Emancipation by Marriage, in France, gives a Power of marrying again, without the Father's Consent, tho' under Age: But among the Romans, *Cujas* tells us, a Widow, under 25 Years of Age, tho' *emancipated* by her former Marriage, return'd into the Power of her Father, and might not marry a second Time without his Consent.

Du Cange observes, that the Word *Emancipation* was also used in the Monasteries, in speaking of Monks, promoted to any Dignity, or removed from under the Power of their Superiors: As also in speaking of Monasteries, Chappels, &c. themselves, when exempted by the Pope, from the Jurisdiction of the Ordinary.

The Word is form'd of the Latin, *ex*, of, and *Mancipium*, a Slave.

EMASCULATION, the taking from a Male thofe Parts which make the Character of the Sex. See CASTRATION.

EMAUX de l'Esu, in Heraldry, the Metal and Colours of a Shield, or Scutcheon. See METAL and COLOUR.

EMBALMING, the Opening a dead Body, taking out the Intestines, and filling their Place with odoriferous and delicate Drugs, and Spices, to prevent its putrefying.

The Word is form'd from *Balm*, which was a principal Ingredient in the *Embalming*s of the ancient Egyptians. See BALM.

The Body of *Jacob* was 40 Days in *Embalming* in Egypt. See Genesis 50. v. 5. *Mary Magdalen*, and *Mary* the Mother of *James*, bought Perfumes to *Embalme* Jesus. See S. *Matthew*, Sec. *John* King of France, dying at London in 1364, his Body was *Embalmed*, and sent to France, and there interr'd at St. Dennis. *Dr. Tillet*. For the Manner of *Embalming* among the Egyptians, See *Treyner's* Collection, *Tom* 1.

The Peruvians had likewise a Method of preserving the Bodies of their *Yucas*, or Kings, *Embalma'd*. *Garcilasso de la Vega*, takes their main Secret to have been the burying of the Corps in the Snow, to dry them; and afterwards applying a certain Bitumen, mention'd by *Aeolus*, which kept them as entire, as if they had been still alive.

Dr. Greav, in his *Museum Regalis Societatis*, is of Opinion, that the Egyptians boil'd their Bodies in a large Caldron, with a certain Kind of liquid Balm: His Reason is, that in the Mummies preserv'd in the Collection of the Royal Society, the Balm has penetrated not only the fleshy and soft Parts, but even the very Bones; so, that they are all as black as if they had been burnt. See MUMMY.

EMBARCADERE, in Commerce, a Spanish Term, much used along the Coasts of America, particularly those on the Side of the South Sea.

The Word signifies a Place that serves some other considerable City further within Land, for a Port, or Place of Shipping, i. e. of *embarking* and *disembarking* Commodities. Thus *Colao*, e. g. is the *Embarcadere* of *Lima*, the Capital of Peru: And *Africa* the *Embarcadere* of *Poroff*. There are *Embarcaderes* 40, 50, and even 60 Leagues off the City which they serve in that Capacity.

EMBARGO, a Restraint, or Prohibition; imposed by a Sovereign, on Merchant Vessels; to prevent their going out of Port; sometimes their coming in; and sometimes both, for a limited Time. *Embargo's* are usual in Time of War; in Apprehensions of Invasions, &c.

One great Occasion of *Embargo's* is, that the Government may make Use of the Merchant Vessels, with their Equipage, &c. in Armaments, Expeditions, Transporting of Soldiers, &c. *Embargo's* are of the worst Consequence to Commerce imaginable.

EMBARRAS, a French Term, tho' now naturalized. It signifies a Difficulty, or Obstacle, which perplexes or confounds a Person, &c.

The *Embarras* was very great in the Road, by Reason of the Army which desired therein. A Man lives more in two Days of Leisure, and feels more of Life therein, than in two Years of Hurry and *Embarras*. *Cheu de Mer*. It discovers a Decay of the Passion, when the Lovers are under an *Embarras* to find themselves alone. *La Bruyere*.

The Majesty, the Dignity of Kings, is *Embarrassing*, *Embarassing*; by Reason it obliges them to have a certain Air, and certain Manners suitable to their Rank; which are scarce had without a continual Attention, which must needs fatigue, and *Embarasse* a Man.

The Majesty of *Louis XIV.* is said not to have been any wife *Embarassing*: It was natural to him.

EMBASSADOR, a public Minister, sent from one Sovereign Prince, as a Representative of his Person, to another. See MINISTER.

In Latin, we usually call him *Legatus*, or *Orator*; tho' 'tis certain, the Word *Embassador*, with us, has a much more extensive Signification, than that of *Legatus* among the Romans: And, excepting that they are both under the Protection of the Law of Nations, there is scarce any Thing in common between them. See LEGATUS.

Embassadors are either Ordinary or Extraordinary.

An *Embassador in Ordinary*, is he who resides stantly in the Court of another Prince, to maintain a mutual good Understanding, look to the Interests of his Prince, and transact such Affairs as may be occur.

Embassadors in Ordinary, are but of modern Invention: 'Tis not above 200 Years ago since they were first heard of: Till then, all *Embassadors* were Extraordinary, and retired as soon as they had dispatched the Affair they were sent upon. See ORDINARY.

An *Embassador Extraordinary*, is he who is sent to a Prince's Court on some particular, and emergent Occasion; as to conclude a Peace, or Marriage; make a Complement, or the like. Indeed, there is no essential Difference between Ordinary and Extraordinary; their Errand is all: And they equally enjoy all the Privileges and Prerogatives which the Laws of Nations decrees.

At Athens, the *Embassadors* from foreign Princes and States, mounted the Tribune, or Pulpit, of the public Orators,

Orators, and there open'd their Commission, and acquainted the People with their Business and Errand: At Rome, they were introduced to the Senate, and deliver'd their Commission to them: Among us, they make their Address immediately and solely to the King.

Atheni, and *Sparta*, says M. *Tourneil*, when in all their Glory, were never so much delighted, as to see, and hear a Number of *Embassadors* in their Assemblies, suing for the Protection, or Alliance of the one or the other State. It seem'd to them the noblest Humage that could be paid them; and that State, which received the most Embassies, was judg'd to have the Advantage over the other.

The Name of *Embassador*, *Cicero* observes, is sacred and inviolable; *Non modo inter Sociorum Jura, sed etiam inter Hostium Tela incoluntur.* In *Ver. Orat. VI.* *David*, we read, made War against the *Ammonites*, to revenge the Injury done his *Embassadors*. *Kings J. II. C. 29.* *Alexander* put the Inhabitants of *Tyre* to the Sword, for affronting his *Embassadors*; and the Youth of *Rome*, for affronting the *Embassadors* of *Valens*, were deliver'd up into their Hands, to be punished at Discretion.

The *Embassadors* of Kings should never attend at any public Assemblies, Marriages, Interments, or other Solemnities, unless their Masters have some Interests therein; nor must they go into Mourning, or the like, on any Occasions of their own, by Reason they represent the Persons of their Princes, and must conform and keep Pace with him. See *Stanger in Verb. Embassador.*

The Word is derived from the corrupt Latin *Ambofciator*, form'd of *Ambofcius*, an old Word borrow'd from the *Gaulish*, signifying Servant, Ciceron, Domestic, or Officer: Such is the Origin given by *Borel*, *Menage*, and *Chifflet*, after *Salsavius* and *Spelman*. But the Jesuits of *Antwerp* reject this Opinion, in the *Alta Senti. Mart. Tom. II. pag. 128.* by Reason the *Gaulish Ambofci* had been discontinued long enough e're the Latin *Ambofcius* was ever thought of: Which, however, is not strictly true; the Word *Ambofcius* occurring in the *Salic Law, Tit. 19.* and being form'd of *Ambofci*, by pronouncing the *t* as in *alio*; and *Ambofci* came from *Ambofci*.

Lindbroeck derives the Word from the German, *Ambacht*, Work; as signifying a Person hired, to perform a Work, or Legation: And *Chorier*, meeting with the same Word in the Laws of the *Alb. Acharifius*, gives into the Sentiment of *Lindbroeck*. *Alb. Acharifius* in his *Italian Dictionary* derives it from the Latin *Ambulare*, to walk, or travel.

And, lastly, the Jesuits of *Antwerp*, in the Place last cited, observing that the Word *Ambofcius* occurs in the Laws of the *Bourguignons*, derive thence the Words *Ambasciatore*, and *Ambasciatore*, as signifying Envoys, or Agents, from one Prince, or State, to another. Their Sentiment then is, that among the *Barbarians*, who overspread *Europe*, *Ambofci* signified the Discourse of a Person who stoops or humbles himself; being form'd from the same Root with *abaissier*, viz. of *au*, or *am*, and *bat*.

EMBASSY, *Legatio*, a Mission from one Sovereign Prince, or State, to another, of some able experienced Person, to negotiate some Affair, in Quality of *Embassador*.

Pa. Dumesol observes, that under the ancient *French Kings*, their *Embassies* consisted of a Body, or Number of Persons, join'd together in Commission, and who compos'd a Kind of Council: Something like which is still retain'd at Treaties of Peace. Thus the *Embassy of Nimeguen*, for the Peace, consisted of three Plenipotentiaries; that of *Utrecht* of two, &c. See *EMBASSADORS*.

We likewise read of *Embassadrasses*: Madam the Marchale de *Quebriant*, *Wicqnesfort* observes, was the first, and perhaps the only Woman, sent by any Court in *Europe*, in Quality of *Embassadrass*. *Mott. L. IV. Vie. & Henry IV.* tells us, that the King of *Perfia* sent a Lady of his Court on an *Embassy* to the Grand Signior, during the Troubles of the Empire.

EMBATELED, a Term in Herakry, when the Out-line of any Ordinary is of this Figure;

which represents the Battlements of a Wall, or Castle.

EMBER-, or EMBRE-Weeks, are those wherein the *Ember-* or *Embre-Days* fall.

In the Laws of King *Affree*, and those of *Caesus*, they are called *Ymbren*, that is, Circular Days, from whence they are corrupted into *Ember-Days*: By the Canonists they are called, *Quatuor Anni Tempora*, the four Cardinal Seasons, on which the Circle of the Year turns.

They are the *Wednesday*, *Friday*, and *Saturday*, after *Quadragesima Sunday*, after *Whitsunday*, after *Holy-Rood Day* in *September*, and after *St. Lucies Day* in *December*: Which four Times answer well enough to the four Quarters of the Year, *Spring*, *Summer*, *Autumn*, and *Winter*.

Mr. *Somner* thinks they were Feasts, instituted to beg God's Blessings on the Fruits of the Earth.

These *Ember-Weeks* are now chiefly taken Notice of, on Account of the Ordination of Priests and Deacons; because the Canon now appoints the *Sundays*, next succeeding the *Ember Weeks*, for the solemn Times of Ordination. Though the Bishops, if they please, may ordain on any *Sunday*, or Holiday. See *ORDINATION*.

EMBLEM, a Kind of painted *Ænigma*; which, representing some obvious History, with Reflections underneath, instructs us in some Moral Truth, or other Matter of Knowledge.

Such is that very significant Image of *Secula*, holding his Hand in the Fire: With the Words, *Agere & pati fortis Romanum est.* To do and suffer courageously is Roman.

The *Emblem* is somewhat plainer, and more obvious than the *Ænigma*. See *ÆNIGMA*.

Gale defines it an ingenious Picture, representing one Thing to the Eye, and another to the Understanding.

The *Emblems* of *Alicius* have been in as much Reputation among the more learned, as those of *Quarles* among the Vulgar.

The Word is pure *Greek*, *ἔμβλημα*, form'd of the Verb, *ἔμβλλω*, to cast in, to insert. *Suetonius* relates, that *Tiberius* made the Word be erased out of a Decree of the *Roman Senate*, because borrow'd from another Language.

The *Greeks* give the same Name *ἔμβλημα*, to insaid, or Mosaic Works, and even to all Kinds of Ornaments of Vases, Moveables, Garments, &c. And the *Latins* using *Emblema*, in the same Sense: Accordingly, *Cicero* reproaching *Verres* with the Statues, and fine wrought Works he had plunder'd from the *Sicilians*, calls the Ornaments fix'd thereon (and which on Occasion might be separated from them) *Emblemata*. Add, that the *Latin Authors* frequently compare the Figures and Ornaments of Discourse to these *Emblemata*: Thus, an ancient *Latin Poet*, praising an Orator, says, that all his Words were ranged like the Pieces in Mosaic.

Quam lepide mæni composite, ut referre omnes, Indo pavimento, atque Emblemate Vermiculato.

We don't use our *English* Word *Emblem* in this Sense; tho' the ancient *Jews* consult'd, always retain the Latin *Emblema* to express such Ornaments, by Reason the *Greek ἔμβλημα*, literally denotes any Thing applied, or added to a Body by Way of Enrichment.

With us, *Emblem* ordinarily signifies no more than a Painting, Basso Relief, or other Representation, intended to hold forth some Moral, Political, or Academical Instruction.

That which distinguishes an *Emblem* from a *Devise*, is, that the Words of an *Emblem* have a full compleat Sense of themselves; may, all the Sense and Signification which they have with the Figure.

But there is a yet further Difference between *Emblem* and *Devise*: For a *Devise* is a Symbol affected, or determined to some Person, or that expresses something which concerns him particularly; whereas an *Emblem* is a Symbol that regards all the World alike. These Differences will be apparent, from comparing the *Emblem* just quoted, with the *Devise* of a Candle lighted; and the Words, *jurando confusor*, I waste my self in doing good. See *DEVISE*.

EMBLEMMENTS, a Term strictly signifying the Profits of Lands down; tho' sometimes used more largely for any Profits arising, and growing naturally from the Ground; as *Grass*, *Fruit*, &c.

If a Tenant, for Life, sow the Land, and die; his Executor shall have the *Emblements*, and not be in Reversion. But if the Tenant, for Years, sow the Land, and before Severance the Term expires, then the Lessor, or be in Reversion, shall have the *Emblements*, and not he the Lessee.

EMBOLISM, in Chronology, *Intercalation*. As the *Greeks* made use of the Lunar Year, which is only 354 Days; in Order to bring it to the Solar, which is 365 Days; they had every two or three Years an *Embolimus*, i. e. they added a thirteenth Lunar Month every two or three Years; which additional Month they called *Embolimus*, because inserted or intercalated. See *YEAR*.

The Word *Embolimus* comes from the *Greek, ἔμβολιμος*, form'd of *ἔμβλλω*, to insert. See *EMBOLISMOS*.

EMBOLISMIC, *Intercalary*. The Term is chiefly used for the additional Months, which the Chronologists insert to form the Lunar Cycle of 19 Years. See *INTERCALARY*.

For the 19 Solar Years, consisting of 6939 Days, and 18 Hours; and the 19 Lunar Years, only making 6726 M m *

Days: It was found necessary, in order to render the 19 Lunar Years equal to the 19 Solar, which make the Lunar Cycle of 19 Years, to intercalate or insert 7 Lunar Months, containing 209 Days; which, with the four Bifextile Days, happening in that Interval, make 213 Days, and the whole, 6939 Days. See CYCLE.

By Means of these seven *Embolismic*, or additional Months, the whole 6939 Days and 18 Hours of the Solar Years, are employed in the Calendar. See MONTH.

In the Course of 19 Years, there are 228 common Moons, and seven *Embolismic* Moons. Their Distribution is thus: Every 3d, 6th, 9th, 11th, 14th, 17th, and 19th Year are *Embolismic*, and consequently contain 384 Days a-piece. And this was the Method of computing Time among the *Greeks*; when they used the *Embolocaecestrides*, or Cycle of 19 Years. But they did not keep regularly to it, as the *Jews* seem to have done.

The *Embolismic* Months, like other Lunar Months, are sometimes 30 Days, and sometimes only 29. See YEAR.

The *Embolismic Epacts*, are those between XIX and XXIX; which are thus called, by Reason with the Addition of Epact XI, they exceed the Number XXX: Or rather, because the Years, which have these Epacts, are *Embolismic*; having thirteen Moons a-piece, whereof the 13th is the *Embolismic*. See EPACT.

EMBOLUS, the moveable Part of a Pump, or Syringe; called also the *Piston*, and popularly the *Sucker*. See PISTON: See also PUMP and SYRINGE.

The Pipe, or Barrel of a Syringe, &c. being close shut; the *Embolus* cannot be drawn up without a very considerable Force; which Force removed, the *Embolus* returns again with Violence. This Phenomenon the *Aristotelians* attribute to Nature's Abhorrence of a Vacuum. See VACUUM.

But the modern Philosophers finding that in an exhausted Receiver, the *Embolus* is easily drawn up, tho' the Orifice be stop'd; prove that 'tis the Pressure of the Atmosphere, on the external Parts of the *Embolus*, that makes the Difficulty of drawing it up. See AIR, ATMOSPHERE, SUCTION, &c.

EMBOSSING, or IMBOSSING, the Art of forming, or fashioning Works in Relief, whether they be call, or moulded, or cut with the Chisel, &c. See RELIEVO, STATUE, FOUNDERY, &c.

Embossing is one great Part of Sculpture; being that which has to do with Figures rais'd, or prominent from the Plane or Ground: The other Part, which makes Figures, &c. that are indented, or cut in below the Ground, is call'd *Engraving*. See SCULPTURE and ENGRAVING.

EMBRACEOR, he who, when a Matter is in Trial between Party and Party, comes to the Bar with one of the Parties, (having receiv'd some Reward so to do) and speaks in the Case, or privately labours the Jury, or stands there to over-look, awe, or put them in Fear.

The Penalty hereof is 20 Pound, and Imprisonment at the Justices Discretion.

EMBRASURE, in Architecture, the Enlargement made of the Gap, or Aperture of a Door, or Window, on the inside the Wall. See DOOR.

Its Use is to give the greater Play, for the opening of the Door, Wicket, Casement, &c. or to take in the more Light.

The *Embrasure* coming sloping inwards, makes the inner Angles obtuse. When the Wall is very thick, they sometimes makes *Embrasures* on the outside.

EMBRASURES, in Fortification, are the Holes, or Apertures, thro' which the Canons are pointed; whether in Casemates, in Batteries not cover'd with Gabions, or in the Parapets of Walls.

The *Embrasures* are generally about 12 Foot a-part, from six to nine Foot wide without, and two or three within. Their Height from the Plat-form is usually three Foot on the inside, and a Foot and half on the outside: That so the Muzzle, on Occasion, may be sunk, and the Piece brought to shoot low.

They are particularly called *Canonieres*, when big enough to pass the Mouth of a Canon through; and *Mesurriers*, when only big enough for Muskets.

When the Parapet is so low, that the Canon may shoot without *Embrasures*, it is said to shoot *en barbe*.

EMBROCATION, in Pharmacy, is the applying of Remedies, as Oils, Spirits, Decoctions, and other Liquids, by sprinkling, or even rubbing them on the Part affected; called also *Irrigation*.

Embrocations are only a Kind of Lotions. See LOTION.

Embrocations are now little used, except in Diseases of the Head. If the Pain do not abate, make an Embrocation of Cows Milk, lukewarm, on the Head. *Degori*. Make an *Embrocation* on the Part with Unguent. *Dialtheae*, or Oil of Lilly very hot. *Drovis*.

The Pumping used in Natural Baths is properly an *Embrocacion*.

The Word is form'd from the *Greek* *σπιν*, *Irrigo*, *madsfacio*, I sprinkle, wet, macerate.

EMBROIDERY, the Enriching of a Cloth, or Stuff, by Working divers Figures thereon, with Needle and Thread of Gold, or Silver. See BROCADE.

That done with Silk, Flax, or the like, is not now call'd *Embroidery*; tho' anciently, and properly, the Word denoted all Kinds of figuring, or flourishing.

The chief Use of *Embroidery* is in Church Vestments, Cloaths, Houplings, Guidons, Standards, &c. The Invention of *Embroidery* is attributed to the *Phyrgians*; whence the *Latins* call Embroiderers *Phyrgiones*.

The Word *Embroidery* is derived from the French *broderie*, of *broder*, to *Embroider*, which some deduce, by Transposition from *Bordeur*, by Reason they formerly *Embroider'd* only the Edges of Stuffs; whence the *Latins* also call the Embroiderers *Lambuberii*. *Du Cange* observes, that they anciently wrote *anobroffus*, for *Embroider'd* with Gold, or *Bruffus brudatus*, and *Brodatus*; whence *Broderie*.

There are divers Kinds of *Embroidery*: Among the rest, *Embroidery on both Sides*, that is, which appears on both Sides; only practicable on thin slight Stuffs, as Taffetas, Gauze, Mullins, &c. *Embroidery on the Stamp*, where the Figures are very high, and prominent, being supported on Wool, Cotton, Hair, &c. *Low Embroidery*, where the Figures are low, and without any Enrichment between them.

EMBRYO, in Medicine, *Fetus*; the first Beginning, or Rudiments of the Body of an Animal, in its Mother's Womb, before it have received all the Dispositions of Parts, necessary to become animated: Which is supposed to happen to a Man on the 42 Day; at which Time, the *Embryo* commences a perfect *Fetus*. See FETUS.

The *Modera* have made Abundance of fine Discoveries on the Formation and Growth of the *Embryo*. See ECO, GENERATION, CONCEPTION, &c.

The Word is derived from the *Greek*, *εμβρυον*, which signifies the same Thing; form'd of the Preposition *ε* and *βρυον*, *scaturio*, *pullio*, I spring out: From the Manner of the first Growth of the *Embryo*, which resembles that of the first Shoots of a Plant, as being a Kind of *Zoophyte*, and having only a Vegetative Life. See ZOOHYTE.

Monf. *Dodart* having an *Embryo* of 21 Days Age put in his Hands, made a nice Examen thereof; to find the Order Nature observes in the Formation of the Parts, and the first Rise of the Parts themselves.

The *Placenta*, he found more than half of the whole; and thence concludes, that the nearer the *Embryo* is to the Moment of its Conception, the greater is the *Placenta* with Respect to the Secundines, and the *Fetus*. Which Circumstance furnishes a Reason why Miscarriages are more dangerous than regular Deliveries; notwithstanding the *Fetus* in the former Case is much less than in the latter. For tho' the *Embryo* have made a Way sufficient for it self, it may not for so great a *Placenta* as is to follow it. See ABORTION, PLACENTA, &c.

The *Embryo* is self was only seven Lines long, from the Top of the Head to the Bottom of the *Spina dors*, where it terminated. The Thighs were not yet unfolded: They only appeared like two little Warts at the Bottom, of the Trunk: The Arms made just the same Appearance on the Shoulders. The Head was $\frac{1}{2}$ of the Length of the whole seven Lines: On this were seen two little black Points, which would one Day have been Eyes. The Mouth was very big; which M. *Dodart* takes for an Indication that the *Fetus* was fed by the Mouth. There was no Eminence for the Nose; but two little, almost imperceptible, Pits for the Nostrils.

The Painters usually make the Head $\frac{1}{2}$ of the Height of a well proportion'd Man; and $\frac{1}{3}$ of that of a young Child: In the *Embryo* before us, the Head was thrice the Height of the Head; whence it follows, that the younger the *Embryo*, the bigger the Head in Proportion to the Body. The Parts nearer the Head are also bigger in Proportion to the rest; and the Legs and Feet the smallest.

The *Embryo* was a little crooked forwards, and bore some Resemblance to the Maggot of a Silk-Worm: It weighed less than seven Grains, which is an extraordinary Lightness for a Body seven Lines long. It was so soft, that no Part of it could be touch'd without making a Change in its Form.

Upon opening it, M. *Dodart* discover'd the Heart, and the right Arterie: All the other Parts in the *Foetus*, and lower *Venter*, were only simple Linements, or Contours, and all *Vesicular*, excepting a Part on the left Side, which may be supposed to be the Spleen. There was

no Appearance of any Thing on the right Side for a Liver.
Mem. de l'Acad.

EMBRYO, is also used by Naturalists, to express the Grain, or Seed of a Plant; or rather the Germ, or first Sprout appearing out of the Seed: By Reason the whole future Plant is supposed to be contain'd therein. Just as the whole Chick, is supposed contained in the Cicatrice, or Treddle of an Egg. See SEED, GRAIN, PLANT, PUPULE, RADICLE, &c.

EMBRYOTHLASTES, from *ἔμβριον*, *Fetus*, and *θάλας*, *contundis*, I bruise or break; an Instrument to crush the Bones of an Embryo, or dead Child; so as to make it easier of Extraction, and prepare it for the *Embryoniscus*, to draw it out of the Womb. See DELIVERY.

EMBRYOTOMY, in Chirurgery, the Operation of cutting off the *Funiculus Umbilicalis*, or Naval String, of a Child just born; and tying it up. See UMBILICUS.

The Word is form'd of the *Greek*, *ἔμβριον*, and *τομή*, *I cut*.

EMBRYOLKIA, or **EMBRYOLKIA**, in Chirurgery, the Operation of extracting the Child out of the Mother's Womb.

What the *Greeks* call *Embryolkia*, the *Latins* call *Cæsarean Section*. See CÆSAREUS.

This latter Name, *M. Dionis* observes, has taken Place, and prevail'd over the former; as being more easy of Pronunciation.

The Word is form'd of the *Greek*, *ἔμβριον*, *Child*, and *κόλλω*, *to draw*.

EMENDALS, an old Term still used in the Accounts of the inner Temple: Where, so much in *Emendals* at the Foot of an Account, signifies so much in the Bank, or Stock of the House, for Reparation of Losses, and other Occasions.

EMENDATIO Panis & Cerevisiæ, the Adfixe of Bread and Beer; or the Power of supervising and correcting the Weights and Measures belonging to them. See ASSIZE.

EMERALD, a precious Stone, very green and transparent; and as to Hardness, the next after the Ruby. See PRETIUS STONE.

Pliny reckons up twelve Kinds of *Emeralds*; and denominates each from the Provinces, or Kingdoms, where he supposed them to be found; as *Seythian*, *Babylonian*, *Egyptian*, *Peruvian*, &c.

But the modern Naturalists, and Jewellers, only know of two Kinds, viz. *Oriental* and *Peruvian*. And if we may credit *Tavernier*, in his *Treatise of Colour'd Stones found in the Indies*, inserted in the second Volume of his *Voyages*, these two should yet be reduced to one, viz. the *Peruvian*.

In Effect, he maintains that there is not, nor ever was, any Mine of *Emeralds* in the *East-Indies*; and that all that are there found, were brought from *Persia* by the Way of the *South Sea*; which was a Method of Commerce, carried on by the *Peruvians* before the Discovery of *America* by the *Spaniards*. But as the Point of such Commerce is not sufficiently proved, we must keep to the ancient Division.

The *Oriental Emerald* is harder, more brilliant, and transparent than the *Peruvian*; which has generally Clouds found in it, and sparkles less. Beside that, there are such Quantities brought from *Persia*, by the Way of *Carthagena*, that they are much funk in Value and Reputation. They talk likewise of *Emeralds* found in *Cyprus*, and even in our own Island; but they are very inconsiderable; if, indeed, there be any true ones at all.

Some Authors hold *Emeralds* to be taken out of Iron Mines: And *Pomet* assures us, he had one to which the Iron Ore was still sticking. To which, all we have to say, is, that it could not be a *Peruvian*, by Reason there is no Iron Mine in the Country.

The *Emerald* is supposed to grow more and more perfect in the Mine like the Ruby, and to arrive at its Greenness by slow Degrees, as the Fruit comes to Maturity by Degrees. 'Tis a common Opinion, that the *Emerald* grows in the *Jasper*; and 'tis certain there are some *Jaspers* so perfectly green, that many have taken them for *Emeralds*. See JASPER.

But the proper Matrix, or Marcesite of this Stone is the *Præme*, which is held among the coarser precious Stones; being hard, transparent, half opaque, and usually intermix'd with yellow, green, white, black, &c.

The Antients made Amulets of *Emeralds* against all Kinds of Scurvy; and supposed them effectual against a thousand different Distempers. At present; that we have more Experience, or less Credulity, they are valued for their Beauty, not their Virtue; tho' there are still some who suppose, that when reduced into an insipid Powder, and mix'd with Rose Water, they may be of some Use in Medicine.

We read in Authors of several *Emeralds* of incredible Magnitude: *Roderigo de Toledo* tells us, that when the *Saracens* took that Town, King *Cerik* had for his Share of the Plunder, a Table 365 Foot long, and all of one-piece, which he maintains to be an *Emerald*. After this, the Reader will not wonder at that seen by *Theophrastus*, in a Temple in *Egypt*, four Cubits long, and three broad; nor even at an Obelisk of *Emerald* 40 Foot high.

The Word is form'd from the French *Esméralde*, and that from the Latin *Smaragdus*, which signifies the same Thing. Others derive it from the Italian *Smeraldo*, or the Arabic *Zemrad*.

In the *Dictionnaire de Commerce*, we have a very curious and accurate Estimate of the Value of the different Kinds of *Peruvian Emeralds*; which the Reader will not be displeas'd to find transcribed hither.

ROUGH EMERALDS.

Those of the first, and coarsest, Sort, called *Plafines*, for grinding, are worth 27 Shillings Sterling the Marc, or 8 Ounces. The *Demi-Morillons*, 8 Lib. Sterl. per Marc. Good *Morillons*, which are only little Pieces, but of fine Colour, from 13 L. to 15 L. per Marc. *Emeralds* larger than *Morillons*, and call'd of the third Colour, or Sort, are valued at from 50 L. to 60 L. the Marc. *Emeralds*, call'd of the second Sort, which are in larger and finer Pieces than the preceding, are worth from 65 L. to 75 L. per Marc. Lastly, those of the first Colour, otherwise call'd *Negres Cortes*, are worth from 110 Lib. to 115 Lib.

EMERALDS ready cut, or polished, and not cut, being of good Stone, and a fine Colour, are worth,

	Lib.	Sb.
Those weighing One Carat, or 4 Grains	0	10
Those of Two Carats	-	1
Those of Three Carats	-	7
Those of Four Carats	-	3
Those of Five Carats	-	4
Those of Six Carats	-	7
Those of Seven Carats	-	15
Those of Eight Carats	-	19
Those of Nine Carats	-	23
Those of Ten Carats	-	33

EMERALD, or **EMERAUD**, in Herakry, is used in Lieu of Vert, or Green, in Blazoning the Arms of Dukes, Earls, &c. See BLAZONING.

EMERGE. See EMERSON and EMERGENT.

EMERGENT Year, in Chronology, is the *Epoche*, or Date, whence we begin to account our Time. See EPOCHA. Thus, our *Emergent Year* is sometimes the Year of the Creation: That of the *Ferri*, is from the Deluge, or the *Evodus*, &c. The *Emergent Year of the Greeks*, was the Establishment, or at least the Restoration of the *Olympic Games* by *Iphitus*. The *Romans* accounted their Years from the Building of the City AB U. C. That is, AB URBE CONDITA.

EMERSON, in Physics, the rising of any Solid above the Surface of a Fluid specifically lighter than it self, into which it had been violently immerged or thrust.

'Tis one of the known Laws of Hydrostaticks, that a lighter Solid being forced down into a heavier Fluid, immediately endeavours to emerge; and that with a Force, or Momentum, equal to the Excess of Weight of a Quantity of the Fluid, above that of an equal Bulk of the Solid.

Thus, if a Solid be immerged in a Fluid of double its specific Gravity; it will emerge again, till half its Bulk, or Body, be above the Surface of the Fluid. See FLUID.

EMERSON, in Astronomy, is when the Sun, Moon, or other Planet, begins to re-appear, after having been eclipsed, or hid by the Interposition of the Moon, Earth, or other Body. See ECLIPSE.

The Difference of Longitudes is found by observing the Immersions and Emersons of the first of *Jupiter's Satellites*. See SATELLITES.

The Immersions are observed from the Time of *Jupiter's* being in Conjunction with the Sun, to his Opposition; and the *Emersons*, from the Opposition to the Conjunction. Which two Intervals are usually six Months a-piece; and divide the Year between them.

But when *Jupiter* is in Conjunction with the Sun, and fifteen Days before and afterwards; there is nothing to be observed: That Planet, with his Satellites, being then lost in the Light of the Sun. See JUPITER.

EMERSON, is also used when a Star, before hid by the Sun, as being too near him, begins to re-appear, and to get out of his Rays. See MERCURY.

Scruples, or Minutes of **EMERSON**, are an Arch of the Moon's Orbit, as T. Q. (*Tab. Astronom. Fig. 46*) which the Moon's Centre passes over, from the Time she begins to Emerge out of the Shadow of the Earth to the End of the Eclipse.

EMERY, a Sort of Metallic Stone, found in most, or all Mines of Metals; but chiefly those of Iron, Copper, and Gold. See STONE and MIXT.

We usually distinguish three Kinds of Emery; the Spanish, Red, and Common Emery.

The first is found in the Gold Mines of Peru, and other Provinces of the Spanish America: 'Tis judged a Kind of Mercassite of that rich Metal; being streck'd with little Veins, and Specks of Gold. 'Tis for this Reason the King of Spain prohibits it being exported; which renders it exceeding rare among us; to the great Regret of the Seekers of the Philosopher's Stone, who build great Hopes in the Transmutation of this precious Mineral. The Red Emery is found in Copper Mines; the little we have of it comes from Sweden and Denmark.

The Common Emery is taken out of Iron Mines; and is almost the only Sort used among us. The Consumption hereof is very considerable among the Armourers, Cutlers, Locksmiths, Glaziers, Lapidaries, Masons, &c. Some of whom use it to polish and burnish Iron, and Steel Works; others, to cut and scoldop Glass, Marble, and precious Stones.

This Emery is of a brownish Colour, bordering a little on Red; exceedingly hard, and of Consequence difficult to pulverize. The English are the only People that have got the Art of making it into Powder; which they do chiefly by Means of certain Mills contriv'd for that Purpose: And thus send it in Powder to their Neighbours.

Pounding it in Mortars was in vain; it being so hard that it would piece, or break the Mortar ere it would give Way.

Of the Powder, the most subtle and impalpable is the best: As to the Stone, it should be chofe of a high Colour, and as free of the Rock as possible.

Emery fused with Lead, and Iron, hardens them. It increases and heightens the Weight and Colour of Gold. 'Tis usual to mix a little of it with the Gold from Madagascar, which is naturally pale and soft. See GOLD.

Powder of EMERY, is a Kind of dirty Matter, found on the Lapidaries Wheels; containing Part of the Powder of Emery.

The Word Emery appears to be derived from the Latin *Saxaris*, and that from the Greek *εμεις*, which signify the same Thing; and which Monf. Lavery derives from the Verb *εμειν*, I clean, scour.

EMETIC, in Medicine, a Remedy that excites Vomiting; or that evacuates by Vomiting. See VOMITING and EVACUANTS.

Of these there are a great Variety; as *Ipecacuanha*, *Cardus Benedictus*, &c.

The Use of *Emetics* is indicated by a Foulness of the Mouth in a Morning, rising, loathing, gnawing of the Stomach, gradual Loss of Appetite, spontaneous Vomiting, &c.

Vomiting is rais'd by irritating the Spirits with the Presence of something loath'd; by an unusual Agitation, as Sailing, &c. by tickling the Fibres of the Jaws, and Pharynx with a Feather dipp'd in Oil; by drinking Quantities of warm Water, &c. by any Thing sharp and viscid; as the Flowers and Seeds of *Dill*, *Leaves of Cefarum*, &c. *Crocus* and Glass of *Antimony*; the Flowers and Regulus thereof; *Mercurius Vise*, *Mineral Turbith*, and *Mercury* sharpen'd with Acids.

The *Emetic Wine*, *Vinum Emeticum*, is only white Wine, wherein is infused some *Crocus Metallorum*, or Glass of Antimony.

The *Emetic Powder*, call'd also Powder of *Algarath*, from the Name of its Author, is a Precipitate of Antimony, or Butter of Antimony, sweeten'd and softned by repeated Lotions. See ANTIMONY.

Emetic Tartar, is Cream, or Crystal of Tartar, powder'd and mix'd with one fourth of *Crocus Metallorum*.

The Word is form'd from the Greek, *εμειν*, I vomit.

The Operation of *Emetic Medicines* is thus account'd for by Dr. Quincy: The Particles of the *Emetic* wedging themselves into the Orifices of the Emisseries of the Glands, placed adjacent to the Surface of the Stomach, do dilate the same; (which by some extrinsic Cause had been contracted) and after the same Manner, do dissolve (at least in some Degree) the Cohesion of the fragrant morbidick Matter; rendering it more fluid, and consequently making its Resistance less.

Now the natural and constant Actions of the Glands being Secretion; and the Impediment (by the Dilatation of the Orifice, and the Attenuation of the Fluid) being taken away, or at least made less than the natural Momentum of the Glands; the Matter must naturally flow into the Cavity of the Stomach, till it be heaped up in such a Quantity, (which not being to be done in an Instant, must require some Time) as is sufficient by its Stimulus to villicate, and force the Fibres of the Stomach,

Abdomen, and Diaphragm, by Communication of the first with the two last, into a violent Contraction; and thereby throw all out by the Oesophagus: And this makes all quiet for a Time, till a new and sufficient Quantity be excreted from these Glands to produce the aforesaid Contraction.

Thus there happens Fits of Vomiting and Quiet alternately, till either all the morbidick Matter be thrown out, or the Force of the *Emetic* be so diluted, that it is no longer able to draw out the morbidick Matter from the Glands.

And the strong Contraction in so many Muscles, and muscular Canals, as are at Work in the Action of Vomiting, and the violent Concoction which is produced all over the whole Body by a Power, which, by just Computation, is not inferior to 26000 *l*. Weight, may, and often does, take away the Obstruction in many other Canals, besides those which are adjacent to the Stomach and Gullet; as we plainly see, by those vast Sweats, which plentiful Fits of Vomiting occasion.

Emetic and Purgative Medicines differ only in this, that the Particles of the latter do not immediately villicate the Fibres of the Stomach, dilate the Orifices, and attenuate the Matter contain'd in the Glands of the Stomach; but act gently, and assist the natural Motion of Digestion, and so are carried down into the Guts: And how they operate there. See PURGATIVE.

EMINENCE, in Geography, a little Hillcock, or Alient, above the Level of the Champagne. See MOUNT.

This Seat is built on an *Eminence*. The *Enemies* have taken Possession of such an *Eminence*, such a Height, from which they can command our Rear.

EMINENCE, in Anatomy, is a Part of the Brain, call'd the *Annular Eminence*. See BRAIN.

The fifth Pair of Nerves arises from the Sides of the *Annular Eminence* of the Brain. See NERVE.

EMINENCE, is also a Title of Honour given to a Cardinal. See CARDINAL.

'Tis his *Eminence* the Cardinal de ——. The Decree of the Pope, whereby it was appointed, that the Cardinals should be address'd under the Quality of *Eminence*, bears Date the 10th of January, 1630. They then laid aside the Titles of *Illustissimi*, and *Reverendissimi*, which they had bore before.

The Grand Master of Malta, is likewise address'd under the Quality of *Eminence*. See MALTA.

The Popes John VIII, and Gregory VII, gave the same Title to the Kings of France. The Emperors have likewise bore it.

Eminentissimus, the superlative of *Eminent*, has of late been attributed to the Cardinals. *L' Eminentissime Cardinal de Richelieu*.

EMINENTLY, in the Schools, is used in Contradistinction to *Formaliter*; and in the same Sense with *Virtualiter*: viz. when a Thing possesses, or contains any other Thing in a more perfect or higher Manner than is required to a formal Possession thereof.

Thus an Angel is said to have Prudence *Eminenter*; as he has it in a higher and more perfect Degree than it is in Man, in whom it is *Formaliter*. See FORMALITER and VIRTUALITER.

For one Thing to contain another *Eminenter*, there are usually required two Things, 1. That the containing be of a more excellent Nature than the contain'd. 2. That the less Excellent be some Way contain'd in the more excellent, viz. either as in its productive Cause: Or by some Similitude: Or as to the Manner, and Order of Acting, &c.

EMINENTIAL Equation, is used by some Algebraists in the Investigation of the Areas of Curvilinear Figures; for a Sort of Artificial Equation, containing another Equation *Eminently*. *Hayes's Fluxions*, p. 97.

EMIR, a Title of Dignity, or Quality, among the Turks and Sarazens; attributed to such as are Relations, or Descendants of their great Propbet *Abraham*.

The *Emirs* are held in high Veneration; and have alone the Privilege of wearing a *Green Turban*. See TURBAN.

On the Borders of the Holy Land were several *Emirs*, Sovereign Princes; as the *Emir of Gaza*, and the *Emir Tarsus*, over whom the Grand Seigneur had but little Authority.

The *Emir Hags*, or Prince Conductor of the Pilgrims to *Meca*, is *Bashaw of Jerusalem*, &c.

This Title, at first, was only given to the Caliphs: In *Persia* they were also call'd *Emir Zadeh*, q. d. Princes Son: Whence, by Abbreviation of *Emir*, they form'd *Mir*, and of *Emir Zadeh*, *Mirza*. See CALIPH.

In after Times, when the Caliphs had assumed the Title of Sultans; that of *Emir* remain'd to their Children, as that of *Cesar* among the *Romans*. In Succession of Time, the same Title of *Emir* came to be attributed to all, who

were judg'd to defend from *Mohomet* by his Daughter *Fathimah*, and who wear the *Green Turban*. See *TURBAN*.

EMIR, is also a Title, which being joy'd to some other Word, frequently denotes an Office, or Employ.

As the *Emir al Omra*, Commander of Commanders; who, in the Time of the Caliphs, was Chief of the Councils and Armies.

The Name *Emir* is also applied, by the *Turks*, to all Viziers, and Bashiaws or Governours of Provinces. See *BASHAW*, &c.

Add, that *Emir Akbar*, vulgarly *Imperator*, is Master, or Chief of the Equestrics to the Grand Scignior: *Emir Alem*, vulgarly *Miralem*, Standard-Bearer, and Director of all the Standards of the Empire, with the Music, &c. *Emir Bazar*, the Prevot, or Superintendent of the Markets, who regulates the Prices of Provisions. *Emir al Moslem*, or *Emir al Monmenin*, i. e. Commander of the Faithful, or the Believers, was a Title assumed by the *Almoravides* and *Almoabades*, who reign'd in *Africa* and *Spain*.

The Word *Emir* is *Arabic*, where it literally signifies *Prince*. It is form'd of the Verb *EMAR*, which is originally *Hebrew*, and in both these Languages signifies to *joy*, and to *command*.

EMISSARY, A trusty, dextrous, able Person fent, understand, to sound the Sentiments, and Views of another; to make him fume Proposal, or Overture: Or to spread Reports, watch the *Actions*, *Motions*, and Commencement of a contrary Party, or Person, in Order to make Advantages of them all.

The Leaders of Parties have Abundance of *Emissaries* employ'd in their Service, who inform them of what passes every where, that they may take their Measures accordingly. The Pope and the Chevalier have their *Emissaries* in *England*.

The Word is form'd of the *Latin* *e*, and *mittere*, I fend out.

EMISSARY of a *Gland*, or its excretory *Duct*, is the common Conduit, Canal, or Pelvis, in which all the little secretory Canals of a Gland do terminate. See *GLAND*.

EMISSION, the Act of throwing or driving a Thing, particularly a Fluid, from within, outwards.

The Term is chiefly apply'd among us to the Expulsion, or Ejaculation of the Seed; See *EJACULATION*. Tho', we also say, the Antients took Vision to be perform'd by the *Emission* of Visual Rays from the Eye. See *VISION*.

It is also us'd Morally: Thus, the Civil Death of a Religious is reckon'd from the Day of the solemn *Emission* of Vows.

EMMENAGOGUES, in Medicine, such Remedies as promote the *Menses*; thus call'd from *εμ*, *in*, *μην*, *Month*, and *αγω*, *duco*, I lead; by Reason their natural Periods of flowing are once a Month. See *MENSES*.

Emmenagogues either act by giving a greater Force to the Blood in its Circulation, whereby its Momentum against the Vessels is increas'd; or by making it thinner, whereby it will more easily pass through any Outlet.

The former Intention is help'd by Chalybeates, which give a greater Weight and Momentum to a languid, heavy Blood, and all other Substances of the like Gravity and Elasticity. And such is the Case of a Leuco-phlegmatic Habit, or as it is commonly call'd, the *Green-Sicknel*, and its Cure.

But, in the latter Case, where the Blood is florid and too high; attenuating Alteratives and Detergents are the only Remedies, because fittest to render the Blood more thin, and give it such a Property, as will better carry it thro' those little Apertures, designed for its Discharge into the *Uterus*.

EMOLLIENTS, in Medicine, and Pharmacy, Remedies us'd to soften, and loosen, Hardnesses, or Constrictions of the Belly; or those of Tumors and Swellings.

Such are *Mallows*, *Mercurialis*, *Lilly Root*, *Athysa*, *Linseed*, *Rutter*, *Wax*, *Gum Ammoniac*, &c. See *MALACTICS*.

The Term *Emollient* is not only apply'd to internal Remedies, but also to other Things: A Laxative, Anodyne, and *Emollient* Clyster: An *Emollient* Emplaster, made of resolutive Unguents: An *Emollient* Cataplasim: Fresh Cherries are an *Emollient* Food; tho', when dry, they rather constringe than relax; as wanting a great Part of the Plegm, which render'd them *Emollient*. Ripe Grapes, of Afrington, which they were before, become Laxative and *Emollient*. Hog's Grease, apply'd externally, is resolutive and *Emollient*.

Dr. *Quincy* defines *Emollients*, more scientifically, to be such Things as fheat and soften the *Aperites* of the Humours, and relax and supple the Solids at the same Time.

For it is easy to conceive how these should be both effected by the same Medicine; thus: By what Means soever, (whether in the Stomach, or any other Parts) the Juices have obtained a Sharpness, or *Aperity*, so as to vellicate and render uneasy the Fibres, and nervous Parts; which often happens; those Things which are smooth, soft, and yielding, cannot but wrap up their Points, and render them imperceptible; whereby they may gradually, by the proper Course of Circulation, be brought to some convenient, *Emanctory*, without doing any Injury by the Way.

Such Sharpness of Parts, likewise, draws the Fibres into Spasms, keeps them too tense, and frequently thereby occasions Obstructions of the world Kind.

In all such Cases, therefore, *Emollients* lubricate, and moisten the Fibres, so as to relax them into their proper Dimensions, whereupon such Disorders cease.

EMOLUMENT, is properly apply'd to the Profits arising daily from an Office, or Employ.

The Patent, or other Instrument, whereby a Person is prefer'd to an Office, gives him a right to enjoy all the Dues, Honours, Wages and *Emoluments* belonging thereto.

In our Law Books, &c. *Emolument* is us'd in a somewhat greater Latitude.

The Word is form'd of the *Latin* *Emolumentum*, which primarily signifies the Profits redounding to the Miller from his Mill, of *molere*, to grind.

EMPALEMENT, or *IMPALEMENT*, a cruel kind of Punishment, wherein a sharp *Pale*, or Stake, is run up the Fundament and thro' the Body.

We find mention of *Impaling* in *Javelin*: It was frequently practis'd in the Time of *Nero*; and continues to be so in *Turkey*.

The Word comes from the *French* *Empaler*, or the *Italian* *Impalare*; or rather they come all alike, from the *Latin* *Palus*, a Stake, and the Preposition *in*, *in*, into.

EMPALEMENT, in Botany, the outmost Part of the Flower of a Plant, encompassing the Foiliation of the Article. See *FLOWER*.

It is compounded of the three general Parts of all Plants, the Skin, the Cortical, and the ligneous Bodies, each *Empaler* being (whether consisting of one or more Pieces) as another Leaf, and design'd to be a Guard, and a Band to the Flower, where it is weak and tender; and therefore such Plants as have Flowers, with a firm and strong Basis, as *Tulips*, &c. have no *Empalement*, nor need any. See *CALYX*.

EMPAÑELLING, in Law, signifies the Writing, and entering the Names of a Jury into a Parchment, Schedule, or Roll of Paper by the Sheriff, which he hath summon'd to appear for the Performance of such public Service, as Juries are employ'd in. See *PANEL* and *JURY*.

EMPARLANCE, in Law, a Desire, or Petition in Court, of a Day to pause, or consider what is best to be done.

The Civilians call it *Petitio Judiciana*. *Kitchin* mentions *Imparlanca general* and *special*: The first seems to be only that made in one Word, or in general Terms: *Emparlanca special*, is where the Party requires a Day to deliberate; adding these Words, *Solvis omnibus Advantages tam ad Jurisdictionem Curie, quam ad breve & Narrationem*.

Brown uses it for the Conference of a Jury upon a Cause committed to them. See *IMPARLANCA*.

EMPASMA, in Pharmacy, a Powder thrown, or sprinkled, over the Body, to correct some ill Smell thereof, or to prevent unnecessary Sweats.

The Word is form'd from the *Greek*, *επισπασσω*, to sprinkle.

EMPASTING, a Term us'd in Painting, for the laying on of Colours, thick and bold; or applying several Layers of Colours, so as they may appear thick. See *COLOURING*.

A Painting is said to be well *Empasted* with Colours, when the Colours are bestow'd plentifully, or it is well fed and saturated with Colours.

The Term is also us'd, when the Colours are laid distinct and asunder; and not soften'd, or lost in each other. This Head is not painted: It is only *Empasted*.

It is form'd of the *French* *Empaster*, which has the same Signification, of *Peste*, or *Pâte*, Paste.

EMPEROR, *Imperator*, a Title which, among the Antient *Romans*, only signified a General of an Army; but, afterwards, it came to denote an absolute Monarch, or a supreme Commander of an *Empire*; a *Roman Emperor*, &c.

In strictness, the Title *Emperor* does not, cannot, add any Thing to the Rights of Sovereignty: Its Effect is, only to give Precedence, and Preeminence above other Sovereigns; and as such, it raises those invest'd with it, to the Top of all Human Greatness.

The *Emperors*, however, pretend, that the *Imperial* Dignity is more eminent than the *Regal*; but the Foundation of such Privilege does not appear: 'Tis certain the greatest, most ancient, and absolute Monarchs, as those of *Babylon*, *Persia*, *Affria*, *Egypt*, *Macedonia*, &c. were call'd by the Name of Kings in all Languages, both Ancient and Modern. See *KING*.

'Tis disput'd whether or no *Emperors* have the Power of disposing of the *Regal* Title: 'Tis true, they have sometimes taken upon them to erect Kingdoms; and thus it is, that *Bohemia* and *Poland* are said to have been rais'd to the Dignity: Thus, also, the Emperor *Charles the Bald*, in the Year 877, gave Province to *Boson*, putting the Diadem on his Head, and decreeing him to be call'd King; *Ut more proficorum Imperatorum Regibus videtur Dominari*.

Add, that the late Emperor *Leopold*, erected the *Ducal* *Prussia* into a Kingdom, in Favour of the Elector of *Brandenburgh*; but several of the Kings of *Europe* refused, for some Time, to acknowledge him in that Capacity: Tho' by the Treaty of *Utrecht*, in 1712, they all came in.

In the *East*, the Title, and Quality of *Emperor* are more frequent than among us: Thus the Sovereign Princes of *China*, *Japan*, *Mogol*, *Persia*, &c. are all *Emperors* of *China*, *Japan*, &c.

In the *West*, the Title has been a long Time restrain'd to the Empire of *Germany*. The first who bore it was *Charlemagne*, who had the Title *Emperor* conferr'd on him by Pope *Leo III*, tho' he had all the Power before.

In the Year 1755, the Czar of *Moscow* assumed the Title of *Emperor of all Russia*; and procur'd himself to be recognized as such by most of the Princes and States of *Europe*.

The Authority of the *Emperor of Germany*, over the States of the Empire, consists, 1°. In presiding at the *Imperial* Dyets, and in having a negative Voice therein: So that his Vote alone can prevent all the Resolutions of the Dyet. 2°. In that all the Princes, and States of *Germany*, are obliged to do him Homage, and swear Fidelity to him, 3°. That he, or his Generals, have a Right to command the Forces of all the Princes of the Empire, when united together. 4°. That he receives a Kind of Tribute from all the Princes and States of the Empire, call'd the *Roman Moubt*. For the rest, there is not a Foot of Land, or Territory, affected to his Title.

The Kings of *France* were also call'd *Emperors* at the Time when they reign'd with their Sons, whom they associated to the Crown: Thus, *Hugh Capet*, having associated his Son *Robert*, took the Title of *Emperor*; and *Robert*, that of King. Under which Titles they are mention'd in the History of the Council of *Rheims*, by *Gebert*, &c. King *Robert* is also call'd *Emperor of the French* by *Helgau* of *Fleury*. *Louis le Gros*, upon associating his Son, did the same. In the first Register of the King's Charters, Fol. 166. are found Letters of *Louis le Gros*, dated in 1116, in Favour of *Raymond* Bishop of *Magnelonne*, wherein he styles himself, *Ludovicus Dei Ornatissime Providentia Francorum Imperator Augustus*.

The Kings of *England* had likewise, antiently, the Title of *Emperors*; as appears from a Charter of King *Edgar*: *Ego Edgarus Anglorum Basiliens Omniumque Regum Insularum Oceani que Britanniam circumjacent, &c. Imperator & Dominus*.

Add, that we say, the King of *England*, *Omne habet Potestatem in Regno suo quam Imperator vendicat in Imperio*: Whence the Crown of *England* has been long ago declared in Parliament to be an *Imperial* Crown.

EMPERESS, *Imperatrix*, the Feminine of *Emperor*; applied either to an *Emperor's* Wife, or to a Woman who rules singly over an Empire, with all the Authority of an *Emperor*: As at this Time the *Empress of Russia*.

EMPERESS, is also used, in the antient *French* Poetry, for a particular Kind of Rhime, thus denominat'd by Way of Excellence. See *RHIME*.

The *Rime* *Empereire* was a Sort of Crown'd Rime, wherein the Syllable that made the Rime, was immediately preceded by two other like Syllables, of the same Termination; which made a Kind of Echo, call'd the triple Crown; and which, to the Shame of the Nation, (as some of their late Authors express it) their best antient Poets took for a wonderful Beauty and Excellence.

Fa. Mourguet, in his Treatise of *French* Poetry, gives us an Instance very proper to give us a Contempt of the miserable Taste of that Antiquity, which knew no Way of Expressing, that the World is impure, and subject to change, fo admirable, as by saying,

Qu'es tu qu'us Immonde, Monde, onde.

EMPHASIS, in Rhetoric, &c. a Force, Stress, or Energy, in Expression, Action, Gesture, &c.

This Orator speaks with a World of *Emphasis*; all his Words have an *Emphasis*. What greater Punishment, says *de la Bruyere*, than to hear indifferent Verses recit'd with all the *Emphasis* of an ill Poet?

The Word is *Greek*, *ὑψαος*.

EMPHATICAL, in Rhetoric. See *EMPHASIS*.

EMPHATICAL is also used by the antient Philosophers, to express those apparent Colours, (as they call them) which are often seen in Clouds before the Rising, or after the Setting of the Sun, or those in the Rainbow, &c. See *COLOUR*.

These, because they are not permanent and lasting, they will not allow to be true Colours. But, since these *Emphatical* Colours are Light, modified chiefly by Refraction, and with a Concurrence of Reflections, and some other accidental Variations; and being the proper Objects of Sight, and capable as truly to affect it, as other permanent Colours are: There is no Reason for excluding them from the Number of true and genuine Colours; since all other Colours are only Modifications of Light as these are. See *LIGHT*.

EMPHRACTIC, in Pharmacy, the same with *Emplastic*. See *EMPLASTIC*.

The Word is form'd from the *Greek*, *ὑψαος*, *I*, *ὑψος*.

EMPHYSEMA, in Medicine, a windy Swelling, or bloating of the whole outer Habit of the Body; like that in the Parts of divers Animals, when blown up, after they are kill'd. See *TUMOR*.

The Wind, or Air, which is the Matter of the *Emphysema*, is lodged under the Cutis, and principally in the *Cellule Adipose*.

Hence the Seat of the *Emphysema*, or the Place wherein the Wind is chiefly lodg'd, is in the Adipose Cells, under the Skin, covering the Thorax: The ordinary Occasion is some Wound in the Thorax.

Monf. *Lissee* accounts for it thus: When a Person is wounded in the Breast, there enters Air in at the Wound; now, it may happen, either from the Narrowness of the Wound, or the Flesh's closing again readily, or some other Cause, that the Air thus admitted, cannot readily get out again, at least not all of it: And thus Air comes to be inclosed in the Capacity of the Breast.

Now, at every Inspiration, the Lungs are to fill this Capacity, by their swelling with the Air naturally received. But here they cannot swell without pressing upon the other extraneous Air: The Consequence of which is, that it obliges it to slip between the Interstices of the fleshy Fibres, and perhaps to enter the little Orifices of the minutest Veins or Lymphatics.

Immediately, another Force comes to take Place, contrary to that of *Inspiration*; viz. Expiration: In this, the Breast contracting it self, presses the extraneous Air still more than the Lungs had done in their Dilatation: And the two opposite Moments or Actions conspire to the same Effect.

The Air, thus continually Impell'd, will be propagated along the Passages it first open'd it self, till at Length it meets and becomes collect'd in some Place. Now this Place will be the *Cellules* of the fat, rather than any where else, by Reason of the Thinness, and Flexibility of their Membranes; and as the Air came from within the Cavity of the Breast, it will be in the Fat that covers the Breast, under the Skin, rather than elsewhere, that the windy Tumor, or *Emphysema* will lie.

Now, such Tumor cannot be very considerable, as only form'd by the Air receiv'd in at a Wound: But if we suppose the Wound to have pierc'd the Substance of the Lungs, then beside the Air taken in by the Wound, there will be Part of that taken by Inspiration; so much as was contain'd in the *Bronchie*, or *Vesicula*, thus perforated, or open'd, escaping into the Cavity of the Breast, and driven along with the former, into the Flesh. And as a fresh Quantity of this is supplied every Moment, there will be a continual Accession, so long as the Wound of the Lungs remains open.

Hence, an *Emphysema* from a Wound in the Lungs, sometimes possess'd the whole Habit; the Air being carried to the several Parts of the Body by Circulation.

The Word is *Greek*, *ὑψαος*, which signifies the same Thing.

EMPHYTEOSIS, or EMPHYTEUSIS, in the Civil and Canon Law, the letting out of poor barren Lands for ever, or at least for a long Term of Years, on Condition of cultivating, meliorating, or mending them; and paying a certain yearly Consideration.

Emphyteotes are a Kind of Alienations, differing from Sales, in that they only transfer the *Dominus utile*, the Benefits of the Ground; not the Property, or Fee simple.

Among the *Romans* they were at first temporary; afterwards perpetual.

The Word is form'd of the Greek, *ἐμψύχω*, which signifies a *Graft*, and by Metaphor, a *Melioration*, Amendment: For as we only graft Trees to mend them; so a Man only alienates his Land by *Emphyteests*, on Condition of amending it.

The 20th Canon of the Council of *Carthage*, prohibits the Bishops seizing the Church's *Emphyteotes*, out of the Hands of private Persons, unless they have been three Years without paying Rent.

EMPIRE, the Territory, or Extent of Land under the Command, and Jurisdiction of an *Emperor*. See *EMPEROR*.

The *Roman Empire*; the *Empire of the East*; the *Empire of the West*, or the *Western Empire*; the *Empire of the Great Mogul*, &c.

Tacitus observes of *Galba*, that all the World would have thought him worthy the *Empire*, had he never been Emperor.

Antiquaries distinguish between the Medals of the *upper* and *lower Empire*. The curious only value those of the *upper Empire*, which commences with *Cæsar*, or *Augustus*; and ends in the Year of Christ 460.

The *lower Empire* comprehends near 1200 Years, reckoning as low as the Destruction of *Constantinople*, in 1453. They usually distinguish two Ages, or Periods, of the *lower Empire*: The first beginning where the *upper* ends, viz. with *Aurelian*, and ending with *Anastasius*, including 200 Years: The second beginning with *Anastasius*, and ending with the *Paleologi*, which is 1000 Years.

EMPIRE, used absolutely, and without any Addition, or *The Empire*, signifies the *Empire of Germany*, call'd also, in Juridical Acts and Laws, the *Holy Roman Empire*; *S R I*, q. d. *Sacrum Imperium Romanum*; which is what we otherwise call the *Germanic Body*.

The *Empire* had its Beginning with the IXth Century; *Charlemagne* being created first Emperor by Pope Leo III. who put the Crown on his Head in *St. Peter's* on *Christmas-Day* in the Year 800.

Authors are at a Loss under what Form of Government to range the *Empire*: Some will have it a Monarchic State, by Reason all the Members thereof are obliged to ask the Investiture of their States of the Emperor, and to take an Oath of Fidelity to him.

Others, will have it a Republic, or Aristocratic State, by Reason the Emperor cannot resolve, or determine any Thing, without the concurring Suffrages of the Princes: Adding, that if they require Investiture from, and swear Fealty to, him, 'tis only as Head of the Republic, and in the Name of the Republic, and not in his own: Just, as at *Venice*, every Thing is transacted in the Name of the *Doge*. See *DOGE*.

Lastly, others will have the *Empire* to be a Monarcho-Aristocratic State, i. e. a Mixture of Monarchy and Aristocracy; for that tho' the Emperor, in many Cases, seems to act sovereignly; yet his Decrees and Resolves have no Force, in Case the States refuse to confirm them.

In fine, we should rather chuse to call it an Aristocratic State; by Reason the Dye, wherein the Sovereignty is lodged, is composed of Princes, and the Deputies of Cities; and is divided into three Orders, or Bodies, call'd *Colleges*, viz. the College of Electors, the College of Princes, and the College of Cities. See *COLLEGE*.

We say *Diet* of the *Empire*, *Circles* of the *Empire*, *Piebs* of the *Empire*, *Princes* of the *Empire*, *Estates* of the *Empire*, *Members* of the *Empire*, *Capitulations* of the *Empire*, *Recessus* of the *Empire*, &c. See *DIET*, *CIRCLE*, *PIEB*, *BAN*, *PRINCE*, *CAPITULATION*, *RECESSUS*, &c.

The States of the *Empire* are of two Kinds, *Mediate* and *Immediate*.

The *Immediate States* are those who hold immediately of the *Empire*; whereof, again, there are two Kinds: The first, such as have Seats, and Voices in the Imperial Diet; the second, such as have none.

The *Mediate States* are those who hold of the *Immediate*.

The States which now compose the *Empire*, are the Princes of the *Empire*, the Counts of the *Empire*, the Free Barons of the *Empire*, the Prelates of the *Empire*, the Princesses, or Abbesses of the *Empire*, the Nobles of the *Empire*, and the *Imperial Cities*.

EMPIRIC, or EMPIRICK, a Name attributed, of all Antiquity, to such Physicians as form'd themselves Rules, and Methods, on their own Practice and Experience; and not on any Knowledge of Natural Causes, or the Study of good Authors; and who prescribed, without enquiring into the Nature of the Disease, or the Properties and Virtues of their Medicines: depending wholly on the Authority of some general experienced Remedies. See *PHYSICIAN*.

Medicine was almost altogether in the Hands of *Empiricks*, till the Time of *Hippocrates*; who first introduced Reason and the Use of Theory therein: And hence

arose a new Sect, call'd *Theoretici*. See *THEORIST*.

The Word is form'd of the Greek, *ἐμπειρία*, and that of *ἐμπεριάζω*, knowing, able; but, particularly, knowing and learned by Experience. The Root being *ἐμπερ*, *Efficit*, *Trial*.

Pliny, and *Cælius*, make mention of the *Empiricks*, and their Profession, which the *Greeks*, and the *Latins* after them, call *Empirice*; as attributing all to Experience, and nothing to the Authority of the Masters of the Art, or the Deductions of Reason. See *MEDICINE*.

Pliny relates, that the Sect of *Empiricks* had its Rise in *Sicily*: The first who profess'd it, he says, were *Apollonius* and *Glancias*; others say, *Acron Argentinus*. They, and their Followers, made great Opposition to the dissecting of human Bodies; particularly to that practis'd by *Herophilus*, and *Erasistratus* on living Bodies, of Criminals condemn'd to Death. See *DISSECTION*.

But the Word *Empirice* is now more odious than ever; being confounded with that of *Charlatan*, or *Quack*, and applied to Persons who practise *Physic* at Random, without a proper Education, or understanding any Thing of the Principles of the Art. See *CHARLETAN*.

Indeed, 'tis possible, the Word may be abused even on this Side of the Question; for those of the Physicians attached to the Train and Method of the Schools, the Reasonings of *Hippocrates* and *Galen*, and the Sentences of the Faculty, we all know, have been ever forward to treat those who think more freely, and are less stiffly devoted to Antiquity, Custom, and the reigning Practice, or Mode, as *Empiricks*, *Charletans*, and *Quacks*.

EMPLASTER, popularly call'd PLASTER, a Medicine, of a stiff, glutinous Consistence, composed of divers simple Ingredients, spread on Leather, or Linnen, and applied externally.

Emplasters are made up in a strong solid Body, that by remaining a long Time on the Part, the Medicinal Ingredients, they are chiefly composed of, may have Time enough to produce their Effect.

The Drugs, used to give a Body and Consistence to *Emplasters*, are usually Wax, Pitch, Gums, Fats, Litharge, and other Preparations of Lead.

There are *Emplasters* of divers Kinds, and used with divers Intentions: *Stomachic Emplasters*; *Cephalic*, *Stipitic*, *Hepatic*, *Diaphoretic*, *Resolutive*, *Descriptive*, *Emollient*, *Incurstant*, *Astringent*, *Conjunctivatus*, &c. *Emplasters*.

The most usual *Emplasters*, are those of *Diapalmæ*, and *Diasoylon*: The *Emplastrum Polycroston*, the *Divinum*, the *Maus Dei*, the *Magnetic*, of *Angelus Sala*. That of *Chorpi*, of *Saffron*, *de Ronis*, &c.

The Word is form'd from the Greek, *ἐμπλαστῶν*, or *ἐμπλάσσω*, to put in a Mass, or to do over: By Reason the *Emplaster* is made of divers Kinds of simple Drugs, work'd up into a thick tenacious Mass; or because it covers over the Piece of Leather, or Linnen, to be applied on the Part affected.

EMPLASTICKS, in Pharmacy, are Salves, or Medicines, which stop up, and consolidate the Pores of the Parts they are applied on.

Such are Fat's, Mucilages, Wax, the Whites of Eggs, &c. They are also call'd *Emplasticks*. The Plaster is cover'd over with a very *Emplogic* Unguent, that it may stick the stronger to the Skin. *Dionis*.

The Word is form'd from the Greek, *ἐμπροσθῶν*, to stop up.

EMPROSTHOTOS, in Medicine, a Kind of *Tonic Convulsion*, wherein the Head is drawn forwards, till the Chin touch the Breast. See *CONVULSION*.

Sometimes, too, 'tis so general, that the whole Body is bent forward, and makes a Bow; and even, sometimes, a Kind of Circle, the Knees meeting the Head.

The Cause of this Disorder is a Contraction of the Anterior Muscles, particularly those of the Head, call'd *Mastoides*. See *MASTOIDES*.

The Word is Greek, composed of *ἐμπεριάζω*, before, and *τίσις*, *Tension*, *Stiffness*, of the Verb *τινῶ*, to stretch.

EMPYEMA, in Medicine, a Collection of Pus, or purulent Matter, in the Cavity of the Breast; discharged thither upon the bursting of some Abscess, or Ulcer, in the Lungs, or Membranes, that inclose the Breast.

The *Empyema* sometimes succeeds a *Squinnacy*, sometimes a *Peripneumony*, but more usually a *Pleurisy*; as being ordinarily the Effect of a *Peripneumonic* or *Pleuritic* Abscess. See *PLEURISY*, *PERIPNEUMONY*, &c.

It usually comes 15 or 20 Days after those Difficulties. Sometimes, also, 'tis generated of extravasated Blood, issued out of a bursten, broken, or patrified Vein: 'Tis distinguish'd by a Difficulty of Breathing, a dry Cough, a Heaviness about the Diaphragm, a Noise, and fluctuating of the Matter upon moving; slow Fever, ruddy Cheeks, hollow

hollow Eyes, the Tips of the Fingers hot, and a Swelling of the Abdomen.

The Cure is difficult, from the Difficulty of absorbing, or evacuating such extravasated Matter: If Nature shews any Endeavour to throw it off by Vomiting, or Urine, or the like, she must be seconded, and assisted therein. Thus, if the Urine be purulent, administer Diureticks; if the Stools, Laxatives; if the Spitting, Expectorants, or even Emetics; otherwise, Recourse must be had to a Paracentesis, or Tapping. See PARACENTESIS.

In Order to this, an Aperture must be made in the Thorax, by a proper Instrument, on the Side affected, between the 4th and 5th, or the 5th and 6th Ribs, reckoning from the lowest; and thro' this, the Pus must be slowly drawn. See CANNULA.

There is also a Kind of *Spurious*, or *Bastard Empyema*, proceeding from a pituitous, or serous Humour, brought by some Duct, or Passage, into the Thorax; where corrupting, it degenerates into a Matter like Pus.

An *Empyema*, in Course of Time, breeds a *Pneumonia*. See PNEUMONIA.

The Word is form'd of the Greek, $\epsilon\mu\pi\upsilon\mu\alpha$, *Empyema*: The Letter ν , being here changed into μ . Which is a Thing often observed in other Languages, when the ν happens to come, in Composition, before the Labials b and p . Witness the Latin *Embaumus*, *Embleus*, *Empyrius*, &c.

EMPYREUM, among Divines, is the highest of the Heavens, wherein the Blessed enjoy the beatific Vision; call'd also the *Empyrean Heaven*, and *Paradise*.

Some of the Fathers take the *Empyreum* to have been created before the Heaven we see: St. Basil, and *Eusebius of Antioch*, maintain it in express Terms. Being the Abode of God, they suppose it must be luminous in the highest Degree; and are in Pain to account for the Darkness, which our Part of the World was in, before the Creation of the Sun, &c. As judging that the infinitely vivid Lustre of the *Empyreum*, must diffuse it self to the greatest Depths of this lower World.

They have, therefore, Recourse to an Hypothesis; our visible Heavens, according to them, did the Office of a Screen, or Curtain, and shelter'd the Earth and Waters from the Light of the *Empyreum*. See *Fa. Soucier, Dissert.* p. 171, 172.

The Word is form'd of $\epsilon\pi\upsilon$, and $\rho\upsilon\sigma$, *Fire*, by Reason of its Splendour.

EMPYREUMA, in Chymistry, &c. *Smell or Taste of Burning*; a Quality, or Change, in Bodies that have been burnt, or much scorched with Fire, sensible to the Taste and Smell; or, perhaps, it may be the foreign Matter impress'd, or added by the Fire, and remaining on the burnt or scorched Part, that gives the new offensive Smell and Flavour.

The Term is chiefly us'd when in boiling, or distilling any Thing, it sticks and burns to the Bottom of the Vessel, or Alembic, the offensive Smell and Taste whereof are express'd by the Word *Empyreuma*.

It is also us'd for the Heat remaining upon the Declension of a Fever.

The Word is form'd of the Greek, $\epsilon\mu\pi\upsilon\mu\alpha$, *to inflame, kindle*.

EMRODS, or rather *Hemorrhoids*. See HEMORRHOIDS.

EMULATION, a Noble Jealousy, between Persons of Virtue, or Learning, contending for the Superiority therein.

Plato observes of *Emulation*, that it is the Daughter of Envy; if so, there is a deal of Difference between the Mother and the Offspring: The one is a Virtue, and the other a Vice. *Emulation* admires great Actions, and strives to imitate them; Envy refuses them the Praises that are their Due: *Emulation* is generous, and only thinks of surpassing a Rival; Envy is low, and only seeks to lessen him.

The Word comes originally from the Greek, $\epsilon\mu\upsilon\lambda\lambda\alpha$, *Disspute, Debate*; whence the Latin *Emulus*, and thence our *Emulation*.

EMULGENT, in Anatomy, an Epithet bestow'd on those Arteries, which bring the Blood to the Kidneys; and those Veins, which carry back what is superfluous thereof. See KIDNEY.

The *Emulgent Arteries* spring from the descending Trunk of the *Aorta*; and the *Emulgent Veins* terminate in the ascending Trunk of the *Cava*. See CAVA and AORTA.

EMULSION, in Medicine, a liquid, gentle Remedy, of a Colour, and Consistence, resembling Milk.

It is composed of Oleaginous Seeds, Kernels, or Fruits, pounded in a Mortar, and dissolved in distill'd Waters, or light Decoctions; afterwards, express'd, or strain'd and sweeten'd with Sugar, or Syrup.

Emulsions serve to temper, dilute, and soften Acrimonies of the Breast; to moderate the Heat of the Kidneys; soften the Sharpness of the Urine; and give the Patient Rest and Ease.

The Seed of the Melon is one of the four greater cold Seeds, much us'd in *Emulsions*: The Seed of the great Gourd is also us'd in *Emulsions*, Broths, and Decoctions.

The Word is form'd from the Latin, *emulgere*, to milk.

EMUNCTORY, in Medicine and Anatomy, a Part of the Body destined for the Separation of some Humour, judg'd useless, or even hurtful to the Animal; after its having circulated some Time with the Blood. See EXCRETMENT.

The Word also implies a Cavity, adjoining to the Part that separates; wherein the excrementitious Humour is collected and preserved in Readiness for Evacuation.

The Kidneys, urinary Bladder, and millary Glands of the Skin, are *Emunctories*: The Parotides are not properly *Emunctories*, because destined to separate the Saliva, which is no useless, or excrementitious Humour, but necessary for the Digestion of the Food.

Some, without much Propriety, confine *Emunctory* to the Receptacle into which the secreted Excrement is discharged; as the pituitous Humour of the Brain into the Nostrils; the Crumen into the Ears; the Excrements into the Intestines, &c. Tho' this last has not undergone any Circulation.

The Word is form'd from the Latin Verb, *Emulgere*, to wipe.

ENALLAGE, in Rhetoric, a Figure whereby we change, and invert the Order of the Terms in a Discourse; against the common Rules of Language. See FIGURE.

The Grammarians, too, have a Kind of *Enallage*, whereby there is a Change either of a Pronoun, as when a Possessive is put for a Relative, e. g. *sums* for *ejus*; or of a Verb, as when one Mood, or Tense, is put for another.

The Word is derived from the Greek, $\epsilon\pi\alpha\lambda\lambda\alpha\sigma\tau\eta\varsigma$, form'd of $\epsilon\pi\alpha\lambda\lambda\alpha\sigma\tau\eta\varsigma$, which signifies *to change*, as well as the simple Verb $\alpha\lambda\lambda\alpha\sigma\tau\eta\varsigma$.

ENALURON, in Heraldry, is us'd by *Gullim*, to express a Bordure charged with Birds; as, with an *Enaluron of Martlets*, &c. Bat Mackenzy charges this as a Mistake on the Author, arising from Ignorance of the French Tongue: *Enaluron* properly signifies in Manner of *Orle*, or *Bordure*, and is applicable to a bearing of any Thing in that Form.

ENAMEL, popularly AMEL, a Kind of coloured Glass, by the Latins call'd *Encaustum*, and by the French *Émail*; us'd in *Enamelling*, and *Painting in Enamel*. See ENAMELLING, and *Painting in Enamel*.

The Basis of *Enamel* is the finest Crystal Glass, made of the best Kali from *Alicant*, and Sand vitrified together. See GLASS.

To this Glass are added Tin and Lead in equal Quantities, calcined by a reverberatory Fire. Such is the fundamental Composition of *Enamel*; to which are added other metallic or mineral Matters, to give it the Colour required: As *Æt Opus* for Green, *Crocus Martis* for Yellow, &c.

We may distinguish three Kinds of *Enamel*: The first intended for the counterfeiting and imitating of precious Stones: The second, for *Painting in Enamel*: And the third us'd by the *Enamellers*, Jewellers, and Goldsmiths, on Gold, Silver, and other Metals; with which last Kind, particularly the White, it is that the Makers of the *Dutch Ware*, give the Lustre and Polish to their Works.

The *Enamel* us'd in imitating precious Stones, and that for *Painting*, is prepared by the Workmen themselves, employ'd in those Arts: The rest is brought from *Venice* and *Holland*. The Composition is the same, in the main, in all the three Kinds: All the Difference consists in giving it the Colour, or Transparency.

For that us'd in imitating precious Stones. See PRECIOUS STONES.

ENAMELS for Painting.

The white *Enamel*, or Colour, us'd by the Painters in *Enamel*, is the same with the common *Enamel*, us'd by *Enamellers*: Only, 'tis to be prepared by grinding, and cleansing it with *Aqua fortis*. After which, washing it well in fair Water, 'tis ground, or pounded a-fresh in a Flint or Agat Mortar. The *ruddy brown*, is made with Feeces of Vitriol, and Salt-Petre, or with Iron Rust, well ground on an Agat, with Oil of Aspic. *Black*, is made of *Perigueux* well calcined, and ground with Oil of Aspic; to which is added an equal Quantity of the Goldsmiths, or *Enamellers* black. *Yellow*, is the same with the Goldsmiths Yellow, the Composition whereof will be given hereafter. *Blue* is made of the *Azure*, or *Lapis*, us'd by the Painters in Oil, well purified and prepared with Brandy, and expos'd in a Bottle five or six Days to the Rays of the Sun. *Vermillion Red*, is made with Vitriol calcined between two Crucibles, luted together; then wash'd in *Aqua fortis*, and afterwards in fair Water; The Fire to be moderate, and to remain about half an Hour.

Lake Red, is composed of fine Gold, dissolved in *Acqua Regia*, with *Sol Armoniac*, or common Salt. The Dissolution being complicated, 'tis put in a Cucurbit with Spring Water, and Mercury, o'er hot Sand for 24 Hours. The Powder remaining at the Bottom of the Cucurbit, when the Water is pour'd off, is ground up with double its Weight of Flower of Sulphur, and put in a Crucible over a gentle Fire. And when the Sulphur, which takes Fire, is exhall'd, the red Powder remaining, is ground up with *Rocaille*. Lastly, White Copper calcin'd, makes a Colour much like the amber Colour used by the Limners.

These seven or eight Colours, or *Enamels*, serve for the Composition of all the rest, by a discrete Mixture and Combination thereof. Thus, blue and yellow make green; blue and red, Violet; and so of the rest. See COLOUR.

ENAMELS used by the Jewellers, Goldsmiths, and Enamellers.

These Kinds of *Enamel*, we have observed, come chiefly from *Venice* and *Holland*: They are in little thin Cakes of different Sizes; usually four Inches in Diameter, and $\frac{1}{2}$ an Inch thick. Every Cake has the Maker's Mark struck on it with a Punction. The most usual Marks are the Name *Jesus*, a Syren, Monkey, Sun, &c.

Those brought from *Venice* are chiefly white, Slate-Colour, sky Blue, Carnation, Yellow, Green, and a deep Blue, call'd a false *Lapis*. These seven are the Principles of all the others, which arise out of the Mixture of these. And the white, in particular, is, as it were, the Basis of all the other six principal Colours.

White is made, as already observed, of Crystal Glass, Tin, and Lead calcined by a reverberatory Fire. And this *Enamel* is used not only by the Jewellers and *Enamellers* on Metal, but also by the Painters in *Enamel*, the Makers of *Dutch* Ware, &c. By adding Azures thereto, it becomes a Slate Colour; by adding Copper, and *Cyprus* Vitriol, it makes a sky Blue. By *Perigueux*, a flesh Colour; and by Iron-Rust, a yellow. To make a green, they add Copper-filings, &c.

ENAMELLING, by the Antients call'd *Encaustice*, the Art, or AG of applying *Enamels* of various Colours, on Metals, &c. either in the Way of Painting, or by the Lamp. See ENAMEL.

Painting in ENAMEL, is a Method of Painting with *Enamels*, or Metal Colours, ground, reduc'd to Powder, and us'd, like other Colours, with a Pencil; then fus'd, bak'd, again, and vitrified by Force of Fire.

The Art of *Painting in Enamel* is very antient; and appears to have been first practis'd on Earthen, or Pottery-Ware. As early as the Age of *Porseus* King of *Tuscan*, we hear of beautiful Vases made in his Territories, *Enamell'd* with various Figures; though far short of those afterwards made at *Faenza*, and *Castel Durante*, in the Dutchy of *Urbino*, in the Time of *Raphael*, and *Michael Angelo*. There are still some of those Vases extant in the Cabinets of Antiquaries; in all which the Design, or Drawing of the Figures, is much better than the Colouring. For they were, at that Time, only acquainted with two Colours, viz. black and white; either for Earthen, or Metal Works: Excepting a faint Kind of Carnation in the Faces and other Parts.

In the Time of *Francis I.* of *France*, the Art was retriev'd in that Country, particularly at *Limoges*; where there were produced Abundance of very valuable Pieces, in the Manner of the Antients, that is, well perform'd as to the Draught, and the Chiaroscure, chiefly in two Colours.

There are two Ways of *Painting in Enamel*; the one with clear and transparent, and the other with thick and opaque Colours.

To use the first, they are only ground up with Water: The second are ground with Oil of *Aspic*.

The first are laid on the Metal flat, and border'd, or edg'd, with a Rim of the Metal, to keep the Colours sunder. Tho', we have seen Pieces laid on contiguous, and without any Partition; which is very difficult to practise, by Reason the transparent Colours, in Melting, are apt to run in each other; especially in the little Works.

The Invention of opaque Colours, is much later, and greatly preferable to that of transparent ones.

All Metals, however, will not equally admit both Kinds. Copper, for Instance, which bears all the opaque Colours, will not bear the transparent ones: But to employ these latter upon Copper, they are forced, first, to cover it with a Lay, or Couch, of black *Enamel*, over which they lay a silver Leaf, and on this apply the other suitable Colours, that is, the Colours or *Enamels* proper for Silver, which it self does not allow of all Kinds.

Those which suit it best, are Purple, Green, Azure and Ague marin. But Gold receives all the Kinds, and Colours, both opaque and transparent, perfectly well. It may be

added, however, that only the finest Gold must be used herein. For the transparent Colours being laid on a base Gold, grows dim and livid; there being a Kind of Smoak that settles on it not unlike black Lead.

Of transparent *Enamels*, the hardest are the best; tho' there is a Difference even among these; some losing their Colour in the Fire, and others retaining it. As to the reds, they are only red by Accident, being only yellow when made and applied on the Gold; and becoming red in the Furnace. The best transparent Reds are those made of calcin'd Copper, Iron Rust, Orpiment, and calcin'd Gold, melted with the due Proportions of Glass.

But 'tis the Method of Painting with opaque, or thick *Enamel*, to which we owe all our fine modern Pieces of *Enamel*; particularly those curious ones on Gold, representing Portraits to as much Perfection as the best Painting in Oil; and even some History Pieces: With this great Advantage, that their Beauty and Lustre never decays.

This Art we are indebted for to the *French*: Nothing of the Kind having been attempted before the Year 1630; when *Jean Toustin*, a Goldsmith of *Chasteauneu*, and a great Master in the common Way of Painting with transparent *Enamel*, first applied himself to find a Way to use thick Colours of different Tints, which should melt with Fire, yet retain their Lustre, Purity, &c.

Toustin succeeded in his Attempt, and having got the Secret, communicated it to his Fellow Artists; who, in their Turns, contributed to the bringing it to Perfection: The first who distinguish'd himself was *Dubie*, a Goldsmith, who wrought in the Galleries of the *Louvre*. After him came *Mortiere*, a Native of *Orleans*, who applied himself chiefly to the Painting on Rings and Watch Cases. His Disciple, *Robert Vaquer* of *Blais*, exceeded them all both in his Designs, and his Colours. After him *Pierre Chartier* of *Blais*, took himself to the Painting of Flowers, wherein he succeeded to Admiration.

By this Time, the *English* were fallen into the Way; who, as is allowed by Foreigners themselves, seem to have been the first that applied it with Success to the Painting of Portraits, which was now become mightily in Vogue, in Lieu of those in Miniature.

M. Felidien observes, that the first, and most finish'd Portraits, and those in the finest Colours, were brought into *France* by *Petitot*, and *Bordier* from *England*: This occasion'd *Louis Hance*, and *Louis du Gournier*, two good Painters in Miniature, to attempt the like; in which the latter succeeded beyond every Body. He likewise invented several new Tints for the Carnations; and had he liv'd, had probably merited the Glory of carrying the Art to its last Perfection.

This Kind of Painting, to be in Perfection, must be on Plates of Gold: For Copper, beside that it emits a Fume which tarnishes the Colours, is apt to scale and crackle; and Silver turns the Whites, Yellow.

These Plates are made a little hollow on one Side, and rais'd on the other, either in a circular or oval Manner, to prevent the Gold's fretting by the Fire, and making the Colours crack and fly: Nor must they be made too thick. 'Tis sufficient they can bear the Colours; tho' 'tis usual to strengthen them all around with a Circle somewhat thicker.

The Plate being hammer'd very evenly throughout, they apply a white *Enamel* on both Sides, tho' the Design be only to paint on one. The Intent of this is to prevent any swelling and warping by the Fire: For otherwise, in large Pieces, and especially if the Colours be laid on any Thing unequally, they are apt to rise up in Puffs or Blisters. Now, this first Lay, which is white, remaining smooth and uniform, serves as a Ground for all the other Colours. The Composition of the white *Enamel*, with the other opaque Colours, is already deliver'd under the Article ENAMEL.

The Gold Plate thus *Enamell'd* in *rebrite*; the Draught, or Design, to be painted, must be chalk'd thereon; and, afterwards, the whole accurately drawn out in a ruddy brown. The Draught, or Out-line, thus finish'd, the Piece is set to the Fire, and then painted with the Colours above prescribed.

The white Ground they paint on, serves all the Colours for white. The Method being to spare the Ground from first to last, in the Places where the Lights are to be, after the same Manner as in Miniature: Tho' they have another white, to lay over the other Colours, when there is Occasion to raise them.

Add, that as the Painters in Oil re-touch their Paintings several Times, and let them dry; so in this Sort of Painting, they touch the Piece as often as they please, setting it each Time to a reverberatory Fire, and taking it away again, as soon as they perceive the *Enamel* has got its full pough.

The reverberatory Fire is made in a little Furnace, wherein there is Fire both a-top and all around; only a

void Place in the middle, where the Piece is to be put for the *Enamels* to melt. The Colours are laid on with the Tip or Point of the Pencil, as in Mignature; with this only Difference, that they use Oil of Aspic to dilute them instead of Gum Water. See MIGNATURE.

Method of ENAMELLING by the Lamp.

The Works of this Kind are all perform'd by the Fire of a Lamp; wherein, in Lieu of Oil, is put Horles Grease, call'd Caballin Oil.

The Lamp is of Copper, or Tin, and consists of two Parts, the Box and the Lamp: In the latter of these, which is a Kind of flat Oval, is put the Oil, and out of this rises the Wick. All the Use of the Box is to receive the Oil, which the Ebullition, occasion'd by the intense Heat, might throw abroad.

This Lamp, or even where two or three Artificers work together, two or three more Lamps, are placed on a Table of a proper Height, &c. under which, about the middle of its Height, is a double Bellows like those of an Organ, which one of the Workmen raises and falls with his Foot, to increase and quicken the Flame of the Lamps, which is by such Means rais'd to a Degree of Vivacity almost incredible.

The Wind of the Bellows is convey'd to the several Lamps, tho' never so many, by Means of Grooves cut along the Thickness of the Table, and cover'd with Parchment, extending from the Bellows, to a Tube or Pipe placed before each Lamp. These Tubes are of Glass, and that the *Enamellers* may not be incommoded with the Heat of the Lamp, each Tube is cover'd at about six Inches Distance with a Piece of Tin, call'd a Fan, fixed in a Hole of the Table. In Works that don't take up much Time, they content themselves with a Glass Blow-Pipe, to heighten the Flame of the Lamp.

Applying their Cake of *Enamel* to the Flame of this Lamp, they draw it out into Threads inconceivably fine. Those made use of in artificial Flames of Feathers are so very slender, that they may be wound on a Reel, like Silk or Thread.

The fictitious Jeats of divers Colours, sometimes used in Embroideries, are also made of *Enamel*; and that with so much Art, that each Piece has its Hole to pass the Silk thro', wherewith it is sew'd. These Holes are made by blowing them in long Pieces, which are afterwards cut off with a proper Tool.

See the *Process of drawing out the Enamel, illustrated under the Article DUCTILITY.*

'Tis rare that the *Dutch*, or *Venetian Enamels*, are used pure: The common Way is to melt them in an Iron Ladle, with an equal Quantity of Glass or Crystal. And when the two Matters are in perfect Fusion, they draw it out into Threads of different Sizes, as Occasion requires, by taking a Quantity between two Pipe-Stoppes, held in the two Hands, and removing them asunder as far as the Arms will reach. If the Thread is to be longer than the Workman can stretch, a second Person takes one of the Ends, and continues to draw it out while the first continues to keep the *Enamel* to the Flame. All the Threads drawn after this Manner are round; so that if the Nature of the Work require them to be flat, they are afterwards drawn thro' a Pair of Pinchers while yet hot. They have another Iron Instrument, in Manner of Pliers, to draw out the *Enamel* by the Lamp, when it is to be work'd, or dispos'd in Figures, or otherwise. Lastly, they have glass Tubes, of various Sizes, serving to blow the *Enamel* into various Figures, and preserve the necessary Vacancies therein, as also to spare the Staff, and form the Contours.

When the *Enameller* goes to Work, he seats himself before his Lamp, with his Foot on the Tredde; and holding in his left Hand the Piece of Work he has to *Enamel*, or the Brass or Iron Wires his Figures are to be form'd with; with his right Hand, he draws out the Thread from the *Enamel* held to the Lamp: And this with a Dexterity and Patience equally surprizing.

There is nothing but may be thus represented in *Enamel*; and there are Figures so finely finish'd of this Kind, that one would take them to have come out of the Hands of the ablest Sculptors.

ENARTHROSIS, a Kind of *Jointing*, or *Articulation*, wherein the Cavity that receives is deep, and the Bone receiv'd oblong. See DIARTHROSIS.

Such is that of the Huckle-Bone, &c. See ARTICULATION.

ENCENIA, a Greek Term, signifying *Restoration*, *Renovation*.

Encenia was the Name of a Feast, celebrated by the Jews, on the 25th of the Ninth Month, in Memory of the Dedication, or rather Purification, of the Temple, by *Judas Maccabæus*, after its being polluted and plunder'd by *Antiochus Epiphaneus*.

They had also two other *Encenia*; the Dedication of the Temple by *Solomon*; and that by *Zorobabel*, after the Return from the Captivity. See DEDICATION.

The Word is wrote in the Greek, *ἐγκαινία*, being form'd of the Preposition *ἐν* and *καινία*, new.

In the Fathers, and Church History, we likewise meet with *Encenia*, for the Dedication of Christian Churches: *St. Augustine* assures us, that in his Time, the Use of the Word *Encenia* was even transfer'd to profane Matters; and that they call'd it *Enceniare*, when they put on a new Suit of Cloaths.

Our Translators of the Bible don't retain the Word *Encenia*, in *St. John X. 22.* where mention is made thereof: In lieu of that, they call it, *Fest of the Dedication*; which is much less proper. In Effect, it was not the Feast of the Dedication, but of the Purification, or Re-consecration of the Temple profaned.

ENCANTHIS, in Medicine, a Tumor of the *Coruncula Lacrymalis*, in the great *Cantus* or Angle of the Eye. See CARUNCLE.

It is oppos'd to *Réyas*, which is a Diminution, or Consumption of the same Caruncle. See RÉYAS.

The *Encanthis* is occasion'd by a Defluxion on that Part, or an Ulcer therein not readily enough dried.

The Word is Greek, *ἐγκανθίς*, form'd of the Preposition *ἐν* and *κανθίς*, Corner of the Eye.

ENCAUSTICE, the Art of *Enamelling*. See ENAMELLING.

ENCEPHALI, in Medicine, an Epithet applied to Worms generated in the Head; where they occasion violent Pains, inasmuch as sometimes to produce Distraction. See WORMS.

There are four Kinds of *Encephali*; those properly so call'd, which are found in the Brain: The *Narisarii*, in the Nose; *Auriculares*, in the Ears; and the *Dentales*, in the Teeth.

The *Encephali*, properly thus call'd, are rare: But there are certain Diseases wherein they swarm; and we are told of incidental Fevers that arose wholly from them.

In one of these Fevers, the Physicians having open'd the Body of a Person it had carried off, they found a little, short, red Worm in the Head. Hereupon, they tried various Medicines to find what might destroy it: But all in vain, till *Melissæ* Wine, wherein Horfe Radish had been boil'd, was apply'd: This was so sooner thrown on the Worm than it died. The same Remedy was afterwards tried on the Sick; and it recover'd 'em almost all. The like have also been taken out by Trepanning, and the Patient recover'd. See VERMES.

The Word is compounded of the Preposition *ἐν*, in, and *κεφαλή*, Head.

ENCEPPE, in Heraldry, denotes chain'd, or girt round the middle; as is usual with Monkeys, &c.

ENCHANTMENT. See MAGIC, SORCERY, and WITCHCRAFT.

ENCHASING, INCHASING, or CHASING, the Art of *Enriching*, and beautifying Gold, Silver, and other Metal Works, by some Design, or Figures represented thereon, in low Relief.

Chasing is only practis'd on Hollow, thin Works; as Watch-Cases, Cane-Heads, Tweezer-Cases, or the like.

'Tis perform'd by punching or driving out the Metal to form the Figures, from with-inside, so, as there to stand out prominent from the Plane, or Surface of the Metal.

In order to this, they have a Number of fine Steel Blocks, or Punchcons, of divers Sizes: And, the Design being drawn on the Surface of the Metal, they apply the inside upon the Heads, or Tips, of these Blocks, directly under the Lines or Parts of the Figures. Then, with a fine Hammer, striking on the Metal, sustain'd by the Block; the Metal yields, and the Block makes an Indenture, or Cavity on the inside; correspondent to which, there is a Prominence on the outside, which is to stand for Part of the Figure.

Thus, the Workman proceeds to *Chase*, and finish all the Parts, by successive Applications of the Block, and Hammer, to the several Parts of the Design.

And 'tis surprizing, with what Beauty, and Justness, by this simple Piece of Mechanism, the Artificers in this Kind will represent Foliages, Grotesques, Animals, Histories, &c.

ENCHEIRESIS, in Anatomy, the same with *Dissection*. See DISSECTION.

ENCLAVE, in Heraldry, is where one Thing is let into another; particularly where the Jointure is Square.

ENCLITICA, in the Greek Grammar, certain Particles which stick so closely to the preceding Word, that, as if united with it, they only seem to form one Word together.

Whence it happens, that the Word which sustains them, does generally likewise bear the Accent that governs them, and especially when the *Enclitic* is a Mono-syllabic.

ENCROACHMENT, or ACCROACHMENT, an unlawful gathering upon another Man: As, if two Men's Grounds lying together, the one pretends too far on the other: Or, a Tenant owe Two Shillings Rent Service, and the Lord exacts Three.

ENCRATITES, ancient Hereticks, thus call'd from their making Profession of Continence, and absolutely rejecting Marriage.

The Word is form'd from the Greek, *ἐγκρατικός*, Continent. The Founder of this Sect was *Tatian*, a Disciple of *Justin*, and one of the most learned Persons of all Antiquity. After the Death of that Martyr, he made a Separation from the Church; and soon had his Followers; who, beside the Dogma just mention'd, borrow'd a great many Things from *Satanus*, and *Marcius*, beside several Errors which they adhered to in common with the *Gnosticks* and *Valentinians*.

They abstain'd from eating any Thing that had Life; and denied that *Adam* was saved. They look'd on such as drink Wine to be very great Sinners; and for this Reason, only made Use of Water in celebrating the Eucharist: As holding that Wine came from the Devil. To maintain this Sentiment, they produced Passages out of Scripture, where mention is made of what becal *Noah* and *Lot* when they were drunk.

They only admitted such of the Books of the Old Testament as they thought good: But in *Liturgies* thereof, they own'd several ignominious and Apocryphal Writings for Canonical and Divine. Such were the Acts of *St. Andrew*, *John* and *Thomas*.

ENCYCLOPÆDIA, the Circle, or Chain, of all Sciences and Arts. See ART and SCIENCE.

The Word is compounded of the Preposition *ἐν*, in, *κύκλος*, Circle, and *μαθῆς*, Science, *Δοξίνη*, Discipline, Learning; the Root being *παῖς*, Child, Infant.

'Tis mistakenly that some derive the Word from *κύβη*, a Chain, or Fetter, that holds by the Feet; it being wrote in Greek by an *ω*, not an *ε*: *Ἐγκυκλιωδία*.

The Greeks used the Term for the Knowledge of the seven liberal Arts, and the Possession of all Sciences: *Orbis ille Doctrinæ quem Greci ἑγκυκλιωδία vocant; sive Quintilian.* They also call'd it *παναρωδία*. *Vitruvius* somewhere calls it *Encyclos Disciplina*.

ENDECAGON, or HENDECAGON, in Geometry, a Figure of eleven Angles, and consequently eleven Sides. See POLYGON.

The Word is Greek, *ἑνδεκάγωνον*, form'd of *ἑνὰς*, Eleven, and *γωνία*, Angle.

ENDECASYLLABUS, or HENDECASYLLABUS, a Verse consisting of Eleven Syllables. See VERSE.

Of this we have Abundance of Instances in the Greek and Latin, and still more in the Italian Poetry.

The Greek and Latin *Endecasyllabus*, is also call'd *Phalœcus*, from the Name of its Author: Tho', in *Caullus*, we have *Phalœci*, that only contain two Syllables. See PHALÆCUS.

ENDEMIC, ENDIMIAL, or ENDEMIOS Disease, (thus call'd from *ἐν*, in, and *δῆμος*, *Populus*, People) is any Disease which affects many People together, in the same Country; as proceeding from some Cause, peculiar to the Country where it reigns. See DISEASE.

Such are the Scarcy to the Northern Climes, intermitting Fevers in marshy Places, &c.

ENDEDENT, ENDENCHE, DENTED, INDENTED, in Heraldry, is applied to a Fess, a Pale, and other triangular Pieces, when divided alternately between two different Colours. *Coupe*, or *Endentes*, with *Or* and *Argent*. See INDENTED.

ENDITEMENT, or INDICTMENT, in Common Law, is much the same as *Accusatio* in the Civil Law; tho', in some Points, it differs.

It may be defined a Bill, or Declaration made, in Form of Law, (for the Benefit of the Common-Wealth) exhibited as an Accusation of a Person, for some Offence, either Criminal, or Penal; unto the Jurors; and by their Verdict, found, and presented to be true, before an Officer having Power to punish the said Offence. See INDICTMENT.

It is always at the Suit of the King, and differs from an Accusation in this, that the Preferrer is no Way tied to the Proof thereof, upon any Penalty, if it be not proved; except there appear Conspiracy. See JURY, &c.

ENDORSE, in Heraldry, an Ordinary, or Ordinary, containing the eighth Part of a Pale. This, *Leigh* says, is never used but when a Pale is between two such: Others hold, that an *Endorse* may be bore between Birds, Fishes, Beasts, &c. Sir *J. Ferne* adds, that it shews the same Coat has been sometimes two Coats, and afterwards conjoynd within

one Escutcheon, for some Mystery of Arms. He bears *Argent* an *Endorse Argent*.

ENDORSED, or ENDOSSE, in Heraldry, is where Things are bore back to back.

ENDORING, or INDORSING, in Law, implies the Writing on the backside of a Deed, Inframent, &c. something relating to the Matters contain'd therein.

Endorsement is particularly used in Commerce for a Writing on the Back of a Bill of Exchange, by the Proprietor, or Bearer; either, thereby, to transfer it to some other, or to render it payable to the Order of some other; or to serve for an Acquittance or Receipt. The *Endorsement* is the simple Name of the Proprietor, or *Endorser*.

Note, when the *Endorsement* of a Bill of Exchange is to render it payable to another, it is call'd an *Order*. See ORDER.

To an Order, 'tis necessary the *Endorsement* be dated; and contain the Name of him who paid the Value thereof: In which Case the Bill belongs to the Person with whose Name the Order is fill'd; without any other Transfer: Without these Conditions, the Bill is judg'd to belong to the Person who *Endorsed* it.

The Bearer of a Bill of Exchange protested, has a Remedy against the *Endorsers*, for the Payment of the Recharge of the Places where the Bill was negotiated by their Order. In Case a Bill or Note is refus'd to be paid, &c. the Bearer has a Remedy against any one of the *Endorsers*, where there are several. See BILL.

ENDOWMENT, the giving, or assigning, of a Dower to a Woman. See DOWER.

The Word is also used figuratively for the setting forth, or severing, of a sufficient Portion for a Vicar, towards his perpetual Maintenance, when the Benefice is appropriated: Whence such a Vicarage, is called a Vicarage *endowed*. See VICARAGE.

ENEMA, from *εἰς*, *immitto*, I send in; is sometimes used to express a Clyster. See CLYSTER.

ENEMASIS, according to *Blanchard*, is a Medicine which stops or fratches the Blood: Or which, by binding, cooling, or drying, closes the Passages of the Vessels before open; or diminishes the Fluidity and Motion of the Blood. See SYMPLECTIC.

ENEPHOREMA, from *ἐπιφύω*, I lift up, or float; expresses such Contents of the Urine, as float about in the middle, resembling a Cloud; and thence also call'd *Nubecula Hypostasi*. See NUBECULA and URINE.

ENERGUMENUS, a Term used by Divines, and Schoolmen, to signify a Person possess'd with a Devil, or an Evil Spirit. See POSSESSION.

The *Papists* says, the *Energumeni* were such as counterfeited the Actions of the Devil, performing Things which seem'd supernatural. The Council of Orange debates, or deprives, the *Energumeni* of the Functions of the Priesthood.

The Word is form'd from the Greek, *ἐνεργῶς*, to be agitated, work'd, of *ἐν* and *ἐργον*, *Opus*.

ENERGY, an uncommon Force, or Strength, in a Discourse, a Sentence, or a Word. Thus, we say, the Words of Holy Scripture are full of *Energy*.

The Word is Greek, *ἐνεργία*, form'd of the Preposition *ἐν* and *ἐργον*, *Work*, *Labour*.

We also say *Energie*, as *Energie Style*, *Energie Terms*, &c. The same Appellation *Energie*, has been given to a religious Sect, of the Sixteenth Century, by Reason they held that the Eucharist was the *Energy*, and Virtue of Jesus Christ, not his Body, nor a Representation thereof.

ENERVATE, to destroy the Force, Use, or Office of the Nerves; either by cutting them, by weakening them with Debauchery, or by some other Violence.

Excess of Wine, and other strong, hot, spirituous Liquors, *enervate*, weaken the Nerves. When they would render a Horse useless, they *enervate* him, or cut his Nerve.

In the Mange, *enervating* is particularly used for the cutting two Tendons in the Side of a Horse's Head, under the Eye, which meet on the Tip of the Nose: They *enervate* Horses to make their Head small and lean.

The Word is also used figuratively: 'Tis no small Artifice in disputing, to be able to *enervate*, and extenuate the Allegations of one's Antagonist. This Author has a weak, *enervate* Style. See NERVE.

ENERVATION, a Term in the ancient Anatomy, applied to the Tendons of the Recti, or direct Muscles, of the Abdomen.

The Fibres of the Recti of the Abdomen, do not go from one Extreme of the Muscle to the other, but are intersected by several Nervous Places, called by the Antients *Energustions*; tho' they be real Tendons.

Their Number is not alike in all: Some having three, others four, &c. See RECTI.

ENFANS Perdus, a French Phrase, literally implying lost Children, and by a little Extension, *Persons forsaken*; used

used in War, to signify the Soldiers who march at the Head of a Body of Forces appointed to sustain them; in Order to begin an Attack, make an Assault, or force a Post. At present 'tis the Grenadiers that usually begin such Attacks. See **PERDUS**.

ENFILADE, a French Term, sometimes used in *Englilh*. It signifies a Series, or Continuation, of several Things, disposed, as it were, in the same Thread or Line.

As an *Enfilade* of Rooms, of Doors, of Buildings, &c. It is also used figuratively; as a long *Enfilade* of Stories, Examples, Narrations, &c.

The Word is form'd of the French Verb *Engler*, to string a Thing, which is compounded of *en*, in, and *fil*, or *filum*, Thread: *q. d.* a Thread, or String, of any Thing.

ENFILADE, in War, is applied to Trenches, and other Lines, which are *Enfilad*, i. e. in a Line, and so may be scour'd, or swept, by the Canon length-wise, or in the Direction of the Line, and render'd almost defenceless.

Care must be taken that the Lines be not *Enfilad*: On the contrary, the Covert Line must be *Enfilad*, that the Enemy may be driven out of it.

The last *Bayon*, or Gut of the Trenches, is subject to the *Enfilade*; that is, to be scour'd according to its Length.

A *Battery & Enfilade*, is that where the Canon rate a right Line. A *Post*, or *Command & Enfilade*, is a Height from which one may sweep a whole right Line at once. The Canon play on the *Fosse* by *Enfilade*. The Trenches are to be driven out of the *Enfilade*, i. e. are to be carried winding.

ENFRANCHISEMENT, the Incorporating any Man into a Society, or Body politic.

For Example: He that by Charter is made Denizen of *England*, is said to be *Enfranchis'd*: The like underfoot of a Person made a Citizen of *London*, or other City, or corporate Town; by Reason he is thereby made Partaker of the Liberties appertaining to the Corporation whereof he is *Enfranchis'd*.

ENGASTRIMYTHUS, or **ENGASTRIMANDER**, a Person who speaks from, or with, the Belly; without opening the Mouth; or, if open, without stirring the Lips.

Thus call'd by the *Greeks*, from *en*, *gaster*, Belly, and *mythos*, Speech; and by the *Latins* *Venerilocus*, quasi *ex ventre Loquens*. See **VENTRILOCUS**.

The ancient Philosophers, &c. are divided on the Subject of the *Engastrimythi*: *Hippocrates* mentions it as a Disease. Others will have it a Kind of Divination, and ascribe the Origin, and first Discipline thereof, to one *Empyrus*, whom no Body knows any Thing of.

Others attribute it to the Operation, or Possession, of an Evil Spirit: And others to Art, and Mechanism.

The most eminent *Engastrimythi*, were the *Pythias*, or Priests of *Apollo*, who deliver'd Oracles from within, without any Action of the Mouth or Lips. See **PYTHIA**.

St. Christophorus and *Oecumenius*, make express Mention of a Sort of Divine Melo, call'd by the *Greeks* *Engastrimandi*, whose prophetic Bellies pronounced famous Oracles. See **ORACLE**.

M. Scabrus, Library-Keeper to the King of *Prussia*, in a Dissertation on the Apocryphs of *Homer*, maintains, that the *Engastrimythi* of the Antients, were only Poets, who, when the Priests could not speak in Verse, supplied the Defect, by explaining, or delivering, in Verse, what *Apollo* dictated in the Cavity, or Belly, of the Basin, that stood on the sacred *Tripod*. See **TRIPED**.

Leo Allatius has an express Treatise of *Engastrimythi*, entitl'd, *de Engastrimytho, Synopsis*.

ENGENDRING, the Act of begetting, or producing the Kind, by Way of Generation. See **GENERATION**.

The Term is likewise applied to other Productions of Nature: Thus, *Meteors* are said to be *Engender'd* in the middle Region of the Air. See **METEOR**.

Crude Fruits *Engender* Worms. See **WORMS**.

The Antients believ'd that Insects were *Engender'd* of Putrefaction. See **INSECT**.

ENGINE, a compound Machine, or Instrument; consisting of several simple ones, as Wheels, Screws, Levers, or the like, combin'd together; in Order to lift, cast, or sustain a Weight, or produce some other considerable Effect, so as to save either Time, or Force. See **MACHINE**.

The Word is form'd of the French *Engin*, of the Latin *Ingenium*, Wit, Ingenuity; by Reason there is Ingenuity required in the Contrivance of *Engines*, to augment the Effect of moving Powers. See **POWERS**.

The Kinds of *Engines* are infinite: Some for War, as the *Balista*, *Catapulta*, *Scorpio*, *Arx*, &c. Others for the Arts of Peace, as *Mills*, *Cranes*, *Presses*, *Clocks*, *Water-bells*, *Engines* to raise Water, to extinguish Fire, &c. which see under their respective Articles **MILL**, **CLOCK**, **WHEEL**, **PRESS**, **FIRE-ENGINE**, &c. See also **INSTRUMENT**.

ENGINEER, in its general Sense, is applied to a Contriver, or Maker, of any Kind of useful *Engines*, or Machines. But, in its proper Sense, it denotes an Officer in an Army, or fortified Place, whose Office is to concert, and inspect Attacks, Defences, Works, &c.

An *Engineer* should be an able and expert Mathematician, particularly versed in Military Architecture and Gunnery; being often sent to view and examine the Places intended to be attack'd, to chuse out and shew the General the weakest Place, to draw the Trenches, assign the Places of Arms, Galleries, Lodgments on the Counterflope, and half Moon; conduct the Works, Saps, Mines, &c. and appoint the Workmen their nightly Task: He also makes the Lines of Countersallation, with the Redoubts, &c. from Space to Space.

Under the new Establishment of the Office of his Majesty's Ordnance, are six *Engineers*, and four *Sub-Engineers*. See **ORDNANCE**.

ENGLECFRIE, **ENGLECHERIE**, or **ENGLESCHYRE**, a Term of great Import to our Ancestors; tho' now obsolete: It properly signified the Quality of an *Englismann*.

Thus, if a Man were privily slain, or murder'd, he was, antiently, accounted *Francigenus*, (which comprehended every Alien, especially *Danes*) till *Englecherie* was proved: i. e. till it was made appear that he was an *Englismann*. See **BRITON LIB.**

The Origin of the Custom was thus: King *Cannus* having conquer'd *England*, at the Request of the Nobles, he sent back his Army into *Denmark*; only reserving a Guard of *Danes* for his Person: And made a Law, that if any *Englismann* kill'd a *Dane*, he should be tried for the Murder; or, if he escap'd, the Village where the Man was slain should be charged to pay 66 Marks into the Exchequer. After this Law, whenever a Murder was committed, it was necessary to prove the Party slain an *Englismann*, that the Penalty of 66 Marks might not be charged on the Village.

ENGLISH, or the **ENGLISH** *Tongue*, the Language spoke by the People of *England*; and, with some Variation, by those of *Scotland*. See **LANGUAGE**.

The *English* is of *Gothic*, or *Yeutonic* Extraction: This was the Root, or Stock, upon which several other Dialects have been since grafted; particularly the *Latin*, and *French*. See **TEUTONIC**, &c.

The Language antiently spoke in our Island was the *British*, or *Welsh*, which was common to the *Britains* and *Gauls*; and which still subsists, in more or less Purity, in the Principality of *Wales*, the County of *Corwall*, the Islands and Highlands of *Scotland*, *Ireland*, and some Provinces of *France*, particularly *Bretagne*. See **WELSH**.

As the *Roman* Empire, extending it self towards the *Western* Parts of *Europe*, came to take in *Gaul* and *Britain*; the *Roman* *Tongue* became propagat'd therewith; and the *Edicts*, &c. relating to the publick Affairs, being design'dly wrote in that Language.

The *Latin*, however, 'tis certain, never got so much Ground, or prevail'd so far in *England*, as in *Lombardy*, *Spain*, and the *Gauls*; partly on Account of its great Distance from *Rome*, and the small Resort of *Romans* hither; and partly, for that the entire Reduction of the Kingdom was not effected, till so late as the Empire of *Claudius*, when the Empire was on the declining Hand; and the new Province was forced to be soon decier'd by its Conquerors, call'd to defend their Territories nearer Home. See **LATIN**.

Britain thus left naked, became an easy Prey to the *Angli*, or, *Anglo-Saxons*, a strolling Nation from *Yusland* and *Norway*, who took an easy Possession thereof; much about the Time that the *Franks*, another *German* Nation, enter'd *Genl*. The *Gauls* and *Franks*, it seems, at leagh, came to Terms; found Means to unite into one Nation: And thus the antient *Gaulish*, with its Mixture of *Latin*, continu'd the prevailing *Tongue*, only further intermix'd with *Francian*, or *Lingua Franca*, of their new Inmates: But the *Britains* were more constant, and determin'd absolutely to refuse any such Coalition; they had embrac'd Christianity, and their Competitors were Heathens: Rather than admit of such an Union, therefore, they chuse to be shut up, with their Language, in the mountainous Parts of *Cambria*, or *Wales*.

The *English Saxons* thus left absolute Lords, chang'd every Thing; their own Language was now fully establish'd, and the very Name of the Country was henceforth to be *Anglo-Saxon*.

The new Language remain'd, in good measure, pure and unmix'd till the *Norman* Invasion: The Attempts of the *Danes*, and the Neighbourhood of the *Britains*, indeed wrought some lesser Innovations therein; but, in the main, it preserv'd it self; for, as to the *Danes*, their Language was not much different therefrom. *Edward*

the Conqueror, however, who had lived long in France, might, possibly, bring in a little Mixture of the Dialect of that Country.

But *Williams* I, and his *Normans*, having got Possession of *England*, an Alteration was soon attempted: The Conquist was not complete, unless the Conqueror's Language, the *French*, or *Franso Gallie*, were introduced; and accordingly all his Acts, Diplomas, Edicts, Pleadings, and other Judicial Matters, were written, &c. in that Tongue. See FRENCH.

But his Attempts prov'd unsuccessful; the Number of *Normans* he brought over, being very small, in comparison of the *English* with whom they were incorporated, they lost or forgot their own Language, sooner than they could make any Change in the *English*. This, however, did not hinder, but by the Endeavours of the Conqueror, Abundance of *French* Words, tho' many of them of *Latin* Original, crept into the *English*: And many *English* Words by degrees grew out of Use.

Hence, as to the Origin and Etymology of many of our Words, *Dr. Wallis* lays it down, that such Words of *German* Original as we have in common with the *French*, are to be reckoned as our own, rather than borrowed from them; and that the old *Gaulish* Words, common to the *French* and the *Welsh*, which are found in our Language, have been likewise taken from the *Welsh* rather than the *French*. See ETYMOLOGY.

Hence, also, the same Author accounts, why the Names of the divers Sorts of Cattle are *Saxon*, as Ox, Cow, Calf, Sheep, Hog, Boar, Deer, &c. And yet that their Flesh, when prepared for Food, is *French*; as Beef, Veal, Mutton, Pork, Brawn, Venison, &c. The *Norman* Soldiers, forsooth, not concerning themselves with Pastures, Parks, and the like Places, where such Creatures are fed and kept; so much as with Markets, Kitchens, Festivals, and Entertainments, where the Food was either prepared, sold, or eaten.

Under *Henry II.* *Dr. Swift* observes, the *French* made a still greater Progress; by reason of the large Territories he possessed on that Continent, both from his Father and his Wife, which occasioned frequent Journeys thither, with numerous Retinues, &c. And for some Centuries after, there was a constant Intercourse between *France* and *England*, by the Dominions we possess'd there, and the Conquests we made; so that the Language, two or three hundred Years ago, seems to have had more *French* than at present.

Besides this Alteration from the Conquerors, the Language, in Process of Time, underwent divers others; and came to have numerous Words and Phrases of foreign Dialects, ingrafted into it; in lieu whereof the ancient *Saxon* ones gave Way; particularly by means of Negotiations, and Commerce with other Nations; by the Marriages of Royal Families; by the Affectation of many Writers in most Ages, who are fond of coining new Words and altering the usual Forms of Speech, for the greater Delicacy; and by the Necessity of framing or borrowing new Words, according as new Things and Inventions turn up. And by such Means was the old *Anglo Saxon* converted into the present *English* Tongue.

Having traced the Rise and Progress of our Language historically, we think it may be no uncurious Amusement to represent, by actual Examples, the several successive Changes and Stages it has pass'd thro', to arrive at its present Perfection: In order to which we shall make Use of the Collections of the ingenious *Mr. Greenwood*.

From the *Saxon* Invasion in 449, we have no Memorial extant of the Language for 250 Years: The oldest *Saxon* Writing extant, is a Gloss on the Evangelists, written in the Year 700, by *Eadfride* Bishop of *Holy Island*: In which the three first Articles of the Lord's Prayer run thus,

- Uren Fader the arth in Heofnas, sic gehalgad Our Father who art in Heaven, be hallow'd
- thin Noma, so cymeth thin Ric. Sic thin Willa thy Name, come thy Kingdom, be thy Will
- sue is Heofnas, and in Eorthis, &c. so as in Heaven, and in Earth.

200 Years after, in the Year 900, the same was render'd thus:

- Thu ure Fader the Eart on Heofenam, si thin Nama gehalgad Come, thin Ric, si thin Willa on Eorthen.
- fwa, fwa on Heofenam.

In the following Age it was turn'd thus in the *Saxon* Homilies, said to be translated by King *Alfred*.

- Feder ure tha the Earth on Heofnum, si thin nama Gehalgod to be come thin Ric, Gewurthe thin willa on Eorthisan fwa fwa on Heofnum, &c.

About the Year 1160, under *Henry II.* it was thus render'd by Pope *Adrian*, an *Englishman*, in Rhime.

- Ure fadyr in Heaven rich,
- Thy Name be halved every lich,
- Thou bring us thy michell blisse;
- Als hit in Heaven y-doe
- Evar in Yearth be it also, &c.

About 100 Years after, in the Time of *Henry III.* it was turn'd thus:

- Fadir that art in Heaven blisse,
- Thin Helge nam it wurth the blis,
- Cumen & mot thy Kingdom,
- Thin Holy Will be it all don
- In Heaven and in Erth also, &c.

200 Years after, under *Henry VI.* it was render'd thus:

- Our Fadir that art in Hevencs, halwid be thi
- Name, thi Kingdome come to thee, be thi Will done
- in Erthe, as in Hevenc —

An extraordinary Specimen of the *English*, as spoke in the Year 1385, *Dr. Hicks* furnishes us withal, in his *Trebur. Liter. Septem.* which we shall the rather entertain the Reader withal, as it is on this very Subject the *English* Tongue, and contains not only the History, but the Reasons, of the Changes and Differences therein.

As it is knowe how many maner peeth beeth in this Lond; there beeth also fo many dyvers Longages and Tonges. Notheles *Walshes* Men and *Scots* that beeth nought medled with other Nations, holdeth wel nyh hir firste Longage and Speche; but yif the *Scottes* that were sometime conederat and woned with the *Pictes* drawe somewhat after hir Speche; but the *Flemynge*s that woneh in the *Weste Side of Wales*, haveth left hir strange Spech, and spekethe *Scotliche* now. Also *Englyshe* Men, they had from the bygynnyng thre maner Speche: Northerne, Sowtherne, and middel Speche in the middel of the Londe, as they come of thre maner of Peple of *Germania*: Notheles by Commysyn and medlyng first with *Danes*, and afterward with *Normans*, in meny the contrary Longage is apayrd [corrupted]. This appayrnyng of the burthe of the Tunge is because of twic thynges, oon is for Children in scole agest the Usage and Maner of all other Nations, beeth compelled for to leve hire own Longage, and for to construe hir Lefus and here Things in *French*, and so they haveth sethe *Normans* come first into *Engelond*. Also Gentlemen Children beeth taught to speke *Frenche* from the Tyme that they beeth rokked in here Cradhe, and kunneht speke and play with a Childes Broder, and upondische Men will likne himself to Gentlemen, and fondeth with great Belyueff for to speake *Frenche* to be told of. — Hit seemeth a greet Wonder how *Englyshe* Men and her own Longage and Tonge, is so dyverc of Sown in this oon lound; and the Langage of *Normandie* is comlyng of another Land, and hath oon maner soun amonge alle Men that speketh hit ariht in *Engelond*. — Also of the forelaid *Saxon* Tunge that is deled [divided] a thre, and is abide fereceliche with fewe upondische Men is greet Wonder. For Men of the *Est*, with Men of the *West*, is, as it were, under the same Partic of Hevenc accordeth more in sownnyng of Speche, than Men of the North, with Men of the South. Therefore it is that *Amerci*, that beeth Men of myddel *Engelond*, as it were Parteners of the Endes, underfondeneth bettre the Side Longages *Northerne* and *Southerne*, than *Northerne* or *Southerne* underfondeneth either other. — All the Longage of the *Norrbumber*, and specialliche at *Tork*, is to sharp, flitting and frotyng, and unschape, that we *Southerne* Men may that Langage unnothe understande. I trow that that is by cause that they beeth nyh to frange Men and Nations, that speketh strongliche, and also bycause that the *Kinges of Engelond* wonneth alwey fir from that Country, &c.

How the *English* flood about the Year 1400, may be seen in *Chaucer*, who refined and improved it very considerably; tho' he is charged with the Affectation of mixing too many *French*, and *Latin* Words with his *English*, and by that Means altering and corrupting the primitive Language.

In the Year 1537, the Lord's Prayer was printed according to the following Version:

- O Our Father which arte in Heven, halowed be thy
- Name: Let thy Kingdome come, thy Will be fulfilled
- as well in Erth as it is in Heven, &c.

Where the Reader will observe the Diction almost brought to the present Standard; the Variations being principally in the Orthography.

Spencer, who lived in the same Age, contributed not a little to the Improvement and refining of the Tongue: He threw aside Abundance of the outlandish Ornaments, and wrote a purer *English*, yet with more Elegance and Variety, than had been known before. He was succeeded in order, by *Shakespeare*, *Ben. Jonson*, *Lord Bacon*, *Milton*, *Cowley*, *Waller*, *Tillotson*, and *Dryden*, whose Works are in every body's Hands; by whom the Language has been transmitted to us under all its present Advantages.

The Perfections ascribed to the *English*, and that in a degree superior to any of the other Modern Tongues, are,

1°. That it is Strong and significant: to which our finely compounded Words, form'd on the Model of the *Greek*, do not a little contribute.

2°. *Copious*: of which Mr. *Greenwood* gives us Instances in the Word *Striking*: which we have above 30 different, synonymous Expressions for; as, to smite, bang, beat, buff, buffet, cuff, hit, thump, thwack, flap, rap, tap, kick, spuro, box, yerke, pummel, punch, &c. And the Word *Anger*, for which he enumerates above 40.

So we say, *to sceth or boil* Flesh, *stew* Prunes, *poche* Eggs, *coddle* Apples, *bake* Bread; for which Expressions *to sceth*, *boil*, *poche*, *coddle*, and *bake*, the *Latin*, with all the best *Copias* of the Tongue, have only one Word, *coquere*; and the *French*, as much as they abound with Terms of Cookery, not many more; the Word *Cuire*, serving indifferently for scething, boiling, baking, stewing and cooking.

3°. Musical and harmonious; in which Respect Mr. *Dennis* makes no Scruple to assert it superior even to the *French*. This, which some may think strange, he proves hence, that we have blank Verse which is harmonious by mere Force of Numbers, and Quantity; whereas the *French* have long ago desisted from all Pretensions to poetical Numbers, without the Assistance of Rhime. See QUANTITY, NUMBERS, &c.

