Clysters*. See MAGISTRY, EXTRACT, TINCTURE, ELIXIR, &c.

The Instruments, or Agents of *Chemistry*, whereby its Operations are perform'd, are *Fire*, *Water*, *Air*, *Earth*, *Menstruums*, and Instruments properly call'd, as *Alembics*, *Cucurbits*, *Retorts*, *Pelicans*, *Furnaces*, and *Lutes*. See FIRE, AIR, WATER, EARTH, MENSTRUUM, ALEMBOIC, CUCURBIT, RETORT, FURNACE, and LUTE.

Chemistry is an Art of very great Antiquity, and is held by some very learned Persons to have been practis'd in the Antediluvian World. *Osam*, the Son of *Noah*, is commonly held to have been its Inventor, from whom it is supposed to have taken its Name. Others refer the Invention to *Tubal Cain*, whom the Scripture records as the Inventor of Instruments of Brass and Iron. This is pretty certain, that some of the highest and most difficult Things in *Chemistry*, must have been known by him; among which are the separating and purifying of Copper and Iron, the making of Brass, &c. See COPPER, IRON, &c.

The first mention we find made of the Art, is in *Zoziemus*, the *Patapolitan*, who lived about the Year of Christ 400. 'In the Sacred Writings, says that Author, we find certain *Genii* spoke of, who had commerce with Women.

Hermes says as much in his Books upon Nature; and scarce any Author but has some Footsteps of this Tradition. These *Genii*, intoxicated with the Love of Women, discover'd 'em all the Secrets of Nature; and taught 'em abundance of Things unfit for 'em to know; for which reason they were banish'd from Heaven. The Book wherein their Secrets was contain'd, was call'd *Chemica*; and hence the Name *Chemica*, or *Chymica*.'

The Text of Scripture *Zoziemus* here refers to, is that Passage in *Moses*, The Son of God saw the Daughters of Men, and took 'em to Wife.

This Antediluvian Origin of *Chemistry* is confirm'd by *Tertullian*: 'The Angels that fell, says that Father, discover'd Gold and Silver to Men, with the Arts of working 'em, of dying Wool, &c. for which reason they were banish'd, as is related by *Enoch*.'

Boerhaave looks on these Passages as authentic; but adds, that *Enoch* was mistaken, for that the Angels he speaks of were not real Angels; but the Descendants of *Serb* and *Tubal Cain*, who degenerating from their Fathers, gave themselves up to criminal Pleasures with the Women descended from *Cain*; and in the Course of their Intrigues, divulg'd the Secrets God had trull'd 'em withal.

Be this as it will, *Chemistry*, no doubt, was first practis'd in *Egypt*. According to *Moses*, *Tubal Cain* should be the first Inventor. Profane Authors refer it to *Vulcan*; and some of the latest and best Critics endeavour to show, that *Tubal Cain* and *Vulcan* were the same; as, indeed, there is found a great resemblance between their Names.

After *Tubal Cain*, the first *Chymist* we read of is *Moses*; whose Skill in *Chemistry* is incontestable, from his burning and pulverizing the Golden Calf the *Israelites* had set up, and giving it the People to drink. There is scarce a more difficult Operation in all *Chemistry*, than to make Gold potable. See GOLD.

Chemistry had the common Fate of the other Arts, at the Declension of the Eastern Empire; and lay bury'd and forgot till the Time of *Roger Bacon*, who retriev'd it. He was follow'd by *Lully*, *Ripley*, *Basil Valentine*, *Paracelsus*, *Van Helmont*, *Glauber*, *Boyle*, *Lemery*, *Homburg*, &c. by whom the Art has been carry'd to its present degree of Perfection.

The first *Chymists* confin'd themselves to Metals: In these latter Ages, the Bounds of *Chemistry* have been greatly enlarg'd; and Plants, Animals, Minerals, &c. have been taken into it.

'Tis but of late that *Chemistry* has been apply'd to the Preparation of Medicines: *Basil Valentine*, and *Arnoldus de Villa Nova*, seem to have been the first that attempted it. *Paracelsus* and *Van Helmont* carry'd it to such a length, as to render Medicine almost wholly *chymical*. See MEDICINE.

Chemistry is divided into *Metalurgia*, *Alemyia*, *Chymical Pharmacy*, and *Chymical Philosophy*. See METALURGIA, ALEMYIA, &c.

Criticks are divided as to the Etymology of the Name *Chemistry*: It is usually deriv'd from the Greek *chemo*, Juice; or from *chemo*, to melt.

Boerhaave, and others, more justly derive it from the Egyptian *Chemia*, or *Kema*, black; and write it *Chemia*, not *Chymia*.

Others, making *Cham* the Inventor of *Chemistry*, derive the Term from his Name; supporting their Erymology on the Signification of the Word *Cham*, which in the Hebrew signifies *heat*, *hot*, *black*; all of them bearing some relation to the Operation of *Chemistry*.

Chemistry is also known under various other Names: It is sometimes call'd the *Hermetical Art*, from a Supposition of its being invented by *Hermes Trismegistus*: See HERMETIC. Others call it, the *Egyptian Art*, from the People among whom it was first practis'd: Others the *Sacred*, or *Divine Art*; *Poetists* the Art of making Gold, &c. Others call it the *Spagyric Art*; *Paracelsus* the *Hyfysic Art*; others *Pyrotechnia*, &c. See SPAGYRIC, HYFYSIC, PYROTECHNIA, &c.

When the *Chymists* would express the most sublime Parts of their Art, they prefix the Arabic Particle *Al* to the Word *Chymia*, or *Chymistry*, and thus form *Alemyia*. See ALEMYIA.

Some Authors observe, that *Dioclesian*, after the taking of *Alexandria*, order'd all the Books of *Chemistry*, anciently wrote by the *Egyptians*, for making Gold and Silver, to be sought out and burnt; that they might not have the Power of enriching themselves by this Art, or of putting themselves, by this means, into a Condition of revolting.

Authors on the Subject of *Chemistry* are very numerous: *Borel* has publish'd a Catalogue of most of 'em, under the Title of *Bibliotheca Chymica*; containing the Names of above ten thousand. *Boerhaave* is the latest, fullest, and infinitely the best; he has given both the History, Theory, and Practice, in the finest, most orderly, and scientific Way in the World. Dr. *Friens* has reduc'd *Chemistry*

wisdom to *Newtonianism*, and accounted for the Reasons of the Operations on Mechanical Principles.

CHYMOSIS, in Medicine, the Act of making or preparing *Clyme*. See *CHYME*.

Clymosis is particularly us'd for the second of the Concoctions made in the Body; being a repeated Preparation of the most impure and gross Parts of the Chyle, which being turn'd back by the *Lactesia*, is imbib'd by the *Mesenterica*, and thence carry'd to the Liver, to be there elaborated, purify'd, and subtiliz'd afresh. See *CONCOCTION*.

'Tis of this, according to *Rigers*, that the Animal Spirits are form'd.

The Word comes from *χυμωσις*, *succus*, of *χυμω*, *fundio*, I melt.

CHYMOSIS, or **CHYMOSIS**, is also us'd in Medicine, for an Inflammation of the Eyelids, which turns out their inside to light.

The Word comes from the Greek *χυμωσις*, *bifio*.

CICATRICULA, in Natural History, a little whitish Speck, in the Coat of the Yolk of an Egg; wherein the first Changes appear towards the Formation of the Chick. See *YOLK*.

The *Cicatricula* is what is commonly call'd the *Treadle* of the Egg. See *EGG*.

CICATRISIVE, in Medicine, is apply'd to such Medicines as are very Dedicative; and on that account aid Nature to repair the Skin, and to form a *Cicatrix*, or *Eschar*. See *CICATRIX*.

Such are *Armenian Bole*, Powder of Tutty, the Unguent *Diapompholignus*, *desiccatorum Rubrum*, &c.

Cicatriv Medicines are otherwise call'd *Escharotics*, *Epulotics*, *Incarnevatives*, *Agglutinants*, &c. See *EVOLUTIC*, *ESCHAROTIC*, *INCARNATIVE*, &c.

CICATRIX, in Medicine, &c. a little Seam, or Elevation of callous Flesh, rising on the Skin, and remaining there after the healing of a Wound, &c. ordinarily call'd a Scar, or *Eschar*. See *ESCHAR*, *WOUND*, &c.

The *Cicatrix* is the same as to the joining of the fleshy Parts, as a *Callus* is to the Bones. See *CALLUS*.

In young Infants, these Callosities, or Scars, sometimes much diminish, and oftentimes quite vanish when come to Age, as is particularly observ'd in the Pits of the Small-Pox; and, in growing, they are sometimes observ'd to change their Situation.

Some derive the Word from *quasi circa cutem*: others fetch *Cicatrix* from *quasi Occacatrix*, the *Cicatrix* being only *obductio vulneris*, the covering up, or hiding of the Wound: but 'tis better deriv'd from *Cecatrix*, which has the same force; and of the Verb *Cecare*, to blind.

CICUTA, a vegetable Poison, celebrated both among Antients and Moderns. See *POISON*.

The modern *Cicuta* is the Plant *Hemlock*; whereof there are two Kinds: the *Cicuta*, absolutely so call'd, or *Cicuta major*; and *Cicuta minor*.

The first grows in Places a little moist, in the Shade, among old Ruins, or along Roads.

So many unhappy Effects have been perceiv'd from it, that its Use, internally, is by no means to be recommend'd: And yet some Persons boast of it as a powerful Sudorific. Externally it may be apply'd, to resolve Wens, and Hardnesses of the Spleen and Liver. It is the Base of the Plaster which bears its Name.

The Physicians have generally rank'd it among the cold Poisons; but the later Writers, with more justness, regard it as a Dissolvent, or hot Poison. The Reasons they give, as related by *Weffer*, are, that it bites the Tongue; that the Effluvia it yields are hot, and arise from a volatile Salt, and an impure Sulphur; that the Madness it occasions, as well as the other Symptoms, shew a great activity of Parts; and that if the Blood be found coagulated by it after Death, Spirit of Wine does the same.

The lesser *Cicuta* is not less dangerous than the greater; it is ever suppos'd more violent, as well as more hasty in its Operation.

Several Persons have been render'd foolish, by eating Porridge wherein *Cicuta* has been us'd instead of Rye. It has much such an Enmity to the Brain, as *Cantharides* have to the Bladder; and *Lepus Marinus* to the Lungs.

The *Cicuta* of the Antients, is a Secret which is now scarce possible to be discover'd: it was call'd *Cicuta Aquatica*, and was of the Umbelliferous Tribe. *Weffer*, in an excellent Treatise on the Subject, will have it the *Sium Ericace sive C. B.*

CICUTA is also us'd, chiefly, among the Antients, for a Juice, or Liqueur, express'd from the Plant *Cicuta*. This *Cicuta* was the common Poison wherewith their State-Criminals were put to death: *Socrates* drank the *Cicuta*.

Plato, in his Dialogue on the Immortality of the Soul, observes, that 'The Executioner advis'd *Socrates* not to talk, for fear of causing the *Cicuta* to operate too slowly.' *M. Petit*, in his *Observationes Miscellaneae*, remarks, that this Advertisement was not given by the Executioner out

of Humanity, but to save the *Cicuta*: for he was only allow'd so much *per Annum*, which if he exceeded, he was to furnish at his own Expence. This Contraction is confirm'd by a Passage in *Plutarch*: The Executioner who administer'd the *Cicuta* to *Ptoleion*, not having enough, *Ptoleion* gave him Money to buy more; observing, by the way, that it was odd enough, that at Athens a Man must pay for every thing, even his own Death.

CIDER, a brisk, tart, cool Liqueur, prepar'd from Apples.

The Manner of making *CIDER* is as follows.

The Fruit is first ground, or stamp'd, and the Juice squeeze'd out in a Press; then 'tis strain'd thro' a Sieve, or other Filter, and tum'd up: the Vessel not to be full. For two or three Days it is to be stopp'd loosely, then quite clos'd with Clay. Henceforward, a small Quantity to be drawn out every Day for some Weeks, till such time as it be suppos'd pretty clear; then 'tis pierc'd, to see how fine it is: the Summer Fruit after a Month; the Gemet-Moill, after the first Frosts; the Redbreak not till after January; and the other Winter Fruits about the same time.

If it be'n now found fine enough, it stands a Month longer; and if even then it be defective, 'tis rack'd off like Wine, so as to keep out the Air.

Some, instead of racking, fine it with fling-glass, steep'd in Whitewine, and dissolv'd over the Fire; this they boil in a quantity of the Liqueur to be fined, and then mix it with the rest: and others, instead of dissolving the fling-glass over the Fire, let it steep in the Whitewine for about a Month, in which time it diffolves into a Jelly of it self: a quantity of this is mix'd with some of the Liqueur, and the whole beat to a froth; then mingled, together with some Broom, with the rest. The Liqueur once fine, 'tis drawn out, or bottled off, as occasion requires. See *CLARIFYING*.

'Tis observ'd, that a Mixture of Fruits is a great Advantage to *Cider*; the worst Apples, mix'd together, making as good *Cider* as the best alone: always observing, however that they be of equal ripeness.

The best Mixture, according to *Mr. Worlidge*, is that of Redbreaks with Golden-Rennets: Bitter Apples spoil the *Cider*; but the Juice of them and of Crabs, yield as good Spirits as the best Apples, when ferment'd: neither the four nor the bitter Taste arising with the Spirit upon Distillation.

If the Apples be pounded in a Stone Mortar, which is the Custom of some, the Kernels and Stalks are bruis'd with them, which gives the Liqueur an ill Savour.

CIDERKIN, or *Parre*, is a Liqueur made of the Murr, or gross Matter remaining after the *Cider* is press'd out.

For this purpose, the Murr is put up in a large Fat, with a proper Quantity of boil'd Water, which has stood till it be cold again: if half the Quantity of Water be us'd that there was of *Cider*, 'twill be good; if the Quantities be equal, the *Ciderkin* will be small. The whole is left to infuse forty eight Hours, then well press'd: What is squeeze'd out by the Press is immediately tum'd up and stopp'd; 'tis fit to drink in a few Days.

It clarifies of it self, and serves in Families instead of Small Beer. It will keep, if boil'd after pressure, with a convenient quantity of Hops.

CILIA, in Anatomy, the Hairs wherewith the *Palpebrae*, or Eyelids are fring'd; especially the Upper, which is larger and stiffer than that of the Under. See *PALPEBRA*.

Their Use seems to be, to break the too fierce Impression of the Rays of Light; as also to keep out Flies and Moats, and other Things floating in the Air, which might annoy the Eye.

These *Cilia* spring from a small row of Glands, which cover a thin tender Cartilage, edging each Eyelid, and serving as a kind of Rod, or Ring to stretch 'em upon.

CILIARE, in Anatomy, an Epithet given to a Part of the Eye, call'd *Ligamentum Ciliare*; because of its resembling the *Clum*, or Hair of the Eyelids. See *LIGAMENT*.

The *Ligamentum Ciliare*, call'd also *Processus Ciliaris*, consists of a range of black Fibres dispos'd circularly; having their rise in the inner Part of the *Uvea*, and terminating in the prominent Part of the Crystalline, which they incampass round.

Anatomists generally imagine their Use to be to suspend the Crystalline in the Globe of the Eye, to lengthen or shorten its Figure, and bring it nearer to or farther from the *Uvea*; as and to open or contract the Pupil as occasion require, i. e. as near or remote Objects, obscure or bright Objects are to be view'd. See *CRYSTALLINE*, and *PUPIL*.

The Motion of the Pupil, some say, is effected by the circular and Strait Fibres of the *Uvea*; others attribute it to the *Ciliary Ligament*; yet, I have no great doubt, but they both concur in the same Action; and that the *Ligamentum Ciliare* doth, at the same time the Pupil opens or shuts, dilate or compress the Crystalline, and bring it nearer, or carry it farther off the *Retina*. *Derham Phys. Theol.*

M. Mariotte denies the *Ligamentum Clivare* to have any connection with the Crystalline, or to serve for any purposes thereof. See VISION.

CILIARIS, in Anatomy, a Muscle, otherwise call'd *Ophthalmicus Palpebrarum*. See OBLIQUARIS.

CIMA, or *Sims*, in Architecture, a Member or Moulding, call'd also *Gula*, and *Cymatium*. See GULA, and CYMATIUM.

CIMIER, in the French Heraldry. See CREST.
CINCTURE, or CEINTURE, in Architecture, a Ring, Lign, or Ozel, at the top and bottom of the Shaft of a Column; dividing the Shaft, at one end, from the Base; and at the other from the Capital. See SHAFT, COLUMN, &c.

That at bottom is peculiarly call'd *Apophyses*; as if the Pillar took its height hence: and that at top *Colaris*, or Collar. See APOPHYSES, and COLARIS.

The *Cincture* is suppos'd to be an Imitation of the Girdle, or Ferris, antiently us'd to strengthen and preserve the primitive wooden Columns. See ORDER.

The Word, in its original French, signifies *Girdle*; of the Latin *cingo*, I gird.

CINERATION, in Chymistry, the reduction of Wood, or any other combustible Matter into *Ashes*, by means of Fire. See ASHES, CALCINATION, &c.

This, others call *Cinefation*.

CINERES. See ASHES.

CINERES *Clavellii*, among Chymists, are the *Ashes* of Tartar, or the Lees of Wine burnt. See TARTAR.

CINERITIOUS, a Term apply'd to Things resembling *Ashes*; particularly in point of Colour and Consistence.

Thus, the Corical Part of the Brain, is also call'd the *Cineritious Part*. See CORTICAL.

CINNABAR, or CINOPER, in Natural History, a Mineral Stone, red, heavy, and brilliant; found chiefly in the Quicksilver Mines; call'd also *Vermilion*. See FOSSIL, and MERCURY.

Many, with good reason, esteem this the *Minium* of the Antients; tho' a very different thing from the modern *Minium*. See MINIMUM.

The ordinary Vermilion itself, is nothing else but *Cinnabar* ground up with Spirit of Wine and Urine. See VERMILION.

Some have imagin'd *Cinnabar* to be Dragons-Blood, gather'd, as *Pliny* and *Solinus* have it, when the Dragon and Elephant fight together: This Fable is refuted by *Dioscorides* and *Scaliger*. See DRAGONS-BROOD.

Cinnabar is either *Native*, or *Falitious*.

The *Native*, or Mineral *Cinnabar*, or Vermilion, which is that abovemention'd, is found in most Places where there are Quicksilver Mines; yet, 'tis true also, that it has Mines its own: those in *Spain* are very famous; the *French* too have theirs, in *Normandy*.

It may be esteem'd as *Matrecasse* of Quicksilver, or rather, as Quicksilver petrify'd and fix'd, by means of Sulphur, and a subterraneous Heat: Chymistry being found to reduce it without much trouble or loss, to the Nature of Mercury. Each Pound of good *Cinnabar* yields fourteen Ounces of Mercury. Accordingly, the principal Property and Use of this Mineral, is to yield a most excellent Mercury; and that which the Alchymists maintain to be the best dispos'd for attaining to the Transmutation of Gold.

The best Mineral *Cinnabar* is of a high Colour, brilliant, and free from the Stone.

It is us'd by Physicians in Venereal Cases, and others, occasion'd by sharp Serofities. It's also esteem'd a good Cephalic, and accounted for service in Epilepsies, and other nervous Distempers; Add, that it is reckon'd of efficacy in cutaneous Cases, as the Scoury.

Falitious, or Artificial *Cinnabar*, or Vermilion, is form'd of a Mixture of Mercury and Sulphur, sublimed, and thus reduced into a kind of Stone.

The best is of a high Colour, full of Fibres, like Needles. The Method of preparing *Falitious CINNABAR* is thus.

They take three Ounces of Sulphur, and four of Quick-silver; these being well mix'd, are set on the Fire, till part of the Sulphur be consum'd, and the Powder remain black. 'Tis then sublim'd once or twice in open Pots; at bottom of which remains the *Cinnabar*, very heavy, and break'd with Lincs, or Needles; some red, others brilliant, like Silver.

This serves for the same medicinal Purposes with the *Native Cinnabar*: besides which, 'tis likewise us'd by the Farriers, to make Pills for their Horses; and by Painters, as a Colour: it being a very vivid red; but drying with some difficulty.

Cinnabar, or Vermilion, is render'd more beautiful by grinding it with Gum-Water and a little Saffron: those two Drugs preventing its growing black. See VERMILION.

There is likewise a *Mus Cinnabar*, made by mixing two Parts of Sulphur with three of Quicksilver, and one of Sal Ammoniac: these being sublimed, produce a beautiful

blac Substance; whereas Quicksilver and Sulphur alone produce a red.

The Word comes from the Greek *κινναβος*, the *Smell of Goss*; by reason, says *Matthioli*, in digging a kind of Mineral *Cinnabar*, it yields forth a Scent, that the Diggers are oblig'd to stop their Nostrials.

The Chymists prepare other Kinds of Artificial *Cinnabar*; as,

CINNABAR of Antimony, a Composition of Mercury, common Sulphur, and crude Antimony sublimed. See ANTIMONY.

It is held a Diaphoretic, and Alterative; and is us'd in Scrophulous and other chronic Cafes.

CINNAMON, an agreeable aromatic Spice, furnish'd by the *East-Indies*. See SPICE.

Cinnamon is allow'd to be the Bark of a Tree, growing in the Islands of *Ceylon*, *Java*, and in *Malabar*.

The *Cinnamon* Tree, call'd by the Natives *Orunda Gauhah*, grows in Woods, like other Trees; and is but little regarded by 'em. It never grows high: its Leaves resemble those of the Laurel, both as to Substance, and Colour. When they first begin to open, they are red as Scarlet; and if rubb'd between the Hands, yield an Odour more like that of Cloves than of *Cinnamon*. The Fruit resembles an Acorn, or Olive; and has neither the Smell nor Taste of the Bark. When boild in Water, it yields an Oil, which, as it cools and hardens, becomes as firm and white as Tallow. Its Smell is agreeable, and they make Candles of it, which are only allow'd to be burnt in the King's Palace. The Wood is of no Virtue at all.

The chief Virtue of the *Cinnamon* Tree is in its Bark; which, when green, appears to be double: its exterior Surface being grayish, and the inner of the common *Cinnamon* Colour.

'Tis then divisible into two Barks of different Colours; but these drying together, become inseparable, and pass for the same Bark; the grayish Colour changing in proportion as it dries.

When the *Cinnamon* is fresh taken from the Tree, 'tis flat, has little Taste, Smell, or Colour; but it twirls or convolves, as it dries, in form of a Stick, or Cane: whence the *French* call it *Cannelle*.

By thus exhaling its superfluous Humidity, it acquires a sweet brisk Smell, and a sharp pungent Taste. 'Tis said, that after the Tree has been strip'd of its Bark, in three Years it forms a new one, which is as good as the first: but this is not very probable.

Some hold, that the small Branches of the same Tree make the *Coffees*; but that must be a Mistake. See CASSIA.

The Natives draw from the Roots of the Tree a Liqueur, very much resembling *Campbor*.

Cinnamon, to be good, must have a brisk agreeable Taste, and a bright brown Colour. Its Qualities are, to heat and dry; to promote the Menfes, to fortify the Spirits, and to help Digestion; but its chief Use, in Medicine, is as an Astringent; with which Intention it is prescrib'd in Diarrheas, and Weaknesses of the Stomach.

The *Cinnamon* of the Antients was different from that of the Moderns; they distinguish'd five Kinds of *Cinnamon*: the *Molyntique*; *Cinnamon of the Mountain*; *black* and *branch'd Cinnamon*; another white and spongy; and a fifth of less value, reddish, and of a strong Smell: as also a *bastard Cinnamon*, call'd *Zimiber*: This last Species was antiently in very high esteem, but is now no longer known. See ZIMIBER.

They extract an Oil from *Cinnamon*, call'd its Essence, or Quintessence, which is an excellent Cardiac; the manner of preparing it, is said to be a Secret known only to the *Dutch*. The common *Cinnamon* is often adulterated with that out of which this Essence has been extracted.

Cinnamon, by means of Fire, furnishes Waters, Extracts, and Salts; out of which are compounded Syraps, and Pastils, call'd *Oleo Sacchara*; together with an Essence, that serves to turn all manner of Wines, white and red, into *Hypocras*.

CINNAMON Water, is made by distilling the Bark, (first infus'd in Barley-Water) in Spirit of Wine, or Whittewine. See WATER.

All the *Cinnamon* consum'd in *Europe*, comes from the *Dutch*; who have got the whole Commerce thereof in their own Hands, by becoming Masters of the Isle of *Ceylon*, and destroying all the other *Cinnamon* Trees about the Kingdom of *Cochin*.

Clove CINNAMON, is also the Bark of a Tree growing in *Brasil* and *Madagascar*; where it is known under the Name of *Ravendava*. The *Portuguese* call it *Crovo de Marebana*.

This Bark, pulveriz'd, is sometimes substituted for real Cloves, tho' far short of 'em in respect of Quality. See CLOVES.

Sassafras, or *Saxifras*, is sometimes also call'd *Cinnamon-Wood*. See SASSAFRAS.

White CINNAMON, which some call *Costus Corivius*, or *Corticofus*, or *Cortex Winteri*, *Winter's Bark*, from the

Person's Name who first brought it into *England*; is the Bark of a Tree resembling the Olive Tree, frequent in the Island of *S. Domingo, Guadeloupe, and Madagascar*; call'd by the Natives *Pimpi*. See *Cortex*.

The Bark, which dries like that of *Cinnamon*, is at first grayish, or a sharp biting Taste, like Pepper; and a Smell like Musk: as it dries it whitens.

Some use it in lieu of Nutmeg: In Medicine, it's us'd as a Stomachic, and sometimes as an Antiforbic.

The same Tree yields a Gum, call'd *Alouba*, or *Bdellium*, which is no disagreeable Perfume.

CINQUE-PORTS, or *Quinque Portus*, five Havens that lie on the East Part of *Engl.*, towards *France*; thus call'd, by way of Eminence, on account of their superior Importance; as having been thought by our Kings to merit a particular regard, for their preservation against Invasion.

Hence they have a particular Policy, and are govern'd by a Keeper, with the Title of *Lord Warden of the Cinque-Ports*.

They have various Privileges granted 'em, as a particular Jurisdiction; their Warden having the Authority of an Admiral among 'em, and sending out Writs in his own Name. See *WARDEN*.

Caesars tells us, that *William the Conqueror* first appointed a Warden of the Cinque-Ports; but King *John* first granted them their Privileges; and that upon Condition they should provide 80 Ships at their own Charge, for 40 Days, as often as the King should have occasion in the Wars: he being then stratagem'd for a Navy to recover *Normandy*.

The five Ports are *Hastings, Romney, Hythe, Dover, and Sandwich*.

Thorn tells us, that *Hastings* provided 21 Vessels; and in each Vessel 21 Men. To this Port belong *Seaford, Pevensey, Hedney, Winchelsea, Rye, Hamise, Wakesbourn, Greeneth, and Fortbolsie*.

Romey provided 5 Ships, and in each 24 Men. To this belong *Brombal, Lyde of Marstone, Dangenmures, and Romential*.

Hythe furnish'd 3 Ships, and in each 21 Seamen: To this belongs *Westmeath*.

Dover the same Number as *Hastings*: To this belong *Folkeston, Feversham, and Margate*.

Lastly, *Sandwich* furnish'd the same with *Hythe*: To this belong *Fordwich, Reculver, Serwe, and Deal*.

CION, or **CYON**, or **SCION**, in Gardening, a young Shoot, Sprout, or Sprig, put forth by a Tree. See *SHOOT*.

Grafting is perform'd by the Application of the Cion of one Plant upon the Stock of another. See *GRAFT*, and *ENGRAFTING*.

To produce a Stock of Cions for Grafting, Planting, &c. the Gardeners sometimes cut off the Bodies of Trees, a little above the Ground, and only leave a Stump or Root standing: the redundant Sap will not fall next Spring to put forth a great number of Shoots. See *SHOCS*.

In dressing dwarf Trees, a great many Cions are to be cut off. See *DWARF*; see also *PRUNING*.

CION, in Anatomy, is sometimes us'd for the *Uvula*. See *UVULA*.

CIPHER, or **CYPHER**, one of the Numerical Characters, or Figures; form'd thus 0. See *CHARACTER*, *FIGURE*, &c.

The *Cipher* of it self implies a Privation of Value; but when dispos'd with other Characters on the left thereof, in the common Arithmetic, it serves to augment each of their Values by ten; and in Decimal Arithmetic, to lessen the Value of each Figure to the right thereof, in the same proportion. See *NOTATION*, *NUMERATION*, and *DECIMAL*.

CIPHER is also a kind of mystic Character, compos'd of several Letters interwove together; which are ordinarily the initial Letters of the Persons Names, for whom the *Cipher* is intended.

These are frequently us'd on Seals, Coaches, and other Movable.

Antiently, Merchants and Tradesmen were not allow'd to bear Arms: in lieu thereof they bore their *Ciphers*, or the initial Letters of their Names, artfully interwove about a Cross; of which we have divers Instances on Tombs, &c.

CIPHER is also us'd for certain secret Characters, disguis'd and varied; us'd for the writing of Letters that contain Secrets, not to be understood by any but those between whom the *Cipher* is agreed on.

This is now reduc'd into a separate Art, call'd *Polygraphia*, and *Steganographia*; but appears to have been little known to the Antients. See *STEGANOGRAPHY*, &c.

De la Guilletiere, in his *Lacedaemon Antient and Modern*, endeavours to make the antient *Spartans* the Inventors of the Art of writing in *Cipher*.

Their *Scytala*, according to him, was the first Sketch of this mystical Art: These *Scytalas* were two Rollers of Wood, of equal length and thickness; one of them kept

by the *Ephebi*; the other by the General of the Army, sent on any Expedition against the Enemy.

Whensoever these Magistrates would send any secret Orders to the General, they took a slip of Parchment, and roll'd it very justly about the *Scytala* which they had receiv'd; and in this state wrote their Intentions, which appear'd perfect and consistent while the Parchment continu'd on the Roller: when taken off, the Writing was mist, and without correction; but was easily retriev'd by the General, upon applying it to his *Scytala*.

Polybius says, that *Aneas Tacticus*, 2000 Years ago, collected together twenty different Manners of Writing so as not to be understood by any but those in the Secret; part whereof were invented by himself, and part us'd before his Time.

Trithemius, *Bap. Porta*, *Vigenere*, and *P. Niceros* have wrote on the Subject of *Ciphers*.

As the writing in *Cipher* is become an Art; so is the reading, or unravelling thereof, call'd *Deciphering*. See *DECIPHERING*.

A *CIPHER* with a single Key, is that wherein the same Character is constantly us'd to express the same Word, or Letter: This is easily decipher'd with a little Application.

A *CIPHER* with a double Key, is that wherein the Alphabet, or Key, is chang'd in each Line, or each Word, and wherein are inserted Characters of no significance, to amuse and perplex the Meaning.

The Word *Cipher* comes from the Hebrew *Sifre*, Number, Enumeration.

CIPHERING, is popularly us'd for the Art of Accompting; properly call'd *Arithmetic*. See *ARITHMETIC*.

CIPPUS, among Antiquaries, a little low Column, erected in the great Roads, and other Places, with an Inscription thereon; either to shew the Way to Travellers, or to preserve the Memory of something remarkable.

The *Cippi* plac'd in the Highway, for the Convenience of Travellers, were also call'd *Military Columns*. See *MILITARY COLUMN*.

Hottinger has an express Treatise of the *Cippi* of the Jews, *De Cippis Hebraeorum*; wherein he takes *Cippus* for the Tomb of a Defunct. See *TOMB*, and *TUMULUS*.

CIPPUS was also us'd in Antiquity, for a wooden Instrument, wherewith Criminals and Slaves were punish'd.

CIRCENSES LUDI, in Antiquity, *Circensian Games*, or *Games of the Circus*, a general Term, under which were comprehended all Combats exhibited in the *Roman Circus*, of what Kind soever; whether a-foot, or on Horseback, or in a Car; Wrestling, or Boxing; with Swords, Pikes, Darts, or Arrows; against Men, or against Beasts; on the Ground, or aboard Vessels. See *GAMES*, and *CIRCUS*.

There were few but Slaves that gave the People this cruel Pleasure: it was an Exercise that would have disgrac'd People of any Account.

Some say, the *Circensian Games* were so call'd from the Latin *Circimius*; because they were held in a Place encompass'd round with naked Swords, that the Combatants might not have an opportunity of escaping.

At first they are said to have been exhibited on the brink of the River *Tyber*, and the Ground encompass'd, to the Landward, with naked Swords.

Most of the Feasts of the *Romans* were accompany'd with *Circensian Games*; and the Magistrates, or other Officers of the Republick, frequently presented the People with them on other Occasions. See *FEAST*.

The grand ones were held for five Days, commencing on the 15th of *September*.

CIRCLE, in Geometry, a plane Figure, comprehended under one single Line, which returns into it self; having a Point in the Middle, from which all the Lines drawn to its Circumference are equal. See *CENTRE*.

Properly speaking, 'tis the Space included within the Circumference, or Periphery, that is the *Circle*: tho' in the popular Use of the Word, *Circle* is frequently us'd for the Periphery alone. See *PERIPHERY*.

Every *Circle* is suppos'd to be divided into 360 Degrees. See *DEGREE*; see also *CHORD*, *TANGENT*, *DIAMETER*, &c.

The Area of a *Circle*, is found by multiplying the Periphery by the fourth Part of the Diameter; or half the Periphery by half the Diameter.

The Area is also found by finding a Fourth proportional to 1000, 785, and the Square of the Diameter: or, to 452, 352, and the Square of the Diameter. See *AREA*.

Circles, and similar Figures inscrib'd in 'em, are always as the Squares of the Diameters: So that they are in a duplicate Ratio of their Diameters; and therefore of their Radii.

A *Circle* is equal to a Triangle whose Base is equal to the Periphery, and its Altitude to the Radius. *Circles*, therefore, are in a Ratio compounded of the Periphery and the Radii.

To find the Proportion of the Diameter of a Circle to its Periphery.

Find, by continual Bisection, the Sides of the inscrib'd Polygons, till you arrive at a Side subtending any Arch, howsoever small: this found, find likewise the Side of a similar circumscrib'd Polygon; multiply each by the Number of Sides of the Polygon; by which you will have the Perimeter of each Polygon. The Ratio of the Diameter to the Periphery of the Circle, will be greater than of the same Diameter to the Perimeter of the circumscrib'd Polygon; but less than that to the inscrib'd Polygon.

The Difference of the two being known, the Ratio of the Diameter to the Periphery, is easily had in Numbers very nearly true; tho' not justly so.

Thus, *Wolffius* finds it as 1000000000000000 to 31415926535897932. *Archimedes* Ex'd the Proportion as 7 to 22. *Isidrophus à Couleu* carries it to a much greater accuracy; finding, that putting the Diameter for 1, the Periphery is greater than 3, 141592653589793284626434387950; but, less than the same Number, changing the last Cipher into an Unite. *Mertius* gives us the following Proportion, which is the best that is express'd by small Numbers: if the Diameter be 113, the Periphery (113.31415) is 10000; that is, 355, nearly.

To circumscribe a Circle about a given regular Polygon: bisect two of the Angles of the Polygon E and D, (Tab. Geom. Fig. 28.) by the Lines EF and DE; and on the Point of Concourse F, as on a Centre, with the Radius EF, describe a Circle. See CIRCUMSCRIBING.

To inscribe any given regular Polygon in a Circle: divide 360 by the Number of Sides, to find the Quantity of the Angle EFD; which being made, in the Centre apply the Chord ED to the Periphery, as often as it will go: Thus is the Figure inscrib'd in the Circle. See INSCRIBED.

Thro' three given Points, not in a right Line, A, B, C, to describe a Circle. On A and C strike Arcs intersecting in D and E; and others, G and H; from C and B draw the right Lines DE and HG: The Point of Intersection, I, is the Centre of the Circle.

Hence, 1^o, by assuming three Points in the Periphery, or the Arch of any Circle, the Centre may be found, and the given Arch be perfected. See CENTRE.

2^o, If three Points of any Periphery agree, or coincide with three Points of another; the whole Peripheries agree, and the Circles are equal.

3^o, Every Triangle may be inscrib'd in a Circle. See TRIANGLE.

In Opticks, 'tis shewn, that a Circle never appears truly such, unless either the Eye be directed perpendicularly to its Centre; or the distance of the Eye from the Centre, when directed obliquely, be equal to the Semidiameter of the Circle: in every other Case the Circle appears oblong; and to make a Circle that shall appear such, it must be oblong.

Parallel, or Concentric CIRCLES, are such as are equally distant from each other in every Point of their Peripheries; or are describ'd from the same Centre: as, on the contrary, those drawn from different Centres, are said to be eccentric. See CENTRE, and ECCENTRIC.

The Quadrature of the CIRCLE, or the manner of making a Square, whose Surface is perfectly and geometrically equal to that of a Circle, is a Problem that has employ'd the Geometricians of all Ages. See QUADRATURE.

Many maintain it to be impossible; *Des Cartes*, in particular, insists on it, that a right Line and a Circle being of different Natures, there can be no strict Proportion between 'em: and, in effect, we are likewise at a Loss for the just Proportion between the Diameter and Circumference of a Circle.

Archimedes is the Person who has come the nearest to the Quadrature of the Circle: all the rest have made Paralogisms.

Charles V. offer'd a Reward of 100000 Crowns to the Person who should solve this celebrated Problem; and the States of *Holland* have propos'd a Reward for the same.

CIRCLES of the higher Kind, are Curves wherein $A^2 pm : pM^2 :: M : pB$, (Tab. Analysis, Fig. 8.) or $A^2 pm : pM^2 :: pM^2 : pB$.

Cor. I. Suppose $A p = x$, $pM = y$: $AB = a$; then will $pB = a - x$. Consequently, $x^2 : y^2 :: y : a - x$. Hence we have an Equation that defines infinite Circles, viz. $ym + 1 = ax^2 - xm + 1$; and another defining infinite other Circles, viz. $ym + n = (a - x) x x^n$.

Cor. II. If $m = 1$, then will $y^2 = ax - x^2$; and therefore a Circle of the first Kind is contain'd under this Equation alone. If $m = 2$, $y^4 = ax^2 - x^4$, which Equation defines a Circle of the first Kind.

CIRCLES of the Sphere, are such as cut the mundane Sphere, and have their Periphery either on its moveable Surface, or in another immoveable, continuous, and equidistant. See SPHERE.

Hence arise two Kinds of Circles, moveable, and immoveable.

The first, those whose Peripheries are in the moveable Surface, and which therefore revolve with its diurnal Motion, as the *Meridians*, &c. See MERIDIAN.

The latter, having their Periphery in the immoveable Surface, don't revolve; as the *Ecliptic*, *Equator*, and its *Parallels*, &c. See ECLIPTIC, &c.

If a Sphere be cut in any manner, the Plane of the Section will be a Circle, whose Centre is in the Diameter of the Sphere. See SPHERICS.

Hence, the Diameter of a Circle passing thro' the Centre, being equal to that of the Circle which generated the Sphere; and that of a Circle which does not pass thro' the Centre, being only equal to some Chord of the generating Circle; the Diameter being the greatest of all Chords, there hence arises another division of the Circles of the Sphere, viz. into great and less.

A great Circle of the Sphere, is that which divides it into two equal Parts, or Hemispheres; having its Centre in the Centre thereof. See GREAT.

Hence, all great Circles are equal, and cut each other into equal Portions, or Semicircles. See SPHERICS.

The great Circles are the *Horizon*, *Meridian*, *Equator*, *Ecliptic*, the *Colures*, and the *Aximuths*; which see in their Places, *HORIZON*, *MERIDIAN*, *ECLIPTIC*, &c.

A lesser Circle of a Sphere, is that which divides the Sphere into equal Parts, and has its Centre in the Axis of the Sphere, but not in the Centre thereof. See LESSER.

They are usually denominated from the great Circles they are parallel to, as *Parallels of the Equator*, &c. See PARALLEL.

CIRCLES of Altitude, otherwise call'd *Almacantars*, are Circles parallel to the Horizon, having their common Pole in the Zenith, and still diminishing as they approach the Zenith. See ALMACANTAR.

They have their Names from their Use; which is to shew the Altitude of a Star above the Horizon. See ALTITUDE.

CIRCLES of Latitude, or *Secondaries of the Ecliptic*, are great Circles parallel to the Plane of the Ecliptic, passing thro' the Poles thereof, and thro' every Star and Planet. See SECONDARY.

They are so call'd, because they serve to measure the Latitude of the Stars, which is nothing but an Arch of one of these Circles, intercepted between the Star and the Ecliptic. See LATITUDE.

CIRCLES of Longitude, are several lesser Circles, parallel to the Ecliptic; still diminishing, in proportion as they recede from it.

On the Arches of these Circles, the Longitude of the Stars is reckon'd. See LONGITUDE.

CIRCLES of Declination, are great Circles passing thro' the Poles of the World. See DECLINATION.

Vertical CIRCLES, or *Aximuths*. See VERTICAL, and AZIMUTH.

Diurnal CIRCLES, are immoveable Circles, suppos'd to be describ'd by the several Stars, and other Points of the Heavens, in their diurnal Rotation round the Earth; or rather, in the Rotation of the Earth round its Axis. See DIURNAL.

The Diurnal Circles are all unequal: the Equator is the biggest.

Polar CIRCLES, are immoveable Circles, parallel to the Equator, and at a distance from the Poles, equal to the greatest Declination of the Ecliptic. See POLAR.

That next the Northern Pole is call'd the *Arctic*; and that next the Southern one the *Antarctic*. See ARCTIC, and ANTARCTIC.

CIRCLES of Excursion, are Circles parallel to the Ecliptic, and at such a distance from it, as that the Excursions of the Planets towards the Poles of the Ecliptic, may be included within it; which are usually fix'd at 10 Degrees. See SPHERE, and SPHERICS.

It may be here added, that all the Circles of the Sphere above describ'd, are transfer'd from the Heavens to the Earth; and thence come to have Place in Geography, as well as Astronomy: all the Points of each Circle being conceiv'd to be let fall perpendicularly on the Surface of the Terrestrial Globe, and so to trace out Circles perfectly similar to them.

Thus, the Terrestrial Equator is a Line, conceiv'd precisely under the Equinoctial Line, which is in the Heavens; and so of the rest. See EQUATOR, &c.

Horary CIRCLES, in Dialling, are the Lines which shew the Hours on Dials; so these be not drawn circular, but nearly so. See DIAL.

Circle Equant, in the *Ptolemaic Astronomy*, is a Circle describ'd on the Centre of the Equant. See EQUANT.

Its chief Use, is to find the Variation of the first Inequality. See VARIATION.

Circle of perpetual Apparition, one of the lesser Circles, parallel to the Equator; describ'd by any Point of the Sphere touching the Northern Point of the Horizon; and carry'd about with the diurnal Motion.

All the Stars included within this *Circle* never set, but are ever visible above the Horizon.

The *CIRCLE* of *perpetual Occultation*, is another *Circle* at a like Distance from the Equator; and contains all those Stars which never appear in our Hemisphere. See OCCULTATION.

The Stars situate between these *Circles*, alternately rise and set at certain Times. See STAR, RISING, SETTING, &c.

CIRCLES of *Position*, are *Circles* passing thro' the common Intersections of the Horizon and Meridian, and thro' any Degree of the Eclipse, or the Centre of any Star, or other Point in the Heavens; us'd for finding out the Situation or Position of any Star, &c. See POSITION.

They are usually made six in number; and cut the Equator into twelve equal Parts, which the Astrologers call the *Celestial Houses*.

Hence some call them *Circles* of the *Celestial Houses*.

CIRCLE, in *Physics*, is understood, among the Schoolmen, of a Vicissitude of Generations, arising one out of another.

Thus, good Concoction causes a good Habit of Body; a good Habit of Body produces Strength and Vigour; these occasion frequent Exercises; and these a good Concoction.

'Tis a celebrated Dogma of the *Scotists*, 'There is no *Circle* in Causes of the same Order, or Kind.'

CIRCLE, in *Logic*, the Fault of an Argument that supposes the Principle it should prove, and afterwards proves the Principle by the Thing it seem'd to have prov'd.

Or, a *Circle* in *Logic*, call'd also *Syllogistic Circle*, is when the same Terms are proved, in *Orbens*, by the same Terms; and the Parts of the Syllogism, alternately by each other, both directly and indirectly.

There are two Kinds of *Circles*; the one *Material*, the other *Formal*.

The *Formal* is that which in two reciprocal Syllogisms begs the *Medium*, which is the next Cause of the greater Extreme. This Kind is by no means to be admitted; otherwise, the same Thing becomes both prior and posterior; the Cause and Effect of it self; which is absurd.

The *Material Circle*, call'd also *Regressus*, consists of two Syllogisms, the former whereof proves the Cause by the Effect; and the latter the Effect by the Cause: This may be admitted.

CIRCLES of the *Empire*, are such Provinces, and Principalities of the Empire, as have a Right to be present at Diets. See EMPIRE, and DIET.

The Division of the Empire into six *Circles*, was establish'd by Maximilian I. in 1509, at *Ausburg*; twelve Years afterwards he divided it afresh, into ten *Circles*, which Partition was confirm'd by Charles V. at the Diet of *Nuremberg*, in 1522.

The Order of these *Circles* has never been well regulated; yet, in the Imperial *Matricula*, it is as follows: The *Circle* of *Austria*, that of *Burgundy*, of the *Lower Rhine*, of *Bavaria*, *Upper Saxony*, *Franconia*, *Swabia*, *Upper Rhine*, *Westphalia*, and the *Lower Saxony*.

CIRCUIT, or *CIRCUITY*, in Law; a longer Course of Proceeding to recover the Thing sued for, than is needful.

Thus, if a Man grant a Rent-Charge of 10 *l.* out of his Manor, and after, the Grantee disseise the Grantor of the same Manor, who brings an *Affix*, and recovers the Land, and 10 *l.* Damages; which being paid, the Grantee brings his Action for 10 *l.* of his Rent, due during the Time of the Disseisin, and which he must have had if no Disseisin had been: This is call'd *Circuit of Action*; because, whereas the Grantor was to receive 10 *l.* Damages, and to pay 10 *l.* Rent, he might have receiv'd but 10 *l.* for Damages, and the Grantee have kept the other.

CIRCUIT, is also the Journey, or Progress the Judges take, twice every Year, thro' the several Counties of *England* and *Wales*, to hold Courts, and administer Justice, where recourse cannot so well be had to the King's Courts at *Westminster*. See JUDGE, and ASSIZE.

CIRCULAR, any thing that is describ'd, or mov'd in a round; as the Circumference of a Circle, or the Surface of a Globe. See CIRCLE.

The circular Form is of all others the best dispos'd for Motion; and the most capacious.

The modern Astronomers shew, that the Heavenly Bodies don't move in *Circular*, but in *Elliptic* Orbits. See ORBIT, PLANET, &c.

CIRCULAR Lines, in *Mathematicks*, are such straight Lines as are divided from the Divisions made in the Arch of a Circle.

Such are Sines, Tangents, Secants, &c. See SINE, TANGENT, &c.

CIRCULAR Velocity, a Term in *Astronomy*, signifying that Velocity of a Planet, or revolving Body, which is measur'd by the Arch of a Circle: as suppose by *Ab*, (Tab. *Astron.* Fig. 10.) describ'd on the Centre of Attraction *S*.

The circular Velocity of a Body moving from *B* to *C*, is measur'd by the Ark *BC*.

CIRCULAR Numbers, are such whole Powers end in the

Roses themselves; as 5, whose Square is 25, and Cube 125. See NUMBER.

CIRCULAR Letter, a Letter directed to several Persons, who have the same Interest in the same Affair; as in the Convocation of Assemblies, &c.

CIRCULAR Sailing, is that perform'd in the Arch of a great Circle. See SAILING.

Circular Sailing, of all others, goes the nearest or shortest way; and yet there are such Advantages in sailing by Rhumbs, that this latter is generally prefer'd.

CIRCULATION, the Act of *circulating*, or moving in a Circle. See CIRCLE.

Thus, we say, The *Circulation* of the Blood; the *Circulation* of the Sap; of the Spirits, &c. See BLOOD, SAP, SPIRITS.

As in the great World we find a perpetual and orderly *Circulation* of Waters, convey'd from the Sea by subterranean Passages, Springs, &c. and return'd thither again by Rivers, &c. so in the little World, Man, a like Circuit is observ'd; the Blood being continually driven from the Heart, by the Arteries, to all Parts of the Body; and brought back again to the Heart by the Veins. See HEART, VEIN, and ARTERY.

CIRCULATION of the Blood, a natural Motion of the Blood in a living Animal; whereby that Humor is alternately convey'd from the Heart to all the Parts of the Body, by the Arteries, and return'd from the same Parts to the Heart by the Veins. See BLOOD.

The Heart, we have elsewhere shewn, is a Muscle, into the *Ventricles* or Cavities whereof, all the Veins discharge themselves, and from which all the Arteries arise; having, withal, a reciprocal Action of Dilatation, or *Diastole*; and Constriction, or *Systole*. See HEART, SYSTOLE, and DIASTOLE.

Now, the necessary Effect of such alternate Action, is, that the Heart, by turns, both receives and expels the Blood. The Blood expell'd out of the right Ventricle, must be carry'd thro' the *Pulmonary Artery* (which arises thence) into the Lungs; from which it must be return'd, by the *Pulmonary Vein*, to the left Ventricle, (in which that Vein terminates.) From the left Ventricle, the Blood thus import'd, is by the Constriction of that Part, again expell'd into the *Aorta*, and by it distributed all over the rest of the Body; and thence return'd again to the right Ventricle by the *Cava*, which compleats the *Circulation*. See PULMONARY ARTERY, and VEIN; CAVA, and AORTA.

The *Circulation* of the Blood, has been generally allow'd to have been first discover'd in *England*, in the Year 1628, by *Harvey*, a Physician of our own Country; tho' there are several Authors who dispute it with him.

Jansen de Almedoven, in a Treatise of *New Inventions*, printed in 1684, quotes several Passages from *Hippocrates*, to prove that the *Circulation* was known to him.

Waleus, (*Ep. ad Bartsbol.*) and *Corleton*, (*Oecon. Anim.*) pretend, 'twas known not only to *Hippocrates*, but also to *Plato* and *Aristotle*.

'Tis added, that the *Chinese* Physicians taught it 400 Years, ere it was spok'd of in *Europe*.

Some go back as far as *Solon*, and imagine they see some Traces of it in *Ecclésiastes*, Chap. xii.

Bern. Gongi, in an *Italian* Treatise of Anatomy, quotes several Passages from *Realdus Columbus*, and *And. Cellisius*, whereby he endeavours to prove that they admitted a *Circulation*, long enough before *Harvey*.

He adds, that *Fra. Paolo Sarpi* the famous *Venetian*, from a Consideration of the Structure of the Valves of the Veins, and other Experiments, concluded a *Circulation*. See VALVE.

Leoniceus adds, that *F. Paolo* durst not make known his Discovery, for fear of the Inquisition; that he therefore only communicated the Secret to *Fab. ab Aquapendente*; who, after his Death, deposited the Book he had compos'd on it in the Library of *S. Mark*; where it lay hid a long time, till *Aquapendente* discover'd the Secret to *Harvey*, who then publish'd under him at *Padua*; and who, upon his return to *England*, a Country of Liberty, publish'd it as his own.

The *Circulation* of the Blood is evinc'd, from the following Considerations.

1. All the Blood of a living Animal, upon wounding any one of the larger Arteries, is, in a little time, evacuated; and that with a considerable force: as appears from the Operations of Butchers, &c.

Hence, it follows, that the Blood has a Passage from every Part of the Animal Body into every Artery: and if the whole Mass of Blood be found to move on this occasion, 'tis evident it must have mov'd before.

2. The great Quantity of Blood driven out of the Heart into the Arteries at every Pulse, makes a *Circulation* necessary; since, without it, an infinitely greater Stock of Blood must be suppos'd in the Body of a Man, than any Observation or Experiment will allow of.

For tho' the Antients, who knew not this *Circulation*, imagin'd that only a Drop or two was expell'd at each *Systole*; which they were necessitated to suppose, to avoid the too great

great Dilatation of the Arteries, from a more considerable Influx: yet it is certain, and even demonstrable, that there must needs be an Ounce, or more, driven into 'em at each time; and yet some compute five or six thousand Pulsations in an Hour.

3. Any of the Arteries, being ty'd with a Thread, swell, and beat, between the Bandage and the Heart; but grow flaccid between the Bandage and the Extremities of the Body.

If now the Artery be cut between the Bandage and the Heart, the Blood streams out, even to Death: If it be cut between the Bandage and the Extremities of the Body, the Quantity of Blood it yields is very small.

The vital Blood, therefore, flows thro' the Arteries; and its Course is from the Heart towards the Extremes of the Body: and this it does in every Point of the Body, internal and external; fill out of a wider Part into a narrower; out of the Trunk into the Branches. 'Tis on this Principle alone, that all the Blood may be deriv'd into any Artery, and evacuated at it. See ARTERY.

4. Any of the larger Veins being bound up with a Thread, swell between the Extremes of the Body and the Bandage; but without beating: between the Bandage and the Heart it becomes flaccid.

If open'd in the former Part, it bleeds even to Death; if in the latter, it scarce bleeds at all. The Blood, therefore, flows briskly from every Part of the Body into this Vein; and its Course is from the Extremes of the Body towards the Heart; and from the narrower Parts of the Vein towards the wider Parts; and from the Branches to the Trunk. See VEIN.

From the whole, 'tis evident, that all the Arteries of the Body are continually bringing the Blood from the left Part of the Heart, thro' the Trunks of the Arteries, into the Branches; and from those to all Parts of the Body, internal and external: And on the contrary, that all the Veins, excepting the *Porta*, are perpetually bringing back the Blood from the extreme Parts into the smaller Branches; from those it passes into the larger, at length into the Trunks, and thence into the *Cavae*; and thro' the *Sinus Venosus*, or Trunk of that Vein (which ends in the Cavity of the right Auricle) into the Heart.

The Blood arriv'd here, its Motion, or Circulation, is continu'd as follows.

The Arteries of the Heart being large hollow Muscles, furnish'd with a double Series of strong Fibres proceeding with a contrary Direction to two opposite Tendons, the one adhering to the right Ventricle, the other to the *Sinus Venosus*, as also with innumerable Veins and Arteries; by the contractile Force of these Arteries, the Blood will be vigorously express'd, and drove into the right Ventricle; which, upon this Contraction, is render'd flaccid, empty, and dispos'd to admit it. See MUSCLE.

If now the right Ventricle, thus full of Blood, by the Contraction of its Fibres press the Blood towards the Aperture again; the venous Blood at the same time pouring in, will drive it back again into the Cavity, and mix it more intimately; till rising up against the *Parietes*, it raises the *Valvule Tricuspidales*, which are so connected to the fleshy Columns extended on the opposite side, as that when laid quite down they cannot close the *Parietes* of the right Ventricle: tho' it thrusts towards the right Auricle, till being there join'd, they stop the Passage very closely, and prevent any return.

By the same means, the same Blood rises up into the three *Semilunar Valves*, plac'd in the Extremity of the other Mouth, and lying open to the Pulmonary Artery: these it shuts close against the Sides of the Artery, and leaves a Passage into the Artery alone.

The venous Blood therefore, that is, the Blood of the whole Body, continually moves out of the *Sinus*, or Trunk of the *Vena Cavae*, thro' the right Auricle, and right Ventricle, into the Pulmonary Artery, in a continu'd and forcible Stream.

The Blood carry'd by this Artery into the Lungs, and distributed by its Branches thro' the whole Substance thereof, is first admitted into the Extremities of the Pulmonary Vein, call'd *Arteria Venosa*; whence passing into four large Vessels, which unite together, it is brought to the left *Sinus Venosus*, or Trunk of the Pulmonary Vein; by the force of whose muscular Structure it is driven into the left Ventricle, which, on this occasion, is relax'd, and by that means prepar'd to receive it.

Hence, as before, 'tis driven into the left Ventricle, which is relax'd by the same means; and the *Valvule Mitrales* opening, admit it into the left Ventricle, and hinder its reflux into the Pulmonary Vein.

From hence it is forc'd into the *Aorta*; at whose Orifice there are three *Semilunar Valves*, which also prevent a Reflex by closing the same.

And thus is Circulation effected; all the Blood sent into the Lungs, and receiv'd into the *Arteria Venosa*, *Sinus Venosus*, left Auricle and Ventricle, being here continually

propell'd into the *Aorta*; whose Ramifications are spread throughout all the rest of the Body, with a violent Motion.

This Motion, in living Animals, is attended with the following Phenomena.

1. Both *Venous Sinus* are fill'd, and grow turgid at the same time. 2. Both Auricles grow flaccid at the same time; and both are fill'd at the same time, with Blood impell'd by the contractile Force of its correspondent muscular *Venous Sinus*. 3. Each Ventricle contracts, and empties it self of Blood at the same time; and the two great Arteries are fill'd and dilated at the same time. 4. As soon as the Blood, by this Contraction, is expell'd, both Ventricles being empty, the Heart grows longer and broader; and consequently more flaccid and capacious. 5. Upon which, the muscular Fibres of both *Venous Sinus* contract, and express the Blood contain'd in 'em into the Ventricles of the Heart. 6. In the mean time, the *Venous Sinus* are again fill'd, as before; and the Auricles, &c. return into their former habitude. 7. And this Alternation continues till the Animal begins to languish, under the Approach of Death; at which time, the Auricles and *Venous Sinus* make several Palpitations, for one Contraction of the Ventricle.

Thus is all the Blood, in its return from every Point of the Body, internal and external, and from every Point of the Heart and its Auricles, impell'd into the right Ventricle; out of that into the Lungs; thence into the left Ventricle; and thence thro' the whole extent of the Body; and thence again brought back to the Heart.

As to the manner of the Blood's passing out of the Arteries into the Veins, in order to its being return'd to the Heart; there are two Opinions.

In the first, the Veins and Arteries are suppos'd to open into each other, or to be continu'd from each other, by *Anastomoses*, or Inoculations of their Extremities. See INOCULATION, &c.

In the latter the extreme Capillary Arteries are suppos'd to let out their Blood into the Pores of the Substance of their Parts; on whose Nutrition part is spent, and the rest receiv'd in at the Mouths of the Capillary Veins.

Each of these manners must be allow'd to have its Place: For without the first, it were difficult to account for so quick a return of the Blood to the Heart, as in effect we find; besides that, in some of the larger Vessels, there is a confel'd *Anastomosis*, e.g. in the Splenic Artery with the Splenic Vein, &c. whence Authors conclude the same Continuance to hold in the lesser Vessels; even in the smallest Twigs in the extreme Parts of the Body, tho' not discover'd by the Eye; Nature being ordinarily found very uniform, and consistent with her self.

Riolanus, however, who will allow of no Circulation but by *Anastomoses*; allows of none, neither, but by the larger Vessels.

The Reason of the latter Opinion is deduc'd hence, that if part of the arterial Blood did not ooze out into the Substance of the Parts, they could not be nourish'd thereby: For the Blood, while contain'd in the Vessels, may indeed convey Warmth thereto, but no Nourishment; the very Vessels themselves being not nourish'd by the Fluid running in their Cavity, but by Capillaries passing their Coats. See NUTRITION.

If then the Blood be driven out of the Vessels in a greater Quantity than is requir'd for Nutrition; the redundancy must be imbiv'd by the Capillary Veins.

M. *Leuwenhoek* seem'd to have put this Matter out of doubt by his Microscopes, with which he discover'd the Inoculations, or Continuations of the Extremities of the Veins and Arteries in Fishes, Frogs, &c. But some still doubt whether there be such Continuations in the Extremes of the Veins and Arteries in human Bodies and Quadrupeds: those Animals it has been hitherto observ'd in, being either Fish, or of the amphibious Kind, which have but one Ventricle in the Heart, and their Blood actually cold; to which it may be added, that the Blood in these Creatures does not circulate with that Rapidity as in those whose Hearts have two Ventricles.

This difference in the principal Organs of Circulation, occasion'd Mr. *Cowper* to make Experiments on other Animals, whose Parts have the same Structure with those of Man. In the *Omentum* of a Cat, he saw the Blood move briskly thro' the Inoculations; the same he found in the *Omentum*, and much clearer in the Mesentery, of a Dog. He adds, that the Extremities of the Vessels are not equally lessen'd, in the Inoculations, in different Animals.

In the Tail of the Tadpole, he frequently observ'd several Communications between the Veins and Arteries; thro' each of which two Globules of Blood might pass abreast. In young Fish, particularly Grigs, the communicant Branches so small, that one Globule of Blood can scarce pass in the Space of three Seconds. See VEIN, &c.

In a *Fetus*, the Apparatus for the Circulation is somewhat different, from that above describ'd.

The *Septum*, which separates the two Auricles of the Heart, is pierc'd thro' with an Aperture, call'd the *Foramen Ovale*; and the Trunk of the Pulmonary Artery, a little after it has left the Heart, sends out a Tube into the descending *Aorta*, call'd the *Communicating Canal*.

The *Fetus* being born, the *Foramen Ovale* closes, by degrees, and the Canal of Communication dries up, and becomes a simple Ligament. See *FORUM*.

This Mechanism once known, 'twas easy to perceive its Use.

For while the *Fetus* is inclos'd in the *Uterus*, it receives no Air, but that little furnish'd it by the Umbilical Vein: Its Lungs, therefore, can't swell and subside as they do after the Birth, and after the free Admission of the Air. They continue almost at rest, and without any Motion; their Vessels are as it were full of themselves, and don't allow the Blood to circulate, either in abundance, or with Ease.

Nature, therefore, has excus'd the Lungs from the Passage of the greatest Part of the Blood; and has contriv'd the *Foramen Ovale*, by which Part of the Blood of the *Vena Cava*, receiv'd into the right Auricle, passes into the left Auricle, at the Mouth of the Pulmonary Veins; and by this means is found as far in its Journey as if it had pass'd the Lungs.

But this is not all, for the Blood of the *Cava*, which, mixing the *Foramen Ovale*, passes from the right Auricle into the right Ventricle; being still in too great Quantity to pass by the Lungs, whither 'tis driven thro' the Pulmonary Artery; the communicant Canal intercepts part of it in the way, and pours it immediately into the descending *Aorta*. See *FORAMEN, &c.*

This is the Doctrine of *Harvey, Lower*, and most other Anatomists; but, *M. Merj*, of the Royal Academy, has made an Innovation in it.

He assigns another use for the *Foramen Ovale*; and maintains, that the whole Mass of Blood brought from the *Cava* to the right Ventricle, passes, as in Adults, into the Pulmonary Artery, whence Part of it is convey'd by the communicant Canal into the *Aorta*; and the rest brought from the Lungs by the Pulmonary Veins into the left Auricle, where 'tis divided into two Parts; the one passing thro' the *Foramen Ovale* into the right Ventricle, without circulating thro' the *Aorta* and the rest of the Body; the other Part pass'd, as in Adults, by the Contraction of the left Ventricle, into the *Aorta*, and the whole Body of the *Fetus*.

The whole Question then turns upon this, *vis.* whether the Blood pass thro' the *Foramen Ovale* from the right to the left Ventricle, or from the left to the right.

M. du Verney asserts the ancient Opinion, against *M. Merj*, and maintains that the *Foramen Ovale* has a Valve so dispos'd as to be open'd by the Blood driving into the right Ventricle, but shut the more firmly by its pushing into the left. *M. Merj* denies the Existence of any such Valve.

Again, in an Adult, the *Aorta* being to receive all the Blood of the Pulmonary Artery, is found of the same bigness. In a *Fetus*, the two Arteries are to receive unequal Quantities, which of the two Systems forever be follow'd.

According to the common Opinion, the *Aorta* receiving more Blood than the Pulmonary, should be bigger; according to the Opinion of *M. Merj*, the Pulmonary Artery should be the bigger, as being esteem'd to receive a larger Quantity of Blood.

To judge of the two Systems therefore; it should seem there needed nothing but to determine which of the two Vessels were biggest in a *Fetus*.

M. Merj always found the Pulmonary Artery half as big again as the *Aorta*; and, on the other hand, *M. Tasbury*, who scconded *M. du Verney*, produces Cases where the Pulmonary is less than the *Aorta*: the Facts on both Sides being examin'd by the *French Royal Academy*.

M. Tasbury adds, that tho the Pulmonary Artery should be greater than the *Aorta*, yet this does not prove that more Blood passes the first than the second; since it may be accounted for from the Blood's pressing more slowly towards the Lungs, which it finds some difficulty to penetrate, and accordingly swells, and is driven back.

M. Lister, upon dissecting an Adult, in whom the *Foramen Ovale* was still open, and measuring the Capacities of the Vessels on each side, declares for *M. Merj*.

For the Source of the Circulation in the *Fetus*, Anatomists are again divided.

The popular Opinion is, that during Gestation, the Arteries of the *Uterus* convey their Blood into the *Placenta*, which is nourish'd by it, and the Surplus convey'd into the Roots of the Umbilical Vein, which makes Part of the Navel-string: thence 'tis carry'd to the Liver of the *Fetus*, where it enters the *Vena Cava*, and is thence convey'd to the right Ventricle of the Heart, and distributed as before.

Again, the Blood brought from the Iliac Arteries of the *Fetus*, enters the Navel-string by the Umbilical Arteries; thence passes into the *Placenta*, where it is resum'd by the Veins of the *Uterus*, which carry it back again to the Mo-

ther; and perhaps also by the Roots of the Umbilical Vein, which mix it afresh with the Blood of the Mother.

According to this System therefore, 'tis the Blood of the Mother that supplies the Child; which is here only regarded as a distinct Member, or Part of her Frame.

The beating of her Heart sends it a Portion of her Blood; and so much of the Impulse is prefer'd, as suffices to maintain that languid Circulation which a *Fetus* enjoys; and, in all probability, gives that feeble Pulsation observ'd in the Heart.

Other Anatomists maintain, that the *Fetus* is only supply'd with Chyle from the Glands of the *Uterus*; which is further elaborated, and turn'd into Blood in the Vessels of the *Fetus*; and circulates therein, without any further Communication with the Mother.

They allow of no reciprocal Circulation, excepting between the *Placenta* and the *Fetus*.

But the former Opinion is best supported; For the *Placenta* being separated from the *Uterus*, during the time of Gestation, neither yields any Chyle, nor any thing but Blood. Besides, *M. Merj* has shewn, that the *Uterus* has no Glands to furnish any Chyle.

Two other Observations of the same Author, confirm the popular System: The inner Surface of the *Uterus* is lin'd with Veins; and the outer Surface of the *Placenta* is not lin'd with any Membrane. Now as 'tis by these two Surfaces that the two seem in some measure glud together; it looks as if they were only left without Membranes, for an immediate Communication between their Blood Vessels.

Add to these a Fact whereof *M. Merj* was an Eye-witness: A Woman big with Child was kill'd by a Fall; in the Cavity of her Belly were found seven or eight Pints of Blood; all the Blood-Vessels being empty'd; the Child too was found dead; but without the least Appearance of any Wound or Contusion; all its Blood-Vessels being empty of Blood, like those of the Mother. The Body of the *Placenta* still adher'd to the whole inner Surface of the *Uterus*; nor was there any extravasated Blood.

Now the Blood here had no other way to discharge itself, but by the Veins of the *Uterus*: whence it follows, that these Veins being back to the Mother the Blood of the *Fetus*; which alone establishes the whole System. If the Circulation were only from the *Fetus* to the *Placenta*, and not also to the Mother; the dead Child would have had all its Blood.

Upon the whole, the Blood in the Lungs of the *Fetus* has none of the Advantages of Air or Respiration; which yet being necessary, Nature, 'tis suppos'd, takes care that it receive a Portion of Air, mix'd together with its Mother's Blood, and transmitted to it by the Umbilical Vessels, to be diffus'd thro' the Body.

This is confirm'd hence, that by constringing the Navel-string very tight, the Child dies like a Man strangled; which appears to be owing to nothing but the want of Air. Add to this, that as soon as the Mother ceases to respire, the *Fetus* expires.

As to the Velocity of the circulating Blood, and the Time wherein a Circulation is completed; several Computations have been made.

By *Dr. Keil's* Account, the Blood is driven out of the Heart into the *Aorta*, with a Velocity which would carry it 52 Feet in a Minute. But this Velocity is continually abated in the Progress of the Blood thro' the numerous Sections, or Branches of the Arteries: so that e'er it arrive at the Extremities of the Body, its Motion is infinitely diminish'd.

The same Author, upon a moderate Ratio of the Branches of the Arteries to the Trunks, shews, that the greatest Velocity of the Blood is to the least, in a greater proportion than of 1000,0000,0000,0000,0000,0000,0000,0000,0000, to 1.

The space of Time wherein the whole Mass of Blood may ordinarily circulate, is variously determin'd.

Some of the latest Writers state it thus: Supposing the Heart to make 2000 Pulses in an Hour, and that at every Pulse there is expell'd an Ounce of Blood; as the whole Mass is not ordinarily computed to exceed 24 Pounds, it must be circulated 7 or 8 times over in the space of an Hour.

CIRCULATION of the *Spirits*, or the *Nervous Juice*. That the *Spirits circulate*, is evinc'd in the same manner as some Authors chuse to prove the Circulation of the Blood; *vis.* That as the Heart drives out every Hour three or four thousand Ounces of Blood, whereas, ordinarily, there is not above two thousand in the whole Body; there is a Necessary for the Blood driven out, to return to the Heart, in order to supply a Fund to be expell'd.

In like manner, 'tis shewn, that there is form'd each Hour a large Quantity of *Spirits*, which are nothing but the more subtil Parts of this Blood driven out from the Heart: whence 'tis infer'd, that these too must circulate. See *SPIRIT*.

The Course they are suppos'd to take is this.

The most subtil Parts of the Arterial Blood being carry'd from the Heart to the Brain by the Carotid Arteries, are thrown violently into the fine Network, wherewith the Bottom of the Ventricles of the Brain is lin'd; whence the more delicate Parts are driven into the Mouths of the Choroid Arteries, where they continue their rapid Motion, and discharge themselves at the Pores where those Vessels terminate around the Pincal Gland.

Hence they enter that Gland, and there form a constant Spring of Spirits; which being here purify'd, enters the Cavities of the Brain, and insinuating into the Pores of its Substance, flow into the Lymphatics; whence they are carry'd to the Heart by two ways.

Those from the upper Parts by the Subclavian Veins, and the adjacent Vessels; those from the lower, being discharg'd into Pecque's Reservoir, proceed by the Thoracic Duct, and at last by the descending Veins to the Heart. Whence they begin their Course afresh.

CIRCULATION of the Sap, is a natural Motion of the nutritious Juice of Plants, from the Root to the extreme Parts, and thence back again to the Root. See SAP, and PLANT.

The Experiments of modern Naturalists, and Gardeners seem to prove a Circulation in the Body of Plants, by Veins and Arteries, analogous to that in Animals.

M. Perrault first started the Circulation of the Sap in France, and propos'd it, in 1667, to the Royal Academy: Tho' M. Major, a Physician of Hambourg, had publish'd it, unknown to M. Perrault, two Years before. A Year and half afterwards, M. Marriotte propos'd the same to the Academy, as a new thing; not knowing that M. Perrault had been beforehand with him: And the great Malpighi appears to have entertain'd the same Thought about the same time.

The Opinion, however, is not universally receiv'd: some of the ablest Botanists, and particularly M. Dodart, protesting openly against it.

That Author allows of a Juice mounting from the Root to the Extremities of the Branches; and of another descending from these Extremities to the Root: the first imbib'd from the Soil, and digested in the Root, for the nourishment of the Plant: the second receiv'd from the moist Parts of the Air, in at the Extremities of the Branches. The rising and descending Juices, therefore, according to him, are not the same; or, that which rises never descends, and reciprocally; i. e. there is no Circulation.

Dr. Yong, in the *Philosophical Transactions*, maintains, that the Sap always rises, and never properly descends; having only a Subsiding, or Recidivation, which he can by no means call a Circulation.

M. Switzer owns himself at a Loss for the Method where-in a Circulation should be effected; as well as for the Parity of Reason commonly urg'd for a Circulation of the Sap and of the Blood. In Animals, he observes, the degree of Growth, or Extension, is but very small: so that the Blood, not being employ'd in any other service, may be easily suppos'd to circulate: But Trees, growing to an unlimited Tallness, 'tis probable the great Effort of Nature is employ'd in exceeding 'em that way; and that the nutritious Juice only ascends. He adds, that as to the Swelling, or Extension of Trees in bulk, it evidently arises from the Effusion of the Sap from the Heart of the Tree thro' the Pores, which dilates the whole insensibly, by accumulating Circle on Circle; which are annual Gradations easily observ'd upon cutting a Branch, or Trunk across.

But still, the Arguments for a Circulation, must be allow'd of more weight than any thing here urg'd against it.

The same Experiments of Ligature, and Incision, which evince a Circulation in Animals, have been made in Plants; particularly in such as abound in Sap, as the Milk-Thistle, &c. and with the same Success; the Part between the Ligature and the Root swelling very considerably, and the other much less.

The Ligatures are to be made with metalline Rings. Dr. Lister gives us an Instance in the *Cataputia minor*, where the Ligature being only a silken Thread, ty'd as hard as possible without breaking the Skin, no greater Swelling arose on one side the Ligature than the other.

Mr. Lawrence gives us a Demonstration of the Circulation of the Sap, from an Experiment on the yellow strip'd Jessamine.

Upon a Branch of a plain Jessamine, whose Stem spreads it full in two or three Branches, inoculate a Bud of the yellow strip'd Jessamine, in Autumn: As the Tree comes to shoot, the following Summer, some of the Leaves will be found ting'd here and there with yellow, and this even on the Branches not inoculated; till, by degrees, the whole Tree, even the very Wood of the young Branches, will be all variegated, or strip'd with green and yellow. See VARIATION.

Mr. Fairchild confirms this Experiment by a similar one of his own: Having inoculated a yellow spotted Jessamine Tree, into another Jessamine Tree; he found, that tho the

Bough did not take, yet, in a Fortnight's time, yellow Spots began to appear on a Shoot which came out of the Ground from another Part of the Plant. See MULB.

As to the manner of the Circulation; it is not difficult to conceive. Malpighi, Grew, &c. by means of Microscopes, have discover'd, that the Wood of Plants consists of fine Capillary Tubes, which run parallel from the Root, thro' the Trunk, and may be look'd on as Arteries; and on the outside of these, betwixt the Wood and the inner Bark, are other large Tubes, to do the Office of Veins.

Now, the Root having imbib'd a Stock of Juice from the Earth, that Juice will be put in motion by the Heat; that is, it will be rarefy'd, and made to ascend in form of a Steam or Vapour. Meeting, therefore, with the patent Mouths of the Arterial Vessels, it will pass thro' the same to the Top and extreme Parts of the Tree, with a Force answerable to the Heat by which it is put in motion: when it is there arriv'd; meeting with the Cold of the external Air, it is condens'd into a Liquor; and in that form returns, by its own weight, towards the Root of the venal Vessels abovemention'd.

CIRCULATION, in Chymistry, is an Operation whereby the same Vapour, rais'd by Fire, falls back; to be return'd and distill'd several times, and thus redac'd into its most subtil Parts. See DISTILLATION.

Circulation is perform'd by disposing the Liquor in a single Vessel, stopp'd at top, call'd a Pelican; or in a double Vessel, consisting of two Pieces, luted on each other; the lower to contain the Liquor. See PELICAN, and DOUBLE VESSEL.

'Tis perform'd either by the Heat of a Lamp, or that of Athes, or of Sand moderately hot, or in Dung, or by the Sun. It usually demands a cooling'd heat of several Days, sometimes of several Weeks, or even several Months. See FIRE, and HEAT.

By Circulation, the finest Part of the Fluid mounts to the Top of the Vessel; and finding no issue there, falls back again, and rejoins the Matter left behind at the Bottom, whence it arose: and thus, by continuing to rise, and fall alternately in the Vessel, there is effected a kind of Circulation, or Remission of the spirituous Parts with the gross ones; whereby the former are render'd finer and more subtil, and better dispos'd to exert their Activity when separated from the latter. See RECTIFICATION.

CIRCULATORY, CIRCULATORIUM, in Chymistry, the Vessel wherein a Fluid is put, to undergo the Process of Circulation. See CIRCULATION.

There are two Kinds of Circulatories, the *Diana*, or double Vessel; and the *Pelican*. See DOUBLE VESSEL, and PELICAN.

CIRCULUS, in Geometry Logick, &c. See CIRCLE.

CIRCULUS, among Chymists, is a round Iron Instrument, us'd in cutting off the Necks of glass Vessels: which they effect thus.

The Instrument being heated, is apply'd to the glass Vessel, and there kept till it grow hot: then, by a few Drops of cold Water, or a cold Blast thereon, it flies asunder.

Thus they cut off the Necks of Retorts, or Cucurbits. See RETORT, &c.

There is another Method of doing the same, viz. by tying a Thread, first dip'd in Oil of Turpentine, round the Place where the Fracture is to be; and then setting fire to the Thread.

This done, some cold Water being sprinkled on the Place, the Glass will be crack'd thro' precisely where the Thread was ty'd.

CIRCUMAGENTES *Majuli*, in Anatomy. See OBLIQUI.

CIRCUMAMBIENT, an Epithet denoting a thing to invest, or encompass another around. See AMBIENT.

We say the *Ambient*, or *Circumambient* Air, &c. See AIR, ATMOSPHERE, &c.

CIRCUMCISION, the Act of cutting off the Prepuce: or, a Ceremony in the *Jewish* and *Mahometan* Religions, wherein they cut away the *Preputium*, or Fore-skin of the Males who are to profess the one, or the other Law. See PREPUCE, JEW, MAHOMETAN, &c.

Circumcision commenc'd in the Time of *Abraham*; and was, as it were, the Seal of a Covenant stipulated between God and him: it was in the Year of the World 2178, that *Abraham*, by divine Appointment, *circumcis'd* himself, and all the Males of his Family; from which time it became an hereditary Practice among his Descendants.

The Ceremony, however, was not confin'd to the *Jews*: *Herodotus* and *Philo Judæus* observe, that it obtain'd also among the *Egyptians* and *Ethiopiens*. *Herodotus* says, that the Custom was very ancient among each People; so that there was no determining which of them borrow'd it from the other. The same Historian relates, that the Inhabitants of the *Calchide* also us'd *Circumcision*; whence he concludes, that they were originally *Egyptians*. He adds, that the *Phœnicians* and *Syrians* were likewise *circumcis'd*; but that they borrow'd the Practice from the *Egyptians*. And lastly,

that a little before the Time when he wrote, *Circumcision* had pass'd from the *Colchide*, to the People inhabiting near *Thermodon* and *Partbenus*.

Morham is of Opinion, that the *Hebrews* borrow'd *Circumcision* from the *Egyptians*; and that God was not the first Author thereof: citing *Diodorus Siculus* and *Herodotus* as Evidences on his side. Be this as it will, 'tis certain, the Practice of *Circumcision* among the *Hebrews*, differ'd very considerably from that of the *Egyptians*.

Among the first, 'twas a Ceremony of Religion, and was perform'd on the eighth Day after the Birth of the Child. Among the latter, a Point of mere Decency and Cleanliness; and, as some will have it, of physical Necessity; and was not perform'd till the thirteenth Year; and then on Girls as well as Boys.

Among the *Jews*, *Circumcision* was perform'd with a Knife of Stone. They set aside the Practice of *Circumcision*, during the forty Years of their Passage thro' the Wilderness; in regard, *Circumcision* being intended as a Mark of Distinction between the *Jews* and *Gentiles*, it was unnecessary to make any Mark at all, in a Place wherein there was no body to mix with them.

M. *Fleury* observes, that the *Jews* were not unanimous as to the Necessity of *Circumcision*; some holding it an Essential, others as a Circumstance.

The *Turks*, before the Operation of *Circumcision*, squeeze the Skin with little Pinchers, to deaden the Sensation; they then cut it off with a Razor, and apply a certain Powder, which heals the Wound, and abates the Pain. They never *circumcise* till the seventh or eighth Year; as having no Notion of its being necessary to Salvation.

The *Perussians* *circumcise* their Boys at thirteen Years; and their Girls from nine to fifteen. Those of *Madagascar* cut off the Flesh at three several times: The most zealous of the Relations present, catches hold of the *Preputium* and follows it.

Herrera tells us, there is a kind of *Circumcision* among the *Mexicans*, who they are very remote both from *Judaism* and *Mahometanism*: they cut off the Fore-skin of the virile Member and the Ears, as soon as the Child is born, with a word of Ceremony.

Circumcision is also practis'd on Women, by cutting off the Fore-skin of the *Clitoris*; which bears a near resemblance, and analogy to the *Preputium* of the Male Penis. *Strabo* says, the *Egyptian* Women were *circumcis'd*; *Belon* says the same of the *Coptes*; and P. *Jovius* and *Munster* of the Subjects of *Prefter Jobu*. See *CLITORIS*.

Among the *Jews*, the Father is oblig'd to have his Son *circumcis'd* on the eighth Day; it mayn't be sooner; but the Child's Weakness may allow of its being deferr'd longer. There is a Godfather to hold the Child, and a Godmother to carry it from the House to the Synagogue, and to present it there. He who *circumcises* is call'd in *Hebrew*, *Mohel*: Any Person is chosen for the Purpose, indifferently; provided he be but capable of the Function; which among the *Jews* is a Title of great Merit.

The Manner of the Ceremony, as related by *Leo de Modena*, is as follows.

Two Seats are prepar'd, in the Morning, with silken Cushions; the one for the Godfather who holds the Child, the other, as they say, for the Prophet *Elias*, whom they suppose to assist invisibly. The Person who is to *circumcise* brings the necessary Utensils, the Razor, Syptic, Lincin, Fillet, and Oil of Roses; to which some add a Shell full of Sand to put the *Preputium* in. A Psalm is sung till the Godmother brings the Child, attended with a Crowd of Women, and delivers it to the Godfather; none of 'em entering the Door. The Godfather being seated, sets the Child on his Lap; then the *Circumciser* taking the Razor, and preparing the Child for the Operation, says, *Blessed be thou, O Lord, who hast enjoin'd us Circumcision*; and in so saying cuts off the thick Skin of the *Preputium*, and with his Finger Nails tears off another finer Skin remaining; sucking the Blood two or three times as it breaks out, and spitting it out into a Glass full of Wine: then he lays Dragons-Blood on the Wound, with Powder of Coral, and other Things to stanch the Blood; and lastly, a Compress of Oil of Roses; and thus binds up the whole. This done, he takes a Glass of Wine, and blessing it, adds another Benediction for the Child, and imposes the Name.