It may be added on this last Head, from Mr. *Wolfe*, that the *English* has many Measures, the *Jambic* and *Træbeæ* for Instance, in common with the *Greek* and *Latin*; an Advantage arising from the Variation of the Accent. And that Rhime is peculiarly natural to it, varying it self to the Ear with excessive Sweetness; not to mention the Casuras, Pauses, Transpositions, and numberless other Graces, which the *English* Versification is capable of, beyond any other living Language. See RHYME, &c.

Some object to the *English*, its consisting too much of Monosyllables; which others make a Piece of Merit, as it argues the greater Antiquity, if what *Salmasius* says be true: *Certum quippe est, lingua omnes que monosyllabis consistunt ceteris esse antiquiores*; adding, that the ancient *Greek* abounded herein, as appears from the ancient Poets, and such as affected Antiquity. *De Re Hellenicæ*. But we have a further Advantage from our Monosyllables; viz. *Conciseness*, we being hereby enabled to express more Matter in the same Compass of Letters, than any other Modern Tongue. The only Thing we suffer by it is, something in Point of Softness and Numbers; and yet we have Verses composed wholly of Monosyllables, that do not want Harmony; as that of *Greek* "Nor could the World have born so fierce a Flame." See MONOSYLLABLE.

Some of our later, and politer Writers, however, find wherewithal to find Fault in our Language: It seems it does not come up to the Softness, the Delicacy of the more Southern Languages, *France*, *Spain*, and *Italy*. It retains somewhat of the Gothic Roughness, of the People who framed, and introduced it; the Soil and the Climate it was planted in, not tending much to mellow and refine it.

To this Purpose does Dr. *Swift* talk, who accounts for the Thing hence, that the *Latin* Tongue was never in its Purity in our Island; and beside, such as it was, was call'd away ere it could have Time to incorporate with the Language of the Country, and subdue, and soften it: as it did in the other Provinces of *France* and *Spain*, &c. But it is to be observed, that, upon the whole, this, supposing it true, does not fall as an Objection against the Language, but the People: Our Manners are also less polish'd, than some of our Neighbours; we are not yet arrived, and may we never hereafter arrive, at that Pitch of Molleness, of Delicateness, of Soupleness, which we confire in them; and 'tis but just our Language correspond with the rest of our Character. We have somewhat more of the rough Virtues of human Nature unsoften'd, unpolish'd away by Art; and when these are gone, we may talk as softly, and as prettily, as the Dissolute, Enervate,

[Effeminate, I would have said, but for the *Cassabrisis*] Nations on the other Side the *Alps*, where you see Politeness in its Perfection.

But the Revd. Doctör ventures further: "Our Language," he affirms, "is extremely imperfect; its Improvements in 'no proportion to its Corruptions; and in many Instances 'it offends against every Part of Grammar." What this ingenious Author means by offending against Grammar, we don't apprehend: Is it, that the *English* Tongue offends against the Grammar of the same Tongue? That were absurd: A Language is not to be judg'd of ad regulated, by any pre-conceiv'd Forms or Rules of Grammar, but the Grammar to be taken from the Language: 'Tis the Language directs the Grammar, not *vice versa*; So that if there be any Disagreement between them, the Fault must be charged on the Grammar, which is so far deficient. Does he mean, that it offends against the Grammar of the *Latin*, or *Greek*? That may well be, without any Fault; for the Grammars of all Languages widely differ.

Mr. *Wolfe* is fully of Opinion, that the *English* Language is not capable of a much greater Perfection, than it has already attain'd: We have traffick'd, he observes, with every Country for the enriching it: The Ancients and Moderns have both contributed to the giving it Splendor and Magnificence; the fairest Scyons that could be had from the Gardens of *France* and *Italy*, have been grafted on our old Stocks, to refine the Savageness of the Breed; we have laid aside most of our harsh, antique Words, and retain'd few but those of good Sound and Energy: The most beautiful Polish is at length given our Tongue that it will bear, without destroying, and altering the very Basis and Ground-work of it: Its *Leontick* Rust is worn away, and little or nothing is wanting, either of Copiousness, or Harmony. He goes on to argue the Maturity and Perfection of the *English*, from another very extrinsic Principle; viz. By comparing the Time, and Circumstances of the Improvements, made since the first Refiners of it; with those of the *Greek*, *Latin*, *French*, and other Tongues, that consistently have risen to their Height.

Every civilized Nation, that applauded Author thinks, has its Classical Age; and he suggests, that the *English* are not far from it. So that what remains to be done for the *English* Tongue, should not be to advance, but to fix it where it is, and prevent its Declining. There is in Effect, a Point of Perfection, which when a Language has once arriv'd at, it cannot exceed, tho' it may degenerate from it; and thus it happen'd to the two first Languages the World has known.

It may seem odd to talk, with Dr. *Swift*, of fixing so unstable a Thing as Language: The *Greek* Liturgies of St. *Basil*, and St. *Chrysostom*, still us'd in that Church, the one for Solemn, the other for Common Days, have been a long Time unintelligible to the People: So much is the vulgar *Greek* degenerated from its original Purity. *Polybius* testifies, that the Articles of Truce between the *Romans* and *Carthaginians*, cou'd scarce be understood by the most learned *Roman* Antiquaries, 350 Years after the Time of their Making. In Effect, from the Days of *Romulus*, to those of *Julius Cæsar*, the *Latin* was perpetually changing; and what was wrote three hundred Years before *Tully*, was as unintelligible in his Time, as the *English* and *French* of the same Period are now: And these two have changed as much since *William the Conqueror*, in about 700 Years, as the *Latin* appears to have done in the like Term.

Whether our Language will decline as fast as the *Romans* did, may admit of some Debate; there being many Circumstances in the Affairs of the Nation, which contributed to that Corruption, that may not, in all Probability, find Place among us. The *French*, for these 50 Years past, has been polishing as much as it will bear; and appears to be now declining, by the natural Inconstancy of that People, and the Affliction of some late Authors, to introduce Cant Words, which is the most ruinous Corruption in any Language. But without some such Consideration, there does not seem any absolute Necessity, why a Language should be perpetually changing.

We find Examples to the contrary: From *Homer* to *Plutarch*, are above a thousand Years; and so long, at least, Dr. *Swift* thinks, we may allow the Purity of the *Greek*: The *Grecians* spread their Colonies round all the Coasts and Islands of *Asia minor*, and the *Egean* Sea, where the Language was prefer'd coire for many Ages after they themselves became Colonies to *Rome*, and were over-run by the barbarous Nations. The *Crusse* have Books in their Language above 2000 Years old; neither have the frequent Conquests of the *Tartars* been able to alter it. And the *German*, *Spanish*, and *Italian*, have admitted few or no Changes for some Ages past.

On such Considerations, that Author, with the conspiring Wishes of Numbers of others, moved the then prime Minister, the Earl of *Oxford*, to establish a Society, or Academy, for the settling, and ascertaining, the Purity of our Tongue; to set a Mark on the Improprieties which Custom has made familiar, to throw out various Phrases and Words, to correct others, and perhaps retrieve some others now grown obsolete, and to adjust the Orthography, Pointing, &c. See ACADEMY.

Without some such Means, he complains, that Fame any Writer can expect will be so short and scanty, as by no Means to be a sufficient Motive to call forth, and engage a Man to exert his Genius. Our Language is chiefly confined to these two Islands; and it is hard our Authors Fame should be limited in Time as well as Place. Were it not for the Bible and Common-Prayer, we should hardly have been able to understand any Thing written a hundred Years ago.

'Tis a melancholy Reflection, that *Petrarch* still speaks good *Italian*; whereas *Chaucer*, who lived an hundred Year later, is not to be understood without a *Saxon* and *French* Glossary. And what Security has *Dryden* himself, while Things continue on their present Footing, that he shall not in a like Space of Time become as obsolete as *Chaucer* is?

Grammars, and Dictionaries, with whatever Care and Judgment they are composed, will prove but a feeble Stay to a fleeting Language, unless they have some extraordinary Sanction, and Authority. And what is to be lamented, such Writings have contributed to the Corruption almost as much as the Perfection of our Tongue. See GRAMMAR and DICTIONARY.

Dr. *Gill*, *Ben Jonson*, and *Hexham*, 'tis certain, by forcing the *English* Tongue to the *Latin* Method, have clog'd, and perplex'd it with Abundance of useless Precepts concerning Cases, Gender, and Declensions of Nouns, Tenses, Moods and Conjugations of Verbs, and other Things which our Language has nothing to do withal. Nor have even Dr. *Wallis*, *Greenwood*, &c. tho' sensible of the Fault in those others, been able wholly to keep clear of it themselves. See CASE, GENDER, NUMBER, &c.

ENGNONASIS, in Astronomy, *Hercules*; one of the Northern Constellations. See HERCULES.

ENGRAFTING, GRAFTING, or GRAEFING, in Agriculture and Gardening, the Art, or Act, of inserting, or fixing, a Cyon, Shoot, or Bud, of one Tree, in the Stock of another; in order to correct and improve its Fruit. See FRUIT-TREE.

Or it is the Art of applying a *Graft*, or Shoot, of one Plant, to the Stock of another; in such Manner, as that the Sap passing freely thro' both, the Tree grafted on may produce the same Kind of Fruit with that whence the *Graft* is taken. See GRAFT.

Engrafting only differs from *Inoculation*, in that the latter is perform'd when the Sap is at the highest, in Summer; and the former e're it rises, at least, in any Quantity. See INOCULATION.

Engrafting is one of the principal Operations in Gardening, and that wherein the Goodness of the Fruit greatly depends. See GARDEN.

'Tis very extraordinary that the Seeds, or Kernels, or Stones of a Fruit, as an Apple, Pear, Peach, Plum, Cherry, &c. being sown, degenerate in the Ground; so, that the Tree arising from it is of another Kind, a Sort of wilding, harsher, fouler and coarser than that of the Parent Tree. To correct this, Trees thus rais'd, must be grafted from other better Kinds. See SEMINARY, ORCHARD, NURSERY, &c.

Apples are commonly rais'd by *Engrafting* the intended Kinds on Crab Stocks, procur'd by sowing the Kernels: So are *Pears*, procur'd by *grafting* on the wild Pear Stock: Tho' for Dwarf, or Wall Trees, they generally chuse to *Engraft* on the Quince Stock. See DWARF, &c.

They will also do if grafted on the white Thorn. *Peaches* are produced by *grafting* on an Almond or Plum-Stock. Indeed, in this Fruit, it sometimes happens that the Stone sown, produces better Fruit than that from which it was taken: But this is not common; beside that the Tree in such Case, is long e're it comes to bear. *Plums* are rais'd by *Engrafting* on a Damson, or wild Plum-Stock: And *Cherries*, on the Black-Cherry, or Merry Stock, rais'd from Stones.

Our best Gardeners, likewise, *Engraft* their less kindly Trees from other better of the same Sort, to mend them; as, also, the smaller and single Flowers, as *Gilliflowers*, &c. from the larger and finer. To produce Stocks for *Engrafting* on. See STOCK.

The Curious furnish us with other extraordinary and anomalous Instances of *Engrafting*: As of Apples on

Plane, Elder, Thorn, Cabbage-Stralk, &c. and the like of Pears, &c. Pears on Apple Trees, on Elms, &c. Cherries on the Laurel; Coral Berries on the Plum: Beach on the Chestnut, Oak on the Elm, Gooseberry on the Currant, the Vine on the Cherry Tree, &c.

Inferius Lauro Cerasus, pernique Costo
Tingis adopivius virginis Ora pudor. Ausonius.

Even *Daphne's* Coyne's thou dost mock,
And wedst the Cherry to her Stock. Cowley to Mr. Evelyn.

— *Mutastamque infusa mala*
Ferre Pyrum, & Prunis lapidosa rubescente Corna.
Virgil Geor. Lib. II.

— *Steriles Platani, Malos gessere Valentis;*
Castanea, fagos; Ornuſque incanus albo
Flore Pyri; Glanemque Sues fragers sub ulnis. Id. ibid.

The Origin, and Invention of *Engrafting*, is differently related by Naturalists: *Theophrastus* tells us, that a Bird having swallow'd a Fruit whole, cast it forth into a Cleft, or Cavity, of a rotten Tree; where mixing with some of the purified Parts of the Wood, and being wash'd with the Rains, it budded, and produced within this Tree, another Tree of a different Kind. This lead the Husbandman to certain Reflections, from which, soon afterwards, arose the Art of *Engrafting*.

Pliny sets the Thing in a different Light: A Countryman having a Mind to make a Palisade in his Grounds; that it might endure the longer, he brought himself to fill up, and strengthen the Bottom of the Palisade by running, or wadding it with the Trunks of Ivy. The Effect of this was, that the Stakes of the Palisades taking Root, became *Engrafted* into the Trunks, and produced large Trees; which suggested to the Husbandman the Art of *Engrafting*.

The Reason, or Philosophy, of *Engrafting*, is somewhat obscure; and had not Hazard given the first Hint, all our Knowledge of Nature would never have led us to it. The Effect is ordinarily attributed to the Diversity of the Pores, or Ducts, of the *Graft*, from those of the Stock, which change the Figure of the Particles of the Juices in passing thro' them to the rest of the Tree.

Mr. *Breadley*, on Occasion of some Observations of *Agricola*, suggests something new on this Head: The Stock grafted on, he thinks, is only to be consider'd as a Fund of vegetable Matter, which is to be filter'd thro' the Cyon, and digested, and brought to Maturity, as the Time of Growth in the Vessels of the Cyon directs. A Cyon, therefore, of one Kind, grafted on a Tree of another, may be rather said to take Root in the Tree 'tis grafted in, than to unite it self with it: For it is visible that the Cyon preserves its natural Purity and Intent, tho' it be fed and nourish'd with a mere Crab; which is, without doubt, occasion'd by the Difference of the Vessels in the Cyon from those of the Stock: So that *Grafting* may be justly compar'd to Planting.

In Prosecution of this View of that ingenious Author, we add, that the natural Juices of the Earth, by their Secretion and Communion, in passing thro' the Roots, &c. e're they arrive at the Cyon, must doublets arrive there half elaborated and concocted; and so dispos'd for a more easy, plentiful, and perfect Assimilation and Nutrition; whence the Cyon must necessarily grow and thrive better and faster than if it were put immediately in the Ground, there to live on coarse Diet and harder of Digestion: And the Fruit produced, by this further Preparation in the Cyon, must be finer and further exalted, than if fed immediately from the more imperfectly prepared and alter'd Juices of the Stock.

The Cyon, to say no more, is somewhat in the Condition of the *Fetus* in *Utero*, fed from the Mother's Blood: At least, 'tis in that of the Infant after Exclusion, fed with the Mother's Milk.

The Methods, or Kinds of *Engrafting* are various; as *Grafting in the Cleft*, *Grafting in the Ring*, *Whip-Grafting*, *Grafting by Approach*, *Scutcheon Grafting*, *Root Grafting*, *Re-iterated Grafting*, *Grafting on Branches*, &c.

The Apparatus, or Instruments used herein, are Saws to cut off the Head of Stocks; Knives to make Clefts; a Chissel to pare away the Wood; a Clay, mix'd with Horse-Dung, to prevent freezing, and with Tamers Hair to prevent cracking; Ruffs Strings, or Woollen Yarn, to tie the *Grafts* with, and *Grafting Wax*. See WAX.

GRAFTING, in the Cleft, or Stock, call'd also *Slit-GRAFTING*, is the most ancient, and ordinary Way. We have a very beautiful Description of it in *Virgil, II. Georg. v. 78.* It is chiefly used for middle sized Stocks, from one to two Inches Diameter. Its Season is the Months of *January, Febru-*

February, and March. The Method, as now practis'd, is thus:

The Head of the Stock being fawn, or cut off, smooth and clean; a perpendicular Cleft is made therein, nearly two Inches deep, with a strong Knife, or Chisel, as near the Pith as may be to miss it. In this Cleft, the *grafting* Chisel, or Wedge, is put to keep it open. The *Graft*, or *Cyon*, is prepared by cutting it a-slope, in Form of a Wedge, to suit the Cleft, only leaving a small Shoulder on each Side: And, when cut, is to be placed exactly in the Cleft, so, as that the inner Bark of the *Cyon* may apply, and closely, join to the inner Part of the Bark, or *Rind* of the Stock; in the dexterous Performance of which, the chief Secret consists. If the Cleft pinch too tight, a small Wedge may be left in it to bear the Strefs. And, lastly, the Cleft is cover'd over with Clay: Or rather, as M. *Gentil* advises, with Moss, or the fresh Bark of a Tree bound on with Offer.

The Reader, who would have this in more elegant Terms, may be furnish'd from *Virgil*.

*Aut rursum Enodes Trunci refecantur, & alie
Finditur in solidum Cuneis via: deinde feraces
Plumæ immittuntur: nec longum Tempus, & Ingenus
Exit ad Cæsum ramis longibus Arbos,
Miraturque novus frondeis, & non sua poma.*

GRAFTING in the Rind, or Shoulder-GRAFTING, called also *Slicing* and *Packing*; is practis'd in the latter End of *April*, or Beginning of *May*. The Method is as follows:

The Top of the Stock is cut off in a smooth, straight Place: Then the *Cyon*, or *Graft*, is prepared by cutting it on one Side from the Joint, or Seam down slopewise, making the Slope about an Inch long; and observing its Bent, that so, when the *Cyon* is fixed to the Stock, it may stand nearly upright. At the Top of the Slope, they make a *Shoulder*, whereby it is to rest on the Stop of the Stock. The whole Slope to be plain and smooth, that it may lie even to the Side of the Stock. As to the Length of the *Cyon*, for a Standard Tree, it may lie about four Inches from the Shoulder; but for a Dwarf, or Wall Tree, six Inches. The *Cyon* prepared; the outside is applied to the West, or South West Side of the Stock, and its Length and Breadth measured thereon; which done, the Bark of the Stock is cut away to those Dimensions, that the cut Part of the *Cyon* may fit it. Wherein, Regard is to be had to the Bigness of the Stock, and the Thickness of the Bark, to proportion the length and breadth of the Chip thereto; otherwise the Passages of the Juice in the Stock and *Cyon* will not meet. Lastly, laying the Cut-Part of the *Cyon* on that of the Stock, they bind them together with Woollen Yarn, and cover the whole with Clay an Inch above, and as far below the Stocks Head: Working it round the *Cyon*, till it become sharp at Top, that the Rain may run down it.

This Method has several Advantages beyond the former: As that the Wound heals up sooner; and that, in the mean Time, it is in less Danger from the Weather; that it does less Injury to the Stocks and *Grafts*, as avoiding those severe Splittings and Pinchings: That the Bark is more easily placed in the Passage of the Sap here, than in the Cleft: That the *Graft* thrives and shoots with greater Vigour, and bears sooner in this Way than in that: And that it is practicable on smaller Stocks than the other, which must have a good Body, and Consistence, ere they can bear Cleaving.

GRAFTING in the Bark, is perform'd thus:

Prepare the Stock, and *Cyon*, as in *Grafting in the Rind*; but, instead of cutting the Bark of the Stock, slit the same on the South West Side, from the Top, almost as long as the Slop'd Part of the *Cyon*; and at the Top of the Slit loosen the Bark, with the Top of your Knife. Thrust your Instrument, made of Ivory, Silver, or the like, and form'd at the End like the slope End of the *Cyon* but much less, down, between the Bark and Wood, to make Room for the *Cyon*; which being put in the Bark, is to be so managed, as that it may fall close to the Stock, and Edges of the *Cyon*.

GRAFTING by Approach, call'd also *Inarching*, and *Abolition*. See the Method thereof under the Article **ABREACTATION**.

Whip-GRAFTING, or *Tongue-GRAFTING*, is a Sort of *Grafting in the Rind*, proper for small Stocks, from an Inch Diameter to a Quarter of an Inch. Mr. *London* speaks of it as the most effectual Way of any, and that most in Use.

In this, the Stock and *Cyon* are to be of the same Bigness. The *Cyon* to be slop'd off a full Inch, or more; and the like to be done to the Stock; and so the one to be tied to the other. Otherwise, the Top of the Stock

being cut off, a Shoulder is to be made in the *Graft*: And the rest to be performed as already shewn under *Grafting in the Rind*.

This Method is also improved by what they call *sipping*, or *conging*; which is, the making a Slit with a Knife in the bare Part of the Stock, downwards; and the like in the sloped Face of the *Cyon*, upwards: And then, joining them, by thrusting one Slice into the other, till the bare Place of the *Cyon* cover that of the Stock.

Side-GRAFTING. In this, the *Cyon* is prepared as in *Whip-Grafting*, but the Head of the Stock is not cut off. Only, from a smooth Part on the West Side, so much of the Bark is pared off as the *Cyon* will cover; then slitting both *Cyon* and Stock, as in the last Article, they bind the two together, and close them up with Clay. At the Year's End, the Top of the Stock is cut off at the *grafted* Place, slopewise, and the Place cover'd with Clay.

Scutcheon-GRAFTING, is another Method of *Grafting in the Rind*, practis'd in *June*, *July* and *August*; when the Bark will not part from the Stock. 'Tis perform'd, by slitting the Bark of the Stock in Form of the Capital Letter T, loosening it with the Point of a Knife, and clapping in a *Cyon*, prepared as above. See **SCUTCHEON**.

Crown-GRAFTING, is when four or more *Grafts*, are placed round the Stock, between the Bark and the Rind, somewhat in the Manner of a *Crown*. This is only practis'd in the larger Trees, which are capable of receiving a Number of *Grafts*, and are too high to be cloven. The Method is in all Respects the same as that already deliver'd for *Grafting in the Rind*.

Root-GRAFTING, is a modern Invention, treated on at large by *Agricola*: Its Invention is somewhat different from the former, being for the Propagation, or Multiplication of Plants.

To perform this, take a *Graft*, or Sprig of a young Tree, which you intend to propagate; and a small Piece of the Root of another Tree of the same Kind, or very like it; or else Pieces of Roots cut off of other Trees, in transplanting; and *Whip-Graft* them together: Observing, that the two Bar-Ends of the *Graft* and Root be united, and that the Rind of the Root join that of the *Graft*. These may, afterwards, be planted out at Pleasure, and the Piece of Root will draw the Sap, and feed the *Graft*, as the Stock does the other Way.

This Way of Propagation is very easy and expeditious; Roots being more plentiful than Stocks: By this Method the Pieces of Roots of one Crab-stock, or Apple-stock, will serve for 20 or 30 Apple *Grafts*, and the like of other Trees. The same is an excellent Way for raising of tender Trees, that will hardly bear being *grafted* in the Stock. Add, that Trees thus *grafted*, bear sooner, and are more easily dwarfed, than those done any other Way. See **DWARF**.

Re-inverted GRAFTING, or *Grafting by a double, or triple Incision*, is another Method mention'd by *Agricola*.

To perform this, first *graft* a good *Cyon* on a Stock, and cut it away to one half, or a third Part; then fix another *Graft* to it, of a better Kind; and a third to that: For still, the oftener a Tree is *engrafted*, the finer Fruit it produces.

By this Method, that Author assures us, he produced Muscat Pears, that were admirable; making, at first, use of a Stock *grafted* with a Pound Pear, on which he *grafted* a Summer *Bon Chretien*; and when the Branch of this latter had shot, he *grafted* on it a *Cyon* of *Bergamot*; which he also cut, and *grafted* on it a *Cyon* of a *Muscate Pear*.

ENGRAFTING of Branches, *Agricola* mentions as a very certain and profitable Operation, best practis'd on large, full grown, and even old Trees.

To do this, half or more of the Branches must be lopp'd off, and *Grafts* of three or four Years old be applied to them; taking Care to have Stakes, or other Things, to support them against the Wind, &c.

He adds, that by this Method, you will have, perhaps, the same Year, at least, the second or third, such a Quantity of Fruit, as the youngest and soundest Tree would hardly produce.

ENGRAFTING of the Small-Pox. See **INOCULATION**.

ENGRAILED, or **INGRAILED**, in Heraldry, (from the French *Grêlé*, Hall) is when a Thing is represented with its Edges ragged, or with half rounds struck thereon, as if broke by something falling on it; as in the adjoining Figure.

It differs from *Indented*, in that the Breaches there are all in straight Lines; but here Semi-circular: And from *Inverted*, in that the Points of the little Arches are turn'd inwards towards the middle of the Field; which in *Inverted*, are turn'd outwards. See **INDENTED** and **INVERTED**.

Splænan calls it in Latin *Lubricatus*, others *Ingradiatus*, and others *Sriatus*.

ENGRAVING, or GRAVING, the Art, or ART of cutting Metals and precious Stones, and representing Figures, Letters, and other Matters thereon.

The Word is a Compound of the Preposition *in*, and the Greek *yeleuo*, *I write*. Tho' *Ménage*, after *Salmafius*, derives it from *cauere*, to hollow; others from the Latin, *graphare*; and others from the German, *graben*, q. d. *Effodere*, to dig out. In Latin it is called *Sculptura* and *Calatura*.

Engraving is properly a Branch of Sculpture; tho' with us, it generally stands contra-distinguished from Sculpture; As the latter, popularly call'd *Carving*, expresses the forming of Figures, &c. Embos'd, or in Relief; and the latter, those indented, or in *Creux*. See RELIEVO and CREUX.

Among the French, the Term *Engraving*, *Gravure*, is of more Extent. It includes all Sculpture, both that perform'd with the Chisell and Knife, on Marbles and Woods, in Relief; and that in Metals, Stones, &c. with the Graver, indented. See SCULPTURE.

Engraving is divided into several Branches, according to the Matters it is practis'd on, and the Manner of performing it. The Original Way of *Engraving* on Wood is now distinguished by the Name of *Cutting in Wood*; that on Metals with *Aqua Fortis*, is called *Etching*; that by the Knife, Burnisher, Punch, and Scraper, *Messotinto*; that on Stones, for Tombs, &c. *Carving* or *Stone cutting*; and lastly, that perform'd with the Graver on Metals, as Copper, Brass, Steel, Silver, &c. as also on precious Stones, Crystals, &c. retain alone the primitive Denomination of *Engraving*. See CUTTING in Wood, ETCHING, CARVING, and MEZZO TINTO.

Engraving is an Art, for the greatest Part, of Modern Invention; having its Rise no earlier than the 16th Century. The Ancients, 'tis true, practis'd *Engraving* on precious Stones and Crystals, with very good Success; and there are still some of their Works remaining, equal to any Production of the later Ages. But the Art of *Engraving* on Plates, or Blocks of Wood, to afford Prints, or Impressions, was not known till after the Invention of printing in Oil.

The Discovery is ascribed to *Maso Finiguerra*, a Goldsmith of Florence; who having us'd to take Impressions of every thing he cut, in Clay; and to cast melted Sulphur in this Mould; at length hit on a Way of taking the Impressions thereof on Paper, by finearing this Figure of Sulphur with Oil and Lamp-black.

The Secret soon got Abroad, and coming to the Hands of *Albert Durer* and *Lucas*, they greatly improved it, and began to *Engrave* on Wood and Copper, in which they succeeded to Admiration. See PRINT.

ENGRAVING in Copper, is employ'd in representing divers Subjects, as Portraits, Histories, Landscips, Foliages, Figures, Buildings, &c. either after Paintings, or Designs made for the Purpose.

It is perform'd either with the Graver, or with *Aqua Fortis*.

For the first, there needs but little Apparatus, and few Instruments. The Plate you work on being well polish'd, is cover'd over with a thin Skin of Virgins Wax, and on this, the Draught, or Design, done in black Lead, red Chalk, or other unguam'd Matter is laid; and rubb'd down for the Wax to take off. The Design thus transfer'd upon the Wax, is traced thro' on the Copper, with a Point or Needle: Then heating the Plate, and taking off the Wax, the Strokes remain; to be follow'd, heighten'd, &c. according to the Tenor of the Design, with the Graver, which is to be very sharp, and well temper'd.

In the Conduct of the Graver, consists all the Art; for which there are no Rules to be given; all depending on the Habitude, Disposition, and Genius of the Artist.

The other Instruments are, a *Cushion*, or Sand-Bag, to lay the Plate on, to give it the necessary Turns and Motions: A *Burnisher*, round at one End, and usually flattish at the other, to rub out Slips and Failures, soften the Strokes, &c. A *Scraper*, to pare off the Surface, on Occasion: And a *Rubber* of black Cloth, or Hat, to fill up the Strokes, that it may appear how the Work proceeds.

ENGRAVING in Copper with *Aqua Fortis*. See ETCHING.

ENGRAVING on precious Stones, consists in representing Figures or Devices, either in Relief, or Indented, on divers Kinds of hard, polish'd Stones. See PRECIOUS STONES.

The Art of *Engraving* on precious Stones, is one of those wherein the Ancients excell'd; there being divers antique Agats, Cornelians, and Onyx's, which surpass any Thing of that Kind the Moderns have produced. *Pyrrogotes* among the Greeks, and *Discorides* under the first Emperors of Rome, are the most eminent Engravers we read of: The former was so esteem'd by *Alexander*,

that he forbid any body else to *Engrave* his Head: And *Augustus's* Head, *Engraven* by the latter, was found so beautiful, that the succeeding Emperors chose it for their Seal.

All the polite Arts having been buried under the Ruins of the Roman Empire, the Art of *Engraving* on Stones met the same Fate. It was retriev'd in Italy, at the Beginning of the 15th Century; when one *John of Florence*, and after him *Dominic of Milan*, perform'd Works of this Kind no Way to be despis'd.

From that Time, such Sculptures became common enough in Europe, and particularly in Germany, whence great Numbers were sent into other Countries; but they came short of the Beauty of those of the Ancients; especially those on precious Stones; for as to those on Crystal, the Germans, and after their Example, the French, &c. have succeeded well enough.

In this Branch of *Engraving*, they make Use either of the Diamond, or Emery. The Diamond, which is the hardest, and most perfect of all precious Stones, is only cut by it self, or with its own Matter. See DIAMOND, &c.

The first Thing, is to cement two rough Diamonds to the Ends of two Sticks, big enough to hold them steady by, in the Hands; and to rub or grind 'em against each other, till they be brought to the Figure desired. The Dust, or Powder, rubb'd off, serves afterwards to polish 'em; which is perform'd with a Kind of Mill, that turns a Wheel of soft Iron. See LAPIDARY.

The Diamond is fix'd in a Brass Dish, and thus apply'd to the Wheel, which is cover'd with Diamond Dust, mix'd up with Oil of Olives: And when the Diamond is to be cut facet-wisely, they apply first one Face, than another, to the Wheel.

Rubies, Saphires, and Topazes, are cut and form'd the same Way, on a Copper Wheel; and polish'd with *Tripoli*, diluted in Water. See EMERY.

As to Rubies, Emeralds, Hyacinths, Amethysts, Grenats, Agats, and other of the softer Stones, they are cut on a Leaden Wheel, moisten'd with Emery and Water, and polish'd with *Tripoli*, on a Pewter-Wheel. *Lapis*, Opal, &c. are polish'd on a Wooden Wheel. See WAXES.

To fashion and *Engrave* Vases of Agat, Crystal, *Lapis*, or the like, they have a Kind of Lathe, like that of the Pewterers; excepting, that whereas the latter is to hold the Vessels, which are to be wrought with proper Tools; the former generally holds the Tools, which are turn'd by a Wheel, and the Vessels held to 'em to be cut and *Engraved*, either in Relief, or otherwise: Remembering from Time to Time, to moisten the Tools with Diamond Dust and Oil; or, at least, Emery and Water.

To *Engrave* the smaller Works of any of these Stones, when polish'd; such as Medals, or Seals, &c. they use a little Iron Wheel, the two Ends of whose Axes are receiv'd between two Pieces of Iron placed upright, as in the Turners Lathe; to be brought closer, or set further apart, at Pleasure. At one End of one of the Axes, are fitted the proper Tools, being kept tight by a Screw. Lastly, the Wheel is turn'd by the Foot; and the Stone applied by the Hand to the Tool; and thus shifted and conducted as Occasion requires.

The Tools are generally of Iron, sometimes of Brass. As to their Form, it is various, but generally bears some Resemblance to Chisells, Gouges, &c. Some have small round Heads like Burtons; others, like Perrels, to take the Pieces out; others, flat, &c. These Tools are not applied directly against the Stone; but, as it were, sidewise; thus wearing, and, as it were, grinding off the Substance. And still, whether it be Figures, or Letters, or Characters, the Manner of Application is the same. The Tools, as above observed, are to be frequently moisten'd with Diamond Dust, and Oil of Olives. When the Stone is *Engraven*, they polish it on Wheels of Brushes, made of Hogs Bristles and *Tripoli*. For the larger, and less delicate Works, they have Copper, or Pewter Tools, on purpose to polish the Ground, or plain Parts, with *Tripoli*, &c. which they apply after the same Manner, as those wherewith the *Graving* is perform'd.

ENGRAVING on Steel, is chiefly employ'd in cutting Punches, Matrices, and Dies, proper to strike Coins, Medals, and Counters. See COINAGE.

The Method of *Engraving*, with the Instruments, &c. are the same for Coins, as for Medals and Counters! All the Difference consists in their greater, or less Relief; the Relief of Coins being much less considerable than that of Medals; and that of Counters still less than that of Coins. See MEDAL.

The *Engraver* in Steel usually begins with Punches, which are in Relief, and serve for making the *Creux*, or Cavities of the Matrices, and Dies. Tho', sometimes, he begins immediately with the *Creux*; but 'tis only when the intended Work is to be cut very shallow. The first

Thing is to design his Figures; then he moulds 'em in white Wax, of the Size and Depth required: And from this Wax he graves his Punch.

This Punch, is a Piece of Steel, or at least of Iron and Steel mix'd; on which, ere they temper, or harden it, the intended Figure, whether a Head, or a Reverse, is cut, or chisell'd in Relievo. The Instruments used in this *Graving* in Relievo, which are much the same as those wherewith the finishing of the Work, in Creux, is effected, are of Steel. The Principal are *Gravers* of divers Kinds, Chissels, Flat-thers, &c. When the Punch is finish'd, they give it a very high Temper; that it may the better bear the Blows of the Hammer, wherewith it is struck, to give the Impression to the Matrice. See PUNCHION.

What they call *Matrice*, or *Matrix*, is a Piece of good Steel of a Cubic Form, call'd also *Dye*; whereon, the Relievo of the Punch is struck in Creux. It is call'd *Matrice*, because in the Cavities or Indentures thereof, the Coins, or Medals, seem form'd, or generated, as Animals are in the Matrix of their Mother. To soften this Steel, that it may more easily take the Impression of the Punch, they make it red-hot; and after striking the Punch thereon in this State, they proceed to touch up, or finish the Strokes and Lines, where, by Reason of their Fineness, or the too great Relievo, they are any Thing defective; with some of the Tools abovementioned. See MATRIX.

The Figure thus finish'd, they proceed to *Engrave* the rest of the Medals, as the Mouldings of the Border, the engrail'd Ring, Letters, &c. All which, particularly the Letters and Engrailment, are perform'd with little Steel Punches, well temper'd, and very sharp. Add, that as they sometimes make Use of Punchions, to *Engrave* the Creux of the Matrix; so, on some Occasions, they make Use of the Creux of the Matrix, to *Engrave* the Relievo of the Punch.

To see, and judge of the *Engraving* in Creux; divers Means have been devised to take the Impressions therefrom, as the Work proceeds. Sometimes they make Use of a Composition of common Wax, Turpentine, and Lamp-black; which always retaining its Softness, easily takes the Impression of the Part of the *Graving* it is applied to. But this only serving to shew the Work piece-meal, they have had Recourse to other Ways, to shew the whole Figure. The first, by pouring melted Lead on a Piece of Paper, and clapping the Matrice thereon: The second, with melted Sulphur, managed the same Way: And the third, proper only where the *Graving* is shallow, by laying a Piece of soft Paper on the *Graving*, and over the Paper a Leaf of Lead; when, giving two or three Blows with a Hammer on the Lead, the Paper takes the Impression of the Work.

When the Matrix is quite finish'd, they temper it, rub it well with Pumice-stone, and clean out the Stone again with a Hair-Brush; and lastly, polish it with Oil and Emery. In this Condition it is fit for the Mill, to be used to strike Coins, Medals, &c. See COINING.

After the like Manner, are the Matrices for casting of Printing Letters, *Engraven*. See Letter FOUNDRY.

ENGRAVING of Seals, Stamps, Punchions, Marking Irons, Gilding Irons, and other Matters, for Goldsmiths, Pewsters, Book-binders, &c. either in Relievo, or Indenture, is perform'd after the Manner last described. See SEAL, &c.

ENGRAVING in Wood. See CUTTING in Wood.

ENGROSSING, the Writing a Deed over fair, and in proper Characters.

In the Way of Trade, *Engrossing* signifies the Buying up any Commodity in the Grois; Foretelling the Market. See FORESTAL and MONOPOLY.

ENGUCHE, in Heraldry; is applied to the great Mouth of a hunting Horn, when it has a Rim of a different Colour from the Horn it self.

ENGYSCOPE, a Machine, better known under the Name of *Microscope*. See MICROSCOPE.

ENHARMONIC, the last of the three *Genera*, or Kinds of Music. See GENERA.

The *Enharmonic* Genus, is said to have been thus called by Reason of its superior Excellence; 'Tho' wherein that consists, says Mr. *Malcolm*, we don't see. It was by all acknowledged so difficult, that few could practise it.

The several *Genera* are divided into Diastems, upon which the Differences depend: Those of the *Enharmonic* are the *Diessis* and *Dissonus*: Those of the *Chromatic*, the *Hemitonium* and *Triemitonium*; and in the *Diatonic*, the *Hemitonium*, or *Lianma*, and the *Tonus*.

But under these general Names, which distinguish the *Genera*, there are several different Intervals, or Ratio's, which constitute the *Chrosis*, or *Colores Generum*, or Species of *Enharmonic*, *Chromatic*, and *Diatonic*. See DIATONIC, and CHROMATIC.

ENHERITANCE. See INHERITANCE.

ENIGMA, or *ENIGMA*, *Riddle*, a Proposition put in obscure, ambiguous, and generally contradictory Terms, to puzzle, or exercise the Wit, in finding out its meaning. Or, an obscure Discourse, covering some common, and well known Thing, under remote and uncommon Terms.

The Word is Greek, *Αινιγμα*, literally importing *dark*, *knotty* *Discourse*, form'd of *αινεμας*, *obscure innere*, to hint a Thing darkly. The *Latins* call it *Scirpus*: The *Hebrews*, *קריק*.

Fran. Junius defines an *Ænigma* to be an obscure Parable, or Allegory; and makes two Kinds: The one *greater*, rendering the Sentence more intricate and knotty, by a Multitude of Words; the other *lesser*, consisting of only one or two remote Words, or Allusions; as in *Isaiab*, Ch. XI. 1. where *Jesus Christ* is call'd *רוד*, *jurcaius*, *Rod*, *Branch*. See PARABLE.

Fa. Boubours, in the *Memoirs of Trouvain*, defines an *Ænigma*, a Discourse, or Painting, including some hidden meaning, which is propos'd to be guess'd. *Painted Ænigma's*, are Representations of the Works of Nature, or Art, conceal'd under human Figures, drawn from History, or Fable. Thus *Jesus Christ*, in the middle of the Doctors, represents the Bible, &c. A *Verbal Ænigma* is a witty, artful and abstruse Description of any Thing. *Boubours*.

Fa. Menestrier, has given us a learned Treatise of *Ænigma's* and *Enigmatical* Figures.

The Use of *Ænigma's* was very great among the *Egyptians*. That People, *Gale* observes, cover'd their Doctrines, both of divine, human, and natural Things, under such Disguises: Thus some of the *Stas*, *Clemens Alexand. Strom.* 5. notes were, on Account of their oblique Motions, liken'd to Serpents, the Sun to a Crocodile, a Ship, &c.

Gale thinks they might borrow the Customs from the *Hebrews*, among whom, 'tis certain, the *Enigmatical* Way was not less in Use. Witness *Samson's* Riddle, *Judg. XIV. 12, 13. I will now put forth a Riddle to you, &c. קריק* i. e. according to *Vatablus*, an *Enigmatical* Problem. The *LXX* render it, *αεγαια*. *Out of the Easter came forth Meat, and out of the Strong came forth Sweetness*; whereby *Easter* and *Strong*, is meant a Lion; and by *Meat*, Honey. *Solomon* is said to have been particularly skillful in the Solution of *Ænigma's*. *Joseph Antiq. Lib. V. C. 2. Clemens* assures us, that the *Egyptians* placed Sphynxes before their Temples; to intimate that the Doctrines of God and Religion were *Enigmatical* and *Obscure*. See PARABLE, HIEROGLYPHIC, EMBLEM, SYMBOL, FABLE, &c.

ENIXUM *Salt*, among the Chymists, a Kind of Neutral Salt, being neither Acid nor Alkalious, but participating of both.

Such is common Salt, Nitre, Allum, Vitriol, &c. See SAL.

ENMANCHE, in Heraldry, is when a Chief has two Lines drawn from the middle of the upper Edge, to the Sides, the Depth of half the Chief; The two Lines including an obtuse Angle, the Point whereof, is the Centre of the Top of the Chief.

The *Heralds* conceive this, as bearing some Resemblance to *Sleeves*; whence the Etymology of the Word, from the French *Manche*, *Sleeve*. It differs from *Chappe*, where the Lines come from the Top to the Bottom of the Chief.

ENNEADECATERIS, in Chronology, a Cycle, or Period of Nineteen Solar Years. See CYCLE.

Such is the Lunar Cycle invented by *Metan*, at the End whereof the Moon returns to the same Point, from which it departed. Whence the *Jews*, *Athenians*, and other Nations, who were minded to accommodate the Lunar Months to the Solar Year, made Use of the *Enneadecateris*; allowing to seven of the Years 13 Months a piece, and to the rest 12.

The *Jewish* ENNEADECATERIS is properly a Cycle of 19 Lunar Years, beginning from *Molad Taba*, and returning again and again; whereof, every 3^d, 6th, 8th, 11th, 14th, 17th, and 19th, are Embolismic, or of 383 Days, 21 Hours a-piece; the rest common, or of 354 Days, 8 Hours a-piece. See YEAR.

Consequently, the *Jewish* *Enneadecateris* is 6939 Days. See EMBOLISMIC.

The Word is Greek, *enneagweteis*, form'd of *ενν* nine, *και* ten, and *ισ* Year.

ENNEAGON, in Geometry, a Figure of Nine Angles, and Nine Sides. See POLYGON.

The Word is form'd of *ενν* Nine, and *γωνια* Angle. In Fortification, *Enneagon* is a Place with Nine Bastions. See FORTIFIED PLACE.

ENNEATICAL Days, are every Ninth Day of a Sicknels; which some imagine naturally occasions a great Alteration, either for better or worse. See CRITICAL Days.

ENNECATICAL Years, are every Ninth Year of a Man's Life. See CLIMACTERIC.

ENORMOUS, signifying excessively, or immensely, big. Thus we say, the *Colossus* of *Rhodes* was of an *Enormous* Stature.

The Word is form'd of the Privative *e* and *norma*; Rule q. d. void of, or contrary to Rule, or Measure, *contra normam*. In the corrupt Ages of Latinity, they us'd *inormis* and *inormis*.

In the Civil Jurisprudence, *Lesio Enormis*, *Enormous* Damage, is that which exceeds half the Value of the Thing sold. And this gave Room for the Rectification of the Contract. See RESCISSION.

ENQUEST, or INQUEST, is taken for an Inquisition of a Jury, by hearing of Witnesses. See INQUEST.

This is the most usual Trial, in all Causes, both Civil and Criminal, within this Realm. In Civil Causes, after Proof is made on either Side, of so much as each Party thinks good for himself; if the Doubt be in the Fact, it is refer'd to the Discretion of Twelve indifferent Men, impell'd by the Sheriff for that Purpose; and as they bring in their Verdict, so Judgment passeth; for the Judge saith, *The Jury findeth the Fact thus*.

For the *Enquest* in Criminal Causes. See JURY.

ENS, *Being*, in Metaphysics, is applied, in its most general Sense, to every Thing that the Mind any Way apprehends, and whereof it affirms, denies, proves, or disproves any Thing.

This, other Philosophers call *Cogitabile*, and *Intelligibile*; and the Logicians, *Thema*.

ENS, in a less general Sense, signifies something that is, or exists, some Way further than 'in being conceiv'd, or being capable of being conceiv'd in the Mind.

This is particularly call'd, *Ens positivum*, or *reale*, positive, or real Being. In Opposition to which stands *Non Ens*.

ENS, in its proper, or restrain'd Sense, is that to which there are real Attributes belonging; or that which has a Reality, not only out of the Intellect, but in it self.

This is what is properly meant by *Res, Thing*; and what we otherwise call *Ens reale*, and also *Substantia*. See SUBSTANCE.

ENS *rationalis*, is that which depends on the Mind; or which exists only in the Imagination.

Of this they distinguish three Kinds: *Ens rationis effectivum*, which is done, or produced by the Mind; as Knowledge: *Ens rationis subjektivum*, which is received into the Mind; as Science: And *Ens rationis objectivum*, which is represented by the Mind; as a Golden Mountain.

Which last, if it have no other Manner of Being, i. e. if it be represent'd only as it does not, or cannot be, it is what we most properly call *Ens rationis*.

The Generality of School Philosophers, and the Peripateticks among the rest, assert, that there are of these *Entia rationis objectiva*. Others deny, there are, or can be any such Thing.

ENS, or *ens primum*, among the Chymists, is the efficacious Part of any natural mixt Body, whether Animal, Vegetable, or Fossile; wherein, all the Qualities or Virtues of the Ingredients of the mixt, are comprehended in a little Compass. See ESSENCE.

Paracelsus pretends to have been able to separate the *Ens primum* from Bodies, and with it to effect prodigious Things towards the Renovation, and Restoration of Youth: But his Processes are so obscurely deliver'd, that Nobody has been induc'd to try 'em.

Mr. *Boyle* gives us a Process from M. *le Fevre*, whereby the *Ens primum*, or Essence of Balm, is easily obtain'd: He adds, that the Effects of an *Ens* of Balm, thus drawn, are no Ways inferior to those of *Paracelsus*; and insinuates in a special Friend of his, who, upon taking it only for a Fortnight, the Nails of his Hands and Feet fell off, and were succeeded by a Set of new ones; Which convinced him so far of its Efficacy, that he left off taking it himself: But giving some of it to an old Woman of 70 Years of Age, who served in the House, it produced the *Menfes* again; and that so copiously, as wonderfully to startle the Woman.

Upon giving a little of it to an old Hen, her Feathers began to moult on the sixth Day, and she grew stark naked; but ere a Fortnight was over, she had others in their Room, fairer, and better colour'd than the former.

The Relation is odd enough; yet considering the Hands we have it from, and how easily the Thing is tried, 'tis much no body has yet attempted to prosecute it. The Process is thus:

Having gather'd, e. gr. some Balm, or other fitting Plant, at the proper Season and Time; beat it into a Pulp in a Marble Mortar, and putting it into a Bolt-Head hermetically seal'd, digest it 40 Days in a Daughill, or other analogous Heat. This done, take out the Matter

which will now be more liquid than before, and separating from it the Drugs, or grosser Parts, digest it anew in a gentle Bath; that the remaining grosser Parts may also subside: Filtrate it, and add to it the fix'd Salt, drawn from the former Drugs, dried and calcin'd. To the Liqueur thus prepared, add equal Parts of the Liqueur of good Sea-Salt well purified, and melted, and then let it run *per aliquidum*. Lastly, seal up the Mixture in a Bolt-Head; and expose it to the Sun six Weeks longer. At the End of which Term, the *Ens primum* of the Plant will be found swimming on the Liqueur, in a liquid, transparent Form, sometimes of a green, and sometimes a reddish Colour, according to the Plant used.

Ens Venusis, or *Flower of Venus*, a chymical Preparation from Vitriol, first published by Mr. *Boyle*. See VITRIOL.

It is held a Specific in the Rickets, and is much commended in nervous Cases, obitinate Cachexies, Loss of Appetite, and Obstructions of all Kinds.

It is had by subliming equal Parts of the Powder of *Cyprus* Vitriol, (calcin'd till it is of a dark Colour) and of Sal Ammoniac, into the Form of yellow Flower.

It has its Name from the Particles of Copper therein, carried away from the Vitriol.

ENSENCED. See INSENCED.

ENSEMBLE, a French Term, sometimes us'd in our Language. The Word is an Adverb, and literally signifies *together*, or *one with another*; being form'd of *in* and *simul*.

Hence, in Architecture, we say *the Ensemble*, or *tout Ensemble*, of a Building, to signify the whole Work, or Composition, consider'd together, and not in parts; and sometimes also to signify the relative Proportion of the Parts to the whole. All these Pieces of Building make a fine *Ensemble*.

In Sculpture, we say, To judge well of a Work, a Statue, &c. one must first examine, whether the *Ensemble* be good.

In Painting, we frequently use the Phrase, *tout Ensemble*: The *tout Ensemble* of a Painting, is the Harmony resulting from the Distribution of the several Objects or Figures, whereof it is compos'd. This Painting is very good, taking it separately: But the *tout Ensemble* is naught.

ENSIFORMIS *Cartilago*. See CARTILAGO *Ensjiformis*.

ENSIGN, in the Military Art, a Banner, or Colours, under which the Soldiers are ranged, according to the different Companies, or the different Parties they are of. See BANNER.

The Chinese *Ensigns*, are Horus Tails: Those of the Europeans, are Pieces of Taffaty, with divers Figures, Colours, Arms, and Devices. *Xenophon* tells us, that the *Ensign*, bore by the Persians, was a Golden Eagle on a white Flag: The *Corinthians* bore the winged Horse, or Pegasus, in theirs: The *Athenians* an Owl: The *Macedonians*, the Greek Letter M: The *Lacedemonians* the A.

The Romans had a great Diversity of *Ensigns*; the Wolf, Minotaur, Horse, Boar, and at length the Eagle, where they stop'd: This they first assum'd under the second Year of the Consulate of *Marius*. See EAGLE.

A Military *Ensign*, on a Medal of a Roman Colony, denotes it a Colony peopled with old Soldiers.

ENSIGN, is also us'd for an Officer in the Infantry, who bears the *Ensign*, or Colours; by the Latins call'd *Signifer*, and *Vexillifer*.

He has the Charge of the *Ensign* in Combats; and if he be kill'd, the Captain is to take it in his Stead. The *Ensign* is under the Command of the Lieutenant, and in his Absence supplies his Post.

ENTABLATURE, or ENTABLAMENT, in Architecture, by *Vitruvius* and *Vignola* call'd *Ornament*, is that Part of an Order of Column which is over the Capital; comprehending the *Architrave*, *Frise*, and *Corniche*. See ARCHITRAVE, FRIZE, and CORNICHE.

The *Entablature* is also call'd the *Stabration*: It is different in the different Orders: Indeed it consists of the three grand Parts, or Divisions above-mentioned, in all; But those Parts consist of a greater, or less Number of particular Members, or Sub-divisions, as the Orders are more or less rich. See ORDER.

Vignola makes the *Entablature* a Quarter of the Height of the whole Column, in all the Orders. See COLUMN.

In the *Tuscan* and *Doric*, the *Architrave*, *Frise*, and *Corniche*, are all of the same Height. See TUSCAN and DORIC.

In the *Ionic*, *Corinthian*, and *Composite*, the whole *Entablature* being 15 Parts; 5 of them are allow'd for the *Architrave*, 4 for the *Frise*, and 6 for the *Corniche*, See *IONIC*, *CORINTHIAN*, &c.

ENTABLATURE, or ENTABLAMENT, is also us'd for the last Row of Stones on the Top of the Wall of a Building, whereon the Timber and the Covering rest.

The Word is form'd of the Latin *Tabulatum*, or *In-tabulamentum*.

As it is frequently made to project beyond the Naked of the Wall to carry off the Rain, some Authors call it in Latin *Stillicidium*, or Drip. Such an *Estabulmentum* does not bear far enough out: It lets the Water fall on the Foot of the Wall.

ENTAIL, in Law, signifies Fee Tail, or Fee Entail'd, i. e. abridg'd, curtail'd, or limited to certain Conditions. See FEE and TAIL.

For the Docking of an Entail. See DOCKING and RECOVERY.

ENTE, in Heraldry. The Term literally implies En-grafted; and is used by the foreign Heralds to express a Method of Marshalling, little known among us.

Yet we have an Instance of it in the fourth grand Quarter of his Majesty's Royal Ensign; whose Blazon is, *Brumbeac and Lusenburgh* impaled with ancient Saxony, Ente in pointe.

ENTELECHIA, a Greek Term, by which Aristotle defines the Soul; and which not occurring in any other Author, has given the Critics and Philosophers infinite Perplexity to discover its meaning.

Hermolantus Barbarus, is even said to have consulted the Devil about it; after which, in his Paraphrase on *Athenistius*, whether from the Devil or himself we know not, he renders it by *Perfelligabdia*, which is not a whit the clearer.

Cicero, whose Interpretation should be preferable to that of any Modern, defines *Entelechia* (*Yuseul. q. L. C. 1.*) to be a certain, continued, and perpetual Motion: Whence it should appear that Aristotle took the Soul for a Mode of the Body; a continuous Motion being doubtless a Mode of Body. See BODY.

The common *Peripateticks* hold *Entelechia* to signify *Act*; and under it, suppose the Form of the Compound, or Animal, to be understood: Accordingly, they define it any *Act*, whether Substantial or Accidental, considered as capable of performing some Operation in the Body.

Others of them define it to be a substantial *Act*, whereby a Thing is, what it is, in Substance.

Lastly, others of the *Peripateticks*, and those the latest, agree that the *Act* of *Entelechia*, whereby Aristotle meant to explain the Nature of the Soul, either signifies some Mode of the Body, as Motion, or nothing at all. And thus the *Peripatetic* Notion comes round to that of Cicero.

ENTENDEMENT, in Law, the true Meaning, Intent, or Signification of a Word, Sentence, Law, &c. See INTENDMENT.

ENTERFERING, in the Menage. See CUTTING.

ENTERMENT, or INTERMENT, the Act of Interring, i. e. of Burying, or laying a decas'd Person in the Ground. See BURIAL and FUNERAL.

The Kings of England are Enterr'd at Westminster, those of France at Dennis, &c.

The Excommunicated are not to be Enterr'd in Holy, i. e. in Consecrated Ground. The Antients did not Interr their Dead: They burnt them, as the Indians do at this Day. See BURNING.

The Custom of Burning the Dead, ceas'd among the Romans under the Empire of the Antonines; long before the Christians were allow'd to Interr in Churches, which was even prohibited Kings and Emperors. The Assassins, in Lieu of Interring their Dead, flut them up in the Bodies of Trees, dug hollow for this Purpose.

The Gardeners Interr, or earth up Sallery, Endive, and Lettice, to blanch, or whiten, and make them the tenderer.

To Interr wild Stocks in Ditches, is what *Columella* calls *deponere, seminarum Scrobibus*. There are some Trees, as Willows, Olives, &c. which grow very well, by Interring their Truncheons, i. e. by cutting a Truncheon, or Piece off at both Ends, and planting it in the Ground: Which is what the Latins call, *laburare tales, tales ferere*.

ENTEROCELE, in Medicine, a Defecent of the Intestines. See DESCENT.

The *Enterocoele* is a Kind of Hernia, or Rupture, wherein the Intestines, particularly the *Ilium*, fall into the Groin, or the Scrotum. See HERNIA.

The next Cause of the *Enterocoele*, is the Relaxation, or Extension, of the lower Part of the *Peritoneum*, wherein the Intestines are contain'd: The remote Causes are great Lifts, too violent Exercises, great Coughs, frequent Vomiting, much Crying, &c. Whence it is that Children are much subject thereto.

There are two Kinds of *Enterocoele*; the *Perfect*, which happens when the Intestine falls into the Scrotum; and the *Imperfect*, when it only falls into the Groin.

The Remedy is chiefly by External Applications, as Trusses and Blisters.

The Word is form'd of the Greek, *εντρον*, Intestine; and *κοιλη*, Tumor.

ENTERO-EPILOCELE, a Kind of Rupture; wherein the Intestines, and *Epiploon*, or Caul, fall together into the Scrotum; whence the Appellation *Entero-epilocoele*. See HERNIA.

The Causes are the same as those of the *Enterocoele*.

ENTERO-EPILOMPHALUS, a Kind of *Exomphalus*, wherein the Intestines, and *Epiploon*, or Caul, bunch out at the Navel. See EXOMPHALUS.

The Word is composed of *εντρον*, Intestine, *επιπλον*, Caul, and *ομφαλη*, Umbilicus, Navel.

ENTERO-HYDROMPHALUS, in Medicine, a Kind of *Exomphalus*, wherein, beside a displacing and bunching out of the Intestine, there is a deal of watery Humours collected along with it.

The Word is form'd of the Greek, *εντρον*, Intestine, and *ομφαλη*, Navel.

ENTEROLOGY, from *εντρον*, intestinum, a Gut; and *λογος*, Sermo, a Discourse; is properly a Treatise of the Bowels; tho' the Word is generally understood to include the Contents of the three Cavities, Head, Breast, and Belly.

ENTEROMPHALUS, in Medicine, a Kind of *Exomphalus*, consisting in the Intestines being put out of their Place, and occasioning a Tumor. See EXOMPHALUS.

The Word is form'd of the Greek *εντρον*, Intestine, and *ομφαλη*, Umbilicus.

ENTERPLEDE, in Law, to discuss, or try a Point incidentally falling out, before the principal Cause can be determined.

E. gr. Two Persons being found Heirs to Land, by two several Offices in one County; the King is brought in Doubt, to which of 'em Livery ought to be made. Before Livery, therefore, they must *Enterplede*, that is, formally try between themselves which is the right Heir.

ENTHUSIASM, a prophetic, or poetic Rage, or Fury, which transports the Mind, enflames and raises the Imagination, and makes it think and express Things extraordinary and surprising.

M. de Piles defines *Enthusiasm* to be a Transport of the Mind, whereby it is led to think and imagine Things in a sublime, surprising, and yet probable Manner.

The sublime, he thinks a necessary Ingredient in the Definition; as being the proper Effect and Production of *Enthusiasm*. *Enthusiasm*, he adds, contains the sublime; as the Trunk, the Branches. See SUBLIME.

The Word is derived from the Greek *ενθουσιάζω*, or *ενθουσιάζω*, a Man animated in an extraordinary Manner with the Spirit of God, in whom God is, whom God animates, *ενθουσιάζω*.

Whence, the Verb *ενθουσιάζω*, or *ενθουσιάζω*, and the Noun *ενθουσιάζω*, *Enthusiasm*; and *ενθουσιάζω*, *Enthusiasm*, a Person subject to *Enthusiasm*.

This is the *Enthusiasm* felt in Poetry, Oratory, Music, Painting, Sculpture, &c. But this *Enthusiasm* which belongs to the Works of Art, is very different from that attributed to the Sybils and Priestesses of the Oracles, and Heathen Gods; which was little else but Fanaticism, and consisted principally in Grimace, and Contortions of the Body.

There is a Degree of Assent, says Mr. Lock, which, with some Men, has the same Authority, as either Faith or Reason; and that is *Enthusiasm*; which laying by Reason, would set up Revelation without it; whereby, in Effect, it takes away both Reason and Revelation, and substitutes in the Room of it, the ungrounded Fancies of a Man's own Brain, and assumes them for a Foundation both of Opinion and Conduct.

Immediate Revelation being a much easier Way for Men to establish their Opinions, and regulate their Conduct by, than the tedious Labour of strict Reasoning; it is no Wonder, that some have been very apt to pretend to it, especially in such of their Actions and Opinions, as they cannot account for by the ordinary Methods of Knowledge, and Principles of Reason.

Hence we see, that in all Ages, Men, in whom Melancholy has mixed with Devotion, or whose Conciit of themselves, has raised them into an Opinion of a greater Familiarity with God, than is allowed others; have often flattered themselves with the Perfection of an immediate Intercourse with the Deity, and frequent Communications from the Divine Spirit.

Their Minds being thus prepared, whatever groundless Opinion comes to settle it self strongly upon their Fancies, is an Illumination from the Spirit of God; and whatsoever odd Action they find in themselves an Inclination to do,

do, that Impulse is concluded to be a Call, or Direction, from Heaven, and must be obeyed. See INSPIRATION.

This we take to be properly *Entusiasmus*, which, rising from the Conceit of a warm, or over-wearing Brain, works, where it once gets footing, more powerfully on the Passions and Actions of Men, than either Reason, or Revelation, or both together; Men being most forwardly obedient to the Impulses they receive from themselves.

When Men are once got into this Way of immediate Revelation, of Illumination without Search, and Certainty without Proof, Reason is lost upon 'em; They are above it: They feel the Light infused into their Understandings, and they cannot be mistaken; like the Light of bright Sun-shine, it shews it self, and needs no other Proof but its own Evidence: They feel the Hand of God moving them within, and the Impulses of the Spirit, and cannot be mistaken in what they feel. But of this Seeing and Feeling, is it a Perception of an Inclination to do something, or of the Spirit of God moving that Inclination? There are two very different Perceptions, and should be carefully distinguished. See REVELATION.

If they know the Thing to be a Truth, they must do it, either by its own Self-Evidence, or by the rational Proofs that make it out to be so: If they know it to be a Truth, either of these two Ways, they in vain suppose it to be a Revelation: For thus all Truths, of what Kind soever, that Men uninspired, are enlighten'd with, come into their Minds. If they say, they know it to be true, because it is a Revelation from God, the Reason is good; but then it will be demanded, how they know it to be a Revelation from God? If they say, by the Light it brings with it; they should consider, whether this be saying any more, than that it is a Revelation, because they believe it to be true; for all the Light they speak of, is but a strong Persuasion of their own Minds, that it is a Truth; which is a very unsafe Ground to proceed on, either in our Tenets or Actions. True Light in the Mind, is nothing else but the Evidence of the Truth of any Proposition: And, if it be not self-evident, all the Light it can have, is from the Clearness of those Proofs upon which it is received. See EVIDENCE.

God, when he makes the Prophet, doth not unmake the Man: He leaves his Faculties in their natural State, to enable him to judge of his Inspirations, whether they be of divine Original, or no. If he would have us assent to the Truth of any Proposition, he either evidences that Truth by the usual Methods of natural Reason, or else makes it known to be a Truth which he would have us assent to by his Authority; and convinces us, that it is from him, by some Marks, which Reason cannot be mistaken in.

The Holy Men of God, who had Revelations from God, had something else besides internal Light of Assurance in their own Minds, to testify to them, that it was from God. They had outward Signs to convince them, of the Author of those Revelations. And when they were to convince others, they had a Power given them to justify the Truth of their Commission from Heaven; and by visible Signs to affirm the divine Authority of the Message they were sent with. *Moses* saw the Bulb burn without being consumed, and heard a Voice out of it, God, by another Miracle, of his Rod turn'd into a Serpent, assured him likewise of a Power to testify his Mission, by the same Miracle repeated before them to whom he was sent. See MIRACLE.

ENTHUSIAST, literally signifies a Person addicted to *Entusiasmus*. But the Word is usually understood in an ill Sense.

It was applied by the Antients, to a Sect of Hereticks, call'd also *Massilians* and *Euchites*; who, as *Theodoret* expresses it, were denominated *Entusiasmists*, by reason that being possessed by the Devil, they believed themselves divinely inspired. See MASSALIANS.

Among us, *Entusiasm* is of the like Import with *Faustic*; and is applied to the Quakers, the ancient Anabaptists, and modern Prophets, from their Pretences to extraordinary Lights, Revelations, Visions, Impulses, &c. from Heaven. See QUAKER, ANABAPTIST, &c.

ENTHYMEME, in Logic, an Argument consisting only of two Propositions, an Antecedent, and a Consequent deduced from it. See ARGUMENT.

Aristotle calls it, the *Rhetorical*, or *probable Argument*; and the Schools, also, the *imperfect Syllogism*, in Contradistinction to the perfect, which consists of three Propositions, and is call'd the *dialectical Argument*. See SYLLOGISM.

It must be observed, however, that the *Entymeme* is really a perfect Syllogism in the Mind, and only imperfect in the Expression, by reason one of the Premises is supposed, as being too clear and obvious, and easily supplied by the Understanding of those with whom we discourse.

Thus, In every right lined Triangle, the three Angles are equal to two right ones, and consequently, 'tis so in an Isosceles: Is an *Entymeme*; the Proposition that an Isosceles is a right lined Triangle, being omitted, as being sufficiently known and granted.

The *Entymeme* is the most simple and elegant of all Arguments, being what a Man, in arguing closely, commonly makes, without attending at all to the Form thereof. Thus, that Verse remaining of *Ovid's* Tragedy, entitled, *Medeæ*, contains an *Entymeme*: *Servare potui, perdere an possim rogas?* I was able to save you; consequently, Cou'd have destroy'd you. All the Beauty wou'd have been lost, had all the Propositions been express'd; the Mind being pleas'd with a Rehearsal of what is no ways necessary.

Sometimes, also, the two Propositions of an *Entymeme*, are both included in a single Proposition; which *Aristotle* calls, an *Entymematical Sentence*; and gives this Instance thereof, *Mortal do not bear an Immortal Hatred*. The whole *Entymeme* wou'd be, *Thou art Mortal, let not, therefore, thy Hatred be Immortal*.

The Word is derived from the Greek, *ἐπιθυμία*, of the Verb *ἐπιθυμῶ*, to think, conceive, which is a Compound of *επι* and *θυμι*, in the Mind.

ENTIRE Tenancy, in Law, is contra-distinguished to several Tenancy; and signifies a sole Possession in one Man; whereas the other denotes a joint, or common one, in several. See TENANT.

ENTITATIVELY, *Entitativo*, implies an Abstraction, or Retrenchment, of all the Circumstances, from a Thing under Consideration. Thus, a Thing is said to be taken, or consider'd, *Entitativo*, or *secundum Entitatem*, when consider'd nakedly and precisely, according to what it is in it self, without any Thing extrinsic. See ABSTRACTION.

E. gr. *Peter*, *Entitativo* taken, is *Peter*, as a Thing, a Substance, a Body, &c. without any Regard to his being a Lord, a Husband, Learned, &c.

ENTITY, in the School Philosophy, a physical *Ent*, or Being, consider'd according to what it is in its physical Capacity. See *ENS*.

Some Dealers in Distinction, give us several Kinds of *Entities*. In its proper Sense, they apply it to a Multitude of dissimilar Parts; such is the *Entity* of a Hoarse of the World, &c. In a more limited Sense, they apply it to a Multitude of similar Parts, such is the *Entity* of Water, Heat, &c. And, in its general Sense, to any Reality, as the *Entity* of God, of Angels, &c.

But this is mere Subtlety; perhaps *Entity* were best defined the Actual Essence, or Existence, of any thinking Thing. See ESSENCE.

ENTOYER, or ENTOIRE, in Heraldry, is used to express a Bordure, charged entirely with Things without Life. See BORDURE.

ENTRAILS, the Intestines, or Guts, of an Animal. See INTESTINES.

Poison leaves its chief Marks in the Entrails. See POISON. In Embalming they take out the Entrails. See BALMING.

Menage derives the Word from the Latin *Enteralia*, form'd of the Greek, *εντερον*, *Intestine*.

ENTRAILS, is also used, in a more general Sense, for the *Viscera*, or all the Parts contain'd in the Bodies of Animals. See VISCERA.

The *Arystippian* of the Antients, was employ'd in considering the *Entrails* of Victims, as the Heart, Lungs, Liver, &c.

ENTRY, or ENTRANCE, in its general Sense, a Door, Gate, Passage, &c. thro' which to *Enter*, or arrive within a Place. See DOOR, GATE, &c.

ENTRY, in Book-keeping. See BOOK-KEEPING.

ENTRY, in Commerce, a Duty, or Impost, laid on Commodities imported into a State, either by Land or Sea.

The Duties of *Entry*, are paid according to a Tariff settled for that Purpose. Where the Duty of *Entry* of any Commodity, is not fix'd by the Tariff; it is paid by Estimation, *i. e.* in Proportion to what some other Commodity, of nearly the same Quality and Value, used to pay. See DUTY, IMPORTATION, EXPORTATION.

ENTRY, is also a solemn Reception, or Ceremony perform'd by Kings, Princes, Embassadors, Legates, &c. upon their first Entering a City, or upon their Return from some Triumph and Expedition.

ENTRY, in Law, signifies the taking Possession of Lands, or Tenements. See POSSESSION.

Entry is also used for a Writ of Possession. See INGRESSU. The *Writs of Entry*, says *Brison*, favour much of the Right of Property. Some, *e. gr.* are to recover Customs, and Services; and in these are contain'd the two Words, *solei et debet*: Such are the *Writs Quo iure, Rationabilibus Divisiis, Rationabili Eboreria*, &c.

In the Plea of *Entry* there are three Degrees: First, where a Man demandeth Lands or Tenements, of his own Seisin, after the Term is expired. The Second is, where one demandeth Lands or Tenements, let by another after the Term is expired. The Third, where one demandeth Lands or Tenements of that Tenant, who had Entry by one, to whom some Ancestor of the Plaintiff did let for a Term now expired; according to which Degrees, the Writs for Remedy are varied.

Beside which, there is a fourth Form, without Degrees, and in Case of a more remote Seisin, to which the other three Degrees do not extend. The Writ in the second Degree, is call'd a *Writ of Entry in le per*: In the third, *In le per Et cui*: And in the fourth, without Degrees, a *Writ of Entry in le post*; that is, after Diffusion, made by such a one to such a one. And if a *Writ of Entry* be conceiv'd out of the right Cause, so that one Form is brought for another, it is abatable. In these four Degrees are comprehended all Manner of Writs of *Entry*, which are without Certainty and Number.

A *Writ of Entry* differeth from an *Affize*, because it lieth for the most Part against him who enter'd lawfully, but holdeth against Law; whereas an *Affize* lieth against him, who unlawfully diffiz'd: Yet, sometimes, a *Writ of Entry* lieth upon an *Entrusion*. See *ASSIZE*.

ENTRIES, amongst Hunters, are those Places, or Thickets, thro' which Deer are found lately to have pass'd; by which Means their Bigness or Size is guess'd at, and then the Hounds, or Beagles, are put to them for the View.

ENTRUSION, or INTRUSION, in Law, a violent, or unlawful Entrance into Lands, or Tenements, void of a Possessor; by a Person who has no Right to them.

E. gr. When a Man steps into Lands, the Owner whereof lately died, &c the right Heir, either by himself, or any other, hath taken Possession, it is *Intrusion*.

Intrusion and *Abatement*, are sometimes taken for the same Thing: Tho' there is a Difference. See *ABATEMENT*. See also *DISSEISIN*.

ENVELOPE, in Fortification, is a Mount of Earth, sometimes raised in the Ditch of a Place, and sometimes beyond it; being either in Form of a simple Parapet, or of a small Rampart border'd with a Parapet.

These *Envelopes* are made, where one would only cover the weak Places with single Lines; without any Design of advancing towards the Field, which cannot be done but by Works which require a great deal of Breadth; such as Horn-Works, Half-Moons, &c.

These *Envelopes* are sometimes call'd *Sillons*, *Contregars*, *Conferres*, *Lunettes*, &c.

ENVIRONNE, in the *French* Heraldry, is when a Lion, or other Figure, is *Environ'd*, or encompass'd round with other Things.

Environne with so many *Beavants*, &c. in *Orle*.

ENUMERATION, Numbering, a particular Account, or Detail of several Things. See *NUMERATION*.

God desires *Abraham*, in Scripture, to *Enumerate* the Stars: At the Time of our Saviour's Birth, *Augustus Cæsar* had commanded an *Enumeration* to be made of all the World, or rather of all the People under his Empire. Tho' several able Authors are of Opinion that the Census, Tax, or *Enumeration*, mention'd by *St. Luke*, did not extend to the whole Empire, but only to the People of *Judea*. See *Perizonius de Censu Judaico*: And *Berger de Viis Militaribus*.

At *Rome*, it was an usual Thing to have an *Enumeration* of all the Families: The first was under *Servius Tullius*, when the Men amounted to 80 Thousand. *Pompey*, and *Cæsar*, made another when they reach'd to 400 Thousand. That of *Cæsar* did not exceed 100 Thousand: So that the Civil Wars must have destroy'd 300 Thousand *Roman* Citizens. Under *Augustus*, in the Year 725, the *Roman* Citizens, throughout the Empire, were number'd at 4 Million 63 Thousand. In the Year of *Rome* 746, the Citizens being number'd again, were found 4 Millions, 2 Hundred 33 Thousand. In the Year 766, being the last Year of *Augustus*'s Reign, that Prince, together with *Tiberius*, made another *Enumeration* of the Citizens of *Rome*, when they were found 4 Millions 137 Thousand Persons. *Claudius* made a new Computation, in the Year of Christ 48, when, as *Tacitus* relates it, the *Roman* Citizens throughout the whole Empire, amounted to 6 Millions 964 Thousand; tho' others represent the Number as considerably greater.

A very curious, rare, yet indisputable Medal of *Claudius*, never yet made public, expresses the precise Number in this List made by *Claudius*, which was call'd *Offensio*, to be 7 Millions of People fit to bear Arms, beside all the Soldiers on Foot in the Armies, which amounted to 50 Legions, 57 Cohorts, and 60 Soldiers.

After this *Enumeration* we find no more till that of *Vespasian*, which was the last.

ENUMERATION, in Rhetoric, a Part of the Peroration, wherein the Orator, collecting the scatter'd Heads of what has been delivered throughout the whole, makes a brief, and artful Recapitul, or Recapitulation thereof. See *PERORATION*.

Enumeration of the Parts, in Rhetoric, is what we more usually call *Distribution*. See *DISTRIBUTION*.

ENUNCIATION, a simple Expression, or Declaration of a Thing, in Terms either of Affirmation, or Denial.

The Schoolmen usually distinguish three Operations of the Understanding, *Apprehension*, *Enunciation*, and Reasoning. See *MIND*, *OPERATION*, &c.

ENUNCIATION, among the Logicians, is the same as a *Proposition*. See *PROPOSITION*.

ENVOICE. See *INVOICE*.

ENVOY, a Person deputed, or sent purposely to negotiate some particular Affair with a foreign Prince, or Republic. See *MINISTER*.

Those sent from the Courts of *England*, *France*, &c. to *Genoa*, the Princes of *Germany*, and other petty Princes and States, don't go in Quality of *Embassadors*, but of *Envoys*.

Add, that those sent from one great Prince, or State, to another; as from the King of *England* to the Emperor, &c. When the Affair they go upon is not very solemn and important, have frequently no other Character but that of *Envoys*. See *EMBASSADOR*.

Envoys are either *Ordinary*, or *Extraordinary*. See *EXTRAORDINARY*, &c.

Both Kinds enjoy the Protection of the Law of Nations, and all the Privileges of *Embassadors*; only differing from them in this, that the same Ceremonies are not perform'd to them.

The Quality of *Envoy Extraordinary*, *Wicquefort* observes, is very modern; more modern than that of *Resident*: The Ministers invested therewith, at first, took on them most of the Aims of *Embassadors*; but they have since been taught otherwise.

In the Year 1639, the Court of *France* made a Declaration, that the Ceremonies of conducting *Envoys* Extraordinary to their Audience in the Kings and Queen's Coaches, with divers others, should no longer be practis'd to *Envoys*.

S. Justiniani, the first *Envoy* Extraordinary from *Venice*, after that Regulation offer'd to cover, in speaking to the King; but it was refused him. And the King of *France* himself declared, that he did not expect his *Envoy* Extraordinary at the Court of *Vienne*, should be regarded any otherwise than as an ordinary *Resident*. Since which Time, those two Kinds of Ministers have been treated alike. See *Wicquefort*.

ENURNY, is the Herald's Term, for a Burdure of a Coat of Arms being charged with any Kind of Beasts.

ENVY. See *PLEASURE* and *PAIN*.

EOLIC, or, more properly, **ÆOLIC**, in Grammar, is a Dialect of the *Greek* Language. See *ÆOLIC* and *DIALECT*.

EOLIC, in Music, one of the Modes of the ancient Music. See *MOOD*.

The *Æolic* Mode was found fittest for *Lyric* Verses; as having a peculiar Sweetness and Gravity. It was the Sol of *G re Sol ut*.

The *Sub-Æolic*, or *Hypo-Æolic*, had the same Effects with the *Æolic*. It was the *re* of *de Sol re*; and began a Diatessaron lower than its natural authentic Mode.

EOLIPILE, in Hydraulicks, See *EOLIPILE*.

EON, or **ÆON**, a *Greek* Term, signifying *Sacrosanctum*, *Age*; attributed by *Valentine*, a *Heretic* of the 11th Century, to his God, and all the Productions thereof. See *EON*.

Valentine, refining on those who had preceded him in this Way, produced a long Genealogy of a Number of *Eons*, or *Æons*: The first, and most perfect, he particularly denominates *Iegde*, *Proon*, that is, *pre-existent*; beside other Names, the most usual whereof was that of *Bythos*, Βύθος, *Depth*.

This *Bythos* continued long alone with *Æonia*, *Æonina*, *Thought*; whom *Valentinius* also call'd *ædes*, *Grace*, and *Σιγή*, *Silence*. At length, *Bythos* with *Sige*, produced *Nous*, Νους, *Understanding*, and *Αλήθεια*, *Truth*, her Sister. *Nous* begot two *Eons*; *Logos*, Λόγος, *Word*, and *Zoe*, Ζωή, *Life*: Which two begot two others, *Austrapor*, Ἀυραπορ, *Mans*, and *Εκκλησια*, *Church*. And these eight *Eons* were the Chief of all the rest.

The *Word*, Λόγος, and *Life*, Ζωή, begot ten other *Eons*: *Mis* and the *Church* begot twelve more; among whom were the *Paraclete*, *Faith*, *Hope*, *Charity*, the *Perfect*, *Tolerat*, and *Wisdom*, Σαφεια. And thus were the 30 *Eons* made up, which all together made the *Pleroma*, Πληρομα, or spiritual and invisible *Plenitude*.

These

These 30 *Epa's*, the *Valentinians* hold to have been figured by the thirty Years of our Saviour's private Life. See VALENTINIAN.

EPACTS, in Chronology, the Excesses of the Solar Month above the Lunar Synodical Month; and of the Solar Year above the Lunar Year, or 12 Synodical Months: Or of several Solar Months, above as many Synodical Months; and several Solar Years above as many Dozens of Synodical Months.

Whence, the *Epa'ct's* are either *Annual* or *Menstrual*. *Menstrual EPACTS*, are the Excesses of the Civil, or Calendar Month, above the Lunar Month. See MONETH.

Suppose, *e. gr.* it were New Moon on the first Day of *January*: Since the Lunar Month is 29 Days 12^h 44' 3"³; and the Month of *January* contains 31 Days: The *Menstrual Epa'ct* is 2 Day 11^h 15' 37".

Annual EPACTS, are the Excesses of the Solar Year above the Lunar. See YEAR.

Hence, as the *Julian Year* is 365 Days 6 Hours, and the *Julian Lunar Year* 354 Days 8^h 48' 38"; the annual *Epa'ct* will be 10 Days 12^h 11' 22"; that is, nearly, 11 Days. Consequently, the *Epa'ct* of 2 Years, is 22 Days; of 3 Years, 33 Days; or rather 3, since 30 Days make an *Embolismic*, or Intercalary Month. See EMBOLISMIC.

Thus, the *Epa'ct* of 4 Years are 44 Days, and 16 of the rest: And thus, every 19th Year, the *Epa'ct* becomes 30 or 0; and consequently the 20th Year the *Epa'ct* is 11 again: And so the Cycle of *Epa'ct's*, expires with the Golden Number, or Lunar Cycle of 19 Years, and begins again with the same, as in the following Table.

Gold. Numb.	Epa'ct.	Gold. Numb.	Epa'ct.	Gold. Numb.	Epa'ct.
1	XI	7	XVII	13	XXIII
2	XXII	8	XXVIII	14	IV
3	III	9	IX	15	XV
4	XIV	10	XX	16	XXVI
5	XXV	11	I	17	VIII
6	VI	12	XII	18	XIX
				19	XXX

Again, as the New Moons are the same, that is, fall on the same Day every 19 Years, so the Difference between the Lunar and Solar Year, is the same every 19 Years. And because the said Difference is always to be added to the Lunar Year, in Order to adjust, or make it equal to the Solar Year; hence the said Difference respectively belonging to each Year of the Moon's Cycle, is called the *Epa'ct* of the said Year, that is, the Number to be added to the said Year to make it equal to the Solar Year; The Word being form'd from the *Greek*, *επισημαίνω*, *induco, interscolo*.

Upon this mutual Respect, between the Cycle of the Moon, and the Cycle of the *Epa'ct's*, is founded this Rule for finding the *Epa'ct* belonging to any Year of the Moon's Cycle. Multiply the Year given of the Moon's Cycle into 11; if the Product be less than 30, it is the *Epa'ct* sought; if the Product be greater than 30, divide it by 30, and the Remainder of the Dividend is the *Epa'ct*: For Instance, I would know the *Epa'ct* for the Year 1712, which is the third Year of the Moon's Cycle. Wherefore 3 is the *Epa'ct* for 1712: For $11 \times 3 = 33$, and 33 being divided by 30, there is left 3 of the Dividend for the *Epa'ct*. See CYCLE.

By Help of the *Epa'ct* may be found what Day of any Month in any Year the New Moon falls on, thus: To the Number of the Month, from *March* inclusively, add the *Epa'ct* of the Year given; if the Sum be less than 30, subtract it out of 30; if greater, subtract it out of 60; and the Remainder will be the Day, whercon the New Moon will fall.

If the New Moon be sought for in the Month of *January* or *March*, then nothing is to be added to the *Epa'ct*; if for *February* or *April*, then only 1 is to be added.

For Example: I would know what Day of *December* the New Moon was on *A. D.* 1711, the *Epa'ct* wherof is 22. By the aforesaid Rule, I find it will be *December* the 28th; for $22 + 10 = 32$, and $60 - 32 = 28$. See MOON.

The Day whercon the New Moon falls, being thus found, it is easy to infer from thence what the Age of the Moon is on any Day given.

However, there is a peculiar Rule commonly made use of to this Purpose, which is this: Add the *Epa'ct* of the Year, the Number of the Month, from *March* inclusively, and the given Day of the Month all into one Sum, which if it be less than 30, shews the Age of the Moon; if it be greater than 30, divide it by 30, and the Remainder of the Dividend shews the Age of the Moon, or how many Days it is from the last New Moon: This Method will never err a whole Day.

For Instance: What was the Age of the Moon on *December* 31st, *A. D.* 1711? By this Rule, I find, that the Moon will then be three Days old; that is, it will then be three Days from the last new Moon. For, $22 + 10 + 31 = 63$, and 63 being divided by 30, there will remain of the Dividend, 3. And this exactly agrees to the other foregoing Rule, wherby it was found that the New Moon was on *December* 28, 1711.

It must be observed, that as the Cycle of 19 Years, anticipates the new Moons by one Day in 312 Years; the same Cycle of *Epa'ct's* will not always hold: The Moon's Anticipation lessning the several *Epa'ct's* by one, every 312 Years.

To have the *Epa'ct's*, therefore, point out the New Moons perpetually; that *Epa'ct* given in the Calendar is not sufficient; but all the 30 *Epa'ct's* should be followed throughout the whole Year, that the Calendar may exhibit all the Cycles of *Epa'ct's*. See CALENDAR.

And, again, that as in 300 *Gregorian* Years, there is one Bissextile Year dropp'd; the New Moons are thus thrown on the following Day. Consequently, by the Moon's post-position there is one added to every *Epa'ct*. See GREGORIAN.

EPANORTHOISIS, in Rhetoric, a Figure, wherby the Orator revokes and corrects something before allow'd, as too weak; and adds something stronger, and more conformable to the Passion he is agitated by. See CORRECTION.

Such, *e. gr.* is that of *Cicero* for *Calpis*: *O Sculpitis! Sculpitis ne dicam, an Impudentium Singularitas!* Oh Folly! Folly shall I call it, or rather intolerable Impudence? And in the first *Catalonian*: *Quamquam quid loquor? Te ut ulla res frangat? Tu ne unquam te corrigas? Tu ut ullam fugam mediteris? Tu ut illum exitium cogites? Utinam tibi istum Mentem Dii Immortales donarent.*

Thus also *Terence*, in the *Honourourimurumemo*, introduces his old Man *Mendemus*, saying,

Filius Uicium Adolecentulum Habeo. Ab: quid dixi habere me? Imo habui, Chreme, Nunc habeam nec no, incertum est.

The Word is *Greek*, *επισημαίνω*, form'd of *επισημαίνω*, *Right*, *Straight*, whence *επισημαίνω*, *I straighten*, *επισημαίνω*, *I redress*, *straighten*, *correct*, and *επισημαίνω*, *Correction*.

The *Latin* call it *Correltio*, and *Emendatio*.

EPAULE, or **ESPAULE**, in Fortification, the Shoulder of the Bastion; or the Angle made by the Face and Flank; whence that Angle is often called the *Angle of the Epaule*. See BASTION and SHOULDER.

The Word is pure *French*, and literally signifies *Shoulder*.

EPAULEMENT, in Fortification, a Side-Work hastily thrown up, to cover the Canon, or the Men.

It is made either of Earth thrown up, of Bags of Earth, Gabions, or of Palisades and Earth, of which latter make, the *Epaulements* of the Places of Arms, for the Cavalry, behind the Trenches are.

EPAULEMENT, is also used for a *Demi-Bastion*, consisting of a Face and Flank, placed at the Point of a Horn- or Crown-Work. Also, for a little Flank, added to the Sides of Horn-Work, to defend them when too long. Also for the Redoubts made on a right Line, to fortify it. And, lastly, for a Square Orillon, which is a Mass of Earth almost square, faced and lined with a Wall, and designed to cover the Canon of a Cañon.

EPENTHESIS, in Grammar, the Addition, or Interjection of a Letter, whether a Vowel, or Consonant, in the Middle of a Word; as *Religio* for *Religio*. See FIGURA.

The Word is *Greek*, *επισημαίνω*, form'd of *επισημαίνω*, *επισημαίνω*, *επισημαίνω*, *infero, immitto*.

EPHA, a dry Measure in Use among the *Hebrews*.

See MEASURE.

The *Epha* was the most ordinary Measure they used; and that wherby the rest were regulated. 'Tis commonly supposed that the *Epha*, reduced to *Roman Modii*, contain'd four *Modii* and a half. Now the *Roman Modius* of Grains, or Flower, contain'd 20 *Libre*, or Pounds; consequently the *Epha* weigh'd 90 Pounds. Dr. *Arbutnot* reduces the *Epha* to 3 Pecks, 3 Pints, *Engl.*

The Hospitality of *Gideon* is prais'd for baking an *Epha* of Flower for a single Angel. Which might have served 45 Men a whole Day; the usual Portion allow'd the Workmen being two Pound of Bread per *Diem*.

EPHEMERA, in Medicine, an Epithet applied to something that only lasts one Day; particularly to a Fever, which terminates in the Compass of a Day, *i. e.* to an Access of a Fever which returns no more; called by *Galen*, *επισημαίνω*, *Febri's Ephemera*, and also *Diaria*. See FEVER.

The Word, and the following one, *Ephemeros*, are form'd of the Preposition *ἐπι*, *de*, *super*, *apud*, *ob*, *in*, *proter*, in *English*, of, on, at, for, in, by, near; and *ἡμερα*, *Diem*, *Day*.

EPHEMERA, or **EPHEMERON**, in Natural History, an Animal that only lives five Hours: Within the Term whereof it is born, grows, and extends its Members, appears young, breeds Eggs, casts Seed, grows old, and dies.

Aristotle, who gives the first Account thereof, in his Book of *Animal*, gave it the Name *σπυμεν*, because its Life was bounded within the Day. *Aldrovandus*, *Jouffroy* and *Clafius*, furnish us Accounts of the *Ephemeron*; and above all, *Suommerhaus*, in an express Work de *Ephem. Vite*.

He calls it *Ephemera*, *Hemerobios*, and in Latin *Diaria*. The *Ephemeron* is of the winged, or fly Kind; and appears usually about St. *John's* Tide. It is born about Six a Clock in the Evening, and dies about Eleven.

It must be observed, however, that 'ere it assumes this Figure, it has lived three Years under that of a Worm, in a clay Cell, or Case.

It never eats from the Time of its Change to its Death; nor is it furnish'd with the Parts necessary for the Reception and Concoction of Food. Its Change seems intended merely for the Sake of Generating and Multiplying its Kind.

Its Life is summ'd up in a few Words. In the Beginning, it sheds his clay Coat; which done, and the poor little Animal thereby render'd light and agile, it spends the rest of its short Life in frisking over the Waters. During which, the Female drops her Egg on the Waters, and the Male his Sperm on them, to impregnate them. These Eggs, thus impregnated, descend to the Bottom of the Water by their own Gravity, and are hatch'd by the Warmth of the Sun into little Worms, which make themselves Casts in the Clay, and feed on the same without any Need of parental Care: Till the Time of their Change, or Metempsychosis come.

EPHEMERA, is also applied among Botanists, to a Kind of Flowers, which open, and expand themselves at Sun-Rising, and wither and fade away again at his Setting. Such are the *Dent de lion*, vulgarly Dandelion, and divers others.

The Travellers into *Arabia* tell us of several *Ephemeron Trees*, which grow every Day, from Morn to Noon, and then disappear; tho' 'tis not known, whether they wither away entirely, or sink back into the Sands among which they grow.

EPHEMERIDES, or **EPHEMERIS**, in Astronomy; Tables calculated by Astronomers, shewing the present State of the Heavens for every Day, at Noon; that is, the Places wherein all the Planets are found, at that Time. See **PLANET**, **PLACE**, and **TABLE**.

'Tis from these Tables, that the Eclipses, Conjunctions, and Aspects of the Planets, are determined; Horoscopes, or Celestial Schemes contracted, &c. See **CALENDAR**.

The *Ephemeres* of *Origen*, *Kepler*, *Argoli*, *Heckerus*, *Mozaracchis*, *Wing*, *de la Hire*, *Parker*, &c.

Sig. Cassini has made *Ephemeres* of the *Sidera Medicea*, or *Satellites of Jupiter*, which are of good Use in determining the Longitude. See **SATELLITE**, **ECLIPSE**.

EPHETA, in Antiquity, a Magistrate among the *Athenians*.

The *Ephetae* were instituted by King *Demophon*, to take Cognizance of Murders committed by Accident: Their Number was 100, whereof 50 were *Athenians*, and 50 *Argians*. They were not admitted to the Post till upwards of 60 Years of Age.

Draco extended their Authority. *Ubo Emmius*, de *Ref. Arden.* says, he transferr'd Part of the Jurisdiction of the *Areopagites* upon 'em.

EPHIALTES, in Medicine, a Disease, by the *English* call'd the *Night-Mare*, and the Latins *Incubus*; chiefly affecting Persons asleep, when laid on their Back, and having the Stomach loaded with Food of difficult Digestion. See **INCUBUS**.

In this State they are oppress'd, as it were, with a huge Weight on the Breast, and imagine some Spectre, or Demon, stopping their Breath.

This Disease does not arise, as was antiently imagined, from gross Vapours filling the Ventricles of the Brain: But rather from a too great Repletion of the Stomach, which hinders the Motion of the Diaphragm, and of Consequence, the Dilatation of the Breast necessary for Inspiration. See **RESPIRATION**.

Ermulder observes, that they are but rarely affected with this Disorder who use a laudable Diet, and sup sparingly; lying on the Side, with the Head pretty high, generally prevents it.

The *Arabs* call it, the *Nocturnal Epilepsy*, because, when habitual, it usually degenerates into the Epilepsy, being the usual Forerunner thereof, especially in young People. In old, it frequently terminates in an Apoplexy. See **EPILEPSY**, &c.

Menofitus accounts for its being most usual in Boys, from their being too voracious, and eating more than they can digest. *Aurelianus* assures us, it has kill'd several; adding from *Silvius*, that there was a contagious, or epidemic *Incubus* at *Rome*, which over-run Numbers like a Plague.

EPHIPPIUM, in Anatomy, a Part of the *Sphensoides*, call'd also *Sella Equina*, and *Sella Turcica*. See **SSELLA EQUINA**.

EPHOD, a Sacerdotal Garment, in Use among the antient *Jews*.

The *Ephod* is supposed to have been a Kind of Linnen Alb, or Surplice, by the *Latins* call'd *Super-bunserale*: But 'tis very hard to say precisely what it was; And there is Room enough for the Interpreters to be divided about it.

The only Point they are agreed upon is, that it was an upper Garment wore over all the rest, immediately under the Pectoral, or Breast-plate. Some hold it had Sleeves; others deny it. The Generality agree it was very short, tho' some hold, that it hung down to the Feet behind.

There were two Kinds of *Ephods*; the one, common to all who assist'd in the Temple; being only made of common Linnen, mention'd in the 1st Book of *Samuel*, ii. 18. The other, peculiar to the High-Priest, mention'd *Exod.* xxviii. 6, 15. to be made of Gold, of blue, and of Purple, of Scarlet, and fine twined Linnen, with cunning Work; Having two Shoulder Pieces, with a curious Girdle of the same Matter, whereon were two Ouyx's, with the Names of the Children of *Israel* engraven thereon.

It is also express'd, in the 11th Book of *Samuel*, vi. 14. that upon the Removal of the Ark of the Covenant from the House of *Obed Edom*, that Prince danced for Joy, girded with a Linnen *Ephod*; whence some Authors have concluded, that the *Ephod* was also a Regal Garment on solemn Occasions.

The Word **EPHOD**, is derived from **EPHOD**, a Hebrew Word, signifying to cloath.

EPHORI, Magistrates established in ancient *Sparta*, to balance, and check the Power and Authority of the Kings; as, at *Rome*, there were Tribunes created to controul the Power of the Consuls. See **TRIBUNE**.

Lycurgus, being sensible that a perfect Understanding between the Prince and the People, was the Basis and Foundation of both their Happiness; To maintain that good Understanding, establish'd *Ephori*, or Inspectors, as a Kind of Mediators, who should have an Eye to the Measures and Conduct of both Sides, and preferre so equal a Ballance between 'em, that the Regal Power should never decline into Severity and Tyranny; nor the Liberty of the People run into Licensé and Rebellion.

The Authority of the *Ephori* was very great: On certain Occasions, they expell'd, and even put to Death, the Kings; and abolish'd, or suspend'd the Power of the other Magistrates, calling 'em to Account at Pleasare. *Agellus*, in the Height of all his Conquests, which even struck Terror on the great King of *Persia*; stopp'd, and turn'd back, out of Deference to the *Ephori*, when they recall'd him. Some Authors deny, that the *Ephori* were establish'd by *Lycurgus*.

The Word is form'd of the Greek *επι*, *intueri*, form'd of the Preposition *ἐπι*, and the Verb *εἶδω*, to see; whence *intueri*, *Inspector*.

EPIBATERIA, a Composition of Poetry, in Use among the antient *Greeks*.

When any Person of Condition and Quality, return'd Home after a long Absence, or Journey, into another Country; he call'd together his Friends, and Fellow-Citizens, and made 'em a Speech, or rehears'd them a Copy of Verses, wherein he return'd solemn Thanks to the Immortal Gods, for his happy Return, and ended with an Address, by way of Compliment, to his Fellow-Citizens.

This Copy of Verses, is what the *Greeks* call *Embateus*, *Epibateria*, of *Demetrius*, *Iterum*. At going away, they had another, call'd *Apobateria*. See **APOBATERIUM**.

EPIC POEM, call'd also **EPOPEA**; an heroic Poem; or a Poem relating some great and signal Transaction of a Hero. See **HERO**, &c.

Such is the Iliad and *Odysee* of *Homer*, the *Æneid* of *Virgil*, the *Giernusalemus* of *Tasso*, and the *Paradise lost* of *Milton*; which are the principal Poems of the *Epic* Kind. See **ILIAD**, **ÆNEID**, &c.

The *Epic Poem*, is more accurately and scientifically defined, by that excellent Critic, *Fach. Bossu* in an express Treatise on that Subject, to be a Discourse invented with

Art, to form the Manners by Infractions, disguised under the Allegory of an important Action, related in Verse, in a probable, entertaining, and surprising Manner. See POEM.

The *Epos* is distinguished from the Comedy, in that the Action of the latter is not important, nor is it related by the Poet, but acted by the Persons introduced for that Purpose; which Circumstance, likewise, distinguishes it from a Tragedy. See COMEDY and TRAGEDY.

Nor is it a philosophical Poem, as that of *Ineretus*, on the Creation of Sir R. Blackmore; nor a Treatise of Agriculture, or the like, as the Georgicks of *Virgil*; these Poems not being intended to form the Manners: beside, that the Infractions they contain are naked, simple, and direct, without any Disguise, or Allegory. Which second Circumstance likewise distinguishes it from a Treatise of Morality, wrote in Verse: Or a simple History in Verse, as the *Phœnalis* of *Lucan*; the Punic War of *Silius*; or the Civil Wars of *Sam. Daniel*; add, that its being confined to one important Action, distinguishes it from a Poem which relates all the Actions of a Person's Life; as the *Thebaid* and *Achilleid* of *Statius*, which are what we properly call Heroic Poems. See HEROIC.

Mon. de la Motte, indeed, in his Controversy with Madam Dacier, on the Subject of *Homer*, maintains, that the whole Life of a Hero, may justly be made the Subject of an Epic Poem; and even, that the *Lutrin* of Mon. Boileau, might pass for an Epic Poem: But be seem'd, afterwards, to return to the common Sentiment. In effect, the Question is not as to the Sense, which may be affected to the Words *Epic Poem*, but the Sense which Custom has actually affected to 'em.

If we had only Regard to the Etymology of the Word *Epic*, (of *êpos*, Verse; *Pœty*, from *aim*, dico, I speak, relate) all Poems wherein the Poet speaks, or rehearses Things himself, without making the Persons of his Poem speak, except at second hand, as he relates what they spoke on this or that Occasion, wou'd be *Epic Poems*; and so, there's not an Epigram, Sonnet, or Madrigal, but wou'd come under this Denomination. But this were wild.

In Effect, the Term *Epic Poem*, is only attributed to a Composition, whose Subject is great, instructive, and heroic; that only comprehends one single principal Event, to which all the rest refer; which principal Action is to be terminated in a certain Space of Time, ordinarily about a Year. 'Tis true all this is arbitrary; but the Sense of all Words is so too: And in Matters of Language we must always be guided by Custom.

If M. de la Motte had only pretended, that one might make a fine, instructive Poem, on the whole Life of a Hero; or an agreeable, and diverting Poem, on some humorous Adventure; all the World would have been of his Side. But 'tis enough that Custom has not thought good to apply the Term *Epic*, either to Subjects of too much Extent, and that are fill'd with too many Incidents no wife connected together; nor to burlesque Poems, as the *Batrachomyomachia* of *Homer*; the *Sœcchia Rapsodia* of *Tassoni*; the *Desaite de Dulot*; the *Lutrin* of *Boileau*; the *Hubbards* of *Burlet*; the *Rape of the Lock* of *Mr. Pope*; or the *Dispensary* of *Dr. Garth*. See BURLESQUE.

The *Epic Poem*, then, as appears from what was above observed, bears a Relation, or Analogy, to four Things; History, Morality, Fable, and Poetry: To History, as both of 'em relate one or more Actions; but then, the Actions of History are singular; so that the *Epos* is no History, nor Kind of History. See HISTORY.

To Moral Philosophy, as both of them consist of Instructions for forming the Manners; but the Action and Allegories distinguish it herefrom. See MORALITY.

But it relates entirely to Poetry and Fable, as being strictly a Poem, and a Fable. See POETRY and FABLE.

The Nature of the *Epic Poem*, is finely drawn by the great Critic above-mentioned: The *Epic Poets*, says *Fath. Buffin*, have done that with Regard to Morality, which the ancient Heathen Divines did with Regard to the Divinity. The too great Diversity of divine Actions and Perfections, so very disproportionate to our Comprehension, obliged the latter to divide a single Idea of a simple Essence, God, into several Persons; to whom they attributed several Names, *Jupiter*, *Juno*, *Neptune*, &c. See GOD.

And, on the contrary, the Nature of moral Philosophy, which never prescribes Rules for particular Things, lead the Poets to collect into one single Idea, one and the same Person, and one apparently singular Action, whatever that Kind was found in different Persons, and different Actions.

Thus *Aristotle*, *On poetica* in *Præceptis poetarum*, &c. Poetry, says he, teaches moral Philosophy, not by relating only, in manner of an Historian, what *Atalides*, for instance, did or suffer'd; but by proposing what some

Person, named as the Poet thinks fit, wou'd, probably, or necessarily have done on the like Occasion. And thus it is that he shews either the unhappy Consequences usually attending imprudent Schemes, or ill Actions; or the Reward of good Actions, and the Satisfaction resulting from a Design laid in Virtue, and conducted with Prudence. So that in the *Epic Poem*, according to *Aristotle's* Sentiments, the Persons and Actions, however named, are all figur'd, allegorical, and universal, not historical and singular.

But the Poets thus taking on 'em the Office of Moral Philosophers, did not cease to be Divines. On the contrary, their Morality it self frequently obliges them to introduce the Deity into their Works; as the Knowledge, Fear, and Love of God, are the first and most solid Foundations of all Morality. The Presence of the Divinity, and the Care to august a Personage was supplic'd to have of the Action, obliged the Poet to make the Action great and important, and to have it transacted by Kings and Princes. The same likewise oblig'd 'em to think and speak, in a manner elevated above the common Pitch of Men; and equal, in some measure, to the Dignity of the divine Persons introduced. To which End serves the poetical and figurative Language, with the Majesty of Heroic Verse. Add, that as to much of the divine and miraculous might ruin the Probability, they were hereby oblig'd to have Recourse to several Rules to maintain the same. See MACHINE.

Thus much the Poets were driven to by the Substance of the Things they had chose for the Matter of their Poems and Instructions. The Manner of delivering 'em usefully and methodically, oblig'd 'em to several other Rules. See UNITY, EPISODE, &c.

The *Epic Poem* is intended more for the Manners and Habitudes, than for the Passions. These latter rise all at once, and their Violence is but of short Duration; but the Habitudes are more calm, and improv'd, or quitted more leisurely. Consequently, the *Epic Action* cou'd not be included in the Space of a Day, as that of the Theatrical. A longer Time was necessary than is required for Tragedy, which is altogether for the Passions.

This Distinction has introduced a World of Difference between Tragedy and *Epic Poetry*. The Tragic Violence requires a more lively and animated Representation, than a mere Recital. Accordingly, it is wholly thrown into Action, and the Poet never speaks at all, as he does in the *Epos*, where there are no Actors.

See further of the Nature of the *Epic Poem* under FABLE.

For its Matter, see ACTION. For its Form, see NARRATION. See also MANNERS, CHARACTER, MACHINES, &c.

EPICARPIUM, in Medicine, a Kind of Remedy, usually in Form of a Cataplasm, or Plaster, consisting of sharp, penetrating Ingredients, as Garlic, or Onion, Spiders-Web, Hellebore, Camphor, Turpentine, &c. applied round the Wrist, at the Beginning of the Access of a Fever, to prevent the same.

The Word is form'd of the Greek *êpi*, super, on, and *carpos*, Corpus, Wrist.

EPICEDION, in the Greek and Latin Poetry, a Poem, or poetical Composition, on the Death of a Person.

As the Obsequies of any Man, there were three Kinds of Discourses usually made: That rehears'd at his Buriall, or Funeral Poem, was call'd *Nenia*; that engraven on his Tomb, *Epitaph*; and that spok'd in the Ceremony of his Funeral, *Epicedion*. See *NENIA* and *EPITAPH*.

We have two beautiful *Epicedions* in *Virgil*; that of *Euryalus*, and that of *Pallas*.

The Word is Greek, form'd of *êpi*, upon, and *κείσθαι*, to perform Funerals, to do the last Office to any one, of *êkêi*, cura, care.

EPICOENE, in Grammar, a Term applied to Nouns, which, under the same Gender and Termination, mark, indifferently, two Kinds, or SEXES. See GENDER.

Such, in Latin, is *Aquila*, *Vespertilio*, &c. which signify equally, a Male or Female Eagle, or Bat.

Grammarians distinguish between *Epicoene* and *Common*: A Noun is said to be common of two Kinds, when it may be joynd either with a Masculine, or a Feminine Article; and *Epicoene*, when it is always joynd to some one of the two Articles, and yet signifies both Genders.

EPICERASTICKS, in Medicine, are Remedies, which by their emollient Virtue, or temperate Moisture, soften the Acrimony of an Humour, and assuage the painful Sensation of the Part irritated or afflicted: Such are the Roots of Athusa, Mallow, Liqueurice; Leaves of Lettice, Mallow, Nenuphar, Furlain; the Seeds of Flax, Poppy, &c.

The Word is form'd of *êpi* and *ραστρός*, tempero, I moderate, correct.

EPICHEREMA, in Logic, an Argumentation, consisting of four, or more Propositions; some whereof are Proofs of others.

Thus, that Oration of Cicero for Milo, may be reduced to the *Epicherema*. 'Thou who Way-lay a Man to kill him, 'tis lawful for him to kill; as is allowed by the Laws of Nature and Nations, and by the Practice of the best Men: But *Cicilius* Way-laid *Milo* with that View; as appears from his forming an Ambuscade before his Country House, and from his Provision of Weapons, Soldiers, &c. Therefore it was lawful for *Milo* to kill *Cicilius*. See *SOPHISTS*.

EPICOLIC Regions, from *ἐπι*, *supra*, upon, and *Colo*, the Gut so called; a Name given by Dr. *Gifford*, to that Space, on both Sides, over the Colon. See *COLON*.

EPICUREANS, a Sect of ancient Philosophers, who adhere to the Doctrines and Opinions of *Epicurus*. See *EPICUREANISM*.

The *Epicureans* have, in all Ages, been derided for their Morals, and their Attachment to the Pleasures of Sense: Several Authors, particularly, *Cicero* among the Antients, and *Gassendus* among the Moderns, have endeavoured to vindicate them from this Charge; by shewing that the Pleasure wherein their Master *Epicurus* places the *Summum Bonum*, or supreme Happiness of this Life, was not any sensual, or brutal Pleasure, but a Contentment, and Tranquillity of Mind, exempt from all remanent Passions, &c.

This Opinion seems just, and well grounded; but, without entering into the Question, which *Gassendus*, *Du Roudet*, and others have exhausted; 'tis certain, that in the common Use of the Word, *Epicurean* constantly signifies a Debauchee, an indolent, soft, effeminate Person, who only consults his Pleasure, without concerning himself with any Thing serious.

In Ethics, there were always two Kinds of *Epicureans*; the Rigid and Remiss: The Rigid *Epicureans*, were those strictly attach'd to the Sentiments of *Epicurus*, who placed all their Happiness in the pure Pleasures of the Mind, resulting from the Practice of Virtue. The Remiss *Epicureans*, taking the Words of that Philosopher in a gross Sense, placed all their Happiness in Pleasures of the Body, in Eating, Drinking, Loving, &c. The former Kind, who were the genuine *Epicureans*, call'd the other the Sophists of their Sect.

The *Epicureans* take their Name from the Chief of their Sect, *Epicurus*, whom some, however, deny to be the Author of the Philosophy he taught; charging him with Retailing for Physicks, the Doctrine of *Democritus*; and for Ethics, that of *Aristippus*.

As to this as it will, he was an *Athenian*, and the Son of *Neocles*; born in the 109th Olympiad, and consequently 324 Years before Christ. He began to form his School at *Mitylene* and *Lampsacubus*, about the 32d Year of his Life; tho' he afterwards remov'd to *Athens*, where he philosophiz'd chiefly in his Garden: And died of the Stone at 72 Years of Age.

EPICUREANISM, or EPICUREAN Philosophy, the Doctrine, or System of Philosophy, maintain'd by *Epicurus*, and his Followers. See *EPICUREANS*.

The noble Poet *Lucretius*, who has given us a beautiful System of *Epicureanism* in fine Latin Verse, prefers its Father *Epicurus*, above all other Philosophers, whom, he makes no Scruple to say, he obscured, as much as the Sun does the other Stars. 'Tis said he first taught Grammar; till upon reading *Democritus's* Books, he began to apply himself to Philosophy.

From *Democritus* he learnt the Doctrine of Atoms, or Corpuscles, which he afterwards made the Basis of his Physicks. *Clem. Alexand. Strom. 6.* advances, that *Epicurus* stole his chief Doctrines from *Democritus*. But, 'tis certain, he greatly improved and illustrated them. *Diog. Laertius* assures us, he compos'd an infinite Number of Volumes.

This Philosophy consisted of three Parts: *Canonice ætate*, *Physical* *ætate*, and *Ætate*, *Ethical*; which he explain'd briefly in three Epistles.

The first, as *Lucretius* relates, was about the Canons, or Rules of Judging; wherein, rejecting the Use of Logic, he establish'd the Sense, Passions, and Anticipations, as the Criteria, or Judges of Truth. See *CRITERION, SENSUS, &c.*

In the second, he laid down Atoms, Space and Gravity, as the first Principles of all Things. The Universe he taught, consist'd of Atoms, or Corpuscles, of various Forms, Magnitudes and Weights, which having been dispers'd at Random thro' the immense Inane, or Space, fortuitously concurred into innumerable Systems, or Worlds, which were thus form'd, and afterwards, from Time to Time, increas'd, chang'd, and dissolv'd again, without any certain Cause, or Design; without the Intervention of any Deity, or the Intendance of any Providence. See *ATOM* and *CORPUSCULUM*.

Not that he denied the Existence of a God: On the contrary, he asserted it; but thought it beneath the

Majesty of the Deity to concern it self with human Affairs: *Laertius* assures us, he held him, *τὸ μακρότερον, ὡς ἀπαιτῶν, ἢ τὰ ἀνάγκη ἀπορῶν ἐξ ἑῶν ἄλλοι παρῶν, Ἄβυσσος, ἰαμάρταλ βεῖνγ, ἔχοντ τὰ ἀφαιρὰ τῶν ὀντων τὸ λαβερεφ, ἄνδ ἀποὺ λαβερεφ τῶν ὀντων*. See *CORPUSCULAR, SPACE, GRAVITY, ELEMENT, &c.*

As to *Ethicks*; his first Principle, or the supreme Felicity of Man, he held, was Pleasure. Which some, as already observ'd, understand of Mental, and others of Carnal Pleasure. See *EPICUREANS*.

EPICYCLE, in the antient Astronomy. As the Astronomers have invented an Eccentric Circle, to solve the apparent Irregularity of the Planets, and their different Distances from the Earth; they have likewise invented a little Circle to solve the Stations, and Retrogradations of the Planets. This little Circle which they call *Epicycle*, has its Centre in the Circumference of another greater, which is the Eccentric of a Planet. See *ECCENTRIC*.

In this Eccentric, the Centre of the *Epicycle* moves; carrying with it the Planet fix'd in its Circumference, the Centre of the Planet, all the Way, moving regularly along the Circumference of the *Epicycle*, when downwards, according to the Order of the Signs, and when upwards, contrary to it.

The highest Point of the *Epicycle* is call'd the *Apogee*, and the lowest the *Perigee*. See *APOGEE* and *PERIGEE*.

The great Circle, in whose Circumference the Centre of the *Epicycle* is plac'd, is call'd the *Descent* of the *Epicycle*, as carrying the *Epicycle* along with it. See *DEFERENT*.

Thus, the Moon is supposed to move in an *Epicycle*, whose Centre is in the Orbit of the Earth, according to the Hypothesis of *Copernicus*: But in that of *Ptolemy*, who supposed the Heavens solid, the *Epicycle* was a Sphere, which revolv'd with the Moon, of the Thickness allow'd its Heaven or Orbit; and which, sometimes shew'd it higher, and sometimes lower. See *PTOLEMAIC SYSTEM*.

The Astronomers, who deny the Motion of the Earth;

'In Order to render the Phenomena of the Motions of the

'Planets more consistent with the Motion of the Sun,

'have affix'd the Orbit of the Earth, as an *Epicycle*, to

'the Orbit of the Planets: So that the Planet should

'proceed in an *Epicycle*, while it is carried through its

'Orbit round the Sun: But this is far from answering

'their Expectations.' *Wolf. Elem. Math. T. II. p. 501.*

'*Riccius*, tho' a zealous Enemy of the Motion of the

'Earth, could not make any Astronomical Tables that

'should but tolerably agree with Observation, without

'supposing the Earth to move; not, tho' he call'd in all

'the foreign and forced Assistances of changeable *Epicycles*,

'liable to continual Increase and Decrease, and variously

'inclined to the Æcliptic.' *De Chales Astron. Reform. Lib. X. C. 1. § 553, &c.*

The Word is form'd of the Greek, *ἐπι*, and *κύκλος*,

Circulo, q. d. a Circle on a Circle.

EPICYCLOID, in Geometry, a Curve generated by the

Revolution of a Point of the Periphery of a Circle, along

the Convex, or concave Part of another Circle. See *CAVUS*.

A Point of the Circumference of a Circle, proceeding

along a Plane, in a right Line, and at the same Time

revolving on its Centre, describes a *Cycloid*. See *CYCLOID*.

And the generating Circle, if in lieu of moving on a

right Line, it move along the Circumference of another

Circle, whether equal or unequal; the Curve described by

any Point in its Circumference is called an *Epicycloid*.

If the generating Circle proceed along the Convexity of the

Periphery, it is called an *upper*, or *Exterior Epicycloid*:

If along the Concavity, a *lower*, or *Interior Epicycloid*.

In an *Epicycloid*, the Part of the Circle, the generating

Point moves along, is called the *Base* of the *Epicycloid*:

Thus in *Tab. Geom. Fig. 58.* DB is the *Base* of the

Epicycloid, V its *Vertex*; VB its *Axis*; DPV half of the

Exterior Epicycloid; made by the Revolution of the

Semi-circle VLB, (which is called the *Generant*)

along the Convex Side of the *Base*, DB: As DPU is the

Interior Epicycloid, formed by the Generant's re-

volving along the Concave Side of the *Base*.

The Length of any Part of the Curve, which any given

Point in the revolving Circle has described, from the Time it

touch'd the Circle whereon it revolv'd, is demonstrat'd to be

double the versed Sine of half the Arch, which all that Time

touch'd the quiescent Circle, as the Sum of the Diameters of

the Circles, to the Semi-diameter of the quiescent Circle:

Provided the revolving Circle moves upon the Convex Side

of the quiescent Circle; but, if upon the Concave Side, as the

Difference of the Diameters, to the Semi-diameter.

Dr. *Halley* gives us a general Proposition for measuring

all *Cycloids* and *Epicycloids*; thus: The Area of a *Cy-*

cloid, or *Epicycloid*, either primary, or contract'd, or

prolate, is to the Area of the generating Circle; (and also

the Area of the Parts, generated in those Curves, to the

Areas of analogous Segments of the Circle: As the Sum

of double the Velocity of the Centre, and Velocity of the

circular

circular Motion, to the Velocity of the circular Motion. The Demonstration hereof, See in *Phil. Transact.* N^o 218.

EPIDEMIA, or **EPIDEMIC Disease**, is sometimes used for a catching, or contagious Disease; communicable from one to another: Such as the Plague, Pox, Scorbutus, &c.

Epidemic Disease, however, is more properly, and usually, understood of a general or spreading Disorder, as a Plague, arising from some Corruption, or Malignity in the Air, which seizes great Number of People in a little Time.

The Word is form'd of *ἐπί* and *δημιον*, *Populus*, People; such Diseases running among all Kinds of People, of whatever Age, Sex, Quality, &c. as arising from a common or general Cause. Whence the *Latins* call them *Populares Morbi*, popular Diseases; in Opposition to those call'd *Sporadici*, which are only here and there, as arising from private, or particular Causes. See **SPORADIC**.

EPIDEMIA, in Antiquity, Feasts of *Apollo* at *Delfos*, and *Miletus*; and of *Dionis* at *Argos*. See **FEAST**.

These Feasts bore the Name *Epidemias*, by Reason those Gods were imagin'd to be present on those Days among the People. Accordingly, on the last Day of the *Epidemia*, they sang Hymns, call'd *ἐπιδημιαστικα*, to bid them adieu, and set them forwards on their Journey.

As those Gods could not be every where, and yet were honour'd in Abundance of different Places; there were Times allow'd them to pass from one Place to another to receive the Vows of their Adorers. See *Scaliger, Poet.* L. III. C. 114.

EPIDERMIS, in Anatomy, the *Cuticula*, or Scarf-skin. See **CUTICLE**.

Some hold the *Epidermis* to be form'd of the Excrements of the *Dermis*, or Skin: *Hippocrates* is of Opinion, it is engender'd by Cold; as, on Blood, Broth, or the like, when cold, we see a Pellicle form'd.

But 'tis now past doubt, that it is produced at the same Time, and after the same Manner with the other Parts; it being found in *Fetus's* of all Ages, in the Womb: It has neither Veins, Arteries, nor Nerves; whence it is insensible.

The Word is form'd of the Greek, *ἐπί*, *on*, *over*, and *ἄνω*, *Skin*.

EPIDIDYMIS, in Anatomy, a little, round Body, on the Back of each Testicle; call'd also *Parastata*. See **PARASTATA**.

The Word is form'd of the Greek, *ἐπί*, and *διδυμιον*; *Twin*, *Testicle*.

EPIGASTRIC Region, is a Name given to the upper Part of the Abdomen, or Belly; reaching from the *Cartilago Xiphoides*, almost to the Navel. See **REGION**.

It is divided into three Parts: The Sides, or lateral Parts, call'd *Hypochondria*; and the middle, the *Epigastrium*. See **HYPOCHONDRIA**, &c.

There are also two *Epigastric Veins*, and as many Arteries. The Arteries are Branches of the Iliac External Arteries: The Veins discharge themselves into the Iliac External Veins.

EPIGASTRIUM, in Anatomy, the middle Part of the *Epigastric Region*; or, according to others, the interior Part of the lower Venter, or Abdomen. See **EPIGASTRIC**.

The Word is form'd of the Greek, *ἐπί* and *γαστήρ*, *Belly*.

EPIGLOTTIS, in Anatomy, the Cover or Lid of the *Larynx*. See **LARYNX**.

The *Epiglottis* is a thin, moveable Cartilage, in Form of a Leaf of Ivy, or a little Tongue, and therefore likewise call'd *Lingula*; serving to cover the Cleft, or Rima of the *Larynx*, call'd *Glottis*. See **GLOTTIS**.

The Word is form'd of *ἐπί* and *γλωττις*, or *γλωττις*, *Tongue*.

Galen takes the *Epiglottis* to be the principal Organ, or Instrument, of Voice; serving to vary, modulate, and render it harmonious. See **VOICE**.

Its Base, which is pretty broad, is in the upper Part of the *Cartilago Scutiformis*, and its Point, or Tip, turn'd towards the Palate. It is only flut by the Weight of the Piece in swallowing; but not so exactly, but that a Crum, or a Drop, sometimes escapes thro' it into the *Trachea*. See **TRACHEA**, &c.

EPIGRAM, in Poetry, a short Poem, or Composition in Verse, treating of one only Thing, and ending with some Point, or lively, ingenious Thought. See **POEM**.

The Word is form'd of the Greek, *ἐπιγραμμα*, *Inscription*, of *ἐπιγραμμεν*, *to inscribe*, or make an Inscription.

Epigrams, in Effect, properly signify *Inscriptions*, and derive their Origin from those Inscriptions placed by the Antients on their Tombs, Statues, Temples, triumphal Arches, &c. See **INSCRIPTION**.

These, at first, were only simple Monograms; afterwards, increasing their Length, they made them in Verse, to be the more easily retain'd: *Herodotus*, and others, have preserv'd us several of them.

Such little Poems retain'd the Name *Epigrams*; even after the Design of their first Institution was varied, and People began to use them for the relating of little Facts, and Accidents, the Characterizing of Persons, &c.

The *Greeks* confine their *Epigrams* to a very narrow Compass: For tho' in the Antiquity, we here and there meet with a very long one; ordinarily, they don't exceed six, or, at most, eight Verses. The *Latins* were not always so scrupulous, and the Moderns much less, as to these Bounds.

M. le Brun, in the Preface to his *Epigrams*, defines an *Epigram* a little Poem, susceptible of all Kinds of Subjects, and ending with a lively, just, and unexpected Thought: Which are three Qualifications essential to the *Epigram*; particularly the first and last of them, *viz.* Brevity and the Point, or Clost of the *Epigram*.

To strain Brevity, only one Thing is to be aim'd at in the Poem, and that to be pursued in the conceit Terms possible. Authors are much divided, as to the Length the *Epigram* is to be confin'd to: The ordinary Limits are from two to twenty Verses; tho' we have Instances, both among the Antients and Moderns, where they exceed to fifty. But still it is allow'd that the shorter the better, and more perfect, as it pretakes more of the Nature and Character of this kind of Poem.

The Point is a Quality much insist'd on by the Critics, who require the *Epigram* constantly to close with something poignant, and unexpected, to which all the rest of the Composition is only preparatory. Others there are, who exclude the Point, and require the Thought to be equily diffus'd throughout the whole Poem, without laying the whole Stress on the Clost: The former is usually *Martial's* Practice, and the latter that of *Catullus*. Which is the most beautiful and perfect Manner, is disput'd by a third Class of Critics.

The Greek *Epigrams* have scarce any Thing of the Point, or Brevity, of the *Latin* ones: Those collected in the Anthology, have most of them a certain Air of Exactness and Simplicity, attended with something just and witty: Such as we find in a sensible Peasant, or a Child that has Wit. They have nothing that bites, but something that tickles. Tho' they want the Salt of *Martial*, yet to a good Taste they are not insipid; except a few of them, which are quite flat and spiritless. However, the general Faintness, and Delicacy of the Pleasantry in them, has given Occasion for a Greek *Epigram*, or *Epigram in Grecque*, to be the Denomination for an *Epigram* void of Salt or Sharpness.

'Tis principally the Point that characterizes the *Epigram*, and distinguishes it from the *Madrigal*. See **POEM**.

In the modern Verification, as observ'd by *Fa. Bouhours*, the *Epigram* and *Madrigal*, are distinguished by the Number of Verses, and the Clost. 'Tis by the Number of Verses, which in the Modern *Epigram* does not go beyond eight, nor in the Modern *Madrigal*, comes short of six: And, a dly, in that the Clost, or Fall of the *Epigram*, is always something more lively and studied than that of the *Madrigal*. See **MADRIGAL**.

The *Epigram* is the lowest, and least considerable of all the Productions of Poetry; and 'tis rather an Effect of good Luck, than of Art, to succeed therein. The Finest, and Subtlety of the *Epigram*, *M. Bouhours* observes, should turn on the Words, rather than the Thought; which seems very little to the Credit of this Kind of Composition, as it reduces it to the Nature of the Pan, or Equivoque. *Fa. Bouhours* confirms the Hint, in adding, that the Equivoque is what usually shines the most in the *Epigram*.

One great Beauty of the *Epigram*, is to leave something for the Reader to guess, or supply. Nothing pleases the Mind so much, as to find something of it self in the Objects presented it; nor does any Thing disgust it more than to preclude it from shewing and exercising a Faculty it values it self for. See **RAIS**.