The Manner of *Circumcision* among the *Turks*, differs from that of the *Jews*: for the former, after they have cut off the Skin, meddle no further; but the last tear off the Edge of the remaining Skin in several Places with their Thumb-Nails; which is the Reason why the *circumcis'd Jews* are call'd much sooner than the *Turks*.

Those among the *Jews* who perform the Operation of *Circumcision*, are distinguish'd by the Length of their Thumb-Nail.

CIRCUMCISION is also the Name of a Feast celebrated on the first of *January*, in Commemoration of the *Circumcision* of our Saviour. See *FRASER*.

This Day was antiently kept a Fast; in opposition to the Pagan Superstitious, who feasted on it in honour of the God *Janus*.

CIRCUMFERENCE, in Geometry, the Curve Line that incloses a Circle, or circular Space; call'd also *Periphery*. See *CIRCLE*, and *PERIPHERY*.

All Lines drawn from the Centre of a Circle to the *Circumference*, call'd *Radii*, are equal. See *RADIUS*.

Any Part of the *Circumference* is called an *Arch*; and a right Line drawn from one Extreme of the Arch to the other, a *Chord*. See *ARCH*, and *CHORD*.

The *Circumference* of every Circle is suppos'd to be divid'd into 360 equal Parts, call'd *Degrees*. See *DEGREE*.

The Angle at the *Circumference*, is double that at the Centre. See *ANGLE*, and *CENTRE*.

Every Circle is equal to a Triangle, whose Base is equal to the *Circumference*, and its Height to the *Radius*. See *TRIANGLE*.

Hence, the *Circumferences* of Circles are to each other as their *Radii*.

Hence, again, since the *Circumference* of one Circle is to its *Radius*, as that of any other Circle to its *Radius*; the Ratio of the *Circumference* to the *Radius* is the same in all Circles.

The Ratio of the Diameter of a Circle to its *Circumference*, *Archimedes* makes as 7 to 22; others, who bring it nearer the Truth, as 10000000000000000 to 31415926535897932. For Use, the Proportion of 100 to 314 in smaller Circles; and of 1000 to 3145 in larger Circles, is commended by *Vicia*, *Huygens*, &c. The justest Proportion for small Numbers, is that of *Metius*, who makes it as 113 to 355. See *DIAMETER*.

The Diameter of a Circle therefore being given, its *Circumference* is had; and that multiply'd by one fourth Part of the Diameter gives the Area of the Circle. See *AREA*.

The Word is form'd from the Latin *Circum*, about, and *fero*, I carry.

CIRCUMFERENTOR, an Instrument us'd in Surveying, to take ANGLES by. See *ANGLE*, and *SURVEYING*.

The *Circumferentor* is very simple, yet expeditious in the Practice: It consists of a Brass Circle and an Index, all of a Piece. See its Figure in *Tab. Surveying*, Fig. 19.

On the Circle is a Card, or Compass, divided into 360 Degrees; the Meridian Line whereof answers to the middle of the Breadth of the Index. On the Limb, or *Circumference* of the Circle, is fold'd a Brass Ring; which, with another fitted with a Glass, make a kind of Box for the Needle, which is suspended on a Rivet in the Centre of the Circle. To each Extreme of the Index is fitted a Sight. See *SIGHTS*.

The whole is mounted on a Staff; with a Ball and Socket for the Convenience of its Motion. See *BALL* and *SOCKET*.

Use of the **CIRCUMFERENTOR**.

To take an Angle by the **CIRCUMFERENTOR**. Suppose the Angle requir'd E K G, (*Tab. Surveying*, Fig. 20.) place the Instrument, v.g. at K, with the Flower-de-lace in the Card towards you. Then direct the Sights, till thro' 'em you spy E; and observe what Degree is pointed at by the South End of the Needle, which suppose 296; then turn the Instrument about, the Flower-de-lace still towards you, and direct the Sights to G; noting the Degree at which the South End of the Needle points, which suppose 182.

This done, subtracting the lesser Number 182, from the greater 296, the Remainder 114, is the Number of Degrees of the Angle E K G.

If the Remainder chance to be more than 180 Degrees, it must be again subtracted from 360 Degrees; the last Remainder is the Quantity of the Angle sought.

To take the Plot of a Field, Wood, Park, &c. by the **CIRCUMFERENTOR**.

Suppose ABCDEFGK, (*Fig. 21.*) an Inclosure to be survey'd with the **Circumferentor**.

1. Placing the Instrument at A, the Flower-de-lace towards you, direct the Sights to B; where, suppose the South End of the Needle to cut 197; and the Ditch, Wall, or Hedge, measur'd with the Chain, to contain 10 Chains, 75 Links; which enter down. See *CHAIN*.

2. Placing the Instrument at B, direct the Sights as before to C; the South End of the Needle, v.g. will cut 279; and the Line B C contain 6 Chains 83 Links, to be noted as before. Then move the Instrument to C; turn the Sights to D, and measure C D as before.

In the same manner, proceed to D, E, F, G, H, and lastly to K; still noting down the Degrees of every Bearing, or Angle, and the Distances of every Side.

Having thus gone round the Field, you will have a Table in the following form.

Stations	Degrees.	Min.	Chains.	Links.
A	191.	00	10.	75
B	297.	00	6.	83
C	216.	00	7.	82
&c.				

From this Table, the Field is to be *plotted, or protracted*; for the Manner whereof, see *PLOTTING*, and *PROTRACTING*.

Note, Where Security is to be considered rather than Dispatch, it may be convenient to take Back-sights; *i. e.* to place the Instrument so, at each Station, as that looking backwards thro' the Sights to the last Station, the North End of the Needle may point to the same Degree as the South End did, in looking forwards from the last Station to this. See *THEODOLITE*, and *PLAIN-TABLE*: Both which Instruments are us'd, on occasion, as *Circumferators*.

CIRCUMFLEX, in Grammar, an Accent, *forming* to note, or distinguishing a long Syllable. See *ACCENT*, *LONG*, &c.

The Greeks had three Accents, the *Acute*, the *Grave*, and the *Circumflex*, form'd thus ' , ' . In *English*, *French*, &c. the *Circumflex* is made thus ' , ' . See *CHARACTER*.

The *Acute* raises the Voice, and the *Grave* falls, or lowers it: the *Circumflex* is a kind of Undulation, or wavering of the Voice, between the two. See *ACCUTE*, *GRAVE*, &c.

'Tis seldom us'd unless to shew the Omission of a Letter which made the Syllable long and open; a thing vastly more frequent in the *French* than among us: Thus they write *poëte*, for *poëte*; *poëte*, for *poëte*; *poëte*, for *poëte*, &c. They also use the *Circumflex* in the Participles; some of their Authors writing *conatus*, *fecer*, others, *conatus*, *poë*, &c. *Father* *Buzzer* is at a *Loss* for the Reason of the *Circumflex* on this occasion.

The Form of the Greek *Circumflex* was antiently the same with that of ours: but the *Copists* changing the Form of the Characters, and introducing the running Hand, chang'd also the Form of the *Circumflex* Accent; and instead of making a just Angle, rounded it off, adding a Dash thro' ro' much half; and thus form'd an *s*, inverted and laid horizontally, which produc'd this Figure " , " , instead of this *A*.

CIRCUMLOCUTION, a Circuit, or Tour of Words, us'd either when a proper Term is not at hand, to express a thing naturally and immediately by; or when one chuses not to do it, out of respect; or on some other occasions.

The Word comes from the Latin *Circumloquor*, I speak about.

CIRCUMLOCUTION, in Oratory, is the avoiding of something disagreeable, or inconvenient to be express'd in direct Terms; by intimating the Sense thereof in a kind of Paraphrase, so conceiv'd as to soften, or break the Force thereof.

Thus *Cicero*, unable to deny that *Clodius* was slain by *Milo*, owns it, with this *Circumlocution*, *Milo's* Servants being prevented from assisting their Master, who was reported to be kill'd by *Clodius*; they, in his absence, and without his Privy, or Consent, did what every body would expect from their own Servants on such an occasion.

CIRCUMINCESSION, in Theology, a Term whereby the Schoolmen use to express the Existence of three divine Persons in one another, in the Mystical of the Trinity. See *PERSON*.

The School-Divines are not the first Authors of this Term; *Damasceus*, in the VIIIth Century, having us'd the Word *metaphora*, which signifies the same thing, in his Explanation of that Text, *I am in my Father, and my Father is in me*.

CIRCUM *Polar Stars*, are such Stars as being pretty near our North-Pole, move around it; and in our Latitude, never set, or go below the Horizon. See *STAR*, *POLAR*, *SETTING*, &c.

CIRCUMSCRIBING, in Geometry, denotes the describing a polygonous Figure about a Circle, in such manner, as that all its Sides are Tangents to the Circumference. See *CIRCLE*, *POLYGON*, &c.

The Term is sometimes also us'd for the describing of a Circle about a Polygon; so, as that each side is a Chord. But in this Case, we more usually say, the Polygon is *inscribed*, than the Circle *circumscribed*. See *INSCRIBING*.

Any regular Figure *A B C D E*, (Plate *Geometry*, Fig. 29.) inscrib'd in a Circle, is resolv'd into equal and similar Triangles, by Radii drawn from the Centre of the *circumscribing* Circle *F*, to the several Angles of the Figure; and its Area is equal to a rectangled Triangle, whose Base is equal to the Circumference of the whole Polygon; and its Height a Perpendicular let fall from the Centre *F* to one side *A B*.

The same may be said of the Area of the *circumscribing* Circle *ab cde*, excepting that the Height is to be the Radius.

The Area of every Polygon that can be inscrib'd in a Circle is less; and that of every Polygon that can be *circumscrib'd*, greater than that of the Circle: In like manner, the Perimeter of the first is less, and that of the second greater than the Circumference of the Circle. See *PERIMETER*, &c.

On this Principle *Archimedes* attempted the Quadrature of the Circle; which is nothing else, but to effect, by the measuring of the Area, or Capacity of a Circle. See *QUADRATURE*.

The Side of a Hexagon is equal to the Radius of a *circumscrib'd* Circle. See *HEXAGON*.

To *Circumscribe a Circle* about any given regular Polygon, *A B C*; (Fig. 30.) and *vice versa*. Bisect two of the An-

gles, *v. g.* *A* and *B*; and on the Point *F*, where the two Lines of Bisection intersect, as on a Centre, describe a Circle with the Radius *F A*.

To *Circumscribe a Square about a Circle*. Draw two Diameters, *A B* and *D E*, (Fig. 31.) intersecting each other in the Centre *C*, at right Angles. From *A E B D*, with the Interval of the Radius, make Intersections in *F, G, H, I*. Draw the right Lines *F G, G H, H I, I F*. Then is *F G H I* a Square *circumscrib'd* about the Circle.

To *circumscribe any regular Polygon, v. g.* a Pentagon, about a Circle. Bisect the Chord *A E*, (Fig. 32.) by the Perpendicular *F G*, which continue till it cut the Arch in *g*. Turn *A* and *E*, draw the Radii *A F* and *E F*; and thro' *g* draw a Line parallel to *A E*, meeting the Radii continu'd on each side in *a* and *e*: Then is *a e* one side of the *circumscrib'd* Polygon. Produce the Radius *F B* to *b*, till *F b = F a*; and draw *a b*: this is another Side of the Polygon; and in the same manner may the rest of the Sides be drawn.

To *Inscribe any regular Polygon in a Circle*. Divide 360 by the number of Sides, in order to find the Quantity of the Angle *E F D*; which make at the Centre, and apply the Chord to the Periphery as often as it will go. Thus will the desir'd Figure be *inscrib'd* in the Circle.

CIRCUMSTANCES, the Incidents of an Event, or the Particularities that accompany an Action. See *INCIDENT*.

Divines say, the Conversion of a Sinner depends on a certain Assesment, and a certain Management of external *Circumstances* in the midst whereof he is plac'd; which Arrangement of *Circumstances*, depends on the Providence of God: whence Conversion also depends on him. See *CONVERSION*.

The *Circumstances* of the Actions of Men, are express'd in this Latin Verse.

Quis, quid, ubi, quibus auxiliis, cur, quomodo, quando.

Quis, who, denotes the Quality, State, Age, &c. of the Person. *Quid*, what, the greatness, smallness, multitude, fewness, &c. of the thing. *Ubi*, where, the Place. *Quibus Auxiliis*, with what Assurances, the Instruments, Means, &c. *Cur*, why, on what Account, with what View. *Quomodo*, how, the Quality of the Action, as to Intention or Remissness, Designedness or Casualty, Secrecy or Openness. *Quando*, when, the Time; as on a Holiday, at the Hour of Prayer, &c.

CIRCUMSTANTIBUS, in Law, is us'd for the supplying, and making up the Number of Jurors, (in case any impell'd appear not; or appearing, be challeng'd by either Party) by adding to them so many of the Persons present, or standing by, as will serve the turn. See *JURY*, and *JURON*.

CIRCUMVALLATION, in Fortification, a Line, or large Trench, made around a Camp; in the besieging of a Town. See *LINE*, *FORTIFICATION*, &c.

This Trench is to be a Cannon-shot distant from the Place, ordinarily, about 12 Foot broad, and seven deep. It is border'd with a Parapet, and flank'd with Redoubts, or little Forts, erected from Space to Space. It forces both to prevent any Saccar from being sent into the Place, to keep in Defectors, and prevent Incursions of the Enemy's Garrison.

Care must be taken that the Line of *Circumvallation* never pass by the Foot of an Eminence; lest the Enemy seizing on the Eminence, lodge his Cannon, and command the Line.

The Word is form'd from the Latin *circum*, about, and *vallum*.

CIRCUMVOLUTIONS, in Architecture, the Turns of the Spiral Line of the Ionic Volute. See *VOLUTE*.

The Word comes from the Latin *Circumvolvare*, to turn around; and is also apply'd to the Turns of a wreath'd or twisted Column. See *COLUMN*.

CIRCUS, in Antiquity, a large Building, either round, or oval; us'd for the exhibiting of Shows to the People. See *SPECTACLES*, *CIRCENSIAN Games*, &c.

The *Roman Circus*, was a large Place, or Square, arch'd at one End; incompass'd with Porticos, and furnish'd with Rows of Seats, plac'd ascending over each other.

In the middle was a kind of *Banquette*, or Eminence, with Obelisks, Statues, and Posts at each End. This serv'd 'em for the Courses of their *Bigs* and *Quadrigæ*. See *BIG*, &c.

There were no less than ten *Circus's* at *Rome*: the largest was that built by the Elder *Tarquinius*, called *Circus Maximus*; between the *Aventine* and *Palatine* Mounts. *Pliny* says, it was enlarg'd by *J. Cæsar*, so as to take in no less than three *Stadia* in Length, and one in Width.

The most magnificent *Circus's* were those of *Augustus* and *Nero*. There are still some Remains of the *Circus's*, both at *Rome*, at *Nismes*, and other Places.

The *Romans* were excessively fond of the Games exhibit ed in the *Circus*, witness that Verse in *Juvenal*,

—*Æque diut tantum rei anxius optat,
Panem & Circus*—

Some derive the Word from *Circus*, to whom *Tertullian* attributes the Invention. *Cassiodorus* says, *Circus* comes à *circus*.

The *Romans*, *Scrvins* observes, at first, had no other *Circus* but that made by the *Tiber*, on one side, and a Pallisade of naked Swords on the other.

Hence, according to *Isidore*, came the Term *Ludi Circenses*, quasi *Circum-Efetes*. But *Scaliger* laughs at the Etymology.

The Games of the *Circus*, which some call *Circensian Games*, were Combats celebrated in the *Circus*, in honour of *Conjux* the God of Councils; thence also call'd *Conjuxialis*. See CONSUALIA.

They were also called *Roman Games*, *Ludi Romani*, either on account of their Antiquity, as being coeval with the *Roman People*, or because establish'd by the *Romans*: and the great Games *Ludi Magni*, because celebrated with more Expence and Magnificence than any others; and because held in honour of the great God *Neptune*, who was their *Conjux*.

Those who say they were instituted in honour of the Sun, confound the *Poppa Circensis*, or Procession of the *Circus*, with the Games.

The Games of the *Circus* were instituted by *Evander*, and re-establish'd by *Romulus*: The Procession was only a Part of the Games, making the Prelude thereof; and consisting of a simple Cavalcade of Chariots.

Till the Time of the Elder *Tarquinius*, they were held in an Island of the *Tiber*; and were called *Roman Games*: after that Prince had built the *Circus*, they took their Name therefrom; as being constantly held there.

There were six Kinds of Exercises in the *Circus*: the 1st Wrestling, fighting with Swords, with Staves, and with Pikes: the 2d was Racing: the 3d *Solatio*, Dancing: the 4th *Disipi*, Quoits, Arrows, and *Cestus*; all which were all on Foot: the 5th was Horsecourcing: the 6th Courses of Chariots, whether with two Horses, or with four. See *BIGAE*, and *QUADRIGAE*.

In this last Exercise, the Combatants were at first divided into two *Quadriis*, then into four; each bearing the Names of the Colours they wore; *Falio Alba*, *Ruffea*, &c. See *FRACTION*, *QUADRIL*, &c.

At first there was only white and red; then green was added, and blue. *Domitian* added two more Colours, but they did not hold.

It was *Oenonius* who first invented this Method of distinguishing the *Quadriis* by Colours. The green was for those who represented the Earth; the blue for the Sea, &c. See *COLOUR*, &c.

CIRRI, in Botany, a Term us'd for those fine Strings, or Hairs, by which some Plants fasten themselves, for their support; as Ivy, and the like. See *CLASPERS*.

CIRCOSOLE, in Medicine, a Dilatation of the Spermatic Veins; occasion'd by a too thick, gumous Blood; call'd also *Hernia Varicosa*. See *HERNIA*.

The Word comes from the Greek *varis*, *varis*, Vein, and *varia*, *Hernia*. See *VARIX*.

CISALPINE, any thing on this side the *Alps*. The *Romans* divided *Gaul*, and the Country now call'd *Lombardy*, into *Cisalpine* and *Transalpine*. See *TRANSALPINA*.

That which was *Cisalpine* with regard to the *Romans*, is *Transalpine* with regard to us.

The Word is form'd from the Preposition *Cis*, on this side, and *Alpes*; which, though properly confin'd to the Mountains separating *Italy* and *France*, yet is us'd by Authors for any very high Mountains.

Thus *Anselmus* has the *Alps* of the *Pyreneans*, the *Alps* of the *Apennines*, &c.

CISSOID, in Geometry, an Algebraic Curve, first invented by *Diocles*; whence it is peculiarly call'd the *Cissoid of Diocles*. See *CURVE*.

The Genesis of the *Cissoid* may be thus conceiv'd: To the Diameter AB, (Tab. *Analysis*, Fig. 9.) of the Semicircle AOB, draw an indefinite Line, at right Angles, BC; then, draw the right Line AH, and make AM=IH; or in the other Quadrant, LC=AN. Thus will the Points M and L be in a Curve Line AMOL; which is the *Cissoid of Diocles*.

Properties of the Cissoid.

From the Genesis it follows, 1st, That drawing the right Lines PM and KI, perpendicular to AB; we shall have AP:KB::AM:IH. But AM=IH; consequently, AP=AB. And therefore, AK=PB; and PN=IK.

2d, After the same manner, it appears, that the *Cissoid* AMO bisects the Semicircle AOB.

3d, Again, AK:KI::KI:KB. That is, AK:PN::PN:AP. And again, AK:PN::AP:PM; therefore, PN:AP:AP:PM. Consequently, AK, PN, AP, and PM, are four Lines in continual Proportion. And if PN=v, AP=x, PM=y; x²=vy. And after the same manner it may be shewn, that AP, PN, AK, and KL, are in continual Proportion.

4th, In the *Cissoid*, the Cube of the Abscissa AP, is equal to a Solid, arising of the Square of the Semicirculate PM, multiply'd into the Complement of the Diameter of the generating Circle PB.

Hence, when the Point P falls on B, then x=0, and BC=y; consequently, y³=0. Wherefore, 0:I::x³:y³.

that is, the Value of y becomes infinite: and therefore the *Cissoid* AMOL, tho it continually approach BC yet they will never meet.

5th, BC, therefore, is an *Asymptote* of the *Cissoid*. See *ASYMPTOTE*.

The Antients made use both of the *Concoid* and *Cissoid*; for the finding of two mean continual Proportionals between two given right Lines. See *PROPORTIONAL*.

For the *Quadrature*, *Subnormal*, and *Subtangency* of the *Cissoid*, see *QUADRATURE*, *SUBNORMAL*, and *SUBTANGENCY*.

CISTERCIANS, an Order of Religious, call'd by the French *Cisterciens*; consisting of an hundred Monasteries, and near as many Nunneries. See *ORDER*, *MONK*, *RELIGIOUS*, &c.

The Order took its rise in 1075, from twenty one zealous Monks in the Monastery of *Moleine* in *Burgundy*; who, with their Abbot *Robert*, complaining that the Rule of *S. Benedict* was not strictly enough observ'd; obtain'd Permission of *Hugh*, Archbishop of *Lyons* and Legate of the Holy See, to settle in a Place call'd *Cisteaux*, five Miles from *Dijon*.

Here *Eudes* Duke of *Burgundy* erected 'em a Building, into which they were admitted in 1098; endowing it with a considerable Revenue. The Bishop of *Chalons* gave *Robert* the Pastoral Staff, in quality of Abbot; and erected the new Monastery into an Abbey. See *ABBOT*.

Such was the beginning of the *Cisterciens*, so famous in After-times, and now so extended throughout all *Europe*.

CISTERN, or *CESTERN*, is properly us'd for a subterraneous Reservoir of Rain-water. See *WALL*.

Cisterns must be made with good Cement, to retain the Water. See *CEMENT*.

The Bottom should be cover'd with Sand, to sweeten and preserve it. See *WATER*.

Authors mention a *Cistern* at *Constantinople*, the Vaults whereof are supported by two rows of Pillars, 212 in each Row; each Pillar being two Foot in Diameter. They are planted circularly, and in Radii tending to that in the Centre.

The Word, according to some, comes from *Cita*, and *terram*, i. e. *inter terram*; others derive it from *Cista*, an Officer Basket, a Duct, &c.

CISTIC.
CIST-Heptic. } See } *CYSTIC*.
CISTUS. } } *CYST-Heptic*.
 } } *CYSTUS*.

CITADEL, or *CITTADEL*, a Fort, or Place fortify'd with four, five, or six Bastions; built sometimes in the most eminent Part of a City, and sometimes only near the City.

In the first Case, the *Citadel* serves to defend the City against Enemies. See *FORT*, *FORTIFY'D Place*, &c.

In the latter it serves to command it, and to keep the Inhabitants in their Obedience: for which purpose the City is left unfortify'd on the Part toward the *Citadel*, but the *Citadel* fortify'd toward the City.

The most usual Form for *Citadels*, is that of a Pentagon; a Square being too weak, and a Hexagon too big. See *FORTIFICATION*, *PENTAGON*, &c.

There is always a large Esplanade between the *City* and *Citadel*. See *ESPLANADE*.

The Word is a Diminutive of the Italian *Citta*, City, &c. little City.

CITATION, an Assignment, or summoning of a Person before an Ecclesiastical Judge, on some Affair relating to the Church.

In the Civil, and Ordinary Courts, it is call'd *Summoning*. See *SUMMONS*.

The Word *CITATION* is also us'd in speaking of Military and Monastick, as well as Ecclesiastical Courts. Such a Heronick was cited to *Rome*; to a General Council, &c.

Knights are cited to the General Chapters of their Order. *K. Edward 1. of England*, was cited, by Order of *Philip IV. of France*, to a Court of his Peers. The *Citation* was publish'd by the Seigneur d'*Arrebloy*, Seneschal of *Perigord* and *Querci*; and was pass'd up, by his Order, on the Gates of the *City Libourne*, which then belong'd to *K. Henry*. For Default in not appearing, all his Domains, and Effects in *France* were confiscated. F. *Daniel*.

CITATION is also an Allegation, or Quotation of some Law, Authority, or Passage. See *QUOTATION*.

The Word comes from *cito*, of *cito*, I stir up.

CITRON, an agreeable Fruit, in Colour, Taste, Smell, &c. resembling a Lemon; and serving, like that, to cool, and quench the Thirst: being produc'd by a Tree of the same Name, much resembling the Lemon Tree. See *LEMON*.

The *Citrus* is distinguish'd from the *Lemon*, in that it is bigger, and its Pulp firmer; its Smell brisker, and Colour higher. It is held excellent against Poisons: and *Arbenus* relates

relates an Instance of two Persons, preserv'd safe from the most dangerous Apices, by eating a *Citron*.

The Distillers, Perfumers, Confectioners, &c. procure divers things from *Citrons*; as Essences, Oils, Confections, Waters, &c.

CITRON WATER. See *CITRON-WAYER*.

CITRON-SCENTAL. See *SANTAL*.

CITY, a large Town, inclos'd with a Wall. See *TOWN*.

'Tis hard to give any just Definition of a *City*; in regard, Custom has reserv'd the Appellation of *Towns*, to so many Places which seem to have every thing requisite to constitute a *City*.

Formerly, *City* was only understood of such *Towns* as were Bishops Sees: which Distinction seems still to hold in *England*; tho' no where else. See *S&S*.

City is particularly us'd to express the Heart of the Place. At *Paris* they have the *City* and the *University*; at *London* we have the *City* and the *Suburbs*.

The Term *City* had its rise among us, since the Conquest; for in the Time of the Saxons there were no *Cities*, but all great *Towns* were call'd *Burghs*: Thus, *London* was call'd *London Burgh*. See *BURGH*.

And for a long time after the Conquest, *City* and *Burgh* were us'd promiscuously: thus, in the Charter of *Leicester*, that Place is call'd both *Civitas* and *Burgus*; which shows a Mistake in my Lord Coke, where he tells us, that every *City* was, or is a Bishop's See. Nor had *Glocester* any Bishop then; tho' his call'd a *City* in *Dome's-Day*. The like may be observ'd of *Conbridge*; to which it may be added, that *Cromwell*, reckoning up our *Cities*, leaves out *Ely*, tho' it had a Bishop and a Cathedral.

Yet *Cassimereus, de Consuetud. Burguad.* says, *France* has within its Territories 104 *Cities*; and gives his Reason, because it has so many Archbishops and Bishops.

CITY, Civitas, in speaking of Antiquity, signifies a State, or People, with all its Dependencies, constituting a particular Republic; such as are, still, several *Cities* of the Empire, and the Swiss Cantons.

Tho' the ancient *Gauls* were, in effect, only one Nation; they were yet divided into several Peoples, which form'd as many different States: or, to speak with *Cæsar*, as many different *Civitates, Cries*. Besides that each *City* had its particular Assemblies, it sent Deputies, too, from time to time, to the general Assemblies, held on Affairs relating to their common Interest.

Augustus, upon numbering the *Roman Citizens*, found they amounted to 4 Millions, 137000. See *ENUMERATION*.

To make a good *Roman Citizen*, there were three things requir'd: that he were an Inhabitant of *Rome*; that he were enroll'd in one of the 35 Tribes; and that he were capable of Dignities. Those to whom were granted the Rights and Privileges of *Roman Citizens*, were properly only *Honorary Citizens*.

The seventh Law, *de Incolis*, makes a great deal of difference between a *Citizen* and a mere Inhabitant. Birth, alone, made a *Citizen*; and entitl'd to all the Privileges of Burgely: Time could not acquire it; but the Emperor cou'd bestow it.

The Word comes from the Latin *Civis*; which Authors derive from *Civo*, by Reason the *Civitates* live together: or rather from *Civo*, I call together.

CIVET, a kind of Perfume, bearing the Name of the Animal whence it is taken. See *PERFUME*.

The *Civet*, or *Civet-Cat*, is a little Animal, resembling our Cat; excepting that his Snout is more pointed, his Claws less dangerous, and his cry different.

The Perfume this Animal produces, is form'd like a kind of Grease, or thick Scum, in an Aperture, or Bag, under his Tail. 'Tis gather'd from time to time; and still abounds, in proportion as the Animal is fed.

There is a very considerable Traffic of *Civet*, from *Bassora*, *Cathace*, and other Places, where the Animal that produces it is found. Tho' part of the *Civet* among us is furnish'd us by the *Dutch*; who bring up a considerable Number of the Animals.

Before any of these Animals were seen in *Europe*, or it had been observ'd how the Perfume had been gather'd; the common Opinion, founded on the Relations of Travellers, was, that it was the Sweat of that Animal, irritated, and kindled into Rage.

To this effect, 'twas said, that the Animal was inclos'd in an Iron Cage; and after having been a long time beaten with Rods, they gather'd with a Spoon, thro' the Bars of the Cage, and between the Thighs of the Animal, the Sweat or Foam, which the Rage and Agitation had produc'd: and that without this Precutation, the Animal would yield no Perfume at all.

But Experience has taught us better; and we now know, that the Perfume *Civet*, is only a thick unctuous Humour, secreted by certain Glands between the two Tunics of the Bag wherein it is amass'd, under its Tail, beneath the *Anus*.

Civet must be chosen new, of a good Confidence, a whitish Colour, and a strong disagreeable Smell.

Besides the *Indian* and *Dorset Crow*, there is also a *Civet* from *Brasil*, or *Guinea*, like that of *India*; and an *Occidental Crow*, which bears no resemblance to it.

Civet is little us'd in Medicine, except in a Thickness of Hearing, from Cold; where a Graio or two being put in a little Cotton, or Wool, and the Ears stopp'd therewith, is sometimes of service. It is much us'd among Perfumers and Confectioners.

The Word *Civet* comes from the Arabic *Zibet*, or *Zebet*, Scum, Froth.

CIVIC, an Epithet apply'd to a Kind of Crown, made of Oak Leaves; antiently bestow'd by the *Romans*, on those who sav'd the Life of a Fellow-Citizen in a Battle, or an Assault. See *CROWN*.

The *Civic Crown* was exceedingly esteem'd; and was even given as an Honour, to *Augustus*; who on this Occasion struck Coins with this Device, *OB CIVIS SERVATOS*.

It was also given to *Cicero*, after his Discovery of *Catiline's* Conspiracy.

CIVIL, in its general Sense, is something that regards the Policy, publick Good, or repose of the Citizens, or Subjects of a State. See *CITY*.

In this Sense, we say, *Civil Government*; *Civil Law*; *Civil Rights*; *Civil War*, &c. See *GOVERNMENT*, &c.

CIVIL LAW, Lex Civilitatis, is defin'd, in the Institutes, to be the Laws peculiar to each *City*, or each People; but in the modern Use, it properly implies the *Roman Law*, contain'd in the Institutes, the Digest, and the Code; otherwise call'd, the *Lex Scripta*, or *Written Law*. See *LAW*.

The *Roman Law*, at its Commencement, was very inconsiderable. Under the Kings, the People were govern'd by certain Laws, prepar'd by the Senate, pass'd by the Kings, and confirm'd in an Assembly of the People.

Papirius was the first who made a Collection of the Regal Laws; which took its Name from its Author, and was call'd *Jus Papirianum*.

The Republic, after abolishing the Regal Government, still retain'd the Royal Laws: To these they added the Law of the *Twelve Tables*; drawn by the *Decemviri*, from the Laws of twelve of the principal Cities of *Greece*; and the more Equitable among the Laws hitherto practis'd at *Rome*. See *DECEMVIRI*.

The Law of the *Twelve Tables* was at length found so severe, and conceiv'd in such obscure Terms; that it was judg'd proper to moderate, restrain, and ascertain it; by other Laws, propos'd to the Senate by the Consuls, and pass'd at general Assemblies of the People; according to the Practice that had obtain'd under the Kings themselves.

In the Year of *Rome* 731, the Republic expir'd; and the whole Power of the People was transfer'd to *Augustus*, who was contented to publish his new Laws in the Assembly of the People; to keep up some Image of the Republic by this Formality.

Tiberius abolish'd these occasional Assemblies, on pretence of their being too numerous; and in lieu thereof profess'd his Law to the Senate, who never fail'd to confirm 'em: inasmuch that the Laws of *Tiberius*, and his Successors, who kept the same Measures with the Senate, were esteem'd *Senatus-Consulta*.

Thus arose two Kinds of *Roman Law*, with regard to the Changes in the Legislative Authority: the Law establish'd by the People, *Plébiscita*; and the Laws of the Emperors, or *Imperial Laws*. See *PLEBISCITA*, and *IMPERIAL*.

During the Time of the Republic, and even under the Emperors, there were *Juris-Consulti*; who making publick Profession of the Study of the Law, interpreted, were consulted on the different Senses of the Laws, and gave Answers to the Questions propos'd to 'em hereon; which were call'd *Responsa Prudentium*.

Papirius was the first of these *Juris-Consulti*, after the Expulsion of the Kings; and *Mofestianus* the last. See *JURIS-CONSULTI*.

After him, viz. in 240, these Oracles of the *Roman Jurisprudence* ceasing, out of their Writings, which made no less than 2000 Volumes, a Body of the *Roman Law* was afterwards compil'd, by Order of *Justinian*.

The Magistrates, on their side, in administering Justice, interpreted the Laws with more freedom than even the *Juris-Consulti*; and were, as it were, the living Voice of the Law.

The Emperors too, to render the Interpretations of the Magistrates less free and frequent, appointed, that they themselves should be consulted; and their Answers express'd, as to Questions in Law, as may be observ'd from *Pliny's* Epistles to *Trajan*. See *RESCRIPT*.

In proportion as new Laws were made at *Rome*, care was taken to collect and reduce 'em into Bodies. See *BODY*.

Papirius, in the Time of *Tarquinius Superbus*, made a Collection of the Regal Laws. And no sooner was the Republic establish'd, than the Laws of the *Twelve Tables* were drawn.

In the Time of *Julius Cæsar*, *Offilius*, a Lawyer, began a Collection of the Edicts of the *Prætors*; which was not finish'd till the Time of *Adrian*; by another Lawyer, *Julianus*.

In the Time of *Constantine*, or his Children, two *Jurists* compil'd two Codes; from their Authors call'd *Gregorian*, and *Heremian* Code. See CODE.

Lastly, *Justinian*, finding the Authority of the *Roman Law* almost abolish'd in the West, by the Declension of the Empire; resolv'd to make a general Collection, of the whole *Roman Jurisprudence*; and committed the Care thereof to his Chancellor *Tribonianus*.

That Minister executed his Commission with a great deal of Diligence, not to say Precipitation: a new Code was finish'd in 529, and a Digest in 533. See DIGEST, and CODE.

The same Year he publish'd an Abridgment, thereof containing the first Principles and Elements of Law, under the Title of *Institutes*. See INSTITUTES.

In the Course of this Reign, *Justinian* made 168 Constitutions, and 13 Edicts; which made a considerable Alteration in the ancient Law, and were call'd *Novels*. See NOVELL. All these together, make the *Corpus Juris Civilis*, or Body of the *Civil Law*, as reduc'd, by order of *Justinian*.

For the Space of 300 Years, this System of Law obtain'd without any Innovation. But the new Constitutions made by the Emperors from time to time, at length occasioning some Alterations; the Emperor *Basil*, and *Leo* his Son, compos'd a new Body of the *Roman Law*, chiefly from the *Justinian*, in the *Greek Language*, dividing it into 7 Volumes, and 60 Books; under the Title of *Basilica*. From which time, *Justinian's* Body had but little Credit in the East; the *Basilica* taking place of it. See BASILICA.

In the West, the *Civil Law* had a different Fortune: 'Tis ordinarily suppos'd not to have been there known till the Year 600; when *Lotharius II.* finding the Book at the taking of *Melphi*, a Town in *Naples*, made a present of it to the City of *Pisa*: Tho' we find it quoted in several *Latin Works* long before *Lotharius*. 'Tis true, however, it was never taught publicly till the XIIIth Century; when *Imerius* first made profession of it at *Bologna*, in 1128; whence it was carry'd by his Disciples into other Countries; and in a little time was taught in all the Universities.

'Tis allow'd that the *Civil Law* contains all the Principles of Natural Equity; and that nothing can be better calculated to form good Sense, and sound Judgment. Hence, tho' in several Countries it has no other Authority but that of Reason and Justice; 'tis yet every where refer'd to for Authority, and is that alone taught in Universities.

It is not receiv'd at this Day in any Nation without some Alterations: sometimes the *Feudal Law* is mix'd with it, or general and particular Customs; and often, Ordinances and Statutes cut off a great part of it.

In *Turkey*, the *Basilica* are only us'd. In *Italy*, the Canon Law, and Customs have excluded a good part of it. In *Venice*, Custom hath almost an absolute Government. In the *Milanese*, the *Feudal Law*, and particular Customs, bear sway. In *Naples* and *Sicily*, the Constitutions and Laws of the *Lombards* are said to prevail. In *Germany* and *Holland*, the *Civil Law* is esteem'd to be the municipal Law; but yet many Parts of it are there grown obsolete; and others are alter'd, either by the Canon Law, or a different Usage.

In *Priesland*, it is observ'd with more strictness: But in the Northern Parts of *Germany*, the *Jus Saxoniense*, *Lubeckense*, or *Cathensè*, is prefer'd before it. In *Denmark* and *Sweden* it hath scarce any Authority at all. In *France* only a Part of it is receiv'd; and that Part is in some Places as a Customary Law: And in those Provinces nearest to *Italy*, the municipal Written Law. In Criminal Causes, the *Civil Law* is more regarded in *France*; but the manner of Trial is regulated by Ordinances and Edicts.

The *Civil Law*, in *Spain* and *Portugal*, is connect'd with the *Jus Regium*, and Custom. In *Scotland*, the Statutes of the *Sederunt*, part of the *Regie Majestatis*, and their Customs, control the *Civil Law*.

In *England*, it is us'd in the Ecclesiastical Courts; in the Courts of the Admiralty; and in the two Universities; yet in all these restrain'd and directed by the Common Law. See LAW, COMMON-LAW, &c.

CIVIL WAR, is a War between People of the same State, or Citizens of the same City. See WAR.

CIVIL DEATH, any thing that retrenches, or cuts off a Man from Civil Society: as a Condemnation to the Gallies, perpetual Banishment, Condemnation to Death, and Excommunication: All which make a Man cease to be look'd on as a Citizen.

The Term is likewise apply'd to those who are no longer capable of acting in Temporal Concerns; as those who renounce the World, who retire and make Vows in a Monastery, &c. See MONK, VOWS, MONASTERY, &c.

CIVIL, in a Legal Sense, is also apply'd to the ordinary Procedure in an Action relating to some Pecuniary Matter, or

Interest; in which Sense it is oppos'd to *Criminal*. See ACTION, CRIMINAL, &c.

CIVIL YEAR, is the Legal Year, or annual Account of Time, which every Government appoints to be us'd within its own Dominions. See TIME.

It is thus call'd, in contradistinction to the *Natural Year*; which is measur'd exactly by the Revolution of the Heavenly Bodies. See YEAR.

CIVIL MONTH, } See MONTH.

CIVIL DAY, } See DAY.

CIVILISATION, a Law, Act of Justice, or a Judgment which renders a Criminal Process, Civil.

Civilisation is perform'd by turning the Information into an Inquest, or vice versa. See INFORMATION, INQUEST, &c.

CLAIM, in Law, a challenge of Interest in any thing that is in Possession of another; at least, out of his own. See CHALLENGE, POSSESSION, &c.

There are divers Kinds of Claims: as,

CLAIM by Charter. See CHARTER.

CLAIM by Descent. See DESCENT.

Continual CLAIM, a Claim made from time to time, within every Year and Day, to Land, or other Thing, which on some accounts cannot be attain'd without danger.

Thus, if I am dispos'd of Land, into which, tho' I have a Right, I do not enter for fear of bearing; I am to hold on my Right of Entry at my best opportunity; by approaching as near as I can, once every Year, as long as I live: thus I leave the Right of Entry to my Heir. See ENTRY.

CLAIM-OBSCURE, or CHIARO SCURO, in Painting, the Art of distributing, to advantage, the Lights and Shadows of a Piece; both with regard to the casting of the Eye, and the Effect of the whole Piece. See LIGHT, and SHADOW.

Thus, when a Painter gives his Figures a strong Relievo, loosens 'em from the Ground, and sets 'em free from each other, by the Management of his Lights and Shadows; he is said to understand the *Clair-obscur*.

The *Clair-obscur* makes one of the great Divisions, or Branches of Painting; the whole of a Picture being referable into *Light*, and *Shadow*. See PAINTING.

The Doctrine of the *Clair-obscur*, will come under the following Rules.

Light may be either consider'd with regard to it self; to its Effects; the Place wherein 'tis diffus'd; or its Use.

For the 1st, Light is either *Natural*, or *Artificial*. *Natural*, either comes immediately from the Sun, which is brisk, and its Colour various according to the Time of the Day; or 'tis that of a clear Air thro' which Light is spread, and whose Colour is a little bluish; or a cloudy Air, which is darker, yet represents Objects in their genuine Colours with more ease to the Eye.

Artificial proceeds from Fire, or Flame, and tinges the Object with its own Colour: but the Light it projects, is very narrow and confin'd.

For the 2^d, the Effects of Light are either *Principal*, as when the Rays fall perpendicularly on the Top of a Body, without any Interruption; or *Glancing*, as when it slides along Bodies; or *Secondary*, which is for things at a distance.

3. For the Place, 'tis either the open Campaign, which makes Objects appear with great Softness; or an inclin'd Place, where the Brightness is more vivid, its Diminution more hasty, and its Extremes more abrupt.

4. For the Use, or Application: The Light of the Sun is always to be suppos'd without, and over against the Picture; that it may brighten the foremost Figures: the Luminaries themselves never appearing, in regard the best Colours can't express 'em. The chief Light to meet on the chief Group, and as much as possible on the chief Figure of the Subject. The Light to be persu'd over the great Parts, without being cross'd, or interrupted with little Shadows. The fall Face of the principal Light to be only in one Part of the Piece: taking care never to make two contrary Lights: Not to be scrupulously confin'd to one universal Light; but to suppose other accessory ones, as the opening of Clouds, &c. to loosen some Things, and produce other agreeable Effects. Lastly, the Light to be different, according to the Quality of Things whence it proceeds, and the Nature of the Subjects which receive it.

For *Shadows*; they are distinguish'd, 1st, into those form'd on the Bodies themselves, by their proper Relievs. 2^d, Those made by adjacent Bodies; those that make Parts of any whole; and the different Effects, according to the difference of Places.

For the first, since the different Effects of Lights only appear by Shadows, their Degrees must be well manag'd. The Place which admits no Light, and where the Colour are lost, must be darker than any Part that has Relievo, and dispos'd in the Front. The Reflex, or return of the Light, brings with it a Colour borrow'd from the Subject that reflects it; and flies off at a greater or less Angle, according to the Situation of the reflecting Body, with regard to the luminous

one: Hence, its Effects must be different in Colour, and in Force; according to the Dispositions of Bodies. Deepenings, which admit not of any Light, or Reflex, must never meet on the Relieve of any Member of any great elevated Part; but in the Cavities or Joints of Bodies, the Folds of Draperies, &c. And to find Occasions for introducing great Shadows, to serve for the Repose of the Sight, and the loosening of Things; instead of many little Shadows, which have a pitiful Effect.

For the 2d, The Shadows made by Bodies, are either in plain and smooth Places, or on the Earth; wherein they are deeper than the Bodies that occasion 'em, as receiving less reflex Light; yet still diminish as they depart further from their Cause; or on the neighbouring Bodies, where they are to follow the Form of the said Bodies, according to its Magnitude and its Position, with regard to the Lights.

For the 3d, In Shadows that have Parts, the Painter must observe to take for a Light in a shadow'd Place, the Tint, or Lustre of the light Part; and, on the contrary, for the Shadow in the lighten'd Part, the Tint, or Lustre in the Shadow: To make an agreeable Affsemblage of Colour, Shadow, and Reflex in the shadow'd Part; but without interrupting the great Masses of Shadows: To avoid forming little Things in the Shadow; as not being perceiv'd, unless closely look'd at; and to work, as it were, in the general, and at one sight: Never to set the strong Shadows against the Lights, without softening the harsh Contrast by the help of some intermediate Colour: tho' the Mass of Light may be plac'd either before or behind that of the Shadow; yet ought it to be so dispos'd, as to illumine the principal Parts of the Subject.

For the 4th, The Effects of Shadows are different, as the Place is either wide and spacious; as in those coming immediately from the Sun, which are very sensible, and their Extremes pretty abrupt; from the serene Air, which are fainter and more sweet; from the dark Air, which appear more diffus'd, and almost imperceptible; and those from an artificial Light, which makes the Shadow deep, and their Edges abrupt: or as it is more narrow and confin'd, where the Lights coming from the same Place; make the Shadow more strong, and the reflex less sensible. See COLOURING.

CLAIR OBFUSCÉ, CHIAIRO SCURO, is also us'd for a Design consisting only of two Colours; ordinarily black and white, sometimes black and yellow. See CAMIEX.

Or, it is a Design only wash'd with one Colour; the Shadows being of a dusky brown Colour, and the Lights heighten'd up with white.

The Word is also apply'd to Prints of two Colours, taken off at twice; wherein there are Volumes in the Cabinets of the Curious in Prints.

The Word *Chiar-Obfcuré* is a compound of two others. *Chiar* is us'd among the French for those Parts of a Painting which reflect the most Light; and comprehends not only the Lights themselves, but also those Colours that are luminous. By *Obfcuré*, is meant not only all the Shades, but also all the Colours that are dusky. See COLOUR.

CLAMEA *admittenda in virore per Attornatum*, is a Writ whereby the King commands the Justice in Eyre to admit ones *Clams* by an Attorney, who being employ'd in the King's Service, cannot come in Person.

CLAMOR, or CLAMEUR *de Hero*, a popular Term in the French Laws, importing a Complaint, or Cry, whereby any one implores the Assistance of Justice against the Oppression of another. See HERO.

Du Moulin calls it *Quirivatio Normannorum*. The *Hero* has the same Force with the Interdict *Retinenda possessionis*. The Person on whom the *Hero* is cry'd, is oblig'd to cease his Enterprize, and the Crier leads him before the Judge; where each gives Security, the one to pursue the *Hero*, the other to defend it.

In the mean time, the Thing in dispute is sequester'd into the hands of a third Person. Nor can the Judge annul the *Clameur de Hero*, without a Mandat.

This Custom has prevail'd in Normandy, since the Conquest of *Rouen*, or *Reau*. *Du Moulin* says, the Word *Hero* is form'd of *Hal Rou*; the Cry whereby they invoc'd that Prince.

CLAMP, in a Ship, a piece of Timber apply'd to a Mast, or Yard, to strengthen it, and prevent the Wood from bursting. See MAST.

CLAMP is also a little piece of Wood, in form of a Wheel, us'd instead of a Pulley in a Mortice.

CLAMP-NAILS, are such Nails as are us'd to fasten on Clamps, in building and repairing of Ships. See NAILS.

CLAMPING, in Joinery, &c. when a piece of Board is fitted with the Grain to the End of another piece of Board cross the Grain; the first Board is said to be clamp'd.

Thus the Ends of Tables are commonly clamp'd, to preserve them from warping.

CLANGULARIES, CLANGULARII, a Sect of Anabaptists, who deny'd the Necessity of making any open Profession of the Faith; and taught that a private one would be sufficient. See ANABAPTISTS.

These were also call'd *Horvularies*, and *Gardners*, from the Places they chose to assemble in, instead of Churches.

CLANDESTINE, any thing done secretly, and without the Knowledge of some of the Parties interest'd in it; or without the proper Solemnities.

Thus, a Marriage is said to be *Clandestine*, when perform'd without the Publication of Banns, the Consent of Parents, or the Knowledge of the Ordinary. See MARRIAGE.

The Council of *Tout*, and the French Ordinance annual all *clandestine* Marriages.

The Word comes from the Preposition *Clam*, of *clamo*, *clando*, I shut, or *clippa*, *furtum*, theft.

CLAP, in Medicine, the first Stage, or State of the Venereal Disease; call'd also a *Gonorrhoea*. See VENEREAL Disease, and GONORRHOEA.

Dr. *Cockburn*, and others after him, will have the *Clap* to consist in an Ulceration of the Mouths of the Glands of the *Urethra* in Men, and of the *Glandula Lacuna* in Women; occasion'd by the insinuation of an acrimonious, purulent Matter, contract'd from an infected Person in *Alia Coitus*.

From these Glands, issues, or gleans a sharp, corrosive Matter, accompany'd with heat of Urine, Cordice, &c. which makes what is usually term'd the first Stage of the Distemper. See CORDEX, &c.

A *Clap* appears sometimes sooner, and other times later, tho' generally in about three or four Days after the Infection is receiv'd; and discovers it self by the running, &c. of the Penis, with Inflammation of the Glands, or Nux of the Yard.

If the Person be affected with a *Phymosis*, or *Paraphimosis*; if the running be of a thin Consistence, a yellow or green Colour, and in great Quantity, and the Testicles swell'd, 'tis usually term'd a *Gonorrhoea Virulenta*; and the *Clap* suppos'd to be in its second Stage. See PHYMOSIS, &c.

Some Authors think, that in this Degree, or Stage, the Infection has reach'd the Mass of Blood, and the *Vesiculae Seminales*: others insist, that the Symptoms may be accounted for from the Running, or *Virus*, being more corrosive; and by that means irritating and inflaming the adjacent Parts.

The Cure of a *Clap* consists in proper Evacuations, as Calomel-Purgatives, Refrigerant-Emulsions, Pouders, &c. Turbith-Emetics, and lastly, proper Terobitics, &c. to which some add Decoctions of the *Lignum Fite*, &c. As to External, they are generally comprehended under the form of Fomentations, Cataplasms, Liniments, and Lotions.

Late Authors, and especially Dr. *Cockburn*, have insisted on the Cure of a *Clap* by a particular Injection, without the use of any other Medicine.

This has given a Handle to Quacks, who, by affecting to do the same by their Injections, generally check the Running, and make a confirm'd *Pox*.

Turbith-Mineral, Calomel, &c. given in small Doses, and continu'd for some time, so as to take effect by way of Alteratives, have been lately much commended as to Success. Mercerial Unguents, us'd in small Quantities, so as not to raise a Salivation, is said to cure all the Stages of the Venereal Disease: This Practice is usual in *Monspelier*, &c. See SALIVATION, MERCURY, &c.

Mr. *Becket*, in the *Philosophical Transactions*, attempts to show, that the Disease we now call a *Clap*, is the same with that our Forefathers call'd a *Burning*, or *Breuning*; under which Name it was known several hundred Years before the commonly suppos'd Origin of the Venereal Disease; and that the Apellation *Breuning*, &c. was only discontinued as that of *Clap* commenc'd.

In a MS. as old as Henry IV. *Arden*, Chirurgion to that Prince, describes *Breuning* to be a certain inward Heat and Excitation of the *Urethra*; which, Mr. *Becket* observes, gives us a perfect Idea of what we now call a *Clap*. For frequent Dissections of such as have labour'd under that Disease, have made it evident, that the *Urethra* is excoriated by the Virulency of the Matter they receive from the infected Woman: Which Excoriation, or Ulceration, he adds, is not confin'd to the *Ostia*, or Mouths of the mucous Glands of the *Urethra*, as has been lately imagin'd; but may equally attack any Part of the *Urethra*.

The heat, or burning which such Persons feel in making water, is a Consequence of this Excoriation of the *Urethra*; the Salts contain'd in the Urine pricking and irritating the nervous *Fibrille* of the Urine, thus divided of its natural Membrane. See BURNING.

CLARENCEUX, the second King at Arms; thus call'd from the Duke of *Clarence*, to whom he first belong'd. See KING at Arms.

Lionel, third Son of *Edward III.* having by his Wife the Honour of *Clare* in the County of *Thomson*, was hereupon created Duke of *Clarence*; which Dukedom afterwards escheating to *Edward IV.* he made this Herald, who properly belong'd to the Duke, a King at Arms; naming him *Clarenceux* in French, and *Clarencius* in Latin. See HERALD.

His Office is to marshal, and dispose of the Funerals of all the lower Nobility; as Barons, Knights, Esquires, and Gentlemen on the South side of *Trent*: whence he is also call'd *Surrey*, or *South-roy*, in contradistinction to *Norroy*. See *NORROY*.

CLARET, or **CLAIRET**, *Pale red*, a Name the *French* give to such of their red Wines as are not of a deep, or high Colour. See *WINE*.

The Word is a Diminutive of *clair*, clear, bright, transparent.

CLARET, **CLARETA**, in the ancient Pharmacy, was a kind of Wine impregnated with Aromatics; sometimes also call'd *Hippocras*, or *Vinum Hippocraticum*; because Hippocraes'd to have been first prescrib'd by *Hippocrates*.

It has its Name *Claret*, from its being clarify'd by Percolation thro' a Wine-Sack, or Bag, call'd *Hippocraes's* Sleeve.

CLARICORD, or *Manicord*, a Musical Instrument, in form of a Spinett. See *SPINETT*.

It has 49 or 50 Strops, and 70 Strings, which bear on five Bridges; the first whereof is the highest, the rest diminishing in proportion. Some of the Strings are in Unison; their Number being greater than that of the Strops.

There are several little Mortalses for passing the Jacks, arm'd with little Brass Hooks, which stop and rattle the Chords in lieu of the Feather us'd in *Virginals* and *Spinetts*. But what distinguishes it most, is, that the Chords are cover'd with pieces of Cloth, which render the Sound the sweeter; and deaden it so, as that it can't be heard to any considerable distance.

Hence some call it the *dumb Spinett*; whence it comes to be particularly in use among the Nuns, who learn to play, and are unwilling to disturb the Silence of the Dormitory.

The *Claricord* is more ancient than either the Spinett or Harpsicord; as is observ'd by *Scaliger*, who only gives it 35 Chords.

CLARIFICATION, in Chymistry, the Act of clearing, or fining of Liquors from their grosser Parts. See *REFINING*.

Clarification is perform'd by Ebullition, Despumation, and Colature or Filtration.

The Term is chiefly apply'd to Juices, Decoctions and Syrups, which are clarify'd by Filtration, or by passing 'em thro' a Strainer, after having beat them up into a Froth with the Whites of Eggs; the viscous Parts of the Eggs intangling the thick gross Particles of the Liqueur, retain them in the Strainer. See *FILTRATION*.

Sometimes the Mixture is boil'd; by which means, the Eggs intangle the grosser Parts, and carry them up to the Top in a tough Scum; which is either taken off with a Spoon, or separated by a Flannel Bag, as before, call'd *Hippocraes's* Sleeve. See *DESPUMATION*.

Another Method is, by letting the Liqueur stand in a convenient Vessel, till the grosser Particles settle.

In distill'd Waters, &c. which have a milky hue, or are turbid, it is generally effected with fine Sugar, mix'd with a small quantity of Alum; which will bear down the oily Parts, and leave the rest clear. See *DEPURATION*.

Many Liquours are clarify'd by passing them thro' a thick brown Paper; among others, *Hippocras*, *Hydromel*, &c. See *HYDROMEL*, &c.

Fine and delicate Wines are usually clarify'd with Fish-Glue: The thicker Wines with Omelette, or whites of Eggs diluted in Water. Sometimes with pouring them thro' a heap of little Chips. See *WINE*.

'Tis an Error to suppose that Fish-Glue, or Omelette, can be prejudicial to the Health; since both the one and the other fall down with the Lees, without producing any ill Effect. That which makes Wines unwholesome, is not the clarifying by these innocent means, but the Mixtures and Sophistications of the Vintners, to make 'em brisk, and bring them to life again after the Fret; which is done with Aqua vite, Spices, Pidgeons Dung, &c.

The Antients clarify'd their Wines by pouring them from off the Lees, into another Barrel, thro' a Tin Strainer.

Sugar is clarify'd with the Whites of Eggs and Sugar beat together. See *SUGAR*.

CLARIGATIO, or **CLARIGATION**, in the Law of Nations, a loud, clear Call, or Summons made to an Enemy, to demand Satisfaction for some Injury receiv'd; in defect whereof, recourse will be had to Reprisals.

Clarigatio is the same with what the *Greeks* call *δεδνμνλνλν*. See *ANDROLESIA*.

Nanda uses the Word in a somewhat different manner.

Reprisals, says he, signify the same as *pignorationes Budeo*, aut *Clarigationes Hermolao*: For, as to the *Greek*

Word *Androlesia*, it is equivalent to the Latin *pignori vendi potestas*.

CLARION, a kind of Trumpet, whose Tube is narrower, and its Tone acuter and shriller than the common Trumpet. See *TRUMPET*.

Nicod says, the *Clarion*, as now us'd among the *Moors*, and *Portuguese* who borrow'd it from the *Moors*, serv'd antiently for a Trible to several Trumpets, which founded

Tenor and Bass. He adds, that it was only us'd among the Cavalry and the Marines.

Menage derives the Word from the Italian *Clarion*, of the Latin *Clarus*, by reason of the Clearness of its Sound.

CLARION, in Heraldry, is a Bearing of this Figure. He bears Ruby three *Clarions* Topaz; being the Arms of the Earl of *Bath*, by the Name of *Greenville*.

Gaulin takes these *Clarions* to be a kind of old-fashion'd Trumpet; but others rather think, they represent the Rudder of a Ship; or else a Rolt for a Lance.

CLARO-OPSCURO. See *CLAIR-OPSCURE*.

CLASPERS, in Botany, are Tendrils, Threads, or Ligaments of a middle Nature between that of a Root and Trunk; whereby Shrubs, and other Plants, take hold of Trees, or other things near 'em, for their Support, &c.

The Wisdom of the Creator is very conspicuous, in this Provision for some Species of Plants, which need it; as *Ivy*, *Vines*, *Briony*, &c.

The Contrivance is various in various Subjects. *Malpighi* observes, that the *Claspers* of *Ivy* are roundish, and cover'd with Hair; and what is very remarkable, they yield a glutinous Terribiethic Humor, by means whereof they adhere closely to Stones, &c. Nature, he adds, uses no less Artifice in the *Vitis Canadensis*.

Claspers serve sometimes for Support only; as those of the *Vine*, *Briony*, &c. whose Branches being long, slender, and brittle, would be weigh'd down by their own load, and that of their Fruit; but for these *Claspers*, which by a natural Spire, or Circumvolution, catch hold of any adjacent body.

Claspers sometimes also serve for a Supply of Juice; as in the Trunk-Roots of *Ivy*, which being a tall Plant, and of a compact Substance, the Sap would not be sufficiently furnish'd to the upper Sprouts without this Expedient.

Claspers also sometimes serve for Stabilmēt, as those of Cucumbers; for Propagation, as those of Camomile; and for Shade, Stabilmēt, and Propagation all together, as those of Strawberries.

CLASS, or **CLASSIS**, a distribution of Persons, or Things, arranged them according to their Merit, Value, or Nature.

The Word comes from the Latin *Classis*, of the *Greek* *κλασν*, *congrego*, *convoco*; a *Class* being nothing but a multitude, assembled apart.

CLASS, **CLASSIS**, in Antiquity. See *CLASSIC*.

CLASS is particularly us'd for a Distinction among Scholars; and are distributed into several *Classes*, or *Forms*, according to their Capacities and Attainments.

Quintilian uses the Word *Classis* in this Sense in the 11th Book of his *Institutiones*.

CLASSIC, **CLASSICAL**, a Term seldom us'd but for Authors read in the *Classes*, at Schools, and who are in great Authority there. See *SCHOOL*.

Aquinas, and the *Master of the Sentences* are *Classic* Authors in the School Divinity; *Aristotle*, in Philosophy; *Cicero* and *Virgil* in the Humanities. *Aulus Gellius* ranks among *Classic* Authors, *Cicero*, *Cesar*, *Salust*, *Virgil*, *Horace*, &c.

The Term seems properly applicable only to Authors who liv'd in the Time of the Republic and the *Augustan* Age, when the *Latin* was in its Perfection. It appears to have taken its rise hence, that an Estimate of every Person's Estate being appointed by *Servius Tullius*, he divided the *Roman* People into six Bands, which he call'd *Classes*.

The Estate of those of the first *Classis* was not to be under 200 Pounds: And these, by way of Eminence, were call'd *Classes*, *Classici*. Hence, Authors of the first Rank came to be call'd *Classici*: all the rest were said to be *infra Classici*.

The first *Classis*, again, was subdivided into *Centuries*; making fourscore Centuries of Footmen, and eighreen of Horsemen. See *CENTURY*.

Each *Classis* consisted, one half of the younger sort, who were to make War abroad; and the other of old Men, who staid at home for the Defence of the City.

CLAVICULÆ, *Clavicle Bones*, in Anatomy, two small Bones, situate at the Basis of the Neck, and atop of the Breast. See *NECK*, *THORAX*, &c.

They are about half a Foot long, of the thickness of a Finger, and a little bent at each end, and that different ways, somewhat like the Letter S; and are thus call'd, as being the Keys, or Claves of the *Thorax*.

Their inner Substance is spongy; whence they are brittle, easily broke, and easily coalescing again.

They are join'd to the *Acromion* of the *Scapula* per *Symphondrosin*; and on the Forepart, per *Artrodiosin*, to a Sinus on each side of the Upper-part of the *Sternum*.

Their Use is, to fix the *Scapula* with the *Sternum* and the Arms, and to prevent 'em from slipping too forward upon the *Thorax*.

CLAVIS, a Latin Word, sometimes us'd in *English* Writers for a Key. See *KEY*.

CLAUSE, an Article, or particular Stipulation in a Contract; a Charge, or Condition in a Testament, &c.

We say, *Derogatory Clause*, *Penal Clause*, *Codicillary Clause*, *Resolutive Clause*. See each of these in its Place, DEROGATORY, PENAL, &c.

CLAUSUM *Fregit*, an Action of Trespass; thus call'd, by reason the Writ demands the Person summon'd to answer to *quare clausum fregit*, why he committed such a Trespass. See *TRESPASS*.

CLAVUS, in Antiquity, a Band or Filler of Purple, more or less broad, according to the Dignity of the Person; as'd among the ancient Romans: whence the Difference of the *Tunica Jugularis*, and *Laticlavus*. See *LATICLAUVS*, &c.

This Ornament, according to some, was call'd *Clavus*, Nail; as being set with little round Plates of Gold, or Silver, like the Heads of Nails. *Cassellius* maintains, that the *Clavus* consisted of a kind of Purple Flowers, sewed upon the Staff.

CLAVUS, in Medicine, a Name Physicians give to a shooting Pain in the Head, commonly situate a little above the Eyes, viz. on the *Sinus Frontalis*; and suppos'd to resemble a boring of the Head thro' with an Aggre; whence the Name. In some 'tis only in one, and in others in both.

'Tis generally allow'd to be a Species of an Ague, or an intermitting Fever; its Periods of coming or going, being usually regular or fix'd. In some 'tis Quotidian, in others Tertian. See *FEVER*.

The Cure consists in giving an Emetic a little before the Fit, and after, confirming it with a proper Quantity of the Cortex, &c. as in intermitting Fevers: the Bleeding and Diaphoretics sometimes effect a Cure without other Assiliants.

A Pain like in this, on the top of the Head, sometimes attacks hysterical Persons; which by Dr. *Sydenham* is term'd *Clavus Hystericus*. See *HYSTERIC*.

CLAVUS is also us'd in Medicine, for a Callus form'd on the Toes; popularly call'd a *Corn*. See *CALLUS*.

Clavus arise from a too great Compression of the *Cutis*; which by this means hardens, and forms it self into a Knot. The Cure is by softening 'em, as with *Emplastr. de Ranis cum Mercurio*, or *Amygdal. Galban. Creat.* with Sal *Ammoniac*; and then plucking 'em up. A piece of raw Beef, apply'd in manner of a Plaster, and frequently shifted, is found to dissipate 'em in a little time.

CLAY, in Natural History, a soft viscous Earth, found in various Places, and us'd for various Purposes, of several Kinds and Properties. See *EARTH*, *SOIL*, &c.

Dr. *Lister*, in the *Philosophical Transactions*, gives us a Table of 22 several Clays found in the several Counties of England; five whereof he calls *pure*, i. e. such as are soft, like Butter, to the Teeth, with little or no Grittiness in 'em, viz. 1. *Fullers Earth*, which he distinguishes by its Colour into yellowish, brown, and white. See *FULLERS EARTH*.

2. *Bales*. See *BOLL*.

3. *Pale yellow Clay*. 4. *Cowfoot Clay*. 5. *Dark blue Clay*, or *Maric*.

Seventeen *impure*; whereof eight are harsh and dusty when dry: as, 1. *Creta*, or milk-white Clay. 2. *Potters pale yellow Clay*. 3. *Blue Potters Clay*. 4. *Blue Clay*, wherein is found the *Aprotes*. 5. *Yellow Clay*. 6. *Fire red Clay*. 7. *Soft chalky blue Clay*. 8. *Soft chalky red Clay*.

Three are stony when dry, viz. 1. A red stony Clay. 2. A blue stony Clay. 3. A white stony Clay.

Three are mix'd with Sand, or Pebbles, viz. 1. a yellow Loam. 2. A red sandy Clay. 3. A second Species of the same Kind.

Lastly, three are mix'd with flat or thin Sand, glittering with *Mica*: viz. 1. *Crouch white Clay*. 2. *Grey or bluish Tobacco pipe Clay*. 3. A red Clay.

CLAYES, in Fortification, are Wattles made with Stakes, interwove with Osiers, &c. to cover Lodgments. See *FASCINES*.

CLAYING of Land. See *MANURE*.

CLEAR, in Building, is sometimes us'd among the Workmen for the inside Work of a House, &c. See *HOUSE*, &c.

CLEARING of Liquors. See *CLEARIFICATION*.

For Malt Liquors, particularly Beer, there are various Methods of clearing; the best is by casting into it fix'd Nitre: some add the Quintessence of Malt and Wine; whites of Eggs made into Balls with a little Flower sd *Ising-glass*; Oil and Quintessence of Barley have the same Effect. It is exceedingly clear'd and strengthen'd, by adding to it, during the time of its Fermentation, some ardent Spirit. See *MALT*, *LIQUOR*, *BEER*, &c.

CLECHE', or CLECHE'E, in Heraldry, is usually understood of an Ordinary open to the Light, or pierc'd thro' with another inner one of the same Figure; e. g. when a Cross appears as if charg'd with another Cross of the same Colour with the Field; or as if the Field appear'd thro' the Apertures thereof.

But *Columbiere*, and some other Writers, will have this piercing to be only a Circumstance of

the Cross *Cleche'*, and call it by the Name *Vuid'*, voided. The thing that denominates it *Cleche'*, is its spreading from the Centre towards the Extremities, which are very wide, and end in an Angle in the middle; as in the Figure adjoining.

The Word is *French*, suppos'd to be form'd of *Clef*, Key; the Ends of the Cross being thought to bear some resemblance to the Bowls of the ancient Keys.

CLEDONISM, CLEDONISMUS, a kind of Divination in use among the Antients. See *DIVINATION*.

The Word is form'd from the *Greek κλεδονισμ*, which signifies two things, *Remor*, a Report, and *Avia*, a Bird: In the first Sense, *Cledonifus* is a kind of Divination drawn from Words occasionally utter'd. *Cicero* observes, that the *Pythagoreans* made Observation not only of the Words of the Gods, but of those of Men; and accordingly believ'd the pronouncing of certain Words, v. g. the Word *Incendum*, at a Meal, very unhappy.

Thus, instead of *Prison*, they us'd the Word *Demicitium*; and to avoid *Erimetes*, said *Ennemidet*.

In the second Sense, *Cledonifus* should seem a Divination drawn from Birds; the same with *Ornithomantia*. See *ORNITHOMANCY*.

CLEF, CLIFFE, or Key, in Musick, a Mark at the Beginning of the Lines of a Song, which shews the Tune, or Key in which the Piece is to begin. Oft, it is a Letter mark'd on any Line, which explains and gives the Name to all the rest. See *KEY*.

Antiently, every Line had a Letter mark'd for a *Clef*; now a Letter on one Line suffices: since by this all the rest are known; reckoning up or down in the Order of the Letters.

'Tis call'd the *Clef*, or *Key*, because hereby we know the Names of all the other Lines and Spaces; and consequently the Quantity of every Degree, or Interval.

But because every Note in the Octave is call'd a *Key*, tho in another Sense, this Letter mark'd, is call'd in a particular manner the *Sign'd Clef*; because being written on any Line, it not only signs and marks that one, but explains all the rest.

By *CLEF*, therefore, for distinction-sake, we mean that Letter sign'd on a Line, which explains the rest; and by *Key* the principal Note of a Song, in which the Melody closes.

There are three of these *Sign'd Clafs*, c, f, g. The *Clef* of the highest Part in a Song, call'd *Treble*, or *Alt*, is g set on the second Line counting upwards. The *Clef* of the Bass, or the lowest Part, is f on the fourth Line upwards: For all the other mean Parts, the *Clef* is c, sometimes on one, sometimes on another Line. Indeed, some that are really mean Parts, are sometimes set with the g *Clef*. See *BASS*, &c.

It must, however, be observ'd, that the ordinary Signatures of *Clafs* bear little resemblance to those Letters. Mr. *Malesm* thinks it would be well if we us'd the Letters themselves. *Kepler* takes a world of Pains, to shew that the common Signatures are only Corruptions of the Letters they represent. See their Figure among the other CHARACTERS of *Musick*.

The *Clafs* are always taken Fifths to one another: That is, the *Clef* f is lowest, c a Fifth above it, and g a Fifth above c.

When the Place of the *Clef* is chang'd, which is not frequent in the mean *Clef*, 'tis with Design to make the System comprehend as many Notes of the Song as possible, and so to have the fewer Notes above or below it. If then there be many Lines above the *Clef*, and few below it, this Purpose is answer'd by placing the *Clef* in the first or second Line: If there be many Notes below the *Clef*, 'tis plac'd higher in the System. In effect, according to the Relation of the other Notes to the *Clef* Note, the particular System is taken differently in the Scale; the *Clef* Line making one in all the Variety. See *SCALE*.

But still, in whatever Line of the particular System any *Clef* is found, it must be understood to belong to the same of the general System, and to be the same individual Note or Sound in the Scale.

By this constant Relation of *Clafs*, we learn how to compare the several particular Systems of the several Parts; and know how they communicate in the Scale, i. e. which Lines are Unison, and which not: for 'tis not to be suppos'd that each Part has certain Bounds, within which another must never come. Some Notes of the Treble, v. g. may be lower than some of the mean Parts, or even of the Bass. To put together therefore in one System all the Parts of a Composition written separately, the Notes of each Part must be plac'd at the same Distances above and below the proper *Clef*, as they stand in the separate System; and because all the Notes that are consonant, (or heard together) must stand perpendicularly over each other, that the Notes belonging to each Part may be distinctly known, they may be made with such Differences as shall not confound or alter their Significations with respect to Time, but only shew that they belong to this or that Part. Thus shall we see how

the Parts change and pass thro' one another; and which, in every Note is highest, lowest, or unison.

The Use of particular *Sign'd Clefts* then, is an Improvement with respect to the Parts of any Composition; for unless some one Key in the particular Systems were distinguish'd from the rest, and refer'd invariably to one Place in the Scale, the Relations could not be distinctly mark'd.

It must here be observ'd, that for the Performance of any single Piece, the *Cleft* only serves for explaining the Intervals in the Lines and Spaces; so that we need not regard what Part of any greater System it is; but the first Note may be taken as high or as low as we please. For the proper Use of the Scale is not to limit the absolute Degree of Tone; so for the proper Use of the *Sign'd Cleft*, is not to limit the Pitch at which the first Note of any Part is to be taken; but to determine the Tune of the rest with relation to the first: And considering all the Parts together, to determine the Relations of their several Notes by the Relations of their *Clefts* in the Scale: Thus, the pitch of Tune being determin'd in a certain Note of one Part; the other Notes of that Part are determin'd by the constant Relations of the Letters of the Scale, and the Notes of the other Parts by the Relations of their *Clefts*.

In effect, for performing any single Part, the *Cleft* Note may be taken in any Octave, *i. e.* at any Note of the same Name, provided we do not go too high or too low for finding the rest of the Notes of a Song. But in a Concert of several Parts, all the *Clefts* must be taken, not only in the Relations, but also in the Places of the System above-mention'd; that every Part may be comprehended in it.

The difference of *Clefts* in particular Systems, makes the Practice of Musick much more difficult and perplex'd than it would otherwise be; both with respect to Instruments, and to the Voice. This occasion'd Mr. *Salmon* to propose a Method of reducing all Musick to one *Cleft*; whereby the same Writing of any Piece of Musick, should equally serve to direct the Voice, and all Instruments; which he calls an *Universal Character*.

The Natural and Artificial Note express'd by the same Letter, as *c* and *c* \times ; are both set on the same Line or Space. When there is no Character of Flat or Sharp at the beginning with the *Cleft*, all the Notes are Natural: and if in any particular Place the Artificial Note be requir'd, 'tis signify'd by the Sign of a Flat or Sharp set on the Line a Space before that Note.

If a Sharp or Flat be set at the beginning in any Line or Space with the *Cleft*, all the Notes on that Line or Space are Artificial ones; *i. e.* are to be taken a Semitone higher or lower than they would be without such Sign. The same affects all their Octaves above and below, tho' they be not mark'd so. In the Course of the Song, if the Natural Note be sometimes requir'd, 'tis signify'd by \natural .

The marking of the System thus by Flats and Sharps, Mr. *Maskein* calls the *Signature of the Clefts*. See NOTE, TUNE, TRANSPOSITION, FLAT, SHARP, &c.

CLEMENTINE, a Term in use among the *Augustines*, who apply it to a Person, who after having been nine Years a Superior, ceases to be so, and becomes a private Monk, under the Command of a Superior.

The Word has its rise hence, that Pope *Clement*, by a Bull, prohibited any Superior among the *Augustines* from continuing above nine Years in his Office.

CLEMENTINES, in the Canon Law, are the Constitutions of Pope *Clement* V. and the Canons of the Council of *Vienne*. See CANON.

CLEPSYDRA, a kind of Water-Clock, or Hour-Glass, serving to measure Time by the Fall of a certain quantity of Water. See CLOCK, &c.

There have likewise been *Clepsydras* made with Mercury. The *Egyptians* by this Machine measur'd the Course of the Sun. *Tycho Brahe*, in our Days, made use of it to measure the Motion of the Stars, &c. and *Dudley* us'd the same Contrivance in making all his Maritime Observations.

The Use of *Clepsydras* is very ancient: They were invented in *Egypt* under the *Pharaohs*; as were also Sand-Dials. Their Use was chiefly in the Winter; Sand-Dials serv'd in the Summer. They had two great Defects; the one, that the Water run out with a greater or less facility, as the Air was more or less dense: The other, that the Water run out more readily at the Beginning, than towards the Conclusion.

M. *Anonimus* has invented a *Clepsydra* free from both these Inconveniences, and which has the three grand Advantages, of serving the ordinary Purpose of Clocks; of serving in Navigation for the Discovery of the Longitude; and of measuring the Motion of the Arctics.

The Word comes from *κλεψιδρα*, *κεκλειστος*, and *δραμα*, *αγμα*. The Word *Clepsydra* is also us'd for an Hour-Glass of Sand. For the Construction of a CLEPSYDRA.

Problem. To divide any cylindric Vessel into Parts, to be

employ'd in each Division of Time; the Time wherein the vessel, and that wherein any Part is to be evacuated, being given.

Suppose, *v. g.* a cylindric Vessel, whose Charge of Water flows out in twelve Hours, were required to be divided into Parts to be evacuated each Hour. 1. As the part of Time 1 is to the whole Time 12, so is the same Time 12 to a fourth Proportional, 144. 2. Divide the Altitude of the Vessel into 144 equal Parts: Here, the last will fall to the last Hour; the three next above to the last Part but one; the five next to the tenth Hour, &c. Lastly, the 23 last to the first Hour.

For, since the Times increase in the Series of the Natural Numbers 1 2 3 4 5, &c. and the Altitudes, if the Numeration be in a retrograde Order from the twelfth Hour, increase in the Series of the unequal Numbers 1 3 5 7 9, &c. the Altitudes computed from the twelfth Hour, will be as the Squares of the Times 1 4 9 16 25, &c. Therefore, the Square of the whole Time 144, comprehends all the Parts of the Altitude of the Vessel to be evacuated. But a third Proportional to 1 and 12 is the Square of 12; and consequently it is the Number of equal Parts into which the Altitude is to be divided, to be distributed according to the Series of the unequal Numbers, thro' the equal Intervals of Hours.

Since, in lieu of Parts of the same Vessel, other less Vessels equal thereto may be substituted; the Altitude of a Vessel emptied in a given Space of Time being given, the Altitude of another Vessel to be emptied in a given Time may be found; *vis.* by making the Altitudes as the Squares of the Times.

Hence we see the Method of constructing the *Clepsydras* us'd by the Antients.

CLERGY, *Clerus*, the Assembly or Body of Clerks, or Ecclesiastics. See CLARA.

In the *Romish* Church there are two Kinds of Clergy; the one *Regular*, comprehending all the Religious of both Sexes; the other *Secular*, comprehending all the Ecclesiastics that don't make the Monastic Vows. See REGULAR, &c.

Among the *Reformed*, there are none but *Secular Clergy*. See ECCLESIASTIC.

The *Roman Clergy* forms a Monarchical State, under the Pope, who is the Head thereof. See POPE, HIERARCHY, &c.

The Clergy was antiently divided into three Orders, *vis.* *Priests*, *Deacons*, and *inferior Clerks*; and each Order had its Chief: the Arch-Priest was the Head of the first Order, the Archdeacon of the second, and the Dean of the third. See PRIEST, DEACON, ARCHDEACON, DEAN, ARCH-PRIEST, &c.

Under the Name of Clergy, were also formerly compris'd all the Officers of Justice; as being suppos'd to be Men of Letters. See CLERK.

Tho' the Clergy formerly claim'd an Exemption from all Secular Jurisdiction, yet *Matt. Paris* tells us, *William* the Conqueror subjected the Bishops and Abbays who held *per Baroniam*, and who till then had been exempt from all Secular Service; and order'd they should be no longer free from Mortuary Services. To this purpose he preferib'd arbitrarily what Number of Soldiers every Abbey and Bishoprick should provide, to serve him and his Successors in War, and laid up these Registers of Ecclesiastical Servitude in his Treasury.

But, in effect, the Clergy were not exempt from all Secular Service till then; as being bound by the Laws of King *Edgar* to obey the Secular Magistrate in three Things, *vis.* upon an Expedition to the Wars, and in contributing to the Building and Repairing of Bridges, &c.

The Privileges of the English Clergy are still very considerable: Their Goods pay no Toll in Fairs or Markets; they are exempt from all Offices, but their own; from the King's Carriages, Posts, &c. from appearing at Sheriffs *Tourns*, or Frank-Pledges; and are not to be fined or amerced according to their Spiritual, but their Temporal Means.

A Clergyman acknowledging a Statute, his Body shall not be imprison'd: If he be convict of a Crime, for which the Benefit of the Clergy is allow'd, he shall not be burnt in the Hand; and he shall have the Benefit of the Clergy in infinitum, which no Layman can have but once.

The Clergy are not to be burden'd in the general Charges with the Laity; nor to be moubled or incumber'd, unless expressly nam'd and charg'd by the Statute; for general Words don't affect them. Thus, if a Hundred be sued for a Robbery, the Minister shall not contribute; tho' the Words are, *Genes demorantes*: neither are they affect'd to the Highway, to the Watch, &c.

The Revenues of the Clergy were antiently more considerable than at present: *Erbevelobus*, in 855, gave them the Title of all Goods, and the Tenth of all the Lands in *England*; free from all Secular Services, Taxes, &c. See TITLE.

The Charter whereby this was given them, was confirm'd by several of his Successors, *Edmund*, *Edgar*, *Erbeired*, *Affred*, and *William* the Conqueror; which last, finding the Bishops too rich, erected them all into Baronies; each Barony containing 12 Knights Fees, at least. But since the Reformation

tion the Bishopsricks are much impair'd. See BISHOPRICK, DIOCESS, &c.

The Revenues of the inferior Clergy, in the general, are small; a third Part of the best Benefices being anciently, by the Pope's Grant, appropriated to Monasteries; upon the Dissolution whereof they became Lay-Fees. See ABBEY, FEE, &c.

Indeed, an Addition was made 2^d Anne; the whole Revenue of First-Fruits and Tenths being then granted, to raise a Fund for the Augmentation of the Maintenance of the Poor Clergy: pursuant to which, a Corporation was form'd, by the Name of the *Governours of the Bounty of Queen Anne, for the Augmentation of the Maintenance of the Poor Clergy*; to whom the said Revenues were convey'd in Trust, &c. See AUGMENTATION.

CLERGY is also us'd for an ancient Liberty of the Church, confirm'd by several Acts of Parliament; consisting in this, that when a Priest, or one in Orders, was arraign'd of Felony before a secular Judge, he might pray his Clergy, i. e. he might pray to be deliver'd to his Ordinary, to purge himself of the Crime objected against him.

This was admitted, even in Cases of Murder: But several Statutes made in aftertimes have abridg'd and restrain'd this Privilege.

The ancient Course of the Law is now much alter'd on this Head; for by the Stat. 18 Eliz. cap. 7. Clerks are no more committed to their Ordinaries to be purg'd; but every Man to whom the Benefit is granted, tho' not in Orders, is put to read at the Bar, after he is found guilty, and convicted of such Felony; and so, burnt in the Hand, and set free for the first time, if the Ordinary's Commissioner, or Deputy standing by, do say, *Legit ut Clericus*; otherwise he suffers Death.

CLERICO *Admittendo*, in Law, a Writ directed to the Bishop, for the admitting a Clerk to a Benefice upon a *Ne admittas*, try'd, and found for the Party who procures the Writ.

CLERICO *capto per Statutum Mercatorum*, is a Writ for the Delivery of a Clerk out of Prison, who is imprison'd upon the Breach of Statute Merchant.

CLERICO *contra commissio Gaule in defectu Ordinarii deliberando*, is a Writ for the Delivery of a Clerk to his Ordinary, that was formerly convicted of Felony; by reason his Ordinary did not challenge him according to the Privilege of Clerks.

CLERICO *intra sacros Ordines constituto non eligendo in officium*, is a Writ directed to the Bailiffs, &c. that have intrud a Bailiwick or Benefice upon one in Holy Orders; charging them to release him.

CLERK, *Clericus*, an ancient Word, formerly us'd to signify a learned Man, or Man of Letters.

Thus, *Procurator* observes, the Officers of the Counts, *Comites*, were anciently created under the Title of Clerks of *Accounts*; and Secretaries of State were call'd Clerks of the Secret. So, *Clericus Domini Regis*, in the Time of Edward I. was english'd, the King's Secretary, or Clerk of his Council.

This Term, Clerk, was apply'd indifferently to all who made any Profession of Learning; or who knew how to manage the Pen: tho' originally it was appropriated to Ecclesiastics.

As the Nobility and Gentry were usually brought up to the Exercise of Arms; there was none but the Clergy left to cultivate the Sciences: Hence, as it was the Clergy alone who made any Profession of Letters, a very learned Man came to be call'd a great Clerk; and a stupid ignorant Man, a bad Clerk.

Roussard, in his old Language, uses the Word femininely, *Clergesse* for a learned Woman.

Mais trop plus est à craindre une femme Clergesse.

The Word Clerk, and its Derivatives, come from the Greek *κλῆρ*, us'd for Clergy, but more properly signifying Lot, or Heritage; in regard the Lot, and Portion of Clerks or Ecclesiastics is to serve God.

Accordingly, *Clerus* was at first us'd to signify those who had a particular Attachment to the Service of God.

The Origin of the Expression is deriv'd from the Old Testament, where the Tribe of Levi is call'd the Lot, *Hereditas*, *κλῆρ*; and God is respectively call'd their Portion; by reason that Tribe was consecrated to the Service of God, and liv'd on the Offerings made to God, without any other settled Provision as the rest had. See CLERGY.

CLERK is also us'd in the general for all those of the Ecclesiastical State, or who are in Orders, of any Degree, or Kind; from the Deacon to the Prelate. See ORDERS, DEACON, BISHOP, &c.

Yet, in its utmost Latitude, the Word also includes *Chantors*, *Acolyths*, *Exorcistes*, and *Qstariis*. See CHANTOR, ACOLYTH, EXORCIST, &c.

In this Sense, the CONGREGATION communicate all those who lay hands on a Clerk. See ORDERS, ECCLESIASTIC, PRIEST, &c.

A Council held in Africa, prohibited the appointing any Clerk to be a Tutor, Guardian, or Curator, by Testament. The Council of Elvira enjoins Continence on all Clerks, Bishops, Priests, and Deacons, on Pain of being stripp'd of their Clericature. See CELEBRATE.

Acceptatus CLERK, in the 11th Century, was a Name given to those Clerks who separated from the Bishop, and chose not to live any longer in Community with him; in contradistinction to *Canon*-CLERKS, who continu'd to live with the Bishop, according to the Canons. See CANON.

CLERK, is also a Title given to several Officers in the Royal Palace, the Courts of Justice, Revenue, Army, Navy, &c. The principal of these are as follow.

CLERK of the *Acts*, is an Officer of the Navy, who receives and enters the Commissions and Warrants of the Lord Admiral; and registers the Acts and Ordinances of the Commissioners of the Navy. See NAVY, ADMIRAL, &c.

CLERK of *Assize*, is he that writeth all things judicially done by the Justices of Assize, in their Circuits. See ASSIZE.

CLERK of the *Check*, is an Officer in Court; so call'd, because he hath the Check and Controlemore of the Yeomen of the Guard, and all other ordinary Yeomen, or Uffers, belonging either to the King, Queen, or Prince; giving leave, or allowing their Absence, or Defects in Attendance; or diminishing their Wages for the same. See CHECK.

CLERK of the *Crown*, an Officer in the King's Bench Court, whose Business is to read, frame, and record all Indictments against Traytors, Felons, and other Offenders there arraign'd upon any publick Crime. See CROWN.

CLERK of the *Gift*, is a Divine; or otherwise called *Confessor to his Majesty*; whose Office is to attend at the King's right Hand during Divine Service, to resolve all Doubts concerning Spiritual Matters, to wait on the King in his private Oratory, &c. See CLOSER.

CLERK of the *Crown*, in Chancery, an Officer, who by himself, or Deputy, is continually to attend the Lord Chancellor, or Lord Keeper, for special Matters of State, by Commission, or the like either immediately from his Majesty, or by Order of his Council; as well ordinary as extraordinary: Also all general Pardons, upon Grants of them at the King's Coronation or in Parliament, the Writs of Parliament, with the Names of the Knights, Citizens, and Burgesses, are return'd into this Office. He hath also the making of special Pardons, and Writs of Execution upon Bonds of Statute Seple forfeited.

CLERK of the *Deliveries*, is an Officer in the Tower, who takes Indentures for all Stores issued thence. See TOWER.

CLERK of the *Enrollments of Fines and Recoveries*, is an Officer in the Court of Common Pleas, under the three Elder Judges of that Court, and removable at their Pleasure. See ENROLLMENT.

CLERK of the *Errors*, in the Court of Common Pleas, transcribes and certifies into the King's Bench the Tenor of the Records of the Cause, or Action, upon which the Writ of Error is brought there to be determin'd. See ERRORS.

CLERK of the *Errors*, in the King's Bench, does likewise transcribe, and certify the Records of such Causes in that Court into the Exchequer; if the Cause, or Action, is by Bill. See KING'S BENCH.

CLERK of the *Errors*, in the Exchequer, transcribes the Records certifi'd thither out of the King's Bench; and prepares them for Judgment in the Court of Exchequer, to be given by the Justice of the Common Pleas, and Barons there. See EXCHEQUER.

CLERK of the *Effoigns*, is an Officer belonging to the Court of Common Pleas; who keeps the Effoign-Roll, or enters Effoigns. He also provides Parchment, cuts it into Rolls, makes the Number on them; delivers out all the Rolls to every Officer, and receives them again when written. See ESSOIGN.

CLERK of the *Estreats*, belongs to the Exchequer; and every Term receiveth the Estreats out of the Lord Treasurer's Remembrancer's Office, and writeth them out to be lev'd for the King. He also maketh Schedules of such Sums citrated as are to be discharg'd. See ESTRAT.

CLERK of the *Hampers*, or *Hampers*, or *Warden of the Hamper*; is an Officer in Chancery, whose Business is to receive all Money due to the King for the Seals of Charters, Patents, Commissions, and Writs; as also Fees due to the Officers for enrolling and examining the same. He is oblig'd to attend on the Lord Chancellor, or Lord Keeper daily in Term time; and at all Times of Sealing. See HAMPER.

CLERK of the *Juries*, or *Curata* Writs, is an Officer belonging to the Court of Common Pleas; who maketh out the Writs call'd *Habeas Corpus*, and *Distingas*, for the Appearance of the Jury, either in Court, or at the Assizes; after the Panel is return'd upon the *Venire Facias*. See JURY.

CLERK *Comptroller of the King's House*, an Officer of the Court, who has Place and Seat in the Compting-House; with Authority to allow or disallow the Charges and Demands of Pursuivants, and Messengers of the green Cloth, Parvey-

nes, &c. He has also the oversight of all Defaults and Mifcarriages of inferior Officers; and fits in the Compting-Houfe with the fuperior Officers, viz. the Lord Steward, Treasurer, Comptroller, and Cofferer, for the correcting and redreffing things out of order. See **HOUSEHOLD**, and **COMPTING-HOUFE**.

CLERK of the King's great Wardrobe, is an Officer of the King's Houfe, that keepeth an Account, or Inventory in Writing, of all things belonging to the King's Wardrobe. See **WARDROBE**.

CLERK of the King's Silver, is an Officer belonging to the Common Pleas; to whom every Fine is brought, after it has been with the *Custos Brevirum*; and by whom the Effect of the Writ of Covenant is enter'd into a Paper Book; and according to that Note, all the Fines of that Term are alfo recorded in the Rolls of the Court. See **SILVER-Office**.

CLERK of the Market, is an Officer of the King's Houfe; whofe Duty is to take charge of the King's Meafures, and to keep the Standards of them: that is, Examples of all the Meafures that ought to be us'd thro' the Land. See **STANDARD**.

CLERK-Marshal of the King's Houfe, feems to be an Officer that attends the Marshal in his Court, and recordeth all his Proceedings.

CLERK of a Merchant Ship, is an Officer appointed to take care that nothing be fquander'd, or fpend needlefly. See **SHIP**.

He is oblig'd to keep a Register, or Journal, containing an exact Inventory of every thing in the Loading of the Vefel; as the Rigging, Apparel, Arms, Provision, Munition, Merchandifes: as alfo the Names of the Paflengers, if there be any; the Freight agreed on; a Lift of the Crew; their Age, Quality, Wages; the Bargains, Purchafes, Sales, or Exchanges the Ship makes from its Departure; the Confumption of Provision; and in fhort, every thing relating to the Expence of the Voyage. He alfo registers the Conftitutions of the Captains, Pilots, &c.

He alfo does the Office of a Register in all criminal Proceedings; and of a Notary, to make and keep the Wills of thofe who die in the Voyage; takes Inventories of their Effects, &c. The Clerk is not allow'd to quire the Vefel during the Voyage, on Forfeiture of all his Wages, &c.

In fmall Vefels, the Mafter, or Pilot, does the Office of Clerk. See **MASTER**.

CLERK of the Nichils, or Nibils, is an Officer in the Exchequer, that maketh a Roll of all fuch Sums as are nibbled by the Sheriffs upon their Eftreats of green Wax; and delivers the fame into the Lord Treasurer's Remembrancer's Office, to have Execution done upon them for the King. See **NIHIL**.

CLERK of the Ordnance, is an Officer in the Tower; who registers all Orders relating to the King's Ordnance. See **ORDNANCE**.

CLERK of the Outlawries, is an Officer belonging to the Court of Common Pleas; being a Deputy to the King's Attorney-General, for making out the Writs of *Capias ut legatum*, after Outlawry; and the King's Attorney's Name is to every one of thofe Writs. See **OUTLAWRY**.

CLERK of the Paper-Office, is an Officer of the King's Bench. See **PAPER-Office**.

CLERK of the Parcels, an Officer of the Exchequer. See **EXCHEQUER**.

CLERK of the Parliament, is he that recordeth all Things done in the Parliament; and engroffeth them fady into Parchment Rolls, for their better keeping to Pofterity. See **PARLIAMENT**.

Of thofe there are two, one of the *higher*, or Houfe of Lords; and the other of the *lower*, or Houfe of Commons.

CLERK of the Patents, or Letters Patent under the Great Seal. See **PATENT**.

CLERK of the Peace, is an Officer belonging to the Seffion of the Peace; whofe Duty is at the Seffion to read the Indictments, to enroll the Afts, and draw the Procefs; to enroll Proclamations of Rates for Servants Wages; to enroll the Difcharge of Apprentices; to keep the Counterpart of the Indenture of Armour, &c. Alfo to certify in the King's Bench Transcripts of Indictments, Outlawries, Attainders, and Convictions, had before the Juftices of the Peace within the Time limited by Statute. See **PEACE**.

CLERK of the Pell, belongs to the Exchequer: His Buftness is, to enter the Teller's Bills into a Parchment Roll, call'd *Pellis receptorum*; and alfo to make another Roll of Payment, call'd *Pellis exituum*; wherein he fetts down by what Warrant the Money was paid. See **PELL**.

CLERKS of the Petty Bag, is an Officer in Chancery, whereof there are three; the Mafter of the Rolls being their Chief. See **CHANCERY**.

Their Office is to record the Return of all Inquisitions out of every County; all Liveries granted in the Court of Wards; all *Offes les mannes*: to make all Patents of Customers, Gaugers, Comptrollers, and Afnagers; Summons of the Nobility, Clergy, and Burgeffes to the Parliament; Commitfions directed to Knights and others, of every Shire, for raifing

of Subfidies; Writs for nomination of Collectors for the Fifteenths; and all Traverfes upon any Office, Bill, or otherwise; and to receive the Money due to the King for the fame. See **PETTY-BAG**.

CLERK of the Pipe, belongs to the Exchequer; who having all Accounts and Debts due to the King delivered and drawn out of the Remembrancer's Office, chargeth them down into the great Roll: He alfo writes Summons to the Sheriff, to levy the faid Debts upon the Goods and Chattels of the faid Debtors; and if there be no Goods, he draws them down to the Lord Treasurer's Remembrancer, to write Eftreats againft their Lands. See **PIPE**.

CLERK of the Pleas, is an Officer in the Exchequer, in whole Office the Officers of the Court, upon fpecial Privileges belonging to them, ought to fue, and be fued upon any Action. See **PLEA**.

CLERKS of the Privy-Seal. There are four of thefe Officers, who attend the Lord Keeper of the Privy-Seal, or, if there be none fuch, the principal Secretary; and write or make out all Things fent by warrant from the Signer to the Privy-Seal, and to be paid to the Great Seal: as alfo to make out Privy-Seals upon any fpecial Occafion of the King's Affairs; as for Loan of Money, or fuch-like. See **PRIVY-SEAL**.

CLERK of the Sewers, is an Officer belonging to the Commiffioners of the Sewers, who writes down all Things they do by virtue of their Commiffion. See **SEWER**.

CLERK of the Signet, is an Officer continually attending on the King's principal Secretary; who has custody of the Privy-Signet, as well for fealing the King's private Letters, as for fuch Grants as pafs his Majesty's Hand by Bills fign'd. Of thefe there are four, who attend in their Turn, and have their Diet at the Secretary's Table. See **SIGNET**.

CLERK of the Superfedas, is an Officer of the Court of Common Pleas, who makes out Writs of *Superfedas* (upon the Defendant's appearing to the Exigent) whereby the Sheriff is forbid to return the Exigent. See **SUPERSEDEAS**.

CLERKS of the Treasury. See **TREASURY**.

CLERK of the Treasury, is alfo an Officer of the Common Pleas, who has charge of the Records of the *Nifi prius*; the Fees due for all Searches; and hath the certifying of all Records into the King's Bench, when a Writ of Error is brought: He alfo makes out all Writs of *Superfedas de non Moleftanda*, which are granted for the Defendants while the Writ of Error hangeth; he alfo maketh all Exemplifications of Records, being in the Treasury.

CLERK of the Warrants, is an Officer likewise belonging to the Court of Common Pleas, who enters all Warrants of Attorney for Plaintiff and Defendant; and enrolls all Deeds of Indentures of Bargain and Sale, which are acknowledg'd in the Court, or before any Judges out of the Court. See **WARRANT**.

CLEROMANCY, a kind of Divination perform'd by the throwing of Dice, or little Bones; and obferving the Points, or Marks tum'd up. See **DIVINATION**.

At *Bura*, a City of *Abessin*, was a Temple, and a celebrated Oracle of *Hercules*; where fuch as confulted the Oracle, after praying to the Idol, threw four Dies, the Points whereof being well learn'd by the Prieft, he was fuppof'd to draw an Answer from them. See **ORACLE**, and **SORTES**.

The Word comes from the Greek *κλήρω*, *Lot*, and *μαντις*, *Divination*.

CLIENT, *Clientis*, among the *Romans*, was a Citizen who put himfelf under the Protection of fome great Man, who in that Relation was call'd his *Patron*, *Patronus*. See **PATRON**.

The Patron affifted his *Client* with his Protection, Interest and Estate; and the *Client* gave his Vote for his Patron, when he fought any Office for himfelf, or his Friends. *Clients* ow'd refpect to their Patrons, as thefe reciprocally ow'd them their Protection.

This Right of Patronage was appointed by *Romulus*, to unite the Rich and Poor together, in fuch manner, as that one might live without Contempt, and the other without Envy. But the Condition of a *Client*, in courfe of Time, became little elfe but a moderate kind of Slavery.

By degrees, the Custom extended it felf beyond *Rome*; and not only Families, but Cities, and entire Provinces, even out of *Italy*, follow'd the Example. Thus, *Sicily*, v.g. put it felf under the *Clientela*, or Protection of *Marcellus*.

Lactus and *Andeus*, refer the Origin of Fiefs and Tenures to the Patrons and *Clients* of ancient *Rome*: But the Difference is pretty confiderable between the Relation of Vaffals and their Lords, and that of *Clients* and their Patrons. See **VASSAL**, **LOAN**, &c.

For the *Clients*, befide the Refpect they bore their Patrons, and the Vote they gave them, were oblig'd to affift them in all Affairs; and even to pay their Ranfom, if they fhould be taken Prifoners in War, in cafe they were not able to do it of themfelves. See **FEE**, and **TENURE**.

The Word *Clientis* is form'd of *Colens*, honouring. **CLIENT**, is now us'd for a Party in a Law-Suit, who has tum'd over his Cafe into the Hands of a Counfellor, or Solicitor. **CLI-**

CLIMACTERIC, *Annus Climactericus*, a critical Year, wherein, according to the Astrologers, there is some very notable Alteration in the Body to arise; and a Perfon stands in great danger of Death. See CAUVICAT.

The first *Climacteric* is the seventh Year of a Man's Life; the rest are Multiples of the first, as 21, 49, 56, 63, and 84; which two last are called the *Grand Climacterics*, and the Dangers here suppos'd more imminent.

The Opinion has a great deal of Antiquity on its side. *Aulus Gellius* says, it was borrow'd from the *Chaldeans*; who might probably receive it from *Pythagoras*, whose Philofophy run'd much on Numbers; and who imagin'd an extraordinary Virtue in the Number 7.

Marc. Ficinus gives us the Foundation of the Opinion; He tells us, there is a Year assign'd for each Planet to rule over the Body of Man, each in his turn; now, *Saturn* being the most malefic Planet of all, every seventh Year, which falls to his Lot, becomes very dangerous; especially thofe of 63 and 81, when the Perfon is already advanc'd in Years.

Some hold, according to this Doctrine, every seventh Year an establish'd *Climacteric*; but others only allow the Title to thofe produc'd by the Multiplication of the *climacterical* Space by an odd Number, 3, 5, 7, 9, &c. Others observe every ninth Year as a *Climacteric*.

Hevelius has a Volume under the Title of *Annus Climactericus*; describing the Loss he sustain'd in the burning of his Observatory, &c. which it seems happen'd in his first *grand Climacteric*.

Suetonius says, *Augustus* congratulated his Nephew upon his having pass'd his first *grand Climacteric*, whereof he was very apprehensive.

Some pretend, that the *Climacteric* Years are also fatal to political Bodies.

Authors on the Subject, are *Plato*, *Cicero*, *Macrobius*, *Aulus Gellius*, among the Antients; *Argol*, *Magninus*, and *Salmastius* among the Moderns. S. *Augustin*, S. *Ambrose*, *Beda*, and *Boetius* countenance the Opinion.

The Word *Climacteric* comes from the Greek *κλιμαξ*, *κλιμαξ*, *Scala*, *g. d.* by a Scale, or Degree.

CLIMATE, in Geography, a part of the Surface of the Earth, bounded by two Circles parallel to the Equator, and of such a Breadth, as that the longest Day in the Parallel nearer the Pole, exceeds the longest Day in that next the Equator by some certain Space, viz. half an Hour. See EARTH, PARALLEL, &c.

The Beginning of the CLIMATE, is the parallel Circle wherein the Day is the shortest.

The End of the CLIMATE, is that wherein the Day is the longest. See DAY.

The *Climates* therefore are reckon'd from the Equator to the Pole; and are so many Bands, or Zones, terminated by Lines parallel to the Equator; tho, in strictness, there are several *Climates* in the Breadth of one Zone. See ZONE.

Each *Climat*e only differs from its contiguous ones, in that the longest Day in Summer is longer or shorter by half an Hour in the one Place than in the other.

As the *Climates* commence from the Equator, the first *Climat*e, at its Beginning, has its longest Day precisely 12 Hours long; at its End, 12 Hours and an half; The second, which begins where the first ends, viz. at 12 Hours and an half, ends at 13 Hours; and so of the rest, as far as the Polar Circles. See HOUR.

Here, what the Geographers call *Hour-Climates* terminate, and *Month-Climates* commence.

As an *Hour-Climat*e is a Space compris'd between two Parallels of the Equator, in the first of which, the longest Day exceeds that in the latter by half an Hour; so the *Month-Climat*e is a Space terminated between two Circles parallel to the Polar Circles whose longest Day is longer or shorter than that of its contiguous one by a Month, or 30 Days. See MONTH.

The Antients, who confin'd the *Climates* to what they imagin'd the habitable Parts of the Earth, only allow'd of seven. The first they made to pass thro' *Meroe*; the second thro' *Sienna*; the third thro' *Alexandria*; the fourth thro' *Rhodes*; the fifth thro' *Rome*; the sixth thro' *Pontus*; and the seventh thro' the Mouth of the *Bosphorus*.

The Moderns, who have fill'd further toward the Poles, make thirty *Climates* on each side; and in regard the Obliquity of the Sphere makes a little difference in the length of the longest Day; instead of half an Hour, some of 'em only make the difference of *Climates* a Quarter.

In fixing the *Climates*, there ordinarily is no regard had to the Refraction. See REFRACTION.

Vulgarly, the Term *CLIMATE* is below'd on any Country or Region differing from another, either in respect of the Seasons, the Quality of the Soil, or even the Manners of the Inhabitants; without any regard to the Length of the longest Day.

Albucasis, an Arabic Author, distinguishes the first kind of *Climates* by the Term *real Climates*; and the latter by that of *apparent Climates*.

The Word comes from the Greek *κλιμα*, *Inclinationum*, an Inclination.

Varenius gives us a Table of thirty *Climates*; but without any regard to the Refraction. *Revelius* furnishes a more accurate one, wherein the Refractions are allow'd for: An Abstract of which follows.

A Table of CLIMATES.

Middle of Climat.	Longest Day.	Latit.	Climates.	Longest Day.	Latit.	Middle of Climat.	Latit.	Cont. Lax.	North Night.	Cont. Lax.	South Night.
I	12 ^h 30'	0° 1'	VIII	16 ^h 0'	48° 15'	XV	66° 53'	31 ^h 24'	27 ^h 30'	28 ^h 4'

VII	15 30	44 42	XIV	24	0 6						

CLIMAX, or Gradation, in Rhetorick, a Figure, where by we ascend or descend, as it were by degrees.

Such is that of *Cicero* to *Catiline*, *Nihil agis, nihil moliris, nihil cogitas; quod ego non audiam, quod etiam non videm, placeque sentiam*: Thou dost nothing, movest nothing, thinkst nothing; but I hear it, nay see it, and perfectly understand it. Thus, the same *Cicero* to *Atticus*; *Si dormas experspice; si stas, ingredi; si ingrediis, curre; si curris adules*. Thus, *Terrullian* de *Spac*. 'Who ever found the Truth without God? Who ever found God without Christ? who Christ without the Holy Spirit? who the Holy Spirit without Faith?

CLINIC, CLINICUS, a Term apply'd by some Church-Historians to those among the Antients, who receiv'd Baptism on their Death-Bed. See BAPTISM.

It was the Doctrine of many of the Fathers, that Baptism absolutely wash'd away all previous Sins, and that there was no Attainment for Sins committed after Baptism. On this account, many deserd't that Sacrament till they were arriv'd at the last Stage of Life, and were pretty life from the danger of sinning any more; and such were call'd *Clinics*.

Augustus, in the III^d Century, made a Doubt whether or no *Clinics* were truly baptis'd, in regard the Ceremony was only perform'd by Asperion, instead of Immersion. He consulted S. *Chrysostom* on the Point, who made him answer, that the Sacrament does not wash away Sin after the manner of a corporal Bath; and shews from Scripture that Asperion is sufficient.

The Word comes from the Greek *κλινε*, a *Bed*. *CLINIC* is also us'd in Antiquity in two other Senses: 1st,

for a Patient, or Perfon merely sick, even without keeping his *Bed*; as appears from the Life of *Charlemaign*, in *Causticus*. adly, for a *Physician*; in regard, Physicians are much conversant about the *Beds* of the Sick.

It was, however, principally the Physicians of Emperors that were call'd by this Title. (*Rodericus* on *Martial*, *Revelius*, and *Hoffman*.)

Medicina CLINICA, was particularly us'd for the Method of visiting and treating sick Persons a-bed, for the more exact Discovery of all the Symptoms of the Disease. See MEDICINE.

Le Clerc observes, that *Aesculapius* was the first who exercis'd the *Medicina Clinica*.

CLINIC is now seldom us'd but for a *Quack*; or rather for an empirical Nurse, who pretends to have learnt the Art of curing Diseases by attending on the Sick. See PHYSICIAN.

CLINOIDES, in Anatomy, an Epithet given to three internal Apophyses of the *Oss Spheeroides*, one of the Bones of the *Cranium*; so call'd, say some, from their resembling the Feet of a *Bed*. See SPHEROIDES.

Two of these are anterior, or before; the third posterior, behind: The three together form a little *Cavea*, from its Shape call'd *Sella Turcica*, or *Equina*; wherein is plac'd the Pituitary Gland. See SELLA, and PITUITARY Gland.

The Word is form'd of the Greek *κλινε*, a *Bed*, and *ωδω*, *form*; either from the three Bones which resemble the Feet of a *Bed*; or from the Cavity they form, which resembles a *Bed* it self.

CLITORIDIS *Musculi*, in Anatomy. See ERECTOR *Clitoridis*.

CLITORIS, in Anatomy, a long round Body in the Fore-part of the *Vulva*, or Natural Parts of a Woman; being one of the principal Organs of Generation in that Sex. See **GENERATION**.

Its Figure represents that of a Gland, or Acorn: ordinarily 'tis pretty small, but in some Women thick, and long. In many respects it resembles the Penis of a Man; whence some call it the *Woman's Yard*. See **PENIS**.

In effect, it is compos'd of the same Parts; has, like it, two cavernous, or spongy Bodies; and a Gland at the Extremity, cover'd with a *Preputium*; but is not pierc'd thro' like the Penis. See **GLANDS**, **PREPUCE**, &c.

It has two Muscles which erect it in Coition; on which occasion it swells and grows hard. Some Anatomists say, too, it has two *Musculi Ejaculatorii*. See **ERECTOR**, &c.

Its Sensation is exquisite; and 'tis found the chief Seat of Pleasure; hence some Women are apt to abuse it.

The Extremity of this Part is sometimes cut off; as in Circumcision, and where it advances out too far. 'Tis sometimes so large and propendent, that it bears a full resemblance to the virile Member; whence the Persons in whom 'tis so found, frequently pass for *Hermaphrodites*. See **HERMAPHRODITE**.

The spongy Bodies of the *Clitoris*, arise distinctly from the lower Parts of the *Os Pubis*; and approaching one another, unite, and form the Body of the *Clitoris*. Before their Union they are called the *Crura Clitoridis*; and are twice as long as the Body of the *Clitoris*. See **CAVITY**.

Its Muscles arise from the Protuberance of the *Ischium*, and are inserted into its spongy Bodies. It has Veins and Arteries from the Hemorrhoidal Vessels, and Pudenda; and Nerves from the Intercostals.

CLOACA, among the Ancients, was a substantaneous Aqueduct; or a Common-flare, or Canal, for the Reception and Discharge of the Filth of a City, or a Hoag.

Terquinius Prætor is said to have been the first who contriv'd Cloacas in ancient Rome; to which end, a Canal was first dug thro' the Mountains, whereon the City stood, and divided into three Branches, call'd the *great Cloaca*.

The Care and Inspection of the *Cloaca* belong'd to the Censors, till the Time of *Augustus*, who appointed *Caratores Cloacarum*, on purpose.

They had their *Cloacini*, or Goddes who presid'd over the *Cloaca*.

The Word is compounded of the Greek *κλῶα*, *purgo*.

CLOCK, an Automaton, or Machine, serving to measure and strike Time. See **TIMES**.

The usual Movements are *Watches*, and *Clocks*: the former, in strictness, are such as shew the Parts of Time; the latter such as publish it by striking: Tho' the Name *Watch* is ordinarily appropriated to Pocket-Clocks, and that of *Clocks* to larger Machines; whether they strike or no.

The Parts common to both Kinds of Movement, see under the Article **MOVEMENT**.

Those peculiar to *Watches* and *Clocks*, see under **WATCH-Work**, and **CLOCK-Work**.

The Invention of *Clocks* with Wheels, is refer'd to *Pacificus Archiepiscopus Veronæ*, who liv'd in the Time of *Lotharius*, Son of *Louis le Debonnaire*; on the Credit of an Epitaph quoted by *Ughell*, and borrow'd by him from *Pausanias*.

It was at first call'd the *Natural Clock*; to distinguish it from the *Dials*, which shew'd the Hour by the Sun's Shadow. Others ascribe it to *Boetius*, about the Year 510.

Mr. Deharbo makes *Clock-work* of a much older standing; and ranks *Archimedes's* Sphere, mention'd by *Claudian*; and that of *Pollidonius*, mention'd by *Cicero*, among the Machines of this Kind; not that either their form or use were the same with those of ours; but that they had their Motion from some hid'd Weights, or Springs, with Wheels or Pulleys, or some such *Clock-work* Principle. Thus he understands the *luculentæ caris fulminatoris Spiritus Astris*; & *vinum certis mensuris arget opus*.

Be this as they will, 'tis certain the Art of making *Clocks*, such as are now in use, was either first invented, or at least retriev'd in *Germany*, about 200 Years ago.

The *Water-Clocks*, or *Clepsydræ*, and *Sun-Dials*, have, both a much better Claim to Antiquity. See **CLEPSYDRA**, and **DIAL**.

The *French Annals* mention one of the former Kind, sent by *Aaron King of Persia* to *Charlemagne*, about the Year 807, which seem'd to bear some resemblance to the modern *Clocks*: It was of Brass, and shew'd the Hours by twelve little Balls of the same Metal, which fell at the End of each Hour, and in falling struck a Bell and made it sound. There were also Figures of twelve Cavaliers, which at the End of each Hour came forth at certain Apertures, or Windows in the Side of the *Clock*, shut 'em again, &c.

Among the modern *Clocks*, the most eminent for their Furniture, and the Variety of their Motions and Figures, are those of *Strasbourg*, of *London*, and of *Lyons*. In the first, a Cock claps his Wings, and proclaims the Hour; the An-

gel opens a Gate and salutes the Virgin; the Holy Spirit descends on her, &c. In the second, two Horsemen encounter, and beat the Hour on each other; a Door opens, and there appears on a Theater the Virgin, with Jesus Christ in her Arms; the *Magi*, with their Retinues, marching in order, and presenting their Gifts; two Trumpeters sounding all the while to adorn the Procession. See *Securus*; see also *Salmafius on Solinus*; *Nastus de Ymirinabolis*, and *Kircher in his Musæum Romanum*, and *Jædop. Belyst*.

The Invention of *Pendulum Clocks* is owing to the happy Industry of the last Age: The Honour of it is disputed between *Huygens* and *Galileo*. The former, who has a just Volume on the Subject, declares it was first put in practice in the Year 1657, and the Description thereof printed in 1678. *Becher, de nova Temporis dimensandi Theoria, Anno 1680*, fiddles for *Galileo*; and relates, tho' at second hand, the whole History of the Invention; adding, that one *Trefler*, Clock-maker to the Father of the then grand Duke of *Tuscany*, made the first *Pendulum-Clock* at *Florence*, by direction of *Galileus à Galileo*; a Pattern of which was brought into *Holland*.

The Academy de *l'Climento* say expressly, that the Application of the *Pendulum* to the Movement of a *Clock* was first propos'd by *Galileo*, and first put in practice by his Son *Vincenzo Galilei*, in 1649.

Be the Inventor who he will, 'tis certain the Invention never flourish'd till it came into *Huygens's* hands, who insist on it, that if ever *Galileo* thought of such a thing, he never brought it to any degree of Perfection.

The first *Pendulum-Clock* made in *England*, was in the Year 1622, by *M. Fromantill a Dutchman*. See **PENDEULUM**.

Pendulum-Clock. See **PENDEULUM-Clock**.

Packet-Clock. } See { **WATCH**.

Repeating-Clock. } See { **WATCH**.

Clock-Work, is that Part of a Movement which strikes the Hour, &c. on a Bell. See **MOVEMENT**.

The Wheels it consists of are the *great*, or *first* Wheel; which is that the Weight, or Spring first drives: in sixteen or twenty hour *Clocks*, this has usually Pins, call'd the *Pin-Wheel*; in eight day Pieces, the second Wheel is commonly the *Pin-Wheel*, or *Striking-Wheel*. Next 'tis the *Striking-Wheel*, is the *Detent-Wheel*, or *Hoop-Wheel*, having a Hoop almost round it, wherein is a Vacancy at which the *Clock* ticks. The next is the *third*, or *fourth* Wheel, according to its distance from the first. The last is the *fining Pinion*; with a Fly, or Fan to gather Air, and so bridle the Rapidity of the *Clock's* Motion. To these must be added the *Pinion of Report*; which drives round the *Locking-Wheel*, call'd also the *Count-Wheel*; ordinarily with eleven Notches in it, unequally distant, to make the *Clock* strike the Hour. See **WHEEL**.

Besides the Wheels, to the *Clock-part* belongs the *Rest*, or *Ratch*; a kind of Wheel of twelve large Fangs, running concentrically to the *Dial-Wheel*, and serving to lift up the *Detents* every Hour, and make the *Clock* strike: The *Detents*, or *Stops*, which being lifted up, and let fall, lock and unlock the *Clock* in striking. The *Hammers* which strike the Bell; the *Hammer-tails*, by which the striking Pins draw back the *Hammers*; *Latches*, whereby the Work is lifted up and unlocked; and *Lifting-pieces*, which lift up and unlock the *Detents*.

Theory and Calculation of Clock-Work.

The Method of calculating the Numbers of a piece of *Clock-Work*, having something in it very pretty, and at the same time very easy and useful, we shall give the Reader the Rules relating thereto; referring, for the general Rules that obtain in the Calculation of all Movements, of *Watch* as well as *Clock-Work*, to the Article **MOVEMENT**; and for the particular Rules of *Watch-Work*, to the Article **WATCH-Work**.

For the strict Calculation it self, it bears that affinity to the Calculation of *Watch-Work*, that to avoid Reperitions we shall refer to that Head: what *Clock-Work* has peculiar to it self, will be conceiv'd from what follows.

Rules for calculating the striking Part of a *Clock*.

1st then, Observe that regard, here, needs only to be had to the *Count-Wheel*, *Striking-Wheel*, and *Detent-Wheel*, which move round in this proportion: the *Count-Wheel* commonly goes round once in 12 or 24 Hours; the *Detent-Wheel* moves round every stroke the *Clock* strikes, or sometimes but once in two Strokes; wherefore, it follows, that

2^{dy}, As many Pins as are in the *Pin-Wheel*, so many Turns hath the *Detent-Wheel* in one Turn of the *Pin-Wheel*; (or which is the same) the Pins of the *Pin-Wheel* are the Quotients of that Wheel, divided by the *Pinion* of the *Detent-Wheel*. But if the *Detent-Wheel* moveth but once round in two Strokes of the *Clock*, then the said Quotient is but half the number of Pins.

3^{dy}, As many Turns of the *Pin-Wheel* as are requir'd to perform the Strokes of 12 Hours, (which are 78) so many Turns must the *Pinion* of *Report* have, to turn round the *Count-Wheel* once: Or thus, the Quotient of 78, divided

vided by the Number of striking Pins, shall be the Quotient for the Pinion of Report and the Count-Wheel; and this is in case the Pinion of Report be fix'd to the Arbor of the Pin-Wheel, which is commonly done.

An Example will make all plain: The Locking-Wheel being 48, the Pinion of Report 8, the Pin-Wheel 8) 48 (6. 78, the Striking-Pins are 15, and 60 of the rest. Note also, that 78 divided by 15 gives 6, the Quotient of the Pinion of Report. As for the Warning-Wheel and Flying-Wheel, it matters little what Number they have; their use being only to bridle the Rapidity of the Motion of the other Wheels.

The following Rules will be of good service in this Calculation.

1. To find how many Strokes a Clock strikes in one turn of the Fuly, or Barrel. As the Turns of the great Wheel, or Fuly, are to the Days of the Clock's continuance; so is the number of Strokes in 24 Hours, viz. 156, to the Strokes of one Turn of the Fuly.

2. To find how many Days the Clock will go. As the Strokes in 24 Hours are to those in one turn of the Fuly; so are the Turns of the Fuly to the Days of the Clock's going.

3. To find the Number of Turns of the Fuly, or Barrel. As the Strokes in one turn of the Fuly are to those of 24 Hours; so is the Clock's continuance to the Turns of the Fuly, or great Wheel.

4. To fix the Pin of Report on the Spindle of the great Wheel. As the Number of Strokes in the Clock's continuance is to the Turns of the Fuly; so are the Strokes in 12 Hours, viz. 78, to the Quotient of the Pinion of Report, fix'd on the Arbor of the great Wheel.

5. To find the Strokes in the Clock's continuance. As 12 is to 78, so are the Hours of the Clock's continuance to the Number of Strokes in that time.

To add Chimes to a piece of Clock Work, see the Article CHIMES.

CLOISTER, a Habitation surrounded with Walls, and inhabited by Canons and Religious. See CANON, &c.

In a more general Sense, Cloister is us'd for a Monastery of Religious of either Sex. See MONASTERY.

In a more restrain'd Sense, Cloister is us'd for the principal Part of a Regular Monastery, consisting of a Square built around; ordinarily, between the Church, the Chapter, and the Refectory; and over which is the Dormitory. See DORMITORY, &c.

The Cloisters serv'd for several Purposes in the ancient Monasteries. 1st, Peter de Blois observes, that it was here the Monks held their Lectures: The Lecture of Morality at the North side, next the Church; the School on the West, and the Chapter on the East; Spiritual Meditation, &c. being reserv'd for the Church.

Dr Conge concludes, that all these different Exercises were perform'd in the Cloister it self; but by mistake. The Church, the Chapter, and the School were not Parts of the Cloister, but Buildings adjoining to it.

Laurencius observes, that the proper Use of the Cloister was for the Monks to meet in, and converse together, at certain Hours of the Day.

The Form of the Cloister was square; and it had its Name, as being inclos'd on its four Sides with Buildings.

Hence, in Architecture, a Building is still said to be in form of a Cloister; when there are Buildings on each of the four Sides of the Court.

CLOSE, in Heraldry, when any Bird, addicted to flight, is drawn in a Coat of Arms with its Wings close down about it, and not either flying or display'd, i. e. in a standing Posture, they blazon it by the Word Close. See VOL.

If it be flying, they call it Volant. Close is not apply'd to the Peacock, Dunhill-Cock, &c. in regard that is their ordinary posture.

The Term Close is likewise us'd for the Barnades, or Bits of a Bridle, when not extended, as they are usually bore.

It is also us'd for the Bearing of a Helmet, with the Vizor down: A Barnacle Close, a Helmet Close, &c.

CROSS, in Music. See CADENCE.

CROSS-FIGHTS, a board a Ship, are Bunk-heads put up fore and aft in the Ship, for the Men to stand behind in a close Engagement, and fire on the Enemy; or if the Ship be boarded, to foor the Decks.

CROSET, is a Term in Heraldry, signifying the half of a Bar. See BAR.

The Bar ought to contain one fifth Part of the Escutcheon, as the Fesse doth the third.

CLOTH, in Commerce, in its general Sense, includes all Kinds of Stuff, wove or manufactur'd on the Loom, whether their Threads be of Wool, or Flax. See STUFF, LOOM, WEAVING, &c.

In its more restrain'd Sense, Cloth is peculiarly apply'd to a Web, or Tissue of woollen Threads, interwoven; whereof some, called the Warps, are extended lengthwise, from one

end of the Piece to the other; the rest, called Woof, dispos'd across the first, or breadthwise of the Piece. See WOOL, and WARP.

Cloths are wove on the Loom as well as Linens, Druggets, Serges, Camelots, &c. They are of various Qualities, fine, coarse, strong, &c. some made of Wool of different Colours; i. e. the Wools being dy'd and dress'd, are either spun, or wove: others are wrought white, dress'd to be dy'd in scarlet, black, blue, green, yellow, &c.

Their Widths and Lengths are various, according to the Places where they are manufactur'd. See SPINNING, &c.

The goodness of Cloth consists in the following Circumstances. 1st, In the Wool's being fine and well dress'd. See WOOL.

2^d, In its being spun equally; always observing, however, that the Thread of the Warp be finer and better twist'd than that of the Woof. 3^d, In the Cloth's being well wrought and beaten on the Loom, so as to be every where equally close and compact. See WEAVING.

4th, In the Wool's not being finer and better at one End of the Piece than in the rest. 5. In the Lills being sufficiently strong, and of the same Length with the Stuff; and that they consist of good Matter, as Wool, Oultrich Feathers, or the Hair of Danish Dogs, which last is the best.

6. In the Cloth's being well clear'd of the Knots and other Imperfections. 7. In its being first well scour'd with good Fullers-Earth, then fill'd with the best white Soap, and wash'd out in clear Water. 8. In the Hair, or Nap's being well drawn out with the Teasle, or Thistle, on the Pole, without being too much open'd. 9. In its being shorn close; yet without laying the Ground or Thread bare. See SHEAR-ING.

10. In its being well dy'd. See DYEING.

11. In its not being stretch'd, or pull'd further than is necessary to set it square, and bring it to its just Length and Breadth. See STRETCHING.

12. In its only being press'd cold; hot-pressing being an utter Enemy to Cloth. See PRESSING.

Manufacturing of fine Cloths in wabste, for dyeing:

The best Wools for the Purpose are those of England and Spain; especially those of Lincolnshire, and Segouan.

To use them to the best advantage; when taken out of the Bales, they must be four'd, by putting 'em in a Bath somewhat more than luke-warm, compos'd of three Parts of fair Water, and one of Urine. After the Wool has continu'd long enough in the Bath to dissolve and loosen the Grease, it is taken out, drain'd, and wash'd in a running Water: 'Tis known to be well four'd, when it feels dry to the touch, and has no smell but the natural Smell of the Sheep.

In this state 'tis hung out to dry in the Shade; the heat of the Sun being apt to make it harsh, and untractable. When dry, 'tis beat with rods on Hardles of Wood, or on Ropes, to clear out the Dull and grosser Filth: The more it is thus beat and clean'd, the more soft it becomes, and the better it spins.

After bearing, it is well pick'd, to clear the rest of the Filth, that had escap'd the Rods.

'Tis now in a State to be oil'd, and carded on large Iron Cards, plac'd a-slope. The best Oil for the Purpose is Oil of Olives; one fifth of which, at least, should be us'd for the Wool destin'd for the Woof, and a sixth for that of the Warp.

'Tis now given out to the Spinners; who first card it on the Knee, with small fine Cards; then spin it on the Wheel; observing to make the Thread of the Warp smaller by one third than that of the Woof, and much closer twist'd; in order to this, the latter must be spun with the Band, or String open, and the former with it cross'd.

The Thread thus spun, reel'd, and made into Skeins, that destin'd for the Woof is wound on Spools, i. e. on little Tubes, or pieces of Paper, or Rushes, so dispos'd as that they may be easily put in the Eye of the Shuttle. That for the Warp is wound on a kind of Rochets, or large wooden Bobbins, to dispose it for warping. See SHUTTLE, and WARPING.

When warp'd, 'tis stiffen'd with Size; whereof, that made of shreds of Parchment is the best; and when dry, is given to the Weavers, who mount it on the Loom.

The Warp being on the Loom, the Weavers, who are two to each Loom, one on each side, tread at the same time, alternately, on the same Treadle; i. e. now on the right Step, and now on the left, which raises and lowers the Threads of the Warp equally; between which they throw, transversely, the Shuttle from the one to the other. And each time that the Shuttle is thrown, and so a Thread of the Woof inserted within the Warp, they strike it conjointly with the same Frame wherein is fix'd the Comb, or Reed, between whose Teeth the Threads of the Warp are pass'd; repeating the Stroke as often as is necessary; in some Cloths no less than 12 or 13 times, viz. six with the Warp open, and seven shut.

It may be observ'd, that the more the Threads of the Wool are struck against each other, the closer the Cloth is: hence it becomes enabled to sustain the Violence of the Fulling-Mill, as well as of the Teasel, or Fulling-Thistle, without frutting or opening.

The Weavers having continu'd their Work till the whole Warp is fill'd with Wool, the Cloth is finish'd: 'Tis taken off the Loom, by unrolling it from the Beam whereon it had been roll'd, in proportion as it was wove; and now given to be clear'd of the Knots, ends of Thread, Straws, and other Filth; which is done with little Iron Finchers.

In this Condition 'tis carried to the Fallery, to be scour'd with Urine, or a kind of glass'd Earth well clean'd and steep'd in Water, put along with the Cloth in the Trough, where-in it is fill'd.

The Cloth being again clear'd from the Earth, or Urine, by washing it in Water, is return'd to the former Hand, to have the lesser Filth, small Straws, and almost imperceptible Knots taken off as before: then 'tis return'd to the Fuller, to be beat, and fall'd with hot Water, wherein five or six Pounds of Soap have been dissolv'd. The Soap most esteem'd is the white, especially that of *Genoa*. After fulling an Hour and a half, 'tis taken out to be smooth'd, i. e. to be pull'd by the Lifts lengthwise, to take out the Wrinkles and Creases occasion'd by the Force of the Mallets, or Pestles falling on the Cloth when in the Troughs.

The Smoothing is repeated every two Hours, till the Fulling be finish'd, and the Cloth brought to its proper Breadth: after which, it is wash'd in clear Water, to purge it of the Soap, and given, all wet, to the Carders, to raise the Hair, or Nap, on the right Side, with the Thistle, or Weed; where-with they give it two courses, the first again the Grain, from Tail to Head; the second with the Grain, from Head to Tail.

The Cloth being dry'd after this Preparation, the Sheerman takes it, and gives it its first cut, or sheering.

This done, the Carders resume it, and after wetting it, give it as many more courses with the Weed as the quality of the Stuff requires: always observing to begin against the Hair, and to end with it; and to begin with a smoother Weed, proceeding still to a sharper and sharper, as far as the sixth degree.

After this, the Cloth being dry'd, is return'd to the Sheerman, who sheers it a second time, and returns it to the Carder; who wetting it, gives it as many courses as he thinks fit, dries it, and gives it back again to the Sheerman; who after sheering it the third and last time, returns it to the Carders, who repeat their Operation as before, till the Hair, or Nap, be well rang'd on the Surface of the Cloth, from one end of the Piece to the other.

It must be observ'd, that 'tis indispensably necessary the Cloth be wet, while in the Carders hands; in order to which, 'tis sprinkled from time to time with Water.

The Nap finish'd, and the Cloth dry'd, the Sheerman gives it as many cuts as he thinks requisite for the Perfection of the Stuff. It must also be observ'd, that all the Sheerings must be on the right Side, except the two last, which must be on the other; and that the Cloth can't be too dry for Sheering.

The Cloth thus wove, full'd, wash'd, and shorn, is sent to the Dyer. See DYING.

When dy'd, 'tis wash'd in fair Water, and the Sheerman takes it again, wet as it is, lays the Hair, or Nap, with a Brush on a Table, and hangs it on the Tenter; where it is stretch'd both in length and breadth, enough to smooch it, set it square, and bring it to its proper Dimensions, without straining it too much; observing to brush it afresh, the way of the Hair, while yet a little moist on the Tenter.

When quite dry, the Cloth is taken off from the Tenter, and brush'd again on the Table, to finish the laying of the Hair: 'Tis then folded, and laid cold under a Press, to make it perfectly smooth and even, and to give it a little Lustre.

The Lustre is given by laying a Leaf of Vellum, or fine Pastboard in each Pleat of the Piece; and over the whole a square Plank of Wood: on which, by means of a Lever, the Screw of the Press is brought down, with the degree of Force judg'd necessary, with regard to the Quality of the Cloth.

There are none but Scarlet, Greens, Blues, &c. which receive this last Preparation; Blacks needing it not.

Lastly, the Cloth being taken out of the Press, and the Pastboards remov'd; it is in a condition for Sale or Use.

For the Manufacture of mix'd Cloths, or those wherein the Wools are first dy'd, then mix'd, spun, and wove of the Colours intended; the Process, except in what relates to the Colour, is mostly the same with that just spoke of.

The Method of adjusting the Mixture, is by first making a Felt of the Colours of the intended Cloth, as a Specimen: The Wool of each Colour is weigh'd, and when the Specimen is to the Manufacturer's Mind, he mixes, for use, a Quantity in the same proportion; estimating each Grain of the Specimen at 20 Pounds weight of the same Wool in the Cloth to be made.

Thus, if he would mix three Colours, v. g. Coffee Colour, Feuillemort, and pale Blue, the first to be the prevailing Colour; he weighs a Quantity of each: for instance, 70 Grains of the first, 25 of the second, and 20 of the third; then multiplies each by 20 Pounds of Wool; and thus gains 1400 Pounds for the Coffee Wool; 500 Pounds for the Feuillemort, and 400 for the pale Blue.

The Wools of the Specimen thus weigh'd, are mix'd, oil'd, carded, moisten'd with clear Water, rubb'd with black Soap, and in this state wrought a long time in the Hands; till being perfectly full'd, they are reduc'd into a piece of Felt, like that us'd by Hatters.

'Tis then rins'd in Water, to purge out the Oil and Soap; and when dry, the Hair, or Nap is carded out with the Weed; then shorn once again, till the Ground appear, and the several Colours be discoverable.

Lastly, wetting it a little, and pressing it, he examines it well, and if he be not contented with it, makes another Felt; if he be, he proceeds to mix his Wools: when mix'd, 'tis beat on Hurdles, clean'd, oil'd, carded, spun, wove, &c. as in white Cloth.

Incombustible CLOTH. See LINUM *Incombustibile*.
CLOUD, in Physiology, a Collection of condens'd Vapour. See VAPOUR.

A Cloud is a Congeries of watery Particles, or Vesicles rais'd from the Waters or watery parts of the Earth, by the solar, or subterraneous Heat, or both; which at their first rise from our Globe, are too minute to be perceiv'd; but as they mount, meeting with a greater degree of cold, are condens'd, and render'd opaque by the reunion of their Parts; so as to reflect Light, and become visible. See CONDENSATION.

The manner wherein Vapours are rais'd into Clouds may be conceiv'd thus:

Fire being of a light, soft Nature, easily breaks loose from Bodies wherein 'tis detain'd: For the manner whereof, see BOILING.

Now, by reason of the exceeding smallness of the Particles of Fire, their attractive Force must be exceeding great: hence, in their Ascent thro' fluid Bodies, part of the Fluid will cling around them, and mount up together with them, in form of Vesicles of Water replete with Particles of Fire; which Vesicles are what we call Vapour. See FIRE, and VAPOUR.

Further, this Vapour being specifically lighter than Air, mounts in it, till having reach'd such a Region of the Atmosphere as is of the same specific Gravity with themselves, they will be suspend'd; till the watery Vesicles, which were at first too thin to be perceiv'd, being now condens'd by the Cold of the superior Regions; and their included igneous Particles extinguisht, or at least driven into a less compals, and consequently the Parts set closer together; their Density is first augmented so as to render 'em opaque enough to reflect the Sun's Light, and become visible; and their specific Gravity increas'd, so as to make 'em descend: in the former State they are called Clouds; and in the latter, when they arrive at us, Rain. See RAIN; see also BARRAGE.

Clouds, beside their use when they descend in Rain, are likewise of use while suspend'd in the Atmosphere; as they help to mitigate the excessive Heat of the Torrid Zone, and screen it from the Beams of the Sun, especially when in his Zenith.

CLOVE, an aromatic Fruit, bore on a Tree of the same Name; by the Latins also call'd *Caryophyllus*. See SPICE.

This Tree was antiently very common in the Molucco Islands; where all the European Nations, who traffick in Spices to the Indies, furnish'd themselves with what quantity of Cloves they requir'd. At present there are scarce any found but in the Island of Ternate: the Dutch, in order to render themselves Masters of that Merchandise, having dug up the Clove-Trees of the Molucco, and transplanted them to Ternate; so that there are none now to be had but thro' their Hands.

The Tree is very large; it only bears Fruit once in eight Years, but holds, at this rate, an hundred. Its Bark resembles that of the Olive-Tree, and its Leaves those of the Laurel: Its Fruit falling, takes root, and thus multiplies of it self without any culture. 'Tis said, it will not allow any other Herb or Tree near it; its excessive heat drawing to it all the Humidity of the Soil.

When the Clove first begins to appear, it is of a greenish white; as it ripens it grows brown: Nor is there any Preparation necessary in order to render it such as it comes to us, but to dry it in the Sun; whatever some Authors talk of first steeping it in Sea-Water, to preserve it from Worms.

The Fruit is somewhat in form of a Nail; whence the Term Clove, from the French Clois, Nail.

Towards the Head it separates into four; the four Quarters being made angle-wise, and their Apices meeting at the top, form a kind of Crown, somewhat in the antique manner.

They must be chosen dry, brittle, sharp to the Touch, well grown, of a dusky red Colour; a hot aromatic Taste, an agreeable Smell, and, if possible, with the Fuss, or Button.

Their Properties are to warm and dry, to correct a fetid Breath, sharpen the Sight, dissipate Films in the Eyes, fortify the Stomach and Liver, and stop Vomiting. They are us'd in Apoplexies, Palſies, Lethargies, and other Diseases of the Brain.

Such of the Fruit as eſcape the Gatherers, grow and ſwell on the Tree, and become full of a Gum us'd in Medicine, call'd *Mother of Cloves*.

There is also an Oil drawn from *Cloves* by Diſtillation; which, when new, is of a gilded white Colour, but reddens as it grows old: 'tis us'd in Medicine as a ſovereign Remedy for the Tooth-ach, and in Compoſitions with the ſame View as the Fruit. It is also much us'd among the Perfumers.

The Natives call the Tree *Chamyo*, the *Persians* and *Arabs* *Korunſel*, and the *Turks* *Kalaſaur*. They make ſeveral Preparations both of the Flowers and Fruit.

CLOUGH, or *Dranght*, in Commerce, an Allowance of two Pounds in every hundred Weight for the turn of the Scale; that the Commodity may hold out weight when ſold out by retail.

CLUNY, or CLUGNY, a celebrated Abbey of *Benedictine* Monks, in a City of that Name; being the Head, or Chief of a Congregation denominat'd from them. See *ABBEY*, and *BENEDICTINE*.

It is ſituate in the *Majonnois*, a little Province of *France*, on the River *Grone*; and was founded by *William* Duke of *Berry* and *Aquitain*; or, as others ſay, by the Abbot *Bernard*, ſupported by that Duke, in the Year 910.

This Abbey was antiently ſo very ſpacious and magnificent, that in 1245. after the holding of the firſt Council of *Lyon*, Pope *Innocent IV.* went to *Cluny*, accompanied with the two Patriarchs of *Antioch* and *Conſtantinople*, twelve Cardinals, three Archbiſhops, fifteen Biſhops, and a great number of Abbots; who were all entertain'd, without one of the Monks being put out of their place: the *S. Louis*, *Q. Blanche* his Mother, the Duke of *Artois* his Brother, and his Siſter, the Emperor of *Conſtantinople*, the Sons of the Kings of *Aragon* and *Caſtile*, the Duke of *Burgundy*, fix Cousins, and a great number of Lords, with all their Retinue, were there at the ſame time.

Cluny, at its firſt Erection, was put under the immediate Protection of the Apoſtolic See; with expreſs Prohibition to all Secular and Eccleſiaſtick Powers, to diſturb the Monks in the Poſſeſſion of their Effects, or the Election of their Abbot. By this they pretended to be exempted from the Jurisdiction of Biſhops; which, at length, gave the Hint to other Abbies to inſiſt on the ſame. See *ABBEY*.

Cluny is the Head of a very numerous and extenſive Congregation: In effect, it was the firſt Congregation of divers Monasteries united under one Chief, ſo as only to conſtitute one Body, or, as they call it, one Order, that ever aroſe. See *CONGREGATION*, and *ORDER*.

CLYPEUS, CLYPEUS, or CLYPEUM, a Buckler; a piece of defensive Armour, which the Antients us'd to carry upon the Arm, to ſecure them from the Blows of their Enemies. See *SHIELD*, and *BUCKLER*.

The Figure of it was either round, oval, or ſexangular; in the middle was a Boſs of Iron, or of ſome other Metal, with a ſharp point.

CLYSSUS, in Chymiſtry, is one of the Effects, or Productions of that Art; conſiſting of the moſt effuſive Principles of any Body, extracted, purify'd, and then re-mix'd. See *CHYMISTRY*.

Or, a *Clyſtus* is when the ſeveral Species, or Ingredients of a Body, are prepar'd and purify'd ſeparately, and then combin'd again. Thus, Salt, Sulphur, Oil, Spirit, and Mercury, re- combin'd into one Body, by long Diſtillation, &c. make a *Clyſtus*. Thus,

Clyſtus of *Antimony*, is an agreeable acid Spirit, drawn by Diſtillation from *Antimony*, Nitre, and Sulphur mix'd together. See *ANTIMONY*.

There is also a *Clyſtus* of *Vitriol*, which is a Spirit drawn by Diſtillation from *Vitriol* diſſolv'd in *Vinegar*; this is us'd by Phyſicians in various Diseases, and to extract the Tinctures of ſeveral Vegetables.

Clyſtus is us'd among ſome Authors for a kind of *Sapa*, or Extra, made with eight Parts of the Juice of a Plant, and one of Sugar, ſeeth'd together into the Conſiſtence of Honey.

CLYSTER, in Medicine, a liquid Remedy, or Injection, introduc'd into the Intestines by the Fundament; in order to refresh them, looſen the Belly, moiſten and ſoſten the *Feces*, diſſipate Wind, &c.

Clysters are made of Bran-Water, and Milk, but more uſually of Decoctions of certain Herbs; to which are added Honey, brown Sugar, ſometimes Catholicon, and other Drugs.

Clysters are either *Emollient*, *Carmineative*, *Laxative*, *Astringent*, *Laxative*, *Amalgam*, *Uterine*, *Antifebrile*, *Nourishing*, &c.

Uterine *Clysters*, are Injections into the *Uterus*, or *Womb*. See *PESSARY*.

Nourishing *Clysters*, are thoſe apply'd with deſign to nourish Perſons who cannot take in any Aliment at the Mouth.

Hilſanus tells us, that *Auberi*, a Phyſician, ſed a Woman of Quality fix Weeks by *Clysters* compos'd of Capoes Eſſeh, and other Fowls, boil'd to a Pulp, with Yolks of Eggs, apply'd twice a Day.

'Tis difficult, however, to conceive how *Clysters* ſhould nourish; and the Caſe is briskly controverted in the Memoirs of the *French* Royal Academy, between *M. Littere*, who maintains the Negative, and *M. Lemery*.

The Arguments urg'd by the firſt, are, that the Materials of the *Clyster*, for want of the ordinary Paſſage, want the neceſſary Preparations to be converted into Nourishment; and beſide that, are out of the Road for getting into the Blood: For in the firſt of the large Intestines, call'd the *Cecum*, is a Valve call'd *Valvula Bauſoni*; to oppoſe the paſſage of any Food into the ſmall Intestines: And there are no Lacteal Veins in the large Intestines, but abundance in the ſmall ones. But the Lacteals are the only Canals that can carry the Chyle into its Receptacle, and the Chyle the only Subſtance that can nourish.

To this *M. Lemery* objects, that very great Antientists have found Lacteals in the large Intestines, tho' in ſmall number: But tho' there were none, adds he, the Meſaraic Veins are indubitably diſtributed to theſe Intestines; and may eaſily be ſuppas'd to pump the moſt ſubtil Part of a Broth, and carry it into the Blood. *M. Mery* has paſs'd a Liquor immediately from the large Intestines into theſe Veins; beſides that, the animal Machine is ſo porous thro'out, that Nature ſeems to have intended an extraordinary way of conveying Fluids into the Blood, to be ready on extraordinary occaſions.

This Notion will appear incontroſtable, if *M. Morin's* Theory of the Paſſage of the Urine be admitted. See *URINE*.

Heredotus ſays, the *Egyptians* were the firſt who invented *Clysters*; or rather, who apply'd 'em to uſe. *Galen* and *Pliny* add, that they learnt the thing from a Bird of their Country, call'd *Ibis*; which they frequently obſerv'd to make this kind of Injection with its Beak, and afterwards to diſcharge it ſelf ſeveral times. Others ſay, that the *Creeper*, or *Sork*, firſt taught Men the Application of *Clysters*.

The Word comes from the *Greek* *κλύω*, *lavo*, *abluo*, I waſh. *CNEMODACTYLUS*, in Anatomy, a Muſcle, otherwiſe call'd *Extensor tertius Internodii digitorum*. See *EXTENSOR tertii Internodii*, &c.

COACH, a Vehicle for commodious travelling, ſuſpended on Leathers, and mov'd on Wheels.

In *England*, and throughout *Europe*, the *Coaches* are drawn by Horſes, except in *Spain*, where they uſe Mules. In a part of the Eaſt, eſpecially the Dominions of the great *Mogul*, their *Coaches* are drawn by Oxen. In *Denmark* they ſometimes yoke Rein Deer in their *Coaches*; tho' rather for Curioſity than Uſe.

The *Coachman* is ordinarily placed on a Seat rais'd before the Body of the *Coach*. But the *Spaniſh* Policy has diſplac'd him in that Country by a Royal Ordinance; on occaſion of the Duke of *Orleans*, who found that a very important Secret whereon he had conferr'd in his *Coach*, had been overheard, and reveal'd by his *Coachman*: Since that time, the Place of the *Spaniſh* *Coachman*, is the ſame with that of the *French* *Stage-Coachman*, and our Poſtillion, viz. on the firſt Horſe on the left.

The Invention of *Coaches* is owing to the *French*; yet are not *Coaches* of any great antiquity, even in *France*; ſcarce reaching beyond the Reign of their *Francis I.*

Their uſe, at their firſt riſe, was only for the Country; and Authors obſerve, as a thing very ſingular, that there were at firſt no more than two *Coaches* in *Paris*; the one that of the Queen, and the other that of *Diane*, natural Daughter of *Henry II.* The firſt Courier who had one, was *Jean de Laval de Bois Dauphin*; whoſe enormous Bulk diſabled him from travelling on Horſeback.

One may hence judge how much Vanity, Luxury, and Softneſs have grown upon our Hands in later Days; there being now computed in that ſame City no leſs than 15000 *Coaches*.

Coaches have had the Fate of all other Inventions to be brought by ſteps and degrees to their Perfection; at preſent they ſeem to want nothing, either with regard to Eaſe or Magnificence. *Louis XIV. of France*, made ſeveral ſumptuary Laws for reſtraining the exceſſive Richneſs of *Coaches*, prohibiting the uſe of Gold, Silver, &c. therein; but they have had the Fate to be neglected.

Coaches may be divided into two Kinds; thoſe that have Iron Bows, and thoſe that have not: Both the one and the other have two principal Parts, the *Body*, and the *Train*, or Carriage.

The *Body* is that part where the Paſſengers are diſpos'd; and the *Carriage* that which ſuſtains the *Body*, and to which the Wheels are faſten'd, that give Motion to the whole Machine.

Coaches are diſtinguiſh'd, with regard to their Structure, into *Coaches*, properly ſo call'd, *Couriers*, *Cataſtes*, and *Berlins*. With regard to the Circumſtances of their

Use, &c. we distinguish *Stage-Coaches*, *Hackney-Coaches*, &c.: *Chariot*, or *Half-Coach*, is a kind of *Coach* that has only a Seat behind; with a Stool, at most, before. When these are very gay, richly garnish'd, and have five Glassies, they are call'd *Calafbes*.

Calafbe is also a kind of light small *Coach*, with very low Wheels, richly adorn'd; us'd on occasion of Pleasure; and open on all sides, to take the Air, and enjoy the Prospect. There are of these *Calafbes* with one, two, and three Seats; where the Persons don't sit facing one another, as in the common *Coaches*, but all forwards, each Seat having its back.

Hackney Coaches, those expos'd to hire, in the Streets of *London*, and some other Capital Cities, at Rates fix'd by Authority.

Those in *London* are under the Direction of Commissioners, who take cognizance of all Causes and Disputes arising thereupon. They are distinguish'd by Numbers affix'd to the *Coach-Doors*; and the Rates, or Fares, fix'd by a Statute 14 Car. II. and confirm'd by another in the 5th and 6th of K. William III.

For a whole Day of twelve Hours the Fare is 10s. for a single Hour 1s. 6d. for every Hour after the first 1s. At these Rates, they are oblig'd to carry Passengers any where within 10 Miles of *London*.

Stage-Coaches, are those destin'd for the Conveyance of Travellers from one City or Town to another.

COADJUTOR, *q. d.* a *Follow-helper*, is properly us'd for a Prelate join'd to another, to assist him in the Discharge of the Functions of his Prelature; and even, in virtue thereof, to succeed him.

The *Coadjutor* has the same Privileges with the Bishop himself. See BISHOP.

Coadjutors were appointed by the King, for Archbishops and Bishops grown old, or absent, and not able to administer in their Dioceses. But the Right of appointing *Coadjutors* is now reserv'd to the Pope alone.

Coadjutors are call'd Bishops in *partibus infidelium*; in regard it is necessary the *Coadjutor* of a Bishop should be a Bishop himself; without which, he can't discharge the Offices.

The Use of *Coadjutors* in the Church, is borrow'd from the *Roman Empire*. *Symmachus* speaks of Assistants, or *Coadjutors*, given to Magistrates; and calls them *Adjutores publici officii*.

The Popes, formerly, made a shameful Abuse of the *Coadjutories*: Some they granted to Children, and young People, with this Clause, *Donec ingressus fueris*; 'Till they were 'capable of entering upon the Administration of the Office.' Others they granted to Persons not in Orders, with this Clause, *Donec accesseris*; and others to Persons at a great distance, with this Clause, *Cum regressis*: But the Council of *Trent* ty'd down the Pope's Hands, by adding abundance of Restrictions upon the Article of *Coadjutors*.

In Nunneries they have *Coadjutrix's*; who are Religious nominated to succeed the Abbess, under pretence of aiding her in the Discharge of her Office. See ABBESS.

COAGMENTATION, is us'd among Chymists, for the Act of melting down a Matter, by casting in certain Pouders, and afterwards reducing the whole into a Concrete, or Solid.

COAGULATION, the condensing or thickning of a fluid Matter, without its losing any of the sensible Parts which occasion'd its fluidity; as we frequently see in Blood, Milk, &c. See FLEVIN.

We distinguish between that kind of thickning which is effected by the Evaporation of the fluid Parts of a Body, as in Clay, which condenses in the Sun, which we properly call *hardening*; and that effected without any loss of its Substance, which we call *coagulating*. Thus, we say, that Cold *coagulates* Blood, &c.

There is one general Term, *viz.* *Concretion*, which includes both *Coagulation*, *Condensation* and *Hardening*. See CONCRETION.

Coagulation is perform'd by the mixing of Salts of different Natures; as when Spirit of Vitriol is pour'd on Oil of Tartar; or when Oils are mix'd in a Mortar with salime, or aqueous Liquors, as in Nutrition.

By injecting an Acid into the Vein of an Animal, the Blood *coagulates*; which stops its Circulation, and brings immediate Death. See BLOOD.

Several Poisons have their effect by inducing a *Coagulation*. See POISON.

COAL, a black, sulphurous, inflammable Matter, dug out of the Earth; serving in many Countries as the common Fuel. See FUEL.

This we sometimes call *Pit-Coal*, sometimes *Sea-Coal*, *Fossil-Coal*, *Earth-Coal*, and *Natural Coal*; to distinguish it from an Artificial Fuel made in imitation hereof, by half burning the Branches and Roots of Trees; properly call'd *Charcoal*, and *Smallcoal*. See CHARCOAL.

Pit-Coal is rank'd among the number of Minerals, and the Places it is dug out of are call'd *Coal-Mines*, or *Coal-Pits*. It is common in most Countries of *Europe*: tho' the *English Coal* is of most repute, even in foreign Countries;

notwithstanding some pretend, that of the *Fosse in Auvergne* is not any thing inferior to it.

The Goodness of *Coal* consists in its being as free as possible from Sulphur, in its heating Iron well, and in its burning a long time in the Smith's Forge. The *English Coal* has this particular to it; that it never lights so perfectly as when Water is thrown on it.

The Commerce of *Coal* is very considerable in *England*; great Quantities are exported to *France*, &c. by way of *Rouen*. The Measure whereby they are sold is the *Chaldron*; containing 56 *Bushels*. See BUSHEL.

In the Memoirs of the *French Royal Academy*, we have an Account of two Experiments on the common *Pit-Coal*, made by M. *Des Landes* while in *England*, and which he thinks have escap'd the *English Philosophers*.

1st, Pounding some *Coal*, and putting half an Ounce of it in a Viol of Water, the Mixture became quite black; but leaving it expos'd to the Air in a Window, during a cold Winter Night; in the Morning 'twas found frozen, and converted into a reddish Colour. The Reason of the Change must be, that the Frost had disengag'd the Sulphurs of the *Coal*: tho' one would little expect such an Effect from it.

2dly, From an Infusion of *Cinders* in Brandy, mix'd with Iron Filings, arises a black Tincture, which brightens in proportion as it is heated; when arriv'd at the height of boiling, the Colour becomes perfectly fine and soft; and gives a Dye to Cloth, which no Workman can imitate.

The *Strata*, or Veins of *Coals* in *Coalpits* are numerous, and their Order, Qualities, &c. different in different Places. See STRATA, and VEIN.

In those at *Dudley* in *Staffordshire*, the *Srrata*, below the Turf, two or three Clays, a grey Stone, and a hard grey Rock, are express'd in the *Philosophical Transactions* to be 1st, *Coal*, call'd *Bench-Coal*; 2d, *Slipper-Coal*, less black and shining than the former; 3d, *Spit-Coal*, more black and shining; 4th, *Stone-Coal*, much like *Canal-Coal*.

These *Srrata* have between each of 'em a *Bar*, or Bed, of a peculiar sort of Matter, about the thickness of a Crown-Piece. Below these are divers metalline *Srrata*; as a black Substance call'd the *Dun-row bat*; a grey Iron Ore, call'd the *Dun-row Iron-stone*; a bluish *Bar*, call'd *White-row*; a blackish Iron Ore, call'd *White-row grains*, or Iron-stone; a grey Iron Ore, call'd *Mid-row grains*; a black fossil Substance, call'd the *Gubbin bat*; a black Iron Ore, call'd *Gubbin Iron-stone*; a dark grey Iron Ore, call'd *Rubble Iron-stone*; the *Table Bars*.

Then, 5^o, comes a coarse sort of *Coal*, call'd *Foot-Coal*; a black brittle *Bar*: 6th, the *Heathen Coal*; 7th, a Substance like coarse *Coal*; tho' call'd a *Bat*, because it does not burn well: 8th and 9th, *Bench-Coal*.

Small-Coal is prepar'd from the Spray, and Brush Wood, stripp'd off from the Branches of Coppice Wood; sometimes bound in Bays for that purpose, and sometimes prepar'd without binding.

The Wood they dispose on a level Floor, and setting a Portion of it on fire, throw on more and more, as fast as it kindles; whence arises a sudden blaze, till all be burnt that was near the Place. As soon as all the Wood is thrown on, they cast Water on the Heap, from a large Dish, or Scoop; and thus keep plying the Heap of glowing *Coals*, which stops the Fury of the Fire, while with a Rake they spread it open, and turn it with Shovels till no more Fire appears. When cold, they are put up into Sacks for use.

Char-coal, see its Preparation under CHARCOAL.

COALITION, the reunion, or growing together of Parts before separated. In this Sense, the Word is us'd both in a Physical and a Moral Sense.

COAST, a Sea-shore, or the Country adjoining to the Edge of the Sea. See SEA, &c.

COASTING, that Part of Navigation, wherein the Places assign'd are not far distant; so that a Ship may sail in sight of the Land, or within sounding, between the Places.

Such are the Voyages on the *Narrow*, or *British Seas*, between *England*, *Holland*, and *France*; also those about the *British Seas*, and in the *Mediterranean*, &c.

For the Performance hereof, there is only requir'd good knowledge of the Land, the Use of the Compass, and of the Lead, or Sounding-Line. See COMPASS, SOUNDING, &c.

COASTING, in Agriculture, &c. the transplanting of a Tree, and placing it in the same Situation, with respect to East, West, North, &c. as it stood in before. See PLANTING, and TRANSPLANTING.

COAT of Arms, in Heraldry, a Cloke, or Habit bore by the ancient Knights over their Arms, both in War, and at Tournaments; and still bore by the Heralds at Arms. See ARMS, HERALD, &c.

It was a kind of Jacket, reaching only as low as the Navel; open at the Sides, with short Sleeves; sometimes furr'd with Ermins and Vair, whereon were apply'd the Armories of the Knight, embroider'd in Gold and Silver, and enamell'd with Colours of beaten Tin, colour'd black, green, red, and blue: whence the Rule, never to apply Colour on Colour, nor Metal on Metal.

The *Coats of Arms* were frequently open, and diversify'd with Bands and Fillets of several Colours, alternately plac'd, as we still see Cloths scarlet, water'd, &c. hence they were also call'd *Divizes*, or *Drives*; as being divided, or compos'd of several Pieces, sew'd together; whence the Words, *Fesse*, *Pale*, *Chevron*, *Bend*, *Croft*, *Saltee*, *Lozenge*, &c. which have since made the honourable Pieces, or Ordinaries of the Shield. See each in its Place, FESS, BEND, CROSS, &c.

Coats of Arms, and *Banners*, were never allow'd to be worn by any but Knights, and ancient Nobles. See ESCUTCHEON, &c.

COAT of Mail, or *Jacques de Mail*, a kind of Armour made in form of a Shirt; consisting of Iron Rings wove together. See MAIL.

COAT, in Anatomy. See TUNIC.

COBALT, in Natural History, a kind of Natural Cadmia, out of which is drawn Bismuth, Arsenic, and Smalt. See CADMIA, BISMUTH, ARSENIC, &c.

Cobalt usually contains a little Silver. There are various Mines of *Cobalt*, especially in *Saxony*; some in *France* and *England*.

COCCIFEROUS, in Botany, such Plants, or Trees, as bear Berries. See BERRY.

COCIGIS, or *COCCÆ OS*, in Anatomy, a Bone join'd to the Extremity of the *Os Sacrum*; compos'd of three or four Bones, whereof the lower is fill less than the upper, till the last ends in a small Cartilage.

It resembles a little Tail turned inwards; or rather, as some imagine, the Beak of a Cuckow; whence the Name. Its Use is to sustain the Strait Gut; it yields to the Pressure of the *Femas* in Women in travail; and Midwives use to thrust it backwards; but sometimes rudely and violently, which is the occasion of great Pain, and several bad Effects.

COCULUS Indicus, a poisonous Narcotic Berry, known mostly now to Poachers, who have got a trick of intoxicating Fish therewith, so as to take them out of the Water with their Hands; by which Reason they are called *Bucco Piscatorie*, Fishers Berries.

COCHINEAL, or *COCHENEAL*, a Drug us'd by the Dyers, &c. for giving red Colours, especially Crimson, and Scarlet. See RED, SCARLET, &c.

It is brought from the *West Indies*; but Authors are divided as to its Nature; some taking it to be a kind of Worm, and others the Grain of a Tree. F. *Plumier*, the Minimé, a celebrated Botanist, has maintain'd the former Opinion, and *Pomet* the latter.

It may perhaps be said, that they are both equally distant from the Truth in the Description they have given of *Cochineal*; and yet that there is both a *Cochineal* which is a Worm, and another a Grain. This Opinion is founded on the Account given by *Dampier*; who gives a precise Description of each kind: If it be't true, 'tis at least more likely than any Opinion yet propos'd. His Description of each is as follows:

The *Cochineal Worm*, is an Insect ingender'd in a Fruit resembling a Pear: The Shrub which bears it is five or six Foot high. A-top of the Fruit grows a red Flower, which when mature falls on the Fruit; and that opening, discovers a Cleft two or three Inches in Diameter. The Fruit then appears full of little red Insects, having Wings of a surprising smallness, and which would die and rot there, if not taken out.

The *Indians*, therefore, spreading Cloth under the Tree, shake it with Poles, till the Insects are forc'd to quit their Lodging, and fly about the Tree; which they cannot do many Moments, but tumble down dead into the Cloth; where they are left till they be entirely dry: When the Insect flies it is red; when it is fallen, black; and when dry, white; tho' it afterwards changes Colour.

These are whole Plantations of the *Cochineal Tree*, or *Yonna*, as the Natives call it, about *Gustatima*, *Chepe*, and *Guxaca*, in the Kingdom of *Mexico*.

Cochineal Grain, or, as *Dampier* calls it, *Sylvestris*, is a red Berry, growing in *America*, found in a Fruit resembling that of the *Cochineal Tree*, or *Yonna*. The first Shoots produce a yellow Flower; then comes the Fruit, which is long, and when ripe opens with a Cleft of three or four Inches. The Fruit is full of Pippins, or Grains, which fall on the least Agitation, and which the *Indians* take care to gather. Eight or ten of these Fruits may yield about an Ounce of Grain.

This Berry yields a Dye almost as beautiful as that of the Insect; and a Perfum may be easily deceiv'd in them: tho' the first is much less esteem'd. See DYEING.

Cochineal is us'd in Medicine as an Alexipharmac, tending to promote Sweating, and also as a Cordial.

COCHLEA, in Mechanicks, one of the five mechanical Powers; otherwise called the Screw. See SCREW.

It is thus call'd, from the resemblance a Screw bears to the spiral Shell of a *Snail*, which the *Latins* call *Cochlea*.

COCHLEA, in Anatomy, is the last Canal, or Cavity of the Ear; thus call'd from its helical Form. See EAR.

The *Cochlea* is divided into two Parts, the upper, and lower, by a thin, spiral *Lamina*; of which the Part next the Axis is bony, but extremely brittle; and that, next the outer Shell, membranous; appearing to be only made of an Expansion of the Auditory Nerve. See NERVE.

The upper Canal opens into the *Tympanum*, and the lower into the *Vestibulum*: this is narrower than that, especially towards the Basis of the *Cochlea*; where each is about a Line wide; and the Basis it self is about four Lines in Diameter. See HEARING.

COCK of a Dial, the Pin, Style, or Gnomon. See DIAL, STYLE, and GNOMON.

COCKET, a Seal belonging to the King's Custom-house. See SEAL, &c.

COCKET is also a Scroll of Parchment, sealed and deliver'd by the Officers of the Custom-house to the Merchants, upon entering their Goods, certifying that the Goods were custom'd. See CUSTOMS.

The same Word is also used in the Statutes of Bread and Ale, 15 Hen. III. where there is mention'd *Cocket Bread*, among several other Kinds: It seems to have been hard Sca-Bisケット, which perhaps had then some *Cocker*, Mark, or Seal; or else was so call'd from its being design'd for the use of the *Cocksmen*, or Seamen.

COCKLE-STAIRS. See STAIRS.

COCKING-CLOTH, a Devise for the catching of Pheasants withal.

It consists of a piece of coarse Canvas, about an Ell square, dipp'd in a Tan Pit to colour it; and kept stretch'd by two Sticks, placed from corner to corner, diagonal-wise: a Hole to be left to peep thro'. The Gamester, then, being provided of a short Gun; carries the Cloth before him at Arms end; under cover of which, he may approach his Game as near as he pleases: when near enough, he puts the Nafel of his Gun thro' the Hole, and shoots.

COCKPIT, a sort of Theatre, whereon Game-Cocks fight their Battles.

The *Cock-Pit* is usually a House, or Hovel cover'd over: They fight on the Clod, or green Sod; which is generally mark'd out round, and inclos'd with Seats, one above another.

The *Cock-Pit Laws*, are principally these: When Cocks are set, none to be on the Sod but the two Setters. When the Cocks are set Beak to Beak in the middle of the Clod, and there left by the Setters, if the set Cock do not strike in counting twenty, and six times ten, and twenty after all, the Bartel is lost: but if he do strike, the Bartel is to begin again, and they must count again. If any offer a Mark to a Groat, or 40 to 1, and the Wager be taken, the Cock must be set, and they are to fight it out. Done, and done, is a sufficient Bet, or Wager, when the Cocks are cast on the Clod.

COCK-PIT, in a Man of War, is a Place on the lower Floor, or Deck, abait the main Capitan, lying between the Passerum and the Steward's Room; where are Subdivisions or Partitions for the Purser, the Surgeon, and his Mate.

COCK-ROAD, a Contrivance for the taking of Wood-cocks.

As that Bird lies close by day, under some Hedge, or near the Roof of an old Tree, to peck for Worms under dry Leaves, and will scarce stir out, unless disturb'd, as not seeing his way so well in the Morning; toward the Evening he takes Wing, to seek for Water; flying generally low, and when he finds any thoroughfare in a Wood ventures thro' it.

To take 'em, therefore, they plant Nets in such Places; or, for want of such Places ready to their hands, they cut *Roads thro' Woods*, *Thickets*, *Groves*, &c.

These *Roads* they usually make 35 or 40 Foot broad, perfectly straight and clear; and to two opposite Trees they tie the Net, which has a Stone fasten'd to each corner. Then, having a Stand, or Place to lie conceal'd in, at a proper distance, with a Stake near the same, to fasten the Lines of the Net to: when they perceive the Game flying up the *Road*, they unwind the Lines from off the Stake; upon which, the Stones drawing it down, the Birds are intangled in the same.

COCK-SWAIN, or *COCKSON*, is an Officer on board a Man of War, who hath the care of the Barge, or Sloop, and all things belonging to it; to be always ready with his Boat's Gang, or Crew, and to Man the Boat on all Occasions.

He fits in the Stern of the Boat, and steers; and hath a Whistle to call and encourage his Men.

COCOA, or more justly *CACAO*, the Nat whole Kernel yields the Chocolate. See CACAO, and CHOCOLATE.

COCOS, or *COCO*, is also used for a Nut, whose Shells much used by Turners, Carvers, &c. for divers Works.

The *Coco Tree*, which the *Malabars* call *Yonga*, is a fruit, without any Branches, and ordinarily thirty or forty Foot high: Its Wood is too spongy to be used in Carpentry. A-top it bears twelve Leaves, ten Foot long, and half a Foot

broad, us'd in the covering of Hooves, making Matts, &c. Above the Leaves is form'd a large Bud, in form of a Cabbage, excellent to eat; but the taking it off is mortal to the Tree.

Between the Leaves and the Top are several Suckers, of the thickness of the Arm; which, when cut, distil a white, sweet, agreeable Liguor, serving as a Wine, and intoxicating; it becomes acid if kept a few Hours; and at the end of 24 Hours is converted into a strong Vinegar: and is further prepar'd into Brandy. While this Liguor distils, the Tree yields no Fruit; but when the Suckers are let grow, it puts forth a large Cluster, or Branch, wherein the Coco-Nuts are sicken'd, to the number of ten or twelve.

While they are yet new, and the Bark tender, they yield half a Pint of a clear refreshing Water: which in a little time becomes firm a white, soft Flesh, and at length condenses, and assumes the Taste of the Nut.

It yields Fruit thrice a year; and those sometimes as big as a Man's Head. Many Travellers say, that from a single Coco Tree, and its Fruit, a Ship might be built, equip'd, and loaden with Merchandize and Provision.

The *Cocos* of the *Antilles*, are not so large as those of the *East-Indies*, *Africa*, and *Arabia*: the Trees seldom exceed 25 Feet in height; and the Fruits in proportion: 'Tis these are used among us.