Moet. B. L. M. the Author of a new Collection of French *Epigrams*, in the Year 1720, has a deal of good Observations on the Nature of *Epigrams*. He defines it an ingenious Thought delivered in a few Verses; and conceives it as a Genetical Name, including under it divers Kinds of short, lively Poetics, as the *Sonner*, *Rondelet*, *Madrigal*, and little *Tales* which only turn on some merry Thought. Epitaphs and Inscriptions, he thinks, may be also us'd, reduced to the Head of *Epigrams*. See **SONNET**, **RONDELET**, &c.

The *Epigram* admits of great Variety of Subjects: Some are made to Praise, and others to Satyrize, which last are much the easiest; ill Nature serving instead of Point and Wit. *Bailean's Epigrams*, are all Satyrs on one or another. Those of *des Rousse*, are all made in Honour of his Friends. And those of *Mad. Scudery*, are so many Eloges. The *Epigram* being only a single Thought, it would be ridiculous to express it in a great Number of

Verbes; it muſt have its Unity like the *Drama*. The Comedy has an Action for its Subject; and the *Epigrams* a Thought. See *UNITY*.

EPIGRAPH, an Inſcription on a Building, to ſignifie its Uſe, Occaſion, the Time when, and the Perſons by whom, it was built.

The Word is *Greek*, and ſignifies *Superſcription*.

EPILEPSY, in Medicine, a Convulſion, either of the whole Body, or ſome of its Parts; attended with a Deprivation of the Senſes and Underſtanding; and returning from Time to Time in Fits, or Paroxyſms. See *CONVULSION*.

The Patient ſeiſed herewith, falls inſtantly and ſuddenly down; or, rather, throws and precipitates himſelf violently to the Ground. When down, he grinds his Teeth, foams at Mouth, and frequently ſhakes his Head; his Arms, Legs, Neck, Back, &c. either becoming rigid, or variously diſtorted. And as all the Parts are in a violent Contraction, there is frequently an involuntary Flux of Urine, Seed, and fecal Matter. After ſome Time he returns to himſelf; only retaining a Head Ache, Heavineſs, Wearineſs of his Limbs, &c.

Emmel more accurately diſtinguiſhes the Diſeaſe into three Degrees: The firſt, or loweſt, is much the ſame with the higheſt Degree of a Vertigo. See *VERTIGO*.

In the ſecond, there ariſe various Agitations and Conſultations; and the Senſes, both external and internal, either remaining, or being transported into a Delirium; they dance, ſing, laugh, weep, talk idly, ſtrick, and beat their Breſts. Sometimes they remember all after the Fit is over, and ſometimes nothing at all.

In the third Degree, which alone is ordinarily call'd the *Epilepſy*, they loſe the Uſe both of Reaſon and Senſe; fall, or ſing themſelves down, foam, grind their Teeth, and bite their Lips, with the other Circumſtances above related. Thoſe affected with the ſecond Degree, are uſually held for poſſeſſ'd by the Devil.

The Cauſe of this Diſeaſe, *Barbette* attributes to too much Action of the Brain, on the motory Nerves, and none on the ſenſitive ones. Some are pleas'd to account for it, from the Abundance of ſharp Humours mixing with the animal Spirits, and giving them extraordinary and irregular Motions, and Directions; Whence ariſes its Diſtinction from a Syncope, and Apoplexy, which take away all Motion as well as Senſe. See *SYNCOPE* and *APOPLEXY*.

The *Epilepſy* is either *Idiopathic*, or *Sympathetic*: It is *Idiopathic*, when it ariſes moſtly from a Diſorder of the Brain, or Spirits: And *Sympathetic*, when it is preceded by ſome other Diſeaſe which brings it on.

The *Epilepſy* ſometimes hangs many Years to a Perſon, without much Danger: Tho' when its Paroxyſms return ſill, it renders the Patient more or leſs paralytic, delirious, or ſtupid. In young People there is Hope of its going off about the Time of Puberty. *Hippocrates* obſerves, that when it ſeizes a Perſon after 25 Years of Age, it laſts for Life; but this does not always hold.

The Cure is very difficult: The principal *Anti-epilepticks* are, the Roots of Piony, Leaves of the Lilly of the Valley, Seeds of Rue, Miſtole of the Oak, or Hazle, Box-wood, Spirit of black Cherries, Spirit of human Blood, human Secundines, human Cranium, Tooth of the Sea-Horſe, Caſtoreum, Peacocks Dung, Camphor, Salt, and Oil of Amber.

To recover a Perſon in a Fit, Tobacco Smoak, or that of burnt Feathers, is recommended. *Barbette* above all Things directs the Flowers and Spirits of Sal Ammoniac againſt this Diſeaſe; *Craſo*, native Cinnamon. Sir *John Colbatch* has an exact Treatiſe on the Miſtole of the Oak, to ſhew it a Specific in this Diſeaſe. Elks Claws have long had the Reputation of the ſame. See each Remedy, its Preſentice, &c. under its proper Term in this Work, as *MISTOLE*, *ELKS CLAWS*, &c.

M. *Poupart*, from a Diſſection of an *Epileptic* Perſon, wherein, immediately under the *Dura Mater*, was found a deal of white, thick, viſcid *pituita*, glued, and, as it were, incorporated with the Membrane; thinks, that this might be the Cauſe of the Diſeaſe; The exceſſive Quantity of ſuch thick Lympha, loading the Brain, and obſtructing its Motions. The firſt Cauſe, he judges, might be the Sponguloſity of the *Dura Mater*, which imbibed the Secretions of the Brain.

He adds, that he knows an *Epileptic* Perſon, who, upon the firſt Approach of his Diſorder, rubs his Forehead with his Hand, and bends his Head as far backward as he can, reſting it againſt a Wall; and by that Means ſecures himſelf againſt the Convulſion. 'Tis probable, that by this he gives a Motion to the Lympha, and drives it from the Place which before it diſturbd.

The Word *Epilepſy* is form'd of the *Greek*, *ἐπιλαμβάνω*, to ſurprize, graſp bold of one, by reaſon the Diſeaſe ſeizes and overcomes the Senſes, ſo that the Patient ſeems as if dead.

In *Engliſh* it is uſually call'd the *Falling Sickneſs*, by reaſon People fall down when attack'd therewith. The *Latin*s call it *Comitialis Morbus*, by reaſon when any body was ſeiſ'd therewith in a *Comitia*, or Aſſembly of the *Roman* People, they preſently broke up the Aſſembly, as deeming it an unhappy Preſage. See *COMITIALIS*.

Some call it the *Morbus Sacer*, as ſuppoſing it ſent by way of immediate Punishment from God. Others, the *Morbus Caducus*, others *Herculeus*, *Sonticus*, *Unus Deificus*, &c.

EPILOGUE, **EPILOGOS**, in Oratory, &c. The Peroration, or laſt Part of a Diſcourſe, or Treatiſe; wherein there is ordinarily made a Recapitulation of the principal Matters deliver'd therein. See *PERORATION*.

The Word is form'd of the *Greek* *ἐπίλογος*, of the Verb *ἐπιλογέομαι*, I ſay after, the *Epilogue* being the End, or Conclusion of a Diſcourſe.

EPILOGUE, in dramatic Poetry, a Speech addreſſ'd to the Audience, when the Play is over, by one of the principal Perſons, or Actors therein; containing uſually ſome Reflections on certain Incidences in the Play, particularly thoſe of the Part of the Perſon who ſpeaks it.

In the modern Tragedy, the *Epilogue* has uſually ſomewhat of Pleaſantry; intended, we ſuppoſe, to compoſe the Paſſions rais'd in the Courſe of the Representation, and ſend away the Audience in good Humour; tho' how far that Deſign is good and laudable, will bear ſome Diſpute. See *TRAGEDY*.

An ingenious Author in the *ſpeſſator*, compares it to a merry Jig on the Organ, after a good Sermon, to wipe away any Impreſſions that might have been made thereby, and ſend the People away juſt as they came.

In Effect, tho' the *Epilogue*, in this Senſe, may ſeem an Abuſe; yet has it the Countenance of Antiquity: The *Romans* had ſomething of the ſame Nature, tho' under another Name. Their *Exodinus* was a Kind of Farce, brought on the Stage when the Tragedy was over; *ut quaquam Lacrymarum ac triſtitie ceſſant ex Tragicis aſpectibus, juvus ſpectantium riſus detergeret*, ſays the Scholiaſt of *Juvenal*.

The *Epilogue* is but of modern Date, much later than the *Prologue*. See *PROLOGUE*.

Many, indeed, have taken the *Exodinus* of the ancient *Greek* Drama, for an *Epilogue*; by reaſon *Ariſtotele* defines it, to be a Part rehearſed after the Chorus had ſung for the laſt Time: But, in Reality, it was of a quite different Nature. The *Exodinus* was the laſt of the four Parts of a Tragedy; containing the unravelling and Cataſtrophe of the Plot, and anſwering to our laſt, or fifth Act. See *EXODIUM*.

EPINICION, a Term in the *Greek* and *Latin* Poetry. It has two different Significations among the Ancients. 1. A Feaſt, Ceremony, or Rejoicing, on Occaſion of a Victory obtain'd. 2. A Poem, or Compoſition, on the ſame Subject.

Scaliger treats expreſly thereof in his *Poeticks*, L. I. c. 44. The Word is form'd from the *Greek* *ἐπινικιον*, *Victory*.

EPHANY, in Antiquity, the Feaſt of Kings. A double Festival, of the firſt Rank, ſolemnized on the 6th of January, *New-Years-Day*, in Honour of the Appearance of *Jeſus Chriſt* to the Three Kings, or *Magi*, who came to adore and bring him Preſents. See *FEAST*.

The Feaſt of *Ephany*, now held in Honour of the Adoration of the *Magi*, had, at its firſt Inſtitution among the *Greeks*, a different Object, *viz.* Our Saviour's Birth; and was call'd *Theophany*, and *Ephany*, that is, Appearance, and Manifeſtation of God.

Pope *Julius*, who reign'd from the Year 337, to 352, was the firſt who taught the Church to diſtinguiſh the Feaſts of the Natiivity, and *Ephany*. *Papebroch. paral. ad Conſt.* p. 23. *Act. SS. Maii*. T. VII. See *NATIVITY*.

The Word in the Original *Greek*, *ἐπιφάνεια*, ſignifies Appearance, or Apparition; and was applied, as ſome Critics will have it, to this Feaſt, on Account of the Star which appeared to the *Magi*. *St. Jerom*, and *St. Chryſoſtom*, take it for the Day of our Saviour's Baptiſm, when he was declared to Men by the Voice. *Hic eſt filius meus dilectus, in quo mihi complacui*. This is my beloved Son, in whom I am well pleaſed. And accordingly it is ſtill obſerved by the *Coptae* and *Ethiopiæ* in that View. See *Lutolph. Hiſt. Epiſcop. Lib. XXI. c. 2*.

Others contend, that the Feaſt of *Chriſtmas*, or the Natiivity of our Saviour, was held in divers Churches on this ſame Day; which had the Denomination *Ephany*, or Appearance; by reaſon our Saviour firſt appear'd on Earth on that Day. And it muſt be allow'd, that the Word is uſed among the ancient *Greek* Fathers, not for the Appearance of the Star to the *Magi*, but for that of our Saviour to the World. In which Senſe, *St. Paul* uſes the Word *Ephania*, in his Second Epiſtle to *Timothee*, c. i. v. 10.

Add, that the *Armenians*, to this Day, celebrate the Feast of the Nativity, on the Day of *Epiphany*, according to the Practice of the ancient Church; which some *Romish* Missionaries have impertinently censured 'em for, not knowing that the *Epiphany*, originally, and properly, was the Nativity of our Saviour.

Ammianus Marcellinus makes mention of this Feast, *Lib. XXI. c. 2.* and observes that it was held in *January*. Upon which Passage, *Valesius* in his Notes, endeavours to shew, that the Historian meant by *Epiphany*, the Feast of the Nativity.

The Heathen Writers used the Word *Epiphania* in the like Sense, viz. to express the Appearance of their Gods on Earth. And the Christians, after their Example, applied it, in the general, to express any Appearance, or Manifestation of the Deity.

EPIPHONEMA, in Rhetoric, a Figure of Speech. See **FIGURE**.

The *Epiphonema* is a Sententious Kind of Exclamation, frequently added after a Narrative, or Rehearsal, of any Thing remarkable; containing, usually, a lively, close Reflection, on the Subject there-spoke of.

Such is that of *St. Paul*, when, after discoursing of the Rejection of the *Jews*, and the Vocation of the *Gentiles*, he cries out:

Ob the Depth of the Wisdom and Knowledge of God!

Such also is that of *Lucretius*, after relating the Story of *Agamemnon's* sacrificing his Daughter *Iphigenia*:

Tantum Religio potuit suadere malorum—

Such, lastly, is that of *Virgil*, upon Occasion of *Juno's* persecuting *Aeneas*:

—Tantene animis Caelestibus Iras

Which *M. Boileau* has imitated in,

Tant de fiel entre il en l' Ame des Dieux?

And *Mr. Pope* in,

*And dwells such Rage in softest Bosoms then?
And lodge such daring Souls in little Men?*

EPIPHORA, in Medicine, a Disease of the Eyes; consisting in a preternatural Effusion of Rheum, or the Mixture of Tears; accompanied, frequently, with Heat, Redness, and Twitching. *Pitcairius* calls it a Kind of Catarrh of the Glands of the Eye.

The internal Causes of the *Epiphora*, or Rheum in the Eyes, are a Relaxation of the Glands of the Eyes, and a too great Acrimony, or Sharpness of the serous Humour separated thereby; which fretting and vellicating the Eye, draws an unusual Quantity of Blood and Lympha thereto; by which, at length, the Cheek becomes excoriated, &c. Children are most liable to it, from the frequent Use, and straining of the Glands of the Eye in Crying.

The external Causes of the *Epiphora*, are sharp Dusts, Steams, &c. entering the Eye, and irritating the same. A too cold and sharp Air has frequently the like Effect. Children are most liable to it.

An inveterate *Epiphora* frequently degenerates into a *Fistula Lacrymalis*.

The Cure of the *Epiphora*, is, 1^o. By causing a Revulsion, or Derivation, of the peccant Humour, to some other Part, as by Venesection, Cupping, Blistering, or Catharticks. 2^o. By correcting its Acrimony by proper Remedies. And, 3^o. By applying Astringents externally. *Lapis Calamintaris* is much commended.

The Word is Greek, form'd of *ἐπιφύω*, I am drawn.

EPIPHYSIS, in Anatomy, is a lesser Bone, adhering, or growing to another, by simple Contiguity. See **BONE**.

The Substance of the *Epiphyses* is rare and lax; in young Children it is merely cartilaginous; but hardens as they grow in Age, and, at length, becomes quite bony.

'Tis commonly laid down, that there is no regular Articulation between the *Epiphyses* and the Bone; tho' 'tis certain, that there is a reciprocal Admission of the Heads, or Extremities of each, into the Cavities of the other. See **ARTICULATION**.

There are some Bones that have no *Epiphyses* at all, as the lower Jaw: Others have no less than five, as the *Vertebrae*. The Design of adding *Epiphyses* to Bones, was, to supply their Defects, and render them longer and bigger at the Extremes.

The Word is form'd of the Greek, *ἐπι, επί, upon*, and *φυω, to grow, adhere*. It is also called *Appendix*, *Adhaesivum*, *Adhaesivum*, &c.

EPHYPSES Vermiformes, are two Eminences of the *Cerebellum*, shaped like Worms, which keep open the Passage from the third to the fourth Ventricle.

In dilating the third Ventricle of the Brain, we perceive four Eminences, two upper, and two bigger, call'd orbicular Protuberances; and two lower, and less, call'd *Epiphyses* of the orbicular Protuberance. *Dionis*.

EPIPLASMA, the same with *Cataplasma*. See **CATAPLASMA**.

EPIPOCELE, in Medicine, a Kind of *Hernia*, or Tumor, occasion'd by the Defect of the *Epiploon*, or Caud, into the *Scrotum*. See **HERNIA**. See also **EXTERIO-EPIPOCELE**.

EPIPLOIC, or **EPIPLOIDES**, a Term applied to the Arteries and Veins, distributed through the Substance of the *Epiploon*, or Caud. See **EPIPLOON**.

EPIPLOIC Dextra, is a Branch of the Celiac Artery, which runs thro' the right Side of the inner, or hinder Leaf of the Caud. See **CELIAC**.

EPIPLOIC Sinistra, is a Branch of the Celiac Artery, which is bestowed on the lower and left Side of the Caud. See **CELIAC**.

EPIPLOIC Postica, is a Branch of the Celiac Artery, springing out of the lower End of the *Splenica*, and running to the hinder Leaf of the Caud.

EPIPLOMPHALUS, in Medicine, a Species of *Exomphalus*, or Navel-Rupture; being a Tumor, or Swelling of the Part, occasion'd by the *Epiploon's* bearing too hard against it. See **EXOMPHALUS**.

The Word is compounded of the Greek *ἐπίπλοος*, and *μφαλός*.

EPIPLOON, in Anatomy, a fatty Membrane, spread over the Intestines, and entering even into the Sinusities thereof; call'd also the *Omentum*, and popularly the *Caul*. See **OMENTUM**.

The Word is form'd of the Greek, *ἐπιπλοών, to swim*, by reason it seems to float on the Intestines.

EPIPILOSARCOMPHALUS, in Medicine, a Sort of Tumor, of the *Exomphalus* Kind. It is form'd of the *Epiploon*, and the Flesh. See **EXOMPHALUS**.

The Word is compounded of the three Greek Words, *ἐπίπλοος*, *Epiploon*, *σῆξ*, *Flesh*, and *σάρκαξ*, *Umbilicus Navel*.

EPISCOPACY, the Quality of *Episcopal* Government; or that Form of Church Discipline, wherein Diocesan Bishops are establish'd, distinct from, and superior to Priests or Presbyters. See **BISHOP**, **ΗΕΡΑΚΛΕΝΤ**, &c.

Episcopacy and *Presbytery*, have been alternately established and abolished in *Scotland*. See **PRESBYTERY**.

EPISCOPACIDE, the Crime of murdering a Bishop by one of his own Clergy.

By the Laws of *England*, the same Obedience is due from a Clergyman to his Bishop, as from a Child to his Father: And therefore the Offences of *Episcopacide* and *Parricide* are made equal, viz. Petty-Treason. See **TREASON**.

EPISCOPAL, something that belongs to a Bishop. See **BISHOP**.

The *Episcopal Government*, is the Government of a Diocese, wherein one single Person, legally Consecrated, presides over a whole Clergy, or a whole Church, in Quality of Head, or Super-intendant thereof; conferring Orders, and exercising a Sort of Jurisdiction. See **DIOCESE**.

The *Presbyterians* reject the *Episcopal* Establishment, and condemn the *Episcopal* Order as a human Institution, the mere Result of Pride and Ambition. See **PRESBYTERIANS**.

Among the *Episcopal* Functions, the principal is that of making frequent Visitation of the Diocese. See **VISITATION**.

The Word is form'd of the Latin, *Episcopus*, Bishop; derived from the Greek, *ἐπισκοπος, inspicere*, to inspect, whence *ἐπισκοπος, Inspector*, Bishop; who is to watch over the Flock committed to his Care.

EPISCOPALIA, is sometimes used in the same Sense with *Pontificalia*. See **PONTIFICALIA**.

It is also used to denote Synodals, or customary Payments, due to the Bishops from the Clergy of his Diocese; call'd also *Onus Episcopale*.

EPISCOPALIANS, a Name given to those who remain to the Church of *England*, and particularly to the Ecclesiastical Hierarchy, such as it was in the *Romish* Church, before the Reformation; who affect the Discipline of Bishops, Priests, Canons, the Office, or Liturgy, &c. and retain the greatest Part of the Canon Law, with the Decretals of the Popes, more closely than the Catholics themselves of several Countries. Tho', as to Matters of Doctrine, or Faith, they agree in most Points with the Calvinists, or Reformed.

In *Scotland*, the principal Dissenters are the *Episcopals*. *Lay Episcopals* enjoy all the same Civil Privileges with those of the Establishment Church. They are under no Restrictions; tied to no Tests; but are employ'd in all Places of Trust, upon taking the Oaths to the Government. But the *Episcopal Ministers* are liable to several penal Laws; the greatest part of 'em being Non-jurors. *Chamberlain*.

EPISCOPIUM puerorum. It was an ancient Custom for some Layman, about the Feast of Epiphany, to plait his Hair, that he might seem to have the Tonsure, and to put on the *Episcopal* Garments; and then to exercise a Shew of Jurisdiction, and do several ludicrous Actions: For which Reason he was call'd the *Bishop of the Boys*. This Custom obtain'd among us, long after several Constitutions were made to abolish it.

EPISODE, is commonly conceiv'd to be a separate Incident, Story, or Action, which an Historian, or Poet, inserts and connects with his principal Action; to furnish out the Work with a greater Diversity of Events; tho', in Strictness, all the particular Incidents, whereof the Action or Narration is compos'd, are call'd *Episodes*.

From the *Greek*, ἐπί, and ὄσι, *Carmen, Verse*.

EPISODE, **EPISODIUM**, in dramatic Poetry, was the second part of the ancient Tragedy. See **TRAGEDY**.

The Origin and Use of *Episodes*, is admirably described by *M. Hædellus*, and *Fa. Boffu*. Tragedy, in its Original, being only a Hymn sung in Honour of *Bacchus*, by several Persons, who made a Kind of Chorus, or Consort of Music, with Dancing, and the like; to diversify the Representation a little, and divert the Audience, they brought themselves at length to divide the Singing of the Chorus into several parts; and to have something rehear'd in the Intervals.

At first, a single Person, or Actor, was introduced, then two, then more; and what the Actors thus rehear'd, or entertain'd the Audience withal, being something foreign, or additional to, or beside, the Song of the Chorus, and no necessary part thereof, was call'd *Exordium, Episode*.

And hence Tragedy came to consist of four parts, the *Prologue, Episode, Exode, and Chorus*.

The *Prologue* was all that preceded the first Entrance of the Chorus. See **PROLOGUE**.

The *Episode*, all that was interposed between the Singings of the Chorus.

The *Exode*, all that was rehear'd after the Chorus had done singing. See **EXORDIUM**.

And the *Chorus*, was the Grex, or Company that sung the Hymn. See **CHORUS**.

And as this Recitation of the Actors was in several parts, and inserted in several places; it might either be consider'd together, as a single *Episode*, consisting of several parts; or each part might be call'd a distinct *Episode*.

These several *Episodes* in the same Tragedy, might either be taken from so many different Subjects; or from the same, divided into a proper Number of Recitations, or Incidents.

To consider only the first Occasion, and Institution, of these foreign, or additional pieces; it appears no ways necessary that they should all be taken from one and the same Subject: Three or four Recitations of different Actions, no-wise related, or connected to each other, would ease the Actors, and amuse the People, in the Intervals of the Chorus as well as if they were all so many parts of the same Action. By degrees, what was at first only an Addition to the Tragedy, became the principal part thereof. Then, the several Pieces, or *Episodes*, began to be consider'd as one single Body, which were not to have parts, or Members of different Nature, and independent of each other.

The best Poets took the Thing in this Light, and drew all their *Episodes* from the same Action; which Practice was so fully establish'd in *Aristotle's* Time, that he lays it down as a Rule. Those Tragedies wherein this Unity and Connection was not observed, he calls *Episodic Pieces*. See **EPISODIC**.

EPISODE in Epic Poetry. The Term *Episode*, by being transplant'd from the Stage to the *Epopæa*, did not change its Nature. All the Difference *Aristotle* makes between the Tragic and Epic *Episodes*, is, that the latter are more ample than the former. See **EPIC**.

Aristotle uses the Word in three different Senses: The first taken from the Enumeration already made, of the parts of the Tragedy, viz. *Prologue, Chorus, Episode, and Exode*. Whence it follows, that in Tragedy, every Thing is *Episode*, that is none of the other parts: So that as among us, there are Tragedies, without either *Prologue, Chorus, or Epilogue*, the *Tragic Episode* includes the whole Tragedy: Consequently, the *Epic Episode* must be the whole Poem, in like manner. All there is to retrench from it being the Proposition, and Invocation,

which stand in lieu of the *Prologue*. In this Sense, the *Epopæa* and Tragedy, have each only one *Episode*; and if the Parts, or Incidents, be ill connected together, the Poem will be *Episodic* and defective.

But further, as all that was sung in the Tragedy, was call'd the *Chorus*, in the singular Number; yet this Singularity did by no means prevent every Part or Division of the same from being call'd a *Chorus*, without making several *Chorus's*: So 'twas with the *Episode*: Each Incident, and part of the Fable and Action, is not only a part of the *Episode*, but an *Episode* it self.

The Term *Episode*, therefore, in this Sense, signifies every part of the Action express'd in the Plan, or first Draught of the Fable; as the Absence and Wanderings of *Ulysses*, the Disorders in his Family, and his Presence which retriev'd every Thing.

Aristotle furnishes us with a third Kind of *Episode*; in shewing, that what is contain'd and express'd in the first Plan of the Fable is *proper*, and that all the rest is *Episode*.

By *proper*, he means what is absolutely necessary; and by *Episodes*, what in one Sense are necessary, and in another not; so that the Poet is at Liberty to use, or let 'em alone.

Thus, *Homer*, having made the first Draught of the Fable of his *Odyssæe*, was not at Liberty to make *Ulysses* absent from his Country, or not. His Absence was essential; and therefore *Aristotle* ranks it among the Things he calls *proper*. But he does not bestow that Appellation on the Adventures of *Antiphale, Circe, the Syrens, Scylla, Caryodis*, &c. The Poet was at Liberty to have left these alone, and chosen others in their Room; so that they are *Episodes*, distinct from the first Action, to which they are not immediately necessary. Indeed, in one Sense, they may be said to be necessary: For *Ulysses's* Absence being necessary, it follows, that not being in his own Country, he must be somewhere else. If therefore the Poet was at Liberty, not to have used those particular Adventures above mention'd; yet he was not at Liberty not to have used any: But if he had omitted those, he must necessarily have substituted others in their Room. Otherwise, he would have omitted a part of the Matter contain'd in his Plan, and his Poem had been defective.

This third Sense, therefore, of the Word *Episode*, comes to the second: All the Difference between them, is, that what we call *Episode*, in the second Sense, is the Ground, or Plan of the *Episode* in the third: And that the third adds to the second, certain Circumstances which are only probable, and not necessary; as the Places, Princes, and People, among whom *Ulysses* was cast by *Neptunus*.

It must be added, that in an *Episode* in the third Sense, the Incident, or *Episode* in the first Sense, whereon it is grounded, is to be extended and amplified; otherwise, an essential part of the Action and Fable, does not become an *Episode*. Lastly, 'tis in this third Sense that we are to understand that Precept of *Aristotle*, not to make the *Episodes*, till after the Names of the Persons the Fleet and Ships as he has done; if, in lieu of the Names of *Achilles, Agamemnon, and Iliad*, he had chose those of *Araffus, Capanemus, and Theboah*. See **FABLE**.

Upon the whole, the Term *Episode*, in the Epic Poem, as us'd by the Father of the Critics, *Aristotle*, does not signify any foreign, or accidental Adventure; but the whole Narration of the Poet, or a necessary and essential part of the Action and Subject, amplified with probable Circumstances.

Thus, *Aristotle* enjoins, that the *Episode* be not added to the Action, or fetch'd from elsewhere; but be a part of the Action; and never use the Word *adding*, in speaking of *Episodes*, tho' it occur'd so naturally to his Interpreters that they have generally used it in their Translations and Comments. He does not say, that after laying the Plan, and chasing the Names, the Poet is to add the *Episodes*; but uses a Derivative of the Word *Episode, ἐπιπέσειν*, as if in *English* we should say, *Episode* itself his Action.

Add, that to shew the different Extension of the Tragedy and *Epopæa*, that is, how the one becomes longer than the other; he does not say, that there is but little *Episode* in Tragedy; but more accurately, that the *Episodes* of Tragedy are short and concise; whereas the *Epopæa* is lengthen'd out and extended by 'em. In one Word, the taking Vengeance of the wicked People in *Ulysses's* Court, as express'd in a few Words by *Aristotle*, in his Plan of the *Odyssæe*, is a simple proper Action, necessary to the Subject. It is no *Episode*, but the *best*, and, as it were, *flavour* of an *Episode*. And this same Punishment explain'd and open'd, with all the Circumstances of Time, Place, and Persons, is no simple and pro-

proper Action, but an Action *Episodised*, or a real *Episode*; which, tho' at the Discretion of the Poet, is yet necessary and proper to the Subject.

From what has been said, we may venture to define *Episodes* to be necessary Parts of the Action, extended and fill'd up with probable Circumstances. Now, an *Episode* is only a Part of an Action; and not a whole Action. And this Part of the Action, which is the Basis, or Ground of the *Episode*, must not, when *Episodised*, retain any Thing of the Simplicity which it had when first express'd in general, in the Plan of the Fable.

Aristotle rehearsing the Parts of the Plan of the *Odyffe*, says expressly, that they are proper; and by that, distinguishes them from *Episodes*. Thus, in the *Oedipus* of *Sophocles*, the ceasing of the Plague at *Thebes* is no *Episode*. 'Tis only the Ground, and Matter of an *Episode*, which the Poet might have us'd, had he pleas'd. And *Aristotle*, observing that *Homer*, in the *Iliad*, had taken but few Things for his Subject, but that he had us'd Abundance of his *Episodes*, intimates, that the Subject contains in it self Abundance of *Episodes*, which the Poet may use, or let alone, at Pleasure. That is, it contains the Grounds, or Stamina thereof, which may either be left in their general and simple Brevity, as *Seneca* has done the ceasing of the Plague; or may be extended and unfolded, as the same Author has done the Punishment of *Oedipus*.

The Subject of a Poem is lengthen'd two Ways: Either, by the Poets making use of a great many of his *Episodes*; or by amplifying, and giving a great Extent to every one. By this latter Method, chiefly, it is, that the *Epic* Poets lengthen their Poems much beyond the *Dramatic*. It must be added, that there are certain Parts of an Action, which, of themselves, don't naturally present or afford more than one *Episode*; such as the Death of *Hector*, of *Turpin*, or the like: Whereas, there are other Parts of the Fable more copious and fertile, and which oblige the Poet to make divers *Episodes* on each; tho' laid down in the first Plan, with as much Simplicity as the rest: Such are the Battels of the *Trojans* and *Greeks*; and the Absence of *Ulysses*; the Wanderings of *Aeneas*, &c. For *Ulysses*'s Absence for many Years from his own Country, required his Presence elsewhere; and the Design of the Fable was to throw him into several Dangers, and different Countries.

Now each Peril, and each new Country, furnish'd an *Episode*, which the Poet might use if he pleas'd.

The Result of the whole is, that *Episodes* are not Actions, but Parts of Actions; that they are not added to the Action and Matter of the Poem, but that they make that Action and Matter themselves, as the Members make the Body: That, of Course, they are not to be fetch'd from elsewhere, but rais'd from the Ground, or Fund of the Action: That they are not united, and connected with the Action, but with one another: That all the Parts of an Action are not so many *Episodes*, but only such as are amplified, and extended with particular Circumstances: And, lastly, that their Union with each other, is necessary in the Ground of the *Episode*, and probable in the Circumstances thereof. See ACTION.

EPISODIC, in Poetry. A Fable is said to be *Episodic*, when it is well'd with unnecessary Incidents; and its *Episodes* are not necessarily, nor properly connected with each other. See EPISODE.

Aristotle lays it down, that those Tragedies are most defective, whose *Episodes* have no Connection, or Dependence, on each other; which he calls *Episodice*, q. d. superabundant in *Episodes*; by Reason for many little *Episodes* can never compose one whole one; but necessarily remain in a vicious Plurality. See FABLE.

The most simple Actions are most subject to this Irregularity; in that, having fewer Incidents and fewer Parts than others, they afford less Matter. An unwar Poet would sometimes have consumed his whole Stock in the first, or second Time that his Actors appear'd between the Chorus's: and be driven to a Necessity of looking out for other Actions, to supply the remaining Intervals. *Arist.* Poem. C. 9.

The first French Poets did the like: To fill each Act, they took to many different Actions of a Hero; which had no other Connection between them, but that they were done by the same Person. *Buffu* p. 106.

If an *Episode* be us'd, the Names and Circumstances whereof are unnecessary, and whose Ground and Subject is no Part of the Action, that is of the Matter of the Poem; such an *Episode* renders the Fable *Episodic*. This Irregularity is discover'd, when one may take away a whole *Episode*, without substituting any Thing in its Room; and yet leave no Chasm, or Defect in the Poem. The History of *Hyppolyte*, in *Statius*'s *Thebais*, affords an Instance of these faulty *Episodes*. If the whole Story of that illustrious Nucle were retrench'd, the Sequel of the principal

Action would be the better for it. Nor would any Body imagine he had forgot any Thing, or that there was any Member of his Action wanting. *Buffu*.

EPISPASTIC, in Medicine, a Remedy, which being externally applied, draws or attracts the Humour to the Part; call'd also an *Attractive*. See ATTRACTIVE.

Of *Epispasticks* there are some which act very gently, and others with a deal of Violence. Those of the latter Kind swell, and blister the Skin, make it Red, and even raise Blisters thereon. See VESICATORY.

The principal simple *Epispasticks* are *Pellitory*, *Garlic*, *Mustard*, *Omons*, *Yeast*, *Goose-lung*, and that of *Pidgeons*, *Cantharides*, &c.

The Word is Greek, form'd of *ἐπι* and *παστα*, *trabo*, I draw.

EPISTATES, in Antiquity, a Commander, or Person, who has the Direction and Government of a People.

The Term is of considerable Use, in speaking of the ancient Government of *Athens*; where the *Epistates* was the Senator in Command for that Day, or whole Term it was to preside that Day.

The Constitution was this: The ten Tribes of *Athens*, elected every Year by Lot, each of them fifty Senators; which made a Senate of five Hundred. Every Tribe had the Precedence in its Turn, and surrender'd it again, successively, to another. The fifty Senators in Office were call'd *Prystanes*; the particular Place where they assembled *Prystaneum*; and the Term, or Duration, of their Office, viz. thirty five Days, *Prystania*. During these thirty five Days, ten, of the fifty *Prystanes*, presided weekly, under the Name of *Proedres*. And of these *Proedres*, there was one to preside each Day of the Week, under the Title of *Epistates*.

No Person was allow'd to hold this Office more than once in his whole Life; lest he should fall too much into the Taft of Dominion. The Senators of all the other Tribes still voted, according to the Order the Lot had given them; but the *Prystanes* alone convened the Assemblies; the *Proedres*, laid the Business before them; and the *Epistates*, took their Votes and Opinions.

It must be added, that of the ten *Proedres*, of each Week, there were but seven that could preside, each his Day, in Quality of *Epistates*. The ten *Proedres* elected the seven *Prystanes*. See PASTANES.

The Word is derived from the Greek, *ἐπι*, super, over, and *στασις*, *sta*, I stand.

EPISTEMONARCH, a Dignitary in the Greek Church.

The *Epistemonarch* was appointed to watch over the Doctrines of the Church; and to inspect, or survey every Thing relating to the Faith, in Quality of Censor thereof.

His Office answer'd pretty much to that of *Magister sacri Palatii* at Rome.

The Word is derived from the Greek, *ἐπιστημι*, scio, I know, of *ἐπιστημι*, Science, Knowledge, and *ἀρχη*, Command, Precedence.

EPISTILE, a Letter missive. See LETTER.

The Term *Epistile* is now scarce us'd, but for Letters wrote in Verse; and Letters Dedicatory. See EPISTILE DEDICATORY.

In speaking of Letters wrote by Moderns, or rather, in the modern Languages, we never use the Word *Epistile*. Thus, we say, the Letters, not *Epistles*, of the Cardinal *d' Ossa*; of *Vauvour*, of *Balaac*, of *Hovvel*, of *Ferquar*, &c. But those wrote by the Antients, or rather in the Ancient Languages, we call *Epistles*: As the *Epistles*, not Letters, of *Cicero*, *Pliny*, *Seneca*, *Bosdesquius*, *Lamoy*, &c. Of St. *Augustin*, St. *Jerome*, &c. The *Epistles* of St. *Paul*, St. *Peter*, St. *John*, &c. to the *Romans*, *Corinthians*, &c.

The Word is form'd of the Greek, *ἐπιστολα*, *mitra*, I send.

EPISTOLARY, a Term chiefly us'd in the Phrase *Epistolary Style*. See STYLE.

The Word is, sometimes, also applied to Authors who have wrote *Epistles* or Letters: The principal *Epistolary* Authors, are *Sidonius Apollinaris*, *Tully*, the younger *Pliny*, *Seneca* the Philosopher, *Petrarch*, *Politian*, *Bosdesquius*, *Erasmus*, *Lipsius*, *Muret*, *Ascham*, *Milton*, *Pesau*, *Louvois*, *Seren*, *Balaac*, and *Vauvour*.

EPISTOMIUM, in Hydraulicks, a Plug, or Instrument by the Application whereof, an Aperture may be open'd, and shut again at Pleasure.

EPISTROPHEUS, from *ἐπιστροφω*, *convertio*, I turn about; the same with *Cardo*. See CARDO.

EPISTYLE, in the ancient Architecture, a Term us'd by the Greeks, for what we call *Architrave*, viz. a Massive of Stone, or Piece of Wood, laid immediately over the Capital of a Column. See ARCHITRAVE.

The *Epistyle* is the first, or lowest Member of the *Entablature*. See *ENTABLATURE*.

The Word is derived from the *Greek*, ἐπί, *super*, upon, and στήλη, *Column*.

EPITAPH, a Monumental Inscription, in Honour, or Memory, of a Defunct; or an Inscription engraven, or cut, on a Tomb, to mark the Time of a Person's Decease, his Name, Family, and usually some Eloges of his Virtues, or good Qualities. See *MONUMENT, TOMB, &c.*

The Style of *Epitaphs*, especially those composed in *Latin*, is singular. See *LAVINARY STYLE*.

At *Sparta*, *Epitaphs* were only allowed to People who died in Battle. *Bonhorvius* has made a Collection of *Epitaphs*, not very ample, but exceedingly well chosen. *Fa. Jabbe*, has likewise given a Collection of the like Kind, in *French*; entitled, *Trojar des Epitaphes*. *Comben* has done something in the same Way in our English *Epitaphs*. An *Epitaph* is said to be yet wanting to the Duke of *Marborough's* Monument; tho' a Premium of 500 Pounds was offer'd by his Dowager, to him that should compose one worthy of the Hero deceas'd.

In *Epitaphs*, the dead Person is sometimes introduced, by Way of *Prosopœia*, speaking to the Living; of which we have a fine Instance, worthy the *Augustan* Age, wherein the dead Wife thus bespeaks her surviving Husband.

*Immatura peri: sed tu felicior, Annos
Vive tuos, Coniux optime, vive meos.*

The Word comes from ἐπί, *upon*, and τάφος, *Sepulcher*. See *SEPOLCHRA*.

The *French* have a Proverb, *Moutens comme une Epitaph*: He lies like an *Epitaph*; in Allusion to the Eloges ordinarily contain'd therein, which are not always over just.

EPITAPH, is also applied to certain Eloges, either in Prose or Verse, compos'd without any Intent to be engraven on Tombs.

In the Collection of *Epigrams*, we have Abundance of such *Epitaphs*; some of them ludicrous and satyrical. See *EPICRAM*.

For a Specimen, we shall here add a very beautiful *Epitaph*, compos'd by Mr. *Cowley*, on himself, to be put on a little Country House, whither he retreated from the Court and Town, to spend his last Days.

*Hic, O Viator, sub Laræ parentis,
Coalectus hic est Conditus, hic jacet
Defunctus humani laboris
Sorte, supervacuaq; Vita;*

*Non indecora pauperie nitent,
Et non inertis nobilis otio,
Vanæq; dilectis populo,
Droitiis, animosus hostis.*

*Possis ut illum dicere mortuum?
Ea terra jam nunc quantula sufficit?
Exempta sit curis, Viator,
Terra sit illa levis, precare.*

*Hic sparge flores, sparge breves Rosas;
Nam vita gaudet Mortua floribus;
Herbifera odoratis coronas
Vatis adhuc cinerem Calentem.*

EPITASIS, in the ancient Poetry, the second Part, or Division of a Dramatic Poem; wherein the Plot, or Action, propos'd, and enter'd upon, in the first Part, or *Proctasis*, was carried on, heighten'd, warm'd, and work'd up, till it arriv'd at its State, or Height, call'd the *Catastasis*. See *PROTASIS*, and *CATASTASIS*.

This Division is laid aside in the Modern Drama; in Lieu whereof, our Plays are divided into *Acts*. See *ACT*.

The *Epitasis* might, ordinarily, take up about our second or third Act. See *TRAGEDY*.

The Word is pure *Greek*, ἐπίσσις, of ἐπιτίσι, *Intendo*, I heighten.

EPITASIS, in Medicine, is sometimes used for the Increase, or Growth, and heightening of a Disease; or a Paroxysm of a Disease, particularly a Fever. See *STATE*.

EPITHALAMIUM, in Poetry, a *Nuptial Song*; or a Composition, usually in Verse, on Occasion of a Marriage between two Persons of Eminence.

The Topics it chiefly insists on, are the Praises of Marrimony, and of the Married Couple; with the Pomp and Order of the Marriage Solemnity. It concludes, with praying to the Gods for their Prosperity, their happy Offspring, &c. *Caullus* exceeded all Antiquity, in his *Epithalamiums*; and the Cavalier *Morino*, all the Moderns.

The Word is form'd of ἐπί and ἄμφω, *Bride-chamber*.

EPITHEME, EPITHEMA, in Pharmacy, a Kind of *Fomentation*, or Remedy, of a liquid, spirituous Kind; applied externally upon the Regions of the Heart, or Liver; to strengthen and comfort the same, or to correct some Intemperature. See *FUMENTATION*.

There are two Kinds of *Epithems*; the one *Liquid*, and the other *Solid*: The *Liquid Epithem* is a Fomentation of a more spirituous Nature than the rest; the *Solid*, is a Mixture of Confects, Treacle, Confections, and Cordial Powders, generally spread on a Piece of Scarlet, or Leather.

The Word is form'd of the *Greek*, ἐπί, *upon*, and ἔπιμα, *posse*, I put.

EPITHET, a *Non Adjective*, expressing some Quality of a Substantive to which it is join'd. See *ADJECTIVE*.

As, a fruitful Vine, a stately Pile, an Echoing Vault, &c. *Epithets*, are Engines of mighty Use and Convenience among the Poets and Orators; who supply in *Epithets*, what they want in Things. *Card. Perron* even blames *Homer* on the Head of *Epithets*; observing, that he frequently books in *Epithets*, without any Sense, or Significancy at all, to help out his Measures; and that he equips every Hero with an *Epithet*, not according to the Exigence of the Case, but the Measure of the Verse.

The Word is form'd of ἐπί, *upon*, and ἔπος, *poëtia*, putting.

EPITHET, is also used for a *Sur-name*, or second Appellation. See *SUR-NAME*.

Epithets, were anciently bestow'd very frankly, either on Account of any Defects of the Body, or Mind: The Kings themselves, were not exempted from them. Hence, those *Epithets* so frequent in History; as *Henry Long-shank*, *Edward Iron-side*, *Richard Crook-back*, *John Lock-land*, &c.

Nor have the *French* us'd their Kings any better: Witness their *Charles the simple*, *Louis the lazy*, *Sancaut*, *Ludovicus nihil sciens*; *Pepin the stout*; *Louis the Stammerer*, *le Bègue*.

EPITHYME, a Medicinal Plant, of a very extraordinary Nature and Figure. Its Seed is very small, from which arise long Threads like Hairs, which soon perish, as well as the Root, unless they meet with some neighbouring Plant, both to sustain and feed them.

The *Epithyme* grows indifferently on all Kinds of Herbs; and, of Consequence, the Kinds thereof are infinite: To which Writers usually attribute the particular Virtues of the Plants they grow on.

The most known of these Plants, and those most us'd in Medicine, are such as grow on *Thyme*; which are the proper *Epithymes*; and those on *Flax*. There are two Kinds in the Shops; the one from *Venice*, the other from *Candia*: They have both an Aromatick Taste, but that of *Venice* the strongest.

Their Use is to strengthen the Parts, and prevent Obstructions of the Viscera, &c.

EPITOME, an Abridgment, or Reduction, of the principal Matters of a larger Book, into a little Compass. See *ABRIDGMENT*.

The *Epitome* of *Bonovius's* Annals is done by *Sponde*: *Sermier* has made an *Epitome* of the Philosophy of *Gassendus*.

'Tis a popular Objection against the *Epitomizing* of Authors, that it frequently occasions the Loss of the Originals. Thus the Loss of the Historian *Trogus Pompeius*, is attributed to his Epitomizer *Josius*; and the Loss of a great Part of *Livy* to *Ju. Florus*.

The Word is *Greek*, ἐπιτομή, form'd of ἐπιτίσι, *rescure*, to retrench, abridge, or cut off.

EPITRITUS, a Foot of the ancient *Latin* Verse, consisting of four Syllables. See *FOOT*.

Grammarians reckon four Species of *Epitrites*: The first compounded of an *Iambus* and *Sponde*, as *Salmestus*. The second of a *Trochee* and *Sponde*, as *Conitius*. The third of a *Sponde* and an *Iambus*, as *Comanicus*. And the fourth of a *Sponde* and *Trochee*, as *Incantus*.

EPITROPE, in Rhetoric, a Figure of Speech, by the *Latin* call'd *Concessio*; whereby the Orator grants something which he might deny; that, by this Shew of Impartiality, he may the more easily be granted what he requires, in his Turn. See *FIGURE*.

This Figure is frequently invidious: Let them extol his Probity; I acquiesce and am ready to be silent: But when they propose him for a Pattern of Wit, my Spoken is rais'd, &c.

EPITROPUS, a Kind of Judge, or rather Arbitrator, which the *Greek* Christians, under the Dominion of the *Turks*, elect, in the several Cities, to terminate the Differences that arise among them; and avoid carrying them before the *Turkish* Magistrates.

There are several *Epitrops* in each City: *Mouf Spou*, in his Travels, observes, that at *Atheis* there are eight, taken out of the several Parishes, and call'd *Vocchards*, i. e.

i. e. old Men. But *Athens* is not the only Place where there are *Epiropi*. They are in all the Islands of the *Archipelago*.

Some *Latin* Authors of the *Vth* Century, call *Epiropi*, those who more anciently were call'd *Villici*, and since *Vidames*. See *VIDAME*.

In *Times* still earlier, the *Greeks* applied the Term *επιροπ*, in the same Sense as the *Latin* did *Procurator*, viz. for a Commissioner, or Intendant: Thus the Commissioners of Provisions in the *Persian* Army, are call'd by *Herodotus*, and *Xenophon*, *Epiropi*; and in the *New Testament*, *επιροπ*, is the Intendant of a House, render'd in the vulgar *Procurator*.

EPLOTE, in Heraldry. An *Engle Eploye*, is what in *English* we more usually call an *Engle display'd*, or *Spread Engle*. See *DISPLAY'D* and *EAGLE*.

EPOCHA, or *Æra*, in Chronology, a Term, or fix'd Point of Time, whence the Years are number'd, or accounted. See *YEAR*.

The Word is form'd of the *Greek*, *ἐποχή*, *inhibitio, restrictio*, of *επιμαίνω* to sustain, stop; by reason the *Epocha* defines, or limits a certain Space of Time. See *TIME*.

Very different *Epochs*, or *Epochæ*, obtain in different Nations; and no wonder: for there being no astronomical Consideration to render one preferable to another, their Constitution is purely arbitrary.

That principally regarded among *Christians*, is the *Epocha* of the *Nativity*, or Incarnation of *JESUS CHRIST*; that of the *Mahometans*, the *Hegira*; that of the *Jews*, &c. the *Creation of the World*; that of the ancient *Greeks*, the *Olympiads*; that of the *Romans*, the *Building of the City*; that of the ancient *Persians* and *Assyrians*, the *Epocha of Nabonassar*, &c.

The Doctrine and Use of *Epochæ*, is of very great Extent in Chronology. See *CHRONOLOGY*.

To reduce the Years of one *Epocha* to those of another, i. e. to find what Year of one, corresponds to a given Year of another; a Period of Years has been invented, which commencing before all the known *Epochæ*, is, as it were, a common Receiptacle of them all, call'd the *Julian Period*. To this Time all the *Epochæ* are reduced, i. e. the Year of this Period, whereon each *Epocha* commences, is determined. All that remains, therefore, is to add the given Year of one *Epocha*, to the Year of the Period corresponding with its Rise; and from the same to subtract the Year of the same Period corresponding to the other *Epocha*. The Remainder is the Year of that other *Epocha*. See *JULIAN PERIOD*.

The *Epocha* of *Christ*, or our *Lord*, is the vulgar *Epocha* throughout *Europe*; commencing from our Saviour's *Nativity*, *December 25*; or rather, according to the usual Account, from his *Circumcision*, the *1st* of *January*; but particularly in *England*, from the *Incarnation*, or *Annunciation* of the *Blessed Virgin*, on the *25th* of *March*; *Nine Months* prior to the *Nativity*. See *NATIVITY*, *CIRCUMCISION*, *ANNUNCIATION*, &c.

Now, the Year of the *Julian Period* whereon *Christ* was born, and circumcised, is usually computed to be the Year *4713*; consequently, the first Year of the *Æra* of *Christ*, corresponds to the Year *4714* of the *Julian Period*.

Hence, 1°. If to any given Year of *Christ*, you add *4713*, the Sum will be the Year of the *Julian Period* corresponding thereto. E. gr. if to the present Year *1725*, be added *4713*, the Sum *6438*, is the present Year of the *Julian Period*.

2°. On the contrary, subtracting *4713*, from any given Year of the *Julian Period*, the Remainder is the current Year of *Christ*, e. gr. From the Year of the *Julian Period* *6438*, subtracting *4713*, the Remainder is the Year of *Christ* *1725*.

In Effect, the *Epocha* of our *Lord*, serves not only for the Computation of the Years elapsed since the *Epocha* commenced; but even of those before it.

Now, to find the Year of the *Julian Period*, corresponding to a given Year before *Christ*; subtract the given Year from *4714*; the Remainder is the correspondent Year required. Thus, e. gr. the Year before *Christ* *752*, is the Year *5466* of the *Julian Period*. On the contrary, subtracting the Year of the *Julian Period* from *4714*, the Remainder is the Year before *Christ*.

The Author of the vulgar *Epocha*, or Way of computing from *Christ*, is an Abbot of *Rome*, one *Dionysius Exiguus*; by Nation a *Scythian*; who flourish'd under *Justinian*, about the Year *507*: Tho' *Dionysius* borrowed the Hint from *Panodorus* a *Greek* Monk. Till his Time, the Generality of *Christians* computed their Years, either from the *Building of Rome*, or according to the Order of the Emperors and Consuls, and the other Ways in Use with the People they lived among.

This Diversity occasioning a great Distraction between

the Churches of the *East* and *West*; *Dionysius*, to compose the same, first propos'd a new Form of the Year, with a new general *Æra*, which in a few Years Time was generally admitted.

Dionysius began his Account from the Conception, or Incarnation, popularly call'd *Lady-Day*, or the *Annunciation*: Which Method still obtains in the Dominions of *Great Britain*, and there only; so that the *Dionysian*, and *English* *Epocha*, is the same. In the other Countries of *Europe*, they reckon from the *1st* of *January*; except in the Court of *Rome*, where the *Epocha* of the Incarnation still obtains for the Date of their Bulls.

It must be added, that this *Epocha* of *Dionysius* is charged with a Mistake: The common Opinion is, that it places our Saviour's *Nativity* a Year too late; or, that he was born the Winter preceding the Time prescribed by *Dionysius* for his Conception.

But, the Truth is, the Fault lies on *Bede*, who misinterpreted *Dionysius*, and whose Interpretation we follow; as has been shewn by *Petavius*, from *Dionysius's* own Epistles. For *Dionysius* began his Cycle from the Year of the *Julian Period* *1713*; but his *Epocha* from the Year *1715*, wherein the vulgar *Æra* supposes *Christ* to have been incarnate.

The Year, therefore, which according to the vulgar *Epocha* is the *1st* Year of *Christ*; according to *Dionysius's* *Æra*, is the *2d*. So that the present Year, which we call *1725*, shou'd, in Justice, be *1726*. Tho' some Chronologists, instead of one Year, will have the Error two.

To this vulgar *Æra*, as a sure, fix'd Point, Chronologists use to reduce all the other *Epochæ*; tho' there is not one of 'em but what is controverted: So much Uncertainty there is in Time. We shall exhibit 'em as reduced to the *Julian Period*.

Epocha of the *Creation*, or *Orbis conditi*, according to the Computation of the *Jews*, call'd also the *Jewish Epochæ*, is the Year of the *Julian Period* *953*; answering to the Year before *Christ* *3761*; and commences on the *7th* Day of *October*.

Hence, subtracting *952* Years from any given Year of the *Julian Period*, the Remainder is the Year of the *Jewish Epochæ*, corresponding thereto. Thus, e. gr. the present Year being the *6438th* Year of the *Julian Period*; it is the *5486th* Year of the *Jewish Epochæ*, or since the *Creation* of the World.

This *Epochæ* is still in Use among the *Jews*.

The *Epocha* of the *Creation*, used by the *Greek* Historians, is the Year before the *Julian Period* *787*; answering to the Year before *Christ* *5500*.

Hence, to any given Year of the *Julian Period*, adding *787*; the Sum gives the Year of this *Epochæ*, E. gr. *6438* being the present Year of the *Julian Period*; *7590* is the present Year of this *Epochæ*, or the Age of the World, according to this Computation.

The Author of this *Epochæ*, is *Julius Africanus*, who collected it from the *Historians*. But when it came to be admitted into civil Use, *8* Years were added to it; that so, every Year thereof divided by *15*, might exhibit the *Indiction*, which the *Eastern Emperors* used in their Charters and *Diplomata's*.

The *Epocha* of the *Creation* used by the later *Greeks*, and *Russians*, is the Year *795*, before the *Julian Period*; or the Year *5509* before *Christ*; commencing from the *1st* Day of *September*. Tho' the *Russians*, having lately admitted the *Julian Calendar*, begin their Year from the *1st* of *January*.

Hence, adding *795*, to the Year of the *Julian Period*, the Sum gives the Year of this *Epochæ*. Thus, e. gr. the *Julian Period* of the present Year being *6438*; the present Year of this *Epochæ*, i. e. the Years from the *Creation*, on this Footing, are *7233*. Again, from the present Year *7233*, subtracting *5508*; the Remainder is the Year of the common *Æra* *1725*.

This *Æra* was used by the Emperors of the *East*, in their *Diplomata*, &c. And thence also call'd the *Civil* *Æra* of the *Greeks*. In Reality, it is the same with the *Epocha* of the *Constantinopolitan* Period; whence some call it the *Epocha* of the *Period* of *Constantinople*. See *PERIOD*.

The *Alexandrian Epochæ* of the *Creation*, is the Year *780*, before the *Julian Period*; answering to the Year before *Christ* *5494*; and commencing on the *29th* Day of *August*.

Hence, adding *5495*, to the present Year of *Christ* *1725*; the Sum, *7218*, gives the present Year of this *Epochæ*; or Years elapsed since the *Creation*, according to this Computation.

This *Epochæ* was first concerted by *Panodorus*, a Monk of *Egypt*, to facilitate the Computation of *Easter*; whence, some call it, *Greek Ecclesiastical Epochæ*.

The *Enfavian* ΕΡΩΧΑ of the Creation, is the Year of the Julian Period 486; answering to the Year before Christ 428; and commencing in Autumn.

Hence, subtracting 486, from the Julian Period of the present Year 6438; or adding 4448 to the present Year of Christ, the Result 5952, is the present Year of this *Epocha*.

This *Epocha* is used in *Enfavian's Chronicon*, and the *Roman Martyrology*. See CREATION.

ΕΡΩΧΑ of *Olympiads*, is the Year of the Julian Period 3938; answering to the Year 776, before Christ; and the Year 298; from the Creation; commencing at the Full Moon next the Summer Solstice. And each *Olympiad* containing four Years.

This *Epocha* is very famous in ancient History: It was used principally by the *Greeks*, and had its Origin from the *Olympic Games*, which were celebrated at the Beginning of every fifth Year. See OLYMPIAN.

ΕΡΩΧΑ of the Building of Rome, or *Urbs condita*, U. C. is the Year of the Julian Period 3961, according to *Varro*; or 3962, according to the *Festus Capitolini*; answering to the Years before Christ 753, or 752, and beginning on the 21st of April.

Hence, if the Years of this *Epocha* be fewer than 754, subtracting 'em from 754, or 753; you have the Year before Christ. And, on the contrary, if they be more than 745, adding 'em to the same, the Sum is the Number of Years since Christ. Lastly, adding the Year before Christ, to 753, or 752; the Sum will give the Year of this *Epocha*, or the Time since the Building of Rome. Thus, e. g. the present Year 1723, according to *Varro*, is the Year of Rome 2488.

ΕΡΩΧΑ of *Nabonassar*, is the Year of the Julian Period 3967; answering to the Year before Christ 747; commencing on the 26th Day of February.

This *Æra* takes its Denomination from its Initiator, *Nabonassar King of Babylon*; and is that used by *Ptolemy* in his *Astronomical Observations*, by *Consorinus* and others.

Dioclesian ΕΡΩΧΑ, or ΕΡΩΧΑ of *Martyrs*, is the Year of the Julian Period 4997, answering to the Year of Christ 583; call'd *Æra of Martyrs* from the great Number of Christians, who suffer'd Martyrdom under the Reign of that Emperor.

The *Abyssinians*, among whom 'tis still used in all Ecclesiastical Computations, call it the *Years of Greece*. Tho' they don't reckon their Years in a continued Series from this *Epocha*. But when the *Dionysian* Period of 534 Years is expired, they begin their Computation afresh from 1, 2, &c.

ΕΡΩΧΑ of the *Hegira*, or *Mahometan* ΕΡΩΧΑ, is the Year of the Julian Period 5353, answering to the Year of Christ 622. It commences on the 12th of July, the Day of *Mahomet's* Flight from *Mecca* to *Medina*.

This *Epocha* is used by the *Turks* and *Arabs*, and even all who profess the *Mahometan* Faith: It was first introduced by *Omar*, the third Emperor of the *Turks*. The *Astronomers*, *Alfraganus*, *Albatogius*, *Alphonfus*, and *Ulugh Beigh*, refer *Mahomet's* Flight to the 15th of July; but all the People who use the *Epocha*, agree to fix it on the 12th. See HEGIRA.

ΕΡΩΧΑ of the *Selucides*, used by the *Macedonians*, is the Year of the Julian Period 4402; answering to the Year before Christ 312. See SELEUCIDES.

Zendegerdic, or *Persian* ΕΡΩΧΑ, is the Year of the Julian Period 5345; answering to the Year of Christ 632, and commencing on the 16th of June.

This *Epocha* is taken from the Death of *Zendegerdic*, the last King of *Persia*, slain in Battle by the *Saracens*.

Julian ΕΡΩΧΑ, or *Epocha of Julian* Years, is the Year of the Julian Period 4668; answering to the Year before Christ 45.

This *Epocha* had its Origin from the Year of the Reformation of the Calendar under *Julius Cesar*, call'd the *Year of Confusion*. See YEAR.

Spanish ΕΡΩΧΑ, is the Year of the Julian Period 4676; answering to the Year before Christ 58.

Ætlicæ, or *Ætlican* ΕΡΩΧΑ, is the Year of the Julian Period 4684, answering to the Year before Christ 30. Commencing on the 29th Day of August. See ÆTICÆ.

Other memorable *Epochæ* are, that of the *Deluge*, in the Year of the Creation 1656; The Birth of *Abraham* in 2039; The *Israelites* Exodus or Departure out of *Egypt*, in 2544; The Building of the Temple of *Jerusalem*, in 2623; And the Destruction of the same in the Year of Christ 70: The taking of *Constantinople* by the *Turks*, in 1453, &c.

EPODE, in Poetry. In the *Lyric* Poetry of the *Greeks*, the *Epoë* is the third Part, or End of the *Ode*: Their *Ode*, or Song, being divided into *Strophæ*, *Antistrophæ*, and *Epoë*. See ODE.

The *Epoë* was sung by the *Priests*, standing still before the *Altar*, after all the *Turns* and *Returns* of the *Strophæ* and *Antistrophæ*. See STROPHÆ.

The *Epoë* was not confined to any precise Number, or Kind of Verse; as the *Strophæ* and *Antistrophæ* were. See STROPHÆ, &c.

But when the *Ode* contain'd several *Epoë*s, *Strophæ*, &c. they were all alike.

As the Word *Epoë*, then, properly signifies the End of the Song; and as in *Odes*, what they call'd the *Epoë*, finish'd the Singing; It became customary, as *M. Dacier* shews, for a little Verse, which being put after another, clos'd the Period, and finish'd the Sense which had been suspended in the first Verse, to be call'd *Epoë*, imd &c.

And hence it is, that the 11th Book of *Horace's* *Odes* is entitl'd *Liber Epodon*, Book of *Epoë*s, by reason the Verses thereof are all alternately long and short; and that the short one, generally, tho' not always, closes the Sense of the long one.

But the Signification of the Word is extended still further; *Epoë* being become a general Name for all Kinds of little Verses, that follow one or more great ones, of what Kind soever they be: And, in this Sense, a *Pentameter* is an *Epoë*, after an *Hexameter*, which in Respect thereof is a *Pro-ode*.

ΕΡΩΜΙΣ, in Anatomy, the upper Part of the Shoulder, reaching up to the Neck. See SHOULDER.

Some Authors apply the Word *Ερωμις* to the upper Part of the *Os Humeri*: But the ancient *Greek* Physicians only use it for the muscular, or fleshy Part, placed as abovemention'd.

The Word is *Greek*, Ερωπε, which signifies the same Thing.

EPOPEA, *Epos*, in Poetry, is strictly the History, Action, or Fable, that makes the Subject of an *Epic* Poem. See ACTION and FABLE.

In the common Use of the Word, however, *Epoëa* is the same with *Epic* Poem it self: In which Sense it is defined, a Discourse invented with Art, or a Fable agreeably imitated from some important Action; and related in Verse, in a probable and surprising Manner; with a View to form the Manners, &c. See EPIC POEM.

The Word is derived from the *Greek*, εως, *Carmina*, Verse; and εωω, *facio*, I make.

ΕΡΥΛΟ, in Antiquity, a Minister of Sacrifice among the *Romans*. See SACRIFICE.

The Pontifics not being able to attend all the Sacrifices perform'd at *Rome*, to so many Gods as were adored by the People; appointed three Ministers, whom they call'd *Ερυλο*s, by reason they confer'd on 'em the Care and Management of the *Epula*, Feasts in the solemn Games and Festivals.

To them belong'd the ordering and serving the sacred Banquet, offer'd on such Occasions to *Jupiter*. They wore a Gown border'd with Purple, like the Pontifics. Their Number was at length augmented from Three to Seven, and afterwards by *Cæsar* to Ten.

Their first Establishment was in the Year of *Rome* 558, under the Consulate of *L. Furius Purpureo*, and *M. Claudius Marcellus*.

ΕΡΥΛΟΤΙΚΚΣ, in Medicine, dry, astringent Remedies, proper to cicatrize, or incarnate Wounds and Ulcers. See INCARNATIVE, CICATRICE.

Such are Emplasters of *Ceruss*, and *Diapalma*; the Unguent *Pompholix*, &c.

The Word is form'd of the *Greek*, εω, *super*, and εωω, *Cicatriv*, *Escar*. Whence the Verb εωωω, *cicatrivem*, *infro*.

ΕΡΥΛΟΜ, in Antiquity, Banquet, a holy Feast prepared for the Gods. See FEAST.

The Statues of the Gods were commonly laid upon a Bed, and were served as if they had been very hungry; to perform which, was the Function of the Ministers of Sacrifice, hence call'd *Ερυλο*s. See ΕΡΥΛΟ.

EQUABLE Motion, is that whereby the moveable Body proceeds with the same continued Velocity; neither accelerated nor retarded. See MOTION.

EQUAL, a Term of Relation between two or more Things of the same Magnitude, Quantity, or Quality.

Wolffius defines *Equals* to be those Things which may be substituted for each other, without any Alteration of Quantity. 'Tis an Axiom in Geometry, that two Things which are *Equal* to the same third, are *Equal* to each other. And again, if to, or from *Equals*, you add or subtract *Equals*, the Remainders will be *Equal*. See EQUALITY.

EQUAL CIRCLES, in Geometry, are those whose Diameters are *Equal*. See CIRCLE.

EQUAL ANGLES, are those whose Sides are inclined alike to each other; or that are measured by similar Parts of their Circles. See ANGLE. EQUAL

EQUAL Figures, are those whose Area's are *Equal*; whether the Figures be similar or not. See **FIGURE**.

The Segments of a Sphere, or Circle, are of an *Equal Convexity*, or *Concavity*, when they have the same Ratio, or Proportion to the Diameters of the Spheres, or Circles whereof they are Parts. See **SEGMENT**.

EQUAL Solids, are those which comprehend, or contain each as much as others; or whose Solidities and Capacities are *Equal*. See **SOLID**.

EQUAL Hyperbola's, are those whose Ordinates to their Indeterminate Axes, are *Equal* to each other; taken at *Equal Distances* from their Vertices. See **HYPERBOLA**.

EQUAL Numbers } See **NUMBER**.

EQUAL Hours } See **HOUR**.

EQUAL Geometrical Ratio's, are those whose least Terms are similar *aliquot*, or *aliquant* Parts of greater. See **RATIO**.

Equal Arithmetical Ratio's, are those wherein the Difference of the two less Terms, is *Equal* to the Difference of the two greater. See **RATIO**.

In Opticks, we say, that Things seen under *Equal Angles*, are *Equal*. *Equal Parts* of the same Interval, or Magnitude, if unequally distant from the Eye, appear unequal. *Equal Objects*, and at *Equal Distances*, only the one placed directly, and the other obliquely, seem unequal; and that placed directly, the bigger. See **VISION**.

EQUALITY, in Astronomy. The Circle of *Equality*, or the *Equinox*, is a Circle used in the *Ptolemaic Astronomy*, to account for the Eccentricity of the Planets, and reduce them more easily to a Calculus. See **EQUANT**.

In Geometry, the *Ratio*, or *Proportion of EQUALITY*, is that between two equal Numbers, or Quantities.

Proportion of EQUALITY evenly ranged, or *ex Aequo ordinata*, is that wherein two Terms in a Rank, or Series, are Proportional to as many Terms in another Series, compared to each other in the same Order, *i. e.* the first of one Rank to the first of another; the second to the second, &c.

Proportion of EQUALITY evenly disturbed, call'd also *ex Aequo Perturbata*, is that wherein more than two Terms of a Rank, are proportional to as many Terms of another Rank, compared to each other, in a different and interrupted Order; *viz.* the first of one Rank to the second of another; the second to the third, &c.

EQUALITY, in Algebra, is a Comparison of two Quantities, that are equal both really and representatively, *i. e.* both equal in Effect and Letters: And *Equation*, is a Comparison of two Magnitudes, equal in Effect, but unequal in Letters, to render them equal.

Equality, in Algebra, is usually denoted by two parallel Lines, as =: Thus, $2 + 2 = 4$, *i. e.* 2 Plus 2, are equal to 4.

This Character was first introduced by Harriot. *Det Cartes*, and some after him, in Lieu thereof use ∞: Thus, $2 + 2 ∞ 4$, for $x - y = b + c$, signifies that x minus y , is equal to b plus c .

From an Equation, we arrive at an *Equality*, by changing one Letter into another, whereby the two Members of the Equation, *i. e.* the two Quantities compared together, and conjoined by the Sign of *Equality*, are render'd Equal.

Thus, in the Equation $aax = bcd$; supposing $x = \frac{bcd}{aa}$, we change x into $\frac{bcd}{aa}$, and by this Substitution arrive at the *Equality* $bcd = bcd$.

In the Solution of a Numerical Problem, to be render'd rational; if there be only one Power to be equal'd to a Square, or other higher Power; it is call'd *simple Equality*.

When there are two Powers to be equal'd, each to a Square, it is call'd *double Equality*, &c.

Diophantus has given us a Method for double *Equalities*, and *Fa. Billy*, another for triple *Equalities*, in his *Diophantus and Redivivus*.

EQUANT, or **EQUANTUM**, in Astronomy, a Circle, imagin'd by Astronomers, in the Plane of the Defect, or Eccentric; for the regulating and adjusting of certain Motions of the Planets. See **DEFECT**.

EQUATION, or **EQUATION**, in Algebra, an Expression of the same Quantity, in two different, that is, dissimilar, but *Equal Terms* or Denominations. As when we say, $2. 3 = 4 + 2$; that is, twice three is equal to four and two. See **QUANTITY**.

Srifolius defines *Equation* to be the Ratio of Equality, between two Quantities differently denominated: As when we say 3 Shill. = 56 Pence. Or 50 Shill. = 2 Lib. 10 Shill. = 600 Pence, = 2400 Farth. Or, $b = d + c$. Or, $12 = \frac{2 - P}{5}$, &c.

Hence, the Reduction of two heterogeneous, or dissimilar Quantities to the same Value, *i. e.* to an Equality, is call'd the *bringing them to an Equation*.

The Character, or Sign of an Equation, is = or ∞; See **CHARACTER**.

The Resolving of Problems, by Means of Equations, is the Business of Algebra. See **ALGEBRA**.

The Terms of an Equation, are the several Quantities, or Parts, of which an Equation is compos'd; conjoined together by the Signs + and -. Thus, in the Equation $b + c = d$; the Terms are b , c and d . And the Tenor of the Equation is, that some Quantity, represented by b , is equal to two others represented by c and d . See **TERMS of Equations**.

The Root of an Equation, is the Value of the unknown Quantity in the Equation. *E. gr.* if $a^2 + b^2 = x^2$; the Root will be $\sqrt{(a^2 + b^2)}$. See **ROOTS of Equations**.

Equations are divided with Regard to the Powers of the unknown Quantities, into *Simple, Quadratic, Cubic, &c.*

A *Simple EQUATION*, is that wherein the unknown Quantity is only of one Dimension, or the first Power. As, $x = (a + b) : 2$. See **SIMPLE EQUATION**.

A *Quadratic EQUATION*, is that wherein the unknown Quantity is of two Dimensions, or the second Power. As, $x^2 = a^2 + b^2$. See **QUADRATIC EQUATION**.

A *Cubic EQUATION*, is that wherein the unknown Quantity is of three Dimensions. As $x^3 = a^3 - b^3$, &c. See **CUBIC EQUATION**.

If the unknown Quantity be of four Dimensions, as $x^4 = a^4 - b^4$, the Equation is call'd a *Biquadratic*; if of 5, a *Surd-solid*, &c. See **POWER**.

Equations are consider'd two Ways: Either, as the ultimate Conclusions we arrive at in the Solution of Problems; or as Means, by the Help whereof, we arrive at those final Solutions. See **SOLUTION** and **PROBLEM**.

An Equation of the first Kind, consists only of one unknown Quantity, intermix'd with other known Quantities. Those of the latter Kind, consist of several unknown Quantities, which are to be compared, and connect'd together, till out of them all arise a new Equation, wherein the one unknown Quantity sought, is mix'd with the known. To get the Value of which unknown Quantity, the Equation is generally turn'd, and transform'd various Ways, till it be brought as low, and render'd as simple as possible.

The Doctrine and Practice of Equations; that is, the Solution of Questions by Equations, consists of several Steps, or Parts, *viz.* 1^o. The denomination of the several Quantities, or expressing them in proper Signs, or Symbols. 2^o. The bringing the Quantities thus denoted to an Equation. 3^o. The reducing that Equation to its lowest and simplest Terms. To which 4^o. may be added the construct'g of the Equation, or representing it in Geometrical Lines: We proceed to each in its Order.

With Regard to the first; a Question, or Problem, being propos'd; we conceive the Thing sought, or required, as already done: And accordingly now, or express it by one of the Vowels, as a , or more usually, by one of the last Letters of the Alphabet, x or z ; noting the other known Quantities, by the Consonants, or the beginning Letters of the Alphabet, b , c , d , &c. See **QUANTITY**, **CHARACTER**, **SERIES**.

The Question being thus stated in Species; it is consider'd whether, or no, it be subject to any Restrictions, *i. e.* whether it be determinate, or no; which is found by these Rules.

1^o. If the Quantities sought, or required, be more than the Number of Equations given, or contain'd in the Question; it is indeterminate, and capable of innumerable Solutions. The Equations are found, if they be not expressly contain'd in the Problem it self, by the Theorems of the Equality of Quantities.

2^o. If the Equations given, or contain'd in the Problem, be just equal in Number with the unknown Quantities; the Question is determinate, or has one only Solution.

3^o. If the unknown Quantities be fewer than the given Equations, the Question is yet more limited, and sometimes discovers it self impossible, by some Contradiction between the Equations. See **DETERMINATE**, &c.

To bring Questions to EQUATIONS.

Now, to bring a Question to an Equation, that is, to bring the several mediate Equations, to one final one; the principal Thing to be attended to, is to express all the Conditions thereof, by so many Equations. In order to which, it is to be consider'd, whether the Propositions, or Sentences, wherein it is express'd, be all of them fit to be noted in Algebraic Terms; as our Conceptions use to be in Latin, or Greek Characters. And if so, as is generally the Case in Questions about Numbers, or abstract Quantities; then let Names be given both to the known and unknown Quantities, as far as Occasion requires: And thus the Drift of the Question may be couch'd, as we

may call it, in the Algebraic Language. The Conditions, thus translated to Algebraic Terms, will give as many Equations as are necessary to solve it. To illustrate this by an Instance: Suppose it required to find three Numbers, in continual Proportion, whose Sum is 20, and the Sum of the Squares 140; putting x, y, z , for the Names of the three Numbers sought, the Question will be translated out of the Verbal to the Symbolical Expression, thus:

<i>The Question in Words.</i>	<i>In Symbols.</i>
Required three Numbers, on these Conditions.	$x, y, z?$
That they be continually proportional.	$x : y :: y : z, \text{ or } xz = yy$
That the Sum be 20.	$x + y + z = 20.$
And the Sum of their Squares 140.	$xx + yy + zz = 140.$

Thus, is the Question brought to these Equations, viz. $xz = yy, x + y + z = 20$, and $xx + yy + zz = 140$, by the Help whereof, x, y , and z , are to be found.

The Solutions of Questions are, for the most Part, so much the more expedite and artificial, by how much the unknown Quantities, you have at first, are the fewer. Thus, in the Question proposed, putting x for the first Number, and y for the second, $\frac{yy}{xx}$ will be the third Proportional; which being put for the third Number, being the Question into Equations as follows.

<i>The Question in Words.</i>	<i>Symbolically.</i>
There are sought three Numbers in continual Proportion.	$x, y, \frac{yy}{xx}?$
Whose Sum is 20.	$x + y + \frac{yy}{xx} = 20.$
And the Sum of their Squares 140.	$xx + yy + \frac{yy}{xx} = 140.$

You have therefore the Equations $x + y + \frac{yy}{xx} = 20$, and $xx + yy + \frac{yy}{xx} = 140$, by the Reduction whereof, x and y are to be determined.

Take another Example: A Merchant increases his Estate annually by a third Part, abating 100 L. which he spends yearly in his Family; and after three Years he finds his Estate doubled. *Query*, What is he worth? To resolve this, it must be observed, that there are (or lic' bid) several Propositions, which are all thus found out and laid down.

<i>In English.</i>	<i>Algebraically.</i>
A Merchant has an Estate.	x
Out of which the first Year he expends 100 l.	$x - 100.$
And augments the rest by one Third.	$x - 100 + \frac{x - 100}{3}, \text{ or } \frac{4x - 400}{3}$
And the second Year he expends 100 l.	$\frac{4x - 400}{3} - 100, \text{ or } \frac{4x - 700}{3}$
And augments the rest by one Third.	$\frac{4x - 700}{3} + \frac{4x - 700}{9}, \text{ or } \frac{16x - 2800}{9}$
And so the third Year he expends 100 l.	$\frac{16x - 2800}{9} - 100, \text{ or } \frac{16x - 3700}{9}$
And by the rest gains likewise one Third.	$\frac{16x - 3700}{9} + \frac{16x - 3700}{27}, \text{ or } \frac{64x - 14800}{27}$
And he becomes at length twice as rich as at first.	$\frac{64x - 14800}{27} = 2x.$

Therefore the Question is brought to this Equation, $\frac{64x - 14800}{27} = 2x$, by the Reduction whereof you will find $x = 14800$.

viz. Multiply it into 27, and you have $64x - 14800 = 54x$; subtract $54x$, and there remains $10x - 14800 = 0$, or $10x = 14800$; and dividng by 10, you have $x = 1480$. So that the Value of his Estate at first was 1480 *l.*

It appears then, that to the Solution of Questions about Numbers, or the Relations of abstract Quantities; there is scarce any Thing more required, but to translate 'em out of the common, into Algebraic Language; i. e. into Characters, proper to express our Ideas of the Relations of Quantities. Indeed, it may sometimes happen, that the Language wherein the Question is stated, may seem unfit to be rendered into the Algebraical; tho' by making a few Alterations therein, and attending to the Sense, rather than the Sound of the Words, the Translation becomes easy enough. The Difficulty here results merely from the Difference of Idioms, which is as observable between most Languages, as between the common and symbolical.

However, to render the Solution of such Problems a little more easy and familiar, we shall add an Example or two thereof.

1^o. Given, the Sum of two Numbers a , and the Difference of their Squares b ; to find the Numbers themselves. Suppose the lesser, x ; the other will be $a - x$; and their Squares xx and $a^2 - 2ax + xx$: Whose Difference, $a^2 - 2ax$ is call'd b . Consequently, $a^2 - 2ax = b$.

Whence, by Reduction, $2a - b = 2ax$. Or $\frac{2a - b}{2a} = x$.

E. gr. Suppose the Sum of the Numbers, or a , to be 8, and the Difference of their Squares, or b , 16: Then will, $\frac{1}{2} \frac{2a - b}{2a} (= 4 - 1) = 3 = x$. And $a - x = 5$. Therefore the Numbers are 3 and 5.

2^o. To find three Quantities x, y , and z ; the Sum of each Pair whereof is given. Suppose the Sum of the Pair x and y to be a ; that of x and z , b ; and that of y and z , c . To determine the three Numbers required, x, y , and z ; we have three Equations $x + y = a$; $x + z = b$; and $y + z = c$: Now, to exterminate two of the unknown Quantities, *e. gr.* y and x ; take away x , both from the first and second Equations; and we shall have $y = a - x$ and $z = b - x$. Which Values being substituted for y and z in the third Equation; there will arise $a - x + b - x = c$; and by Reduction $x = \frac{a + b - c}{2}$. Having found x the former Equations, $y = a - x$ and $z = b - x$ will give y and z .

Thus, *e. gr.* If the Sum of the Pair x and y be 9; of x and z , 10; and of y and z , 13: Then, in the Values x, y , and z , write 9 for a , 10 for b , and 13 for c ; and you will have $a + b - c = 6$; and consequently $x (= \frac{a + b - c}{2}) = 3, y (= a - x) = 6$ and $z (= b - x) = 7$.

3^o. To divide a given Quantity into any Number of Parts, so as that the greater Parts shall exceed the least by any given Differences. Suppose A a Quantity to be divided into four such Parts, the first and smallest whereof is x ; the Excess of the second Part above this, b , of the third, c , and the fourth, d : Then will $x + b$ be the second Part, $x + c$ the third, and $x + d$ the fourth: The Aggregate of all which $4x + b + c + d$ is equal to the whole Line A . Now, taking away from each, $b + c + d$, and there remains $4x = A - b - c - d$ or $x = \frac{A - b - c - d}{4}$.

Suppose, *e. gr.* a Line of 20 Feet, to be divided into 4 Parts, in such manner, as that the Excess of the second above the first may be 2 Feet, of the third, 3 Feet, and of the fourth 7 Feet. Then the four Parts will be $x (= \frac{20 - 2 - 3 - 7}{4}) = 2, x + b = 4, x + c = 5$, and $x + d = 9$. And after the same Manner, may a Quantity be divided into a greater Number of Parts on the same Conditions.

4^o. A Person disposed to distribute a little Money among some Beggars; wants Eight Pence, of Three Pence for each of 'em: He therefore gives 'em Two Pence a-piece, and has Three Pence left: The Number of Beggars is required. Let the Number of Beggars be call'd x ; and the Person want Eight Pence of giving 'em all 3s. Consequently he has $3x - 8$; out of which he gives 2s Pence; and the remaining Pence are 3. That is $x - 8 = 3$ or $x = 11$.

5^o. The Power or Strength of one Agent being given; to determine how many such Agents will produce a given Effect a , in a given Time b . Suppose the Power of the Agent such, as that it may produce the Effect c , in the Time d ; then, as the Time d , is to the Time b , so is the Effect c , which the Agent can produce in the Time d , to the Effect it can produce in the Time b , which accordingly will be $\frac{bc}{d}$. Then, as the Effect of one Agent $\frac{bc}{d}$ is to the joyn'd Effect of 'em all a ; so is that one Agent to all the Agents. Consequently the Number of Agents will be $\frac{ad}{bc}$.

Thus, *e. gr.* If a Clerk, or Writer, in 8 Days Time, transcribe 15 Sheets; how many such Clerks are required to transcribe 405 Sheets in 9 Days? *Ans.* 24. For if 8 be substituted for d , 15 for c , 405 for a , and 9 for b , the Number $\frac{ad}{bc}$ will become $\frac{405 \times 8}{9 \times 15}$. That is 240 or 24.

6^o. The Powers of several Agents being given; to determine the Time x , wherein they will jointly perform a given Effect a . Suppose the Powers of the Agents, A, B, C , such as that in the Times e, f, g , they would produce

several arise from *Eucl. Ax. 19. Prop. 4. Book 6. and Prop. 47. Lib. I. Elem.*

To facilitate this Discovery, of the Relations of the Lines in the Figure, there are several Things that contribute; as first, the Addition and Subtraction of Lines; since from the Values of the Parts, you may find the Values of the whole; or from the Value of the whole, and one of the Parts, you may obtain the Value of the other Part. Secondly, by the Proportionality of Lines; since, as above supposed, the Rectangle of the mean Terms, divided by either of the Extremes, gives the Value of the other; or, which is the same Thing, if the Values of all four of the Proportionals are first had, we make an Equality (or Equation) between the Rectangles of the Extremes and Means. But the Proportionality of Lines is best found out by the Similarity of Triangles; which, as it is known by the Equality of their Angles, the Analyst ought in particular to be conversant in. In Order to which, 'twill be necessary he be Master of *Euclid, Prop. 5, 11, 15, 29, and 32, Lib. I. and of Prop. 4, 5, 6, 7, 8, Lib. VI. and of the 20, 21, 22, 27, and 31, Lib. III.* To which may be added, the 5d *Prop. Lib. VI. or the 36th and 37th Prop. Lib. III.* Thirdly, the Calculus is promoted by the Addition, or Subtraction of Squares, viz. in right angled Triangles, we add the Squares of the lesser Sides, to obtain the Square of the greater; or from the Square of the greater Side, we subtract the Square of one of the lesser, to obtain the Square of the other. On which few Foundations, if we add to them *Prop. 1. of the 11th Elem.* when the Business relates to Superficies, and also some Propositions taken out of the 11th and 12th of *Euclid*, when Solids come in Question; the whole analytic Art, as to right-lined Geometry, depends. Indeed, all the Difficulties of Problems may be reduced to the sole Composition of Lines out of Parts, and the Similarity of Triangles; so that there is no Occasion to make Use of other Theorems; because they may all be resolved into these two, and consequently into the Solutions that may be drawn from them.

6°. To accommodate these Theorems to the Solution of Problems, the Schemes are oft times to be farther constructed, by producing out some of the Lines, till they cut others, or become of an assigned Length; or by drawing Lines parallel, or perpendicular from some remarkable Point; or by conjoining some remarkable Points; as also, sometimes, by constructing them after other Methods, according as the State of the Problems, and the Theorems, which are made use of to solve it, shall require.

As for Example: If two Lines that do not meet each other, make given Angles, with a certain third Line; perhaps you produce them so, that when they concur, or meet, they shall form a Triangle, whose Angles, and consequently the Ratio of their Sides, shall be given; or if any Angle is given, or be equal to any one, we often complete it into a Triangle given in Specie, or similar to some other, and that by producing some of the Lines in the Scheme, or by drawing a Line subtending an Angle. If the Triangle be an oblique-angled one, we often resolve it into two right-angled ones, by letting fall a Perpendicular. If the Business concern multilateral, or many sided Figures, we resolve them into Triangles, by drawing diagonal Lines, and so in others; always aiming at this End, viz. that the Scheme may be resolved either into given, or similar, or right angled Triangles.

Thus, in the Example proposed, draw the Diagonal BD, that the Trapezium ABCD, may be resolved into the two Triangles, ABD a right angled one, and BDC an oblique-angled one, (*Figure 8.*) Then resolve the oblique-angled one into two right-angled Triangles, by letting fall a Perpendicular from any of its Angle BC or D, upon the opposite Side; as from B upon CD, produced to E, that BE may meet it perpendicularly. But since the Angles BAD, and BCD, make in the mean while two right ones, (by 22 *Prop. 5 Elem.*) as well as BCE and BCD, the Angles BAD, and BCE are perceived to be equal; consequently the Triangles BCE, and DAB to be similar. And so the Computation (by assuming AD, AB, and BC, as if CD were sought) may be thus carried on, viz. AD and AB, (by Reason of the right-angled Triangle ABD) give you BD. AD, AB, BD and BC, (by Reason of the similar Triangles ABD, and CEB) give BE, and CE. BD, and BE, (by Reason of the right-angled BED) give ED: and ED - EC gives CD. Whence there will be obtain'd an Equation between the Value of CD so found out, and the small Algebraic Letter that denotes it. We may also (and for the greatest Part it is better so to do, than to follow the Work too far in one continued Series) begin the Computation from different Principles, or at least promote it by divers Methods to one and the same Conclusion; that at length there may be obtained two Values of any the same Quantity; which may be made equal to one another. Thus, AD, AB, and BC, give

BD, BE, and CE as before; then CD + CE, gives ED; and lastly, DB and ED (by Reason of the right-angled Triangle BED) give BE.

7°. Having concerted your Method of Procedure, and drawn up your Scheme; give Names to the Quantities that enter the Computation, (that is, from which assumed the Values of others are to be derived, till you come to an Equation) choosing such as involve all the Conditions of the Problem, and seem accommodated before others to the Business, and that shall render the Conclusion (as far as you can guess) more simple, but yet not more than what shall be sufficient for your Purpose: Wherefore, don't give new Names to Quantities, which may be denominated from Names already given. Thus, of a whole Line given, and its Parts, of the three Sides of a right-angled Triangle, and of three or four Proportionals, some one of the least considerable we leave without a Name; because its Value may be deriv'd from the Names of the rest. As in the Example already brought, if I make AD = x, and AB = a, I denote BD by no Letter, because it is the third Side of a right-angled Triangle ABD, and consequently its Value is $\sqrt{ax - a^2}$. Then if I say, BC = b, since the Triangles DAB, and BCE are similar, and thence the Lines AD, AB :: BC, CE proportional, to three whereof, viz. to AD, AB, and BC, there are already Names given; for that Reason I leave the fourth CE without a Name, and in its Room I make use of $\frac{2b}{x}$ discover'd from the foregoing Proportionality. And so if DC be call'd c, I give no name to DE, because from its Parts DC, and CE, or c and $\frac{2b}{x}$, its Value $c + \frac{2b}{x}$ comes out.

8. By this Time, the Problem is almost reduced to an Equation. For after the aforesaid Letters are set down for the Species of the principal Lines, there remains nothing else to be done, but that out of those Species, the Values of other Lines be made out, according to a preconceived Method; till after some foreseen Way they come to an Equation. And there is nothing wanting in this Case, except that by Means of the right-angled Triangles BCE and BDE, I can bring out a double Value of BE, viz. BCq - CE q (or $bb - \frac{2abb}{x}$) = BE q; as also BD q - DE q (or $xx - aa - cc - \frac{2abc}{x}$) = BE q. And hence (blotting out on both Sides $\frac{2abb}{x}$) you shall have the Equation $bb = xx - aa - cc - \frac{2abc}{x}$; which being reduced, becomes $x^2 = \frac{2abc}{x} + b^2 + a^2 + c^2$. as before.

9°. For the Geometry of Curve Lines: We use to denote them, either by describing them by the local Motion of right Lines, or by using Equations indefinitely expressing the Relation of right Lines disposed in Order, according to some certain Law, and ending at the Curve Lines. See CURVES.

The Ancients did the same by the Sections of Solids, but less commodiously. The Computations, which regard Curves, described after the first Manner, are performed as above directed: Thus, suppose AKC (*Fig. 9.*) a Curve Line, described by K, the vertical Point of the Square AKC, whereof one Leg AK, freely slides thro' the Point A given in Position, while the other KC of a determinate Length is carried along the right Line AD, also given in Position; and it is required to find the Point C, in which any right Line CD, given also in Position, shall cut this Curve: Draw the right Lines AC, CF, which may represent the Square in the Position sought, and the Relation of the Lines (without any Difference, or Regard, of what is given or sought, or any Respect had to the Curve) being considered; you perceive the Dependency of the others upon AC, and any of these four, viz. BC, BF, AF, and CF, to be synthetical; two whereof you assume, as CF = a, and CB = x; and Beginning the Computation from thence, you presently obtain BF = $\sqrt{aa - xx}$, and AB = $\frac{ax}{\sqrt{aa - xx}}$, by Reason of the right Angle CBF; and $\sqrt{aa - xx}$, that the Lines BF, BC :: BC, AB are continual Proportionals. Moreover, from the given Position of CD, AD is given, which therefore call b; there is also given the Ratio of BC to BD, which suppose as d to e, and you have $BD = \frac{cd}{d}$, and $AB = b - \frac{cd}{d}$.

Therefore $b - \frac{cd}{d} = \frac{ax}{\sqrt{aa - xx}}$, an Equation which (by squaring

Equating its Parts, and multiplying by $a - x$ will be reduced to this Form.

$$ax^2 = \frac{2 b d c e x^2 - b b d d x x - 2 a a b d e x + a a b b d d}{d d + e e}$$

Whence, lastly, from the given Quantities $a, b, d,$ and e ; x may be found by Rules given hereafter; and at that Interval, or Distance x or BC , a right Line drawn parallel to AD , will cut CD in the Point sought C .

If, instead of Geometrical Descriptions, we use Equations to denote the Curve Lines by; the Computations will thereby become as much shorter and easier, as the gaining of those Equations can make them. Thus, suppose the Intersection C , of the given Ellipsis ACE , Fig. 10. with the right Line CD given Position, sought: To denote the Ellipsis, take some known Equation proper to it,

as $rx - \frac{r}{q} xx = yy$, where x is indefinitely put for any Part of the Axis Ab , or AB , and y for the Perpendicular $b c$, or BC , terminated at the Curve; and r and q are given from the given Species of the Ellipsis. Since therefore CD is given in Position, AD will be also given, which call a ; and BD will be $a - x$; also the Angle ADC will be given, and thence the Ratio of BD to BC , which call 1 to e ; and BC (y) will be $= ea - cx$, whose Square $eeaa - 2eacx + cccx$, will be equal to $rx - \frac{r}{q} xx$. And thence by Reduction there will arise $xx = \frac{2 a e c c x + r x - a a e c}{e c + \frac{r}{q}}$, or $x =$

$$a e c + \frac{1}{2} r + e \sqrt{ar + \frac{rr}{4cc} - \frac{aa r}{q}}$$

Add, that tho' a

$$e c + \frac{r}{q}$$

Curve be denominated by a Geometrical Description, or by a Section of a Solid, yet thence an Equation may be obtained, which shall define the Nature of the Curve, and consequently all the Difficulties of Problems proposed about it, may be reduced hither. Thus, in the former Example, if AB be called x , and BC, y , the third Proportional BF will be $\frac{yy}{x}$, whose Square, together with the Square of BC , is equal to CFq , that is, $\frac{y^2}{x^2} + yy = a a$; or $y^2 + x x y y = a a x x$. And this is an Equation, by which every Point C , of the Curve AKC , agreeing or corresponding to any Length of the Base (and consequently the Curve it self) is defined; and from whence consequently you may obtain the Solutions of Problems proposed concerning this Curve.

After the same Manner also, when a Curve is not given in Specie, but proposed to be determined, you may assign an Equation at Pleasure, that may contain its general Nature; and assume this to denote it, as if it was given, that from its Assumption you some Way arrive at Equations, by which the Assumptions may be determined.

What remains of the Doctrine and Practice of Equations, relates to their Reduction to the lowest and simplest Terms, the better to come at the Value of the unknown Quantity in the Equation; and their Geometrical Construction.

For the Reduction of EQUATIONS. See REDUCTION of Equations.

Extraction of the Roots of EQUATIONS. See EXTRACTION of the Roots of Equation.

Construction of Equations. See CONSTRUCTION of Equations.

EQUATION of Time, in Astronomy, the Difference between mean and apparent Time; or the Reduction of the apparent unequal Time, or Motion of the Sun, or a Planet, to Equable and mean Time or Motion. See TIME and MOTION.

Time is only measured by Motion; and as Time, in it self, flows ever equally; to measure it, such a Motion must be used as is equable, or which always proceeds at the same Rate.

The Motion of the Sun, is what is commonly used for this Purpose; as the most easy to be observed: Yet it wants the great Qualification of a Chronometer. In Effect, the Astronomers find that the Sun's apparent Motion is no Ways equal: That he now and then slackens his Pace, and afterwards quickens it again. Consequently equal Time cannot be measured thereby. See SUN.

Hence, the Time which the Sun's Motion shows, call'd the apparent Time, becomes different from the true and equable Time, whereof all the Celestial Motions are to be estimated, and accounted.

This Inequality of Time is thus accounted for: The Natural, or Solar Day is measured, not, properly, by one

entire Revolution of the Equinoctial, or 24 Equinoctial Hours; but by the Time which passes while the Plane of a Meridian passing thro' the Centre of the Sun, does, by the Earth's Convexion round its Axis, return again to the Sun's Centre: Which is the Time between one Mid-day and the next. See DAY and MERIDIAN.

Now, had the Earth no other Motion but that round its Axis; all the Days would be precisely equal to each other, and to the Time of the Revolution of the Equinoctial: But the Earth is otherwise; for while the Earth is turning round its Axis, it is likewise proceeding forward in its Orbit. So that when a Meridian has completed a whole Revolution from the Sun's Centre, its Plane has not yet arrived at the Sun's Centre again: As will appear from the Figure.

Let the Sun be S , (Tab. Astronom. Fig. 50.) and let AB be a Portion of the Ecliptic: Let the Line MD , represent any Meridian, whose Plane produced, passes thro' the Sun when the Earth is in A . Let the Earth proceed in its Orbit, and in making one Revolution round its Axis, let it arrive at B ; then, will the Meridian MD be in the Position $m d$ parallel to the former MD ; and consequently has not yet passed thro' the Sun, nor have the Inhabitants under that Meridian, yet had their Mid-day. But the Meridian $d m$, must still proceed with its angular Motion, and describe the Angle $d B f$ ere its Plane can pass thro' the Sun. See EARTH.

Hence it appears, that the Solar Days are all longer than the Time of one Revolution of the Earth round its Axis.

However, were the Planes of all the Meridians perpendicular to the Plane of the Earth's Orbit; and did the Earth proceed with an equal Motion in its Orbit; the Angle $d B f$ would be equal to the Angle $B S A$, and the Arches $A f$ and $A B$ be similar: Consequently, the Times would be always equal; the Arch $A B$, and the Angle $d B f$, of the same Quantity; all the Solar Days equal to each other; and the apparent and real Time agree.

But, as it is, neither of those is the Case: For the Earth does not proceed in its Orbit with an equable Motion, but in its Aphelion, describes a less Arch, and in its Perihelion a greater, in the same Time; beside, that the Planes of the Meridians, are not perpendicular to the Ecliptic, but to the Equator. Consequently, the Time of the Angular Motion $d B f$, which is to be added to the entire Revolution in order to make a whole Day, is not always of the same Quantity.

The same will be found, if, setting aside the Consideration of the real Motion of the Earth, we consider the apparent Motion of the Sun in lieu thereof; as being what we measure Time by.

On this Principle we observe, that the Day not only includes the Time of one Convexion of the Globe on its Axis, but is increas'd by so much as answers to that Part of the Sun's Motion, performed in that Time. For when that Part of the Equinoctial, which, with the Sun, was at the Meridian yesterday at Noon, is come thither again to Day; it is not yet Noon; the Sun not being now at the Place where he yesterday was, but gone forward near a Degree more or less. And this Addition above the 24 Equinoctial Hours is upon a double Account unequal.

1°. In that the Sun, by Reason of his Apocæ and Perigæ, does not at all Times of the Year describe an equal Arch of the Ecliptic in one Day; but greater Arches near the Perigæum, which is about the middle of December; and lesser nearer the Apogæum, which is about the middle of June.

2°. In that tho' the Sun should always move equally in the Ecliptic, yet equal Arches of the Ecliptic do not in all Parts of the Zodiac, answer to equal Arches of the Equator, by which we are to estimate Time; by Reason some Parts thereof, as the two Solstitial Points, lie nearer to a parallel Position to the Equinoctial than others, e.g. those about the Equinoctial Points, where the Ecliptic and Equinoctial intersect. Whereupon an Arch of the Ecliptic, near the Solstitial Points, answers to a greater Arch of the Equinoctial, than an Arch equal thereto near the Equinoctial Points.

The apparent Motion of the Sun to the East, then, being unequal, the natural and apparent Days are no Ways proper to be applied to measure the Celestial Motions, which have no Dependence on that of the Sun.

And hence Astronomers have been obliged to invent other Days for the Use of their Calculations: Those others are equal; and a mean between the shortest and longest of the unequal ones.

These are had by considering the Number of Hours in the whole Revolution of the Sun in the Ecliptic, and dividing the whole Time into as many Equal Parts as there are Hours, 24 of which constitute the Day: And this Reduction of the Days constitutes the Equation of natural Days.

Consequently, computing those Motions according to the equal Time, it is necessary to turn that Time back again into apparent Time, that they may correspond to Observation: On the contrary, any Phenomena being observed, the apparent Time thereof must be added to equal Time, to have it correspond with the Times mark'd in the Astronomical Tables.

As we don't know of any Body in Nature that moves equally; yet such a Motion is alone proper to measure equal Days and Hours: It has been thought fit to imagine some Body, *e. gr.* a Star, moving in the Equator, Eastward; and never quickening, or slackening its Pace, but going thro' the Equator, in precisely the same Time, as the Sun finishes his Period in the Eclipse.

The Motion of such a Star will represent equal Times; and its diurnal Motion in the Equator, will be $59' 8''$, the same as the mean, or equated Motion of the Sun in the Eclipse. Consequently, the mean or equable Day, is determined by the Arrival of this Star at the Meridian; and is equal to the Time wherein the whole Circumference of the Equator, or 360° , passes the Meridian, and $59' 8''$ more. Which Addition of $59' 8''$ remaining always the same, these mean or equated Days will be constantly equal.

Since then the Sun goes unequally Eastwards with respect to the Equator; it will sometimes arrive at the Meridian sooner than this imaginary Star, and sometimes later: The Difference is the Difference between true and apparent Time: Which Difference is known by having the Place of the imaginary Star in the Equator; and the Point of the Equator which comes to the Meridian with the Sun. For the Arch Intercepted between 'em, being converted into Time, shews the Difference between equal and apparent Time; which, as before, is call'd the Equation of Time.

The Equation of Time then, may be defined the Time that flows while the Arch of the Equator intercepted between the Point determining the right Ascension of the Sun, and the Place of the imaginary Star, passes the Meridian: Or, as *Tychö*, and, after him, *Street*, state it, the Difference between the Sun's true Longitude, and his right Ascension.

To EQUATE Solar Days, that is, to convert apparent into mean Time, and mean into apparent Time.

1^o. If the Sun's right Ascension be equal to his mean Motion, the imaginary and true Sun will pass the Meridian at the same Time: Consequently, the true coincides with the apparent Time.

2^o. If the right Ascension be greater than the mean Motion, subtract the latter from the former; and turning the Difference into Solar Time, either subtract it from the apparent Time, to find the mean Time: or add it to the mean Time to find the apparent.

3^o. Lastly, if the right Ascension be less than the mean Motion, subtract the former from the latter, and turning the Difference into Solar Time, either add it to the apparent Time, to find the mean Time; or subtract it from the mean to find the apparent.

This Method of Equation obtains, if the Calculus be progressive; if it be Retrograde, that is, if the Time be reckon'd backwards, the Operation must be just the Reverse.

This Doctrine of the Inequality and Equation of natural Days, is not only of Use in Astronomical Computations, but also in the adjusting and directing of Clocks, Watches, and other Time Keepers: Hence we see, why a Pendulum, or other Movement, which measures equal Time, does not keep Pace with the Sun, which measures apparent Time; but is sometimes before, and sometimes later than the same. Whence, such Automata and Sundials, are found almost perpetually at Variance. See CLOCK and DIAL.

The Variations of the two Kinds of Time, are exhibited in the following Table, for every Day throughout the Year. 'Tis borrowed from Mr. *Flamsteed*; one Part of whose Praise it is, that he was the first who fully demonstrated and clear'd this Inequality of Natural Days: Tho' others, and even *Protonoy*, had a partial Notion of it.

The Use of the Table is obvious: A Clock, or Watch, that is to be kept to true or equal Time, must be so many Minutes and Seconds faster or slower than a Sundial, as is assign'd in the Table, for the respective Day: Or, if you would have it go by the Sun-Dial, it goes well, if it gains or loses each Day the Number of Minutes and Seconds in the Table.

A Table of the Equation of Natural Days, with the Regulation of a Movement by the same.

DAYS.	January.		February.		March.		April.		May.		June.		July.		August.		Sept.		Oct.		Nov.		Dec.		
	W. too fast.	W. too slow.	Min.	Sec.	Min.	Sec.	Min.	Sec.	Min.	Sec.	Min.	Sec.	Min.	Sec.	Min.	Sec.	Min.	Sec.	Min.	Sec.	Min.	Sec.	Min.	Sec.

EQUATION of the Centre, call'd also *Prosthapheresis*, and *total Prosthapheresis*, is the Difference between the true and mean Place or Motion of a Planet; or the Angle made by the Lines of the true and mean Place or Motion; or, which amounts to the same, between the mean and equated Anomaly. See PROSTHAPHERESIS.

The Motions of the Sun and Moon, are affected with various Inequalities; whence arises a Necessity of so many Equations. See MOON, &c.

From these Inequalities, the Moon's Place became exceeding difficult to be determined; to remove which Difficulty, is the great Design of Sir *Isaac Newton's* new Theory

Theory of the Moon; wherein we are furnish'd with Equations for all the Inequalities of the mean Motion. The principal are,

Annual EQUATIONS of the mean Motion of the Sun and Moon, and of the Apogee and Nodes of the Moon. The Annual Equation of the mean Motion of the Sun, depends on the Eccentricity of the Earth's Orbit round the Sun, which is $16 \frac{1}{2}$ of such Parts, whereof the Earth's mean Distance from the Sun is 1000: Whence its Denomination of Equation of the Centre. This, when greatest, is 1 Deg. 56' 20". The greatest Annual Equation of the Moon's mean Motion is 11' 49": That of her Apogee 20': And of her Node 9' 30".

Which four Annual Equations are always mutually proportional one to another: Wherefore, when any of them is at the greatest, the other three will also be greatest; and when any one lessens, the other three will also be diminished in the same Ratio.

The Annual Equation of the Sun's Centre being given, the three other corresponding Annual Equations will be also given; and therefore a Table of that will serve for all. For if the Annual Equation of the Sun's Centre be taken from thence, for any Time, and be called P, and let $\frac{1}{2} P$ (Tab. Astronomy Fig. 51.) = Q, $Q + \frac{1}{2} P$ = R, $\frac{1}{2} P = D$, $D + \frac{1}{2} D = E$, and $D - \frac{1}{2} D = F$; then shall the Annual Equation of the Moon's mean Motion for that Time be R, that of the Apogee of the Moon will be E, and that of the Node F.

Only observe, that if the Equation of the Sun's Centre be required to be added; then the Equation of the Moon's mean Motion must be subtracted, that of her Apogee must be added, and that of the Node subtracted. And on the contrary, if the Equation of the Sun's Centre were to be subtracted, the Moon's Equation must be added, the Equation of her Apogee subtracted, and that of her Node added.

There is also an Equation of the Moon's mean Motion, depending on the Situation of her Apogee in Respect of the Sun; which is greatest, when the Moon's Apogee is in an Oclant with the Sun; and is nothing at all, when it is in the Quadratures, or Syzygies. This Equation, when greatest, and the Sun in Perigee, is 3 Min. 56 Seconds. But if the Sun be in Apogee, it will never be above 3 Min. 54 Seconds. At other Distances of the Sun from the Earth, this Equation, when greatest, is reciprocally as the Cube of such Distance. But when the Moon's Apogee is any where but in the Oclants, this Equation grows less, and is mostly at the same Distance between the Earth and Sun, as the Sine of the double Distance of the Moon's Apogee, from the next Quadrature or Syzygy, to the Radius. This is to be added to the Moon's Motion, while her Apogee passes from a Quadrature with the Sun to a Syzygy; but is to be subtracted from it, while the Apogee moves from the Syzygy to the Quadrature.

There is, moreover, another Equation of the Moon's Motion, which depends on the Aspect of the Nodes of the Moon's Orbit with the Sun: And this is greatest, when her Nodes are in Oclants to the Sun, and vanishes quite, when they come to their Quadratures or Syzygies. This Equation is proportional to the Sine of the double Distance of the Node from the next Syzygy, or Quadrature; and at greatest, is but 47 Seconds. This must be added to the Moon's mean Motion, while the Nodes are passing from their Syzygies with the Sun, to their Quadratures with him; but subtracted while they pass from the Quadratures to the Syzygies.

From the Sun's true Place take the equated mean Motion of the Lunar Apogee, as was above shew'd; the Remainder will be the Annual Argument of the said Apogee. From whence the Eccentricity of the Moon, and the second Equation of her Apogee may be compared.

EQUATOR, or ÆQUATOR, in Astronomy, and Geography, a great moveable Circle of the Sphere, equally distant from the two Poles of the World, or having the same Poles with those of the World. See CIRCLES.

Such is the Circle DA, (Tab. Astronomy. Fig. 32.) its Poles being P and Q.

It is call'd the **Equator**, by Reason when the Sun is therein, the Days and Nights are Equal; whence also it is call'd the **Æquinoctial**; and when drawn on Maps, and Planispheres, the **Æquinoctial Line**, or simply the **Line**. See ÆQUINOCTIAL.

Every Point of the **Equator** is a Quadrant's Distance from the Poles of the World; whence it follows, that the **Equator** divides the Sphere into two Hemispheres, in one of which is the Northern, and in the other Southern Pole. See HEMISPHERE.

By the Passages, or Transits of Arches of the **Equator** over the Meridian, its equal or mean Time is estimated: Hence we have frequent Occasion for the Conversion of Degrees of the **Equator** into Time; and, again, for the Re-conversion of Parts of Time into Parts of the **Equator**.

For Performance whereof, we subjoin the following Table; wherein are exhibit the Arches of the **Equator**, which pass the Meridian in the several Hours, Minutes, &c. of Equated, or mean Time. See EQUATION of Time.

Conversion of Parts of the Equator into Time, and vice versa.							
Deg. of Equat.	Hours		Hours	Deg. of Equat.	Hour. Min.		Deg. of Equat.
	I	II			I	II	
Min.	II				Sec.	II	
Sec.	III				Third.	III	
Third.	IV				Fourth.	IV	
1	0	4	1	15	1	0	15
2	0	8	2	30	2	0	30
3	0	12	3	45	3	0	45
4	0	16	4	60	4	0	60
5	0	20	5	75	5	0	75
10	0	40	6	90	6	1	30
15	1	0	9	135	10	2	30
30	2	0	12	180	20	5	0
60	4	0	15	225	30	7	30
90	6	0	18	270	40	10	0
180	12	0	24	360	50	12	30
360	24	0	24	360	60	15	0

The Use of the Table is obvious; suppose, e. gr. it were required to turn $19^{\circ} 15' 7''$ of the **Equator** into Time: Against 15 Deg. in the first Column, we have $1^h 0^m 00''$: Against 4 Deg. we have $16^m 0''$: Against 10 Minutes, $40^m 3''$: against 3 Minutes, $15^m 0''$: Against 5 Seconds, we have $0^m 20''$; and against 2 Seconds, $8''$: Which added together, give $1^h 16^m 52^s 28''$.

Again, suppose it were required to find how many Degrees, Minutes, &c. of the **Equator**, answer to 23 Hours 25 Min. 17 Sec. and 9 thirds. Against 23^h in the fourth Column of the Table you have 315° : Against 2 Hours, 30° : Against 20', 5° : Against 10 Sec, $2^{\circ} 30''$: Against 5 Sec. $1^{\circ} 15''$: Against 2 Sec. $30^m 0''$; against 6 Thirds, $0^m 45''$: Which added together give $357^{\circ} 19' 17'' 15'''$.

The **Elevation, or Altitude of the EQUATOR**, is an Arch of a Vertical Circle, intercepted between the **Equator** and the Horizon. The **Elevation of the Equator**, with that of the Pole, is always equal to a Quadrant. See ELEVATION.

EQUERY, or ECURY, a grand Stable, or Lodge for Horses, furnish'd with all the Conveniences thereof; as Stalls, Manger, Rack, &c.

Some hold that Stable, in Propriety, relates only to Ballocks, Cows, Sheep, Hogs, &c. And **Equery** to Horses, Mules, &c.

A **single Equery**, is that provided for one Row of Horses: A **double Equery** is that provided for two, with a Passage in the middle, or two Passages; the Horses being placed Head to Head: As in the little **Equery** at Versailles.

Under **Equery** is sometimes also comprehended the Lodgings, and Apartments, of the **Equeries**, Grooms, Pages, &c.

The Word is form'd from the French **Ecurie**, which signifies the same Thing. Some, again, derive **Ecurie** from the Latin **Scuria**, which is not only a Place for Beasts to be put up in, hat also a Grange, or Barn. But a more probable Derivation is from **Equite**, a Stable for Horses, of **Equus**, Horse.

Equery, Ecueryer, is also an Officer, who has the Care and Management of the Horses of a King, or Prince.

Of these **Equeries**, there are a great Number in the King of France's Service: As the **Grand Ecuery**, call'd absolutely **Monsieur le Grand**; one of the principal Offices of the Crown, and a Branch of that of Constable; answering to the Master of Horse among us. He has the chief Intendance and Direction of the great and little **Ecurie**, and disposes of all the vacant Posts therein: the first great **Ecueryer** of the great **Ecurie**, who has the Command thereof in the Absence of the **Grand Ecuery**: The first **Ecueryer** of the little **Equeries** call'd absolutely **Monsieur le Premier Ecuery Cavaladeur**, who commands the **Equery** of Horses for a Prince's own Riding: A **Ecueryer de Main**, who not only directs the **Ecurie**, but also attends his Master in walking, &c. call'd also **Gentlemen-Uhers**, and **Concoisseurs d'Honneurs**: **Ecueryer Trenchant**, the King's Carver and Severer: **Ecueryer Bouche**, who ranges the Dishes and Plates on the Table: **Ecueryer de Cuisine**, &c.

ESQUIRES are particularly used among us, for Officers of the King's Stables; who when his Majesty goes Abroad, ride in the leading Coach; are in Waiting one at a Time monthly, and have a Table with the Gentlemen Officers during the Time.

They used to ride on Horse-back by the Coach-Side, when the King travelled; but that being more expensive to them, than necessary to the Sovereign, it has been discontinued. There are Six of them, and their Salary is 300*l.* per Annum each.

The *Esquires* of the Crown Stable have that distinct Appellation, as being employed in managing and breaking the Saddle Horses, and preparing them for the King's Riding.

One of them is, or always should be, in close Waiting at Court; and when his Majesty rides, holds the Stirrup, whilst the Master of the Horse, or one of the *Esquires*, in his Absence, assists in mounting him; or when his Majesty rides, they usually attend him. They are two, and their Salary is 256*l.* per Annum each.

ESQUES AVRAINS, is used to signify a Knight Bachelor; call'd *Avrains*, because anciently none but Knights might gild or beautify their Armour, or other Habillments of War, with Gold. See **KNIGHT**.

However, in Law, this Term is not used; but instead of it *Miles*; and sometimes *Chevalier*. See **MILES**, **CHEVALIER**, &c.

EQUESTRIAN, EQUESTRIAN, a Term rarely used, but in the Phrase *Equestrian Statue*, which signifies a Statue representing a Person mounted on Horseback. See **STATUE**.

The *Fortuna Equestris*, in ancient Rome, was a Statue of that Goddess on Horseback.

We sometime also say, *Equestrian Column*. See **COLUMN**.

And *Equestrian Order*, which signified, among the *Romans*, the Order of Knights, or *Equires*. See **KNIGHT**.

The Word is form'd of the Latin, *Equus*, Knight, Horseman; of *Equus*, Horse.

EQUILANGULAR, or EQUIANGULAR, in Geometry, is applied to Figures whose Angles are all equal. See **ANGLE**.

A *Square* is an *Equiangular Figure*. See **SQUARE**.

All equilateral Triangles are also *Equiangular*. See **EQUILATERAL**.

When the three Angles of one Triangle, are severally equal to the three Angles of another Triangle; the Triangles are also said to be *Equiangular*. See **TRIANGLE**.

EQUICULUS, Equuleus, or Equus minor, a Constellation of the Northern Hemisphere. See **EQUULEUS**.

EQUICRURAL, or EQUICRURAL Triangle, is what we more usually call an *Isosceles*. See **ISOSCELES**.

EQUIDIFFERENT, or EQUIDIFFERENT, in Arithmetic. If in a Series of three Quantities, there be the same Difference between the first and second, as between the second and third, they are said to be *continually Equidifferent*: But if in a Series of four Quantities, there be the same Difference between the first and second, as between the third and fourth, they are said to be *differently Equidifferent*. Thus, 3, 6, 7, and 10, are differently *Equidifferent*; and 3, 6, and 9, continually *Equidifferent*.

EQUIDISTANT, or EQUIDISTANT, in Geometry, a Term of Relation between two Things, which are every where at an equal, or the same, Distance from each other. See **DISTANCE**.

Thus parallel Lines are said to be *Equidistant*, as they neither approach nor recede.

Parallel Walls are *Equidistant* from each other. See **PARALLEL**.

EQUILATERAL, or EQUILATERAL, is applied to any Thing whose Sides are all equal. Thus, an *Equilateral Triangle*, is that whose Sides are all of equal Length. In an *Equilateral Triangle*, all the Angles are likewise equal. See **TRIANGLE**.

All regular Polygons, and regular Bodies, are *Equilateral*. See **POLYGON**.

An *Equilateral Hyperbola*, is that wherein the conjugate Axes, as A B, and D E, are equal. (See *Conick's Fig. 20.*)

Hence, as the Parameter is a 3^d Proportional to the conjugate Axes, it is also equal thereto. Consequently, in the Equation $y^2 = b x + h x^2$; a, make $b = a$; And the Equation $y^2 = a x + x^2$, defines the Nature of an *Equilateral Hyperbola*. See **HYPERBOLA**.

EQUILIBRIUM, or EQUILIBRIUM, in Mechanics, a Term implying an exact Equality of Weight between two Bodies, compared with each other. See **WEIGHT**.

Thus, we say a Balance is in *Equilibrio*; when the two Ends are so exactly poisd, that neither of 'em

ascends or descends, but both retain their parallel Position to the Horizon. From which Circumstance the Word is originally taken; as being a Compound of *æquus*, equal, and *libra*, Balance.

Whence we frequently use the Word *Balance* in lieu thereof. See **BALANCE**.

The *Equilibrium* of Fluids makes a considerable Part of the Doctrine of Hydrostatics. See **FLUID**.

The Term *Equilibrium*, is also used figuratively on other Occasions. A Painter must take Care to observe the *Equilibrium* of his Figures, i. e. to dispose 'em well on their Center of Gravity, that they mayn't seem ill supported, or ready to tumble.

Thus, e. gr. if one Arm be moving forward, the other must be proportionally backward to poise the Figure.

In a Picture, there should be an *Equilibrium* between one Part and another: That is, the Objects are to be distributed so, as to balance, and contrast each other; and not too many, e. gr. be crowded on one Side, and the other left bare. — Peace is never well secured, unless the Neighbouring States are in *Equilibrio*.

EQUIMULTIPLE, in Arithmetic and Geometry, is applied to simple Magnitudes, when multiplied equally, i. e. by equal Quantities, or Multipliers. See **MULTIPLICATION**.

Thus, taking A as many Times as B; or multiplying 'em equally, there will still remain the same Ratio between the Magnitudes thus multiplied, as between the primitive Magnitudes before Multiplication.

Now, those Magnitudes, thus equally multiplied, are call'd *Equimultiples* of the original ones A and B: Whence we say, that *Equimultiples* have the same Ratio as the simple Quantities. See **RATIO**.

In Arithmetic, we generally use the Term *Equimultiples* for Numbers which contain equally, or an equal Number of Times, their *Submultiples*.

Thus 12 and 6 are *Equimultiples* of their *Submultiples* 4 and 2; inasmuch as each of them contains its *Submultiple* three Times. See **SUBMULTIPLE**.

EQUINOCTIAL, or EQUINOCTIAL, in Astronomy, a great and immoveable Circle of the Sphere, under which the *Equator* moves in its diurnal Motion. See **SPHERE**.

The *Equinoctial*, or *Equinoctial Line*, is ordinarily confounded with the *Equator*; but there is a Difference: the *Equator* being moveable, and the *Equinoctial* immoveable; and the *Equator* drawn about the Convex Surface of the Sphere, but the *Equinoctial* on the Concave Surface of the *magnum Orbis*. See **EQUATOR**.

The *Equinoctial* is conceiv'd, by supposing a Semi-diameter of the Sphere, produced thro' a Point of the *Equator*, and there, by the Rotation of the Sphere about its Axis, describing a Circle on the immoveable Surface of the *primum Mobile*.

Whenever the Sun, in his Progress thro' the Ecliptic, comes to this Circle, it makes equal Days and Nights all around the Globe; as then arising due East, and setting due West, which he never does at any other Time of the Year. See **DAY**.

And hence the Denomination, from *æquus*, and *nox*, Night; *quis æquet diem nocti*. See **DAY** and **NIGHT**.

The *Equinoctial*, then, is the Circle which the Sun describes, or appears to describe, at the Time of the *Equinoxes*; that is, when the Length of the Day is every where equal to that of the Night; which happens twice per Annum. See **EQUINOX**.

EQUINOCTIAL, in Geography. See **EQUATOR**.

People who live under this Circle, by Geographers and Navigators call'd the *Line*, have their Days and Nights constantly equal. And at Noon, the Sun is in their *Zenith*, and casts no Shadow. See **ASCIT**.

From this Circle, is the Declination, or Latitude of Places, accounted in Degrees of the Meridian. See **LATITUDE**, &c.

EQUINOCTIAL Points, are the two Points wherein the *Equator* and *Ecliptic* intersect each other. The one, being in the first Point of *Aries*, call'd the *Vernal*; and the other in the first Point of *Libra*, call'd the *Autumnal Point*. See **POINT**.

EQUINOCTIAL Colour, is that passing thro' the *Equinoctial Points*. See **COLOR**.

EQUINOCTIAL Dial, is that whose Plane lies parallel to the *Equinoctial*. See **DIAL**.

EQUINOX, or EQUINOX, in Astronomy, the Time when the Sun enters one of the *Equinoctial Points*.

That when he enters the *Vernal Point* is particularly denominat'd the *Vernal*; and that in the *Autumnal Point*, the *Autumnal Equinox*. See **EQUINOCTIAL Points**.

The *Equinoxes* happen when the Sun is in the *Equinoctial Circle*; when, of Consequence, the Days are equal to the Nights throughout the World, which is the Case twice

twice a Year; viz. About the 10th of March, and the 12th of September; the first of which is the *Vernal*, and the second the *Autumnal Equinox*.

As the Sun's Motion is unequal, that is, sometimes swifter, and sometimes slower; (from the Causes already explain'd under the Article EQUATION) it comes to pass, that there are about Eight Days more from the *Vernal*, to the *Autumnal Equinox*, than from the *Autumnal* to the *Vernal*: The Sun spending more Time in travelling thro' the Northern, than the Southern Signs.

According to the Observations of M. Cassini, the Sun is 186 d. 14 h. 55' in the Northern Signs; and only 178 d. 14 h. 56' in the Southern. The Difference of which is 7 d. 25 h. 57'.

The Sun being continually advancing forwards in the *Ecliptic*, and gaining a Degree every Day; he makes no Stay in the *Equinoctial Points*, but the Moment he arrives in 'em, leaves 'em.

Of Course, therefore, tho' the Day the Sun enters the *Equinoctial Point*, is call'd the *Equinox*, as being reputed equal to the Night; yet is not precisely so, unless the Sun enter the *Equator* at Mid-day. For if the rising Sun should enter the *Vernal Equinox*, at setting, he will have departed from it, and have got Northwards about 12'; Consequently, that Day will be somewhat longer than 12 Hours, and the Night proportionably shorter.

The Time of the *Equinoxes*, i. e. the Moment in which the Sun enters the *Equator*, is found by Observation; the Latitude of the Place of the Observer being given.

Thus, in the *Equinoctial Day*, or near it, take the just Meridian Altitude of the Sun; if this be equal to the Altitude of the *Equator*, or the Complement of the Latitude, the Sun is that very Moment in the *Equator*. If it be not equal, the Difference is the Sun's Declination. The next Day observe the Meridian Altitude as before, and find his Declination: If the Declination be of different Kinds, viz. the one North, and the other South, the *Equinox* has happen'd in the Interval of Time between 'em. Otherwise, the Sun has either not enter'd the *Equinoctial*, or had pass'd it at first. From these two Observations, a Trigonometrical *Calculus* gives the Time of the *Equinox*.

It is found by Observation, that the *Equinoctial Points*, and all the other Points of the *Ecliptic*, are continually moving backward, or in *Antecedentia*, that is, Westward. This retrograde Motion of the *Equinoctial Points*, is that famous and difficult Phenomenon, call'd the *Precession of the Equinoxes*. See PRECESSION of the Equinoxes.

EQUIPAGE, a Ship's Crew; or the Officers, Soldiers, Sailors, and other Persons, that man and manage the same; with the Arms, Provisions, Merchandizes, &c. where-with it is loaded. See SHIP, &c.

The Sailors that are to work and manage a Ship, are regulated by the Number of Lafts it may carry; each Laft making two Tun.