In the Kingdom of *Siam*, the *Coco's* Fruit, dried and emptied of its Pulp, serves as a Measure, both for things liquid and dry. See MEASURE.

As these Fruits are not all of the same Capacity, but are some larger, others less; their content is first measur'd with *Cauris*, those little *Maldives* Shells, which serve as small Money in several States of the *Indies*. Some *Cocos* contain 1000 *Cauris*, others 500, &c.

COCTION, a general Name for all Alterations made in Bodies, by the approach of Fire, or Heat. See HEAT.

The greatest Secret in Chymistry is to manage the *Cocktion* aright; to give the Fire to advantage.

There are various Species of *Cocktions*; as *Maturation*, *Friction*, *Elixation*, *Affusion*, *Torrefaction*, and *Ustion*; which see in their Places, MATURATION, FRICTION, &c. see also COCCINATION.

COD-FISHERY. See COD-FISHERY.

CODE, CODEX, a Collection of the Laws and Constitutions of the *Roman* Emperors; made by order of *Justinian*.

It is compriz'd in twelve Books, which make the second Part of the *Civil*, or *Roman* Law. See CIVIL-LAW.

There were several other *Codes* before the Time of *Justinian*; all of them Collections, or Abridgments of the *Roman* Laws. *Gregory* and *Hermogenes*, two Lawyers, made each a Collection of this kind, called from their Names the *Gregorian Code* and *Hermogenian Code*. These included the Constitutions of the Emperors from *Adrian*, to *Dioclesian* and *Maximin*, A. D. 506. We have nothing remaining of 'em but a few Fragments: the Work falling to the ground, for want of Authority to put it in Execution.

Theodosius the Younger was the first Emperor who made a *Code*, which was compriz'd in sixteen Books, form'd out of the Constitutions of the Emperors from *Constantine* the Great to his own Time; abrogating all other Laws not included in it: And this is what we call the *Theodosian Code*; which was publish'd in the Year 458, and receiv'd and observ'd, till annul'd by the *Code* of *Justinian*.

Theodosian's Code has been a long time lost in the *West*: *Cmas* took a great deal of Pains to retrieve it, and to publish it in a better Condition than ever. *Gotfredus* has given us a Comment on the *Theodosian Code*; a Work which cost him 30 Years.

In 506, *Alarick* King of the *Goths*, made a new Collection of the *Roman* Laws, taken from the three former *Codes*, the *Gregorian*, *Hermogenian*, and *Theodosian*, which he likewise publish'd under the Title of the *Theodosian Code*. This *Code* of *Alarick* continu'd a long time in force; and was all the *Roman* Law receiv'd into *France*.

Lastly, the Emperor *Justinian*, finding the Authority of the *Roman* Law exceedingly weaken'd in the *West*, upon the Decline of the Empire, resolv'd to make a general Collection of the whole *Roman* Jurisprudence. The Management hereof he committed to *Tribonianus*, who chose out the most excellent Constitutions of the Emperors, from *Adrian* to his own Time; and publish'd his Work in 528, under the Title of the *New Code*.

But because *Justinian* had made several new Decisions, which made some Alteration in the ancient Jurisprudence; he retrench'd some of the Constitutions infert'd by *Tribonianus*, and added his own in their Place: on which account, he publish'd a new Edition of the *Code* in 529, and abrogated the former.

This *Code* of *Justinian*, as well as the rest of the *Roman* Law, was a long time lost in the *West*, till the Time of *Isidorus* II. who found it at the taking of *Melphis*, and gave it to the City of *Pisa*. This was first re-publish'd by *Irnerius*, in 1128.

The Emperor *Frederic*, at the Request of the Universities, appointed it to be taught in the Schools; and commanded all his People to observe it. Accordingly, it obtain'd in *Italy* and *Germany*; and still obtains in a Part of *France*, particularly the Southern Provinces.

The Word comes from the Latin *Codes*, a paper Book; so called a *Codicibus* or *Caudicibus arborum*, the Trunks of Trees; the Bark whereof being stripp'd off, serv'd the Antients to write their Books on.

There have been various other later *Codes*, particularly of the ancient *Gothic*, and since of the *French Kings*; as the *Code* of *Enrida*, the *Code* *Mehault*, *Code* *Louis*, *Code* *Neron*, *Code* *Henry*, *Code* *Marchand*, *Code* *des Fleux*.

CODE of CANONS, CODEX CANONUM. See CANON.

CODIA, in Botany, is used for the Top, or Head of any Plant; but, by way of eminence, for that of a sort of Poppy; whence the Syrup made therewith is called *Diacodium*, from *Sis*, cum, with, and *codia*, the Poppy head. See DIACODIUM.

CODICIL, a Schedule, or Supplement to a Will, or other Writing. See SCHEDULE, WILL, &c.

It is us'd as an Addition to a Testament, when any thing is omitted which the Testator would add, explain, alter or retract; and is of the same Nature as a Testament, but that it is without an Heir or Executor.

So that a *Codicil* is a less solemn Will of one that dies either Testate or Intestate, without the Appointment of an Heir: Testate, when he that hath made his *Codicil*, hath either before or afterwards made his Testament, on which that *Codicil* depends, or to which it refers. Intestate, when one leaves behind him only a *Codicil* without a Testament; wherein he gives Legacies only to be paid by the Heir at Law, and not by any Heir instituted by Will, or Testament.

A *Codicil*, as well as a Will, may be either *Written* or *Nuncupatory*. Some Authors call Testament, a *great Will*, and *Codicil*, a *little one*; and compare Testament to a Ship, and *Codicil* to the Boat tied to it.

But there is this further Difference between a *Codicil* and a Testament; that a *Codicil* cannot contain the Institution of an Heir; and that in a *Codicil*, a Man is not oblig'd to observe strictly all the Formalities prescrib'd by Law for solemn Testaments.

In Customary Countries, Testaments, properly speaking, are no more than *Codicils*; in regard, Custom it self names the Heir, and does not allow of Testamentary Inheritors.

Codicils were first brought into use in the Time of *Augustus*, by *L. Lentulus*: They were originally intended to follow the Testament; which was, as it were, their Basis in process of time, *Codicils* came to have their effect, even though made before the Testament; provided there was nothing in the Testament contrary to the *Codicil*.

People were also allow'd to make *Codicils* without Testaments.

Rayn. Lully has a Book which he calls *Two Codicils*; wherein he pretends to have left his Readers the Secret of the Philosopher's Stone; provided they do but understand it.

COECUM, or CÆCUM, in Anatomy, the blind Gut, the first of the thick Intestines; so called, because made like a Sack, having but one Aperture, which serves it both for entrance and exit. See INTESTINES.

It is situate on the right Side, below the Kidney. In Children new born, and in Quadrupeds, it is found full of Excrements; but in Adults, &c. it frequently disappears, and only hangs like a Worm.

Its use in Adults is very obscure: In a *Fetus*, or Infant newly born, it appears to serve as a Receptacle for the *Feces* during such time as the Animal does not discharge by Stool.

Dr. Glisson imagines it may likewise serve in such Animals as have it large, as Dogs, Conies, Rats, &c. for a kind of second Ventricle, or Bag, wherein the prepar'd Aliment may be retain'd, while a richer and more nutritious Juice is drawn from the same.

Others will have it contain a Ferment; and others the Flatulosity of the Intestines: Lastly, others fancy it may separate a Humor, by some Glands plac'd therein, wherewith to harden the Excrements as they pass thro' the Colon. See EXCREMENT, COLON, &c.

CO-EFFICIENTS, in Algebra, are Numbers prefix'd to Letters, or Species, into which they are suppos'd to be multiply'd; and therefore, with such Letters, or with the Quantities represented by them, they make a Rectangle, or Product, *co-efficient* *Productum*; whence the Name.

Thus, *ab* implies, that the Quantities represented by *a* & *b*, are multiply'd into the *co-efficient* *c*; and that out of these two, the Rectangle, or Product *cb* is form'd. If a Letter have no Number prefix'd, it is always suppos'd to have a *Co-efficient*; because every thing is once it self.

The *Co-efficient*, in a Quadratic Equation, is according to its Sign, either the Sum, or Difference of the two Roots: And in any Equation of an higher Nature, the *Co-efficient* of the second Term, is always the Aggregate of all the Roots retaining their proper Signs: So that if all the Negatives be equal to all the Affirmatives, the second Term will vanish; and

and where the second Term is thus wanting, it is a Sign that the Quantities under contrary Signs were thus equal.

The Co-efficient of the third Term is the Aggregate of all the Rectangles arising by the Multiplication of every two of the Roots, how many ways soever those Combinations of Two's can be had; as three times in a Cubic, six in a Biquadratic Equation, &c.

The Co-efficient of the fourth Term, is the Aggregate of all the Solids, made by the continual Multiplication of every three of the Roots, how often soever such a Ternary can be had; as there may be four in a Biquadratic, five in an Equation of five Dimensions, &c. And thus it will go on infinitely.

COELESTIAL Observations, are Observations of the Phenomena of the Heavenly Bodies, made with a proper Apparatus of Astronomical Instruments, in order to the determining their Places, Motions, Phases, &c. See OBSERVATION.

The Instruments chiefly used in *Celestial Observations*, are the Astronomical Gnomon, Quadrant, Micrometer, and Telescope; each of which see under its proper Head, QUADRANT, MICROMETER, TELESCOPE, GNOMON, &c.

Observations in the Day-time are easy; in regard the cross Hairs in the Focus of the Object-Glass of the Telescope are then distinctly perceivable; in the Night, those cross Hairs are to be illumined to make them visible.

This illumination is either perform'd by a Candle, placed obliquely near 'em, so as the Smoke don't intercept the Rays; or where this is inconvenient, by making an Aperture in the Tube of the Telescope, near the Focus of the Object-Glass, thro' which a Candle is apply'd to illumine the cross Hairs.

M. de la Hire has made an Improvement on the first Method, which renders it of very good use; and it is by covering that end of the Tube next the Object-Glass with a piece of Gauze, or fine white silk Casp. For in such case, a Link, placed at a good distance from the Tube, so enlightens the Gauze, as to render the cross Hairs very perceivable.

Observations of the Sun, are not to be made without placing a Glass, smok'd in the Flame of a Lamp or Candle, between the Telescope and the Eye; to take off from its Lustre, which would otherwise confound and damage the Eye, were not a good part of its Beams intercepted.

Note, When any of the Heavenly Bodies are observ'd thro' a Telescope of only two Glasses, they appear inverted.

Celestial Observations are chiefly of two Kinds; the one when the Objects are in the Meridian. See MERIDIAN Observations.

The other, 'when in Vertical Circles. See Vertical Circles.

COELIAC Artery, the first Artery, detach'd from the descending Trunk of the Aorta into the Abdomen. See AORTA, ARTERY, &c.

It divides into two Branches, the one on the right side, the other on the left; of which the first gives the *Gastriaca dextra*, which goes to the Stomach; the *Cistica*, which goes to the Gall-Bladder; the *Epiplota dextra* to the Omentum; the *Intestinatis* to the Duodenum, and to a part of the Jejunum; and the *Gastro Epiploica* to the Stomach, to the Omentum, and some Branches to the Liver, which enter the *Capsula Communis*, to accompany the Branches of the *Vena Porta*.

The left Branch of the *Celica* gives the *Gastriaca sinistra*, which is also spread upon the Stomach; the *Epiplota sinistra* to the Omentum; and the *Splenica* to the Substance of the Spleen. See each Branch describ'd in its Place.

COELIAC Vein, is that which runs thro' the *Intestinum Rebum*. See RECTUM.

COELIACA, or COELIAC Passion, or Affection, is a sort of Diarrhoea, or Flux of the Belly; wherein the Chyle, or nutritious part of the Food is evacuated by Stool, instead of Excrements. See FLUX, and DIARRHOEA.

Authors frequently confound the *Celica* with the Licentery, but they are different. See LICENTERY.

There is also a *COELIAC Diabetes*, call'd *Celica Urinaria*, wherein the Chyle passes off along with, or instead of Urine. See DIABETES.

COELUM. See HEAVEN.

COELUM is us'd by some Anatomists for the Cavity of the Eyeball toward the Angles, or *Canthi*. See EYE, CANTHUS, &c.

COENOBITE. See CENOBITE.

COENOTAPHIUM, or rather CENOTAPHIUM, in Antiquity, an empty Tomb, or Monument erected in honour of some illustrious Defunct; who perishing by Shipwreck, in Battle, or the like, his Body could not be found, to be interr'd or deposited in the same. See TOMBS, and SEPULCHER.

Cardinal Noris has several express Dissertations on the *Coenobitis* of the *Cæsars Caius* and *Lucius*, which still remain at *Pisa*. See FUNERAL.

The Word is *Greek*, compounded of *καθη*, empty, and *ταφος*, Sepulcher.

COEQUALITY, a Term expressing the Relation of Equality between two things. See EQUALITY.

The Resilience to S. *Ambrosius's* Doctrine of the Trinity; hold the Son and Holy Spirit *coequal* with the Father. The *Arians*, &c. deny the *Coequality*. See ARIAN, &c.

COETERNITY, is us'd among Divines, to denote the Eternity of one Being equal to that of another. See ETERNITY.

The Orthodox hold the second and third Persons in the Trinity *coeternal* with the first. See TRINITY.

COEUR, in Heraldry, *Party en COEUR*, signifies a short Line of Partition in Pale, in the Centre of the Escutcheon, which extends but a little way, much short of Top and Bottom; being met by other Lines, which form an irregular Partition of the Escutcheon.

CO-EXISTENCE, a Term of Relation, denoting two, or more Things, to exist together at the same time, &c. See EXISTENCE.

COFFEE, in Natural History, a Seed, or Berry, brought from *Arabia felix*; us'd for the making a Drink of the same Name.

That from the *Levant* is most esteem'd, being greener, heavier, and appearing riper and plumper than that from *Aethia*; which is larger, lighter, and whiter.

For *Coffee-Berries*, some substitute Peas, Beans, Rye, and Barley; which roasted, yield an oily Matter, resembling in Flavour, but less agreeable, as well as in much less quantity than *Coffee*.

COFFEE is also a Kind of Drink, prepared from these Berries; very familiar in *Europe* for these 60 Years, and among the *Turks* for above an hundred.

Its Original is not well known; some ascribe it to the Prior of a Monastery, who being inform'd by a Goatherd, that his Cattel sometimes browsing on the Tree, would wake and caper all Night; became curious to prove its Virtue; accordingly, he first try'd it on his Monks, to prevent their sleeping at Matins.

Others, from *Sebebeddin*, refer the Invention of *Coffee* to the *Persians*; from whom it was learnt in the XVth Century by *Gemellon*, Mufti of *Aden*, a City near the Mouth of the Red Sea; and who having tried its Virtues himself, and found that it dissipat'd the Fumes which oppress'd the Head, inspir'd Joy, open'd the Bowels, and prevented Sleep, without being incommode'd by it; recommend it first to his Servants; with whom he us'd to spend the Night in prayer.

Their Example brought *Coffee* into vogue at *Aden*: The Professors of the Law, for Study, Artisans to work, Travellers to walk in the Night; in fine, every body at *Aden* drank *Coffee*.

Hence it pass'd to *Mecca*, where first the Devotees, then the rest of the People took it. From *Arabia felix* it pass'd to *Cairo*.

In 1511, *Khaib Beg* prohibited it, from a Persuasion that it incriated, and that it inclin'd to Things forbidden. But Sultan *Cosmo* immediately after took off the Prohibition, and *Coffee* advanced from *Egypt* to *Syria* and *Constantinople*.

The *Devils* declin'd it again; it from the *Alevars*, which declares that Coal is not of the number of Things created by God for Food. Accordingly, the Mufti order'd the *Coffee-Houses* to be shut; but his Successor, declaring *Coffee* not to be Coal, they were open'd again.

During the War in *Canada*, the Assemblies of Newfongers making too free with State-Affairs, the Grand Vizeir *Caprol* suppress'd the *Coffee-Houses* at *Constantinople*; which Suppression, tho' still on foot, does not yet prevent the publick Use of the Liqueur there.

Ibevenor, the Traveller, was the first who brought it into *France* by a Greek Servant, call'd *Pasqua*, brought into *England* by Mr. *Dan Edwards*, a *Turky* Merchant, in 1652, to make his *Coffee*, first set up for the Profession of *Coffee-Man*, and introduc'd the Drink among us. The same say Dr. *Harevey* had us'd it before.

The Word *Coffee* is originally *Arabic*; the *Turks* pronounce it *Cabuch*, and the *Arabs* *Cabouch*; which some Authors maintain to be a general Name for any thing that takes away the Appetite; others for any thing that promotes Appetite; and others, again, for any thing that gives Strength and Vigour.

The *Malometans*, 'tis observ'd, distinguish three Kinds of *Cabouch*; the first is Wine, or any Liqueur that incribrates; the second is made of the Pods that contain the *Coffee-Berry*; this they call the *Sultana's Coffee*, from their having first introduc'd it, on account of its heating less than the Berry, as well as its keeping the Bowels open; the third is that made with the Berry it self; which alone is us'd in *Europe*, the Pods being found improper for Transportation. Some *Europeans* who imported the Pods, call'd them the *Flower of the Coffee Tree*.

The deep brown Colour of the Liqueur, occasion'd its being first call'd *Syrup of the Indian Mulberry*; under which specious Name it first gain'd ground in *Europe*.

The Preparation of *Coffee* consists in *roasting*, or giving it a just Degree of Torrefaction, on an earthen, or metalline Plate, till it have acquir'd a brownish hue, equally deep on all Sides: 'Tis then ground in a Mill, as much as serves the present occasion. A proper quantity of Water is next boil'd, and the ground *Coffee* put in it. After it has boil'd sufficiently, 'tis taken from the Fire; and the Decoction having stood a while in little and fine, they pour, or decant it into Dishes.

The Custom is to drink *Coffee* as hot as possible, with Sugar; tho' the *Turks* don't trouble themselves to take off its Bitterness with any Sugar; their *Grandees* add to each Dish a drop of Essence of Amber; others boil with it a couple of Cloves; others a little *Indian Anise*; others *Cacoulib*, or the Grain of the *Cardamom mints*.

Coffee is one of the Necessaries the *Turks* are oblig'd to furnish their Wives withal.

The ordinary Method of roasting *Coffee* among us, is in a Tin cylindrical Box, full of Holes; thro' the middle whereof runs a Spit: under this is a semicircular Hearth, wherein is a large Charcoal Fire: By help of a Jack, the Spit turns swift, and so roasts; being now and then taken up to be shaken. When the Oil rises, and it's grown of a dark brown Colour, it is emptied into two Receivers, made with large Hoops, whose bottoms are Iron Plates, these shut into: There the *Coffee* is shaken, and left till almost cold; and if it look bright and oily, 'tis a Sign 'tis well done.

Coffee is taken with very different, nay frequently with directly opposite Intentions; some use it to prevent Sleep, others to promote Digestion, &c.

Its more real Virtues, own'd by the Physicians, consist in this; that being an excellent Dryer, it carries off Fumes and Disorders of the Head arising from too much moisture, dissipates Megrimas, and absorbs Acrimonies of the Stomach, whence its use after a Debauch of strong Liquors; and hence also its use in promoting watching, by bracing the Fibres, and rendering 'em too tense for the Relaxation requir'd in Sleep.

It likewise promotes Circulation, but such best with People of a pretty corpulent Habit; being found hurtful to those who are thin, lean, dry, and of a bilious Temperament; as it dries up the Nerves, and inclines them to Tremors: 'tis said to be prejudicial likewise to those who digest too fast, where the Circulation is too quick, or where there is a spitting of Blood arising from the Mouths of any of the Veins and Arteries being too open, or the Blood too thin and sharp.

The oily Matter that separates from the *Coffee*, and appears on its surface when roasted, and its particular Smell, which distinguishes it from Peas, Beans, Rye, &c. which some substitute in lieu of *Coffee*, are to be the real Indications of its Effects. If consider'd with regard to the Oils drawn by the Retort, this, as well as that, contains volatile Principles, both saline and sulphureous.

'Tis to the Dissolution of its Salts, and the Mixture of its Sulphurs in the Blood, that its chief Faculty of promoting Watchfulness is to be attributed: Hence also its Property of promoting Digestion, of precipitating Foods, of preventing Eructations, and correcting Acrimonies of the Stomach, when taken after Meals.

Hence also that Fermentation in the Blood, serviceable to corpulent People: hence also its diuretic Virtue. By Experience 'tis found of service to drink a Glass of Water before *Coffee*, to render it laxative; or to mix it with Milk, or Cream, to extinguish its Sulphurs, embarrass its saline Principles, and render it nourishing.

S. Pauli, a *Douglis* Physician, maintains that it enervates Men, and renders them incapable of Generation: And 'tis certain the *Turks* attribute the same Effects to it; and from the immoderate use hereof, account for that thinness of Inhabitants found in Provinces formerly the best peopled. But this Opinion is refuted by *Du Four*.

F. Malbranche gave the Royal Academy of Sciences an Account of a Person cur'd of an Apoplexy, by giving him several Clysters of *Coffee*.

The Tree that produces the *Coffee*, is a Kind of *Arabic Jassin*: The Berry, when ripe, is found as hard as Horn; which gave occasion to an Opinion, that the People of the Kingdom of *Yemen* in *Arabia felix*, where it is cultivated, sleep'd in boiling Water, or bak'd in a Furnace all the *Coffee* they sold abroad, to prevent its growing any where else.

'Tis said, it yields a Revenue upwards of five Millions per Annum. Nor will that appear any wonder, when we consider that in *London* alone, besides the Consumption in private Houses, some have computed three thousand *Coffee*-Houses. In the three Kingdoms are yearly expended one hundred Tonn of *Coffee*-Berries; in *England* alone seventy; which at 300 *l.* per Tonn, a moderate Price, amounts to 21000 *l.* Sterling.

COFFER, *Cassa*, in Architecture, a square depressure, or sinking, in each Interval between the Modillions of the *Corinthian* Cornice; ordinarily fill'd up with a Rose, sometimes a Pomegranate, or other Enrichment. See MODILLION.

These Sinkings, call'd also Panels, are of different Figures in the Compartments of Vaults and Soffits. See SOFFIT.

COFFER, in Fortification, is an hollow Lodgment, about a dry Moat, from six to seven Foot deep, and from sixteen to eighteen Foot broad: the upper Part being made of pieces of Timber rais'd two Foot above the Level of the Moat; which little Elevation has Hurdles laden with Earth for its covering; and serves as a Parapet, with Embasures. See DITCH.

The Besieged generally make use of these *Coffers* to repulse the Besiegers, when they endeavour to pass the Ditch.

'Tis nearly the same thing with a *Caponiere*, abating that this last is sometimes made beyond the Counterscarp on the Glacis, and the *Coffer* always in the Moat, taking up half its breadth. See CAPONIERE.

It differs from the *Traverse*, and *Gallery*, in that these latter are made by the Besiegers, and the *Coffer* by the Besieged. See GALLERY, &c.

To save themselves from the Fire of these *Coffers*, the Besiegers throw up the Earth on that side towards the *Coffer*.

COFFERER of the King's Household, a principal Officer in the Court, next under the Comptroller; who, in the Counting-House, and elsewhere at other times, has a special Charge and Oversight of other Officers of the House, for their good Demerit and Carriage in their Offices: to all when he pays the Wages. See HOUSEHOLD, COMPTROLING-HOUSE, &c.

COGESHAL'S Sliding Rule, an Instrument us'd in Gaging, so call'd from its Inventor: See its Description and Use under SLIDING RULE.

COGITATION, the Act or Operation of Thinking. See THINKING.

COGNATION, in the Civil Law, the Bond of Relation between all the Descendants from the same Stock, both Males and Females: by which it is distinguish'd from *Agnation*, which only comprehends the Descendants in the Male Sex. See AGNATION.

In France, for the Succession to the Crown they follow *Agnation*; in *England*, *Spain*, &c. *Cognation*, Women coming to the Succession, according to the degree of Proximity, in default of Males, or their Descendants from Branch to Branch.

In the Roman Law, the Words *Cognatio* and *Cognatus* are taken in a more limited Sense; *Cognatio* signifying only the Bond of Relation between the Descendants from the same Stock on the Woman's side; and *Cognatus* those between whom there was such a Bond of Relation subsisting.

COGNIZANCE, or COGNISANCE, in Heraldry. See CREST.

COGNIZANCE, in Law, is the Acknowledgment of a Fine, or Confession of a thing done. In this Sense, we say, *Cognoscens latro*.

The Word is also used for a Power or Jurisdiction: Thus, *Cognizance of Pleas*, is an Ability to call a Plea out of another Court; which no one but the King can do, unless he can shew a particular Charter for it.

Sometimes it is used for an Audience, or hearing of a Matter judicially; as, *to take Cognizance*.

COGNIZANCE, again, is used for a Badge on a Waterman, or Servingman's Sleeve, which is commonly the Giver's Crest, whereby he is discern'd to belong to this or that Nobleman, or Gentleman.

COGNISOR, or CONNUSOR, is he that passeth, or acknowledgeth a Fine of Lands and Tenements to another. See COGNIZANCE.

COHABITATION, implies a Concubinage, Copulation, or Carnal Knowledge between two Persons; but 'tis rarely used except in a criminal Sense. See CONCUBINE.

CO-HEIR, a Person who shares an inheritance or Estate with another. See HEIR.

COHERENCE, a School-Term, applied to Propositions, Discourses, &c. which have a Connexion or Dependence on one another.

COHESION, or COHESION, in Physicks, the Action whereby the Particles, or primary Corpuscles whereof natural Bodies consist, are connected, or bound together, so as to form Particles; and those, again, kept together, so as to form sensible Masses, or Bodies. See PARTICLE, BODY, &c.

The Cause of this *Cohesion*, or the *Nexus Materie*, has extremely perplex'd the Philosophers of all Ages. In all the Systems of Physicks, Matter is suppos'd originally to be imitate, indivisible Atoms. See MATTER.

How, and by what Principle these several distinct Corpuscles should come first join'd and combin'd into little Systems; and how they should come to persevere in that State of Union; is a Point of the most difficulty, and even of the most importance of any in Physicks.

The most popular Opinion, is that so strenuously defended by *J. Bernoulli*, *de gravitate Aetheris*; who accounts for the *Cohesion* of the Parts of Matter, from the uniform Pressure of the Atmosphere: confirming this Doctrine from the known Experiment of two polish'd marble Plates; which cohere very strongly in the open Air, but easily drop asunder in an exhausted Receiver.

But tho' this Theory might serve tolerably well to explain the *Cohesion* of Compositions, or greater Collections of Mat-

ter; yet it falls short of accounting for that first *Cohesion* of the Atoms, or primitive *Corpuscles*, whereof the *Corpuscles* of hard Bodies are compos'd.

Sir Isaac Newton delivers his Doctrine of *Cohesion* thus: The Particles of all hard, homogeneous Bodies which touch one another, *cohere* with a great Force; & account for which, some Philofophers have recourse to a kind of hook'd Atoms, which in effect, is nothing else but to beg the Thing in question. Others imagine, that the Particles of Bodies are connected by *Rest*; i. e. in effect, by nothing at all; and others by *comparing Atoms*, i. e. by a relative rest among themselves. For my self, it rather appears to me, that the Particles of Bodies *cohere* by an *attractive Force*, whereby they tend mutually toward each other: which Force, in the very point of Contact, is very great; & at little Distances is less; & a little farther distance is quite insensible. See ATTRACTION.

Now if compound Bodies be so hard, as by Experience we find some of 'em to be, and yet have a great many hidden Pores within 'em, and consist of Parts only laid together; no doubt those simple Particles which have no Pores within 'em, and which were never divided into Parts, must be vastly harder. See MATTER.

For such hard Particles gather'd into a Mass, can't possibly touch in more than a few Points: & therefore much less Force is requir'd to sever them than to break a solid Particle, whose Parts touch throughout all their Surfaces, without any intermediate Pores or Interstices. But how such hard Particles, only laid together, and touching only in a few Points, should come to *cohere* so firmly as to fact we find they do, is inconceivable; unless there be some Cause, whereby they are attracted and press'd together.

Now, the smallest Particles of Matter may *cohere* by the strongest Attractions, and continue large; whose attracting Force is feebler: And, again, many of these larger Particles *cohering*, may continue others still larger; whose attractive Force is still weaker; and so on for several Successions, till the Progression end in the biggest Particles, on which the Operations in Chymistry, and the Colours of Natural Bodies do depend; and which by *cohering* compose Bodies of a sensible Magnitude. See HARDNESS, FLUIDITY, and FIRMNESS.

The different Degrees of *Cohesion*, constitute Bodies of different Forms and Properties.

Thus, the same great Author observes, that the Particles of Fluids which don't *cohere* too strongly, and are small enough to render 'em susceptible of those Agitations which keep Liquors in a Flux, are most easily separated and rarefied into Vapour, and make what the Chymists call *Volatile Bodies*; rarefying with an easy heat, and again condensing with a moderate cold. See VOLATILITY.

Those whose Particles are grosser, and so less susceptible of Agitation, or *cohere* by a stronger Attraction, are not separable without a greater degree of Heat; and some of 'em not without Fermentation: and these make what the Chymists call *Fix'd Bodies*. See FIXATION.

COHOBATION, in Chymistry, a repeated Distillation of the same Matter, with the Liquor drawn from it; that Liquor being again and again return'd upon the Matter left at the bottom. See DISTILLATION.

The Design of this Operation is to open the Pores, and separate and volatilize the spirituous Part.

Cohobation is a kind of *Circulation*; only differing from it in this, that the Liquor is drawn off in *Cohobation* as in common Distillation, and thrown back again; whereas in *Circulation* it rises and falls in the same Vessel, without ever being carried out. See CIRCULATION.

COHORT, *Cohors*, among the Romans, a Body of Infantry, consisting of five or six hundred Men; answering in most respects to our Battalion.

The *Cohort* was divided into three *Maniples*, or Companies; the *Manipulo* into two *Centuries*; and the *Century* into an hundred Men. See MANIPULUS, CENTURY, &c.

The first *Centurio* in a *Cohort* was called *Principilus*; and bore the Eagle, or Standard of the Legion. See PRINCIPILUS.

A Legion consisted of six *Cohorts*. See LEGION.

When the Army was rang'd in order of Battle, the *Cohorts* were dispos'd in the following manner: The first *Cohort* took up the right of the first Line, as the Companies of Grenadiers do in our Regiments; the rest follow'd in their natural Order: so that the third was in the Centre of the first Line of the Legion, and the fifth on the left: the second between the first and third; and the fourth between the third and fifth. The five remaining *Cohorts* form'd a second Line in their natural Order: Thus the sixth was behind the first, and so of the rest.

The first, third, and fifth *Cohorts* were esteem'd the best; at least it appears so from the Poets they took up, which were look'd on by the Romans as the most important.

Marius was the first who divided the Roman Forces into *Cohorts*.

The Word properly signifies the Arow, Yard, or Space before the Door of a Houle.

COIF, the Badge of a Serjeant at Law; who is hence also called *Serjeant of the Coif*. See SERJEANT.

The *Coif* is of Lawn, and worn on the Head, under the Cap when they are created, and ever after.

The Use of the *Coif* was to cover the *Tonsuram Clericallem*, otherwise call'd, *Corona Clericalis*; because the Crown of the Head was close shav'd, and only a Border of Hair left around the lower Part, which gave it the Appearance of a Crown. See CROWN, TENIA, &c.

COIN, or *Motrice*, in the Manufactory of Money, Medals, Counters, &c. is a piece of Steel well temper'd, four or five Inches high, square at bottom, and round a-top; whereon are engrav'd, *Deut-wile*, or *En creuse*, with Punchions and other Instruments, the several Figures, Marks, &c. to be struck on the Monies, &c. See MATRICE.

For the manner of engraving of the Coins; see ENGRAVING on Steel.

COIN is more generally us'd for a Piece of Metal, converted into Money, by the impressing of certain Marks or Figures thereon. See MONEY.

Or, Coin may be defin'd, a Species of Money, struck with a Hammer, or Mill. See COINAGE.

Hence, *Coins* differs from *Money*, as the *Species* does from the *Genus*. Money is any Matter, whether Metal, Wood, Leather, Glass, Horn, Paper, Fruits, Shells, Kernels, &c. which have cours'd as a Medium in Commerce.

Coins are a particular Branch of *Monies*, viz. such as are made of Metal, Gold, Silver, or Copper, and struck according to a certain Process, call'd *Coinage*.

It is observ'd, under the Article MONEY, that the precise Epochs of the Invention of Money is not known; 'tis too ancient for our Annals: And if we might argue from the Necessity and Obviousness of the Thing, must be nearly coeval with the World.

Whether *Coins* be of equal Antiquity, may admit of some doubt; especially as most of the antient Writers are so frequent and express in their mention of Leather Monies, Paper Monies, wooden Monies, &c. Some, however, manage all this, are of opinion that the first Monies were of Metal: the Reasons they give, are the Firmness, Neatness, Cleanliness, Durableness, and Universality of Metals; which, however, do rather conclude, they ought to have been so, than that they actually were so.

In effect, the very Commodities themselves were the first Monies, i. e. had cours'd for one another by way of exchange; and it was the difficulty of cutting, or dividing certain Commodities, and the impossibility of doing it without great Loss, that first put 'em on the Expedient of a general Medium. See TRADING.

Indeed, thus much may be said in behalf of *Coins*, that, on this view, 'twas natural for 'em to have their first recourse to Metals; as being almost the only things whose Goodness, and as it were Integrity, is not diminish'd by Partition; besides the Advantages above express'd, and the Conveniences of melting, and returning 'em again into a Mass of any size or weight. See EXCHANGE.

'Twas probably, then, this Property of Metals which first accustom'd People, who stick'd together, to account 'em in lieu of Quantities of other Merchandises in their Exchanges; and at length to substitute 'em wholly in their stead: and thus arose Money: As it was their other Property to preserve any Mark or Impression a long time, which confirm'd 'em in the Right; and thus was the first rise of *Coins*.

In the first Ages, each Person cut his Metal into pieces of different Sizes and Forms, according to the Quantity to be given for any Merchandise, or according to the Demand of the Seller, or the Quantity stipulated between them: To this end they went to Market, loaden with Metal, in proportion to the Purchase to be made, and furnish'd with Instruments for portioning it, with Scales for dealing it out, according as occasion requir'd.

By degrees it was found more commodious to have Pieces ready weigh'd; and as there were different Weights requir'd, according to the Value of the different Wares, all those of the same Weight began to be distinguish'd with the same Mark, or Figure: Thus were *Coins* carried one step further.

At length, the growing Commerce of Money beginning to be disturb'd with Frauds, both in the Weights and the Matter, the publick Authority interpos'd; and hence the first Stamps or Impressions of Money; to which succeeded the Names of the Monies; and at length the Effigies of the Prince, the Date, Legend, and other Precautions to prevent the Alteration of the Species: And thus were *Coins* completed. See COMMERCE.

On the Foot whereon Money now stands, 'tis divided into *real*, or effective Money; and *imaginary* Money, or Money of Account.

Imaginary Money, or Money of Account, is that which has no Existence in real Species; but is rather a Sum of several Species, invented or retain'd to facilitate Accounts, by keeping them on a fix'd footing, not to be chang'd like the current Coins, which the Sovereign Power either raises or lowers at pleasure, according to the Occasions of the State.

Of this Kind, among us, are Pounds, Nobles, Marks, &c. among the French, Livres, &c. See POUND, LIVRE, &c.

For the several Imaginary Monies us'd in the several Parts of Europe, &c. with their Proportions and Reductions, see MONNY.

Real, or Effective Money, is that which has an actual Existence, in real Species of Gold, Silver, &c. See SPECIES.

Such are, among us, the Shillings, Guineas, &c. the List of which, us'd in the several Parts of the World, with their Reductions, are as follows.

Modern Coins, or current Species of Europe, Asia, Africa, and America.

All the current Species in the four Quarters of the Earth, at this Day, are either made of Metals, or are Shells and Fruits.

The Metals are Gold, Silver, Copper, Tin, and Lead; to which may be added Billon, a mixture of Silver and Copper in a certain proportion.

In Europe, none are us'd but Gold, Silver, Copper, and Billon. In some part of the East Indies, they likewise use Tin and Lead: As to Shells and Fruits, they are the small Money of several Nations in Asia, Africa, and America.

British Coins.

In England, the current Species of Gold, are the Guinea, Half Guinea, Jacobus, Laureat, Angel, and Rose-Noble: the four last of which are now seldom met with, having been most of them converted into Guineas, chiefly during the Reigns of Charles II. and James II. See GOLD.

The Silver Coins are the Crown, Half Crown, Shillings and Sixpences. See SILVER.

Copper Coins are Halfpennies and Farthings. See COPPER.

Value and Proportions of the English Coins.

Farthing.		= Halfpenny.		= Shilling.		= Half Crown.		= Crown.		= Pound Acc.	
48	24	120	60	240	120	960	480	1048	504	21	10
										Guinea, or Piece.	
										The Jacobus	
										The Carolus,	
										or Laureat	

In Scotland, by the Articles of the Union, 'tis appointed, that all the Coins be reduced to the English, and the same Accounts observ'd throughout. Till then, the Scots had their Pounds, Shillings, and Pence, as in England; but their Pound was but twenty Pence English, and the others in Proportion: Accordingly, their Mark was 137 s. Scotch, current in England at 13 s. d. their Noble in proportion.

Before these, they had their Twynner Pence and Halfpence; their Penny $\frac{1}{12}$ of that of England: besides base Money of Achifous, Babecs, and Placks. The Bodle, $\frac{1}{2}$ of the Pence, $\frac{1}{4}$ of the Achifon, $\frac{1}{2}$ of the Babec, and $\frac{1}{2}$ of the Plack.

In Ireland, the Coins are as in England, viz. Shillings, Pence, &c. with this difference, that their Shilling, or Harper, is but equal to nine Pence Sterling; whence their Pound is only $\frac{3}{4}$ of ours, or 15 s.

French Coins.

The only Gold Coin now current in France, is the Lewidore, or Louis d'Or, with its Divisions, which are $\frac{1}{2}$ and $\frac{1}{3}$ and its Multiples, which are the double and quadruple Louis. See LOUIS.

Till the Year 1700, they had Gold Lys, and Ecus, or Crowns; but they are now no more.

The Silver Coins are the Ecus, Crowns, or white Louis's, with their Diminutions, viz. $\frac{1}{2}$ and $\frac{1}{3}$; and Pieces of ten Sols, and of six. See SOL, and CROWN.

The Billon Coins are of two Kinds; each called Sol; some of 15 Deniers, others 27. To these may be added the Deniers current in the Linnotts, Provence, Dauphine, and other Parts.

Lastly, the Copper Coin is the Liard, equal to three Deniers; and is ordinarily called the Double.

Their general Value is as in the following Table: For Particulars, see the particular Heads.

Denier, equal to $\frac{1}{2}$ of a Farthing Sterl.

2	Doable.							
3	12	Liart.						l. s. d. grs.
12	6	4	Sol Paris, is equal to		0		0	
240	120	8	20	Livre, Acc.		0		1
720	360	240	60	3	Ecus, Crown		0	

The Louis d'Or, or French Pistole, was first struck at 10 Livres, but has since risen as high as 50. With us 'tis valued at 16 s. Sterling.

Spanish Coins.

In Spain, and the States depending thereon, the Gold Coin is the Pistole; above which is the Double Pistole, and Piece of four Pistoles; and under it the Half Pistole; to which must be added the Castilians of Gold. See PISTOLE.

The Silver Money are the Piafre, or Piece of eight Reals, and its Diminutions; as also the simple Real, with its Diminution. See REAL.

The Copper Coins are the Ochavos, or Octavos, which are of two Kinds, the one equal to four Maravedis, and ordinarily call'd Quarta; the other double this, and called double Quarta: lastly, the Maravedis. See MARAVEDI.

It must be observ'd, that in Spain they have new Money, and old. The old, current in Sevil, Cadix, Andalusia, and some other Places, is worth 25 per Cent. more than the New, current at Madrid, Bilbao, St. Sebastian, &c. i. e. 100 Pounds old, is equal to 125 Pounds new. This difference is owing to their King Charles II. who in 1688, to prevent the Export of Money abroad, rais'd it 25 per Cent. which, however, he was only able to effect in part; several Provinces retaining the ancient Rate.

Value of the Spanish Coins:

Maravedis old, somewhat above $\frac{1}{4}$ of a Farthing Sterling.

4	Quarta.							
8	2	Octavo, or double Quarta.						l. s. d.
64	32	16	Real, old Plata, equal to		0		0	
312	68	34	8	Pieces of Eight, or Piafre,		0		4
2048	272	136	32	4	Pistole,		0	

Portuguese Coins.

Those of Gold are the Milleray, or St. Stephen, and the Moeda d'Oro, or, as we call it, the Moitore; which is properly their Pistole; above this are Doppio Moedas, or double Pistoles; and quadruple Species equal to five Pistoles. See MOITORE.

Their Silver Coins are the Cruzada; Pataca, or Piece of Eight; and the Vintain, whereof they have two sorts, the one Silver, and the other Billon.

The Res is of Copper, which serves 'em in Accounts, as the Maravedis does the Spaniards.

Res, or Rez, equal to $\frac{1}{2}$ of a Farthing Sterling.

20	Vintaino.							
400	20	Cruzada.						l. s. d.
1000	50	25	Mi-moeda, or Half Pistole, equals		0		13	
3000	100	5	2	Moeda d'Oro, or Pistole,		1		7

10000	500	25	10	6	25	Ducat of fine Gold,		6

Dutch Coins.

Those of Silver are Crowns, or Dollars, Ducatoons, Florins, and Eschilins, each whereof has its Diminution. The Silver, or common Shilling, is of Billon; the Dayt, and Penny of Copper.

Penny.

12	Dayt.							
6	4	Gros.						l. s. d.
12	8	2	Stuyver, or Shilling common		0		0	
72	48	12	6	Scalin, or Shilling gros		0		0
236	160	40	20	32	Florin, or Guilder,		0	
708	480	120	60	10	3	Dollar, or Ducatoon,		0

Flemish Coins.

Those of Gold are Imperials, Rides, or Phillips, Alberts, and Crowns.

Those of Silver are Phillips, Rixdollars, Paragons, Scilins, and Gulden: And those of Copper, Patards.

Patard, or Penny.

8	Groat.	l.	s.	d.
16	Single Silver, equal to	0	0	1 1/2
96	6 Shilling.	0	0	1 1/2
288	18 5 Guineen.	0	2	0
720	30 Rixdollar, Dollar, Patag.	0	4	6
1104	14 1/2 Imperial.	0	11	3

Note, The Rixdollar, Dollar, and Patagon, are nearly on the same Foot with the Crown, or Piece of Eight.

German COINS.

Those of Gold are Ducats, which are of various Kinds; Oboli of the Rhine, and Florins: of this last Kind there are some likewise of Silver; beside Rixdollars and Izelottes, which are all of that Metal.

Those of Copper, are the Creux, or Kreuzer, and Fenin.

Fenin, equal to 1/4 of a Farthing Sterling.

8	Creux, or Kreuzer.			
192	24 Dollar.			
348	4 1/2 Obolus.	l.	s.	d.
432	12 Izelotte.	0	2	9
480	60 Gulden, or Florin.	0	3	0
650	100 Rixdol. or Dollar.	0	4	6
1068	13 1/2 Ducat.	0	7	6

Italian COINS.

In Italy, the Several States have several current Monies: tho' there are some common to them all; such as the Pistole of Gold, and the Ducatoon and Florin of Silver; which being of various Weights, Firmness, and Value, see under the Articles PISTOLE, DUCATOON, &c.

Those peculiar to Rome, are the Julius, of Silver, the Pistonelle of Billon; and the Bayoco, Demi-Bayoco, and Quadrine of Copper.—Venice has its Sequins of Gold; its Julins, or Ducatoons, and Derlingues of Silver.—Naples its Carlines.—Mourges its Monaco, or Crowns, and its Louis's of six Sols.—Genos its Croissats.—Savoy and Piemont, its Lys; all Silver. This last State has likewise Papiroles, and Cavales of Billon.

Julio, equal to	0	6 1/2	2 8 1/2	make a French-Crown.
Bayoco, 1/2 of the Julio =	0	0 1/2	Penny and 1/4	
Pignatelle, 1/4 of the Julio =	0	0 1/4	of 1/2 of a Penny, or near 1/2 a Far. Sterl.	
Justine =	4	9		
Derlingue, 1/2 of the Justine =	1	4 1/2		
Carlin =	0	6		
Monaco =	4	4		
Sequin =	9	2		
Croissat =	4	4		

Swiss COINS, are Ratzes, and Blazes; of Billon.

Ratze, equal to 1/2 and 1/4 of a Penny Sterling.

Blaze of Bern, nearly on the same Footing with the Ratze.

Polish COINS.

Beside the Rixdollars struck here, which are common to other Countries; the Poles strike Silver Rousps, Abras, and Groats.

Roup	0	6 1/2
Abra	1	0 1/2
Groch	0	0 1/2 and 1/4

Danish COINS, are the Horic, the Marcs Lubs, and the Schedules of Silver.

Horic	1	d.
Marc Lubs	1	1 1/2 Sterl.
Schedal, two Marcs, or Lubs	3	0

Swedish COINS.

Those of Silver are the Christines, Carolines, and Cavaliers. Those of Copper the Roustique, Allcuere, Mark, and Money.

Christine	1	1 1/2
Caroline	1	5 1/2
Mark	0	2
Roustique, 1/2 of the Mark	0	0 1/2 and 1/4 of 1/2
Allcuere, 1/4 of the Roustique	0	0 1/4 and 1/8 of 1/4

The Swedish Money, properly so called, is a kind of Copper, very soft and malleable, found in little square Pieces, or Plates, about the thickness of three English Crowns, and weighing five Pounds and a half; stamp'd at the four Corners with the Swedish Arms; and current in Sweden for a Rixdollar, or Piece of Eight.

Majovite COINS.

There are two Kinds of Copecs in Majovite, the one of Gold, the other of Silver; the last call'd also Denaing, or Pence. Their

Copec, or Kapeke of Gold, worth 1: 6 1/2 Sterl. but current in the Cesar's Territories for 1: 9.

Copec of Silver, or Denaing of an oval form, worth } 0: 1 } Sterl. but current for somewhat more.

Polusk, 1/2 of the Copec	0	0	1/2
Muskofik, 1/4 of the Copec	0	0	1/4

Turkish COINS.

The only Gold Species struck in the Grand Seignior's Territories, is the Sultanic, call'd also Scherif, or Sequin.

Their small Monies are the Para, Parsli, call'd also Parat, and Meidein, and the Afpre both of Silver.

Sultanic Scherif, or Sequin, equal to the Ducat of Gold, or	9	0
Para Parat, or Parsli	0	1 1/2
Shakee of Aleppo and Scandaroon	0	3 1/2
Afpre	0	0 1/2

but ordinarily, by reason of the base Alloy, no more than 1/2.

COINS of the Coast of Barbary.

The current Coins struck here are Rubies, Medians, Ziams, and Metceals; all of Gold: the last of which are struck at Morocco, the rest at Fox, Algiers, and Tunis; which beside have Doubles of Silver, and Burbas of Copper.

Tunis its Nafaras of Silver, its Blanquilles likewise of Silver, and Felours of Copper.

Other Coins of Africa, are the Merigal of Gold, current in Syfala, and the Kingdom of Monopata; and the Pardo of Silver, current in Misambica.

Rubie, equal to 35 Afpre, or	1	9
Median, 30 Afpre, or	2	7
Ziam, Zian, or Dian, 2 Medians, or	5	2
Metceal, a Kind of Ducat of different Firmness, consequently of different Value; whence very considerable Difficulties in Commerce. The Difference arises hence, that there is no Mint fix'd, or regular Coiners at Morocco, but every Jew and Goldsmith strikes Ducats after his own manner in open Shop.	1	d. Sterl.
Double, equal to 80 Afpre, or	4	6
Burba, 1/2 of an Afpre, or	0	0 1/2
Blanquille,	0	2 1/4
Felours, 1/2 of the Blanquille, or	0	0 1/2 and 1/4
Merigal, worth about	18	0
Pardo,	1	3

Persian COINS.

Those are either Silver, or Copper; Gold they have none: Of the first Kind are the Abassi, Mamoudi, Chaye, and Bisi; of the second the Kabequi, and Half Kabequi; the Tela, or Cherafis, indeed is Gold; but 'tis less a Money than a Medal, tho' it has some course in Commerce.

Abassi, equal to	1	4 1/2
Mamoudi, Chaye, 1/2 the Abassi,	0	8 1/2
Chaye, 1/2 the Mamoudi,	0	4 and 1/2
Bisi, some Relations make a Coin worth about 1 Penny Halfpenny; but others only a Term of Accompt, signifying 10 Dimars, or 1/10 part of a Toman. See TOMAN.		
Kabequi, or Cabelque, equals 1/2 of a Penny Sterl.		
Tela, or Cherafis, usually struck at the Accession of a new King, and at the Beginning of each new Year; its Weight and Worth various.		

Chinese COINS.

Throughout the Kingdom of China and Tanguin, there are not properly any Coins struck; instead of this, they cut their Gold and Silver into little Pieces of different weights: Those of Gold, the Dutch, from their Figure, which resembles a Boat, call Golchuts: those of Silver, the Natives call Leam; and the Portuguese, Taels.

Their small Money is of Copper; 10 of these make their Shilling, and 10 of those their Crown, or Leam.

Beside these, they have a small Money of Lead, mix'd with the Scum of Copper, having Holes in the middle to string 'em on for the ease of numbering: this Species is call'd Casa, Cas, and Pids; and the Spring, which usually holds 200, is call'd Sema. They are so very brittle, that they never fall without breaking into a great number of Pieces; and if left all Night in Salt Water, stick so close together that they can't be separated.

There are two Kinds, great and small.

Golchut, an Ingot, which at 1. 3 s. per Ounce, usually amounts to 101 l. 5 s. Sterling.

Other Golchuts only weigh half as much; their Value in proportion.

Tael, or Leam, equal to 6s. 8d. Sterling.
 Copper Money $\frac{1}{2}$ v. part of the Tael, or somewhat more than $\frac{1}{4}$ of a Farthing.
 Caxa, Cache, or Pitis, $\frac{10}{17}$ or $\frac{1}{2}$ of a Penny Steel. 300000 of these are nearly equal to 56 Dutch Pounds.
 Caxa larger, $\frac{1}{277}$ of a Pfaffir, or Piece of Eight.

COINS of Japan.

The Japanese strike Coupanis, both of Gold and Silver, and Copper Pieces with Holes in the middle, like those of China; 600 of these make the Tael. Their other Monies, or quasi Monies, are Ingots, which they cut like the Chinese of different Weights, chiefly three; the largest, of the weight of six Reals, viz. 4 $\frac{1}{2}$ Taels, the Tael equivalent to 75 Dutch Styvers. The second equal to six Taels and an half; and the third to $\frac{1}{2}$ of a Real, or 1 Tael $\frac{1}{2}$.

Beside these, they have a small Silver Money, in form of round Beans, of no determinate weight, usually weigh'd by Maifas; the common Payment being by 20 Maifas, which make one Tael.

Coupan of Gold, weighing 1 Ounce	l. s. d. Sterl.
6 Drachms; its Figure a long Oval, the longest Diameter about 4 Inches, and the shortest half an Inch.	6 : 12 : 6
Other Coupanis of Gold, near $\frac{1}{2}$ of the former, amounting to about	2 : 4 : 2
Coupan of Silver, current at	0 : 4 : 6
Copper Money, ——— $\frac{1}{2}$ of a Farthing.	

COINS of Siam.

In the Dominions of Siam are struck Gold Pieces five or six Grains heavier than the Half Pistole of Spain; but these are rather Pieces of Curiosity, than of Use in Commerce.

Their Silver Coin is the Tical, or Baat; the Diminutions whereof are the Mayon, or Seling, Foang, and Sompayc. These Pieces are all strangely struck: in form they resemble Nuts, a little flattened at the Extremities; and are some of them cloven like Horse-shoes: On two of the Sides are some Stamp'd Letters.

Their Copper Money, called Bia, is round and thick: beneath this is the Cauris.

Gold Species of Siam, ———	l. s. d. Sterl.
Tical, or Baat, ———	7 : 0
Mayon, or Seling, $\frac{1}{2}$ of the Tical, ———	2 : 5 $\frac{1}{2}$
Foang, $\frac{1}{3}$ the Mayon, ———	0 : 7 $\frac{1}{2}$ and $\frac{1}{2}$
Sompayc, $\frac{1}{4}$ the Foang, ———	0 : 3 $\frac{1}{4}$
Copper Coin, or Farthing of Siam, ———	0 : 1 $\frac{1}{2}$ and $\frac{1}{4}$
	0 : 6 $\frac{1}{2}$

COINS of the Coasts and Islands of the Indies.

The Principal, and those most generally current, are Pagods, Roupias, Larins, Fanos, or Fanons, and Coupanis, each whereof are struck both of Gold and Silver.

Beside these general Coins, are particular ones, viz. at Goa, S. Thomas's of Gold.—Along the Persian Gulf, about Mecca, and throughout Arabia, the Lario.—Along the Coasts of Malabar, and at Goa, the Paradso Xeraphin of Silver.—At Bantam, the Fardos; at Malebar, the Tare; at Siam the Tical, with its Diminutions the Mayon, Foang, Sompayc, and Demi-Foang: all of Silver.—At Surate, Agre, and the rest of Indostan, the Pecha, or Pessa, and Doudous, all of Copper.—The Bafaracos and Chedas, of Tin.

Pagod, Gold, denominated from its Impression, an Indian Idol, ———	l. s. d. Sterl.
Pagod, Silver, its Value very different; the smallest 8 Tangas, and the Tangas 90 Bafaracos; equal to	0 : 5 : 0
Roupias, Gold, ———	1 : 11 : 6
Roupias, Silver, its Fineness and Value various: There are three Kinds current, viz. the Roupias Siccas, the Roupias of Surat, and Roupias of Maderas.	s. d. Sterl.
Roupias Siccas, worth at Bengal	2 : 12
of Surat	2 : 6 $\frac{1}{2}$
of Maderas	2 : 5 $\frac{1}{2}$

Note, This is to be understood of the new Roupias; for as to the old ones, of each Kind, their Value is less: those of Maderas, v. g. are but equal to 1 s. 11 d. Sterl. those of Surat, 2 s. and the Siccas 2 s. 4 d.

Larin, in form of a round Wire, or Cylinder, equal to the Barrel of a Pen; bent in two and a little flattened at each end, to receive the Impression of some Arabic, or Persian Character.	l. s. d. Sterl.
	0 : 11

Fanos, or Fanon, Gold, is of different Fineness, Weight, and Value; the largest worth	0 : 9
The smallest	0 : 2 $\frac{1}{2}$
Fanos, Silver, ———	0 : 1 $\frac{1}{4}$
Coupan, see COINS of Japan.	
S. Thomas, equal to	9 : 0
Pardao Xeraphin	2 : 1
Fardos	2 : 8 $\frac{1}{2}$
Tare	0 : 0 $\frac{1}{2}$

Tical, see COINS of Siam.	s. d. Sterl.
Pecha, or Pessa, ———	0 : 0 $\frac{1}{2}$
Doudou, $\frac{1}{2}$ of Fanos, or somewhat less than	0 : 0 $\frac{1}{4}$
Bafaraco ——— $\frac{1}{7}$ of a Farthing.	
Cheda is of two Kinds, the one Octagonal, current at	0 : 1 $\frac{1}{2}$
The other round ———	0 : 0 $\frac{1}{2}$

Mogul COINS.

In the Dominions of the great Mogul, are Roupias, Maimouds, and Pechas; the first both of Gold and Silver; the second of Silver alone, and the third of Copper.

There are others struck by the Princes tributary to him, and the Powers bordering on him, scarce current beyond their respective Territories: particularly a small Silver Coin struck by the K. of Matouba, whose Territories lie to the North of Agre, of the Value of the Pecha of Mogul, but half so heavy again.—The Raja of Paria-jajamoula, to the North of Patna, likewise strikes some little Pieces, both of Silver and Copper, of small Value.—The Raja of Ogdan, who commands between Brampoor, Serouge, and Amadabab, a small Silver Coin, equal to 6 Pence Sterling; and another of Copper, equal to an Halfpenny Sterling.—The King of Cheda and Pera, a Tin Money called Cheda.—The King of Achem, little slight Gold Pieces, worth about 15 Pence Steel, and Tin Pieces, 80 of which are equal to the English Penny, current in the Isles of Sumatra.—The Gold Coin of the King of Macassar and Celebes, is taken by the Dutch for a Florin.—The King of Cambaya strikes only Pieces of Silver and Copper: his Gold, wherein he abounds, is negotiated by weight.—The Kings of Java and Bantam, in the same Island, and those of the Molucca Islands, strike only Copper Coins: they allow foreign Silver Species to be current in their Territories, but coin none.

Roupias, see COINS of the Coasts, &c. of India. s. d. Sterl.

Maimouds, or Mammed, its value is not fix'd	0 : 11
In the Kingdom of Mazarate, the great Maimoud is equal to	
The small half the great one	0 : 5 $\frac{1}{2}$
Pecha, see COINS of the Isles, &c. of India.	
Silver Piece of Matouba, ———	0 : 0 $\frac{1}{2}$
Silver Piece of the K. of Ogdan, ———	0 : 6
Copper Piece of the same	0 : 0 $\frac{1}{2}$
Cheda, see COINS of the Isles, &c. of India.	
Gold Piece of the King of Achem, ———	1 : 3
Tin Piece of the same	0 : 0 $\frac{1}{2}$
Gold Piece of the King of Macassar, taken by the Dutch for a Guilder, ———	1 : 10 $\frac{1}{2}$

To the Number of current Coins which have distinct Names to specify 'em, may be added many more, both in Europe and Asia; only denominated and known from their Value: Such are those called simply Pieces, with the Addition of their Price: as in Spain, the Piece of eight Reals, in England the Piece of 2s Shillings, or Guinea; in France the Piece of 4 Francs, Piece of 10 Sols, or Shillings; Piece of 4 Sols; Piece of 2 Sols; of 6 Blancs; of 30, 15, 6, 4, &c. Deniers, or Pence. See PENCE.

Shells current in Asia.

These serve in many Places for Money; and are brought from the Maldives, so called in the Indies Cauris: On the Coasts of Africa they change their Name, and are called Bouges.

In America they take a third Name, viz. Porcelains. Indeed these last don't come from the Maldives; there being Shells found in the West-Indies much like those of the East. In the Kingdom of Congo is another Kind of Shells, called Zimbi; so the same will have them the same with the Cauris. Cauris, Coris, or Bouges, are white Shells, current particularly in the State of the Great Mogul; dug out of the Ground by the Maldivians: 65 are usually reckon'd equivalent to the Pecha, a small Copper Coin, worth about an Halfpenny Sterling; which brings each Cauris to $\frac{1}{277}$ of a Penny Sterling.

Porcelains are nearly on the same Footing with the Cauris. See CAURIS.

Zimbi, current particularly in the Kingdoms of Angola and Congo. Two thousand Zimbis make what the Negroes call a Macoute; which is no real Money, whereof there is none in this Part of Africa, but a manner of reckoning: Thus, two Flemish Knives they esteem a Macoute; a Copper Basin, two Pound weight, and 12 Inches Diameter, three Macoutes; a Ful ten, &c.

Fruits current for COINS.

There are three Kinds of Fruits used for Coins; two in America, particularly among the Mexicans; which are the Cacao and Maife: The other in the East-Indies, viz. Almonds; brought thither from Lar, and growing in the Deserts of Arabia.

Cacao, 15 of these are esteem'd equivalent to a Spanish Real, or 7 Pence Sterling.

Maid has ceas'd to be a common Money since the Discovery of America by the Europeans.

Almonds are chiefly used where the Cairis are not current. As the Year proves more or less favourable to this Fruit, the Value of the Money is higher or lower: In a common Year, 40 Almonds are set against a Pečina, or Halfpenny Sterling; which brings each Almond to $\frac{1}{2}$ of a Farthing.

Thus much for the Modern Coins, or Monies: Those of the Antients are as follows.

Antient Coins.

Value and Proportion of the Jewish Coins.

		l. s. d. Sterl.
Gerah	—	00 : 00 : 1 $\frac{1}{100}$
10 Bekah	—	00 : 01 : 1 $\frac{1}{10}$
20 Shekel	—	00 : 02 : 3 $\frac{1}{2}$
1200 Maneh	} 06 : 16 : 10 $\frac{1}{2}$	
1200 Minah Hebraica		
60000 Talent	342 : 03 : 09	
Solidus Aureus, or Sextula, worth	00 : 12 : 0 $\frac{1}{2}$	
Siclus Aureus, worth	1 : 16 : 6	
A Talent of Gold, worth	5475 : 00 : 0	

Value and Proportion of the antient Grecian Coins.

		s. d. grs. Sterl.
7 Chalcus	—	0 : 0 : 0 $\frac{11}{16}$
14 Dichalcus	—	0 : 0 : 0 $\frac{11}{8}$
18 Hemibobolium	—	0 : 0 : 1 $\frac{1}{4}$
36 Bobolium	—	0 : 0 : 2 $\frac{1}{2}$
112 Diobolium	—	0 : 1 : 2 $\frac{1}{2}$
224 Tetrobolium	—	0 : 5 : 0 $\frac{1}{2}$
336 Drachma	—	0 : 7 : 3
672 Didrachmum	—	1 : 3 : 12
1344 Tetradrachmum	—	2 : 7 : 0
1680 Pentadrachmum	—	3 : 2 : 3

Note, Of these the Drachma, Didrachm, &c. were of Silver, the rest for the most part of Brass. The other Parts, as Tridrachm, Triobolus, &c. were sometimes coin'd.

Note also, the Drachma is here, with the generality of Authors, suppos'd equal to the Denarius; tho' there's Reason to believe, the Drachma was somewhat the weightier. See DRACHMA.

The Grecian Gold Coin was the Stater Aureus, weighing two Attick Drachms, or half of the Stater Argentus; and exchanging usually for 25 Attick Drachms of Silver; in our Money

According to our Proportion of Gold to Silver 1 : 00 : 9
 There were likewise the Stater Cyclonus, exchanging for 28 Attick Drachms, or Stater Philippicus, and Stater Alexandrinus, of the same Value. } 0 : 18 : 1
 Stater Darius, according to Josephus, worth } 1 : 12 : 3 $\frac{1}{2}$
 50 Attick Drachms, or }
 Stater Caelius, of the same Value.

Value and Proportion of the Roman Coins.

		s. d. grs. Sterl.
Terencius	—	0 : 0 : 0 $\frac{271}{64}$
1 Semilibella	—	0 : 0 : 1 $\frac{1}{16}$
2 Libella	} 0 : 0 : 3 $\frac{1}{8}$	
4 As		
10 Sesterterius	—	0 : 1 : 3 $\frac{1}{2}$
20 Quinarius	} 0 : 3 : 3 $\frac{1}{2}$	
40 Victoriatius		
100 Denarius	—	0 : 7 : 3

Note, Of these the Denarius, Victoriatius, Sesterterius, and sometimes the As, were of Silver, the rest of Brass. There were sometimes also coin'd of Brass the Triens, Sextans, Uncia, Sextula, and Dupondius.

The Roman Gold Coin was the Aureus, which weigh'd generally double the Denarius; the Value of which, according to the first Proportion of Coinage mention'd by Pliny, was, according to the Proportion that obtains now amongst us, worth 1 : 0 : 9
 According to the Decuple Proportion, mention'd by Livy and Julius Pollux, worth 0 : 12 : 11
 According to the Proportion mention'd by Tacitus, and which afterwards obtain'd, whereby the Aureus exchange'd for 25 Denarii, its Value 0 : 16 : 1 $\frac{1}{2}$

COIN, in Architecture, a kind of Die, cut diagonal-wise, after the manner of the Flight of a Staircase; serving at bottom to support Columns in a Level; and at top to correct the Inclination of an Entablature, supporting a Vault.

These Coins have also the same effect with round Balusters, which are not inclined according to any Flight.

COIN is also us'd for a Corner, or solid Angle, compos'd of two Surfaces inclined towards each other; whether that Angle be exterior, as the Coin of a Wall, a Tree, &c. or interior, as the Coin of a Chamber, or Chimney; from the Word *Cuneus*, Wedge. See QUAIN.

COINAGE, or Coining, the Art or Act of manufacturing, or making Money. See MONEY.

COINING, is either performed by the Hammer or the Mill.

The first Method is now little used in Europe, especially in England, France, &c. tho' the only one known till the Year 1555, when a new Machine, or coining Mill, having been invented by an Engraver, one Antoine Brubeck, was first try'd in the French King's Palace at Paris, for the coining of Counters. The same attribute the Invention of the Mill to Varin, a famous Engraver, who, in reality, was no more than an Improver of it; and others to Aubry Olivier, who had only the Inspection of it.

The Mill has met with various Fate since its first Invention; being now us'd, and again laid by, and the Hammer resum'd; but it has at length got that footing, by the Neatness and Perfection of the Species struck with it, that there appears no probability of its being again displac'd. See MILL.

In either kind of coining, the pieces of Metal are stamp'd, or struck with a kind of Molds, or Coins, wherein are engraven the Prince's Effigies, with the Arms, Legend, &c. The manner of preparing and cutting of which, see under GRAVING.

The first Operations in coining are the mixing, and melting of the Metals.

For the mill, it is to be observ'd, that there are no Species coin'd of pure Gold or Silver, but always a quantity of Alloy of Copper is mix'd with them: The Reasons are partly the Scarcity of those two Metals, partly the Necessity of making them harder by some foreign Admixture; and partly to defray the Expences of coining. See ALLOY.

Now there are two Kinds of alloying, or mixing; the first where the Gold or Silver has not been used for Money before; the other where several Kinds of Species, or Ingots of different Titles and Values, are to be melted down into a new Money.

The proportioning of the Alloy with the fine Metal is easy in the first Case, in the other more difficult: The Arithmeticians make a long Doctrine of it, which see under ALIGATION.

Yet it is readily effected by the following Method, taken from the anonymous Author of the Treatise at the End of that of Mr. Bouffard, viz.

Write down the several Matters to be melted, their Quality, Weight, and Fineness, in two distinct Articles; the one containing those above the Standard, the other those under it: By calculating the first, you shall have the Excess, by the latter the Defect. Then comparing the two Products, you will find, by Subtraction, how much Alloy must be added to bring the several Matters to the Fineness requir'd.

For the melting, if the Metal be Gold, 'tis done in Earthen Crucibles; if Silver or Copper, in Iron ones. See CRUCIBLE. There are two Kinds of Furnaces proper for the melting of Metals; those with Wind, and those with Bellows: See each explain'd under the Article FURNACE.

When the Gold or Silver are in Balance, i. e. are entirely melted, they are stirr'd and brew'd together; the Silver and Copper with an Iron Stirrer, the Gold with one of bak'd Earth. In this State they are pour'd into Molds, or Frames, for the casting 'em into Plates, or Sheets: The Method of doing which, is exactly the same with that us'd by the Founders, in Sand; both with regard to the Frames, the manner of working the Earth, and of ranging the Molds or Patterns. See FOUNDRY; for also FRAMES, and MOUNTS.

The Molds are flat Plates of Copper, about 15 Inches long, and nearly of the thickness of the Species to be struck. In each Mold are placed eight of these to make Plates for Guineas, ten for Half Guineas, five for Crowns, &c. and in proportion for Copper. All the difference between casting the Plates of Gold, and those of other Metals consisting in this; that the latter are taken out of the Crucibles with Ladles, and pour'd into the Aperture of the Mold; and that for Gold, the Crucible is taken off the Fire with a kind of Tong, and thence pour'd into the Mold.

Thus far the Process is the same, in coining either with the Mill or the Hammer: When the Plates are taken out of the Molds the difference commences: so that here the Article of Coining divides into two Branches.

COINING by the Mill, or Mill'd Money. The Plates being taken out of the Molds, scraped, and brush'd, are pass'd several times thro' the Mill, to flatten 'em,

'em, and bring them to the just thickness of the Species to be coin'd; with this difference, however, that the Plates of Gold are heated again in a Furnace, and quench'd in Water, before they undergo the Mill; which softens, and renders 'em the more ductile: whereas those of Silver pass the Mill just as they are, without any heating; and when afterwards they are heated, they are left to cool again of themselves, without Water. See MILL.

The Plates, whether Gold, Silver, or Copper, thus reduced as near as possible to their thickness, are cut into round Pieces, or Planchets, near the Size of the intended Species, with a cutting Instrument fasten'd to the lower Extremity of an Arbor, whose upper end is form'd into a Screw; which being turn'd by an Iron Handle, turns the Arbor, and lets the Steel, well sharpen'd, in form of a Punch-cutter, fall on the Plates; and thus is a piece punch'd out. See this Instrument represented in Tab. *Miscellany*, Fig. 3.

These Pieces are now given to be adjusted, and brought by filing, or rasping, to the Weight of the Standard whereby they are to be regulated; and what remains of the Plate between the Circles is melted again.

The Pieces are adjusted in a fine Balance; and those which prove too light are separated from those too heavy; the first to be melted again, and the second to be filed down. For it may be observ'd, that the Mill thro' which the Plates are pass'd can never be so just, but there will be some inequality, whence will arise a difference in the Planchets. This inequality, indeed, may be owing to the Quality of the Matter, as well as of the Machine; some Parts being more porous than others.

When the Planchets are adjusted, they are carried to the blanching, or whitening House, i. e. the Place where the Gold Planchets have their Colour given them, and the Silver ones are whiten'd; which is done by heating 'em in the Furnace, and when taken out and cool'd, boiling 'em successively in two Copper Vessels, with Water, common Salt, and Tartar; and after scowring 'em well with Sand, and washing 'em with common Water, drying 'em over a Wood Fire, in a Copper Sieve; wherein they are put when taken out of the Boilers.

The whitening, or blanching was formerly perform'd very differently from what it now is: And as the ancient Method is still in use among Goldsmiths, and other Workmen who use Gold and Silver, we have made a distinct Article of it. See BLANCHING.

Formerly, the Planchets, as soon as blanch'd, were carry'd to the Press, to be struck and receive their Impressions; but now they are first mark'd with a Legend, or Engine, on the Edges, to prevent the clipping and paring of the Species; which is one of the ways wherein the ancient Money us'd to be damag'd.

The Machine us'd to mark the Edges is very simple, yet ingenious; it consists of two Plates of Steel, in form of Rulers, about the thickness of a Line, on which the Legend or Edging are engraven, half on the one, and half on the other. One of these Plates is immovable, and strongly bound with Screws to a Copper Plate; and that again to a strong Board, or Table: The other is movable, and slides on the Copper Plate, by means of a Handle, and a Wheel, or Pinion of Iron; the Teeth whereof catch in a kind of other Teeth, on the Surface of the sliding Plate. Now, the Planchet being plac'd horizontally between these two Plates, is carried along by the Motion of the movable one; so, as by that time it has made half a turn, it is found mark'd all round.

This Machine is so easy, that a single Man is able to mark twenty thousand Planchets in a Day: It was invented by the Sieur *Castaing*, Engineer to the French King, and first us'd in 1685.

Lastly, the Planchets being thus edg'd, are stamp'd, i. e. their Impression given them in a Balancier, or Press; which is a Machine invented at the latter end of the XVIIth Century: See its Figure in Tab. *Miscellany*, Fig. 4.

Its chief Parts are a Beam, Screw, Arbor, &c. all contain'd in the Body of the Machine, except the first, which is a long Iron Bar, with a heavy Ball of Lead at each end, and Rings, to which are fasten'd Cords which give it Motion: It is plac'd horizontally over the Body of the Machine. In the middle of the Beam is fasten'd a Screw, which by turning the Beam, serves to press the Arbor underneath it; to the lower Extremity of which Arbor, placed perpendicularly, is fasten'd the Matrice, or Coin of the Reverse, or Arms side, in a kind of Box, or Case, wherein it is retain'd by Screws: and under this is a Box, or Case containing the Matrice of the Image side, firmly fasten'd to the lower Part of the Balancier. See MATRICE, &c.

Now when a Planchet is to be stamp'd, 'tis laid on the Image Matrice, upon which two Men draw, each on his side, one of the Ropes of the Beam, and turn the Screw fasten'd in it; which by this Motion lowers the Arbor, to which the Matrice of the Arms is fasten'd: by which means, the Metal being in the middle, at once receives an Impres-

sion on each side, from either Matrice. As to the Press, formerly us'd, it has all the essential Parts of a *Balancier*, except the Beam; which is here, as it were, divided, and only drawn one way. See ENGRAVING.

The Planchets having now all their Marks and Impressions, both on the Edges and Faces, become Money; but have not currency till they have been weigh'd and examin'd.

For the COINING of Medals, the Process is the same, in effect, with that of Money: The principal difference consists in this, that Money having but a small Relief, receives its Impression at a single Stroke; whereas, for Medals, the height of their Reliefs makes it necessary that the Stroke be repeated several times: To this End, the Piece is taken out from between the Coins, heated, and return'd again; which process, in Medallions, and large Medals, is sometimes repeated 15 or 20 times, ere the full Impression be given; care being taken every time the Planchet is remov'd, to take off the superfluous Metal stretch'd beyond the Circumference, with a File. See MEDAL.

Add to this, that Medallions, and Medals of high Relief, by reason of the Difficulty of stamping 'em in the Balancier, or Press, are usually first cast or molded in Sand, like other works of that kind, and are only put in the Balancier to perfect them; by reason the Sand does not leave 'em clean, smooth, and accurate enough. Medals, therefore, receive their Form and Impression by degrees; Money all at once.

The Rule whereby they judge the Medal to be sufficiently stamp'd; is, when feeling it with the Hand, 'tis found firm, and not to be shak'd, as filing the Coin equally every where. See MEDALLION, &c.

COINING with the Hammer, or hammer'd Money.

In this Method of making Money, the Plates of Gold, Silver, or Copper being taken out of the Molds, or Frames, as above, are heated and stretch'd by bearing 'em on the Anvil: when sufficiently beaten, they are cut into Pieces; which being again heated, flattened, and further stretch'd with the Hammer, are adjusted by cutting off the Angles with Sheers: thus by cutting and rounding them, they are reduced to the Weight of the Standard; and their roundness finish'd with another Hammer, which beats down all the Points and Angles still remaining on the Edges. In this manner they are brought to the Size of the Species to be coin'd.

In this State the Pieces become Planchets, and are carried to the Blanching-House; where they undergo the same Preparation as the mill'd Money already describ'd, and are given to the Minter to beat 'em with the Hammer.

For this last Operation, which finishes the Money, they use two Punchoons, or Matrices; the one called the *Pile*, and the other the *Tras*, or *Quiver*; each engraven dent-wise. The *Pile* bearing the Arms, and the *Tras* the Image, or Cross; both their Legend, Date, &c.

The *Pile*, which is about eight Inches high, has a kind of Talon, or Heel in the middle, and ends in a Point: Which Figure it had, for the sake of being more easily sunk, and more firmly fasten'd to the Block whereon the Money is struck. See *PILE*, &c.

The Minter, then, laying the Planchet horizontally on the *Pile*, and covering it with the *Tras*, which he holds steadily in his left Hand, gives several smart Blows on the *Tras* with an Iron Mallet held in the right; more or less, as the Graving of the Coins is more or less deep. If after these first Strokes, the Planchet be not sufficiently stamp'd, 'tis return'd again between the Matrices, exactly in its former Position, and the Strokes repeated till the Impression be perfect.

Thus is the Coinage finish'd, and the Planchets convert'd into Money; which, after they have been examin'd as to their weight, become current.

English COINAGE.

Since the Invention of milling Money in France, it has been imitated by several other Nations; but by none with Success equal to that of the *English*, who have carried it to the utmost Perfection; both by the Beauty of their Graving, and by their inventing the Impressions on the Edges, that admirable Expedient for preventing the Alteration of the Species, abovemention'd.

Till that time the *English* Money was struck with the Hammer, as that of other Nations; and, in effect, 'tis but very late, *vis.* in the Reign of K. *William III.* that the hammer'd Species ceas'd to be current. Ere they were put down, the *English* Money was in a woful Condition; having been filed and clipp'd by Foreigners, especially the *Dutch*, so as to be scarce left of half its Value: The retrieving of this distress'd State of the *English* Money, is look'd on as one of the Glories of King *William's* Reign; for which we are owing, in good measure, to the happy Conduct of the late Earl of *Hallifax*.

The Coinage of *England* is now perform'd wholly in the *Tower of London*; where there is a Corporation under the Title of the *Mint*. See *MINT*.

Formerly there were here, as there are still in other Countries, what we call the *Rights of Seignorage and Profilage*; but since the XVIIIth Year of K. *Charles II.* there

is nothing taken, either for the King, or for the Expences of *Courage*; it having been settled by Act of Parliament, that all Money should be struck at the publick Expence: so that Weight is return'd for Weight, to all Persons who carry their Gold or Silver to the *Tower*. See *STATIONERAGE*.

The *Species coin'd in England*, are esteem'd contraband Goods, and not to be exported: All foreign Species are allow'd by Act of Parliament, made in 1673, to be sent out of the Realm; as well as Gold and Silver in Bars, Ingots, Dust, &c. Indeed, in the Session of Parliament in 1718, Endeavours were made to put a stop to this License, which drains *England* of its richest Metals; but in vain; the Parliament having first settle the Bill, without coming to any Resolution.

The *Spanish COINAGE* is esteem'd one of the least perfect in *Europe*: It is settled at *Sevil* and *Segovia*, the only Cities where Gold and Silver are struck. 'Tis true, there are brought from *Mexico*, *Peru*, and other Provinces of the *Spanish America*, such vast Quantities of Pieces of Eight, and other Species, both of Gold and Silver, that, in this respect, it must be own'd, there is no State in the World where so much Money is coin'd, as in that of the King of *Spain*.

Muscovite COINAGE. The *Czar* strikes no Money but Silver, and that only in the Cities of *Mosco*, *Novograd*, *Tver*, and *Pliscon*; to which may be now added *Petersburg*, the favourite City of his Cæsarian Majesty. The *Coinage* of each of these Cities is let out to farm, and makes part of the Royal Revenue.

Persian COINAGE. All the Money made in *Persia*, is struck with the Hammer: and the same may be understood of the rest of *Asia* and *America*, and the Coasts of *Africa*, and even *Mosny*; the Invention of the Mill being nor yet got out of *Europe*, nor even establish'd in every Part of it. The King's Duty, in *Persia*, is seven and a half per Cent. for all the Monies coin'd; which are now reduced to Silver and Copper: there being no Gold coin'd there; except a kind of Medals at the Accession of a new *Sophi*.

The *COINAGE* of *Fes* and *Tunis* is not under any Discipline; each Goldsmith, Jew, and even private Person, undertaking it at pleasure: which renders their Money exceeding bad, and their Commerce very unsafe.

COITION, the Intercourse between Male and Female in the Act of Generation. See *GENERATION*.

It is observ'd, that Frogs are 40 Days in the Act of *Coition*. *Barboline*, &c. relate, that Butterflies make 130 Vibrations of the Wings in *Coition*.

COITION is also sometimes used for that mutual Attraction, or Tendency toward each other, which is found between Iron and the Magnet. See *MAGNET*.

COLARBIASANS, a Sect of Heretics in the 11d Century; so called from their Leader *Colarbasus*, a Disciple of *Valentine*: who, with *Marcus*, another Disciple of the same Master, maintain'd the whole Platitude, and Perfection of Truth and Religion, to be contain'd in the *Greek Alphabet*; and that 'twas upon this account *Jesus Christ* was called the *Alpha* and *Omega*.

COLARIN, in Architecture, the little Frise of the Capital of the *Tuscan* and *Doric Column*; plac'd between the *Atrigra*, and the *Annulets*: called by *Vitrubius*, *Hypotrachelina*. See *FRIZE*, &c.

COLARIN is also used for the Orlo, or Ring, a-top of the Shaft of the Column, next the Capital; called also *Cincture*. See *CINCTURE*.

COLATURE, in Pharmacy, the Separation of a Liquor from some Mixture, or Impurity, by percolating, or straining it thro' the narrow Pores of a Cloth, or other Matter; which will give passage to the fine, and pure Part, but intercept the grosser. See *PERCOLATION*, and *FILTRATION*.

COLCOTHAR, in Natural History, &c. There are two Kinds of *Colcothar*, *Natural* and *Falsitious*.

The *Natural* is otherwise called *Colestis*; being a red Vitriol, brought from *Germany*; form'd from the common green Vitriol, calcin'd naturally by some subterraneous Fire. See *CHALCITIS*.

The *Artificial* is also a green Vitriol, calcin'd a long time by an intense Fire; and by that means reduc'd to the redness of Blood.

COLOTHAR Vitrioli, is particularly us'd for the Dregs, or Remains, left at the Bottom of the Vessel, after the Distillation of Vitriol. See *VITRIOL*.

COLD, something devoid of Heat, or which contains in it no Particles of Fire. See *FIRE*.

This Definition is agreeable to the Sentiments of most of the modern Philosophers, who make *Cold* a mere negative Term; and suppose the Thing to consist in a mere Privation, or Diminution of Heat.

Others define *Cold*, much on the same Principle, to be that State of the minute Parts of a Body, wherein they are more slowly and faintly agitated than those of the Organs of Feeling: In which Sense, *Cold* is a mere Term of Relation; and hence the same Body becomes liable to be perceiv'd hot or cold; as its Particles are in a greater or less degree of Mo-

tion than those of the sensible Organs. See *SENSE*, *FEELING*, &c.

It is suppos'd to consist in a particular Motion of the Parts of the *low Body*; and hence the Nature of *Cold*, which is its opposite, is easily deducible: For *Cold*, we find, extinguish'd, or rather abates Heat; whence it seems to follow, that those Bodies are cold, which check and restrain the Motion of the Particles wherein Heat consists. See *HEAT*.

Now, there are three Kinds of Bodies which may do this, viz. either those whose Particles are perfectly at rest; or those whose Particles are indeed agitated, but less violently than those of the hot Body to which they are applied; or, lastly, those whose Particles have a Motion proper for exciting the Sensation of Heat, but move with a different Determination; so as to retain and change the Motion of the Particles of the Organ.

Hence, there arise three different Kinds of *Cold*, or *cold Bodies*: The 1st is, that *Cold* common to all hard Bodies, which consists in the Rest of their Parts. The 2d is that which arises on plunging any Part of the Body in Water; which consists in this, that the Parts of our *Preceptor* being more briskly agitated than those of the Fluid, communicate part of their Motion to it. The 3d, the *Cold felt* on collecting even warm Air with a Fan, or in blowing hot Breath out of our Mouth, with the Lips close shut; which consists in this, that the direct Motion of the Particles of Air, do in some measure change and rebate the Motion and Determination of the Parts of the Body: And hence it is, that a cold Body cannot cool another without heating it self. Hence also it is, that the more Parts of a frigid Body are at rest, the more must the Particles of a warm Body applied to heat 'em, lose of their Motion, and by consequence of their Heat. Thus a Marble having more quiescent Parts than Wood, which is full of Pores and Interstices, is felt colder than Wood. Hence also we see why Air, near Marble and other dense Bodies, feels somewhat colder than in other Places.

On this Principle, the two latter Kinds of *Cold* appear somewhat more than Privations: The Particles inducing the *Cold*, may be esteem'd real frigidific Corpuscles; and *Coldness* be deem'd a real Quality as well as Homœis. See *QUALITY*, *FRIGIDIFIC*, &c.

These Particles do not only check the Agitation of those continually diffus'd from the inner Parts of the Animal to the outer; but, having an elastic Power, bend and hang about the Filaments of the Body, pinch and squeeze them; and hence that acute pungent Sensation called *Cold*.

That *Cold* is more than a mere Relation, or Comparison, is evident from its having real and positive Effects; such as Freezing, Congelation, Condensation, Rarefaction, Bursting, &c. See *FREEZING*, &c.

Dr. Clark takes *Cold* to be owing to certain nitrous, and other saline Particles, endued with particular Figures proper to produce such Effects. Hence, Sal Ammonic, Salt Petre, or Salt of Urine, and many other volatile and alkalisate Salts, mix'd with Water, increase its degree of cold very sensibly. Hence also that popular Observation, that *Cold* prevents Corruption; which, however, must not be admitted without an Exception: since, if a hard, porous Body have its Interstices fill'd with Water, and this be too much dilated by freezing, the including Body will be burst. And thus it is, that *Cold* proves destructive to the Parts of some Plants. See *ICE*, *FROG*, *CONDENSATION*, *RAREFACTION*, &c.

COLIC, in Medicine, a cruel, severe, gnawing Pain, felt in the lower Venter; so called, because the ordinary Seat of the Disorder, was anciently suppos'd to be in the Intestine Colon.

Physicians usually distinguish three Kinds of *Colic*, the *Bilious*, *Windy*, and *Nephritic*.

The *Bilious Colic* has its rise from certain sharp, bilious, stimulating Humours, which being diffus'd thro' the Intestines, viciate their Fibres, and occasion a Sensation of Pain. The *Willis* takes the Part principally affected to be the Mesentery.

Dr. Sydenham observes, that the *bilious Colic* usually attacks about the beginning of Summer; that it's generally attended with a Vomiting of bilious green Liqueur; that the Patient complains of excessive Heat, great Gripings, Faintness, &c. and that if it be not soon remedy'd, it is apt to turn into the *Iliaic Passion*. See *ILIAIC Passion*.

Baglivi notes, that if the Patient sweat much, and be much enfeebled; the Disease is apt to degenerate into a Palsy. The Cure, he says, depends on Bleeding, gentle Cathartics, and Enemas; and if it arise from a Crispula, an Emetic is to precede: after which, the Cure is to be completed with proper Anodynes.

The *Windy Colic* is vagabond, never staying in any fixed Place; being produc'd by windy Vapours, which swell and distend the Intestines that are inclin'd in.

The *Nephritic Colic* is felt particularly in the Reins, whence it has its Name; the *Greek* $\mu\epsilon\tau\epsilon\tau$ signifying Reins. See *NEPHRITIC*.

It usually has its rise from some Stone, or Gravel detach'd from the Kidnies, and fallen into the Pelvis. The *Parsira Brava* is said to be a Specific for *Nephritic Colics*. See *PARSIRA BRAVA*.

S. Mennobio, a Venetian Physician at the Court of the Great Mogul, gives the following Remedy as infallible in Nephritic Cases: An Iron Ring, about an Inch and half in Diameter, and thick in proportion, is to be heated red-hot; then, laying the Patient on his Back, the red-hot Ring is to be apply'd to his Navel, so, as that the Navel be in the Centre of the Ring; The Patient will presently feel the Pain, which will occasion him to shrink back very suddenly; and the sudden Revolution thus occasion'd in the lower Venter, will in a little time dissipate all his Pains. The same Author adds, that he can warrant the Success of the Remedy.

In *Colics* arising from Flatulencies, Carminative Waters, Oils, Aromatics, &c. are always to be added to the Compositions: And in *Nephritic Colics*, besides Emollient Clysters, Solutions of Manna, Cream Tartari, &c. in Whey, &c. and proper oleaginous Mixtures, are to be exhibited to relax the Fibres; after which, proper Anodynes take place.

Some, particularly *Sydenham*, mention a *Nervous Colic*, mostly incident to hysterical and hypochondriac Persons; but this appears only a Species of the *Windy Colic*.

Rugeri recommends Camomile as an Antidote against the *Colic*, from what Cause soever it arise. Where the Disease is obstinate, much riding is of especial Service.

COLIR, an Officer in *Civitas*, who has an Eye over what passes in every Court, or Tribunal in the Empire; and tho' himself not of the Number, yet is assisting at all Assemblies, the Proceedings whereof are communicated to him.

He is properly what we may call an *Inspector*: He gives secret Intelligences to the Court; and even, on occasion, accuses the Mandarins of their Faults openly; and that not only of Faults in their publick Offices, but even in their private Life. To keep him impartial, he is kept independent; by having the Post for Life. These *Colirs* make even the Princes of the Blood tremble.

COLLAR, a particular Ornament, wore by the Knights of several Military Orders, hanging over their Shoulder, on the Mantle; and its Figure drawn around their Armories. See **KNIGHT**.

The *Collar* ordinarily consists of a Chain of Gold, enamell'd, frequently set with Cyphers, or other Devices, and having the Badge of the Order suspended at Bottom.

The *Collar* of the Order of the Garter, consists of SS, with Roses enamell'd red, within a Garter enamell'd blue, the George at the Bottom. See **GARTER**.

Maximilian is said to have been the first of the Emperors who put the *Collar* of an Order around his Arms, upon his being made Chief of that of the Golden Fleece.

Knights of the COLLAR, a Military Order in the Republick of Venice; called also the *Order of St. Mark*, or the *Medal*.

'Tis the Doge and the Senate that confer this Order: The Knights bear no particular Habit, only the *Collar*, or Chain, which the Doge puts around the Neck; with a Medal, whereon is represented the winged Lion of the Republick.

COLLATERAL, in Geography, any Thing, Place, Country, &c. situate by the Side of another.

The Word is a Compound of *col*, with, and *latus*, side; and chiefly applied to the Winds, which blow a-side of those in the Cardinal Points of the Horizon; as the North-East, South-East, North-West, South-West, and their Subdivisions.

COLLATERAL Points, in Cosmography, the intermediate Points; or those between the Cardinal Points. See **CARDINAL Points**.

The *Collateral Points* are either *Primary*, which are those removed by an equal Angle on each side, from two Cardinal Points; or *Secondary*; which, again, are either those of the first, or second Order. The first, those equally distant from a Cardinal and first Primary; the latter equally distant from some Cardinal or Primary, and first Secondary. See **POINT**.

COLLATERAL Winds, those blowing from *Collateral Points*. See **WIND**.

COLLATERAL, in Matters of Genealogy, is understood of those Relations which proceed from the same Stock, but not in the same Line of Ascendants, or Descendants; but being, as it were, aside of each other.

Thus, Uncles, Aunts, Nephews, Nieces, and Cousins, are *Collaterals*, or in the *Collateral Line*. Those in a higher Degree, and nearer the common Root, represent a kind of Paternity with regard to those more remote; but there is a kind of Equality between *Collaterals* in the same Degree.

Thus, *collateral* Descent stands in opposition to *direct* Descent to Posterity; the former passing to Brothers Children, but the latter only from Father to Son.

COLLATERAL Assurance, is a Bond, made over, and beyond the Decd it self, for the Performance of Covenants between Man and Man; thus called, as being external, and without the Nature and Essence of the Covenant.

Crompton says, that to be subject to the feeding of the King's Deer, is *collateral* to the Soil within the Forest. It may be added, that liberty to pitch Booths in a Fair, or another Man's Ground, is *collateral* to the Ground.

COLLATERALIS Penis, in Anatomy, a Muscle, otherwise called *Errigens*, or *Erector Penis*. See **ERECTOR**.

COLLATION, in the Canon Law, the conferring, or bestowing of a Benefice by a Bishop, who has it in his own Gift, or Patronage. See **BENEFICE**, and **PATRONAGE**.

Collation differs from *Installation*, in that the latter is perform'd by the Bishop, at the Motion or Presentation of another; (see **INSTALLATION**.) And the former on his own Motion.

Collation also differs from *Presentation*, in that the latter is properly the Act of a Patron, offering his Clerk to the Bishop, to be instituted into a Benefice; whereas the former is the Act of the Bishop himself. See **PRESENTATION**.

The *Collator* can never confer a Benefice on himself. In the *Romish Church*, the Pope is the *Collator* of all Benefices, even elective ones, by Prevention; setting aside Confessorial Benefices, and those in the Nomination of Lay-Patrons. Prelates and Bishops are call'd *Ordinaries*, or ordinary *Collators*. See **ORDINARY**, &c.

If the Ordinary *Collator* neglect to exercise his Right for six Months, the superior *Collator* may collate by Devotion. Thus, if the Bishop neglect, the Metropolitan may confer; then the Primate; and so on from degree to degree.

In France, the King is the *Collator* of all Benefices, whereof he is Patron, excepting Confessorial ones; to which he has only the Nomination; and the Pope, by Virtue of the *Concordat*, is oblig'd to confer on whomsoever the King nominates. For the rest, he is direct and absolute *Collator*; and may confer 'em, by Virtue of a kind of Priethood annex'd to the Royalty.

Other Lay-Patrons have seldom more than a mere Presentation; the *Collation* properly belonging to the Bishop; yet there are Abbots who have the full Right of *Collation*.

The Canonists reckon two Kinds of *Collation*; the one Free, and Voluntary, the other Necessary. The first depending on the mere Will of the *Collator*, who may chuse whom he pleases to fill the Vacancy. In the latter, the *Collator* is not at his liberty; which is the Case where a Benefice has been resign'd, or chang'd, and that Resignation or Permutation allow'd of by the Superior; for here the *Collator* is oblig'd to grant the Provision to the Resignatory, or Compermutant.

'Tis a Maxim in the New Canon Law, *Collationes sunt in fructibus*; ' Those who have the Fruits of a Benefice have the *Collation*.' But in that Case, the Word *Collation* is us'd for Presentation. See **PRESENTATION**, &c.

A *collated* Act is equivalent to an Original; provided all the Parties concern'd were present at the *Collation*.

COLLATION, in Common Law, is the Comparison, or Presentation of a Copy to its Original, to see whether or no it be conformable: or the Report, or Act of the Officer who made the Comparison.

COLLATION is also us'd among the *Romanists* for the Meal or Repast made on a Fast-Day, in lieu of a Supper. See **FAST**.

Fruits are not allow'd in a *Collation*: *E. Labineau* observes, that anciently there was not allow'd, even, bread in the *Collations* in Lent; nor any thing beside a few Confitures and dried Herbs, and Fruits: which Custom, he adds, obtain'd till the Year 1515.

Cardinal *Humbert* observes further, that in the middle of the XIth Century, there were no *Collations* at all allow'd in the Latin Church in the time of Lent; and that the Custom of *Collations* was borrow'd from the *Greeks*; who themselves did not take it up till about the XIth Century. See **LENT**.

COLLATION is also popularly us'd for a Repast between Dinner and Supper.

The Word *Collation*, in this Sense, *Du Cange* derives from *Collocutio*, Conference; and maintains, that originally, *Collation* was only a Conference, or Conversation on Subjects of Piety, held on Fast-Days in Monasteries; but that, by degrees, the Custom was introduced of bringing in a few Refreshments: and that by the Excesses to which those sober Repasts were at length carried, the Name of the Abuse was retain'd, but that of the Thing lost.

COLLEAGUE, a Companion, Partner, or Associate in the same Office, or Magistrature.

The Word is particularly us'd in speaking of the *Roman* Consuls, and Emperors.

COLLECT, or **COLLECTION**, a voluntary gathering of Money, for some pious, or charitable Purpose.

Some say, the Name *Collect*, or *Collection*, was us'd, by reason those Gatherings were anciently made on the Days of *Collects*, and in *Collects*, i. e. in Assemblies of Christians; but, more probably, *quia colligebatur pecunia*.

The Word is sometimes also us'd for a Tax, or Imposition, rais'd by a Prince for any pious Design. Thus, *Histories* say, that in 1166, the King of England, coming into Normandy,

appointed a *Collect* for the Relief of the Holy Land, at the Desire, and after the Example of the King of France.

COLLECT, in the Liturgy of the Church of England, and the Mass of the Romanists, a Prayer accommodated to any particular Day, Occasion, or the like. See *LITURGY*, and *MASS*.

In the general, all the Prayers in each Office are call'd *Collects*; either because the Priest speaks in the Name of the whole Assembly, whose Sentiments and Desires he sums up by the Word *Oremus*, Let us pray; or as observ'd by Pope Innocent III. or, because those Prayers are offer'd when the People are assembled together; which is the Opinion of *Panemius* on *Tertullian*.

The Assembly it self is in some antient Authors call'd *Collect*. The Popes *Gelasius* and *Gregory* are said to have been the first who establish'd *Collects*. *Despons*, a Doctor of the Faculty of *Paris*, has an express Treatise on *Collects*, their Origin, Antiquity, Authors, &c.

COLLECTIVE, in Grammar, a Term applied to a Word that expresses a multitude; tho' it self be singular.

Thus, Troop, Company, Army, are Nouns *Collective*. **COLLECTOR**, a Person nominated by the Commissioners of any Duty, the Inhabitants of a Parish, or the like, to raise or gather any Tax, &c.

COLLEGATARY, in the Civil Law, a Person to whom is left a Legacy in common with one or more other Persons. See *LEGACY*.

If the Thing be bequeath'd *in solido*, the Portion of the deceased *Collegatory* accrues to the rest.

COLLEGE, an Assemblage of several Bodies, or Societies; or, even of several Persons into one Society. See *SOCIETY*.

The Term *College*, among the *Romans*, was used for an Assemblage of several Persons employ'd in the same Functions, and as it were bound together to act, or serve in concert. It serv'd indifferently for those employ'd in the Offices of Religion, of Government, the Liberal Arts, and even Mechanical Arts, or Trades: So that the Word properly signified what we call a *Corporation*, or *Company*. See *CORPORATION*.

In the *Roman Empire*, there were not only the *College of Augurs*, and the *College of Capitoline*, i. e. of those who had the Superintendance of the *Capitoline Games*; but also the *College of Artificers*, *Collegium Artificum*; the *College of Carpenters*, *Fabricorum*, or *Fabrorum*; the *College of Pottery*, *Figularum*; of Founders, *Erariorum*; the *College of Locksmiths*, *Fabrorum Serravarium*; of Engineers, for the Army, *Tignarium*; of Butchers, *Lanarium*; of Dendrophori, *Dendrophorum*; of Centonaries, *Centonarium*; of Makers of Military Calcaques, *Sagoriarum*; of Tent-makers, *Tabernacularium*; of Bakers, *Pistorum*; of Musicians, *Tibicinum*, &c.

Plutarch observes, that it was *Numa* who first divided the People into *Colleges*; which he did, to the End that each consulting the Interests of their *College*, whereby they were divided from the Citizens of the other *Colleges*, they might not enter into any general Conspiracy against the publick Repose.

Colleges were distinguish'd from other Societies, nor form'd into *Colleges* by publick Authority, in this, that those who compos'd a *College* were qualify'd to treat of the common Interests of their *College*, which was, as it were, a Member of the State, and had a common Purse, an Agent to negotiate their Affairs, sent Deputies to the Magistrates when they wanted to treat with them; might make Statutes and By-Laws for the Administration of their *College*, &c. (See *Plutarch*, *Pliny*, *Caeser*, *Avl. Gellius*, the *Pandect*, *Code*, &c.)

There are various *Colleges* on foot among the *Moderns*, built on the Model of those of the *Antients*; as the *Three Colleges of the Empire*, viz. the *College of Electors*, *College of Princes*, and *College of Cities*, &c.

COLLEGE of Electors, is the Body of Electors, or their Deputies, assembled in the Diet at *Ratisbon*. See *ELECTOR*.

Antiently, the King of *Bohemia* had no Deputy in their *College*; at present he has. See *DIET*.

College of Princes, is the Body of Princes, or their Deputies, at the Diet of *Ratisbon*.

College of Cities, is, in like manner, the Body of Deputies which the several Imperial Cities send to the Diet.

COLLEGE of Cardinals, or the *Sacred COLLEGE*, is a Body compos'd of the three Orders of Cardinals, viz. Cardinal-Bishops, Cardinal-Priests, and Cardinal-Deacons. See *CARDINAL*.

Each Order has its Dean, or Chief. The Dean of the Cardinal-Bishops is always the Bishop of *Ofisia*.

COLLEGE is also us'd for a publick Place, endow'd with certain Revenues; where the several Parts of Learning, both Divine and Human, are taught, in Schools, Halls, or Classes, appointed for that Purpose.

An Assemblage of several of these *Colleges* constitute an University. See *UNIVERSITY*.

The University of *Oxford* consists of 18 *Colleges*; that of *Cambridge* of 16; that of *Paris* of 50 *Colleges*.

The Erection of *Colleges* is part of the Royal Prerogative, and not to be done without the King's Consent.

Among the *Greeks*, the *Lycæum* and *Academy* were the celebrated *Colleges*; the latter of which has given its Name to our Universities, which in *Latin* are call'd *Academæ*. With them, the House, or Apartment of each Philosopher, or Rhetor, might be esteem'd a kind of *College* of it self. See *LYCÆUM*, and *ACADEMY*.

The *Romans* came late into the Institution of such *Colleges*: They had, however, several, founded by their Emperors; especially in *Gaul*; the chief whereof were those of *Marselles*, *Lions*, *Besancon*, and *Bourdeaux*.

The *Jews*, and *Egyptians* too, have had their *Colleges*; the Chief of the first were those of *Jerusalem*, *Tiberias*, *Nardes*, *Pomposita*, *Sara*, and *Babylon*: this last is said to have been instituted by *Ezekiel*, and to have subsisted in the Time of *Malomet*.

Colleges of this kind have been generally in the Hands of those consecrated to the Offices of Religion: The *Megi* in *Perfia*, the *Gymnosophists* in the *Indies*, the *Druids* in *Gaul* and *Britain*, had the Care of educating Youth in the Sciences. After Christianity became establish'd, there were almost as many *Colleges* as Monasteries; *Charlemagne*, in his *Capitularies*, enjoining the Monks to instruct Youths in Music, Grammar, and Arithmetic: But, this, calling the Monks from their Solitude, and taking up too much of their time, the Care of the *Colleges* was at length put into the Hands of those who had nothing else to do. See *SCHOOL*.

In the Canon Law, it is said, Three Persons make a *College*, *Tres Collegium faciunt*.

The *Colleges* in *London* are,

Stow-COLLEGE, or the *College of the London Clergy*; which has been a Religious House time out of Mind: sometimes under the Denomination of a Priory, or *College*; sometimes under that of a Spital, or Hospital; as, at its Dissolution under 31 Hen. VIII. it was call'd *Ellyn's Spittle*, from the Name of its Founder, a Mercer, in 1529.

At present it is a Composition of both, viz. a *College* for the Clergy of *London*, who were incorporated in 1631, at the Request of Dr. *White*, under the Name of the *President and Fellows of Stow COLLEGE*; and an Hospital for ten poor Men, and as many Women. See *HOSPITAL*.

The Officers of the Corporation are the President, two Deans, and four Assistants; who are annually chosen from among the Rectors and Vicars of *London*; subject to the Visitation of the Bishop. They have a good Library, built and stock'd by Mr. *Sinpson*, chiefly for the Clergy of the City, without excluding other Students on certain Terms; and a Hall, with Chambers for Students, generally fill'd with the Ministers of the neighbouring Parishes.

COLLEGE of Civilians, commonly call'd *Doctors-Commons*; a *College* founded by Dr. *Harvey*, Dean of the Arches, for the Professors of the Civil Law residing in this City; where usually, likewise reside the Judge of the Arches Court of *Canterbury*, Judge of the Admiralty, of the Prerogative Court, &c. with other Civilians; who all live, as to Diet and Lodging, in a *Collegiate* manner, communing together: whence the Appellation of *Doctors-Commons*.

Their House being consum'd in the great Fire, they all resided at *Exeter-House* in the Strand, till 1672; when their former House was rebuilt, at their own Expence, in a very splendid manner. To this *College* belong 34 Professors; who make themselves Parties for their Clients, manage their Causes, &c. See *PROCTOR*.

COLLEGE of Physicians, a Corporation of Physicians, in *London*; who, by several Charters and Acts of Parliament of Henry VIII. and his Successors, have certain Privileges, whereby no Man, tho' a Graduate in Physick of any University, may, without License under the said *College-Scal*, practise Physick, in, or within seven Miles of *London*; nor even in any other part of *England*, unless he have taken the Degree in one of our own Universities: with Power to administer Oaths, fine and imprison Offenders, in that and several other Particulars: to search the Apothecaries Shops, &c. in and about *London*, to see if their Drugs, &c. be wholesome, and their Compositions according to the Form prescrib'd by the said *College* in their Dispensatory.

By the said Charter they are also freed from all troublesome Offices; as to serve on Juries, be Constable, keep Watch, provide Arms, &c.

This Society had anciently a *College* in *Knightrider-Street*, the Gift of Dr. *Linnæus*, Physician to King Henry VIII. Since that, they have had a House built 'em by the famous Dr. *Harvey*, in 1652, at the end of *Amen-Street*, which he endow'd with his whole Inheritance in his Lifetime; but this being burnt in the great Fire in 1666, a new one was erected at the Expence of the Fellows, in *Warwick Lane*; with a noble Library; given partly by the Marquis of *Dorchester*, and partly by Sir *Theodore Moserius*.

Of this *College* there is a President, four Censors, and 12 Electors: The Censors have, by Charter, Power to survey, govern, and arrest all Physicians, or others practising Physick,

in, or within seven Miles of *London*; to fine, amerce, and imprison them at discretion.

The Number of Fellows was antiently 30, till King *Charles II.* increas'd their number to 40; and King *James II.* giving 'em a new Charter, allow'd the Number of Fellows to be enlarg'd, so as not to exceed fourscore; reserving to himself and Successors, the Power of placing and displacing any of 'em for the future.

The College are not very rigorous in asserting their Privileges; there being a great Number of Physicians, some of very good Abilities, who practise in *London*, &c. without their Licence; and are commiv'd at by the College; yet, by Law, if any Person, not expressly allow'd to practise, take on him the Cure of any Disease, and the Patient die under his hand, 'tis deem'd Felony in the Practicer.

In 1696, the College made a Subscription, to the Number of 42 of their Members, to set on foot a Dispensary, for the Relief of the sick Poor: since that, they have erected two other Dispensatories. See DISPENSARY.

Gresham COLLEGE, or COLLEGE of *Philosophy*; a College founded by Sir *Tob. Gresham*, and endow'd with the Revenue of the *Royal Exchange*: One Moiety of this Endowment the Founder bequeath'd to the Mayor, and Aldermen of *London*, and their Successors, in trust, that they should find four able Persons to read within the College, Divinity, Geometry, Astronomy, and Musick; and to allow each, besides Lodging, 50 Pounds per Ann.

The other Moiety he left to the Company of Merchants, to find three more able Persons, to read Civil Law, Physick, and Rhetoric, on the same Terms; with this Limitation, that the several Lecturers should read in Term-time, every Day in the Week, except Sundays; in the Morning in *Latin*, in the Afternoon the same in *English*: that in Musick to be only read in *English*.

In this College formerly met the *Royal Society*, that noble Academy, instituted by *K. Charles II.* and celebrated thro'out the World, for their Improvements in Natural Knowledge. See their History and Policy, under SOCIETY.

COLLEGE of *Heralds*, or COLLEGE of *Arms*, a Corporation founded by Charter of King *Richard III.* who granted 'em several Privileges; as, to be free from Subsidies, Tolls, Offices, &c. See HERALD.

They had a second Charter from King *Edward VI.* and a House built near *Dolors Commons*, by the Earl of *Derby*, in the Reign of King *Henry VIII.* was given 'em by the Duke of *Norfolk*, in the Reign of Queen *Mary*; which House is now rebuilt.

Of this Collegiate Society, are three Officers stiled Kings of *Arms*, *Reges Armorum Angliorum*. See KING at *Arms*. Six Heralds. See HERALD. And four Pursuivants. See PURSUIVANT.

COLLEGES of Common Law. See INNS of Court, and Chancery.

COLLEGES for disabled Soldiers, Seamen, &c. See HOSPITALS.

COLLEGIANS, a Religious Sect, form'd among the *Arminians* and *Anglicans* in *Holland*; so called, because of their Colleges, or Meetings the first Sunday in each Month; where every one has the same Liberty of expounding the Scripture, Praying, &c.

They are said to be all either *Arians*, or *Socinians*: They never Communicate in the College, but meet twice a Year from all Parts of *Holland* at *Rimbourgh*, a Village two Miles from *Leyden*, where they Communicate together; admitting every one that presents himself, without regard to his Sect or Opinion. They have no particular Ministers, but each officiates as he is dispos'd. They never baptize without plunging.

COLLEGIATE, or COLLEGIAL Churches, are those which have no Bishop's See; yet have the ancient Retinue of the Bishop, the Canons and Prebends. See CHURCH, CANON, &c.

Such are, among us, *Westminster*, *Rippon*, *Windsor*, &c. Of these Collegiate Churches there are two Kinds; some of Royal Foundation, others of Ecclesiastical Foundation; each of them, in Matters of Divine Service, are regulated in the same manner as the Cathedrals. See CATHEDRAL.

There are even some Collegiate Churches which have the Episcopal Rights. Some of these Churches were antiently Abbies; which, in time, were seculariz'd. See ABBY.

The Church of *St. Peter's Westminster* was antiently a Cathedral; but the Revenues of the Monastery being by Act of Parliament 1^o *Eloz.* vested in the Dean and Chapter, it commenc'd a Collegiate Church.

In several Causes, the stiling it *Cathedral*, instead of *Collegiate Church of Westminster*, has occasion'd Error in the Pleadings.

COLLETICS, in Medicine, such Remedies as join, and glue together the separated Parts, or Lips of a Wound, or Ulcer; in order to re-establish 'em in their natural Union. See AGGLUTINANT, WOUND, &c.

Colleticks are more delicate than Sarcotics; but less so than Epulotics. See SARCOtics, and EPULotics.

Among Colletics are rank'd Licharge, Aloes, Myrrh, &c.

The Word comes from the Greek *καλλωμις*, something that has the Virtue of gluing together.

COLLIQUATION, in Pharmacy, the Action of melting together two, or more solid Substances; or rendering 'em liquid by Fusion, or Dissolution; as Wax, Mucilages, &c. by Heat; Gums, &c. by Moisture. See FUSION, DISSOLUTION, &c.

COLLIQUATION is also us'd to express such a Temperament, and Disposition of the Animal Fluids, as proceeds from a too lax Compages; whereby they flow out thro' the several Joints, and particularly thro' those of the Skin, faster than they ought; which occasions Fluxes of many Kinds, but mostly, profuse greasy, clammy Sweats.

If this Colliquation continue, it generally terminates in an Hectic Fever, and is usually a Concomitant of one. See HECTIC.

The curative Intention in this Case, is the giving a better Consistence to the Juices by Balsamicks and Agglutinants; and the hardening of the Solids by Subastringents. Hence,

COLLIQUATIVE Fever, is a Fever attended with a Diarrhea, or profuse Sweats, from too loose a Consistence of the Fluids. See COLLIQUATION; see also FEVER.

COLLISEUM, or COLISEUM, in the antient Architecture, an oval Amphitheater, built at *Rome* by *Vespasian*, in the Place where stood the Pond of *Nero's* gilded Horse.

In this were seen Statues, representing all the Provinces of the Empire; in the middle whereof stood that of *Rome*, holding a golden Apple in her Hand. The same Term, *Coliseum*, is also given to another Amphitheatre of the Emperor *Severus*.

In these Colissea were represented Games, and Combats of Men and wild Beasts: There is now little remaining of either of them; Time and War having reduc'd 'em to Ruins. See AMPHITHEATRE.

The Word is form'd from *Colosseum*, on account of the *Colossus of Nero*, that stood near it: or, according to *Nardini*, from the Italian *Coliseo*.

COLLISION, the Friction, or Percussion of two Bodies moving violently with different Directions, and dashing against each other.

For the Laws of the Collision of Bodies, see PERCUSSION.

COLLUSION, a secret Understanding between two Parties, who plead, or proceed fraudulently against each other, to the prejudice of a third.

In the Canon Law, *Collusion*, in Matters of Benefices, vacates the Benefice; and incapacitates the Person from holding any Benefice at all.

COLLUTHIANS, a Religious Sect, who arose about the Beginning of the 11th Century; on occasion of the Mildness and Indulgence shewn to *Arius*, by *Alexander* Patriarch of *Alexandria*.

Several People being scandaliz'd at so much Condescension; and among the rest *Colluthus*, a Priest of the same City, he hence took a Pretence for holding separate Assemblies, and by degrees proceeded to the Ordination of Priests; as if he had been a Bishop; pretending a Necessity for this Authority, in order to oppose *Arius*.

To his Schism he added Heresy; teaching, that God did not create the Wicked; that he was not Author of the Evils that befall Men, &c.

He was condemn'd in a Council held at *Alexandria* by *Ofius*, in the Year 335.

COLLYRIDIANs, antient Hereticks, denominated from a little Cake, call'd by the Greeks *Collyra*, which they offer'd to the Virgin *Mary*.

This Sect, it seems, consisted chiefly of Arabian Women, who, out of an Extravagance of Devotion to the Virgin, met on a certain Day in the Year, to celebrate a sileant Feast, and to render Divine Honours to *Mary* as to a Goddess; eating the Cake which they offer'd in her Name. *St. Epiphanius*, who relates the History of this superstitious Ceremony, laughs at it.

COLLYRIUM, in Medicine, an external Remedy, particularly appropriated to Diseases of the Eyes. See EYE.

There are two Kinds of *Collyrium*s, the one liquid, the other dry.

Liquid *Collyrium*s are compos'd of Ophthalmic Powders, or Waters; as Rose-Water, Plantain-Water, that of Fennel, Eyebright, &c. wherein they dissolve Tutty, White Vitriol, or some other proper Powder.

The Dry, are Troches of Rhus, Sugar-candy, Iris, Tutty prepar'd, &c. blown into the Eye with a little Pipe.

The same Name is also given to Unguents us'd for the same Purpose; as Unguent of Tutty, and several others.

Lastly, the Name is given, tho' improperly, to some liquid Medicines us'd against Venereal Ulcers.

The Word *Collyrium* comes from the Greek *καλλωμις*; and that, according to *Martinius*, from *καλλωμις τρις*; because it glues up, and prevents Desfluxions.

COLON, in Grammar, a Point, or Character form'd thus [:] serving to mark a Pause, and to divide the Members of a Period. See POINTING; see also PERIOD and COMMA.

Grammarians generally assign the Use of a Colon to be to mark the Middle of a Period; or to conclude a Sense less perfect than the Dot, or Period: But, a Sense less perfect than the Period, is an Expression infinitely vague and indeterminate. See PERIOD.

Others say, a Colon is to be used when the Sense is perfect, but the Sentence not concluded: but neither is this ever clear and express. Add to this, that in Practice our best Writers confound the Colon with the Semicolon.

F. Buffier, with his usual accuracy, attempts to fix the Use of the Colon; but does not much distinguish it from the Semicolon: he prescribes the use of either, indifferently; and calls 'em by a common Name, *Intermediate Pointings*; as being Medians between the Comma and Full-point, or Period. Their Use, according to this Author, is to distinguish the supernumerary Members of a Period.

By *supernumerary Members*, are meant, such as the precedent does not raise any Expectation of; i. e. such Parts, as have indeed a Dependence on what goes before, even tho' what goes before has a complete Sense, independent hereon: v. g. *The Augustan Age was so eminent for good Poets, that they have serv'd as Models to all others: yet did it not yield any good Tragic Poets.* Where the supernumerary Member, and the Use of the Colon are obvious.

The most obvious and sensible Use of the Colon, he adds, is when the supernumerary Member is distinguish'd by some Conjunctions; as notwithstanding, however, but, except that, unless, inasmuch as, yet, since, the rather, as, provided that, &c.

Some, indeed, use the Colon in the Middle of long Periods, without any regard to supernumerary Members: which Custom was probably introduc'd, to mark that the Breath is here to be taken almost as much as in a common Period, in the Place where the supernumerary Period commences. But this, at best, is arbitrary; and the intermediate Pointings may always be omitted in a Period, if there be no supernumerary Member; i. e. if there be no subsequent Member, but what is expected from the precedent.

As to the Occasions where the Colon is to be used, rather than the Semicolon, there is nothing precise to be said of it; except that the Colon shows the supernumerary Member more detach'd, and sets it at a greater distance from the rest; and therefore marks a longer pause than the Semicolon.

Accordingly, it seems preferable to the Semicolon before Conjunctions Adveritative, Restrictive, Conditional, &c. as, nevertheless, but, excepting that, however, otherwise, provided that. Again, where the supernumerary Phrases not only suppose the precedent, but depend on 'em for their Reason; and are, as it were, new Parts thereof: there the Semicolon seems preferable to the Colon. v. g. *You are regarded of the Goodness of God, who first bestow you; a God who is only jealous of your Heart for your own Happiness; a God who could be equally glorious in destroying you by his Justice, as in saving you by his Mercy.* Or thus: *The Discourse consisted of two Parts; in the first was shown the Necessity of fighting; in the second, the Advantages that would redound from it.*

But this Difference, it must be own'd, has a Dependence on something that influences all the Points, and sways the whole Doctrine of Punctuation; viz. the length, or shortness of the Members and Periods: For when the Phrases are long, we point higher than when short.

A late Author, in a very ingenious little Discourse, *de Ratione Interpungendi*, marks the Office of the Colon, and where in it differs from the Semicolon, &c. much more precisely: A Colon, on his Principles, serves to distinguish those conjunct Members of a Sentence, which are capable of being divided into other Members; whereof one, at least, is conjunct. See SENTENCE.

Thus, in the Sentence, *As we cannot discern the Shadow moving along the Dial-plate, So the Advantages we make in Knowledge are only perceiv'd by the Distance gone over;* the two Members being both simple, are only separated by a Comma: In this, *As we perceive the Shadow to have moved, but did not perceive it moving;* *So our Advances in Understanding, in that they consist of such minute Steps, are only perceivable by the Distance;* the Sentence being divided into two equal Parts, and those conjunct ones, since they include others; we separate the former by a Semicolon, and the latter by Comma: But in this, *As we perceive the Shadow to have moved along the Dial, but did not perceive it moving; and it appears the Grass has grown, tho' no body ever saw it grow: So the Advantages we make in Knowledge, as they consist of such minute Steps, are only perceivable by the Distance.* The Advancement in Knowledge is compar'd to the Motion of a Shadow, and the Growth of Grass; which Comparison divides the Sentence into two principal Parts: But since what is said of the Movement of the Shadow, and likewise of the Growth of Grass, contains two simple Members, they are to be separated by a Semicolon; consequently, a higher Point-

ing is requir'd to separate 'em from the other Part of the Sentence, which they are oppos'd to: And this is a Colon. See PUNCTUATION.

COLON, in Anatomy, is the second of the thick Intestines. See INTESTINE.

The Colon is placed between the *Cecum* and *Rectum*; and is wider than either of them: In length it is eight or nine Hands. It begins where the *Ilium* ends, viz. in the Cavity of the *Os Ilium*, on the right Side; whence, ascending by the Kidney on the same side, it passes under the concave Side of the Liver, to which it is sometimes ty'd, as likewise to the Gall-Bladder, which rings it yellow in that place: Then it runs under the bottom of the Stomach to the Splenon in the left Side, to which it is also knit; and thence it turns down to the left Kidney; and thence passing in form of an S, it ends at the upper Part of the *Os Sacrum* to the *Rectum*.

At the Beginning of this Gut, there is a Valve form'd by the Production of the inmost Coat of the Intestines in this place; which hinders the Excrements, when once fallen into the Colon, from returning again to the *Ilium*.

It has a strong Ligament, which running along its upper Side, from the *Ilium* to the *Rectum*, strengthens it against the Weight of the Excrements, and draws it together into Colls; which, with the *Valvulae Constrictorae*, retard the Passages of the Excrements, that we may not be continually oblig'd to be going to Stool. See EXCREMENTS.

The fleshy Fibres of its second Coat are greater and stronger than those of the other Intestines; because a greater Strength is requisite to cause the Excrements to ascend.

The chief Design of the Colon's surrounding the Abdomen, and with the *Rectum*, touching all the Parts contain'd in it, seems to be, that by immediate Puncturation with Clysters, they might be eas'd of their Maladies. See CLYSTERS.

Some derive the Word from *colonus*, to retard; in regard 'tis in the Folds of this Intestine that the Excrements are stopp'd and form'd. Others fetch it from *colonus*, hollow; on account of its Capacity: Others again from *colonus*, to be tormented; in regard of the grievous Pain it frequently undergoes.

'Tis from this Part that the Colic takes its Name. See COLIC.

COLONEL, an Officer in the Army, who has the Command of a Regiment, either of Horse, Foot, or Dragoons. See REGIMENT.

In the French Army, Colonel is confin'd to the Infantry and Dragoons; the commanding Officer of a Regiment of Horse, they usually call *Mestre de Camp*.

Skinner derives the Word from *Colony*; being of Opinion, the Chiefs of Colonies might give their Name to the Chief of Forces.

COLONEL Lieutenant, is he who commands a Regiment of Guards, whereof the King, Prince, or other Person of the first Eminence is Colonel. See GUARDS.

These Colonels Lieutenants have always a Colonel's Commission, and are usually General Officers.

Lieutenant COLONEL, is the second Officer in the Regiment; who is at the Head of the Captains, and commands in the absence of the Colonel. See LIEUTENANT.

Lieutenant Colonel of Horse, or Dragoons, is the first Captain of the Regiment. See CAPTAIN.

COLONNADE, a Peristyle, of a circular Figure; or a Series of Columns, dispos'd in a Circle, and insulated within-side. See PERISTYLE.

Such is that of the little Park at *Versailles*, which consists of 32 Ionic Columns; all of solid Marble, and without Incrustation.

A Polystyle COLONNADE, is that whose number of Columns is too great to be taken in by the Eye at a single View. Such is the *Colonnade* of the Palace of *St. Peter at Rome*; which consists of 284 Columns of the *Doric* Order, each above four Feet and an half Diameter; all in *Tiburine* Marble.

COLONY, a Plantation, or Company of People, of all Sexes and Conditions, transported into a remote Province, in order to cultivate and inhabit it. See PLANTATION.

We may distinguish three Kinds of Colonies: The first serves to ease, or discharge the Inhabitants of a Country; where the People are become too numerous, so that they cannot any longer conveniently subsist.

The second are those establish'd by victorious Princes and People, in the middle of vanquish'd Nations, to keep 'em in awe and obedience.

The third may be call'd *Colonies of Commerce*; because, in effect, 'tis Trade is the sole Occasion and Object thereof.

'Twas by means of the first kind of Colonies, that some Ages after the Deluge, the East, first, and successively all the other Parts of the Earth became inhabited: And without mentioning any thing of the *Pheebician* and *Grecian Colonies*, so famous in ancient History, 'tis notorious that it was for the Establishment of such Colonies, that during the Declension of the Empire, those Torrents of barbarous Nations, issuing, for the generality, out of the North, overtook the

Gaul, Italy, and the other Southern Parts of Europe; and after several bloody Battels, divided it with the ancient Inhabitants.

For the second kind of Colonies, the Romans us'd 'em more than any other People; and that to secure the Conquests they had made from the West to the East. Every one knows how many Cities in Gaul, Germany, Spain, and even England, value themselves on their having been of the Number of Roman Colonies.

Lastly, the Colonies of Commerce, are those establish'd by the English, French, Spaniards, Portuguese, and other Nations within these two last Centuries, and which they continue still to establish, in several Parts of Asia, Africa, and America; either to keep up a regular Commerce with the Natives, or to cultivate the Grounds, by planting Sugar-Canes, Indigo, Tobacco, and other Commodities. See COMMERCE.

The principal of this Kind of Colonies, are in the one and the other America, Northern and Southern; particularly Peru, Mexico, Canada, Virginia, New-England, Carolina, in Louisiana, Acadia, Hudson's Bay, the Antilles Islands, Jamaica, Domingo, and the other Islands.

In Africa, Madagascar, Cape of Good Hope, Cape Verd, and its Islands, and all those vast Coasts, extended thence as far as to the Red Sea.

Lastly, in Asia, the famous Batavia of the Dutch; Goa, Din of the Portuguese; and some other less considerable Places of the English, French, and Danes.

M. Vaillant has fill'd a Volume in Folio with Medals struck by the several Colonies, in honour of the Emperors who founded 'em. The ordinary Symbol they engrav'd on their Medals, was, either an Eagle; as when the Veteran Legions were distributed in the Colonies: or a Labourer, holding a Plough drawn by a pair of Oxen; as when the Colony consisted of ordinary Inhabitants. On all the Medals are seen the Names of the Decemvirs; who held the same Rank, and had the same Authority there, as the Consuls had at Rome. See DECEMVIR.

There were two Kinds of Colonies among the Romans; those sent by the Senate; and the Military ones, consisting of old Soldiers, broken and disabled with the Fatigues of War, who were thus provided with Lands, as the Reward of their Services. See BENEFICE.

The Colonies sent by the Senate, were either Roman, or Latin; i. e. compos'd either of Roman Citizens, or Latins.

The Colonies of Roman Citizens had the Right of Suffrages; but had no part in the Offices or Honours of the Republick. The Inhabitants of Latin Colonies, had no Right of Suffrages without an express Permission. See CITIZEN, &c.

According to Ulpian, (lib. de Cenſ.) there were other Colonies, which had little more than the Name; only enjoying what they call'd Jus Italicum; i. e. they were free from the Tributes and Taxes paid by the Provinces: Such were the Colonies of Tyre, Berytus, Heliospolis, Palmyra, &c.

Originally, the Word Colony signify'd no more than a Farm; i. e. the Habitation of a Peasant, with the Quantity of Land sufficient for the Support of his Family; Quantum Colonus unus arare poterat.

COLOPHONY, a kind of Gum; being only a finer Turpentine, boil'd in Water till it be reduc'd into a solid Consistence. See TERPENTINE.

The chief Use of this Drug is in the Cure of Venereal Ailings, Seminal Weaknesses, the Whites in Women, &c. The Apothecaries make it into Pills, which they roll in Liquorice-Powder, or cover over with Gold-Leaf, and call them Turpentine Pills.

It is also used by Musicians, to rub the Hairs of their Bow withal; the Effect whereof is, that the Gum cleaning the Hairs, and communicating to 'em a renacious Quality, prevents their sliding too easily over the Strings; and promotes that trembling which forms the Sound.

COLOPHONY is also an oleaginous Substance, of a yellowish Colour, dry, and friable, compos'd of the Remains of Resins of Fir, and Fir-Apples, condens'd by Coction, and harden'd by Cold.

To be good, it must be shining and odoriferous; and when thrown on the Fire, render a Smoke like that of Incense.

Pliny says, Colophony took its Name from Colophon, a City of Ionia, whence it was first brought.

'Tis now frequently call'd Spanish Wax, or Grecian Resin; as it is brought from the one or the other of those Countries. It is found to warm, dry, soften, and agglutinate, and usually enters the Composition of Plasters and Unguents.

COLOPHONY is also used for the Remains of Turpentine distilled; or the gross Part resting at the bottom of the Vessel. See DISTILLATION.

COLOQUINTIDA, or COLOCYNTHIS, usually call'd Bitter Apple; the Fruit of a Plant of the same Name, brought from the Levant; about the bigness of a large Orange.

Its Colour is that of a golden brown: Its inside is full of Kernels, which are to be taken out before the Colocynthis be us'd. Both the Seed and Pulp are intolerably Bitter.

Coloquintida is of considerable Use in Medicine, but mostly in official Compositions; the Violence of its Operation rendering it unsafe to be given inwardly in extemporaneous Prescriptions, except with great Caution.

It enters, as an Ingredient, in the Confectio Hamacæ, and most purging Pills; and in such Cases as require purging, is attended with great Success. It is one of the most violent purgative Drugs known; inso much that it excoiates the Passages to that degree, as sometimes to bring away Blood, and induce a Superpurgation. Sometimes it is taken boil'd in Water, or Small Beer, in Obstruction of the Meules; which, in strong Constitutions, is often attended with Success. Some Women have got a trick of taking it, in the same manner, in the beginning of Pregnancy, to procure Abortion; which it often effects by the Violence of its Operation.

The Powder of Coloquintida is sometimes used externally, with Aloes, &c. in Unguents, Emplasters, &c. with remarkable Success against Worms; and some, for the same purpose, recommend the Pulp, given Clyster-wise. In the Iliaic Passion, Clysters of Coloquintida have been found of Service, after most other Medicines have fail'd.

Troches made of Coloquintida, are call'd Troches of Abundant: They are prepared by cutting the Coloquintida very small, and reducing it to a fine Powder in a Mortar, rubb'd with Oil of sweet Almonds; adding Gum Tragacanth, and Mastic afterwards. See TROCHES.

The Word comes from the Greek κολοκύνθη, which is given it, in regard it causes vom, agitates the Belly.

COLORASIANS, a Branch of Gnosticks; so call'd from Colorbasus, who improv'd on the Visions of the Gnosticks that had preceded 'em. St. Epiphanius enumerates and confutes their Errors. See GNOSTICS.

COLORISATION, or COLORATION, in Pharmacy, a Term apply'd to the several Changes of Colour which Bodies undergo in the various Operations of Nature, or Art; as by Fermentations, Loosens, Coctions, or Calcinations, &c. See COLOUR, and COLOURING.

COLOSSAL Column. See COLUMN.

COLOSSUS, a Statue of a prodigious Size, representing a Giant. See STATUE.

The most eminent of this kind was the Colossus of Rhodes, a Statue of Apollo, so high, that Ships pass'd with full Sails betwixt its Legs. It was the Workmanship of Chares, a Disciple of Lysippus; who spent twelve Years in making it: 'Twas at length overthrow'n by an Earthquake, after having stood 1360 Years. Its Height was sixscore and six Feet: There were few People could fathom its Thumb, &c.

Some Critics observe, that the Colossus of Rhodes gave its own Name to the People among whom it stood; and that many, at least among the ancient Poets, call the Rhodians, Colossians; Hence they advance an Opinion, that the Colossians in Scripture, to whom St. Paul directs his Epistle, are, in reality, the Inhabitants of Rhodes. Of this Sentiment are Suidas, Calepinus, Munster, &c.

When the Serenices became possess'd of the Island, the Statue was found laid along the ground: They sold it to a Jew, who load'd 900 Camels with the Brass.

The Basis that supported it was of a triangular Figure, its Extremities were sustain'd with 60 Pillars of Marble. There was a winding Stair-case to go up to the top of it; from whence one might discover Syria, and the Ships that went into Egypt, in a great Looking-Glass, that was hung about the Neck of the Statue.

Among the Antiquities of Rome, there are seven famous Colossus's: two of Jupiter, as many of Apollo; one of Nero, one of Domitian, and one of the Sun.

The Term Colossus takes its rise μεγαλὸν καὶ ὄραον, good minuat & retinuat oculos.

COLOSTRUM, or COLOSTRA, in Medicine, Milk coagulated in Womens Breasts. See MILK.

The Name is also given to a Disease which this coagulated Milk occasions.

COLOUR, in Philosophy, a Property inherent in Light, whereby, according to the different Sizes, or Magnitudes of its Parts, it excites different Vibrations in the Fibres of the Optick Nerve; which propagated to the Sensorium, affects the Mind with different Sensations.

Or, Colour may be defin'd a Sensation of the Soul, excited by the Application of Light to the Retina of the Eye; and different, as that Light differs in the degree of its Refrangibility, and the Magitude of its component Parts. See SENSATION.

In the former View, therefore, Light is the Subject of Colour; in the latter it is the Agent. See its Properties under the Article LIGHT.

Various are the Opinions of ancient and modern Authors, and of the several Sects of Philosophers, with regard to the Nature and Origin of the Phenomenon Colour: The most popular

popular Opinion, is that of the *Aristotelians*; who maintain *Colour* to be a Quality residing in the *colour'd Body*; and to exist, independently of Light. See *QUALITY*.

The *Cartesians* come nearer the Matter: They own, that as the *colour'd Body* is not immediately applied to the Organ, to occasion the Sensation, and that as no Body can affect the Sense but by immediate contact; the *colour'd Body* does not excite the Sensation if it self, or contribute any thing to it, otherwise than by moving some interpos'd Medium, and by that the Organ of Sight.

They add, that, as we find that Bodies don't affect the Sense in the dark, Light only occasions the Sense of *Colour*; by moving the Organ; and that *colour'd Bodies* are no further concern'd than as they reflect the Light with a certain Modification: the differences in their *Colours* arising from a difference in the Texture of their Parts, whereby they are dispos'd to reflect the Light with this or that Modification.

But 'tis to Sir *Isaac Newton* we are owing for a solid and consistent Theory of *Colours*; built on sure Experiments, and solving all the Phenomena thereof: His Doctrine is as follows.

'Tis found by Experience, that Rays, or Beams of Light, are compos'd of Particles very heterogeneous, or dissimilar to each other: *i. e.* some of them, as 'tis highly probable, are larger, and others less. For a Ray of Light, as F B. (Tab. *Optics*, Fig. 5.) being receiv'd on a refracting Surface, as A D, in a dark Place, is not wholly refracted to L; but split, as it were, and diffus'd into several little Rays, some whereof are refracted to L, and others to the other intermediate Points between L and G; *i. e.* those Particles of the Light which are the most minute, are of all others the most easily and most considerably diverted, by the Action of the refracting Surface, out of their rectilinear Course towards L; and the rest, as each exceeds another in Magnitude, so is it with more difficulty, and less considerably turn'd out of its right Line to the Points between L and G. See *REFRACTION*.

Now, each Ray of Light, as it differs from another in its degree of Refrangibility, so does it differ from it in *Colour*: this is warranted by numerous Experiments. Those Particles, *v. g.* which are most refracted, are found to constitute a Ray of a violet *Colour*; *i. e.* in all probability, the most minute Particles of Light, thus, separately impell'd, excite the shortest Vibration in the *Retina*; which are thence propagated by the solid Fibres of the Optic Nerves into the Brain, there to excite the Sensation of violet *Colour*; as being the most dusky and languid of all *Colours*. See *VISION*.

Again, those Particles which are the least refracted, constitute a *Redness*, or Ray of a red *Colour*; *i. e.* the largest Particles of Light excite the longest Vibrations in the *Retina*; so as to excite the Sensation of red *Colour*, the brightest and most vivid of all others. See *RED*.

The other Particles being in like manner separated, according to their respective Magnitudes, into little Rays; excite the intermediate Vibrations, and thus occasion the Sensations of the intermediate *Colours*; much in the same manner as the several Vibrations of the Air, according to their respective Magnitudes, excite the Sensations of different Sounds. See *VIBRATION*.

To this it may be added, that not only the more distinct and notable *Colours* of red, yellow, blue, &c. have thus their rise from the different Magnitude and Refrangibility of the Rays; but also the intermediate Degrees or Tints of the same *Colour*; as of yellow up to green, of red down to yellow, &c.

Further, the *Colours* of these little Rays, not being any adventitious Modifications thereof, but connate, primitive, and necessary Properties; as constituting, in all probability, in the Magnitudes of their Parts, must be perpetual and immutable; *i. e.* cannot be chang'd by any future Refraction or Reflection, or any Modification whatsoever.

This is confirm'd by abundance of Experiments; all endeavours having been us'd, after separating a *colour'd Ray* from those of other Kinds, to change it into some other *Colour* by repeated Refractions, but to no effect. Apparent Transmutations of *Colours*, indeed, may be effected; *viz.* where there is an Assemblage, or Mixture of Rays of different Kinds; the component *Colours* never appearing in their natural Hue in such Mixtures, but always alloy'd and temper'd with each other: whence results a middling Kind of *Colour*, which, by Refraction, may be separated into the component ones; and those, after Separation, being remix'd, return to their former *Colour*.

Hence, the Transmutations of *Colours*, by mixing those of different Kinds, are not real; but mere Appearances or Deceptions of the Sight: For the Rays being again sever'd, exhibit the same *Colours* as at first. Thus, blue and yellow Powders, well mix'd, appear to the naked Eye green; yet, without having pass'd any Alteration, when view'd thro' a Microscope, the blue and yellow Particles still appear distinct.

Hence there arise two Kinds of *Colours*; the one *original* and *simple*, produced by homogeneal Light; or by Rays that have the same degree of Refrangibility, and the same Magnitude of their Parts: Such are red, yellow, green, blue, a violet purple, orange, and indigo; with all their intermediate Tints and Gradations.

The other Kind of *Colour* is *secondary*, or *heterogeneous*; compos'd of the primary ones, or of a Mixture of Rays differently refrangible, &c.

There may also be secondary *Colours* produced by Composition, like the primary ones, or those consisting of homogeneal Light, as to the Species or Appearance of the *Colour*; but not as to the Permanency, or Immutability thereof. Thus, yellow and blue make green; red and yellow, orange; orange and yellowish green, yellow: And in the general, if any two *Colours* be mix'd, which in the Series of those generated by the Prism, are not too far apart, from their Mixture results that *Colour*, which in the said Series is found in the mid-way between 'em; but those situated at too great a distance do not so.

Indeed, the more any *Colour* is compos'd, the less perfect and vivid it is: by too much Composition they may be dilu'd and weaken'd till they cease. By Composition there may likewise be produced *Colours*, not like any of those of homogeneal Light.

The most extraordinary Composition is that of *Whiteness*; for to this, all the primary *Colours* above-mention'd are requir'd; and those to be mix'd in a certain degree. Hence it is that White is the ordinary *Colour* of Light; Light being nothing else but a confus'd Assemblage of Rays of all *Colours*. See *WHITENESS*.

If the Rays of different *Colours* do thus begin to be separated by one Refraction of one single Surface; that Separation is much promoted, so as even to become sensible to the Eye by a double Refraction. This is observ'd in the two Surfaces of any Glass; provided those Surfaces be not parallel; but, of all others, it is most sensible in the two Faces of a triangular Prism; the Phenomena whereof, as they are the Touchstone of all Theories of *Colours*; and as they contain the Foundation of that here deliver'd, we shall lay down as follows.

1. The Rays of the Sun, transmitted thro' a triangular Prism, exhibit an Image of various *Colours*, (the chief whereof are red, yellow, green, blue, and violet) on the opposite Wall.

The Reason is, that the differently *colour'd Rays* are separated by Refraction: For the blue Rays, *v. g.* mark'd with the dotted Line, (Plate *Optics*, Fig. 6.) which begin to be separated from the rest by the first Refraction in *sd*, of the Side *es* of the Prism *sdce*, (as also in the first Surface of the Globe of Water *abce*, Fig. 7.) are still further separated in the other Side of the Prism *bc*, (as also in their egress out of the Globe *abce*) by a second Refraction in *ce*, in the same Direction as the former; whereas, on the contrary, in the plane Glass *abcf*, Fig. 9. (as also in the Prism *glo*, Fig. 8. now placed in another Situation) those blue Rays which begin to be separated from the rest in the first Surface, in *sd*, by a second Refraction, the contrary way, pass out parallel, *i. e.* remix'd with all the *Colours* of the other Rays.

2. That Image is not round, but oblong; its length, when the Prism is an Angle of 60 or 65 Degrees, being five times its breadth.

The Reason is, that some of the Rays are refracted more than others; and by that means, exhibit several Images of the Sun, extended lengthwise, instead of one.

3. Those Rays which exhibit yellow, are turn'd further from the rectilinear Course, than those which exhibit red; those which exhibit green, than those which exhibit yellow; but, of all others, those which exhibit violet the most: Accordingly, if the Prism thro' which the Light is transmitted be turn'd about its Axis, so as the red, yellow, green, &c. Rays be projected, in order, thro' a narrow Aperture into another Prism, plac'd at the Distance of about 12 Feet; the yellow, green, &c. Rays, tho' falling thro' the same Aperture, in the same manner, and on the same Point of the second Prism, will not be refracted to the same Place as the red, but to a Point at some distance from it; on that side to which the Rotation is made.

This is what Sir *I. Newton* calls the *Experimentum Crucis*; being that which led him out of the Difficulties into which the first Phenomenon, &c. had thrown him; and plainly shew'd a different Degree of Refrangibility, and a different *Colour* corresponding thereto in the Rays of Light; and that yellow Rays, *v. g.* are more refracted than red ones, green ones more than yellow ones; and blue and violet ones most of all.

4. The *Colours* of *colour'd Rays*, well separated by the Prism, are not at all chang'd or destroy'd by passing an illuminating Medium, or by their mutual Decussation; their bordering on a deep Shadow; nor their being reflected from
any

any natural Body, or refracted thro' anyone, in a Place howsoever oblique.

The reason is, that Colours are not Modifications arising from Refraction, or Reflection, but immutable Properties; and such as belong to the Nature of the Rays.

5. An Assemblage of all the Kinds of colour'd Rays, collected either by several Prisms, by a convex Lens, or a concave Mirror, or in any other manner, from what we call *Whiteness*; yet each of these, after Decussation, becoming separated, again exhibits its proper Colour: For, as the Ray was white before its Parts were separated by Refraction; so, the Parts being rejoin'd, it becomes white again: And colour'd Rays, when they meet together, don't destroy one another, but are only interspers'd.

Hence, a red, green, yellow, blue, and violet Colour, being mix'd in a certain Proportion, appear whitish; *i. e.* are of such a Colour as arises from white and black mix'd together: and if there were not some Rays absorb'd and lost, would be plainly white. In like manner, if a Paper cut into a Circle, be stain'd with each of those Colours, separately, and in a certain Proportion; then swiftly turn'd round its Centre, so as the Species of Colours be mix'd together in the Eye, by the briskness of the Motion; the several Colours will disappear, and the whole Paper appear of one continued Colour; which will be a Mean between white and black.

6. If the Rays of the Sun fall very obliquely on the inner Surface of a Prism, those that are reflected will be violet; those transmitted, red.

For, the Rays were colour'd before any Separation; and by how much they are the more refrangible, by so much they are the more easily reflected; and by that means are separated.

7. If two hollow Prisms, the one fill'd with a blue Fluid, the other with a red one, be join'd together, they will be opaque; tho' each, apart, be transparent.

For, the one transmitting one or two blue Rays, and the other none but red ones; the two together will transmit none at all.

8. All natural Bodies, especially white ones, view'd thro' a Prism held to the Eye, appear fringed, or border'd, on one side with red and yellow, and on the other with blue and violet.

For, those *Fimbriae* are the Extremes of entire Images, which the Rays of any kind, as they are more or less refracted, would exhibit, nearer, or at a greater distance from the real Place of the Object.

9. If two Prisms be so placed, as that the red of the one, and the purple of the other meet together, in a Paper fit for the purpose, incompas'd with darkness; the Image will appear pale: and if view'd thro' a third Prism, held to the Eye at a proper distance, it will appear double; the one red, the other purple.

In like manner, if two Powders, the one perfectly red, the other blue, be mix'd; any little Body cover'd pretty deeply with this Mixture, and view'd thro' a Prism held to the Eye, will exhibit a double Image, the one red, and the other blue: in regard, the red and purple, or blue Rays, are separated by their unequal Refraction.

10. If the Rays transmitted thro' a convex Lens, be receiv'd on a Paper ere they meet in a Focus; the Confiner or Boundary of Light and Shadow will appear ting'd with a red Colour: but if they be receiv'd beyond the Focus, with a blue one.

Because, in the first Case, the red Rays, being somewhat more refracted, are the higher; but, in the second, after Decussation in the Focus, the blue ones.

Lastly, if the Rays about to pass thro' either side of the Pupil, be intercepted by the Interposition of any opaque Body near the Eye; the Extremes of Bodies, plac'd as if view'd thro' a Prism, will appear ting'd with Colours; tho' those not very vivid.

For then, the Rays transmitted thro' the rest of the Pupil, will be separated by Refraction into Colours; without being dilut'd with the admixture of the intercepted Rays, which would be refracted in a different manner.

And hence it is, that a Body view'd thro' a Paper pierc'd with two Holes, appears double, and also ting'd with Colours.

Of the Colours of thin Plates. As Rays of different Colours are separated by the Refraction of Prisms, and other thick Bodies; so are they separated, tho' in a different manner, in the thin Lamelle, or Plates of any pellucid Matter, *e. g.* the Bubbles rais'd in Water, thickn'd by Soap, &c. For all Lamelle, under a determinate thickness, transmit Rays of all Colours, without reflecting any at all: but, as they increase in thickness, in arithmetical Proportion, they begin to reflect, first blue Rays; then, in order, green, yellow and red, all pure: then, again, blue, green, yellow, red, more and more mix'd and dilut'd; till, at length, arriving at a certain thickness, they reflect Rays of all Colours perfectly intermix'd, *e. i.* white.

But, in whatsoever Part a slender Lamelle reflects any one

Colour, *v. g.* blue; in that Part it always transmits the opposite Colour, *v. g.* red, or yellow.

'Tis found, by Experiment, that the difference of Colour of a Plate does not depend on the Medium that incompas'es it; but the degree of Vividness does: *ceteris paribus*, the Colour will be more vivid, if the denser Medium be incompas'd with the rarer. A Plate, *ceteris paribus*, reflects more Light as it is thinner; as far as a certain Degree of thinness, beyond which it reflects no Light at all.

In Plates whose thicknesses increase in an arithmetical Proportion of the natural Numbers 1, 2, 3, 4, 5, &c. If the first, or thinnest, reflect any homogeneous Ray, the second will transmit it; the third, again, will reflect it: And thus is the same Ray alternately reflected and transmitted; *i. e.* the Plates corresponding to the odd Numbers, 1, 3, 5, 7, &c. will reflect the same Rays that those corresponding to the even ones, 2, 4, 6, 8, &c. transmit.

Hence, an homogeneous Colour in a Plate, is said to be of the first Order; if the Plate reflect all the Rays of that Colour. In a Plate whose thickness is triple the first, it is said to be of the second Order: in another, whose thickness is five times that of the first, it is said to be of the third Order, &c.

A Colour of the first Order is the most vivid of any; and, successively, the Vividness of the Colour increases, as the Quantity of the Order increases: The more the Thickness of the Plate is increased, the more Colours it reflects; and those of more different Orders. In some Plates, the Colour will vary as the Position of the Eye varies; in others it is permanent.

Colours of Natural Bodies. Bodies only appear of different Colours, as their Surfaces are dispos'd to reflect Rays of this or that Colour alone; or of this or that Colour more abundantly than any other: hence Bodies appear of that Colour which arises from the Mixture of the reflected Rays. See Body.

All Natural Bodies consist of very thin, transparent Lamelle; which, if they be dispos'd, with regard to each other, as that there happen no Reflections or Refractions in their Interfaces, those Bodies become pellucid, or transparent: but if their Intervals be so large, and those filled with such Matter; or, so empty, (with regard to the Density of the Parts themselves) as that there happen a Number of Reflections and Refractions within the Body; the Body, in that Case, becomes opaque. See TRANSPARENCY, and OPACITY.

The Rays which are not reflected from an opaque Body, penetrate into it; and there, suffering innumerable Reflections and Refractions, at length, unite themselves to the Particles of the Body it self.

Hence, an opaque Body grows hot the sooner, as it reflects Light less copiously: Whence, we see why a white Body, which reflects almost all the Rays that strike upon it, heats much more slowly than a black one, which reflects scarce any. See HEAT, BLACKNESS, &c.

To determine that Constitution of the Surface of Bodies wherein their Colour depends; it must be observ'd, that the smallest Corpuscles, or first Particles wherein Surfaces are made up, are most thin and transparent; and separated by a Medium of a different Density from the Particles themselves. In the Surface, then, of every colour'd Body, are innumerable smaller thin Plates, corresponding to those of Bubbles: wherefore, what has been observ'd of those, may be understood of these.

Hence we gather, that the Colour of a Body depends on the Density and Thickness of the Parts of the Body, between the Pores of the Surface: that the Colour is more vivid and homogeneous, as the Parts are thinner; that *ceteris paribus*, the said Parts are the thickest when the Body is red; and the thinnest when violet: That the Parts of Bodies are usually much denser, than the Medium contain'd in their Interfaces; but that in the Tails of Peacocks, in some Silks, and generally, in all Bodies whose Colour varies according to the Situation of the Eye, it is less; and that the Colour of a Body is the less vivid to the Eye, as it has a denser Medium within its Pores.

Now, of the several opaque Bodies, those consisting of the thinnest Lamelle are black; those consisting either of the thickest Lamelle, or of Lamelle very different from each other in thickness, and on that account fitted to reflect all Colours, as the Froth of Water, &c. are white: Those, again, consisting of Lamelle, most of which are of some intermediate thickness, are blue, green, yellow, or red; inasmuch as they reflect the Rays of that particular Colour, much more copiously than that of any other Colour; most of which last they either absorb and extinguish, by intercepting them, or else transmit.

Hence it is, that some Liquors, *v. g.* an Infusion of Lignum Nephriticum, appear red, or yellow, if view'd by reflected Light; and blue by transmitted Light: and gold Leaves yellow in the former Circumstances, but green or blue in the latter.

To this may be added, that some of the Powders used by Painters, have their Colour changed by being very finely ground; which must be occasion'd by the Comminution or Breaking of their small Parts into others still smaller; just as a *Lamella* has its Colour alter'd, by altering its Thickness.

In fine, those odd Phenomena arising from the Mixture of Liquors of different Colours, can no way be better accounted for, than from the various Actions of the butire, &c. Corpuſcles of one Liquor, with the colour'd Corpuſcles of another; if they unite, the Mass will either swell or shrink, and thereby its Density will be alter'd; if they ferment, the Size of the Particles may be diminish'd, and thereby colour'd Liquors may become transparent: If they coagulate, an opaque Liquor may be produc'd of two transparent ones.

Hence, 'tis easy to see why a colour'd Liquid, in a Glass of a conical Figure, placed between the Eye and the Light, appears of a different Colour in different Parts of the Vessel; there being more and more Rays intercepted, as they pass thro' a longer or a shorter Section of the Vessel: till, at the Base, they are all intercepted; and none seen but those reflected.

From the various Colours of Natural Bodies, Sir I. Newton observes, the Bigness of their component Parts may be estimated: For that the Parts of Bodies do properly exhibit the same Colour with a *Lamella* of equal thickness, provided the Density in both be the same: See BODY, PARTICLE, &c.

For the distinct Properties, &c. of the several Colours. See BLACK, WHITE, BLUE, &c. See also RAINBOW, &c.

COLOUR, in Painting, is applied both to the Drugs, and to the Tincts produced by those Drugs, variously mix'd and applied.

The principal Colours used by Painters, are red, and white Lead or Ceruſſe; yellow and red Ocre; several Kinds of Earth, as Umber; Orpiment, black Lead, Cinnabar or Vermilion, Gamboge, Lacca, blue and green Albes, Indigo, Verdgreene, burnt Ivory, Bistre, Lampblack, Smalt, Ultramarine, and Carmine; each of which, with the manner of preparing them, their Uses, &c. see under their respective Heads, LEAD, CERUſſE, OCRE, &c.

Of these Colours, some are used ground in Oil, others only in Fresco, others in Water, and others for Mignature. See FRESCO, and MIGNATURE; see also PAINTING, COLOURING, &c.

Dark, and Light Colours. Under these two Classes, the Painters reduce all the Colours they use: Under Light Colours are comprehended white, and all those which approach nearest it; and under Dark Colours, black, and all those which are obscure and earthy, as Umber, Bistre, &c.

Simple, and Mineral Colours, is another Division among the Painters: Under simple Colours, they range all those us'd by Limners, Illuminers, &c. extracted from Vegetables; and which will not bear the Fire: as the yellow made of Saffron, of French Berries, &c. Lacca, and other Tinctures extracted from Flowers. The rest are Mineral, drawn from Metals, &c. and able to bear the Fire: these alone are us'd in Enamelling. See ENAMELLING.

Changing and Permanent Colours; another Division of Colours: By changeable, are meant those which depend on the Situation of Objects with regard to the Eye; as that of Taffetas, of a Pidgeon's Neck, &c. The last, however, being attentively view'd with a Microscope, each Fibre of the Feathers appears compos'd of several little Squares, alternately red and green; so that they are fix'd Colours.

Kircher says, that the changing Colours observ'd in the Wings of Pidgeons, Peacocks, &c. arise from the Feathers being transparent, and of a Figure resembling a Prism; and consequently the Light's being differently refracted from 'em. On the contrary, the fix'd and permanent Colours, are not exhibited by Refraction but Reflection.

M. Mariette observes, that there are two different Gradations, or Series of Colours, from white, to black; the one white, yellow, red, and black; the other white, blue, violet, and black. See PAINTING.

COLOUR, in Dying. There are five simple, primary, or Mother-Colours, used by the Dyers; from the Mixture whereof all the other Colours are form'd: These are blue, red, yellow, brown, and black; each of which see under their proper Head, BLUE, RED, &c.

Of these Colours, variously mix'd and combin'd, they form the following Colours; puffy, blue, and red: from the Mixture of blue and scarlet, are form'd amarant, violet, and puffy: From the same Mixture of blue and crimson-red, are form'd the columbine or dove-colour, purple, crimson, amarant, puffy, and crimson-violet.

It may be observ'd, that they give the Name *Crimson*, to all Colours made with Cochineal. See CRIMSON, COCHINEAL, &c.

Of blue and red Madder, they likewise make purple, puffy-colour, tan-colour, and dry rose: The same blue, with red half in grain, makes amarant, tan-colour, and dry rose. Blue, and half red crimson, compose quarant, tan-colour, dry rose, a brown puffy, and fur-bran.

Blue and Yellow. These two Colours, mix'd together, compose a yellow-green, spring-green, grass-green, laurel-green, brown-green, dark-green; as well as ice-green, parrot-green, and cabbage-green, &c. These three last Colours are to be less boil'd than the first.

Note, with regard to green, there's no Ingredient or Drug in Nature that will dye it; but the Stuff is dy'd twice, first in blue, then yellow.

Blue and Brown. These two Colours are never mix'd alone; but with the addition of red, either of Madder or Cochineal, they form several Colours.

Red and Yellow. All the Shades compos'd of these two Colours, as gold-yellow, aurora, marigold, orange, nacarat, granat-flower, flame-colour, &c. are made with yellow, and red of Madder; scarlet being less proper, as well as too dear.

Red and Brown. Of these two Colours are form'd cinnamon-colour, chestnut, musk, bears-hair, and even purple; if the red be that of Madder.

Yellow and Brown. The Colours form'd from these two are all the Shades of Fenille-morris, and Hair-Colours.

It may be observ'd, that tho' we say, there are no Colours, or Shades, made from such and such Mixtures: 'tis not that none can be made; but only that they are more easily form'd from the Mixture of other Colours. See DYING.

For the Method of proving the Goodness, or Falseness of Colours, or Dyes; see DYE.

COLOUR, in Heraldry. The Colours generally used in Heraldry, are red, blue, black, green, and purple; which, by the Learned in that Science are call'd Gules, Azure, Sable, Vert or Sinople, and Purpure. Tenne, or tawny, and Sangui, are not so common. See each Colour under its proper Article GULES, AZURE, VERT, &c.

As to yellow and white, call'd Or and Argent; they are Metals, not Colours. See OR, and ARGENT.

These Colours and Metals are sometimes also express'd in blazon by the Names of precious Stones; and sometimes by those of Planets, or Stars. Thus, Or is call'd Sol, and Topaz; Argent, Luna, and Pearl; Gules, Mars, and Ruby; Azure, Jupiter, and Saphir; Sable, Saturn, and Diamond; Vert, Venus, and Emerald; Purpure, Mercury, and Amethyst; Tenne, the Dragon's Head, and Hyacinth; and Sangui, the Dragon's Tail, and Sardonias. See SABLE, SOL, ARGENT, &c.

It is a general and fundamental Rule in Blazon, not to place Colour upon Colour, nor Metal upon Metal. That is, if the Field be of a Colour, the Bearing must be of a Metal: tho' this Rule, on some Occasions, and in some Circumstances, is dispens'd withal; as in the Diminutions and Differences which distinguish the younger from the elder Families; and in the Extremities of Animals Tongues, Claws, Horns, &c. In which Cases, Colour may be on Colour, and Metal on Metal, without false Heraldry.

Onomast is said to have first invented the Distinction of Colours, to distinguish the Quadrille of Combatants at the Circassian Games: the green for those who represented the Earth; and the blue for those who represented the Sea. See FACTION.

Hence, the ancient Cavaliers took occasion to distinguish themselves in their Tournaments, by Habits, Plumes, and Ribbands of different Colours; which were ordinarily those of their Mistresses, and were the Symbol of some Passion, or Quality.

Hence also the Origin of Colours in Liveries. See LIVERY. Colours, in the Military Art, include the Banners, Flags, Ensigns, &c. of all Kinds, bore in an Army, a Fleet, or the like. See BANNER, FLAG, STANDARD, &c.

COLOURS, are also used both in the Latin and Greek Churches, to distinguish several Mysteries and Feasts celebrated therein.

In the Latin Church are only regularly admitted five Colours, viz. white, red, green, violet, and black; the white for the Mysteries of our Saviour, the Feasts of the Virgin, those of the Angels, Saints, and Confessors; the red for the Mysteries and Solemnities of the Holy Sacrament, the Feasts of the Apostles and Martyrs; green for the Time between Pentecost and Advent, and from Epiphany to Septuagesima; violet in Advent, Christmas, in Vigils, Rogations, and in votive Masses in time of War: Lastly, black for the Dead, and the Ceremonies thereto belonging. Clothes of Gold and Silver, and Embroideries, serv'd indifferently for all Solemnities.

In the Greek Church, the use of Colours is almost obliterated, as well as among us: Red, among them, was the Colour for Christmas and the Dead; as black is still in the last among us. See MORNING.

COLOUR, in Law, is a probable, or plausible Plea; tho' in reality false at bottom; and only calculated to draw the Trial of the Cause from the Jury to the Judge.

Thus, v. g. in an Action of Trespass for taking away the Plaintiff's Beasts, the Defendant urges, That before the Plaintiff had any thing in them, he himself was possess'd of 'em, as his proper Goods; and deliver'd them to A. B. to deliver to him again, when &c. and A. B. gave them to the

Plaintiff; and the Plaintiff, supposing the Property to be in *A. B.* at the Time of the Gift, took them; and the Defendant took 'em again from the Plaintiff; whereupon the Plaintiff brings his Action. This is a good Colour, and even a good Plea. See *Doct. and Stud.*

Colour of Office, is when some unjust Action is done, under countenance of Office, or Authority.

To Colour Strangers Goods, is when a Freeman allows a Foreigner to enter Goods at the Custom-house in his Name.

COLOURING, in Painting, the manner of applying, and conducting the Colours of a Picture: Or, it is the Mixture of Lights and Shadows, form'd by the various Colours, employ'd in a Painting. See *CLAIR-OSCUR*.

The *Colouring* is one of the principal Branches of Painting. *M. Felibien* divides the Painter's Art into three Parts; the Design, the Composition, and the *Colouring*. The *Colouring* strikes the most; but among Masters it always gives place to the Exactness of the Design. See *PAINTING*.

De Piles observes, that the Word *Colouring*, in its confined Sense, is chiefly applicable to a History-piece, scarce at all to a Landship. He adds, that the Term *Colouring* relates more immediately to the Carnations than any thing else.

The *Colouring*, in its general Sense, takes in what relates to the Nature and Union of Colours; their Agreement, or Antipathy; how to use them to advantage in Light and Shadow, so as to shew a Relievo in the Figures, and a sinking of the Ground: What relates to the aerial Perspective, i. e. the Diminution of Colours, by means of the Interposition of Air; the various Accidents and Circumstances of the Luminary and the Medium; the different Lights, both of the Bodies illuminating and illuminated; their Reflections, Shadows, different Views, with regard either to the Position of the Eye, or the Object: What produces the Strength, Ferocness, Sweetness, &c. in Paintings well colour'd: The various Manners of colouring, both in Figures, Landships, &c.

The Doctrine of COLOURING is compris'd under the following Rules.

Colours are consider'd, either in respect of their Use, or their Oeconomy and Disposition.

1st, With regard to their Use. They are either in Oil, or Water: Those in Oil, again, are either consider'd with a View to their Preparation, or Application.

In the Preparation of Oil Colours, care must be taken that they be ground fine; that in putting them on the Palette, those which won't dry of themselves, be mix'd with Oil, or other Driers; and that the ting'd Colours be mix'd in as small Quantities as possible.

For their Application, it is consider'd either with regard to the Kinds of Painting in Works of various Colours, or in those of one single Colour.

For the first: in the larger Pieces, the Colours are either laid too full, so as they may be impasted, or incorporated together, which makes them hold the more firmly.

Or else we mix those more agreeable ones, which dry too hard, and too hastily, with a little *Oil*, and the clearest of the Oil: But, in both Cases, the Colours are to be laid on strong at first; it being easy to weaken those that are to be thrust back, and to lighten the others: The Touches to be bold, by the Conduct of a free and steady Pencil; that the Work may appear the most finish'd at a proper distance, and the Figures animated with Life and Spirit.

For glazed Colours, care must be taken that the Under-Colour be painted strong, and that it be a Body-Colour, and laid smooth.

In finish'd Works, which are to be view'd near at hand, they proceed, either by applying each Colour in its place; preserving their Purity, without fretting or tormenting them, but sweetly softening off their Extremities: Or by filling up all the great Parts with one single Colour; and laying the other Colours, which are to form the little Things, upon it: which is the more expeditious way, but more apt to decay.

For the second: the Kinds of Pictures in one Colour are two, viz. *Camieux*, where the Degradations of Colours of Objects afar off, are usually manag'd by Lights, as with Crayons; and *Basso-Relievo*, which is an Imitation of Sculpture, of whatsoever Matter and Colour: in both these, the Colours are wrought dry. See *CAMIEUX*, &c.

For Water-Colours, they are wrought various ways; viz. in *Distemper*, where the Colours are prepar'd in Size; which Method is used on all kinds of Matter: in *Fresco*, or Painting on fresh Mortar; where the Colouring must be quick, that the Matter dry not; and with much Care and Neatness, laying each Colour in its place, and intermingling them by Parcels: in *Aguacbe*, where the Colours are mix'd with Gum, and the Pencil dragg'd; as in Paint and Washings: In *Miniature*, for small and delicate Works; where the Colours are to be very fine and clean, mix'd with Gums and wrought in Dots or Points. See *DISTEMPER*, *MINIATURE*, &c.

But in all the Kinds of Painting, both in Oil and Distemper, especially the latter, care must be taken that the

Design be fix'd, and all the Parts mark'd out, ere any Colours be applied.

For the 2^d Part of *Colouring*, or the *Oeconomy* and disposing thereof in Paintings; regard is either had, first, to the Qualities of the Colours, to appropriate them according to their Value and Agreement; or, secondly, to their Effect, in the Union and Oeconomy of the Work.

For the first, it must be observ'd, that white represents Light, and gives the briskness and heightening; black, on the contrary, like Darkness, obscures and effaces the Objects: again, black sets off the light Parts; and by that they serve each other to loosen the Objects. A proper Choice to be made of Colours, and the too much charg'd manner to be avoided; both in Carnations, where red Colours are not to be affected, as rather resembling the Flesh which fleeth than the Skin; and all bright glowing Colours: The Skin, how delicate soever, being always of a *Down-Colour*. In the *Drapery*, where the Painter has his whole stock of Colours to chuse out of, to procure a good effect; and in the *Landship*, to dispose those Colours near one another, which mutually assist and raise each other's Force and Briskness; as red and green, yellow and blue.

To manage 'em so, as that they be accommodated to the Effects of the great Parts of Light and Colour: that the strong Colours lead to the soft ones, and make 'em more look'd at; bringing 'em forwards, or keeping 'em back, according to the Situation, and the degree of Force requir'd.

For the Effects of Colours, they either regard the Union, or the Oeconomy: With respect to the first, care must be taken that they be laid so as to be sweetly united, under the briskness of some principal one; that they participate of the prevailing Light of the Piece; and that they partake of each other by the communication of Light, and the help of Reflection.

For the Oeconomy in managing their degrees, regard is to be had to the Contrast, or Opposition intervening in the Union of the Colours; that by a sweet Interruption, the briskness, which otherwise fides and falls, may be rais'd to the Harmony which makes the Variety of Colours agree; supplying and sustaining the Weakness of some by the Strength of others; neglecting some Places, on purpose to serve as a Basis or Repose to the Sight, and to enhance those which are to prevail thro' the Piece: To the Degradation; where, the better to proportion the Colours that fill behind, some of the same Kind are to be preserv'd in their purity, as a Standard, for those carried afar off to be compar'd by, in order to justify the Diminution: regard being always had to the quality of the Air, which, when loaded with Vapours, weakens the Colours more than when clear: To the Situation of the Colours; where care must be taken, that the purest and the strongest be placed before, or in the Front of the Piece; and that by their force, the compound ones, which are to appear at a distance, be kept back; particularly, the glazed Colours to be used in the first Rank: Lastly, to the Expression of the Subject, and the Nature of the Matters, or Stuffs; whether shining or dull, opaque or transparent, polish'd or rough. See *CARNATION*, *CONTRAST*, *DEGRADATION*, &c.

COLOURING and Non-colouring Drugs: Thus the Dyers distinguish their Drugs: the first are applicative, and communicate their Colours to the Matters build'd in them, or pass'd thro' them; as Woods, scarlet Grain, Cochineal, Indigo, Madder, Turmeric, &c. The second serve to prepare and dispose the Stuffs, and other Matters; and to extract the Colour out of the colouring ingredients; as Alum, Salt or Crystal of Tartar, Arsenic, Realgal, Salt-Petre, common Salt, Sal Armoniac, Sal Gemme, Agaric, Spirit of Wine, Bran, Paste-flour, Wheat, Search, Lime, and Altes.

COLUMBINE, a kind of Violet-colour, call'd also *Dro-colour*. See *COLOUR*.

S. COLUMBUS, a Congregation of Regular Canons, formerly of great Extent in Ireland; having under it 20 hundred Abbies, or Monasteries, in the British Islands. See *CONGREGATION*, and *CANON*.