The *Equipage* of a Dutch Ship, from 40 to 50 Lafts, is 7 Sailors and a Swabber; from 50 to 60 Lafts, the *Equipage* consists of 8 Men and a Swabber; and thus increases at the Rate of one Man for every 10 Lafts, so that a Ship of 100 Lafts has 15 Men, &c.

English and *French Crews*, are usually stronger than Dutch; but always about the same Proportion.

EQUIPPE, in Heraldry, expresses a Knight equip'd, i. e. arm'd at all Points.

EQUIPOLLENCE, in Logic, is when there is an Equivalence between two or more Terms, or Propositions; i. e. when they signify one and the same Thing, tho' they express it differently. Such Propositions, &c. are said to be *Equipollens*. See EQUIVALENT.

EQUITY, is Justice, or Right, mitigated and temper'd by the Consideration of particular Circumstances; or a Correction, or Moderation of the Severity of some Law; or a Temperament, which, without being unjust, abates the Rigour of some just Law. See LAW.

This is what the *Greeks* call *Epikaites*. The utmost Severity of a good Law, is frequently contrary to Justice; it should always have *Equity* for its Rule and Guide. *Suum cuique jus, sepe summa injuria*.

The Foundation of *Equity*, is not that there is any Mistake in the Law; but that the Law was laid down universally; when as all Circumstances could not be consider'd, or taken in under one Law.

Equity, therefore, is not so much a Correction of a Law, as an Amendment; nor yet so properly an Amendment of the Law it self, as of the Opinion arising from its being ill understood, or ill applied.

In this it is distinguish'd from a *Dispensation*, which takes away the Obligation of the Law in some particular Case; whereas a Correction does not take away any Thing of the Obligation, but only shows in what Sense it is to

be taken, left there should be imagin'd any Obligation, where there is none.

For an Instance, suppose it an express Law, that the City being now besieg'd with an Enemy, the Gates be all shut; and suppose it fall out, that the Enemy is then in pursuit after some of the Citizens by whom it is defend'd; so that it would be highly prejudicial thereto, not to open 'em the Gates: *Equity* here decrees the Gates to be open'd, contrary to the express Word of the Law.

Thomas Aquinas propoſes another Instance: Suppose it Law, that whoever refuses to restore what had been committed in Trust to him, shall pay a grievous Mult; and suppose some Person refuse to restore a Sword lent with him, to a Mad-man. This Case is comprehended in the Sense and Intendment of the Law, tho' not in the Words thereof. And the Legislator himself, if he were present, would except it. *Equity*, therefore, must here step in, to correct or supply the Defects of the Judge, and acquit the Man of the Mult.

In this View, *Equity* is of two Kinds, and those of contrary Effects: The one abridges, and takes from the Letter of the Law; and the other enlarges, and adds thereto.

The first is defin'd, the Correction of a Law, made generally in that Part wherein it fails: As, suppose an Act made, That whoever does such a Thing, shall be a Felon, or suffer Death; yet if a Madman, or an Infant, who hath no Discretion, do the same, he shall neither be a Felon, nor suffer Death.

The other is defin'd an Extension of the Words of the Law, to Cases unexpress'd, which yet have the same Reason; so that, when one Thing is enact'd, all other Things, which are of the like Degree, are so too.

Thus in the Statute which ordains, That in a Action of Debt against Executors, he that doth appear by Directors shall answer; doth extend, by *Equity*, to Administrators; for such of them as shall appear first by Directors, shall answer by the *Equity* of the said Act: *Quia sunt in equali genere*.

EQUITY is also used for the Virtue of Justice. See JUSTICE.

EQUITY, in our Laws, &c. is frequently us'd for the Court of Chancery, where Controversies are supposed to be determin'd, according to the exact Rules of *Equity* and Conscience, by mitigating the Rigour of the Common Law. See CHANCERY.

Æquitas sequitur Legem, is an old Maxim in Law, but from the great Increase of Suits in Chancery, some have thought fit to give it this Construction, That in all Causes after a Man has been at Law, he must go into *Equity*.

EQUIVALENT, is understood of something that is equal in Value, Force, or Effect to another. See EQUIPOLLENCY.

Æquivalence is of various Kinds, in Propositions, in Terms, and in Things.

Equivalent Terms are, where several Words that differ in Sound, have yet but one and the same Signification; as *Every Body was there*, and *no Body was absent*; *Nihil non et omne*.

Æquivalence in Things, is either moral, physical, or spiritual. *Moral*, as when we say, that the commanding or advising a Murderer, is a Guilt *Equivalent* to that of the Murderer: *Physical*, as when a Man, who has the Strength of two Men, is said to be *Equivalent* to two: And *Spiritual*, whereby a less Weight becomes of equal Force with a greater, by having its Distance, or the like, increas'd.

EQUIVOCAL, EQUIVOQUE, is applied to an Expression that is dubious and ambiguous; or that may have several Senses, one true, and another false. See EQUIVOCATION.

EQUIVOCAL, EQUIVOCUM, EQUIVOQUE, in Logic, by the *Greeks* call'd *Homonymaton*, is any Word which under one Sense exhibits several Ideas, or is adapted to different Conceptions.

As the Word *Emperor*, which is both the Name of a Dignity, the proper Name of a Person, and the Name of a Plant. So also the Latin *Gallus*, which stands indifferently for a Cock, and a *Frenchman*.

In which Cases one Word denotes divers Conceptions, one Word divers Things. Whence that common Definition of *Equivocal* in the School, *quorum nomen est commune, Ratio vero Essentialis secundum illud distincta*.

The Philosophers have distinguish'd *Æquivocals*, into *Active* and *Passive*; or into *Æquivocal*, *Æquivocantia*, and *Æquivocata*.

Æquivoca Æquivocantia, or those that denominate and signify Things, are Words common to several Things in a very different Signification, i. e. to several Things which have a similar Essence, correspondent to the similar Denomination.

tion. *E. gr.* The Word *Taurus*, which stands for a Sign, a Mountain, and an Animal; and in one signifies a lowing Animal; in another, a Heap of Stones and Earth; and in the third, a Constellation, or System of Stars.

Equivoca Equivocata, or those that are called, or denominated; are the Things signified by ambiguous Names, *e. gr.* a Sign, a Mountain, and an Animal. Which last Species of *Equivocals* alone, *Aristotle* seems to have had in View in his Definition, which agrees to these, and these only.

EQUIVOCATION, the using a Term, or Expression, that has a double Signification. See **EQUIVOCAL**.

Equivocations are Expedients to save telling the Truth, and yet without telling a Lye for the Matter. The Fathers are great Patrons of *Equivocations*, and mental Reservations; holding, that the Use of such Shifts, and Ambiguities, is in many Cases allowable.

St. *Augustin*, particularly, is reproach'd with endeavouring to vindicate *Haac* for having his Wife from a Crime, by an *Equivocation*: *Tacuit aliquid veri, & non dixit aliquid falsi*. To advance a dubious Proposition, knowing it will be understood in a Sense different from that you give it in your Mind, is an *Equivocation*, in Breach of good Faith and Sincerity. See **TRUTH**, **FALSEHOOD**, &c.

EQUIVOCATION, or **EQUIVOCAL**, in Moral Theology, is strictly understood of a Term, or Phrase, with two different Significations; the one common, and obvious; the other more unusual, and remote; the latter of which being understood by the Speaker, but the former by the Hearers, they conceive something different from one another.

Of this we have an Instance in St. *John*, Chap. 11. where our Saviour is represented as saying, *Lazarus sleepeth*: For the Disciples taking the Word *Sleeping* in the usual Signification, concluded that *Lazarus*, whom they had been told was sick, began to take Rest, and would soon recover; but *Jesus*, taking the Words in a less, direct, and usual Signification, meant that *Lazarus* was dead.

When the *Equivoque* consists of several Words, 'tis properly call'd an *Ambipology*: Of which we have an Instance in St. *John*, Chap. 2. *Destroy this Temple*, says *Jesus* Christ, speaking to the Jews, and *I will raise it again in three Days*.

The Use of *Equivokes* has been greatly disputed among the modern Casuists: Many grave Authors deny that it is allowable to use them on any Occasion whatever. Their Reason is, that an *Equivoque* is to all Intents and Purposes the same with a Lye. See **FALSEHOOD**.

Others, on the contrary, particularly *Cassius*, a Divine famous among the Priests of the Oratory, hold a World of Difference between an *Equivocation* and a Lye; maintaining that it is ever criminal to use a Lye; but that there are some Occasions where an *Equivocation* may be used innocently: And such, in Effect, is the Sacrament of St. *Thomas*, St. *Antonin*, St. *Raymond*, and especially St. *Augustin*, as *Pa. Cabanis* seems to have demonstrated. *Lib. IV. Theor. de Prax. Jur. Can. Edit. Lugd. 1685. Cap. 4.*

EQUIVOCAL Generation, is a Method of producing Animals and Plants, not by the usual Way of Coition between Male and Female, but I know not what plastic Power, or Virtue in the Sun, &c. See **GENERATION**.

Thus Insects, Maggots, Flies, Spiders, Frogs, &c. have usually been supposed to be produced by *Equivocal Generation*, i. e. by the Heat of the Sun warming, agitating and impregnating the Dust, Earth, Mud, and putrified Parts of Animals.

This Method of Generation, which we also call *Spontaneous*, was commonly asserted and believed among the ancient Philosophers: But the Moderns, from more and better Observations, unanimously reject it, and hold that all Animals, nay and Vegetables too, are *Universally* produced, that is, by Parent Animals, and Vegetables of the same Species and Desomination. See **UNIVOCAL Generation**.

'Twere a Thing one would imagine sufficient to discredit the *Aristotelian*, or rather the *Egyptian Doctrine* of *Equivocal Generation*, to see Flies, Frogs, Lice, &c. to be Male and Female; and accordingly to engender, lay Eggs, &c.

To imagine that any of those Creatures could be spontaneously produced, especially in so romantic a Manner, as in the Clouds, as they particularly thought the Frogs were, and that they dropp'd down in Showers of Rain, were, certainly, highly unphilosophical.

Yet some, even to this Day, credit the raining of Frogs; and, among the rest, the very curious and learned Dr. *Lifter*, seems inclined to the Opinion: Instancing in Frogs, found on the Leads of the Lord *Alton's* Gatehouse at *Wick* in *Staffordshire*, which he imagines came there by some such Means. But we may make a Judgment of this, and a hundred the like Reports to be met with

in considerable Authors, from some other the like Relations that have been better inquired into. Such are several Reports of the raining of *Miller-seed*, *W bear*, *Whittings*, &c. An Account of which, with the Grounds of the Deceit, see under **RAIN** and **SNOW**.

The Doctrine of *Equivocal Generation* we call an *Egyptian Doctrine*, as having, in all Probability, had its Rise in *Egypt*, to save the Hypothesis of the Original Production of Men, and other Animals, out of the Earth, by Help of the Sun's Heat. To prove which, the *Egyptians*, as *Diodorus Siculus* observes, produce this Observation; that about *Thebes*, when the Earth is moisten'd by the Nile, and afterwards impregnated by the intense Heat of the Solar Rays, an innumerable Swarm of Mice do come forth: Whence he infers, that all Kinds of Animals might equally have arose out of the Earth at the Beginning of Things. And from these, Bishop *Stillingfleet* takes the other Writers and Adherents, to the Doctrine of *Equivocal Generation*, *Mela*, *Pliny*, *Ovid*, &c. to have borrow'd the Hypothesis, without enquiring into its Truth. *Verban's Phys. Theor. Lib. IV. C. 15.*

EQUULEUS, among the Antients, was an Instrument of Torture, or Punishment; being a Kind of *Wooden-Horse*, made with very sharp Ridge, or Back, widening much in its Decent. See **PUNISHMENT**.

The Criminal being seated on the Ridge, Weights were hung to his Feet, to make his Seat more painful.

This Punishment is still retain'd in Cittadels and Armies; where the Soldiers of the Garrison, &c. are condemn'd to the *Wooden-Horse*, for divers Offences.

Hieronymus Megini, when a Prisoner among the *Turks*, wrote an express Treatise de *Equuleo*; and another of Bells; merely, as 'tis said, from his Memory, without any Assistance of Book. *Sigausus* has another Treatise on the same Subject.

EQUULEUS, in Astronomy, a Constellation of the Northern Hemisphere. See **CONSTELLATION**.

The Stars in the Constellation *Equuleus*, in *Ptolemy's* Catalogue are 4; in *Lycob's* 4; in *Mr. Flamsteed* Catalogue 10.

The Longitudes, Latitudes, Magnitudes, &c. whereof are as follows.

Stars in the Constellation EQUULEUS.

Name and Situation of the Stars.	R ^o	Longit.	Latitude.		Magnit.

EQUULEUS, in the Arts and Manufactures. See **HORSE**.
ERADICATIVE, in Medicine, An *Eradicative Cure* is that which takes away the Cause, or Root of the Distemper; in which Sense it stands oppos'd to *palliative*; which relieves for a Time, but not going to the Cause of the Disorder, does not prevent its Return. See **CURE**.

The Word is a Compound of *e* out, and *radix* Root.

ERANARCHA, a publick Officer among the ancient *Greeks*, whose Business was to preside over, and direct the Alms and Provisions made for the Poor.

The *Eranarcha* was properly the Administrator, or Commissioner of the Poor: When any Person was reduced to Poverty, taken Captive, or had a Daughter to marry, which he could not effect for Want of Money, &c. this Officer call'd an Assembly of Friends and Neighbours, and taxed each according to his Means and Estate, to contribute towards his Relief. This is what we learn from *Corn. Nepos*, in his Life of *Epaminondas*.

The Word is form'd of the *Greek* *εραν*, *Alms*, *Contribution*, and *αρχη*, *Command*.

ERASED, in Heraldry, expresses any Thing violently torn off from its proper Place.

It is used in Contra-distinction to *Coped*, which signifies a Thing clean cut off. The Family of *Cord* bears *Erasine*, a *deny Lion rampant* erased, *Azure*, &c.

ERASTIANS, a religious Sect, or faction, that arose in *England* during the Time of the Civil Wars.

They were thus call'd from their Leader *Thos. Erastus*; whose distinguishing Doctrine it was, that the Church had no Right to discipline, that is, no regular Power to excommunicate, exclude, censure, absolve, decree, or the like.

ERECT Flowers, are such as grow upright, without hanging or reclining the Head. See FLOWER.

ERECT Vision. See VISION.

ERECT { *Direct*
 { *Declining, &c.* } *Diast.* See DIAL.

ERECTION, the Act of raising, or elevating a Thing, in a right Line. See ELEVATION.

The *Erecting* a Perpendicular on a Line given, is a popular Problem in Geometry. See PERPENDICULAR.

The Term is also used figuratively; As, the *Erection* of a Marquisate into a Duchy; Bishopsricks can only be *Erected* by the King. It was antiently the Practice to *erect* Statues to great Men. See STATUE.

Cato, the Censor, being ask'd why a Statue was not *Erected* him? I had rather, says he, hear the Question made, than hear it ask'd why a Statue was *Erected* me.

ERECTION, is particularly used in Medicine, for the State of the Penis, when swell'd, and distended by the Action of the Muscles, call'd *Erectors*, or *Erectores*. See PENIS and ERECTOR.

There is also an *Erection* of the *Clitoris*, perform'd by Muscles provided for that Purpose. See CLITORIS, &c.

An Alternation of *Erection*, and Flaccidity in the Penis, *Dr. Drake* observes, is of absolute Necessity: The first to the Performance of its Office; the second for the Security of the Part. Without an *Erection* it were impossible to emit and lodge the Seed where it ought to be; and with a constant one, almost as impossible to secure the Part from external Injuries. — To say nothing of the Loss of Insiguation, which must be a necessary Consequence of constant *Erection*. See PRAPISMUS.

The *Erection* of the Penis, consists in a Distention of its *Corpora Cavernosa*, by an extraordinary Quantity of Blood pent up therein. See CAVERNOSA.

That the Blood is the Matter which distends the Penis in *Erection*, is evident from Abundance of Experiments; tho' the most convincing is that of firmly tying the Penis of an Animal (as has been frequently done to a Dog) in *Coitu*; wherein, nothing has been found but Blood to distend it. Hence, in the Bodies of Criminals, that hang long after Death, the Penis becomes erected; the Blood, in that Position, falling to the inferior Parts, and stopping there.

By blowing into the Blood Vessels after Death, the Penis becomes *Erected*. This was first discover'd by *Mr. Couper*, upon viewing its Veins, after he had distend'd 'em with Wind; whence it plainly appear'd, that the external Trunks pass'd, some under its Skin only, and some over the *Os pubis*: Beside, that a vast Number of other Veins on the *Dorsum penis*, unite and empty themselves into one Trunk, call'd *Vena penis*, which passes immediately under a transverse Ligament of the *Os pubis*, which is compress'd by the Approximation of the *Dorsum penis*, to the Ligament of the *Pubis*. This Application of the *Dorsum penis* is effected by its *Musculi Directores*, pulling down the *Crura* of the *Corpora Cavernosa* Penis, which are tied up at their Junctionure in the Body of the Penis, to the *Os pubis*, by the *Ligamentum Suspendens*. Now, this cannot happen to the cavernous Body of the *Urethra*, by Reason there is no Bone, whose Position can give Rise to a Ligament, which can have that Effect on its Veins: Wherefore, the *Musculi Acceleratores*, embracing the Veins of the Balb do that Office, tho' not so effectually as in the Penis it self.

Accordingly, the Glans is not always perfectly distended with the Penis, and soonest becomes flaccid on an *Erection*. See GLANS.

The Blood, by such Means, being preclud'd from its Return, the *Corpora Cavernosa* must of Necessity become distended, if we consider their Structure above-mentioned, with Respect to the Veins. The Arteries, which before were flaccid, have now their Trunks also distended, and do more plentifully import Blood into the *Corpora Cavernosa*.

But since it is absolutely necessary some Part of the detain'd Blood should be still passing off, lest it become stasious, and unfit for a Reflux; the *Vena preputii* communicate with those of the Penis it self; whereby Part of the Blood may be return'd from the Penis during its *Erection*, and give Way to a fresh Supply from the Arteries, and preserve the Circulation uninterupted. See CIRCULATION.

ERECTOR Clitoridis, in Anatomy, a Pair of Muscles arising from the Protuberances of the *Iscium*, and inserted into the spongy Bodies of the *Clitoris*; which they serve to erect in Coition. See CLITORIS.

ERECTOR Penis, a Pair of Muscles arising fleshy from the Protuberances of the *Iscium*, below the Beginning of the cavernous Bodies of the Yard, into whose thick Membranes they are inserted,

Their Use is to pull the Yard towards the *Os pubis*, whereby its great Vein is compress'd, and the redundant Blood denied its Passage under those Bones; which makes it swell. See ERECTION.

EREMITE. See HERMIT.

ERICHONIUS, in Astronomy, a Constellation, the same as *Auriga*. See AURIGA.

ERIDANUS, in Astronomy, a Constellation of the Southern Hemisphere. See CONSTELLATION.

The Stars in the Constellation *Eridanus*, in *Ptolemy's* Catalogue are 30: In *Lycob's* 19: In *Mr. Flamsteed's* 68: The Longitudes, Latitudes, Magnitudes, &c. whereof are as follow.

Stars in the Constellation ERIDANUS.

FRIGENS

Penis. See **ERECTOR Penis.**

ERMINE, in Heraldry, a white Field, or Fur, powdered, or interspersed with black Spots. See **FUR.**

It is supposed to represent the Skin of an Animal, of the same Denomination; which some will have a *Water Rat*, others a *Mustela*, or Sort of *Weasle*, and others an *Armenian Mouse*. In Effect, there is no

Animal whose Skin naturally corresponds to the Herald's *Ermine*.

The Animal is Milk white; and so far is it from Spots, that the Tradition has it, he will rather die, or be taken, than fully its Whiteness. Whence its symbolical Use.

But white Skins having for many Ages been used for the Linings of the Robes of Magistrates, and great Men; the Furriers, at length, to add to their Beauty, used to sew Bits of the Black Tails of those Creatures upon the white Skins; to render them the more conspicuous. Which Alteration was introduced into Armoury.

The Sable Spots in *Ermine* are not of any determinate Number, but may be more or less, at the Pleasure of the Painter or Furrier.

ERMINE, is used by some *English* Writers for the Reverse of *Ermine*, i. e. for white Spots on a black Field; but on what Foundation no body can tell; for the *French*, from whom we have our Heraldry, have no such Term; but call this black powdered with white, *Contre Ermine*; as denoting the Counter, or Reverse of *Ermine*; which is white powdered with black.

ERMINEE. A *Cross* **ERMINEE**, is a *Cross* composed of four *Ermine* Spots, placed in that Figure. See **CROSS.**

It must be observ'd, that the Colours in such Arms are not to be express'd; by reason, neither the *Cross*, nor the Arms, can be of any Colour but white and black.

Colombiere blazons it *quatre queues de Hermine en Croix*. The Editor of *Guillou* describes it thus; A *Cross* of four *Ermines*; or, as I think more properly, of four *Ermine* Spots in *Cross*. 'Tis the Coat of *Hurston* in *Cheshire*.

ERMINTES, shew'd seem a diminutive of *Ermines*, and naturally to signify little *Ermines*; but 'tis otherwise. *Ermines* expresses a white Field powdered with black; only every Spot has a little red Hair therein.

Some Authors use the Word *Erminites*, for a yellow Field powdered with black; which the *French* expects much better by *er senso d'Ermines de Sable*.

FROSION, in Medicine, the AG of sharp, acid Fluids, or Humors, gnawing and tearing off Parts from the Flesh, and other Substances. Arsenic, and other Poisons, make *Ergross* in the Intestines. See **CORROSION.**

EROTIC, is applied to any Thing which has a Relation to the Passion of Love. See **PASSION.**

In Medicine, we particularly use the Phrase *Delirium Eroticum*, for a Kind of Melancholy contracted thro' Excess of Love. See **MELANCHOLY.**

Tho', among the several Species of Pulses, there be no amorous Pulse, that is, no Pulse peculiar to that Passion; yet we can certainly discover where the Disorder is *Erotic*, by the beating of the Pulse, which, in that Case, is changeable, unequal, turbulent and irregular. Speak to the Patient of the Person he loves, and his Pulse instantly changes, becoming higher and quicker: And the Minute you change the Conversation, the Pulse is lost again, and is disturb'd a-new. See **PULSE.**

The Word is derived from the *Greek*, *eros*, Love; whence *ignota*.

ERRANT, in Law, the same with *Itinerant*, attributed to Judges that go the Circuit: To Bailiffs at large, &c. See **JUSTICE**, **BAILIFF**, &c.

ERRATA, a List at the Beginning or End of a Book, containing the Faults that have escap'd in the Impression, and, sometimes, even in the Composition, of the Work. See **PRINTING.**

Lindenberg has an express Dissertation on Typographical *Errata*, de *Erroribus Typographicis*; wherein he observes, that there is no Book exempt from 'em, not even the Sacred Books. He sets himself to enquire into all the Causes thereof; and proposes Means to prevent 'em. But he advances nothing on that Article, but what is either common or impracticable. The Authors, Compositors, and Correctors of the Press, he says, must do their Duty; who disputes it? Each Author must have his own Printing-Press at Home, as *Callistus* and *Optimus* had; who can do it?

Fa. Hardouin's Book on Medals, might be entitled the *Errata of the Antiquaries*; and the Critiques on History by *Perizonius*, the *Errata of the ancient Historians*.

In the same Sense, *M. Bayle's* Dictionary might be call'd the *Errata of Möreri*.

ERRATIC, in Astronomy, an Epithet applied to the Planets, which are call'd *Erratic*, or wandering Stars, in Contra-distinction to the fix'd Stars. See **PLANET.**

There is also a Kind of Fever call'd *Erratic*. See **FEVER.**

ERRHINA, **ERRHINES**, in Medicine, are Remedies taken by the Nose, to enliven the Spirits, stop Bleeding, &c. but principally to purge the Humidities of the Head.

Of these, some are taken in *Powders*, as *Betony*, *Tobacco*, *Marjoram*, *Iris*, white *Hellebore*, *Euphorbium*, &c.

Others in a *liquid* Form, made of the Juice of *Marjoram*, *Sage*, *Beet*, *Cyclamen*, *Iris*, &c.

Others in Form of *Liniments*, incorporated with *Unguent*, *Rosat*.

Others, *solid*, form'd like *Pyramids*, to stop Bleeding at the Nose; composed of *Armenian Bole*, *Terra sigillata*, *Mastic*, human or *Hogs-Blood* dried, &c.

Such *Errhina* as are dry, and made up in *Powders*, are properly call'd *Sternutatories*. The Moderns sometimes call 'em *Caput purgia*. See **STERNUTATORY.**

The Word is derived from *er*, *in*, and *eis*, *Nose*.

ERROUR, or **ERROR**, a Mistake of the Mind, in giving Assent to a Thing or Proposition which is not true. See **FALLACY.**

Some Philosophers define *Error* an AG of the Mind, whereby Things that should be joynd, are separated; or Things that should be separated, are joynd: Or a wrong Judgment, disagreeing with the Things whereon it is pass'd. See **JUDGEMENT.**

Error stands in Opposition to *Truth*, which consists in an Agreement between the Proposition, and the Thing whereof it is affirmed or derived. See **TRUTH.**

However, a bare Failure, or Non-attainment of Truth, does not constitute *Error*; that being common both to *Ignorance* and *Doubting*. See **IGNORANCE** and **DOUBTING.**

Error only stands distinguished from *Falseness*, in that the former is in the Mind, and the latter in the Proposition. See **FALSEHOOD.**

The great Origin of all *Error*, i. e. of believing that to be true, which is false, is a *Liberty*, or Power in the human Mind, of giving its Assent to Ideas or Propositions, that are obscure, as if they were perspicuous and plain. See **LIBERTY.**

Particular Causes of *Error* are, 1°. An Inadvertency, or Negligence, in passing Judgment, without using or attending to the Means proper to assist the Judgment. As if a Person should attempt to judge of the Height of the Pole, without proper Instruments, or Observations: Or determine about Nations without knowing their History.

2°. Ignorance, in not having inform'd the Understanding by Study and Application; or foolishly it with the Ideas that have an immediate Relation to the Matter in hand.

3°. Impatience of the Labour and Fatigue, of going thro' a long Chain of Reasons and Arguments; or of waiting for a necessary Number of Experiments; with a Fondness for the Opinion of being *knowing*; and a Prejudice for, or against, some particular Person, Sect, &c.

4°. The fallacious Rules of Probability, and Opinion. See **PROBABILITY** and **OPINION.**

5°. Interest, which makes us incline to believe those Things true, from which we are like to derive Advantage.

6°. Authority: Education: and vulgarly receiv'd Opinions, imbib'd ere we were qualified for judging. See **FAITH.**

Against all which, there is this one general Rule or Caution laid down, by *Fa. Mallebranch* and others, *viz.* Never to give our full Assent to any Proposition, unless the Evidence for it be so strong, as that we can no longer withhold it, without incurring the secret Reproaches of our own Reason.

Mr. Lock reduces the Causes of all our *Errors* to these four, *viz.* 1°. Want of Proof. 2°. Want of Ability to use 'em. 3°. Want of Will to use 'em. And, 4°. Wrong Measures of Probability.

F. Mallebranch considers five Occasional Causes of *Error*, or rather five different Kinds of *Errors*, accommodated to the different Manners we have of perceiving Things. 1°. *Errors of Sense*. 2°. Of the *Imagination*. 3°. Of the *Understanding*. 4°. Of our *Inclinations*. And 5°. Of the *Passions*. See **SENSE**, **IMAGINATION**, **UNDERSTANDING**, **INCLINATION**, and **PASSION.**

ERROUR, in Law, is generally understood of a Fault, or Oversight, either in Pleading, or in Process: Upon either of which is brought a *Writ*, by way of Remedy; call'd a *Writ of Error*; and in Latin, *de Errore Corrigendo*. See **WRIT.**

Fitzherbert defines a *Writ of Error* to be, that which lies to redress false Judgment given in any Court of Record,

cord, having Power by Charter, or Prescription to hold Plea of Debt or Trespass of above xx *Sh.*

There is also a *Writ of Error* for reversing a Fine, &c.
ERUCTION, *Belebbo*, the same as RUCTION. See RUCTION.

ERUDITION, Learning, or Knowledge; and chiefly that of Antiquity. See LEARNING.

The *Scaligers* were Men of deep *Eruition*: The Writings of *Mon. Lamy*, a Priest of the Oratory, are full of *Eruition*.

Mr. *Lock* says, 'tis of more Use to fill the Head with Reflections, than with Remarks of *Eruition*. If the Mind be not just and right, Ignorance is better than *Eruition*, which only produces Confusion and Obscurity: St. *Evremond*. M. *Balsac* calls a Heap of *Eruition* ill-cholin, the Luggage of Antiquity.

ERUGINOUS, or *ERUGINOUS*, some Thing partaking of, or like to the Rust of Brass, or Copper. See RUST and *ERUGO*.

ERUPTION, a bursting forth, or Exclusion of something before cover'd, or conceal'd.

The *Eruption of Pusles* in the Small-Pox, ordinarily begins on the 4th Day. See SMALL POX.

In the Incalculated Kind, the *Eruption* does not begin till the 9th Day. See INOCULATION.

The *Eruption of Vulcanus*, or Burning Mountains, is frequently the Effect, and Issue, of Earthquakes. See VULCANUS and EARTHQUAKE.

The *Eruptions of Mount Etna*, and *Vesuvius*, are observed to be somewhat periodical: They are of two Kinds; the one less violent, happening once in 2 or 3 Months, and lasting usually three or four Days, without much Damage to the adjacent Country.

The other more furious, and of longer Continuance, happening to Mount *Vesuvius* about once in 80 Years. The last, in 1632, was so violent, that, by the best of his [S. *Peccaccia*] Observations, it call the Rocks three Miles into the Air. Mr. *Harrop* in *Philosoph. Transact.* N^o. 202.

M. *Oldenbony* gives us an Historical Account of the several *Eruptions* of Mount *Etna*, recorded in Authors. The first whereof we have any credible Account, was at the Time of the Expedition of *Aeneas*, described by *Virgil*, *Aeneid*. Lib. III. The 24, described by *Thucydides*, was 476 Years before *Christ*: In the Time of *Roman* Consuls there were 4: Another in *Cesar's* Time, so fierce, that *Diodorus* assures us, the Ships near the Island of *Lipara* were burnt with the extreme Heat of the Water: Another under *Caligula*: Another at the Time of the Martyrdom of St. *Agatha*, said to have been stopp'd at her Intercession: Another in the Year 812: Several between the Years 1160 and 1169: Others in 1284, 1329, 1408, 1444, 1526, 1633, 1650. *Phil. Transact.* N^o. 48.

Another extraordinary *Eruption* happen'd in 1669, particularly described in the same *Transactions*, N^o. 51. It was preceded for the Space of 18 Days, with a dark thick Sky, Thunder, Lightning, and frequent Concussions of the Earth: The Place of the *Eruption* was 20 Miles from the old Mouth.

The Matter here yielded, was a Stream, or River of Metals and Minerals, render'd liquid by the Fierceness of the Fire, and boiling up, and gushing forth, as Water does at the Head of some great River; till, having run in a full Body for a Stone's Cast, or more, the Extremity thereof began to crust and curdle, and turn'd, when cold, into hard, porous Stones, call'd *Sciarr*, as resembling huge Cakes of Sea-Coal, full of a fierce Fire. These came rolling and tumbling over one another, and where they met a Bank, Wall, Building, &c. would fill up, and swell over; by their Weight bearing down any common Building, and burning up what was combustible. The Progress of this Inundation was at the Rate of a Furlong a Day; which it continued for 15 or 20 Days; running, at first, into the Sea, but afterwards into the City of *Catania*; in its Course, it overwhelm'd 14 Towns and Villages, containing three or four thousand Inhabitants. The Noise of the *Eruption* at the Mouth was heard 60 Miles.

Dr. *St. Clair*, in the *Philosoph. Transact.* gives an Account of a constant *Eruption* of Fire, on one Side of one of the *Appenines*, between *Bologna* and *Flavence*: A Spot of Ground 3 or 4 Miles in Diameter, he observes, incessantly sends up a Flame, rising very high, without Noise, Smoak, or Smeel; tho' it gives a very great Heat. In great Rains it sometimes intermits, but re-kindles with greater Vigour and Heat. Within 3 or 4 Yards of it, he adds, there grows Corn. The Flame he conjectures to arise from a Vein of Bitumen, or Naphtha. There are three other such Fires on the same Hills.

ERYSIPELAS, in Medicine, call'd also *Sacer Ignis*, and *St. Anthony's Fire*, a Disease of the Skin.

Its Seat is any Part of the Body, but principally the Face: It shews it self in a ruddy Inflammation of the Part, with

a little Swelling of the fame; as an intense Pain, and a Crowd of little Pusles, which, as the Inflammation increases, grow into *Vesiculae*. See SERIN.

The Disease spreads it self apace; shifting from one Place to another, with a Fever attending it. It attacks the Patient all at once, and chiefly when out in the Air; whence the Country People call it *blasting*, *Sisorasia*.

Dr. *Quincy* accounts for the *Erysipelas*, from a too fix'd Blood, which obstructing the Capillaries, occasions Inflammations: Others, from a too sharp and bilious Blood, which, on Account of its great Subtily, occasions no sensible Tumor; but spreads, or diffuses it self in Length and Breadth. Its Colour, tho' red, generally inclines towards a yellow, on Account of the Mixture of Bile; and always the more of the Bile, the more dangerous the Disease.

'Tis another Species of *Erysipelas*, tho' less usual than the former; most commonly arising from a too copious drinking of spirituous Liquors. It begins with a Fever, after which there is an universal Eruption of Pusles, almost over the whole Body, much like those after the stinging of Nettles, and sometimes rising into *Vesiculae*. At going off, they leave an insupportable Itching, and as often as scratch'd return again.

Ermuller gives it as the distinguishing Character of an *Erysipelas*, that when press'd very lightly by the Finger, there follows a white Spot, which presently after becomes red again; which does not happen in an ordinary Inflammation, unless when violently press'd. Scorbutic People are most subject to this Disease.

'Tis disput'd, whether Purging be good in the *Erysipelas*: *Sydenham* recommends it the next Day after Bleeding. *Ermuller* cautions us against 'em both; and recommends Disphoreticks. Dr. *Friens* observes, that in the last Stage of an *Erysipelas* of the Head, attended with a Coma, Delirium, &c. unless Catharticks will do good, the Case is desperate. All unctuous, astringent, and cold Applications, externally, are dangerous, and sometimes make the *Erysipelas* degenerate into a Gangrene.

The Word is form'd of the *Greek*, *ερση*, *trahere*, to draw; and *μαλα*, *prope*, by reason it withdraws it self towards the Skin: Whence *Galen* calls it the *Passio Cutis*.

The *Erysipelas* is either simple, or attended with an Ulcer.

ERYTHRODES, in Anatomy, the first of the proper Membranes that inclose the Testicles. See TESTICULUS.

It is interspersed with fleshy Fibres, derived to it from the *Cremaster Muscle*, which make it appear reddish.

And whence its Name from the *Greek*, *ερυθρος*, *red*, and *δω*, *form*.

ESCALADE, or *SCALADE*, a furious Attack upon a Wall, or a Rampart; carried on with Ladders, to mount by; without proceeding in Form, breaking Ground, or carrying on Works to secure the Men. See SCALADE.

ESCALOP-Shell, a frequent bearing in Coat Armour; proper, say our *Heralds*, for such as have distinguish'd themselves by Naval Exploits. *Azars*, three *Escalop-Shell*s Or, by the Name of *Moller*.

ESCAMBIO, was anciently a License granted any one for the making over a Bill of Exchange to another beyond Sea. See EXCHANGE.

For, by Stat. 3 *Rich. II.* no Person might exchange, or return Money beyond Sea, without the King's License.

ESCAPE, in Law, is either *voluntary*, or *negligent*.

Voluntary, is when one arrests another for Felony, or other Crime, and afterwards lets him go; in which *Escape*, the Party that permits it, is by Law guilty of the Fault, committed by the Person who *Escapes*; be it Felony, Treason, or Trespass.

Negligent Escape is, when one is arrested, and afterwards *Escapes* against his Will that arrested him; and is not pursued by fresh Suit, and taken again, before the Party pursued hath lost Sight of him.

ESCARTELE, in Heraldry, *Quarter'd*, or *Quarterly*. See QUARTER'D, &c.

ESCHAR, in Chirurgery, a hard Crust, or Scab, form'd on the Flesh, by means of a hot Iron, or a Caustic Medicine, or some sharp, corrosive Humour within.

The Caustic Stone, or *Lapis Infernalis*, produces a round *Eschar* in the Place where it has burnt. See ESCHAROTIC, CAUSTIC, and CAUTERY.

The Word is derived from the *Greek*, *εσχαρα*, *Crust*, or *Scab*. Some Authors derive it from *εσ* and *σκα*, *I burn*; but this comes with some Difficulty, by reason *εσκα* is wrote with a *σ*; and *εσχαρα* with a *χ*.

ESCHAROTICKS, Medicines, which being applied externally, produce *Eschars*, or Scabs, by burning the Flesh. See ESCHAR.

Such are the *Lapis Infernalis*, red precipitate, &c. these are also call'd *Causticks*. See CAUSTIC.

The Word is derived from the *Greek* *εσχα*. See ESCHAR. ESCHAT,

ESCHEAT, in Law, signifies any Lands, or other Profits, that fall to a Landlord within his Manor, by way of Forfeiture, or the Death of his Tenant dying without Heir general or special, or leaving his Heir within Age, and unmarried.

The Civilians call such Forfeitures *Bona Caduca*; and in the same Sense as we say the Fee is *Efcheated*, they say *bona aperta*.

The Word *Efcheata* sometimes also signifies a lawful Inheritance descending on the Heir. But then, it is usually distinguished by the Addition of *Relia*, as *Relia Efcheata*.

ESCHEAT, is also used for the Place or Circuit within which the King, or other Lord, hath *Efcheats* of his Tenants.

And sometimes for a Writ, lying where the Tenant having Estate of Fee Simple, in any Lands or Tenements holden of a superiour Lord, dies feild, without Heir general, or special: In which Case, the Lord brings this Writ against him that possesses the Lands, after the Death of his Tenant; and thereby recovers the same in lieu of his Services.

ESCHEATOR, an Officer, who anciently took Care of the King's *Efcheats* in the County, and certified them into the Exchequer, or Chancery. See **ESCHEAT**.

He was appointed by the Lord Treasurer; held his Office only for one Year; nor could any Person be *Efcheator* above once in three Years. But this Office having its chief Dependence on the Court of Wards, is now out of Date.

ESCHEQUER. See **EXCHEQUER**.

ESCHEVIN, or **ECHEVIN**, in the French and Dutch Polity; a Magistrate, elected by the Inhabitants of a City, to take Care of their common Concerns, the good Order, Convenience, and Decouragement of the City.

At Paris, there is a *Prevost*, and four *Efchevins*; in most other Cities, a *Maire*, or Mayor, and *Efchevins*.

In *Languedoc*, *Provence*, and *Dauphine*, they are call'd *Consuls*: At *Toulouse*, *Capitauls*: And *Jeruss* at *Bordeaux*.

Anciently the *Efchevins* were Assessors, and Counsellors, of the *Comites*, or Judges of Cities: On which Account they were call'd in some Places, *Pairs*, *Parcs*: They even took Cognisance of petty Causes themselves.

Du Cange observes, that the Judges, and their Assessors, who were chose by the Inhabitants, were call'd *Scabini*, *Echevins*, and their College, *Scabiniagium*, or *Efchevinage*. He adds, that some Authors call 'em *Pœnitii*, by reason their Office and Jurisdiction extended to the securing Peace in their City and *Banlieue*, call'd *Pax Villa*.

The *Efchevins* are also frequently what the *Ediles* were at Rome, the *Sheriffs* at London, and the Magistrate call'd *Podestats*, in the petty Cities of Italy. The Greeks call him *ἀρχηγός*, &c.

In *Holland*, the *Efchevins* judges of all Civil Affairs at first Hand. They also take Cognisance of criminal Affairs, and if the Criminal confets himself guilty, they can see their Sentence executed without Appeal. They can even give the Torture.

The Number is not the same in all Cities: At *Amsterdam* there are Nine, at *Rotterdam* Seven, &c.

ESCHRAKITES, or **ESRAKITES**, a Sect of Philosophers among the *Mahometans*, who adhere to the Doctrines and Opinions of *Plato*.

The *Efchrakites*, or *Mahometan Platonists*, place their highest Good and Happiness in the Contemplation of the Divine Majesty; despising the gross Imaginations of the *Alcoran* touching Paradise.

They are very careful in avoiding Vice, preserve an equal and easy Temper, love Music, and divert themselves with composing little Poems, or spiritual Songs.

The *Schetics*, or Priests, and the chief among the Preachers of the *Imperial* *Mosques*, are *Efchrakites*.

The Word is derived from the Arabic *سبحارا* *Sebaraka*, which in the Fourth Conjugation *سبحن* *Aschbraka*, signifies to shine, glister like the Sun: So that *Efchrakite* seems to import *Illumined*.

ESCHYNOGENOUS Plants, are the sensitive Plants; that is, such as upon approaching 'em shrink back, and contract their Leaves. See **SENSITIVE Plant**.

ESCLAIRCISSEMENT, a French Term, which we see retain'd in some late English Writers.

The Word properly signifies the Act, or Effect of clearing a Thing, or rendering it more bright and transparent; being form'd from the Verb *Eclaircir*, to clear, &c.

But it is chiefly used in a figurative Sense, for an Explication of an Obscurity, or Difficulty. *Eclaircissements* of the Dialogues of the Gods: The *Eclaircissements* of difficult Passages in the Bible, is only had from similar Passages, or Passages of the like Kind occurring in other Places.

ESCLATTE, in Heraldry, is applied to a Thing violently broke.

Thus a Bend, or other Partition, *Efclatte*, is represented torn, or broke off like a Piece of a ruin'd Wall; or rather, a Shield broke and shatter'd with the Stroke of a Battle Ax, &c.

ESCORT, a French Term, sometimes used in English Authors.

An *Efscort* is a *Convoy*, or Company of armed Men, attending some Person or Thing, in a Journey or Voyage, to defend or secure it from Injults. See **CONVOY**.

A Supply was sent to the Camp before *Aras*, with an *Efscort* of 1200 Men. In Times of War, Merchant Vessels seldom stir much abroad without an *Efscort* of Men of War. People that travel in *Turky*, generally take Janizaries for *Efscort* them.

After the Victory, the General sent the Prisoners under a strong *Efscort* into the neighbouring Towns. See **CONVOY**. Some derive the Word from the Latin *Cobors*.

ESCOUADE, is usually the third Part of a Company of Foot. See **COMPANY**.

It is divided for mounting of Guards, and for the more convenient relieving one another: It is equivalent to a *Brigade* of a Troop of Horse. See **BRIGADE**.

ESCRITOIRE. See **SCRITOIRE**.

ESCROL, or **SCROLL**, in Heraldry, a long Slip, as it were, of Parchment, or Paper, whereon a Motto is placed. See **MOTTO**.

Leigh observes, that no Person, under the Degree of a Knight, might, long after King Henry V, place his Crest on a Weath, as is now usually done, but only on an *Efscrol*.

ESCU, or **ECU**, the French Crown, of 60 *Sols*, or 3 *Livres*. See **CROWN**, **LIVRE**, &c. See also **COIN**.

The *Efscu* was thus called by Reason the Escutcheon, or Arms of France, which they call *Efscu*, was struck thereon. See **SHIELD**, **HELMET**, **ESCUTCHERON**.

ESCUAGE, or **SCUTAGE**, an ancient Kind of Knight's Service, call'd also *Service of the Shield*; the Tenant holding by which, was obliged to follow his Lord to the *Scottish*, or *Welsh* Wars, at his own Expence. See **CAPITE**.

He who held a whole Knight's Fee, was bound to serve with Horse and Arms for 40 Days: And he who held half a Knight's Fee, 20 Days. See **SERVICE**.

The same Term *Efscuage*, is also used for a Sum of Money, paid by such as held by this Tenure, when they neither attended the Wars, nor provided another in their Room.

ESCUAGE, was also a reasonable Aid, demanded by the Lord of his Tenants, who held of him in Knight's Service.

Concesserunt Domino Regi ad Maritimum filium suum de annibus qui tenent de Domino Rege in Capite de singlis Scutis 20 solidos solvendos, Matth. Paris, Anno 1242.

ESCULENTS, are Plants for Food, as Artichokes, Carrots, Turnips, Parsnips, Cabbages, Colliflowers, &c. See **PLANT**, **SALADE**, &c.

ESCURIAL, by the Spaniards wrote **ESCORIAL**, a Term that occurs pretty frequently in our Gazettees, and Journals of News.

Efscorial, is originally a little Village in Spain, situate in the Kingdom of *Toledo*, seven Leagues to the West of *Madrid*, and nine to the East of *Avila*; on the Side of a Chain of Mountains, call'd by some the *Carpetanin*, or *Carpetanien* Mountains, and by others the *Pyreneans*; as being a Branch of the *Pyrenean* Ridge.

Here, King Philip II. built a stately Monastery of the Order of St. *Ferous*; held by the Spaniards for one of the Wonders of the World; and call'd the *Efscorial*.

Fa. *Francisco de los Padros*, in a Description thereof, entitled, *Descripcion breve del Monasterio de S. Lorenzo el real del Efscorial*, &c. assures us it was built by that Prince in Memory of the Battle of S. *Quintin*, gain'd on the Day of S. *Lawrence*, *Lorenzo*, a famous Spanish Saint, and at his Intercession.

The King and Queen have their Apartments therein; the rest being possess'd by the Monks. Whence, many of the great Translations of that Court, are dated from the *Efscorial*.

It has a very fine Church, to which Philip IV. built a beautiful Chappel, call'd the *Pantheon*, wherein the Kings and Queens of Spain, who leave any Posterity, are Enterr'd. The rest being laid in another Vault of the same Church, together with the Infants & other Princes. See **PANTHEON**.

ESCUTCHEON, or **SCUTCHERON**, in Heraldry, the Shield, Coat, or Field, whereon the Bearing, or Arms of any Person is represented. See **SHIELD**, **COAT of Arms**, &c.

The Word *Efscutcheon* is form'd of the French *Efscuffon*, and that from the Latin *Scutum*, Shield; which was what Arms were originally bore on, e're ever they came

on Banners; and still, wherever they are placed, 'tis on something representing the Form of a Shield.

The Latin *Scutum*, no doubt, came originally from the Greek *Scuros*, Leather, wherewith the Shields were usually cover'd. See SHIELD.

On these Shields was always some particular Mark, Badge or Symbol painted: Which was the Original of Armoury. See ARMS.

The *Escutcheon* is of a Square Figure, excepting for the Bottom Part, which is usually a little rounded, ending with a Point in the middle.

Till within a few Hundred Years, the *Escutcheons* of the French and English were triangular: Those of the Spaniards, are still quite round at Bottom without any Point: Those of the Italians, are Oval: And those of the Germans, in Form of Cartouches.

The ancient *Escutcheons* were generally couch'd, or inclined; and they only began to place them upright, when Crowns, &c. were put over them by Way of Crest.

In France, *Escuffon*, *Esfuscheon*, was formerly restrain'd to a Shield, or Coat, pointed at Bottom; by which it was distinguish'd from the *Fisen*, which was quite Square, and was only allowed to be bore by the Counts and Viscounts. Those of inferior Quality were confined to the *Efcuffon*, or pointed *Fiscu*.

The several Parts, and Points of the *Efcutcheon*, have their several Names: The Point D, for Instance, is the *Dexter chief Point*; C the *middle Chief*; and S the *sinister Chief Point*: H is the *Honour Point*; F the *Fesse Point*; N the *Noon-bril Point*; d the *Dexter Base*; B the *Middle*, and s the *Sinister Base Point*.

The *Efcutcheon* is diversely denominat'd, according to its Divisions. It is call'd *dexter's*, when the perpendicular Line that divides it, is to the right of a third Part of the *Efcutcheon*: *Sinister's*, when on the left: *Tierced in Pal*, when it is double, and divides the whole *Efcutcheon* into three equal Parts: *Pales*, when increas'd to the Number of six, eight, or ten. A Horizontal Line makes the *Chief*, when at one third Part from the Top: The *Plein*, when at a third from the Bottom: And when double, in the middle, at an equal Distance from both Extremes, it makes the *Fess*, and the *Tierced in Fess*: When 'tis multiplied, it denominates it *fess'd*: When there are 8, or 10 equal Spaces, *Barrales*: A Diagonal from the Dexter of the Chief to the Sinister of the Point makes it *traverse*; the contrary, *double*. If it be doubled at equal Distances, the first makes *bande*, and the *seconde* in Bend; and the other *barre*, or *seconde* in Bar: Increasing the Number of the first makes *bande* and *cottice*; and increasing that of the second, *barre* and *traverse*.

ESCUTECHON OF PRETENSE, is an *Escutcheon*, or little *Efcutcheon*, which a Man, who hath married an Heiress, and hath issue by her, may bear over his own Coat of Arms; and in it the Arms of his Wife; and the surviving issue will bear both Coats Quarterly. See PRETENSE.

ESCUTECHON, and *ESCUTECHON-GRAFTING*, in Gardening. See ENGRAFTING.

ESPALIER, in the French Gardening, a *Wall-Tree*; or a Fruit-Tree which is not left to grow at Liberty in full Air, but has its Branches nail'd or fasten'd to a Wall, near which it is plant'd; and thus growing, it is made to conform it self to the flat, tho' unnatural, Figure thereof. See WALL-TREE.

ESPALIERS, in our Gardening, are Rows of Trees, plant'd in a curious Order round the Outside of a Garden, or Plantation, for the general Security thereof, from the Violence and Injury of the Winds; or else only round some Part of a Garden, for the particular Security of a Plantation of Orange Trees, Lemon Trees, Myrtles, and other tender Plants; or, lastly, for the bounding of Borders, Walks, Avenues, &c. See GARDEN, &c.

Espaliers are now come into mighty Use, with Respect to the first of these Intentions: In Effect, 'tis found by Experience, that the best Brick, or Stone Walls, are not of themselves sufficient Security to Fruit-Trees, from the Ravages of blighting Winds. See WALL.

The Reason may be, that being built close and compact, they repel the Winds, and by that Means damage the tender Plants, that lie within the Reach of the Repulsion. But these *Espaliers* serve to deaden the Violence of the Winds, so as the tender Greens, or Plants, encompass'd by them, rest serene and quiet.

Thus, if the *Espaliers*, for Instance, be of Spruce Holly or Yew, they give Way to the Force of tempestuous Winds, beating against them, without occasioning any Resilition thereof.

Mess. *London*, and *Wife*, direct them to be plant'd at some Distance, without the utmost Bounds, or Walls of Gardens, &c. Two, or three Rows of Trees, they think sufficient, from 18 or 20 to 25 Foot a-part. And as to the Method, or Order, of disposing the Trees, the most commodious is where the middle Row makes every where Equilateral Triangles with the extreme Rows, in the following Manner.

The Trees recommended for making, or planting, these *Espalier* Fences, are the Elm, Lime, Beech, Scotch Fir, Oak, Pine and Sycamores; but particularly the two first. For the Method of Planting 'em. See PLANTING; TRANSPLANTING, &c.

As for *Espalier Hedges*, or Hedge Rows, for Defence of tender Greens, and Plants from destructive Winds in the Summer Season: If there be Occasion to use them the first or second Year after they are plant'd; a substantial Frame of Wood must be made, seven or eight Foot high, with Posts and Rails. And to this *Espalier* Frame, must the side Boughs of the young Trees be tied, to cause the *Espalier* to thicken the sooner.

As to the Form of such an *Espalier*, it must be oblong, running North and South.

These *Espaliers* may be plant'd of Apples, Pears, Holly, Laurel, Lime, Maple, white-Thorn, Yew, &c.

To prevent the Disorders that might befall *Espalier* Fruit Trees when in Blossom, Mr. Bradley mentions a nursery Man at *Brensford*, who having most Sorts of Fruit in *Espaliers*, has portable Hedges made of Reeds in Frames, which he sets both at the Back, and Front of his *Espaliers*, as he sees Occasion.

ESPAULE, *ESPAULEMENT*, &c. in Fortification. See EPAULE, EPAULEMENT, &c.

ESPLANADE, in Fortification, call'd also *Glacis*, a Part serving the Counterfearp, or cover'd Way, for a Parapet; being a Declivity, or Slope of Earth, commencing from the Top of the Counterfearp, and losing it self insensibly in the Level of the Campaign. See GLACIS.

ESPLANADE, also signifies the Ground which has been level'd from the *Glacis* of the Counterfearp, to the first Houles; or the vacant Space between the Works and the Houles of the Town.

The Term is also applied in the general for any Piece of Ground render'd flat or level, which before had some Eminence that incommoded the Place. See TALUT.

ESPOUSALS. See MARRIAGE.

ESQUADRILLE, } See { *QUADRIL*.
ESQUADRON, } See { *SQUADRON*.

ESQUINANCY, in Medicine, a Disease call'd also *Angina*, *Squintancy*, and popularly *Quinzy*. See ANGINA, SQUINANCY, &c.

ESQUIRE, a Title of Nobility, next below that of *Knight*, and above that of a simple *Gentleman*. See NOBILITY, KNIGHT, and GENTLEMAN.

The Origin, both of the Name and the Thing, *Esquire*, is very dark and intricate: The English Denomination is confessedly borrow'd from the French *Escuyer*; and that from the Latin *Scutarius*, Shield, as some will have it; or as others, from *Scutarius*, or *Scutiger*, Shield Bearer, or from *Scuria*, Stable, or *Equis*, Groom.

So many different Ideas of the Formation of the Word, have given rise to as many about their Office; unless, perhaps, the latter have given Occasion to the former.

Polignier in his *Recherches*, L. II. C. 15, maintains the Title of *Esquire*, *Escuyer*, *Scutarius*, to be very ancient. From the Time of the Declension of the Roman Empire, he observes, there were two extraordinary Kinds of Soldiers, in the Roman Army; the one call'd *Gentiles*, and the other *Scutarii*.

Ammian. Marcellin L. XIV. C. 7. and L. XVI. C. 4. speaks of these *Scutarii* as Men of redoubt'd Prowess; and even deem'd invincible. 'Tis added, that *Julian* the Apostate for a mighty Value on those Troops, when he was in the *Gauls*: And hence, probably, it was, that the *Gauls*, or perhaps, only the *Frank*s, finding the bravest among the Roman Forces were call'd *Gentiles*, and *Scutarii*, gave the like Names to the boldest and bravest among themselves; such, according to that curious Antiquary, is the Origin of *Esquires*.

Esquires, however, afterwards came to be used in a somewhat different Sense; viz. for a Gentleman who attended a Knight in the Wars, and on other military Occasions; bearing the Shield, *Scutum*, before him; Whence *Scutarius*, *Scutiger*, or *Scutifer*; as also his Launce, and other Weapons: Whence his other Latin Appellation, usual among us, *Armiger*, q. d. Armour-Bearer.

And hence it is, that in all our ancient Romances, the Hero is constantly attended by a gentle, and truly *Squire*.

After all, the most probable Derivation of *Esquire*, is not from *Esca, Scutum*, as is the common Opinion, but from *Equus*; and these *Esquires* were originally what the *Latins* call *Equitones*, and had the Care and Intendance of the *Equaries*, or *Stables* only. See *EQUERRY*.

Be this as it will, the Title *Esquire*, Armiger, as now established among us, is the next below that of Knight, *Eques*. They who bear this Title, are all younger Sons of Noblemen, and the eldest Sons of such younger Sons; the eldest Sons of Knights, and their eldest Sons successively; the four *Esquires* of the King's Body; and *Esquires* created by the King, by putting about their Necks a Collar of *SS's*, and bestowing on them a Pair of Silver Spurs. Lastly, divers others in the superior public Offices, are reputed *Esquires*, or equal to *Esquires*; as Sheriffs of Counties, Serjeants at Law, Justices of Peace, Mayors of Towns, Councillors at Law, Bachelors of Divinity, Law, Physic, &c. tho' none of them are really so: Lastly, the Chiefs of some ancient Families are likewise *Esquires* by Prescription.

ESQUISSE, in the *French* Painting, a Term signifying the first slight sketch, or draught of a Picture; the first Thought of a Design drawn hastily with a Crayon, or in Colours on Paper, Canvas, or the like; in Order to be finish'd, and painted or engraven afterwards. See *DESIGN*.

He had not the Trouble of making a finish'd, and correct Design; but went to work upon the *Esquisse*.

The Word is form'd of the Italian *Schizzo*, a Splash; by Reason an *Esquisse* of a Painting only represents, as it were, Splashes, or Dabs of Colours.

ESSART, or *ASSART*. See *ASBART*.

To *Essart*, is to grub up, or extirpate Bushes, Trees, old Roots, Stumps, or the like; in Order to fit the Ground for Tillage.

Du Cange derives the Word from some of the barbarous *Latin* Words, *Esartus*, *Exartum*, *Exartes*, *Esartum*, *Assartum*, *Sartum*, and *Sartus*; which all signify a Forest cut down or dug up: Tho' *Speelman* derives it from the *Latin* *Esartum*, torn up, or unrooted. Others, from *farris*, to weed. And others, lastly, from *exaro*, to plow, whence *exarare* and by Contracture, *Exartum*.

In our ancient Law Books, *Exartum facere in Sylva*, is to *Essart* a Place in a Forest.

ESSAY, a Trial, or Experiment, to prove whether a Thing be of the requisite Quality, or Goodness. See *SPECIMEN*.

The Word is also used for an Attempt, or Tentative, to learn whether or no a Thing will succeed. *Essays* of Machines should be made in large; 'tis not enough they succeed in little. See *MACHINE*.

In *Monasteries*, *Essay* is particularly used for a Trial which a Person makes of the Monastic Life, in a secular Habite. This *Essay* is of one, two, and in some Monasteries, of three Months. The *Essay* is not reckon'd in the Noviciate. See *PROBATION*.

Some Authors derive the Word from the *Latin* *Examen*. *ESSAY*, or *ASSAY*, or simply *SAY*, in Coinage, &c. is a Proof, or Trial, made by the Cappel, or Test, of the Fineness, or Purity of the Gold or Silver to be used in the Coining of Money, &c. or that have been used therein. See *COINING*.

There are two Kinds of *Essaying*; the one before Metals are melted, in Order to bring them to their proper Fineness; the other after they are struck, to see that the Species be Standard.

For the first *Essay*; the *Essayers* use to take fourteen or fifteen Grains of Gold, and half a Drachm for Silver; if it be for Money; and eighteen Grains of the one, and a Drachm of the other, if for other Occasions.

As to the second *Essay*, 'tis made of one of the Pieces of Money already coin'd; which they cut in four Parts.

Method of ESSAYING Gold.

The *Essayer* having weigh'd the Gold he intends to make the Trial in, very exactly, and noted down the Weight; adds twice as much fine Silver thereto; tho' this should be in Proportion to the Fineness the Gold seems to be of; the basest Gold requiring the least Silver. The Gold and Silver thus weigh'd, and mix'd, are wrapp'd up in a Piece of Paper, to prevent their losing any Thing of their Weight, which would disturb the Accuracy of the *Essay*.

While the *Essayer* is weighing his Matters, a reverberatory Fire is lighted to a Furnace, furnish'd with a Maffier, and a Cappel, or Test, for therein to heat. This done, a little Bullet of Lead is put in the Cappel, of a Weight proportionable to the Quantity and Quality of the Gold to be *Essay'd*. When the Lead is well melted, and appears very clear and bright; they put in the Gold and

Silver, and let it fuse and seeth till it appear of an Opal Colour, and have fix'd it self, in a little Lump, to the Bottom of the Cappel.

This done, the Cappel is left to cool in the Furnace it self; after which the Lump is separated very exactly from the Place where it stuck to the Vessel; and stretch'd, or hammer'd on the Anvil; heating it again and again, on the Coals, to promote the stretching.

When sufficiently hammer'd, they roll it up in Form of a Cornet, or Coffin, and thus put it in a Glass Matrass, capable of containing four Spoonfuls of Water; and having added to it a Quantity of *Aqua fortis*, well corrected, that is, mix'd with near one third of the Quantity of River Water, they boil it over a Wood Fire, till such Time as the *Aqua fortis* yields no more red Fumes.

This first Water being pour'd off, and the Cornet left alone at the Bottom of the Matrass, they fill the Matrass again, but with pure *Aqua fortis*; which, after boiling, is pour'd off in its Turn, at such Time as the Fumes are become white. This done, they fill up the Matrass with River Water, to wash the Cornet.

When wash'd, they put it dry in a Crucible, with a Cover over it, and heat it till it become of a Cherry Colour.

This done, the *Essay* is finish'd; and there remains nothing but to weigh it against the same Weight of fine Gold, as was used at first, before the *Essay*. For by Comparing the first Weight of the Gold, &c. it was put in the Fire, and the *Aqua fortis*, with what it retain'd after it had thus undergone the Test; they judge, from the greater, or less Loss it has sustain'd, of the Quantity of Alloy mix'd with it.

Method of ESSAYING Silver.

The Process is much the same as in Gold; only less difficult, and shorter. The Silver is weigh'd, as before; and the same Furnace, and Maffier, the same Fire, the same Cappel used. Add, that Lead is likewise put in the Cappel, proportioned to the Quantity and Quality of the Silver to be *Essay'd*.

The Lead being well melted, and clear, the Silver is put in; and after it is brought to an Opal Colour, and fix'd in a Lump at the Bottom of the Cappel, which happens in about half an Hour: They let it cool, and cleanse it, and lastly, weigh it again, as in Gold: And from its Diminution, estimate the Quantity of Alloy.

ESSAYING of Lead.

The *Essay* of Gold and Silver being perform'd by Means of Lead; 'tis of the utmost Importance, the Lead be free of any Mixture of either of the two Metals: Otherwise the *Essay* will be false; by reason the Gold and Silver mix'd with the Lead, will not evaporate like other Kinds of Alloy, but unite with the Metal under *Essay*.

To prevent this Disorder, and assure the Operation, there is no way but to *Essay* the Lead it self.

This *Essay* is performed in the same Furnace, and with the same Cappel, as those of Gold and Silver: But the Process is incomparably more simple. All here required, when the Cappel is heated, being, to put in the Piece of Lead to be *Essay'd*. If this Lead evaporate entirely, 'tis fit for the Purpose. On the contrary, if there remain any little Grain of Silver, &c. at the Bottom, it must be set aside. See *LEAD*.

ESSAY, in Matters of Learning, is a peculiar Kind of Composition; whose Character is to be free, easy, and natural; not tied to strict Order, or Method, nor work'd up and finish'd, like a formal System.

The Matter of an *Essay* is supposed to consist principally of sudden, occasional Reflections, which are to be wrote much at the Rate, and in the Manner a Man thinks; sometimes leaving the Subject, and then returning again, as the Thoughts happen to arise in the Mind.

At least, this has hitherto been the Practice; and *Montague*, who has got no small Reputation by this Way of Writing, seldom keeps many Lines to the Subject he proposes: Tho' it is our Opinion, that my Lord Bacon is a better Pattern in the *Essay* Kind.

Mr. Lock, however, and a few other Authors use *Essays* in a severer Sense: The *Essay of human Understanding*, every Body knows is a regular, artful, labour'd Work.

ESSAY-Master. See MINT.

ESSE, in the School Philosophy, is used in the same Sense with *Essence*; principally for that which is actual, or actually existing. See *ESSENCE*.

From *Esse* arises *Essatum*, a barbarous Term now almost obsolete, signifying that which is endued with *Essence*, or Nature; or effected with the Virtue or Efficacy of another. Some distinguish *Esse* into *real* and *intentional*; and again into *Essatum* and *Volitum*. See *ESSENCE*.

The Word is pure *Latin*, being the Infinitive of the Verb *Sino*, I am; whence *Esse*, to be.

ESSENCE, that which constitutes, or determines the Nature of a Thing; or which is absolutely necessary for its being what it is. See NATURE.

In Philosophy, the *Essence* of a Thing is defined to be that whereby a Thing is distinguished from every other Thing.

The *Cartesians* hold the *Essence* of Matter to consist in Extension; and on that Principle, deny that there is any such Thing as Mere Space, or Vacuity: But the *Hypothesis* is false, as is shewn under the Articles MATTER, SPACE, VACUITY, PLENUM, &c.

Gassendus, and most of the Corpuscular Philosophers, hold the *Essence* of Matter to consist in Solidity, or Impenetrability, or Resistance, or, more adequately, in a solid Impenetrability resisting the Touch; which, it must be allow'd, of all the Properties of Matter, seems to have the fairest Title. See EXTENSION, BODY, SOLIDITY, IMPENETRABILITY, &c.

The School Philosophers give us two Significations of the Word *Essence*; the first denotes the whole *Essential* Perfection of a Being, and consequently its Entity, with all its intrinsic, or *Essential*, and necessary Attributes taken together. In which Sense, *Essence* may be defined to be *all that whereby a Thing is, and is what it is*. In which Case, the *Essence* of a Thing, is to the Thing it self, what Humanity, *e. gr.* is to Man.

The second Signification of *Essences*, is that whereby it denotes the principal, and most intimate of all the Attributes of a Thing; or that which agrees to every such Thing, and such alone, and that always, and in such manner, as that the Mind, with all its Attention, cannot perceive any Thing prior thereto. By which, *Essence* is distinguished from the *Essential Attributes*, *i. e.* from such as flow from its *Essences*, or first Attribute. Thus, the *Essence* of the human Mind is commonly supposed to consist in the Power of Thinking; by reason all its other Perfections seem to pre-suppose this; but this pre-supposes none. And thus, the Powers of understanding, doubting, assenting, willing, &c. do all flow from the Power of Thinking; and cannot exist without it, tho' this may without any of them.

It must be allow'd, however, that the *Essential* Properties of a Thing do so closely cohere, nay, and inhere in the *Essence* it self, that 'tis scarce possible to distinguish the one from the other. Hence, what some urge, that setting aside all the Attributes and Properties of a Thing, and what remains is its *Essence*; is a mere Chimera. For set aside, *e. gr.* from the Mind, the Powers of understanding, and willing, with the rest of its Attributes: and what will there remain to call its *Essence*?

'Tis greatly disputed in the Schools, whether the *Essences* of created Things be Eternal: Or, whether the *Essences*, as well as the Existences, had their Origin in Time? The *Cartesians* hold, that the *Essences* of Things depend absolutely on the free concurring Will of God.

ESSENCE, in Medicine and Chymistry, is the purest and most subtle Part of a Body, extracted from the same, by means of Fire. See EXTRACTION.

Of these there are a great Variety, drawn from Flowers, Fruits, &c. used on Account of their agreeable Smells, Tastes, &c. by the Apothecaries, Perfumers, &c.

The principal are *Essence of Rosemary: Of Turpentine: Of Anis: Of Cloves: Of Cinnamon*; and of *Citron*.

The *Essences* commonly sold by the Perfumers, are only the Oils of Ben, and of bitter Almonds; to which they give the Smell of certain Flowers, or Spices, as Violets, Jessmin, Cinnamon, &c.

The *Essences* to be drunk, or mix'd with Liquors, are of a more elaborate Composition: The most usual and best, is prepared with the Spirit of Wine, Cloves, Cinnamon, Mace, Long Pepper, and Coriander: The whole being put up in a very close Vessel, is exposed to the Sun for six Weeks, or two Months, during the Day-time, and in the Night set on the Fire.

In Winter they use the Fire alone: This *Essence* being exceedingly strong; 'tis frequently used only to give a Strength to other weaker Liquors. After the same manner may the *Essences* of Amber, Mufe, &c. be drawn.

The *Essences* of odoriferous Flowers, to give a fine Smell to Liquors, are drawn by laying *Strata*, or Lays of the Flowers, and of Sugar, alternately, in a proper Vessel, and leaving 'em to infuse in a Cellar for 24 Hours; and after that as long by the Sun; and lastly, straining or percolating the whole thro' a Sieve, without squeezing the Flowers.

ESSENI, or ESSENES, or ESSÆANS, an ancient Sect among the Jews. See SECT.

Josephus making mention of the several Sects among his Countrymen; distinguishes three; *viz.* the Pharisees; Sadducees, and *Esseni*: Which last he prefers to the

two former, as to their manner of Life. He assures us, further, that they were *Jews* by Original; from which it should appear, that S. *Ephippianus* was mistaken, in ranking 'em among the *Samaritanians*.

In Effect, the *Esseni* appear to have been true Pythagorean Philosophers, in every Thing that related to their manner of Living. For they greatly affected Solitude and Retirement, and all Conversation with Women, to devote themselves more entirely to the contemplative Life.

The *Esseni* seem to have been among the Jews, what the most retired and austere Monks are, or were, among the Christians; which was what gave them their Denomination of *Isidori astarta*, *Ascetic Jews*. See ASCETIC.

Many Catholic Writers have even deduced the Origin of Monks from 'em: Building, principally, on what *Philo* relates of 'em, who divides 'em into two Branches or Sects: The one who married, and the other who lived in Celibate. See MONK and CELIBATE.

Josephus seems likewise to have had an Eye to these two Sorts of *Esseni*. *Serrarius*, who has wrote very amply on the Subject, follows *Philo*, in making two Classes of *Esseni*: The first, are those whom he calls *Practici*, and who lived in Community: The second, those call'd *Theoretici*, who lived in Solitude, and led a Life of pure Contemplation. He adds, that *Josephus* only makes mention of the first; passing, unouch'd, over the contemplative Kind, whom *Philo* calls *Therapeutes*, and who were principally found in Egypt. See THERAPÆUTE.

Grosius will have the *Esseni* the same with the ancient

Ἰσίδωροι, *Hesidam*, or *Hesibæi*, thus call'd, according to *Philo*, from their singular Piety, Humility, and Devotion. Among these, *Gale* observes, it was, that the Hebrew Philosophy chiefly flourish'd. *Porphyry*, de *Abstinentia*, is very prolix in his Praises of the *Esseni*;

ἐπιτομήν τιναν ἐστίν, ἡδίστην μὲν τοῦ γαστρός, φιλοκαλοῦσι, &c. He represents 'em as Despisers of Pleasure, Riches, Glory, and Delicacy, &c. and strenuous Retainers to Continency, Austerity, Study, &c. They decline Marriage; and adopt and educate other Peoples Children in Religion and Philosophy. They are all on a Level, hold every Thing in common, neither buy nor sell, &c. By long Habits, they arrived at such a Degree of Patience, that *Porphyry* assures us, Flames and Torments had not the least Effect on 'em. They seem'd to treat their Torturers; nor ever shed a Tear; but would smile under all their Agonies, &c. As to their Learning, *Philo Judæus*, in his Treatise, *That every good Man is free*, tells us, that they despis'd Logic, as useless to the acquiring of Virtue; Physics, they left to the Sophists and Disputers, as judging it to transfuse the human Faculties; and apply'd themselves wholly to Morality. *Gale*, *Essenar*. *Char. ap. Philof.*

Gener. p. 29.

Enschius holds, that the *Esseni*, call'd *Therapeute*, were real Christians, or *Jews* converted by St. *Mark*, who had embraced this Kind of Life. *Scaliger*, on the contrary, maintains, that these *Therapeute* were no Christians, but real *Esseni*; who made Profession of *Judaism*. However, he allows the two Kinds of *Esseni* abovemention'd. But *Valesius*, in his Notes on *Enschius*, absolutely rejects any such Distinction: He denies, that the *Therapeute* were any real *Esseni*; and that, chiefly, on the Authority of *Philo* himself, who never calls 'em *Esseni*, and who places the *Esseni* in *Judea* and *Palestine*; whereas the *Therapeute* were spread throughout *Greece*, *Egypt*, and other Countries.

ESSENTIAL, something that is necessary to constitute a Thing, or that has such a Connexion with the Nature and Reason of a Thing, that it is found, or supposed, wherever the Thing it self is. See ESSENCE.

Thus, it is essential to God to be just. Mr. *Lock* has overturn'd that great Principle of the *Cartesians*, that *Thinking is essential to the Soul*. See THINKING.

The Heart, Brain, and Spinal Marrow, are Parts ordinarily supposed *Essential* to Life, or without which Life cannot be; yet we have Instances in Natural History, of Childrens being found, and alive, without almost any of those Parts. See BRAIN, &c.

ESSENTIAL Properties, are such as necessarily depend on, and are connected with, the Nature and *Essence* of any Thing, so as to be inseparable from its Distinction from accidental. See PROPERTY.

ESSENTIAL Oils, are such as are really in a Plant, and drawn from it by Distillation, in an Alembic, with Water; in Contra-distinction to those made by Infolation. See OIL.

ESSENTIAL Salts, are such as will crystallise in the Juice or Infusion of a Plant; in Distinction from those made by Incineration. See SALT.

ESSOIN, in Law, an Excuse for him that is summon'd to appear and answer to an Action real, or to perform Suit

Suit to a Court Baron. It is equivalent to *Excusatio* among the Civilians.

The Causes that serve to *Effoin*, are divers; yet may be reduced to five Heads: The first is, *Effoin de verra mare*, when the Party is beyond Sea: The second, *De terra sancta*, when on an Expedition in the Holy Land: The third, *de malo venienti*, when he is infirm of Body, and cannot come; which is also call'd, the *Common Effoin*: The fourth, *Effoin de malo facti*, when the Defendant is sick a-bed: The fifth, *de servitio Regis*, when he is in the King's Service. *Horus* mentions several other *Effoins* touching the Service of the King Celestiall.

The Word is form'd of the French, *Effoinie*, i. e. *Causarius miles*, he that has his Preference forborn upon any just Cause, as Sickness, or other Impediment.

ESSOINS and PROFFERS. See PROFFER.

ESSORANT, in Heraldry, a Term us'd to express a Bird standing on the Ground with the Wings expanded, as if it had been wet, and were drying it self.

ESTANDARD. See STANDARD.

ESTATE, in Law, the Title, or Interest a Man hath in Lands or Tenements.

Estate is either simple or conditional: *Estate simple*, call'd also *Fee simple*, is where a Man by Deed Indented, enfeoff's another in Fee, reserving to him and his Heirs a Yearly Rent; with this Proviso, that if the Rent be behind, &c. it shall be lawful for the Feoffee and his Heirs, to enter. See FEE.

Estate Conditional, or upon Condition at Law, is such, as hath a Condition annexed to it, tho' it be not specified in Writing, e. g. If a Man grant to another, by his Deed, the Office of Park-Keeper for Life: this *Estate* is upon Condition in Law, viz. If the Park-Keeper shall so long well and truly keep the Park.

ESTATE, or simply STATE, the Empire, Kingdom, Provinces, or Extent of Lands under any one Government or Dominion.

The *Estates* of the Grand Seigneur, of the King of Spain, &c. are very extensive: Those of the King of France are compact, and well peopled. *Italy* is canton'd out into a great Number of petty *Estates*.

Ministers of *Estate*, Secretaries of *Estate*, &c. See MINISTER, SECRETARY, &c.

ESTATE is particularly applied to the several Ranks, or Classes, of a People assembled together, for the concerning of Measures, reforming Abuses, or composing the Disturbances of a State.

In *England*, the Three *Estates*, viz. King, Lords, and Commons, meet ordinarily in Parliament.

In *France*, the *Estates* consist of the Churchmen, the Noblesse, and the Third *Estate*.

Some will have these Assemblies of *Estates* to be a very ancient Constitution: All we know is, that there were general Assemblies held in the *Gauls*, before *Cæsar's* Conquest. But then the People, or third *Estate*, had no Share in 'em. Under the 1st and 11d Race of the *French* Kings, there were also solemn Convocations, call'd *Parliaments*; but it was only the great Lords of the Realm that were call'd to 'em. See PARLIAMENT.

ESTATES General. { See STATES General, &c.

ESTATES of Holland. {

ESTERLING, or EASTERLING. See STERLING.

ESTETE, in Heraldry, is us'd by the *French* to signify a Beast whose Head has been, as it were, torn off by Force; and consequently the Neck left rough and ragged: In Contra-distinction to *deffait*, or *decapite*, where the Neck is left smooth; as if the Head had been cut off. See DEFAIT.

ESTHER, a Canonical Book of the Old Testament. The Book of *Esther*, is denominat'd from a celebrated Jewish Captive of that Name, in *Persia*, whose Beauty pleas'd her to the Bed of *Ahasuerus*, and the Throne of *Persia*; And who, in that Quality, sav'd her Compatriots the *Jews*, from the Death, to which *Ahasuerus* had doom'd 'em, by the Councils of his Favourite *Haman*: The History of which Transaction makes the Subject of the Book of *Esther*.

The Critics are divided about the Author of this Book: *S. Epiphanius*, *S. Augustin*, and *Isidore*, attribute it to *Esra*; But *Eusebius* will have it of a later Date. Some ascribe it to *Joachim*, High-Priest of the *Jews*, and Grand-son of *Josedek*. Others will have it compos'd by an Assembly, or Synagogue of the *Jews*, to whom *Mordecai* wrote Letters, informing 'em of what had happen'd, *Eth. IX. 29.*

But the Generality of Interpreters, both *Hebrew*, *Greek*, *Latin*, &c. ascribe the Book to *Mordecai* himself: *Elias Leure*, in his *Ast. hebraica*. Pract. 3. mentions this Sentiment as unquestionable.

'Tis chiefly founded on the Passage, Ch. IX. Ver. 20. where it is said, *Ubi Mordecai wrote these Things, and*

sent Letters unto all the Jews, that were in all the Provinces, &c. 'Tis also suppos'd, that *Queen Esther* her self, might have some Share therein; it being express'd in the same Chapter, Ver. 29. that *Esther* and *Mordecai* wrote a second Letter with the King's Authority, to ordain the solemnizing a Yearly Feast, call'd *Purim*, that is, Days of Lots, in Commemoration of the *Jews* being deliver'd from the Lots, or *Sorres*, whereby they had been condemn'd.

Some will have this Book to be only Deuterocanonical. Others contend for its being Canonical, as far as *Chap. X. Ver. 3.* inclusive; and all the rest Deuterocanonical. Of this Sentiment are *S. Jerome*, *De Lyra*, *Dionysius the Carthusian*, *Coletan*, and others. The Council of *Trent* sum'd the Scale for its being Canonical throughout: so that the Matter is determin'd for the Catholic Countries.

But as to the Protestants, they retain to the old Opinion, and only admit it as far as the 3d Verse of the Xth Chapter. See DEUTEROCANONICAL.

ESTIVAL, or ESTIVAL Solstice. See SOLSTICE.

ESTOILEE'. A Cross *Estoilee*, is a Star with only four long Rays, in manner of a Cross; and accordingly broad in the Centre, and terminating in sharp Points. See CROSS.

ESTOPPEL, in Law, an Impediment, or Bar of Action growing from a Man's own Act, who hath, or otherwise might have had his Action. See BAR.

Goddard defines an *Estoppel* to be a Bar, or Hindrance, to one to plead the Truth; and extends it not to the Impediment given by his own Act only, but another's also.

There are three Kinds of *Estoppel*, viz. by Matter of Record; by Matter in Writing; and by Matter in pais.

The Word is form'd of the French, *Estouper*, *opprobre*, *obscipare*.

ESTOVERS, in Law, is us'd by *Bracton*, for that Suttenance, which a Man committed for Felony, is to have out of his Lands, or Goods, for himself and his Family, during Imprisonment.

In Stat. 6. *Edm. I.* it is us'd for an Allowance in Meat or Clothes. In Stat. *West.* it is also us'd for certain Allowances of Wood, to be taken out of another Man's Woods.

In this last Sense *Estovers* comprehends *Houghs-bote*, *Hay-bote*, and *Plow-bote*: So that if a Man hath in his Grant these general Words, *de Rationabili Estoverio in Bosis*, &c. he may thereby claim all three.

In some Mannors, the Tenants have Common of *Estovers*; that is, necessary Botes out of the Lord's Wood. See ALMONY.

ESTRADE, a French Term, literally signifying a public Road, or High-way. Hence the Military Phrase, *Battre l'Estrade*, to Beat the *Estrade*, that is, to send Scouts, or Horsemen, to get Intelligence, to learn the Dispositions of the Enemy, and inform the General of every Thing like to fall in the Way. An Army never marches, without sending *Batteurs d'Estrade* on every Side.

The Word is form'd of the Italian *Strada*, Street, or Road, which is deriv'd from the Latin *Strata*, a paved Street. Some derive it from *Estradors*, who were Cavaliers anciently employ'd in beating the *Estrade*.

ESTRADE is also us'd, for a little Elevation in the Floor of a Room, frequently encompass'd with an Alcove, or Rail, for the placing a Bed in; and sometimes, as in *Turkey*, only cover'd with fine Carpets, to receive Visitors of Distinction in. See ALCOVE.

ESTRANGEL, in the Syriac Grammar. The *Estrangel*, or *Estrangelus Character*, is a particular Species, or Form of Syriac Letters, serving as the Majuscule Letters of the Syriac Language.

Abraham Escholensis takes the *Estrangel Character*, for the true, ancient, *Chaldee* Character. And 'tis certain, the *Abyssinians*, who call themselves *Chaldeans*, still occasionally use the *Estrangel Character*; if we may credit *Hottinger* in his *Tesaurus Philol.* p. 486. *Bishop Walton*, in his *Prolegomena*, gives us an *Estrangel Alphabet*.

ESTRAY, signifies any tame Beast found within any Lordship, and not owned by any Man; in which Case, being cri'd, according to Law, in the Market adjoining, if it be not claimed by the Owner in a Year and a Day, it is then the Lord's of the Soil where found.

ESTREAT, in Law, is us'd for the true Copy, or Duplicate, of an original Writing: For Example, of Amerciaments, or Penalties, set down in the Rolls of a Court, to be levied by the Bailiff, or other Officer, of every Man for his Offence.

Clerk of the ESTREATS. See CLERK.

ESTREPEMENT, in Law, an impoverishing, or making of Land barren, by continual Plowing and Sowing; without due Manuring, Rest, and other Husbandry.

The Word is also us'd, for any Spoil made by the Tenant for Life, upon any Lands, or Woods, to the Prejudice of him in Reversion; as the cutting down of Trees,

or lopping them further than the Law allows, &c. Stat. Edu. VI.

The Word is derived from the French, *Estrapper*, to malm; or the Latin, *extripare*.

ESTREPEMENT, is also a Writ which lies in two Cases; the one, when a Man having an Action depending, (wherein the Demandant is not to recover Damages as a Writ of Right, *Assis facti infra arreata*, &c.) sues, to inhibit the Tenant from making Wast during the Suit.

The other is for the Demandant who is adjudged to recover Sciffin of the Land in Question, and before Execution, for fear of Waste to be made ere he can get Possession, sues out this Writ.

ESULA, a medicinal Root. The *Esula*, is properly the Bark of a little reddish Root, which produces green, narrow, milky Leaves. It grows chiefly in France. Here they use it, tis infused in Vinegar: After which, they draw Extracts from it, used in the Dropsy.

ESURINE Salts, are such as are of a fretting, eating, or corroding Nature; which chiefly abound in Places near the Sea-side, and where great Quantity of Coal is burnt: As appears from the speedy rusting of Iron in such Places. See SALT.

ETAPPE, in War, the Allowance of Provisions and Forage made to the Soldiers, upon March thro' a Kingdom or Province, to or from Winter Quarters.

Hence, he that contracts with the Country, or Territory, for furnishing the Troops in their March, is called **ETAPPIER**.

ETCHING, a Method of Engraving on Copper; wherein the Lines, or Strokes, instead of being cut with a Tool, or Graver, are eat with Aqua fortis. See ENGRAVING.

Etching was invented much about the same Time with *Engraving* on Copper, properly so call'd; by *Alb. Durer*, and *Lucas*. It has several Advantages over that Art; as, that it is done with more Ease and Expedition; that it requires fewer Instruments; and even, that it represents divers Kinds of Subjects better, and more agreeably to Nature, as Landships, Ruins, Grounds, and all small, fair, loose, remote Objects, Buildings, &c.

The Method of *Etching* is thus: The Plate being well polish'd, is heated over the Fire; and when hot, cover'd over with a peculiar Ground, or Varnish. When cold again, the Ground is blacken'd with the Smoke of a Candle; and on this Ground, thus blacken'd, the Back of the Design, or Draught, is laid.

This done, the Design remains to be call'd, or transferr'd upon the Plate; which is more easily effected, than in the common Graving; for the Back of the Design having been before rubb'd over with red Chalk, nothing remains but to trace over all the Lines and Strokes of the Draught with a Needle or Point; which pressing the Paper close down to the Ground, occasions the Wax therein to lay hold of the Chalk, and to bring off the Marks of the several Lines: So as at length, to shew a Copy of the whole Design in all its Circumstances.

The Draught thus call'd, the Artist proceeds to draw the several Lines, and Contours with a Point, thro' the Ground, upon the Copper.

To finish his Work, he makes use of Points of divers Sizes, or Bignesses; and presses on them sometimes more strongly, and sometimes more lightly, according as the several Parts of the Figures, &c. require more or less Strength or Boldness: Some of the Points being as fine as Needles, for the tender, Hair strokes, and the remotest, faintest Objects; and others again, as big as Bodkins, made oval-wise, for the deeper Shadows, and the Figures in the Front of the Work.

Things thus prepared, a Rim, or Border of Wax, is rais'd round the Circumference of the Plate, and *Aqua fortis* pour'd on; which, by the said Border, is kept from running off at the Edges.

The Ground being impetrable to that corrosive Water, the Plate is defended from it every where but in Lines, or Haunches, cut thro' it with the Points; which, lying open, the Water passes thro' them to the Copper, and eats into the same, to the Depth required: Which done, it is pour'd off again.

Of *Etching* Grounds, it must be observed, there are two Kinds, the one *soft*, and the other *hard*. There are also two Kinds of *Aqua fortis*: The one *White*, which is only used with the soft Ground, and is applied as above directed: The other *Green*, made of Vinegar, Common Salt, *Sul Ammoniac* and Verdigrise. This is used indifferently with either Kind of Ground: Its Application is somewhat different from that of the *White*.

Without making any Border, they pour it on the Plate, which is placed for that Purpose a little inclined; and as the Water runs off, it is received in a Vessel placed under-

neath. This they repeat, pouring it again and again, till it has eaten deep enough.

Add, that the *Aqua fortis*, of which Kind soever it be, must not continue equally long, or be pour'd equally often, on all the Parts of the Design. The remote Parts must be bitten more slightly, than those nearer to the View.

To manage this, they have a Composition of Oil and Grease, wherewith they cover the Parts that are to be bitten no further. Or else they lay the Composition on as a defensive at first, and take it off again when they find proper. In Effect, they are every now and then covering and uncovering this or that Part of the Design, as Occasion requires; the Conduct of the *Aqua fortis* being one of the principal Concerns in the whole Art, and that on which the Effect of the whole very much depends. The Operator is also to be very attentive to the Ground, that it don't fail, or give Way, in any Part, to the Water; and where it does, to stop up the Place with the Composition aforesaid.

Lastly, it is to be remember'd, that a fresh Dip of *Aqua fortis* be never given, without first washing out the Plate in fair Water, and drying it at the Fire.

The *Aqua fortis* having done its Part, the Ground is taken off, and the Plate wash'd and dried; after which nothing remains but for the Artist to examine it with his Graver in his Hand, to touch it up, and heighten it, where the *Aqua fortis*, &c. has mis'd.

ETERNITY, an Attribute of God, whereby the Duration of his Existence is conceiv'd incommensurable with Time, and exclusive of Beginning, Progress, Ending, &c. See GOD, TIME, &c.

Authors are terribly frighten'd for a proper and just Definition of *Eternity*. That of *Boethius de Consol. Philos. L. V. Pr. 6. vis. Interminabilis vis, tota sancti & perfecta possessio*, i. e. a perfect Possession of a whole endless Existence all together, or at once, tho' retain'd by *S. Thomas*, and others, is faulty in divers Respects.

Confortius, de Die Natali defines *Eternity*, by *Infinita Duratio*; that is, Duration which has always been, and always will be. — Others, more fully describe it by a Duration that exists all together, without any Flux, or Succession of Parts, prior, or posterior to each other: Where, the Word *Duratio*, taken abstractedly, imports no more than the Perseverance of a Thing in Existence; the *Infinita*, being here oppos'd to the *efflare*, in Existendo.

But soten the Word *Duratio* how you will, it is scarce conceivable, but by conceiving a Quantity thereof; nor a Quantity, without conceiving a Succession. — Others, therefore, define *Eternity* by a *perpetuum nunc*, a *perpetual now*; or a *nunc semper flans*, an ever-standing now: But neither are the's unexceptionable; the Words *perpetuum*, and *semper flans*, importing an obscure Sort of Duration. See DURATION.

ETESIAN Winds. See WINDS.

ETHER. See ETHER.

ETHERIAL Oil, a Name the Chymists give to high rectified Oils, which differ little from inflammable Spirits; such are Oil of Turpentine, &c. See OIL, SPIRIT, &c.

ETHICKS, **ETHICA**, a Term originally Greek, *ἠθικα*, applied to the Doctrine of *Morality*, or *Moral Philosophy*. See PHILOSOPHY.

Gale makes *Ethicks* only the first Part, or Branch of Moral Philosophy, viz. that which regards private Persons, or in a private Capacity. See MORALS.

The Word is form'd from *ἠθος*, *Mores*, *Manners*; by Reason the Scope, or Object thereof, is to form the *Manners*. See MANNERS.

Now, by *Manners*, is here meant a Way, or Manner of Living, confirm'd by Custom, or Habit; or certain Habitudes of doing; or Actions which are often repeated: Which, if they be according to right Reason, the *Morals*, or *Manners*, are said to be *Good*; otherwise *Evil* and vicious. See GOOD and EVIL.

Hence, the Object of *Ethicks*, is the Exercise of right Reason, in all our Affairs, Actions and Circumstances; or it is Man himself consider'd as dirigible, and to be conducted according to Reason: And the End of *Ethicks*, is to make him good and happy. For that if a Man conduct himself, according to right Reason, in all the Circumstances of his Actions, Affairs and Relations, he will arrive at the highest Pitch of Moral Perfection and Beatitude.

Whence, *Ethicks* may be defined a right Manner of thinking, in order to attain human Felicity; or a Discipline whereby Man is directed to conduct his Will, and the Actions thereof, so as to live well and happily. See WILL.

The principal, nay, the only Topics thereof, are Happiness and Manners; whence arise two Parts, or Branches of *Ethicks*; the first on moral Happiness, consider'd as the End; and the second on Moral Virtues, or good

Manners, as the Means to arrive thereat. See HAPPINESS, VIRTUE, &c.

ETHIOPROSCOPTES, in Antiquity, the Name of a Sect.

Democritus, in his Treatise of *Heretics*, tells us, that the Denomination *Ethioproscoptes* was given to such as er'd in Matters of Morality, and Things relating to Practice, that were to be done, or to be avoided, &c. who blamed Things laudable, and good in themselves, or recommended or practis'd Things Evil. Which shews, that they were no particular Sect.

The Word is form'd of the Greek, ἠθῶν, *Manners*, and προσκοπῶν, *offendo*, I offend.

ETHMOIDAL, **ETHMOIDALIS**, in Anatomy, one of the *Sutures* of the Human Cranium. See **SUTURE**.

The common *Sutures* are those which separate the Bone of the Cranium from those of the Cheeks; and are four: The *Transversal*, *Ethmoidal*, *Sphenoidal*, and *Zygomatid*. See **CRANIUM**.

The *Ethmoidal* takes its Denomination from its turning round the *Os Ethmoides*. See **ETHMOIDES**.

ETHMOIDES, in Anatomy, a Bone situate in the middle of the Basis of the Fore-head, or *Os frontis*, and at the Top of the Root of the Nose; filling almost the whole Cavity of the Nostrils. See **NOSTRIL**.

It has its Name from ἔθμος, *Cribrous*, Sieve, and ἴδιον, *Forma*; because all spongy and cribrous.

By its cribrous Part it is join'd to the Head; by the spongy Part, to the Cavity of the Nostrils; and by the plain and broad Part, to the Orbit of the Eyes.

In the cribrous Part is an *Apophysis*, which jets out, in a Point, into the Cavity of the Skull; call'd, from its Figure, *Crista Galli*, or *Cock's Comb*. From its under Side, there goes a thin Bone, which divides the Cavity of the Nostrils into two, call'd the *Vomer*. It is perforated by a Number of small Holes, thro' which the Fibres of the olfactory Nerves pass to the *Processus Membrillares*.

J. Philip Ingrassias, a *Sicilian*, who flourish'd about the Year 1545, was the first who gave a just Account of the Structure of the *Os Ethmoides* or *Cribriform*. See **NOSE**.

ETHNARCHA, **ETHNARCH**, a Governour, or Commander of a Nation. See **TETRARCH**.

There are some Medals of *Herod I* surnam'd the *Great*, on one Side whereof is found ἩΡΩΔΟΥ, and on the other ΕΘΝΑΡΧΟΥ, q. d. *Herod the Ethnarch*: Now, after the Battle of *Philippi*, we read that *Anthony* passing over into *Syria*, constituted *Herod* and *Phelael* his Brother, *Tetrarchs*, and in that Quality committed to them the Administration of the Affairs of *Judea*. *Jos. Ant. L. XIV. C. 23*. *Herod* therefore had the Government of the Province before ever the *Partians* enter'd *Syria*, or before *Aurignus's* Invasion, which did not happen till six or seven Years after *Herod* was Commander in *Gallilee*. *Jos. L. XIV. C. 24, 25*.

Consequently, *Herod* was then truly *Ethnarch*; for he can be no otherwise denominated: So that it must have been in that Space of Time that the Medals were struck which only give him this Title. Which Medals are a Confirmation or what we read in History of the Government that Prince was intrusted withal e're he was rais'd to the Royalty.

Josephus gives *Herod* the Appellation of *Tetrarch*, in lieu of that of *Ethnarch*; but the two Terms came so near to each other, that it was very easy to confound them together. See **TETRARCH**.

The *Herod* the *Great* left by Will, to *Archelaus*, all *Judea*, *Samarita*, and *Idumaea*; yet, *Josephus* tells us, he was then only call'd *Ethnarch*.

The Word is *Greek*, form'd of ἔθνος, *Nation*, and ἀρχή, *Command*.

ETHNOPHRONES, in Antiquity, the Name of a Sect. See **SECT**.

The *Ethnophrones*, or *Paganizers*, were Hereticks of the VIIth Century, who made a Profession of Christianity, but join'd thereto all the Ceremonies and Follies of *Paganism*, as *Judiciary Astrology*, *Sortileges*, *Auguries*; and other Divinations.

And hence their Denomination; from ἔθνος, *Nation*, and φρονεῖν, *Thought*, *Sentiment*, q. d. whose Thoughts, or Sentiments were still Heathen or Gentile.

They practis'd all the Expiations of the Gentiles, held all their Feasts, observ'd all their Days, Months, Times, and Seasons. See *Damasceus*, *L. Heres. N. 94*.

ETHOPEIA, or **ETHOPEA**, in Rhetoric, call'd also **ETHOLOGY**, and vulgarly *Picture*, or *Portrait*; is a Draught, or Description, expressing the Manners, Passions, Genius, Temper, Aims, &c. of another Person.

Such is that beautiful Passage in *Selust*, in his *Bellum Castellianum*, wherein he gives us a Picture of *Carthage*: *Fuit sanguis ei & animi & Corporis sed Ingenio malo proovogue kute*, &c. 'He had an uncommon Strength both of Body and Mind; but an ill turn'd, and wicked Disposition. When a very Boy, his great Pleasure was in intestine Broils, Rapine, Slaughter, and civil Discord. His Body was form'd to undergo Fasting, Cold, and Watching, beyond all Belief. His Mind was daring, deceitful and various; and could imitate, or accommodate it self to any Body: He was extremely covetous of other People's Goods, and profuse of his own withal. His Lufts and Desires were very high; his Stock of Eloquence considerable; but his Discretion scarce any.'

The *Ethopeia* is divided into *Prologographia*, and *Ethopeia*, properly so call'd; the former of which is a Picture of the Body, Countenance, Make, Dress, Gait, &c. and the latter of the Mind.

The Word is of *Greek* original, being form'd of ἔθος, *mos*, *custom*, and ὄψις, *facies*, *figura*, *descriptio*. *Quintilian*, *L. IX. C. 2*. calls this Figure *Imitatio morum alienorum*; and in *Greek*, μιμησις, *Imitation*.

ETYMOLOGY, that Part of Grammar, which considers, deduces, and explains the Origin and Derivation of Words; in order to arrive at their first and primary Signification. See **GRAMMAR**.

The Word is form'd of the *Greek*, ἔτυμον, *verus*, *trac*, and λόγος, *disco*, I speak; whence λόγιος, *Discourse*, &c. and thence *Cicero* calls the *Etymology*, *Notatio*, and *Verilogium*: Tho' *Quintilian* chuses rather to call it *Originatio*.

In all Ages there have been People curious in *Etymologies*: *Varro* has wrote on the *Etymology* of the *Latia* Words; and we have a *Greek Etymologicon*, under the Name of *Nicias*.

The *Etymologies* of our *English* Words have been deduced from the *Saxon*, *Welsh*, *Walloon*, *Danish*, *Latin*, *Greek*, &c. by *Sumner*, *Gambden*, *Verlegus*, *Speelman*, *Casaubon*, *Henslow*, *Skinner*, *Janus*, &c. See **ENGLISH**.

Those of the *French* and *Italian* Words, by *Ménage*, in what he calls his *Origines*: *Henry Stephens*, *Tripot*, *Berel*, &c. have all labour'd on the *French Etymologies*. *Guichard*, and *Fa. Thomassin*, have carried the *Etymologies* of Abundance of *French* Words as high as the *Hebrew*. *Poffet* had the same Design of them.

We have a *Latin Etymologicon* of *Gerard Vossius*, another of *Martinus*, &c. *Oliviero Ferrari*, has an *Etymology* of the *Italian* Tongue: And *Bernard d'Albretra*, another of the *Spanish*.

Fa. Dom. Pearson, *Abbot of Charmoye*, and *Priest* of the *Sorbbonne*, has traced up to the *Celtic* Language the *Etymologies* of Abundance of *Greek*, *Latin*, *German*, *French*, and other Words, us'd by *Piero*, *Servius*, *Donatus*, and other *Latin* Authors without knowing their true Origin, and *Etymology*, for Want of being acquainted with the Roots of the *Celtic* Tongue, from which Abundance of *Greek*, *Latin*, &c. Words are derived. But it must be added, that his *Etymologies* are frequently so far fetch'd, that one can scarce see any Resemblance, or Correspondence at all.

A strict, and solicitous Enquiry into *Etymologies*, is no frivolous, and impertinent Design; but has considerable Use. Nations, who value themselves on their Antiquity, have always look'd on the Antiquity of their Language as one of the best Titles they cou'd plead. For the *Etymology*, by seeking the true, and original Reason of the Notions and Ideas attach'd to each Word, and Expression, may often furnish an Argument of Antiquity from the Vestigia, or traces remaining thereof; and from the Indices still subsisting in the present Use of the Words, compar'd with the ancient Utes.

Add, that *Etymologies* are necessary for the thorough Understanding of a Language: For, to explain a Term precisely, there seems a Necessity of recurring to its first Impulsion, in Order to speak justly and satisfactorily thereof. The Force and Extent of a Word is generally better conceiv'd, and enter'd into, when a Person knows its Origin and *Etymology*.

'Tis objected, however, that the Art is arbitrary, and built altogether on Conjectures and Apperances; and the *Etymologists* are charg'd with deriving their Words from where they pleas'd. But the Science is certainly real, and as regular as divers others; having its proper Principles, and Method.

It must be own'd, indeed, that it is no easy Matter to return into the ancient *British*, and *Gaulish* Ages; to follow, as it were by the Track, the divers imperceptible Alterations a Language has undergone from Age to Age. A sober *Etymology* has need of all the Lights he can come at, to conduct and bring down Words variously dis-

gals'd in their Passage, and remark all the Changes that have befallen them. And as those Alterations have sometimes been owing to Caprice, or Hazard, 'tis easy to take a mere Imagination, or Conjecture, for a regular Analogy; so that 'tis nothing strange the Public should be prejudic'd against a Science which seems to stand on so precarious a Footing.

EVACUANTS, in Medicine, Remedies proper to expel, or carry off any ill, peccant, or redundant Humour in the animal Body; by the proper Ways or Emissionaries. See **EVACUATION**.

Of **Evacuants**, there are divers Kinds, distinguish'd according to their various Humours and Emissionaries. See **HUMOR** and **EMUNCTORY**.

Some, *e. gr.* carry off their Matters by *Stool*, call'd *Purgatives*, or *Catharticks*. See **PURGATIVES**, &c. Others by *Urine*, call'd *Diureticks*. See **DIURETICKS**. Others by *Perpiration*, call'd *Diaphoreticks*. See **DIAPHORETICKS**. Others by *Sweat*, call'd *Sudorifics*. Others by the Mouth, call'd *Emetics*, or *Emeticks*. Others by the salivary Glands, as **SIALOGOGUES**: And others, lastly, by the *Menses*, as **MENAGOGUES** and **ARTEOLOGICKS**.

EVAUATION, in Medicine, a Diminution of the animal Fluids, in Order to a Discharge of some morbid, or redundant Matters therein; or, only, for the Sake of thinning, attenuating, and promoting the Motion and Circulation thereof. See **EVACUANTS**.

The Matter of a Discharge, or what is prescribed by Art to remove or ease it, is *Evacuata* two Ways.

1^o. By the natural Emissionaries, or Out-lets of the Skin; the Nostrils, Mouth, Fauces, Oesophagus, Ventricle, Intestines, Bladder, and Uterus.

And 2^o. By artificial Outlets, made either in the Blood Vessels; as by *Phlebotomy*, *Arteriotomy*, *Scarifications*, and *Lesechæ*. See **PHLEBOTOMY** and **SCARIFICATION**, &c. Or, in the Lymphatic Vessels; as by **CAUSTICKS** and **VESICATORIES**. Or, lastly, in both, as by *Issues*, *Setons*, *Ulcers*, *Fistula's*, &c. See **ISSE**, **SETON**, **FISTULA**, &c.

Hence, the first Distinction of **Evacuans** is derived from the different *Emissionaries*; and the 2^d, from the Diversity of Matter *evacuata* thro' them.

Most of the Chronical Difflaxes, the Infirmities of old Age, and the short Periods of the Lives of *Englishmen*, Dr. *Cheyne* observes, are owing to Retention. This is evident from hence; that *Evacuation* of one Kind or another, is nine Parts in ten of their Remedy: For not only Copping, Bleeding, Blistering, Issues, Purging, Vomiting and Sweating, are manifest *Evacuans*, or Drains, to draw out what has been superfluously taken down; but even Abstinence, Exercise, Alteratives, Cordials, Bitters, &c. are but several Means to dispose the gross Humours, to be more readily *evacuata* by insensible Perpiration. *Essay on Health*.

For the Periodical *Evacuans* of Women. See **MENSES**.

For the *Evacuans* of Women after Delivery. See **LOCHIA**.

The Term is likewise used in the Art of War: To *Evacuate a Place*, is to make the Garrison quit, or march out of it, in order for another Power to take Possession of it, or to make Room for another Garrison.

EVANGELISTS, the inspired Authors of the Gospels. See **GOSPEL**.

The Name *Evangelists* was likewise given, in the antient Church, to such as preach'd the Gospel here and there; without being attach'd to any particular Church. In which Sense, some Interpreters think it is, that St. *Philip*, who was one of the seven Deacons, is call'd the *Evangelist*, in 1st Chapter of the *Acts of the Apostles*, Ver. 8.

Again, St. *Paul* writing to *Timothy*, Ep. 2. C. IV. v. 5. bids him do the Work of an *Evangelist*. The same Apostle, *Eph. IV. 11.* ranks the *Evangelists* after the Apostles and Prophets.

Hence, *Mont. Tillamont* takes the Liberty to use the Word in the same Sense. * Most of those who then embraced the Faith, being fill'd with the Love of a holy Philosophy, began to distribute their Goods to the Poor, and after that went into divers Countries to do the Office of *Evangelists*, to preach Christ to such as had not yet heard of him, and to furnish them with the sacred Writings of the Gospel.

The Word is derived from the Greek, *εὐαγγέλιον*, form'd of *εὖ*, bene, well, and *αγγελος*, Angel, Messenger.

O Savaus Epistolas tuas was tempore mihi datas duas; quibus Evangelia que reddam nescio; sed ubi quidem plane fateor. Cic. ad Attic.

EVANID, A Name some Authors give to those Colours which are not of very long Duration; as those in the Rain-bow, in Clouds before and after Sunset, &c. See **COLOUR**, &c.

Evauid are the same with those otherwise call'd *Fantastical*, and *Euphastical Colours*: See **FANTASTICAL**, &c.

EVANTES, in Antiquity, the Priestesses of *Bacchus*; thus call'd, by Reason, in celebrating the *Orgia*, they ran about as if distracted, crying *Ecoa, Euan, Obe Euan!* See **BACCHANTES**.

EVAPORATION, in Philosophy, the Act of exhaling the Humidity of a Body; or of dissipating it in Fumes or Vapour. See **VAPOUR**.

Common Salt is form'd, by evaporating all the Humidity in the Salt-Water, or Brine; which *Evaporation* is either perform'd by the Heat of the Sun, as in the Salt-Works by the Sea Coast, &c. or by Means of Fire, as in the Salt Springs, &c. See **SALT**.

By the Observations of *Mont. Sedilcan* it appears, that what is rais'd in Vapour, exceeds that which falls in Rain. See **RAIN**.

Tho' the *Evaporation* of Liquids is generally look'd on as an Effect of the Heat, and the Motion of the Air; yet *Mont. Gauseron*, in the *Memoirs de l'Academie des Sciences*. An. 1705. shews, that a quite opposite Cause may have the same Effect; and that Liquids lose a deal more of their Parts in the severest Frost, than when the Air is moderately warm. In the great Frost of the Year 1708, he found, that the greater the Cold, fill the more considerable the *Evaporation*; and that ice it self lost full as much as the warmer Liquors that did not freeze. See **FAUST**.

Dr. *Halley* furnishes us with some Experiments of the Quantity, or Measure of the *Evaporation* of Water. -- The Result is contain'd in the following Articles:

1^o. That Water falts to about the same Degree as Salt Water, and expos'd to a Heat equal to that of a Summer's Day, did, from a circular Surface of about Eight Inches Diameter, *Evaporate* at the Rate of 6 Ounces in 24 Hours. Whence, by a Calculus, he finds, that the Thickness of the Pellicle, or Skin of Water *Evaporated* in two Hours, was the 33^d Part of an Inch: But, for a round Number, he supposes it only a 60th Part; and argues thence, that if Water as warm as the Air in Summer, evaporates the Thickness of one 60th Part of an Inch in two Hours, from its whole Surface; in twelve Hours it will exhale one tenth of an Inch. Which Quantity, he observes, will be found abundantly sufficient to furnish all the Rains, Springs, Dews, &c. See **SPRING**, &c.

In Effect, on this Principle, every 10 Square Inches of the Surface of the Water, yields in Vapour, per diem, a Cubic Inch of Water; and each Square Foot half a Wine Pint; every Space of 4 Foot Square, a Gallon; a Mile Square, 6912 Tons; and a Square Degree, suppose of 69 *English Miles*, will *Evaporate* 33 Millions of Tons. See **RIVERS**, &c.

2^o. A Surface of Eight Square Inches, *Evaporated*, purely by the natural Warmth of the Water without either Wind or Sun, in the Course of a whole Year, 16292 Grains of Water, or 64 Cubic Inches; consequently, the Depth of Water thus *Evaporated* in one Year amounts to 8 Inches. But this being much too little to answer the Experiments of the *French*, who found, that it rais'd 19 Inches of Water in one Year at *Paris*; or those of Mr. *Townley*, who found the Annual Quantity of Rain in *Leicester*, above 40 Inches: He concludes, that the Sun and Wind contribute more to *Evaporation*, than any internal Heat, or Agitation of the Water. See **RAIN**.

3^o. The Effect of the Wind is very considerable, on a double Account. For the same Observations shew a very odd Quality in the Vapours of Water, viz. that of adhering and hanging to the Surface that exhales 'em, which they clothe, as it were, with a Fleece of vaporous Air; which once involving the Vapour, it thenceforwards rises in much less Quantity. Whence, the Quantity of Water lost in 24 Hours, when the Air was very still from Winds, was very small; in proportion to what went away when there was a strong Gale of Wind Abroad to dissipate the Fleece, and make Room for the Emission of Vapour: And this, even tho' the Experiment was made in a Place as close from the Wind as could be contriv'd.

Add, that this Fleece of Water hanging on the Surface of Waters in still Weather, is the Occasion of very strange Appearances, by the Refraction of the Vapour's differing from, and exceeding that of common Air. Whence every Thing appears rais'd, as Houses like Steeples, Ships as on Land above the Water, the Land rais'd, and as it were lifted from the Sea, &c.

4^o. The same Experiments shew, that the *Evaporations* in May, June, July, and August, which are nearly equal, are about three Times as great as those in the Months of November, December, January, and February.

EVAPORATION, in Pharmacy, an Operation by which the more aqueous and volatile Parts of Liquids are spent, or drove away in Steam; so as to leave the remaining Part stronger, or of a higher Consistence than before.

Evaporation is properly the setting a Liquor over a gentle Heat, to carry off the most fluid and volatile Parts, without lessning the Quantity of the other Matter the Liquor is in prepared withal.

Evaporation differs from Exhalation, in that the former is profit on moist Things, and the latter on dry. See EXHALATION.

To *Evaporate ad Cuticulum*, is to *Pellicle*. See CUTICULA and PELLICLE.

EVATES, is a Branch, or Division of our old Philosophers the Druids. See DRUID.

Serabo distributes the Philosophers among the *Britains* and *Gauls*, into three Sects. *Bards*, *Bardi*, *Odavens*, *Evates*, and *Druids*. He adds, that the *Bardi* were Poets and Musicians; the *Evates*, Priests and Naturalists; and the *Druids*, Moralists as well as Naturalists.

But *Marcollinus*, Lib. 15. *Vossius* Philos. Lect. 1. 2. and *Hornius* Hist. Philosoph. 1. 2. c. 12. reduce 'em all to two Sects, viz. *Bardi* and *Druides*.

And, lastly, *Ceslar*, lib. 6. comprehends 'em all under the Name of *Druids*.

The *Evates*, or *Vates*, of *Serabo*, might probably be what other Authors, and particularly *Amman*, *Marcollin*, calls *Evages*. But *M. Bonche*, in his *Hist. de Provence*, L. II. c. 2. distinguishes between 'em. The *Vates*, he says, were such as took Care of the Sacrifices, and other Ceremonies of Religion; and the *Evages*, those who spent their Time in the Search and Contemplation of the great Mysteries of Nature. See EVAGES.

EUBACES, an Order of Priests, or Philosophers, among the ancient *Gæts* or *Gauls*.

Closter takes the *Eubages* to be the same with the *Druids*, and *Servius* of *Diodorus*: Others take the *Eubages* to be those whom *Serabo* L. IV. p. 197. calls *Odavens*, *Evates*, or *Vates*: On which Principle there were Room to conjecture, that the Word should be wrote *Evatus*, it being easy to mistake a T for a V. See EVATES.

Be this as it will, the *Eubages* appear to have been different from the *Druids*. See what has been shewn under the Article DRUID.

EUCCHARIST, *Eucharistia*, the Sacrament of the Supper; or a Communication of the Body and Blood of *Christ*, under the Species, or Figures of Bread and Wine. See COMMUNION, SACRAMENT, SPECIES, TRANSUBSTANTIATION, CONSUBSTANTIATION, &c.

The Word in its original *Greek*, *Euchæstia*, literally imports *Thanksgiving*; being form'd of *eû*, bene, well, and *charis*, gratis, Thanks.

EUCHITES, or *Euchistes*, a Sect of ancient Hereticks, thus call'd, by reason they pray'd without ceasing; imagining that Prayer alone was sufficient to save 'em. See PRAYER.

Their great Foundation, were those Words of *St. Paul*, Epist. I. to the *Thessalon*. C. 5. V. 17. *Pray without ceasing*.

The Word is form'd of the *Greek*, *Euchê*, *Prayer*; whence *Euchistes*, the same with the Latin *Procatores*, *Prayers*. They were also call'd *Enthusiasts* and *Messianists*. See ENTHUSIAST.

St. Cyril of *Alexandria*, in one of his Letters, takes Occasion to censure certain Monks in *Egypt*, who, under Pretence of resigning 'emselves wholly to Prayer, led a lazy, scandalous Life. The Orientals, however, lay a further Charge on the *Enchites*, or *Messianists*. See MESSIANIST.

EUCHOLOGUS, *Euchologus*, a *Greek* Term, signifying, literally, a *Discourse on Prayers*; being form'd of *euchê*, *Prayers*, and *logos*, *Discourse*.

The *Euchologus* is properly the *Greek* Ritual, wherein is prescribed the Order and Manner of every Thing relating to the Order and Administration of their Ceremonies, Sacraments, Ordinations, &c.

Fa. Goar has given us an Edition of the *Greek Euchology* in *Greek* and *Latin*, with Notes, at *Paris*.

EUCHRASY, from *eû*, bene, good, and *χρᾶσις*, *Temperamentum*, Constitution, is an agreeable, well proportion'd Mixture of Qualities; whereby a Body is said to be in good Order, that is, in a good State of Health. See TEMPERAMENT.

EUDOXIANS, a Party, or Sect of Hereticks, of the IVth Century; denominated from their Leader *Eudoxius*, Patriarch of *Alexandria* and *Constantinople*, a great Defender of the *Arian* Doctrine.

The *Eudoxians*, then, adhered to the Errors of the *Arians* and *Eusebians*; maintaining, that the Son was created out of Nothing; that he had a Will distinct and different from that of the Father, &c. See ARIANS and EUSEBIANS.

EVE TRON, is used by some Astronomers for the *Liberation* of the Moon. See LIBERATION.

EVEN Number, is that which may be divided into two equal Parts, or Moieties. See NUMBER.

EVENLY even Number, is which is exactly divisible by an *Even Number* taken an *Even Number* of Times; such is 32; since divisible by eight, taken four Times.

EVENLY odd, is that which an *Even Number* measures by an *Odd one*; as 30, which is measured by 6, taken five Times.

EVERGETES, a *Greek* Term, signifying *Benefactor*; being form'd of *eû*, bene, well, and *εργος*, *opus*, *Work*.

It is still retain'd in our Language, by Way of Addition, or Epithet, given to several Princes, or Kings of *Syria* and *Egypt*, who succeeded *Alexander*. Thus we say, *Prolemys Evergetes* King of *Egypt*; *Antiochus Evergetes* King of *Syria* ascended the Throne 139 Years before *Christ*.

EVER-GREENS, or *Perennials*, such Plants as continue their Verdure, Leaves, &c. all the Year. See PLANT, &c.

Of these, our Gardeners reckon twelve, fit for *English* Air, viz. the *Alaternus*, *Arbutus*, *Bay-Tree*, *Box-Tree*, *Holly*, *Juniper*, *Laurus* *stnus*, *Phytolita*, *Pyracantha*, or *Ever-green Thorn*, *Italian green Privet*, and the *Tew-Tree*.

EVIDENCE, a Quality in Things whereby they become visible and apparent to the Eyes, either of the Body, or the Mind. See KNOWLEDGE.

The Schoolmen distinguish *Evidence*, into *formal* and *objective*.

Formal Evidence, is the Act of the Intellect, consider'd as clear and distinct.

Objective Evidence, consists in the Clarity and Perspicuity of the Object; or it is the Object it self, so constituted, as that it may be clearly and distinctly known.

Others divide *Evidence* into *Moral*, *Physical*, and *Metaphysical*.

A Thing is said to be *morally Evident*, so far as I have a distinct Notion, or Knowledge thereof, by unexceptionable Witnesses. *Physically*, so far as natural Sense and Reason pointing out any Thing, convinces one thereof. *Metaphysically*, when I enter so fully and clearly into the Essence of any Thing, that nothing can be clearer.

Evidence, is the essential and infallible Character, or Criterion of Truth; and is that, in Effect, which with us constitutes Truth. See TRUTH.

If *Evidence* should be found in Propositions that are false, we should be compell'd into Error; since the Assent we give to *Evidence* is necessary. Whence would follow this impious Position, that God who made us, is the Author of our Errors, as he has constituted us so, as to put us under a Necessity of falling into 'em. See ERROR.

It may be added, that as we necessarily love Truth, and hate Error, it seems inconsistent with the Nature of a beneficent Being, to form us with a Love of what we could not obtain, or not know whether we did obtain it or not: Beside that, if we should err in Things that are *Evident*, as well as in those that are not so, we should sometimes find Contradictions in *Evident* Propositions, as we commonly do in Things that are obscure.

Evidence therefore must be allow'd the Mark of Truth; and those Things must be allow'd true, which carry with 'em such a Degree of *Evidence*, as obliges us to assent to 'em. Whatever we see *Evidently* agreeable to the Things whereof we speak, that we must acknowledge to be true. See FAITH, OPINION, VERISIMILITUDE, &c.

The *Epicureans* allow of no other *Evidence* but that of Sense; or that arising from Sense, (it being a fundamental with them, that Sense is the first and primary Criterion of all Truth) See FALSHOOD and FALLACY.

By *Evidence* of Sense, they mean that Species, or Image, exhibited by the Sense, or Phantasia; which, when all Impediments to a just judging, as Distance, Motion, Medium, &c. being removed, cannot be contradicted, or gain-say'd. Wherefore, the Question being put, whether or no a Thing be such as it appears; the Answer is not to be given, till it have been tried and examined all the Ways, and by all the Senses that it can be an Object of. See SENSE, CRITERION, EPICUREANS, &c.

EVIDENCE, in Law, is any Proof, be it Testimony of Men, Records, or Writings: It is thus call'd, because the Point in Issue is hereby made *Evident* to the Jury. See TESTIMONY, WITNESS, &c.

Sir Tho. Smith reitains *Evidence* to authentic Writings of Contracts, written, seal'd, and deliver'd. *De Rep. Angl.* Lib. II.

EVIL, *Malum*, in Ethics, a Privation, or Absence of some proper, or necessary Good; or some due Measure, or Degree thereof. See GOOD.

The Schoolmen deny, that any thing is *evilly* w. y. *Evil*; and restrain all *Evil*, to be only so, *quoad hoc*;

as the Thing wants this, or that Degree of a certain Quality, necessary to constitute it, in that respect, good. There is nothing *Evil*, say they, without some Good in it wherein the *Evil* resides as in its Subject; for, as it is a Being, and as every Being depends on the Supreme Being, it cannot but be good, as flowing from the Supreme Good.

Evil is either Natural or Moral; between which there is this Relation, that Moral *Evil* produces Natural.

Moral *Evil*, is defined a Deviation from right Reason, and consequently from the Will and Intendment of the Great Legislator, who gave us that as a Rule: This the Philosophers call *Inobedientiam* and *carpe*, as staining the Image of God, and fullying our original Beauty; likewise *malum culpæ*.

Natural *Evil*, is a Want of something necessary to the bene esse, or Perfection of a Thing, or to its answering all its Purposes. Such are Defects of the Body, Blindness, Lameness, Hanger, Distempers, Death.

This Species of *Evil* is denominated *triste*, *injucundum*, *noxium*, and *malum pæne*.

Again, *Evil* is either such in it self, as Envy, Impiety, &c. or, to another; as Meant, which in it self is good, may be *Evil* to a Man on Account of some Distemp; as Wine to a Feverish Person, &c.

Thus far the Schools have gone in the Nature and Reason of Moral and Natural *Evil*: A late excellent Author sets the Thing in another Light, and furnishes a much finer, more adequate Theory of Moral Good and *Evil*. Inquire into the Origin of our Ideas of Beauty and Virtue.

Moral *Evil*, according to this Philosopher, denotes our Idea of a Quality apprehended in Actions which excite Aversion and Dislike towards the Actor, even from Persons who receive no Disadvantage thereby: As Moral Goodness denotes our Idea of a contrary Quality which procures Approbation and Love towards the Actor, even in Persons unconcern'd in its natural Tendency.

This Notion supposes an universally acknowledged Difference of Moral Good and *Evil*, from Natural. Moral Good, we all know, procures Love towards those we apprehend possess'd of it: Whereas Natural Good does not. How differently, for instance, are we affected towards those we suppose possess'd of Honesty, Faith, Generosity, &c. when we expect no Benefit from those Qualities: And those possess'd of the natural Goods, as Houses, Lands, Gardens, Health, Strength, &c. So, whatever Quality we apprehend morally *Evil*, raises our Hatred towards the Person in whom we observe it; as Treachery, Cruelty, Ingratitude, &c. Whereas we love and pity many expos'd to natural *Evils*, as Pain, Hunger, Sickness, &c.

The Origin of these different Ideas of Actions, has greatly puzzled the Moralists: The Generality make Self-Interest, or Self-Love, the Source of 'em all: We approve the Virtue of others, as it has some small Tendency to our Happiness, either from its own Nature, or from this general Consideration, that a Conformity to Nature and Reason is in the general advantageous to the whole, and to us in particular: And, on the contrary, disapprove the Vice of others, as tending at the long Run to our particular Detriment.

Others suppose an immediate natural *Evil*, in the Actions call'd *Vicious*; that is, that we are determin'd to perceive some Deformity or Displeasure from such Actions, without reflecting on any Disadvantage that may any way redound to us from the Action; and that we have a secret Sense of Pleasure accompanying such of our own Actions as are call'd virtuous, when we expect no further Advantage from 'em: But then they add, that we are excited to perform those Actions, even as we pursue or purchase Pictures, Statues, Landscips, &c. from Self-Interest, to obtain the Pleasure which accompanies the Action.

But the Author just mention'd has shewn the Mistake: Some Actions, he proves, have to Men an immediate Goodness, and others an immediate *Evil*, i. e. We perceive Pleasure in some, and Pain in others, and are determin'd to love, or hate the Doers, without any View of natural Advantage, without any View to future Rewards or Punishments, or even without any Intention to obtain the sensible Pleasure of the Good; but from a very different Principle, viz. an internal moral Sense, or a natural Determination of the Mind, to receive amiable, or disagreeable Ideas of Actions, when they shall occur to our Observation, antecedently to any Opinions of Advantage or Loss to redound to our selves from 'em; even as we are pleas'd with a regular Form, or an harmonious Composition, without any Knowledge of Mathematicks, or seeing any Advantage in that Form or Composition, different from the immediate Pleasure. See SENSE, GOOD, VIRTUE and VICE, BENEVOLENCE.

EVIL, or *Kings-EVIL*, in Medicine, a Disease by the Physicians call'd *Struma*, and *Scrophulous*, consisting of

scirrhous Tumours, arising most commonly about the Neck, but sometimes also on the other glandulous Parts, as the Breasts, Arm-pits, Groin, &c. See STRUMA and SCROPHULA.

The Kings of England and France, have, of a long Time, pretended to the Privilege of Caring the *Kings-Evil* by Touching. See TOUCHING.