The principal Monastery, or Chief of the Order, according to some, was at *Armagh*; according to others, at *Londonderry*: others will have it in the Island of *Ha*, or *Hu*, or *Iona*, now call'd *Tielmil*, to the North of Ireland, not far from Scotland.

There is a Rule in *Irisb* Verse, supposed to have been dictated by *S. Columbus* to his Canons.

COLUMN, in Architecture, a round Pillar, made to support or adorn a Building. See *PILLAR*, *BUILDING*, &c.

The *Column* is the principal, or reigning Part of an Order. See *ORDER*.

The principal Laws and Properties of this eminent Member of Architecture are thus deduc'd:

Every *Fulcrum*, or Support, is so much the more perfect as it is the firmer, or carries the greater appearance of firmness: and hence all Columns, or Pillars, ought to have their Base, or Foot, broader than themselves. See *BASE*.

Again,

Again, as a Cylinder and a quadrangular Prism are more easily remov'd out of their place than a truncated Cone, or Pyramid, on the same Base, and of the same Altitude: The Figure of Columns ought not to be cylindrical; nor, that of a Pilaster, pyramidal; but both the one and the other to be contracted or diminish'd, *i. e.* to grow less and less, like a truncated Cone and a truncated Pyramid. See DIMINUTION.

For the same Reasons, the lower Parts of the Columns to be cylindrical, that of Pilasters pyramidal: Hence, again, as Columns are more firm, if their Diameter bears a greater proportion to their Height, than if it bore a less: The greater Ratio is to be chosen, where a large weight is to be sustain'd; and less where a less.

Further, as the Design of a Column is to support a weight, it must never be supported without an Entablature: tho' a Column rais'd on an eminent Place, so as to leave no room to fear its being thrust out of its place, needs no Pedestal. See ENTABLATURE, and PEDESTAL.

The entire Column, in each Order, is compos'd of three principal Parts, the *Base*, the *Shaft*, and the *Capital*. See the Proportions of each under its respective Head, *BASE*, *SHAFT*, &c.

Each of these Parts, again, is subdivided into a great Number of lesser, called *Members*, or *Mouldings*: some whereof are essential, and found in all Columns; others are only accidental, and found in particular Orders. See Moulding, ORNAMENT, &c.

Columns are made different, according to the several Orders they are used in; and likewise, not only with regard to their Order, but also to the Matter, Construction, Form Disposition and Use.

COLUMNS, With regard to Order.

Tuscan COLUMN, is the shortest, and most simple of all the Columns. See TUSCAN.

Its height, according to *Vitruvius*, *Palladio*, and *Vignola*, is 7 Diameters, or 14 Modules; according to *Scamozzi*, 15 Modules; to *De Lorme*, 12; to *Trojan's Column*, 16. Its Diminution, according to *Vitruvius*, is one fourth of the Diameter; according to *Vignola*, a fifth; and according to *Trojan's Column*, a ninth.

Its several Parts, Mouldings, &c. see under their proper Heads, *SHAFT*, *CAPITAL*, &c. See it represented in Plate *Architecture*, Fig. 6.

Doric COLUMN, is somewhat more delicate. See DORIC.

Its Shaft is adorn'd with Flutings: its Height, according to *Vitruvius*, is from 14 to 15 Modules; to *Scamozzi*, 17; to *Vignola*, 16; in the *Coliseum*, 19; in the *Theatre of Marcellus*, 15. Its Diminution, according to the *Theatre of Marcellus*, 12 Minutes; to the *Coliseum*, 4 Min. and a half. See Plate *Architecture*, Fig. 7.

Ionic COLUMN, is more delicate still. See IONIC.

It is distinguish'd from the rest by the Volutes in its Capital; and by its Base. See VOLUTE.

Its Height, according to *Palladio*, is 17 Modules; according to *Vignola*, 18. Its Diminution, in the *Temple of Concord*, 10 $\frac{1}{2}$ of *Fortuna Virilis*, 7 $\frac{1}{2}$; *Coliseum*, 10 Min. See Plate *Architecture*, Fig. 8.

Corinthian COLUMN, is the richest and most delicate of all the Columns. See CORINTHIAN.

Its Capital is adorn'd with two rows of Leaves, and with Caulicokes; whence spring out little Volutes. Its Height, according to *Vitruvius*, and many Remains of antique Porticos, Temples, &c. is 19 Modules; according to *Serlio*, 18; to the *Coliseum*, 17, 17 $\frac{1}{2}$; to the three Columns in the *Coupo Vaccino*, 20; the Basilisk of *Antoninus*, 20. Its Diminution, according to the *Temple of Peace*, 6 $\frac{1}{2}$ Minutes; the *Pantheon*, 6 $\frac{1}{2}$; *Temples of Sibil and Faustina*, 8; *Constantine's Arch*, 7; *Portico of Septimius*, 7 $\frac{1}{2}$. See Plate *Architecture*, Fig. 9.

Composite COLUMN, has two rows of Leaves in its Capital, like the *Corinthian*; and angular Volutes, like the *Ionic*. See COMPOSITE.

Its Height, according to *Vignola*, and the *Arch of Titus*, is 20 Modules; to *Scamozzi*, and the *Temple of Bacchus*, 19 $\frac{1}{2}$; the *Arch of Septimius*, 19.09. Its Diminution, according to *Titus's* and *Septimius's* Arch, 7 Minutes; *Baths of Diocletian*, 11 Min. $\frac{1}{2}$; *Temple of Bacchus*, 6 $\frac{1}{2}$. See Plate *Architecture*, Fig. 10.

It may be here observ'd, that there seems more of Caprice than Reason in that Diversity found in the Heights of Columns of the same Order, in different Authors; each of whom frequently takes the liberty of dispensing with his own Rules.

Vitruvius, for Instance, makes the *Doric* Columns of Temples, shorter than those of Porches behind Theaters; *Palladio* gives a greater height to Columns standing on Pedestals, than to those which have none; and *Serlio* makes his Columns a third shorter, when insulate, or detach'd, than when contiguous to the Wall.

But notwithstanding the diversity of Height in Columns of the same Order in different Authors; they still bear a true Proportion in the several Orders compar'd with each other;

by which they go increasing, as the Orders are less massive.

But this Augmentation is greater in some Ordinations than in others; for in the *Antique* it is but of 5 Modules, or *Semidiameters*, for the five Orders: the shortest *Column*, *viz.* the *Tuscan*, being 15 Modules; and the longest, the *Composite*, 20. In *Vitruvius*, this Increase is also of 5 Modules; but commences from 14 Modules, and ends at 19. The *Moderns* usually make it greater: *Scamozzi* makes it 5 Modules and a half; *Palladio* and *Serlio*, 6.

From the several Proportions of Columns assign'd by several Authors, *M. Perrault* has drawn a new one; which is a Mean, between the Extremes of the rest. Thus; he makes the *Tuscan Column* 14 Modules $\frac{1}{2}$; which is a Mean between the *Tuscan* of *Vitruvius*, 14, and that of *Trojan's Column*, 16; The height of the *Doric Column* he makes 16 Modules; which is a Mean between the 14 of *Vitruvius*, and the 19 of the *Coliseum*: The *Ionic* he makes 17 Modules $\frac{1}{2}$; which is a Mean between the 16 of *Serlio*, and the 19 of the *Coliseum*: The *Corinthian Column* he makes 18 Modules $\frac{1}{2}$; as being a Medium between the 16 Modules 6 Minutes of the *Temple of the Sibyl*, and the 20 Modules 6 Minutes of the three Columns of the *Roman Forum*: Lastly, the *Composite Column*, by the same Rule, he makes 20 Modules $\frac{1}{2}$; that height being a Mean between the *Arch of Titus*, and the *Temple of Bacchus*.

Indeed, the Rule he proceeds by seems very reasonable; *viz.* that the proportional Advance of each Column in the different Orders be equal: so that having settled the whole Progression, from the *Tuscan* to the *Composite*, at 5 Modules 10 Minutes; this being a Mean between the 5 Modules of the *Antique*, and the 5 $\frac{1}{2}$ of the *Moderns*; he divides this Sum, which is 160 Minutes, into four equal Parts, giving 40 Minutes to the Progression of each Order: This makes the *Tuscan Column* 14 Modules 20 Minutes; the *Doric* becomes 16, the *Ionic* 17, 10 Min. the *Corinthian* 18, 20 Min. and the *Composite* 20 Modules. See PROPORTION.

For the distinguishing Characters of each Order of Columns; see ORDER.

For the Matter; see STONE, MARBLE, &c.

For the Use and Application; see BUILDING.

For the ranging of Columns, and the Spaces to be observ'd between each; see INTERCOLUMNATION.

Columns, with regard to their different Matter.

Water COLUMN, is a Column whose Shaft is form'd of a large Jet d'Eau; which spouting out Water violently from the Base, drives it within the Tambour of the Capital, which is made hollow; whence falling down again, it has the Effect of a liquid crystal Column. See FOUNTAIN.

An Instance of this we have at *Quinta d'Aveiro* near *Lisbon*.

Fusible COLUMN. Under this Term are comprehended, not only Columns of various Metals, and other fusible Matters, as Glass, &c. but also those of Stone, said to have been cast; the Secret of which, some will have us believe to have been known to the *Antients*.

Transparent COLUMN, any Column made of transparent Matter; as were those of Crystal in the *Theater of Scarrus*, mention'd by *Pliny*; and those of transparent Alabastrer, in the Church of *St. Mark*, at *Venice*.

Hydraulic COLUMN, is that whose Shaft appears to be of Crystal, being form'd by a number of little Threads of Water, falling from Holes made in Girts of Metal, at equal distances, by means of a Pipe mounting thro' the middle thereof; as in the Gardens at *Verfailles*.

Hydraulic COLUMN, is also a Column from whose top proceeds a Jet d'Eau, to which the Capital serves as a Basin; whence the Water descends by a little Pipe, which turns spirally around the Shaft.

Such are the *Ionic Columns* of the Cascade at the *Belvedere at Frescati*; and those of the *Vineyard Marbei at Rome*.

Maldet COLUMN, is that made by Impaction, of Gravel and Films of divers Colours, bound together with a Cement, which grows perfectly hard, and receives a polish like Marble.

The Secret of making these, it appears the *Antients* were Masters of, by the Columns lately discover'd near *Algiers*; which are doubtless the Ruins of the ancient *Julia Cesarea*: on these are found the very same Inscription in antique Characters, the Contours, Accents, and even Faults, being repeated in every Shaft: an incontestable Proof of their being imoid.

COLUMNS with regard to their Construction.

Column of Joinery, is made of strong timber boards, join'd, glu'd, and pin'd together; is hollow, turn'd in the Lath, and usually fluted. Such are the Columns in most *Altarpieces*.

Incrustated COLUMN, is made of several Ribs, or thin Shells of fine Marble, or other rare Stone, cemented upon a Mold of Stone, Brick, or the like. This is done with design both to save the precious Matter, as *Oriental Jasper*, *Lapis*, *Agat*, &c. or to represent pieces of such Matters of an extraordinary size, by the neatness and closeness of the Incrustation, which renders the Joints imperceptible.

Geminated COLUMN, that whose Shaft is form'd of three similar and equal Sides, or Ribs of Stone, fitted within one another; and fasten'd at bottom with Iron Pins, and a-top with Cramp-Irons. This is to be fluted, that the Joins may be the less discernible.

COLUMN of Masonry, is made of rough Stone, well laid and cover'd with Plaster; or of Bricks moulded triangular-wise, and cover'd with Stucco.

COLUMN with Bands, or Tambours; that whose Shaft is form'd of several Courses of Stone, or Blocks of Marble; less high than the Diameter of the Column: This is what *Ulpian* means by *Columna struthillis, or adpakte*; which is opposite to the *Columna glida, or integra*, i. e. of one piece.

COLUMN in Truncheons, or Pieces consists of three, four, or five pieces of Stone, or Metal; differing from the Tambours, as being higher than the Diameter of the Column.

COLUMNS, with regard to their Form.

Fluted COLUMN, called also *channell'd, and striated Column*; that whose Shaft is adorn'd with Flutes, or Channelings; either from top to bottom, or only two thirds of its height. See *FLUTING*.

Cabled, or Rudented COLUMN, is a Column having Projectures in form of Cables, or Cords, in the Naked of the Shaft; each Cable having an Effect opposite to that of a Fluting; and accompany'd with a little Lift on each side. See *CABLEING*.

Fluted and Cabled COLUMN, is that whose Flutes are fill'd up with Cables, Roods, or Staves; beginning from the bottom of the Shaft, and reaching one third of its height.

Fluted COLUMN enrich'd, is that whose Flutings are fill'd up with Ornaments of Foliages, Rinds, Ribbons, &c. instead of Cables.

Twisted COLUMN, is that whose Shaft is twisted round, in manner of a Screw, with six Circumvolutions; being, ordinarily of the *Corinthian Order*: *Vignola* first found a Method of drawing it by Rule.

A twisted fluted COLUMN, is that whose Flutes follow the Contour of the Shaft, in a spiral Line throughout the whole length; whereof there are some antique ones of Porphyry, and hard Marble.

COLUMN twisted and enrich'd, is that, one third of whose Shaft is fluted, and the rest adorn'd with Branches and other Enrichments: and which being all of Marble, is enrich'd with Sculpture from bottom to top.

Sometimes, again, the *twisted Column* is form'd of two or three slender Shafts, twisted round, so as to leave a Cavity in the middle. Sometimes the Flutings are Spiral, yet the Shaft straight; which succeeds very well in the more delicate Orders.

Colossal COLUMN, a Column of enormous size, too large to enter any Ordinance of Architecture; to be placed solitary, in the middle of a Square, &c. See *COLOSSUS*.

Such is the *Trajan Column*, whose Proportions are *Doric*, and its Profile *Tuscan*; 12 Feet and $\frac{1}{2}$ is Diameter, and 100 in Height, including the Base and the Capital: The Pedestal has 18 Feet, and the Crowning 16 and an half. It supports a Brazen Statue of *St. Peter*, 13 Foot high: The whole making 147 antique Roman Feet.

It was built by *Apollodorus*; and consists of 34 Tambours, or Blocks, of Pieces of white Marble, taking in the Crowning.

The *Antonine Column*, which is also of white Marble, is inferior to the *Trajan* in beauty of Sculpture, but exceeds it in height; being 168 Feet to the Capital, besides the Feet of the Pedestal under ground.

Lastly, the *London Column*, or Monument, is of Stone, 15 Foot in Diameter, and 102 high; taking in the Pedestal and Crowning. See *MONUMENT*.

Carolitic COLUMN, that adorn'd with Foliages, or Leaves and Branches turn'd spirally around the Shaft; or in Crowns and Festoons.

These were used by the Antients for raising Statues on; which hence took the Denomination of *Carolitic*.

They are very suitable in triumphal Arches, and Decorations of Theatres.

Swell'd COLUMNS, are those which have a bulging, or swelling, in proportion to the height of the Shaft.

Authors are much divided on the Subject of this *Swelling*; *Sir H. Wotton* treats it as a most ridiculous Abuse; yet the Practice obtains among the modern Architects; who generally make their Columns a little bigger at one third of their height, than at the Base; i. e. they diminish the Column near the Base; which makes the Part appear big, and occasions a Swelling at about one third of the height.

This Swelling appears to have been unknown to the Antients. *M. le Clerc* observes, it ought not to exceed one Minute and a half at most. He thinks it ought never to be us'd, excepting where there is a particular occasion for it; as where Columns are to be placed over one another.

Diminish'd COLUMN, is that which has no swelling, but begins to taper, or diminish, from the Base; in imitation of Trees. See *DIMINUTION*.

Such are most of the Antique Columns of *Granate*; particularly the *Corinthian* ones in the Porch of the Pantheon.

Gothic COLUMN, a round Pillar, either too short for its bulk, or too slender for its height; as having, sometimes, 20 Diameters; and this without either Diminution, or Swelling; yet, its Ornaments, and the Character of its work, being as far from those of the Antique as its Proportions. See *GOthic*.

Hermetic COLUMN, a kind of Pilaster, in manner of a *Terminus*; having the Head of a Man, in lieu of a Capital. It had its Name from a Custom among the Antients, of placing *Mercury's* Head, whom the Greeks call *Hermes*, a-top of Columns. See *HERMES*.

Massive COLUMN, are those too short for the Order whose Capital they bear; as the Pillars in *Gothic Churches* usually are. See *MASSIVE*.

Under the Term *Massive*, are, likewise, frequently comprehended *Rustic* and *Tuscan Columns*. See *RUSTIC*.

Cylindrical COLUMN, is that which has neither Swelling nor Diminution.

Oval COLUMN, that whose Shaft has a Flatness; its Plan being made oval, to reduce the Projecture.

Polygonous COLUMN, has several Sides, or Faces: The most Regular of these have eight Faces.

These three last, *Daviler* regards as Abuses in Architecture.

Pastoral COLUMN, that whose Shaft is form'd in imitation of the Trunk of a Tree, with Bark and Knots.

This Kind of Column, in the *Tuscan* Proportion, may be used in the Gates of Parks and Gardens; in the Decoration of Pastoral Scenes, &c.

Serpentine COLUMN, a Column form'd of three Serpents, twisted together; the Heads whereof serve as a Capital.

An Instance of this is at *Constantinople*, in the Square called *Armenian*, antiently the *Hippodrome*. *P. Gilles* calls this the *Delphic Column*; as imagining it antiently serv'd for the Tripod of *Apollo*, in the Temple at *Delphos*. It is now ordinarily called the *Talisman*, or *Enchanted Column*.

COLUMNS, with regard to their Disposition.

Insulated COLUMN, is that standing free, and detach'd, on all Sides, from any other Body.

COLUMN insersed, or back'd, is that attach'd to a Wall, by a third or fourth Part of its Diameter.

COLUMN Nieb'd, is that whose Shaft enters, with half its Diameter, into a Wall, which is hollowed for its Reception; with its Plan parallel to the Projecture of the Tore.

Such is that in the Portal of *St. Peter* at *Rome*.

Angular COLUMN, is an insulated Column, placed in the Coin, or Corner of a Portico; or insersed into the Corner of a Building: Or, even a Column that flanks an Angle, either acute or obtuse, of a Figure of many Sides.

Attic COLUMN, according to *Pliny*, is a Plaster insulated; having four equal Faces, or Sides; and of the highest Proportion, v. g. *Corinthian*.

Flank'd COLUMN, according to *M. Blondel*, is a Column engag'd with one half, or at least, one third of its Diameter, between two Demi-Pilasters.

Doubled COLUMN, is an Assemblage of two Columns; join'd in such a manner, as that the two Shafts penetrate each other with a third of their Diameter. Such are those of the four Angles in the Court of the *Louvre*.

Coupled COLUMNS, are those disposed by two and two; so as almost to touch each other at their Bases, and Capitals.

Canon'd COLUMNS, those engag'd in the four Corners of a square Pillar, to support four Springs of an Arch.

Grouped COLUMNS, those placed on the same Pedestal, or Sockle; either by three and three, or by four and four.

Median COLUMNS. *Vitruvius* gives the Name *Columna Medianae*, to the two Columns in the middle of a Porch, which have their Intercolumniation larger than the rest: So that if these last, for instance, be *Pycnostyles*; the *Medianae* are *Eustyle*.

The Term may also be applied to the middle Row of Columns, in a Frontispiece adorn'd with three Orders.

COLUMNS, with regard to their Use.

Astronomical COLUMN, is a kind of Observatory, in form of a very high Tower; built hollow, and with a spiral Ascent to an Armillary Sphere; placed a-top, for observing the Courses of the heavenly Bodies.

Such is that, of the *Doric Order*, erected at the Hotel de *Suffren* at *Paris*, by *Catherine de Medici*, for the Observations of *Orontius Finus*, a celebrated Astronomer of that Time.

Chronological COLUMN, that which bears some historical Inscription, dispic'd according to the Order of Time: as by *Laetia*, *Olympiads*, *Fasts*, *Epochas*, *Annals*, &c.

At Athens there were Columns of this kind, whereon were inscrib'd the whole History of Greece, digested into *Olympiads*.

Hollow COLUMN, that which has a spiral Stair-case within-side, for the Convenience of ascending to the top: As the *Trajan Column*, the Stair-case whereof consists of 185 Steps, and is illumin'd by 43 little Windows: The *Antonine Column*,

James has 198 Steps, with 56 Windows; each of these is cut in Tambours of white Marble. The *Monument*, or *Fire-Column* at *London*, has also a Stair-case; but it does not reach to the top.

These kind of Columns are called also *Columnæ Coelivides*, or *Coelivides*, *q. d.* a Stair-case in form of a Snail.

Funerary Column, that which bears an Urn, wherein are supposed to be inclos'd the Ashes of some deceas'd Hero; and whose Shaft is sometimes overfread with Tears, or Flames; which are Symbols of Sorrow, and of Immortality.

Gnomonic Column, a Cylinder, whereon the Hour of the Day is represented by the Shadow of a Style.

Of these there are two Kinds: in the one, the Style is fix'd, and the Hour-Lines are no more than the Projection of a vertical Dial, on a cylindrical Surface.

In the other, the Style is movable; and the Hour-Lines are drawn to the different Heights of the Sun, in the different Seasons of the Year.

Historical Column, is that whose Shaft is adorn'd with a Bas-relievo, running in a spiral Line its whole length; and containing the History of some great Personage.

Such are the *Trajan* and *Antonine Columns*, at *Rome*.

Historical Column may likewise be divided by Bands, or Tambours, into separate Bas-relievos, containing distinct Subjects; by which means, the same Column may likewise be made to answer the End of Chronological ones.

This Manner *Vignola* prefers to the former; which, he thinks, appears too much confused.

Indicative Column, that which serves to shew the Tides, &c. along the Sea-Coasts. Of this kind, there is one at *Grand Cairo*, of Marble, whereon the Overflowings of the Nile are express'd: By this they form a Judgment of the succeeding Season: when the Water, for instance, ascends to 25 Foot, 'tis a Sign of great Fertility in *Egypt*. See *NILOMETER*.

Instructive Column, that rais'd, according to *Josephus*, *Lib. I. cap. 3.* by the Sons of *Adam*, whereon were engraven the Principles of Arts and Sciences.

Baudet tells us, that the Son of *Pisistratus* rais'd another of this kind, of Stone; containing the Rules and Precepts of Agriculture.

Itinerary Column, a Column with several Faces, placed in the Cross-ways in large Roads; serving to shew the different Rout, by the Inscriptions thereon.

Lactary Column, at *Rome*, according to *Festus*, was a Column erected in the Herb-Market, now the *Plaza Montanara*; which had a Cavity in its Pedestal, wherein young Children, abandon'd by their Parents, out of Poverty or Inhumanity, were expos'd, to be brought up at the publick Expence.

Legal Column. Among the *Lacedemonians*, there were Columns rais'd in publick Places, whereon were engraven the fundamental Laws of the State.

Limitropheus, or *Boundary Column*, that which shews the Limits of a Kingdom, or Country conquer'd. Such was that, which, *Pliny* says, *Alexander the Great* erected at the Extremities of the *Indes*.

As to those of *Hercules*, ordinarily call'd his *Columns*, or *Pillars*; they are only two very steep Mountains in the Straights of *Gades*, now *Gibraltar*.

Luminous Column, a sort of Column form'd on a cylindrical Frame, mounted and cover'd over with oil'd Paper, or Gawec; so that Lights being dispos'd in ranks over each other, the whole appears as on fire.

This sort of Column is likewise made with rows of Lamps, or Torches, running round its Shaft; either in horizontal Belts, or Bands; or in a spiral Line, continued over a Festoon of Flowers.

Mansuivory Column, from the Latin *Mansuivie*, Spoils of the Enemy; a Column adorn'd with Trophies, built in imitation of Trees, whereon the Spoils of Enemies were antiently hung. See *TROPHY*.

Memorial Column, that rais'd on occasion of any remarkable Event; as the *Monument* in *London*, built to perpetuate the Memory of the Burning of that City, in 1666.

It is of the *Doric* Order, fluted, hollow, with a winding Stair-case; and terminated a-top with waving Flames.

There is, also, another of the like Kind, in form of an Obelisk, on the Banks of the *Rhine* in the *Palatinate*, in memory of the famous Passage of that River, by the great *Gustavus Adolphus* and his Army.

Mensian Column, any Column which supports a Balcony, or *Mensiane*. See *MENIANE*.

The Origin of this kind of Column, *Suetonius* and *Africanus* refer to one *Mensius*; who having sold his House to *Cato* and *Flaccus*, Consuls, to be converted into a publick Edifice; reserv'd to himself the Right of raising a Column without side, to bear a Balcony; whence he might see the Shows.

Military Column, among the *Romans*, a Column whereon was engraven a List of the Forces in the *Roman* Army, ranged by Legions, in their proper order; with design to preserve the Memory of the Number of Soldiers, and of the Order observ'd in any Military Expedition.

The *Romans* had another kind of *Military Column*, which they call'd *Columna Bellica*, standing before the Temple of *Janus*; at the Foot whereof the Consul declar'd War, by throwing a Javelin towards the Enemies Countries.

Military Column, was a Column of Marble, rais'd by order of *Augustus*, in the middle of the *Roman Forum*; from whence, as a Centre, the Distances of the several Cities, &c. of the Empire were reckon'd, by other *Military Columns*; dispos'd at equal Distances, on all the great Roads. See *MILIARY*.

This Column was of white Marble; the same with that which is now seen on the Balustrade of the Perron of the Capital at *Rome*.

Its proportion is massive; being a short Cylinder, with a *Tylian* Base and Capital, and a Brass Ball for a Crowning, the Symbol of the Globe of the Earth.

It was call'd *Miliarium Aureum*; as having been gilt, at least the Ball, by order of *Augustus*. It was restor'd by the Emperors *Felipeus* and *Adrian*; as appears by the Inscriptions.

Profphorical Column, a *Light-house* or a hollow Column, built on a Rock, or the Tip of a Mole, or other Eminence, to serve as a Lantern to a Port.

Prostral Column, that adorn'd with the Beaks, or Prows of Ships and Gallies, with Anchors and Grapplers; erected, either in memory of a Naval Victory; as the *Tylian Column*, in the Capitol: or, in honour of some Admiral; as the *Doric* ones, at the Entrance of the Castle de *Ribblien*.

Septulchral Column, antiently, was a Column erected on a Tomb or Sepulchre; with an Inscription on its Base. See *TOMB*, &c.

Those over the Tombs of Persons of Distinction were very large; those for the common People small: these last are call'd *Stele* and *Cippi*. See *CIPPUS*, &c.

Statuary Column, that which supports a Statue. Such was that erected by Pope *Paul V.* on a Pedestal before the Church of *St. Maria major* at *Rome*; to support a Statue of the Virgin, which is of gilt Brass. See *STATUES*.

This Column was dug up in the Temple of *Peace*; its Shaft is a single Block of white Marble 49 Foot and an half high, and 5 Foot 8 inches Diameter; of the *Corinthian* Order, fluted.

The Term *Statuary Column*, may likewise be apply'd to Caryatides, Perissans, Terminal, and other human Figures, which do the Office of Columns; and which *Vitruvius* calls *Telamones*, and *Atlantes*. See *CARYATIDES*, &c.

Symbolical Column, is a Column representing some particular Country, by the Attributes proper thereto: As that of the *French* Order, set with Flower de Lis's, in the Frontispiece of the *Jesuits* Church at *Rouen*; or some memorable Action; as the *Corinthian Column*, on which was a Crow; erected to *Valerius Maximus*, Sirnam'd *Corvinus*, in memory of his Defeat of a Giant in the Army of the *Gauls*, by the Assistance of a Crow.

Under the Title of *Symbolical Columns*, may also be comprehended those which serve for Symbols. Such is that in a Medal of *Nero*, which expresses the Stability of the *Roman* Empire. See *SYMBOL*.

Triumphal Column, a Column erected among the Antients in honour of an Hero; the Joins of the Stones, or Courses whereof, were cover'd with as many Crowns, as he had made different Military Expeditions. See *TRIUMPH*.

Each Crown had its particular Name; as *Pallissaris*, which was set with Spikes, in memory of having forced a Passade. *Muralis*, adorned with little Turrets, or Battlements; for having mounted to an Assault. *Navalis*, of Prows and Beaks of Vessels; for having overcome at Sea. *Obfidionalis*, or *Graminis*, of Grass; for having rais'd a Siege. *Ovans*, of Myrtle, which express'd an Ovation, or little Triumph: And *Triumphalis*, of Laurel; for a grand Triumph. See *CROWN*.

Procopius tells us of a Column of this Kind, erected in the place call'd *Augusteum*, before the Imperial Palace of *Constantinople*, supporting an *Equestrian* Statue of the Emperor *Justinian*.

Zophoric Column, a kind of Statuary Column, whereon is placed a Figure of some Animal. Such is one of the two Columns of the Gate of *Venice*; whereon is the Lion of *St. Mark*, and the Arms of the Republick: or that at *Sievna*, which bears the Wolf that suckled *Romulus* and *Remus*.

COLUMN, in War, a deep File, or Row of Troops; or a Division of an Army, which marches at the same Time, and towards the same Place, at Intervals large enough to avoid Confusion.

An Army marches in one, two, three, or more Columns; according as the Ground will allow, and the General sees expedient.

The Word is also used in speaking of Vessels at Sea, following each other in the same Line.

'Tis difficult to form Columns at Sea, unless the Wind be in Stern.

COLUMN, among Printers, is half a Page, when the Page is divided into two Parts, from top to bottom. See *PAGE*.

COLUMNÆ Nafæ, is used by some Writers of Anatomy, for the fleshy Part of the Nose jutting out over the upper Lip. See **NOSE**.

COLUMNA Oris, is sometimes used for the *Uvula*. See **UVULA**.

COLUMNÆ Carnæ, in Anatomy, called also *Laceruli*, and *Columæ Cordis*; are several small Muscles in the Ventricles of the Heart; derived, and as it were, detach'd from the Parietes of the Ventricles, and connected by tendinous Extremities to the Valves of the Heart. See **HEART**.

These little *Columns*, or Pillars, being fasten'd to the Parietes of the Heart on one side, and the Tricuspid and Mitral Valves on the other; do, by their Contraction in the Systole of the Heart, draw out the Valves; and by that means, not only shut the Orifices of the Veins, but more exactly close the Ventricles in their Systole. See **SYSTOLE**, and **DIASTOLE**.

COLURES, in Geography and Astronomy, two great Circles, imagin'd to intersect each other at right Angles, in the Poles of the World. See **CIRCLE**.

The *Colures* pass, one of 'em thro' the *Solstitial*, and the other thro' the *Equinoctial* Points of the Eclipse; whence the first is denominated the *Solstitial* and the second the *Equinoctial Colure*. See **SOLSTITIAL**, and **EQUINOCTIAL**.

The *Equinoctial Colure* determines the *Equinoxes*; and the *Solstitial*, the *Solstices*. See **EQUINOX**, and **SOLSTICE**.

By thus dividing the Eclipse into four equal Parts, they mark the four Seasons of the Year. See **SEASON**.

The Word is deriv'd from the Greek *κόρυς*, *mutinus*, or *irruentis*, and *ἄξ* *tail*; as appearing with the *Tail cut off*; because never seen entire above the Horizon.

COLYBA, a Term in the Greek Liturgy, signifying an Offering of Grains, and boil'd Pulse; made in honour of the Saints, and for the sake of the Dead.

Balfamon, *P. Goat*, *Leo Alistini*, and others, have wrote on the Subject of *Colybas*: the Substance of what they have said, is as follows.

The Greeks boil a quantity of Wheat, and lay it in little Heaps on a Plate; adding beaten Peas, Nuts cut small, and Grape-stones, which they divide into several Compartments, separated from each other by Leaves of Parsley. A little Heap of Wheat thus season'd, they call *κόρυς*.

They have a particular *Formula* for the Benediction of the *Colybas*; wherein, praying that the Children of *Babylon* may be fed with Pulse, and that they may be in better Plight than other People, they desire God to bless their Fruits, and those who eat them, because offer'd to his Glory, to the honour of such a Saint, and in memory of the faithful Deceased.

Balfamon refers the Institution of that Ceremony to *S. Athanasius*; but the Greek *Synaxary* to the Time of *Julian* the Apostate.

Many of the *Latin Divines* having spoke injuriously of this Ceremony, *Gabriel Archbishop of Philadelphia*, has wrote a Discourse in its Vindication; wherein he endeavours to shew, that the Design of the *Colybas* is only to represent the Resurrection of the Dead, and to confirm the Faithful in the Belief thereof.

The *Colybas*, he says, are Symbols of a general Resurrection; and the several Ingredients added to the Wheat, signify to many different Virtues.

COMA, in Medicine, a sort of a sleepy Disease, otherwise called *Catapnoza*; consisting in a violent propensity to sleep, whether Sleep ensue, or not. See **SLEEP**.

If Sleep do ensue, the Disease is called *Coma Somnolentum*, wherein the Patient continues in a profound Sleep; and when awak'd, immediately relapses, without being able to keep open his Eyes.

If he do not sleep, but is continually awak'd with frightful Dreams, 'tis called *Coma Vigil*: and here too his Eyes are shut, and he appears asleep.

The Cause of the *Coma Somnolentum*, may be any thing that prevents the Course of the Spirits; as a cold, humid temperature of the Brain; hot purrid Vapours ascending into the Head, and stopping the Canals of the Animal Spirits; narcotick Vapours, &c.

The *Coma Vigil* is supposed to arise from the Conflict, or jarring Mixture of Bile with *Pituita*; the one urging to sleep, the other to waking. Hence, the Patient sleeps either not at all; or, at most, but for a moment; is uneasy, starts, rises up, and sometimes throws himself on the Persons near him; his Eyes, all the time fast closed.

The Remedies for a *Coma*, are those which occasion great Evacuations; as violent Clysters, or Vomitives; Medicines that purge, and dry the Brain; and those which occasion Revulsion of Humours; as Vescicatories, Causteries, &c. to which may be added volatile Spirits, Salts, and moist Cephalicks.

COMA, in Grammar. See **COMMA**.

COMA BERENICES, *Berenice's Hair*, in Astronomy, a Constellation of the Northern Hemisphere. See **CONSTELLATION**.

The Stars in the Constellation *Coma Berenices*, in *Ptolemy's Catalogue* are 3; in *Tych'o's* 13; in the *Britannic*

Catalogue 40. The Order, Names, Longitudes, Latitudes, Magnitudes, &c. whereof, are as follow.

Stars in the Constellation COMA BERENICES.

All these Stars *Ptolemy* ranks among the *Inferiores* of *Leo*; and the Cluster of little Stars, in form of a Nebulous one, between the Lion and Bear, he calls simply *πληθυσ*; as resembling an Ivy-leaf: the pointed Part whereof is turn'd towards the North, and the Sides, bounded by the 7th and 22d Stars. *Bayr*, instead of Hair, gives a Sheaf of Corn.

COMBAT, an *Engagement*; or a Difference decided by way of Arms.

Authors distinguish in an Army, between a *Combat* and a *Battel*; the latter expressing the general Action of the whole Army: the former a particular Skirmish, or Engagement of a single part: so that the *Combat* is properly a Part of a *Battel*. See **BATTEL**.

COMBAT, in Law; or, *Single-COMBAT*; a formal Trial, between two Champions, of some doubtful Cause or Question, by the Sword, or Batons. See **TRIAL**.

This form of Proceeding was antiently very popular; and obtain'd not only in Criminal, but also in Civil Causes; being built on a Presumption, that God would never grant the Victory, but to him who had the best right. See **DUEL**.

We find the *Combat* as early as the Time of *Osbo*: The last admitted in *England*, was *6 Car. I.* between *Donald Lord Rhee*, or *Rey*, and *David Ramsay Esq;* in the *Parished Chamber*.

The Form and Ceremony of the *Combat*, is describ'd in the *Grand Coutumier of Normandy*: The Accuser, first, swore to the Truth of his Accusation; the Accused gave him the *Lye*: upon which, each threw down a Gage, or Pledge of *Battel*; and the Parties were committed Prisoners till the Day of *combat*. See **CHAMPION**.

Historians tell us, that *Alphonso King of Castile*, desiring to abolish the *Moharabic Rite*, and to introduce the *Roman Office*: the People opposing it, 'twas agreed to terminate the Difference by *Combat*; and to leave the Cause to the Decision of Heaven.

COMBAT is also used for the solemn Games of the antient Greeks and Romans, in honour of their Gods; as the *Olympia Games*, *Pythian*, *Isthmean*, and *Nemean Games*; the *Ludi Acliani*, *Circenses*, &c. which see in their Places, **OLYMPIC**, **ISTHMEAN**, &c.

The Combats here celebrated, were *Running, Wrestling, Boxing, &c.*

The Combatants who were called *Athlets*, prepar'd themselves for it from their youth, by constant Exercise, and a very rigid Regimen: they only eat certain Things, and at certain Hours; drank no Wine, had no commerce with Women: both their Labour and their Rest were regulated. See *ATHLETIC, GLADIATOR, &c.*

COMBATANT, is the Herald's Word for two Lions, &c. born in a Coat of Arms in a fighting posture, rampant; and their Escutcheons charged with other.

COMBINATION, is properly understood of an Assemblage of several Things by two, and two.

COMBINATORY is also used for the Variation, or Alternation of any Number of Quantities, Letters, Sounds, or the like, in all the different Manners possible. See *CHANGES.*

P. Mercenne gives us the Combinations of all the Notes and Sounds in Musick, as far as 24; the Sum whereof amounts to 90 Figures, or Places.

The Number of Combinations of the 24 Letters of the Alphabet, taken first two by two, then three by three, &c. M. Prefet has calculated to be 13917244888872599942 512925402100. See *LETTER, and ALPHABET.*

The Words in the following Verse may be combin'd a thousand twenty two several ways.

Tu tibi sunt Dotes, Virgo, quos sidera Calo.

Doctrine of COMBINATIONS.

Any Number of Quantities being given, together with the Number in each Combination; to find the Number of Combinations.

One Quantity, we observe, admits of no Combination; two, *a* and *b*, of one; of three *a b c*, there are three Combinations, viz. *a b, a c, b c*; of four, *a b, a c, b c, a d, b d, c d*; of five, ten, *a b, a c, b c, a d, b d, c d, a e, b e, c e, d e*.

Whence it appears, that the Numbers of Combinations proceed as 1, 3, 6, 10, &c. i. e. are triangular Numbers, whose Side differs by Unity from the Number of given Quantities: if that, v. g. be *q*, the Side of the Number of Combinations will be $q-1$; and therefore the Number of

Combinations $\frac{q-1}{1} \cdot \frac{q-1}{2} \cdot \frac{q-1}{3} \cdot \frac{q-1}{4} \cdot \frac{q-1}{5} \cdot \frac{q-1}{6} \cdot \frac{q-1}{7} \cdot \frac{q-1}{8} \cdot \frac{q-1}{9} \cdot \frac{q-1}{10} \cdot \frac{q-1}{11} \cdot \frac{q-1}{12} \cdot \frac{q-1}{13} \cdot \frac{q-1}{14} \cdot \frac{q-1}{15} \cdot \frac{q-1}{16} \cdot \frac{q-1}{17} \cdot \frac{q-1}{18} \cdot \frac{q-1}{19} \cdot \frac{q-1}{20} \cdot \frac{q-1}{21} \cdot \frac{q-1}{22} \cdot \frac{q-1}{23} \cdot \frac{q-1}{24}$. See *TRIANGULAR NUMBER.*

*If three Quantities are to be combin'd, and the Number in each Combination be three, there will only be one Combination, *a b c*; if a fourth be added, the Combinations will be found *a b c, a b d, b c d, a c d*; if a fifth, ten, *a b c, a b d, b c d, a c d, a b e, b c e, a c e, a d e*; if a sixth, twenty, &c. The Numbers of Combinations, therefore, proceed as 1, 4, 10, 20, i. e. are the first pyramidal triangular Numbers, whose Sides differ by two Units from the Number of given Quantities. See *PYRAMIDAL NUMBER.*

Hence, if the Number of given Quantities be *q*, the Side will be $q-2$; and therefore, the Number of Combinations $\frac{q-2}{1} \cdot \frac{q-2}{2} \cdot \frac{q-2}{3} \cdot \frac{q-2}{4} \cdot \frac{q-2}{5} \cdot \frac{q-2}{6} \cdot \frac{q-2}{7} \cdot \frac{q-2}{8} \cdot \frac{q-2}{9} \cdot \frac{q-2}{10} \cdot \frac{q-2}{11} \cdot \frac{q-2}{12} \cdot \frac{q-2}{13} \cdot \frac{q-2}{14} \cdot \frac{q-2}{15} \cdot \frac{q-2}{16} \cdot \frac{q-2}{17} \cdot \frac{q-2}{18} \cdot \frac{q-2}{19} \cdot \frac{q-2}{20} \cdot \frac{q-2}{21} \cdot \frac{q-2}{22} \cdot \frac{q-2}{23} \cdot \frac{q-2}{24}$.

Hence is easily deduced a general Rule of determining the Number of Combinations in any Case: For, suppose the Number of Quantities to be combin'd, *q*, the Exponent of the

Combination will be the Number of Combinations $\frac{q-n+1}{1} \cdot \frac{q-n+2}{2} \cdot \frac{q-n+3}{3} \cdot \frac{q-n+4}{4} \cdot \frac{q-n+5}{5} \cdot \frac{q-n+6}{6} \cdot \frac{q-n+7}{7} \cdot \frac{q-n+8}{8} \cdot \frac{q-n+9}{9} \cdot \frac{q-n+10}{10} \cdot \frac{q-n+11}{11} \cdot \frac{q-n+12}{12} \cdot \frac{q-n+13}{13} \cdot \frac{q-n+14}{14} \cdot \frac{q-n+15}{15} \cdot \frac{q-n+16}{16} \cdot \frac{q-n+17}{17} \cdot \frac{q-n+18}{18} \cdot \frac{q-n+19}{19} \cdot \frac{q-n+20}{20} \cdot \frac{q-n+21}{21} \cdot \frac{q-n+22}{22} \cdot \frac{q-n+23}{23} \cdot \frac{q-n+24}{24}$. till the Number to be added be equal to *n*.

Suppose, v. g. the Number of Quantities to be combin'd = 6; the Exponent of the Combination 4; the Number of Combinations will be $\frac{6-4+1}{1} \cdot \frac{6-4+2}{2} \cdot \frac{6-4+3}{3} \cdot \frac{6-4+4}{4} = \frac{2}{1} \cdot \frac{3}{2} \cdot \frac{4}{3} \cdot \frac{5}{4} = 5$.

Coroll. If it be desired to have all the possible Combinations of the given Quantities beginning with the Combinations of the several Twos, proceeding to threes, &c. there must be added $\frac{q-1}{1} \cdot \frac{q-1}{2} \cdot \frac{q-1}{3} \cdot \frac{q-1}{4} \cdot \frac{q-1}{5} \cdot \frac{q-1}{6} \cdot \frac{q-1}{7} \cdot \frac{q-1}{8} \cdot \frac{q-1}{9} \cdot \frac{q-1}{10} \cdot \frac{q-1}{11} \cdot \frac{q-1}{12} \cdot \frac{q-1}{13} \cdot \frac{q-1}{14} \cdot \frac{q-1}{15} \cdot \frac{q-1}{16} \cdot \frac{q-1}{17} \cdot \frac{q-1}{18} \cdot \frac{q-1}{19} \cdot \frac{q-1}{20} \cdot \frac{q-1}{21} \cdot \frac{q-1}{22} \cdot \frac{q-1}{23} \cdot \frac{q-1}{24}$. Whence the Number of Combinations possible will be $\frac{q-1}{1} \cdot \frac{q-1}{2} \cdot \frac{q-1}{3} \cdot \frac{q-1}{4} \cdot \frac{q-1}{5} \cdot \frac{q-1}{6} \cdot \frac{q-1}{7} \cdot \frac{q-1}{8} \cdot \frac{q-1}{9} \cdot \frac{q-1}{10} \cdot \frac{q-1}{11} \cdot \frac{q-1}{12} \cdot \frac{q-1}{13} \cdot \frac{q-1}{14} \cdot \frac{q-1}{15} \cdot \frac{q-1}{16} \cdot \frac{q-1}{17} \cdot \frac{q-1}{18} \cdot \frac{q-1}{19} \cdot \frac{q-1}{20} \cdot \frac{q-1}{21} \cdot \frac{q-1}{22} \cdot \frac{q-1}{23} \cdot \frac{q-1}{24} + \frac{q-2}{1} \cdot \frac{q-2}{2} \cdot \frac{q-2}{3} \cdot \frac{q-2}{4} \cdot \frac{q-2}{5} \cdot \frac{q-2}{6} \cdot \frac{q-2}{7} \cdot \frac{q-2}{8} \cdot \frac{q-2}{9} \cdot \frac{q-2}{10} \cdot \frac{q-2}{11} \cdot \frac{q-2}{12} \cdot \frac{q-2}{13} \cdot \frac{q-2}{14} \cdot \frac{q-2}{15} \cdot \frac{q-2}{16} \cdot \frac{q-2}{17} \cdot \frac{q-2}{18} \cdot \frac{q-2}{19} \cdot \frac{q-2}{20} \cdot \frac{q-2}{21} \cdot \frac{q-2}{22} \cdot \frac{q-2}{23} \cdot \frac{q-2}{24} + \frac{q-3}{1} \cdot \frac{q-3}{2} \cdot \frac{q-3}{3} \cdot \frac{q-3}{4} \cdot \frac{q-3}{5} \cdot \frac{q-3}{6} \cdot \frac{q-3}{7} \cdot \frac{q-3}{8} \cdot \frac{q-3}{9} \cdot \frac{q-3}{10} \cdot \frac{q-3}{11} \cdot \frac{q-3}{12} \cdot \frac{q-3}{13} \cdot \frac{q-3}{14} \cdot \frac{q-3}{15} \cdot \frac{q-3}{16} \cdot \frac{q-3}{17} \cdot \frac{q-3}{18} \cdot \frac{q-3}{19} \cdot \frac{q-3}{20} \cdot \frac{q-3}{21} \cdot \frac{q-3}{22} \cdot \frac{q-3}{23} \cdot \frac{q-3}{24} + \frac{q-4}{1} \cdot \frac{q-4}{2} \cdot \frac{q-4}{3} \cdot \frac{q-4}{4} \cdot \frac{q-4}{5} \cdot \frac{q-4}{6} \cdot \frac{q-4}{7} \cdot \frac{q-4}{8} \cdot \frac{q-4}{9} \cdot \frac{q-4}{10} \cdot \frac{q-4}{11} \cdot \frac{q-4}{12} \cdot \frac{q-4}{13} \cdot \frac{q-4}{14} \cdot \frac{q-4}{15} \cdot \frac{q-4}{16} \cdot \frac{q-4}{17} \cdot \frac{q-4}{18} \cdot \frac{q-4}{19} \cdot \frac{q-4}{20} \cdot \frac{q-4}{21} \cdot \frac{q-4}{22} \cdot \frac{q-4}{23} \cdot \frac{q-4}{24} + \frac{q-5}{1} \cdot \frac{q-5}{2} \cdot \frac{q-5}{3} \cdot \frac{q-5}{4} \cdot \frac{q-5}{5} \cdot \frac{q-5}{6} \cdot \frac{q-5}{7} \cdot \frac{q-5}{8} \cdot \frac{q-5}{9} \cdot \frac{q-5}{10} \cdot \frac{q-5}{11} \cdot \frac{q-5}{12} \cdot \frac{q-5}{13} \cdot \frac{q-5}{14} \cdot \frac{q-5}{15} \cdot \frac{q-5}{16} \cdot \frac{q-5}{17} \cdot \frac{q-5}{18} \cdot \frac{q-5}{19} \cdot \frac{q-5}{20} \cdot \frac{q-5}{21} \cdot \frac{q-5}{22} \cdot \frac{q-5}{23} \cdot \frac{q-5}{24} + \frac{q-6}{1} \cdot \frac{q-6}{2} \cdot \frac{q-6}{3} \cdot \frac{q-6}{4} \cdot \frac{q-6}{5} \cdot \frac{q-6}{6} \cdot \frac{q-6}{7} \cdot \frac{q-6}{8} \cdot \frac{q-6}{9} \cdot \frac{q-6}{10} \cdot \frac{q-6}{11} \cdot \frac{q-6}{12} \cdot \frac{q-6}{13} \cdot \frac{q-6}{14} \cdot \frac{q-6}{15} \cdot \frac{q-6}{16} \cdot \frac{q-6}{17} \cdot \frac{q-6}{18} \cdot \frac{q-6}{19} \cdot \frac{q-6}{20} \cdot \frac{q-6}{21} \cdot \frac{q-6}{22} \cdot \frac{q-6}{23} \cdot \frac{q-6}{24}$.

Therefore, since those Units come out $1+1$, by being rais'd to the Power q ; and since $1+1=2$; 2^q-1 is the Number of all the possible Combinations, v. g. If the Number of Quantities be 5, the Number of possible Combinations will be $2-1=32-1=31$.

Any Number of Quantities being given, to find the Num-

ber of Changes and Alternations, which those Quantities, combin'd in all the Manners possible, can undergo.

Suppose two Quantities, *a* and *b*; their Variations will be 2; consequently, as each of those may be combin'd, even with itself, to these there must be added two Variations. The whole Number, therefore, will be $2+2=4$. If there were three Quantities, and the Exponent of the Variation 2; the Combinations will be 3, and the Changes 9; to which, if the three Combinations of each Quantity with itself *a a, b b, c c*, be added, we shall have the Number of Changes, $3+3+3=9$.

In like manner, 'tis evident, if the given Quantities were 4, and the Exponent 2, the Number of Changes would be 16; if 3, 25, &c. and, in general, if *n*.

Suppose the Quantities 3, and the Exponent of Variation 3; the Number of Changes is found $27=3^3$; viz. *a a a, a a b, a b a, b a a, a b b, a b c, a c a, c a a, a b c, b a c, c a b, c a c, c a b, c c a, c c a, b b a, b a b, b b b, b b c, c b b, b c b, c c c, c c c*.

After the same manner, it will appear, if the Quantities were 4, and the Exponent 3, the Number of Changes would be $64=4^3$; and, in general, if the Number of Quantities be *n*, and the Exponent 3, the Number of Changes will be n^3 . By thus proceeding, it will be found, that if the Number of Quantities be *n*, and the Exponent *n*, the Number of Changes will be n^n ; wherefore, if all the Antecedents be added, where the Exponent is less, the Number of possible Changes will be found $n^n + n^{n-1} + n^{n-2} + n^{n-3} + n^{n-4} + n^{n-5} + n^{n-6} + n^{n-7} + n^{n-8} + n^{n-9} + n^{n-10} + n^{n-11} + n^{n-12} + n^{n-13} + n^{n-14} + n^{n-15} + n^{n-16} + n^{n-17} + n^{n-18} + n^{n-19} + n^{n-20} + n^{n-21} + n^{n-22} + n^{n-23} + n^{n-24}$. Till at length, the Number subtracted from *n*, leaves 1; because the beginning is from single Quantities taken once.

Since then the Number of possible Changes is a geometrical Progression, whose first or smallest Term is *n*, the greatest n^n , and the Denominator *n*; it will be $(n^n - n) / (n - 1)$.

Suppose, v. g. *n=4*. the Number of possible Changes $(4^4 - 4) / (4 - 1) = 1200 / 3 = 340$. Suppose, again, *n=24*, the Number of possible Changes will be $(24^{24} - 24) / (24 - 1) = 320095864440681898677795328272600 / 23 = 13917244888872599942512925402100$. In so many various manners, therefore, may the 24 Letters of the Alphabet be varied and combin'd among themselves.

F. Truchet, in the *Memoirs of the French Academy*, shows, that two square Pieces, each divided diagonally by two Colours, may be arranged and combin'd 64 different ways, so as to form so many different Kinds of Chequer-work; which appears surprising enough, when one considers that two Letters, or Figures, can only be combin'd twice.

This Note may be of use to Masons, Paviers, &c. See *PAVEMENT.*

COMBING of Wool, in Commerce, the drawing, or passing it across the Teeth of a kind of Card, called a *Comb*, to dispose it for spinning. See *WOOL, CLOTH, SPINNING, &c.*

COMBS. See *HONEY-COMBS.*

COMBUST, in Astronomy. When a Planet is not above 8 Degrees and 30 Minutes distant from the Sun, either before or after him, it is said to be *Combust*, or in *Combustion*.

COME. The small fibres or Tails of Malt, upon it first flooring forth is thus called. See *MALT.*

COMEDY, in its proper Sense, a Dramatic Piece, representing some agreeable and diverting Transaction: or, it is an allegorical Representation of something in private Life; for the Amusement and Instruction of the Spectators. See *DRAMA.*

In this Sense, *Comedy* is oppos'd to *Tragedy*; the Subjects whereof are grave, and violent; and the Persons of the first Rank. See *TRAGEDY.*

Scaliger defines *Comedy* a Dramatic Poem, very busy, pleasant in the Conclusion, and writ in a popular Style.

Aristotle calls it an *Imitation of the worst*, or, rather, of the lowest Class of Persons, by way of ridicule: This Definition *Cornelius* finds fault with, and maintains, that the Actions of Kings themselves may enter *Comedy*; provided they be such as are not very momentous, nor attended with any considerable danger. He adds, that a Poem wherein the greatest Peril is the Loss of a Mistress, has no right to any higher Appellation than that of *Comedy*: But then he makes a Distinction in *Comedies*, and dignifies those where great Personages are introduc'd, with the Epithet of *Heroic Comedies*, to distinguish them from ordinary ones.

Mr. Congreve seems pretty much of the same Sentiment; he understands Aristotle's Definition of the worst Men; on which bottom, 'tis sufficient to constitute a *Comedy*, than the Action represented be that of some ill Man brought on the Stage to be expos'd.

M. Dacier is of a contrary Opinion: He maintains, that *Comedy* allows of nothing grave, or serious, unless it be turn'd to ridicule; and that *Railery* and *Ridicule* are its only proper and genuine Characteristics: In which Opinion he is warmly seconded by Mr. *Dennis*.

Thus different are Critics and Comic Authors on the Nature of *Comedy*: some distinguishing it from *Tragedy* by the

Joanefs of the Subject; others by the ridiculous Light it is fet in.

The accurate F. Boffu fixes the Notion of *Comedy* much better: according to that excellent Critic, *Comedy* differs from *Tragedy* in this, that the Comic Writer invents both the Names of his Persons, and the Actions he presents; whereas the Tragic Writers only invent the latter; the former they are to take from History.

Upon the whole, *Comedy* may be defined an Image, or Representation of the ordinary Life of Men: it exhibits their common Actions and Passions; exposes, and ridicules their Failings, to preserve the Spectators from 'em, or to correct 'em. Cicero defines it the Imitation of Life, the Mirror of Custom, and the Image of Truth.

There is a Dispute among the Critics, whether *Comedy* be a Poem, or a mere Conversation. They who maintain the latter, do it on the foot of this general Opinion, that a Poem is a Discourse in Verse: F. Boffu insists on the former, and shews, that as *Comedy* has the Fable, or Allegory, it has every thing essential to Poetry. See POEM, and FABLE.

Comedy and *Tragedy* were originally one and the same Thing: Their common Origin see under TRAGEDY.

M. Boileau says, *Comedy* took its rise at Athens, from the happy Issues or Conclusions of Tragedies. On this Principle, the Catastrophe should have been the proper Criterion, or distinguishing Mark between *Tragedy* and *Comedy*; and all other differences only accidental.

*Des succès fortunez Au spectacle tragique
Dans Athènes naquit la Comédie antique.*

After the Grave and Serious became separated from the Ridiculous, and *Tragedy* and *Comedy* became two distinct Arts; People applied themselves to cultivate the former, and neglected the latter: So that *Comedy* continued in its Infancy, with little Improvements, while *Tragedy* grew up to a perfect Art: this, once arrived at its height, they began to think of cultivating *Comedy*.

With regard to the various Changes and Revolutions *Comedy* has undergone, it is commonly distinguish'd into three Kinds, viz. the *Antient*, wherein there was nothing feign'd; the *Mean*, where the Subject was real, but the Names fictitious; the *New*, where both Names and Things are fictitious.

The *Antient* was that first in use, when the supreme Power was in the Hands of the People; and when, on that account, the Poets were at their full liberty to say what they pleas'd, and of whom they pleas'd; by Name to rail at People in Authority, and openly charge Magistrates with Crimes; (sparing no Age, Sex, or Quality).

This is very observable in the *Frogs*, and the *Clouds* of *Aristophanes*; where it is to be noted, that tho' the railing Part was occasionally distributed among all the Actors, yet the chief was laid on the Chorus.

When the *Athenian* Liberties became sunk up in the Tyranny of a few, it was no longer safe for the Poets to use their old License; Men of Office being now to be skrew'd from reproach. The Chorus, therefore, became useless, and was therefore dropp'd; and thus commenc'd what we call *Comœdia media, sive, or the Mean Comedy*. See CHORUS.

Under this, the Poets were not allow'd to name the Persons; and therefore Names were to be invented: but then the Persons were so well pointed out, that 'twas no difficult matter to know 'em.

At length, however, they were oblig'd to repress even this License: and this Reform gave occasion to the *New Comedy*; which only brought upon the Stage feign'd Adventures, and imaginary Names.

This last Kind alone was receiv'd among the *Romans*; who yet made a new Subdivision thereof, into *Antient*, *Mean*, and *New*; according to the various Periods of the Commonwealth. Among the *antient Comœdies* were rank'd those of *Terentius Andronicus*; among the *Mean*, those of *Pacuvius*; and among the *New* ones those of *Terence*.

Comedy, as well as *Tragedy*, has its *Essential*, and its *Integrant* Parts.

Its *Essential* Parts, in the Language of the *Antients*, are the *Protasis*, *Epitasis*, *Catastasis*, and *Catastrophe*.

The *Protasis* is the beginning, or opening; where the Subject is just enter'd upon, the Character of the Persons shewn, and the Interest, or part, each has in the Action. See PROTASIS.

In the *Epitasis*, the Intrigues begin: they are carry'd on, and heighten'd in the *Catastasis*; and unravel'd in the *Catastrophe*. See EPITASIS, CATASTROPHE, &c.

The *Integrant* Parts are the five *Acts* into which the *Comedy* is divided, agreeable to that Precept of *Horace*;

Novo minor quinto non sit produciat Actu.

The *Acts* are divided into *Scenes*; the Number whereof is not fix'd, either by Reason or Experience, but depends on the Things to be done in each Act, and the Number of Per-

sons to be employ'd. See ACT, SCENE, &c. see also MANNERS, HUMOUR, &c.

Among the *antient Romans*, *Comœdies* were distinguish'd according to the Quality of the Persons represented, and the Drefs they wore, into *Togate*, *Prætextæ*, *Trabæte*, and *Tabernariæ*; which last were those where the Scene lay in Colleges, or among People of the lowest Rank, agreeing pretty nearly with our *Farces*.

In the Representation, *Comedy* was distinguish'd from the *Tragedy*, by the *Stæc* wore in the former, and the *Baskin* in the latter. See SOCK, and BASKIN.

Among us, *Comedy* is distinguish'd from *Farce*, in that the former represents Nature as the is; the other distorts or overcharges her. They both paint from the Life, but with different Views: the one to make Nature known, the other to make her ridiculous. See FARCE.

Scaliger derives the Word *Comedy* from *κομος*, *Villages*, or *Conventicles of Peasants*; by reason, says *Varro*, the *Astro* Youth us'd to travel thro' the Country, and pick up Money by their Comic Representations; or from *αὐτὸν ἰσὺν ἡμετέραν*, i. e. *vicinus*; because the Scene was laid in ordinary Houses: whereas, in *Tragedy*, it lay in Palaces, and the Houses of the Great.

COMET, popularly call'd a *blowing Star*, a heavenly Body, rising suddenly, and again disappearing; and during the Time of its Appearance, moving in its proper Orbit, like a Planet. See STAR, and PLANET.

Comets have this to distinguish them from the other Stars, that they are usually attended with a long Train, or Tail of Light, always opposite to the Sun, and which is of the fainter Lustre, the further it is from the Body. Hence arises a popular division of *Comets* into three Kinds, viz. *bearded*, *tail'd*, and *hairy Comets*; tho, in effect, this division rather relates to the several Circumstances of the same *Comet*, than to the Phenomena of several.

Thus, when the *Comet* is Eastward of the Sun, and moves from it, the *Comet* is said to be *bearded*, *barbatus*; because the Light marches before it, in manner of a Beard.

When the Light is Westward of the Sun, and fers after it, the *Comet* is said to be *tailed*, *caudatus*; because the Train follows it, in manner of a Tail.

Lastly, when the *Comet* and the Sun are diametrically opposite, (the Earth between them) the Train is hid behind the Body of the *Comet*, excepting a little that appears around it, in form of a Border of Hair, hence call'd *Cirinus*.

Nature of COMETS.

As to the Nature of *Comets*, the infrequency of their appearing, together with the seeming Irregularities of their Phenomena, have left Philosophers much in the dark: Those who liv'd before *Aristotle*, accounted for 'em by supposing the heavenly Spaces full of an infinite Number of Stars; and many of these too remote, or too small to have ever come under the Notice of Astronomers: These invisible Stars, they further suppos'd to move by their own proper Motion every way; finishing their Courses in very unequal Times. Now, a *Comet*, according to them, was a vast heap or assemblage of these little Stars meeting together, by reason of the Inequality of their Motions, and uniting into a visible Mass; which must again disappear, as those Stars separate, and each proceed in its Course.

But how these Stars should thus meet, coalesce, and form a Body, which in all Positions of the Sun should resemble a Tail, and again separate, is a Mystery.

This Opinion, therefore, *Aristotle* easily overturn'd; substituting another in its stead: According to him, *Comets* were only a kind of transient Fires, or Meteors, consisting of Exhalations rais'd to the upper Region of the Air, and there set on fire; far below the Moon's Course.

But neither is this Hypothesis more just than the other: For on this Principle, the Light of the *Comet* being independent of the Sun, would be dispers'd every way alike, without any appearance of a Train, or Tail, which is contrary to the Phenomena. Besides, that the modern Astronomers, who have measur'd the distance between the *Comets* and the Earth, find that the *Comets* have no sensible Parallax; which could not be, were they not much more remote than the Moon, whose Parallax is sensible. See PARALLAX.

Hewelius from a great Number of Observations, proposes it as his Opinion, that the *Comets*, like the Solar Macule or Spots, which they pretty much resemble, are form'd and condens'd out of grosser Exhalations of his Body. In which Notion he agrees nearly with *Kepler*, who maintains, that *Comets* are generated in the *Æther* in vast Numbers, like Fishes in the Ocean; tho' they don't all become visible, either because of their smallness, or because they lay a long time under the Horizon.

But Sir I. Newton has shewn the Fallacy of this Hypothesis, by proving that the *Comet* of 1680, in its passage thro' the Neighbourhood of the Sun, would have been dispersed, had it consisted of Exhalations of the Sun and Plan-

sets: For the Heat of the Sun, 'tis allow'd, is as the Density of his Rays, *i. e.* reciprocally as the Squares of the Distances of Places from the Sun: Wherefore, since the Distance of that *Comet* in its Perihelion, *December* the 8th, was observ'd to be to the Distance of the Earth from the Sun, nearly as 6 to 1000; the Sun's heat in the *Comet*, at that time, was to his heat with us at *Middsummer*, as 1000000 to 26, or 28000 to 1.

And again, finding by Experiment, that the Heat of boiling Water, is little more than three times the heat of our dry Earth, when expos'd to the *Middsummer*'s Sun; and assuming the heat of red-hot Iron to be about three or four times as great as that of boiling Water: he concludes, that the heat of the dry'd Earth, or body of the *Comet* in its Perihelion, must be near 2000 times as great as that of red-hot Iron.

Such an immense heat once acquir'd in its Perihelion, the *Comet* must be a long time in cooling again. The same Author computes, that a Globe of red-hot Iron, of the Dimensions of our Earth, would scarce be cool in 50000 Years. If then the *Comet* be suppos'd to cool 100 times as fast as red-hot Iron; yet, since its Heat was 2000 times greater, supposing it of the bigness of the Earth, it would not be cool in a Million of Years.

James Bernoulli, in his *Systema Cometarum*, supposes some primary Planet, revolving round the Sun in the Space of four Years and 177 Days; and at the distance, from his Body, of 2583 Semidiameters of the *majoris Orbis*: This Planet, he concludes, either from its vast distance, or smallness, to be invisible to us; but, however, to have, at various Distances from him, several Satellites moving round him, and sometimes descending as low as the Orbit of *Saturnus*; and that these becoming visible to us, when in their *Perigeum*, are what we call *Comets*.

Des Cartes advances another Opinion: He conjectures that *Comets* are only Stars, formerly fix'd, like the rest, in the Heavens; but which, becoming by degrees cover'd with *Meteors*, or Spots, and at length wholly robb'd of their Light, cannot keep their place, but are carried off by the Vortices of the circumjacent Stars; and, in proportion to their Magnitude and Solidity, mov'd in such manner, as to be brought nearer the Orb of *Saturnus*; and thus coming within reach of the Sun's Light, render'd visible. See *CARTESIANISM*.

But the Vanity of all these Hypotheses abundantly appears from the Phenomena of *Comets*; the chief of which we shall enumerate: as being the Test by which all Theories are to be tried.

First, then, those *Comets* which move according to the Order of the Signs, do all, a little before they disappear, either advance lower than usual, or else go retrograde, if the Earth be between them and the Sun; and more swiftly, if the Earth be situate in a contrary Part: On the contrary, those which proceed contrary to the Order of the Signs, proceed more swiftly than usual, if the Earth be between them and the Sun; and more slowly, or go retrograde, when the Earth is in a contrary Part.

2dly, So long as their Velocity is increas'd, they move, nearly, in great Circles; but towards the end of their Course, deviate from those Circles; and as often as the Earth proceeds one way, they go the contrary way.

3dly, They move in Ellipsis's, having one of their *Foci* in the Centre of the Sun; and by Radii drawn to the Sun, describe Areas proportionable to the Times.

4thly, The Light of their Bodies, or *Nuclei*, increases in their Recess from the Earth towards the Sun; and, on the contrary, decreases in their Recess from the Sun towards the Earth.

5thly, The Tails appear the largest and brightest, immediately after their Transit thro' the Region of the Sun.

6thly, The Tails always decline from a just opposition to the Sun towards those Parts which the Bodies, or *Nuclei* pass over, in their progress thro' their Orbits.

7thly, This Declination, *ceteris paribus*, is the smallest, when the Heads, or *Nuclei* approach nearest the Sun; and less, still, near the *Nucleus* of the *Comet* than towards the Extremity of the Tail.

8thly, The Tails are somewhat brighter, and more distinctly defined in their convex than in their concave Part.

9thly, The Tails always appear broader at their upper Extreme than near the Centre of the *Comet*.

10thly, The Tails are transparent, and the smallest Stars appear thro' 'em.

These are the chief Phenomena of *Comets*; which, how ill they consist with the wild Notions of the Antients, and the weak Conjectures of most of the Moderns, is pretty evident. Indeed, there were some, *Pliny* tells us, among the Antients, who had juster Notions, who took these Stars to be perpetual, and believ'd they moved in their proper Orbs; but were never seen unless when left by the Sun. And more fully *Seneca*, *Quæst. Nat. Lib. VII.* 'I am not of the common Opinion, nor do I take a *Comet* to be a sudden Fire, but esteem it among the Eternal Works of

'Nature. — *Quid autem miramur Cometas, tam variam mundi spectaculum nondum teneri legibus certis, nec instat illorum sineque notefere, quorum ex ingentibus interstitiis recessus est? — Veniet Tempus quo ista que nunc latent, in lucem dies extrahat & longioris Aevi diligentia. Veniet Tempus quo posteri nostri tam aperta nos notefere mirentur. — Erit qui demonstrat aliquando, in quibus *Comete* partibus erroris; cur tam seducti a ceteris eant, quanti qualesque sint.*

This Prediction we have seen accomplish'd in our Days, by the great Sir *I. Newton*; whose Doctrine is as follows.

The *Comets* are compact, solid, fix'd, and durable Bodies; in one word, a kind of Planets; which move in very oblique Orbits, every way with the greatest freedom; perverting in their Motions, even against the Course and Direction of the Planets: And their Tail is a very thin, slender Vapour, emitted by the Head, or *Nucleus* of the *Comet*, ignited or heated by the Sun.

This at once solves all the Phenomena: For ist, 'Tis evident, that those which proceed according to the Order of the Signs, a little before they disappear, must move more slowly, or appear retrograde, if the Earth be betwixt them and the Sun; and swifter, if the Earth be in a contrary Part: on the contrary, those proceeding against the Order of the Signs, &c. For since their Course is not among the fix'd Stars, but among the Planets; as the Motion of the Earth either confpires with 'em, or goes against 'em; their Appearance, with regard to the Earth, must be changed; and, like the Planets, they must sometimes appear swifter, sometimes slower, and sometimes retrograde. See *DIRECTION, RETROGRADATION, &c.*

2dly, 'When the *Comets* move the swiftest, they must proceed in straight Lines, but to the end of their Course decline, &c. Because in the end of their Course, when they recede almost directly from the Sun, that part of the apparent Motion which arises from the Parallax, must bear a greater proportion to the whole apparent Motion.

3dly, 'The *Comets* must move in Ellipsis's, having one of their *Foci* in the Centre of the Sun.' Because they don't wander precipitantly from one sidereal Vortex to another; but, making a part of the solar System, return perpetually, and run a constant round. See *ORBIT*.

Hence, their elliptic Orbits being very long and eccentric, they become invisible, when in that Part most remote from the Sun.

From considering the Curvity of the Paths of *Comets*, Sir *I.* concludes, that when they disappear, they are much beyond the Orb of *Jupiter*; and that in their Perihelion they frequently descend below the Orbits of *Mars* and the inferior Planets.

4thly, 'The Light of their *Nuclei* must increase in their Recess from the Sun, and *vice versa*.' Because, as they are in the Regions of the Planets, their Access toward the Sun, bears a considerable proportion to their whole distance.

From Observations of the *Comet* of 1680, Sir *I. Newton* found that the Vapour in the Extremity of the Tail, *Jan. 25.* began to ascend from the Head before *December* the 11th; and had therefore spent more than 45 Days in its Ascens; but that all the Tail which appear'd *December 10.* ascended in the Space of those two Days, then just pass'd, since its Perihelion. The Vapour, therefore, at the beginning, when the *Comet* was near the Sun, ascended prodigiously swift; and afterwards continu'd to ascend with a Motion retarded by the Gravity of the Particles; and by that Ascens increas'd the length of the Tails: But the Tail, notwithstanding its length, consisted almost wholly of Vapours, which had ascended from the Time of the Perihelion; and the Vapour which ascended first, and compos'd the Extreme of the Tail, did not vanish, till it was too far from the Sun to be illumin'd by him, and off us to be visible. Hence, also, the Tails of *Comets* that are shorter, do not ascend with a quick and continual Motion from the Head, and then presently disappear; but are permanent Columns of Vapours and Exhalations, gather'd from the Head by a very gentle Motion, and in a great space of time; which yet, by participating of that Motion of their Heads they had at the beginning, continue easily to move along with their Heads thro' the celestial Regions: whence also the Vacuity, of those Regions is argued. See *VACUUM*.

5thly, 'Their Tails must appear the largest and brightest immediately after their Transit thro' the Region of the Sun.' Because, then, their Heads being the most heated, will emit the most Vapours.

From the Light of the *Nucleus*, or apparent Star, we infer their Vicinity to the Earth, and that they are by no means in the Region of the Fix'd Stars, as some have imagin'd; since in that case, their Heads would be no more illumin'd by the Sun, than the Planets are by the Fix'd Stars.

6thly, 'The Tails must still decline from a strict opposition to the Sun, towards those Parts which the Heads pass over, in their progress thro' their Orbits.' Because, all Smoke, or Vapour emitted from a Body in Motion, tends up-

wards obliquely, still receding from that Part towards which the smoking Body proceeds.

7thly, 'That Declination will be still the least near the Nucleus of the *Comet*; and when the *Comet* is nearest the 'Sun' because the Vapour ascends more swiftly near the Head of the *Comet*, than in the higher Extremity of its Tail; and when the *Comet* is at a less distance from the Sun, than when at a greater.

8thly, 'The Tail is brighter, and better defin'd in its convex Part, than in its concave:' Because the Vapour in the convex Part, which goes first, being somewhat nearer and denser, reflects the Light more copiously.

9thly, 'The Tail must appear broader towards the higher or Extremity of the *Comet*, than towards the Head:' Because, the Vapour in a free Space perpetually rarefies and dilates.

10thly, 'The Tails must be transparent:' Because consisting of infinitely thin Vapour, &c.

Thus accurately does the Hypothesis tally to the Phenomena.

Phases of COMETS.

The *Nuclei*, which we also occasionally call the *Heads* and *Bodies* of *Comets*, view'd thro' a Telescope, shew a very different Face from those of the Fix'd Stars, or Planets. *Sturmius* tells us, that observing the *Comet* of 1680 with a Telescope, it appear'd like a Coal dimly glowing, or a rude Mass of Matter illumin'd with a dusky fumid Light, less sensible at the Extremes than in the middle; rather than as a Star which appears with a round Disk, and a vivid Light.

Hevelius observ'd of the *Comet* of 1661, that its *Nucleus* was of a yellowish Colour, bright and conspicuous, but without any glittering Light: in the middle was a dense ruddy *Nucleus*, almost equal to *Jupiter*, incapsul'd with a much fainter thinner Matter. 5 Feb. its Head was somewhat bigger and brighter, of a gold-colour; but its Light more dusky than theretofore the Stars: Here, the *Nucleus* appear'd divided in 6 several Parts. 6 Feb. the Disk was lessen'd; the *Nuclei* still exist'd, the less than before: one of 'em, on the lower Part of the Disk, on the left, much denser and brighter than the rest; its Body round, and representing a very lucid little Star: The *Nuclei* still incapsul'd with another kind of Matter. 10 Feb. the Head somewhat more obscure, and the *Nuclei* more confus'd, but brighter at top than bottom. 13 Feb. the Head diminish'd much, both in Magnitude and brightness. 2 March its roundness a little impair'd, its Edges lacerated, &c. 28 March very pale and exceeding thin; its Matter much dispers'd; and no distinct *Nucleus* at all appearing.

Wegelius, who saw the *Comet* of 1664, the Moon, and a little Cloud illumin'd by the Sun at the same time; observ'd, that the Moon, thro' the Telescope, appear'd of a continued luminous Surface; but the *Comet* very different; being perfectly like the little Cloud in the Horizon, illumin'd by the Sun. From these Observations it was, that *Hevelius* concluded *Comets* to be like *Meteors*, or Spots form'd out of the solar Exhalations.

The Length of the Tails of *Comets* is various: That of 1680, according to *Sturmius*, about the 20th of November, was but small, at most not exceeding 20 Degrees in length; in a little time it grew to a length of 60 Degrees; after which it dwindled very sensibly.

Formation of the Tails of COMETS.

Sir Isaac Newton shews, that the Atmospheres of *Comets* will furnish Vapour sufficient to form their Tails: This he argues from that wonderful Rarefaction observ'd in our Air, at a distance from the Earth: a Cubic Inch of common Air, at the distance of half the Earth's Diameter, or 4200 Miles, would expand it self so as to fill a space larger than the whole Region of the Stars. Since then the *Comet*, or Atmosphere of a *Comet* is ten times higher than the Surface of the *Nucleus*, counting from the Centre thereof; the Tail, ascending much higher, must needs be immensely rare: so that 'tis no wonder the Stars should be visible thro' it.

Now, the Ascend of Vapours into the Tail of the *Comet*, he supposes occasion'd by the Rarefaction of the Matter of the Atmosphere at the Time of the Perihelion. Smoke, 'tis observ'd, ascends the Chimney by the Impulse of the Air wherein it floats; and Air, rarefy'd by heat, ascends by the Diminution of its specific Gravity, making up the Smoke along with it: Why then should not the Tail of a *Comet* be suppos'd to be rais'd after the same manner by the Sun? For the Sun-Beams don't act on the Mediums they pass thro', any otherwise than by Reflection and Refraction.

The reflecting Particles, then, being warm'd by the Action, will again warm the Ether wherewith they are compounded; and this, rarefy'd by the Heat, will have its specific Gravity, whereby it before tended to descend, diminish'd by the Rarefaction; so as to ascend, and to carry along with it those reflecting Particles, whereof the Tail of the *Comet* is compos'd.

This Ascend of the Vapours will be promoted by their circular Motion round the Sun; by means whereof, they will

endeavour to recede from the Sun, while the Sun's Atmosphere, and the other Matters in the celestial Spaces, are either at rest, or nearly so; as having no Motion but what they receive from the Sun's Circumrotation.

Thus are the Vapours rais'd into the Tails of *Comets* in the neighbourhood of the Sun, where the Orbits are most curve; and where the *Comets* being within the denser Atmosphere of the Sun, have their Tails of the greatest length.

The Tails thus produced, by preferring that Motion, and at the same time gravitating towards the Sun, will move round his Body in Ellipses, in like manner as their Heads; and by this means, will ever accompany, and freely adhere to their Head. In effect, the Gravitation of the Vapours towards the Sun, will no more occasion the Tails of the *Comets* to forsake their Heads, and fall down towards the Sun, than the Gravitation of their Heads will occasion them to fall off from their Tails: but by their common Gravitation, they will either fall down together to the Sun, or be together suspended, or retarded. This Gravitation, therefore, does not at all hinder, but that the Heads and Tails of *Comets* may receive and retain any position towards each other, which either the abovemention'd Causes, or any other, may occasion.

The Tails, therefore, thus produced in the Perihelion of *Comets*, will go off along with their Head into remote Regions; and either return thence, together with the *Comets*, after a long Series of Years; or, rather, be there lost, and vanish by little and little, and the *Comet* be left bare; till at its return, descending towards the Sun, some little short Tails be gradually and slowly produc'd from the Heads; which afterwards, in the Perihelion, descending down into the Sun's Atmosphere, will be immensely increas'd.

The Vapours thus dilated, rarefy'd, and diffus'd thro' all the celestial Regions, the same Author observes, may probably, by little and little, by means of their own Gravity, be attracted down to the Planets, and become intermingled with their Atmospheres.

He adds, that for the Conservation of the Water, and Moisture of the Planets, *Comets* seem absolutely requisite; from whose condens'd Vapours and Exhalations, all that Moisture which is spent in Vegetations and Putrefactions, and turn'd into dry Earth, &c. may be resupply'd and recruited. For all Vegetables grow, and increase woolly from Fluids; and, again, as to their greatest part, turn, by Putrefaction, into Earth again; an earthy Slimc being perpetually precipitated to the bottom of putrefying Liqueurs. Hence, the quantity of dry Earth must continually increase, and the Moisture of the Globe decrease, and at last be quite evaporated; if they have not a continual Supply from some part or other of the Universe. And I suspect, adds our great Author, that the Spirit, which makes the finest, subtillest, and best part of our Air, and which is absolutely requisite for the Life and Being of all Things, comes principally from the *Comets*.

On this Principle, there seems to be some Foundation for the popular Opinion of Prejages from *Comets*: Since the Tail of a *Comet* thus intermingled with our Atmosphere may produce Changes very sensible in Animal and Vegetable Beings.

M. Facio has suggested, that some of the *Comets* having their Nodes so very near the annual Orbit of the Earth; should the Earth happen to be found in that Part next the Node, at the Time of a *Comet's* passing by; as the apparent Motion of the *Comet*, will be incredibly swift, so its Parallax will become very sensible; and the Proportion thereof to that of the Sun will be given: whence, such Transits of *Comets* will afford the best Means of determining the distance of the Earth and Sun.

The *Comet* of 1472, v.g. had a Parallax above twenty times greater than the Sun's: and if that of 1618 had come down in the beginning of March to its descending Node, it would have been much nearer the Earth, and its Parallax much more notable. But, hitherto, none has threaten'd the Earth with a nearer Appulse than that of 1680: For, by Calculation, *Dr. Halley* finds, that November 11, 1 H. 6 Min. P. M. that *Comet* was not above one Semidiameter of the Earth, to the Northwards of the Way of the Earth; at which time, had the Earth been in that part of its Orbit, the *Comet* would have had a Parallax equal to that of the Moon: What might have been the consequence of so near an Appulse, a Contact, or lastly, a Shock of the celestial Bodies?

Motion of COMETS.

If their Paths be suppos'd directly parabolic, as some have imagin'd, it would follow, that being impell'd towards the Sun by a centripetal Force, they descend from Spaces infinitely distant; and by their Falls acquire such a Velocity, as that they may again run off into the remotest Regions; still moving upwards, with such a perpetual Tendency as never to return. But the frequency of their Appearance, and their degree of Velocity, which does not exceed what they might acquire by their Gravity towards the Sun; seem to put it past doubt that they move, Planet-like, in elliptic Orbits, the whole exceedingly eccentric; and so return again, the shorter very long Periods. See ELLIPSES.

Apollonius Myndianus was the first who took Comets for regular Stars; and ventur'd to foretel, that one day the Periods and Laws of their Motion would be discover'd.

Astronomers, however, are still divided on that Head: *Newton*, *Flemstead*, *Halley*, and the *English Astronomers*, &c. seem satisfy'd of the Return of Comets: *Cassini*, and others of the *French*, think it highly probable; *de la Hire*, and others, oppose it.

Those on the affirmative Side, suppose the Comets to describe Circles prodigiously eccentric, inasmuch as we can only see 'em in a very small part of their Revolution: Out of this, they are lost in the immense Spaces; hid not only from our Eyes, but our Telescopes. That little part of their Circle next us, *M. Cassini*, &c. have found to pass between the Orbits of *Venus* and *Mars*.

For the Reasons of the Return of COMETS, *M. Cassini* gives these that follow.

1. In considering the Course of the Comets, with regard to the Fix'd Stars, they are found to keep a considerable time in the Arch of a great Circle, i. e. a Circle whose Plane passes thro' the Centre of the Earth: Indeed, they deviate a little from it, chiefly towards the end of their Appearance; but this Deviation is common to them with the Planets.

2. Comets, as well as Planets, appear to move so much the faster as they are nearer the Earth; and when they are at equal Distances from their Perigee, their Velocities are nearly the same.

By subtracting from their Motion the apparent Inequality of Velocity occasion'd by their different distance from the Earth, their equal Motion might be found; but we should not be certain this Motion were their true one; in regard they might have considerable Inequalities, not distinguishable in that small Part of their Orbit visible to us. 'Tis, indeed, probable, their real Motion, as well as that of the Planets, is unequal in it self: and hence we have a Reason why the Observations made during the Appearance of a Comet cannot give the just Period of their Revolution. See PERIOD.

3. There are no two different Planets whose Orbit cuts the Ecliptic in the same Angle, whose Nodes are in the same Points of the Ecliptic, and whose apparent Velocity in their Perigee is the same: Of consequence, two Comets seen at different Times, yet agreeing in all those three Circumstances, can only be one and the same Comet.

And this were the Comets of 1577 and 1680 observ'd to do; and those of 1652, and 1698: Not that this exact agreement in these Circumstances is absolutely necessary to determine 'em the same Comet. *M. Cassini* finds the Moon her self irregular in 'em all: Accordingly, he is of Opinion, there are several which disagree herein, yet may be accounted the same.

The great Objections against the Return of COMETS, are, the rarity of their Appearance, with regard to the number of Revolutions assign'd to 'em.

In 1702 was a Comet, or rather the Tail of one, seen at Rome, which *M. Cassini* takes to be the same with that observ'd by *Aristotle*, and that since seen in 1668; which would imply its Period to be 34 Years. Now, it may seem strange, that a Star which has so short a Revolution, and of consequence such frequent Returns, should be so seldom seen. Again, in April of the same Year, 1702, a Comet was observ'd by *Mess. Bianchini* and *Moraldi*, suppos'd by the latter to be the same with that of 1662, both by reason of its Motion, Velocity, and Direction. *M. de la Hire* took it to have some relation to another he had observ'd in 1698; which *M. Cassini* refers to that of 1652: On this Supposition its Period appears to be 45 Months, and the Number of Revolutions between 1652 and 1698, fourteen: But 'tis hard to suppose, that in this Age, wherein the Heavens are so narrowly watch'd, a Star should make 14 Revolutions unperceiv'd; especially such a Star as this, which might appear above a Month together; and of consequence be frequently discern'd from the Crepuscula.

For this reason *M. Cassini* is very reserv'd in maintaining the Hypothesis of the Return of Comets, and only proposes those for Planets, where the Motions are easy and simple, and are solv'd without straining, or allowing many Irregularities.

M. de la Hire proposes one general Difficulty against the whole System of the Return of Comets, which would seem to hinder any Comet from being a Planet; and 'tis this: that, by the Disposition necessarily given to their Courses, they should appear as small at first as at last; and always increase, till they arrive at their greatest Proximity to the Earth: or, if they should chance not to be observ'd as soon as they become visible, for want of Attention thereto; at least, 'tis impossible but they must frequently shew themselves ere they have arriv'd at their full Magnitude and Brightness: But he adds, that none were ever yet observ'd till they had arriv'd at it.

But the Appearance of a Comet in this present Month of October 1723, while yet at a great distance, so as to be too small and dim to be view'd without a Telescope, may serve

to remove this Obstacle, and set the Comets, still, on the same footing with the Planets.

Sir Isaac Newton supposes, that as those Planets which are nearest the Sun, and revolve in the least Orbits, are the smallest; so among the Comets, such as in their Perihelion come nearest the Sun, are the smallest, and revolve in lesser Orbits.

Dr. Halley has given us a Table of the Astronomical Elements of all the Comets that have been yet observ'd with due care; whereby, whenever a new Comet shall appear, it may be determin'd, by comparing it therewith, whether it be any of those which have yet appear'd; and consequently its Period, and the Axis of its Orbit determin'd, and its Return foretold.

For there are many things in the Comet of 1531, observ'd by *Appian*, which intimate its being the same with that of 1687, observ'd by *Kepler* and *Longomontanus*; and which *Dr. Halley* himself again observ'd in 1682. All the Elements agree, and there is nothing contradicts the Opinion, but that inequality in the periodic Revolution; which, however, he thinks, is no more than may be accounted for from physical Causes: so more, in effect, than is observ'd in *Saturn*; the Motion of which Planet is so disturb'd by the rest, especially *Jupiter*, that its Period is uncertain for several Days together: To what Errors then may not a Comet be liable, which rises almost four times the height of *Saturn*, and whose Velocity, if but a little increas'd, would change its Elliptic Orb into a parabolic one?

What further confirms the Identity is the Appearance of another Comet in the Summer of 1456; which, too observ'd by one with accuracy, yet by its Period, and the manner of its Transit, he concludes it to be the same: and thence ventures to foretel its return in the Year 1758. See SOLAR SYSTEM, and the Plate it refers to, where the Orbits of the several Comets are delineated, and their Periods, so many of them as are known, express'd.

To determine the Place and Course of a COMET. Observe the distance of the Comet from two Fix'd Stars, whose Longitudes and Latitudes are known: from the Distances thus found, calculate the Place of the Comet by Trigonometry, after the manner deliver'd under PLANET.

By repeating the Observations and Operations for several Days successively, the Course of the Comet will be had.

To determine the Course of a Comet mechanically, and without any Apparatus of Instruments. The following ingenious Method, by a Thread, we owe to *Longomontanus*: Observe four Stars round the Comet, such as that the Comet may be in the Intersection of the right Lines that join the two opposite Stars; which is easily found, by means of a Thread plac'd before the Eye, and extended over against the Stars and Comet.

Suppos'd, v. g. the Comet's place in the Heavens A, (Tab. Astronomy, Fig. 25.) between the four Stars, B, C, D, E; where the Line joining the Stars B and D, passes thro' the Body of the Comet; and so of the Lines passing thro' C and E.

On a Globe, wherein these four Stars are found, extend a Thread thro' B and D, and another thro' C and E; the Point of Intersection will give the place of the Comet. This Practice being repeated for several Days, the Comet's Course will be had on the Globe; which Course will be found to be a great Circle: from any two Points whereof, it will be easy to find its Inclination to the Ecliptic, and the Place of the Nodes; only by observing where a Thread stretch'd thro' the two Points cuts the Ecliptic.

To determine the Parallax of a Comet. See PARALLAX.

COMITIA, an Assembly of the Roman People, either in the Comitium, or Campus Martius; for the Election of Magistrates, or for consulting on the important Affairs of the Republic. See CAMPUS MARTIUS, &c.

There were certain Days fix'd for these Assemblies, call'd *Dies Comitiales*; mark'd with a c in the Calendar of *Julius Cesar*.

Comitial Assemblies held for the Election of Consuls, were call'd *Consular Comitia*: in like manner, the other Comitia took their Name from the Officer to be created; whether a Tribune, a Pontiff, Edile, &c.

There were three Kinds of Comitia, viz. *Curiata*, *Centuriata*, and *Tributa*; so distinguish'd, from the manner wherein the People voted, and gave their Suffrages, viz. by *Curies* or Parishes, Tribes or Centuries. See CURIA, TRIBE, &c.

Authors make the difference between *Comitia* and *Comitia* to consist in this; that in the former the whole People were call'd together, in the latter only a part.

The Comitium, or Place where the Comitia were ordinarily held, was a large Hall in the Roman Forum: It was a long time open at top; on which account, the Assemblies were often interrupted by the ill Weather: 'Twas first cover'd over in the time of the second Punic War. See FORUM.

Roffius observes, that the Consuls and Tribunes were not created in the Comitium, but the Campus Martius.

The Word comes from the Verb *Coco*, or *Como*, to go together.

COMITIALIS Morbus, an ancient Term for the Epilepsy, or Falling-Sickness; so call'd, because if any Person was seiz'd with it in the *Roman Comitia*, the Assembly was immediately dissolv'd: this being esteem'd an evil Omen. See **EPILEPSY**.

COMMA, in Grammar, a Virgula, Point, or Character form'd thus [,]; serving to mark a short Stop, or Pause; and to divide the Members of a Period. See **POINT**, &c.

'Tis very difficult to fix the precise Use of the *Comma*; different Authors define and use it differently: The ordinary Doctrine is, that the *Comma* serves to distinguish Nouns, Verbs, Adverbs, and the several Parts of a Period, that are not necessarily join'd together. But this conveys no clear, precise Idea; for what is it to distinguish the Parts of a Period not necessarily join'd together?

F. *Bruffler* has carried the Doctrine of the *Comma* much further: The *Comma* serves to distinguish those Members of a Period, in each whereof is a Verb, and the Nominative Case of the Verb. Thus, *That so many People are pleas'd with Trifles, is owing to a Weakness of Mind, that makes 'em love things easy to be comprehended.*

Besides this, the *Comma* is us'd to distinguish, in the same Member of a Period, several Nouns Substantives, or Nouns Adjectives, or Verbs not united by a Conjunction. Thus, *Virtue, Wit, Knowledge, are the chief Advantages of a Man: Or, a Man never becomes learned without studying constantly, methodically, with a Gift, Application, &c.*

If those Words be united in the same Phrase by a Conjunction, the *Comma* is omitted: Thus, *The Imagination and the Judgment don't always agree.* The *Comma* may also be omitted between two Phrases that are very short, especially if they depend on the same Regimen, and are united by a Conjunction: Thus, *Alexander conquer'd Asia and establish'd the Monarchy of the Greeks.*

The Author of the *Treatise de Ratione Interpungendi*, printed with *Vossius's Element. Rhetor.* Lond. 1724. lays down the Use of a *Comma* to be, to distinguish the simple Members of a Period, or Speech; i. e. such as only consist of one Subject, and one definite Verb. See **SENTENCE**.

Thus *Cicero*, *Venio inuicem ad voluptates agriculorum, quibus ego incredibiliter delector, que nec ulla impediuntur senectute. & mihi ad sapientis vitam proxime accedere videntur.*

But this Rule does not go throughout; the same Author insinuating many particular Cases, not included herein, where yet the *Comma* is advisable. See **POINTING**.

Sometimes, e. g. a Proposition includes another, which may be call'd *Partitive*, as being only a Part of the entire Phrase; in which case, the two are to be divided from each other by *Commas*. Thus, *He always says, as he tells us, the finest Things in the World.*

The Points, or Pauses in Discourse, 'tis observ'd, are in a kind of musical Proportion: The *Comma* stops the Reader's Voice while he may privately tell one; the Semicolon, two; the Colon, three; and the Period or Full-stop, four.

The Antients only made two Kinds of Points, or Pauses in a Period; the larger they call'd *Members*, the Greeks *Cole*, thus [:] the smaller *Truista*, the Greeks *Commata*, thus [,].

The Moderns, refining on the Antients, have subdivided the first into a Colon and Semicolon; some say, without any good Foundation in Nature; the others stand up for the usefulness of the Division. See **COLON**.

As the Member, or Colon divides the Period into two Parts, each containing a Sense, tho' that imperfect; thus, *Antequam de Republica, patres conscripti, dicam ea que dicenda hoc tempore arbitror;* where the Sense does not rest, nor is the Period or Sentence perfect, without the Addition of, *exponam vobis breuiter & profusius & reuerfionis mee:* The *Comma* subdivides each Member into intermediate Divisions, which, of themselves, have no precise meaning at all; e. g. *Nihil est, mihi crede, virtute formosius, nihil pulchrius, nihil amabilius.*

Frequent *Commas*, as on other occasions they promote perspicuity and distinctness, and ease the Reader, both in the Recurr'd and Comprehension of his Author; so, in Oratory, are they of especial use and effect; particularly where an Adversary is to be closely and pointedly attack'd, upbraided, reprehended, wounded, &c. witness that of *Cicero* against *Ferres*; *Non enim vos color iste seruilis, non pilose genae, non dentes patrii docerentur: oculi, suspensio, frons, vultus denique totus, qui sermo quidam tacitus mentis est, hic in fraudem, homines impulsit: hic, eos; quibus eras ignotus, decepit, sefellit, in fraudem inducit: pauci tua ista insulenta vita novimus; pauci raritatem ingenii, supponere, debilitatamque linguam, &c.* See **PERORATION**.

COMMA, in Musick, is the smallest of all the sensible Intervals of Tune. See **INTERVAL**.

The *Comma* is about the tenth Part of a Tone: or, it is the Interval whereby a perfect Semitone surpasses an imperfect one; or a perfect Tone, an imperfect one. See **TONE**.

M. *Senoveur* says, a *Comma* is the Difference between a Tone-major and minor. It is seldom in use, except in

the Theory of Musick, to shew the Justness of the Consonances; for in the Practice, the Division is drown'd and lost, Each lesser Tone ordinarily contains ten *Commas*.

Lancelot only divides his Tone into nine Parts, or *Commas*; so that according to him, a *Comma* is the ninth Part of a Tone.

The proportion of the greater *Comma* in Numbers, is as 80 to 81; that of the smaller, as 2025 to 2048. See **TUNE**.

The Word *Comma* is Greek form'd of *abola*, *scilicet*, 1 cut. **COMMANDING Ground**, in Fortification, is such as overlooks any Post, or strong Place.

Of this they reckon three sorts; first, *A Front Commanding Ground*; which is an Height opposite to the Face of the Post, which plays upon its Front. See **FRONT**.

2d, *A Reverse Commanding Ground*, which is an Eminence that can play upon the Back of any Pace or Post.

3d, *An Enfilade Commanding Ground*, or *Curtain Commanding Ground*; which is an high Place, that can with its Shot four all the length of a straight Line. See **ENFILADE**.

COMMANDMENT, in a Legal Sense, has various Uses; as, *Commandment of the King*, when, on his own mere Motion, and from his own Mouth he calls a Man into Prison.

Commandment of the Justices, is either *absolute*, or *ordinary*; *absolute*, as when on their own Authority, and their own Discretion, they commit a Man to Prison for Punishment.

Ordinary, as when they commit him rather for safe Custody than Punishment. A Man committed on an ordinary *Commandment* is releasable.

Commandment is also us'd for the Offence of him who directs or wills another to transgress the Law; as by Murder, Theft, and the like.

COMMANDRY, a kind of Benefice, or certain Revenue belonging to a Military Order, and conferr'd on suitable Knights who had done Services to the Order. See **KNIGHT**.

There are *strict*, or *regular Commandries*, obtain'd in Order, and by Merit: there are others of *grace or favour*; conferr'd at the pleasure of the Grand Master.

There are also *Commandries* for the Religious in the Orders of *S. Bernard* and *S. Anthony*. The Kings of France have converted several of the Hospitals for Lepers into *Commandries* of the Order of *S. Lazarus*. See **LEPER**.

Commandries may be compar'd to Conventual Princes; which, at first, were no more than Administrations of the Revenue of certain Places at a distance from the principal Monastery: As there was a necessity for having Monks dispos'd in these Houles to take care of the Effects: so there was the like necessity for sending Knights into those Places where the Order had Lands.

The *Commandries* of *Malta* are of different Kinds; for as the Order consists of Knights, Chaplains, and Brothers Servitors, there are peculiar *Commandries* or Revenues attach'd to each. See **MALTA**.

The Knight to whom one of these Benefices or *Commandries* is given, is call'd *Commander*: which agrees pretty nearly with the *Prepositus* set over the Monks in Places at a distance from the Monastery, whose Administration is call'd *Obedientia*; because depending entirely on the Abbot who gave him his Commission. Thus it is with the simple *Commanders* of *Malta*, who are rather Farmers of the Order than Beneficiaries; paying a certain Tribute or Rent, call'd *Responso*, to the common Treasure of the Order.

COMMEMORATION, the Remembrance of any one; or something done in honour of his Memory.

Among the *Romanists*, 'tis a Practice for dying Persons to leave a Legacy to the Church for the rehearsing of many Masses in Commemoration of them. See **MASS**, &c.

The Eucharist is a Commemoration of the Sufferings of Jesus Christ; and is not, therefore, Jesus Christ himself. See **EUCCHARIST**.

COMMEMORATION is also the Name of a Religious Feast in the *Romanist* Church, held on the second of *November*, in memory of all the Faithful deceased; instituted in the 13th Century, by *Odilobus* Abbot of *Cloyay*. See **FRASER**.

The occasion of its Institution is variously related; the most plausible account is this: A Religious Knight returning from a Pilgrimage to the Holy Land, and losing his Road, met a Hermit; who hearing that he was a *France*, ask'd him if he knew the Monastery of *Cloyay*, and the Abbot *Odilobus*; the Pilgrim professing his Knowledge of both, the Hermit told him, that God had discover'd to him, that he was to have the Credit of delivering the Souls from the Pains they suffer in the other Life; charging him, at his return, to exhort *Odilobus*, and those of his Community, to continue their Prayers and Alms for the Dead. See **CLUNY**.

COMMENDAM, in the Canon Law, the Charge, Trust, and Administration of the Revenues of a Benefice, given to a Layman to enjoy, by way of *Depositum*, for the Space of six Months; in order to its being repair'd, &c. or to quater Bishop, or Ecclesiastic to perform the Pastoral Offices thereof; all such time as the Benefice is provided of a regular Incumbent. See **BENEFICE**.

Antiently, the Administration of vacant Bishopricks belong'd to the nearest neighbouring Bishop; which is still practis'd between the Archbishoprick of Lyons, and the Bishoprick of Auzon: on this account they were call'd *Commendatory Bishops*.

This Custom appears to be very antient: *S. Albanus* says of himself, according to *Nicephorus*, that there had been given him in *Commendam*, i. e. in Administration, another Church besides that of *Alexandria*, whereof he was later Bishop.

The Care of Churches, it seems, which had no Pastor, was committed to a Bishop, till they were provided of an Ordinary: The Register of Pope Gregory I. is full of these Commissions, or *Commendams*, granted during the Absence or Sickness of a Bishop, or the Vacancy of the See.

Some say, that Pope Leo IV. first set the modern *Commendams* on foot, in favour of Ecclesiasticks who had been expelled their Benefices by the *Saracens*; to whom the Administration of the vacant Churches was committed for a time, in expectation of their being restor'd: the *S. Gregory* is said to have used the same, while the *Lombards* desolated Italy.

In a little time, the practice of *Commendams* was exceedingly abus'd; and the Revenues of Monasteries given to Laymen for their Subsistence. The Bishops also procur'd several Benefices, or even Bishopricks in *Commendam*; which serv'd as a Pretext for holding 'em all; without directly violating the Canons. Part of the Abuse has been rerench'd; but the Use of *Commendams* is still retain'd, as an Expedient to take off the Incompatibility of the Person, by the Nature of the Benefice.

When a Parson is made Bishop, his Parsonage becomes vacant; but if the King give him Power, he may still hold it in *Commendam*.

COMMENDAM, in many *Romish* Countries, is a real Title of a Regular Benefice; as an Abby or Priory given by the Pope to a Secular Clerk, or even to a Layman, with Power to dispose of the Fruits thereof during his Life. See *ABBOY*.

No Benefice that has a Cure of Souls, i. e. no Curacy, or Bishoprick can be given in *Commendam*. This Practice being entirely contrary to the Canons, none but the Pope, who has a Power of dispensing with the Canons, can confer it.

When the *Commendans* become vacant by the Death of the *Commendatory*, it is not esteem'd vacant by his Death; but as it was vacant before the *Commendans* was granted, that making no Alteration in the Thing: Yet the Pope gives the same Benefice in *Commendam* again, by a Privilege which he still continues.

By the Pope's Bulls, a *Commendatory* Abbot has the full Authority of the Regular Abbot to whom he is substituted: This is express'd in plain Terms, *Curae Monasterii ac regiminis & administrationem tibi in spiritualibus & temporalibus plene committendo*. For this reason, the Bulls expressly require, that he be a Priest; or, that if he han't yet attain'd the Age of Priesthood, he shall take Orders as soon as he has. But this is a mere Formality, or matter of Style; the Thing is never executed.

Indeed, the spiritual Direction of the Abby, while in *Commendam*, is lodg'd wholly in the Coadjutor. The *Commendatory* Abbots have not any Authority over the Religious in *spiritualibus*: they even cannot either appoint or set aside the Coadjutor Priors, who are nominated in the Bulls the Administrators of the Spirituality; in which, however, this Restriction is added, *ors. till the Abbot arrive at the Age of 25 Years*, to assume the Priesthood. The Bull given the Prince of *Newbourg* for the Abby of *Fesamp* runs thus: *Et ne ob defectum Aetatis primo-dictum Monasterium, aliquod in spiritualibus patitur detrimentum; primo-Coadjutorem pro tempore existentem, primo-dicti Monasterii in spiritualibus, donec in 25 tne Aetatis annum pervenerit, auctoritate constituimus ac deputamus*. The Words *Administration in spiritualibus*, are understood principally of the Monastic Rule, or Discipline; from which the Abbots are excluded, even when they are promoted to the Priesthood, unless they become Regulars.

The Pope grants Benefices in *Commendam*, not only to Clerks, by dispensing with their Age, and other Qualifications requir'd; but also dispense with the Clericate in Children yet in the Cradle, till they become of age to take the Tonsure: It being sufficient to obtain a Bull, that it be presented at *Rome*, that the Child is destin'd for the Ecclesiastical State.

In this Case there is an *Oeconoms*, or Steward, appointed to take care of the temporal Concerns.

COMMENSURABLE Quantities, in Geometry, are such as have some common aliquot Part, or which may be measur'd by some common Measure, so as to leave no Remainder in either. See *MEASURE*.

Thus, a Foot and a Yard are *Commensurable*; there being a third Quantity which will measure each, *viz. an Inch*; which taken 12 times makes a Foot, and 36 times a Yard. See *QUANTITY*.

Commensurables are to each other, either as Units to a

Rational Whole Number; or as one Rational Whole Number to another. See *NUMBER*.

In *Incommensurables* 'tis otherwise. The Ratio of *Commensurables* therefore is Rational; that of *Incommensurables* Irrational: Hence, also, the Exponent of the Ratio of *Commensurables* is a Rational Number. See *RATIO*.

COMMENSURABLE Numbers, whether Integers or Fractions, are such as have some other Number which will measure or divide them without any Remainder. See *NUMBER*.

Thus, 6 and 8, $\frac{6}{12}$ and $\frac{8}{12}$ are respectively *Commensurable* Numbers.

COMMENSURABLE in Power. Right Lines are said to be *Commensurable in Power*, when their Squares are measur'd by one and the same Space, or Superficies. See *LINE*.

COMMENSURABLE Surds, are such Surds as being reduc'd to their least Terms, become true figurative Quantities of their Kind; and are therefore as a Rational Quantity to a Rational. See *SURD*.

COMMENTARY, or COMMENT, an Interpretation, Gloss, or Addition, made to an ancient, obscure, or difficult Author, to render him more intelligible, or to supply what he has left undone.

Sir *Hen. Savil* has wrote a *Commentary* of 300 Pages in Quarto, to explain the first eight Propositions in *Euclid*.

S. Eusemond observes, that *Commentators* commonly spend a great part of their time in finding out Beauties the Author never dream'd of, and in enriching him with their own Thoughts.

COMMENTARY is also used for a sort of History, written by the Person who had the chief hand in the Transactions related. See *HISTORY*.

Such are the *Commentaries* of *Cæsar*, of *Montluc*, &c.

The Word is also used for certain Books wrote on some particular Subject: Thus, *Kepler* has wrote an excellent Book of *Commentaries on Mars*; containing Observations on the Motion of that Planet.

COMMERCE, Trade, the Exchange of Commodities; or, the buying, selling, or trafficking of Merchandise, Money, or even Paper; in order to profit by the same. See *MERCHANTISE*.

There is no doubt but *Commerce* is nearly as antient as the World it self: Necessary for it on foot, the Desire of Conveniency improv'd it, and Vanity, Luxury, and Avarice, have brought it to its present Pitch. At first it only consist'd in the Exchange of Things necessary for Life: The Plowman gave his Grain and his Pulse to the Shepherd, and receiv'd Milk and Wool in exchange: Which Method of *Commerce* by Exchange subsists still in many Places; as about the Coasts of *Siberia*, and the *Danish* and *Muscovite Lapland*; among several Nations on the Coasts of *Africa*; among most of those of *America*, and many of *Asia*. See *EXCHANGE*.

'Tis not precisely known when the *Commerce* by buying and selling first began, nor when Coins, and the several Species of Gold, Silver, and Copper had their rise. The first Monies were Wood, Leather, and Iron; and even at this day, 'tis the Custom in some Places of both *Indies*, to give a certain Value in Sea-Shells and Coco-Nuts, for Merchandises, Drugs, &c. See *MONEY*, and *COIN*.

The first Instance of this kind of *Commerce* in the sacred *Writing*, is in the Time of the Patriarch *Abraham*. For profane Authors, they usually fix its Epocha to the Reign of *Saturu* and *Jann* in *Italy*; and the antient Authors, according to *Cæsar*, attribute its Invention to the God *Mercury*.

The *Egyptians*, *Phœnicians*, and *Carthaginians*, who were a *Tyrian* Colony, were the first, the most daring and expert Traders of all Antiquity; at least, 'tis evident they were the first who run the Hazard of long Voyages; and who set on foot a Traffick by Sea between Coasts very remote. See *NAVIGATION*.

Among the Antients, *Commerce* did not appear unworthy the Application of Persons of the first Rank: *Solomon*, we are told, frequently join'd his Merchant-Fleets with those of the King of *Tyre*, for their Voyage to *Opphir*; and by this means render'd himself, tho' in a little Kingdom, the richest King in the Universe. Under the *Asiatic* and *Grecian* Empires, antient History gives us from time to time the Traces of a *Commerce* cultivated by several Nations: but it flourish'd more considerably under the Dominion of the *Romans*; as appears from that vast Number of Colleges and Companies of Merchants in the several Cities, mention'd in *Hilozians* and antient Inscriptions. See *COLLEGE*.

The Destruction of the *Roman* Empire by the Irruptions of the Barbarians, brought that of *Commerce* along with it; or at least suspended its ordinary Operation for some time: By degrees it began to recover it self, and made a new progress; especially in *Italy*.

Hence, the *Pisians*, *Florentines*, *Genoese*, and *Venetians*, who abound in Shipping, took occasion to spread themselves thro' all the Parts of the *Levant* and *Egypt*; bringing thence Silk, Spices, and other Merchandizes; and furnishing the greatest part of *Europe* therewith. And thus was the

modern *Commerce* founded on the Ruins of that of the ancient *Greeks* and *Romans* to the same Places: And thus did those famous Republics acquire their Lustre.

The *Germans*, however, had a long time carried on a *Paragone Commerce*; which was not borrowed from the *Romans*, nor did it fall with theirs. Towards the End of the XIIIth Century, the *German* Cities situate on the Coasts of the *Baltic*, and the Rivers that run into it, had a considerable Traffick with the neighboring States.

As their *Commerce* was much interrupted by Pirates, 72 of them united together for their mutual Defence; and were thence called *Hanseatic*, or *Hans Towns*. See *HANS TOWN*.

Thus they flourish'd till the Beginning of the XVth or End of the XVth Century; when a Division arising among them, and about the same time a new Passage to the *Indies*, by the Cape of *Good Hope*, being discover'd by the *Portuguese*; and Settlements made on the Coasts of *Africa*, *Arabia*, and the *Indies*; the ancient *Italian* and *Hanseatic Commerce* sunk; and the chief Trade came into the Hands of the *Portuguese*.

The *Portuguese* had not possess'd those different Trades above 100 Years, when, about the Beginning of the XVIIth Century, the *Dutch* began to share it with 'em; and in a little time dispossest 'em of almost the whole. The *English*, *French*, *Danes*, and *Hamburgers*, excited by their Success, have likewise made Settlements in the *Indies*, and on the Coasts of *Africa*; tho' much less considerable ones, excepting those of the *English*.

Little, *America*, discover'd by the *Spaniards* soon after the *Portuguese* had discover'd the new Way to the *Indies*, likewise became the Object of a new, vast, and important *Commerce*, for all the Nations of *Europe*; whereof *Cadix* and *Sevil* were made the Centre.

'Tis true, the first Conquerors of this new World still possess the greatest and richest Part of it; and preserve the *Commerce* thereof to themselves with a world of Jealousy; yet, besides that, the *English*, *French*, *Portuguese*, and *Dutch*, have several rich and flourishing Colonies, both in the Islands and the Continent; 'tis certain, that 'tis as much for other Nations as themselves, that the *Spaniards* every Year find their Flota's for the Treasures of *Pernu* and *Mexico*. See *COLONY*, *FLOTA*, and *GALLION*.

The Trade of *Europe* was no Sufferer by this new one of *America*; the North and South have still the same mutual occasion for each other as before.

The Navigation from the *Baltic* to the *Mediterranean* was tedious and difficult: The Situation of *Flanders*, and the Manufactures which there flourish'd from the Xth Century, together with the free Fairs of that Country, engag'd the Merchants, both of the North and South, to establish their Magazines first in *Bruges*, and then in *Antwerp*. See *FAIR*, &c.

The Establishment of the Republic of *Holland*, the favourable Reception it gave to Strangers, and the Refuge it afforded to Religionaries, drew store of Manufacturers to it, as well as Manufactures; and soon sunk the *Commerce* of *Antwerp*.

And the same Reason, the Convenience and Multitude of the Ports of *England*, the Goodness of the Wools, and the Industry of the Workmen, have brought thither a considerable Part of the *Commerce* of *Europe*. See *WOOLLEN MANUFACTURE*.

In *France*, the Nobility are allow'd to exercise *Commerce*, without derogating from their Nobility: By an Ordinance of *Louis XIII*. Merchants are allow'd to take on 'em the Quality of Nobles; and by another of *Louis XIV*. are declared capable of being Secretaries of State, without laying aside their *Commerce*. It may be added, for the honour of *Commerce*, that some of the *Italian* Princes, looking on themselves as the chief Merchants of their States, don't disdain to make their own Palaces serve as Magazines: And there are several Kingdoms in *Asia*, as well as most of those on the Coasts of *Africa* and *Guinea*, who negotiate with the *Europeans* by their Factors, and frequently by themselves. See *MERCANTILE PROFESSION*.

Commerce, on the foot it now stands, is divided into *Commerce by Land*, and *by Sea*; that by *long Voyages*, and *by short*; *Inland* or *Domestick*, and *Foreign*; by *Wholesale* and *Retail*.

A great part of the Foreign *Commerce* of *England* is now carried on by *Companies*: Some incorporated by the King's Charters, with an exclusive Privilege, as the *East-India* and *South-Sea* Companies; others only private Associations, as the *Turky* and *Hamburg* Companies. See *COMPANY*.

COMMUNICATORY, a Clause inserted in a Law, Edict, Patent, &c. importing a Punishment wherewith Delinquents are menac'd; which, however, is not executed in its rigour. See *CLAUSE*.

Thus, in some Countries, when an Exile is enjoin'd not to return on Pain of Death, it is deem'd a *Communicatory Penalty*; since, if he do return, it is not strictly executed;

but a second Injunction is laid on him, which is more than *Communicatory*, and from the Day of the Date thereof, imports Death without remedy.

COMMUNITION, the Act of grinding, or breaking any Matter into smaller Particles. Thus, we say, the Effect of chewing, or masticating our Food, is the *Communion* thereof. See *MASTICATION*, &c.

COMMISSARY, an Officer of the Bishop, who exercises Ecclesiastical Jurisdiction in those Parts of the Diocess which are so far remote from the See, that the Chancellor cannot call the Subjects thereof to the Bishop's principal Consistory, without their too great Molestation. See *BISHOP'S COURT*, *CHANCELLOR*, &c.

This Officer, call'd by the Canonists *Commissarius*, or *Oficialis foraneus*, is appointed to supply the Bishop's Office in the Out-parts of the Diocess, and in such Parishes as are peculiar to the Bishop, and exempted from the Jurisdiction of the Archdeacon: for where the Archdeacons have Jurisdiction, as in most Places they have, either by Prescription or Composition, the *Commissary* is superfluous, and frequently vexatious. See *ARCHDEACON*.

COMMISSARY, in an Army. There are two sorts of *Commissaries*: The *Commissary-General* of the Musters, or Muster-Master General; who takes an account of the Strength of every Regiment, reviews them, sees that the Horse are well mounted, and all the Men well arm'd and accoutred. See *MUSTER*.

And the *Commissary-General of Provisions*, who hath the Charge of furnishing the Army with all Things of that kind.

COMMISSION, in our common Law, is the same with *Delegation* among the Civilians; and is taken for the Warrant, or Patent which any Man exercising Jurisdiction, either ordinary or extraordinary, hath to authorize him to hear or determine any Cause or Action.

The Term, however, is sometimes extended further than to Matters of Judgment; as in the *Commission of Purveyors and Takers*, which seems to be null by the Statute, for taking away Purveyance, 12 Car. II. and the *Commission-Court*, which was founded on the Statute 1^o Eliz. and is also abolish'd by Act of Parliament 17 Car. I.

The Persons charged with a *Commission* are hence call'd *Commissaries*; sometimes, *Committees*. See *COMMISSIONERS*, and *COMMITTEE*.

COMMISSION OF Anticipation, was antiently a *Commission* under the Great Seal, to collect a Subsidy before the Day. See *ANTICIPATION*.

COMMISSION OF Association, is a *Commission* under the Great Seal, to associate two, or more learned Persons, with the several Justices in the several Circuits and Counties in *Wales*. See *ASSOCIATION*.

COMMISSION OF Bankruptcy, a *Commission* under the Great Seal, directed to five or more *Commissioners*, to inquire into the Particulars of a Man's Circumstances, who hath failed, or broke; and to act according to certain Statutes made in that behalf. See *BANKRUPT*.

COMMISSION OF Peace. See *JUSTICE OF PEACE*.

COMMISSION OF Rebellion, or *Writ of Rebellion*, is issu'd out when a Man, after Proclamation issu'd out of the Chancery, or the Exchequer, and made by the Sheriff, to present himself, under Pain of his Allegiance, to the Court by a certain Day; does not appear. See *REBELLION*.

This *Commission* is directed, by way of Command, to certain Persons; three, two, or one of 'em, to apprehend, or cause to be apprehended, the Party as a Rebel, and to bring him to the Court on a Day assign'd. See *OUTLAWRY*.

COMMISSION, in Commerce. See *FACTORAGE*.

COMMISSIONER, he who has a *Commission*, e. g. a Patent, or other legal Warrant, to execute any publick Office.

Such are, *Commissioners of the Office of Licences*, *Commissioners of Alienation*, &c. See *ALIENATION*, &c.

COMMISSIONERS of the Customs. See *CUSTOMS*.

COMMISSIONERS of Excise. See *EXCISE*.

Lords COMMISSIONERS of the Treasury. See *TREASURY*, and *EXCHEQUER*.

COMMISSURE, *Commissura*, a Term used by *Mr. Boyle*, and some other Authors, for the small Meeting, or Interstices of Bodies; or the little Clefts between the Particles; especially when those Particles are broadish and flat, and lie contiguous to one another, like thin Plates, or *Lamelle*. See *PORE*.

The Word literally signifies a *joining*.

COMMISSURE, in Architecture, &c. the Joint of two Stones; or, the Application of the Surface of the one to that of the other. See *MASONRY*.

Among Anatomists, *Commissure* is sometimes used for a Suture of the Cranium, or Skull. See *SUTURE*.

COMMITTEE, in Law, one or more Persons, to whom the Consideration of any Matter is refer'd, either by a Court, or by Consent of the Parties concern'd.

COMMITTEE of Parliament, is a Board consisting of a certain Number of Members, appointed by the whole House

for the examining of a Bill, the making Report of an Inquiry, or a Proceed of the House. See PARLIAMENT, BILL, &c.

Sometimes, the whole House is resolv'd into a *Committee*; on which Occasion each Person has a right to speak, and reply as much, and as often as he pleases: an Expedient they usually have recourse to in extraordinary Cases, and where any thing is to be thoroughly canvass'd.

When the House is not in a *Committee*, each gives his Opinion regularly, and is only allow'd to speak once.

COMMITTEE of the Kings, is us'd for a Widow of one of the King's Tenants; thus call'd, as being by the ancient Law of the Realm committed to the King's Care and Protection.

COMMODATE, *Commodatum*, in the Civil Jurisprudence, the Loan, or free Concession of any thing moveable or immovable, for a certain time, on condition of restoring again the same Individual after a certain time.

The *Commodate* is a kind of *Loan*, or Contract; there is this difference, however, between a *Loan* and a *Commodate*, that the latter is *gratis*, and does not transfer the Property: the thing must be return'd in Effence, and without Deterioration: So that Things which consume by Use, or Time, can't be Objects of a *Commodate*, but of a *Loan*; in regard they may be return'd in Kind, tho' not in Identity. See *LOAN*.

COMMODORE, in the Navy, an Under-Admiral, or Person commission'd by an Admiral to command a Squadron of Ships in Chief. See ADMIRAL, and SQUADRON.

COMMON, something that belongs to all alike; own'd, or allow'd by all; and not affect'd to this more than that. In which Sense *Common* stands oppos'd to *proper*, *peculiar*, &c.

Thus, the Earth is said to be our *common* Mother; in the first, or golden Age, all things were in *common*, as well as the Sun and Elements: The Name *Animal* is *common* to Man and Beast; that of *Substance* to Body and Spirit.

Philosophers dispute whether there be any such thing as *common* Notions, innate, or impress'd on the Mind by Nature her self; or whether our Ideas are all adventitious. See *INNATE IDEAS*.

COMMON, in Grammar, that Gender of Nouns which is equally applicable to both Sexes, Male and Female. See *GENDER*.

Such is that of *parents*, Parent; which is either Masculine, or Feminine, as it is us'd to signify either Father or Mother.

The *Latin* Grammarians, beside this, which they call the *Common* of *two*, do also make a *Common* of *three*; which extends to Masculine, Feminine, and Neuter.

COMMON, in Geometry, is applied to an Angle, Line, or the like, which belongs equally to two Figures, or makes a necessary Part of both.

COMMON or *Double Time*, in Musick. See *TIME*.

COMMON DIVISOR, is a Quantity, or Number, which exactly divides two, or more other Quantities, or Numbers, without leaving any Remainder. See *DIVISION*.

COMMON, in Law, is that Soil, or Water, the use whereof lies open to the several Inhabitants, or Holders of a particular Town, or Lordship: In this Sense, we say, *Common* of Pasture, *Common* of Fishing, *Common* of Turfery, *Common* of Ellowers, &c.

Common is divided into *Common in gross*, *Common appendant*, *Common appurtenant*, and *Common by way of neighbourhood*.

COMMON in gross, is a Liberty to have *Common* alone; that is, without any Land or Tenement in another Man's Land; to himself for Life, or to him and his Heirs. This is commonly pass'd by Deed, or Grant, or Speciality.

COMMON Appendant, and *COMMON Appurtenant*, are in a manner confounded; both being defin'd to be a Liberty of *Common* appertaining to, or depending on such or such a Freehold; which *Common* must be taken with Beasts *commonable*; as Horses, Oxen, &c. being accounted fittest for the Plowman; and not of Goats, Geese, and Hogs.

Others distinguish between the two, thus; *Common Appurtenant* may be sever'd from the Land where it appertains; but not *Common Appendant*; which, according to my Lord Coke, had its original in the following manner.

When a Lord enclos'd another in Arable Lands to hold of him in Socage; the Feeffee, to maintain the Service of his Plow, had at first, by Courtesy of his Landlord, *Common* in his Waifes, for necessary Beasts, to ear, and compost his Lands; and that for two Causes; 1st, because it was tacitly implied in the Feoffment; by reason the Feeffee could not till, or compost his Land, without Cattel; and Cattel could not be sustain'd without Pasture: By consequence, therefore, the Feeffee had, as a thing necessary, or incident, *Common* in the Waifes, or Lands of the Lord, ad, For the Maintenance and Advancement of Tillage.

COMMON per Cause de Vicinage, i. e. by reason of Neighbourhood; is a Liberty that the Tenants of one Lord in one Town, have to a *Common*, with the Tenants of another Lord in another Town.

But it is to be observ'd, that those who claim this kind of *Common* (which is usually call'd *Intercommoning*) may not put their Cattel into the *Common* of the other Town, for then they are distrainable; but, turning them into their own Fields, if they stray into their neighbour *Common*, they must be suffered. See *INTERCOMMONING*.

COMMON Duct, in Anatomy. See *DUCTUS COMMUNIS*.
COMMON FINE, in Law, a certain Sum of Money which the Refiants within the View of some Leets pay to the Lord thereof; call'd, in some Places, *Head-silver*; in others *Cert-Money*, or *Certum Lote*, and *Head-pence*. See *CERT-MONEY*.

It was first granted to the Lord towards the Charge of his Purchase of the Court-Leet; whereby the Refiants have now the Convenience of doing their Suit-Royal near home, without being compell'd to go to the *Sheriff's Turn*.

COMMON Intendment, in Law, the *common* Understanding, Meaning, or Construction of any thing; without framing it to any foreign, remote, or particular Sense.

Bar to Common Intendment, is an ordinary or general Bar, which commonly disables the Declaration of the Plaintiff. See *BAR*, and *INTENDMENT*.

COMMON LAW, *Lex non scripta*, that Body of Rules generally receiv'd, and held as *Law* in this Nation, before any Statute, or *Lex scripta* was made to alter the same. See *LAW*.

Origin of the COMMON LAW. After the Decay of the Roman Empire, Britain became invaded by three Kinds of German People, viz. the Saxons, Angles, and Jutes. From the Jutes descended the Men of Kent, and thole of the Isle of Wight; from the Saxons came the People call'd the East, South, and West-Saxons; and from the Angles came the East-Angles, Mercians, and Northumbrians. See *HETARCHY*.

Now, as each People had its peculiar Customs, so each inclin'd to different Laws; whereof, those of the West-Saxons, and Mercians, who inhabited the midland Countries, were, upon the Dissolution of the Heptarchy, and Establishment of a Monarchy, prefer'd to the rest, and acquir'd the common Appellation of *Fus Anglorum*. Their particular Names were *West-Saxonlage*, and *Mercenlage*. See *MERCEN-LAGE*, &c.

By these Laws the Nation was govern'd for several Ages, till being at length subdu'd by the Danes, the Customs of those People were introduc'd, and incorporat'd with the rest; and thus a new form of *Common Law* arose, call'd *Danelage*. See *DANELAGE*.

The Danes being, in their turn, overcame by the Normans; the Conqueror, on a Review of the several Laws and Customs that then obtain'd, abrogat'd some, and abolish'd others; adding some of his own Country Laws; and the System, or Assemblage of these, is what we call the *Common Law*.

The *Common Law of England*, is properly, the common Customs of this Kingdom; which, by length of time, have obtain'd the force of Laws. See *CUSTOM*.

It is call'd the *Unwritten Law*: not but that we have most of it written in the old *Norman* Dialect, but because it cannot be made by Charter, or Parliament: for those are always Matters of Record; whereas Customs are only Matter of Fact, and subsist no where but in the Memory of the People.

From the common Reason of Things, therefore, *Common Law* should appear the best, most beneficial, and easy to the People; in regard it consists of such Rules and Practices as they themselves spontaneously, and as it were by the Impulse and Direction of their own interests, were led to: Whereas, the Written Laws, made in *England* by the King and Parliament, are impos'd on the Subject at once, and without any Trial, or Foreknowledge how they shall answer; and whether or no they are like to prove beneficial to the Nation, and agreeable to the Nature of the People: Excepting such as are first made temporary; and for their approved Utility, afterwards perpetuated.

The first *Saxon* Laws publish'd in *England*, were those of King Ethelbert in the Vith Century. 300 Years after, King Alfred, whom our Historians call *Magnus Juris Anglicani Conditor*, having united the Heptarchy, and render'd himself Master of the whole Nation; made a Collection from among the several Laws of the several Provinces of his Dominions; and command'd 'em to be observ'd throughout his Kingdom. This Collection was denominat'd the *Folk-Right*, and soon after, the *Common Law*; as being *common* to the whole Nation.

Beside the *Common Law of England* in general; there are in divers Parts of the Nation particular Customs, and common Usages, which have the force of *Common Law* among those People who have retain'd 'em: Such as the *Borough-English*, *Gavel-kind*, &c. See *BOROUGH-ENGLISH*, and *GAVEL-KIND*.

Where the *Common Law* is silent, there the Statute Law speaks. See *STATUTE LAW*.

All Trials of *Common Law* are by a Jury of twelve Men. See *JURY*.

COMMON-PLACES, *Adversaria*, among the Learned, are a Register, or orderly Collection of what things occur worthy to be noted, and remain'd in the Course of a Man's reading, or Study; so dispos'd, as that among a Multiplicity of Heads, and Things of all Kinds, any one may be found, and turn'd to at pleasure. See *PLACE*.

Common-places are things of infinite Service: they are a Kind of Promptuaries or Storehouses, wherein to deposit the choicest and most valuable Parts of Authors, to be ready at hand when wanted. Several Persons have their several Methods of ordering them: but that which comes best recommended, and which many learned Men have now given in to, is the Method of that great Master of Order Mr. *Locke*. He has thought fit to publish it in a Letter to M. *Toussard*; determin'd thereto, by the great Convenience and Advantage he had found from it in 20 Years experience; as well as by the Recommendations and Intreaties of many of his Friends, who had likewise prov'd it.

The Substance of this Method we shall here give the

Reader; whereby he will be easily enabled to execute it himself.

The first Page of the Book you intend to keep the *Common-places* in, is to serve as a kind of Index to the whole; and to contain References to every *Place* or *Matter* therein: In the commodious Contrivance of which Index, so as it may admit of a sufficient *Copia*, or Variety of Materials, without any Confusion; all the Secret of the Method consists.

In order to this, the first Page, as already mention'd, or, for more room, the two first Pages that front each other, are to be divided, by parallel Lines, into 25 equal Parts; whereof, every fifth Line to be distinguish'd, by its Colour or other Circumstance. These Lines are to be cut perpendicularly by others, drawn from top to bottom; and in the several Spaces thereof, the several Letters of the Alphabet, both Capital and Minuscule, are to be duly wrote.

The form of the Lines and Divisions, both horizontal and perpendicular, with the manner of writing the Letters therein, will be conceiv'd from the following Specimen; wherein, what is to be done in the Book for all the Letters of the Alphabet, is here shewn in the first four *A, B, C, and D*.

The Index of the *Common-place Book* thus form'd, Matters are ready for the taking down any thing therein.

In order to this, consider to what Head, the thing you would enter is most naturally refer'd; and under which, one would be led to look for such a thing: in this Head, or Word, regard is had to the initial Letter, and the first Vowel that follows it; which are the characteristic Letters whereon all the Use of the Index depends.

Suppose, e. g. I would enter down a Passage that refers to the Head *Beauty*; *B*, I consider, is the initial Letter, and *e* the first Vowel: Then, looking upon the Index for the Partition *B*, and therein the Line *e*, (which is the Place for all Words whose first Letter is *B*, and first Vowel *e*; as *Beauty*, *Benevolence*, *Bread*, *Bleeding*, *Alms*, &c.) and finding no Numbers already down to direct me to any Page of the Book where Words of this Characteristic have been enter'd, I turn forward to the first blank Page I find, which in a fresh Book, as this is suppos'd to be, will be Page 2, and here write what I have occasion for on the Head *Beauty*; beginning the Head in the Margin, and indenting all the other subservient Lines that the Head may stand out and shew it self: This done, I enter the Page where 'tis wrote, viz. 2, in the Index, in the Space *Be*; from which time, the Class *Be* becomes wholly in Possession of the 2d and 3d Pages, which are assign'd to Letters of this Characteristic.

Had I found any Page or Number already enter'd in the Space *Be*, I must have turn'd to the Page, and have wrote my Matter in what room was left therein: so, if after entering the Passage on *Beauty*, I should have occasion for *Benevolence*, or the like, finding the Number 2 already possess'd of the Space of this Characteristic, I begin the Passage on *Benevolence* in the Remainder of the Page, which not containing the whole, I carry it on to Page 3, which is also for *Be*; and add the Number 3 in the Index.

An Example will make the Method of writing down Heads obvious.

BEAUTY. 'The Power of perceiving the Ideas of *Beauty* is justly call'd a *Sense*, because of its affinity to the other Senses in this, That the Pleasure does not arise from any Knowledge of Principles, Proportions, Causes, or of the Usefulness of the Object; but strikes us at first with the Idea of *Beauty*: nor does the most accurate Knowledge increase this Pleasure of *Beauty*; however, it may superadd a distinct rational Pleasure from Prospects of Advantage, or from the Increase of Knowledge. And further, the Ideas of *Beauty*, like other sensible Ideas, are necessarily pleasant to us, as well as immediately so; neither can any Resolution of our own, nor any Prospect of Advantage or Disadvantage, vary the Beauty or Deformity of an Object: For as in the external Sentations, no View of Interest will make an Object grateful; nor Determination, distinct from immediate Pain in the Perception, make it disagreeable to the Sense; so, propose the World as a Reward, or threaten the

'greatest Evil, to make us approve a deformed Object, or disapprove a beautiful one; Dissimulation may be procur'd by Rewards, or Threatnings; or we may in external Conduct obtain from any Pursuit of the Beautiful, and pursue the deformed; but our Sentiments of the Forms, and our Perceptions would continue invariably the same. Hence, it plainly appears, that some Objects are immediately the Occasions of this Pleasure of *Beauty*; and that we have Senses fitted for perceiving it; and that it is distinct from that Joy which arises from Self-love, upon prospect of Advantage. Nay, do not we often see Convenience and Use neglected to obtain *Beauty*, without any other Prospect of Advantage in the beautiful Form, than the suggesting the pleasant Ideas of *Beauty*? Now this shews us, that however we may pursue beautiful Objects from Self-love, with a View to obtain the Pleasures of *Beauty*; as in Architecture, Gardening, &c. yet there must be a Sense of *Beauty* independent to Prospects of even this Advantage: without which Sense, these Objects would not be thus advantageous; nor excite in us this Pleasure which constitutes 'em advantageous. Our Sense of *Beauty*, from Objects by which they are constituted good to us, is very distinct from our Desire of 'em, when they are thus constituted: Our Desire of *Beauty* may be counterbalanc'd by Rewards and Punishments, but never our Sense of it. Had we no such Sense of *Beauty*, Houses, Gardens, Dress, Equipage, might be recommended to us as convenient, fruitful, warm, easy; but never as beautiful: And in Faces, I see nothing that could please us, but Liveliness of Colour, and Smoothness of Surface.—*Inquiry into the Original of our Ideas of Beauty*, &c. 8vo. Lond. 1725. p. 10, 11, 12.

BENEVOLENCE. 'The true Spring of all Actions call'd *Virtuous*, is some Determination of our Nature to study the Good of others; or some Instinct antecedent to all Reason from Interest; which influences us to the Love of others.—The same Cause which determines us to pursue Happiness for our selves, determines us to Esteem and *Benevolence* for others: even the very Frame of our Nature, or a generous Instinct.—This universal *Benevolence* towards all Men, we may compare to that Principle of Gravitation; which extends to all Bodies in the Universe, but like the Love of *Benevolence*, increases as the Distance is diminish'd; and is strongest when Bodies come to touch each other. *Id. ib.* p. 121, 123, 129.—As all Men have Self-love, as well as *Benevolence*; those two Principles may jointly excite a Man to the same Action: and then they are to be consider'd as two Forces impelling the same Body to Motion: Sometimes they con-

spice; sometimes are indifferent to each other; and sometimes are opposite. Thus, if a Man have such strong *Benevolence* as would have produced an Action without any Views to Self-Interest; that such a Man has also in view private Advantage, does no way diminish the *Benevolence* of the Action. When he would not have produc'd so much publick Good, had it not been for prospect of Self-Interest; then the Effect of Self-Love is to be deducted; and his *Benevolence* is proportion'd to the Remainder of Good, which pure *Benevolence* would have produc'd. When a Man's *Benevolence* is hurtful to himself, then Self-Love is opposite to *Benevolence*; and the *Benevolence* is proportion'd to the Sum of the Good produc'd, and the Resistance of the Self-Love fomented thereby.—The Morality of any Person, or the Quantity of publick Good produc'd by him, is in a compound Ratio of his *Benevolence* and Abilities: Or, (by substituting the initial Letters for the Words, as M = Moment of Good, and μ = Moment of Evil) $M = B \times A$. *Idem ib.* p. 130, 131, 143, 199.

When the two Pages destin'd for one Class are full, look forwards for the next Backside that is blank; if it be that which immediately follows, write at the bottom of the Margin of the Page fill'd, the Letter *V.* for *Versé*, turn over; and the same at the top of the next Page; and continue from this new Page as before. If the Pages immediately following be already fill'd with other Classes; write at the bottom of the Page last fill'd the Letter *V.* with the Number of the next blank Page; and at the top of that Page, the Number of the Page last fill'd: Then entering that Head in this new Page, proceed as before. By these two Numbers of reference, the one at the top, and the other at the bottom of the Page, the discontinued Matters are again connected. It may not be amiss, too, every time you put a Number at the bottom of a Page, to put it likewise in the Index. None, if the Head be a Monosyllable beginning with a Vowel, the Vowel is at the same time both the initial Letter and the characteristic Vowel: Thus, the Word *Art* is to be wrote in *A a*.

Mr. *Locke* omits three Letters of the Alphabet in his Index, *viz.* *K, T, and W*; which are supplied by *C, F, U*, equivalent to them: And as for *Q*, since it is always follow'd by an *n*, he puts it in the fifth Place of *Z*; and so has no *Z n*, which is a Characteristic very rarely occurs. By thus making *Q* the last in the Index, its Regularity is preserv'd, without diminishing its Extent.

Others chuse to retain the Class *Z n*, and assign a Place for *Q n* below the Index.

If any imagine that those hundred Classes are not sufficient to comprehend all kinds of Subjects without Confusion, he may follow the same Method, and yet augment the Number to 500, by taking in one more Characteristic to 'em.

But the Inventor assures us, that in all his Collections, for a long Series of Years, he never found any deficiency in the Index as above laid down.

COMMON PLEAS, *Communia Placita*, or *Bancus Communis*, one of the King's Courts, now constantly held in *Westminster-Hall*; but anciently moveable. See COURT.

Gavin observes, that till the granting of *Magna Charta* there were but two Courts called the King's Courts, *viz.* the *Exchequer*, and the *King's Bench*; and that upon the Grant of that Charter the Court of *Common-Pleas* was erected, and fix'd to a Place certain, *viz.* *Westminster-Hall*: whence the Writs which before ran *Coram me vel Justiciariis meis*, simply; were now chang'd, and run *Coram Justiciariis meis apud Westmon.* See BENCH.

All Civil Causes, both Real and Criminal, are, or were in former Times, tried in this Court, according to the strict Law of the Realm; *Forfeiture* represents it as the only Court for Real Causes.

The Chief Justice herof is call'd the *Lord Chief Justice of the Common Pleas*; who is accompanied with three or four his Associates, created by Letters Patent, and as it were judges it all'd or placed on the *common Bench* by the Lord Chancellor, and the Lord Chief Justice of the Court. See JUSTICE.

The rest of the Officers belonging to this Court, are the *Custos Brevirum*; three *Prothonotaries*, or *Protonotaries*; *Chirographer*; 14 *Filers*; 4 *Exigenters*; Clerk of the *Warrants*; Clerk of the *Juries*, or *Jurata Writs*; Clerk of the *Treasury*; Clerk of the *King's Silver*; Clerk of the *Effoigns*; Clerk of the *Outlawries*; Clerk of the *Errors*; whose several Functions see in their Places *Custos Brevirum*, *PROTHONOTARY*, *EXIGENTER*, *CLERK*, &c.

COMMON BENCH. ? See COMMON PLEAS.

COMMON COUNCIL. ? See COMMON COUNCIL.

COMMON-HUNT, the Chief-Huntsman belonging to the Lord Mayor and the City of *London*. See MAYOR.

COMMON RECEIPTABLE. ? See RECEIPTABLE.

COMMON SENIORY. ? See SENIORY.

COMMONER, is used for a Student in an University; enter'd on the Foundation, and not as a *Servitor*. See UNIVERSITY.

The Word is also apply'd to a Member of the House of Commons; in contradistinction to a *Peer*. See COMMONS.

COMMONS, in Parliament, are the lower House, consisting of Knights elected by the Counties, and of Citizens, and Burgesses by the Cities and Borough-Towns. See KNIGHT, and BURGESS; see also COUNTRY, BURGOUGH, &c.

In these Elections, anciently, all the People had Voice; but King *Henry VI.* to avoid Tumults, first appointed, that none should vote for Knights but such as were Freeholders; did reside in the County, and had 40*s.* yearly Revenue: The Persons elected for Counties to be *Milites notabiles*, at least Esquires, or Gentlemen fit for Knighthood; native *Englishmen*, at least naturaliz'd; and at Years of Age: No Judge, Sheriff, or Ecclesiastical Person, to sit in the House for County, City, or Borough.

All Members of either House, with their menial Servants, and necessary Goods brought with 'em, are privileg'd from all Attachments and Imprisonments; except for Treason, Felony, or breach of Peace, all the time of the Session; and till they arrive at home, *suavis, morando, ad propria rediendo*.

The Commons sit in their House promiscuously; only the Speaker has a Chair, or Seat, fix'd towards the upper End; and the Clerk, with his Assistant, sits near him.

The Members have no Robes, as the Lords ever had; excepting the Speaker and Clerks; and sometimes the Professors of Law in Term-time, and the Members of the City of *London*.

On the first Day of the new Parliament, ere any Affair is meddled with, all the Members take the Oaths; usually, before the Lord Steward, and in the Court of Wards. See OATHS.

They then proceed to the Choice of a *Speaker*. See SPEAKER.

After the Election of a Speaker, they take the Oaths a second time.

Power and Privileges of the House of Commons. All Bills for levying Money on the Subject, begin in the House of Commons; in regard, 'tis from them the greatest Part of the Monies arise: nor will they allow the Lords to make any alteration in a Money-Bill.

They have the Privilege to propose Laws; and are, in effect, the grand Inquest of the Realm; send public Grievances; impeach publick Delinquents, even the highest Officers of the Kingdom; and prosecute 'em before the House of Lords, who are a Court of Judicature, tho the Commons are not.

The Commons are allow'd their Expences during Parliament-time, *rationabiles expensas*, as the Words of the Writ are; *i. e.* such Allowance as the King, considering the Prices of Things, shall think proper to impose on the People they represent. In 17 *Edm. II.* the Allowance was ten Croats for Knights, and five for Burgesses, per Day; afterwards it was rais'd to four Shillings a Day for dabb'd Knights, and two Shillings for all the rest: But all Allowance is now grown into dispute; and the Course of the Money run'd the other way. See PARLIAMENT.

COMMONS is also us'd in opposition to *Nobles, or Peers*; *viz.* for all sorts of Persons under the degree of a Baron; including the Orders of Knights, Esquires, Gentlemen, the Sons of the Nobility, and Yeomen. See each under its proper Article ESQUIRE, GENTLEMAN, YEOMAN, &c.

COMMONS is also us'd for the rated and ordinary Diet, or Eating of a College, Inns of Court, or other Society. See INN, &c.

COMMON WEALTH. See REPUBLICK.

COMMOTIE, an ancient Term in *Wales*, as appears from *Stat. Wallie*: a *Commote* was half a *Centred*, or Hundred; containing 50 Villages. See HUNDRED.

Wales was anciently divided into three Provinces; each of these subdivided into *Centreds*; and every *Centred* into *Hundreds*.

Sylvester Girald, however, tells us in his *Itinerary*, that a *Commote* is but a quarter of a Hundred.

COMMOTION, an intestine Motion, or Lullation in the Parts of any thing.

In Medicine, the Term is chiefly us'd for a blow, or shake of the Brain. Thus, we say, a Convulsion is a *Commotion* of the fine medullary Fibres of the Brain. A fall occasions a *Commotion*, whence frequently arises a counterstroke on the opposite Part; which occasions sometimes a Contusion, and at other times a Rupture of the Vessels, and an Apoplexie; by shaking the whole Mass of the Brain.

COMMUNIBUS Locis, a *Latin* Term, in frequent use among Philosophical, &c. Writers; implying some Medium, or mean Relation between several Places.

Thus, Dr. Keil supposes the Ocean to be one quarter of a Mile deep, *communibus locis*, q. d. at a Medium, or taking one place with another.

COMMUNIBUS ANNIS, has the same Import with regard to Years, that *Communibus locis* has with regard to Places.

Thus, Mr. Derham observes, that the Depth of Rain, *communibus annis*, i. e. one Year with another, were it to stagnate on the Earth, would amount to, at *Townly in Lancashire*, 42 $\frac{1}{2}$ Inches; at *Upsminster in Essex* 19 $\frac{1}{2}$; at *Lurick* 32 $\frac{1}{2}$; at *Pisa* 47 $\frac{1}{2}$; and at *Paris* 19 Inches.

COMMUNICATING, in Theology, the Act of receiving the Sacrament of the Eucharist. See EUCHARIST.

Those of the *Reform'd* and of the *Greek Churches* *communicate* under both Kinds; those of the *Romish* only under one.

From the second Book of *Tertullian* to his Wife, it appears, that antiently they communicated fasting. *S. Augustin* says expressly, that in some Churches, in his Time, they *communicated* every Day.

Among the *Greeks*, *M. Fleury* observes, the Laity still *communicate* every Sunday; those who omit it three Sundays together are excommunicated.

The Oriental Communicants receive the Species of Wine by a Spoon; antiently, they suck'd it thro' a Pipe, as has been observ'd by *Beat. Rebennus* on *Tertullian*.

COMMUNICATION, the Act of imparting a thing to another, or making him a Shareer with us therein.

Thus, God is said to *communicate* his Grace to us by means of his Sacraments. The Use of Speech is for the communicating of our Ideas and Sentiments to each other.

Philosophers are at a Loss as to the manner of the *Communication*, or Intercourse between Soul and Body. See SOUL, CAUSE, &c.

COMMUNICATION is also used for the Connection of one thing with another; or the Passage from one Place to another.

Antiently, it was frequent to have subterraneous *Communications* between one Place and another. Such a Gallery makes a *Communication* between such two Apartments.

Lines of COMMUNICATION, in War, call'd also simply *Lines*; are Ditches six or seven Foot deep, and 12 broad, made between one Fort, or Work, and another; in order for a Passage between one Quarter and another; especially in Sieges. See LINE, &c.

COMMUNICATION of Idioms, in Theology, the *Communication* of the Attributes of one Nature in Jesus Christ to that of the other.

The *Communication of Idioms*, is founded on the Unity of two Persons in Jesus Christ: By this *Communication of Idioms* it is, that we say, God suffer'd, died, &c. which is strictly understood of the Human Nature; and signifies, that God suffer'd in his Humanity, that he died as to his Human Nature.

For the Denominations which signify Natures, or Properties of Nature, the Schoolmen tell us, are Denominations of *Subjunctives*, or Persons, and are to be attributed to 'em: Thus, the two Natures only subsisting in Jesus Christ by the sole Person of the Word, to this Person must be attributed the Denominations of both Natures, and of their Properties. But we may not by *Communication of Idioms* attribute to Jesus Christ what would suppose him not to be God; since that would destroy the Hypothetical Union, which is the Foundation of the *Communication of Idioms*. Thus, we may not say that Jesus Christ is mere Man; that he is fallible, &c.

The *Lutherans* carry the *Communication of Idioms* so far, as to say, that Jesus Christ is not only in his Divine Nature, and by reason of his Divine Person, but also really and properly in his Humanity, Immortal, Immense, &c.

COMMUNICATION of Motion, the Action of a moving Body, whereby a Body at rest is put in Motion, or a Body already in Motion accelerated. See MOTION.

F. Malebranche looks on the *Communication of Motion* as something Metaphysical; i. e. as not necessarily arising from any physical Principles, or any Properties of Bodies, but flowing from the immediate Agency of God: there being, according to him, no more Connection, or Dependence between the Motion or Rest of one Body, and that of another, than between the Form, Colour, Magnitude, &c. of one Body and those of another. The Motion of one Body, therefore, on his Principle, is not any physical Cause of that of another. See CAUSE.

Laws of the COMMUNICATION of Motion.

Action, and Reaction, Sir *Isaac Newton* demonstrates, are equal and opposite; so that one Body striking against another, and thereby occasioning a Change in its Motion, does it self undergo the very same Change in its own Motion, the contrary way.

Hence, a moving Body striking directly against another at rest, the one loses just as much of its Motion as it *communicates* to the other; and they will proceed with the same Velocity as if grown into one Mass.

If, therefore, the Body in Motion be triple that at rest against which it strikes, it will lose a fourth Part of its Motion; and whereas, before, it would have run over (v. g.) a Line of 20 Foot, in a given time, it will now only run over 18; i. e. it will lose a fourth part of its Velocity.

If the moving Body strike on another already in Motion, the first will augment the Velocity of the latter; but will lose less of its own Motion, than had the latter been absolutely at rest.

Thus, v. g. if a Body in Motion be triple of another at Rest, and strike against it with 32 degrees of Motion; it will *communicate* eight degrees of its Motion to the other, and retain 24 to it self. If the other Body had already four degrees of Motion, the first would only *communicate* five, and retain 27: since these five were sufficient, in regard of the Inequality of the Bodies, to make 'em proceed with equal Velocity.

After the same manner may the other Laws of *Communication* of Motion in Bodies perfectly hard, and void of all Elasticity, be determin'd. But all hard Bodies that we know of have an elastic Power; and in elastic Bodies, the Laws are different, and much more intricate. See ELASTICITY; and the *Laws of Percussion in elastic Bodies*, see under PERCUSSION.

If a Body, when moved by another, happen to decline out of the way, so as to leave a free Passage to the Body whereby it was moved; yet, that will only proceed with the Velocity which it had after its *Communication* to the other, not with that it had before: It being a Rule, that every thing endeavours to persevere; not in the State wherein it was formerly, but in that wherein it is at that Juncture: therefore, a Body which has already lost part of its Motion, by its meeting with another; may lose still more by a second and a third; so as at length to become perfectly quiescent.

Hence, if, two unequal homogeneous Bodies move in a right Line with the same Velocity, the greater must persevere in Motion longer than the smaller: for the Motions of Bodies are as their Masses; but each *communicates* of its Motion to the circumjacent Bodies which touch its Surface, in proportion to the Magnitude of its Surface; the larger Body, therefore, tho' it has more Surface than the smaller, yet having less, in proportion to its Mass or Quantity of Matter, than the smaller, will lose a less Portion of its Motion every Moment than the smaller.

Suppose, e. g. a Cube, A, to be a Foot every way, and another, B, one Foot: the Surfaces here will be as 4 to 1, but their Masses as 8 to 1. If therefore those Bodies move with the same Velocity, the Cube A will have 8 times as much Motion as the Cube B (the Quantity of Motion being ever as the Quantity of Matter). That each of 'em, therefore, may become quiescent at the same time, the Cube A must lose 8 times as much Motion every Moment as the Cube B: But that is impossible, because as their Surfaces are to each other as 4 to 1; the Bodies against which they strike, will only be as 4 to 1: Therefore, when the Cube B is become perfectly quiescent, A will have half its Motion.

Hence, 2dly, we see the Reason why any long Body, as a Dart, thrown lengthwise, continues its Motion longer than when thrown transversely: it meeting fewer Bodies in the way to *communicate* its Motion to in the one Case than in the other.

Hence also, 3dly, if a Body be moved almost wholly within it self, so as to *communicate* little of its Motion to the ambient Bodies, it must continue its Motion a long time. Thus, a smooth brass Ball of half a foot Diameter, supported on a slender smooth Axis, with a very weak impulse, is found to revolve, for the Space of three or four Hours. See RESISTANCE, &c.

COMMUNION, in Theology, an uniform Belief in several Persons; whereby they are united under one Head, in one Church.

In this Sense, the *Lutherans*, *Calvinists*, &c. are said to have been cut off from the *Romish Communion*.

This is the primitive use of the Word *Communion*, as appears from the Canons of the Council of *Elvira*.

COMMUNION is also used for the Act of *communicating* in, or participating of the Sacrament of the Eucharist. See COMMUNICATING.

The fourth Council of the *Lateran*, decrees, that each Believer shall receive the *Communion*, at least, at *Easter*; which seems to import a tacit Desire that they should do it oftner; as, in effect, they did do it much oftner in the primitive Days. *Gratian*, and the *Master of the Sentences*, prescribe it as a Rule for the Laity, to *Communicate* three times a Year, at *Easter*, *Whitsontide*, and *Christmas*. But, in the XIIIth Century, the Practice was got on foot, never to approach the Eucharist except at *Easter*; and the Council thought fit to enjoin it then by a Law, lest their Coldness and Remissness should go farther still.

COMMUNION under both Kinds; in the XIth Century, the *Communio* was still receiv'd by the Laity in both Kinds; or, rather, the Species of Bread was dip'd in the Wine, as is own'd by the *Romanists* themselves, *Acta SS. Benedicti*. Sec. III.

M. de *Marca* observes, that they receiv'd it at first in their Hands; *Heft. de Bearn*. and believes the *Communio* under one Kind alone, to have had its Rise in the West under Pope *Urban II.* in 1096, at the Conquest of the Holy Land.

The XXVIIIth Canon of the Council of *Clermont*, enjoins the *Communio* to be receiv'd under both Kinds, distinctly: adding, however, two Exceptions; the one of Necessity, the other of Caution, *nisi per necessitatem, & cautelam*; the first in favour of the Sick, the second of the Abstemious, or those who had an Aversion for Wine.

It formerly was a kind of Canonical Punishment, for Clerks guilty of any Crime, to be reduc'd to *Lay-Communio*, i. e. only to receive it as the Laity did, viz. under one Kind.

They had another Punishment of the same Nature, tho' under a different Name, called *Foreign Communio*; to which the Canons frequently condemn'd their Bishops and other Clerks. This Punishment was not any Excommunication, or Deposition; but a kind of Suspension of the Function of the Order, and a Degradation from the Rank they held in the Church.

It had its Name, because the *Communio* was only granted to the Criminal on the Foot of a Foreign Clerk, i. e. being reduc'd to the lowest of his Order, he took place after all those of his Rank, as all Clerks, &c. did in the Churches to which they did not belong. The second Council of *Agda*, orders every Clerk that absents himself from the Church, to be reduc'd to foreign *Communio*.

COMMUNITY, a Society, or Body of Men united together under certain common Laws, agreed on among themselves, or impos'd by a Superior. See SOCIETY, and CORPORATION.

The *Romans*, who seem to have given the first hint of *Communities* to the several Nations into which their Empire was divided, doubtless borrow'd it from some Rules of their Neighbours: They call'd 'em *Colleges*; which Term, among them, had nearly the same Signification with *Community* among us. See COLLEGE.

Communities are of two Kinds, *Ecclesiastick* and *Laiick*: The first are either *Secular*, as Chapters of Cathedral and Collegiate Churches; or *Regular*, as Convents, Monasteries, &c. See CHAPTER, CONVENT, &c.

Lay Communities are of various Kinds; some contract'd by a fix'd Abode of a Year and a Day in the same Place; others form'd by the Discharge of the same Office, the Profession of the same Art, or attending the same Place of Worship; as those of *Parishes*, *Fraternities*, &c. See FRATERNITY, PARISH, &c.

Accordingly, the Word is commonly understood of pious Foundations for the Support of several Persons, either in a Secular or Regular Life; as *Colleges*, *Abbies*, *Convents*, *Priories*, *Conventual Seminaries*, *Hospitals*, *Imis*, &c.

COMMUNITY, also, is particularly us'd for the joint Property in Effects between Husband and Wife: The Result of which *Community* is, that during Marriage they are equally intitled to all Effects, and liable to all Debts, contract'd either before or under Marriage.

Community is a Species of Succession, and the Acceptation of *Community* resembles an hereditary Addition.

Community was set on foot in favour of the Wives, to enter 'em in as Sharers in the Husband's Effects.

In Countries where the Civil Law obtains, this *Community* has no place; nor even in several Customary Countries; as being reputed a Burden on the Man.

Antiently, the Woman's Share in the *Community* was only one third; and this appears still the Sense of the Law among us; the Widow, at the Decease of her Husband, being only intitled to one third Part of the Moveables.

COMMUNITY continu'd, is that which subsists between the Survivor of two Persons join'd in Marriage, and the minor Children of that Marriage; when the Survivor has not made any Inventory of the Effects in Possession during Marriage, the Widow may either renounce *Community* with her Children, or continue it.

COMMUNITY tacit, is a *Community* contract'd between a Man and Woman, by the mere mingling of their Effects; provided they have liv'd together the Space of a Year and a Day: This *Community* being odious, is now abolish'd.

COMMUTATION, in Law, a Change of Penalty, or Punishment, viz. of a greater for a less, &c. as when Death is commuted for, by perpetual Imprisonment, &c. See PUNISHMENT.

Some doubt whether the Word be properly applied to any Change; but that of Punishment: others will have it indifferently us'd for the exchanging, or trucking of any thing. See PERMUTATION.

COMMUTATION, in Astronomy. The *Angle of Commutation*, is the Distance between the Sun's true Place seen from the Earth, and the Place of a Planet reduc'd to the Ecliptic. See PLACE.

This is the *Angle ESR*, (Tab. *Astronomy*, Fig. 24.) subtended between the Sun's true Place E, view'd from the Earth; and that of a Planet reduc'd to the Ecliptic, R, is the *Angle of the Commutation*.

The *Angle of Commutation*, therefore, is found by subtracting the Sun's true Place E, from the heliocentrical Place of the Planet R; or contrarily.

COMPACT, in Physics, denotes a Body to be close, dense, and heavy; having few Pores, and those small ones. See BODY, PORE, &c.

The heaviest Metals, as Gold and Silver, are the most compact. See WEIGHT.

COMPACT, in a Legal Sense, signifies an Agreement, or Contract stipulated between several Parties. See PACT, CONTRACT, &c.

COMPACT is also the Name of a celebrated Bull, confirm'd by Pope *Paul IV.* relating to the Cardinals.

In virtue of the Bill of *Compact*, Cardinals can only confer Benefices in their natural State; i. e. Regular Benefices on Regulars. See BENEFICE, CARDINAL, REGULAR, &c.

COMPANY, a collective Term, understood of several Persons assembled together in the same Place, or with the same Design. See SOCIETY.

The Word is form'd of the French *Compagnie*, and that of *Compagnie*; and *Companies*, which, *Cibiffet* observes, are found in the *Salic Law*, Tit. 66. and are properly Military Words, understood of Soldiers who, according to the modern Phrase, are *Comrades*, or *Meis-mates*, i. e. lodge together, eat together, &c. of the Latin *cum*, with, and *panis*, Bread.

It may be added, that in some *Greek* Authors under the Western Empire, the Word *synagoga* occurs in the Sense of *Society*: but 'tis more probable, that the *Greeks* borrow'd it from the *French* or *Italians*.

COMPANY, in Commerce, is an Association of several Merchants, or others, who unite in one common Interest, and contribute by their Stock, their Council, and their Care, to the setting on foot, or supporting of some profitable Establishment. See COMMERCE.

The *Company* and *Society* be, in effect, the same thing, yet Custom has made a difference between 'em: *Society* being understood of two, or three Dealers, or not many more; (see SOCIETY;) and *Company* of a greater Number.

A second difference between *Companies* and *Societies*, is, that the first, especially when they have exclusive Privileges, cannot be establish'd without the Concession of the Prince; and need Letters Patent, Charters, &c. See CHARTER, CORPORATION, PRIVILEGE, &c.

Whereas, for the latter, 'tis sufficient to have the Consent of the Members, fix'd, and certify'd by Acts and Contracts, and authoriz'd by By-Laws.

Lastly, the Word *Company* seems more peculiarly appropriated to those grand Associations, set on foot for the Commerce of the remote Parts of the World; as the *English* and *Dutch East-India Company*, *South-Sea Company*, *Mississippi Company*, &c. The Rise and Establishment whereof, we shall here let before the Reader.

English Companies.

East-India Company, was form'd towards the latter end of the Reign of Queen *Elizabeth*; their Charter being dated in 1599.

Their first Fleet, sent out in 1600, brought back so rich a Cargo, that in a few Years they number'd 20 Ships. *K. James I.* to shew how much he had his Interest at heart, sent several Embassies to the Great *Mogul*, *Kings of Persia*, *Japan*, and other Princes, to make Treaties of Commerce in his Name, and that of the *Company*; some of which subsist still: The King of *Persia*, in particular, granted the *Company* several extraordinary Favours, in recompence for that Service the *English* had done him, in assisting him to expel the *Portuguese* from *Ormuz*; who by means of their Lodgment there, usurp'd the whole Commerce of the *Persian Gulf*.

But its chief Favours the *Company* receiv'd at the hands of *King Charles II.* who, by a Charter in 1669, granted 'em the Port and Island of *Bombay*, with all the Rights thereof, as surrender'd to him by the *Portuguese*: only reserving to himself the Sovereignty and Homage thereof, with a yearly Acknowledgment of 10 l. per Annum in Gold.—By another Charter in 1674, he granted 'em, in like manner, the Island of *St. Helena*, belonging to him by Right of Conquest, from the *Dutch*, who had before taken it from the *English*.—By a third Charter, he granted them a Power to erect a Court of Judicature, compos'd of a Legist, and two Merchants, in all their Places, Settlements, Factories, &c. to the judge of Seizures, and all marine Disputes; as also about Bargains, Exchange, &c. and even of all Crimes committed on the high Seas, or in the Countries and Territories of the *Company*,

in *Asia, Africa, and America*; the whole, however, agreeable to the Utages and Customs of Merchants, and the Laws of *England*. In 1662, the same Prince granted the *Company* a Charter, which contain'd a Confirmation of the antient ones of King *James I.* and Queen *Elizabeth*; or rather, a new Charter, granting 'em abundance of Privileges which they had not before enjoy'd: This Charter is properly the Basis of the *Company*, and the Foundation, wherein are founded all the Rights, and the Policy of the *New Company*, establish'd in 1698.

This Charter consists of 28 Articles: In the first, the King erects the *Company* into a Corporation, or Body Politick, under the Name of the *Governour and Company of Merchants trading to the East-Indies*. The 3d grants 'em a common Seal: the 4th a Governour, and 24 Directors, or Assistants, chofe out of the Proprietors, or Actionaries; the 6th, 7th, 8th, and 9th, regulate the Order and Policy of the *Company*, settle the Officers, manner of Election, Authority, General Meetings, &c. The 10th fixes the Extent of the Grant; permits all those of the *Company*, their Children if 21 Years of Age, their Apprentices, Factors, and Domesticks, to trade to the *Indies*, and any Part of *Asia, Africa, and America*, beyond the *Cape of Good Hope*, and the *Straits of Magellan*. The 11th grants 'em Power to make By-Laws, to be observ'd by the Officers, Factors, &c. and to enjoin Penalties; provided those Laws be not contrary to the standing Laws of *England*. By the 12th, the Payment of the Duties, Customs, &c. of Goods imported or exported is delay'd; one half of it for half a Year, the other half a whole one: Providing, withal, that if the Goods thus imported, be exported again in the Space of 13 Months, no Duties shall be paid for such Export, provided it be done aboard *English* Vessels. The 13th Article grants 'em a Power of exporting foreign Gold for their Service abroad, and even *English* Gold coin'd in the Tower; provided the Sum do not exceed 50000 Pounds Sterling at a Voyage. By the 14th and 15th, they are allow'd six large Ships, and six Pinks, to pass freely thro' all the Limits of their Grant, without the King's being able to lay any Imbargo on 'em on any occasion. The 16th grants 'em an exclusive Privilege; to have the sole Right of dealing to the *Indies*: ordering the Seizure and Confiscation of all Vessels, &c. which shall infringe. The 19th obliges 'em to bring, at least, as much Gold and Silver into the Kingdom, as they carry out each Voyage. The 21st fixes the Sum in the Capital Stock necessary to have a Vote in the Meetings, at 500 *l.* Sterling: allowing, however, several of those who have less, to join severally together to form a Voice. Lastly, the 25th allows 'em to send Vessels of War, and even to make Peace and War with all the Nations not Christian, in the Extent of their Grant.

All these four Charters of King *Charles II.* were confirm'd by King *James II.* especially the last, which was enforc'd with new Sanctions; particularly the Article of Exclusion; which, in the Time of King *Charles*, had been but little regarded, but was now enforc'd with such rigorous Prohibitions, that all Interlopers seem'd for ever excluded.

The Actions, or Subscriptions of the *Company* were originally only of 50 Pounds Sterling: but the Directors having a considerable Dividend to make in 1676, it was agreed to join the Profit to the Original, instead of withdrawing it; and thus the Actions were doubled, and became of 100 Pounds Sterling.

The first Capital was only 369891 *l.* Sterling, and 51. which being thus doubled, amounted to 735782 *l.* Sterling, and 10 5. to which, if the Profits of the *Company* to the Year 1683, viz. 962639 *l.* Sterl. be added, the whole Stock will be 1703421 *l.* Sterling.

The *Company* had from time to time undergone great Losses; first, in 1680, by the Loss of *Bantam*, out of which they were driven, and their Magazines plunder'd by the *Dutch*; under Pretence of assisting Sultan *Agni* against Sultan *Agow*, his Father. 2dly, in 1682, when the great Numbers of Interlopers, to whom King *Charles II.* too easily granted Permissiions, lower'd their Actions Cent. per Cent. 3dly, By the War which the *Company* maintain'd in the *Indies* against the Great *Mogul*; wherein it was oblig'd to abandon the Factory of *Surat*, and to retire to *Bombay*. But still, she had repair'd her Stock, and supported the Reputation of her Commerce till the Revolution, which happen'd soon after: when the War, and the incredible Losses the *Company* sustain'd by the *French* Privateers, &c. put it into so deperate a Condition, that appearing scarce possible to be supported, a new one was erected: to which, however, the old one was in a little time united.

The Charter of the *New East-India Company* is of the Year 1698: its Stock was so considerable, and the Subscriptions so very ready, that in two Years time, the *Company* had 40 Vessels equip'd in its Service; which was double of what the old one ever had: and sent to the *Indies* (com-
puting in annis) a Million Sterling in Silver: Whereas the

former had never sent above 500000 *l.* This *New Company* stands on the same Footing with the old one; its Charter is the same, in effect: and having enter'd with it, the Propriety of all the Factories and Effects in the *Indies*, has adopted most of its Regulations: So that this is rather to be esteem'd a Continuation of the same *Company*, than a new Corporation.

For the Policy of the *Company*: To be a Member thereof, the Candidate must be 20 *English* Years, at least naturaliz'd, and pay 5 Pounds Sterling at his admittance. To be a Director, the Candidate must have 2000 *l.* Sterl. Capital Stock: The Deputy and Sub-Governour not to be continued above two Years successively. Seven of the Directors to be chofen new every Year.

The Court of Directors, which meet twice a Week, is ordinarily divided into several Committees, or Offices; 1st, for the buying of Goods to be sent to the *Indies*; a second for the freighting of Vessels; a third for the examining of what passes in the *Indies*; a fourth to take Care of the Magazines; and a fifth for the soliciting of Affairs. The *Company* has a Secretary and a Book-keeper; under the first is 12 Clerks, and under the second 6. They have also a Cashier, and Werchouse-keepers; under the first are six Clerks, and under the second several Porters, &c.