The Right, or Faculty, 'tis said by some, was originally inherent in the French Kings; and those of England only claim'd it, as an Appendage, or Appartenance to that Crown, to which they laid a Claim. Tho' some of our own Monkish Writers set the Thing on a different Footing; and will have it to have been practis'd by our Kings, as early as *Edward the Confessor*; which Opinion the ingenious Mr. Becker has abundantly overthrow'd.

Raou de Pruvelles, addressing his Translation of St. Augustin, de *Civitate Dei*, to Charles V. of France, says expressly, *Vos Deuanciers, & vous avez telle Vertu & Puissance que vous est donnee & attribuee de Dieu que vous faites Miracles en votre Vie, telles, & grandes & si apores que vous Gariffes d'une tres horrible Maladie que's appelle les Escrouelles* [i. e. the Kings-Evil] *de laquelle nul' autre Prince terrien ne peut guarir hors vous.*

Steuu de Conti, a Religious of *Corbie*, who lived in the Year 1400, and wrote a History of France still preferred in MS. in the Library of St. Germain des pres, describes the Practice of Touching for the *Evil*. After the King had heard Mass, a Vessel of Water was brought him, and his Majesty having put up his Prayers before the Altar, touch'd the diseas'd Part with his right Hand, and wash'd it with the Water.

Matthieu Paris will have S. Louis the first who practis'd it: Others contend, that King Robert was the first who was gifted this Way. 'Tis certain, we find no mention of any such Prerogative, before the Kings of the 11th Century, when that Prince reign'd, *Fa. Daniel*, Hist. de France, T. I. p. 1034.

Polydore Virgil strains hard to prove the same Virtue in the Kings of England; but to little Purpose. *Foyns Hist. de Navarre*, 1062.

The Continuer of *Monstrelet*, observes, that Charles VIII. touch'd several Sick Persons at Rome, and cured 'em, *dans ceux des Italiens*, says he, *voyant ce Mystere us furent ouques si emerveilles.*

The same Virtue, we know not on what Grounds, is commonly attributed to a Seventh Son, born without any Daughter between: As also to the Chiefs of certain particular Families; particularly, the Eldet Person of the House of Annonin in Burgundy.

EULOGY, EULOGIA, in Church-History. — When the Greeks have cut a Loaf, or Piece of Bread, to consecrate it, they break the rest into little Bits, and distribute it among the Persons who have not yet communicated, or send it to Persons that are absent; and these Pieces of Bread are what they call *Eulogies*.

The Latin Church has had something of the like Kind, of a great many Ages; and 'twas thence arose the Use of their Holy Bread.

The Name *Eulogy*, was likewise given to Loaves, or Cakes, brought to Church by the Faithful, to have them bless'd.

Lately, the Use of the Term, pass'd hence to mere Pretenses made a Person, without any Benediction. See the Jesuit *Grotter*, in his Treatise de *Benedictionibus & Malédictionibus*, L. II. C. 24, 25, &c. where he treats of *Eulogies* thoroughly.

From a Passage in *Bollandus*, on the Life of S. Melaine, C. 4. it appears, that *Eulogies* were not only of Bread, but any Kinds of Meats bless'd and hallow'd for that Purpose. Add, that almost every body bless'd and distributed *Eulogies*: Not only Bishops and Priests, but even Hermits, tho' Laymen, made a Practice of it. Women also would sometimes send *Eulogies*, as appears from the Life of S. Waulry, C. III. n. 14. in the *Bollandists. Acta Sancti Jan. T. I. p. 20.*

The Wine sent as a Present, was also held an *Eulogy*. *Bollandus* remarks further, that the Eucharist it self was call'd *Eulogy*. *Act. Sancti Jan. T. II. p. 199.*

The Word is Greek, *Eulogia*, form'd of *eu*, bene, well; and *logos*, dico, I say, speak, q. d. *Benedictionum*.

EUNOMIANS, a Sect of Heretics, denominated from *Eunomius*, Bishop of *Cyicut*, who, in the IVth Century, maintain'd most of the Errors of *Arius*, and added others to 'em; as, particularly, that he knew God, as well as God knew himself. See ARIANS.

He re-baptized such as had already been baptized in the Name of the Trinity: He had dissembled his Errors for some Time, but having at length made a Discovery, he was expell'd his Sec.

The *Arians* endeavour'd to have put him into that of *Somofata*, but could not effect it: In lieu thereof, the Emperor *Venant* r'stor'd him to *Cyprus*.

EUNOMIOEPSYCHIANS, a Sect of Hereticks of the IVth Century. See **HERESY**.

The *Eunomioepychians*, mention'd by *Nicophorus*, L. XII. C. 30. are the same with those call'd *Eusebians* by *Sozomen*, L. VII. C. 17. The Author whereof, according to *Sozomen*, was an *Eunomian*, named *Eusebius*, and not *Eusebius*, as *Nicophorus* has it: And yet this latter Writer only copies *Sozomen* in this Passage; so that it is past doubt, they both speak of the same Sect. But on whose Side the Error lies, is not easy to decide: *Valesius* durst not undertake to shew it; but contented himself to mark the Difference in his Notes on *Sozomen*, as *Fa. Fronton* has done on *Nicophorus*.

EUNUCH, **ΕΥΝΟΥΧΙΑ**, a Term applied, in the general, to all who have not the Faculty of Generating, either thro' Imbecility, or Frigidity; but particularly to such as have been castrated, or have lost the Parts necessary thereto. See **CASTRATION**.

In *England*, *France*, &c. *Eunuchs* are never made but on Occasion of some Disease, which render such an Operation necessary; but in *Italy*, they make *Eunuchs*, for the sake of preferring the Voice; and, in the *East*, they make *Eunuchs* to be Guards, or Attendants on their Women.

Great Numbers of Children, from one to three Years of Age, are yearly castrated in *Italy*, to supply the Opera and Theaters, not only of *Italy*, but other Parts of *Europe*, with Singers: Tho' 'tis not one in three, that after having lost their Virility, have a good Voice for a Recompence.

Tavernier assures us, that in the Kingdom of *Bosnia* in the *East-Indies*, there are every Year made Twenty Thousand *Eunuchs*, and sold thence into other Countries.

The *Seraglio's* of the *Eastern* Emperors, are chiefly serv'd, and guarded by *Eunuchs*. And yet we have very good Testimonies, that the rich *Eunuchs* in *Persia* and other Countries, keep *Seraglio's* for their own Use.

By an Arrêt of the grand Chamber of *Paris* in 1665, it is adjudg'd, that an *Eunuch* could not marry, not even with the Consent of the Woman and all the Parties on both Sides.

Claudian has a very severe Satyr against the *Eunuch Eutropius*, who had been Elected Consul of *Rome*. He represents him as an old Woman, dress'd up in the Honours of the Consulate.

The Story of *Origen* is notorious: That learned and pious Father, upon a too literal Interpretation of that Passage in *St. Matthew*, C. XIX. ver. 12. where mention is made of, *Eunuchs so born from their Mothers Womb*; — *Eunuchs who were made so of Men*; — And *Eunuchs who made themselves Eunuchs for the Kingdom of Heaven*: Castrated himself.

In the Council of *Nice*, those were condemn'd, who, out of an indiscreet Zeal and to guard themselves from sensual Pleasures, should make 'emselves *Eunuchs*: Such as thus mutilated their Bodies, were excluded from Holy Orders; witness *Leontius* Bishop of *Antioch*, who was deposed for having practis'd this Cruelty on himself. And the Bishop of *Alexandria* excommunicated two Monks, who had follow'd his Example on Pretence of securing 'emselves from the impetuous Motions of Concupiscence. Several of the Emperors made very severe Prohibitions against the making of *Eunuchs*, or castrating one's self.

The Word is derived from the *Greek*, *εὐνοῦχος*, *Eunuch*; form'd of *εὐνοῦ*, *Leis: curam habet*, q. d. *Guardian*, or *Keeper of the Bed*.

In the III^d Century, there was even a Sect of Hereticks form'd, call'd *Eunuchs*, *Eunuchi*; as having the Folly or Madnes, to castrate not only those of their own Persuasion, but even all they could lay Hands on. They took their Rise from the Example of *Origen*, who, upon a Misunderstanding of our Saviour's Words in *St. Matthew*, made himself an *Eunuch*, by cutting off the Part, as some say; or, as others, particularly *S. Epiphanius*, Hæres. 58. by the Use of certain Medicines. These Hereticks were also call'd *Valesians*. See **VALESIANS**.

EVOLVENT, in Geometry, a Term some Writers use for the Curve resulting from the Evolution of a Curve; in Contradistinction to the *Evolute*, which is the first Curve supposed to be open'd, or Evolved. See **EVOLUTE**.

The *Evolute* always both touches and cuts the *Evolver* at the same Time: The Reason is, that it has two of its infinitely small Sides in common with the *Evolver*, or rather exactly placed on the two equal Sides thereof. One of 'em withinside that of the *Evolver*, i. e. on the concave Side thereof; and the other, on the convex Side of its correspondent Side: So that the *Evolute* touches

the *Evolver* in two Points; whence, instead of being a Tangent, it is said to *Osculate* the *Evolver*, and hence it is also call'd *Osculator*, and *Circulus Osculator*. See **OSCULUM**.

There is one, and but one *Osculator*, to each Point of the *Evolver*; but to the same Point there are an Infinity of other Circles, which only touch, and don't *Osculate*. The *Osculator* and the *Evolute* make no Angle in the Place where they touch and cut: Nor can any Curve Line be drawn between; as there may betwixt a Tangent and a Curve. See **ANGLE OF CONTACT**.

EVOLUTE, **ΕΥΟΛΥΤΑ**, in the higher Geometry, a Curve, first propos'd by *Mr. Huygens*; and since, much studied by the later Mathematicians. See **CAUVE**.

The *Evolute* is a Curve, supposed to be *evolved*, or open'd; and which in opening, describes other Curves.

To conceive its Origin and Formation the better; suppose a flexible Thread, wound exactly over the Convexity of any Curve, as *ABC*, (*Tab. Geometry* Fig. 20.) and suppose the Thread fix'd in *G*, and every where else at Liberty, to *A*. Now, beginning to unwind the Thread from the Point, and continuing it to *G*, and throughout keeping it tight on the Curve Surface *ABC*; when the Thread is become quite straight, and is only a Tangent, *FG*, to the Curve in the Point *G*; 'tis evident the Extremity *A*, in its Progress to *G*, has described another Curve Line *ADBE*.

Here, the first Curve *ABC* is call'd the *Evolute*: Each of its Tangents *BD*, *CE*, &c. comprehend'd between it, and the Curve *ADEF*, is call'd a *Radius of the Evolute*; or *Radius Osculi*, or *Radius Osculator* of the Curve *ADEF*, in each Point *D*, *E*, &c. And the Circles whereof the *Osculators* *BD*, *CE*, &c. are *Radii*, are call'd *Circuli Osculatores* of the Curve *ADEF*, in *D*, *E*, &c. And lastly, the new Curve, resulting from the Evolution of the first Curve, began in *A*, is call'd the *Curve of Evolution*, or *Curve described by the Evoluter*.

The *Radii of the EVOLUTE*, then, is the Part of the Thread comprised between any Point where it is a Tangent to the *Evolute*, and the correspondent Point, where it terminates on the new Curve. Which Appellation *Radii* is the more proper, as one may actually consider this Part of the Thread in every Step it takes, as if it described an Arch of an infinitely small Circle, making a Part of the new Curve, which thus consists of an infinite Number of such Arches, all described from different Centres and different *Radii*.

Every Curve, therefore, may be conceiv'd as form'd by the Evolution of another. And we are to find that whole Evolution that form'd it, which amounts to the finding of the *Radius of the Evoluta* in any Point. For, as it is always a Tangent to the generating Curve, it is properly no more than one of its infinitely small Parts, or Sides prolonged; and all its Sides, whose Position is determin'd of Course, is no more than the generating Curve it self.

The same Thread is also call'd *Radius Curvæ primitivæ*, or *Radius Osculi*, by Reason of a Circle described hereby, from the Centre *C*, is said to *Osculate* or *kiss* it; as both touching and cutting at the same Time, i. e. touching both the inside and the out. See **OSCULATION**.

Hence, 1^o. The *Evolute* *BCF*, (*Fig. 21.*) is the Place of all the Centres of the Circle that *Osculate* the Curve described by the Evolution *AML*. 2^o. When the Point *B*, falls on *A*, the *Radius of the Evolute* *MC*, is equal to the Arch *BC*; or to the Aggregate of *AB*, and the Arch *BC*. 3^o. Since the Element of the Arch *Mm*, in the Curve described by Evolution, is an Arch of a Circle described by the *Radius* *CM*; the *Radius of the Evolute* *CM* is perpendicular to the Curve *AI*. 4^o. Since the *Radius of the Evolute* *MC*, is always a Tangent to the *Evolute* *BCF*; Curves of Evolution may be described thro' innumerable Points, if only Tangents be produced in the several Points of the *Evolute*, till they become equal to their correspondent Arches.

The finding of the *Radii of Evolutes*, is a Thing of great Importance in the higher Speculations of Geometry; and even, sometimes, is of Use in Practice, as the Inventor of the whole Theory, *Huygens*, has shewn in applying it to the Pendulum. *Horol. Oscill.* Part III. — The Doctrine of the *Oscula of Evolutes*, is owing to *M. Leibnitz*; who first shew'd the Use of *Evolutes* in the measuring of Curves.

To find the *Radius of the Evolute* in the divers Kinds of Curves, with Equations to the *Evolute*. See *Woff. Elem. Math.* Tom. I. p. 524. &c. sequens. Or the *Insignis. Petites de Mons. le Marquis de l' Hôpital*.

Since, the *Radius of an Evolute* is equal to an Arch of an *Evolute*, or exceeds it by some given Quantity; all the Arches of *Evolutes* may be rectified geometrically, whose *Radii* may be exhibited by geometrical Constructions; whence we see why an Arch of a Cycloid is double

double its Chord: The Radius of the *Evolute* being double the fame; and the *Evolute* of a Cycloid, being it self a Cycloid. See RECTIFICATION, CYCLOID, &c.

Moſt *Parigons* has applied the Doctrine of the Radius of the *Evolute* to that of Central Forces; ſo that having the Radius of the *Evolute* of any Curve; one may have the Value of the Central Force of a Body which moving in that Curve, is found in the ſame Point where that Ray terminates: Or reciprocally, having the Central Force given, the Radius of the *Evolute* may be determined. *Hiſt. de l'Acad. Roy. des Sciences*. An. 1706.

Imperfect EvOLUTE. Moſt *Reaumur* has given a new Kind of *Evolute* under this Denomination. Hitherto, the Mathematicians had only conſider'd the Perpendiculars let fall on the Points of the Convex Side of the Curve: If other Lines, not perpendicular, were drawn upon the ſame Points, provided they were all drawn under the ſame Angle, the Effect would be the ſame; that is, the oblique Lines would all interſect within the Curve, and by their Interſections, form the infinitely ſmall Sides of a new Curve, whereof they would be in many Tangents.

This Curve would be a Sort of *Epiſclopis*, and would have its Radii; but, an *imperfect* one, ſince the Radii are not perpendicular to the ſirt Curve. *Hiſt. de l'Acad. Sc.* An. 1709.

EVOLUTION, in Geometry, the unfolding, or opening of a Curve, and making it deſcribe an *Evolute*.

For the Nature of *Evolution*. See EVOLUTA.

The Equable *Evolution* of the Periphery of a Circle, or other Curve, is ſuch a gradual Approach of the Circumference to Reſtitude, as that all its Parts do meet together, and equally evolve, or unbend; ſo that the ſame Line becomes ſucceſſively a leſs Arc, of a reciprocally greater Circle, till at laſt they change into a ſtraight Line. In *Philof. Tranſact.* N^o. 260. a new Quadratrix to the ſite Circle, is found by this Means, being the Curve deſcribed by the equable *Evolution* of its Periphery.

EVOLUTION is alſo uſed for the Extraction of Roots out of Powers, in which Senſe it is directly contrary to *Evolution*. See EXTRACTION.

EVOLUTION, in the Art of War, is a Term applied to the divers Figures, Turns, and Motions, made by a Body of Soldiers, in ranging them in Form of Battal, or in changing their Form; either in the Way of Exerciſe, or when in actual Engagement.

'Tis by the *Evolution*s, that the Form, and Poſture of a Battalion, Squadron, &c. are changed; either to make good the Ground they are upon, or to poſſeſs themſelves of another, that they may attack the Enemy, or receive an Onſet more advantageouſly.

The *Military Evolutions*, are *Converſions*, *Counter-marches*, or *Wheelings*, *Doublings* of Rank or File, &c. See CONVERSION, &c.

Fa. Hoſe, a Jeſuite in 1697, printed a Treatiſe of *Naval Evolutions*, in Folio:—By *Naval Evolutions*, he means the Motions made by a Fleet, Squadron, or Naval Armament, in order to put themſelves into a proper Arrangement, or Situation, for attacking the Enemy, or defending themſelves with the moſt Advantage.

The Word is Latin, *Evolutio*, form'd of the Prepoſition *e*, out, and *volvo*, I roll or wind, *q. d.* an *unwinding*, or *unrolling*.

EUPHONY, **EUPHONIA**, in Grammar, an Eſſence, Smoothneſs, and Elegancy of Pronunciation. See PRONUNCIATION.

The Word is Greek, form'd of εὖ, *well*; and φωνή, *Vox*, Voice.

Quintilian calls the *Euphonia*, *Vocalitas*; Scaliger, *facilis pronuntiatio*.

The *Euphonia* is properly a Kind of Figure, whereby we ſuppreſs a too harſh Letter, or convert it into a ſmoother, contrary to the ordinary Rules. There are Examples enough in all Languages.

EUPHORBUM, or **EUPHORIA**, in Pharmacy, a Kind of Gum, brought from *Africa*, in little roundiſh Pieces, whitish when new, and yellowiſh when old, very ſharp to the Taſte, but void of Smell. See GUM.

The principal Uſe of *Euphorbium*, is external; being a great Ingredient in divers reſolutive Plaſters, as well as in Tincture, and Powder for ſtopping of Gangrenes, cleaning of foul Ulcers, and exfoliating carious Bones.

Internally uſed, 'tis a Purgative, but ſo violent a one, that 'tis almoſt out of Doors, as tearing off the neceſſary Mucus or Covering of the Stomach and Bowels, and occaſioning Dyſenteries. Yet we are told the *Africans* uſe it very commonly; tho' they ſirt quench its Fire in Purſian Water.

Its Powder is a violent Sternatory, and to be uſed very cauſtiously, and never alone, but mix'd with a ſmall Quantity of ſome other Powder, to guard againſt its intolerable Heat.

The Gum we call *Euphorbium*, is form'd of the Juice of a Tree, or rather Plant, of the ſame Name, pretty frequent in *Mauritania*; tho' the Species of the Tree, or Plant, has been greatly controverted. The Generality of our lateſt Botanists, make it a ferulaceous Plant; and Mr. Profeſſor *Hermannus* calls it the *Tithymalus Mauritaniae Aphyſus Angulus* & *Spinuſus*. *Hoet Acad. Lug. Batav.* 598.

It has no Leaves; but in Lieu thereof puts forth along its Stem a Kind of long prickly Eyes, or Buds. Which Buds, it is, that yield that gummy Juice, call'd *Euphorbium Officinatum*.

Some Authoes will have it, that the Gum is drawn from the Plant by Inciſion; others, on the contrary, ſay it oozes ſpontaneouſly: The Juice, we are told, is ſo very ſubtile, and penetrating, that the Perſon who taps the Tree, is forced to ſtand at a good Diſtance, and make the Inciſion with a long Pike; otherways it gets to the Brain, and occaſions dangerous Inflammations. It oozes out in great Abundance, and is gather'd in a Sheep's Skin, wrapp'd round the Tree.

Pliny tells us, that the ſirt Diſcovery of *Euphorbium* is attributed to *Juba* King of *Lybia*, who denominated it from *Euphorbus* his Phyſician, Brother of *Muſa*, Phyſician to *Auguſtus*.

Erwaller aſſures us, that the Plant, which yielded the *Euphorbium* of the Antients, is now unknown to us; but if we go by *Pliny's* Deſcription, the Plant call'd *Schadida Calli* in the *Hortus Malabaricus*, muſt be the antient *Euphorbium*. This Diſcovery is owing to *Commelinus*, *Bourquemaieſter* of *Amſterdam*, and Profeſſor of Botany.

EUPHORY, ſignifies the ſame as *Euchraſy*. See EUCHRAEY.

EUPSICHIANS. See EUNOMIEEUPSICHIAN

EURIPUS, in Hydrography: The Word, originally and properly, ſignifies a certain Straight of the Sea, between *Boris*, and the *Negropont*; where the Currents are ſo ſtrong, that the Sea is ſaid to Ebb and Flow ſeven Times a Day; in which Place, as the Story commonly goes, *Ariſtote* drown'd himſelf, out of Chagrin, for not being able to account for ſo unuſual a Motion.

But *Euripus* has ſince become a general Name for all Straights, where the Water is in great Motion and Agitation.

The antient Circus's had their *Euripi*, which were no other than Pits, or Ditches, on each Side the Courſe; into which it was very dangerous falling with their Horſes and Chariots, as they run their Races.

The Term was alſo applied by the *Romans*, in Particular, to three Canals, or Ditches, which encompass'd the Circus on three Sides; and which were fill'd occasionally, to repreſent *Nauſachia*, or Sea Battels.

The ſame People call'd their ſmalleſt Fountains, or *Fers d'Eau*, Canals in their Gardens, *Euripus's*; and their largeſt, as *Cafcades*, &c. Niles.

The Word is derived from the Greek, εὐ, *facile*, eaſily, and ερρις, *precipitari*.

EURUS, } See WINDS.
EURO-Aſter, }
EURO-NORUS, }

EURYTHMIA, in Architecture, Painting, and Sculpture; a certain Majesty, Elegance, and Eſſentials appearing in the Compoſition of divers Members, or Parts of a Body, Building, or Painting; and reſulting from the ſine Proportions thereof. See PROPORTION.

The Word is Greek, and ſignifies literally a Conſonance, or fine Agreement, or as we may call it, a Harmony of all the Parts; being compounded of εὐ, *well*, and ῥυθμῶν, *Rythmus*, a Cadence, or Agreement of Numbers, Sounds, or the like Things. See RYTHMUS.

Vitruvius ranks the *Eurythmia* among the eſſential Parts of Architecture: He deſcribes it as conſiſting in the Beauty of the Conſtruction, or Aſſemblage of the ſeveral Parts of the Work, which render its Aſpect, or whole Appearance graceful: E. gr. when the Height correſponds to the Breadth, and the Breadth to the Length, &c.

From theſe three Ideas, (or *Deſigns*, viz. *Orthography*, *Scenography*, and *Proſie*) it is, that the ſame *Eurythmia*, *Majeſtica*, and *Venus's Species Ediſici*, does reſult; which creates that agreeable Harmony between the ſeveral Dimenſions; ſo as nothing ſeems diſproportionate, too long for this, or too broad for that, but correſponds in a juſt and regular Symmetry, and Conſent of all the Parts with the whole. *Boyle's Account of Archib.* &c. See SYMMETRY.

EUSEBIANS, a Denomination given to the Sect of *Arians*, on Account of the Favour and Countenance, which *Eusebius* Biſhop of *Ceſarea* ſlew'd, and procur'd for them at their ſirt Riſe. See **ARIANS**.

EUSTATHIANS, a Name given to the Catholics of *Antioch*, in the IVth Century; on Occasion of their Refusal to acknowledge any other Bishop beside *S. Eustathius*, deposited by the *Arians*.

The Denomination was given them during the Regency of *Paulinus*, whom the *Arians* substituted to *S. Eustathius*, about the Year 350, when they began to hold their Assemblies apart.

About the Year 350, *Leontius* of *Phrygia*, call'd the *Eventer*, who was an *Arian*, and was put in the See of *Antioch*, desired the *Eustathians* to perform their Service in that Church; which they accepting, the Church of *Antioch* serv'd indifferently both the *Arians* and *Catholics*.

This, we are told, gave Occasion to two Infiltrations, which have subsisted in the Church ever since: The first was Psalmody in two Choirs; but, *M. Baillet* thinks, that if they instituted an alternate Psalmody between two Choirs, 'twas between two *Catholic* Choirs; and not by Way of Response to an *Arian* Choir. The second was the Duxology, *Glory be to the Father, and the Son, and the Holy Ghost*. See DOXOLOGY.

This Conduct, which seem'd to imply a Kind of Communion with the *Arians*, gave great Offence to Abundance of *Catholics*, who began to hold separate Meetings; and thus form'd the Schism of *Antioch*. Upon this, the rest, who continu'd to meet in the Church, cens'd to be call'd *Eustathians*, and that Appellation became restrain'd to the Dissenting Party.

S. Flavianus, Bishop of *Antioch* in 381, and one of his Successors, *Alexander* in 422, brought to pass a Coalition, or Re-union, between the *Eustathians* and the Body of the Church of *Antioch*, described with much Solemnity by *Theodoret*, Eccl. L. III. C. 2.

EUSTATHIANS, was also a Sect of Hereticks, in the IVth Century; denominat'd from their Author *Eustathius*, a Monk so foolishly fond of his own Profession, that he condemn'd all other Conditions of Life.

He excluded married People from Salvation; prohibited his Followers from praying in their Houses; and oblig'd them to quit all they had, as incompatible with the Hopes of Heaven.

He drew them out of the other Assemblies of the faithful, to hold secret ones with him; and made them wear a particular Habit: He appointed them to fast on *Sundays*; and taught them that the ordinary Fasts of the Church were needless, after they had attained to a certain Degree of Purity, which he pretended to. He shew'd a World of Horror for Chappels built in Honour of Martyrs, and the Assemblies held therein.

Several Women, seduced by his Reasons, forsook their Husbands, and Abundance of Slaves deserted their Masters House. He was condemn'd in the Year 342, at the Council of *Caesarea*, in *Paphlagonia*.

EUSTYLE, in Architecture, a Kind of Edifice, where the Pillars are plac'd at a most convenient Distance one from another; the Intercolumniations being all just two Diameters and a Quarter of the Column; except those in the middle of the Face before and behind, which are three Diameters distant. See INTERCOLUMNIATION.

The *Eustyle* is a Medium between the *Pycnostyle* and *Areostyle*. See PYCNOSTYLE, &c.

The Word is *Greek*, being form'd of *εὖ*, *beau*, well, and *στυλ*, *Column*.

Vitrucvius, L. III. C. 2. observes, that the *Eustyle* is the most approved of all the Manners of Intercolumniation; and that it surpasses all the rest, in Convenience, Beauty, and Strength.

EUTYCHIANS, ancient Hereticks, denominat'd from *Eutycheus* the Archimandrite, or Abbot of a Monastery at *Constantinople*. See HERETICK.

The Aversion *Eutycheus* bore to the Heresy of *Nestorius*, threw him into another Extreme, not less dangerous than that to be warmly oppos'd; tho' some Passages in *St. Cyril*, which rais'd the Unity of the Person of *Jesus Christ* very high, contributed, likewise, to his Delation.

At first he held, that the *Logos*, Word, brought his Body down with him from Heaven; which was a near Approach to the Heresy of *Apollinaris*: And tho' he afterwards testified the contrary in a Synod at *Constantinople*, wherein he was condemn'd; yet he could not be brought to acknowledge, that the Body of *Jesus Christ* was consubstantial with ours.

In Effect, he did not seem quite steady, and consistent in his Sentiments; for he appear'd to allow of two Natures, even before the Union; which was apparently a Consequence he drew from the Principles of the Platonic Philosophy, which supposes a Pre-existence of Souls; accordingly, he believ'd that the Soul of *Jesus Christ* had been united to the Divinity before the Incarnation; but then he allow'd no Distinction of Nature in *Jesus Christ*, since his Incarnation.

See the Differtation of *Fa. Hardouin*, de *Sacramento Altaris*, wherein that Jesuit endeavours to unfold all the Sentiments of the *Eutycheians*.

This Heresy was at first condemn'd in a Synod held at *Constantinople*, by *Flavian* in 448: Was re-examin'd, and fulminat'd in the General Council of *Chalcedon* in 451. The Legates of *Pope Leo*, who assist'd thereat, maintain'd, that it was not enough to define that there were two Natures in *Jesus Christ*, but insist'd strenuously, that to remove all Equivocation, they must add these Terms, without being changed, or confounded, or divided.

But this Decree of the Council of *Chalcedon*, at which assist'd upwards of 620 Prelates, did not stop the Progress of *Eutycheianism*: Some Bishops of *Egypt*, who had attend'd at the Council, upon their Return, proclaim'd openly, that *St. Cyril* had been condemn'd, and *Nestorius* acquitt'd therein: Which occasion'd great Disorders; several Persons, under Pretence of contending for the Sentiments of *St. Cyril*, making no Scruple of weakening the Authority of the Council of *Chalcedon*.

The Heresy of the *Eutycheians*, which made a very great Progress throughout the *East*, at length became divided into several Branches. *Nicephorus* makes mention of no fewer than twelve: Some call'd *Subemati*, or *Apparentes*, as only attributing to *Jesus Christ*, a Phantom, or Appearance of Flesh, and no real Flesh: Others, *Theodosians*, from *Theodosius* Bishop of *Alexandria*: Others, *Jacobites*, from one *James*, *Jacobus*, of *Syria*; which Branch establish'd it self principally in *Armenia*, where it still subsists. See JACOBITES.

Others were call'd *Acephali*, q. d. without Head, and *Severians*, from a Monk call'd *Severus*, who serv'd on the See of *Antioch* in 513. See ACEPHALI and SEVERIANS.

These last were subdivided into Five Factions, viz. *Agnoetes*, who attributed some Ignorance to *Jesus Christ*: Followers of *Paul*, *Melan*, that is, the *Black*; *Angelites*, thus call'd from the Place where they assembled. *Adriates* and *Compositives*, with divers others.

EUTYCHIANS, were also a Sect half *Arian*, half *Eunomian*; which arose at *Constantinople*, in the IVth Century.

It being then a Matter of mighty Controversy among the *Eunomians* at *Constantinople*, whether or no the Son of God knew the last Day and Hour of the World; particularly with Regard to the Passage in the Gospel of *St. Matthew*, C. XXIV. Ver. 36. Or rather that in *St. Mark*, XIII. 31. where 'tis express'd, that the Son did not know it, but the Father only: *Eutycheus* made no Scruple to maintain, even in Writing, that the Son did know it: Which Sentiment displeas'd the Leaders of the *Eunomian* Party, he separated from 'em, and made a Journey to *Eunomius*, who was then in Exile.

That Heretick acquiesc'd fully in *Eutycheus*'s Doctrine, that the Son was not ignorant of any Thing the Father knew, and admitted him to his Communion: *Eunomius* dying soon after, the chief of the *Eunomians* at *Constantinople*, refus'd to admit *Eutycheus*; who, upon this, form'd a particular Sect of such as adher'd to him, call'd *Eutycheians*.

This same *Eutycheus*, with one *Theophronius*, as was said in *Sozomen's* Time, were the Occasions of all the Changes made by the *Eunomians* in the Administration of Baptism; which consist'd, according to *Nicephorus*, in only making one Immersion, and not doing it in the Name of the Trinity, but into the Death of *Jesus Christ*.

Nicephorus calls the chief of this Sect, not *Eutycheus*, but *Ephycheus*, and his Followers *EUNOMOTHEUSIANS*.

EWRY, an Office in the King's Household, where they take Care of the Linen for the King's own Table; lay the Cloth, and serve up Water in Silver *Ewers* after Dinner; whence the Office hath its Name.

EXACERBATION, the same as *Paroxysm*. See PAROXYSM.

EXACTION, in Law, is a Wrong done by an Officer, or one pretending to have Authority, in taking a Reward or Fee, for that which the Law allows not.

The Difference between *Exaction* and *Extortion* consists in this, that *Extortion* is where the Officer takes more than his Due: And *Exaction*, where he wrests a Fee or Reward, when none is due. See EXTORTION.

EXAGGERATION, in Rhetoric, a Figure whereby we enlarge, or heighten Things; making them appear more than they really are, whether as to Goodness, Badness, or other Qualities.

The Word is form'd of the Latin, *Exaggero*, I exaggerate; which is a Compound of *ex*, and *agger*, a Mound, or Elevation of Earth.

EXAGGERATION, in Painting, is a Method of representing Things, wherein they are charg'd too much, or mark'd too strong; whether in respect of the Design, or the Colouring.

Exaggerating differs from *Caricaturing*, in that the latter prevents, or gives a Turn to the Features, &c. of a Face, which they had not; whereas the former only improves, or heightens upon what they had.

The latter is a Kind of Burlesque on the Objects, and is generally meant to ridicule. The former is generally an exalting, or enlivening of the Beauties of the Object. See *CARICATURING*.

The Painter is obliged to have Recourse to an *Exaggeration of Colours*, both on Account of the Surface of his Ground, the Distance of his Work; and of Time, and the Air which diminish and weakens the Force of the Colours. But this *Exaggeration* must be conducted in such manner, as not to put the Objects out of their natural Characters. *De Pileis*.

EXAGON, }
EXACHORD, } See { HEXAGON.
EXAMILION, &c. } { HEXACHORD.
EXALATION, } { HEXAMILION, &c.

EXALATION, *Elevation*, is chiefly used in a figurative Sense, for the raising, or advancing a Person to some Ecclesiastical Dignity; and particularly, the Papacy. The Term *Exaltation*, is in some measure appropriated to the Pope, and expresses his Inauguration, Coronation, taking of Possession, and the Beginning of his Pontificate. See *POPE*.

EXALTATION of the Cross, *EXALTATIO CRUCIS*, is a Feast of the Church, held on the 14th of September, in Memory, as is generally supposed, of this, that the Emperor *Heraclius* brought back the true Cross of *Jesus Christ* on his Shoulders, to the Place on Mount *Calvary*, from which it had been carried away fourteen Years before, by *Cosroe King of Persia*, at his taking of *Jerusalem*, under the Reign of the Emperor *Phocas*. See *CROSS*.

The Cross was deliver'd up, by a Treaty of Peace made with *Siroe*, *Cosroe's* Son. — The Institution of this Feast is commonly said to have been signalized by a Miracle; in that *Heraclius* could not stir out of *Jerusalem* with the Cross, while he had the Imperial Vestments on, enrich'd with Gold and precious Stones; but bore it with Ease in a common Dress.

But long before the Empire of *Heraclius*, there had been a Feast of the same Denomination observed both in the Greek and Latin Churches, on Occasion of what our Saviour said in *St. John's* XII. 32. *And I, if I be exalted, or lifted up, will draw all Men unto me.* And again, in *Ch. VIII.* ver. 28. *When they shall have Exalted, or lift up the Son of Man, then shall ye know that I am he.* *Fa. Du Soulier* assures us, that *M. Caspelin* was of Opinion, this Feast had been instituted, at least at *Jerusalem*, 240 Years before *Heraclius*.

The Feast of the Dedication of the Temple built by *Constantine*, was held, says *Nicéphorus*, on the 14th of September, the Day the Temple had been consecrated on, in the Year 335; and this Feast was call'd, *the Exaltation of the Cross*, by reason it was a Ceremony therein, for the Bishop of *Jerusalem* to ascend a high Place built by *Constantine* for that Purpose, in manner of a Pulpit, call'd by the Greeks, the *Sacred Mysteries of God, or the Holiness of God*; and there hoist up the Cross for all the People to see it.

EXALTATION, in Physicks, is the Act, or Operation of elevating, purifying, subtilizing, or perfecting any natural Body, its Principles and Parts; as also the Quality, or Disposition, which Bodies acquire by this Operation. See *MATURATION* and *PURIFICATION*.

'Tis this *Exaltation* of the sulphureous Part in the Straw-berries, that gives them their agreeable, vinous Taste. *Lenery*. — A gentle and temperate Heat of the Body, *Exalts* and disengages the most volatile Parts of our Food, and disposes 'em for Nutrition.

The Term *Exaltation*, is peculiarly affected by the Chymists and Alchemists, who imagining it to have some extraordinary Emphasis, are using it at every Turn. Most sulphureous Matters, much *Exalted*, are observed to be of a red Colour.

EXALTATION, in Astrology, is a Dignity which a Planet acquires in certain Signs, or Parts of the Zodiac; which Dignity is supposed to give 'em an extraordinary Virtue, Efficacy, and Influence.

The opposite Sign, or Part of the Zodiac, is call'd the *Dejection* of the Planet. See *DEJECTION*.

Thus, the sixteenth Degree of *Cancer*, is the *Exaltation* of *Jupiter*, according to *Albunazar*, by reason it was the Ascendant of that Planet at the Time of the Creation: That of the Sun, is in the 19th Degree of *Aries*; and its Dejection in *Libra*: That of the Moon, is in *Taurus*, &c. *Ptolemy* gives the Reason herof in his first Book *de Quadrap.*

EXAMEN, or *EXAMINATION*, an exact and careful Search, or Inquiry; in Order to discover the Truth, or Falseness, of a Thing.

The Way of Authority is, without Comparison, more easy, and better proportion'd to the Reach and Capacity of simple Men, than the Way of Discussion and *Examen*. *Nicole*.

Such a Person had his House robb'd; and has made a severe *Examination* of all his Domesticks, to find out the Criminal. A Student stands a rigorous *Examination* to be admitted to a Degree of Master, Bachelor, Doctor, &c. See *DEGREE*.

Self EXAMINATION, is a Point much insisted on by Divines, and particularly the ancient Fathers, by Way of Preparation, or Introduction, to Repentance. *S. Ignatius* reduces it to five Points, *vid.* 1^o. A returning of Thanks to God for his Benefits. 2^o. A Begging of Grace and Light to know and distinguish our Sins. 3. A running over all our Actions, Occupations, Thoughts and Words, in Order to learn what has been offensive to God. 4^o. A Begging of Pardon, and conceiving a sincere Sorrow for having displeas'd him. And 5^o. A making a firm Resolution not to offend him any more, and taking the necessary Precautions to preserve us from it.

EXAMINERS, in Chancery, are two Officers, whose Business is to *examine*, on Oath, the Witnesses produced on both Sides; upon such Interrogatories as the Parties to the Suit do exhibit for the Purpose. See *CHANCERY*.

EXAMPLE, in Rhetoric, &c. is defined an imperfect Kind of Induction, or Argumentation; whereby it is proved that a Thing which has happen'd on some other Occasion; will happen again on the present one; from the Similitude of the Cases.

As, the Wars of the *Thebans*, against their Neighbours the *Phocians*, was ruinous; consequently, that of the *Athenians* against their Neighbours, will likewise be ruinous.

EXANTHEMA, in Medicine, an *Eruption*, or *Effluorescence* on the Skin. See *ERUPTION*, &c.

Exanthemata are of two Kinds: The one only a discolouring of the Skin; such are the Measles, the purple Spots in malignant Fevers, &c. — The other are little Eminences, or *Papillae*, standing out from the Skin, not unlike Pustles, only smaller. See *MESLES*, &c.

The Word is form'd of the Greek, *εξανθησις*, *Effervesco*, *Efferesco*, I flower, or work out.

EXARCH, *EXARCHUS*, in Antiquity, a Name given, by the Emperors of the East, to certain Officers sent into Italy, in Quality of Vicars, or rather *Profects*, to defend what Part of Italy was yet under their Obedience, particularly the City of *Ravenna*, against the *Lombards*, who had made themselves Masters of the greatest Part of the rest.

The Residence of the *Exarch* was at *Ravenna*; which City, with that of *Rome*, were all that was left the Emperors.

The first *Exarch* was the Patrician *Boethius*, famous for his Treatise, *de Consolatione Philosophiæ*; appointed in 568 by the younger *Justin*. The *Exarchs* subsisted about 185 Years; and ended in *Eutychius*; under whose *Exarchate*, the City of *Ravenna* was taken by the *Lombard King Alstolphus*, or *Astolphus*.

Fa. Papobroch, in his *Proplemum ad Alla Sancti. Mii*, has a Dissertation on the Power and Office of the *Exarchus* of Italy, in the Election and Ordination of the Pope.

The Word is form'd from the Greek, *εξαρχος*, Chief, Commander, and particularly in the Factions of Italy.

Homer, *Philo*, and other ancient Authors, give the Name *Exarch* to the *Choragus*, or Master of the Singers, in the ancient *Chorus*'s; or he who sang first: The Word *ερχος*, or *ερχος*, signifying equally to begin, and to command. See *CHORAGUS*.

The Emperor *Frederic* created *Heraclius* Archbishop of *Lyons*, a Descendant of the illustrious House of *Montboissier*; created him, we say, *Exarch* of the whole Kingdom of *Burgundy*: A Dignity, till that Time, unknown any where but in Italy, particularly in the City of *Ravenna*. *Meneitrier Hist. de Lyons*.

EXARCH of a *Diocese* was, antiently, the same Thing with *Primate*. This Dignity was inferior to the Patriarchal, yet greater than the Metropolitan. See *PRIMATE*.

EXARCH, is also an Officer still subsisting in the Greek Church. See *GREEK*.

The Modern *Exarch* is a Kind of Deputy, or Legat *à latere* of the Patriarch; whose Office it is to visit the Provinces allotted him, in order to inform himself of the Lives and Manners of the Clergy; take Cognizance of Ecclesiastical Causes, the Manner of celebrating Divine Service, the Administration of the Sacraments, particularly Confession; the Observance of the Canons, Monastical Discipline, Affairs of Marriages, Divorces, &c. But above all, to take Account of the several Revenues, which the Patriarch receives from several Churches; particularly, as to what regards the collecting the same.

The *Exarch*, after having greatly enrich'd himself in his Post, frequently rises to the *Patriarchate* himself. See *PATRIARCH*.

EXARCH, is also used, in the *Eastern-Church* Antiquity, for a General, or Superior over several Monasteries: The same that we otherwise call *Archimandrite*; being exempted, by the Patriarch of *Constantinople*, from the Jurisdiction of the Bishops; as are now the Generals of the *Romish* Monastic Orders. See *GENERAL*, &c.

In 495, *Sebas* was establish'd *Exarch*, or Chief of all the *Archbishops* within the Territory of *Jerusalem*. See *Du Bois*.

EXARCH was also a military Dignity. See *Du Cange*.

EXARTICULATION, a *Diflocation* of some of the jointed Bones; or a Breach of Articulation. See *DISLOCATION*.

EXCALCEATION, the Act of putting off the Shoes. See *SHOE*.

Among the *Hebrews*, there was a particular Law, whereby a Widow, whom her Husband's Brother refused to marry, had a Right to summons him into a Court of Justice; and upon his Refusal, might *afcalceate* him, i. e. pull off one of his Shoes, and spit in his Face: Which were both Actions of great Injamy among that People.

The House of the Person who had undergone them, was thenceforward call'd the House of the *Difcalceated*.

EXCAVATION, the Act of hollowing, or digging a Cavity; particularly in the Ground.

The *Excavation* of the Foundations of a Building, by the *Italians* call'd *Cavassone*, is fetted by *Pasquadio* at a sixth Part of the Height of the whole Building. Unless there be Cellars under Ground, in which Case he would have it somewhat more. See *FOUNDATION*.

The Word is Latin, *Excavatio*, form'd of *ex* and *cavus* hollow, or *Cavea*, a Pit, &c.

EXCELLENCY, a Quality, or Title of Honour, given to Ambassadors, and other Persons, who are not qualified for that of *Highness*; as not being Princes; and yet are to be elevated above the other inferior Dignities. See *QUALITY*.

In *England* and *France*, the Title is now peculiar to Ambassadors; but very common in *Germany* and *Italy*. Those it was first affixed to, were the Princes of the Blood, of the several Royal Houses; but they quitted it for that of *Highness*, upon several great Lords assuming *Excellency*. See *HIGHNESS*.

The Ambassadors have only bore it since the Year 1593, when *Henry IV. of France* sent the Duke de *Nevers*, Ambassador to the Pope; where he was first complemented with *Excellency*. After that, the same Appellation was given to all the other Ambassadors residing at that Court: From whence the Practice spread thro' the other Courts. See *EMBASSADOR*.

The Ambassadors of *Venice* have only had it since the Year 1656, when the Emperor and King of *Spain* consented to allow it them.

The Ambassadors of Crown'd Heads, dispute the giving that Title to the Ambassadors from the Princes of *Italy*; where the Practice is not establish'd.

The Court of *Rome* never allow the Quality of *Excellency* to any Ambassador who is a Churchman; as judging it a secular Title.

The common Rules and Measures of *Excellency* are a little varied with Respect to the Court of *Rome*. — The Ambassadors of *France*, at *Rome*, antiently gave the Title *Excellency* to all the Relations of the Pope then reigning; to the Constable *Colonne*, to the Duke de *Bracciano*, and the eldest Sons of all those Lords; as also the Dukes *Savelli*, *Cesirini*, &c. But they are now more reserved in this Respect; tho' they still treat all the *Roman* Princes with *Excellency*.

The Court of *Rome* in their Turn, and the *Romish* Princes, bestow the same Title on the Chancellor, Ministers, and Secretaries of State, and President of the Sovereign Courts in *France*; the Presidents of the Councils in *Spain*; the Chancellor of *Poland*; and those in the first Dignities of other States, if they be not Ecclesiasticks.

The Word *Excellency*, was antiently a Title of Kings and Emperors; accordingly, *Anastasio* the Library-Keeper, calls *Charlemain*, His *Excellency*. The same Title is still given to the Senate of *Venice*; where, after saluting the Doge under the Title of *Serenissimo*, the Senators are addressed to under *Tour Excellency*. The *Liber Diurnus Pontif. Rom.* gives the Title *Excellency* to the *Exarchs* and *Patriarchs*. See *TITLE*.

The *Italians* and *French* have improved on simple *Excellency*; and made *Excellentissimus*, *Excellentissimo*, which has been bestowed on certain Popes, Kings, &c.

EXCEPTION, a Reserve; or something set aside, and not included in the Rule. See *RULE*.

'Tis become proverbial, that there is no Rule, but has its *Exceptions*; intimating, that it is impossible to comprehend all the particular Cases under one and the same

Maxim. 'Tis dangerous following the *Exception*, preferably to the Rule.

EXCEPTION, in Law, is a Stop, or Stay to an Action. See *ACTION*.

The Term is used indifferently both in the Civil, and Common Law; and in each, *Exceptions* are divided into *Dilatory* and *Peremptory*. See *DILATORY* and *PEREMPTORY*.

Exception, in a general Sense, includes all the Kinds of Defence, or Vindication, which a Person, against whom a Process is brought, makes use of to prevent, or retard its Effect. See *PLEA*, &c.

The *Civilians* reckon three Kinds of *Exception*; viz. *Decisatory*, whereby the Authority of the Judge, or Court, is disallowed; *Dilatory*, intended to defer, or prevent the Thing from coming to an Issue; and *Peremptory*, which are proper and pertinent Allegations, founded on some Preception that stands for the Defendant; as Want of Age, or other Quality in the Party; or other Matter, that may be decided without entering into a full Discussion of the Merits of the Cause.

Exceptionis Proposizioni, are those wherein something is affirm'd of a whole Subject, abating some one of the Parts thereof, which is *excepted* by a Particle, thence call'd an *Exceptionis* Particle, or Particle of *Exception*. See *PROPOSITION*.

Thus, all the Sects of the antient Philosophers, except the *Platonists*, held God to be Corporal. Covetousness is inexcusable in Respect of every Thing, but Time.

EXCESS, is distinguish'd into *Natural* and *Moral*: The first, is a Part whereby one Quantity is greater than another. — Thus, we say, this Line is longer than that; but the *Excess* is inconsiderable.

The latter, is an Intemperance, or going beyond the just Bounds and Measures prescribed to any Thing: Thus, we say, *Excess* in Wine, Women, &c. is prejudicial to the Health.

EXCHANGE, a *Permutation*, or an Agreement; whereby one Thing is truck'd or given for another. See *PERMUTATION*.

The first Commerce carried on among Men, was by *Exchange*; People furnishing each other mutually with what Things they want'd: But such *Exchanges* were clogg'd with two considerable Difficulties. 1^o. On Account of the unequal Values of Commodities: And, 2^o. In that every Body had not just what might accommodate him he would *Exchange* withal. See *COMMERCE*.

To remove these Inconveniencies, Money was invented for a common Medium, and instead of *Exchanging*, *Buying* and *Selling*, was introduced. See *MONEY*.

Yet there are Nations among whom the Primitive Way of *Exchange* still obtains: And even among the most civilized People, there are frequent Occasions, when they have Recourse to this Method. — Such, for Instance, is the Trade of several Cities of the *North*, and *Baltic* Sea, where the French *exchange* their Wines and Brandies for Woods, Metals, Hemp, and Furs.

The Commerce of Bills of *Exchange* is, it self, a pure trading by *Exchange*; a Truck of Money for Money; of Money, for Instance, which I have here at *London*, for what a Merchant, or Banker, has at *Venice*, *Rome*, *Austersdam*, or *Constantinople*. In this Sense.

EXCHANGE properly denotes the Business, or Trade of Money, carried on between one Place and another, by Means of Bills of *Exchange*; i. e. by giving Money in one City, and receiving a Bill to entitle you to receive the Value in another City. See *BILL OF EXCHANGE*.

EXCHANGE, is also used for the Profit, which a Merchant, Negotiant, or Broker, receives for a Sum of Money paid, and for which a Bill of *Exchange* is drawn payable in some other Place, and by some other Person; for the Interest of his Money, or the Salary and Reward of his Negotiation.

This Profit is exceeding various; being sometimes 2, sometimes 3, 4, or even 10 and 15 *per Cent.* according as the Alloy of the Species differs, or as Money is more or less plentiful, or Bills of *Exchange* more or less scarce in the Places. This Kind of *Exchange* is ordinarily call'd *Real Exchange*, and sometimes *Mercantile* and mixt *Exchange*. See *PAR*.

The Price of *Exchange* is regulated according to the Course of the Place where the Bill is drawn, or that of the Place where the Remittance is to be made: Some pretend that 'tis the City of *Lyon* gives the Law, or Rule, for the Price of *Exchange* to most of the other Cities of *Europe*.

The Word *Exchange*, according to some, is derived from that perpetual Alteration observ'd in the Price of this *Exchange*, which is sometimes higher, and sometimes lower; there being sometimes somewhat to get, and sometimes to lose thereby; and sometimes nothing to be either got or lost: As is the Case when the *Exchange* is at *Par*.

From this Diversity in the Price of Exchange, arises that common Proverb, *The Exchange and the Wind are often changing*.—But the more natural Way of deriving the Word Exchange, is from this, that a Man here exchanges his Money for a Bill; or that he exchanges present Money for absent Money; or changes his Debtor.

Exchange is not to be look'd on as a Loan; from which it differs, in that in the one, the Risk, or Danger, lies on the Person who borrows; and in the other, on him who lends. It likewise differs from Interest, in that Exchange is not paid in proportion to the Time, which Interest is. See INTEREST and LOAN.

Exchange, is also used in divers Places for the Due, or Profit, allow'd for the changing of one Sort, or Species, of Money for another. — This is particularly call'd *Small Exchange, Natural Exchange, Pure Exchange, &c.*

Exchange, is sometimes also used for the *Agio*, or Profit, allow'd for the Monies advanced in any one's Behalf. See AGIO.

Exchange, is also a public Place, in most considerable Cities, wherein the Merchants, Negotiators, Agents, Bankers, Brokers, Interpreters, and other Persons concern'd in Commerce, meet, on certain Days, and at certain Times thereof; to confer, and treat together of Matters relating to Exchange, Remittances, Payments, Adventures, Assurances, Freightments, and other Mercantile Negotiations both by Land and Sea.

In *Flanders, Holland*, and several Cities of *France*, these Places are call'd *Bourses*; at *Paris* and *Lyons*, *Places de Change*; and in the *Hanse Towns*, *Colleges of Merchants*. See BOURSE.

These Assemblies are held with so much Exactness, and Merchants and Negotiators are so indispensably required to attend at them; that a Person's Absence alone, makes him be suspected of a Failure or Bankruptcy. See BANKRUPT.

The most considerable Exchanges in *Europe*, are that of *Amsterdam*; and that of *London*, call'd the *Royal Exchange*. See ROYAL EXCHANGE.

That of *Antwerp* was little inferior to either of them; till the Port of that City was render'd impracticable by the *Hollanders*, to bring the Commerce thereof to themselves.

Even in the Time of the ancient *Romans*, there were Places for the Merchants to meet, in most of the considerable Cities of the Empire. These built at *Rome*, in the Year of the City 559, 459 Years before our Saviour, under the Consulate of *Appius Claudius*, and *Publius Servilius*, was call'd *Collegium Mercatorum*; whereof we have still some Remains, call'd by the modern *Romans* *Loggia*, the Lodge; and now, usually, the Place of *St. George*. See COLLEGE.

Exchange, in Law, is the Compensation which the Warrantor must make the *Warrantee*, Value for Value, if the Land warrant'd be recovered from the *Warrantee*, Breach. L. II. See WARRANTY.

The King's Exchange, is the Place appointed by the King for Exchange of Plate, or Bullion for the King's Coin. These Places have formerly been divers; but now there is only one, viz. that of the Tower of *London*, joynd with the Mint. See MINT.

Bill of Exchange, is a Writing given by a Merchant, or other Negotiant, to procure a Sum of Money to be paid the Bearer thereof, in some distant Place; in Consideration of a like Sum paid the Writer, by the Person in whose Behalf the Bill is drawn. See BILL of Exchange.

What we call *Rechange*, is the Due, or Premium of a second Exchange, when a Bill is protested. See RECHANGE.

Exchange-Brokers, are Persons who make it their Business to know the Alteration of the Course of Exchange, to inform Merchants how it goes, and to notify to those who have Money to receive or pay beyond Sea, who are proper Persons for the *Exchanging* and doing thereof. See BROKER.

When the Matter is accomplished, that is, the Money paid, they have for Brokage 2 Shillings per 100 Pound Sterling.

But of late, the Humour of gaining, and dealing in Stocks, hath so prodigiously increased the Number of Persons who act as Brokers, that their Business, and their Pay, is very uncertain.

Exchangeers, are those who return Money beyond Sea, by Bills of Exchange, &c. call'd antiently also *Excambiators*, and since Remitters. See EXCAMBIATOR.

EXCHEQUER, or simply, CHEQUER, a Chest-Board; or a Frame divided into 64 Squares, of two Colours, whereon to play at Draughts, Chess, &c.

The Word is form'd from the French *Echecquier*, which signifies the same Thing. See CHESS.

Hedge Trees are said to be planted *Exchequer-wise*, in *Quincunx*, when disposed so as to form divers Squares representing a *Chequer*.

EXCHEQUER, is also a Chamber, or Apartment in *Westminster-Hall*, consisting of two Parts; the *Courts of Exchequer*, and the lower *Exchequer*.

The *Courts of Exchequer*, is a Court, wherein are tried all Cases relating to the King's Treasury, or Revenue; as, touching Accounts, Disbursements, Customs, Fines, &c. See TREASURY.

It consists of Seven Judges, viz. the *Lord Treasurer*, the *Chancellor of the Exchequer*, the *Lord Chief Baron*, and three other *Barons of the Exchequer*, with one *Clerk*. See CHANCELLOR, &c.

The *Lord Chief Baron* is the principal Judge of the Court. See BARONS of the Exchequer.

The *Court of Exchequer* is divided into two: The one of *Law*, the other of *Equity*.

All Judicial Proceedings according to *Law*, are styled, *coram Baronibus* only; But the *Court of Equity* held in the *Exchequer Chamber*, is *coram Iudicibus, Cancellario, & Baronibus*; before the *Treasurer*, *Chancellor*, and *Barons*.

For a long Time after the *Conquest*, there sat in the *Exchequer*, both *Spiritual* and *Temporal* *Barons of the Realm*: But of later Times, there have sat in their Places other Judges, who, tho' no Peers of the Realm, yet retain the original Denomination.

The common Opinion of our Historians is, that this Court was erected by *William the Conqueror*, soon after his having obtain'd the Kingdom; and that it took its Form from the *Echecquier*, or *Scaccarium*, establish'd in *Normandy* long before that Time. In Effect, the two *Exchequers* have this in common, that the *Norman* was the Supreme Court of that *Dutchy*, or a general Assize whereto all the great Lords attended, to judge finally of all Concerns of the greatest Importance; and was arbitratory: And that the *English Exchequer* was a Court of the highest Jurisdiction; that the Acts thereof were not to be examined by any of the ordinary Courts; that it was the Repository of the Records of all the other Courts; and that it was to be held in the King's Court, and before him; and that it was concern'd in the Prerogative, as well as the Revenue of the Crown.

The immediate Profits of the Crown, as of *Franchises*, *Lands*, *Tenements*, *Hereditaments*, *Debts*, *Duties*, *Accounts*, *Goods*, *Chattels*, all *Disbursements*, *Seizures*, and *Fines*, imposed on the Subject, &c. are within the Jurisdiction of the *Exchequer*. And the King's Attorney may exhibit Bills, for any matter concerning the King in inheritance or Profits; so also may any Person, who finds himself aggrieved in any Cause prosecuted against him on Behalf of the King, or any Patent by Grant of the King, exhibit his Bill against the King's Attorney, &c. to be relieved by Equity. See COURT, KING, &c.

To this Court belong two Offices, the King's Remembrancer's Office, and the Lord Treasurer's Remembrancer. See REMEMBRANCER.

Authors are divided about the Origin of the Denomination of this Court, *Exchequer*. *Dr. Causse* is of Opinion, it came from a *Chequer*-wrought Carpet, covering the great Table in that Court; or from the Pavement of the Court, which was *Chequer-wise*: Others, from the Accountants in this Office using *Chequers*, or *Chest-Boards*, in their Computations; *Nicod*, from the Court's being composed of different Qualities, as the *Pieces* or *Partitions* in a *Chest-Board*: Others, by reason People pleaded here, ranged, as it were, in *Battle array*, as they do at *Chess*. *Menage*, after *Pisbon*, &c. derives the Word from the German, *Schicken*, to send; by reason this Court succeeded the Commissioners call'd in ancient Times, *Missi Dominici*. *Spehaen*, &c. derives it from *Schætz*, which signifies, *Treasure*: Whence *Polydore Virgil* also writes it, *Scaccarium*, instead of *Scaccarium*. Lastly, *Sommer* derives it from *Schaen*, to wash; which, according to him, is the Character of the Treasury.

The Lower EXCHEQUER, call'd also the *Receipts of the Exchequer*, is the Place wherein the King's Revenue is receiv'd and disburs'd. See REVENUE and TREASURY.

The principal Officers whereof are, the *Lords Treasurer*, a *Secretary of the Treasury*, a *Chancellor of the Exchequer*, two *Chamberlains of the Exchequer*, an *Auditor of the Receipts of the Exchequer*, four *Tellers*, a *Clerk of the Pells*, an *Usher of the Receipt*, a *Tally Clerk*, &c. See LORD TREASURER, CHANCELLOR of the EXCHEQUER, SECRETARY, CHAMBERLAIN, TELLER, PELL, TALLY, &c.

Black Book of the EXCHEQUER, is a Book under the keeping of the two Chamberlains of the *Exchequer*; said to have been compos'd in 1175, by *Gerardus of Thibury*, Nephew of King *Henry II.* and divided into several Chapters.

Herein is contain'd a Description of the Court of *England*, as it then stood, its Officers, their Ranks, Privileges,

leges, Wages, Perquisites, Power, and Jurisdiction; the Revenues of the Crown, both in Money, Grain, and Cattel.

Here we find, that for One Shilling, as much Bread might be bought, as would serve a hundred Men a whole Day; that the Price of a fat Bullock was only Twelve Shillings; and a Sheep, Four, &c. Larrey, P. 1. p. 394. See also DOOMSDAY-Book.

EXCISE, a Duty, or Imposition, charged on Beer, Ale, Cyder, and other Liquors made for Sale, within the Kingdom of England, Wales, and Town of Berwick upon Tweed. See DUTY.

The Duty of Excise, was first granted to King Charles II. by Act of Parliament, in the Year 1660; during the Life of that Prince: It has been since continued and augmented by divers Parliaments, under the several succeeding Princes, and extended to Scotland. — This Duty, as it now stands, on strong Beer and Ale, is at the Rate of 4s. and 9d. per Barrel; and upon small Beer 1s. 6d.

Now, Brewers being allow'd for Leakage of Beer, 3 Barrels in 23; and of Ale, 2 in 22; the neat Excise of a Barrel of strong Beer amounts to 4s. 1d. and $\frac{1}{2}$; of a Barrel of Ale, 4s. 3d. 3q3; and of a Barrel of small Beer, 1s. 1d. 2q. $\frac{1}{2}$.

The Excise is one of the most considerable Branches of the King's Revenue. — It was formerly farmed out: But is now managed for the King by Seven Commissioners, who sit in the General Excise Office, receive the whole Product of the Excise of Beer, Ale, and other Liquors, and Malt, collected all over England, and pay it into the Exchequer. See EXCHEQUER.

Their Salary is 800*l.* per Annum each, and they are obliged by Oath, to take no Fee, or Reward, but from the King only. From the Commissioners of Excise there lies an Appeal to Five others, call'd Commissioners of Appeals. See COMMISSIONER.

The Number of Officers employ'd in this Branch of the Revenue, is very great. Beside the Commissioners above-mentioned, and their subordinate Officers, as Registers, Messengers, &c. There is an Auditor of the Excise, with his Clerks, &c. A Comptroller with his Clerks: A Register; Secretary; Solicitor, Cashier; Teller; Clerk of Securities; Hoyle-keeper; Door-keeper; an Accomptant for the Imprest Money; General Gauger; General Accomptants, with their Assistants; Messengers; a Clerk for Stationary Wares; Examiners; Clerks for Supervisors Diaries; Accomptants, Examiners, &c. for the London Distillery, Vinegar, Cyder, &c. Examiners for Malt; General and other Surveyors of the London Brewery; with Assistants, and other Officers, to the Number of an hundred: General and other Surveyors of the London Distillery, with other Officers, to the Number of 40; a Collector, and Surveyor, of imported Liquors; with a Land Surveyor at the Custom-House, &c.

The Yearly Salaries of all the Officers in the Excise Office, as computed by Mr. Chamberlayne, amounts to 23650*l.*

Beside which, there are in the Country fifty Collectors; and one hundred and fifty Supervisors; with a great Number of inferior Officers, call'd Gaugers, or Excisemen; which may make the Number of Persons employ'd in this Revenue about 2000.

The Excise on Beer, Ale, and other excisable Liquors, even during a Time of War, is computed to amount to 1100000*l.* per Annum, and is collected from above 30000 People.

The Duty on Malt, with the additional Duty on Cyder, &c. amount to betwixt 6 and 7 hundred thousand Pound per Annum; and are collected from more Hands than the former. And yet the whole Charge of the managing all these Duties, does not amount to Twenty Pence per Pound; which, considering every Thing, is citem'd an Exactedness and Frugality, not to be parallel'd in any Revenue levied in any other Country.

The Rates, with the neat Produce of the several Impositions of Excise, are as follow:

- 1^o. A Duty of 2s. 6d. per Barrel, whereof 1s. 5d. per Barrel during his Majesty's Life; and the other 1s. 6d. hereditary; appropriated to the Civil Government, after a Deduction of 3700*l.* per Week for Annuities. Neat Produce 269837
- 2^o. A Duty of 9d. per Barrel, granted 4 Will. and M. for 99 Years, commencing Jan. 1694. charged with 124866*l.* per Ann. for Annuities, and 7367*l.* per Ann. on Survivorship. Neat Produce 150106
- 3^o. Another 9d. per Barrel perpetual, 5 W. and M. for Payment of 100000*l.* per Ann. to the Bank, as also several Annuities on Lives. Neat Produce 150094

- 4^o. Another 9d. per Barrel, for 16 Years, continued 4 Ann. from May 1713. for 95 Years, for paying 140000*l.* per Ann. on Million Lottery Tickets; with Annuities of 99 Years, &c. Neat Produce 159898; — which, with some additional Duties granted in a later Act may amount to 184898
- 5^o. A Duty on Low Wines, and Spirits of the first Extraction, continued to the 24th of June 1710. Neat Produce 25257
- 6^o. The Excise on Ale and Beer in Scotland, is farm'd at 33500

Total *l.* 1006102

EXCLAMATION, in Rhetoric, a Figure, wherein, by raising the Voice, and using an Interjection, either expressly or understood, we testify an uncommon Warmth and Passion of Mind; and express the Magnitude of the Thing.

Such is, O Heavens! O Earth! &c. such is that of Cicero against Catiline, O Times! O Manners! This, the Senate knows, the Consul sees: And yet he lives. Lives, said I? Nay, and comes into the Senate! — Or that for Calius, Proh Di Immortales! Cur interdum in dominum sceleribus maxime aut committit, aut presentis fraudis paucis in diem reservatis! Ob preclarum, custodem, ovum, ut aiunt, Lupum!

In English, the Interjections O! or Oh! Alas! or, Good God! are generally adjoin'd in an Exclamation. In Latin they use O! Heu! Eheu! Ah! Vab! Pro Superi! Pro Superum atque Humanum sidem: Sometimes, however, the Interjection is understood, as, Wo is me! Miserum me! Hocine scemum. See INTERJECTION.

EXCLUSION, is that whereby a Thing is Excluded, i. e. shut out, or set aside.

As, a Crown imposes an Exclusion from the Papacy: He appointed a Stranger his Heir, in Exclusion of all his own Relations.

Great Efforts were made towards the Close of the Reign of K. Charles II. to pass a Bill of Exclusion, for setting aside the Duke of York, the King's Brother, on Account of his being a Papist.

EXCLUSIONS, in Mathematicks, the Method of Exclusion, is a Way of coming at the Solution of Problems (in numerical Cases), by previously guessing, or excluding out of Consideration, such Numbers, as are of no Use in solving the Question; whereby, of consequence, the Process may be regularly and judiciously abbreviated. See SOLUTION.

EXCLUSIVE, is sometimes used adjectively, for the Force, or Power of Excluding; as a Patent carries with it an Exclusive Privilege. See PRIVILEGE. Sovereign Princes have Exclusive Voices in the Election of Popes, &c.

Sometimes it is also used adverbially, as Marriage is allow'd to the first Day of Lent, Exclusive; i. e. *Ab-Wednesday* is not comprised in the Permission. — He sent him all the Gazettes, from N^o. 125, to N^o. 300, Exclusive; i. e. all between those two Numbers, which themselves were excepted.

EXCLUSIVE Propositions, are those wherein the predicate *u* agrees with its Subject, as to agree with no other. See PROPOSITION.

Thus; Virtue alone makes Nobility: Nothing else renders a Man truly noble.

EXCOMMUNICATION, an Anathema, or Ecclesiastical Censure, and Punishment; whereby a Heretic is cut off from the Society of the Faithful; or an obstinate Sinner from the Communion of the Church, and the Participation of the Sacraments. See CENSURE and ANATHEMA.

The Power of Excommunication properly belongs to the Bishop; but he may delegate it to any grave Priest, with the Chancellor. See BISHOP.

Every Excommunication should be preceded by three public Admonitions, two Days, at least, distant from each other: But this is to be understood of Excommunications imposed by the Ecclesiastical Judge; for those imposed by the Law, are incur'd to all Intents and Purposes the Moment the Action is committed.

These latter are call'd Excommunications by the Canon, or *lata sententia*: And are very numerous, that it would be difficult, even for the best Canonists, to give an exact List of 'em: There are 50 in the Clementines; 20 in the Bull in *causa Domini*, &c. Rebuffs on the Concordat, reckons up 60 Penalties accruing upon Excommunication.

Excommunication is founded on a natural Right which all Societies have, of excluding out of their Body, such as violate the Laws thereof.

Excommunication is either major or minor, i. e. greater or less: The first, which is that understood when we say, simply, Excommunication, separates, or cuts off the Delinquent from all Communion and Fellowship with other Chr-

Christians; disables him from defending his Rights, bringing an Action at Law, &c. The second, or lesser, only excludes from the Communion of the Lord's Supper.

The greater *Excommunication*, call'd also *ab homine*, is when a Prelate, or his Deputy, *Excommunicates* any Man personally, and interdicts him all Society with the Faithful, all Use of Sacraments, &c.

The lesser *Excommunication* is incur'd *pleno jure*, by having any Communication with a Person *Excommunicated* in the greater *Excommunication*. And this too imports a Privation of Communion, but not an Interdiction from entering the Church, nor having Commerce with the Faithful.

Anciently, the *Excommunicated* were obliged to procure Absolution from their Bishop, and make Satisfaction to the Church in forty Days Time; otherwise they were compell'd to it by the secular Judge, by a Seizure of their Effects, Imprisonment of their Persons, &c. In France they were allow'd a whole Year.

By an Edict of S. Louis, in the Year 1228. Vassals, Tenants, &c. were dispens'd, or freed from the Oath of Fidelity, Homage, &c. they had taken to their Lords, or Superiors, till they had made their Submission.

In Spain, to this Day, a Person who is not absolved from his *Excommunication* in a Year's Time, is deem'd a Heretic. See *HERETIC*.

There was a Time, when the People were fully convinced, that the Bodies of *Excommunicated* Persons, unless they were first absolved, could not rot, but remain'd entire for several Ages, a horrible Spectacle to Posterity; as is attested by *Mutheo Paris*, and other Writers. And the *Greeks* are still of the Opinion; and affirm, they have infinite Proofs thereof; as is shewn by *Du Cange*, from the Testimony of a vast Number of Authors.

By the Laws, an *Excommunicated* Person was not to be buried, but the Body flung into a Pit, or cover'd with a Heap of Stones; which was call'd *inhocare corpus*.

In the ancient Church, there were divers Degrees of *Excommunication*: In Effect, *Excommunication* did not always import an Interdiction of the Sacraments; but frequently, a Separation, or Kind of Schism between the several Churches, or a Suspension of spiritual Communication between the Bishops.

But, afterwards, the Occasions of *Excommunications* growing more frequent, they began to use it with less Circumspection and Retardation.

In the IXth Century, the Ecclesiasticks were continually making Use of these spiritual Weapons, to repel any Violences, or Affronts, offer'd them; and Time and Familiarity rendering them more and more obdurate, they proceeded, by degrees, to Rigours unknown to Antiquity; as the *Excommunicating* of whole Families, or Provinces; as the prohibiting the Exercise of all Religion therein; and even accompanying the *Excommunications* with horrible Ceremonies, and diabolical Imprecations.

In the Xth and XIth Centuries, the Severity against the *Excommunicated* was carried to its Pitch: No body might come near them, not even their own Wives, Children, or Servants: They forfeited all their natural and legal Rights and Privileges; and were excluded from all Kind of Offices. Thus was an *Excommunicated* King, reduced to the Condition of a private Man.

By thus stretching the Power of the Church to Extravagance, they render'd it contemptible. Gregory VII. temper'd it a little; exempting the Wives and Children of *Excommunicated* Persons, from *Excommunication*; and allowing them to converse with them.

To render the *Excommunicated* still more odious, the Priest was oblig'd to stop, and break off divine Service, if an *Excommunicated* Person enter'd the Church. Nothing of which Aversion is any where discover'd in the Primitive Church.

At present we have but little of the Terror or Respect of our Fore-fathers, for *Excommunication*; and 'tis even judg'd, and proclaim'd an Abuse, whenever impertinently employ'd.

Thus, the Official of *Toulouse* having *Excommunicated* the Officers of the *Seneschauſſe* of *Toulouse*, on Occasion of their refusing to deliver up a Prisoner; the Official was condemn'd to take off, and revoke the *Excommunication*. 'Tis judg'd an Abuse to fulminate an *Excommunication* against a King, or Kingdom, or the Officers thereof, for any Thing relating to the Discharge of their Office.

The Form of *Excommunication* in the *Romish* Church, as related by *Foerster*, is to take lighted Torches, throw them on the Ground with Curses and Anathemas, and trample them out under Foot to the ringing of the Bells.

— *Auctoritate Dei patris omnipotentis & filii, & Spiritus Sancti, & beate Dei Genetrixis Mariæ, Omniumque Sanctorum, Excommunicamus, Anathematizamus, & a iunctibus Sanctæ Mariæ Ecclesie sequens illos Malefactores, N. Conſentanos quos; & participes & nisi resipuerint, & ad satisfactionem venerint sic extinguetur Incensæ eorum ante osquem in seculo seculorum. Fiat: Amen: Amen: Amen: Ex Emendat. Leg. Will. Conquest.*

We have now none of this Folly; the Sentence is gravely read, and the Person remains *Excommunicated* without further Ceremony.

Peter of Blois assures us, that in England it was anciently the Practice, only to *Excommunicate* such as had kill'd an Ecclesiastick; whereas they were put to Death who had kill'd a Lay-man. — But the Reason was, they held *Excommunication* a greater Punishment than Death.

We have Instances of Bishops, who have pronounced formal *Excommunications* against Caterpillars, and other Insects, after a formal, Juridical Process against them, wherein those Animals were allow'd an Advocate and Proctor, to defend their Cause. See *EXCOMMUNICATIO*.

Foerster relates divers Instances of such *Excommunications*, both against Rats and Mice, for infecting a Country; and other Animals. See the Form of these *Excommunications* in that Author.

In the ancient Church there were two different Kinds of *Excommunication* in Use: The one call'd *Medicinal*, whereby Persons convicted of a Crime by their own Confession, were removed from Communion: The other call'd *Mortal*, was fulminated against Rebels, who persisted obstinately in their Errors and Impieties.

The Power of *Excommunicating* was lodg'd in the whole Church in general: That is, the Bishops and Priests had the Administration thereof, by and with the Consent of the People; which was practis'd even in St. *Cyprian's* Time. But afterwards, they ceased to consult the People about the Matter: The Bishop and Clergy arrogated the whole Power to themselves. Recourse, however, might be had to a Synod of the Province, to judge of the Validity of an *Excommunication*.

It frequently happen'd, that Churches *Excommunicated* each other, that is, broke off the Communication that was between them. In which Case, *Du Pin* observes, it might be dubious, which of the two Parties was *Excommunicated* and cut off from the Body of the Church.

EXCOMMUNICATIO was also in Use among the Jews; who used to expel from their Synagogue, such as had committed any grievous Crime. See the Gospel according to St. *John*, IX. 22. XII. 42. XVI. 2. And *Joseph. Antiq. Jud. L. IX. C. 22.* and L. XVI. C. 2.

The *Jeffen*, when *Excommunicated*, durst not so much as receive Food at any Person's Hand, for Fear of violating their Oath, but contented themselves to live on Herbs; inasmuch that they frequently perish'd, and dy'd for Want. See *Joseph. de Bello, L. II. C. 12.*

Goodwin, in his *Moses* and *Aaron*, distinguishes three Degrees, or Kinds of *Excommunication* among the Jews. The first, he finds intimated in St. *John*, IX. 22. The second in St. *Paul*, *Epist. 1. Cor. V. 5.* And the third, in the 1st Ep. to *Corinth. XVI. 22.*

The Rule of the *Beneditines*, gives the Name *Excommunication*, to the being excluded from the Oratory, and the common Table of the House, in our Inns of Court call'd *Discommouing*. This was the Punishment of such Monks as came too late.

EXCOMMUNICATIO, or a being secluded, or cut off from a Participation in the Mysteries of Religion, was also in Use under Paganism.

Such as were thus *Excommunicated*, were forbid to assist or attend at the Sacrifices, or to enter within the Temples; and were afterwards deliver'd over to the Demons and Furies of Hell, with certain Imprecations; which was call'd among the *Romans*, *Divis devovere*.

The *Druids* among the ancient *Britains* and *Gauls*, likewise, made Use of *Excommunication* against Rebels; and interdicted the Communion of their Mysteries, to such as refused to acquiesce in their Judgment. See *DAVID*.

EXCOMMUNICATIO Copiando, is a *Writ* directed to the Sheriff, for the Apprehension of one who standeth obstinately *Excommunicated* forty Days; for such an one not seeking Absolution, hath, or may have, his Contempt certified into the Chancery; whence this *Writ* issues for laying him up, without Bail, or Main-prize, until he conform himself. See *WALT*.

EXCOMMUNICATIO Deliberando, is a *Writ* to the Under-Sheriff, for the Delivery of an *Excommunicate* Person out of Prison; upon Certificate of the Ordinary, of his Conformity to the Ecclesiastical Jurisdiction.

EXCOMMUNICATIO Recipiendo, is a *Writ* whereby Persons *Excommunicated*, being for their Obstinacy committed to Prison, and unlawfully deliver'd thence before they have

have given Security to obey the Authority of the Church, are commanded to be fought for, and laid up again.

EXCORIATION, the Act of rasing, or tearing off the Skin from any Part of the Body. — He had a grievous *Excoriation* behind, with riding Post. — We also say, an *Excoriation* in the Throat, &c. when the Membrane that covers, or lines it, is torn by the Acrimony of a Humour, a Medicine, or the like; which is ordinarily the Cause in what we call a *fore Throat*.

The Word is Latin, *Excoriatio*, form'd of *ex* and *corium*, Skin, Leather, &c.

EXCORTICATION, the stripping off the *Cortex*, or Bark, from any Thing; call'd also *Decortication*. See **BARK** and **DECORTICATION**.

EXCREMENT, what is evacuated, or *excreted*, out of the Body of an Animal, after Digestion; being what in other Respects is superfluous and prejudicial thereto. See **EXCRETION**.

Chaucus defines *Excrement*, to be all that Matter taken in by way of Food, which cannot be assimilated; and which, of Consequence, not growing or adhering to the Body, wanders about thro' the laxer, and more parent Parts thereof, till it be ejected.

The Urine and Feces or fecal Matter, are the *great Excrements*, expell'd from the Bladder and the Intestines, by Stool, &c. See **URINE**, **FECAL Matter**, &c.

The Matter of insensible Perspiration is also an *Excrement*, and a more considerable one than either of the others. See **PERSPIRATION**.

Among *Excrements*, are likewise ordinarily rank'd, divers Humours and Matters, separated from the Blood by the several Strainers, or Emunctories of the Body, tho' far from being useless; and serving divers valuable Purposes of the OEconomy. Such are Cerumen, or Ear-wax; the Mucus of the Nose; *Lachrymæ*, or Tears; Saliva, Bile, Lympha, Menfes, Lochia, &c. See **CERUMEN**, **MUCUS**, **TEARS**, **SALIVA**, **BILE**, **MENSES**, &c.

Some hold Ambergrease an *Excrement* of the Whale; others, an *Excrement* of the Sea. See **AMBERGREASE**.

All Foods have two Parts, the one Nutritious, the other *Excrementitious*. See **FOOD**.

EXCREMENT, is also attributed, by way of Analogy, to Plants.

Thus Gums, divers Juices, Balms, &c. issuing spontaneously from their respective Trees, are sometimes call'd *Excrements*. See **GUM**, &c.

EXCRESCENCE, in Chirurgery, a superfluous, or unnecessary Piece of Flesh, or other Matter, growing on certain Parts of the Bodies of Animals, contrary to, or beyond the ordinary Structure and Disposition of Nature.

Such are Wens, Warts, &c. Such also are the Woman's Horns now shewn in London; a parallel Case to which, see in the Philosph. Transact. N^o. 297.

Natural, or customary *Excrecences*, as those of Bones, &c. are call'd by Physicians *Apophyses*. See **APOPHYSES**.

The Word is form'd of the Latin, *ex*, and *crefo*, I grow; *q. d.* something that grows from, or out of another.

EXCRETION, in Medicine, the Act whereby Nature expels, or ejects out of the Body, some Humour that is useless, or even hurtful thereto. See **EXCREMENT**.

Most Crises are effected by *Excretion*; as Fluxes of Blood, and Urine, Sweats, Vomitings, Loosenesses, &c. See **FLUX**, &c.

The Word is form'd of the Latin, *excernere*, to excern, separate.

EXCRETORY, in Anatomy, a Term applied to certain little Ducts, or Vessels, making Part of the Structure, or Composition of Glands. See **GLAND**.

The *Excretory Ducts* are the Tubes thro' which the Humours separated in the several Glands, are emitted, or discharged out of the Gland, into some convenient Receptacle, or Emunctory. See **SECRETION** and **EMUNCTORY**.

A capillary Artery, to which a capillary Vein is join'd; with an *Excretory Duct*, convolved, or wound together, make up the Body of the Glands, the Organs of Secretion. The *Excretory Ducts* spring from the Extremities of the Arteries and Veins, and carry off a Liqueur separated from the Blood. *Drake*.

The Lymphatick Glands, have either Lymphaducts, for their *Excretory Ducts*, or Lacteal Vessels, as in the *Meatentery*. *Id*.

The Muscles of those two Bones being contracted, they compress the Bag, and squeeze out the Liqueur thro' two *Excretory Ducts*, terminating in the two Gums of the great Tooth of the Viper. *Lenery*.

EXCURSION, in Astronomy. See **ELONGATION**.

Circles of *Excursion*, are Circles parallel to the Ecliptic, at such Distance from it, as is capable of bounding, or comprehending the greatest Digestions, or *Excursions*,

of the Planets from the same; which is commonly fix'd at 10 Degrees. See **CIRCLE**.

EXEAT, in Church Discipline, a pure Latin Term, us'd for a Permission, which a Bishop grants a Priest to go out of his Diocese; or an Abbot, to a Religious, to go out of his Monastery.

The Word is also us'd in several Great Schools, for Leave given a Scholar, or Student, to go out. His Master has given him an *Exeat*.

EXECUTION, the Act of *Executing*, i. e. of accomplishing, finishing, or achieving any Thing, to be done.

The *Execution* of a Testament; of a Law; of a Treaty; of a Building, &c.

The Term is particularly us'd in the French Music, for the Manner of Singing, or *Performance*: As to the Manner of Singing, call'd in France, *Execution*; no Nation may, with any Probability, dispute it with the French. If the French, by their Commerce with the Italians, have gain'd a bolder Composition; the Italians have made their Advantage of the French, in learning of them a more polite, moving, and exquisite *Execution*. *St. Evremoud*.

EXECUTION, in common Law, signifies the last Performance of an Act: As of a *Fine*, of a *Judgement*, &c.

That of a *Fine*, is the obtaining of actual Possession of Things contained in the same by virtue thereof; which is either by Entry into the Lands, or by Writ. See **FINE** and **POSSESSION**.

There are two Sorts of *Executions*, one final, another with a *Quousque*, as only tending to an End.

An *Execution final*, is that which maketh Money of the Defendant's Goods, or extendeth his Lands, and delivers them to the Plaintiff; for this the Party accepteth in Satisfaction: and this is the End of the Suit, and all that the King's Writ commandeth to be done.

The other Sort, with a *Quousque*, is that which only tends to an End; and is not final, as in the Case of a *Capias ut Satisfaciendum*, &c.

This is not final, but the Body of the Party is to be taken, to the Intent and Purpose to satisfy the Plaintiff; and his Imprisonment is not absolute, but till he doth satisfy: so that the Body is but a Pledge for the Debt.

Military EXECUTION, is the Pillage, or plundering of a Country by the Enemies Army. — The Towns and Villages of the Province were required to pay Contribution, on Penalty of Military *Execution*. See **CONTRIBUTION**.

EXECUTIONE faciendâ, a Writ commanding *Execution* of a Judgment. — *Executio faciendâ in Withernamium*, lies for taking his Cattle, who had formerly convey'd out of the County the Cattle of another.

EXECUTOR, a Person nominated by a Testator, to take Care to see his Will, or Testament, *Executed* or performed; and his Substance dispos'd of according to the Tenor of the Will. See **TESTAMENT**.

An *Executor* is either *universal*, as having the Charge and Dispos'd of the whole; or, only *particular*, entrusted with some particular Branch thereof.

An *Executor* should be seiz'd of all the Moveables of the deced'd during one Year; at the End whereof he is to account for them. To the Validity of a Testament, 'tis not necessary there be an *Executor* nominated therein. The Testaments made in Latin in the XIVth Century, call *Executors, Provisores Testamentarii*.

EXECUTOR de suo torti, or, of his own Wrong, is he who takes on him the Office of an *Executor* by Intrusion, not being constituted thereto by the Testator, or deceased, nor authorized by the Ordinary to administer. How far he shall be accountable to the Creditor, see Stat. 43 *Edw*.

EXECUTORY, that which has, or carries with it a sufficient Authority for being *executed*. — A Contract is only *Executory*, when it is in Form, and seal'd. The Great Seal of England is *Executory* throughout the whole Island. See **SEAL**.

EXEDRÆ, among the Ancients, were Places wherein the Philosophers, Sophists, Rhetors, &c. us'd to hold their Conferences and Disputes.

M. Perrault is of Opinion, they were a Sort of little Academies, where the Men of Learning met together.

Budeus rather thinks, that what the Ancients call'd *Exedrae*, might answer to what we call Chapters in the Cloisters of Monks, or Collegiate Churches.

The Word is pure Greek, *ἐξεδρα*.

EXEGESIS, a Term sometimes us'd by the Learned, to signify *Explication*.

Several Interpreters of the Bible are of Opinion, that in three Passages of Scripture, where we meet with *Abba Pater*, two Words the first *Syrac*, and the second *Greek or Latin*, but both signifying the same Thing; the second is only an *Exegesis* of the first.

The Word *Exegetis* is also used for a whole Discourse by way of Explication, Comment, or *Eclaircissement* on any Thing.

EXEGESIS Numerosa, or Linealis, signifies the Numerical or Lineal Solution, or Extraction of Roots, out of affected Equations; first invented by *Vieta*. *Ozanam* calls it *la Riviere*. See **EXTRACTION of Roots**.

EXEGETES, among the *Athenians*, were Persons learn'd in the Laws of the *Juris consulti*; whom the Judges us'd to consult in capital Causes.

The Word is Greek, *Ἐξηγητής*, form'd of *ἔξηγημα*, I explain.

EXEGETIC, a Greek Term, form'd of *ἔξηγημα*, which, among other Things, signifies to explain, interpret, &c. Whence we say *Exegetic Notes*, an *Exegetic Comment*, &c.

Vieta, the Author of what we call the new Algebra, introduced several Greek Names into his Method; such were *Thetic, Zetic, Exegetic or Exegetica*, &c.

In this Sense, *Exegetic* is either a Substantive Feminine; or an Adjective, under which is understood *pari*, as the *Exegetic Part of Algebra*. See **ALGEBRA**.

The *Exegetica* in Algebra, is the Art of finding, either in Numbers, or Lines, the Roots of the Equation of a Problem, according as the Problem is either Numerical, or Geometrical. See **ROOT** and **EQUATION**.

EXEMPLAR, a Model, or Original, to be imitated, or copied. See **MODEL**, &c.

Exemplar is also the Idea, or Image, conceiv'd, or form'd in the Mind of the Artist, whereby he conducts his Work: Such is the Idea of *Ceasar*, which a Painter has in his Mind when he goes to make a Picture of *Ceasar*. The *Exemplar* is ordinarily number'd among the *Causæ*. See **CAUSE**.

EXEMPLIFICATION of Letters patent, an *Exemplar*, or Copy of Letters Patent, made from the Instrument thereof; and seal'd with the Great Seal of *England*. See **PATENT**.

Such *Exemplifications* are as effectual to be shew'd, or pleaded, as the Letters Patent themselves: Nothing but *Manner of Records* are to be *Exemplified*. See **RECORD**.

EXEMPTION, a Privilege, or Dispensation, whereby a Person is excepted out of some general Rule. See **PRIVILEGE**, &c.

Exemption is particularly applied to Churches, Chapels, and Monasteries which have a Privilege given them by the Popes, or Princes, whereby they are *Exempted* from the Jurisdiction of the Bishop, or Ordinary. See **CHAPEL**, **ORDINARY**, &c.

The Council of *Constance* revoked all *Exemptions*, to restore to the general Law, weaken'd and diminish'd by a Relaxation of several Ages, its ancient Force and Vigour; and make it every where obtain in all its Latitude.

The first *Exemptions* granted to Monks were only for the Liberty of Electing their Abbot, independently on the Bishop; and not to free them from the regular Jurisdiction of the Bishops. The Pretence for these *Exemptions* was, that the Bishops abused their Authority, and exacted extravagant Dues on the Monasteries in their Dependence. But the real Cause was, rather, that the Monasteries, being fallen from the Severity of their Rules, did not care for Inspectors so near at Hand, and therefore solicited *Exemptions* at *Rowe*.

As this was to derogate from the common Laws, the Popes were a good while very reserved in the Point; and seldom granted them, but with the Consent of the Bishops themselves. But, by degrees, the Popes began to assume a Power of granting such *Exemptions* at Pleasure; and made their Account of the Indulgence of the Bishops, who were not sufficiently apprehensive of all the Consequences. Accordingly, they favour'd whole Orders with the Privilege of *Exemption*, as the *Cistercians, Dominicans, Carthusians, Jesuits*, &c.

Things, at length, were brought to such a pass, that there was a Necessity for putting a Check to *Exemptions*; accordingly, the Council of *Trent* prohibited, and declar'd them null for the future; confirming only such as were well founded, on legal Concessions from the Holy See.

EXERCISE, a Repetition of any Operation, for the strengthening or retaining of a Habit. See **HABIT**.

Thus, we use *Exercises* of the Body, for the acquiring, or maintaining of Health; as it contributes both to the Expulsion of the Excrements, and preserving the Tone, and Spring of the Solids. See **HEALTH**.

People who live a sedentary Life, and do not use *Exercise*, are liable to Debilities, which bring on other Disorders. Games of Hazard are to be discountenanced, and those of *Exercise* to be promoted. See **GAMES**.

Exercise and Quiet make one of the Physicians Non Naturals. See **NON-NATURALS**.

Labour, or *Exercise*, Dr. *Cheyne* observes, is indispensably necessary to preserve the Body any Time in due Plight. Let what Diet will be purged, however adjusted both in Quantity and Quality, let whatever Evacuations be used to lessen the Malady, or any *Successionem* be proposed to prevent the ill Effects; still, our Bodies are to made; and the Animal Oeconomy now so contrived, that without due Labour and *Exercise*, the Juices will thicken, the Joints will stiffen, the Nerves will relax, and on these Disorders, Chronical Distempers, and a crazy old Age, must ensue. *Essay of Health*, p. 90. — Of all the *Exercises* that are or may be used for Health, as *Walking, Riding a Horseback*, or in a Coach; *Fencing, Dancing, Bowling, Digging, Pumping, Ringing*, &c. *Walking* is the most Natural, and would be the most useful, if it did not spend too much of the Spirits of the weakly. *But now Riding* is certainly the most manly, the most healthy, and less laborious and expensive of Spirits than any. *Id.* p. 94. &c. — Those Organs of the Body that are most used, always become strongest; so that we may strengthen any weak Organ by *Exercise*: Thus the Legs, Thighs and Feet of Chairmen; the Arms and Hands of Watermen; the Backs and Shoulders of Porters, grow thick, strong and brawny by Time and Use. 'Tis certain also, that speaking strong and loud, will strengthen the Voice, and give Force to the Lungs. *Id.* p. 96. — To the Asthmatic, therefore, and those of weak Lungs, I would recommend talking much and loud; walking up easy Ascents, &c. To those of weak Nerves, and Digestion, Riding on Horseback: To those troubled with the Stone; riding over rough Causeways in a Coach: To those troubled with Rheumatic Pains, playing at Billiards, Cricket, or Tennis: To those of weak Arms or Hams, playing at Tennis or Foot-ball: To those of weak Backs, or Breasts, ringing a Bell, or working at the Pump. Walking through rough Roads, even to Lassitude, will best recover the Use of the Limbs to the Gouty; tho' Riding will best prevent the Disease. But the Studious, the Contemplative, the Voluntary, and those of weak Nerves, must make *Exercise* a Part of their Religion. — A Condition necessary to render *Exercise* as beneficial as may be, is that it be used on an empty Stomach. — Under the Head of *Exercise*, Cold-Bathing, and the Flesh-Braze, come also to be recommended. — *Id.* — *Ibid.* p. 103, 104, &c. See **COLD-BATHING** and **FLESH-BRAZE**.

EXERCISES, in the Plural, is particularly understood of that is taught young Gentlemen in the Academies of the Ecuyers at *Paris*, &c. As Riding the great Horse, Dancing, Fencing, Vaulting, drawing Fortifications, &c. — This young Noblesman went thro' all his *Exercises* with great Applause. See **ACADEMY**, &c.

EXERCISE, in the Art of War, is the ranging a Body of Soldiers in Form of Battle, and making them practise the several Motions and military Evolutions, with the divers Management of their Arms, &c. to make, or keep them expert therat against Occasion.

This is what *Vegetius*, and other Latin Writers call *Meditatio*.

EXERESISIS, or **EXERESIS**, in Chirurgery, an Operation whereby something foreign, useless, and even pernicious, is taken from the human Body.

The *Exeresis* is perform'd two Ways: By *Extraction*, when something formed in the Body is drawn out of the same: And by *Detraction*, when something is taken away, that had been introduced into the Body from without. See **LITHOTOMY**, &c.

The Word is Greek, *ἐξέρσις*, which signifies the same Thing.

EXERGUM, among Medallists, a little Space, round or without the Work or Figures of a Medal; for an Inscription, Cypher, Device, Date, or the like, to be put thereon. See **MEDAL**, **LEGEND**, &c.

The Word is derived from the Greek, *εἶ* and *εργον*, *Opus*, Work.

EXFOLIATION, in Chirurgery, the scaling of a Bone; or its rising and separating in Leaves, or Laminae. See **BONE**.

Any Part of the Surface of the Cranium that has been bored, is liable to *Exfoliation*. The Use of the Cephalic Powders avails nothing for promoting the *Exfoliation*: *Dionis*. The Wound must not be stopp'd too much, but the Bone left at Liberty to recover it self, which it sometimes does, without *Exfoliating*, particularly in Children. See **TREPANNING**.

The Word is compounded of the Latin *ex* and *folium*, Leaf.

EXFOLIATIVE. — An *Exfoliative Trepan*, is a Trepan proper to scrape, and at the same Time pierce, a Bone, and so to *exfoliate*, or raise several Leaves, or Flakes, one after another.

The Use of the *Exfoliative Trepan* is very dangerous; as being apt to shake and disorder the Head.

EXHALATION, a Fume, or Steam, *exhalans*, or issuing from a Body, and diffusing it self in the Atmosphere. See **EVOLVIA**.

The Terms *Exhalation* and *Vapour*, are ordinarily used indifferently; but the more accurate Writers distinguish them: Appropriating the Term *Vapour* to the moist Fumes rais'd from Water, and other liquid Bodies; and *Exhalations* to the dry ones emitted from solid Bodies; as Earth, Fire, Minerals, Sulphurs, Salts, &c. See **VAPOUR**.

In this Sense, *Exhalations* are dry, subtle Corpuscles, or Effluvia, loosen'd from hard terrestrial Bodies, either by the Heat of the Sun, or the Agitation of the Air, or some other Cause; and emitted upwards to a certain Height of the Atmosphere, where mixing with the Vapours, they help to constitute Clouds, and return back again into Dew, Mists, Rains, &c. See **ATMOSPHERE**, **CLOUD**, **RAIN**, &c.

Nitrous, and sulphureous *Exhalations* are the chief Matter of Thunder, Lightning, and divers other Meteors generated in the Air. See **THUNDER**, &c.

Sir Isaac Newton takes true and permanent Air to be form'd from the *Exhalations* rais'd from the hardest and most compact Bodies. See **AIR**.

EXHAUSTED Receiver, a Glass, or other Vessel, applied on the Plate of the Air-Pump, and the Air extracted out of the same, by the working of the Engine. See **RECEIVER**, **AIR-PUMP**, &c.

Things placed in an *Exhausted Receiver*, are said to be in *vacuo*. See **VACUUM**.

EXHAUSTIONS, in Mathematics. — The Method of *EXHAUSTIONS*, is a Way of proving the Equality of two Magnitudes, by a *Reductio ad absurdum*; shewing, that if one be supposed either greater or less than the other, there will arise a Contradiction. See **REDUCTION**.

The Method of *Exhaustions*, is of frequent Use in the ancient Mathematicians, as *Euclid*, *Archimedes*, &c. See **METHOD**.

It is founded on what *Euclid* saith in his tenth Book, *viz.* That those Quantities whose Difference is less than any assignable Quantity are equal: For if they were unequal, the Difference never so small, yet it may be so multiplied, as to become greater than either of them; if not so, than it is really nothing.

This he assumes in the Proof of *Prop. 1.* of Book X. which imports, that if from the greater of two Quantities, you take more than its half, and from the Remainder more than its half, and so continually, there will at length remain a Quantity less than either of those proposed.

On this Foundation they demonstrate, that if a regular Polygon of infinite Sides be inscribed in, or circumscribed about, a Circle, the Space, which is the Difference between the Circle and the Polygon, will, by Degrees, be quite exhausted, and the Circle equal to the Polygon. See **CIRCLE**, **QUADRATURE**, **POLYGON**, &c.

EXHEREDATION, or *EXHEREDATION*, in the Civil Law, with us ordinarily call'd *Dishabiting*, is the Father's excluding his Son from inheriting his Estate. See **DISINHERITING**.

There are fourteen Causes of *Exheredation* express'd in *Jus Justinian's* Novel: Without some one of which Causes, he decrees the *Exheredation* null, and the Testament inofficious, *Testamentum inofficiosum*, as the Civilians call it. See **TESTAMENT**.

Indeed, by the ancient *Roman* Law, the Father might pronounce *Exheredation* without any Cause; but the Rigour of this Law was restrain'd, and moderated by *Justinian*. See **HEIR**.

EXHIBIT, in Law. When a Deed, Acquittance, or other Writing, is in a Chancery Suit exhibited to be proved by Witnesses; and the Examiner writes on the Back, that it was shew'd to such a one, at the same Time of his Examination: This is call'd an *Exhibit*. See **EXHIBITION**.

EXHIBITION, a producing, or shewing of Titles, Authorities, and other Proofs of a Matter in Contest.

The Parties have exhibited their Titles and Pretensions before the Arbitrators.

Antiently, they used the Phrase *Exhibition* of a Tragedy, Comedy, or the like; but now we say *Representations* in Lieu thereof. See **REPRESENTATION**.

EXHUMATION, the Act of digging up a Body interr'd in holy Ground, by the Authority of the Judge. See **INTERMENT**.

In *France*, the *Exhumation* of a dead Body is order'd upon Proof that he was kill'd in a Duel. — A Parson has a Right to demand the *Exhumation* of the Body of one of his Parishioners, when interr'd out of the Parish, without his Consent. See **BURIAL**.

The Word is compounded of the Latin *ex*, out of, and *humus*, Ground.

EXIGENCE, or **ERIGENCY**, that which a Thing requires, or which is suitable thereto.

The Criminals were remitted back to the Judges, to be punish'd according to the *Erigency* of the Cause.

EXIGENT, in Law, a Writ that lies where the Defendant in a personal Action cannot be found, nor any Thing of his within the County, whereby to be attach'd, or distrain'd. See **WRIT**, **ATTACH**, &c.

It is directed to the Sheriff, ordering him to proclaim and call the Party five County Days successively, and charge him to appear under Pain of Out-lawry.

The same Writ also lies in an Indictment of Felony, where the Party indicted cannot be found.

It is call'd an *Exigent*, by Reason it *exigit*, i. e. *exalts* or requires the Party to appear, or be forthcoming, to answer the Law. If he appear not at the last Days Proclamation, he is said to be *quinquies exaltus*, and then is out-law'd. See **OUT-LAWRY**.

EXIGENTERS, are four Officers of the Court of Common Pleas, who make all *Exigents* and Proclamations, in all Actions where the Process of the Out-lawry lies. See **EXIGENT**.

Antiently, the making of Writs of *Superfideas* upon such *Exigents* as were made in their Offices, did likewise belong to them: But this Branch of Business was taken from them under King James I. and committed to a particular Officer in the Court of Common-Pleas, created by Patent. See **SUPERFIDEAS**.

EXILE, *Exilium*. See **BANISHMENT**.

Among the *Romans*, the Word *Exile*, *Exilium*, properly signified an Interdiction, or Exclusion from Water and Fire; the necessary Consequence of which was, that the interdiction'd Person must betake himself into some other Country, since there was no living without Fire and Water.

Thus, *Cicero ad Herenn.* observes, that the Form of the Sentence did not express *Exile*, but only *Aque & Igis Interdictio*. See **INTERDICTION**.

The same Author remarks, that *Exile* was not properly a Punishment, but a voluntarily flying, or avoiding the Punishment decreed: *Exilium non esse Supplicium sed persequimur, potiusque, Supplicii*. Pro *Caccina*.

He adds, that there was no Crime among the *Romans*, as among other Nations, punish'd with *Exile*; but *Exile* was a Recourse People flew voluntarily too, to avoid Chains, Ignominy, Starving, &c.

The *Athenians* frequently sent their Generals, and great Men into *Exile*, out of Envy of their Merits, or Distrust of their too great Authority. A perpetual *Exile* is a Civil Death, and imports Condemnation.

EXILE, is sometimes also used for the relegating a Person into a Place, whence he is obliged not to stir without Leave. See **RELEGATION**.

The Word is derived from the Latin *Exilium*, or from *Exul*, a banish'd Person; and that, probably, from *Extra-solum*, out of his Native Soil.

Figuratively, we use the Phrase honourable *Exile* for an Office, or Employment, which obliges a Man to reside in some remote, or disagreeable Place. Under the Reign of *Tiberius*, remote Employments were a Kind of mysterious *Exiles*. — A Bishopric, or even a Lord Lieutenant, in *Ireland*, is sometimes deem'd a Kind of *Exile*. A Residence, or Embassy, in some barbarous Country, is a Sort of *Exile*.

EXINATION, the same as *Evocation*. See **EVACUATION**.

EXISTENCE, that whereby a Thing has an actual *Essence*; or that whereby a Thing is said to be, *esse*; See **ESSENCE** and **ESSA**.

This Notion of *Existence*, is applicable not only to a created, but an uncreated Substance. — But it must be added, that the *Existence* of created Substances, and especially Corporeal ones, implies a Respect to Place, Time, and even an Efficient Cause; whence the Schoolmen generally define it; *That whereby a Thing is formally and extrinsically without, or beyond its Causes, and this here, and now*.

Existence, and *Essence*, come very near the Nature of each other: In Effect, they only differ in that we have different Manners of conceiving the same Thing.

For, 1^o. *Essence* is usually explain'd either by the first, noblest, and radical Attribute of the Thing, *e. gr.* That of Body, by Extension; that of Mind, by thinking, &c. or by the specifying of all the intrinsic Attributes: And *Existence*, by the specifying of all Place, and all Time, as in that of God; or by the specifying of some definite Place, and Time, together with the Causes; as in the Creators.

2^o. The Foundation, and Occasion of this Distinction, is this; that *Essence* belongs to the Question, What is it? *Quid est?* But *Existence* to the Question, Is it? *An est?*

3^o. *Existence* necessarily presupposes *Essence*, and cannot be conceiv'd without it: But *Essence* may be conceiv'd without *Existence*; in that *Essence* belongs equally to Things that are in *Potencia*, and in *Actu*: But *Existence*, only

only to those in *Actu*. Note, however, that this does not obtain in God; about whose Nature and Essence the Mind cannot think, without conceiving his Knowledge.

We have divers Ways of arriving at the Knowledge of the Existence of Things.—Our own Existence we know by Intuition; the Existence of a God, by Demonstration; And that of other Things by Sensation.

As for our own Existence, we perceive it so plainly, that it neither needs, nor is capable of any Proof. I think, I reason, I feel Pleasure and Pain: Can any of these be more evident to me than my own Existence? If I doubt of all other Things, that very Doubt makes me perceive my own Existence, and will not suffer me to doubt of that. If I know I doubt, I have as certain a Perception of the Thing doubting, as of that Thought which I call Doubt. Experience then convinces us, that we have an intuitive Knowledge of our own Existence, and an internal, infallible Perception that we are. In every Act of Sensation, Reasoning or Thinking, we are conscious to our selves of our own Being, and in this Matter come not short of the highest Degree of Certainty. See CARTESIANISM.

As to our Knowledge of the Existence of a God; tho' he has given us, no innate Ideas of himself, yet having furnish'd us with Faculties of Sense, Perception and Reason, we can never want a clear Proof thereof. See GOD.

The Knowledge of the Existence of other Things, *i. e.* of external Objects, Bodies, a World, &c. we only have by Sensation; for these being no necessary Connexion of real Existence with any Idea a Man hath in his Memory; nor of any other Existence but that of God, with the Existence of any particular Man; no particular Man can know the Existence of any other Being, but only, when by actually operating upon him, it makes it self be perceived by him. The having the Idea of any Thing in our Mind, no more proves the Existence of that Thing, than the Picture of a Man evidences his Being in the World; or the Visions of a Dream make a true History. It is therefore the actual receiving of Ideas from without, that gives us notice of the Existence of other Things, and makes us know that something doth exist at that Time without us, which causes that Idea in us, tho' we neither know, nor consider how it doth it.

This Notice which we have by our Senses of the existing of Things without us, tho' it be not altogether so certain as Intuition and Demonstration, yet deserves the Name of Knowledge, if we persuade our selves, that our Faculties act and inform us right, concerning the Existence of those Objects that affect them. See KNOWLEDGE.

Now besides the Assurance of our Senses themselves, that they do not err in the Information they give us of the Existence of Things without us, we have other concurrent Reasons: As 1^o. It is plain those Perceptions are produced in us, by exterior Causes affecting our Senses, because those that want the Organs of any Sense, never have the Ideas belonging to that Sense produced in their Minds. 2^o. Because we find we cannot avoid the having those Ideas produced in our Minds: When our Eyes are shut, we can at Pleasure recal to our Mind the Ideas of Light, or the Sun, which former Sensations had lodged in our Memories; but if we turn our Eyes towards the Sun, we cannot avoid the Ideas, which the Light or the Sun then produces in us; which shews a manifest Difference between those Ideas laid up in the Memory, and such as seize themselves upon us, and we cannot avoid having. Besides, there is no Body who doth not perceive the Difference in himself between actually looking upon the Sun, and contemplating the Idea he has of it in his Memory; and therefore he hath certain Knowledge, that they are not both Memory or Fancy. Thirdly, Add to this, that many Ideas are produced in us with Pain, which we afterwards remember without the least Offence: Thus, the Pain of Heat or Cold, when the Idea of it is receiv'd in our Minds, gives us no Disturbance; which when felt, was very troublesome; and we remember the Pain of Hunger, Thirst, Head-ach, &c. without any Pain at all, which would either never disturb us, or else constantly do it, as often as we thought of it, were there nothing more but Ideas floating in our Minds, and Appearances concerning our Fancies, without the real Existence of Things affecting us from abroad. 4^o. Our Senses, in many Cases, bear Witness to the Truth of each others Report, concerning the Existence of sensible Things without us: He that doubts, when he sees a Fire, whether it be real, may feel it too, if he pleases, and by the exquisite Pain may be convinced, that it is not a bare Idea or Phantom.

Such is Mr. Lock's Demonstration of the Existence of External Bodies.

The ingenious Mr. Berkeley has a quite different System. External Bodies, he contends, have no Existence but in a Mind perceiving them; that is, they only exist, quatenus they are perceiv'd; there *Existere* is *percipi*. They have

no Existence, nor Shadow of Existence out of our Minds. And of this he has given us what he and some others account a Demonstration. See BODY, EXTERNAL WORLD, &c.

As to the Existence of Spirits, Mr. Lock allows, that our having Ideas of them, does not make us know, that any such Things do exist without us; or that there are any finite Spirits, or any other spiritual Beings, but God. We have ground from Revelation, and several other Reasons, to believe with Assurance, that there are such Creatures; but our Senses being not able to discover them, we want the Means of knowing their particular Existence: For we can no more know that there are finite Spirits really Existing by the Idea we have of such Beings, than by the Ideas any one has of Fairies, or Centaurs, he can come to know that Things answering to those Ideas do really exist.

EXIT, properly expresses the Departure of a Player from off the Stage, when he hath acted his Part.—The Word is also us'd in a figurative Sense to express any Kind of Departure.

EXITUS, in Law, *Issus*; or, the yearly Rents, or Profits of Lands or Tenements. See ISSUS.

EX-*mero motu*, are formal Words us'd in the King's Charters, and Letters patent; signifying that he does what is contain'd therein *Of his own Will and Motion*.—The Effect of these Words is to bar all Exceptions that might be taken to the Instrument, by alleging that the Prince, in passing such Charter, was abused by false Suggestion.

EXOCATACOEIUS, in Antiquity, a general Denomination, under which were included several grand Officers of the Church at Constantinople; as the *Grand Oeconomus*, *Grand Sacellarus*, *Grand Master of the Chapel*, *Grand Secretary*, or Keeper of the Vessel, *Grand Cappellane*, the *Master of the little Chapel*, and the *Procurators*, or first Defender of the Church.

The *Exocatacoei*, were of great Authority: In public Assemblies they had the Precedence of Bishops; and in the Patriarchate of Constantinople, did the Office of Deacons; as the Cardinals originally did in the Church at Rome. Accordingly, in the Letter of John IX. to the Emperor Basil Leo, they are call'd *Cardinales*. See CARDINAL.

At first they were Priests; but some Patriarch of Constantinople, whom *Codin* does not mention, would have them for the future to be no more than Deacons. The Reason was, that being Priests, each of them had their several Churches, wherein they were to officiate on all the grand Festival Days; so that it unhappily fell out, the Patriarch on the most solemn Days was deserted by all his chief Ministers. See DEACON.

The Critics are not at all agreed about the Origin of their Name *Exocatacoei*: *Janus*, in his Edition of *Codin*, breaks the Word into two, and reads *ἐξοκατακοίη*, *q. d.* *Suo Catacoeli*; but this Reading, tho' authorized by several MSS. is faulty; the Generality of Copies only making one Word: Beside that they are call'd *Exocatacoei*, even when there were only five of them. The same *Janus* derives *Catacoeli* hence, that these Officers dwelt in the Valleys, *ἐν τοῖς κοιλάδα*.

Pet. Gregor. Tolosan, takes the Word to have been form'd from *ἐξοκατακοίη*, *permissio*, *divinitus Animam delinno*: But *Greuter* rejects this Etymology, as without any Foundation. In Lieu thereof, he proposes another Conjecture, tho' with a good deal of Timidity: He reads *ἐξοκατακοίη*, instead of *ἐξοκατακοίη*, as if they were thus call'd by Reason they lodg'd, or lived out of the Patriarchal Palace.

Fa. Goar rejects this Opinion, and had rather they should read *ἐξοκατακοίη*, as intimating they were thus call'd in Opposition to the *Syncelesi*, who lay in the Patriarch's Apartment, which the rest did not; but he is far from being of the Opinion that Officers of so much Eminence, should take their Denomination from a Thing, which testifies a Want of a Privilege. He chafes, therefore, to imagine that all the inferior Priests were call'd *Κατακοίη*, *Catacoeli*, *q. d.* People of a low Condition; and that their Superiors were call'd *Exocatacoeli*, *q. d.* People out of the Number of *Katacoeli*, or above them.

Upon the whole, however, he adheres to the Sentiment of *G. Corssin*, who says, that the Patriarchal Palace and the Apartments of the *Syncelesi*, and the Monks in the Patriarch's Service, were in a very low Part of the City, which with Regard to the rest seem'd a Valley or Pit; and that the Offices above mentioned had their several Houses, or Palaces, *ἐξω*, out of the Valley: Whence the Name *Exocatacoeli*.

The Opinion of *M. du Camp* is the last we shall name: He derives the Appellation from their being above the Level, or Rank of the other Clerks; and seated at Church, &c. in more

honourable Places rais'd for that Purpose by the Patriarch's Sides: These two last Systems are the most probable.

EXOCIONITÆ, EXOCIONITES, in Church Antiquity. — *Aneurys* tells us, that there was a Monastery at Constantinople call'd *Exocionium*; and that the first who were call'd *Exocionites*, were the Monks thereof: But this is a Mistake.

'Twas the *Arians* who were first call'd *Exocionites*; by Reason, when expell'd the City by *Theodosius* the Great, they retir'd into a Place call'd *Exocionium*, and there held their Assemblies. *Julianus* gave the Orthodox all the Churches of the Heretics, excepting that of the *Exocionites*. *Cedrenus*. See **ARIAN**.

The Word is derived from *ἔξωκλιον*, or *ἔξωκλιον*, the Name of the Place abovemention'd.

Codin, in his *Origines*, says, that the *Exocionium* was a Place encompass'd with Walls, built and adorn'd by *Constantine*; and that without the Circumference of this Wall, there was a Column, with a Statue of that Emperor, whence the Place took its Name, viz. from *ἔξω*, without, and *κλιον*, Column.

Gotbfrid holds, that *Theodoret* is mistaken, in saying that the *Arians* were call'd *Exocionites*, or *Exocionites*, from the Name of the Place where they assembled; and takes the Name to be the same with that of *Exocionites*, which was attributed to the *Arians*, by Reason they held that the Son was made out of nothing, *ἔξ ἁνυκτου*. But a mere Conjecture of *Gotbfrid* is not sufficient to make us set aside the Authority of so able a Person as *Theodoret*.

EXODE, or EXODIUM, in the ancient *Greek* Dramas, was one of the four Parts or Divisions of Tragedy. See **TRAGEDY**.

The *Exodium*, according to *Aristotle*, was so much as was rehear'd after the Chorus had ceas'd to sing for the last Time; so that *Exodium* with them, was far from being what the Epilogue is with us, as several People have imagin'd it was. See **EPICOLE**.

The *Exode* was so much of the Piece as included the Catastrophe and unravelling of the Plot; which Catastrophe, &c. in Pieces regularly compos'd, always begun after the last singing of the Chorus; answering nearly to our 4th and 5th Acts. See *M. Dacier's* Comment, on *Aristotle's Poetics*, p. 166. See also the Articles **CATASTROPHE**, **CHORUS**, &c.

Among the *Romans*, the *Exodium* was a different Thing; 'twas pretty nearly what *Farces* are with us. After the Tragedy was over, came a Pantomime on the Stage, call'd the *Exodiaris*, who by his Grimace, Jesting, and Buffoonry, diverted the People, compos'd their Minds, and wiped away the Tears with the Tragick Spectacle had occasion'd to be shed.

This was his Office, as related by the ancient Schollast of *Juvenal*: *Exodiaris, apud Veteres in sine Ludorum intrabat, quod ridiculus foret, ut quidquid Lasciviarum atque Tristitia coequebat ex tragica Absollibus, hujus Spectaculi Rufus astingeret.*

Such was the original Intention of the *Exodium*, but it afterwards degenerated into a bitter, malicious Kind of Railery.

Viguere on *J. Livy*, says the *Exodium* consist'd of certain humorous, drolling Verses, rehear'd by the Youth at the End of the *Fabula Attellana*, and answering to our *Farces*. — In another Place, the same Author says, that the *Farces* were a Kind of Interludes, in the Intervals, between the Acts, partly Fable and Pleasantry, partly Music, &c. to give Time both for the Spectators and Actors to recover Breath.

The Passage in *Livy*, whence he takes the Notion, is *Lib. VII. Dec. 1. Rusticula intertextu Versibus, que Juvonens inter se more Antiquo jactare cepit eaque conferta sua fabulis potissimum Attellani.* So also *Juvenal*,

*Urbiens Exodio risum movet Attellana
Gofibus Antonos.*

The Word is form'd from the *Greek*, *ἔξωδος*, going out, or even *Digression*, going aside, out of the Way; or *ἔξωδος*, *Road*. *Beatus*, *Lib. V.* calls it *Exitus*: *Varro*, *de Ling. Lat.* — The same Author uses the Phrase in *Exodium Vite*.

EXODIUM, in the Septuagint, signifies the End, or Conclusion of a Feast. See **FEAST**.

In Particular, it is used for the Eighth Day of the Feast of Tabernacles, which, 'tis said, had a special View to the Commemoration of the *Exodus*, or Departure out of *Egypt*. Tho' there is nothing of it express'd in Scripture.

The *Hebrew* Text calls the Day *מִצְוֵת* which the Seventy render *ἑξήμηρος*.

EXODIUM, was also the Name of a Song, sung at the Conclusion of a Meal.

EXODIARY, EXODIARIUS, in the ancient *Roman* Tragedy, was a Droll, or Mime, who appear'd on the Stage, when the Tragedy was ended, and perform'd what they call'd the *Exodium*, or Conclusion of the Shew; to divert the Company. See **EXODIUM**.

EXODUS, the second of the five Books of *Moses*. See **PENTATEUCH**.

The Word in its original *Greek*, *ἔξωδος*, literally imports a going out, or Journey; and was applied to this Book, by reason the History of the *Israelites* Passage out of *Egypt* is related therein. Beside this, it contains the Story of what was transacted in *Egypt*, from the Death of *Joseph*, to the Delivery of the *Jews*; as well as what pass'd in the Wilderness, and particularly at Mount *Sinai*, to the building of the Tabernacle.

The *Hebrews* call it *Veille Semoth*, signifying, *Ἐβραϊστικῶς*; These are the Names, which are the initial Words of the Book: For the same reason as they call *Genesis*, *Bereshit*, q. d. *in principio*, in the Beginning. See **GENESIS**.

EX OFFICIO. — By a Branch of a Statute of *1 Eliz.* the Queen, by her Letters Patents, might authorize any Persons, &c. to administer an Oath *Ex Officio*; whereby the supposed Offender was forced to confess, accuse, or clear himself of any criminal Matter, &c.

But this Branch relating to this Oath, is repealed by *17 Car. 1. cap. 11.*

EXOMOLOGESIS, a Term little us'd but in speaking of the ancient Rites of Repentance; whereof the *Exomologesis* was a Part. See **CONFESSION**.

It signifies Confession; being pure *Greek*, *ἔξωμολογησις*, form'd of *ἔξωμολογία*, I confess.

Some of the Ancients, and particularly *Tertullian*, de *penit. C. 9.* uses the Word in a greater Latitude, as comprehending the whole of Repentance: A public *Exomologesis* was never commanded by the Church for secret Sins; as may be seen in the Capitularies of *Charlemaign* and the Canons of divers Councils.

EXOMPHALUS, in Medicine, a General Name for divers Disorders.

Exomphalus expresses all Kinds of Ruptures, or Tumors, happening in the *Umbilicus*, or Navel. See **RUPTURE**.

Authors distinguish three Kinds of *Exomphali*; the first are Tumors, or Swellings of the solid Parts, whereof there are three Varieties, denominated from the several Parts affected, as the *Euteromphalus*, *Epiomphalus*, and *Enteromphalus*: The second are Tumors form'd by Collections, or Gatherings of Humours, of which there are four Varieties, distinguish'd by the particular Humours they are form'd of, as the *Hydromphalus*, *Pneumomphalus*, *Sarcophalus*, and *Variomphalus*: The third are those compound'd of both the other, viz. the *Enterohydromphalus*, and *Epihydromphalus*. See each Species under its several Heads, **ENTEROMPHALUS**, &c.

EXORCISM, Prayers, or Conjurations, wherewith to exorcise, i. e. drive out Devils from Persons possid'd, purify unclean Creatures, or preserve from Danger.

Exorcismus are of great Use in the *Romish* Church: Their Prelates, &c. are frequently *Exorcising* Demoniack Persons. The Priests make the Holy Water, by *Exorcising* common Water a certain Number of Times.

The *Exorcismus* is a Part in most of their Consecrations. See **EXORCIST**.

It must be allow'd, the Use of *Exorcismus* is almost as ancient as the Church: Recourse was had to such Machines, to drive away Diseases both of Men and Beasts, to expel and destroy Vermin, and other Animals, noxious to the Earth, and the Fruits thereof.

M. Thiers, in his *Traite des Superstitions*, gives divers Formula's of such *Exorcismus*; and quotes, particularly, the Instance of *St. Greg.* who, by Means of *Exorcismus*, obtain'd of God, the Favour, that there should be no Rat found in the Country of *Aoff*, nor three Miles ground the same.

The same Author is of Opinion, that such *Exorcismus* may be still us'd to good Purpose, against Rats, Mice, Locusts, Caterpillars, Storms, &c. But in order to perform any Thing of this Kind, he observes, a Man must have the proper Quality and Character, and be approv'd of by the Church; and must likewise use Words and Prayers authorize'd thereby; otherwise, his *Exorcismus* will be damnable Superstitions.

Exorcismus had anciently another and further Purpose, being applied by way of Trial, or Purgation, to extort the Truth from the accused. See **PURGATION**.

The *Exorcismus*, in this Sense, was a Sort of Bread conjured and *Exorcised* for the Purpose: And the Opin-

nion was, that if the Person were criminal, he could not swallow the Bread.

This, it seems, was a frequent Practice in the Time of our *Edward III.* and the Bread thus *Exorcised*, was said to be *Carsad.* *Lindaebeck* gives Instances of *Exorcisms* with Barley Bread, and others with Cheese. And hence, probably, might arise that popular Imprecation, *May this Bread choke me, if I tell a Lye.* See *ORDEAL, JUDICIUM DEI, &c.*

The Word is derived from the *Greek, ἔξωρος, adjurare, conjurare, to adjure, or conjure.*

In most Dictionaries, *Exorcism* and *Conjuration* are used as synonymous: But, in Reality, *Conjuration* is only a Part of the *Exorcism*; and the *Exorcism* the Ceremony entire. — The *Conjuration* is properly the Formula, whereby the Devil is commanded to come forth, &c. See *CONJURATION.*

EXORCIST, in the *Romish Church*, a Priest, or sanctioned Clerk, who has received the four lesser Orders, one of which is that of *Exorcist.* See *ORDER.*

The Term is likewise applied to a Prelate, who actually *Exorcises* a Person possessed. See *EXORCISM.*

'Tis a Dispute among Divines, whether ever the *Greeks* had properly any such Order, as that of *Exorcist*: *Fa. Goar*, in his Notes on the *Greek Euchologe*, has made it very probable they had, from several concurring Passages in *St. Dionysius*, and *St. Ignatius Martyr.*

The Ordination of *Exorcists* is perform'd in the Time of Mass: Their principal Office being to expel Devils, the IVth Council of *Carthage*, *Can. 7.* appoints, that in the Ordination of *Exorcists*, the Bishop putting the Book of *Exorcisms* in their Hands, shall say these Words, *Receive it, and keep it in Remembrance, and have Power to lay Hands on Emergentes, whether Baptized, or Catechumens;* which Form Bill obtains.

M. Fleury mentions certain People among the *Jews*, who travel'd round the Country, making Profession of driving out Devils by Invocations, which they pretended had been taught them by *Solomon*: These were also call'd *Exorcists.* See *Joseph. Antiq. Jud. L. VIII. C. 2. Origen. Tract. XXXV. in Matt. XXVII. 63.*

EXORDIUM, in Oratory, *Sc.* the Preamble, or Beginning of a Discourse, or Speech; serving to prepare the Audience, and introduce the Matter in Hand: Call'd also the *Prologue, Præface, and Proem.* — See *PROLOGUE, &c.*

Cicero defines *Exordium*, a Part of an Oration, whereby the Minds of the Audience are duly prepar'd for what remains to be said: — The *Exordium* is a Part of principal Importance, and to be labour'd with extraordinary Care; whence *Tully* calls it, *difficilissima pars Orationis.* See *ORATION.*

The Word is form'd of the Latin, *Ordire*, to begin; or by a Metaphor from the Weaver, who are said *ordire telam, ovarde, begin, or warp* a Web, by disposing and ordering the Threads in a certain Manner for the future Work.