The *Company* has, properly, only a few little Vessels of its own, used in the *Indies*: the rest, which make the Commerce, belong to other Persons; ordinarily, to three or four of the richest Directors, or other great Merchants, who build 'em on purpose, to let 'em out, on freight, to the *Company* for each Voyage, according to a Charter-Party agreed on between 'em.

The Cargo the *Company* sends to the *Indies*, is chiefly Ingots of Gold, Gold-Dust, *French* Louis d'Ors, *Spanish* Pistoles, Pieces of Eight, and even *English* Money, but under certain Restrictions: This Gold and Silver ordinarily makes $\frac{1}{2}$ or $\frac{2}{3}$ of the whole Cargo. The rest is Lead, *Swedish* and *Spanish* Iron, Guns, Powder, *English* Cloths, Serges, and other Manufactures of the Country; *Cochineal*, *Quicksilver*, *Vermilion*, *Coral*, *Amber*, &c.

The Returns from the *Indies* are, Pepper, Drugs, Coffee, Cotton, Saltpetre, Cloths of Gold and Silver, Raw Silks from *Persia* and *China*, *China* and *Japan* Ware, and other Curiosities. These Returns usually amount to 900000 *l.* Sterling per Annum.

The whole Commerce of the *Indies* belongs to the *Company*, exclusive of all other Subjects of *England*; yet private Persons are admitted to trade thither in two manner.

1st, By obtaining a Permission of the *Company*, on the Terms of a Charter-Party: e. g. whereof the Principal are, that they shall carry a certain proportion of Silver, Merchandise, and even Recruits of Soldiers, for the *Company*, &c. and that they pay a Consideration to the *Company*, for the Manufactures, Gold, Silver, &c. These Vessels of Allowance are not at liberty to bring home any Kinds of Merchandise at pleasure, but only such as are permitted by the Regulation of 1686: the chief of which is Pepper, and other Commodities, from *China*, *Japan*, and *Toupin*. At their Return, the Cargo must be consign'd to the *Company*, who sell it by Inch of Candle, at their next general Sale.

The 2d way is by means of Allowances of Luggage, which the *Company* grants to the Proprietors of the Ships it freights to the *Indies*, and the Officers and Crew of the same.

The *Company* has four principal Establishments, or Factories in the *Indies*; viz. at *Surat* in the Gulf of *Bengal*, the Coast of *Coromandel*, and in *Persia*: that at *Priass* in the Island of *Sumatra*, is inconsiderable. See FACTORY.

Royal African Company, establish'd for the Commerce of the Coasts of *Guinea*, is govern'd like that of the *East-Indies*.

Its Privilege is exclusive: It sends out, yearly, ten or a Dozen Ships, of about 150 Ton, laden with Iron-Works, Scissars, Knives, Muskets, Cottons, and other less considerable Merchandizes.

The Returns are in Gold-Dust, Elephants Teeth, Wax, and Leathers: But the best Article of its Commerce is the Negroes, which it sends to *Jamaica*, *Barbadoes*, and other *English* Isles in *America*; frequently, even to the Parts of *New Spain*. See NEGRO, ASIENRO, &c.

Its publick Sales are five or six times in a Year, in the manner of those of the *East-India Company*.

The first Establishment of this *Company*, was by a Charter granted in 1661, in favour of the Duke of *York*; securing to him the Commerce of all the Country, Coasts, Islands, &c. belonging to the Crown of *England*, or not possess'd by any other Christian Prince; from *Cape Blanc* in 20° Nor. Lat. to the *Cape of Good Hope* in 32° 30' Sou. Lat. The Charter was soon after return'd into the King's Hands by the Duke, and revok'd, by consent of the Parties associated with him in the Enterprize; and a new Charter granted in 1663, with ampler Privileges than the former.

The principal Adventurers here, were Queen *Katherine of Portugal*, Queen *Mary of France*, the Duke of *Tork*, *Henrietta Maria* Duchess of *Orleans*, Prince *Rupert*; in brief, the whole Court came into it. The other Adventurers, i. e. those who were to be charg'd with the Management of Affairs, were chosen from among the wealthiest and ablest Merchants; especially those who had already dealt to those Countries. By this Charter the Grant was enlarg'd, and the *Company* put in possession of all the Countries, &c. between the Port of *Salley* in *S. Barbary* to the *Cape of Good Hope*, for a thousand Years; only referring to the Crown the Homage thereof, with the Acknowledgment of two Elephants to be presented the King, or his Successors, every time any of 'em should set foot within the Countries and Colonies in their Grant.

The Privileges granted by the Charter, are, 1st, That the *Company* shall be a Corporation, or Body Politick; shall have a common Seal, bearing on one side an Elephant, supported by two Negro's; on the other, the King's Portrait. That the Governor, with his Deputy, with 7 of the 24, or 12 of the 36 Directors, be authoriz'd to take on 'em the Direction of Affairs: That they may hold Courts, make Laws, inflict Punishments, &c. provided, still, they be equitable, and consistent with the Laws of *England*. That the Adventurers may transfer their Stock at pleasure; provided the Transfer be made in open Court, and be register'd. That it may equip and send out what Vessels it pleases, for Commerce or War; but that it pay the Duties and Customs. That no Vessels but those of the *Company*, and those authoriz'd by it, shall traffick within the Limits of its Grant; on Pain of Confiscation. That the *Company* may make War, in defence of its Colonies, against Invaders, &c. That it have the Benefit of all the Mines in its Territories; the King only reserving to himself two thirds of the Gold Mines, upon bearing two thirds of the Expence. Lastly, that the King reserves for himself and his Successors, the Right of intervening, and being admitted at any time a Shareer in the Stock, upon contributing a proportionable Sum to the rest.

This Charter was confirm'd by new Letters Patent in 1673; follow'd by a Proclamation, enforcing the Obedience of the Article of Exclusion: But neither Charter nor Proclamation being able to secure 'em from Interlopers, they had recourse to the Protection of King *James II.* who had been twice among the number of Merchants Adventurers; of whom they obtain'd a most severe Declaration on their behalf in the Year 1685.

On this foot the *Company* has stood ever since, till the Year 1720; when a *New African Company* being form'd by the Duke of *Orlando*, and others; and a Charter purchas'd at the Expence of 250000 l. Sterling; the two *Companies* soon became united.

Hamburgh Company, is the oldest trading Establishment in the Kingdom; tho' not always known by that Name, nor restrain'd to those narrow Bounds under which it is now confin'd.

It was, first, call'd the *Company of Merchants trading to Calais, Holland, Zealand, Brabant, and Flanders*: Then it acquir'd the general Title of *Merchant-Adventurers of England*; as being compos'd of all the *English* Merchants who traded to the *Low-Countries*, the *Baltic*, and the *German Ocean*. Lastly, it was call'd the *Company of Merchant-Adventurers of England trading to Hamburgh*.

This *Company*, as well as some others in *England* built on its Model, is very different from those abovemention'd; and differs widely from the ordinary Plan and System of such Societies. In effect, this is not a Society of Dealers, each furnishing a part of the Sum to constitute the Capital Stock of the *Company*; but a mere Association, or Body of Merchants, who have nothing in common but the Grant and Privilege of trading to *Hamburgh*, and some other Cities of *Germany*; each managing his own Commerce, and on his own Bottom: only observing a certain Discipline, and some Regulations, which none but the *Company* can establish or change.

The first Charter whereby the *Hamburgh Company* was establish'd, was in 1406, under the Reign of *K. Henry IV.* It was afterwards confirm'd, and augmented with divers Privileges by many of his Successors; among the rest, by *Henry V.* in 1413, *Henry VI.* in 1422, *Henry VII.* in 1495, 1505, and 1506; *Henry VIII.* in 1509, 1517, and 1531; *Edward VI.* in 1547; *Queen Mary* in 1553, *Elizabeth* in 1564 and 1586; *James I.* in 1605, and *Charles II.* in 1661.

But of all these Charters, there are, properly, none but those of *Henry IV.* *Henry VII.* *Elizabeth*, *James*, and *Charles*, that are of any importance, or that give the *Company* any thing new; the rest being only simple Confirmations.

Before the Charter of *Henry IV.* all the *English* Merchants who traffick'd out of the Realm, were left to their own Conduct; and manag'd Affairs with Foreigners, as

might be most for their respective Interests; without any regard to the general Commerce of the Nation.

Henry, observing this Disorder, endeavour'd to remedy it, by uniting all the Merchants in his Dominions into one Body; wherein, without losing the liberty of trading each for himself, they might be governed by a *Company* this substituting; and be subject to Regulations, which should secure the general Interest of the National Commerce, without prejudice to the Interest of Particulars.

With this View, he granted all the Merchants of his States, particularly those of *Calais*, then in his Hands, a Power of associating themselves into a Body Politick, with Directors and Governors, both in *England* and abroad; to hold Assemblies, both for the Direction of Business, and the deciding of Controversies among Merchants; make Laws; punish Delinquents; and impose moderate Duties and Taxes on Merchandizes, and Merchants, to be employ'd in the Service of the Corporation.

These few Articles of the Charter of *Henry IV.* were much augment'd by *Henry VII.* who first gave 'em the Title of *Merchant-Adventurers to Calais, Holland, &c.* gave 'em a Power of proclaiming and continuing free Fairs at *Calais*; and order'd, that to be reputed a Member of the Society, each Person pay 20 Marks Sterling; and that the several Members should attend the General Meetings appointed by the Directors, whether at *London, Calais*, or elsewhere.

The Inexecution of this last Article, and contempt of some of the rest, occasioning great Inconveniencies to the *Company's* Affairs, another Charter was procur'd; whereby, the Pain of Imprisonment was menac'd, for those who should absent themselves from the Assemblies without lawful Cause, or should disobey the Laws.

A Request being made to Queen *Elizabeth*, in 1564, for an Explication on certain Articles in the Charter of *Henry VII.* and a Confirmation of the rest granted by other Kings; that Prince, by a Charter of the same Year, declares, That to end all Disputes, they shall be incorporated a-new, under the Title of the *Company of Merchant-Adventurers of England*; that all who were Members of the former *Company*, should, if they desir'd it, be admitted Members of this: that they should have a common Seal; that they should admit into their Society what other Persons, and on what Terms they pleas'd; and expel 'em again on misbehaviour: that the City of *Hamburgh*, and neighbouring Cities, should be repur'd within their Grant, together with those of the *Low-Countries*, &c. in that of the former *Company*. That no Member should marry out of the Kingdom; nor purchase Lands, &c. in any City beyond Sea: and that those who do, shall be, *ipso facto*, excluded for ever.

Twenty Years after this first Charter, Queen *Elizabeth* granted 'em a second; confirming the former, and further, granting 'em a Privilege of Exclusion; with a Power of erecting in each City within their Grant a standing Council.

After these Privileges, the woollen Manufactures became the principal Object of their Application; wherein they were disturb'd in the following Reign: King *James I.* having erected a Corporation in 1616, in favour of some private Persons, who offer'd to set up a Manufacture for dyeing and pressing Cloths, &c. under pretence whereof, the *Company* of Merchant-Adventurers were prohibited dealing therein. But that Project not succeeding, and the Charter being revok'd two Years afterwards, the Merchant-Adventurers were restor'd to their ancient Privileges, and a new Charter was given 'em, confirming their exclusive Right; and allowing 'em to have Officers in the several Custom-houses, to have an Eye that they were not prejudic'd in their Woollens, under pretence of the like Merchandizes, which others were allow'd to send to other Parts. This Charter of King *James*, is the last of those confirm'd by *Charles II.* in the Grand Charter of 1661.

The Revolutions which had happen'd in the *Low-Countries* towards the end of the XVth Century, and which laid the Foundation of the Republick of *Holland*, having hinder'd the *Company* from continuing their Commerce with their ancient freedom; it was oblig'd to turn it almost wholly to the Side of *Hamburgh*, and the Cities on the *German Ocean*: From which Change, some People took occasion to change its Name to that of the *Hamburgh Company*; tho' the ancient Title of *Merchant-Adventurers* is still retain'd in all their Writings.

Muscovy Company, was first projected towards the End of the Reign of King *Edward VI.* executed in the first and second Years of *Philip* and *Mary*; but had not its Perfection, till its Charter was confirm'd by Act of Parliament under Queen *Elizabeth*, in 1566.

It had its rise from certain Adventurers, who were sent in three Vessels on the Discovery of new Countries; and to find out a North-East Passage to *China*: These sailing into the White Sea, and making up to the Port of *Arbangel*, being exceedingly well receiv'd by the *Muscovites*, at their

return, solicited Letters Patent to secure to themselves the Commerce of *Russia*, for which they had form'd an Association.

The Charter was promis'd 'em by *Edward VI.* but he dying, was first dispatch'd by *Queen Mary*, in 1555. By this Charter, the Association was declar'd a Body Politick, under the Name of the *Company of Merchants Adventurers of England, for the Discovery of Lands, Territories, Islands, &c. unknown, or unfrequented.* Their Privileges were, to have a Governor, 4 Consuls, and 24 Assistants, for their Commerce; for their Policy, to make Laws, inflict Penalties, send out Ships to make Discoveries, take Possession of 'em in the King's Name, set up the Banner-Royal of *England*, plant them; and, lastly, the exclusive Privilege of trading to *Archangel*, and other Parts of *Miscovy*, not yet frequented by the *English*.

This Charter, not being sufficiently guarded, was confirm'd by Parliament in the eighth Year of *Queen Elizabeth*; wherein 'twas enacted, that in regard the former Name was too long, they should now be call'd the *Company of English Merchants for discovering new Trades*; under which Name, they should be capable of acquiring and holding all kinds of Lands, Manors, Rents, &c. not exceeding 100 Marks *per Annum*, and not held of her Majesty. That no part of the Continent, Island, Harbour, &c. not known or frequented before the first Enterprize of the Merchants of their *Company*, situate to the North, or North-West, or North-East of *London*; nor any part of the Continent, Island, &c. under the Obedience of the Emperor of *Russia*, or in the Countries of *Armenia, Media, Hircania, Persia, or the Caspian Sea*; shall be visited by any Subjects of *England*, to exercise any Commerce, without the Consent of the said *Company*, on Pain of Confiscation. The said *Company* shall use no Ships in her new Commerce, but those of the Nation; nor transport any Cloths, Serges, or other Woollen Stuffs, till they have been dyed and press'd. That in case the *Company* discontinue it self to unload Commodities in the Road of the Abbey of *S. Nicholas in Russia*, or some other Port on the North Coasts of *Russia*, for the Space of three Years; that the other Subjects of *England* shall be allow'd to traffick to *Narva*, while the said *Company* discontinues its Commerce into *Russia*; only using *English* Vessels.

This *Company* subsisted with Reputation almost a whole Century; till the Time of the Civil Wars. 'Tis said, the Czar bearing of the Murder of King *Charles*, order'd all the *English* in his States to be expell'd; which the *Dutch* taking the advantage of, settled in their room. After the Restoration, the Remains of the *Company* re-establish'd part of their Commerce at *Archangel*, but never with the same Success as before; the *Russians* being now well accustomed to the *Dutch* Merchants and Merchandizes.

This *Company* subsists still, nearly on the Foot of that of *Hamburg*, and the Northern and *Turky Companies*, i. e. each Member thereof trafficks for himself, and on his own bottom; only paying a Duty of 12 or 13 Pounds Sterling, beside some other Dues impos'd from time to time for the Occasions of the *Company* and the Commerce in general.

North Sea Company, or, as some, more agreeably to its Charter, call it, *East-land Country*, is establish'd on the Foot of that of *Hamburg*; from whence it appears to have been dismember'd.

Its Charter is dated in the Year 1579. By the first Article the *Company* is erected into a Body Politick, under the Title of the *Company of Merchants of the East*; to consist of *Englishmen*, all real Merchants, who have exercis'd the Business thereof, and traffick'd thro' the Sound, before the Year 1568, into *Norway, Sweden, Poland, Livonia, Prussia, Pomerania, &c.* as also *Revel, Covingberg, Danzig, Copenhagen, &c.* excepting *Narva, Muscovy*, and its Dependencies. Most of the following Articles grant 'em the usual Privileges of such *Companies*; as a Seal, Governor, Courts, Laws, &c.

The Privileges peculiar to this *Company*, are, That none shall be admitted a Member, who is already a Member of any other *Company*; nor any Retail-dealer at all. That no Merchant qualify'd, be admitted without paying 6 Pounds 13 Shillings 6 Pence. That a Member of another *Company*, desiring to renounce the Privileges thereof, and to be receiv'd into that of the *East*, shall be admitted gratis: provided he procures the same Favour for a Merchant of the *East*, willing to fill his Place. That the Merchant-Adventurers who never dealt in the *East*, in the Places express'd in the Charter, may be receiv'd as Members of the *Company* on paying 40 Marks: That notwithstanding this Union of the *Adventurers of England*, with the *Company of the East*, each shall retain its Rights and Privileges. That they shall export no Cloths but what are dy'd and press'd; except 100 Pieces *per Ann.* which are allow'd 'em gratis.

This Charter was confirm'd by *Charles II.* in 1661, with this Addition; That no Person of what Quality soever, living in *London*, should be admitted a Member unless he were free of the City.

Turky Company, or Levant Company. This *Company* is establish'd on the Foot of the *Hamburg Company*, i. e. there is no common Fund, wherein the Adventurers deposit their Stock, to make one single Commerce; but the Commerce thither is free, each Member trafficking for himself; but observing, withal, the Rules and Orders of the *Company*; and contributing, occasionally, towards the common Expenses.

This flourishing Body had its rise under *Queen Elizabeth*; *James I.* confirm'd its Charter in 1606; adding new Privileges. During the Civil Wars, there happening some Innovations in the Government of the *Company*, many Persons having been admitted Members, not qualified by the Charters of *Queen Elizabeth* and King *James*, or that did not conform to the Regulations prescrib'd; *Charles II.* upon his Restoration, endeavour'd to set it upon its ancient Basis: to which End, he gave 'em a Charter, containing not only a Confirmation of their old one, but also several new Articles of Reformation.

By this, the *Company* is erected into a Body Politick, capable of making Laws, &c. under the Title of the *Company of Merchants of England trading to the Seas of the Levant.* The Number of Members is not limited but is ordinarily about three hundred. The principal Qualification requir'd, is, that the Candidate be a wholesale Merchant, either by Family, or by serving an Apprenticeship of seven Years. Those under 25 Years of Age, pay 25 l. Steel at their Admission; those above, twice as much. Each makes Oath, at his entrance, not to lend any Merchandizes to the *Levant*, but on his own account; and not to consign 'em to any but the *Companies* Agents, or Factors. The *Company* governs it self by a plurality of Voices.

It has a Court, or Board at *London*, compos'd of a Governor, Sub-Governor, and twelve Directors, or Assistants; who are all actually to live in *London*, or the Suburbs. They have also a Deputy-Governor, in every City, and Port, where there are any Members of the *Company*. This Assembly at *London* sends out the Vessels, regulates the Tariff for the Price at which the *European* Merchandizes sent to the *Levant* are to be sold; and for the Quality of those return'd. It raises Taxes on Merchandizes, to defray Impositions, and the common Expenses of the *Company*; presents the Ambassador which the King is to keep at the Port, elects two Consuls for *Smirna* and *Constantinople, &c.* One of the best Regulations of the *Company*, is, not to leave the Consuls, or even Ambassador, to fix the Impositions on Vessels for defraying the common Expenses; (a thing fatal to the *Companies* of most other Nations) but to allow a Pension to the Ambassador and Consuls, and even to the chief Officers; as Chanceller, Secretary, Chaplain, Interpreters, and Janitors; that there may't be any Pretence for their raising any Sum at all on the Merchants or Merchandizes: 'Tis true, the Ambassador and Consul may act alone on these occasions; but the Pension being allow'd 'em on condition of declining 'em, they chuse rather to sit still.

In extraordinary Cases, the Consuls, and even Ambassador himself, have recourse to two Deputies of the *Company*, residing in the *Levant*: or, if the Affair be very important, assemble the whole Nation. Here are regulated the Presents to be given, the Voyages to be made, and every thing to be deliberated: and on the Resolutions here taken, the Deputies appoint the Treasurer to furnish the Monies, &c. requir'd. The ordinary Commerce of this *Company*, employs from 20 to 25 Vessels, of between 25 and 30 Pieces of Cannon.

The Merchandizes exported thither, are Cloths of all Kinds and Colours, Pewter, Lead, Pepper, Cochineal, and a great deal of Silver, which they take up at *Cadix*: The Returns are in raw Silk, Galls, Camelots, Wools, Cottons, Maroquins, Althes for making Galls and Soap, and several Gums and medicinal Drugs.

The Commerce of this *Company* to *Smirna, Constantinople, and Scanderoon*, is not esteem'd much less considerable than that of the *East-India Company*; but is, doubtless, much more advantageous to *England*; in regard, it takes off much more of the *English* Manufactures than the other, which is chiefly carried on in *Moony*.

The Places reserv'd for the Commerce of this *Company*, are all the States of *Venice*, in the Gulf of *Venice*; the State of *Ragusa*; all the States of the Grand Signior, and the Ports of the *Levant* and *Mediterranean*; excepting *Corbogena, Alicani, Barcelona, Valencia, Marfeilles, Tonia, Genoa, Leghorn, Civita Vecchia, Palermo, Messina, Malta, Majorca, Minorca, and Corfica*; and other Places on the Coasts of *France, Spain, and Italy*.

South-Sea Company. Many take this *Company*, establish'd towards the Close of the XVIIth Century, to have been originally intended, rather as a Political Contrivance for raising a Fund of *Moony*, to serve in the pressing Affairs of the State, than as a real Establishment for the sake of Commerce. For the Nation being exhausted of *Moony* by

the long Wars with France, 'tis no wonder the Phantom of a new Company should be rais'd, to bring in the Subscriptions of the money'd Men; as the only Expedient to be supply'd with Money, without dissatisfying the People, already wore out with Subsidies, &c.

Be this as it will, 'tis certain the Ministry never thought seriously, during the whole Course of the War, about making any Settlement on the Coasts of *South America*; which was the Thing wherewith the People were first flatter'd: Besides that, the Fund having been apparently perverted to defray the Expences of the War, its Value was so lower'd, that it must in all probability have sunk outright, but for the unexpected Help it met with in 1713.

By the Treaty of *Utrecht*, the Business of the *French Affianta Company*, which was to furnish the *Spanish West-Indies* with Negroes, was resign'd to the *English*, in favour of the *South-Sea Company*; which by this Turn reliev'd it self from its languishing Condition, and put it in a Condition to vie with the most flourishing Companies of Commerce in *England*.

The Treaty of this Company with the *Spaniards*, commences from May 1713; and is to hold 30 Years; during which time, the Company is to furnish the *Spanish America* with 144000 Negroes, of both Sexes, between fifteen and twenty five Years of Age, found, &c. and at the Rate of 4800 *per Annum*; and for all they furnish besides, only to pay half the Dues to the King of *Spain*, for the first 25 Years of the Term, or *Affianta*. It may be added, that in consideration of 200000 *Piasters*, paid in Advance to the King of *Spain*, to be reimburs'd as the Dues due during the first ten Years, the Company is only to pay Dues for the 4000: The King's Due is 33 *Piasters*; *per Head*. See *AFFIANTA*.

The chief Establishment of the *French Affianta Company* was at *Buenos Ayres*, a Town of considerable Trade on the Coast of *South America*. The *South-Sea Company*, who without changing their Name, took on 'em the *Affianta*, or Farm of Negroes, preserves the same Establishment; and 'tis here their Vessels disembark their Negroes, which they had negotiated thro' all the Coasts of *Africa* within their Grant.

The Company, 'tis certain, set out with good Success; and there was room to hope still better: since, besides that the Value of their Stock the first five Years, rose faster, in proportion, than that of any other Company; his Majesty, after purchasing 20000 *l*. Sterling therein, was pleas'd to condescend to be their Governor, or first Director. For what remains of the History of this Company, with that fatal Train of romantic Companies it drew after it, we chuse to refer to the Article *BUBBLE*.

HARBOROUGH COMPANY. This Company is yet, *Ann* 1722, only in Embryo: Its Design is to set on foot an immediate Commerce between the Subjects of *England*, and those of his Majesty's *German Territories*. The first Scheme was laid in 1717; a Charter obtain'd some time after: The rest is in *fituro*.

The *West-India Companies*, or those of the *English Colonies* in *North America*, are of a lower Class than those abovemention'd; and too numerous to be here describ'd.

Their Names are, the *Hudson's Bay Company*, *Virginia Company*, *New England*, *New York*, *Pennsylvania*, *New Scotland*, *Massachusetts*, *Connecticut*, *Bermudas*, *Tobago*, and *Carolina Companies*. See *COLONY*, and *PLANTATION*.

SCOTCH DARREN COMPANY, was establish'd with a good Prospect at *Edinburgh*, in 1699, for the Commerce of *S. America*. They sent an Armament and a Colony, which they endeavour'd to establish in the Isthmus of *Darien*, which parts *N.* and *S. America*: But the *English* Ministry not thinking proper to avow and support the first Successes of the Company, which had alarm'd *Spain*, ever jealous of this part of her Territories, the *Scotch* Colony was dispers'd by the *Spaniards* in 1700: And thus vanish'd the best Project that ever was form'd, for disputing with that Nation the Possession of those Countries, from which she pretends to exclude all other Nations.

DUTCH COMPANIES.

Dutch East-India Company, had its rise in the midst of the Struggle that People had for their Liberty: For the *Spaniards* having forbid all Commerce with 'em, and shut up all their Ports; necessity inspir'd some *Zealanders* to seek a new North-East Passage to *China*.

This Enterprize proving unsuccessful to three several Armaments in 1594, 1595; a second Company was form'd, under the Name of the *Company of remote Parts*; which, in 1597, took the ordinary Rout of the *Portuguese* to the *Indies*, and return'd in two Year and a half's time with little Gain, but good Hopes.

This Company, and a new one now just establish'd at *Amsterdam*, being united, equip'd other Fleets; and these occasion'd other Companies at *Amsterdam*, *Rotterdam*, in *Zealand*, &c. insomuch, that the States began to apprehend they might be prejudicial to each other: Under this Concern,

they call'd all the Directors of the several Companies together, who all consented to an Union, the Treaty whereof was confirm'd by the States in 1602: A very remarkable Epochs, as being that of the most solid and celebrated Establishment of Commerce that ever was in the World.

Its first Capital was six Millions six hundred thousand *Florins*. It has 60 Directors divided into several Chambers; 20 in that of *Amsterdam*, 12 in that of *Zealand*, 14 in that of *Delph* and *Rotterdam*, and a like Number in those at *Sloys* and *Hor*. As each Grant expires, the Company is oblig'd to procure a new one, which it has already done four times since the first; viz. one in 1622, for 21 Years, like the first; another for 21 Years, commencing in 1647; and a third in 1667, for 25 Years; a fourth in Advance, commencing in 1698, to end in 1740. Each Grant costs the Company a considerable Sum; that of 1647 cost 1600000 *Livres*, and the two following ones more. The last of 1698 was confirm'd by a *Placard* of the States General, granting 'em a Privilege exclusive.

Their Factories, Residences, &c. in the *East-Indies*, are almost infinite; reaching from the *Persian Gulf* to the Coasts of *China*: the principal is that of *Batavia*, the Centre of their Commerce: Here resides their General, with the State and Splendor of a sovereign Prince; making War and Peace with the Eastern Kings and Emperors at pleasure.

The other more considerable Factories, are *Tayouan* on the Coast of *China*, *Nangyiac* in *Japan*, *Malaca*, *Surat*, *Ambeyne*, *Banda*, *Siam*, *Molucca*, &c. Several on the Coast of *Coromandel*, and at *Ispahan*, *Cape of Good Hope*, &c. In all, they number 40 Factories and 25 Fortresses. They have the whole Trade of the Spicery in their own Hands. See *SPICERY*.

Dutch West-India Company, establish'd in 1621, with an exclusive Privilege to trade 24 Years along the Coasts of *Africa*, between the Tropic of *Cancer*, and the *Cape of Good Hope*; and in *America*, from the South Point of *Newfoundland*, thro' the Straights of *Magellan*, that of *Maire*, or others, to the Straights of *Aian*, both in the North and South Sea.

The Directors are divided into five Chambers, (as in the *East-India Company*) out of which, 19 are chosen for the general Direction of Affairs. In 1647 the Company renew'd its Grant for 25 Years, but was scarce able to hold out the Term; by reason of its great Losses, and Expences in taking the Bay of *Tados los Santos*, *Fernambouc*, and the greatest Part of *Brazil* from the *Portuguese*. The Weakness of this Company, which had several times in vain attempt'd to be join'd to that of the *East-Indies*, occasion'd its Dissolution at the Expiration of its Grant.

In 1674, a new Company, compos'd of the antient Proprietors and their Creditors, was sett'd in the same Rights and Establishment with the former; and still subsists with Honour: Their first Capital was about six Millions of *Florins*. Its principal Establishments, are, one at *Cape Verd*, another in the Gold Coast of *Africa*, at *Tobago*, *Curaçao*, &c. in *America*.

Dutch North Company has no exclusive Privilege; the Advantages of its Patent being of another kind, and very inconsiderable.

There are also in *Holland*, Companies for the *Baltic Sea*, the Fishery of *Novo Zembla*, *David's Straights*, and *Greenland*: yet, none of their Fisheries are intrich'd to private Traders; all the difference between these and the Companies consisting in this; that the former may not go ashore to cut their Fish to pieces, and melt their Lard; but must bring their Luggage to *Holland*. See *FISHERY*.

Dutch Levant Company. In strictness, there is no *Levant Company* in *Holland*: but the Commerce of the private Traders is so considerable, that the State has taken the Regulation thereof on it self.

To this End, they have establish'd a Chamber of Direction at *Amsterdam*, compos'd of six Deputies and a Register; who, under the *Bourgoimasters*, take care of every thing relating to the Commerce of the *Mediterranean*: especially that of *Smirna* and *Constantinople*.

This Company names the Consuls, appoints the Number and Strength of Convoys, terminates Differences among the Traders; and has a Right, on occasion, to add new Regulations to the old ones; tho' those be of no force, till confirm'd by the States-General.

FRENCH COMPANIES.

French East-India Company, was establish'd in 1664, with an exclusive Privilege, to trade for 30 Years in all the Seas of the *East-Indies* and *South-Sea*: No Adventurer to be admitted without 1000 *Livres* in Stock; and Foreigners who had 20000 *Livres* in Stock, to be reputed *Regnicoles*.

The Patent grants 'em the Island of *S. Madagascor*; and the King to be at one fifth of the Expence of the three first Armaments, without Interest; the Principal to be reimburs'd in ten Years: or, if the Company find it loses on the whole, the Loss to fall on the King's side.

The Capital Fund of the *Company*, which was mostly furnished by the King, was seven or eight Millions of Livres, but was to have been 15 Millions.

In effect, the no means were wanting to support the *Company*, yet it still droop'd, and still struggled; till having subsisted ten Years without any change in its Form, and being no longer able to discharge its Engagements, there were new Regulations concerted; but to little purpose. At length, Things not being disposed for a new *East India Company*, nor much good to be expected from the old one; in 1708, the Ministry allow'd the Directors to treat with the rich Traders of *S. Malo*, and resign 'em their Privilege under certain Conditions. Under the Hands of these last, the *Company* began to flourish.

Its chief Factory is at *Ponichery*, or *Pondichery*, on the Coast of *Coromandel*: This is the Residence of the Director-General; the other Factories are inconsiderable. The Merchandizes the *Company* brings into *France*, are Silks, Cottons, Spices, Coffee, Rice, Salt-petre; several Kinds of Gums and Drugs, Woods, Wax, printed Callicoes, Muffins, &c.

French West India Company, establish'd in 1664: their Charter gave 'em the Property and Seigniority of *Canada*, *Acadia*, *Antilles Islands*, *Ile of Ceylon*, and the *Terra firma of America*, from the River of the *Amazon* to that of *Oronoko*; with an exclusive Privilege for the Commerce of those Places, as also of *Senegal* and the Coasts of *Guinea*, for forty Years, only paying half the Duties.

The Stock of the *Company* was so considerable, that in less than 6 Months, 45 Vessels were equip'd; & wherewith they took possession of all the Places in their Grant, and settled a Commerce: yet it only subsisted nine Years. In 1674 the Grant was revok'd, and the Countries above reunit'd to the King's Dominions, as before; the King reimbursing the Actions of the Adventurers. This Revocation was owing partly to the Poverty of the *Company*, occasion'd by its Losses in the Wars with *England*, which had necessitated it to borrow above a Million; and even to alienate its exclusive Privilege for the Coasts of *Guinea*: but also to its having in good measure answer'd its End; which was to recover the Commerce of the *West-Indies* from the *Dutch*, who had turn'd it from 'em: For the *French Merchants* being now accus'd to traffick to the *Antilles*, by permission of the *Company*, were so attach'd to it, that it was not doubted they would support the Commerce after the Dissolution of the *Company*.

French Mississippi Company, was first establish'd in 1684, in favour of the *Chevalier de la Salle*; who having projected it in 1660, and being appointed Governor of the Port of *Frontignac*, at the Mouth of that River, travell'd over the Country in the Year 1683, and return'd to *France* to solicit the Establishment. This obtain'd, he set sail for his new Colony, with four Vessels loaden with Inhabitants, &c. but entering the Gulf of *Mexico*, did not, it seems, know the River that had cost him so much fatigue; but settled on another River, unknown; & there his Colony perish'd by degrees: so that in 1685 there were not 100 Persons remaining. Making several Expeditions to find the *Mississippi*, he was kill'd in one of 'em by a Party who mutiny'd against him: whereupon the Colony was dispers'd and lost. *M. Haberville* afterwards succeeded better; he found the *Mississippi*, built a Fort, and settled a *French Colony*: But he being poison'd, 'his said, by the Intrigues of the *Spaniards*, who fear'd such a Neighbour; in 1715, *M. Crozat* had the whole Property of trading to the *French Territories*, call'd *Louisiana*, granted him for 15 Years.

Company of the West. In 1717, the *Sieur Crozat* surrender'd his Grant; and in the same Year a new *Company* was created, under the Title of *Company of the West*: To which, besides every thing granted to the former *Company*, was added the Commerce of *Casor*, enjoy'd by the *Canada Company* from the Year 1706, but expiring in 1717. In this Establishment, an equal View was had to the Finances, and the Commerce of the Nation: And accordingly, part of the Conditions of its Establishment regard'd the settling a Colony, a Trade, &c. the other the venting part of the Bills, call'd *Bills of State*; which could no longer subsist on their present footing. The former are no more than are usual in such Establishments: for the latter, the Actions are fix'd at five hundred Livres; each payable in Bills of State: The Actions to be esteem'd as Merchandize; and in that Quality to be bought, sold, and traffick'd. The Bills of State, which make the Fund of the Actions, to be converted into yearly Revenue. To put the finishing hand to the *Company*, in 1717 its Fund was fix'd at an hundred Million of Livres; which being fill'd, the Cash was shut up.

India Company. The Junction of the former *Company* with that of *Canada*, was immediately follow'd by its Union with that of *Senegal*; both, in the Year 1718, by an Arret of Council, which at the same time granted the new *Company* the Commerce of *Casor*, and made it Mistress of the Negro, or *Guinea Trade*, to the *French Colonies* in *America*.

Nothing was now wanting to its Perfection, but an Union with the *East-India Company*, and with those of *China* and *S. Domingo*, which were effected; the two first in 1719, and the third in 1720. This Union of the *East-India and China Company* with the *Company of the West*, occasion'd an Alteration of the Name, and it was henceforth call'd the *India Company*.

The Reasons of the Union, were the Inability of the two former to carry on their Commerce, the immense Debts they had contracted in the *Indies*, especially the *East-India Company*; Complaints whereof had been sent to Court by the *Indians*, which discredit'd the *Company* so, that they durst not appear any longer at *Sarat*: Lastly, the little Care they took to discharge their Engagements; and their having transfer'd their Privilege to the private Traders of *S. Malo*, in consideration of a tenth in the Profits of the Returns of their Ships.

The ancient Actions of the *Company of the West*, which were not at Par when this Engratment was projected, were it was completed, were risen to 300 per Cent. which unexpected Success, gave occasion to conclude the new Actions of the united *Companies* would not bear less Credit. The Consensus of Subscribers was so great, that in a Month's time there were above fifty Millions subscrib'd for: The first twenty five Million Actions which were granted to the *India Company*, beyond the 100 Millions of Stock allow'd the *Company of the West*, being fill'd as soon as the Books were open'd; & to satisfy the Earnestness of the Subscribers, the Stock was increas'd by several Arrets to three hundred Millions. Credit still increasing, the new Actions rose to 1200 per Cent. and those of the ancient *Company of the West* to 1900 per Cent. an exorbitant Price, to which no other *Company* ever rose.

Its Condition was now so flourishing, that in 1719 it offer'd the King to take a Lease of all his Farms for nine Years, at the Rate of three Millions five hundred thousand Livres per Annum, more than had been given before; and to lend his Majesty twelve hundred Millions to pay the Debts of the State: These Offers were accepted: and the King, in consideration hereof, granted 'em all the Privileges of the several Grants of the *Companies* united to that *Company*, to the Year 1770: On condition, however, of discharging all the Debts of the old *East-India Company*, without any Deduction at all. The Loan of twelve hundred Millions not being sufficient for the Occasions of the State, was augmented, three Months afterwards, with three hundred Million more; & which, with the former Loan, and another of one hundred Million before, made six hundred Millions: for which the King was to pay Interest at the Rate of three per Cent.

The Duke of Orleans, in February 1720, did the *Company* the Honour to preside in their Assembly, where he made several Proposals to 'em on the Part of the King: the principal was, that they should take on 'em the Charge and Administration of the Royal Bank. This was accepted, and Mr. Law, Comptroller-General of the Finances, was named by the King, Inspector-General of the *India-Company* and Bank united.

This Union, which, it was proposed, would have been a mutual help to both those famous Establishments, prov'd the fatal Point from whence the Fall of both commenc'd: From this time, both the Bank-Bills and the Actions of the *Company* began to fall: in effect, the first perish'd absolutely, and the other had been drawn along with it, but for the prudent Precautions taken for its Support.

The first Precaution was the revoking the Office of Inspector-General, and obliging Mr. Law to quit the Kingdom: The ancient Directors were discharg'd, and new ones substituted; and, to find the bottom of the *Companies* Affairs, it was order'd, they should give an account of what they had receiv'd, and disburs'd; both on the account of the *Company*, and of the Bank, which they had had the Management of near a Year. Another Precaution to come at the State of the *Company*, was by endeavouring to distinguish the lawful Aliquoties from the *Mississippi* Extortions; whose immense Riches, as well as their criminal Address in realising their Actions, either into Species or Merchandize, were become so fatal to the State; in order, if possible, to secure the honest Adventurers their Stock. To this end, an Inquisition was made into their Books, &c. by Persons appointed by the King: And the new Directors, or, as they were call'd *Rogues*, began seriously to look about for their Commerce abroad.

The *French* have had several other *Companies*; some whereof have fallen of themselves, the rest upon the Expiration of their Grants: as, the

Bastion Company of France, which was, at first, a simple Association of two Merchants of *Marseilles*, in the XVth Century, for fishing of Coral in the Gulf of *Sorra-Couray* on the Coast of *Barbary*, on the Frontiers of *Algier* and *Tunis*. Having obtained leave of the Sultan *Solyman II.* to make an Establishment, and having likewise treated with the *Moorish* Princes of the Country; in 1561 they built a little Fort, call'd the *Bastion of France*, whence the *Company* took its Name.

The first Undertakers not being successful, a new Grant was obtain'd of *Mabmont III.* in 1604, to new Undertakers: In 1628 it began to flourish, and the Colony consisted of 800 People: but the Death of their Governor in 1635, gave them a Blow they never recover'd.

Several of the *Companies* have since endeavour'd to set the fishing of *Coral* on its antient Foot, but hitherto in vain.

Guinea COMPANY, was establish'd in 1681: Its Grant expired in 1705, but it continued its Trade of Negroes, by the King's Permission, under the Name of *Affienta Company*, to the Year 1713; when, by the Treaty of *Utrecht*, that Trade was surrender'd to the *English South-Sea Company*; which see.

Affienta COMPANY. See *Guinea COMPANY*, and *Affienta*. *Cape Verd COMPANY*, the same with that of *Senegal*, under another Name: It was establish'd in 1664, before the *Company of the West*; but the Coasts of *Africa* being included in the Grant of this last, we hear no more of the *Cape Verd Company* till the Year 1673, when it rose afresh under the Title of *Company of Senegal*.

French South-Sea COMPANY, the same with the *Affienta Company*; which see.

Canada COMPANY, establish'd in 1628, for the Commerce of *Beaver-Skins*, &c. Its Grant expiring in 1717, it was united to the *Company of the West*; which see.

Acadie COMPANY, establish'd in 1683. Its Grant expiring in 1703, and the War, &c. preventing a new one, the Colony was neglected; and was taken by the *English* in 1710, and confirm'd to 'em by the Treaty of *Utrecht*.

French Levant COMPANY, establish'd in 1670; but its Privilege revok'd in 1684.

French North COMPANY, establish'd in 1669, and expiring with its Grant in 1690.

S. Domingo COMPANY, establish'd in 1698, for fifty Years; carry'd on with honour to the Year 1720, and then united to the *India Company*.

Danish, &c. COMPANIES.

Danish North COMPANY, was establish'd at *Copenhagen*, in 1647: Its Establishments are very considerable in *Norway*; besides which, it sends Vessels to *Veranger*, whence they convey their Merchandizes by Land into the *Danish Lapland*; and by Sledges drawn by *Rein-Deer*, into the *Muscovite Lapland*. It lends others for *Bovandia* and *Siberia*; where its Agents take 'em up, and convey 'em, in like manner, on Sledges, to *Pauisorod*, the Capital of this Part of the *Muscovite Empire*.

The Commodities it sends thither are *Rixdollars*, *Tobacco*, and *Linnens*; it returns nothing but *Furs* and *Skins*.

Danish Island COMPANY, establish'd in the same Year with the *North Company*: Its chief Factory is *Kirkeber*, a large Town in that Island.

Danish East-India COMPANY, establish'd in the middle of the XVIIth Century; their chief Factory is at *Trinquabast*, whither they send two or three Vessels every Year.

Levant COMPANY of the Genoese, establish'd in 1664, and confirm'd by the Port; notwithstanding the Opposition of the *French*.

Its chief Commerce was to be in Pieces of 5 *Sols*, which the *Genoese* had before furnish'd the *Turks* withal; tho in the *French Name*, and under their Banner; they were now to do it under their own Banner: And accordingly, while the Humour of these Pieces lasted, as they serv'd not only for Money, but were likewise used by the *Greek* and *Turkish* Women of the Islands, as Ornaments in their Head-dress, at the bottom of their Vests, or Petticoats, which were cover'd with 'em; the *Company* succeeded well enough: But that Money being decried in 1670, the *Company* has languish'd ever since; and can now scarce support a miserable Commerce.

COMPANY of Ships, is a sort of Fleet of several Merchant-Vessels, who make a kind of Charter-Party among themselves; whereby, under several Clauses and Conditions tending to their common Safety, they engage not to quit one another, but to defend each other reciprocally, during their Voyage.

These Associations, in the *Mediterranean*, are call'd *Conservez*. See *CONSERVE*.

The chief Conditions of the Charter-Party, are, that such and such shall be own'd Admiral, Vice-Admiral, and Counter-Admiral. That those which bear no Guns, shall pay so much *per Cent.* of their Cargo, for the Expenses of the Admiral, &c. that such and such Signals shall be observ'd; that if they be attack'd, the Damages shall be reimburs'd by the *Company* in general, &c. See *CHARTER-PARTY*.

Rule of COMPANY, or Fellowship, in Arithmetick, is a Rule whereby we discover, or ascertain the Share of the Profits, or Losses, belonging to the several Partners, or Associates in any Enterprise, in proportion to the Stock each contributed thereto, and the time that Stock was in Bank. See *FELLOWSHIP*.

COMPANY, in War, is a little Body of Infantry, commanded by a Captain. See *CAPTAIN*.

The *French* use the Word indifferently for *Hoste*, or *Foot*; but the *English* appropriate the Term *Troop* to a *Company* of *Hoste*. See *TROOP*.

The Number of Men in a *Company* is uncertain; in the ordinary Regiments 'tis 50, in the *Guards* more. See *REGIMENT*, and *GUARD*.

In the *French Guards* the *Company* is 120, in the *Swiss Guards* 200.

Companies not imbody'd into Regiments, are call'd *Independent Companies*.

The *French* have their *Free Companies*, who never enter the Body of any Regiment; and *Companies of Ordnance*, who in like manner never enter the Body of a Regiment, but consist of the *Genrs d'Armes* and *Light-Hoste*. They were instituted by *Charles VII.* who choic out fifteen Captains, under each of whom was to be 100 *Lances*, or Men at Arms, each Man at Arms to receive Pay for six Persons, himself among the Number; the rest to three Archers on Horseback, a *Cutler*, and a *Servant*.

COMPARATES, COMPARTA, in *Logic*, the Terms or Subjects of a *Comparison*; or the two Things compar'd to each other. See *COMPARISON*.

COMPARATIVE Anatomy, is that Branch of Anatomy which considers the same Parts of different Animals, with relation to the particular Structure, and Formation which is most suited to the manner of living, and the Necessities of every Creature. See *ANATOMY*.

Thus, in the *Comparative Anatomy* of Stomachs, for instance, it is remarkable, that those Creatures which have the Opportunities of frequent feeding, have their Stomachs very small, in comparison to some Creatures of prey, which, probably, may be under a necessity of fasting a long time; and therefore have Stomachs large enough to hold Food sufficient for such a time. See *STOMACH*, *REMUNITION*, &c.

However, in the common use of the Term, *Comparative Anatomy* is understood of any Anatomy of Beasts; whether with any immediate reference to their Structure to that of other Animals, or not.

COMPARATIVE Degree, in Grammar, is an Inflexion between the Positive and Superlative Degrees; whose effect is, to set a thing above or beneath the Level of another. See *DEGREE*.

The *Latins* express'd their *Comparative Degree* by a particular Termination of their Adjectives, and Participles; wherein they are follow'd by the *English*, tho by few other of the modern Languages.

The *French* form most of their *Comparatives*, by adding the Participles *plus*, *moins*, and *aussi*; the *Italians* by *piu*, *meno*, &c. as the Thing is to be rais'd, lower'd, or equal'd to another.

COMPARISON, parallel; the Relation of two Persons or Things, consider'd as oppos'd, or set before each other, to set a thing above or beneath the Level of another. See *DEGREE*.

COMPARISON, in Rhetorick, is a Figure, or rather Place, in *Speech*, whereby two Things are consider'd with regard to some third, which is common to them both. See *FIGURE*, and *PLACE*.

Thus, *Cicero*. *Topice*. *Cato* licuit suam bellum civile, igitur & *Cicero* licuit. 'Twas allow'd *Cato* to engage in the Civil Wars, therefore it may be allow'd *Cicero*: where, to engage in the Civil Wars is common to both.

There are three Kinds of *Comparison*; the first à *majori*, i. e. from the Major to the Minor, as that of *Cicero* against *Anthony*, *Quid feceris domi tue, cum aliene tam sis insolens*. Or that of *Terence*; *Quem feret, si parentem non ferit suum*. From the same *Quid*, *Quid* endeavours to appeale *Cesar*.

Cur ego posse negem leniri Cæsaris iras,
Cum viderem miles vestibus esse Deos?

The second à *minori*, i. e. from the Minor to the Major: Thus *Cicero*, *Majores nostri bella mercatoribus, ac novulatoribus injuriosius tractatis, sepe gesserunt*; vos tot civium Romanorum milibus uno nunatio atque uno tempore necatis quo tandem animo esse debetis?

The third à *pari*; as when we contend that what obtains in one Thing, ought to obtain in another of the same Kind: Thus, 'Twas a Law, that he who kill'd his Father should be sew'd up in a Sack and thrown into a River; therefore, he who kill'd his Mother deserves the same Punishment.

Cæpo tuam, pudet bene, sed cæpo, Maxime, cenam
Tu captas alterius; jam sumus ergo pares.
Mæne salutatum venio, tu diceris esse,
Ante salutatum: jam sumus ergo pares, &c.

Mart. Lib. II.

COMPARISON of Ideas, an Act of the Mind, whereby it compares its Ideas one with another, in respect of Extent, Degree, Time, Place, or any other Circumstances. See *IDEA*.

This Operation of the Mind is the Ground of *Relations*. See *RELATION*.

Beutes seem not to have this Faculty in any great degree; They have, probably, several Ideas distinct enough; but cannot compare them farther than as to some sensible Circumstances annexed to the Objects themselves: The Power of comparing general Ideas, which we observe in Men, we may probably conjecture they have not at all. See **ABSTRACT**, **GENERAL TERMS**, &c.

COMPARTIMENT, or **COMPARTMENT**, a Design compos'd of several different Figures, dispos'd with Symmetry; to adorn a Parterre, Plafond, Panels of Glass, or Panels of Joinery, the Squares of a Ceiling, &c.

A *Compartment of Tiles*, is an Arrangement of white and red Tiles varnish'd, for the Decoration of the Covering of a Roof.

The Term *Compartment* is also used in Painting: Thus, we say, all the *Turkish* and *Moorish* Paintings are only *Compartiments*: The fine Bindings of Books are in *Compartiments*, &c.

COMPARTIMENT, in Heraldry. See **PARTITION**.

COMPARTITION, in Architecture, the useful and graceful Distribution of the whole Ground-Plot of an Edifice, into Rooms of Office, of Reception, or Entertainment. See **DISTRIBUTION**, **HOUSE**, &c.

Compartition makes one of the great Divisions of the Art of Building. See **BUILDING**.

COMPASS. The *Mariner's*, or *Nautical COMPASS*, is an Instrument used by Pilots, to direct the Course of their Ships. See **COAST**, **NAVIGATION**, &c.

It consists of a Box, which includes a magnetical Needle, that always turns to the North; excepting for a little Declination, which is various in various Places, and even at various Times, in the same Place. See **NEEDLE**, and **VARIATION**.

In the middle of the Box is fix'd a perpendicular Pivot, which bears a Card, or Pathboard, on whose upper Surface are describ'd several concentric Circles; the outmost of which is divided into 360 Degrees; the other into 32 Points, answering to the 32 Winds. See **WIND**.

In the Centre of this Card is fitted a Brass Cone, or Cap, a little concave, which plays at liberty on the Pivot; and along, in the Thickness of the Card, is fitted the Needle, which is cover'd over with a Glass, that its Motions may be observ'd: The whole is inclos'd in another Box; where it is sustain'd by brass Hoops, to keep the Needle horizontal. See it represented, *Tab. Navigation*, Fig. 1.

The Needle, which is, as it were, the Soul of the *Compass*, is made of a thin Plate of Steel, in form of a Lozenge: the middle being cut out, so as to leave nothing but the Extremities and an Axis in the middle, to which the Cap is fitted. To animate, or touch it, it must be rubb'd on a good Loadstone: that End intended for the North Point on the North Pole of the Stone, and that for the South Point on the South Pole. In rubbing it, care must be taken to begin first in the middle of the Lozenge, drawing it gently to the acute Angle of the Lozenge intended for the North; never suffering it to stay at the End when arrived there, nor drawing it back again from the End to the Middle, but rubbing it a second, and even a third time, in the same manner as the first, only beginning a little further and further from the North Point: Some say, the Stone and Needle must be so dispos'd as that the Line of the Rub be in the Direction of the Meridian. See **MAGNET**.

The *Invention* of the **COMPASS** is usually ascrib'd to *Flavio de Meliphe*, or *Flavio Gioia* a *Neapolitan*, about the Year 1502: and hence it is, that the Territory of *Principato*, which makes a part of the Kingdom of *Naples*, where he was born, bears a *Compass* for its Arms.

Others say, that *Marcus Paulus a Venetian*, making a Journey to *China*, brought back the *Invention* with him in 1260: What confirms this Conjecture, is, that at first they used the *Compass* in the same manner as the *Chinese* still do; i. e. they let it float on a little piece of Cork, instead of suspending it on a Pivot. 'Tis added, that their Emperor *Chingungus*, a celebrated Astrologer, had the Knowledge of it in 1120 Years before Christ. The *Chinese* only divide their *Compass* into 24 Points.

Fascioli relates some Verbes of *Guyot de Provence*, who lived in France about the Year 1200, which seem to make mention of the *Compass* under the Name of *Morinette*, or *Mariner's Stone*; which shew it to have been used in France near 100 Years before either the *Meliphe* or *Venetian*. The French even lay claim to the *Invention* from the Flower de Lis, wherewith all Nations still distinguish the North Point of the Card.

With as much Reason *Dr. Wallis* ascribes it to the *English*, from its Name *Compass*, whereby most Nations call it; and which he observes, is used in many Parts of *England* to signify a Circle.

The Use of the *Sea-COMPASS* is obvious. For, the Course a Ship is to sail in, being known by the Chart; and the *Compass* so placed, as that the two parallel Sides of the square Box be dispos'd according to the length of the Ship,

i. e. parallel to a Line drawn from the Head to the Stern; the Rudder is to be directed accordingly; &c. If the Course be found on the Chart between the South-West and South-South-West, i. e. South-West; to the South; turn the Stern so as that a Line from the South-West; South exactly, answer the Mark on the middle of the side of the Box. This is all that is requir'd. See **SAILING**, **CHART**, &c.

COMPASS is also an Instrument of considerable use in surveying Land, Dialling, &c. See **SURVEYING**, **DIALLING**, &c.

Its Structure, in the main, is the same with that of the *Mariner's Compass*; consisting, like that, of a Box and Needle: The principal difference consists in this, that instead of the Needle's being fitted into the Card, and playing with it on a Pivot, it here plays alone; the Card being drawn on the bottom of the Box, and a Circle divided into 360 Degrees on the Limb. See *Tab. Surveying*, Fig. 15.

This Instrument is of obvious use to Travellers, to direct 'em in their Road; and to Miners, to show them what way to dig, &c. But it has other Uses, the less easy, yet more considerable.

1. To take the Declination of a Wall by the **COMPASS**. Apply that side of the *Compass* whereon the North is mark'd along the side of the Wall; the Number of Degrees o'er which the North End of the Needle fixes will be the Declination of the Wall, and on that side; &c. If the North Point of the Needle tends towards the Wall; that Wall may be shone on by the Sun at Noon; if it fix over 50 Degrees, counting from the North towards the East, the Declination is so many Degrees from South towards the East.

But since the Needle itself declines from the North towards the West, with us, 12°; it must be noted, that to retrieve the Irregularity, 12° be always added to the Degrees shewn by the Needle, when the Declination of the Wall is towards the East: on the contrary, when the Declination is towards the West, the Declination of the Needle to be subtracted. See **DECLINATION**.

2. To take an Angle with the **COMPASS**. Suppose the Angle requir'd be DAE, (*Tab. Surveying*, Fig. 11.) apply that side of the *Compass* whereon the North is mark'd to one of the Lines AD; when the Needle rests, observe the Degrees at which its North Point stands, which suppose 80; so many Degrees does the Line decline from the Meridian.

In the same manner take the Declination of the Line AE, which suppose 215°; subtract 80° from 215, the Remainder is 135; which subtracted from 180, there will remain 45; the quantity of the Angle requir'd.

But if the difference between the Declination of the two Lines exceed 180°; in that Case, 180° must be subtracted from that difference: the Remainder is the Angle requir'd.

For the Method of laying this down on Paper. See **PLOTTING**.

Note, In measuring Angles by the *Compass*, there needs not any regard be had to the Variation; that being suppos'd the same in all the Lines of the Angles.

3. To take the *Plot* of a Field by the **COMPASS**. Suppose the Field A, B, C, D, E, (*Fig. 12.*) for the greater accuracy let there be two Sights fitted to the Meridian Line of the *Compass*, place it horizontal, and thro' the Sights look along the Side AB, or a Line parallel to it; applying the Eye to the Sight at the South-Point of the *Compass*. Draw a rough Sketch of the Field by the Eye, and on the corresponding Line enter down the Degree to which the Needle points, which suppose 90; measure the length of the Side, and enter that too, which suppose 10 Chain.

In this manner proceed with all the rest of the Sides of the Field; the Sides which suppose 70, 57, 70, 50, 94 Chains; and the Angles which suppose 30, 100, 150, 240, 300 Degrees.

To protract the Field, set down the several Angles observ'd, one after another, and subtract the lesser from the next greater: thus will you have the quantity of the several Angles, and the length of the Lines that include them. For the rest see **PLOTTING**, and **PROTRACTING**.

Note, All the Angles of the Figure taken together, must make twice as many right Angles, abating two; if no Mistake have been committed.

Acquaint **COMPASS**, differs from the common *Sea-Compass* in this; that there is fasten'd, on the round Box whereon the Card is, a broad Circle AB, (*Tab. Navigation*, Fig. 12.) one half whereof is divided into 90 Degrees, and those subdivided diagonally into Minutes; bc is an Index moveable on b, having a Sight, ba, erected thereon, and moving on a Hinge. From the upper part of the Sight, to the middle of the Index, is fasten'd a fine hypotenusial Late String de, to give a Shadow on a Line in the middle of the Index. The Circle AB is cross'd at right Angles with two Threads, from the Extremities whereof arc drawn four Lines on the inside of the round Box; there are also four Lines drawn at right Angles to each other on the Card. The round Box fitted with its Card, graduated Circle, and Index, is bung'd in the brass Hoops BE, and those Hoops fasten'd to the square Box CC.

The Use of the *Azimuth COMPASS*, is for finding the Sun's magnetical Azimuth, or Amplitude; and thence the Variation of the *Compass*.

If the Observation be for an Amplitude at Sun-rising, or an Azimuth before Noon, apply the Centre of the Index *bc* on the West Point of the Card, within the Box; so that the four Lines on the Edge of the Card, and those on the inside of the Box may meet. If the Observation be for the Sun's Amplitude setting, or an Azimuth in the Afternoon, turn the Centre of the Index right against the East Point of the Card, and make the Lines within the Box concur with those on the Card: The Instrument thus fitted for Observation, turn the Index *bc* towards the Sun, till the Shadow of the Thread *de* fall directly on the Slit of the Sight, and on the Line that is along the middle of the Index; then will the inner Edge of the Index cut the Degree and Minute of the Sun's magnetical Azimuth from the North or South.

But note, that if, when the *Compass* is thus placed, the Azimuth is less than 45° from the South, and the Index *bc* turn'd towards the Sun, it will pass off the Divisions of the Limb: the Instrument, therefore, in this Case, must be turn'd just a quarter of the *Compass*; i. e. the Centre of the Index must be plac'd on the North or South Point of the Card, according as the Sun is from you; and then the Edge will cut the Degree of the magnetical Azimuth, or Sun's Azimuth from the North, as before. See AMPLITUDE.

The Sun's magnetical Amplitude thus found, the Variation of the Needle is thus determin'd.

Being out at Sea the 15th of May 1715, in 45° N. Lat. the Tables give me the Sun's Latitude 19° North, and his East Amplitude $27^{\circ} 25'$ North: By the *Azimuth Compass*, I find the Sun's magnetical Amplitude at his rising and setting; and find he rises, w. g. between the 62d and 63d Deg. reckoning from the North towards the East Point of the *Compass*, i. e. between the 27th and 28th Deg. reckoning from the East.

The magnetical Amplitude, therefore, being here equal to the true one, the Needle has no Variation: But if the Sun at his rising should have appear'd between the 52d and 53d Deg. from the North towards the East; his magnetical Amplitude would then be between 37 and 38 Deg. i. e. about 10 Deg. greater than the true Amplitude: therefore, the Needle would vary about 10 Deg. North-Easterly.

If the magnetical East Amplitude found by the Instrument, should be less than the true Amplitude, their Difference would show the Variation of the Needle Easterly.

If the true East-Amplitude be Southwardly, as also the magnetical Amplitude and this last be the greater; the Variation of the Needle will be North-West, and vice versa.

What has been said of North-East Amplitudes, holds also of South-West Amplitudes. And what of South-East Amplitudes, holds of North-West Amplitudes. See AMPLITUDE.

Lastly, if Amplitudes be found of different Denominations, w. g. if the true Amplitude be 6° Deg. North, and the magnetical Amplitude 5° Deg. South; the Variation, which in this Case is North-West, will be equal to the Sum of the magnetical and true Amplitudes: Understand the same for West Amplitudes.

The Variation may likewise be found from the Azimuth; but in that Case, the Sun's Declination, Latitude of the Place, and his Altitude must be given, that his true Azimuth may be found. See AZIMUTH.

COMPASS OF PROPORTION. See SECTOR.

COMPASS-DIALS, are small Dials, fitted in Boxes, for the Pocket, to show the Hour of the Day by direction of the Needle; which shews how to place them right by turning the Dial about, till the Cock or Style stand directly over the Needle, and point up to the Northward; but these can never be very exact, because of the Variation of the Needle itself. See DIAL.

COMPASSES, or Pair of COMPASSES, a Mathematical Instrument, used for the describing of Circles, measuring the Distances of Points, Lines, &c. See CIRCLE, LINE, &c.

The common *Compass* consist of two Branches or Legs, of Iron, Brass, or other Metal, pointed at bottom; and a-top join'd by a Rivet, whereon they move, as on a Centre.

The Invention of *Compasses* is ascrib'd to Calvus, Nephew of *Dædalus* by his Sister, whom the Poets say, *Dædalus* kill'd out of envy.

We have *Compasses* now of various Kinds and Contrivances, accommodated to the various Uses they are intended for: As,

Hair-COMPASSES, so contriv'd within-side, as to take an Extent to a Hair's breadth.

German COMPASSES, whose Legs are a little bent outwards towards the top; so that when shut, only the Points meet.

The Points are usually made to take off, and on; and other Points for particular occasions put in their Places; as Drawing-pen Point, Dotting-wheel Point, Porte-crayon Point, &c.

Spring COMPASSES, or Dividers, made of harden'd Steel,

the Head arch'd; which, by its Spring, opens the *Compasses*; the opening being directed by a circular Screw, fasten'd to one Leg and let thro' the other, work'd with a Nut.

Clock-makers *Compasses* are very substantial, serving to cut Pastboard, Brass, &c. jointed like the common *Compasses* with a Quadrant, or Bow, as the *Spring Compasses*; only its use different; as serving here, to keep the Instrument firm at any opening.

Turn-up COMPASSES, a late Contrivance to save the trouble of changing the Points: The Body is like the common *Compasses*; towards the bottom of the Legs, without-side, are added two other Points, besides the usual ones; the one carrying a drawing Pen-point, the other a Porte-Crayon; both adjust'd so as to turn round, and so be in the way of use, or out of it, as occasion requires.

The Points of small *Compasses* are temper'd by a Lathp and Blow-pipe, heating 'em red-hot; when cold they are hard: The larger are temper'd by a charcoal Fire and a Blow-pipe, heating them to a Cherry-colour, then plunging them in Water. See TEMPERING.

COMPASSES of three Branches. Their Structure is like that of the common *Compasses*, fitting aside the Excess of a Leg: Their use is to take three Points at once; and so to form Triangles; to lay down three Positions of a Map to be copied at once, &c.

Triflection COMPASSES, the Invention of M. Tarragon, for the Triflection of Angles, geometrically. See TRIFLECTION.

The Instrument consists of two central Rules, and an Arch of a Circle of 120 Deg. immovable, with its Radius: The Radius is fasten'd with one of the central Rules, like the two Legs of a Sector, that the central Rule may be carried thro' all the Points of the Circumference of the Arch. The Radius and Rule to be as thin as possible, and the Rule fasten'd to the Radius hammer'd cold, to acquire an Elasticity: The breadth of the other central Rule, to be triple the breadth of the Radius. In this Rule to be a Groove, with a Dove-tail, to be fasten'd on it, for its Motion: In the Centre of each Rule must likewise be a Hole. See the *Journ. de Savans*, Sept. 1688.

Beam COMPASSES, consist of a long Branch, or Beam, carrying two brass *Carfers*; the one fix'd at one end, the other sliding along the Beam, with a Screw to fasten it, on occasion. To the *Carfers* may be screw'd Points of any kind; whether Steel, for Pencils, or the like. It is used to draw large Circles, take great Extents, &c.

Elliptick COMPASSES. Their use is to draw Ellipses, or Ovals of any kind: They consist of a Beam A B, (Plate Geom. Fig. 2.) about a Foot long, bearing three *Carfers*; to one of which may be screw'd Points of any kind: to the bottom of the other two are riveted two sliding Dove-tails, adjust'd in Grooves made in the cross Branches of the Beam. The Dove-tails having a Motion every way, by turning about the long Branch, go backwards and forwards along the Cross: so that when the Beam has gone half way about, one of these will have mov'd the whole length of one of the Branches; and when the Beam has got quite round, the same Dove-tail has got back the whole length of the Branch: Understand the same of the other Dove-tail.

Note, the Distance between the two sliding Dove-tails, is the Distance between the two *Feet* of the Ellipsis; so that by changing that distance, the Ellipsis will be rounder or flenderer. Under the Ends of the Branches of the Cross, are placed four Steel Points to keep it fast.

The use of this *Compass* is easy; by turning round the long Branch, the Ink, Pencil, or other Point, will draw the Ellipsis requir'd. Its Figure shews both its Use and Construction.

Cylindrick and Spherick COMPASSES, used in taking the Diameter, Thickness, or Calliber of round, or cylindrick Bodies; as, Cannons, Pipes, &c. They consist of four Branches join'd in a Centre; two of 'em circular, two flat, a little bent at the Ends.

To use 'em, one of the flat Points is put within the Cannon, the other without: the two opposite Points shew the Thickness. See CALLIBER.

There are also *Spherick Compasses*, differing in nothing from the common ones, but that their Legs are arch'd; serving to take the Diameters of round Bodies, &c.

Proportional COMPASSES, consist of two Branches, (Plate Geom. Fig. 3.) each pointed at either end with Steel: the length of the Branches is cut thro', for a Carfor to slide up and down; in the middle of which Carfor is a Screw, serving to join the Branches, and to fix 'em at any Point requir'd.

On the one Leg are Divisions, serving to divide Lines into any number of equal Parts, for reducing of Figures, &c. On the other are Numbers, for the inscribing any regular Polygon in a Circle propos'd.

The Use of the first is easy: Suppose, w. g. a right Line to be divided into three equal Parts; push the Carfor till the Screw be just on the Figure 3; where fixing it, take the length of the given Line between the longest Parts of the Legs: the distance between the two shortest, will be

one third of the given Line. In the same manner may the Line be divided into another number of Parts.

For the Use of the Line of Polygons: Suppose, *v. g.* a Pentagon requir'd to be inscrib'd in a Circle; push the Cursor till the middle of the Screw be against 5, the number of Sides in a Pentagon; between the shortest Parts of the Legs take the Semidiameter of the Circle: the Legs thus open'd, the distance between the Points of the longest Parts, will be the side of the Pentagon to be inscrib'd in the Circle. And thus for a Figure of any other number of Sides.

Proportional COMPASSES with the Sector Lines. The Structure of these is like that of the common *Proportional Compasses*, only a little nicer, that it needs no particular Description. See *Plane Geometry*, Fig. 4.

The Lines on the first Face, are the Line of Lines, mark'd *Lines*: it is divided into 100 unequal Parts, every tenth number'd: And the Line of Chords, which goes to 60° , and is mark'd *Chords*. On the other Face are a Line of Sines to 90° , and a Line of Tangents to 45° . On the first side are the Tangents from 45° to $71^\circ.34'$; on the other Scales from 0° to $70^\circ.30'$.

For the Use of these Compasses. 1. To divide a Line into any number of equal Parts, lets than 100: Divide 100 by the number of Parts requir'd; slip the Cursor till the Line on the sliding Dove-tail be against the Quotient on the Line of Lines: Then, the whole Line being taken between the Points of the *Compasses* most remote from the Centre; the Aperture of the other will be the Division requir'd. 2. A right Line given, supposed to be divided into 100 Parts, to take any number of those Parts: Slip the Line on the sliding Dove-tail to the number of Parts requir'd: the whole Line being taken between the Points furthest from the Centre, the Aperture of the other two will include the number of Divisions requir'd. 3. The Radius being given, to find the Chord of any Arch under 60° : Slip the Line on the sliding Dove-tail to the Degrees requir'd on the Line of Chords: the Radius being taken between the Points furthest from the Centre of the Cursor; the Aperture of the other Line will be the Chord requir'd; provided the number of Degrees be greater than 59 : if it be less, the Aperture taken from the Radius will leave the Chord requir'd. 4. If the Chord of an Arch under 60° be given, and the Radius requir'd; slip the Line on the Dove-tail to the Degrees given on the Line of Chords: the given Chord being taken between the two Points next the Cursor, the Aperture of the other will be the Radius requir'd. 5. The Radius being given, to find the Sine of any number of Degrees. Slip the Line on the Dove-tail to the Degree on the Line of Sines whose Sine is requir'd: The Radius taken between the Points furthest from the Cursor; and the Aperture of the other will give the Sine of the Angle requir'd. But if the Sine sought be less than 50° , the Difference of the Apertures of the opposite Points, will be the Sine requir'd. 6. The Radius being given, to find the Tangent of any number of Degrees under 71 : If the Tangent requir'd be under $26^\circ.30'$, slip the Line on the Dove-tail to the Degree proposed on the Side of the *Compass*: the Radius taken between the Points furthest from the Cursor; the Aperture of the others will be the Tangent of the Degrees requir'd: If the Tangent requir'd be above $26^\circ.30'$, but under 45° , the Line on the Cursor must be slip'd to the Degrees given on the Tangent-Line; then the Radius being taken between the Points furthest from the Cursor; the Aperture of the others will be the Tangent. If the Tangent requir'd be greater than 45° , but less than $56^\circ.20'$; slip the Notch on the Tangent-side of the turn'd Cheek to the Degree 0 in the Tangent-line on the Side of the *Compass*: the Radius taken between the Points furthest from the Cursor; the difference between the Aperture of the other, and these, added together, will be the Tangent requir'd. Thus, for the Tangents of other Degrees under 71 . After the like manner may the Secant of any number of Degrees under 71 be found.

Lapidary's COMPASSES, a piece of Wood in form of the Shaft of a Plane, cleft a-top, as far as half its length; wherewith they measure the Angles, &c. of the precious Stones as they cut 'em.

In the Cleft is a little brass Rule, fasten'd there, at one end, by a Pin; but so as it may be mov'd in the manner of a Bevel: with this kind of Square they take the Angles of the Stones, laying 'em on the Shaft as they cut them.

COMPATIBLE, something that may suit, or consist with another. See INCOMPATIBLE.

COMPENDIUM, an Abstrac, Epitome, or Reduction of a large Matter into a little compas. See EPITOME.

COMPENSATION, an Action whereby any thing is admitted as a Parallel, or an Equivalent to another.

Compensation, in the Civil Law, is a kind of Right, whereby a Debtor pursu'd by his Creditor, for the Payment of a Debt, demands that the Debt may be compensated with what is owing him by the Creditor.

Compensation is equivalent to Payment.

COMPETENCE, in Law, the Authority, or Right, of a

Judge for taking Cognizance of any certain Matter. See JURISDICTION.

COMPITALITIA, Feasts held among the Antients in honour of the *Lares*. See FEAST, and *LARES*.

The Word comes from the Latin *Complum*, a Cross-way; by reason the Feast was held in the Meetings of several Roads.

This Feast is more ancient than the building of *Rome*. *Dionysius Halicarnassens* and *Pliny*, indeed, say, they were instituted by *Servius Tullius*; but this only signifies that they were then introduc'd into *Rome*.

Notwithstanding what *Dion* relates, that the *Compitalitia* were celebrated a little after the *Saturalia*; and that the *Roman* Calendar fixes 'em on the 12th of *January*; it appears that they had not any fix'd Day; at least, not in the time of *Varro*, as is observ'd by *Cajaubon*.

The Feast being thus moveable, the Day wherem it was to be held, was proclaim'd every Year. It was ordinarily held on the 4th of the Nones of *February*, *i. e.* on the 2d of that Month.

Macrobis observes, that they were held not only in honour of the *Lares*, but also of *Mama*, *Madone*. The Priests who officiated at 'em were Slaves and *Liberis*; and the Sacrifice a Sow.

They were re-establish'd, after a long neglect, by *Tarquinius* the Proud; and on occasion of an answer of the Oracle, *That they should sacrifice Heads for Heads*, *i. e.* for the Health and Prosperity of each Family, Children were ordain'd to be sacrificed: But *Brutus*, after expelling the Kings, in lieu of those barbarous Victims, substituted the Heads of Gadlick and Poppy; thus satisfying the Oracle which had enjoin'd Heads, *Capita*.

During the Celebration of this Feast, each Family placed at the Door of their Hoast, the Statue of the Goddess *Mania*: They also hung up at their Doors Figures of Wood, representing Men and Women; accompanying them with Supplications that the *Lares* and *Mania* would be contented with those Figures, and spare the People of the House.

As for Slaves, in lieu of the Figures of Men, they offer'd Balls, or Fleeces of Wool. *Servius Tullius* order'd, that the Slaves who assisted at the *Compitalitia*, should be free during the whole Time of the Feast. *Augustus* order'd the Statues of the *Lares*, placed in the Cross-way, to be adorn'd with Flowers twice a Year.

COMPLAINANT, in Law, a Plaintiff, or one who prefers a Complaint against another, to be reliev'd by Justice, or Equity. See PLAINTIFF.

COMPLEMENT, in Geometry, is what remains of a Quadrant of a Circle, or of 90 Deg. after a certain Arch has been retrench'd from it. See ARCUS.

Thus, if an Arch or an Angle be 30 Deg. wofay its Complement is 60 Deg. since $60 + 30 = 90$.

The Arch and its Complement are Relatives; and are only used with regard to each other.

The Sine of the Complement of an Arch, is call'd the *Cofine*; of a Tangent, the *Cotangent*, &c. See CO-SINE, CO-TANGENT, &c.

We sometimes also say, the *Complement of an Angle*; meaning so much as it wants of a right Angle, or 90 Deg. See ANGLE.

COMPLEMENT of the *Course*, in Navigation, is the Number of Points the Course wants of 90 Deg. or 8 Points, *viz.* of a Quarter of the *Compass*. See COURSE.

COMPLEMENT, in Astronomy, is used for the distance of a Star from the Zenith, or the Arch comprehended between the Place of a Star above the Horizon, and the Zenith. See ZENITH, STAR, &c.

COMPLEMENT of the *Curtain*, in Fortification. The inner Polygon consists of the *Curtain* and two *Demigorges*: The *Complement of the Curtain*, therefore, to the inner Polygon, is the *Demigorge*. See CURTAIN, and DEMIGORGE.

COMPLEMENT of the *Line of Defence*, is the Remainder of the Line of Defence, after you have taken away the Angle of the Flank. See DEFENCE.

COMPLEMENTS of a *Parallelogram*, are the two lesser *Parallelograms*, made by drawing two right Lines parallel to each side of the Figure, thro' a given Point in the Diagonal. Such are the *Parallelograms* C and M, (*Plane Geometry*, Fig. 5.)

'Tis demonstrated, that in every *Parallelogram*, the *Complements* C and M are equal: For $Z + C + O = R + M + X$; as making up on each side the great Triangle, made = by the Diagonal; of which, $Z = R$, and $O = X$, (because the Diagonal makes them so;) wherefore, the remaining *Parallelogram* C = M.

COMPLEX, a Term ordinarily used as synonymous with *Compound*; tho, strictly speaking, there be some difference between 'em.

Complex may be applied where a thing contains divers others, or consists of divers Parts, not really distinct from one another; but only imaginarily, or in our Conception. — 13

In this Sense, the Soul may be said to be *Complex*, in respect of the Understanding and Will, which are two things our Reason alone distinguishes in it. See **COMPOUND**.

A *Complex Term*, or *Idea*, is a Term or Idea compounded of several *simple*, or *incomplex* ones. See **TERM**, and **IDEA**.

Thus, in the Proposition, *A just God cannot leave the Crime unpunish'd*; the Subject of this Proposition, *vis. a just God*, is a *Complex Term*, or stands for a *Complex Idea*, compos'd of two *simple*, or *incomplex* ones, *vis. God and just*.

A *Complex Proposition*, is either that which has at least one of its Terms *complex*, as that just mention'd; or such a one as contains several Members, as causal Propositions.

Thus, *e.g. If God be almighty, the Wicked can never escape him*. See **PROPOSITION**.

Mr. Locke observes, that the Mind be perfectly passive in the Formation of simple Ideas; yet it exerts several Actions of its own about them, when once form'd: and that by this means it is, they become the Materials and Foundation out of which all our Knowledge is framed. See **KNOWLEDGE**.

The five Acts are chiefly three, *vis. the combining of several simple Ideas into one compound one*: And thus it is that all *Complex Ideas* are made.

1^{stly}, It brings two Ideas, whether *simple* or *complex*, together; sets 'em by each other, and so views 'em, without uniting 'em into one: And thus it gets its Ideas of Relation. See **RELATION**.

2^{ndly}, It separates several Ideas from all other Ideas that accompany them in their real Existence: And thus all its general Ideas are form'd. See **GENERAL**, and **ABSTRACT**.

As simple Ideas are observ'd to exist in several Combinations united together; so the Mind may consider them as united, not only as they are really united in external Objects, but as it self has join'd them: Ideas thus made up of several ones put together, we call *Complex*; as Man, Beauty, Army, Gratitude, &c. *Complex Ideas*, however compounded and decomposed, may their Number be infinite, and their Variety endless, may be all reduc'd under these three Heads, *vis. Modes, Substances, and Relations*; which see under their proper Heads, **MODE**, **SUBSTANCE**, and **RELATION**.

COMPLEXIO, **COMPLEXION**, in Metaphysics, the Union or Coalition of several Things different from each other; either really, or only in our Conception. See **COMPLEX**.

COMPLEXIO, in Logicks, is sometimes applied to the second Operation of the Mind, *vis. the Judgment*; consider'd as it affirms or denies any thing: such Affirmation, &c. importing a Combination of several things.

COMPLEXIO, is sometimes also us'd by Logicians in the Sense of **Dilemma**. See **DILEMMA**.

COMPLEXIO, in Rhetoric, &c. is a Figure including a Repetition, and a Conversion at the same time; the Sentence both beginning and ending with the same Word.

Thus *Tully, Quis legem tulit? Rullus. Quis majorem partem populi suffragiis privavit? Rullus. Quis civitatis profecit? Rullus*. See **CONVERSION**, and **REPETITION**.

COMPLEXION, in Physics, is us'd for the Temperature, Habitudo, or natural Disposition of the Body. See **CONSTITUTION**.

Some Philosophers distinguish four general and principal Complexions in Man, *vis. the sanguine Complexion*, which, according to them, answers to the Air; having the Qualities thereof, as being hot and moist. It takes its Name from *Sanguis*; because the Blood is there suppos'd to be predominant. See **SANGUINE**.

The *phlegmatic Complexion* takes its Name from the *Pituita*, or *Plegma*, in which it abounds, and corresponds to Water; being cold, and moist. See **PHLEGMATIC**.

The *bilious*, or *choleric Complexion*, takes its Name from the Bile, or Choler; it is suppos'd of the Nature of Fire, hot and dry. See **CHOLERIC**.

Lastly, the *melancholy Complexion* partakes of the Nature of Earth, being cold and dry. See **MELANCHOLY**.

COMPLEXUS, or *Par COMPLEXUS*, in Anatomy, is a Pair of Muscles, arising with six thin small Tendons from the transverse Processes of the *Vertebrae* of the Neck and Thorax; growing fleshy in its Ascent; again becoming tendinous about the middle; and again fleshy, where it is insert'd laterally into the upper Part of the *Oci Occipitis*, and the hind Part of the *Processus Mastoidei*.

When they act together, they pull the Head directly backwards, but either of 'em acting alone, draws it obliquely back.

COMPLICATION of Diseases, a Mixture, or Junction of several Diseases; especially where they have any affinity to one another; as the Dropsy, Asthma and Jaundice happening together. See **DISEASE**.

What perplexes the Physicians, is, when with a Fever there is a *Complication* of some other Disorder. See **FEVER**.

COMPONE, or **COMPONED**, or *Gobony*, in Heraldry. A *Borderure Compone*, is that form'd or compos'd of a row of angular Parts, or Chequers of two Colours; as in the Figure adjoining.

COMPOSED, or **COMPOS'D**, is also us'd in the general for a *Border*, a *Pale* or a *Fess*, compos'd of two different Colours, or Metals, dispos'd alternately, separated and divided by *Filles*, excepting at the Corners; where the *Junctures*, are made in the Form of a *Gobon-foot*.

COMPOSITE ORDER, in Architecture, the last of the five Orders of Columns; so called, because its Capital is compos'd out of those of the other Columns. See **ORDER**.

It borrows a *Quarter-round* from the *Tuscan*, and *Doric*; a double Row of Leaves, from the *Corinthian*; and Volutes from the *Ionic*: Its *Cornic* has simple *Modillions* or *Dentils*. See **CAPITAL**.

The *Composite* is also call'd the *Roman* and *Italic Order*; as having been invented by the *Romans*; conformably to the rest, which are denominated from the People among whom they had their rise. See its Figure in *Tab. Architecture*.

Most Authors rank this after the *Corinthian*; either as being the richest, or as the last that was invented: *Scamozzi* alone places it between the *Ionic* and *Corinthian*; out of a view to its delicacy and richness, which he esteems inferior to that of the *Corinthian*; and therefore makes no scruple to use it under the *Corinthian*: wherein he is follow'd by *M. le Clerc*. See **CORINTHIAN**.

The Proportions of this Order are not fix'd by *Vitruvius*; he only marks its general Character, by observing that its Capital is compos'd of several Parts taken from the *Doric*, *Ionic*, and *Corinthian*: He does not seem to regard it as a particular Order; nor does he vary it at all from the *Corinthian*, except in its Capital. In effect, it was *Serlio* who first added the *Composite* Order to the four of *Vitruvius*, forming it from the Remains of the Temple of *Bacchus*, the Arches of *Titus*, *Septimius*, and the *Goldsmiths*: Till then, this Order was esteem'd a Species of the *Corinthian*, only differing in its Capital.

The Order being thus left undetermin'd by the Antients, the Moderns have a kind of a Right to differ about its Proportions, &c. *Scamozzi*, and after him *M. le Clerc*, make its Column 19 Modules and an half; which is less by half a Module than that of the *Corinthian*: as, in effect, the Order is less delicate than the *Corinthian*. *Vignola* makes it 20; which is the same with that of his *Corinthian*: but *Serlio*, who first form'd it into an Order, by giving it a proper Entablature and Base, and after him *M. Perrault*, raise it still higher than the *Corinthian*.