Exordiums are of two Kinds: either just, and formal; or vehement and abrupt. In the first, the Audience is prepared and conducted, by due and easy Steps: In the second, the Orator, as if seiz'd with some sudden Passion, breaks out upon his Audience at once. Such is that *Exordium* of *Isaiah*, *Hear, O Heavens, and give Ear, O Earth.* Or that of *Cicero* against *Catiline*, *Quousq; tandem abutere patientia nostra Catilina?*

Abrupt *Exordiums* are the most suitable, on Occasions of exceeding Joy, Indignation, or the like; tho' we have Instances of *Panegyrics* of the greatest Orators, began abruptly without any such Occasions: Such is that of *Gregory*, who began his Elogie of the City and People of *Eliis*, with *iam motus invidiam, Eliis, beata civitas:* Or that of *Greg. Nazianzen*, in Praise of *Athanasius*, *Ἄθανασος ἁγίου ἀπὸ τοῦ ἀποστόλου, Athanasium laudans virtutum laudabo.* Abrupt, hasty *Exordiums*, were more of the Taste and Manner of the *Greeks* than the *Latins.*

The Requisites in an *Exordium*, are, 1^o. *Propriety*, whereby the *Exordium* becomes of a-piece with the whole Discourse, and matches it, as a Part does a whole; so as that it could not be accommodated to any other, or perhaps a contrary Occasion. The ancient Orators were very defective in this Point: Their *Exordiums* had frequently nothing in common with the Subject.

2^o. *Core, Accuracy, and Magnificence*, as being the Part most minded, and most exposed to Shew. Thus *Tully*, *Vestibula, aditusq; ad causam facias illustret.*

3^o. *Modesty*, or an ingenuous Bashfulness, which recommends the Orator exceedingly to the Favour of his Audience. This is what *Cicero* extols so much in *L. Crassus*, *Fuit enim in L. Crasso pudor quidam, qui non modo non obesse ejus Orationi, sed etiam probatissimum commendatione professest.* The same *Tully* owns, of himself,

that at the Beginning of his Orations, he trembled every Limb, and his whole Mind was in a Flutter.

And, 4^o. *Brevity*, not amplified, or swell'd with a Detail of Circumstances, or a long Circuit of Words: Such as that must be of the Lawyer, who being to speak of a Difference between two Neighbours, deduced his *Exordium* from *Adam.*

The *Exordium* appears an essential Part of an Oration: Tho', anciently, in the *Areopagus*, *Jullius Polus* tells us, they spoke without any *Exordium*, any Passions, and any Peroration, or Epilogue. The like is said to have been done by *Xenophon*, who begins thus, *Darius & Parisatis duos habere filios.*

EXOSTOSIS, from *ἔξω, Or, a Bone;* is any unnatural Protrusion of a Bone; frequent in Venereal Cases: Or rather, it is a Swelling, occasion'd by a Bone's being out of its natural Place, or Position. See *BONE.*

EXOTIC, a Term properly signifying *foreign, or extraneous, i. e.* brought from a remote, strange Country: In which Sense we sometimes say *Exotic* or barbarous Terms, or Words, &c.

But *Exotic* is chiefly applied to Plants which are Natives of Foreign Countries, particularly those brought from the *East* and *West-Indies*; and which do not naturally grow in *Europe.*

The Generality of *Exotics*, or *Exotic* Plants, do not thrive in *England*, without some peculiar Culture. They require the Warmth of their own Climates; whence the Use of hot-Beds, Glass Frames, Green-Houses, &c. The Green-House is properly a Conservatory of *Exotics.* See *GREEN-HOUSE.*

The Word is derived from the *Greek, ἔξω, ἔξωθεν, extra;* whence *ἔξωτος.*

Dr. Lister has a Discourse in the *Philosoph. Transact.* on *Exotic Diseases*, i. e. Such Diseases as are never bred among us, but brought from Time to Time by Infection from other Countries. Such, according to this Author, are, 1^o. The *Plague*, which is properly a Disease of *Asia*, where it is Epidemic. 2^o. The *Small-Pox*, which is an *Oriental* Disease, and not known to *Europe*, or even *Asia minor*, or *Africa*, till a Spice Trade was open'd to the remotest Part of the *Indies*; whence it originally came, and where it still rages more cruelly than among us. 3^o. The *Griping of the Guts*, which he takes for a Disease peculiar to the *West-Indies*, and yearly receiv'd from thence. For this, he adds, is a quite different Disease from the *Tormina Ventris* of the Ancients; and is scarce ever known in the mid-land Countries, or far in the North of *England.*

EXPANSION, in Metaphysics, expresses the Idea we have of lasting, or persevering Distance; i. e. of Distance, all the Parts whereof exist together. See *DISTANCE.*

EXPANSION, in Physics, is the dilating, stretching, or spreading out of a Body; whether from any external Cause, as the Cause of Rarefaction; or from an internal Cause, as Elasticity. See *DILATATION, RAREFACTION, ELASTICITY.*

Bodies naturally *Expand* by Heat, beyond their Dimensions when cold; whence their specific Gravities are different, at the different Seasons of the Year. See *SPECIFIC GRAVITY.*

Air compressed, or condensed, as soon as the compressing, or condensing Force is removed, *Expands* it self by its Elastic Power, to its former Dimensions. See *AIR.*

But this may seem a less accurate Notion of *Expansion*; which some Authors restrain to an Increment of the natural, or ordinary Dimensions of a Body, by the mere Action of Heat. See *HEAT.*

Dr. Halley found by Experiment, that Water *Expands* it self by one twenty sixth part of its Bulk, when made to boil: But a moderate Heat does not induce any sensible *Expansion* at all. — Mercury, with a very gentle Heat, *Expands* it self one seventy fourth part of its ordinary Dimensions. See *WATER, &c.*

Spirit of Wine, with a Heat less than that of boiling Water, *Expands* it self by one twelfth part of its Bulk; and then fell a boiling. The most sensible *Expansion* of Water, is by Freezing. *Mr. Boyle*, in his *Hist. of Cold*, assures us, that Ice takes up one twelfth part more Space than Water. See *FREEZING.*

Dr. Gregory, in his *Astron. p. 407.* proves, that a Globe of our Air, of an Inch Diameter, if it were removed to the Distance of a Semi-diameter of the Earth, would *Expand* it self so, as to fill all the planetary Region, as far as, nay, far beyond, the Sphere of *Saturn.*

EX PARTE, i. e. *partly, or of one part*, is thus used in the Court of Chancery: A Joint Commission is that wherein both Plaintiff and Defendant join; A Commission *Ex parte*, is that taken out and executed by one Party only.

EXPECTANT-FEE, in Law, differs from Fee simple; Thus, e. g. Lands being given to a Man and his Wife, in frank Marriage, to hold to them and their Heirs: In Case they have Fee-simple. If it be given to them, and the Heirs of their Body, &c. they have Fee-Expectant. See Fee.

EXPECTATIVE, a Hope founded on a Promise of obtaining the next Benefice that shall become vacant, or a Right to the Reversion of the next.

Expellative Graces, *Gratie Expellative*, call'd also Preventions, were Bulls frequently given by the Popes, or Kings, for future Benefices: The Bishops were exceedingly mortified with them; by reason they encroach'd on their Privileges. Besides that such *Expellatives* are odious, as they induce People to wish for the Death of others. See Prevention.

The Use of *Expellatives* is very ancient, tho' it was not near so frequent in the first Ages, as at present. Originally they were no more than simple Requests made on the Part of Kings, or Popes, which the Bishops consented to with the more Willingness, as they only presented to them Persons fit to serve the Church. But the frequent Exercise of this Privilege, made it at length be deem'd a Matter of Obligation and Necessity. See **PREMUNIRE**.

The Council of Trent annull'd all *Expellatives*; but those Canons were never admitted in France, where the Right of conferring *Expellative Graces*, is look'd on as one of the Regalia.

EXPECTORATION, the Act of evacuating, or bringing up of Phlegm, or other Matters, out of the Lungs; by Coughing, Hawking, Spitting, &c. See Lungs.

Expectoration cures the Lungs of the viscid, or putrid Matters, which obstruct its Vessels, and straitens the Breast.

EXPEDITION, in the Forest Laws, signifies a cutting out the Ball of a Dog's Fore-foot, for the Preservation of the King's Game. See Forest and Game.

Every one that keeps any great Dog not *expeditated*, forfeits three Shillings and Four Pence to the King. In Maltese, not the Ball of the Feet, but the three Claws, are to be cut to the Skin. *Instit. P. 4. pag. 308. Nullus dominicus canis, Abbatibus & Monachorum expeditari, Cogat. Chart. Hen. 2. Et sint quieti de Espedimentis Cassini. Ex mag. Rot. Pip. 40 Ann. 9. Ed. 2.*

This *Expeditation* was to be performed once in every three Years; and was done to every Man's Dog who lived near the Forest, and even the Dogs of the Foresters themselves.

EXPEDITION, a military Enterprize. Such were the *Expeditio* of Cyrus against Xerxes, of Alexander into the Indies; the *Expeditio* of Xerxes against Greece, was unhappy. *Cesar* himself, in the middle of his *Expeditio* into the Gaule, composed two Books of the Analogy of Words.

The *Expeditio*es for the Recovery of the Holy Land, were call'd *Croisades*. See **CROISADE**.

EXPENSIS militum levandis, is a Writ directed to the Sheriff, for levying Allowance for the Knights of Parliament. See **PARLIAMENT**.

EXPERIENCE, a Kind of Knowledge acquired by long Use, without any Teacher.

Experience consists in the Idea's of Things we have seen, or read, which the Judgment has reflected on, to form it self a Rule, or Method.

Authors make three Kinds of *Experience*: The 1^o. is the simple Use of the external Senses, whereby we perceive the Phenomena of natural Things, without any direct Attention thereto, or making any Application thereof.

The 2^o. is, when we promeditately, and designedly, make Trials of various Things, or observe those done by others; attending closely to all the Effects and Circumstances.

The 3^o. is, that preceded by a Fore-knowledge, or, at least, an Apprehension of the Event; and which determines whether the Apprehension were true or false. Which two latter Kinds, especially the third, are of great Service in Philosophy. See **EXPERIMENT**.

EXPERIMENT, in Philosophy, a Trial of the Effect or Result of certain Applications, and Motions of natural Bodies; in Order to discover something of the Laws and Relations thereof, or to ascertain some Phenomenon, or its Cause.

The Schoolmen define *Experiment*, a Comparison of several Things before observed by the Senses, and retain'd in the Memory; in some one similar convenient Instance.

The Nature of *Experiment*, therefore, according to them, consists in comparing several Things by one Act; whence they distinguish two Things in every *Experiment*, the one *material*, viz. the several Idea's remember'd; the other *formal*, viz. the comparing of these Idea's in the Mind.

This will be illustrated by an Example: A Physician gives a Quantity of Rhubarb to ten several Persons, and remembers each of them: Now, coming afterwards to compare the several Remembrances together, and finding

the Effect of the Exhibition of Rhubarb to be the same in all, viz. A Purging: This is an *Experiment* of Rhubarb.

The making of *Experiments*, is grown into a Kind of form'd Art; and we now abound in Systems of *Experiments*, under the Denomination of *Courses of experimental Philosophy*. *Sturmius* has made a curious Collection of the principal Discoveries and *Experiments* of the present Age, under the Title of *Collegium Experimentale*. The Chymists chuse to call their *Experiments*, by way of Distinction, or Eminence, *Processus*, or *Operationes*. See **PROCESS**.

EXPERIMENTAL Philosophy, by the Greeks call'd *Episteme*, or *Episteme*, is that which proceeds on *Experiments*; or which deduces the Laws of Nature, and the Properties and Powers of Bodies, and their Actions upon each other, from sensible *Experiments* and Observations.

Experiments are of the last Importance in Philosophy; and the great Advantages the modern Physicks have above the Ancient, is chiefly owing to this, that we have a great many more *Experiments*, and that we make more Use of the *Experiments* we have.

Their Way of Philosophizing was, to begin with the Causes of Things, and argue to the Effects and Phenomena; ours, on the contrary, proceeds from *Experiments* and Observations alone.

My Lord Bacon first paved the Way for the new Philosophy, by setting on Foot the making of *Experiments*. His Method has been prosecuted with laudable Emulation by the Academy del Cimento, the Royal Society, Royal Academy at Paris, Mr. Boyle, Sir I. Newton, and many others.

In Effect, *Experiments*, within these 50 or 60 Years, are come into such Vogue, that nothing will pass in Philosophy, but what is founded on *Experiment*, or confirm'd by *Experiment*, &c. So that the new Philosophy is almost altogether *Experimental*. See **PHILOSOPHY**.

Indeed, the Ancients, whatever we commonly say to the contrary, seem to have thought as well of the *Experimental* Way, as the Moderns. *Plato* mixes no Occasion of speaking of the Advantages of the *episteme*; and as to *Aristotle*, his History of Animals may bear Witness for him. *Democritus*'s great Business was to make *Experiments*; and even *Epicurus* himself owes Part of his Glory to the same Cause. *Plato* calls it, in respect to its Subject, *somnium*, or *Sablety* of Science.

Yet there are those, even among the Learned, who conceive of *Experiments* in a different Manner.

Dr. Keill allows, that Philosophy has receiv'd very considerable Advantages from the Makers of *Experiments*; but complains of their Disingenuity, in too often wringing and distorting their *Experiments*, and Observations, to favour some darling Theories they had espous'd. But this is not all: M. *Hortfocker*, in his *Recueil de plusieurs pieces de physique*, undertakes to show, that they who employ themselves in the making of *Experiments*, are not properly Philosophers, but, as it were, the Labourers, or Operators of Philosophers, who work under them, and for them, furnishing them with Materials to build their Conclusions upon.

The learned M. *Docier*, in the Beginning of his Discourse on *Plato*, at the Head of his Translation of the Works of that Philosopher, deals still more severely with the Makers of *Experiments*. He breaks out with a Sort of Indignation, at a Tribe of idly curious People, whose Philosophy consists in making *Experiments* on the Gravity of the Air, the Equilibrium of Fluids, the Loadstone, &c. and yet arrogant to themselves the noble Title of Philosophers.

EXPERIMENTUM Crucis, is a Capital, leading, or decisive Experiment; thus call'd, either as, like a Cross or Post of Directions placed in the meeting of several Roads, it guides and directs Men to the true Knowledge of the Nature of the Thing they are enquiring after: Or, as it is a Kind of Torture, whereby the Nature of the Thing is as it were extorted by Violence. See **CRUCIS**.

EXPIATION, the Act of Suffering the Punishments adjudg'd to a Man's Crimes, and thus paying off and discharging the Guilt.

The Romanists hold, that Souls, after Death, are sent to Purgatory, to expiate, or atone for their Sins. See **PURGATORY**.

The Word is also applied to Sacrifices offered to the Deity, to implore his Mercy and Forgiveness. See **SACRIFICE**.

The Feast of EXPIATION, among the Jews, call'd by our Translators the Day of Atonement, was held on the Xth Day of the 7th Month of the Jewish Year, answering to our September. It was instituted by God himself, *Levit. XXIII. 27, &c.* On that Day, the High Priest, the Figure or Type of Jesus Christ, confess'd his Sins;

Sins; and after several Ceremonies, made an Atonement for all the People to wash them from their Sins.

EXPIATION, among the Heathens, was a Purification used for effacing, or abolishing of a Crime.

It was practised with divers Ceremonies: The most usual was *Abstination*. See **ABSTINENTION**.

Expiations were perform'd for whole Cities, as well as particular Persons.

After the young *Horatius* had been absolved by the People from the Murder of his Sister; he was further purified by the several *Expiations* prescribed by the Laws of the Pontifices for involuntary Murthers. *Halicarnassus*.

EXPIATION, in the Civil Law, the Act of *Withdrawing*, or diverting any Thing belonging to an Inheritance, before any Body had declared himself Heir thereof.

This made a peculiar Species of Theft: For there cou'd not properly be a Theft in taking a Thing not possess'd by any Body; or ere the Inheritance was accepted.

For this Reason, the *Roman* Legislature introduced the Action of *Expilation*, for the Punishment of this Crime.

EXPIRATION, in Medicine, that Motion in an Animal, whereby the Air, inspired into the Lungs, is expell'd, or thrust out of the fame, and the Cavity of the Breast contracted. See **LUNGS**.

Respiration consists of two alternate Motions, or Actions of the Lungs, corresponding to those of a Pair of Bellows; *Inspiration*, whereby the Air is drawn in; and *Expiration*, whereby 'tis driven out again. See **RESPIRATION**.

By Means of this Alternation, the Circulation of the Blood, and the Motions of the Heart are maintain'd. See **CIRCULATION** and **HEART**.

EXPIRATION, is also used figuratively, for the End of a Term of Time granted, agreed on, or adjudged.—'Tis not above eight Days, till the *Expiration* of the Term of his Imprisonment. The Term of such a Bill of Exchange is *expir'd*, i. e. it is fallen due. See **BILL**.

EXPLICIT, in the Schools, something clear, distinct, formal, and unfolded.—The Will, Intention, &c. is said to be *Explicit*, when 'tis fully explain'd, in proper Terms; and *implicit*, when 'tis only learnt by Deductions and Consequences.

The Jews had not all an *Explicit* Knowledge of Jesus Christ, but they had at least an *implicit* one.

Such a Testator has declared his Will *explicitly*, i. e. in formal Terms; there is no need to have Recourse to *Explications*.

EXPLOSION, in Physics, the Action of a Thing that drives another out of the Place it before possess'd.

The Term is chiefly used for the going off of Gun-Powder, and the Expulsion of the Ball, Shot, or the like Consequent thereon. See **GUN-POWDER**.

Hence the Word comes likewise to be figuratively used to express such sudden Actions of other Bodies, as have some Resemblance thereto; as those which ferment with Violence, immediately upon their Mixture, and occasion a crackling Sound.

Some Writers have likewise applied it to the Excursions of the Animal Spirits, and insensuous Motions of the Fibres, arising without the Direction of the Mind; but the Term then becomes too figurative to express any determinate Idea, so as really to inform the Understanding.

EXPOSITION, in Rhetoric, a Figure, whereby we explain the same Thing in different Phrases and Expressions, in order to shew it more fully.

Exposition was the favourite Figure of *Balzac*—A Man, but moderately versed in the Style of Scriptures, will perceive that this is no more than an *Exposition*; that is, a Figure whereby the sacred Author explains the same Thing in different Terms. The Scriptures are full of such Figures; and I scarce think there is any one more ordinary. *Sonnet*.

EXPONENT, in Arithmetic, or EXPONENT of a Power, the Number which expresses the Degree of the Power; or which shews how often a given Power is to be divided by its Root, ere it be brought down to Unity. See **POWER**.

Thus the *Exponent* of a Square Number is 2; of a Cube 3: The Square being a Power of the second Degree; the Cube of the third, &c.

EXPONENT, is also used in Arithmetic, in the same Sense with *Index*, or *Logarithm*.

Thus a Series of Numbers in Arithmetical Progression, being placed under another Series in Geometrical Progression, are call'd the *Exponents*, *Indices*, or *Logarithms* thereof. See **INDEX**.

E. gr. In the two Progressions,

Geom. 1, 2, 4, 8, 16, 32, 64, 128, 256, 512

Arith. 1, 2, 3, 4, 5, 6, 7, 8, 9

1 is the *Exponent*, *Index*, or *Logarithm*, of the first Term 1; 2 that of the 2th. 32, &c.

Hence, Unity is to the *Exponent* of the Power, as the *Logarithm* of the Root, to the *Logarithm* of its Power: Consequently, the *Logarithm* of the Power is had, by multiplying the *Logarithm* of the Root by its *Exponent*; and the *Logarithm* of the Root is had, by dividing the *Logarithm* of the Power by its *Exponent*. See **LOGARITHM**.

EXPONENT of a Ratio, is the Quotient arising upon a Division of the Antecedent by the Consequent.—Thus, in the Ratio 3 to 2, the *Exponent* is $1\frac{1}{2}$; and the *Exponent* of the Ratio 3 to 1, is 3. See **RATIO**.

Hence, 1^o. If the Consequent be Unity, the Antecedent is the *Exponent* of the Ratio. *E. gr.* The *Exponent* of the Ratio 4 to 1, is 4. And again: The *Exponent* of a Ratio is to Unity, as the Antecedent to the Consequent.

2^o. Since, in a rational Ratio, the *Exponent* of the Ratio is had by dividing a rational Number by another rational; the *Exponent* of a rational Ratio, is a rational Number.

EXPONENTIAL Calculus, or *Calculus EXPONENTIALIS*, is the Method of differencing *Exponential* Quantities, and of summing up the *Differentials* of *Exponentials*. See **CALCULUS**.

EXPONENTIAL Curve, is that defined by an *Exponential Equation*—*Transcendental* Curves partake both of the Nature of Algebraic and *Transcendental* ones; Of the former, because they consist of a finite Number of Terms, tho' those Terms themselves are indeterminate; and of the latter, because they cannot be Algebraically constructed. See **CURVE**.

EXPONENTIAL Equation, is that wherein there is an *Exponential* Quantity; call'd also a *Transcendental Equation*, and by some, a *Geometrical Irrational*. See **EQUATION**, **TRANSCENDENTAL**, &c.

EXPONENTIAL Quantity, is a Power whose *Exponent* is an indeterminate, variable, or flowing Quantity. See **QUANTITY**.

Exponential Quantities are of several Degrees and Orders; when the *Exponent* is a simple indeterminate Quantity, it is call'd an *Exponential* of the first or lowest Degree.

When the *Exponent* it self is an *Exponential* of the first Degree, then the Quantity is an *Exponential* of the second Degree.

Thus xy is an *Exponential* of the first Degree, because the Quantity y is a simple flowing Quantity. But xy^2 is an *Exponential* Quantity of the second Degree; be-

cause y^2 is an *Exponential* of the first Degree. So also xy^3 is an *Exponential* of the third Degree, the *Exponent* y^3 being one of the second.

EXPORTATION, in Commerce, the Act of sending Commodities out of one Kingdom into another. See **COMMERCE**.

The Merchandizes yearly *Exported* from England are immense.—The principal Articles are Corn, Cattle, Cloth, Iron, Lead, Tin, Leather, Coal, Hops, Flax, Hemp, Hats, Malt Liqueurs, Fish, Watches, Ribbands, &c.

The Woollen Manufacture alone, yearly *Exported*, is computed to amount to 2000000 Pound Sterling; and Lead, Tin, and Coals, 500000 Pound. See **WOOLLEN**.

Wool, Fullers Earth, &c. are contraband Goods, i. e. prohibited to be *exported*. See **CONTRABAND**.

For the Duties of *Exportation*. See **DUTY**.

EXPOSING, the fasting a Thing to publick View. Perjury, Furgery, Libelling, false Weights and Measures, are punish'd, by *Exposing* the Criminal in the Pillory, to the Derision of the People. See **PILLORY**.

In the *Romish* Church, the Sacrament is said to be *Exposed*, when 'tis shewn in public, uncover'd, on Festival Days, and during the Time of plenary Indulgences.

The Term is also used with a further Latitude: Thus, we say, 'tis prohibited to *Expose* false, or clipp'd Money.

Children are sometimes *Exposed* in the Streets; i. e. are left in the Streets, with Design to be lost.—Such a House stands very high, and has a delicious Prospect, but it is *Exposed* to all the Four Winds. Such a City being on the Frontiers, and not fortified, is *Exposed* to the insults of every Party of Force.

EXPOSITION, the Act of *Exposing*.—But the Term has a further Meaning; being likewise applied to the Interpretation, or Explication of an Author, or a Passage therein.

Thus we say, an *Exposition* of the 39 Articles, of the Lord's Prayer, &c. In which Sense we do not say *Exposing*, but *Expositioning*. See **EXPOSURE**.

EXPOSITOR, or **EXPOSITORY**, a Title some Writers have given to a little Kind of Dictionaries, or Vocabularies.

larly, *expounding*, or explaining the Meaning of the hard Words of the Language. See DICTIONARY and VOCABULARY.

EXPOSURE, or **EXPOSITION**, in Gardening, the Aspect, or Situation of a Garden, Wall, Building, or the like, with respect to the Sun, Winds, &c. See GARDEN.

There are four regular Kinds of *Exposures*, viz. *East, West, North, and South*. But it must be observed, that among Gardeners, these Terms signify just the contrary to what they do among Geographers.

The Gardeners, in Effect, do not give the Names *East, West, &c.* to the Places where the Sun is; but to those wherein he shines; and they consider the Manner wherein he shines, whether as to the whole Garden, or some one of its Sides.

If they find, that the Sun at its Rising, and during the first half of the Day, continues to shine on one Side of a Garden or Wall; they call that an *Eastern Exposure*, or *East Wall, &c.* And if the Sun begin to shine later, or end sooner, 'tis not a proper *Eastern Exposure*.

For the same Reason, they call the *West*, the Side the Sun shines on in the latter half of the Day, i. e. from Noon to Night. And accordingly, the *South*, or *South Exposure*, is the Place whereon he shines, from about Nine a Clock in the Morning, till Night; or which, in the general, he shines longest on in the whole Day; and the Part he shines least on, is the *North*, or *Northern Exposure*; at what Hour soever it begin or end, being usually from 11 a Clock to 1.

Such is the Gardeners Language with regard to the *Exposures*, and particularly those of Walls; by which we are let into the Signification of this or the like *Exposures*, usual among them. — My *East* Wall proves, hits, or thrives better, than my *West*. My *East* Fruit Trees have had fewer Showers than my *West*, &c.

The *Eastern* and *Southern Exposures* are, by common Consent of all Gardeners, the two principal; and have a considerable Advantage above the rest. A *West Exposure* is not much amiss; at least, 'tis better than a *Northern* one, which is the worst of all. Each has its Inconveniencies.

The *Eastern*, commencing differently at different Seasons of the Year, and ending about Noon, subjects the Trees, &c. to the N. E. Winds, which wither the Leaves and new Shoots, blow down the Fruit, &c. beside that it has little Benefit of Rains, which come mostly from the *West*. Yet does the Reverend Mr. Lawrence judge, the *East* better than the *West* Wall, for all Kinds of Fruit: Not that it has more Hours of Sun, or that there are any peculiar Virtues in the *Eastern Rays*, but because the early Rays of the Sun do sooner take off the cold chilly Dews of the Night.

M. Gevill recommends the *Eastern Exposure*, as best for all Kinds of Peaches; adding, that they ripen soonest, grow bigger, are better colour'd, and of a finer Taste than in any other: But Mr. Carpenter restrains the Rule to the early and middle Sorts: For the backward, he rather chuses a *Southern*, or *South East Exposure*; which is best for all late Fruits; because the Influence of the Sun is strongest, and continues longest therein.

The *Western*, accounted from half an Hour past 11, till Sun-set, is backwarder than an *Eastern* one by 8 or 10 Days; but it has this Advantage, that it receives little Damage from the Frosts, which melt before the Sun comes to shine upon the Fruit, and fall off like Dew, without doing any Prejudice: So that it may bear Apricocks, Peaches, Pears, and Plums. But it is incommoded with *North West* Winds in the Spring, as also the Autumn Winds, which blow down a deal of Fruit.

The *Northern Exposure* has less Sun than the *West*; yet is it not without its Advantages. In the Northern Parts of England, it bears little else but Pears, Cherries, and Plums. But in the warmer Parts it serves for Apricocks, which have the Advantage of continuing later, than in any other *Exposure*, besides being free from Insects.

The *Southern Exposure*, accounted from about 9 till 4, is recommended for Peaches, Pears, Grapes, and Plums.

EXPRESS, something that is precise, in formal Terms, or for some particular Design.

I told him as much in *Express* Terms: He gave me a Commission *Express*: He had *Express* Orders. A Courier was dispatch'd *Express*.

We also say, somewhat abusively, to send an *Express*, meaning a Courier. See COURIER.

EXPRESSED Oils, are such as are procured from Bodies, only by pressing; as the Oils of Olives, Almonds, and the like. See OIL and PRESSURE.

EXPRESSION, in Medicine, Chymistry, &c. the Act of *Expressing*, or extracting the Juices of Plants, Fruits, and other Matters, by squeezing, wringing, or pressing them in a Press. See PRESS.

After having let the Herbs infuse their due Time, their Juice must be drawn by *Expression* in a Linnen Cloth, or under a Press. See INFUSION.

EXPRESSION, the Manner of delivering, or conveying a Man's Ideas to another.

The Simplicity of the *Expression*, leaves the Grandeur, or Littleness of the Thought, to be perceiv'd.

Expression is particularly us'd for the Elocution, Diction, and Choice of Words in a Discourse. — 'Tis not enough a Poet, or Orator, have fine Thoughts, he must likewise have a happy *Expression*. Defects in the *Expression* ordinarily arise from Defects in the Imagination. Abundance of the Beauties of the ancient Writers, are attach'd either to an *Expression* peculiar to their Language; or to Relations, which not being so familiar to us as to them, do not give us the same Pleasure. *De la Motte*.

EXPRESSION, in Painting, the natural and lively Representation of the Subject, or of the several Objects intended to be shewn. See PAINTING.

The *Expression* consists principally in representing the human Body, and all its Parts, in the Action suitable to it; in exhibiting in the Face, the several Passions proper to the Figures; and observing the Motions they impress on the other external Parts. See ALTITUDE.

The Term *Expression*, is ordinarily confounded with that of Passion: But they differ in this, that *Expression* is a general Term, implying a Representation of an Object, agreeably to its Nature and Character, and the Use, or Office it is to have in the Work; and Passion, in Painting, is a Motion of the Body, accompanied with certain Dispositions, or Airs of the Face, which mark an Agitation in the Soul. So that every Passion is an *Expression*; but not every *Expression* a Passion. See PASSION.

The Laws, or Rules of Expression in Painting.

Expression, we have said, is a Representation of Things according to their Character; and may be consider'd either with respect to the Subject in general; or to the Passions peculiar thereto.

1. With regard to the Subject, 'tis to be observed, 1^o. That all the Parts of the Composition are to be transform'd, or reduced, to the Character of the Subject; so as they may conspire to impress the same Sentiment, Passion, or Idea: Thus, e. g. in a Representation of Joy and Peace, every Thing is to appear calm and agreeable; of War, turbulent, and full of Terror, &c.

2^o. In Order to this, if any Circumstance occur in History, or Description, that would invert, or take from the Idea; it must be suppress'd; unless essential to the Subject.

3^o. To this End, the History, or Fable, is to be well studied in the Authors who describe it, in Order to conceive its Nature and Character truly, and impress it strongly on the Imagination; that it may be diffus'd and carried thro' all the Parts of the Subject. See ACTION, FABLE, &c.

4^o. A Liberty to be taken of chusing favourable Incidents, in order to diversify the *Expression*; provided they be not contrary to the principal Image of the Subject, or the Truth of History. See EPISODE.

5^o. The Harmony of the *Expression* to be particularly regarded, both with regard to the Actions, and the Light and Colour. See CLAIR OBLICURE.

6^o. The Modes and Customs to be observ'd; and every Thing made conformable to Time, Place, and Quality. See CUSTOM.

7^o. The three Unities of Time, Place, and Action, to be observ'd: That is, nothing to be represented in the same Picture, but what passes at the same Time, and may be seen at the same View.

8. With regard to the particular *Passions* and *Affections* of the Subject; the Rules are, 1^o. That the Passions of Brutes are few and simple, and have almost all an immediate Respect, either to Self-Preservation, or the Propagation of the Kind: But, in Men, there is more Variety; and accordingly, more Marks and *Expressions* thereof. Hence, Man can move his Eye-brows, which, in Brutes, are immoveable: And can likewise move the Pupil every way, which Brutes cannot.

2^o. Children, having not the Use of Reason, act much on the Footing of Brutes; and *express* the Motions of their Passions directly, and without Fear or Disguise.

3^o. Tho' the Passions of the Soul, may be *express'd* by the Actions of the Body; 'tis in the Face they are principally shewn; and particularly in the Turn of the Eye, and the Motion of the Eye-brows.

4^o. There are two Ways of lifting up the Eye-brows, the one at the middle, which likewise draws up the Corners of the Mouth, and argues pleasant Motions: The other, at the Point next the Nose, which draws up the middle of the Mouth, and is the Effect of Grief and Sadnefs.

4. The Passions are all reducible to Joy and Sadness; each of which is either simple, or mix'd and passionate.

6. Simple Joy causes a Dilatation of all the Parts: The Eye-brows rise in the middle, the Eyes half open, and smiling, the Pupil sparkling and moist, the Nostrils a little open, the Cheeks full, the Corners of the Mouth drawn a little upwards, the Lips red, the Complexion lively, the Forehead serene.

7. Passionate Joy proceeding from Love, shews the Forehead smooth and even, the Eye-brows a little elevated on the Side the Pupil is turn'd to, the Eyes sparkling and open, the Head inclined towards the Object, the Air of the Face smiling, and the Complexion ruddy: — That proceeding from Desire, shews it felt by the Body, the Arms extended towards the Object, in uncertain and unquiet Motions.

8. Simple Sadness, is *Express'd* by the Body being cast down, the Head carelessly hanging aside, the Forehead wrinkled, the Eye-brows rais'd to the middle of the Fore-head, the Eyes half shut, the Mouth a little open, the Corners downwards, the under-Lip pointing and drawn back, the Nostrils swell'd, and drawn downwards. — That mix'd with Fear, causes the Parts to contract and palpitate, the Members to tremble and fold up, the Viscage to be pale and livid, the Point of the Nostrils elevated, the Pupil in the middle of the Eye, the Mouth open'd at the Sides, and the under-Lip drawn back. — In that mix'd with Anger, the Motions are more violent, the Parts all agitated, the Muscles swell'd, the Pupil wild and sparkling, the Point of the Eye-brows fix'd towards the Nose, the Nostrils open, the Lips big and press'd down, the Corners of the Mouth a little open and foaming; the Veins swell'd, and the Hair erect. — That with Despair, resembles the last, only more excessive and disorder'd.

9. The Hand has a great Share in the *Expression* of our Sentiments and Passions: The rising of the Hands conjoin'd — towards Heaven, *expresses* Devotion: Wringing the Hands, Grief: Throwing them towards Heaven, Admiration: Fainting, and dejected Hands, Amazement and Despair: Holding the Hands, Idleness: Holding the Fingers indented, musing: Holding forth the Hands together, Yielding and Submission: Lifting up the Hand and Eye to Heaven, calling God to Witness: Waving the Hand from us, Prohibition: Extending the right Hand to any one, Pity, Peace, and Safety: Scratching the Head, Thoughtfulness and Care: Laying the Hand on the Heart, solemn Affirmation: Holding up the Thumb, Approbation: Laying the Fore-finger on the Mouth, hiding Silence: Giving with the Finger and Thumb, *parades*: And the Fore-finger put forth, the rest contracted, *Monstrari & scier hic est.*

10. The Sex of the Figure to be regarded; and Man, as he is of a more vigorous and resolute Nature, to appear in all his Actions freer and bolder than Women, who are to be more reserved and tender.

11. So also the Age, the different Stages whereof incline to different Motions both of Body and Mind.

12. The Condition, or Honour, a Person is invest'd withal, renders their Actions more reserved, and their Motions more grave; contrary to the Populace, who observe little Conduct or Restraint; giving themselves, for the most part, up to their Passions; whence their external Motions become rude and disorderly.

Lastly, in *Spirits* we must retrench all those corruptible Things, which serve only for the Preservation of Life, as Veins, Arteries, &c. only retaining what may serve for the Form and Beauty of the Body. — In *Angels*, particularly, as being symbolical Figures, we are to mark out their Offices and Virtues, without any Draught of sensual Passions; only appropriating their Characters to their Functions of Power, Activity, and Contemplation.

EXPULSION, the Act of driving a Man by Force out of a City, Community, or the like.

Milton is upbraided by one of his Antagonists, Archbishop *Bramhall*, with his *Expulsion* from the University of *Oxford*; but he shews it a groundless Suggestion. — Mr. was expell'd from *Cambridge*, on Suspicion of Heresy. — *Expulsion* out of Parliament, &c.

EXPULSION, is also used in Medicine, for the Act of driving a Thing out with Violence, from the Place it was in.

The *Uterus* has the chief Office in the *Expulsion* of the *Fœtus*: If the *Expulsion* of the *Fœtus* happen within seven Days after Conception, 'tis call'd a false Birth. See **FOETUS**, **DELIVERY**, &c.

EXPURGATION, in Astronomy, is used by some Authors, for the State or Action of the Sun; wherein, after having been Eclipsed and hid by the Interposition of the Moon, it begins to appear again: But the later Astronomers do all call this, *Emerison*, not *Expurgation*. See **EMERSON**.

EXSICCATION, in Chymistry, &c. the Act of drying, or evaporating the Moisture of a Thing. See **EVAPORATION**.

The Word is *Latin*, form'd of *ex*, and *secare*, dry. **EXSUDATION**, the Act of sweating out — in which manner Gums, Balsams, &c. are produced from Trees. See **GUM** and **BALM**.

EXTANT, something still subsisting, or in being. 'Tis but part of the History of *Levy*, of the Writings of *Cicero*, *Cæsar*, &c. that are *Extant*; the rest are lost. We have nothing *Extant* of *Socrates*; tho' he wrote a great deal.

EXTASY, a Rapture, or Removal of the Mind out of its natural State and Situation: Or, a Transport, whereby a Person is hurried out of himself, and the Office of his Senses suspended.

In Ecclesiastical History, we read of divers Monkish Saints being in *Extases* for several Days successively. — St. *Paul's* being taken up into the Third Heaven, was what we call an *Extasy*.

EXTASY, in Medicine, is a Disease much like a Catalepsy, only differing in this, that the Cataleptic Patient has no Perception of what passes in his Paroxysm, nor any Remembrance thereof when 'tis over; whereas the *Extatic* is taken up with a very lively Idea, or Imagination, which he remembers afterwards.

In an *Extasy*, there must be an unusual Tension of the Fibres of the Senfory, as in most Deliriums, &c. See **PARANNY**, **MANIA**, **MELANCHOLIC**, &c.

EXTENDING, in a Legal Sense, signifies the valuing of Lands and Tenements, of one bound by Statute, &c. and who hath forfeited his Bond, to such an indifferent Rate, as that by the Yearly Rent, the Obligator may, in Time, be fully paid his Debt. See **EXTENT**.

EXTENSION, in Physics, that whereby a Thing is constituted long, broad, or deep, &c. See **BODY**.

Extension is usually described, as consisting in the Situation of Parts, beyond Parts; which some Authors cavil withal, as holding that we can conceive absolute *Extension*, without thinking of any Relation of Parts.

If a Man consider the Distance between two Bodies, abstractedly, and without having Regard to the Bodies that fill that Interval, it is call'd *Space*: And when he considers the Distance between the Extremes of a solid Body, it is call'd *Extension*. See **SPACE**.

Extension is frequently confounded with *Quantity* and *Magnitude*; and, for what we can perceive, without much Harm: The Thing signified by them all appearing to be the same. Unless we admit a Distinction made by some Authors, that the *Extension* of a Body is something more absolute; and its *Quantity* and *Magnitude* more relative; or implying a nearer Relation to each and little. See **QUANTITY**, **MAGNITUDE**, **BULK**, &c.

EXTENSOR, in Anatomy, a Name common to divers Muscles, serving to extend, or stretch out the Parts; and particularly the Hands and Feet: Such are the

EXTENSOR Carpi Ulnaris, call'd also *Cubitus internus*, a Muscle, which coming from the internal Protuberance of the *Humerus*, and passing tendinous under the *Ligamentum Annulare*, is inserted into the upper Part of the Bone *Metacarpus*, which answers to the little Finger. This, and the *Ulnaris flexor*, moving together, draw the Hand side-wise towards the *Ulna*.

EXTENSOR Carpi Radialis, call'd also *Radialis Extensus*, and *Brachialis*, is really two distinct Muscles. The first arises from above the external Protuberance of the *Humerus*; and the second from the lowermost Part of the external Protuberance. They both lie along the external Part of the *Radius*, and passing under the annular Ligament, one is inserted into the Bone of the *Metacarpus*, that sustains the Fore-finger; and the other to that which sustains the Middle-finger. These two extend the Wrist.

EXTENSOR communis digitorum manus, arises from the external Protuberance of the *Humerus*, and at the Wrist divides into three flat Tendons, which pass under the annular Ligament, to be inserted into all the Bones of the Fore, Middle, and Ring-finger.

EXTENSOR primi interosii pollicis, arises from the upper and external Part of the *Ulna*, and passing obliquely over the Tendon of the *Radialis externus*, is inserted near the second Joint of the Thumb.

EXTENSOR secundi interosii pollicis, acites from the upper and internal Part of the *Radius*, and is inserted into the upper Part of the second Bone of the Thumb.

EXTENSOR tertii interosii pollicis, acites from the *Ulna*, a little below the first Extensor, and is inserted into the third Bone of the Thumb.

EXTENSOR indicis, comes from the middle and external Part of the *Ulna*, and passing under the annular Ligament, is inserted into the third Bone of the Fore-finger, where it joins the *Extensor Communis*.

EXTENSOR minimi Digiti, arises from the external Protuberance of the *Humerus*, and from the upper Part of the *Ulna*; and passing under the annular Ligament, is inserted into the third Bone of the little Finger.

EXTENSOR Pollicis, arises from near the upper half of the *Perone* forwards, and passing under the annular Ligament, is inserted into the last Bone of the great Toe.

EXTENSOR digitorum Pedis longus, is a Muscle derived from the fore Part of the upper Epiphysis of the *Tibia*, and growing tendinous about the middle thereof, runs in four Tendons under the annular Ligament, to the third Bone of every Toe, except the *Pollex*.

EXTENSOR digitorum pedis brevis, comes from the exterior and fore Part of the *Calcaneus*, and goes to the second Joint of the Toes.

EXTENSOR pollicis Pedis longus, rises large and fleshy from the fore Part of the *Fibula*, a little below its upper Process; whence, passing under the annular Ligament, it is inserted into the upper Part of the second Bone of the great Toe.

EXTENSOR pollicis Pedis brevis, springs fleshy from the fore Part of the *Oscleis*, and after a short Belly, is contracted into a slender Tendon; which running obliquely over the upper Part of the Foot, is inserted into the second Bone of the *Pollex*.

EXTENT, in Law, hath three Significations; sometimes it denotes a *Writ*, or Commission to the Sheriff, for the valuing of Lands and Tenements; Sometimes the Act of the Sheriff upon this *Writ*. And sometimes the Estimate, or Valuation of Lands, *per proprios Viros*. *Flem. Lib. 2.* See **EXTENDING**.

EXTENUATION, the Act of diminishing, or lessening, the Force of a Thing.

Thus, in Medicine, we say, Fevers, Agues, long Abstinences, &c. occasion great *Extenuations* or Emaciations.

EXTENUATION, is also a Figure in Rhetoric, opposite to the Hyperbole. The Greeks call it *στένσις*.

EXTERIOR Polygon, } See **POLYGON**.

EXTERIOR Talus, } See **TALUS**, &c.

EXTERMINATION, the Act of *Extirpating*, or totally destroying a People, Race, Family, &c.

The Jews have been *Extirminated* out of *Portugal*; the *Moors* out of *Spain*; the *Albigenses* out of *France*, &c. *Philip* the Fair of *France*, to be revenged on the *Knights Templars*, took a Resolution in 1307, to *Extirminate* them. See **TEMPLAR**.

The Word is Latin, form'd of *ex* and *terminus*, Boundary.

EXTERNAL, or **EXTERIOR**, a Term of Relation, applied to the Surface, or out-side of a Body; or that Part which appears, or presents, to the Eye, Touch, &c. In which Sense it is opposed to *Internal*, or *Interior*. See **INTERNAL**.

External Medicines are also call'd *Topicks*. See **TOPIC**. The Senses are divided into *External*, which are those whereby we perceive Ideas, or Perceptions of *External* Objects; as *Seeing*, *Hearing*, &c. and *Internal*. See **SENSES**.

EXTERNAL, is also used to express any Thing that is without-side a Man, or that is not within him, and particularly in his Mind. In this Sense, we say *External Objects*, &c. See **OBJECT**.

The Existence of an *External World*, i. e. of Bodies, and Objects, out of the Mind, is a Thing has been greatly call'd in Question of late. See **MATTER**, **BODY**, **WORLD**, &c.

Were it possible for Bodies, i. e. solid, figured, &c. Substances to exist without the Mind, corresponding to those Ideas we have of *External* Objects, yet how were it possible for us to know it? Either we must know it by Sense, or Reason: As for our Senses, by them we have only the Knowledge of our Sensations or Ideas: They do not inform us that Things exist without the Mind, or unperceiv'd, like those which are perceiv'd. It remains, therefore, that if we have any Knowledge at all of *External* Things, it must be by Reason, inferring their Existence from what is immediately perceiv'd by Sense. But how shall Reason induce us to believe the Existence of Bodies without the Mind, when the Partons of Matter themselves deny that there is any necessary Connection betwixt them and our Ideas. In Effect, 'tis granted on all Hands, and what happens in Dreams, Phrenzies, Deliriums, Extasies, &c. puts it beyond Dispute, that we might be affected with all the Ideas we have now, tho' there were no Bodies existing without, resembling them. Hence, it is evident, the Supposition of *External* Bodies is not necessary for the Production of our Ideas. *Berkeley's Princ. of Human Knowledge*, p. 59.

Granting the Materialists their *External* Bodies, they by their own Confession, are never the wiser knowing

how our Ideas are produced; since they own themselves unable to comprehend in what Manner Body can act upon Spirit; or how it is possible it should imprint any Idea in the Mind. Hence, the Production of Ideas, or Sensations, in our Minds, can be no Reason why we should suppose Matter, or Corporeal Substances; since that is equally inexplicable with or without the Supposition. In short, tho' there were *External* Bodies, 'tis impossible we should ever come to know it; and if there were none, we should have the same Cause to think there were that we now have. *Id. ibid.* p. 60, 61.

Try, whether you can conceive it possible for a Sound, or Figure, or Motion, or Colour, to exist without the Mind, or unperceiv'd. This may perhaps convince you, that what you contend for, is a downright Contradiction. — I am content to put the whole upon this Issue: If you can but conceive it possible for one extended, moveable Substance, or, in general, for any one Idea to exist otherwise than in a Mind perceiving it; I shall readily give up the Cause. *Id. ibid.* p. 63.

It is worth while to reflect a little on the Motives which induced Men to suppose the Existence of material Substance; that so, having observed the gradual ceasing and Expiration of those Motives, we may withdraw the Assent grounded on them. First, Therefore it was thought that Colour, Figure, Motion, and the rest of the sensible Qualities, did really exist without the Mind; and for this Reason, it seem'd necessary to suppose some unthinking Substratum, or Substance, wherein they did exist, since they could not be conceiv'd to subsist by themselves. Afterwards, in Process of Time, Men being convinced that Colours, Sounds, and the rest of the sensible secondary Qualities had no Existence without the Mind; they stripp'd this Substratum of these Qualities, leaving only the primary ones, Figure, Motion, &c. which they still conceiv'd to exist without the Mind, and consequently to stand in need of a material Support. But having shewn above, that some, even of these, can possibly exist otherwise than in a Spirit, or Mind, which perceives them, it follows, that we have no longer any Reason to suppose the Being of Matter. *Id. ibid.* p. 118, 119. See **QUALITY**.

This System, Mr. *Lock* endeavours to set aside, and to prove the Existence of *External Bodies*. — His Arguments lie under the Article **EXISTENCE**.

EXTERNAL Angles, are the Angles of any right-lined Figure form'd without it, when all the Sides are severally produced. See **ANGLE**.

These are all, taken together, equal to four right Angles. Particularly, in a Triangle, the *External* Angle *c*, (*Tab. Geometry* Fig. 76.) is equal to both the internal and opposites ones *x* and *y*. See **TRIANGLE**.

EXTERNAL Ear, } See **EAR**.
EXTERNAL Rights, } See **RIGHT**.
EXTERNAL Beauty, } See **BEAUTY**.

EXTERNUS Auris, in Anatomy, a small Muscle coming from the Side of the *Musculus Auditorius*, to the short Process of the *Malleus*; serving to draw the Handle thereof downwards, and so to relax the *Membrana Tympani*. See **TYMPANUM** and **MALLEUS**.

EXTINCTION, the Act of *Extinguishing*, or destroying Fire or Light.

Boerhaave denies, that there is properly any such Thing as extinguishing of Fire. 'Tis a Body *Sui generis*, of an immutable Nature, and we can no more extinguish, or destroy it, than create it. See **FIRE**.

The *Aristotelians* account for the *Extinction* of Fire from the Principle of Contrariety; thus, say they, Water puts out Fire, by Reason the Qualities of Water are contrary to those of Fire; the one being cold, and moist, and the other, hot and dry. But how far this will go, may appear hence, that Fire is extinguished by hot Water as readily as cold; nay by Oil, Earth, &c. See **ANTIPERISTASIS**.

Some of the Moderns offer two more plausible Causes of *Extinction*, viz. *Dispipation*, as when the immediate Fuel of the Flame, is dispersed and blown off by too forcible a Wind: And *Suffocation*, when it is so compressed, as that its free Motion cannot be maintain'd; as happens upon throwing Water, &c. thereon. See **FOUL**.

EXTINGUITION, in Chymistry and Pharmacy, is when a Metal, Mineral, or the like Body, after having been heated red hot in the Fire, is plunged in some Fluid; either to soften and temper its Acrimony, as the Tatty made of Pearl; or to communicate its Virtue to the Liqueur, as Iron or Steel in Water; or, lastly, to give it a Temper, as in the *Extinction* of Steel in Water, or other Preparation. See **TEMPER**.

EXTINGUISHMENT, in Law, is used for a *Consolidation*. See **CONSOLIDATION**.

E. gr. If a Man, having a yearly Rent due to him out of my Lands, afterwards purchase the same Lands; both the Property and Rent becoming Consolidated, or United in one Possessor, the Rent is said to be *extinguish'd*.

So, where a Man has a Lease for Years, and afterwards buys the Property, there is a *Consolidation* of the Property, and an *Extinguishment* of the Lease. See CONSOLIDATION.

So also if there be Lord, Mesn, and Tenant, and the Lord purchase the Tenancy, the Mesnalty is *extinct*.

EXTIRPATION, the Act of pulling up, or destroying a Thing to the very Roots.—Dogs Grails is a Weed very difficult to *Extirpate*.

Among the Prayers of the *Romish* Jubilee, there is one for the *Extirpation* of Heresy.

The Word is form'd of the Latin *ex* and *stirps*. But its chief Use is in a figurative Sense.

EXTIRPATION, is also used in Chirurgery, for the cutting off any Part entirely; as a Wen, &c. or the eating it away, as a Wart, &c. by corrosive Medicines.

EXTISPEX, in Antiquity, an Officer who viewed, and examined the Entrails of Victims; in order to draw Prefiges therefrom as to Futurity. See SACRIFICE.

This Kind of Divination, call'd *Extispicium*, was mightily in Vogue throughout Greece, where there were two Families, the *Jamides* and *Clytides*, consecrated, or set apart, peculiarly for it.

In Italy, the first *Extispices* were the *Hetrurians*; among whom, likewise, the Art was in great Repute. *Loccus* gives us a fine Description of one of these Operations in his First Book.

The Word is form'd from the Latin *exte* and *spicere*, of *spicio*, I view, consider.

EXTORTION, in Law, an illegal Manner of wresting any Thing from a Man, either by Force, Menace, or Authority.

Thus, *e. gr.* if an Officer, by terrifying, or spurning another on Pretext of his Office, takes more than his ordinary Fees, or Dues, he commits, and is indictable for *Extortion*.

So also the Exacting of unlawful Usury, winning by unlawful Games, and, in fine, all taking of more than is justly due by Colour or Pretence of Right, as excessive Tolls in Millers, excessive Prices of Ale, Bread, Victuals, Wares, &c. comes under *Extortion*. See EXACTION.

Crompon says, that Wrong done by any Man, is properly a Trespass, but excessive Wrong is *Extortion*; which is most properly applicable to Sheriffs, Mayors, Balliffs, and other Officers, who, by Colour of their Office, greatly oppress and wrong the King's Subjects, by taking excessive Rewards, or Fees, for executing their Office.

EXTRA JUDICIAL, in Law, is when Judgment is given in a Cause, or Case, not depending in that Court where such Judgment is given, or wherein the Judge has not Jurisdiction.

EXTRA PAROCHIAL, what is out of the Bounds of any Parish; or privileged, and freed from the Duties of a Parish. See PAROCHIAL.

EXTRACT, in Pharmacy, the purest, and finest Part of a Vegetable, or other Body, separated from the coarser, by dissolving and digesting it with a proper Menstruum; and afterwards reduced into a thick, moist Consistence by a Distillation, or Evaporation of the Humidity of the Menstruum. See EXTRACTION.

EXTRACT, in Matters of Literature, &c. is used for some Matter, Doctrine, Passage, or the like taken from a Book, or Register.

The Journals, *Novelles*, *Bibliothèques*, *Memoires*, and other Monthly or Quarterly Accounts of the Affairs of Learning, consist principally of *Extracts* of the most material Passages, Doctrines, &c. found in the several Books, publish'd in that Time. See JOURNAL.

EXTRACTING, an artful drawing out of the Juices, Virtues, and Qualities of a natural Body. See EXTRACTION.

There are divers Ways of *Extracting* the Virtues of Vegetables, Minerals, &c. by *Pression*, *Infusion*, *Lotion*, *Calcination*, *Distillation*, *Cobabation*, and other Operations taught in Chymistry and Pharmacy. See PRESSION, &c.

EXTRACTION, in Pharmacy and Chymistry, an Operation, whereby Essences, Tinctures, &c. are drawn from natural Bodies. See EXTRACT.

Some will have *Extraction* to signify any Solution made by Menstruums: But, in Strictness, there is this Difference; that in *Solution* the Menstruums absorb the whole Substance of the Body, but in *Extraction* they carry off only certain Part of it: And in this Sense, Camphire is dissolved in Spirit of Wine, but Jalap is more properly said to be *extracted*; for the Resin is only taken out by the Menstruum, the other Particles being left untouched. See SOLUTION and DISSOLUTION.

Extraction does also frequently signify such an Impassation, or thickening of a Solution, as that when a certain

Quantity of the Menstruum is drawn off, reduceth the remaining Mixture to the Consistence of Honey; as in the *Extracts* of Saffron, Gentian, and the like.

Extracts are chiefly made from Vegetables, and require different Menstruums, according to the different Nature of the Plants; especially in Gumous Kind: For such as are mucilaginous, as *Gum Arabic*, and *Trogacath*, &c. are not easily dissolved but in aqueous Liquors; whereas, on the other Hand, resinous Gums, as *Gambannum*, *Scammony*, &c. must have burning Spirits to dissolve them. See GUM.

There are others again of a middle Nature, which may be dissolved in either Sort of Menstruums, tho' not so easily in one as the other. See GUMMO RESIN.

Thus Aloes, and Rhuarb, which are something resinous, are better made into *Extracts* with Spirit of Wine, than Water: Bar Plants, which abound less with Resin, such as Hellebore, &c. are more commodiously *extracted* with Water.—To perform *Extraction* therefore aright, a proper Menstruum is necessary, and one which is as near a-kin as possible to the Body to be *extracted*. See MENSTRUUM.

EXTRACTION, in Chirurgery, an Operation whereby some foreign Matter, formed in the Body, contrary to the Order of Nature, is drawn out of the same.

Such is the *Extraction* of a Stone, formed in the Bladder, or in the Kidneys, &c. See STONE. See also LITHOTOMY.

Extraction belongs to the *Excesses*, as a Species to its Genus. See EXCESSUS.

EXTRACTION, or *Descent*, in Genealogy, is the Line, Stem, Branch, or Family which a Person is descended from. See DESCENT.

In some military Orders, Chapters, &c. a Candidate must make Proof of the Nobility of his *Extraction* ere he is admitted. See DESCENT.

EXTRACTION OF ROOTS, is the Method of finding the Root of a given Number or Quantity. See ROOT.

The Square, Cube, and other Powers of a Number, or Root, are form'd by multiplying the given Number into it self a greater, or less Number of Times, as the Power required is higher or lower.

This Multiplication compounds the Powers; and the *Extraction* of the Root decomposes them again, or reduces them to their first Principles or ROOTS. So that the *Extraction* of the Root is to the Multiplication of the Power, what the Analysis is to the Synthesis.

Thus, 4, multiplied by 4, produces 16; which is the Square of 4, or the Factum of 4 by it self: And 16 multiplied by 4, makes 64, which is the Cube of 4, or the Factum of 4 by its Square:—Such is the *Composition of Powers*.

Again, the Square Root of 16 is 4, by Reason 4 is the Quotient of 16 divided by 4; and the Cube Root of 64 is likewise 4; by Reason 4 is the Quotient of 64 divided by the Square of 4:—Such is the *Extraction of Roots*.

Hence, to *extract* the Root out of a given Power, is the same Thing as to find a Number, *e. gr.* 4, which being multiplied a certain Number of Times into it self, produces the given Power, *e. gr.* 16 or 64. See POWER.

For the *Extraction* of Square and Cube Roots, 'tis necessary to have the Squares, and Cubes of all the Digits in Readiness; as exhib'd in the following Table.

Roots	1	2	3	4	5	6	7	8	9
Square	1	4	9	16	25	36	49	64	81
Cubic	1	8	27	64	125	216	343	512	729

To Extract the Square Root out of a given Number.

1°. Divide the given Number into Classes, of two Figures a-piece; and include each Class between two Dots, commencing with the Place of Units, or right Hand Figure: The Root will consist of so many Parts, or Figures, as you have Classes.—By the Way observe, it may happen that for the last Class on the left Hand there shall only be one Figure left.

2°. Then, the left Hand Class being the Square of the first Figure of the Root sought; look in the Table of Roots for the Square Root answering to that Number: Or, if that Square Number be not precisely there, to the next less Number: This Root write down for the first Figure of the Quotient: And subtract its Square from the left Hand Class.—To the Remainder, bring down the next Class toward the right.

3°. Write down the double of the Quotient Figure under the left Hand Figure of the second Class; and seek how oft this Duple is contain'd in the Figure over it: The Quotient gives the second Figure of the Root.

4°. Write the same Quotient under the right Hand Figure of the same Class; and subtract the Product of the whole Number underwritten, multiplied by the last Figure of the Root, from the Number over it, as in Division.

H h h *

30. Tho

49. The Operation being repeated according to the third and fourth Steps, *i. e.* the Remainder being still divided by the double of the Root as far as *extracted*, and from the Remainder, the Square of the Figure that last came out, with the Duple of that fourfold Divisor augmented thereby, being subtracted, you will have the Root required.

Ex. 27. To *extract* the Root of 99856, point it after the following Manner, 99856, then seek a Number, whose Square shall equal the first Figure 9, *viz.* 3, and write it in the Quotient; then having subtracted from 9, 3×3 , or 9, there will remain 0; to which set down the Figures as far as the next Point, *viz.* 98 for the following Operation. Then, taking no Notice of the last Figure 8, say, How many Times is the double of 3, or 6, contained in the first Figure 9? Answer 1. Wherefore having wrote 1 in the Quotient, subtract the Product, of 1×61 , or 61 from 98, and there will remain 37, to which connect the last Figures 56, and you will have the Number 3756, in which the Work is next to be carried on. Wherefore

also neglecting the last Figure of this, *viz.* 6, say, How many Times is the double of 31, or 62, contained in 375, (which is to be guess'd at from the initial Figures 6 and 37, by taking Notice how many Times 6 is contained in 37?) Answer 6; and writing 6 in the Quotient, subtract 6×626 , or 3756, and there will remain 0; whence it appears, that the Business is done, the Root coming out 316.

Otherwise, with the Divides set down, it will stand thus:

$$\begin{array}{r} 99856 \quad (316 \\ \underline{9} \\ 6) 98 \\ \underline{61} \\ 62) 3756 \\ \underline{3756} \\ 0 \end{array}$$

o And so in others.

Again, if you were to *Extract* the Root out of 22178791: first, having pointed it, seek a Number, whose Square (if it cannot be exactly equal'd) shall be the next less Square, (or nearest) to 22, the Figures to the first Point, and you will find it to be 4. For 5×5 , or 25, is greater than 22; and 4×4 , or 16, is less; wherefore 4 will be the first Figure of the Root. This therefore being writ in the Quotient, from 22, take the Square 4×4 , or 16; and to the Remainder 6, adjoin the next Figures 17, and you'll have 617; from whose Division, by the double of 4, you are to obtain the second Figure of the Root, *viz.* neglecting the last Figure 7, say, How many Times 8 is contained in 61? Answer, 7; wherefore write 7 in the Quotient, and from 617, take the Product of 7 into 87, or 609, and there will remain 8, to which join the two next Figures 87, and you will have 887; by the Division whereof by the double of the third Figure; in order to which say, How many Times is 94 contained in 88? Answer, 0; wherefore write 0 in the Quotient, and adjoin the two last Figures 91, and you will have 88791, by whose Division by the double of 470, or 940, you are to obtain the last Figure, *viz.* say, How many Times 940 is contained in 8879? Answer 9; wherefore write 9 in the Quotient, and you will have the Root 4709. But since the Product 9×9409 , or 84681, subtracted from 88791 leaves 4110, the Number 4709 is not the Root of the Number 22178791 precisely, but a little less.

$$\begin{array}{r} 22178791 \quad (4709, 43637, \&c. \\ \underline{16} \\ 617 \\ \underline{609} \\ 88791 \\ \underline{84681} \\ 411000 \\ \underline{376736} \\ 3436400 \\ \underline{2825649} \\ 60075100 \\ \underline{56513196} \\ 336190400 \\ \underline{282566169} \\ 73624231 \end{array}$$

If then it be required to have the Root approach nearer; carry on the Operation in Decimals, by adding to the Remainder two Cyphers in each Operation. Thus the Remainder 4110, having two Cyphers added to

it, becomes 411000; by the Division whereof, by the double of 4709, or 9418, you will have the first Decimal Figure 4. Then having writ 4 in the Quotient, subtract 4×94184 , or 376736, from 411000, and there will remain 34364. And so having added two more Cyphers, the Work may be carried on at Pleasure, the Root at length coming out 4709, 43637, &c.

But when the Root is carried on half Way or above, the rest of the Figures may be obtain'd by Division alone: As in this Example if you had a Mind to *extract* the Root to nine Figures, after the five former 4709,4 are *extracted*, the four latter may be had, by dividing the Remainder by the double of 4709,4.

Thus if the Root of 32976, were to be *Extracted* to five Places, in Numbers; after the Figures are pointed, write 1 in the Quotient, as being the Figure whose Square 1×1 , or 1, is the greatest that is contain'd in 3, the Figure to the first Point; and having taken the Square of 1 from 3, there will remain 2: Then having set the two next Figures, *viz.* 29 to it, (*viz.* to 2) seek how many Times the double of 1, *viz.* 2, is contain'd in 22, and you will find indeed that it is contained more than 10 Times; but you are never to take your Divisor 10 Times, no,

$$\begin{array}{r} 32976 \quad (181, 59 \\ \underline{} \\ 1 \\ \underline{} \\ 2) 229 \\ \underline{224} \\ 56 \\ \underline{561} \\ 362) 215 (59 \&c. \end{array}$$

nor 9 Times in this Case; because the Product of 9×29 , or 261, is greater than 229, from which it would be to be taken, or subtracted: Wherefore write only 8. And then having wrote 8 in the Quotient, and subtracted 8×28 , or 224, there will remain 5; and having set down to this the Figures 76, seek how many Times the double of 18, or 36, is contained in 57, and you will find 1, and so write 1 in the Quotient; and having subtracted 1×361 , or 361, from 576, there will remain 215. Lastly, to obtain the remaining Figures, divide this Number 215, by the double of 181, *viz.* 362, and you will have the Figures 59, which being writ in the Quotient, give the Root 181, 59.

After the same manner are Roots *Extracted* out of Decimal Numbers. — Thus the Root of 329, 76 is 18, 1593; and the Root of 0, 032976, is 0, 18159, and so on. But the Root of 3297, 6 is 57, 42473; and the Root of 32, 976 is 5, 74247. And thus the Root of 9, 9856 is 99, 10.

To *Extract* the Cube, or other higher Root, out of a given Number.

The *Extraction* of the Cubic Root, and of all other Roots may be comprehended under one general Rule; *viz.* Every third Figure, beginning from Unity, is first to be pointed, if the Root to be *Extracted* be a Cubic one; or every fifth, if it be a Quadrato Cubic, (or of the fifth Power) and then such a Figure is to be writ in the Quotient, whose greatest Power (that is, whose Cube, if it be a Cubic Power, or whose Quadrato-Cube, if it be the fifth Power, &c.) shall either be equal to the Figure, or Figures, before the first Point, or next less under them; and then having subtracted that Power, the next Figure will be found by dividing the Remainder augmented by the next Figure of the Resolvend, by the next least Power of the Quotient multiplied by the Index of the Power to be *Extracted*, that is, by the triple Square, if the Root be a Cubic one; or by the Quintuple Biquadrate (that is, five Times the Biquadrate) if the Root be of the fifth Power, &c. And having again subtracted the Power of the whole Quotient from the first Resolvend, the third Figure will be found by dividing that Remainder, augmented by the next Figure of the Resolvend, by the next least Power of the whole Quotient, multiplied by the Index of the Power to be *Extracted*.

Thus, to *Extract* the Cube Root of 13312053, the Number is first to be pointed after this manner, *viz.* 13312053, then you are to write the Figure 2, whose Cube is 8, in the first Place of the Quotient, as, that which is the next least Cube to the Figures 13, (which is not a perfect Cube Number) or as far as the first Point; and having subtracted that Cube, there will remain 5; which being augmented by the next Figure of the Resolvend 12053, and divided by the triple Square of the Quotient 2, by seeking how many Times 5×4 , or 12, is contained in 53, it gives 4 for the second Figure of the Quotient. But since the Cube of the Quotient

$$\begin{array}{r} 13312053 \quad (237 \\ \underline{8} \\ 53 \\ \underline{52} \text{ rem: } 1 \\ 12) 53 (4 \text{ or } 3 \\ \underline{48} \\ 5 \\ \underline{52} \text{ rem: } 3 \\ 12) 53 (4 \text{ or } 3 \\ \underline{48} \\ 5 \\ \underline{52} \text{ rem: } 3 \\ 12) 53 (4 \text{ or } 3 \\ \underline{48} \\ 5 \\ \underline{52} \text{ rem: } 3 \end{array}$$

24, viz. 13824, would come out too great to be subtracted from the Figures 13312 that precede the second Point, there must only 3 be writ in the Quotient: Then the Quotient 23 being in a separate Place multiplied by 23, gives the Square 529, which again multiplied by 23, gives the Cube 12167, and this taken from 13312, will leave 11455 which augmented by the next Figure of the Resolvend 0, and divided by the triple Square of the Quotient 23, viz. by seeking how many Times 3 x 529, or 1587, is contain'd in 11450, it gives 7, for the third Figure of the Quotient. Then the Quotient 237, multiplied by 237, gives the Square 56169, which again multiplied by 237, gives the Cube 1332053, and this taken from the Resolvend, leaves 0. Whence it is evident, that the Root sought is 237.

So, to *Extract* the Quadrato Cubical Root of 36430820, it must be pointed over every fifth Figure, and the Figure 5, whose Quadrato Cube, or fifth Power 243, is the next least to 564, viz. to the first Point, must be writ in the Quotient. Then the Quadrato Cube 243, being subtracted from 564, there remains 321, which augmented by the next

$$\begin{array}{r} 36430820 \text{ (} 32, 5 \\ 243 \\ 405 \text{) } 1213 \text{ (} 2 \\ \hline 35554432 \\ 5242880 \text{) } 2876388, 0 \text{ (} 5 \end{array}$$

Figure of the Resolvend, viz. 3, and divided by five Times the Biquadrato of the Quotient, viz. by seeking how many Times 5 x 81, or 405, is contain'd in 3213, it gives 2 for the second Figure. That Quotient 32, being thrice multiplied by it self, makes the Biquadrato 1048576; and this again multiplied by 32, makes the Quadrato Cube 35554432, which being subtracted from the Resolvend, leaves 2876388. Therefore 32 is the integer Part of the Root, but not the true Root; wherefore if you have a Mind to prosecute the Work in Decimals, the Remainder, augmented by a Cipher, must be divided by five Times the aforesaid Biquadrato of the Quotient, by seeking how many Times 5 x 1048576, or 5242880, is contain'd in 28763880, and there will come out the third Figure, or the first Decimal 5. And so by subtracting the Quadrato Cube of the Quotient 32,5 from the Resolvend, and dividing the Remainder by five Times its Biquadrato, the fourth Figure may be obtained. And so on *in infinitum*.

In some Cases, 'tis convenient only to indicate the *Extraction* of a Root; especially where it cannot be had exactly. Now, the Sign, or Character, whereby Roots are denoted, is $\sqrt{\quad}$: To which is added the Exponent of the Power, if it be above a Square. *E. gr.* $\sqrt[3]{\quad}$ denotes the Square Root. $\sqrt[4]{\quad}$ the Cube Root, &c.

When a Biquadratick Root is to be *Extracted*, you may *Extract* twice the Square Root, because $\sqrt[4]{\quad}$ is as much as $\sqrt{\sqrt{\quad}}$. And when the Cubo Cubick Root is to be *Extracted*, you may first *Extract* the Cube Root, and then the Square Root of that Cube Root, because the $\sqrt[6]{\quad}$ is the same as $\sqrt[3]{\sqrt{\quad}}$; whence some have called these Roots, not Cubo Cubick ones, but Quadrato Cubes. And the same is to be observed in other Roots, whose Indexes are not prime Numbers.

To prove the *Extraction* of Roots.

1^o. For a *Square Root*: Multiply the Root found by it self, and to the Product add the Remainder, if there were any: If the Sum be equal to the Number given, the Operation is just.

2^o. For a *Cube Root*: Multiply the Root found by it self; and the Product, again, by the same Root. To the last Product, add the Remainder if there were any. If the Sum come out the Number first given, the Work is just.

After the like Manner may the *Extraction* of other Roots be proved.

To *EXTRACT* the *Roots of Equations, or Algebraic Quantities*.

The *Extraction of Roots* out of simple Algebraic Quantities, is evident, even from the Nature, or Marks of Notation it self, as — that \sqrt{aa} is a , and that \sqrt{aacc} is a , and that $\sqrt{9aacc}$ is $3ac$; and that $\sqrt{49a^4xx}$ is $7aax$. And also that $\sqrt{\frac{a^2}{cc}}$, or $\sqrt{\frac{aa}{cc}}$ is $\frac{aa}{c}$, and that $\sqrt{\frac{a^2bb}{cc}}$ is $\frac{a^2b}{c}$, and that $\sqrt{\frac{9a^2xx}{25bb}}$ is $\frac{3ax}{5b}$, and that $\sqrt{\frac{8b^4}{27a^3}}$ is $\frac{2bb}{3a}$, and that $\sqrt[3]{2abb}$ is $\sqrt[3]{ab}$. Moreover, that $b\sqrt{aacc}$, or b into \sqrt{aacc} , is b into a , or abc . And that $3c\sqrt{\frac{9a^2xx}{25bb}}$ is $3cx \times \frac{3ax}{5b}$, or $\frac{9acx}{5b}$. And that $\frac{a+3x}{c} \sqrt{\frac{4bb^2}{8xax}}$ is $\frac{a+3x}{c} \times \frac{2bxx}{9ax}$ or $\frac{2abxx+6bxx}{9ac}$. I say these are all evident, because it will appear at first Sight, that the

proposed Quantities are produced, by multiplying the Root, into themselves (as a from $a \times a$, aac from a into ac , $9aacc$ from $3ac$ into $3ac$, &c.) But when Quantities consist of several Terms, the Business is performed as in Numbers.

Thus to *extract* the Square Root out of $aa+2ab+bb$, in the first Place, write the Root of the first Term a , viz. a in the Quotient, and having subtracted its Square axa , there will remain $2ab+bb$ to find the Remainder of the Root by. Say therefore, How many Times is the double of the Quotient, or $2a$, contained in the first Term of the Remainder $2ab$? I answer b , therefore write b in the Quotient, and having subtracted the Product of b into $2a+b$, or $2ab+bb$, there will remain nothing. Which shews that the Work is finished, the Root coming out $a+b$.

And thus to *extract* the Root out of $a^2+6a^2b+5a^2bb-12ab^2+4b^3$, first set in the Quotient the Root of the first Term a^2 , viz. a , and having subtracted its Square a^2axa , or a^3 , there will remain $6a^2b+5a^2bb-12ab^2+4b^3$ to find the Remainder of the Root. Say therefore, How many Times is $2aa$ contained in $6a^2b$? Answer $3ab$; wherefore write $3ab$ in the Quotient, and having subtracted the Product of $3ab$, into $2a+3ab$, or $6a^2b+9a^2bb$, there will yet remain $-4a^2bb-12ab^2+4b^3$ to carry on the Work. Therefore, say again, How many Times is the double of the Quotient, viz. $2a+3ab$ contained in $-4a^2bb-12ab^2$, or which is the same Thing, say, How many Times is the double of the first Term of the Quotient, or $2a$, contained in the first Term of the Remainder $-4a^2bb$? Answer $-2bb$. Then having writ $-2bb$ in the Quotient, and subtracted the Product $-2bb$ into $2a+3ab-2bb$, or $-4a^2bb-12ab^2+4b^3$, there will remain nothing. Whence it follows, that the Root is $a+3ab-2bb$.

$$\begin{array}{r} a^2+6a^2b+5a^2bb-12ab^2+4b^3 \\ \underline{-a^3} \\ 6a^2b+5a^2bb \\ \underline{-4a^2bb-12ab^2+4b^3} \\ 0 \end{array}$$

And thus the Root of the Quantity $xx-ax+\frac{1}{4}aa$ is $x-\frac{1}{2}a$; and the Root of the Quantity y^2+4y^2-8y+4 is $yy+2y-2$; and the Root of the Quantity $16a^2-24aax+9ax^2+12bbx-16abb+4b^3$ is $3xx-4aa+\frac{1}{2}bb$, as may appear underneath.

$$\begin{array}{r} xx-ax+\frac{1}{4}aa \\ \underline{-x^2} \\ -ax+\frac{1}{4}aa \\ \underline{+ax-\frac{1}{4}aa} \\ 0 \end{array}$$

$$\begin{array}{r} y^2+4y^2-8y+4 \\ \underline{-y^2} \\ 3y^2-8y+4 \\ \underline{-3y^2+6y-4} \\ 2y^2-2y \\ \underline{-2y^2+2y} \\ 0 \end{array}$$

$$\begin{array}{r} 16a^2-24aax+9ax^2+12bbx-16abb+4b^3 \\ \underline{-16a^2+24aax-9ax^2} \\ 12bbx-16abb+4b^3 \\ \underline{-12bbx+16abb-4b^3} \\ 0 \end{array}$$

If you would *extract* the Cube Root of $a^3+3a^2b+3abb+b^3$, the Operation is performed thus:

$$\begin{array}{r} a^3+3a^2b+3abb+b^3 \\ \underline{a^3} \\ 3a^2+3abb+b^3 \\ \underline{3a^2} \\ 3abb+b^3 \\ \underline{3abb+b^3} \\ 0 \end{array}$$

Extrahit first the Cube Root of the first Term a^3 , viz. a , and set it down in the Quotient: Then subtracting its Cube a^3 , say, How many Times is its triple Square, or $3a^2$, contained in the next Term of the Remainder $3aab$? and there comes out b ; wherefore write b in the Quotient, and subtracting the Cube of the Quotient, there will remain 0 ; therefore $a + b$ is the Root. After the same Manner, if the Cube Root is to be *extrahetia* out of $x^3 + 6x^2 - 40x + 64 = 4$, it will come out $2x + 2x = 4$. And so likewise in higher Roots.

EXTRACTS, in Law. See **EXTRACTS**.

EXTRAORDINARY, something rare and uncommon.

Extraordinary COURTIERS, are those sent express on some urgent Occasion. See **COURIER**.

An *Embassador*, or *Envoy Extraordinary*, is such a one as is sent to treat, or negotiate some special and important Affair, as a Marriage, a Treaty, Confederacy, &c. or even on Occasion of some Ceremony, as Condolence, Congratulation, &c. See **EMBASSADOR** and **ORDINARY**.

A *Gazette*, *Journal*, or other *News-paper Extraordinary*, is that publish'd after some great and notable Event, containing the Detail, or Particulars thereof, which were not found in the ordinary Papers. — Our News Writers generally use Post-scripts, instead of *Extrordinaries*.

EXTRAVAGANTES, a Part of the Canon Law, containing divers Constitutions of the Popes, not contain'd in the Body of the Canon Law; whence the Denomination of *Extravagantes*; *Quasi extra corpus juris vagantes*. See **CANON LAW**.

They are divided into two Parts: The first contains XX Constitutions of *John XXII*; and the second, other later Constitutions of the said *John* and his Successors. See **CONSTITUTION**.

EXTRAVASATION, in Medicine, the Act, or Motion, whereby the Blood *extravasates* it self, i. e. breaks out of its ordinary Vessels, the Veins and Arteries, and gathers and stagnates in some Part of the Body: The Blood that flows out of the Body, or that is drawn from it in opening a Vein, is not properly said to be *Extravasated*. See **BLOOD**.

Extravasated Blood always corrupts and turns into an Impoistume. See **IMPOSTUME**, **TUMOR**, &c.

The ordinary Causes of *Extravasations*, are unnatural Repetitions, and Dilatations of the Vessels; or Lacerations, and Erosions thereof.

There is a Necessity for bleeding, to prevent the Blood's growing to such a Head as to *Extravasate*. See **PNEUMONY**.

In Wounds of the Head, particularly, bleeding is necessary, to prevent the *Extravasation* of the Blood in the Brain.

The Term is likewise used with Regard to other Humours beside the Blood, as the Lymphs, Urine, &c. See **DROPSY**.

The Gardeners likewise use it, in speaking of Gums, Juices, &c. oozing out of their Trees either spontaneously, or at Incisions. See **GUMS**, **BALM**, &c.

The Word is form'd of the Latin, *extra*, without, and *vas*, vessel.

EXTREME, or **EXTRIAM**, is applied to the last Part of any Thing; or that which finishes, and terminates it, and beyond which you cannot go.

There is no passing out of one *Extreme*, into the other, without going thro' the middle. — *Extreme Remedies* must only be had Recourse to in *Extreme Diseases*.

Some Anatomists apply the Denomination *Extremis*, or *Extremities*, to the Arms and Legs.

The Arms, or upper *Extremities*, *superiores Extremitates*, consist of 60 Bones; thirty one in each, viz. the *Omoplate*, *Humerus*, *Cubitus*, *Radius*, eight in the *Carpus*, four in the *Metacarpus*, and fifteen in the Fingers. See each in its Place, **OMOPLATE**, &c.

The lower *Extremities*, or Legs, consist of sixty; thirty in each, viz. the *Femur*, *Rotula*, *Tibia*, *Fibula*, seven in the *Tarsus*, five in the *Metatarsus*, and fourteen in the Fingers. See **LEG**, **FEMUR**, &c.

EXTREMES, in Logic, are the two *Extreme* Terms of the Conclusion of a Syllogism, viz. the Predicate and Subject. See **CONCLUSION**.

The Predicate, as being likewise had in the first Proposition, is call'd the *major extremum*, greater *Extreme*; and the Subject, as being put in the second, or minor Proposition, is call'd the *minus Extremum*, lesser *Extreme*. See **PREDICATE** and **SUBJECT**.

They are both call'd *Extremes*, from their Relation to another Term, which is a Medium, or Mean between them. See **MEDIUM**.

Thus, in the Syllogism, *Man is an Animal, Peter is a Man; therefore Peter is an Animal*: The Word *Animal* is the greater *Extreme*; *Peter* the less *Extreme*; and *Man* the Medium. See **SYLLOGISM**.

EXTREMES and *mean Proportion*, in Geometry, is when a Line is so divided, that the whole Line is to the greater Segment, as that Segment is to the other.

Or, as *Euclid* expresseth it, when the Line is so divided, that the Rectangle under the whole Line and the lesser Segment, shall be equal to the Square of the greater Segment.

The Invention of this Division is thus: Let the given Line be $AB = a$, (*Tab. Geometry, Fig. 64.*) and for the greater Segment put x , the lesser will be $a - x$. Then by the Hypothesis, $a : x :: x : a - x$. Therefore $a(a - x) = x^2$, consequently $ax = x^2 + ax$. And by adding $\frac{1}{2}aa$ on each Side, to make $x^2 + ax + \frac{1}{2}aa$ a complete Square, the Equation will stand thus $\frac{1}{2}aa = x^2 + ax + \frac{1}{2}aa$.

Now, since the latter is exactly a Square, its Root $x + \frac{1}{2}a = \sqrt{\frac{1}{2}aa}$, and by Transposition it will be $\sqrt{\frac{1}{2}aa} - \frac{1}{2}a = x$; which last Equation is a Canon to find x .

For at the Foot of $AB = a$, set at right Angles $CB = \frac{1}{2}a$: Then draw CA , the Square of which is equal, $AB^2 + CB^2 = \frac{1}{2}aa$. And therefore $AC = \sqrt{\frac{1}{2}aa}$; make $CD = CA$.

From whence $CB = \frac{1}{2}a$ being taken, as the Case requires, there remains $BD = x$; which transfer'd into AB , shall give the Point E , where AB is cut according to *Extreme and mean Proportion*.

This cannot be exactly done in Numbers; but if you would have it tolerably near, add together the Square of any Number, and the Square of its half, and extract as near as you can, the Square Root of the Sum; from whence taking half, the Remainder is the greater Part.

EXTREME-UNCTION, one of the Sacraments of the *Romish* Church, the fifth in Order, administer'd to People dangerously sick, by anointing them with holy Oils, and performing several Prayers over them. See **UNCTION** and **SACRAMENT**.

This Sacrament is not only in Use in the *Latin*, but also in the *Greek* Church, and throughout the *East*, tho' under another Name, and with some Difference in the Circumstances; in that the Orientals don't wait till their Sick are come to Extremity, in Order to anoint them: But the Sick generally go to Church themselves; and it is administer'd to them as often as they are indispos'd. The *Greeks* taking that Direction of *St. James*, *C. V. ver. 14.* which is the Foundation of the Practice, in a general Sense: *Is any Sick among you? let him call for the Elders of the Church, and let them pray over him, anointing him with Oil.*

Fa. Dandini distinguishes two Kinds of *Unction* among the *Maronites*: The one call'd, *Unction with the Oil of the Lamp*; but this, he suggests, is not the sacramental *Unction*, ordinarily administer'd to such as are in extreme Sickness, for that the Oil is only Consecrated by a simple Priest, and that it is given to all who are present, not to the sick only, but also to the healthy, and even to the Priest himself who officiates. The other Kind of *Unction*, according to that Father, is only for the Sick; it is perform'd with Oil Consecrated by the Bishop alone, on *Holy Thursday*. And this, it seems, is their sacramental *Unction*.

But that *Unction* with Lamp Oil, is in Use not only among the *Maronites*, but throughout all the *Eastern* Church, who use it very religiously. The Truth is, they don't seem to have any other Sacrament of *Extreme Unction* beside this.

Fa. Goar observes, that tho' it be only a Ceremony, with regard to those in Health, it is a real Sacrament to those that are sick.

In their great Churches they have a Lamp, wherein this Oil for the Sick is preserved: This Lamp they call, *Καθηλα τε συχλας*, that is, *the Lamp of Oil join'd with Prayer*; For what the *Latins* call *Extreme Unction*, the *Greeks* call, *συχλας*, or *αγιω ελαιω*, that is, *Oil with Prayer*, or *Holy Oil*.

'Tis call'd *Extreme Unction*, as being only given to Persons in *Extremity*. — In the XIIIth Century, it was call'd the *Unction of the Sick*, and not *Extreme Unction*. For in the earlier Ages, it was given before the *Vaticans*. Which Practice, according to *Fa. Mabillon*, was not changed till the XIIIth Century. See **VATICAN**.

The Reasons he assigns for the Change are, that in that Age there arose divers mistaken Opinions, several of which we find mention'd and condemn'd in the *English* Councils. Among the rest, 'twas held, that such as had received this Sacrament, in case they recover'd, might not use the Rites of Marriage, nor eat Meat, nor go bare-footed: Whence, they chose to forbear using it till the last *Extremity*; which Practice prevail'd. See the Councils of *Worcester* and *Exeter*, in the Year 1287; that

of *Wimbeffer* in 1303; and *Fa. Mobilion, Alia Sancti. Benedicti*. See III. p. 1. The Form of *Extreme Unction* is now secrete, as the Divines call it; formerly 'twas absolute and indicative.

EXTRINSIC, is applied in the Schools in various Senses.

Sometimes it signifies a Thing's not being of the Essence of another; in which Sense the efficient Cause, and the End or Scope of a Thing, are said to be *Extrinsic*, or *Extrinsic* Causes. See CAUSA.

Sometimes it implies a Thing's not being contain'd within the Capacity of another; in which Sense those Causes are said to be *Extrinsic*, which introduce something into a Subject from without; as when Fire introduces Heat, &c.

Sometimes it denotes a Thing added, or applied to another. — Thus, Accidents and Adherences are said to be *Extrinsic* to the Subject; and thus Vision is *Extrinsic* to the Wall fen. See ACCIDENT.

EXUBERANCE, in Rhetoric, &c. a Redundancy. See REDUNDANT.

The Word is compounded of the Latin *ex* and *uber*; plentiful, of *uber*, Under.

EXULCERATION, in Medicine, the Act of occasioning, or producing Ulcers. See ULCER.

Thus, Arteric *Exulcerates* the Intestines; Corrosive Humours *Exulcerate* the Skin.

The Term is sometimes also used for an Ulcer it self; but more generally for those beginning Erosions, which wear away the Sublance, and form Ulcers. — *Exulcerations* in the Intestines, are Marks of Poison. See POSION.

EXUSTION, a burning with Fire; as it is used in some Operations by Surgeons. See BURNING.

EXUVIÆ, in Nat. History, the Shells, and other marine Bodies, which are found every where in the Bowels of the Earth. See EARTH, FOSSIL, DEWOP, SHELL, &c.

EYE, the Organ, or Part of the Body, whereby Vision is effected, i. e. whereby visible Objects are represented to the Mind. See VISION.

The Eye, or Organ of Sight, is generally divided into *Internal* and *External* Parts; or into the Eye properly call'd, and the Appendages thereof.

Under the latter Class, come the *Orbit*, or Cavity wherein the Eye is placed; the *Supercilium*, or *Eye-brow*, whereby Sweat, and other Nuisances, are prevented falling down into it: The *Palpebræ*, or *Eye-lids*, which cover and defend it in Time of Sleep; with their *Cilia*, or Fringes of Hair, to break the too fierce Impression of the Light, and keep off Flies and Moscs: And the *Canthi*, or Angles. See each Part particularly described under its proper Article, PALPEBRÆ, SUPERCILIUM, CILIA, ORBIT, and CANTHUS.

The Eye, properly call'd, is of a globular Form, and consists of *Tunicks*, *Humours*, and *Vessels*. See TUNIC, HUMOUR, &c.

In some Parts it is lined with *Fat*; and it is moved with *Muscles*; which two latter are by some Anatomists, tho' somewhat inaccurately, reckon'd among the constituent Parts of the Eye.

The *Tunicks*, *Coats*, or *Membranes* of the Eye are six: viz. 1^o. The *Adnata*, or *Conjunctiva*, covering the whole Ball of the Eye, except the fore-part, call'd the *Sight*; and making what we popularly call the *White of the Eye*: Tho' this is not reckon'd as a proper Tunic of the Eye. 2^o. Immediately under the *Adnata*, is the *Sclerotica*, which covers the whole Globe of the Eye; being opaque every where but in the fore-part, which covers the Sight and is transparent like Horn; which has occasion'd Anatomists to account this a distinct Membrane, the 3^d in Number, and to denominate it the *Cornæa*. The 4th is the *Choroides*, situate immediately under the *Sclerotica*. Its fore-part, like the former, is transparent, and therefore account'd a distinct, or 2^d Coat, and call'd the *Uvea*. Of the Duplication of this Part of the Tunic, is form'd a striped, variegated Circle, call'd the *Iris*, which, in different Subjects, is of different Colours, and gives the Denomination of this or that Colour to the Eye. In its middle is an Aperture, or Perforation, call'd the *Pupil*, or Apple of the Eye, about which the *Iris* forms a Ring. From the Inside of this Tunic, spring certain Fibres, which spreading round the crystalline Humour, form the *Ligamentum Chliare*. The 6th Tunic, which some only make the 5^d, is the *Retina*, so call'd, as resembling a Net, and covering only the Fund, or Bottom of the Eye, opposite to the Sight.

Of the three proper Tunicks, the *Sclerotica*, *Choroides*, and *Retina*; the first is derived from the *Dura Mater*, being detach'd from the Brain as an outer Coat, or Cover of the Optic Nerve, till arriving at the Ball of the Eye, it is there expanded into a Tunic: The second is derived from the *Pia Mater*, and transmitted likewise from the

Brain, along with the Optic Nerve; the third may be said to be derived from the Brain, or *Medulla it self*, as being an Expansion of the medullary Substance of the Optic Nerve. See each Tunic described under its proper Article, CONJUNCTIVA, SCLEROTICA, CORNEA, CHOROIDES, UVÆ, and RETINA. See also IRLS and PUPILLA.

The *Humours of the Eye*, inclosed between these Tunicks, are three: viz. 1^o. The *Aqueous*, a limpid, transparent Humour, situate in the fore-part of the Eye; immediately under the *Cornæa*, and occasioning its Transparency. 2^o. The *Crystalline*, situate immediately under the *Aqueous*, behind the *Uvea*, opposite to the Pupil. 3^o. The *Vitrious*, or Glassy Humour, which fills all the hind-part of the Cavity of the Globe; and is that which gives the spherical Figure to the Eye. On its back Part is the *Retina* spread. See each Humour under its proper Article, AQUEOUS, CRYSTALLINE, and VITRIOUS.

Some Authors finding these Humours cover'd with proper Membranes, have given distinct Names to them; as the *Aqueous*, *Crystalline*, and *Vitrious Tunics*; but these being only Productions of the other Coats above-mention'd, the Distinction is not much regarded.

The *Vessels of the Eye* are Nerves, Glands, Arteries, and Veins.

1^o. The Nerves are the *Optic Pair*, which issuing thro' a Perforation in the Skull, behind the Orbit, enter the Ball of the Eye, and diffuse and lose themselves therein; the outer Coat, as already observ'd, going to form the *Sclerotica*, the inner to the *Choroides*; and the *Medulla* to the *Retina*. See OPTIC NERVO, &c.

Beside which, the *Motorii*, *Pathetici*, the first Branch of the fifth Pair, call'd *Ophthalmicæ*, and the 6th Pair are below'd on the Muscles of the Eye. See NERVE.

2^o. On the upper part of the Ball of the Eye, near the lesser or outer *Canthus*, is the *Glandula lacrymatoria*, or *Lacrymalis*, which separates the Matter of the Tears, to be discharged, by the continual Motion of the *Eye-lid*, upon the *Cornæa*, to moisten it, and facilitate its Motion. The Tears falling down the *Cornæa*, are stopp'd by the Edge of the under *Eye-lid*, along which they run; till they fall into two small Holes in the great Angle, one in each *Eye-lid*, call'd *Puncta Lacrymalia*, which lead to a small Bag, from the Bottom of which a small Tube arising, opens into the Nose. Between the two *Puncta*, is a Caruncle, or Eminence, which serves to separate and keep them open, and which was anciently taken for the *Glandula Lacrymalis*. See LACRYMALIS Glandula, PUNCTA LACRYMALIA, TEARS, &c.

3^o. The Eye receives Arteries, both from the internal and external *Carotids*, and returns the Blood by Veins that go to the Jugulars. See CAROTID and JUGULAR.

The Muscles of the Eye are six; four of which are from their Situation call'd *Recti*, or straight Muscles; and two, *Obligni*. The *Recti* come from several Points of the Bottom of the Orbit, and run immediately between the *Sclerotica* and *Adnata*: They derive several Denominations from their several Offices, viz. *Atrorsus*, or *superbus*, which draws the Eye upwards; *Depressus*, or *humilis*, which casts it down: *Adducens*, and *Potator*, which draws the Eye towards the Nose: And *Abducens*, or *Indigator*, which draws it the other Way towards the lesser Angle. The two oblique Muscles are, the *superior*, call'd also *Rosator*, and *Trochlearis*; and the *inferior*. See each Muscle in its proper Place, ATRORSUS, DEPRESSUS, ADDUCENS, ABDUCENS, OBLIQUUS, TROCHLEARIS, &c.

The whole Structure and Apparatus of the Eye tends to this, that there be produced a distinct and vivid Collection in the Bottom of the Eye, directly under the Pupil, of all the Rays, which proceeding from any Point of an Object, and entering the Eye, penetrate the crystalline Humour; and that so many Points be painted in the Bottom of the Eye, as are conspicuous in an Object; that so a small Image like thereto, may be represented on the *Retina*. See RAY and RADIANT.

In order to this, the Rays from any radiant or reflecting Point, striking on the *Cornæa*, are refracted towards the Perpendicular, and thus determin'd to proceed thro' the Aperture of the Pupil to the Surface of the Crystalline: While other Rays, which enter'd so obliquely as to be thrown upon the *Iris*, are reflected or again, that they may not disturb the Distinctness of the Sight; and others whose less Obliquity threw them between the *Uvea* and vitrious Humour, are extinguish'd in the Darkness thereof: So that none can be propagated thro' the vitrious, but such as passing thro' the Pupil, strike on the Crystalline. See CRYSTALLINE and REFRACTION.

In the mean Time the *Iris*, contracting by its circular, or dilating by its right Fibres, the *Pupilla* of the Eye; admits

fewer or more Rays, as the Object is nearer or more vivid; or remoter and more languid. See PUPIL.

Now, the flatter the Figure of the *Cornæa* is, the less does it collect the Rays emitted from any lucid Point; whence fewer arrive at the Crystalline, and those more diverging, unless when they come from a very remote Object: On the contrary, the rounder it is, the more of the Rays from any Point does it collect, and throw on the Crystalline; and those the more converging: Whence one great Cause of the Defects in the *Eyes* both of Old Men and Myopes.

Again, the Rays transmitted thro' the Pupil to the Crystalline, are then refracted a-new, further collected, and render'd converging; so as that those which came from the same Point of the Object, are now thrown in one Point thro' the Vitreous, upon the *Retina*; where they point or exhibit that precise Point of the Object whence they flow'd. Accordingly, if the Crystalline be very dense, or spherical, the Focus, or the Point wherein they are united, will be too near; and if too flat, or thin, the Point will be too remote: The Effect of both which is Confusion. And hence another Cause of the Defects of *Myopes* and *Presbyta*. See MYOPIA and PRESBYTIA.

'Tis not, however, *Myopes* and old Men alone, that would labour under these Defects, and have their Vision, in most Cases confus'd, as in Objects very near, or very remote, very small, or very great: But those would be the common Condition of Vision.

Distinct Vision, depending absolutely on the Union of all the Rays coming from the same Point of the Object, on the same precise Point of the *Retina*; and Rays from Objects at different Distances, being united at different Distances behind the Crystalline; it were impossible, e. g. for the same Eye to see distinctly any two Objects differently removed from it. But Nature has made a Provision against these Defects; and that principally, by bringing the Crystalline nearer to the *Cornæa*, or further from it, occasionally; which is effected two Ways, viz. either by compressing the Bulb of the Eye by the four Muscles all strongly contracted at once, which changes the Figure of the aqueous Humour, and renders the Eye oblong; or by the *Ligamentum Ciliare*, augmenting and diminishing the Convexity of the Crystalline, and setting it nearer or further from the *Retina*. See SERRA, SIGHT, &c.

As complex as the Mechanism of the Eye may seem, and as manifold as the Parts are which have a Relation hereto: The Justness of Vision seems to require an exact Habitude in them all. — Thus, tho' the Pupil be no substantial Part of the Eye, but only an Aperture of the *Uvea* almost perpetually changing its Bigness according to the different Degrees of Light the Eye chances to be expos'd to; and therefore should seem, while this Hole remains open, to perform its Office, by giving Entrance to the incident Rays of Light: Yet Mr. Boyle saw a Woman, who, after a Fever, not being able to dilate the Pupil of her Eyes, as before, tho' they were very little narrower than ordinary; yet had she thereby almost lost her Sight. — And on the other Side, tho' a competent Wideness of the Pupil be requisite to a clear and distinct Vision, yet if its Dilatation exceeds the due Limits, there is thereby produced a considerable Distemper of Sight.

It may seem also but a slight Circumstance, that the transparent Coats of the Eye should be devoid of Colour; and of as little Moment, that the *Cornæa* should be very smooth, provided it remain transparent: Yet when either of these Circumstances is wanting, the Sight is greatly vitiated. — Thus we see, that in the yellow Jaundice, the adventitious Colour, wherewith the Eye is tinged, makes the Patient think he sees many Objects yellow, which are of a contrary Colour.

It has of late been an Opinion, that tho' both Eyes be open, and turn'd towards an Object, yet only one of them at a Time is effectually employ'd in giving the Representation of it: So that the having of two Eyes should seem in some Sort a Redundance. — But Mr. Boyle furnishes several Considerations which invalidate this Opinion, and shew that both the Eyes are of Use at the same Time. — He assures us, he has found by frequent Experiment, that his two Eyes together, beheld an Object in another Situation, than either of them spart would do. — He adds, that he has met with a Person, who had a Cataract in his Eye for two or three Years, without finding any Impediment in his Sight, tho' others had, during that Time, taken Notice of a white Film that had cross'd his Eye; till, at length, happening to rub his sound Eye, he was surpriz'd to find himself in the dark: And that a very ingenious Person, who by an Accident had one of his Eyes struck out, told him, that for some Months after, he

was apt to mistake the Situation and Distances of Things; for having frequent Occasion to pour Liquors out of one Vial into another, after this Misfortune he often spill'd them, and let them run quite besides the Necks of the Vials, he thought he was pouring them directly into.

The like was related to him by another Person, who had, by a Wound, lost the use of one of his Eyes; viz. that for some Time after, he often, in pouring out his Wine, mis'd the Mouth of the Bottle, or Glass.

A yet more considerable Instance of this Kind, the same Author gives us, of a noble Person, who, in a Fight, had one of his Eyes strangely mangled by a Mullett Ball, which came out at his Mouth; after which Accident, he could not well pour Drink out of one Vessel into another; but had broken many Glasses by letting them fall out of his Hand, when he thought he had given them to another, or set them down on the Table: He added, that this Aptness to misjudge of Distances and Situation, continued with him, tho' not in the same Degree, for two Years.

The comparative Structure, and Anatomy of the Eye, is very curious: The Situation, Number, Conformation, &c. of this Organ, in different Animals, being nicely and wonderfully adapted to their different Circumstances, Occupations and Manners of Living.

In *Man*, and some other Creatures, an ingenious Author observes, the Eye is plac'd chiefly to look forwards; but withal for order'd, as to take in nearly the Hemisphere before it. — In *Birds*, and some other Creatures, the Eyes are so seated, as to take in near a whole Sphere, that they may the better seek their Food and escape Danger. — In others they are seated, so as to see behind them, or on each Side, whereby to see the Enemy pursuing them: Thus, in *Hares* and *Cowies*, the Eyes are very protuberant, and plac'd so much towards the Side of the Head, that their two Eyes take in nearly a whole Sphere: Whereas in *Dogs*, that pursue 'em, the Eyes are set more forward in the Head, to look that Way more than backward.

Generally, the Head is contriv'd to turn this and that Way, chiefly, for the Occasions of the Eyes; and generally the Eyes themselves are moveable upwards, downwards, backwards, sidewise, for the more commodious Reception of the visual Rays. Where Nature deviates from these Methods, she always makes use of very artful Expedients to answer the same End.

Thus, in some Creatures, the Eyes are set out at a Distance from the Head, to be moved here and there, the one this Way, and the other that; as in *Squills* particularly, whose Eyes are contain'd in their four Horns, like aramentous Spots fitted to the End of their Horns, or rather to the Ends of those black Filaments, or Optic Nerves, sheath'd in the Horn. Power, Exper. Phil. Obs. 51.

And in other Creatures, whose Eyes or Head is without Motion, as in divers Insects; that Defect is sometimes made up by their having more Eyes than two; as in *Spiders*, which having no Neck, and consequently the Head being immoveable, the Defect is supplied by the Situation and Multiplicity of their Eyes; some having four, some six, and others eight, all plac'd in the forefront of the Head, which is round, like a Locket of Diamonds. The Reason Dr. Power gives, is, that being to live by catching so nimble, and thy a Prey as Flies, they ought to see her every Way, and so take her *per saltum*, without any Motion of the Head to discover them.

Again, Men, and most Quadrupeds, are found to have several Muscles belonging to their Eyes, by Help whereof they can turn them any Way, and so obvert the Organ of Sense to the Object. — But Nature not having given that Mobility to the Eyes of Flies, she in Recompence furnishes them with a Multitude of little protuberant Parts, finely ranged upon the Convex of their large bulging Eyes; so that by Means of these numerous little Stubs, numberless Rays of Light are reflect'd from Objects plac'd on either Hand, above, or beneath the Level of the Eye, and conveniently thrown upon that Organ, to render the Objects they come from, visible to the Animal; and by the Help of a good Microscope, and a clear Light, some Hundreds of these little round Protuberances may be discover'd, curiously ranged on the Convexity of a single Eye of an ordinary Flesh Fly.

So *Scorpions* are found to have above an hundred Eyes; and *Squammandam* has observ'd no less than two thousand in the little Insect call'd *Ephemera*.

In other Creatures, the like Deficiency is supplied by having their Eyes nearly two protuberant Hemispheres, each consisting of a prodigious Number of other little Segments of a Sphere.

The Eye of a *Camelion*, Dr. Goldard observes, resembling a Lens, or Convex Glass, set in a versatile globular Socket,

Socket, which the turns backward and forward without stirring the Head; and ordinarily the one a contrary Way to the other.

Lastly, *Moles*, which the Antients, *Aristotle*, *Pliny*, *Alb. Magus*, &c. supposed to have no Eyes at all, are now found to furnish a notable Instance of the Diversity of the Apparatus of Vision. For that Animal living altogether underground, Sight would generally be useless to it, and so tender a Part as the Eye troublesome. It has therefore Eyes, but those so exceedingly small, and withal situate so far in the Head, and cover'd so strongly over with Hair, that they cannot ordinarily be either of Service or Disturbance to it. Yet, to guide and secure it a little when it chanceth to be above ground, *Borrichius*, *Blasius*, *Schneider*, *Mr. Derham*, and others, observe, that it can pretend, or put them forth beyond the Skin, and again draw them back at Pleasure, somewhat after the Manner of Snails.

In the Eyes of Nocturnal Animals is a Part not yet mention'd, viz. a Sort of *Tapestry* at the Bottom of the Eye, which gives a Kind of Radiation on the Pupil, enabling them to see and catch their Prey in the Dark. Thus Dr. *Willis*: *Hujus estus est Oculi pupillam quasi jubare infuso illuminare — quare in Felo pluvianum illustris est, at Homini, Avibus & Piscibus deest. De Animi Brutor.*

He adds, that in some Persons the Iris has a Faculty also of darting out Light: And Instances in a Man of a hot Head, who after a plentiful drinking of generous Wine, could see to read in the darkest Night. *Willis*, ibid.

The like *Pliny* tells us of *Tib. Cesar*, that upon his first waking in the Night, he could see every Thing for a little while, as if in broad Day Light. *Nat. Hist. L. II. C. 37.* And Dr. *Briggs* give a parallel Instance of a Gentleman in *Bedfordshire*. *Ophthalm. C. 5. §. 12.*

Frogs, beside the Parts of the Eye which they have in common with Men, and most Quadrupeds, have a peculiar Membrane, or Cartilage, which is not commonly perceived, wherewith they can, at Pleasure, cover the Eye, without too much hindring the Sight, because the Membrane is both transparent and strong; so that it may pass for a Kind of moveable *Cornea*, or occasional Safeguard to the Eye.

In furnishing Frogs with this strong Membrane, the Providence of Nature seems very conspicuous; for that being amphibious Creatures, designed to pass their Lives in watery Places, which for the most part abound in Plants, endowed with sharp Edges, or Points; and the progressive Motion of this Animal, being not by walking, but by leaping, if his Eyes were not provided with such a Case, he must either shut them, and so keep himself folded, or by leaving them open, must run the Risk of having the *Cornea* cut, pricked, or otherwise offended: But this Membrane, like a Kind of Spectacle, covers the Eye, without taking away the Sight; and as soon as the Occasion for it is over, the Animal withdraws it into a little Cell, where it rests, till its Use be again required. This Membrane becomes visible, by applying the Point of a Pin, or any such sharp Thing, to the Eye of a Frog, whilst his Head is held steady; for to freeze his Eye, he will presently cover it therewith, and afterwards withdraw it, upon a Removal of the suspected Danger. — And because many Birds are destined to fly among the Branches of Trees and Bushes, lest by this Means the Prickles, Twigs, Leaves, &c. should wound or offend their Eyes, Nature has also given them such another Kind of horny Membrane as we see in Frogs. See *NIGHTINGAL Membrane*.

Naturalists relate Wonders of the Sharpness and Accuracy of the Eyes of some Animals, as the Eagle, &c. beyond those of Men. See *EAGLE*, &c.

Yet do those of Men seem improvable to a surprising Degree: — Mr. *Boyle* instances in a Major of a Regiment of King *Charles I.* who being afterwards forced Abroad, ventured at *Madrid*, to do his King a Piece of Service of an extraordinary Nature and Consequence; which being there judged very irregular, he was committed to an uncommon Prison, or rather Dungeon; having no Window belonging to it, only a Hole in the Wall, at which the Keeper put in Provision, and presently closed it again on the Outside, but not perhaps very exactly. — For some Weeks this Gentleman continued utterly in the Dark very disconsolate; but afterwards he began to think he saw some little Glimmering of Light, which, from Time to Time, increased, so that he could not only discover the Parts of his Bed, and other such large Objects, but at length, amidst this deep Obscurity, could perceive the Mice that frequented his Chamber, to eat the Crumbs of Bread which fell upon the Ground, and discern their Motions very well.

The Author just mention'd, in his *Observations on Visited Sight*, gives us some uncommon Phenomena, that

regard the Eyes. — He furnishes several Instances of *Nyctalopias*, or People, whose Eyes in the Day-time were quite dark, or at least so dim, that they could hardly discern their Way; who yet, soon after Sun-set, and during Twilight, saw very clearly. See *NYCTALOPIA*.

This brings to mind an odd Case of an old learned Divine, who complained, that during the Day-time, his right Hand shook so much, that he could not manage his Pen; and therefore was forced to make Use of it only by Candle-Light.

But, which is yet more strange, one of these Patients who could only see by Night, could distinguish some Colours, viz. black and white, but not others, especially red and green. The Meadows to this Person did not appear green, but of an odd, darkish Colour; and when he had a Mind to gather Violets, tho' she knelt in the Place where they grew, he could not distinguish them by the Colour from the Grass about them, but only by their Shape or Touch.

Artificial Eye, is an Optical Machine, wherein Objects are represented after the same manner as in the natural Eye; of considerable Use in illustrating the manner of Vision.

Its Construction is thus: Provide two hollow Hemispheres of hard, dry Wood, well cemented together, to represent the Ball of the Eye: Let the *Anterior*, or Fore-Hemisphere, be perforated with a round Hole in C, (*Tab. Opticks*, Fig. 9.) to supply the Place of a Pupil; and therein fit a thin, plane Glass, or, which amounts to the same, a Concavo-convex Glass, to serve for the *Cornea*: In the Inside, have a short draw-Tube G, with a Lens Convex on both Sides, to do the Office of the *CrySTALLINE* therein. In the hind, or posterior Hemisphere, fit another Draw-Tube E F, with a plain Glass therein, having its inner Surface smooth, tho' not polish'd, representing the *Retina* and *Optic Nerve*.

If now the Aperture C, be turn'd towards any Object; and the Draw-Tube E F be gradually pull'd out; you will have the Object beautifully and strongly represented in all its Colours on the *Retina*, only in an inverted Order. See *VISION*.

It being of no Consequence what the Figure of the Inner Cavity is; any Room, or Chamber, so darken'd as only to receive Light from a single Hole, with a Glass Convex on both Sides fitted therein; will do the Office of an *Artificial Eye*, and exhibit all the Objects oppos'd to the Aperture; on a Wall, or a white Cloth, stretch'd at a proper Distance from the Aperture: With this Circumstance, that the less Sphere the Glass is a Segment of, the greater will the Figures appear. And this is the celebrated *Camera Obscura*. See *CAMERA Obscura*.

EYE, in Architecture is used for any round Window made in a Pediment, an Attic, the Reins of a Vault, or the like. See *WINDOW*.

BULLOCKS-EYE, or *Oeil de Bœuf*, is a little Sky-Light in the Ceiling, or Roof, intended to illumine a Granary, or the like. The same Term is applied to the little Lutherns in a Dome, as in that at St. Peter's at Rome, which has 48 in three Rows. See *LUTHERN*.

EYE of a Dome, is an Aperture at the Top of the Dome; as that of the *Pauidon* at Rome, or of St. Paul's at London. It is usually cover'd with a Lamborn. See *DOSE*.

EYE of the Volute, in Architecture, is the Centre of the Volute, or that Point wherein the Helix, or Spiral, wherof it is form'd, commences: Or it is the little Circle in the middle of the Volutes, wherein are found the thirteent Centres for the describing the Circumvolutions thereof. See *VOLUTE*.

EYE, in Agriculture and Gardening, is a little Bud, or Shoot, inserted into a Tree by Way of *Graft*. See *ENGRAFTING*.

The Term is also used for a Gem, or Bud, as it stands on the parent Tree. A Tree with six, strong, healthy Eyes. *La Quinte*, P. 1. C. 3. Art. 6. The good Branches are those which have come in the Order of Nature, and that have large Eyes pretty near each other. *Id.* This Branch must be cut off at the third Eye. *Liger*. See *BUD*, *GEM*, &c.

EYE, among Physicians, is frequently taken for a Hole, or Aperture. — Whence it is that the first of the big Infirmities is call'd *Cecum*, or the blind Gut, as having no Eye, or Perforation. — For the same Reason the Chyniarity call the Alembic, used in Circulation, a *blind Head*.

EYE, in Printing, is sometimes used for the Thickness of the Types, or Characters, used in Printing: Or, more strictly, it is the Graving in Relief, on the Face, or Top of the Letter. See *TYPE*.

'Tis the Eye alone that makes the Impression; the rest which they call the *Body*, serving only to sustain it. A big Eye;

Eye, small *Eye*, &c. — The *Eye* of the *c*, is the little Aperture at the Head of that Character, which distinguishes it from the *c*.

EYE, is also used among Jewellers, for the Lustre and Brilliant of Pearls and precious Stones; more usually call'd the *Water*.

EYE-lids, } See { PALPEBRÆ.
EYE-brows, } { SUPERCILIUM.

EYE-brow is sometimes used in Architecture, in the same Sense with *Lint*, or *Fillet*. See *LINT* and *FILLET*.

Bulls-EYE, in Astronomy, is a Star of the first Magnitude, in the Constellation *Taurus*; by the *Arabs* call'd *Aldebaran*.

Its Longitude, Latitude, &c. See among those of the other Stars in the Constellation *Taurus*.

COSS-EYE, *Oculus Cori*, in Nat. History, a precious Stone; call'd also *Sun's Eye*, or *Oculus Solis*. See *PRECIOUS STONE*.

'Tis transparent, very shining, and of divers Colours, usually oblong as to Figure, and not unlike the *Opal*, only much harder.

'Tis found in divers Parts of the *East Indies*, but those of the Island of *Ceylon* are the most prized.

Hares-EYE, *Oculus Leprosus*, in Medicine, a Disease arising from a Contraction of the upper *Eye-lid*, which prevents its being able to cover its Part of the *Eye*. Whence the Patient is obliged to keep with the *Eye* half open after the Manner of *Hares*.

The Physicians call it *Lagophthalmia*, a Greek Word signifying the same Thing; being compounded of *λαγύη*, *Hare*, and *ὄφθαλμος*, *Eye*.

GOATS-EYE, *Oculus Caprinus*, is when there is a white Speck on the *Cornea*; as is seen in the *Eye* of *Goats*. Physicians call it *Aigi*.

Crabs-EYES, *Oculus Cancrorum*. See *CANCRA-EYES*.

EYRE, or *BIARE*, in Law, signifies the Court of Justice Itinerant. See *ITINERANT*.

Hence Justices in *Eyre*, are those whom *Bracton* calls, *Judicarios Itinerantes*. See *JUSTICE IN EYRE*.

The *Eyre* of the *Forest*, is otherwise call'd *Justice Seat*; which by the ancient Customs was to be held every three Years, by the Justices of the Forest journeying up and down for that Purpose. See *JUSTICE SEAT*.

The Word is form'd of the French, *Erre*, *Iter*, Journey.

EYRIE, or *AVRIE*, among Falconers, the Nest where Hawks sit, and hatch, and feed their Young. See *NEST*.

Hence a young Hawk newly taken from the Nest, is called an *Eyrel*. See *HAWK* and *FALCON*.

EZECHIEL's Reed, or *Rod*, a Scripture Measure, computed by late Writers to amount to 1 *English Foot*, 11 Inches, $\frac{1}{4}$ of an Inch. See *MEASURE*.

EZRA, or *ESDRAS*, in Divinity.—The Books of *Ezra*, are two Books of Holy Scripture, composed by *Ezra*, or *Esdra*, the High-Priest of the *Jews* during the Captivity; and particularly about the Time when they return'd to *Palestine*, under the Reign of *Cyrus*.

The Original of the Books of *Esdra*s is in *Hebrew*; and the second is particularly call'd by the *Hebrews*, and from them by the *English* Translators, *Nehemiah*.

They contain the History of the Return of that People from the *Babylonish* Captivity, and their Re-establishment in the Holy Land. They are Canonical, and are allow'd as such both by the Church and the Synagogue.

The Canon of *Ezra*, is the Collection of the Books of Scripture made by that Pontiff. See *CANON*.

It appears, however, that the Synagogue added other Books to *Esdra's* Canon; witness the Book of *Ezra* it self, and that of *Nehemiah*.

F

F, THE sixth Letter of the Alphabet, and the fourth Consonant. See Letter.

The letter F may be either consider'd absolutely and in it self; or with regard to the particular Languages where it is found. In the first view, F is placed by some Grammarians among the Mutes, like the θ among the Greek Grammarians: But others give it the Quality of Semi-vowel. See MUTES, &c.

Job. Conrad Aman, in his Dissertation *de Loquela*, divides the Consonants into single and double; and the single into hissing and explosive. Among those called *Hissing*, there are some pronounc'd by the Application of the upper Teeth to the lower Lip; and these are the f and the ph. The Reason why some account it a Semi-vowel, and *Aman* places it among the Hissers, is, that one may produce a little Sound, without any other Motion of the Organs, than what is necessary to the Pronunciation of the F.

This Letter is derived to us from the *Romans*, who borrowed it from the *Æolians*; for the F does not at all differ from the *Æolic* Digamma, or double Gamma, thus call'd as resembling two Γ 's, one over the other: and the Digamma seems no other than the Greek ϕ , which being made at three Strokes, degenerated at length into the Figure F; for the Letter ϕ being compounded of an O, Omicron, with a Perpendicular drawn through it: If that Perpendicular be made first, and the O at two Strokes afterwards, viz. first the upper, then the under part; it will happen, especially in writing fast, that the two Parts shall not join; and even instead of two Arches of Circles, Haste and Convenience may naturally enough make two straight Lines.

Thus it is that the transverse Stroke of the Letter ψ , is frequently seen straight; and the Letter, in form of a Cross \dagger . And what confirms this Transmutation of the ϕ into F still further, is, that in the Medals of *Philip*, and the Kings of *Syria*, in the Words ΕΠΙΦΑΝΟΥΣ and ΦΙΛΑΔΕΛΦΟΥΣ, the Φ is frequently seen in the Form just mentioned, i. e. it has no Circle or Omicron; but a cross the Middle of the Perpendicular, is a Kind of Right-line, form'd only of two Dots, the one on the right side, and the other on the left, representing a Cross, \dagger . Such appears to be the Origin of the Letter F; which, of consequence is no other than a Corruption of the Greek ϕ : And accordingly, on the Medals of the *Falisci*, the F is ordinarily put in lieu of the Greek ϕ ; but it must be added, that the Greek and Latin Letter were thus the same thing, yet the Sound was much softer among the *Latins*, than among the *Greeks*: As was long ago observ'd by *Terentianus*.

The *Romans*, for some time, used an inverted F, β , in lieu of an V consonant, which had no peculiar Figure in their Alphabet: thus in Inscriptions we meet with TERMINAET, DIET, &c. *Lipinus*, in his Comment on the Annals of *Tacitus*, L. XI; *Coccorruvius*, and *Dausguis* in his Treatise of Orthography, hold, that it was the Emperor *Claudius*, who first introduced this Use of the inverted Digamma, or β ; which they call the Invention of a Letter, as being equivalent to the Invention of the Letter V. In effect, *Tacitus*, in the 4th Chapter of the said Book, and *Suetonius* in his Life of *Claudius*, c. 41. assure us, that the Emperor invented three Letters; one of which *Lipinus* shews must be the inverted *Æolic* Digamma: But, before *Claudius*, *Varrus* made an Attempt to introduce the same thing, but could not succeed. All the Authority of an Emperor was necessary to make it take: Nor did it subsist long; for after *Claudius*'s Death it was thrown by again; as we are told by the same *Tacitus*; and *Quintilian* observes, it did not subsist in his time. So far is the Custom of a Language from being subject even to the Masters of the World. It may be added, that the Pronunciation of the F is almost the same with that of the V; as will be evident by attending to the manner of pronouncing the following Words, *Favour*, *Vanity*, *Felicity*, *Vice*, *Foment*, *Vogue*, &c. The *French* particularly, in borrowing Words from other Languages, usually turn the final v into an f, as *Chetif* of *Catvoo*, *Neuf* of *Novus*; *Nef* of *Narcis*, &c.

In the later *Roman* Writers we find the Latin F and Greek ϕ frequently confounded; as in *Salax*, for *Phalanx*: *Philosophia*, for *Philosophia*, &c. Which Abuse is still retain'd by many *French* Writers, who write *Philosophic*, *Filippe*, *Episcane*, &c. and even sometimes by the *English*, as in *Fantasy*, *Filre*, &c.

F, in the Civil Law. Two ff's join'd together, signify *Diozeß*; See the Reason thereof under the Article *DIOZEß*.

FAB

F, in Musick, is one of the signed Clefs or Keys, plac'd at the Beginning of one of the Lines of a piece of Musick. See CLEF.

F is the Bass-clef, and is plac'd on the fourth Line upwards. See BASS.

Indeed, the Character or Sign by which the f and c Clefs are mark'd, bear no Resemble to those Letters. Mr. *Mot-croix*, thinks it were as well if we used the Letters themselves, but Custom has carried it otherwise. The ordinary Character of the F or Bass-clef is C ; which *Kepler* takes a deal of pains to deduce, by Corruption, from the Letter F it self. See CHARACTER.

F, in our ancient Customs. He that shall maliciously strike any Person with a Weapon in Church or Church-yard, or draw any Weapon there with Intent to strike, shall have one of his Ears cut off; and if he have no Ears, he shall be mark'd on the Cheek with an hot Iron, having the Letter F, whereby he may be known for a Fray-maker or Figher.

F, in Physical Prescriptions, stands for *Fiat*, let it be done; as F. S. A. denotes as much as *fiat secundum artem*.

F, among such as give us the numeral Value of the Letters, signifies 40, according to the *Verte*,

Sexta quaterdecies gerit que distat ab alpha

And when a Dash was added a-top, \overline{F} it signified 40 thousand.

FA is one of the Notes of Music, being the fourth in rising in this order of the Gamma, Ut, re, mi, fa. See NOTE.

FABIANS, FARI, in Antiquity, a part of the Lupercl. See LUPERCI, and LUPERCALIA.

Those Priests were divided into two Parts; one of which was called the *Fabians*, and the second the *Quintilians*, from their respective Chiefs. The *Fabians* were for *Romulus*, and the *Quintilians* for *Remus*. See QUINTILIANS.

FABLE, a Tale, or feign'd Narration, design'd either to instruct or divert: Or, *Fable*, as *Mont. de la Motte* defines it, is an Instruction disguis'd under the Allegory of an Action.

Fable seems to be the most ancient way of teaching: The principal Difference between the Eloquence of the Antients, and that of the Moderns, consists, according to *Pere Bossu*, in this, that our manner of speaking is simple and proper; and theirs, full of Mytheries and Allegories. The Truth was usually disguis'd under those ingenious Inventions, call'd by way of Excellence, $\mu\alpha\upsilon\sigma\upsilon$, *Fabule*, *Fables*, that is, *Words*; as intimating that there was the same Difference between these *fabulous* Discourses of the learned, and the common Language of the People, as between the Words of Men, and the Voices of Beasts.

At first, *Fables* were only employ'd in speaking of the Divine Nature, as then conceiv'd: Whence, the ancient Theology was all *Fable*. The Divine Attributes were separated as into so many Persons; and all the Oeconomy of the God-head laid down in the feign'd Relations and Actions thereof; either by reason the human Mind could not conceive so much Power and Action in a single indivisible Being; or perhaps, because they thought such Things too great and high for the Knowledge of the Vulgar. And as they could not well speak of the Operations of this Almighty Cause, without speaking, likewise of its Effects; natural Philosophy, and at length human Nature and Morality it self came thus to be veil'd under the same *fabulous* allegoric Expression; whence the Origin of Poetry, and particularly of *Epic* Poetry. See *EPIC* *POEM*.

The Critics, after *Aphthonius* and *Theophrastus*, reckon three kinds of *Fables*, Rational, Moral, and Mix'd.

Rational FABLES, call'd also *Parables*, are Relations of Things suppos'd to have been said and done by Men; and which might possibly have been said, or done, though in reality they were not. Such, in the Sacred Writings, are those of the ten Virgins; of *Dives* and *Lazarus*; the prodigal Son, &c. Of these *Rational Fables* we have likewise about a dozen in *Phædrus*. See PARABLE.

Moral FABLES, call'd also *Apologues*, are those wherein Beasts are introduced as Actors, Speakers, &c. These *Moral Fables* are also call'd *Egyptic Fables*: not that *Esope* was their Inventor, for they were in use long before him, even in the times of *Homer* and *Hesiod*; but because he excell'd therein. In this kind not only Beasts, but even sometimes

Trees, Hammers, &c. are suppos'd to speak. See AROLOGUE.

Rational differs from the *Moral Fable* in this; that the former, though it be feign'd, might be true; but the latter is impossible; as 'tis impossible for Brutes or Stocks to speak.

Mix'd FABLES, are those compos'd of both sorts, rational and moral; or wherein Men and Brutes are introduc'd conversing together. Of this we have a fine Instance, in *Justin* L. XXXIII. c. 4. made by a petty King, to alarm the ancient *Gauls* against the *Maffilians*, who arriving out of *Affa*, in *Spain*, charm'd with the Place, beg'd leave of the Inhabitants to build a City.

The Bitch and Shepherd, a Mix'd FABLE.

A Bitch big with young, beg'd of a Shepherd, a Place to lay her Whelps in; which when she had obtain'd, she further beg'd for leave to rear 'em in the same. At length, the Whelps being now grown up, depending on the Strength of her own Family, she claim'd the Property of the Place. So the *Maffilians* who are now only Strangers, will hereafter pretend to be Masters of this Country.

As to the Laws of *Fable*, the principal are; *First*, That to every *Fable* there be some Interpretation annexed, to shew the moral Sense, or Design thereof. This Interpretation, if it be plac'd after the *Fable*, is called *emphatic*, or *affabulatio*; if before it, *epitaphic*, *presabulatio*. *2dly*, That the Narration be clear, probable, short and pleasant. To preserve this Probability, the manners must be express'd, and closely kept to, as in Poetry. See PROBABILITY and MANNERS.

M. de la Motte, has some fine Remarks on the Subject of *Fables*, at the Beginning of his *Fables nouvelles, dédiées au Roi* 1719. A *Fable*, according to this polite Writer, is a little Epic Poem; differing in nothing from the great one, but in Extent, and in that being less confin'd as to the Choice of its Persons, it may take in all sorts at pleasure, as Gods, Men, Beasts, or Genii; or even, if occasion be, create Persons, i. e. personify Virtues, Vices, Rivers, Trees, &c. Thus *M. de la Motte* very happily introduces Virtue, Talent, and Reputation, as Persons making a Voyage together. See EPOPEA, and PERSONIFYING.

That Author suggests two Reasons, why *Fables* have pleas'd in all Ages and Places. The first is, that Self-love is spar'd in the Instruction. The 2^d, that the Mind is exercis'd by the Allegory. Men don't love direct Precepts; too proud to condescend to those Philosophers who seem to command what they teach; they will needs be instructed in a more humble manner: They would never amend, if they thought that to amend were to obey. Add, that there is a sort of Activity in the Mind, which must be humour'd. It pleases it self in a Penetration, which discovers more than is shewn; and in apprehending what was hid under a Veil, fancies it self in some measure the Author of it. The *Fable* must always imply or convey some Truth; in other Works, Delight alone may suffice, but the *Fable* must instruct. Its Essence is to be a Symbol, and of consequence to signify somewhat more than is express'd by the Letter. This Truth should for the generality be a moral one; and a Series of fictions conceiv'd and compos'd in this View, would form a Treatise of Morality preferable to any more direct and methodical Treatise: Accordingly, *Socrates*, we are told, had a Design to compose a Course of Morality in this way. This Truth should be conceal'd under the Allegory; and in Strictness, it ought not to be explain'd either at the Beginning or End.

The Truth, or Idea intended, should arise up in the Reader's Mind from the *Fable* it self. However, for the Convenience of the less discerning Readers, it may be a good way to point out the Truth or Moral in precise terms. To have the Moral at the End of the *Fable*, seems much better than at the Beginning: The Mind is apt to be forecall'd in the latter Case: I carry the Key all along with me, so that there is no room to exercise my Mind, in finding any thing my self.

The Image, *M. de la Motte* observes, must be just, and express the Thing intended, directly and without any Equivoque: It must be one, that is, all the Parts must be visibly accessory to one principal end; and it must be natural, that is, founded on Nature, or at least on Opinion.

The Writers of *Fables* are not many. If there were any before *Æsop*, his Success has quite effac'd their Memory; and even occasion'd all the good Things of that kind to be ascrib'd to him. His Life, as wrote by *Plautides*, is it self a thorough *Fable*. It must be own'd to be very happily imagin'd, to make the Inventor of *Fables* a Slave, and his Matter a Philosopher. The Slave has his Masters Pride, and ill Humour to deal with all throughout. His Lessons were all contain'd in the *Fables* themselves; and the Readers were left the Pleasure of picking them out themselves.

'Tis generally allow'd among the Learned, that tho' the Matter and Invention of the *Fables* be *Æsop's*, the Turn and Expression is not. The Greek is of *Plautides*, and bad Greek it is in the Judgment of *F. Vassaffor, de Indicta Dist.* Some Authors will have *Socrates* the Author of the *Fables* of *Æsop*; others attribute them to *Solomon*, and others to *Homer*.

Phædrus was a Slave too, and a freed-Man; but he had the Advantage over *Æsop* in Education. He is only a Fabulist, as he translates and copies. Tho' his *Fables* be generally short, yet is he prolix, compar'd to his Author. His Style however is always florid, his Descriptions concise, and his Epithets suitable: He frequently adds Graces never dream'd of by the Inventor; and every where enriches the Simplicity of *Æsop* in the most delicate manner.

Phlipai, another Fabulist, govern'd *Iudostan* a long time under a powerful Emperor: but he was not the less a Slave; for the prime Ministers of such Princes are always more so than the meanest Subjects. *Phlipai* compos'd all his Politicks in his *Fables*; and accordingly his *Work* long continu'd the Book of State; or the Discipline of *Iudostan*. It was translated into *Persian* and *Arabic*, and since into the modern Languages. His *Fables, M. de la Motte* observes, are rather famous than good; but he is the Inventor, and the Merit of Invention will always compensate for a deal of Faults. His *Fables* are often wild, and artless; and the Collection is a sort of Romantic Assemblage of Men and Genii; compos'd, in its kind, like *Cyrus* or *Orlando*; where the Adventures are continually thwarting and clashing with each other.

We say nothing of the *Fables* of *Gabrius, Babrius, Avianus, Abstennius*, &c.

Among the Moderns, we have none that deserve to be seen in the Company above-mention'd, but *Mess. de la Fontaine*, and *Motte*. The first of whom has pick'd out all the best things in *Æsop*, *Phædrus* and *Phlipai*, and given them a new in *French* with a Delicacy and Simplicity peculiar to himself, and which in the Judgment of his Country-men, sets him even above *Phædrus*.

The latter, rather than take up with what *de la Fontaine* had left, chose to be an Inventor himself. He has succeeded. His *Fables* are many of them very happy, tho' some think 'em too full of Thought and Reasoning. His Verification is infinitely more correct than that of *de la Fontaine*; and more suitable to the Subject, than that of *de la Motte*.

FABLE, is also us'd for the Plot of an Epic or Dramatic Poem; or the Action which makes the Subject of such Poem, or Romance. See PLOT, DRAMA, EPIC and ACTION.

The *Fable*, according to *Aristotle*, is *ἡρῶς, ἢ ἄλλοι ἄνθρωποι*; the principal Part, and as it were the Soul of a Poem. It must be consider'd as the first Foundation of the Composition; or the Principle, which gives Life and Motion to all the Parts. In this Sense, the *Fable* is defined *A Discourse invented with Art, to form the Manners by Instructions design'd under the Allegory of an Action*.

The Epic *Fable*, according to *Bossi*, is confin'd to the Rational kind, i. e. the Actors and Persons are to be Gods and Men. And yet it admits of a deal of Latitude: it may be either grave, illustrious, and important; or low, and popular: either whole, or defective: in verse, or in prose: much episodical, or brief: rehear'd by an Author, or represented by Actors on the Scene; all which are only so many Circumstances, which do not make any Alteration in the Nature and Essence of the *Fable*.

The Characters that specify the *Epic Fable* are these: It is Rational and Probable; it imitates a whole, and an important Action; and it is long, and related in Verse. None of which Properties affect the nature of the *Fable*; or make it less a *Fable* than those of *Æsop*.

The *Fable*, according to *Aristotle*, consists of two essential Parts, viz. Truth, as its Foundation; and Fiction, which disguises the Truth, and gives it the Form of *Fable*. The Truth is the Point of Morality intended to be inculcated: the Fiction is the Action, or Words the Instruction is cover'd under.

To make a *Plot* or *Fable*: The first thing, according to the great Critick just mention'd, is to pitch on some moral Instruction to be exemplify'd.

E. gr. I would exhort two Brothers, or other Persons who have some common Interest to live in Amity; in order to preserve it. This is the end of the *Fable*, and the first thing I have in view. In order to this, I endeavour to impress this Maxim on their Minds, that *I'll Undersanding ruins Familic, and all kinds of Society*. This Maxim is the Moral, or Truth which is to be the Ground of the *Fable*: which moral Truth is now to be reduc'd into Action; and a general Action to be framed from several single and real Actions of such as were ruin'd by ill Understanding.

That *e. gr.* I say, that certain Persons united together for the Preservation of something that belong'd to them in common; coming to disagree; their division left them open to an Enemy who ruin'd them. Such is the first Plan of a Fable. The Action presented by this Narration has four Conditions: It is universal, imitated, feign'd, and contains a moral Truth under an Allegory.

The Names given to the several Persons, begin to specify the Fable. *Epp* uses those of Brutes.

Two Dogs, says he, appointed to watch a Flock, fall out, fight, and leave all open to the Wolf, who carries off what he pleases. If you would have the Action more singular, and render the Fable rational, take the Names of Men. *Pridamant* and *Oromes*, Brothers by a second Venter, were left very rich by their Father's Will: But disagreeing about the Partition of their Effects, they engaged themselves so far against each other, that they took no care of their common Interest, against *Clistander* their eldest Brother, by the first Venter; which last, artfully inflaming their Quarrel, and feigning he had no View but to some moderate Augmentation, which might be made him without pestering them; he, in the mean time, gets the Judges on his side, and the other Persons intrusted with the Affair, procures the Will to be annul'd, and becomes entitl'd to the whole Estate the Brothers were at Variance about.

Now, this Fable is rational; but the Names being feign'd, as well as the Things, and besides, the Persons being only of a private Rank, it is neither *Epic*, nor *Tragic*. However, it may be employ'd in Comedy; it being a Rule laid down by *Aristotle*, that *Epic* and *Tragic* Poets only invent Things; but *Comic* Poets invent both Names and Things. See *COMEDY*, &c.

To accommodate this comic Fable more to the Mode and Taste of the Town, some *Dorinda* must be imagin'd to have been promis'd to *Clistander*; but her Father, finding him disinherited by the Will, changes his Resolution, and will have her marry one of the rich, senseless, younger Brothers, whom he despis'd, &c.

But to return, The Fiction may be so disguis'd with the Truth of History, that there shall not appear any Fiction at all. To effect this, the Poet looks back into History, for the Names of some Persons to whom the feign'd Action either really or probably did happen; and relates it under those known Names, with Circumstances which do not change any thing of the Ground of the Fable.

Thus, In the War of 1302, between King *Philip* the Fair, and the *Flemish*: The French Army was under the Command of *Robert*, Earl of *Artois*, as General, and *Ralph de Nesle*, his Constable: Being in the Plain of *Cortroy*, in fight of the Enemy, the Constable was of Opinion it were easy to starve them; and that it was not worth while to hazard so many of the Nobles, against a vile, desperate Populace. This Advice the Bar rejected with Scorn, taxing the Constable with Cowardice and Inconstancy. It shall be seen, answers the Constable, which of us two is the bravest, and the most faithful; and clapping Spurs to his Horse, led the whole French Cavalry precipitately to the Charge. This Precipitation, with the Dust they rais'd, prevented their seeing a large deep Ditch, behind which the *Flemish* were posted. The Cavalry therefore plunging into it, perish'd miserably; and the Infantry, astonish'd with the Loss, let themselves be cut in pieces by the Enemy. Thus may Fiction be made to consist with Truth.

As for the Fable, it matters but little, whether the Persons be call'd *Dogs*; or *Oromes* and *Pridamant*; or *Robert* of *Artois*, and *Ralph de Nesle*; or *Achilles* and *Agamemnon*.

The *Epic Fable* we shall now propose in its just Extent, under these two Names, last mention'd. It is too short for the *Epos* in the two preceding ones. We chuse the Fable of the *Iliad*, as being the finest Plan of an *Epic Poem* in the World; and at the same time the most useful System of the Precepts of the Art; it being hence, that *Aristotle* was furnish'd with all his Reflexions.

In every discrete Undertaking the End is the first Thing propos'd; and by this the whole Work and all its Parts are regulated: Consequently, the Design of the *Epos* being to form the Manners, 'tis with this first View the Poet must begin. Now, the Philosopher dwelling on Virtues and Vices in general, the Instructions he gives, serve equally for all States and all Ages; but the Poet has a more immediate regard to his Countrymen, and the pressing Occasions of his fellow Citizens. On this view it is that he chuses his Moral, which he is to insinuate into the People, by accommodating himself to their peculiar Customs, Genius and Inclinations. See how *Homer* has acquitted himself of all this.

He saw the *Greeks*, for whom he wrote, divided into as many States, as Cities; each thereof was a Body apart, and had its Government, independent of the rest. Yet were these different States frequently oblig'd to unite into

one Body against their common Enemies. Here then were two sorts of Government, too different to be commodiously treated in one Poem. The Poet accordingly had Recourse to two Fables; the one for all *Greece*, consider'd as confederated together, only consisting of independent Parts: the other, for each particular State; such as they are in Time of Peace, and without the first Relation. The first is the Subject of the *Iliad*, the second of the *Odysses*. See *ILLIAD* and *ODYSSEES*.

For the first kind of Government, all Experience agrees, that that only Thing can render it happy, and its Designs successful, is a good Understanding, and due Subordination among the several Chiefs that compose it; and that Misunderstandings, a desire of *Sway*, &c. are the inevitable Basis of such Confederacies. The best instruction therefore that could be given them, was to set before their Eyes the Destruction of the People, and even of the Princes themselves, thro' the Ambition and Discord of these latter. *Homer* therefore, for the Ground or Moral of his Fable, chuse this great Truth, that the Misunderstandings of Princes ruin their States. *I sing*, says he, *the Wrath of Achilles so fatal to the Greeks, and which destroy'd so many Heroes, occasioned by a Disagreement betwixt King Agamemnon and that Prince.*

To enforce this Truth, he represents divers confederate States first at Variance, and unprosperous; then reconciled and victorious. All which he thus includes in one universal Action.

Several independent Princes league against a common Enemy; he whom they chuse as their Leader, affronts the bravest of all the Confederacy; upon which the offended Prince withdraws, and refuses any longer to fight for the common Cause. This Misunderstanding gives the Enemy so much Advantage, that the Confederates are ready to relinquish the Enterprise. The dissatisfied Person himself becomes a Sharer in the Calamities of his Allies; one of his chief Friends and Favourites being kill'd by the Chief of the Enemies. Thus, both Parties grown wise at their own Costs, are reconciled. Upon which the valiant Prince again joining in the War, turns the Scale to his own Party, and kills the Enemy's Chief.

Such is the first general Plan of the Poem. To render this probable and more interesting, Circumstances of Time, Place, Persons, &c. are to be added; that is, he looks in History, or Tradition, for Persons, to whom such Action may with Truth or Probability be attributed.

He pitches on the Siege of *Troy*, and supposes the Action to have pass'd there. The brave, choleric Character he calls *Achilles*; the General, *Agamemnon*; the Chief of the Enemies, *Hector*, &c. To insinuate himself unto his Readers, he accommodates himself to their Manners, Genius, Views, &c. And to render his Fable more interesting, makes his chief Persons, and those who remain'd at length victorious, to be *Greeks*, the Fathers of those very People. The Course of the Work is fill'd up, and extended with other useful Lessons and Instructions. See *EROSION*.

That the *Epos* in all its Glory is fill'd justly and strictly by a mere Fable, in the same Sense as the Fictions of *Epos*'s are, is shewn by *M. Boiss*, in a Parallel between the Fable of the *Iliad*, and that of *Epp* already mention'd. The moral Instruction is visibly the same in both: so is the Fiction. All the Difference lies in the Names and Qualities of the Persons.

Homer's are Kings; he calls 'em *Achilles*, *Patroclus*, &c. and the general Good to be preserv'd, he calls the *Greeks*. *Epp*, after this manner, gives his Persons the Names of Beasts. The *Dogs* are confederated, the *Wolf* is their Enemy; and what *Homer* calls the *Greeks*, he calls *Sheep*. One says, that while the confederate Princes are at Variance, *Hector* rushes on the *Greeks*, and makes them pay dear for the Folly of their Sovereigns (*Delirant Reges, plerumque Activi*); but that the Allies, brought by Misfortunes to themselves again, re-unite, repulse *Hector*, and kill him. The other, that while the *Dogs* are together by the Ears, the *Wolf* falls on the *Sheep*; and that the *Dogs*, seeing the *Havock* he makes, join together, drive him away, and kill him.

The two Fables were capable of a still nearer Resemblance. *Homer* has extended his by long Speeches, Descriptions, Comparisons and particular Actions; and that of *Epp* might be amplified after the like Manner, without corrupting or altering it.

There needs only to relate what Cause set the *Dogs* at Variance, and shew the Rise of the fatal Wrath in all its Circumstances; to make fine Descriptions of the Plain wherein the *Sheep* fed, and of some neighbouring Wood, where the *Wolf* was shelter'd; to give this Enemy Whelys to rear; make them follow their Father in search of Prey; and describe the Carnage they made at divers Expeditions; nor would the Genealogy of the Hero's be forgotten. The *Wolf* should boast himself a Descendant of *Lycanus*; and one of the *Dogs* be sprung in a direct Line from *Comitus*.

Which last would be the proper Hero of the Poem, as being hot and apt to be enraged. He would represent the Person of *Achilles* to Admiration; and the Folly of some *Ajax* his Cousin, would afford a good Proof of so divine an Extraction. Nothing more was required to engage Heaven in the Cause, and divide the Gods; which, no Doubt, have as much Right in *Jupiter's* Republic, as in the States of *Homer*. Witness *Jupiter* taking care to give a King to the Nation of the Frogs.

The Reader has here field enough for an Epopea; if he have any thing of Fancy and Expression, and do but take care to repeat, as often as *Homer* does,

Tis δ' αναγκησθησθαι απιστην υδρας εζει.

For the Unity of the FABLE, See UNITY.

FABRICK, the Structure, or Construction of any thing, particularly a Building. See BUILDING.

The Word is form'd of the Latin *Fabrica*, which originally signifies a Forge.

In Italy, the Word *Fabrick* is applied to any considerable Building. In France it rather signifies the manner of building.

FABRICK Lands, are Lands given towards the Maintenance, Rebuilding or Repair of Cathedrals or other Churches; mentioned in the Act of Oblivion, 12 Car. 2. cap. 8. See CHURCH, GLEBE, &c.

In ancient time almost every one gave by his Will more or less to the *Fabrick* of the Cathedral or Parish Church where he lived. See TESTATE.

FABULOUS, denotes some thing that has a Relation to Fable. See FABLE.

Varro divides the Duration of the World into three States or Periods. The first, *Ævum*, the obscure or dark, including all the Time before the Deluge; for the Heathens had some faint Idea of a Deluge, and a Sort of Tradition founded therein; but knew nothing of what had passed before. See DELUGE.

The second Period he calls the *medium, fabulosum Age*, including the Time from the Deluge to the first Olympiad; and making, according to *Petavius*, 1551 Years; or to the Destruction of Troy, which was 1164 Years after the Deluge, or 208 after the Delivery from Egypt. See AGE.

This Period is called sometimes *Fabulosum*, and sometimes *Heroic*. The first, on account of the Fables wherein the History and Learning of those Ages are veil'd: The Second, from the Heroes, or Sons of the Gods, whom the Poets feign to have lived in those Days. See HERO and HEROIC.

FACE, the Surface, or first Side, which a Body presents to the Eye. See SURFACE.

Thus we say, *The Face of the Earth, of the Waters, &c.* *Polyhedrons* have several regular Faces. See POLYHEDRON.

A Die, or Cube has six Faces. See CUBE.

FACE, is particularly used for the Visage of an Animal, and especially of a Man; as being the only Part of the Body, that ordinarily appears bare to the Eye. The Latins call it *Facies, Vultus, Os, &c.* In other Animals it is sometimes call'd *Bill* or *Beak*; sometimes *Snout*, &c. See BILL, &c.

The great Variety observable in Mens Faces, Voices and Hand-writing, furnishes a noble Argument of a Providence. See VOICE.

The human Face is call'd the *Image of the Soul*, as being the Seat of the principal Organs of Sense; and the Place where the Ideas, Emotions, &c. of the Soul are chiefly set to View. Pride and Disdain are shewn in the Eye brows; Modesty on the Cheeks, Majesty in the Fore-head, &c. 'Tis the Face shews the Sex, Age, Temperament, Health, or Disease, &c.

The Face, consider'd as the Index of the Passions, Habitudes, &c. of the Person, makes the Subject of *Physiognomy*. See PHYSIOGNOMY.

Anatomists usually divide it into two Parts, the Upper, and Lower: The Upper is the *Front*, or Fore-head; the Lower includes the *Eyes, Nose, Ears, Mouth, and Chin*. See each Part described under its respective Article, EYE, NOSE, MOUTH, &c.

FACE, or *Facade*, is sometimes used for the *Front* of a Building; or the Side on which the chief Entrance is: as also for the Side it presents to a Street, Garden, Court, &c. And sometimes for any Side opposite to the Eye. See FRONT.

FACE, in Astrology, is used for the third Part of a Sign. Each Sign is supposed to be divided into three Faces. The ten first Degrees compose the first Face; the ten following ones the second; and the last ten the third. *Venus* is in the third Face of *Taurus*, that is, in the first ten Degrees thereof. See SIGN.

FACE, *Facia*, or *Fascia*, in Architecture, is a flat Member, having a considerable Breadth, and but a small Projection: such are the Bands of an Archdrave, Larmier, &c. See FASCIA.

FACE of a Stone, is the Surface or Plain of Stone, which is to lie in the Front of the Work. The Face is easily known when the Stone is scapled, as being always opposite to the Back; and the Back going rough as it comes from the Quarry.

But rough Stones, the Workmen generally chuse to make one of those Sides the Face, which when in the Quarry, lay perpendicular to the Horizon; and consequently the Breacking, and not the Clearing way of the Stone. See STONE.

FACE of a Place, includes the Curtain, together with the two Flanks raised above it, and the two Faces of the Bastion, which look towards one another, and flank the Angle of the Tenaille.

FACE of a Bastion, or of a *Bulwark*, is the most advanced Part of a Bastion towards the Field; or the Distance comprehended between the Angle of the Shoulder, and the Flank'd Angle. See BASTION.

The Face, or Flat of a Bastion, Ravelin, Demi-bastion, Horn-work, Crown-work, &c. is more usually understood of that Part of the Work terminated between the Angle of the Epaulé, and the Flank'd Angle; or between the Point of the Bastion, and the Flank.

FACE prolonged, in Fortification, is that Part of a Line of Defence rasant, which is between the Angle of the Epaulé or Shoulder of a Bastion, and the Curtain; or the Line of a Defence rasant cut by the Length of the Face.

FACEt, or *Facette*, a little Face, or Side of a Body cut into a great Number of Angles.

Multiplying Glasses are cut in *Facets*, or *Facet-wise*.

Diamonds are also cut in *Facets*, or *Tabies*. See DIAMOND.

FACIA, in Architecture. See FASCIA.

FACIES *Hippocratica*, in Medicine, is when the Nostils are sharp, the Eyes hollow, the Temples low, the Tips of the Ears contracted, the Fore-head dry and wrinkled, and the Complexion pale, or livid.

The *Facies Hippocratica* is chiefly observed toward the Period of Phthisis and other Consumptions. It is held a sure Prognostick of Death.

FACTION, a Cabal, or Party, form'd in a State to disturb the publick Repose.

The most celebrated *Factions* in the World were that of the *Guelphs* and *Gibelins*, who kept Italy in Alarm for many Ages; and that of the *Whigs* and *Tories* in England. See GUELPH, TORY, &c.

FACTION, was originally the Name given the divers Troops or Companies of Combatants in the Games of the Circus. Of these there were four, *viz.* the *Green Faction*, the *Blue Faction*, the *Red Faction*, and the *White Faction*. See CIRCUS and COLOURS.

These *Factions*, with their Liveries and Badges were at length abolish'd. The Emulation which was at first between them, growing to such height, that in *Justinian's* Time they came to Blows.

FACTITIOUS, signifies any thing made by Art; in Opposition to what is the Produce of Nature.

Thus Cinnamon is divided into *Natural* and *Factitious*. See CINNABAR.

Distilled Waters are *Factitious Liquors*. See WATER-DE-FACTO, see DE-FACTO.

FACTOR, in Commerce, an Agent or Person who acts, and negotiates for a Merchant, by Commission, call'd also *Commissioner*, and on some Occasions *Broker*, and throughout the *Levant, Coasts*. See COMMISSIONER, BROKER, &c.

Factors are chiefly either charged with the Buying, or the Selling of Goods; or with both.

Those of the first Kind are usually established in Places of considerable Manufactures, or Cities of great Trade. Their Office is to buy up Commodities for other Merchants, residing elsewhere; to see them packed, and send them to the Persons for whom they were bought.

Factors of Sale, are usually fix'd in Places where there is a great Vent. To these, Merchants and Manufacturers send their Goods to be sold for them according to the Price and other Conditions express'd in the Orders deliver'd them.

The Wages, or Allowances for selling, are usually clear of all Expences, of Carriage, Exchange, Remittances, &c. excepting Postage of Letters, which are never set to Account. See FACTORAGE.

FACTORS, in Arithmetick, is a Name given to the Multiplier and Multiplier; by reason they do *facere productum*, make or constitute the Product. See MULTIPLICATION.

FACTORAGE, see FACTOR, BROKER, &c.

The *Factorage*, or Wages, call'd also *Commission*, is different, at different Places, and for different Voyages; at a Medium it may be fix'd at three *per Cent.* of the Value of the Goods bought; beside the Charge of Package, which is pay'd over and above.

At *Virginia, Barbadoes*, and *Jamaica*, the *Factorage* is from three to five *per Cent.* and the like throughout the greatest

greatest Part of the *West-Indies*. In *Italy* it is two and a half. In *Holland* one and a half. In *Spain*, *Portugal*, *France*, &c. two per Cent.

FACTORY, a Place where a considerable Number of *Factors* reside, to negotiate and officiate for their Masters or Principals. See **FACTOR**.

The Term is chiefly used in speaking of the *East-Indies* and other Parts of *Asia*, whither the *European* Nations send their Ships every Year, and keep *Factors* to buy the Commodities of the Country, and sell those brought from *Europe*.

The greatest and noblest *Factory* in the World, is that of the *English* at *Swirra*. It usually consists of 80 or 100 Persons, most of them young Gentlemen of the best Families, and frequently younger Sons of Peers. 'Tis a sort of Seminary of Merchants. As there is a Necessity for serving an Apprenticeship of seven Years, to be entitled to trade to the *Levant*; the Custom is for Persons of Fortune, to bind their younger Sons to some Merchant, who, in Consideration of 5 or 400 Pound Sterling agrees, after the three first Years of their Apprenticeship are expired, to send them to *Swirra*, where they have not only the Management of their Masters Affairs, with very plentiful Allowances, but are likewise permitted to trade for themselves; whereby they are enabled to live splendidly the rest of their Apprenticeship, and at length come out the best qualified for Business of any young Persons in the World. See **COMPANY**.

FACTUM, in Arithmetick, The Product of two Quantities multiplied by each other. See **PRODUCT** and **FACTOR**.

FACULA, in Astronomy, a Name given by *Scheiner* and others after him, to certain Spots on the Sun's Disk, that appear brighter, and more lucid than the rest of his Body. See **SUN**.

The *Facula* or bright Spots differ very considerably from the *Macula* or dark Spots, both in Light, Colour, Figure, Magnitude and Duration. See **MACULA**.

Hewelius assures us, that July the 20th 1634, he observ'd a *Facula* that took up a third Part of the Sun's Diameter. And from the Observations of the same *Hewelius*, we learn, that the *Macula* frequently change into *Facula*; the *Facula* into *Macula* rarely, if ever. Some Authors even contend that all the *Macula* degenerate into *Facula*, e'er they quite disappear.

Huygens however, declares he was never able to discover any *Facula*; though the *Macula* occur'd to him very frequently. All the Foundation he could see for the Notion of *Facula*, was, that in the darkish Clouds which frequently surround the *Macula*, one sometimes discerns little Points or Sparks brighter than the rest.

However, Authors after *Kircher* and *Scheiner*, have generally represented the Sun's Body full of bright, fiery Spots, which they conceive to be a sort of Volcano's in the Body of the Sun: But *Huygens*, and others of the latest and best Observers, finding that the best Telescopes discover nothing of the Matter, agree to explode the Phænomena of *Facula*: Their Cause, these Authors attribute to the tremulous Agitation of the Vapours near our Earth; the same as sometimes shews a little *Uveenne's* in the Circumference of the Sun's Disk, when view'd through a Telescope. Strictly then, the *Macula* are not Eruptions of Fire and Flame, but Refractions of the Sun's Rays in the rarer Exhalations, which being condensed in the Neighbourhood of that Shade, seem to exhibit a Light greater than that of the Sun. See **SUN**, &c.

The Word is pure Latin, *Facula* being a Diminutive of *Fax*, Torch; and suppos'd to be here applied from their appearing and dissipating by turns.

FACULTY, a Power, or Ability of performing an Action. See **POWER**.

The Term is much used by the ancient Philosophers, and still retain'd in the Schools, to explain the Actions of natural Bodies by.

Thus, to account for the Act of Digestion, they suppos'd a Digestive Faculty in the Stomach: To account for Motion, they imagin'd a Motive Faculty in the Nerves, &c. which is only a substituting of one Name of an unknown Phenomenon for another.

Yet this Practice of attributing Effects to their respective Virtues or Faculties, still obtains in divers Things, which our Philosophy has not yet afforded us a better Account of. Thus, say our Medicinal Writers, Senna and Rhubarb have a Purgative Faculty; Barberries an Astringent Faculty, &c. which amounts just to this, that Senna purges, and Barberries binds.

The FACULTIES or Powers of the Soul, are commonly reputed two, viz. of Understanding and Willing. See **POWER**. See also **UNDERSTANDING** and **WILLING**.

A FACULTY of an Animal Body, is defined to be the Principle whereby the Body performs its Functions. This is usually distinguish'd with regard to the several Functions, into Vegetative and Animal.

Under the Vegetative Faculty, are comprehended the

divers subaltern ones, whereby Nutrition and Generation are effected.

Under the Animal Faculties, are comprehended those relating to Sense and Motion.

The Vegetative Faculty then is divided into Nutritive and Generative; and the Nutritive is again subdivided into Natural and Vital.

To the first, belong the Functions of the lower Belly, relating to the Preparation of the Food; to the latter, the Actions of the Heart and Lungs, wherein Life is chiefly concern'd.

Others subdivide the Vegetative Faculty into Attractive, Retentive, Concoctive, and Expulsive.

The Animal Faculties, being those whereby an Animal perceives and moves, become divided into Sensitive and Loco-motive. See **ANIMAL**, **VEGETATIVE**, **VITAL**, **NATURAL**, &c. See also **FUNCTIONS**.

FACULTY is also applied in the Schools, to the divers Parts or Members of an University, divided according to the Arts or Sciences taught or profess'd therein.

There are four Faculties in most Universities: That of the Arts, which includes the Humanities and Philosophy, and which is much the most ancient and extensive: The second, is that of Theology: The third, Medicine: And the fourth, Jurisprudence. See each under its proper Article, **THEOLOGY**, &c. See also **UNIVERSITY**.

The Degrees in the several Faculties in our Universities are, those of Bachelor, Master and Doctor. See **DEGREE**. See also **BACHELOR**, **MASTER** and **DOCTOR**.

The Faculty is frequently used absolutely, and by way of Eminence for that chiefly studied or taught in that Place. Thus, the Faculty of London and Montpellier is Medicine: That of Paris Theology: That of Orleans Law, &c. See **COLLEGE of Physicians**, **SORBONNE**, &c.

FACULTY, as it is restrain'd from the original and active Signification to the particular Understanding in Law, is used for a Privilege or special Power granted to a Man by Favour, Indulgence, and Dispensation, to do that which by Law he cannot: As to eat Flesh upon Days prohibited; to marry without Banes first ask'd.

The Court of FACULTIES belongs to the Archbishop of Canterbury, and his Officer is called *Magister ad Facultates*. His Power is to grant Dispensations, as to marry, to eat Flesh on Days prohibited, the Son to succeed his Father in his Benefice, one to have two or more Benefices incompatible, &c.

The Office where such Dispensations are taken out, is also call'd the FACULTY-OFFICE.

FÆCAL Matter, a Term used by Physicians, particularly the French, for the Feces or great Excrements of a Man, i. e. those discharged by Stool. See **EXCREMENT**.

The Fæcal Matter is become famous for a chymical Operation thereon, by *Monf. Homberg*, related at length in the *Mém. de l'Académie R. An. 1711*. He had a Notion suggest'd to him, that the Fæcal Matter, by Distillation, yielded an Oil clear as Water, without any Smell, and which had the Property of fixing Mercury into fine Silver. Upon this, to work he goes; and because he would have as laudable and promising a Matter as he could, hired four robust healthy young Fellows, whom he shut up for three Months, and agreed with them, that they should eat nothing but the finest Bread, which he supplied them withall fresh every Day, and drink the best Champagne Wine as long as they would. After a long Process, and numerous Essays on the Excrements they made, he at length got the clear, inodorous Oil; but it had no Effect at all on Mercury, which was the great Point aim'd at.

However, missing of what he expected, he fell on something he never dreamt of, viz. a Phosphorus. The Caput Mortuum of the Oil, he found to have a surprizing Property of taking Fire without any Motion, or the Application of any other Fire; inasmuch, that it might deserve a Place in the first Rank of Phosphori known.

The Quantity of a Pea taken out of the Matras, and laid on a Paper, or other combustible Matter, begins to smok immediately, and sets the Paper on Fire. See **PHOSPHORUS ARDENS**.

FÆCES, or FORCES, or FÆCES, the Dregs, Sediment, or Impurities remaining of a mixt Body, after the purer, more volatile and fluid have been separated therefrom by Evaporation, Dissolution, Decantation, Derivation, or the like.

Thus we say the Fæces of Oil, &c. Those of Wines are properly call'd Lees. See **LEES**. Those of Malt-liquors, Grounds. See **GROUND**.

FÆCES is particularly used in Medicine, &c. For the gross, impure Matters found at the Bottom of the Compositions and Preparations of either Pharmacy.

FÆCES, in Chymistry, denotes the Lees, Refuse, Dirt, Mud, Ordures, Impurities, Excrements and heterogeneous Matters remaining in the Alembic after the Distillation of any Body. See **DISTILLATION**.

What remains in the Retort, instead of *Feces*, is properly denominated *Caput mortuum*, or *Terra damnata*. See DAMNATA TERRA, CAPUT MORTUUM.

FÆCES is also used for the Excrements of an Animal voided by Stool: See EXCREMENT.

FÆTOR, Stench. See FOSTOR.

FAGGOT, or **FAGOT**, in Fortification. See FASCINE. *Mouage* derives the Word from the Latin *Facinus*, which was form'd of the Greek *φαίνω*. *Nicod.* borrows it from *Fasciculus*, a Bundle: *Du Cange* from the base Latin *Fagrum*, and *fagorum*.

A *Faggot of Steel* is the Quantity of 120 *l.* weight. In the time of Popery in these Kingdoms, *Faggot* was a Badge wore on the Sleeve of the upper Garment by such as had abjur'd Heresy; being put on after the Person had carried a *Faggot* by way of Penance to some appointed Place of Solemnity. The Leaving this Badge was sometimes construed Apostacy.

FAGGOTS, among the Military Men, are ineffective Persons, who receive no regular Pay, nor do any regular Duty, but are hired, occasionally to appear at a Muster, to fill up the Companies, and hide the real Deficiencies thereof.

FAGONA, in Anatomy, a conglomerate Gland, call'd also *Thymus*. See THYMUS.

FAILLIS, in Heraldry, a *French* Term, denoting some Failure or Flaw in an Ordinary, as if it were broke, and a Splinter taken from it.

FAILURE, or **FAILING**, a Species of Bankruptcy; popularly call'd *Breaking*, or *Stopping Payment*. See BANKRUPT.

FAINT, alias **FAINT-ACTION**, is as much as *seign's Action*; that is such *Action*, as albeit the Words of the Writ be true, yet for certain Causes the Party has no Title to recover thereby. A false *Action* is that where the Words of the Writ are false. *Coke on Littl. fol. 361.* Yet sometimes the two are confounded. See **ACTION**.

FAIR, a publick Place, where Merchants Traders, and other Persons from divers Parts meet, on some fix'd Day of the Year, to buy and sell Commodities, and to partake of the Diversions usually accompanying such Assemblies.

FAIRS are either free, or charg'd with Tolls and Impositions. The Privileges of *Free Fairs* consist chiefly, first, in that all Traders, &c. whether Natives, or Foreigners, are allow'd to enter the Kingdom, and are under the Royal Safeguard and Protection in coming and returning, they and their Agents, with their Goods, &c. 2^d, in that the said Persons and their Effects are exempt from all Duties, Impositions, Tolls and Servitudes. 3^d, That Merchants in going to, or returning from the *Fair*, &c. cannot be arrested, or their Goods stop'd, &c. 'Tis the Prince alone that has a Right, by his Letters Patent, to establish *Fairs*, whether free, or subject to Duties, and the other ordinary Laws and Penalties.

The Word *Fair* is form'd of the *French* *Faire*, which signifies the same Thing. And *Faire* some derive from the Latin *Forum*, Market: Others from the Latin *Feria*, by reason *Fairs* were antiently always held in the Places where the *Wakes*, or *Festivals* of the Dedications of Churches, call'd *Ferias*, were held. See **FERIA**.

The *Romans* call'd them *Nundine*. *Erie Puteanus* has a very pretty little Treatise on the *Fairs* of the *Romans*, *De Nundinis Romanorum*, which he calls *Nova fastorum facula*.

Several *Fairs* are held in the open Fields, or on Heaths & Commons; under Tents, Booths and Barracks erected for the Purpose, as *Sturbridge Fair*, &c. Others in Places wall'd in for the Purpose; and form'd into regular Streets, Lanes, &c. for the Occasion. As the *Fair* of *St. Lawrence* at *Paris*: Lastly, others are held in the open Places and Streets of Cities, as *Barboulouse Fair*, the *Bristol Fair*, the *Fair* of *St. Germain's*, &c.

FAIRS, particularly *Free Fairs*, make a very considerable Article in the Commerce of *Europe*, especially that of the Mediterranean or Inland Parts, as *Germany*, &c. where the continual Passage and Repassage of Vessels is impracticable.

The most celebrated *Fairs* in *Europe* are those, 1. of *Frankfort*, held twice a Year, in Spring and Autumn: The first commencing the Sunday before Palm-Sunday, and the other on the Sunday before the eighth of *September*. Lasts 24 Days, or two Weeks, the first of which is called the *Week of Acceptance*, and the second the *Week of Payment*. They are famous for the Sale of all Kinds of Commodities, but particularly the immense Quantity of curious Books, no where else to be found, and whence the Booksellers throughout all *Europe* used to furnish themselves. Before each *Fair* there is a Catalogue of all the Books to be sold thereat, printed and dispersed, to call together Purchasers; though the Learned complain of divers unfair Practices therein; as fictitious Titles, Names of Books purely Imaginary, &c. beside great Faults in the Names of the Authors, and the Titles of the real Books.—2. The

Fairs of *Leipsick*, which are held thrice a Year; one beginning on the first of *January*, another three Weeks after *Easter*; and a third after *Micahemas*. They hold twelve Days a-piece, and are at least as considerable as those of *Frankford*. 3. The *Fairs* of *Novi*, a little City in the *Milanese*, under the Dominion of the Republic of *Genoa*: There are four in the Year, commencing on the second of *February*, the second of *May*, the first of *August*, and second of *September*. Tho' the Commodities bought and sold here be very considerable; yet, what chiefly contributes to render them so famous, is the vast Concourse of the most considerable Merchants and Negotiators of the neighbouring Kingdoms for the transacting of Affairs, and settling Accounts. 4. The *Fairs* of *Riga*, whereof there are two in the Year; one in *May*, and the other in *September*. They are much frequented by the *English*, *Dutch* and *French* Ships, as also from all Parts of the *Baltick*. The best Time for the Sale of Goods at *Riga*, is during the *Fairs*. Since the Building of the famous City of *Petersbourg*, these *Fairs* have suffer'd some Diminution. 5. *Fair* of *Archangel*, during which, all the Trade Foreigners have with that City, is managed. It holds a Month, or six Weeks at most, commencing from the middle of *August*. The *Miscovite* Merchants attend here from all Parts of that vast Empire; and the *English*, *Dutch*, *French*, *Swedish*, *Danish* and other Ships in the Port of that City, on this Occasion, ordinarily amount to three hundred. But this is no *Free Fair*, as the rest are. The Duties of Exportation and Importation are very strictly paid, and on a very high footing. 6. The *Fair* of *St. Germain*, one of the Suburbs of *Paris*, commencing on the third of *February*, and holding till *Easter*; tho' it is only free for the first fifteen Days. 7. The *Fairs* of *Lyons*, which *Mont. du Chesne*, in his Antiquity of Cities, would insinuate from a Passage in *Strabo*, were establish'd by the *Romans*: Tho' 'tis certain, the *Fairs*, as they now stand, are of a much later Date. There are three in the Year, each lasting twenty Days, and free for ever. They begin on *Easter* Monday; the 26th of *July*; and the first of *December*. 8. *Fair* of *Gaiubray*, a Suburb of the City *Falaise* in the lower *Normandy*. It is said to have been establish'd by our *William* the Conqueror, in Consideration of his being born at *Falaise*. It commences on the 16th of *August*, and holds 15 Days, free by Charter, and longer by Custom. 9. *Fair* of *Beaucaire*, held partly in a City of that Name, in *Languedoc*, and partly in the open Country, under Tents, &c. It commences on the 22d of *July*, and only holds for three Days; yet it is the greatest and most celebrated of all the *Fairs* in that Part of *Europe*, both for the Concourse of Strangers from all Parts of the World; and for the Traffick of all kind of Goods: The Money return'd in these three Days amounting sometimes to above six Million of *Livres*.

The *Fairs* of *Porto-bello*, *Vera Cruz*, and the *Havana*, are the most considerable of all those in *America*. The two first last as long as the *Flota* and *Gallions* continue in those Parts; and the last is open'd as soon as the *Flota* or *Gallions* arrive there upon their Return for *Spain*; this being the Place where the two Fleets join. See **FLOTA**, and **GALLIONS**.

FAIR Pleading. See **BEAO-PLEADING**.

FAIRY, a Term frequently occurring in antient Traditions and Romances, denoting a kind of Genii, or imaginary Deities, conversant on Earth, and distinguish'd by a abundance of fantastical Actions and Offices, either good or evil.

The *Fairies* are a peculiar species of Divinities, that have but little Relation to any of those of the antient *Greeks* and *Romans*; unless perhaps to the *Larvæ*. See **LARVÆ**. Tho' others, and with Reason, won't have them rank'd among *Gods*; but suppose them an intermediate kind of Beings, neither *Gods*, nor *Angels*, nor *Men*, nor *Devils*.

They are of *Oriental* Extraction, and seem to have been invented by the *Persians* and *Arabs*, whose History and Religion abounds with Tales of *Fairies* and *Dragons*. The *Persians* call them *Peri*, and the *Arabs* *Ginn*, having a peculiar Country, which they suppose them to inhabit, call'd *Ginnistan*, and by us *Fairy Land*. Our great Countryman *Spencer's* Master-work, the *Fairy Queen*, is an Epic Poem under the Persons and Characters of *Fairies*.

Naudæ, in his *Meteorat* derives the Origin of our Fables of *Fairies*, from those of the *Parææ* of the Antients; and supposes both the one and the other to have been a kind of Envoys, or Interpreters of the Will of Heaven to Men. But then, by *Fairies* he means a sort of Witches, famed for foretelling future Events, by means of some Communication with the Genii above-mentioned. The silly superstitious Notions of the Antients, he observes, were not near so formidable as ours; nor their Hell and Furies any thing comparable to our Devils. Accordingly, in lieu of our Hags and Witches, who do nothing but ill, and are employ'd in the lowest, basest Offices, they had a sort of finer Goddesses, call'd by Latin Authors *Albas Dominas*, who scarce did any thing but good, and took Pleasure in noble, honourable

Deeds: Such were their *Lamia*; and *Nymph Egeria*; from whom the later fairy Queens, *Morga*, *Alana*, *Fata Manto* of *Aristo*, *Gloriana* of *Spencer*; and other Machines in *English* and *French* Fable were, no doubt, deriv'd. Some of them are usually made to attend the Births of young Princes and Cavaliers, to inform them of their Destiny, as was antiently done by the *Parce*, witness *Hyginus*, c. 171, and 174.

But with *Nanda's* Leave, the Antients were not without Witches, as wicked as our own; witness the *Canidia* of *Horace* Epod. IV. Od. V. & *Satyr* L. I. No. did the *Fairies* succeed the *Parce*, or even *Venifce* of the Antients; but rather the *Nymphs*: for such were *Lamia* and *Egeria*. See *Nymph*, *PARCE*, &c.

Fairy Circle or *Ring*, is a Phenomenon pretty frequent in the Fields, &c. being a kind of Round, suppos'd, by the Vulgar, to be trac'd by the *Fairies* in their Dances.

There are two kinds; one of them seven or eight Yards in Diameter, containing a round bare Path, a Foot broad, with green Grass in the Middle: The other, of divers Bignesses; being inclos'd with a Circumference of Grass, much frether and greener than that in the Middle.

Mr. *Jesop* and Mr. *Walker*, in the *Philos.* *Tranfact.* ascribe them to the Lightning; which is confirm'd by their being most frequently produc'd after Storms of that kind; as well as by the Colour and Brittleness of the Grass's Roots, when first observ'd. 'Tis no Wonder that Lightning, like all other Fires, moves round, and burns more in the Extremity than the Middle.

According to those Gentlemen, the second Kind of Circle arises originally from the first: The Grass burnt up by the Lightning, ussng to grow the more plentifully afterwards.

Other Authors have asserted, that these *Fairy Rings* are form'd by Ants; by reason those Insects are sometimes found travelling in Troops therein.

FAITH, in Philosophy, call'd also *Belief*, is that Assent we give to a Proposition advanc'd by another, the Truth of which Proposition we don't immediately perceive, from our own Reason or Experience, but believe it discover'd and known by the other: Or, *Faith* is a Judgment or Assent of the Mind, the Motive whereof is not any intrinsic Evidence, but the Authority or Testimony of some other, who reveals, or relates it. See *REASON*.

Hence, as there are two Kinds of Authorities or Testimonies; the one of God, and the other of Man; *Faith* becomes distinguish'd into *Human*, and *Divine*.

Divine FAITH is that founded on the Authority of God; 'tis that Assent we give to what is affirm'd by God. The Object of this *Faith* is Matters of Revelation. See *REVELATION*.

Human FAITH is that whereby we believe what is told us by Men: The Object hereof is Matter of human Testimony and Evidence. See *TESTIMONY*, and *EVIDENCE*.

Faith again, may be distinguish'd into *implicit*, and *scientific*.

Implicit or *blind FAITH* is that whereby we give our Assent to a Proposition advanc'd by another, of whose Knowledge and Veracity we have no certain and evident Reason or Proof; and this is only *Opinion* under another Name. See *OPINION*.

Scientific or *seeing FAITH*, is that by which we give our Assent to a Proposition advanc'd by one who can neither deceive, nor be deceiv'd; which may be properly refer'd to *Science* or *Knowledge*. See *KNOWLEDGE*.

Divine Faith, *ceteris paribus*, is stronger than human. When we are fully convinc'd that any Proposition comes from God, *Faith* becomes Assurance, or Science; it being an Ingredient in our Idea of God, that he can neither deceive, nor be deceiv'd: But when there is any Doubt, whether the Proposition is declared by God, or whether he has commanded that we should believe such a Thing; the *Faith* can be no stronger, or weaker than the *Reason* on which it is founded: *Divine Faith* therefore, may either be strong, weak or none at all.—Again, the Reasons or Motives of believing Men, may be of such Weight and Force, that being perfectly understood, they may equal a mathematical Evidence: And then the human *Faith* is scarce inferior to the Divine; there being, as it were, an equal Necessity of giving our Assent on each Side. See *CREDIBILITY* of *human Testimony*.

Hence it is easily observ'd, that all our *Faith* or *Belief* has its Foundation on Reason, which cannot deceive us, if we make a due Use of our Liberty, and do not acquiesce, till it necessarily compels us. See *LIBERTY*, and *JUDGMENT*.

Strictly, and philosophically speaking, no Man can have what we call a *Divine Faith*, but a Prophet, to whom God has immediately spoken. See *PROPHET*, and *PROPHECY*.

All our present religious *Faith* is really *human*, as depending on the secondary Testimony of Men; of whose Veracity however, we have the strongest Proofs. The Prophets, or those to whom God immediately revealed his Will, believ'd him,

for that they knew he could not deceive. We, at this Day, believe them, or rather their Writings, for other Reasons, viz. the same which oblige us to believe all undoubted Histories. See *REVELATION*.

FAITH, in Theology, is the first of the Theological Virtues, or Graces. See *GRACE*.

Faith, in this Sense, is a Gift of God, whetby we are led to give a firm Assent to the Truths he has reveal'd to his Church: Or, *Faith* is a Gift or Impression, which leads us to give our Assent to certain Things relating to God, his Nature, Attributes, Worship, Truth, &c. The Evidence of which Things, we do not see and understand clearly enough, to have given our Assent on the common Footing of Reason, and Necessity. See *REVELATION*, and *TRUTH*.

St. *Paul* defines *Faith* the Substance or Support of Things hoped for, and the Evidence of Things not seen. The Life of *Faith* consists in serving God without knowing him in any sensible manner. *Nicole*.

Beside the two Species of *Faith*, human and divine; the Romanists make a third, or intermediate Kind, call'd

Ecclesiastical FAITH, which is the Assent, orthodox Persons give to certain Events decided by the Church, and propos'd to be believed of all: As when she declares that such a Book contains heretical Doctrine: That such a Person is in Heaven, &c. This Term, *Ecclesiastical Faith*, was first introduc'd by Mr. *Perefixe*, to distinguish the *Faith* whereby we believe Matters of Divine Revelation, from those of Ecclesiastical Determination.

Confession of **FAITH**, is a *Creed* or *Formula* containing all those Articles, the Belief whereof is esteem'd necessary to Salvation. See *CREED*, and *SYMBOL*.

FAITH and *Honage*, in the Feudal Law. See *FALTY*. **FAKIR**, or *Faqur*, a kind of Dervise, or Mahometan Religious, who travels the Country, and lives on Alms: Or rather, as *Herbelot* observes, *Fakir* and *Dervise* are the same thing.

The *Turks* and *Persians* use the Name *Dervise* for any poor Person, whether he be so out of Necessity, or Choice: And the *Arabs* apply *Fakir* in the same Sense. Whence, in some Countries of Mussulmanism, the Religious are call'd *Dervises*; and in others, particularly throughout the States of the great *Mogul*, *Fakirs*. See *DERVISE*.

The *Fakirs* sometimes travel singly, and sometimes in Companies. When they go in Companies, they have a Superior, who is distinguish'd by his Habit. Each *Fakir* bears a Horn, which he blows at his Arrival in any Place, as also at his Departure; and a kind of Scrapper or Trowel, to scrape the Earth in the Place where he sits or lies down. When they go together, they divide their Alms equally amongst them; give what is left every Night to the Poor, and never reserve any thing for the Morrow.

There are also a kind of idolatrous *Fakirs*, who follow much the same Trade. *D. Herbelot* reckons in the *Indies* eight hundred thousand Mahometan *Fakirs*; and twelve hundred thousand idolatrous ones: To say nothing of divers extraordinary species of *Faqurs*, particularly *Penitents*; whose Mortification and Penance consists in very odd Observances. Some, e. g. remain Night and Day for many Years in certain uneasy Postures. Others never sit or lay down to sleep, but sustain themselves by a Rope, hung down for the Purpose. Others bury themselves in a Ditch, or Pit, for nine or ten Days without eating or drinking. Others keep their Arms lifted up to Heaven, so long, till they cannot let them down again, if they would. Others lay Fire on their Heads, and burn the Scalp to the very Bone. Others roll themselves naked on Thorns. *Tavernier*, &c.

Another Class of *Fakirs*, retire unto Mosques, live on Alms, and devote themselves to the Study of the Law, the reading of the *Akoran*, &c. to fit themselves for *Moulas* or Doctors.

People of Quality sometimes assume the Character and Quality of *Fakirs*: And the famous *Orangzeb* himself, e'er he ascended the Throne, gave out, that he intended to commence *Fakir*.

The Word *Fakir* is *Arabic*, and signifies a poor Person. It is form'd of the Word *فقر*, *fakara*, to be in want.

FALCATED, one of the Phases of the Plants, popularly call'd *Horned*. See *PHASES*.

The Astronomers say the Moon, or any Planet appears *Falcated*, when the enlighten'd Part appears in form of a Sickle, or Reaping-hook, by the *Latins* call'd *Fals*.

The Moon is *Falcated*, whilst she moves from the Conjunction to the Opposition, or from New Moon to Full; from Full to a New again, the enlighten'd Part appears gibbous, and the dark *Falcated*. See *MOON*.

FALCON, or *Falcon*, a Bird of Prey, of the Hawk-kind, superior to all others for Goodness, Courage, Decibilty, Gentleness, and Nobleness of Nature. See *HAWK*.

The *Falcon* or *Falcon Gentle*, is both for the Fill, and the Lure: Its Feet are yellow, its Head black, and Back spotted. In the Choice, observe that the Head be round,

the Beak thick and short, the Neck long, the Shoulders broad, Thighs long, Legs short, Feet large, the Feathers of the Wings slender, Pounces black, &c.

The *Falcon* is excellent at the River, Brook, and even Field; and flies chiefly at the larger Game, as Wild-geese, Kite, Crow, Heron, Crane, Pyc, Shoveler, &c.

It must be added, that the Name *Falcon* is restrain'd to the Female; for as to the Male *Falcon*, 'tis much smaller, weaker, and less courageous than the Female, and therefore denominat'd *Taffel*, or *Tiercelot*.

John de Jaenna, and several others, take the Name *Falcon* to have been occasion'd by its crooked Talons, or Pounces, which resemble a *Fals* or Sickle. *Giraldus* derives it a *falcando*, because it flies in a Curve.

As in the Course of this Work, the several Terms of Falconry are explain'd, it may be here necessary to say something in the general, of the Management and Discipline of the *Falcon*, as being the Foundation of the Art of *Falconry*. For the rest, the Reader may have Recourse to the Heads *HAWK*, and *HAWKING*.

When a young *Falcon* is first taken, she must be *feet'd*; and the Sealing at length gradually slacken'd, that she may be able to see what Provisions are brought her. Her Furniture is to be Jesses of Leather, maid Leashes, with Buttons at the End, and Bewets. Beside, a small round Sack hanging in a String to stroke her frequently withal; which, the oftener 'tis done, the sooner and better will she be man'd. Two Bells on her Legs, that she may be the more readily found, or heard when she sits, scratches, &c.: And a Hood rais'd, and hold'd over her Eyes. Her Food to be Pidgeons, Larks, and other live Birds, of which she is to eat twice or thrice a Day, and till she be full gorged. When the *Falconer* is about to feed her, he must hoop and lure, that she may know when to expect it. Then unhooding her gently, he gives her two or three Bits, and putting her Hood on again, gives her as much more; but takes care she is cloas't feed'd, and after three or four Days lessens her Diet. At going to bed, he sets her on a Pearch by him, that he may awake her often in the Night; continuing to do so, till she grow tame and gentle. When she begins to feed eagerly, he gives her Sheep-heart; and now he begins to unhood her by Day, but it must be done far from Company: Feeds her and hoods her again; and feeds her as before, but takes care not to fright her with any thing, when he unhoods her; and if he can, reclaim's her without over-watching. The *Falcon* must be born continually on the Pitt, till she be thoroughly man'd, and induc'd to feed in Company: For two or three Days give her wash'd Meat, and then Plumage, according as you esteem her soul within; if she cast, hood her again, and give her nothing till the gleam after her Casting: But when she has gleamed and cast, give her a little hot Meat in Company; and towards Evening let her plume a Hen's Wing, likewise in Company: Cleanse the Feathers of her Casting, if foul and stinky: If she be clean within, give her gentle Casting; and when she is well reclaimed, man'd, and made eager and sharp set, you must venture to feed her on the Lure.

But three things are to be consider'd before your Lure be strew'd her. 1. That she be bold and familiar in Company, and not afraid of Dogs and Horses. 2. Sharp-set and hungry, having regard to the Hour of Morning and Evening when you would lure her. 3. Clean within, and the Lure well garnish'd with Meat on both Sides. When you intend to give her the Length of a Leaf, you must abscond your self: She must also be unhooded, and have a bit or two given her on the Lure, as she sits on your Feet. That done, take the Lure from her, and so hide it that she may not see it: When she is unfeet'd, cast the Lure to near her, that she may catch it within the Length of her Leash; and as soon as she has seiz'd it, use your Voice as *Falconers* do, feeding her upon the Lure on the Ground.

After having lur'd your *Falcon*, in the Evening give her but little Meat; and let this Luring be so timely, that you may give her Plumage, &c. next Morning on your Pitt: When she has cast and gleamed, give her a little beaching of warm Meat: About Noon, give her a Creance to her Leash, go into the Field, there give her a bit or two upon the Lure, and unfeet her; if you find she is sharp-set, and has eagerly seiz'd on the Lure, let a Man hold her, to let her off to the Lure; then unwind the Creance, and draw it after you a good way, and let him who has the Bird, hold his Right-hand on the Tassel of her Hood readily to unhood her, as soon as you begin to lure; to which if she come well, stoop readily upon it, and hastily seize it, let her cast two or three bits thereon. That done, unfeet, rake her off the Lure, and deliver her again to the Person that held her; and going further off the Lure, feed her as before; and so daily farther and farther off the Lure. Afterwards, you may lure her in Company, but do not fright her: And having us'd her to the Lure on foot, do it

also on Horse-back; which may be sooner accomplish'd, by causing Horsemen to be about you, when you lure her on Foot: 'Tis also sooner done, by rewarding her upon the Lure on Horse-back among Horsemen. And when she is grown familiar this way, let somebody a-foot hold the Hawk, and he that is on Horse-back, must call, and call the Lure about his Head, while the Holder takes off the Hood by the Tassel; and if she seize eagerly on the Lure without fear of a Man or Horse, then take off the Creance, and lure at a greater Distance, Lastly, if you would have her love Dogs as well as the Lure, call Dogs when you give her Plumage. See *BATHING*, *ENSEAMING*, &c.

FALCON, } in Gunnery { See FAUCONET, and
FALCONET, }
FALCONER, a Person who brings up, tames, tutors, and manages Birds of Prey; as *Falcons*, *Hawks*, &c. See *FALCONRY*.

The Grand Seigneur usually keeps six thousand *Falconers* in his Service.

The French King has a *Grand Falconer*, which is an Office dismember'd from that of Great Hunt, Grand Veneur. The Historians take notice of this Post as early as the Year 1250.

One great Business of the *Falconer*, is to consider the Quality and Mettle of his Birds, to know which to fly early, and which late. He must also be busy and cleanly in freeing them of Lice, Nits, and Vermine. Every night after flying, he should give his Bird Casting; nor must he forget to water her, unless she have been bath'd. After this, she must be put in a warm Room, having a Pearch with a Candle burning by her; where she is to sit unhooded, that she may prance and pick her self. Next Morning she should be weather'd, &c.

FALCONRY, or FAUCONRY, the Art of taming, managing, and tutoring Birds of Prey, particularly *Falcons* and *Hawks*; and employing them with Advantage in the Pursuit of Game, call'd also *HAWKING*.

The Word is form'd of *Falco*, *Falcon*, or *Faucon*, the Bird of most Use and Esteem in this kind of Sport. See *FALCON*.

Falconry, as now practic'd, was unknown among the Greeks and Romans. All their Writings don't furnish so much as a proper Name to call it by: So far are they from teaching us the Terms. 'Tis the French Language alone, that has particular Words for all the Parts of *Falconry* and *Hunting*; and from them most of our Terms, as well as what we know of the Art it self, are borrow'd.

The Writers of Reputation on *Falconry*, are *Desparon*, *Franchiere*, *Tardif*, *Arrelonche*, *Dalagona*, and *Latham*. *M. de S. Murbr* has put the Principles of the Art into fine Latin Verses, in his *Hieracoglyphon, sive de re accipitraria, libri tres*.

FALDAGE, an ancient Privilege, which several Lords reserved to themselves of setting up Sheep-folds, or Pens, in any Fields within their Manors, the better to manure them; and this not only with their own, but with their Tenants Sheep.

This was also term'd *Setta Falda*; and in some old Characters *Fold-foca*; and in some Places a *Fold-course*, or *Fres-fold*.

FALL, *Descent*, in Physics, the Tendency of any heavy Body towards the Center of the Earth. See *DESCENT*.

Gallies first discover'd the Ratio of the Acceleration of falling Bodies, viz. That dividing the whole Time of falling into equal Parts, the Body will fall thrice as far in the second Moment, as in the first; five times as far in the third; sev'n times in the fourth, &c. and so on in the Order of the uneven Numbers. See *ACCELERATION*.

For the Cause of the FALL of Bodies, see *GRAVITY*.

For the Laws of the FALLING Bodies, see *DESCENT*.

Water-FALL, see *CATARACT*.

FALL, is also us'd in a moral Sense; as the *Fall of Adam*.

See *ORIGINAL SIN*: The *Fall of the Roman Empire*, &c.

Authors contend, that *Plato* had a Notion of the *Fall of Adam*, which he had learn'd from *Moses*. *Euseb. de Preparat. Evangel. L. vi. c. 11.* quotes a Fable in *Plato's* *Symposium* wherein he finds the whole History, allegorically related.

FALL, in Music and Poetry. See *CADENCE*, *EPICRAM*, &c.

FALLACY, a Deception, or false Appearance or Report. See *ERROR*, and *TRUTH*.

The *Epicureans*, deny that there is any such thing as a *Fallacy of the Senses*. According to them all our Sensations, and all our Perceptions, both of Sense and Phantasy, are true: So that Sense is the first grand Criterion of Truth. That the Senses are never deceiv'd, they argue from their being incapable of all Ratiocination and Remembrance: Hence they can neither add, take away, couple, nor disjoin; they cannot, therefore, infer, or conclude, or invent; and consequently cannot deceive by any Inference, or Invention. 'Tis the Mind may do, but not the Sense, whole only

only Business is to apprehend what is present. *E. gr.* Colours, not to discern or distinguish between this Body and that. But a Thing that barely apprehends without pronouncing any thing, cannot deceive. Add, that there is nothing to convict our Senses of Fallshood. The right Eye, *e. gr.* cannot convict the left; nor *Plato's* Eyes, those of *Socrates*; and since the Reasons or Pretensions of each are equal, and the fur-blind Person sees what he sees as much as the *Iguenens*. Nor can a Sense of one Kind convict another; as the Sight, the Smell; by reason their Objects are different; and consequently their Reports, or Judgments are not of the same Things. Thus again, if I see a Stick straight, when out of the Water; but when in it, crooked: My Perception is altogether as true in the latter, as in the former Case; *i. e.* 'Tis as true that I have the Perception or Idea of the crooked Stick, as of the straight one. And this Idea is all that the Sense suggests; so that it does not deceive. Lastly, Reason cannot shew our Senses mistaken, since all reasoning depends on previous Sensations; and the Senses must first be true, before any Reasoning founded thereon, be so. Thus, the *Epicureans*; whose System is strongly confirm'd by what we have already laid down from *Mr. Berkeley*, concerning the *EXTERNAL World*.

The *Cartesians*, on the other hand, are continually crying out against the Senses, as the great Sources of all Deception. Every thing, which our external Senses present us, they say, should be suspected as false, or at best dubious, till our Reason has confirm'd the Report. They add, that our Senses, as being *fallacious*, were never given us by Nature, for the Discovery of any thing of Truth, but only to point out what Things are convenient, or hurtful to our Bodies.

The *Peripateticks* keep a middle Course: They hold, that if a sensible Object be taken in its common or general View, the Sense cannot be deceiv'd about it; for the Sight can see nothing but what is visible; nor can it err in perceiving what is visible *quatenus* such. But they add, that if the Object be taken under its specific View, the Sense may be mistaken about it, *viz.* from a Want of the Dispositions necessary to a just Sensation, as an Indispotion in the Eye, in the Medium, &c. See *SENSE, REASON, &c.*

FALLACY, in Logic, or *Syllogistic Fallacy*, is a captious Argument, call'd also a *Sophism*. See *SOPIHISM*.

Fallacies either arise from Words, or Things: The Foundation of all Illusion and Fallacy in Words, is that one Article of *Ambiguity*; which is of two Kinds, *viz.* a simple *Homonymy*, and an *Anaphorology*. See *HOMONYMIA*, and *AMPHILOGOLOGY*.

The Kinds of Fallacy in Things are very numerous, but may be reduc'd to seven Heads, *viz.* *Ignoratio Elenchi*, *Petitio Principii*, *falsa Causa*, *Interrogatio multiplex*, *Limitatio vitiosa*, *Accidens & Consequens*. See *ELENCHI*, *PETITIO PRINCIPII*, &c.

FALLING SICKNESS, See *EPILEPSY*.

Dr. Furberville in the *Philosoph. Transact.* gives the History of a Patient, much troubled with the *Falling Sickness*. In her Urine he observ'd a great Number of short Worms, full of Legs, and like *Mille-podes*. While these continued lively, and full of Motion, the Fits return'd daily; but upon prescribing her half an Ounce of *Oxymel Heliboratum* in *Tansley Water*, the Worms and the Distemper were both effectually destroy'd.

FALLOPIAN Tubes, in Anatomy, two Ducts arising from the Womb, one on each Side of the Fundus thereof, and thence extended to the Ovaries; having a considerable Share in the Affair of Conception. See *CONCEPTION*.

They are call'd *Tube*, *i. e.* *Trumpets*, in respect of their Form; for that in their Rise or Opening into the Womb, they are exceedingly small, so as scarce to admit a knitting Needle; but in their Progress, towards the Ovaries, they grow much bigger; and at length are capable, to receive the Finger: From whence they contract again; and at the Extremity next the Ovaries, are expanded into a sort of *Flauch* or *Foliage*, which is fringed round with innumerable little Fibres, bearing some Resemblance to the *Flauch* of a Trumpet.

These Tubes are four or five Inches long: They consist of a double Membrane, derived from the outer and inner Membranes of the Uterus. The Extremity next the Ovary, at the Time of Impregnation, at which Time the whole Tube is expanded, reaches to, and embraces the Ovary; tho' at other times it seems to fall a little short of it, and is only slightly tied by the Fringe, to the Under-side of the Ovary.

The Use of these Tubes, is to convey the Seed, or rather Ova of Women, and other Animals, from the Testicles, or Ovaries, into the Uterus, or Womb. See *OVARY*, and *UTERUS*.

Their inner Substance is compos'd, in good Measure of Ramifications of Veins, and Arteries, which form a Kind

of reticular, or cavernous Body, not unlike that of the Clitoris. This Structure makes them capable of Dilatation, and Contraction, according to the Quantity, and Stop of the Blood; and consequently, of being, as it were, erected, in Cold, and of embracing the Ovary at that Time, which in their State of Flaccidity they did not. See *GENERATION*.

They take their Denomination *Fallopian*, from *Gabriel Fallopius*, a *Modenes*, who died in 1562; and who is commonly reputed their first Inventor; tho' we find them described long before him, in *Rafus of Ephesus*.

The Ova, or Embryos, are sometimes detain'd in the *Tube Fallopiana*, and cannot make their Way into the Womb. See *FERTUS*.

Instances of this Kind, have frequently been met withal in Dissections. But the most remarkable, is that related by *Abraham Cyprianus*, a celebrated Physician of *Amsterdam*, in a Letter, address'd to *Sr. Tob. Millington*, wherein he describes the Manner, in which he drew a *Fetus* 21 Months old, out of the *Tube* of a living Woman, who lived and had several Children after the Operation.

FALLOW, a Colour, of a palish red, like that of a Brick half burnt; as a *Fallow Deer*, &c.

FALLOW Field, or *Fallow Ground*, is Land laid up; or that has lain untill'd for a considerable Time.

So, to *Fallow*, is to prepare Land by plowing, long before it is plow'd for Seed. To do this twice, is to *twifallow*, and thrice, to *trifallow*. See *PLOUGHING*.

FALSE Arms, in Heraldry, are those wherein the fundamental Rules of the Art are not observ'd: As if Metal be put on Metal; or Colour on Colour, &c. See *ARMS*.

FALSE Attack, in War, a feigned Attack, intended to draw all the Enemy's Force to one side, in order to favour a real Attack, intended in another Part. See *ATTACK*.

FALSE Braye, in Fortification, a small Mount of Earth, four Fathom wide, erected on the Level round the Foot of the Rampart, on that Side towards the Field, and separated by its Parapet from the Berme, and the Side of the Moat.

It is made use of to fire upon the Enemy, when he is already so far advanced, that you cannot force him back from off the Parapet of the Body of the Place; and also to receive the Ruins, which the Cannon make in the Body of the Place.

FALSE Claim, is where a Man claims more than his Due. See *CLAIM*.

FALSE Conception. See *MOLE*.

FALSE Diamond, a Diamond counterfeited with Glass. See *DIAMOND*.

FALSE, or *False Position*, in Arithmetick. See *POSITION*.

FALSE Flower, a Flower, which does not seem to produce any Fruit; as those of the Hazle, Mulberry-Tree, &c. Or a Flower, that does not arise from any Embryo, or that does not knit; as those of the Melon, Cucumber, &c. See *FLOWER*.

FALSE Imprisonment, is a Trespass committed against a Man, by imprisoning him without lawful Cause. It is also us'd for the Writ brought upon this Trespass.

FALSE Keel, in a Ship, is a second Keel, which is sometimes put under the first, to make it deeper. See *KEEL*.

FALSE Muster, is when such Men pass in Review, as are not actually listed as Soldiers. See *MUSTER*, *FAGOT*, &c.

FALSE Opal. See *GIRASOL*.

FALSE Prophecies, See *PROPHECIES*.

FALSE Roof of a House, is that Part between the upper Rooms, and the Covering. See *ROOF*.

FALSE Money, } See { MONEY.

FALSE Weights, &c. } See { WEIGHT, &c.

FALSE Ribs, } See { SPURIOUS RIBS.

FALSE Birth, } See { ABORTION.

FALSEHOOD, *Falseness*, in Philology, an Act of the Understanding, representing a Thing, otherwise than it is, as to its Accidents: Or, a false Enunciation, or Judgment of any Thing: As if a Person should judge, that the King of Spain is in America. See *ERROR*, and *TRUTH*.

The Circumstance, as to its Accidents, is of absolute Necessity in the Definition; inasmuch as a thing cannot be represented otherwise than it is as to Essentials: for in such Case the Essence of the thing would not be represented: And since the Essence is the Thing it self, it would not be that Thing, which is represented, but another.

There is no *Falseness* in Apprehension, or Sensation: Our Ideas of Sense are all just, and true, so far as they go; and all our Delusions arise from our Reasonings and Conclusions. See *FALLACY*.

The School-men distinguish *Falseness* into *Objective*, which is the Object of the false Judgment; *e. gr.* the King of Spain being in America: *Existitive*, that of the Things appearing what it is not, and thus occasioning the Fallacy: And *Transcendental* and *Metaphysical*; which is a Repugnancy to the Essence, nor Essentials of the Thing.

CRIMEN FALSI, in the Civil Law, is a fraudulent Subornation, or Concealment, with design to darken, or hide the Truth, and make Things appear otherwise, than they are. The

The *Crimen Falsi* is committed three ways; by Words, as when a Witness swears falsely. See PERJURY. By Writing, as when a Man frames or alters something, antedates a Contract, or the like. See FORGERY. And by Deed, as when he sells by false Weights, or Measures, debases the Coin, &c.

FALSO Judicio, a Writ, which lies for false Judgment, given in the *County Court*, *Court Baron*, or other Court, not of Record.

FALSO Retorno Brevium, a Writ, which lies against the Sheriff for making false Returns of Writ. See RETURN.

FALK, in Anatomy, a Part of the Dura Mater, defending between the two Hemispheres of the Brain, and separating the Fore-part from the hinder. See DURA Mater.

It is call'd *Falsæ*, i. e. *Sickle*, by reason of its Curvature, occasion'd by the Convexity of the Brain. See BRAIN. It divides the Brain, as low as the *Corpus callosum*.

FAMES Canina, by the Greeks call'd *Cynodes Arenis*, q. d. Dog appetite, is such an insatiable Hunger, as is not to be satisfied with Eating; but continues, even when the Stomach is full. See BULIMIA.

This is a Case, much talk'd of by Antients; but rarely met with amongst us.

It may be suppos'd, to arise from sharp fretting Juices in the Stomach, which by their continual Vellications excite a Sense like that of Hunger. See HUNGER.

FAMILIA, *Family*, commonly implies all the Servants, belonging to a particular Master.

In another Sense, 'tis taken for a Portion of Land, viz. as much as is sufficient to maintain one Family.

The Term *Hide* is by our Writers sometimes call'd a *Mansie*; sometimes a *Family*; and sometimes *Curvata*, or a *Plow-land*; containing as much as one Plow and Oxen could cultivate in a Year. See HIDE, PLOUGH-LAND, &c.

FAMILY of Curves, is a Congeries of several Curves of different Orders, or Kinds; all which are defin'd by the same indeterminate Equation, but in a different Manner, according to their different Orders.

Suppose, e. g. the indeterminate Equation, $a^m - x^m = y^n$. If $m=2$, $ax=y^2$. If $m=3$, $a^2x=y^3$. If $m=4$, $a^3x^2=y^4$, &c. in Infinitum. All which Curves are said to be of the same Family. See CURVE.

FAN, a Machine, us'd to raise a Wind, and cool the Air, by agitating it.

The Custom which now prevails among the Ladies, of wearing Fans, was borrow'd from the East; where the hot Climate renders the Use of Fans and Umbrellas almost indispensable. It is not long, since the European Women first began to use a kind of Fans, made of Leather, in the Summer time: But they are now found of Necessity in Winter.

In the East they chiefly use large Fans, made of Feathers, to keep off the Sun, and the Flies. In Italy and Spain they have a huge sort of square Fans, suspended in the middle of their Apartments, and particularly over the Tables: Those by a Motion at first given them, and which they retain a long Time, by reason of their perpendicular Suspension, help to cool the Air, and drive off Flies.

In the Greek Church, a Fan is put into the Hand of the Deacons, in the Ceremony of their Ordination; in Allusion to a Part of the Deacon's Office in that Church, which is to keep the Flies off the Priests, during the Celebration of the Sacrament.

Wicquefort in his Translation of the Embassy of *Garcias de Figueroa*, gives the Name Fans to a Kind of Chimneys or Ventiducts, in use among the *Persians*, to furnish Air, and Wind into their Houses; without which the Heats would be insupportable. See the Description thereof in that Author, p. 38.

At present, what is call'd a Fan amongst us, and throughout the best Part of Europe, is a very thin Skin, or Piece of Paper, Taffaty, or other light Stuff, cut in a Semi-circle and mounted on several little Sticks of Wood, Ivory, Tortoise-shell, or the like.

Fans are either made with a double, or single Paper. If the Paper be single, the Sticks of the Mounting are pasted on the least ornamental Side; if double, the Sticks are sewed betwixt them. E'er they proceed to place the Sticks, which they call, *mounting the Fans*; the Paper is to be plaited in such manner, as that the Plaits may be alternately inward and outward.

'Tis in the Middle of each Plait, which is usually about an Inch broad, that the Sticks are to be pasted; which again, are to be all join'd, and riveted together at the other End: They are very thin, and scarce exceed $\frac{1}{4}$ of an Inch, in breadth: And where they are pasted to the Paper, are still narrower; continuing thus to the Extremity of the Paper. The two outer ones, are bigger and stronger than ordinary. The Number of Sticks rarely exceed twenty two. The Sticks are usually provided by the Cabinet-makers, or Toy-men: The San-painters plait the Papers, paint, and mount them.

The common Painting is gold Leaf, applied on a silver'd

Ground, both prepared by the Gold-beaters. Sometimes they paint on a Gold-ground; but 'tis rarely: True Gold being too dear; and false too paltry. To apply the silver Leaves on the Paper, they use a Composition, which they pretend is a great Secret, but which appears to be no other than Gum Arabic, Sugar Candy, and a little Honey, melted in common Water, and mix'd with a little Brandy. This Composition is laid on with a Sponge; then, laying the Silver-leaves thereon, and pressing them gently down, with a linnen Ball, stuffed with Cotton, they catch hold, and grow together. When instead of Silver, Gold-ground is laid, the same Method is observ'd.

The Ground being well dry'd, a Number of them are well beaten together on a Block; by which means the Silver, or Gold, get a Lustre, as if they had been burnish'd.

FANATICK, a wild, extravagant, visionary, enthusiastic Person; who pretends to Revelation, and Inspiration, and believes himself possess'd with a Divine Spirit.

Such were the Anabaptists, Quakers, &c. at their first Rise; and such are still the modern Prophets, *Muggletonians*, &c.

Wigelin, and *Behmen*, were the Leaders of the *Fanaticks of Germany*; and both came out of the School of *Paracelsus*. *Wigelin* is held the Father of the *Reformers*. The Word is firm'd of the Latin *Faunum*, a heathen Temple; for which Reason the first Christians call'd all the Gentiles *Fanaticks*. And accordingly the ancient Chronicles of France, call *Clovis*, *Fanatick* and Pagan. But the Word is yet of higher Original.

Among the Heathens themselves, there were those, call'd *Fanaticks*; from whom the Denomination since pass'd to all the rest. They had their Name from the Latin *Faunum*, Temple, by reason they liv'd altogether in Temples. *Struvius*, *Antiq. Rom. Synt. C. 6. p. 212.* Such, particularly, were the Priests of *Ili*, of the Mother of the Gods; of *Bellona*, &c. Some others, who were always call'd *Fanaticks*. In *Gruter*, p. CCCXII, n. 7. we have an Inscription, wherein one *L. Cornelius Inmarinus*, is call'd *Fanaticus*. *ABISIS, SERAPIS, ABABEEN, BELLONE.* And p. DCLIV, n. 7. *Fanaticus de Æde Bellone.*

What might give further Occasion to the Appellation of *Fanaticks*, was, that they perform'd their Sacrifices in a wild, enthusiastic manner.

FANATIO, is our ancient Customs, the *Fencing-time*, or *Feuce-month*, in Forests. See FENCE.

FANCY, see PHANTASY, and IMAGINATION.

FANTASTICAL Colours, are the same as those call'd *Emphatical Colours*. See EMPHATICAL COLOURS.

FAPESMO, in Logic, one of the Moods of Syllogisms. See MOOD.

A Syllogism in *Fapesmo*, has its first Proposition an universal Affirmative; the second an universal Negative; and the third, a particular Negative. See SYLLOGISM.

FACIUR, see FACERE.

FARCE, was originally a *Drill*, or petty Shew, or Entertainment, exhibited by Charleians, and their Buffoons, in the open Street, to gather the Crowd together.

The Word is French, and signifies literally, *force-meat*, or *Stuffing*. It was applied on this Occasion, no doubt, on account of the Variety of Jest, Gibes, Tricks, &c. wherewith the Entertainment was interlard'd.

At present, *Farce* is of a little more Dignity. 'Tis remov'd from the Street, to the Theater; and instead of being perform'd by Jack-puddings, to amuse the Rabble, is now acted by our Comedians, and become the Entertainment of the politest Audiences.

The Poets have reform'd the Wildness of the primitive *Farces*; and brought them to the Taste, and manner of Comedy. The Difference between the two, on our Stage, is, that the latter keeps to Nature, and Probability; and in order to that, is confin'd to certain Laws, Unities, &c. prescrib'd by the ancient Critics.

The former, disallows of all Laws; or rather, sets them all aside, on occasion. Its End is purely to please, or make merry: And it sticks at nothing, which may contribute thereto, however wild, and extravagant. Hence, the Dialogue is usually low; the Persons, of inferior Rank; the Fable, or Action, trivial, or ridiculous; And Nature, and Truth, every where heighten'd, and exaggerated, to afford the more palpable Ridicule. See COMEDY.

Some Authors derive the Word *Farce* in this Sense from the Latin *Farcia*; others from the Celtic *Farcio*, Mockery; others from the Latin *farcire*, to stuff.

FARCIN, **FARCY**, or **FARSIONS**, a Disease in Horses, and sometimes in Oxen, &c. The *Farcis* is somewhat of the nature of a Scabies, or Mange.

Vegetius calls it *morbus farciniosus*. It consists in a Corruption of the Blood; which shews it self in Eruptions of hard Pustles, Knots, or Strings, along the Veins; and in Ulcers, which are not cured, without great Difficulty, by running hot Irons into them. There is a *spreading Farcis*, which diffuses it self over the whole Body; an *inner Farcy*; a *stringed Farcy*, &c.

The *Farina* is infectious; and has the Effect of a true Plague. *Gesner* derives the Word from *Varices*, by changing the *v* into a *Digamma*, or *f*.

The *Fariey* is ordinarily occasion'd by Over-heats, and Colds; sometimes by Spur-galling with rusty Spurs, Snaffle, Bit, or the like: Or by the Bite of another Horse, infected with it: Or, if in the Leg, by cutting, or interfering.

The *Water-Farain* proceeds from a Horse's feeding, on low, watery Grounds, and Pits, or Holes, where the Grass grows above the Water: For the Horse, in picking out the Grass, licks up the Water, which occasions him to swell under the Belly, or Chaps. The Cure is by a red-hot Iron.

FARDEL of Land, is according to some Authors, the fourth Part of a Yard-land. See **YARD-LAND**.

FARDING-Deal, in our ancient Customs, signifies the fourth Part of an Acre, now call'd a Rood. See **ACRE**.

In the Reg. of Writs, we have also *Denariata*, *Obolata*, *Solidata*, and *Librata Terra*; which must probably rise in Proportion of Quantity from the *Farding-deal*, as an half-penny, Penny, Shilling and Pound, rise in Value: On which noting *Obolata*, must be half an Acre; *Denariata*, an Acre; *Solidata*, twelve Acres; and *Librata*, twelve Score Acres.

Yet we find, *Viginta libratas terra, vel redditus Reg. fol. 94. a. and 248. b.* whereby it seems *librata terra* is so much, as yields xx s. *per Annum*: and *centum solidatas terrarum tenementorum & reddituum, fol. 249. a.* See **FURLONG**.

Others holds *Obolata* to be but half a Peach; and *Denariata*, a Peach. See **PEARCH**.

FARE, a Voyage, or Passage; or the Money paid for passing by Water, &c.

For the *Fares* of Hackney Coach-men, Water-men, &c. see **COACH-MAN**, &c.

FARINA, the Flower, or Powder of some Grain, or Pulse ground, and sifted from the Bran. See **FLOWER**, **PULSE**, **BRAN**, &c.

The Word is pure Latin, *Farina*, form'd of *Far*, Corn, Wheat: And *Far*, according to *Guichard*, comes from the Hebrew *באר*, *bar*, signifying the same Thing.

Farina secundans, among Naturalists, is a fine Dust, prepar'd in the Male flowers of Plants; which being afterwards shed on the Female, does the Office of a Sperm, or Semen, by impregnating the same. See **GENERATION**, **PLANT**, and **FLOWER**.

The *Farina secundans*, call'd also the *Male-dust*, and *Male seed*, is form'd and secreted in the *Apices*, or Tops of the *Stamina*; where, when it becomes mature, and copious enough, bursting its Capsula, it is spit on the Head of the *Pistil*, and thence convey'd to the *Matrix*, or *Utricel* thereof, to fecundify the *Ova*, or female Seed, contain'd therein. See **STAMINA**, **APICES**, **PISTIL**, and **UTERUS**.

This *Dust*, in any one Plant, being view'd with a Microscope; every Particle thereof appears of the same Size and Figure: But in different Plants, the Figure, Size, Colour, &c. of the Dust, is very different. Some are clear, and transparent, as Crystal; as those of the *Maple*, *Burrach*, and *Hemlock*: Others are white, as those of *Hen-bane*, *Balsaminus*: Others blue, as those of *Flax*: Others purple, as of some *Thilips*: Others flesh-colour'd, as some Species of *Lychnis*; and others red, as those of the *Genem*.

It may be observ'd, however, that the Colour of the *Farina* varies, in the same Species, according to the Colour of the Flower; and even, sometimes, the *Farina* of the same Flower is of different Colours; as is easily observ'd in the *Caryophyllus arvensis*.

The Figures of the divers Kinds of *Farine* are much harder to describe. The most general Figure is the Oval, more or less sharp at the Ends, with one or more Channels, or Furrows, running length-wis; so that through the Microscope they look not unlike the Stone of a Date, a grain of Wheat, a Coffee-berry, or an Olive. Such are those of the Polygonatum, Bugles, Bryony, Tithimal, &c. Those of the Melilot, are Cylinders: Those of the Panley, are Prisms, with four Irregular Sides: Those of the great Cosfolida, represent two crystal Globules, closely fasten'd to each other: Those of the Sycamore, represent two Cylinders, plac'd a-crois: Those of the Jonquille, are in form of a Kidney: Those of the *Campanula*, Passion-flower, &c. are nearly round, but unequal in their Surfaces: Those of *Caryophyllus silvestris*, are round, and cut in Facets: Those of the *Geranium*, and some other Species, are round, with a kind of *Umbelicus*, or Indenture, as in an Apple, *Bradley* says, they are perforated quite through, like the Bead of a Necklace, which we doubt: Those of the *Caltha*, *Corona Solis*, &c. are little Globes, set with Prickles, &c.

Of these *Farine*, some are very hard; others, soft, and easily broke. They all contain a deal of sulphureous Matters, more than the other Parts; whence, they are very o-

derous: Those of the Lily, are so full of Oil, that they grease the Paper they are put in, as if it had been oil'd. The *Farine* of most Aromatic Plants, swim in an essential Oil, or sort of liquid Turpentine: Others are involved in a dry Resin; as these of the *Lycopodium*, or *Muscus terrestris clavatus*. C. B. Others, as those of Furniture, are inclos'd in a little, viscid, mucilaginous Matter; and all, in effect, have something so glutinous, that they stick to any thing, that touches them: So that 'tis difficult to separate them from each other.

Some have imagin'd, that these *Farine* were only Particles of Wax, or Resin: But the Contrary is easily prov'd: For they neither dissolve in Water, nor Spirit, nor Oils; even when assist'd with Fire.

Mr. *Bradley* supposes a Magnetick Virtue lodg'd in the *Farina secundans*, or Male Dust; by means whereof, when deposited in the Utricel of the Female, it draws the Nourishment from the other Parts of the Plant into the *Ova*, or Rudiments of the Fruit, and makes them swell. The Reality of this Virtue, he argues from the same being found in Wax, which is chiefly, or wholly gather'd hence by the Bees. See **WAX**.

Some, against the great Use of the *Farina secundans* in Generation, may object, that in Flowers, which hang downwards, as the Cyclamen, &c. the *Farina secundans* cannot be cast on the Orifice of the Pistil: To which it may be answer'd, that the Pistils of such Flowers, hanging lower than the dusty Apices which surround them, the glutinous Matter and Velvet, covering the Extremity of the Pistil, may be capable of receiving, and retaining some of the *Farina*, as it falls: And without any Intromission of the *Farina*, its Lodgment on the Mouth of the Pistil, may by Virtue of its attractive Power fecundify the Seed in the *Uterus*.—

FARM, or **FERM**, in Law, signifies a little Country-Domain, or District, containing House and Land, with other Conveniences; hired, or taken by Lease, either in Writing, or Parole. See **LEASE**.

This in divers Parts is call'd diversly: In the North, it is a *Tack*; in *Lancashire*, a *Fermholt*; in *Essex*, a *Wike*; &c.

The Word originally is form'd of the Latin *firmus*.

In the corrupted Latin, *firma* signified a Place inclos'd, or shut in: Whence, in some Provinces, *Message* observes, they call *Closerie*, or *Cloistre*, what in others they call *Farm*. Add, that we find *locare ad firmum*, to signify to let, so *farm*; probably, on account of the Sure hold the Tenant here has in Comparison of Tenants at Will.

But *Speelman*, and *Skinner*, chuse to derive the Word *Farm*, from the *Saxon Feorme*, that is, *Victus*, or Provision; by reason the Country-people and Tenants antiently paid their Rents in Victuals, and other Necessaries; afterwards converted into the Payment of a Sum of Money. Whence a *Ferm* was originally a Place that furnish'd its Owner or Lord with Provisions. And among the *Normans*, they still distinguish between *Farms*, that pay in Kind, i. e. in Provisions; and those, which pay in Money; calling the former simply *Fermes*, and the latter *Blanche Fermes*, white *Farm*.

Speelman shows farther, that the Word *firmus* signified not only what we now call a *Farm*, but also a Feast, or Entertainment, which the Farmer gave the Proprietor, or Landlord for a certain Number of Days, and at a certain Rate, in Consideration of the Lands, &c. he held of him.

Thus, *Fermis*, in the Laws of King *Canutus*, is render'd by Mr. *Lambard*, *victus*; and thus we read of *reddere firmam vinis novis*; and *reddere unum diem de firma*; which denote, Provision for a Night, and Day; The Rents about the Time of the Conquest being all reserved in Provisions: The Custom whereof is said to have been first alter'd under *Henry I*.

We also say, to *farm Duties*, *Imposts*, &c. The Duty of Excise in *Scotland* is farm'd, or let to *farm*, for at 33500 *per Annum*. See **EXCISE**.

FARREATION, in Antiquity, the same with *Confarreatio*. See **CONFARREATION**.

FARRIER, a Person, whose Office is to shoe Horses, and cure them, when they are diseas'd, or lame. See **SHOING**, &c.

FARTHING, a small *English* Copper Coin, amounting to $\frac{1}{2}$ of a Penny. See **COIN**.

It was antiently call'd *Fourthing*; as being a fourth of the Integer, or Penny. See **PENNY**.

FASCE, *Fascis*, in Heraldry, See **FESSE**.

FASCES, in Antiquity, were Axes, or Hatchets, tied together with Rods, and bore before the *Roman* Magistrates, as a Badge of their Office, and Authority.

Fastes, L. I. c. 5, assures us, that the Use of *Fastes* was introduc'd by the elder *Tarquins*, the 5th King of *Rome*; and were then the Mark of the sovereign Dignity. In after Times, they were bore before the Consuls. They had each

of them twelve, bore by so many Officers, call'd *Lictors*. See *LICTOR*. *Dionys. Halicarn. L. III. c. 84.*

Others will have *Romulus* the Author of the Institution, and ascribe the Number twelve, to the Number of Birds, which forc'd him his Kingdom. Others hold, that he borrow'd it from the *Hetrurians*; and that the Number twelve answer'd to the twelve Nations of *Hetruria*, who in creating him King, gave him each an Officer, to serve him as *Lictor*. *Silius Italicus* ascribes their first Invention to a City of *Hetruria*, call'd *Ventonia*.

These *Fasces* consisted of Branches of Elm; in the Middle whereof was a *Scuris*, or Hatchet, the Head whereof stood out beyond the rest. *Plutarch* relates the Reasons of this Disposition. *Publicola* took the Hatchet out of the *Fasces*, as *Plutarch* assures us, to remove from the People all Occasion of Terror.

After the Consuls, the Pretors assum'd the *Fasces*. *Censorin. de Die Natal.* observes, that the Pretors had only two: Tho' *Polibus* and *Plutarch* give them six. In the Government of the Decem-vir's, it was the Practice, at first, for only one of them to have the *Fasces*. Afterwards, each of them had twelve, in the same manner as the Kings.

FASCIA, in Architecture, by the Workmen call'd *Fascia*, *Fascio*, or *Faso*, a Broad-lift, Fillet, or Band; particularly us'd in Architraves, and Pedestals. See *ARCHITRAVE*, and *PEDESTAL*.

The Architrave consists of three *Fasces*, or Bands; thus call'd by *Vitruvius*, as resembling *Swaths*, call'd in Latin *Fascia*.

That Author admits no *Fascia*, in the *Tuscan*, and *Doric* Architrave, i. e. he makes it all plain, without any Division, or cantoning into Parts or *Fasces*: But the modern Architects take Liberty to differ from him herein. See *TUSCAN*, *DORIC*, &c.

In Brick-buildings, the Juttings out of the Bricks, beyond the Windows, in the several Stories, except the highest, are call'd *Fascia's*, or *Fascie*.

These are sometimes plain, and sometimes moulded. But the Moulding is only a *Cima reversa*, or an O G, at the Bottom, with two plain Courses of Bricks over it; then an *Astragal*, and lastly a *Boutaine*.

FASCIA lata, or *Fasciatis*, in Anatomy, a Muscle of the Leg; call'd also *Membranosus*. See *MEMBRANOSUS*.

FASCIA, in Astronomy, two Rows of bright Spots, observ'd on *Jupiter's* Body; appearing like *Swaths*, or *Belts*. See *JUPITER*.

The *Fascie*, or *Belts* of *Jupiter*, are more lucid than the rest of his Disk, and are terminated by parallel Lines. They are sometimes broader, and sometimes narrower; nor do they always possess the same Part of the Disk.

M. Huggens, likewise, observ'd a very large Kind of *Fascia*, in *Mars*; but it was darker than the rest of the Disk, and took up the middle Part thereof. See *MARS*.

FASCIALIS, in Anatomy, a Muscle of the Leg; call'd also *Sartorius*. See *SARTORIUS*.

FASCICULUS, in Medicine, a Term sometimes us'd to express a certain Quantity, or Measure of Herbs.

By *Fasciculus* is meant so much, as may be held in the Arm, when bent, and rested on the Top of the Haunch. Physicians note it in Prescription by *Fasci*.

FASCINATION, Witchcraft; or a Charm, or Spell, which alters the Appearance of Things, and represents 'em different, from what they are. See *WITCHCRAFT*.

Linder, a *Swedish* Physician, has treated very well of *Fascination*, in the VIIIth Chapter of his little Work, *De Venenis*.

The Word is form'd of the Latin Verb *fascinare*, of the Greek *bazaxion*, signifying the same Thing. See *CHARM*.

FASCINES, or *Faggots*, in Fortification, are small Branches of Trees, or Bayns, bound up in Bundles; which being mix'd with Earth, serve to fill up Ditches, to screen the Men, make the Parapets of Trenches, &c.

Some of them are dipp'd in melted Pitch or Tar; and being set on Fire, serve to burn the Enemies Lodgements, or other Works.

A pitch'd *Fascine* is a Foot and half about: A *Fascine* for Defence, two or three Foot.

In the corrupt Latin, they use *Fiscenina*, *Fascennia*, and *Fascinata*, to signify the Pales, *Fascines*, &c. us'd to enclose the ancient Castles, &c.

FASHION, see *MODE*, *CUSTOM*, &c.

FASHION is particularly us'd among Artificers, for the Trouble, Time, and Labour, employ'd on a piece of Work; particularly some silver, or gold Utensil, Instrument, Toy, &c. 'Tis by the *Fashion*, that the Workmens Wages, or Salary are regulated. We paid so much a-piece for the *Fashion* of these Spoons, exclusive of the Matter, or Silver. That Weaver has so much a-piece for the *Fashion* of the Stuffs we give him to weave. The Word is *French*, *Facon*.

FASHION-Pieces, are those two Timbers, which form the Breadth of a Ship, at the Stern; and are the outmost

Timbers of the Stern, on each Side, except aloft, where the Counters are. See *STERN*.

FAST, a Space of Time, wherein a Person takes little, or no Food. See *FOOD*.

The Advantages of *Fasting*, with regard to Health, with extraordinary Instances of long *Fasting*, see under the Article *ABSTINENCE*.

The *Bronius* never bleed their Sick, but make them fast in lieu thereof.

FAST, is peculiarly us'd for an Abstinence, on account of Religion; or a Space of Time, wherein the Church prohibits the use of Food; or at least restrains it to certain Things, and certain Hours.

The strict, canonical *Fast*, only allows of one Meal in 24 Hours. *Fr. Thomassin* observes, that the ancient *Fast* was, to sup, without dining, i. e. only to take one Meal, and that not till after Nones: Adding, that to dine, though without supping, was a Breach of the *Fast*. The Practice of the Latin Church, was to fast 36 Days in the Year; which, is as it were, the Tyth of the Year.

Terrulianus wrote an express Treatise *de Jejunis*, of *Fasts*; to support the new Laws of *Fasting*, the *Montanists* were for imposing. See *MONTANIST*.

The ancient Catholics allow'd of no *Fasts* of Obligation, or Command, beside that preceding *Easter*, since call'd *Lent*; the Terms of which were to forbear Eating till the Evening. See *LENT*.

The other *Fasts* observ'd were only of Devotion: Such were the fourth and sixth *Perse*, i. e. *Wednesdays*, and *Fridays*. This *Fast* was call'd *Station*. Besides these there were occasional *Fasts*, enjoy'd by the Bishops, &c. See *FRIZE*.

In the Book of *Hermas*, call'd the *Pastor*, the Angel tells him, The Day thou *fastest*, thou shalt take nothing but Bread and Water; and having computed the usual Expences of each Day, thou shalt lay aside so much for the Widow, the Orphan, and the Poor.

In the same Passage, the *Fast* is call'd *Station*, and the Person who *fasted*, was to begin early in the Morning to retire to Prayer. See *STATION*.

St. Fructuosus, *Flery* tells us, going to suffer, some People, out of a Principle of Charity, offer'd him Drink, to support him: But he refus'd it, saying, it is not yet Time to break *Fast*; for it was but ten in the Morning, and it was *Friday*, *Station-day*. Which shews the Exactness of the primitive Christians, in this Point; and that Drinking was held breaking of *Fast*.

Some introduced the Xerophagy into *Fasts*; that is, the Use of dried Fruits for their Meals; and made a Practice of abstinence not only from all Meats, and Wines, but also from succulent Fruits, for the whole 24 Hours: And some reduc'd themselves to Bread and Water. But this was more than was commanded. See *XEROPHAGY*.

The Practice of *Fasting* is more ancient than Christianity. The *Israelites* *fasted* often, and had their stated *Fast-days*. The Day of Attonement, which they call'd *Kippurim*, was a Day of *Fasting*, enjoin'd in *Levit. xxiii. 27. &c.* Some will have this the Day *St. Paul* refers to in *Acts xxvii. 9*. The *Jesus* had likewise *Fasts*, instituted by Precept of the Synagogue: Such were those of the fourth, fifth, and tenth of the Month, mention'd by *Zachariah vii. 3. and viii. 19.*

The Heathens adopted the same Custom, in all Probability, from the People of God; tho' their Religion inclin'd more to Feasting, than *Fasting*; as appears from the long List of *Festivals*, enumerated under the Article *FEAST*.

Yet they *fasted* in the *Eleusinia*; as appears from *Arnobius*, and *Clement Alexand.* See *Salmasius*, p. 130. and *Scaliger*, Poet. l. i. c. 32.

The *Fasts* of the *Calogeri* are so severe, that they remain seven Days, without Eating at all. For the *Fasts* of the *Greeks*, see *Spem. Voyag. P. II.*

The *Turks* are so scrupulous on the point of *Fasting*, that they will not so much as take the Smell of any Perfume, by the Nose. They hold that Odors themselves break *Fast*. If they bath, 'tis forbid to put the Head under Water, for fear of swallowing any of it: And as for Women, they are forbid to bath at all on *Fast-days*.

FASTERMANS, or *FASTING men*, q. d. *homines habentes*, was us'd in our ancient Customs, for Men of Repute, and Substance; or rather for Pledges, Sureties, or Bonds-men, which according to the *Saxons* Polity were *fast* bound to answer for one anothers peaceable Behaviours. See *DECEMNA*.

FASTI, in Antiquity, was the *Roman Calendar*; wherein the several Days of the Year, with their *Fests*, Games, and other Ceremonies, were express'd. See *CALENDAR*.

The *Romans* had their greater and lesser *Fasti*. The *Great Fasti* were call'd, the *Fasti of the Magistrates*; and the lesser, the *Fasti Calendaris*.

The *Fasti Calendaris*, which were, what was properly, and primarily call'd *Fasti*, are defined by *Festus Pompejanus* to be Books, containing a Description of the whole Year; i. e. *Ephemerides*, or *Diarics*, distinguishing the several kinds

kinds of Days, *Festi*, *Profesti*; *Fasti*, *Nefasti*, &c. See *FESTI*, &c.

The Author hereof was *Numa*, who committed the Care and Direction of it to the *Pontifex Maximus*; whom the People used to go and consult on every Occasion. This Custom held to the Year of Rome 550, when *C. Flaminius*, Secretary of the Pontifices, expos'd in the *Forum* a List of all the Days, whereon it was lawful to work; which was so acceptable to the People, that they made him *Curule Aedile*. Liv. L. IX. c. 46.

These lesser *Fasti*, or *Fasti Calendares*, were of two Kinds: *Urbani*, and *Rustici*. The *Fasti Urbani*, or *Fasti* of the City, were those, which obtain'd, or were observ'd in the City. Some will have them thus call'd, by reason they were expos'd publicly in divers Parts of the City; tho' by the divers Inscriptions, or Gravings thereof on antique Stones, one would imagine, that private Persons had them likewise in their Houses. It was these *Fasti Urbani*, *Ovid* undertook to illustrate, and comment on, in his *Fastorum*; whereof we have the six first Books still remaining; the six last, if ever they were wrote, being lost. Beside *Ovid*, several other Authors had undertook the same Subject, particularly *L. Cincius Alimentatus*, *Fulvius Nobilior*, *Majstrinus Sabinius*, *Cornelius Labeo*, *C. Licinianus*, and *Nisus*: Of all whom, *Macrobius* makes Mention, in his *Saturae*, and preserves Fragments of each; beside a Work of one *Behnius Martius*, entitled, *De Fastis diebus*, quoted by *Fulgentius*, *De Praefeo Sermones*.

In the greater *Fasti*, or *Fasti* of the Magistrates, were express'd the several Feasts, with every thing relating to the Gods, Religion, and the Magistrates; the Emperors, their Birth-days, Offices, Days consecrated to them; and Feasts, and Ceremonies, establish'd in their Honour, or for their Prosperity, &c.

With a Number of such Circumstances, did Flattery, at length, swell the *Fasti*; whence they became denominated *Magni*, to distinguish them from the bare Calendar, or *Fasti Calendares*.

In the *Fasti Rustici*, or *Country-Fasti*, were express'd the several Days, Feasts, &c. to be observ'd by the Country-people: For as there were taken up in tilling the Grounds, sowing Feasts, Sacrifices, Ceremonies, and Holidays were enjoy'd them, than on the Inhabitants of Cities: And they had some peculiar ones, not observ'd at Rome.

Those *Rustick Fasti*, contain'd little more, than the Ceremonies of the Calends, Nones, and Ides; the Fairs, Signs of the Zodiac, Increase, and Decrease of the Days, the Tutelary Gods of each Month, and certain Directions for the rural Works, to be perform'd each Month.

FASTI, was also a Table, Chronicle, or Register of Time, wherein the several Years were denoted by the respective Consuls, with the principal Events, that happen'd during their Consulates; call'd also *Fasti Consulares*, or *Consular Fasti*.

Omphrius Pavoninus, *Piginius*, and *Janfon & Ameloveen*, have given us the *Fasti Consulares*; the two first, with long, and learned Comments, wherein are express'd, not only the Consuls, but also the Dictators, *Mogistri Equitum*, Triumphs, and Oventions. *Piginius* even adds as many of the other Officers, as he could find, viz. *Praetors*, *Tribunes*, &c. *Janfon* confines himself to the Consuls alone.

FASTI, is still applied to the Archives, and publick Registers, wherein are kept Historical Memoirs, of the most memorable Things, befalling a People.

In the like Sense, the Martyrology is call'd the *Sacred Fasti* of the Church. See *MARTYROLOGY*.

The Jesuit *Du Louet* has compil'd the *Fasti of Louis le Grand*, &c.

FASTI, or *Dies-Fasti*, were Court-days, answering, in some measure, to our Terms. See *TERM*.

The Word *Fasti*, *Festorum*, is form'd of the Verb *Fari*, to speak; by reason, during those Days the Courts were open, Causes might be heard; and the Praetor was allow'd *fari*, to pronounce the three Words, *Do*, *Dico*, *Adioco*: The other Days, wherein this was prohibited, were call'd, *Ne-fasti*. Thus *Ovid*:

Ille Ne-fastus erit per quem tria verba silentur,
Fastus erit per quem lege licetbit agi.

These *Dies Fasti* were noted in the Calendar, by the Letter *F*. But observe, that there were some Days, *ex parte Fasti*, partly *Fasti*, partly *Ne-fasti*, i. e. Justice might be distributed at certain Seasons of the Day; and at others not. These Days were call'd *Interfici*, or *Endoscerifici*: These were mark'd in the Calendar thus, *F. P. Fastus primus*, denoting, that Justice might be demanded during the first Part of that Day.

FASTIDIUM Cibi. See *NAUSEA*.

FASTIGIUM, in Architecture, the same with *Pediment*. See *PEDIMENT*.

FAT, in an Animal Body, a white, oily, sulphureous Substance, collected in little membranous *Loculi* or Cells, in divers Parts of the Body; serving to keep the Parts warm, and to soften and temper the sharp Salts in the Mass of Blood.

Physicians distinguish two kinds of *Fat*: the first, call'd in Latin *Pinguedo*, and *Aestugia*, and in English, absolutely, and by way of Eminence, *Fat*, is a gross, whitish Oil, found immediately under the *Cutis*, inclos'd in little Bags, call'd *Cellulae Adiposae*, adhering to the outer Surface of a Membrane, call'd *Adiposa*, all over the Body, except on the Forehead, Eye lids, Penis, and Scrotum.

This *Fat* is nothing but the oily Part of the Aliment, or Chyle, separated from the Arterial blood, by the adipose Glands, and carried by peculiar Ducts to the membranous Cells; whence it is transmitted again to the Blood by the Veins.

Dr. Grew takes it to be a Coagulum of the oily Parts of the Blood, made, either by some of its own saline Parts, or by the nitrous Particles of the Air mingled therewith in the Lungs; which Sentiment is confirm'd by an Experiment of that learned Person, who made an artificial *Fat*, by only mixing Oil of Olives with Spirit of Nitre for some Days: And hence it is, that divers Animals, as Comies, Hares, &c. grow fat in Winter, and particularly in severe frosty Weather; the Air then abounding most in Nitre. Hence also it is, that the *Fat* of Land Animals, is much firmer, than that of Fishes; the watery Element containing less nitrous Matter, than the Air.

In some Subjects the *Cellulae* are so full and distended, that the *Fat* is above an Inch thick: In others they are almost flat; and in emaciated Subjects, instead of *Fat*, we find a sort of flaccid transparent Substance, which is nothing, but the bare Membrane; the Cells being all exhausted. See *MEMBRANA ADIPOSITA*.

The second kind of *Fat*, call'd *Serum*, *Suet*, and *Leaf*, is whiter, harder, and more brittle, than the former; being found in the Cavities of the Abdomen, Omentum, &c. See *OMENTUM*, &c.

The *Fat* of both Kinds, serves as a natural Balsam, to preserve the Body; and by mixing with, and enveloping the Salts wherewith the Blood and Serum are highly saturated, keeps them from fretting and corroding the Parts of the Body, through which they pass.

It is thought likewise, and not without Probability, to make a considerable Part of the Nourishment of our Bodies; whence, the fittest Persons, falling into an Atrophy, gradually lose all their *Fat*, which is always quite expended in such Cases, ere the Disease become fatal.

Too much *Fat* is usually attended with Heaviness, and Drowsiness, not only from the Unwieldiness of an overgrown Body, nor from the stuffing of the Cavities and *Thorax* alone, which sometimes obstructs the Expansion of the Diaphragm and Lungs, and produces a *Dyspnoea*, or an *Orthopnoea*; but it is likewise probable, that the Abundance of *fatty*, or oily Particles, return'd into the Blood, and implicating the more subtle and active Parts, may hinder the necessary Secretions in the Brain.

The *Fat* of Animals, for the generality, is not reckon'd good Food; as being hard of Digestion, and producing a thick, viscid Chyle. But it is of good use in Medicine.

Calves Fat is us'd in Pomatums, and Unguents; being resolute, and emollient.—That of *Hogs* and *Boars*, has the same Qualities, and is strengthening besides.—*Deers Grease* is good to fortify the Nerves, against the Rheumatism, Sciatica, Gout, and Fractures.—*Hares Grease*, applied externally, promotes Digestion, and the Suppuration of Abscesses.—That of *Rabbits*, is nervous, and resolute.—That of *Cocks*, and *Hens*, resolves and softens Hardness.—That of *Geese*, has the same Qualities; and likewise abates Hemorrhoids, assuages Pains in the Ear, being applied within the same; and opens the Belly, being taken inwardly.—*Eels Fat* is esteem'd good against the Hemorrhoids and Dentures; to take away Pits of the Small-pox, and to make the Hair grow.—That of the *Troat*, beside its being emollient, is good in Diseases of the Anus, and Ulcers of the Breast.

FAT, in the Sea Language, is the same with *Bron'd*.

Thus, if the Trussing in, or Tuck of a Ship's Quarter under Water be deep, they say, she hath a *fat Quarter*.

FAT, or *Vat* is a great wooden Vessel, which among Brewers and Maltsters is us'd to measure Malt for Expedition; containing a Quarter or eight Bushels. See *MALT*.

It is likewise a Vessel, or Pan of Lead, us'd in the making Salt, &c. See *SALT*.

FATE, *Fatum*, a Term much us'd among the ancient Philosophers.

It is form'd a *fausto*, from *speaking*; and primarily implies the same with *Effatum*, viz. a Word, or Decree, pronounc'd by God; or a fix'd Sentence, whereby the Duty has preferrib'd the Order of Things, and allotted every Person, what shall befall him.

The Greeks call it, *αἰμα, ἀναμῖν, quaff αἰμα, Catena*, a Chain, or necessary Series of Things, indissolubly link'd together; and the Moderns, *Providence*. See PROVIDENCE.

But beside this Sense of the Word, wherein it is us'd, sometimes to denote the Connexion of Causes in Nature, and sometimes in the Divine Appointment; the Word *Fate* has a further Intention; being us'd to express, I know not what *Necessity*, or eternal Designation of Things, whereby all Agents, both necessary, and voluntary, are sway'd, and directed to their Ends. See NECESSITY.

In this Acceptation, some Authors divide *Fate* into *Astrological*, and *Stoical*.

The first, is a *Necessity* of Things and Events, arising from the Influence, and Positions of the heavenly Bodies, which give Law, both to the Elements, and mix'd Bodies, and to the Wills of Men.

In this Sense is the Word often us'd by *Manilius*: *Certum est & inevitabile fatum: materiaque datum est cogi, sed cogere stellas*. See ASTROLOGY.

The *Stoical Fate*, or *Fatality*, is defin'd by *Cicero*, an Order, or Series of Causes, wherein Cause being link'd to Cause, each produces other; And thus, all Things flow from the one prime Cause.

Chrysippus defines it a natural invariable Succession of all Things *ab aeterno*, each involving other. To this *Fate* they subject the very Gods.

Thus the Poet: The Parent of all Things made Laws at the Beginning, by which he not only binds other Things, but himself. So *Seneca*: *Eadem necessitas & Deos alligat. Irrescibilibus divina pariter & humana cursus obicit.—Ipse ille omnium Conditor & Rector scripsit quidem Fata, sed sequitur & Jemal scripsit, semper parat.*

This eternal Series of Causes, the Poets call *μῆτιρ*, and *Parca*, or *Destinies*. See STOICISM.

Fate, is divided by some later Authors, into *Physical*, and *Divine*.

The first, is an Order, and Series of natural Causes, appropriated to their Effects.

This Series is necessary; and the Necessity is natural. The Principle, or Foundation of this *Fate*, is Nature, or the Power and Manner of acting which God, originally gave the several Bodies, Elements, Mixt, &c. By this *Fate* it is, that Fire warms; Bodies communicate Motion to each other; the Sun and Moon occasion the Tides, &c. And the Effects of this *Fate*, are all the Events, and Phenomena in the Universe; except such, as arise from the human Will. See NATURE.

Divine Fate, is what we more usually call *Providence*. See PROVIDENCE.

Plato, in his *Phædo*, includes both these in one Definition, as intimating, that they were one and the same thing actively and passively consider'd: Thus, *Fatum est ratio quedam divina, lesque natura comit, que transfiri nequeat, quippe a causa pendens, que superior sit quibusvis impediens*. Tho' that of *Boetius* seems the clearer, and more just: *Fatum*, says he, *est inherens rebus mobilibus dispositio, per quam Providentia sui neque nequit ordinat*.

FATHER, *Pater*, a Term of Relation, denoting a Person who beget a Child, either Male or Female. See SON, and DAUGHTER.

Among the ancient Romans, the *Fathers* of three Children had very considerable Privileges allow'd them. By the Laws of *Romulus*, a *Father* had an absolute unlimited Power over his Children.

Adoptive FATHER, is he who takes the Children of some other; and owns them as his own. See ADOPTION.

Putative FATHER, is he who is only the reputed, or supposed *Father*; as *Jesseb* was *putative Father* of our Saviour. See PUTATIVE.

Natural FATHER, is he who has illegitimate Children. See BASTARD.

A *Father-in-Law*, is a Person married to a Woman, who has Children by a former Husband, &c.

FATHER, is also us'd in Theology, for the first Person in the Trinity. See PERSON, and TRINITY.

God the *Father*, is the proper *Father* of Jesus Christ; with regard to Men, he is call'd *heavenly Father*. See GOD, and SON.

FATHER, is also us'd in a figurative Sense, on divers Moral, and Spiritual Occasions. Thus, it is applied to the Patriarchs; as we say, *Adam* was the *Father* of all Mankind; *Abraham*, the *Father* of the Faithful, &c. See PATRIARCH.

In an Ecclesiastical Sense, *Fathers* is us'd for the ancient Prelates, and Doctors of the Church. The *Fathers* assembled at the Council of *Nice*: *Chrysostom*, *St. Basil*, &c. were *Greek Fathers*: *St. Augustin*, *St. Ambrose*, &c. *Latin Fathers*.

The *Fathers*, say the *Messieurs de Port Royal*, are the proper Interpreters of the Gospel; and are only honour'd with

that sacred Appellation, as their Works are, in some measure, a Patrimony, or Inheritance, left the Faithful, as their proper Children.

Scaliger observes, that the *Fathers* were good People, but not learned ones. To which *St. Evremont* subjoins, that when a Man comes to look near the *Fathers*, he loses a great Part of the Veneration, which Time and Opinion has procur'd them: The great Distance between them and us, makes them appear much greater, than they are.

The *Fathers*, says the same Author, had more Imagination and Vivacity of Mind, than Judgment, and good Sense. They gave altogether into Allegories, and affected the Brilliant to an Excess. Justness of Mind was a thing they valued themselves of the least.

FATHER, is also a Title of Honour, given to Prelates, and Dignitaries of the Church. The Right Reverend *Father* in God, *The Lord Bishop* of, &c. See TITLE. See also REVERENCE.

FATHER, is also applied to the Superiors of Convents; the *Father General*; *Father Provincial*; *Exprovincial*; *Father Prior*, *Sub-Prior*; *Father Definitor*, in the Order of *Benedictines*; *Father Guardian*, in that of the *Franciscans*; *Father Corrector*, among the *Minimi*, &c.

FATHERS, is also us'd plurally for all Congregations of Ecclesiasticks, whether Regular, or Secular; as, the *Fathers Cordeliers*, *Capuchins*, *Augustines*, *Jacobins*, &c. The *Fathers Jesuites*, *Fathers* of the Oratory, *Barnabites*, *Theatines*, of the Mission, &c. See each under the proper Article. See also BROTHER.

FATHERS, is also us'd for Persons venerable for their Age, Quality, or the Services they have done the Publick. Thus, at *Rome*, the Senators were call'd, *Conscripsi PATRES*, *Patres Conscripsi*, &c. See PATRES Conscripsi. See also SENATORS.

FATHIMITES, or FATHIMITES, the Descendants of *Mahomet*, by *Fathima*, or *Fatimah*.

The Dynasty of *Fathimites*, that is, of Princes descending in a direct Line from *Ali*, and *Fathima* his Wife, *Mahomet's* Daughter, commenc'd in *Africa*, in the Year of the *Hegira*, 296; of Jesus Christ, 908.

The *Fathimites* afterwards conquer'd *Egypt*, and establish'd themselves therein, in Quality of *Kaliphs*. See KALIPH.

The *Fathimites* of *Egypt*, ended in *Aved*, in the Year of the *Hegira*, 567; 268 Years after their first Establishment in *Africa*, and 208, after the Conquest of *Egypt*.

FATHOM, a long Measure, containing six Feet; taken from the utmost Extent of both Arms, when stretch'd to a right Line. See MEASURE.

The *Fathom* is chiefly us'd at Sea, in estimating the Lengths of Cables, and other Ship-rope, with the Depths and Soundings of the Sea: Also in Mines, Quarries, Wells, and all Works of Fortification.

There are three kinds of *Fathoms*, accommodated to the different Ranks of Vessels. The first, which is that of Men of War, contains six Feet: The middling, or that of Merchant Ships, five Feet, and a half; and the small one, us'd in Flays, Flyboats, and other Fishing-vessels, only five Feet.

Fathom is also us'd in several Countries, particularly *Italy*, for the common Yard, or Ell, whereby Things are ordinarily measur'd; in Commerce: In which Sense it is commonly call'd *Brace*, or *Braccio*, q. d. Arm. See BRACE.

FATNESS, *Obesitas*, or *Corpulency*, in Medicine, the State of a Person too much loaded with Flesh, and Fat. See FLESH, and FAT.

Fatness arises from a laudable, copious, oily, soft Blood containing less than its Share of Salt.

Such a Constitution of Blood, occasioning but a feeble Fermentation, there is less consumed, than is made; and the Lymph, which seems to be the Matter of Nutrition, preserves its viscid Consistence longer; and by that means adheres the more plentifully to the divers Parts of the Body. Add, that there is more a Fat separated from the Blood, than can well be deposited in the adipose Cells. Hence the Body grows very considerably, and the Parts sometimes distend to a monstrous Bulk.

Fatness is promoted by any thing that tempers and softens the Blood, and renders it less sharp, and saline: Such is want of Exercise, and Motion; an indolent Life; too much Sleep; nourishing Foods, &c. It is prevented, or removed, by the contrary Causes; and particularly by the Use of saline and acid Meats, and Drinks.

Fatness is the Occasion of divers Diseases, and particularly the Apoplexy.

Senertius mentions a Man, that weigh'd six-hundred Pound; and a Maid, 36 Years of Age, who weigh'd 450: *Chiappa Vitelli*, Marquess of *Cerona*, a noted General in his Time, from an excessive *Fatness*, reduced himself, by drinking of Vinegar, to such a Degree of Leanness, that he could fold his Skin several times round him.

Fatness was infamous among the *Lacedæmonians*.

FATUARIUM, in Antiquity, were Persons, who appear'd inspir'd, foretold Things to come.

The Word is form'd of *Fatus*, Wife of the God *Faunus*, who was suppos'd to inspire Women with the Knowledge of Futurity; as *Faunus* himself did the Men.

Fatus, had her Name from *Fari*, q. d. *Vaticinari*, to prophesy.

FATUUS IGNIS, a kind of fiery Meteor, popularly call'd *Will-with-a-Wisp*. See **METEOR**.

The *Ignis Fatuus* is a Vapour, shining without Heat; and is there not the same Difference between this Vapour, and Flame, as between rotten Wood, shining without Heat, and burning Coals of Fire? *Newt. Opt. p. 316.*

FAUCON, a sort of Cannon, whose Diameter at the Bore is $4\frac{1}{2}$ Inches; Weight, 750 Pounds; Length, 7 Foot; Load, $2\frac{1}{2}$ Pound; Shot, $2\frac{1}{2}$ Inches Diameter; and $2\frac{1}{2}$ Pound weight. See **CANON**.

FAUCONET, a piece of Ordnance, whose Diameter at the Bore is $4\frac{1}{2}$ Inches; Weight, 400 Pounds; Length, 6 Foot; Load, $1\frac{1}{2}$ Pound; Shot, something more than two Inches diameter, and $1\frac{1}{2}$ Pound Weight. See **CANON**.

FAVISSA, among Antiquaries, A Hole, Pit, or Vault under Ground, wherein is kept something of rare Valac.

The *Favissa*, according to *A. Gellius*, and *Varro*, was much the same, with what the ancient *Greeks* and *Romans* call'd *Θεσάουρον*, *Thesaurus*; and what in some of the modern Churches is call'd the *Archives* and *Treasury*.

In the Capitol there were divers *Favisse*. They were faberraneous Places, wall'd, and vaulted; having no Entrance, or Light, but by a Hole a-top, which was stop'd up with a huge Stone.

They were chiefly destined for keeping the old, worn Statues, and other ancient Moveables, formerly us'd in the Temple; so religiously did the People respect, and preserve whatever was consecrated. *Cassius* would have lower'd the Floor of the Capitol; but that the *Favisse* prevented him.

Festus, however, gives us a different Account of the *Favisse*. According to that Author, they were Wells, or Pits of Water, near the Temples, and for the Use thereof: The same with what the *Greeks* call'd *ὕδατος*, Navel, as being round, &c. *Gellius* likewise gives them the Name of *Cisterns*, as well as *Festus*; but 'tis apparently, for no other Reason, than that they bore a Resemblance thereto in figure.

In effect, the two Notions are pretty easily reconciled: It being certain, that the Treasuries of some of the ancient *Greek* Churches were Cisterns, or Reservoirs of Water, wherein People us'd to wash themselves, ere they enter'd the Temple.

The Word *Favissa*, seems form'd of *Fovissa*, a Diminutive of *Fovea*, Pit or Ditch.

FAUNALIA, in Antiquity. Feasts celebrated by the *Romans*, in honour of the God *Faunus*. See **FEAST**.

The *Fanalia* were held on the Day of the Nones of December, i. e. on the fifth Day of that Month. The principal Sacrifice was a Roe-buck; or rather, according to *Horace*, a Kid, attended with Libations of Wine, and burning of Incense.

It was properly a Country Festival; being perform'd in the Fields and Villages with peculiar Joy and Devotion.

Horace gives us a very gay Description thereof, in the XVIIIth Ode of his 3^d Book.

—*Teneor pleno cadit bedus anno*
Larga nec desunt Veneris sodali
Vina Cratera, vetus ara multo
Famat adare.

Struvius, in his *Roman Calendar*, marks the Feast of *Faunus* on the Day of the Ides of *February*, which is the 13th Day of that Month; and the *Fanalia* he places on the 5th of the Ides of *December*, or the 9th of that Month. And in C. IX. he shews, that there really were two *Fanalia*; the one in *February*, mention'd by *Ovid*, *Fast. L. VI. v. 246*; the other, on the 9th of *December*, mention'd by *Horace*, in the Place just cited.

The Deity *Faunus*, to whom the Solemnity was devoted, and from whom it was denominat'd, was the same among the *Romans*, with the *Pan* of the *Greeks*.

FAUNS, **FAUNI**, among the Antients, were a Species of Demi-Gods, inhabiting the Forests; call'd also *Silvans*, *Silvani*. See **SILVANS**.

The *Fauns* are reputed pure *Roman* Deities; unknown to the *Greeks*. They were represent'd as half Men, half Goats; having the Horns, Ears, Feet, and Tail of a Goat, a very flat Nose; and the rest human.

The *Roman Fauns*, we have observ'd, was the same with the *Greek Pan*. Now, in the Poets, we find frequent Mention of *Fauns* and *Panes* in the plural Number; in all Probability therefore, the *Fauns* were the same with the *Panes*. See **PANES**.

The Reason was, that there were several *Faunus's* and *Pan's*; tho' all descend'd from one principal one. Thus *Ovid*:

Aut quas semidee Dryades; Faunisque viciories
Numine costatlas attonvere suo.

The *Romans* call'd them *Fauni*, *Ficarii*, and *Fauni Ficarii*.

The Denomination *Ficarii* was deriv'd, not from the Latin *Ficus*, *ficus*, a Fig, as some have imagin'd; but from *ficus*, *fici*, a sort of fleshy Tumor, or Excrecence, growing on the Eyelids and other Parts of the Body; with which the *Fauns* were represent'd.

Tho' the *Fauns* were held for Demi-Gods; yet were they suppos'd to dye, after a long Life. *Arnobius* shews; that their Father or Chief, *Faunus* himself, only liv'd 120 Years.

FAVOUR, in Commerce, see **GRACE**.

FAUSSE-braye, in Fortification, see **FALSE-braye**.

FAWN, among Hunters, is a Buck, or Doe, of the first Year; or the young one, of the Buck's Breed, in its first Year.

FEALTY, an Oath, taken at the Admittance of every Tenant, to be true to the Lord, of whom he holds his Land.

He that holds Land by this only Oath of *Fealty*, holds in the freest manner; for all, even those that have *Fee*, hold per *fidem* & *fiduciam*, that is, by *Fealty* at the least.

This *Fealty* is also us'd in other Nations; as in *Low-burgundy*, and *Burgundy*.

Indeed, as the very first Creation of this Tenure grew from the Love of the Lord, towards his Followers; so did it bind the Tenant to Fidelity; as appears by the whole Course of the Feuds; and the Breach thereof is Loss of the *Fee*.

Hotoman, in his Commentaries *De Verbis Feudalibus*; shews a double *Fealty*; one *General*, to be perform'd by every Subject to his Prince; the other *Special*, requir'd only of such, as in respect of their *Fee*, are tied by this Oath towards their Landlords. We read of both in the Grand Customary of *Normandy*, &c.

Fealty Special, is with us perform'd, either by *Freemen*, or *Villains*.

The Form of both, see *Anno 17 Ed. 2.* in these Words: When a Freeman shall do *Fealty* to his Lord, he shall hold his right Hand upon a Book, and shall say thus: *Hear you, my Lord A. that J. P. shall be to you, both faithful and true, and shall owe my Fealty to you, for the Land that I hold of you, on the Terms assign'd. So help me GOD; and all his Saints.*

When a Villain shall do *Fealty* to his Lord, he shall hold his right Hand over the Book, and say thus: *Hear you, my Lord A. that J. B. from this Day forth, unto you shall be true and faithful, and shall owe you Fealty, for the Land that I hold of you in Villainage, and shall be justified by you in Body and Goods. So help me GOD, and all his Saints.*

Fealty is usually mention'd as synonomous, with *Homage*; but it differs from it.

Homage consists in taking an Oath, when the Tenant comes to his Land; and is done but once; being an Obligation, which is permanent, and binds for ever: which *Fealty* does not. See **HOMAGE**.

They differ also in the manner of the the Solemnity; for the Oath of *Homage* is taken by the Tenant kneeling; but that of *Fealty* is taken standing, and includes six Things, which are compris'd in the Words, *Incolome, Tutum, Utile, Honestum, Facile, Possibile*.

Incolome, that he do no bodily Injury to the Lord; *Tutum*, that he do him no secret Injury in any thing, which is for his Defence; as in his House, or Castle: *Honestum*, for he do him no Injury in his Reputation: *Utile*, that he do not damage him in his Possessions: *Facile*, and *Possibile*, that he make it easy, and not difficult for the Lord to do any good, which otherwise he might do; all which is likewise compris'd in *Leg. H. 1. cap. 5.*

FEAST, or **FESTIVAL**, a Church-Solemnity, or Rejoicing, in Honour of God, or a Saint.

The Word is form'd of the Latin *Festum*, which some derive a *feriari*, to keep Holiday. Others derive it from the *Greek feia*, which signifies the same Thing, and is form'd of *ieia*, *Hearth*, and *Vesta*. See **FEETUM**, and **FERIE**.

FEASTS, and the Ceremonies thereof, have made a great Part of the Religion of almost all Nations and Sects: Witnesseth those of the *Greeks*, *Romans*, *Hebrews*, *Christians*, and *Mohometans*.

Feasts, among us, are either *immoveable*, or *moveable*.

Immoveable **FEASTS**, are those constantly celebrated on the same Day of the Year: The principal are, *Christmas-day*,

or the *Nativity*; the *Circumcision*, *Epiphany*, *Candlemass*, or the *Purification*; *Lady Day*, or the *Annunciation*, call'd also the *Incarnation*, and *Conception*; *All Saints*, and *All Souls*: Besides the Days of the several *Apostles*, *St. Thomas*, *St. Paul*, &c. which with us, are *Festivals*, tho' not *Perie*. See each *Feast* under its proper Article, *NATIVITY*, *CIRCUMCISION*, *EPIPHANY*, &c.

Movable Feasts are those, which are not confined to the same Day of the Year. Of these the principal is *Easter*, which gives Law to all the rest; all of them following, and keeping their proper Distance therefrom: Such are, *Palm-Sunday*, *Good-Friday*, *Ash-Wednesday*, *Sevensima*, *Ascension-day*, *Pentecost*, and *Trinity Sunday*. See *EASTER*, *Sextagesima*, *Pentecost*, *Trinity*, &c.

Beside these *Fests*, which are general, and enjoy'd by the Church, there are others, *Local*, and *Occasional*, enjoy'd by the Magistrate, or voluntarily set on Foot by the People: Such are Days of *Thanksgiving* for Delivery from Wars, Plagues, &c.

Such also are the *Vigils*, or *Wakes*, in Commemoration of the Dedications of particular Churches. See *VIGIL*, &c.

The *Romans* had abundance of fix'd *Fests*, in honour of their Deities and Heroes: Such were the *Saturnalia*, *Cerealia*, *Isopercaia*, *Liberalia*, *Neptunalia*, *Constantia*, *Porumnalia*, *Vulcania*, *Palilia*, *Dionalia*, &c.

They had also *Fests*, instituted occasionally *Carmentalia*, *Quirinalia*, *Terminalia*, *Floralia*, *Compitalia*, *Lenuria*, *Vendalia*: Beside other movable, and occasional ones; as to give Thanks to the Gods, for Benefits receiv'd; to implore their Assistance, or to appease their Wrath, &c. as the *Paganalia*, *Feralia*, *Bacchanalia*, *Ambarvalia*, *Amburbalia*, *Suovetularia*; and divers others, particularly denominat'd *Perie*; as *Semestina*, *Latina*, &c. See each *Feast* and *Feria* in its proper Place, *SATURNALIA*, *LUPERCALIA*, *SEMENTINE*, &c.

These *Fests*, were divid'd into Days of Sacrifice, and Days of feasting, or banqueting; Days of Games, and Days of Rest, or *Perie*. See *GAMES*, *SACRIFICES*, &c.

There being but little History writ, or at least publish'd in those Days; one end of these *Fests*, or speaking Ceremonies, was to serve the People to keep up the Remembrance of Things, in lieu of reading, and Books.

The principal *Fests* of the Jews were, the *Fest of Trumpets*; that of the *Expiation*; of *Tabernacles*; of the *Dedication*; of the *Passover*, and of *Pentecost*. See *Fest* of *EXPIATION*, *TABERNACLES*, *PASSOVER*, &c.

FEAST is also us'd for a Banquet, or sumptuous Meal, without any immediate Regard to Religion.

The Use of the Word in this Sense, is owing to this, that a Part of the Ceremony of many of the ancient *Festivals*, both those of the Heathens, and the *Agapea* of the Christians, was good Eating: Tho' M. Huet chuses to derive the Word from *Festinare*, which is found in an ancient Latin Version of *Origen's* Comment on *Matthew*, to signify to *Fest*. *Ut veniens illic Jesus festinet cum Discipulis suis*.

In all Antiquity, both sacred, and profane, Sacrifices were little more than religious *Fests*. See *SACRIFICE*.

It has been often observ'd by Authors, that there is no Nation in the World comes near the *English*, in the Magnificence of their *Fests*. Those made at our Coronations, Infantments, Consecrations, &c. transcend the Belief of all Foreigners; and yet it is allow'd, that those now in use are no way comparable to those of our Forefathers.

The *Persians* never discourse, and deliberate of their most important Affairs, but in the middle of their *Fests*.

FEATHER, *Plume*, that Part in Birds, which covers them; and by which they are enabled to fly. See *WING*, *FLYING*. See also *BIRD*.

Feathers make a considerable Article in Commerce; particularly those of the *Ostrich*, *Heron*, *Swan*, *Pheasant*, *Goose*, &c. For Plumes, Ornaments of the Head, filling of Beds, writing Pens, &c. See *PLUME*, *QUILL*, &c.

Some of our latest Naturalists contend for *Feathers* being a Species of Plants; as having the two great Characters of Vegetables, viz. That they grow, and are not sensible. They add, that the Growth of *Feathers* is not perform'd with less Art or Apparatus, than that of Plants; and that they have all the essential, or characteristick Parts thereof, as a Root, Stem, Branches, and Leaves. See *PLANTS*.

Others, take *Feathers* to be that on Birds, which Leaves are on Trees. See *LEAVES*.

Others seem to be nearer to Nature, in making *Feathers* to be what Hairs are on other Animals. See *HAIR*.

Others, will have *Feathers* a kind of Neophytes, or Plant-Animals; such as the *Fetus* is in the Womb. Accordingly, in *Feathers*, especially those of unfeather'd Birds, the Stem, or Quill, is found full of Blood; which argues, that there is some umbelical Nodus, whereby the first Rudiment of the *Feather* was connect'd to the extreme Fibres, i. e. to the Veins and Arteries of the Bird.

In effect, *Feathers* seem only Productions and Expan-

sions of the last, extreme *Fibrille* of the Cutis; and hence, upon stripping off the Cutis, the *Feathers* are likewise taken away: Just, as the Leaves, and Fruit follow, upon peeling the Bark off a Tree. Add, that *Feathers* as well, as Hairs, arise out of Pores in the Cutis; which Pores are not mere Apertures, or Foramina, but a kind of Vaginae, wove of the Fibres of the Skin; which terminate in the *Oscula* or Anatomies of the internal Fibres of the *Feather*.

Feathers, Mr. *Derham* observes, are a very commodious Dress for the Inhabitants of the Air; not only a Guard against wet and cold, and a Means for the Hatching and Brooding the Young, but most commodious for Flight: To which purpose they are nicely placed over the Body, to give an easy Passage; every where neatly posited, from the Head towards the Tail in close uniform Order: So that being preserv'd and dress'd by an unctuous Matter, secreted in a proper Gland, and deposited in a *Oil bag*, placed therein for that Purpose (See *OIL-BAG*); they afford as easy a Passage through the Air, as a Boat new clean'd and dress'd, through the Waters. Without all this Nicety they would have been apt to be ruffled and discompos'd; would have gather'd Air, and prov'd an Obstruction to the Passage of the Body.

Most of the *Feathers* tend backwards, and are laid over each other in exact Method, arm'd with warm and soft Down next the Body; and more strongly made, as well as more curiously clos'd next the Air, and Weather. To which Purpose the Apparatus Nature has made, and the Instinct she has given them to *preen*, or dress their *Feathers*, are admirable. See *PREENING*.

The Mechanism of the *Feather* is wonderful: The *Shaft*, or Rib exceeding strong, but hollow below, for Strength and Lightness sake, and above, not much less strong; fill'd with a *Parachyma*, or Pith both strong and light.

But the *Vanes*, or *Wings* in the flag Part of the Wing, are incomparable; nicely gauged; broad on one Side, and narrower on the other: The Edges of the exterior Vanes bending downwards, and those of the interior, or wider, upwards; by which means they catch, hold, and lie close to each other, when the Wing is spread; so that not one *Feather* may miss its full Force and Impulse upon the Air: The Tips all made sloping; those of the interior Vanes sloping to a Point towards the outer Part of the Wing, and the exterior Vanes towards the Body; so that the Wing, whether extended, or shut, is as neatly stop'd and form'd, as if constantly trim'd with a pair of Scissors.

Mr. *Derham* has several new Observations on the Mechanism of the *Vanes* or *Wings* of the *Feathers*, as they present themselves to the Microscope, by which the wonderful Care and Accuracy of the Creator is to small a Part, are excellently illustrat'd.

The *Vane* consists not of one continued Membrane (because if once broken, it would then be scarce reparable); but of many *Laminae*, admirably contriv'd to hook and hang together. On the under side they are thin, and smooth; but their upper, outer Edge (represented *Tab. Nat. History*, Fig. 5.) parted into two hairy Edges; each Side having a different sort of Hairs, laminated, or broader at Bottom, and slender, and bearded towards the Top. Those bearded Hairs, on one side the *Laminae*, have Strait Beards, as represented in Fig. 4. Those on the other, have hook'd Beards on one Side, the slender part of the *Bristle*; and straight ones on the other, as in Fig. 5.

Both Kinds are represented, as they grow on the upper Edge of the *Lamina*, in Fig. 3. In the *Vane*, the hooked Beards of one *Lamina* always lie next the straight Beards of the next *Lamina*; by which means they lock, and lay hold of each other; and by a pretty Mechanism, braze the *Laminae* close to one another.

Feather Edg'd Beards and *Planks*, are those which are thicker on one side, than on the other.

FEATHER in a *Horses Fore-bead*, &c. Is a Turning, or Parting of the Hair, which in some resembles an Ear of Barley, and in others, a kind of *Oilet-hole*.

FEBRIFUGE, in Medicine, a specifick Remedy for the Cure of *Fevers*. See *FEVER*.

The Word is a Compound of *Febris*, and *Fugo*, I drive away.

The *Quinquina*, or *Jesuit's Bark*, is the greatest, and farcell of all the Class of *Febrifuges*. See *QUINQUINA*.

The little *Centaureum* is sometimes also call'd *Febrifugum*, on account of its Virtues. See *CENTAUREUM*.

The *Chinese Ginseng* is particularly fam'd as a *Febrifuge*. See *GINSENG*.

For such as cannot take the Bark in Substance, Dr. *Fowler* prescribes a *Febrifuge Enema*, made of a Decoction thereof.

The inner Bark of the Ash-tree, with a little Salt of Wormwood, taken like the *Peruvian Bark*, is said to equal, or even exceed it, as a *Febrifuge*.

The like is said of the Bark of the *Elm* near the Root. The Flowers of *Sal Armoniac* are held an excellent *Febrifuge*.

Febrifuge, especially in intermitting Fevers. Cold Water has been lately much extoll'd as a *Febrifuge*. Dr. Hauncecock gives it the emphatical Denomination of *Febrifugus Magni*. See WATER.

Mr. *Reaume*, in the *Hist. de l'Academ. R. de Sciences*, An. 1711. proposes a new *Febrifuge*, of his own Discovery, etc. *Gallis*. From a great Number of Experiments, he has learnt, that *Galls* alone will frequently cure an intermitting Fever, as well as the *Quinquina*; over which it has some Advantages in other Things; in that it is not so bitter, does not heat, is taken in a scilder Dose, seldom, and cheaper.

At his Motion, several other Physicians tried it with Success, particularly Mr. *Hombert*; though it did not succeed so well with M. *Buldae*, *Lemery*, and *Geaffroy*. See GALLS.

FEBRIS, in Medicine. See FEVER.

FEBRUA, in Antiquity, A Feast, held by the *Romans*, in the Month of *February*; in behalf of the Manes of the Deceased.

Macrobius tells us, that Sacrifices were here perform'd; and the last Offices pay'd the Shade of the Deceased. *Saturn. L. I. c. 13*. And from this Feast it was, that the Month of *February* took its Name.

The Design of these Sacrifices is somewhat controverted; *Pliny* says, that they were perform'd, to render the infernal Gods propitious to the Deceased; tho' some of the Moderns have imagin'd, that they were intended, to appease the Deceased themselves, and were offer'd immediately to them, as a sort of Deities. What confirms the former Sentiment, is, that *Plato* himself is furnam'd *Februus*. They held for twelve Days.

The Word is of a very ancient standing in the *Latin* Tongue. From the very Foundation of the City, we meet with *Februa*, for Purifications; and *Februare*, to purify. *Varro, de Ling. Lat. L. V.* derives it from the *Sabini*: *Vofius*, and others, from *ferveo*, I am hot; by reason, that Purifications chiefly were perform'd with Fire, and hot Water. Some go higher, and even deduce the Words from *FE*, *Phur*, or *Phavar*, which in *Syriac* and *Arabic* has the same Signification with *Feruit*, or *Esferbit*; and might probably, likewise signify, to purify: For *phavar*, in *Arabic*, denotes a Preparative, given to Women in Child-bed, to bring away the After-birth, and other Impurities, remaining after Delivery: Much as among the *Romans*, who gave the Name *Februa* to the Goddess suppos'd to preside over the Delivery of Women. *Ovid. Fast.*

FECES, and
FECAL Matter, } See } FECES.
FECIALES, FERIALES, or FETIALES, were publick Officers among the ancient *Romans*.

The *Feciales* were a sort of *Heralds*, or Kings at Arms; who, when the *Romans* had any Dispute with their Neighbors, were sent, first, to demand the Thing pretended to be usurp'd; or require Satisfaction for the Injury alleg'd to be done. If an Answer was not return'd by them, that was satisfactory to the People and the Senate; they were dispatch'd again to declare War: And the like in treating of Peace; the *Feciales* being the only Persons appointed to treat between the Senate, &c. and the Enemy.

Plutarch, in the Life of *Numa*; and *Halicarnassensis* L. II. observe, that they were first instituted by that Prince. The latter adds, that they were chosen out of the best Families in *Rome*; that their Office, which was reputed a sort of *Sacerdotium*, or Priesthood, only ended with their Life; that their Persons were sacred, and inviolable, as those of other Priests; that they were even charged to see the Republick did not declare War unjustly; that they were to receive the Complaints and Remonstrances of Nations, who pretended to have been any way injur'd by the *Romans*; that if those Complaints were found just, they were to seize the Criminals, and deliver them up to those they had offend'd; that they were invest'd with the Rights and Privileges of *Embassadors*; that they concluded Treaties of Peace, and Alliance, and took Care they were executed, and lastly abolish'd them, if they were not equitable.

But *Varro* assures us, that in his time most of these Functions of the *Feciales* were for a side; as *Plutarch* of the ancient *Heralds* at Arms are among us: Tho' *Plutarch* observes, that they had still some Authority in his Time. See HERALD.

The *Feciales* went crown'd with *Verbena*, *Vervain*, when they went to declare War: Their Head was cover'd with a Veil, over which the Crown was applied. In this Equipage they proceeded to the Frontiers of the new Enemy's Country; and threw a bloody Dart, or Javelin into the Earth, within the same. In *Livy*, and other ancient Authors, as also among the modern Critics and Grammarians, we have the Formula's us'd in such Declarations.

Festus derives the Word from *ferio*, I strike; as *ferire fedus*, signifies to conclude a Treaty: And accordingly, instead of *Feciales*, he would have it wrote *Fetiales*.

Others derive it from *fedus*, which was antiently wrote

fedus; or from *fidet*, Faith: Others from *facio*, *faci*, I make, &c. by reason they made War and Peace.

Voffius chales to derive it from *faru*; of the Verb *faru*, to speak; in which sense the *Feciales* should be the same with *Oratores*; who Sentiment is confirm'd from the Authority of *Varro*, who says, they were call'd indifferently, *Feciales* and *Oratores*. *De Vita Popul. Roman. L. II.*

FECULA, or FUCULA, in Pharmacy, A white, mealy Substance, or Powder, which subsides, and gathers at the Bottom of the Juices, or Liqueurs of divers Roots; as those of *Briony*, *Aram*, *Iris*, &c.

This Substance, or Sediment, they dry in the Sun; after having pour'd off the Liqueurs; and it serves for divers Remedies.

The Word *Fecula* is a Diminutive of *Feces*.

FECULENT, or FUCULENT, is applied to the Blood; and other Humors, which abound in *Feces*, or Dregs; or have not the proper and usual Degree of Purity.

FECUNDITY, or FUCUNDITY, *Fertility*, or the Quality of a thing, which denominates it fruitful.

The *Fecundity* of divers Plants is very extraordinary. M. *Dobart* has an express Treatise thereof in the Memoirs of the Academy of Sciences.

He shews, that at a moderate Computation, an Elm, one Year with another, yields 329000 Grains, or Seeds; each of which, if properly lodg'd, would grow up unto a Tree. Now, an Elm ordinarily lives 100 Years; consequently, in the Course of its Life; it produces 32900000 Grains; all which arise from one single Grain.

He shews farther, that the same Elm, by frequently cutting off its Head, &c. might be brought to produce 1540000000 Seeds; and that there are so many actually contain'd in it; see PLANT.

FEE, FEUD, FEUDUM, FEODUM, or FEIF, an Estate; Land, Tenement, Lordship, or Right held of a superior Lord, on condition of Fealty, Homage, or other Acknowledgement.

The Term *Fees* is properly applied to Lands and Tenements, which we hold in perpetual Right, on condition of an Acknowledgment of Superiority in a higher Lord. See TENURE.

The Writers on this Subject, divide all Lands and Tenements, wherein a Man hath a perpetual Estate to him and his Heirs, into *Allodium*, and *Feudum*.

Allodium is defin'd, to be a Man's own Land, which he possesseth merely in his own Right, without Acknowledgment of any Service or Payment of any Rent to another; and this is Property in the highest Degree. See ALLodium.

He that hath *Fee* holds of another by some Duty, or other, call'd *Service*, see SERVICE.

Feudum is that, which we hold by the Benefit of another; and for which we do Service, or pay Rent, or both, to the chief Lord.

Originally, a *Feud* was only an Estate for Life; and those to whom it was granted, were call'd *Vassalls*, who, by such means, were brought to a stricter Discipline and Obedience to the Princes, and were bound to serve them in Wars. See VASSAL.

The Origin of *Fees* is one of the darkest, and most intricate Points in modern History; Authors being exceedingly divided about it.

Some attribute the Invention thereof to the *Lombards*: Others find some Appearance of the Duties of a Vassal to his Lord, in the ancient Relations between the Patron, and his Client: And others look for its Rise in the *Roman* Beneficia.

The Emperors, it seems, distributed Lands among the ancient Legions, on condition of their holding themselves ready at all Times, to take up Arms, in defence of the Frontiers of the Empire; which affords as a good Image enough of *Fees*; and in all Probability, their first Origin was no otherwise: But in Process of Time their Nature was changed, and Duties were annex'd to them, which originally were not.

Du Moulin makes no Doubt, that these Distributions of Lands, call'd *Benefices*, were the first matter of *Fees*; for which reason he uses the Terms *Benefice* and *Feud* promiscuously; as if they were the same Thing: And yet, there was a good deal of Difference between them; as there was neither Fealty, nor Homage, nor the other feudal Rights annex'd to the *Benefice*; and as the *Benefice* was not hereditary. See BENEFICE.

Probably, *Benefices* began then to be call'd *Fees*, when they became hereditary; and when those, of whom the *Benefices* were held, began to demand Faith, or Fealty, from them. See FEALTY.

This Fealty seems to constitute the *Fee*; the Word *Fee* it self, signifying in the antient *Norman* Language, Faith.

There is no fixing the precise Era, when these Changes commenced; For *Fees*, such as they now are, were not establish'd all at once: And in different Countries they took place at different Times, and in different manners. The Great

Lords, after the Destruction of the Roman Empire, having in several Parts usurp'd the Property of their Benefices, laid likewise hold of the Jurisdiction; and made their Vassals their Subjects, so that each became a sort of petty Sovereign in his own Territory.

Macey observes, that the Donation of Fees to the Nobles of France commenc'd under the Principality of Charles Martel.

Hugh Capet, when he came to the Crown, was himself so little establish'd, that he durst not oppose those Usurpations; and was forc'd to suffer, what he could not redress. See *le Fevre, de l'Origine des Fiefs*: and *Hauteferre's Origines Feudorum pro Moribus Gallie*.

The Origin of Fees in England, *Cambden* attributes to *Alexander Severus*. That Prince having built a Wall in the North of England, to prevent the Incurfions of the Picts; he some time after, began to neglect the Defence thereof, and gave, as *Lampridin* assures us, the Lands conquer'd from the Enemy, to his Captains and Soldiers, whom that Author calls *Limitarios Ducis, & Militis*, i. e. Captains and Soldiers of the Frontiers; but it was on this Condition, that their Heirs should continue in the Service; and that the Lands should never descend to private Persons, i. e. to such as did not bear Arms. That Prince's Reason was, that People, who in serving defended their own, would serve with a deal more Zeal, than others.

Such was the Rise of Fees in our Nation, according to *Cambden. Britan. p. 651*.

All our Lands in England (the Crown Land which is in the King's own Hand, in right of his Crown excepted) is in the Nature of Fiefs or Fees.

For tho' many have Land by Descent from their Ancestors, and others have bought Lands; yet cannot Land come to any, either by Descent, or Purchase, but with the Burden that was laid on him who had the *Novel Fee*, or who first received it as a Benefice from his Lord to him, and such as should descend from him, or to whom it should be otherwise convey'd and transfer'd; so that no Man has *directum Dominium*, i. e. the very Property or Domain in any Land, but the Prince, in right of his Crown. *Camb. Britan. p. 93*.

Tho' he who has Fee, has *ius perpetuum*, and *utile Dominium*, yet he owes a Duty for it; so that it is not strictly his own. Indeed, as much is imported by the Terms in which we express our highest Right in Lands, &c. the most he can say, is, *I am fei'd of this Land, in my Domain, as of Fee*.

In the Stat. 37 Hen. 8. cap. 16. Fee is also us'd for Lands invest'd in the Crown; but 'tis from Ignorance of the Import of the Word; for Fee cannot be without Fealty sworn to a Superior: But the King owns Fealty to no Superior, but God alone.

The Words *Fief, Feud, or Fief*, are deriv'd by some Authors from *fidus*, as arising from *Treaty*, or Alliance, made with the Lord: Others, as *Cujas*, &c. fetch them from *fides*, on account of the Faith the Person is oblig'd to bear his Lord: Others derive them from the Saxon *Feh, Hire, Wages, q. d. Status beneficiarius*.

Bodius takes the Latin *Fedum* to be form'd by Abbreviation of the initial Letters of *Fidelis Ero Domino Vero Meo*, which is an ancient Formula of Fealty and Homage. *Nicod* derives it from the German *Feld*, which signifies the same Thing: *Hottoman* from *Fced*, a German Word, signifying War: *Poutanus* from the Danish *Feide*, Militia: Others from the Hungarian *Feid*, Land: Others from *fidem*, to feed: But the Opinion of *Selden*, seems the best authoriz'd, who brings it from the Saxon *Fean*, Stipendium; the Fee being a kind of Prebend to live upon; and accordingly we find, that in ancient Times it was us'd for the Wages, and Appointment of Officers.

Fee is divided in our Laws, into *Fee absolute*, call'd also *Fee Simple*; and *Fee Conditional*, also call'd *Fee Tail*.

Fee-Simple, Fendum simplex, is that, whereof we are fei'd to us and our Heirs, for ever.

Fee-Tail, Fendum talliatum, is that, whereof we are fei'd with Limitation to us and the Heirs of our Body. *Fee-Tail* is of two kinds, *General*, and *Special*.

Fee-Tail general is, where Land is given to a Man, and the Heirs of his Body; so that if a Man fei'd of such Land by such Gift, marry one, or more Wives, and have no Issue by them, and at length marry another, by whom he hath Issue; this Issue shall inherit the Land.

Fee-Tail special is, where a Man and his Wife are fei'd of Lands to them, and the Heirs of their two Bodies; because in this Case, the Wife dying without Issue, and he marrying another, by whom he hath Issue; this Issue cannot inherit the Land, it being especially given to such Heirs, &c.

This *Fee-Tail special* has its Origin from the Stat. of Hen. 2. cap. 1. Before that Statute, all Land given to a Man, and his Heirs, either General, or Special, was reputed in the nature of a Fee; and therefore so firmly held to him, that, any Limitation notwithstanding, he might

alienate it at pleasure. For Redress of which Inconvenience, the Statute provides, that if a Man give Lands in Fee, limiting the Heirs to whom it shall descend, with a Reversion to himself, and his Heirs for Default of such former Heirs; that the Form and Meaning of the Gift shall be observ'd.—

Fee is also us'd for the Compass or Circuit of a Manor, or Lordship. Thus *Braiton, in eadem Villa; & de eadem Feodo*—

Also for a perpetual Right Incorporal; as to have the keeping of Persons in Fee: Rent granted in Fee: an Office held in Fee, &c.

Lastly, Fee still signifies a Reward, or ordinary Due, given a Person for the Execution of his Office, or the Performance of his Part, in his respective Art or Science. Thus, the Lawyer, and Physician, are said to have their Fees, i. e. Considerations for the Pains taken with the Client, or Patient. A Barrister, or Physician, are suppos'd to receive their Fees from time to time, as their Service is perform'd: They cannot make a Bill.

Fee-Expectant, Fendum expectatum, see EXPECTANT. *Fee-Farm, or Fee-Ferm, Fendi-firma, or Feofirma*, signifies Lands holden to a Man and his Heirs for ever, under Rent.

Fee-Farm arises, when the Lord upon Creation of the Tenancy reserves to himself, and his Heirs, either the Rent for which it was before let to Farm, or at least a fourth Part of the Rent; and that without Homage, Fealty, or other Services more than are especially compris'd in the Possession.

Tho', by *Fitz-herbert*, it appears that the third Part of the Value may be appointed for the Rent, or the finding of a Chaplain, to say Divine Service, &c. And the Nature of it is this, that if the Rent be behind, and unpaid for the Space of two Years; then the Feoffor or his Heirs have Action, to recover the Lands as their Demands. See FARM.

FEES are also settled Perquisites, or Allowances, paid to Publick Officers, by Persons who have Business with them.

The Smallness of the Salaries of divers of the Queens Servants, is compensated by the Perquisites, or Fees of Honour.

The Fees paid to the several Officers by every Person, upon his being knighted, amount to 78*l.* 15*s.* 4*d.* And if it be done within the Verge of the Courts, there is three Pound more to the six Pages of the Bed-Chamber, which brings it to 81*l.*

FEELING, or *Tonebing*, one of the external Senses, whereby we get the Ideas of *soft, hard, soft, rough, hot, cold, wet, dry, or other tangible Qualities*; as also of *Distance, Trillitation, Itching, Pain, &c.* See SENSE, SOLLID, HARD, &c.

Feeling, is the grossest, but at the same time the most extensive of our Senses; having more Objects than all the rest taken together: And some even reduce all the other Senses, to this one of *Feeling*.

Aristotle is express, that all Sensation is only *Feeling*; and that the other Senses, as *Seeing, Hearing, Taste, and Smelling*, are only the more exquisite Species or Degrees thereof. *De Anim. lib. 4. c. 3. and lib. 3. c. 12.* See SEEING, HEARING, &c.

Naturalists are divided as to the Organ, or Instrument of *Feeling*.

Aristotle takes this Sense to reside in the Flesh, *quatenus* Flesh; inasmuch as all Flesh, is, in some measure capable of *feeling*. *Hist. Anim. L. 1. c. 4.* Others will have it in all the Parts that have nervous Fibres; which extends it to the Skin, Flesh, Muscles, Membranes, and Parenchyma's: Others restrain it to the Skin, or Cutis; it being observ'd, that only those Parts cover'd with a Cutis, have properly the Faculty of *Tonebing*, or perceiving tangible Qualities. But what part of the Cutis to assign immediately for this Office, is again disput'd.

Some will have it the membranous Part; others the Carnous; and others the medullary Part, deriv'd from the Nerves.

Malpighi, and after him, all our latest, and best Authors, hold the immediate Organ of the Sense of *Feeling*, to be the pyramidal Papillæ under the Skin.

These Papillæ are little, soft, pulps, medullary, nervous Prominences, lodg'd every where immediately under the Cuticula. They are form'd of the subcutaneous Nerves, which in order hereto, first lay aside their outer Membrane, and are left exceedingly soft, and sensible; are continually moisten'd by a thin, subtle Humor; and only covered over, and defended by the Cuticle, or scarf Skin. They are largest, and most conspicuous in those Parts, chiefly design'd for the Office of *Feeling*, viz. the *Tongue, Tips of the Fingers, and Toes*; and are contractile, and again expansive at pleasure. See PAPILLÆ; see also TONGUE, FINGER, &c.

Feeling, then, is thus effected: The Tip of the Finger, for instance, being applied to an Object to be examined; By that Intention of the Mind, the Papillæ are emitted or elevated; and being lightly rubb'd over the Surface of the Object, a Motion is impress'd on them; which being thence propagated by the Nerves communicating with them, to the common Senfory, excites the Perception of Heat, Cold, Hardness, or the like. See SENSATION.

Hence we see, why *Feeling* becomes painful, when the Cuticle is wore off, burnt, macerated, &c. And why, when the Cuticle becomes thick, hard, callous, or cicatrized, &c. the Sense of *Feeling* is lost; whence the Numbness impress'd by the Torpedo; why that exquisite Painfulness under, and at the Roots of the Nails, &c. See CUTICLE, BURNING, CALLUS, TORPEDO, and NAIL.

Feeling is, on many Accounts, the most universal of our Senses: There is no Animal without it.

Pliny observes, that several Animals, as Oysters, and Earth-worms, which have no other Sense, yet have this of *Feeling*. *Nat. Hist. lib. 10. c. 71.* The other Senses are confin'd to narrow Bounds; *Feeling* only is coextended with the Body, as being necessary to the Well-being of every Part. Hence *Cicero*, *Feeling* is equally diffus'd throughout the whole Frame, that we might be sensible of all Impulses in every Part, and feel all the Degrees of Heat, Cold, &c. *De Nat. Deor. L. II. c. 56.*

Naturalists observe, that Spiders, Flies, and Ants have the Sense of *Feeling* in a much greater Perfection than Men; though we have Instances of Persons, who could distinguish Colours by their *Feeling*; and of others, who could perceive what People said, by the same Sense. See COLOUR, and DRAPESS.

FEINT, in Musick, a Semi-tone; the same with what we also call *Diessis*. See DISSIS.

FEINT, in Rhetorick, A Figure whereby the Speaker touches on some thing, in making a Shew of passing it over in Silence. The *Latins* call it *Prætermisso*. See PÆTERMISSION.

FEINY, in Fencing, a false Attack, or a Shew of making a Stroke, or Push in one Part, with Design to bring the Enemy to guard that Part, and leave some other Part unguarded, where the Stroke is really intended. See GUARD.

Feints are either single, or double; high, or low; without, or within, &c. In Prime, in Tierce, in Quart, in Demi, and in the whole Circle; in one, two, or three Measures.

The simple *Feint* is a mere Motion of the Wrist, without stirring the Foot, &c.

FELAPTON, in Logic, one of the Moods of Syllogisms. See MOOD.

In a Syllogism, in *Felapton*, the first Proposition is an universal Negative; the second, an universal Affirmative; and the third, a particular Negative. See SYLLOGISM.

FELLING of Timber, see TIMBER.

FELLOWS, in Fortification, are six pieces of Wood, each of which form an Arch of a Circle; and these joy'd all together by Douldges, make an entire Circle; which with twelve Spokes, make the Wheel of a Gun-Carriage. See CARRIAGE.

Their Thickness is usually the Diameter of the Ball of the Gun they serve for, and their Breadth something more.

FELLOWSHIP, *Company*, or *Partnership*, in Arithmetick, is a Rule of great Use in balancing Accounts amongst Merchants, and Owners of Ships; where a Number of Persons putting together a general Stock; it is requir'd to give every one his proportional Share of the Loss, or Gain.

The Golden Rule several times repeated, is the Basis of *Fellowship*, and fully answers all Questions of that Kind: For, as the whole Stock is to the Total thereby gain'd, or lost; so each Man's particular Share, is to his proper Share of Loss, or Gain. Wherefore, the several Sums of Money of every Partner are to be gather'd into one Sum, for the first Term; the common Gain, or Loss for the second; and every Man's particular Share for the third; and the Golden Rule to be wrought so many times, as there are Partners.

There are two Cases of this Rule; the one *With Time*, the other *Without Time*.

Fellowship without Time, is where the Quantity of Stock, contributed by each Person, is alone consider'd; without any particular regard to the Length of Time, that any of their Monies were employ'd. An Example will make this Process easy.

A, B, and C, freight a Ship with 212 Tun of Wine; A. laying out 1342 l. B. 1178 l. and C. 650 l. towards the same: The whole Cargo is sold at 52 l. per Tun. Query, what shall each Person receive?

Find the whole Produce of the Wine, by multiplying 212 by 52, which yields 6784; Then, adding together the several Stocks, 1342, 1178, and 650, which make 3170, the Work will stand thus:

3170 : 6784	{	1342—Answ.—2890
		1178 — — 2577
		650 — — 1356
		—————
		Proof 3170 6784

FELLOWSHIP *with Time*, is, where the Time, wherein the Money, &c. was employ'd, enters into the Account. An Example will make it clear.

A, B, C. commence a Partnership the first of *January*, for a whole Year. A. the same Day disburs'd 100 l. whereof he receiv'd back again on the first of *April*, 25 l. B. pays on the first of *March* 60 l. and more the first of *August*, 100 l. C. pays the first of *July* 140 l. and the first of *October* withdraws 40 l. At the Years End their clear Gain is 142 l. Query, what is each Person's Due?

A's 100 l. multiplied by 3 Months, the Time it was in, makes 300 l. and the remaining 80, by 9 Months=720, In all 1020 l. of A's Contribution. For B. 60 into 10, gives 600; and 100 into 5, 500; in all 1100 l. for B. For C, 140 into 3, gives 420; and 100 into 3, is 300; in all 720 l. for C.

Now, 1020 + 1100 + 720 = 2840 for the common Antecedent; and the Gain 142, is for the general Consequent: Then the Rule will stand thus:

2840 : 142	{	1020—Answ.—51
		1100 — — 55
		720 — — 36
		—————
		Proof 2840 142

FELD-de-see, is he, that commits Felony, by willingly killing himself.

The *Saxons* call'd him *Self-dane*. See SUICIDE. He is to be interr'd without Christian Burial, with a Stake driven through his Corps; and to forfeit his Goods.

FELONY, was antiently us'd for a violent and injurious Action of a Vassal, or Tenant against his Lord.

In which Sense, *Felony* was equivalent to petty Treason; or it was a Crime next below High Treason. The Crime of *Felony* import'd Confiscation of the Fee, to the Profit of the Lord.

The same Term *Felony*, is applied to an Injury of the Lord to his Vassal, which imports a Forfeiture of the Homage and Service thereof, and make it revert to the Sovereign.

Fidelity, and *Felony* are reciprocal between the Lord and the Vassal. See LORD.

Mevage derives the Word from *Felonia*, form'd of *felo*, or *fello*, which occurs in the Capitularies of *Charlet* the Bald, and is suppos'd to come from the *German* *Fellen*, or *Saxon* *Felen*, to fail, or be delinquent. Others derive it from the barbarous Latin *Vilania*.

My Lord *Coke*, *Nicod*, &c. derive it a *felle*, Gall, as being suppos'd to be done maliciously. Lastly, others derive it from the *Greek* *phalan*, to deceive.

FELONY, in Common Law, is an Offence next below that of Petty-Treason.

Felony includes several Species of Crimes, whose Punishment is the same, viz. Death: Such as *Murder*, *Treft*, *Suicide*, *Sodomy*, *Rape*, wilful *Burning* of Houses, receiving of *stolen Goods*, and divers others found in the Statutes, which are daily making Crimes *Felony*, that were not so before.

Felony is easily distinguish'd from *Treason*. See TREASON. From lesser Crimes, it is distinguish'd by this, that its Punishment is Death; tho' not universally: For *Petty Larceny*, i. e. stealing of a thing, under the Value of 12 s. is *Felony*, according to *Brook*; tho' the Crime be not capital, but only a Loss of Goods.

The Reason *Brook* gives for its being *Felony*, is that the Indictment runs, *Feloniae cepit*.

Till the Reign of *Henry I.* *Felonies* were punish'd by pecuniary Fines: That Prince first order'd *Felons* to be hang'd, about the Year 1108.

Felony is of two Kinds: The one lighter, which for the first time is entitl'd to the Benefit of *Clergy*; as *Manflaughter*. See MANSLAUGHTER. The other is not.

Felony is also punish'd by Loss of all Lands, not entail'd, and all Goods and Chattels, both real and personal: Tho' the Statutes make a Difference in some Cases, concerning Lands as appears by Stat. 37 Hen. 8.

Felony ordinarily works Corruption of Blood, unless the Statute, ordaining the Offence to be *Felony*, provide otherwise: as the Stat. 39 Eliz. c. 17. See FURCA.

FELT, a kind of Stuff, either of Wool alone, or of Wool and Hair; neither spun, cross'd, nor wore, but deriving all its Consistence from its being wrought, and fall'd with Lees and Size, and afterwards fashion'd on a Block or Mould, by help of Fire and Water.

Caster's, Camels, and Coney's Hairs; Lambs and Sheep's Wool, &c. are the most usual Ingredients of *Felts*: And Hats of all kinds, are the Works, they are chiefly employ'd in.

The *Felt* intended for a Hat, being sufficiently full'd, and prepar'd, is reduc'd into one Piece, somewhat in the figure of a large Funnel: In which State it remains ready, to be put into Form, and become a Hat. See HAT.

FELUCCA, or FELUCCO, a little Vessel, with six Oars, but cover'd over; and much us'd in the Mediterranean. It may bear its Helm on both Sides; which is likewise shifted from behind, forwards occasionally. Its Size is about equal to that of a Sloop, or Chaloup. See BOAT.

The Word is form'd from the *Arabic Felcon*, a Ship.— FEMALE, the Sex that conceives, and bears Fruit. See SEX, and WOMAN.

An Animal that generates in it self, is called *Female*; and that which generates in another, *Male*. See MALE.

The *Female* both in Quadrupods, and even Birds, is usually smaller, and weaker than the *Male*; tho' in Birds of Prey, as the Falcon, Hawk, &c. it is otherwise; the *Female* being bigger, stronger, bolder, hardier, and more courageous. See FALCON.

The like is observ'd in most Insects, particularly Spiders; to that Degree, that Mr. *Houber* assures us, he has weigh'd five or six Male Garden-Spiders against one *Female* of the same Species.

For the Proportion of Males to FEMALES, see MARRIAGE, BIRTHS, &c.

Naturalists distinguish Male and *Female* Plants; Male and *Female* Flowers, &c. See PLANT, FLOWER, GENERATION, &c.

FEMALE SCREW. See SCREW.

FEME COVERT, in Law, a married Woman; who is also said to be under *Covert Baran*. See COVERT.

FEMININE, in Grammar, one of the Genders of Nouns. See GENDER.

The *Feminine Gender* is that, which denotes the Name to belong to a *Female*. In the *Latin*, the *Feminine Gender* is form'd of the *Masculine*, by altering its Termination; particularly by changing *us* into *a*. Thus, of the *Masculine Jovis equus*, a good Horse, is form'd the *Femine Jovis equa*, a good Mare; So, of *parvus homo*, a little Man, is form'd, *parva femina*, a little Woman, &c.

In *French*, the *Feminine Gender* is express'd, not by a different Termination; but a different Article: Thus, *le* is join'd to a Male, and *la* to a Female.

In *English*, we are generally more strict, and express the Difference of Sex, not by different Terminations, nor by different Particles, but different Words; as *Boar*, and *Sow*; *Boy*, and *Girl*; *Brother*, and *Sister*, &c. tho' sometimes the *Feminine* is form'd by varying the Termination of the Male into *ess*; as in *Abbot*, *Abbess*, &c.

FEMINE RHINE, see RHINE.

FEMUR, or OS FEMORIS, in Anatomy, the Thigh-bone. See BONE, and THIGH.

The *Femur* is the largest and strongest Bone in the Body; and its Articulations are proportion'd to its Bulk, and Strength. Its upper Part is joined with the *Hicium*, by *Enarthrosis*; the Head of the *Femur* being receiv'd into a Cavity of the *Hicium*; and the two kept together by a strong Cartilage, or Bandage. The lower End is articulated with the *Tibia* by *Ginglymus*; two Heads of the *Femur* being receiv'd into two Cavities of the *Tibia*; beside a Cavity between the two Heads, which receives a Process of the *Tibia*.

The *Femur* is pretty much incurvated, or bent; the convex Part being before, and the Concave behind. It is divided into three Parts; the upper, middle, and lower.

The upper, consists of a Head, and a Neck; in which are contain'd three Epiphyses, viz. the *Extremity*, or Head, which is round, and big, and receiv'd into the *Acetabulum* of the *Coxendix*, wherein it is tied by two Ligaments; the one from the Head, and the other from the Bottom of the *Acetabulum*, but both inserted into the Middle of the Head. Immediately under the Head, is the *Neck*, which is small, long, and a little oval, and makes an Angle with the Body of the Bone; by means whereof the Thighs and Feet are kept at a due Distance from each other, to make our Standing the firmer; Beside that the Obliquity of the Neck conduces to the Strength of the Muscles, which must otherwise have pass'd too near the Centre of Motion. The other two Epiphyses are call'd the greater and less *Trochanters*. See TROCHANTER.

The middle Part, or Shank of the *Femur*, is round, smooth, and polish'd on its Fore-side, and rough on the Hind-side; along which there runs a small Ridge, the whole Length of the Bone, call'd the *Linea aspera*, serving for the Insertion of Muscles.

The lower Part of the *Femur* is divided by a *Sinus* in the Middle, into two Heads, or Apophyses, call'd *Condili*, which make the *Ginglymus* above mention'd; being both receiv'd into the *Sinus* of the *Tibia*. See CONDILUS.

Between the hind Parts of these Heads is a Space for the Passage of the great Vessels and Nerves, which go to the Leg.

The *Femur* has a very large Cavity, running its whole Length, fill'd, like the rest, with Marrow. The Curvature of the *Femur* makes it serve as a Buttress to the Body, to prevent its falling, or bearing too much forward.

Surgeons and Bone-setters should take Care, that in fractures of the *Femur* they don't endeavour to let it straight, which is unnatural.

Meas. *Dionis* derives the Word *Femur* from *fero*, by reason it bears the whole Weight of the Body.—

FEN, in Geography, a kind of Lake, or rather, Morass. See LAKE, and MORASS.

FENS are of two Kinds: The first of a Boggy Confidence, composed of Water and Earth intermix'd; scarce firm enough to sustain the Tread of a Man. See BOG, and MOSS.

The second are Ponds, or Collections of Waters, with pieces of dry Land, raised here and there, above the Surface thereof.

The former kind neither receive, nor emit any River: But the latter are frequently the Heads or Springs of Rivers: Such is the Head of the *Nile*, *Tanais*, &c.

FENCE-MONTH (*Menfis prohibitions*, or *Menfis certius*) is a Month, wherein the female Deer do fawn; for which Reason it is unlawful to hunt in the Forest, during that Time.

It begins fifteen Days before Midsummer, and ends sixteen Days after; in all, thirty Days.

There are also certain *Fence*, or *Defence* Months, or Seasons for Fish, as well as wild Beasts; as appears by *Stat. Westm.* 2. cap. 12. in these Words:

All Waters, where Salmons are taken, shall be in *Defence* for taking of Salmons, from the Nativity of our Lady, unto St. Martin's Day. And likewise, young Salmons shall not be taken or destroyed by Nets, &c. from the Midst of April, to the Nativity of St. John Baptist, &c. See TAMPER, FOINESUN, FANATIO, &c.

FENCE-WALLS, are Walls of Brick, or Stone, made round Gardens, &c. See WALL.

FENCING, the Art of *Defence*; or of using the Sword, to wound an Enemy, and shelter one's self from his Attacks. See SWORN, and GUARD.

Fencing is one of the Exercises learnt in the Academies, &c. See EXERCISE.

Fencing is learnt by practising with *Files*, called in *Latin*, *Rudes*; whence Fencing is called *Gladiatoria rudiarum*. See GLADIATOR.

Pyrard assures, that the Art of Fencing is so highly esteemed in the *East Indies*, that none but Princes and Noblemen are allowed to teach it. They wear a Badge or Cognizance on their right Arms, called in their Language *Esars*, which is put on with great Ceremony, like the Badges of our Orders of Knighthood, by the Kings themselves.

Montaign assures us, that when he was a Youth, the Nobility all shunn'd the Reputation of being good Fencers; as something too subtle, and designing, and apt to corrupt virtuous Manners.

Fencing is divided into two Parts, Simple, and Compound.

Simple is, what is performed directly and nimbly, on the same Line; and is either Offensive, or Defensive. The principal Object of the first, is whatever may be attempted, in pushing or passing from this or that Point, to the most uncovered Part of the Enemy. The second, consists in parrying, and repelling the Thrusts aimed by the Enemy.

The *Compound*, on the offensive Side, includes all the possible Arts and Inventions, to deceive the Enemy, and make him leave that Part we have a Design on, bare, and unguarded, upon finding we cannot come at it by Force, nor by the Agility of the simple Play.

The principal Means hereof are Feints, Appeals, Closings, and Intanglings of Swords, half-Thrusts, &c. And in the Defensive, to push in speaking.

FEND, in the Sea Language, is used for the saving a Boat from being dash'd against the Rocks, Shore, or Ships Side.

Hence the Phrase, *Fending the Boat*, &c. Hence also FENDERS, any Pieces of old Cable Ropes, or Billets of Wood, bang over the Ship's Side, to fend or keep other Ships from rubbing against her.

Boats have the like.—

FENDUE *en Pal*, in Heraldry, a *French* Phrase, applied to a Cross, to denote it cloven down from Top to Bottom, and the Parts set at some Distance from one another.

FENESTRA, in Anatomy, a Name applied to two Holes, or Apertures in the inner Ear. See EAR.

The *Fenestre* are two Openings in the Labyrinth; the first of them inclos'd by the Basis of the Stapes, and from its oval Figure denominated *Fenestra ovalis*; the latter, call'd *rotunda*, is clos'd with a transverse transparent Membrane, plac'd a little within the Surface of its Aperture.

These *Fenestre*, with the whole Labyrinth, are comprehended in that Part of the *Os temporum*, properly call'd from its Hardness *petrosism*. See LABYRINTH, &c.

FENNEL, or *Fennel-seed*, in Commerce, &c. a longish, striated Seed, flat on one Side, and roundish on the other; of a sweetish Taste, not unlike that of Aniseed; being the Produce of an umbelliferous Plant of the same Name, well known as a Pot-herb.

Fennel makes part of the Commerce of the Druggists and Apothecaries. 'Tis esteem'd a Carminative, and us'd like Aniseed, to dispell Winds in the Body; and correct Senna, and the rest of the vegetable Purgatives.

There is also a strong Water, or Erandy made of the Seeds of *Fennel*, and call'd *Fennel-Water*. The Ingredients are *Fennel Seed*, Liquorice, Brandy, and white Wine, which are distill'd together; and to the Essence thereof are added Spirit of Wine, Sugar, and sweet Almonds: The whole strain'd, &c.

PENUGREE, *Fennis Græcum*, or *Fennigreek*, a medicinal Plant, thus call'd, because antiently brought from Greece, tho' now cultivat'd in several Parts of Europe.

Its Stem is about a Foot high: Its Leaves small, and disposed somewhat like those of Trefoil. It yields a little white Flower, from whence arises a long, pointed Pod, shap'd not unlike a Bulls-horn.

The Grain, or Seed is inclin'd in this Pod, which bears the Name of the Plant it self, is less than Mustard Seed, very hard, and solid, of a triangular Form, and a strong disagreeable Smell: When new, 'tis of a yellow, gold Colour; but when kept, ruddy, or brown.

The Fennel, or Flower of these Seeds is esteem'd good to ripen and digest; and as such, is us'd in Cataplasms of those Intentions; as also in emollient Clysters, Decoctions, and Cataplasms.

It yields a Mucilage us'd in Inflammations of the Eyes and on other Occasions.

FEODARY, *FEUDARY*, or *FEUDATARY*, was an Officer, antiently made and authorized by the Master of the Court of Wards. See WARD.

His Office was, to be present with the Escheator, at the finding any Office; and to give Evidence for the King, concerning the Tenure and the Value thereof: To survey the Land of the Ward after the Office found, and rate it. He also assign'd the Kings Widows their Dowers, and received the Rents of Wards Lands. This Office is taken away by Stat. 12 Car. 2.

FEODER, a Capital Measure for Liquids, us'd throughout Germany. See MEASURE.

FEODUM, or *FEUDUM*, the same with *Fief*, or *Fee*. See FEE.

FEOFFMENT, in Common Law, signifies any Gift, or Grant of any Honours, Castles, Manors, Messuages, Lands, or other corporeal or immovable Things of like nature, unto another in Fee simple; that is, to him, and to his Heirs for ever, by the Delivery of Seisin, and the Possession of the Thing given; whether the Gift be made by Deed, or Writing.

When it is in Writing, it is called the *Deed of Feoffment*.

In every *Feoffment*, the Giver is called the *Feoffor*, or *Feoffator*.

The proper Difference between a *Feoffor*, and a *Donor*, is, that the *Feoffor* gives in Fee simple; and the *Donor* in Fee-tail. See DONOR, and FEE.

FERALIA, in Antiquity, a Feast held by the Romans, on the 21st of February, in honour of the Dead. See FEAST.

Macrobius, *Satura*, L. I. c. 13. refers the Origin of the Ceremony to *Numa Pompilius*. *Ovid*, in his *Fasti*, goes back as far as *Eneas*, for its Institution. He adds, that on the same Day, a Sacrifice was perform'd to the Goddesses *Mina*, or *Dumb*; and that the Persons who officiated, were an old Woman, attended with a Number of young Girls.

Varro derives the Word from *inferi*, or from *fero*; on account of a Repast, carried to the Sepulchers of such, as the best Offices were that Day render'd to.

Festus derives it from *ferio*, on account of the Victims sacrificed. *Vossius* observes, that the Romans call'd Death *fera*, *cruel*, and that the Word *Feralia* might arise thence.

FER de Fourchette, in Heraldry. *Croix a Fer de Fourchette* is a Cross, having a forked Iron at each End, like that formerly us'd by Soldiers, to rest their Muskets; by which it is distinguish'd from the *Croix Fourchee*; the Ends whereof turn forked, whereas in this, the Fork is fix'd on the square End; as in the adjoining Figure.

FER de Moulin, q. d. Iron of the Mill, is a Bearing in Heraldry of the Figure adjoining.

It represents the Iron-Link, or Ink of a Mill, which sustains the moving Mill-stone.

There are divers ways of bearing it: Tho' most usual is that here represented.

It is born by the Name of *Beucabam*, and also by the Name of *Turner*.

FERD-wir, in our antient Customs, A Formalury, by which the King pardon'd Manslaughter, committed in the Army.

The Word is form'd of the *Saxon Fird*, Army, and *Wites*, Punishment.

FERENTARIII, or *FERENDARIII*, a Term in History. The *Ferentarii* among the Romans, were auxiliary Troops; lightly arm'd; their Arms being a Sword, Arrow, and a Sling; which are much less cumbersome, than a Buckler; Battle-axe, Pike, &c.

The Name *Ferentarii* was derived a *ferendo auxilio*; these being auxiliary Forces: Tho' *Varro* thinks, they might be so call'd, by reason, the Sling and Stones *feruntur*; *non tenentur*.

We have alfo Mention of another sort of *Ferentarii*, whose Business was, to carry Arms after the Armies, and to be ready to supply the Soldiers therewith in Battle.

Lydus uses the same *Ferentarii* for the *Cataphracti Equites*, i. e. Cavaliers, arm'd Cap-a-pee.

FERIE, among the Romans, were Holidays; or Days wherein they abstain'd from Work.

The *Ferie*, or *Dies feriatii*, were observ'd and distinguish'd chiefly, by Rest; whereas the *Festis*, or *Dies festi*, beside a Cessation from Labour, were celebrated with Sacrifices and Games; so that these were *Ferie*, which were not Fast-days. Tho' Authors frequently confound the *Ferie*, and *Festis*. See FEAST, and FESTI DIES.

Others confound the *Ferie* with the *Dies No-fasti*, or Non-Court-Days. See FASTI DIES.

The Latin *Feria*, amounts to the Sabbath of the Hebrews: See SABBATH.

The Romans had divers kinds of *Ferie*: Their Names; at least the principal thereof, are, The *Æstivales*, Summer-*Ferie*; *Anniverfaria*, Anniverfary *Ferie*; *Compitalitiae*, *Ferie* of the *Saluces*, and *Compito*, or Cross-ways; *Conceptivæ*, Votive *Ferie*, which the Magistrates promis'd every Year: *Denicales*, for the Expiation of a Family polluted by the Death of any one; *Imperativæ*, or *Indivivæ*, those decreed by the Magistrate; *Latine*, the Latin *Ferie*, instituted by *Tarquinius* the Proud, for all the Latin People, amounting to above fifty Nations; being celebrated on *M. Alba*, in Memory of the Peace, concluded by *Tarquinius*, with the People of *Latium*; *Messis Ferie*, the *Ferie* of Harvest; *Paganales Ferie*, or *Paganalia*, an Account of which is given in its Place; *Prædianæ*, which were, what we properly call, the Vigils, or Evens of the Foals; *Privatæ*, or *Proprie*, those peculiar to the several Families; as the *Familie Claudia*, *Æmilia*, *Julia*, &c. *Publicæ*, those observ'd by all in general, or for the Publick Weal; *Semontivæ*, those held in Seed-time; *Stativæ*, those kept constantly to the same Day of the Year; *Saturnales*, whereof we shall speak in their Places; *Struonarum Ferie*, or *Quirinalia*, the *Ferie* of Fools, held on the 17th of February; *Victorie Ferie*, those of Victory, in the Month of August; *Vindemiales*, those of the Vintage, from the 20th of August, to the 15th of October; *Vulcani Ferie*, those of *Vulcan*, which fell on the 22^d of May.

FERIÆ was also us'd among the Romans for Fair Days; by reason it was the Custom to hold their Fairs, on *Dies feriatii*, or Holidays. *Struonius Synt. Antiqq. Rom. C. IX. p. 425. 443.* See NONDIE.

The Word *Ferie*, is usually deriv'd a *ferendis Victimis*; *Martinus* says, that *Ferie dicitur sunt velus iseps, vicesq; dies sacri*, holy Days. Others observe, that all Days in general, tho' they were not Feast-days, were antiently call'd *Festis*; or as *Vossius* reads it, *Festis*; whence, according to that Author, is form'd the Word *Ferie*.

FERIA is still retain'd in the *Romish* Breviary, tho' in a Sense somewhat different from the *Ferie* of the Antients.

It is applied to the several Days of the Week, beginning with Sunday; provided none of those Days be a Feast, or Fast Day. Thus, *Monday* is the second *Feria*; *Tuesday* the third, &c.

These are the ordinary *Ferie*; beside which they have extraordinary, or greater *Ferie*, viz. the three last Days of Passion Week; the two Days following Easter Day, and Whituesday; and the second *Feria* of Rogation.

The Word *Feria*, in this Sense, is double^d borrowed from the antient *Feria*, a Day of Rest. Accordingly, Sunday is the first *Feria*: For antiently, all the Days of Easter Week were accounted Festival Days, by a Decree of *Constantine*; whence those seven Days were call'd *Ferie*: Sun

day being the first, Monday the second, &c. And this Week being then accounted the first of the Ecclesiastical Year; they afterwards accustom'd themselves, to call the Days of the other Weeks after the same manner, first, second, third, &c. *See* *Feria*.

The others will have it, that the Days of the Week were not called *Feria*, from resting the People, that is, on account of being oblig'd to abstain from servile Works; but to advertise the Faithful, that they ought to abstain from Sin. *See* *Durand. de Off. Div. L. VIII. c. 1.*

FERIAL Days, *Dies feriales*, or *Feria*, among the Antients, signify Holidays, or Days vacant from Labour and Pleading. *See* *Feria*.

But in the Stat. 27 Hen. 6. c. 5. and in *Fortesc. De Laudib. LL. Angliæ*, *Ferial Days* are taken for working Days. *S. Sitcher* ordained—*Sabbati & Dominici dies nomine revere, reliquis hebdomade dies feriarum nomine distinctos, ut jam ante in Ecclesia vocari ceperant, appellari.*

So that *Ferial Days* are properly all the Days of the Week, except Saturday and Sunday.

FERM, in Law, *see* *FARM*.

FERMENT, in Physicks, A Body of any Kind, which being applied to another, produces a *Fermentation* therein: Or, any thing capable of exciting an intestine Motion, in the Part of another; and of swelling, or dilating the same, by means of its more penetrating and moveable Parts, which by their Agitation divide and agitate the Particles thereof. *See* *Fermentation*.

Thus, the Acid in Leven, is a *Ferment*, which makes Bread rise, or swell. The Moisture in Hay is the *Ferment*, which heats and makes it smok. Thus also, Remer is the *Ferment*, that curdles and breaks Milk: Balm, or Yeast is the *Ferment*, that sets Wort a-working, &c. *See* *LEVEN*, &c.

The Force or Effect of a *Ferment*, arises hence, that by dissolving, and breaking the Texture or Combination of the component Parts or Principles of the Body, and giving them a new Motion; it disposes them to take a new Arrangement, or to combine again in a new manner; and so to constitute a new Species of Body. Its Effect is somewhat like that of a Person, who opening the Gates of a City, lets in the Enemy, who soon raises terrible Disorders: Thus, the Bite of a mad Dog excites a slow *Fermentation* in the Blood, whereby the divers Liquors, or Matters it consists of, lose that Nexus, or Union, necessary to a State of Health; and occasion an Irregularity in the Spirits, from which arise the Horrors, and other Symptoms of the Disease. *See* *HYDROPHOBIA*.

One way of accounting for Digestion, is by supposing a certain *Ferment* or Menstruum in the Stomach, which dissolves the Food contain'd therein. But what this *Ferment* is, or whence it should be derived, is greatly disputed. Some will have it an Acid; others, acalious; others, sulphureous; others, alkalino-sulphureous; others, muriatick, &c. as their own Fancies suggest to them. *See* *DIGESTION*, and *MENTRUEM*.

FERMENTARIUM, or **FERMENTACIUM**, a Denomination those of the *Latin Church* have given to the *Greeks*, on account of their consecrating and using leaven'd, or fermented Bread in the Eucharist.

As the *Greeks* call the *Latins* *Azymites*, the *Latins*, in return, call them *Fermentarii*. *See* *AZYMUS*.

FERMENTATION, an intestine Motion, or Commotion of the small, insensible Particles of a mix'd Body, arising without any apparent mechanical Cause, and producing a considerable Alteration therein.

Or, it is an easy, slow, gentle Motion of the intestine Particles of a Body, arising usually from the Operation of some active, acid Matter; which rarifies and subtilizes the softer, yielding Particles thereof. *See* *FERMENT*.

Fermentation differs from *Dissolution*, as the latter is the Result or Effect of the former. *Fermentation* is frequently without *Dissolution*, i. e. the fermentative Motion frequently does not go so far as to dissolve the Body: But *Dissolution* always supposes an antecedent *Fermentation*. *See* *DISSOLUTION*.

Fermentitious differs from *Ebullition*, and *Efferescence* in this, that the Motion, which in the former is slow; in the two latter, is violent; and that in the former, the Motion is restrain'd to the minute Particles of the Body; but in the latter it extends to large Masses thereof. *See* *EBULLITION*, and *EFFERESCENCE*.

Indeed it must be observ'd, that Authors usually allow of divers kinds of *Fermentations*; viz. an insensible one, which is only known from its Effects; and a sensible one: A violent and a moderate one: A hot, and a cold one: A natural, and an artificial one.

Plants bruise'd, and left a certain Time in a close Vessel, ferment of themselves; and if let alone, the *Fermentation* will proceed to Putrefaction. *See* *PUTREFACTION*.

In order to *Fermentation*, 'tis necessary, the Ferment or Liquor have something acid and spirituous in it; that its Motion be tumultuous; that it be in an open, spacious Place, and assisted by the Air; and that it tend to exalt and purify the Liquor, and produce vinous, or inflammable Spirits. These are the particular Properties and Conditions of *Fermentation*; tho' in the general, all required in effect a *Fermentation*, is a Body, or Liquor, which is not homogeneous, that is, consists of different Principles; that there be a strong Attraction between the Particles of the Ferment, and the Body; that the Parts of this latter be moved and agitated irregularly; and that this Motion produce some Alteration in the mixt.

Fermentation is one of the most obscure Processes in all Nature. The Generality of our later Philosophers allow it in great Measure a Mytery, to which their Principles will not fully reach.

Dr. Morgan, in his late *Philosoph. Prin. of Medicine*, attempts to account for it, on the *Newtonian System*. His Principle is, that the expansive Force of Air, rarified by the Action of Fire; or the mutual Action of Fire and Air, is the universal natural Cause of *Fermentation* and *Dissolution*.

To shew this, he considers, two great Powers, or Principles in Bodies; viz. an attractive, cohesive Power, in the small Particles of Matter, as the Principle of all Rest, Coherence, &c. And the expansive Force of heated Air; as that of *Fermentation*. On the different Proportion and Adjustment of these two opposite Forces, with respect to each other, the Constitution, Texture and Cohesion of Bodies depend.

By the attractive Force, acting alone, the constituent Parts of compound Bodies, must be brought to their nearest and greatest Contacts, and remain there in a Degree of Firmness, and Cohesion, proportional to the Quantities of Contact. *See* *FIRMNESS*.

On the other hand, by the repulsive, expansive Force, acting alone, all Bodies, even the most compact and solid, must be dissolved and diffused into one perfectly fluid, incoherent Mass. *See* *FLUIDITY*.

If both are found in the same Body, and equal in Degree, such Body must continue in its present State of Fluidity, or Cohesion; if the attractive Power prevail, the Quantity of Contact, or Degree of Cohesion will be continually increased to a certain Pitch, where it will rest: On the contrary, if the expansive Force of the Fire and Air, included in any Body, or Mass of Matter, prevails against the attractive Power of the contiguous Parts, the Parts must necessarily recede from their Points of Contact.

And this happening thro' all the Subdivisions of which the Body or Mass is capable, every small Part must be divided and separated into other smaller Parts; and these again into others, and so on, till we come to the first constituent Particles or Atoms, which are supposed to be perfectly solid, and indivisible. *See* *ATOM*.

This Recede of the Parts of Bodies from their Points of Contact, and the Separation, and Division consequent thereon, is what we call *Rarefaction*; as, on the contrary, the Approach of the Parts nearer to the Points of Contact, is called *Condensation*. Now from the contrary Effects of these two Forces, there necessarily arises an intestine Commotion, Collision, and natural Struggle of the Parts among themselves, i. e. the Parts acted on by two such opposite Forces, will fly off, and recoil, recede, and accede, in Proportion to the Strength and Energy of the opposite Powers, till one or the other prevail, either to fix and condense, or dissolve and diffuse it; which alternate Motion is what we call *Fermentation*. *See* *RAREFACTION*, &c.

If the attractive Force prevail, the most fluid Body will be consolidated, as Water into Ice. *See* *FREEZING*.

On the contrary, if the expansive Force prevail, the firmest Body will be broke, and dissolved. *See* *DISSOLUTION*.

Fermentation is a Point of the utmost Consequence in Medicine: It is one of the principal Means, or Instruments we have for altering, exalting, or calling forth the Properties and Powers of Bodies. To get an Idea of these Changes, we cannot consider it better, than in the procuring of a spirituous Liquor from Malt, by means thereof.

It is to be observ'd then, that the Malt being made, as shewn under the Article *MALT*; and then laid to infuse or steep in hot Water, the rest of the Process of Brewing is nothing but a raising and directing of a *Fermentation*, or intestine Motion. *See* *BREWING*.

How such Motion is mechanically effected, and how it brings forth such a Spirit, may be conceived from what follows; supposing the Reader acquainted with these common Propositions in Hydrostatics; viz. 1^o. That a Body immersed in any Fluid, specifically lighter than itself, will sink; otherwise, emerge and get to the Top.

2^o. That if two equal Bodies of different specifick Gravities be immersed in a Fluid, lighter than either of them, the Celerities of their Descents will be as their Gravities.

3^d. That if two unequal Bodies of unequal specific Gravities be immersed in a Fluid lighter than either, the Celerities of their Descents will be compounded of their Gravities and Dimensions together.

The same Law, by which Bodies descend, hold good in the Ascent of those specifically lighter than the Fluid.

Hence in all heterogeneous Fluids, the constituent Parts of which are not fitted to associate and cohere, so as to form what is called an uniform homogeneous Fluid, the heavier may be accounted as solid Bodies, immersed in a Fluid specifically lighter; and the lighter Parts, as such Bodies in a Fluid specifically heavier; as it may be demonstrated, that the component Parts of all Fluids, separately consider'd, are solid. See FLUID, SOLID, &c.

This Liqueur, therefore, called *Wort*, which is a Decoction of Malt, may be consider'd as such a heterogeneous Fluid, whose Parts cannot be interchang'd in their Positions, till each has obtained such an Elevation, as corresponds to its proper Gravity: But lest this alone should fail of the Intention, by not being sufficient to break those Molecules and Vicinities, which entangle the spirituous Parts, and likewise to prevent their flying off at the Surface, some Portion of an already fermented Substance is mix'd with it.

This Substance, term'd *Worm*, or *Yeast*, consists of a great Quantity of subtle spirituous Particles, wrapp'd up in such as are viscid. Now, when this is mix'd with such a Liqueur, it cannot but much contribute to that intestine Motion, which is occasioned by the Intercourse, and Occurrences of Particles of different Gravities; as the spirituous Particles will be continually striving to get up to the Surface, and the viscid ones continually retarding such Ascent, and preventing their Escape.

So that by these two concurring Causes the Particles extracted from the Grain, will by such frequent Occurrences be so comminuted, as continually to increase the more subtle and spirituous Parts, until all that can be made so by Attrition, are set loose from their former viscid Confinements; and this appears by the Warmth of the Liqueur, and the Froth drove to the Top; just at which Time, if it be thrown into the Still, it affords some Quantity of an high inflammable Spirit.

Moderate Warmth much hastens this Process, as it assists in opening the Vicinities, in which some spirituous Parts may be entangled, and unbend the Spring of the included Air, which cannot but contribute to the Rarefaction and Commixtion of the whole.

The viscid Parts, which are raised to the Top, not only on account of their own Lightness, but by the continual Efforts and Occurrences of the Spirit to get uppermost, both shew, when the Ferment is at the highest, and prevent the finer Spirit making their Escape: For if this intestine Lucas be permitted to continue too long, a great Deal will get away, and the remaining grow flat, and rapid, and raise little besides Phlegm in the Still.

The greatest Use of this Theory in Medicine, will be in teaching, what Parts of the Materia Medica are most properly brought under this Procedure; and how such intestine Motion, does in some Things, destroy their Virtues: For by some Medicines an Intention is aimed at, which is not to be procured, but by their being spirituous; whereas in others the very contrary Property is required: In such Cases therefore, when by any adventitious Cause those Medicines get into a Ferment, they are destroyed, and should not be administered.

FERNAMBOUC, see BRASIL Wood.

FERRUGINOUS, a Term, intimating a Thing to partake of the Nature of Iron; or to contain Particles of that Metal. See IRON.

It is particularly applied to certain mineral Springs, whose Water in their Passage along the Strata of the Earth meet with the Ore, or Marcassite of the Metal, part of which they wash off, and carry with them; and thus become impregnated with the Principles thereof. Such are what we call *ebalybeate* Waters. See CHALYBEAT, and MARS.

The Waters of *Limbridge*, those of *Forges*, and of the iron Spring at *Bourges*, are *ferruginous*.

FERRUGO, the Rust of Iron; or a kind of Calx, found on the Surface thereof. See IRON, and RUST.

FERRUM, see IRON.

FERTILITY, *Fruitfulness*, or the Quality, which denominates a thing *fertile*, or *prolific*. See FECUNDITY; see also BARRENNESS, DISEASE, &c.

The *Egyptian Nitre*, or *Natron*, renders the Ground exceedingly *fertile*. *M. de la Chambre* observes, that Plants grow in such Abundance in *Egypt*, that they would choke one another, if they were not hindered, by throwing Sand upon the Fields: Inasmuch that the *Egyptians* must rake as much Pains to lessen the Fertility of their Soil, as other Nations do to increase it. *Philos. Transact.* N^o 160.

Nothing is more *fertile* than Wheat, which Faculty was given it by the Creator, in regard it was to be the principal Food of Men: Thus a single Measure of that Grain, sown in a

proper Soil, will yield 150 Measures.—One of *Augustus's* Procurators sent him 400 Bars, all produced from one Seed. *Nero* had 340 Bars sent him, from a single Seed. *Plin. Nat. Hist. lib. 18. c. 10.* See SEMINA DON.

FERULA, a little wooden Pallet, or Saice; reputed the Schoolmasters Sceptre, wherewith he chastises the Boys, by striking them on the Palm.

The Word is pure *Latin*, and has also been used to denote the Prelates Crozier, and Staff. Under the Eastern Empire, the *Ferula* was the Emperor's Sceptre, as is seen on divers Medals. It consists of a long Stem, or Shank, and a flat, square Head. The Use of the *Ferula* is very ancient among the *Greeks*, who used to call their Princes *ferulatores*. q. d. *Ferula-bearers*.

The Word is supposed to be form'd of the Latin *ferire*, to strike; or, perhaps, *Ferula* in this Sense may be derived from the Name of a Plant, called *Ferula*, the Stem whereof was anciently used to correct Children withal; tho' others think, the Plant took its Name from the Instrument, or rather from its Use, *ferire*.

In the ancient Eastern Church, *Ferula* signifies a Place separated from the Church, wherein the Penitents, or Catechumens of the second Order, called *Anchusantes*, *anachorites*, were kept; as not being allowed to enter the Church. Whence the Name of the Place; the Persons therein being under Penance, or Discipline: *Sub Ferula erant Ecclesie*.

FERULAE, among Chirurgeons, called also *Spinters*; are little Chips, of different Matter, as Woods, Barks, Fir, Leather, Paper, &c. applied to Bones, that have been dis-jointed, when they are set again.

The Bark of the Herb *Sagapene*, called in Latin *Ferula*, was anciently much used on this occasion; whence the Name *Ferula* became common to all.

FESCENNINE, in Antiquity. *Fescennine Verses* were a kind of satyrical Verses, full of open, wanton, and obscene Expressions, sung or rehears'd by the Company, at the solemnizing of a Marriage among the *Romans*. See SATYR.

The Word *Fescenninus* is borrowed, according to *Ménage*, from *Fescennus*, a Charm; the People taking such Songs to be proper to drive away Witches, or prevent their Effect. See LIGATURE.

FESSE, one of the nine Honourable Ordinaries of the Escutcheon, which it divides horizontally in the Middle, and separates the Chief from the Point. It is supposed to represent a broad Girdle, or Belt of Honour, which Knights at Arms were anciently girded withal.

It possesses the Centre of the Escutcheon, and contains in Breadth one third Part thereof.

Thus, he beareth Azure, a Fesse Or, by the Name of Eliot.

When the *Fesse* takes up less than its proper Breadth, it is called a *Bar*. See BAR.

FESSE-POINT, is the exact Centre of the Escutcheon. See ESCUTCHEON.

It is thus called, as being the Point, through which the *Fesse* Line is drawn from the two Sides; and accordingly divides the Escutcheon into two equal Parts; when the Escutcheon is parted *Per-fesse*.

FESSE-ways, or *in Fesse*, denotes Things born after the manner of a *Fesse*, i. e. in a Line, or Range, a-crośs the Middle of the Shield, which the *French* call *en Fesse*.

Party per Fesse, implies parted a-crośs the Middle of the Shield from Side to Side, through the *Fesse* Point.

This the *French* express by one Word, *Coupee*.

FESTI DIET, among the Antients, were *Festi*-Days, or Holidays. See FEAST.

Numa distinguish'd the Days of the Year into *Festi*, *Profesti*, and *Interfesti*.

The first were those dedicated to the Gods: The second, were those allowed to Men, for the Management of their own Affairs; being thus called, according to *Festus*, *Quod proci sunt a religione Numinis divina*: The third were shared between the Gods and Men.

The *Festi dies*, again, were divided, according to *Mitrovius*, *Saturu. c. 16.* into Sacrifices, *Epule*, or Banquets; *Ludi*, or Games; and *Periz*. See FEAST, &c. And the *Profesti* into *Fasti*, *Comitiales*, *Comperendini*, *Strati*, and *Preliari*. See FASTI, &c.

FESTINO, in *Logic*, is one of the Moods of *Syllogisms*. See MOON.

In a *Syllogism* in *Festimo*, the first Proposition is an universal Negative; the second, a particular Affirmative; and the third a particular Negative. See SYLLOGISM.

FESTIVAL, see FEAST, and FESTUM.

FESTOON, a Garland, or Ornament of Flowers, Fruits and Leaves intermix'd; anciently much used at the Gates of Temples, where *Festis*, or solemn Rejoycings were held; or at any other Places, where Marks of publick Joy and Gayety were desired; as at Triumphal Arches, Tournaments, &c. *Festoon*.

Festoons, or *Garlands*, were also put on the Heads of Victims in the ancient heathen Sacrifices. *St. Paulinus*, in his Poem on *St. Felix*, does not forget the *Festoons* and Crowns of Flowers, plac'd at the Door of the Church, and on the Tomb of that Saint. See *GARLAND*.

The *Italians* have a sort of Artificers, called *Festoroli*, whose Office is, to make *Festoons* and other Decorations for Feasts.

The Word is *French*, *Feston* form'd of the *Latin Festum*, Feast.

FESTOON, in Architecture, Sculpture, &c. A Decoration used by Architects, Painters, Joiners, &c. to enrich their respective Works.

It consists of a String, or Collar of Flowers, Fruits, and Leaves tied together, somewhat biggest in the Middle, and suspended by the two Extremes; from which, beside the main Part which falls down in an Arch, two lesser Parts hang perpendicularly.

This Ornament is made in Imitation of the *Festoons*, or long Clusters of Flowers, plac'd by the Antients on the Doors of their Temples, &c. on festival Occasions.

Festoons are now chiefly used in Freezes, and other vacant Places, required to be filled up, and adorn'd.

FESTUM, see **FEAST**.

In our Law Books, *Festum* is also frequently used for a general Court; in regard such were antiently always kept on the Great Festivals of the Year. Thus, in our Chronicles we read, that in such a Year the King kept his *Festum* at *Winchester*, &c. that is, he kept a Court there at that Time. *Rex apud Winton. maximum Festum & Convivium celebravit, tempore Natalis Domini, consecratis ibidem Principibus & Baronibus totius Regni.*

FET-LOCK, in the Manse, the Hair that grows behind on a Horles Foot: Hence, the Joint where it grows, is called the *Fetlock Joint*.

FETUS, see **FŒTUS**.

FEUD, or **FEUDE**, **FRODUM**, is the same with *Fief*, or *Fee*. See **FEE**.

FEUD is also used in our antient Customs, or a capital Quarrel, or Enmity, called also *Feud*, or *Feetb*.

Feud, or *Feed*, called also *Feida*, and *Faida*, in the original German signifies *Guerram*, i. e. *Bellum*, War.

Lambart writes it *Feeth*, and saith, it signifies *Capitales inimicitias*.

In *Scotland*, and the North of *England*, *Fend* is particularly used for a Combination of Kindred, to revenge the Death of any of their Blood against the Killer and all his Race, or any other great Enemy.

FEUDAL, or **FRODAL**, of, or belonging to a *Feud*, or *Fee*. See **FEE**.

A *Feudal Lord*, in default of Pealty and Homage from his Vassal, may seize the Fruits of the *Fee*. A *Feudal Matter*: *Feudal Jurisprudence*: *Feudal Sciture*.

A *Neapolitan Lawyer*, called *Caravita*, has not long ago publish'd a *Latin Treatise of the Feudal Law*, entitled, *Prelusiones Feudales*.

When once the Use of *Fees* was thoroughly establish'd in *France*, they would need extend it much further: And almost all the great Offices of the Crown thus became *Feudal*; even the Courts of Justice were drawn in; in order to which they were annex'd to certain Lands, or Revenues.

The Design of these *Infestatious* was to render the Offices hereditary, after the manner of *Fees*, which were now become so. Thus the Offices of Grand Chamberlain, Grand Butler, &c. came to be held by hereditary Right.

FEUDATARY, a *Vassal*, or Person who holds of a Superior in *Fee*, i. e. on condition of yielding Pealty and Homage, or other Service. See **FEE**.

The Electors, Princes, and free Cities of *Germany* are all *Feudatories* of the Emperor. See **EMPEROR**, **ELECTOR**, &c.

Fa. Daniel observes, that *Charles VII.* forbid the Count d'*Armignac* to call himself in his Titles, by the Grace of God Count d'*Armignac*; such Terms, which seem to exclude all Dependence, except on God, being an Innovation, prejudicial to the Right of the Sovereign, and which had never been allowed to any Duke, or Count, who was a *Feudatory* of any Crown. *Histoire de France*, T. II. p. 1162.

FEUDBOTE, a *Recompence*, for engaging in a *Feud*, or *Faction*, and for the Damages consequent therein; it having been the Custom of antient times for all the Kindred to engage in their Kindness Quarrels, according to that of *Tacitus de Morib. Germanor. Suscipere tam Inimicitias seu patris, seu propinqui quam amicitias necesse est.*

FEUDIST, a *Lawyer*, or *Doctor* learned, or much conversant about *Fends*, or *Fees*.

Du Abulia is reckon'd a Great *Feudist*.

FEVER, *Febris*, in Medicine, a Disease, or rather Species, or Class of Diseases; it being an Observation of *Sydenham*, that *Fevers* with their Appendages, make two Thirds of all the Diseases of the Body. See **DISEASE**.

This Disorder is very differently defined by Physicians, according to the different Views and Relations they consider it in.

Sydenham defines it a strenuous Endeavour or Effort of Nature, to throw off some morbid Matter, that greatly incommodes the Body.

Etmuller, with the same View, calls it a Motion, or Struggle of Nature, whereby with the Assistance of the Spirits, more or less alter'd, she seeks to expel what is hurtful to the animal Oeconomy.

Quincy defines it an augmented Velocity of the Blood; Others, a Fermentation of the Blood, accompanied with a quick Pulse, and excessive Heat.

The Causes of *Fevers* are innumerable; and the Disease even often arises in the soundest Bodies, where there was no previous morbid Apparatus; as *Cachymia*, *Plethora*, &c. But merely from a Change of Air, Food, or other Alteration in the Noo-naturals.

A *Fever*, *Boerhave* observes, is an inseparable Companion of an Inflammation.

The Symptoms are many. Every *Fever* arising from any internal Cause, is attended with a quick Pulse and unusual Heat, at different Times, and in different Degrees. Where these are intense, the *Fever* is acute; where remiss, *flow*. The Disease begins almost always with a Sense of Chills; and in its Progress is chiefly distinguish'd by the Velocity of the Pulse: So that a too quick Contraction of the Heart, with an increased Resistance or Impulse against the Capillaries, furnishes the proper Idea of a *Fever*; and the Health of the Patient is the scope Nature chiefly aims at in the Disease.

The other attendant Symptoms are usually a laborious and disturb'd Respiration; a uniform, high colour'd Urine; a Parchedness and Dryness of the Tongue, Mouth, &c. a Clamminess of the Saliva; Thirst; Wakefulness; and Nausea against every thing but thin diluting Liquors.

From these Symptoms, *Dr. Morgan*, our latest Writer on that Subject, lays it down as a Principle, that in every *Fever*, there is a general Obstruction, and Diminution of the glandular Secretions; that is, a great Part of the Lymph, or Serum of the Blood, which ought to be continually drain'd off by the Glands, is, during the *Fever*, so retain'd in, and closely united to the Mass, that it circulates together with it in the Veins and Arteries. This he endeavours to prove to be the State and Condition of the Blood in the Production of a *Fever*, by accounting for all the above-mentioned Phenomena from it, as the just and adequate Effects of such a Cause. How he does it, see in his *Philos. Princ. of Med.* p. 207, &c.

The general Indication in the Care of *Fevers*, is, to restrain the Commotion of the Blood, with in the Bounds agreeable to the End, Nature had in raising it, i. e. neither to let it rise too high, for fear of the Consequence; nor yet keep it too low, for fear of frustrating the Endeavour of Nature. And hence the Rule and Measure of letting more, or less Blood, or none at all.

The Cure of *Fevers*, *Boerhave* summarily comprehends in correcting the sharp, irritating febrile Matter, dissolving the Lentor, and mitigating the Symptoms. If Nature seem to carry the *Fever* too high, it must be moderated by Abstinence, thin Diet, drinking of Water, bleeding and cooling Clysters: If she bring it on too slowly, it must be excited by Cardiacs, Aromatics, Volaries, &c. The Cause removed, the Symptoms cease of course; and if they can be bore without much Danger of Life, it were best not to enter into any particular Cure thereof: If they be unreasonable, or too severe, they are each to be abated with the proper Remedies.

Sydenham recommends an Emetick in the Beginning of a *Fever*; or if it have been then omitted, in any other Stage thereof; especially where there is a Propensity to Vomiting: For want of this, a *Diarrhea* frequently succeeds, which is exceedingly dangerous. After this, he uses a Purgative; and the following Days, if there be no Indication to repeat the Venesection, nor any *Diarrhea*, he prescribes every other Day an Enema, till the twelfth Day, when Matters coming to a Crisis, he has Recourse to hotter Medicines, in order to promote and accelerate it. He adds, that if the Disease proceed well, and the Fermentation be laudable, there is no occasion for any Physick at all. About the 15th Day, if the Urine be found to separate, and give a Sediment; and the Symptoms be abated, a Cathartic is usually order'd, lest the Sediment returning into the Blood again, occasion a Relapse. Nothing cools the Patient, and abates the *Fever* so much, as a Cathartic after Venesection.

The more acute the *Fever*, the thinner, according to *Etmuller*, must be the Diet. 'Tis no matter, if the Patient should fast for several Days running; for never did feverish Persons die of Hunger: Eating, always exacerbates the Disease. Vomitories, he allows the principal Place in the Cure of all *Fevers*; but, as a Patron of the hot Regimen,

men, assigns Sudorifics the second. Spirit of Sal Ammoniac, or its Sal Volatile, he observes is an universal Febrifuge, and rarely fails; All sugar'd Things are hurtful.

Hippocrates, in all Fevers, prescribes Wine. Dr. Haensch, Water. See FERRUGINE.

So long as the Urine remains crude, that is, does not give a Sediment, the Patient's Case is very dubious: But when once the Coction commences, and the Urine separates, the great Danger is over.

Among the Signs of Death, the same Author adds, there is none more certain, than a frequent blowing of the Nose, without any Discharge of Matter. A strong, equable Pulse, with Deliria, Tremors, Twitches of the Tendons, and other Symptoms, fatal in Diseases of the nervous kind, always preface well in Fevers: On the contrary, a quick, weak, fluttering Pulse, howsoever favourable the other Symptoms may seem, infallibly proclaim Death at the Door. *Morton*.

It appears, by Observation, that a frequent letting of Blood, renders Persons more inclinable to Fevers.

There are various Kinds of Fevers, denominated and distinguish'd from the particular Cause that produce them; the Time they continue; their Accesses, or Returns; and their several Symptoms.

The most general and genuine Division of Fevers, is into *Essential*, and *Symptomatick*.

An *ESSENTIAL FEVER*, is that whose primary Cause is in the Blood itself; and which does not arise as an Effect, or Symptom from any other Disease in the Solids, or other Parts. This is, what we absolutely and properly call a *Fever*.

A *Symptomatick FEVER* is that which arises as an Accident, or Symptom of some other antecedent Disorder, as an *Inflammation*, *Plegmon*, *Erysipelas*, *Impetume*, *small Pox*, *Pleurisy*, &c. Whence it is peculiarly denominated *Inflammatory*, *Erysipelatous*, *Purulent*, &c.

Essential Fevers are generally distinguished into *Continued* and *Intermitting*. Others chuse to divide them into *Diary*, *Intermitting*, *Continued*, and *Continued*.

A *CONTINUED FEVER* is that which gives the Patient no Respite, or Intermision; but sticks to him from its first Seizure, to its final Period. This is subdivided into *Putrid*, and *non putrid*.

A *Continued Fever non putrid*, is that wherein the Parts of the Blood are not so dissolved and broke, as to give Room and Occasion for the principal Parts thereof to be secreted: Or that, wherein there is not any Discharge of putrid, purulent Matter into the Blood. Of this there are two Kinds, the *Diary*, and *Synochus*; to which some add the *Hætick*.

A *Diary Fever* is that, which does not ordinarily hold beyond 24 Hours. 'Tis also called *Ephemera*, from the Greek *ephēra*, Day. It is the gentlest of all Fevers: Is frequently got by too much Exercise, or other external Accident. It is cured by Rest alone, and keeping a-bed: If it remain for several Days, it is either called a continued *Ephemera*, or simple *Synochus*.

A *Hætick Fever* is a slow, durable *Fever*, which extenuates and emaciates the Body by insensible degrees. It is thus called from the Greek *hæta*, Habitudo, as being difficult to get rid off.

It has three Stages; the first, while it consumes the Juices of the Body: The second, when it exhaults the fleshy Substance of its Humidity: And the third, when it lays hold off, and destroys the Solids themselves: In which last Stage it is reputed incurable. Its Effect is somewhat like that of a Flame; first consuming the Oil of the Lamp; then the Moisture of the Wick; and lastly the Wick itself. But this *Fever* is frequently consider'd as of the *Symptomatick*, or secondary kind, arising in *Phtisies*, &c. See *HÆTICK FEVER*.

A *Putrid*, or *continued Putrid Fever*, is that wherein the Texture of the Blood is render'd so lax, or even dissolv'd, that its Parts or Principles separating, some of the principal are secreted, and lost. See *BROOD*.

Of *Putrid Fevers* are frequently consider'd as secondary ones, arising from the Discharge of putrid, purulent Matter from some morbid Part, as an Ulcer in the Lungs, &c. *Putrid Fevers* are divided into *Simple*, and *Compound* or *Remitting*.

A *Simple continued putrid Fever*, or a *Continued Fever*, properly so called, by the Greeks called *Συνεχῆ*, is that which continues uniformly, from first to last, without any Fits or Periods of Exasperation and Remission of Heat, and the other Symptoms.

Willis divides the *Putrid Fever* into four Stadia, or Stages. The *Beginning*, which is attended with a Chillness, Shivering, Weariness, Thirst, Wakefulness, Pain in the Head and Loins, Nausea, and Vomiting: The *Increase*, wherein the former Symptoms are heighten'd, with the Addition of Deliria, convulsive Motions, Foulness of the Mouth, high turbid Urine, without any laudable Sediment, or Hypostasis; the *Stase*, which contains the Crisis,

which in this Disease is much what the Paroxysm is in Intermitters: For as that returns at certain Hours, so do the critical Motions in continued Fevers happen on the fourth, fifth, sixth, or seventh Day. See *CRISIS*. The last Stage is the *Declesion*, which ends either in Recovery, or Death.

These Fevers are divided into *Burning*, and *Slow*. *Ardent*, or *Burning Fever*, called by the Greeks *καυστική*, is a very acute *Fever*, attended with a vehement Heat, intolerable Thirst, a dry Cough, Delirium, and other violent Symptoms.

It frequently kills on the third, and fourth Day; rarely exceeds the seventh.

It often goes off in a Hemorrhage, on the third, or fourth Day; which, if it prove too sparing, is deadly. Sometimes it goes by Stool, Vomiting, &c. and sometimes ends in a *Peripneumony*.

To the Class of *Burning Fevers* are reducible, the *Lipferia*, *Affodes*, *Elaes*, &c.

The *Fever Lipferia* is a burning *Fever*, wherein the Heat is very intense within side, and at the same time the external Parts cold.

The *Affodes* is a burning *Fever*, attended with great Inquietudes, Nausea, Vomiting, &c.

The *Elaes* is a *Fever*, wherein the Patient sweats continually.

The *Synochal Fever* is that attended with frequent Swoonings.

The *Æpeal Fever* is that wherein both Heat and Cold are felt in the same Part at the same Time.

Slow Fevers are gentle, but durable ones, which consume the Patients by degrees.

They usually arise from Disorders in the Lympha, or Pituita; whence *Sylvius* calls them *Lymphatick Fevers*.

The principal of these are the *Catarrhal*, attended with a Catarrh, Cough, Hoarseness, &c. And the *Scorbutick Fever*, into which acute Fevers, and sometimes Intermitters degenerate. To this Class are reducible,

Colligative Fevers, wherein the whole Body is consumed and emaciated in no long Time; the solid Parts, with the Fat, &c. melted down, and carried off by a Diarrhea, Sweat, Urine, &c. See *COLLIQUATION*.

A *REMITTING FEVER*, called also a *Continued*, *Συνεχῆ*; and a *compound continued Fever*, is that which continues some Time, without any gradual Increase of Heat; yet is liable to alternate Fits of Remission and Aggravation; either stated and periodical, or irregular.

Of this there are divers Kinds, denominated from the Periods of returning; as the *Remitting*, *Continued*, *Quotidian*, the *Continued Tertian*, *Continued Quartan*, &c. which are only a continued *Fever*, whose Accesses or severer Fits return every Day, or any other Day; or every third Day; or every fourth Day.

Some enumerate divers other more complicated continued Fevers; as the *double* or *triple*, *Quotidian*, which has two or three Paroxysms every Day; *Double*, or *triple Tertian*, or *Quartan*, which have two or three every third or fourth Day: The *Semi-tertian*, by the Greeks called *ἡμιτερσίαν*, which consists of a *Continued*, and two intermitting Fevers of different Kinds, viz. a *Quotidian*, and *Tertian*. The Patient, beside a *Continued Fever*, has an extraordinary Fit every Day; and every other Day two.—

Others divide the *Remitting*, *Συνεχῆ*, *Continued*, or *Compound Continued Fever*, into *Simple*, and *Sporious*.

The *Simple Remitter* returns regularly, and is only distinguish'd from an Intermittent, in that the feverish Heat in the Intervals of this latter is never quite extinguish'd; and that the Paroxysms don't begin with so much Chillness and Horror; and go off in profuse Sweats.

The *Sporious Remitter* is attended with grievous Symptoms in the nervous Kind, resembling those of the Rheumatism, Colick, Pleurisy, and other inflammatory and spasmodick Diseases; beside immoderate Excretions, Vomiting, Diarrheas, &c. Whence its Returns are uncertain, and variable.

The *Simple* rarely, if ever, kills; the *Sporious*, frequently. Sometimes it degenerates into a malignant *Συνεχῆ*.

The first is cured with the Cortex Peruv. almost as infallibly an Intermittent; the febrile Ferment being much the same in both: And the same Medicine is found almost a sure, tho' not so speedy a Remedy of the Sporious, if properly applied.

An *INTERMITTING FEVER*, or *Æpea*, is that which ceases, and returns again alternately, at stated Periods.

In this kind, Cold, and Heat, Shivering, and Sweating succeed each other.

The Paroxysms are attended with Sickness, Nausea, Vomiting, Headach, Pain in the Back and Loins, &c. The Paroxysms are acute, but the Disease usually more or less chronic.

No body was ever killed of an intermitting *Fever*, except in the first Stage of the Paroxysm, during the Shivering,

ing, caused by the Oppression of the Spirits. When the Disease becomes of a very old standing, it sometimes degenerates into very fatal ones.

As to the Cure, 'tis found by abundant Observations, that neither Bleeding, nor Emetics, nor Catharticks, nor any other Remedy, administered during the Fit, avail anything. A just Dose of *Vinum Benedictum*, three Hours before the Paroxysm, *Morton* assures us, has often cured it: *Antimonium Diaphoreticum*, a little before the Paroxysm, has the like Effect: And Salt of Wormwood is commended on the same Occasion. *Doleus* mentions *Lapis Lazuli* taken in Spirit of Wine before the Fit, is admirable.

And several Bitters, as *Cardus Benedictus*, *Gentian Root*, *Camomile Flowers*, *Pulvis Febrifugus*, &c. were much valued before the Invention of the *Cortex Peruv.* But that Bark has almost thrown them all out of use; being by the universal Consent of all Physicians allowed a *Pinnacca*, or Specifick for all intermitting Fevers, on all Seasons, Ages, and Constitutions. See *Cortex Peruvianus*; see also *FEBRIFUGES*.

Intermitting Fevers are of divers kinds, as the *Quotidian Fever*, where the Paroxysm returns every Day.

Double Quotidian, which returns twice in twenty four Hours.

Tertian Fever, which only returns every other Day; which again is, either Legitimate, or Spurious.

The *Legitimate Tertian* only holds twelve Hours, and is followed by an absolute Intermision.

The *Spurious Tertian* exceeds twelve Hours, and sometimes holds 18, or 20.

The *Double Tertian* is that which returns twice every other Day. The Word *Double Tertian* is also used, where the *Fever* returns every Day, like a *Quotidian*; only at different times of the Day; the third Fit answering to the Time of the first; the fourth to that of the second, &c.

The *Quartan Fever* is that which only returns every fourth Day; leaving two Days Intermision between every two Fits.

The *Double Quartan* is that which has two Fits every fourth Day. The same Name is given to a *Fever*, which returns two Days successively; only leaving one Day's Intermision.

Triple Quartan Fever is that which has three Fits every fourth Day; Or that which returns every day like a *Quotidian*, only at different Seasons of the Day; the fourth Fit answering to the Time of the first; the fifth to the second, &c.

There are also intermitting Fevers, which only return every fifth Day, or every sixth, or every seventh, and at other Intervals.

Lastly, there are some extraordinary Species of Fevers, not reducible to any of the forementioned Classes; as *Malignant*, *Eruptive*, and *Pestilential Fevers*.

Malignant Fevers are those, wherein the usual, regular Symptoms do not appear (Nature being oppress'd with the Malignity of the ferile Matter) but other foreign Symptoms arise; as a Pain about the Stomach, and Præcordia; a livid Complexion, with the Face much disfigur'd, &c. Sometimes Efflorescences on the Skin, &c.

Some Authors, from microscopical Observations affirm, that in all malignant Fevers the Blood is so corrupted, that Swarms of little Worms are generated therein, which occasion most of the Symptoms.

In all malignant Fevers the Blood is too fluid. Blood-letting has here no Place: Vomitories do well at first; afterwards Sudorificks and Alexipharmachicks: Blisters are commended in the Progress of the Disease.

Eruptive Fevers are those, which beside the Symptoms common to other Fevers, have their Crises attended with cutaneous Eruptions. Such are those of the small Pox, Measles, Petechie, the Purple or Scarlet Fever, and Military Fever: Their other Symptoms are, a grievous Oppression of the Breast; laborious, short Breath, obnivate Waking; Spasms, for Throat, Cough, &c. See *PETECHIE*, *SMALL-POX*, *MEASLES*, and *MILITARY FEVER*.

Pestilential Fevers, are acute, contagious, and mortal Diseases. Some will have the *Fever* to be the Disease or Plague it self: Others only account it a Symptom of the Plague. See *PLAQUE*.

Petechial FEVER, is a malignant *Fever*, wherein, beside the other Symptoms, on the fourth, or more frequently the seventh Day, *Petechie*, or red Spots, like Fleabites, appear, chiefly on the Breast, Shoulders, and Abdomen. The Spots afterwards turn paler, then yellow, and so disappear. When they grow livid, or black, they usually prove fatal.

This *Fever* is contagious, and often Epidemical. It is treated much as those just mentioned.

FEUILLANS, an Order of Religious, clothed in White, and going bare-foot; who live under the strict Observance of the Rule of *St. Bernard*. See *BERNARDINES*.

The Name was occasioned by a Reform of the Order of

Bernardines, first made in the Abby of *Feuilans*, a Village in France, five Leagues distant from *Toulouse*, by the *Sieur Barriere*, who was Abbot thereof in 1589.

It was approved of by Pope Sixtus V. And the Popes *Clement VIII.* and *Paul V.* granted it its particular Superiorities. King *Henry II.* founded a Convent of *Feuilans* in the *Fausbourg*, *St. Honorius* at *Paris*.

There are also Monasteries of Nuns, who follow the same Reform, called *Feuillantes*.

FEUILLE de Scie, in Heraldry, expresses that an Ordinary, as a Fesse, Pale, or the like, is indented only on one Side; in regard it then looks like a Saw, as the *French* Phrase imports. See *INDENTED*.

FEWEL, or *FUEL*, in Philosophy, the *Pabulum* of Fire, or whatever receives, and retains Fire, and is consumed, or render'd insensible thereby. See *FIRE*.

Pure Fire, if left to it self, would disperse, and disappear: To preserve it, it is necessary there be some *Fuel*, to sustain, and keep it together.

The only proper *Fuel*, known in all Nature, is Oil, commonly called *Sulphur*: And all Bodies, whether vegetable, fossil, or animal, are only inflammable, as they contain Oil in them.

Oil feeds and sustains Fire by virtue of its ramose, tenacious Particles, which are disposed to be put into a most vehement, rotatory Motion, before they will let each other go. But, by this rotatory Motion the Fire at length breaks and comminates the ramose Particles of the *Fuel*; till, ceasing to cohere, they are no longer able to sustain the Fire.

In the popular Sense of the Word, *Fewel* is any Body, which contains this *Pabulum*, or Oil, in such Quantity, as to fit them for culinary Uses.

Such 1^o, Are dry, or green Vegetables; especially those abounding in Oil; as the rosinous, and balsamick Woods.

2^o, Fossil Coals, whether vegetable, or animal; as being little else, but the oily Part of the Vegetable, or animal, purged of the Salt, Water, &c. so that the blacker they are, the better.

3^o, Fossil, and bituminous Earths, as *Turf*, and *Peat*, which are a fatty Earth, dug out of the Ground.

4^o, All mineral *Sulphur*, whether pure, or mix'd with Earth, Stone, &c.

5^o, The Fat and Dungs of Animals dried.

And 6^o, The Productions of Chymistry, which are either Coals, or Oil, or oily Bodies; as, inflammable Spirits, produced by Fermentation, Putrification, &c. See *COAL*, *TURP.* &c.

FIBRA Auris, see *EAR*.

FIBRE, in Anatomy, a similar Part of the animal Body, called also *Filamentum*; and when very small, *Fibrilla*, or *Capillamentum*. See *CAPILLAMENTUM*.

A *Fibre* is a long, slender Thread; which being variously interwove, or wound up, forms the various solid Parts of an animal Body; so that *Fibres* are the Stamen, or Matter of the Animal. See *SOLID*, and *STAMEN*.

Anatomists usually distinguish four kinds of *Fibres*, viz. *Carneous*, or *Fleshy*; *Nervous*; *Tendinous*; and *Osseous*, or *Bony*; of one or other of which all the other Parts consist. See *FLESH*, *NERVE*, *TENDON*, *BONE*, *MUSCLE*, and *SENSATION*.

Fibres again are divided, with respect to their Situation, into *Direct* or *Longitudinal*, which proceed in right Lines; *Transverse*, which cut, or go a-cross the former, at right Angles; And *Oblique*, which intersect, or cross them at unequal Angles.—

Some Anatomists reduce the animal *Fibres* to two Species, viz. *Muscular*, or *Motive*; and *Nervous*, or *Sensitive*.

The *Nervous Fibres* are the minute Threads, whereof the Nerves are composed. They arise from the Medulla of the Brain; as that does from the Cortex; and that again from the last, finest Ramifications of the carotid and vertebral Arteries: So it is probable, these Nerves are only Continuations of those Arteries. See *BRAIN*.

From every Point of the Cortex there arises a fine, medullary *Fibrilla*, which uniting in their Progress from the Medulla of the Cerebrum, Cerebellum, and Oblongata; and *Fibrilla* arising from each Point of these again, form the spinal Marrow. See *MEDULLA*.

From the medullary Substance of all these Parts arise Nerves; which are Combinations or Assemblages of a Number of these minute medullary *Fibres* inclosed, after they are got out of the Cranium in a common Membrane, or Coat from the *Pia mater*: And 'tis probable, that to each Nerve, there occur *Fibres* from all three; as also that these *Fibres* are so many fine hollow Tubuli or Canals, for the Conveyance of a fine Juice or Spirit from the Brain throughout the Body. See *NERVE*.

The *Muscular Fibres* are those whereof the Muscles, or fleshy Part the Body are composed. Every Muscle is divisible into other less ones; and these into others, still less, beyond all Imagination. The last and smallest are the muscular

muscular *Fibres*; which whether or no they be vesicular, is some question.

Now, there are Nerves propagated to every Muscle, and distributed through the Body thereof; so as there is no assignable Point wherein there is not somewhat of a Nerve. Add, that all the Nerves here disappear, and that in other Parts of the Body, the Extremities of the Nerves are expanded into Membranes. 'Tis therefore probable, the muscular *Fibres* are only Continuations of the nervous ones. See MUSCLE.

The animal *Fibres* have different Properties; some are soft, flexible, and a little elastic: And these are either hollow, like small Pipes; or spongy, and full of little Cells, as the nervous and fleshy *Fibres* above mentioned. See FLESH.

Others are more solid, flexible, and endowed with a strong Elasticity, or Spring; as the membranous and cartilaginous *Fibres*. See MEMBRANE, &c.

A third fort are hard, and inflexible, as the *Fibres* of the Bones. See BONE.

Now of all these, again, some are very sensible, and others destitute of all Sense: Some too very small, as not to be easily perceived; and others on the contrary, so big, as to be plainly seen; and most of them, when examin'd with a Microscope, appear to be compos'd of still smaller *Fibres*. These *Fibres* first constitute the Substance of the Bones, Cartilages, Ligaments, Membranes, Nerves, Veins, Arteries, and Muscles. And again, by the various Texture, and different Combination of some, or all of these Parts, the more compound Organs are fram'd; such as the *Lungs, Stomach, Liver, Legs, and Arms*, the Sum of all which make up the Body. See BODY.

The great Property of *Fibres*, is *Elasticity*, or a Power of Contraction, after the distracting Force is removed; upon which the Knowledge of the animal Mechanism greatly depends. See ELASTICITY.

To understand this, it may be observ'd, that any Membrane or Vessel may be divided into very small *Fibres*, or Threads; and that these Threads may be drawn out into a very considerable Length, without breaking; and that when such external Force is removed, they will again reduce themselves to their proper Dimensions. It is farther also manifest, that this Property is preferred to them by a convenient Mixture; because if one of those Threads be dried, it immediately loses it; so that upon the Application of any Force to stretch it, it will break; as also will its lying soaked in Liquor too much, render it flaccid, and destroy all its Power of Restitution, when distended.

Now some Hints of that Configuration of Parts, upon which this Property depends, may be had from the Contrivance and Properties of a Syringe; with the Reason, why it is so difficult to draw back the Embolus, when the Pipe is stopp'd; and the Necessity of any Liquors following it, wherein the Pipe is immersed.

All that is necessary hereto, is, that the Embolus be so exactly adapted to the inner Surface of the Barrel, as to prevent any Air passing between them, when it is drawn up: It matters not what Figure the Barrel is of, so that the Embolus is well fitted to it. A Case of Syringes therefore might be contriv'd, wherein every Barrel may also serve as an Embolus to its exterior, which immediately includes it.

In this manner it is not difficult to imagine a continued Series of Particles, so put together, that they may be moved, and drawn upon one another, without suffering the Air immediately to enter into the Interstices made by their Distraction; whereupon as soon as that Force, which drew them, is removed, they will, for the very same Reason as the Embolus of a Syringe, rush up again into their former Contacts.

As suppose *A. B.* (Fig. 1.) two Particles touching one another in *e. f.* and *C. D.* two others, covering the opposite Sides of their Contacts. It is also to be supposed, that on the other Sides they are covered with other Particles in the same manner, as by *C. D.* so that the Places of their Contacts are on all Sides covered from the Air, or the Infusion of any fluid Body.

If now *A. B.* by an external Force, greater than that of their Cohesion be drawn from each other, as far as *G. I.* and *H. K.* (in Fig. 2.) as soon as that Force is removed, they will again run into their former Contacts in *e. f.* (Fig. 1.) that is, if they are not so far as to bring their transverse Surfaces to coincide with *C. D.* for then the Air, or circum-ambient Fluid will interpose and prevent their Reunion; so that by this Contrivance, so much of *A.* and *B.*

as is included by other surrounding Particles, is as the Embolus of a Syringe, and the Particle surrounding them as its Barrel. And therefore when *A.* and *B.* are distracted from their Contacts in *e. f.* it will be with some Difficulty; and when the distracting Force is taken away; they will again run up in their former Contacts; just as the Embolus of a Syringe, and for the same reason. See SYRINGE.

It is not rigidly contended that this must exactly be the Contexture of a *Fibre*; but only some thing like this; where, by the Interstices of the interior Orders are covered by the exterior in such a manner, that when the Thread is distended, that is, when its constituent Parts are drawn from their transverse Contacts, neither the Air, nor any other external Fluid can get between them, so as to hinder their Reunion, as soon as such Force is withdrawn; that is; if their Distraction, as was before said, be not so far as to bring their transverse Surfaces to a Coincidence with one another; for then the circum-ambient Fluid will interpose, that is, the Thread will be broke.

But besides this peculiar Arrangement of a determinate Set of Particles to compose the main Substance of an animal *Fibre*, endowed with the Properties above-mentioned; it seems not at all unreasonable to conjecture, that into their Composition also enters a common Capsula, or Covering, which assists in the wrapping up, and holding together those Fasciculi, or Series of Particles already described; not much unlike the Periosteum of the Bones; the Contexture of which covering, resembling that of a Nut, cannot any ways hinder, either the transverse, or longitudinal Distractions of the other Parts.

Supposing this, then, the Contexture of a *Fibre*, it will be necessary to consider, what farther Requisites are needful to put them into that State, which they are in, in a living Body; to shew how they are maintained in continual Motion; and what are the Consequences of it.

And 1^o, it is necessary to take notice, that all the *Fibres* in a living Body are in a State of Distraction; that is, they are drawn out into a greater Length than they would be in; if separated from any Part, and taken out of the Body; which is demonstrable upon any Solution Continua; as in the transverse Division of a Nerve, or Artery; for immediately the divided Parts run up, and leave a great Distance between them; and the Fluids contained between them, upon such Contraction are squeezed out. This also shews; that their natural Distractions are owing to some Fluids being propelled into the Vessels which they compose, with a Force greater than their Endeavours of Restitution, so far as to obtain a close Contact of all their transverse Surfaces; but yet less than that which is necessary to distract them, so as to bring them into a Coincidence; for then the Vessels would break.

2^o, This State of Distraction must necessarily leave Vacuola between all the transverse Surfaces; as between *G. I.* and *H. K.* (in Fig. 2.) which may be represented by the several Series of Particles (Fig. 3.) which Vacuola will continue as long, as the longitudinal Surfaces of its component Parts continue to close to one another, as to prevent the Infusion of any foreign Matter, how subtle soever between them.

For the same Reason therefore, as when the Embolus of a Syringe is drawn, and the Pipe is stopp'd, there must be continually a *Nifus restituendi*, or an endeavour of Contraction.

There is also this farther Necessity of their being continued in a State of Distraction, because if they were closely to touch one another in all Parts, they could not be put into, and continue in those undulatory Motions, which they are always in, in a living Body, without being altered in their Figures and Contextures.

3^o, It being manifest, that all animal *Fibres* are continued by the perpetual successive Impulse of the Fluids, in such undulatory Motions; besides this Necessity of their Distraction, they must also be continually maintain'd with some convenient Fluid; because otherwise their continual Attritions against one another, would wear them out, as well as render it difficult to move them: The Fluid also for this purpose, must be very soft and subtle, because otherwise it cannot infuse into all the Interstices of the *Fibres*, without so far separating their Parts, as is inconsistent with that Contexture and Mechanism here laid down.

Upon this View there arises a very natural Explication of several Terms, much used by mechanical Writers; such as *Distracted*, *Contracted*, *Vibration*, *Undulation*, *Tonic Motion*, *Concussion*, *Relaxation*, *Corruption*, and *Elasticity* of the Solids; all which are but different ways of expressing the various Modifications and Dispositions of those Machinulae with which all the *Fibres* are composed.

Thus much being granted of the Contexture of a *Fibre*, and the Requisites for its Office, it is to be consider'd, how it comes first to be set in Motion, and by what Mechanism it is afterwards carried on. Suppose then the *Fibre* (Fig. 3.) in such a State of Distracted, as before mentioned; it is certain by *Req. 2.* that in all its Parts there is a *Nisus resistendi*: Where, then, any external Impulse is made against it from *R* to *S*, successively thrusting it from *P* towards *Q*, it is certain that against *r* for instance, the Thread will be more distracted, than in any other Part; and thereby will there be a greater Endeavour of Restitution. And therefore the Impulse passing on towards *S*, all the constituent Machinulae, 1, 2, 3, 4, will successively move after one another.

To make this Matter still more plain, let a Portion of an Artery be represented by Fig. 4. through which the Blood is continually propelled in a Direction parallel to its Axis: Nothing is more certain, than that if it were not for the Resistance of the Sides of the Artery at *E F*, the Blood setting out at *A B*, would go on by the prick'd Lines *C, D*; and therefore it cannot but strike against the Sides of the Artery at *E, F*, and distract them there more, than any where else; whereby their Endeavours of Restitution will be there the greatest: And therefore, when the Impulse of the Blood has raised them to a certain Measure, wherein their Endeavours of Restitution will exceed the Impulse which raised or distracted them, their contractile Powers will draw them again into the same Dimensions; and consequently the Blood will be thrust forward into the next Section of the Artery, and so successively from one to another, thro' the whole Course of its Circulation; the Contraction of one Section of an Artery being the true Cause of the Blood's Impulse against, and raising the next. See CIRCULATION.

Fig. 4.

FIBRE is also used in Physicks, for long, fine Parts, or Threads, whereof other natural Bodies are composed, and which prevent their being friable, or brittle.

Trees, Plants, and Fruits have their *Fibres*, or Capillaments; which are Modifications of their woody Substance, penetrating and terminating in the Parenchyma, or Pith. See PLANT, WOOD, &c.

In the common Use, *Fibre* is only applied to the slender, capillary Roots of Plants.

Kepler even gives *Fibres* to the Stars; and explains several of their Motions from the Situation of their *Fibres*.

FIBRILLA, a little *Fibre*, or Capillament. The Word is a Diminutive of *Fibra*. Each *Fibre* is divisible into a number of lesser Threads, called *Fibrille*. See FIBRE.

FIBULA, in Anatomy, one of the Bones of the Leg, called also *Perone*, *Sura*, and *Pocile minus*. See BONE, LEG, POCIL, &c.

The *Fibula* is the outer, and slenderer of the two Bones of the Leg; and yet, notwithstanding its being more exposed, and its being much weaker than the inner Bone, or Tibia, 'tis not so often broken, as being more pliant and flexible; so that the Tibia often breaks, leaving the *Fibula* entire.

The *Fibula* is join'd or articulated with the Tibia, at both Ends, by a kind of close Arthrodia.

It is divided into three Parts; the upper, which is a round Head, which terminates a little below the Knee, and receives a lateral Protuberance of the Tibia into a small Sinus; by which the Articulation of this Part is effected: The Middle is very slender, long, and triangular, like the Tibia, but somewhat more irregular. The lower Part is receiv'd into a Sinus of the Tibia, and then shoots out into a large Process, called the Malleolus internus, or outer Ankle: It is a little hollow on the Inside, to give Liberty for the Astragalus to move; and a little Convex on the Out-side, that it may have the more Strength, to retain the Astragalus.

The Tibia and *Fibula* only touch at the two Extremes, like the Radius, and Ulna: The Space between them is filled up with a strong membranous Ligament, which ties them together, and strengthens the Articulation. See TIBIA.

FIBULA, *Button*, in Surgery, an Instrument in use among the Antients, for the closing of gaping Wounds.

Celsus speaks of the *Fibula*, as to be used when the Wound was to patent as not easily to admit of being sewed.

Authors are somewhat at a loss as to the Form of the *Fibula*. *Guido* lays, they were made of iron Circles, or Semi-circles, bent backwards both ways; the Hooks whereof being fallen'd on both Sides to the Wound, answer'd exactly to each other: But, as this must have been an insupportable Pain to the Patient, this Description is generally for afeid.

Fallopian, *Santorinus*, and others, take the *Fibula* to have been, in reality, no more than the sewing up of the Wound with a Needle and Thread, used at this Day. See SUTURE.

FIBULÆUS, in Anatomy, a Muscle of the Leg, call'd also *Peroneus primus*. See PERONEUS.

FICUS, a kind of Wart, or Excrescence, yielding a very stinking Saucis, arising sometimes on Fractures of the Skull, but more usually about the Fundament, and Pudenda.

The Physicians more usually call it *Sarcoma*, of *sedqz*, Fleth. See SARCOMA.

RICHANT, *Figens*, a French Term, used in Fortification: Thus, a Flank *Fiehaus*, or a Line of Defence *Fiehaus*; is the Place, whence the Shots are made, that not only raise the opposite Face to be defended, but also enter within it.

The Word is form'd of *ficber*, to stick a Thing in.

FICHE, in Heraldry; see FITCHEE.

FLECTION, see FABLE, FALLACY, &c.

FIDDLE, see VIOLIN.

FIDE-Jussor, in the Civil Law, is the same with Repromissor, Adpromissor, Sponsor, Prædes, and Vades; that is, a Surety, or one that obliges himself in the same Contract with a Principal, for the greater Security of the Creditor, or Stipulator.

FIDEI-Commissum, in the Roman Law, the appointing of an Heir, or Bequeathing of a Legacy to a Person, on this View or Condition, that he surrender the Inheritance or Legacy to another Person, for whom the same is originally meant: Or, it is an Inheritance left in trust with any one, for the use of another. See TRUSTEE.

Fidei-Commis were much used among the Romans. In the French Law the thing is become odious; as being, ordinarily, no other than an Expedient in favour of Persons to whom the Laws forbid any thing to be given. In order to this, some Friend was choic, whom they trusted to make legal Heir, under a tacit Agreement, to deliver the Succession to the Person incapacitated by Law: At length, the same Expedient came to be used with regard to Persons capable of inheriting; to whom the Testator for particular Reasons did not care to leave the Succession directly.

As it happen'd, that the *Fidei-Commissioners* did not always faithfully refore, what was trusted to them, *Augustus* took proper Measures to oblige them thereto: To this End a Pretor was created, whose Business was restrain'd to the single Matter of *Fidei-Commissio*. Just. Lib. II. T. 23.

FIDEI-Commissioner, a Trustee, or Heir intrusted with Charge, to restore the Inheritance or Succession to another Person.

A *Fidei-commissionary* Heir had a Right to reserve the *Trebellianick* Fourth to himself: as a Testament was null without the Infiriation of an Heir; and it frequently happening, that the *Fidei-Commissioner* refused to accept the Trust, upon which the Testament fell to the Ground; To engage some body to accept it out of the Consideration of Advantage, the *Pogonian* Senatus-Consultum decreed, that the *Fidei-Commissioner* should be at Liberty to retain a Fourth of the *Fidei-commissum*.

By the *Trebellian* Senatus-Consultum, a farther Regulation was made. And in course of Time, the two Senatus-Consulta, the *Pogonian* and *Trebellian*, came to be confounded under the Name of the *Trebellian*.

FIDEI-Jussio, in the Civil Law, a Security, or Guaranty. See GUARANTY.

FIDICINALES, in Anatomy, a Name given to several Muscles of the Fingers, called also *Lumbricales*. See LUMBRICALS Manus.

FIEF, the same with *Foid*, or *Fec*. See FEE.

FIELD, in Agriculture, a piece of Land, or Ground inclosed, and fit for Tillage, to bear Hay, Grain, &c. See TILLAGE, PLOUGHING, FALLOW, &c.

FIELD, *Campus*, in Antiquity, is frequently used for a publick Place, or Square in a City, &c. as the *Field of Mars*, *Campus Martius*; and *Field of Flora*, *Campus Floræ*, in Rome; the *Field of May*, *Campus Maji*, among our Ancestors, &c. See CAMPUS.

The *FIELD of Mars* was denominated from a Temple of that Deity, built therein. It was the Scene, or Place of the *Atheniensis* *Comitia*. See COMMITIA.

Tarquin the Proud at length appropriated it to his own Uses;—But after the Expulsion of the Kings, the Consuls

fuls *Brunus* and *Collatinus* restor'd it to the publick Use of Assemblies and Elections.

Originally it was no more than a Meadow, on the Banks of the *Tiber*, where *Horfes* grazed, and the *Roman* Youth were exercis'd to War. But it was afterwards erected into a magnificent Square, adorn'd with Statues, &c. The *Field of Flora* was the Place, where the *Laws*, *Edicts* and *Constitutions* were publish'd.—

For *Field of May*, see *CAMPUS MAJ*.

FIELD, in Heraldry, is the Surface, or Face of the Shield, or Escutcheon; thus call'd, as containing the Achievements antiently acquired in the *Field of Battle*.

The *Field* is the Ground wherein the Colours, Bearings, Metals, Furs, Charges, &c. are represented. In blazoning a Coat, we always begin with the *Field*: He bears *Sable*, &c.

Among the more Modern *Heralds*, *Field* is less frequently us'd than *Shield*, or *Escutcheon*. See *SHIELD*, and *ESCUTCHEON*.

FIELD of a Painting, &c. is more usually call'd the *Ground* thereof. See *GROUND*.

FIELD, in War, the Place where a *Battle* was fought.—The General remain'd Master of the *Field of Battle*—*Clofe Field* was antiently a Place inclosed, or rail'd in with a *Barrier*, for *Jufts* and *Tournaments* to be perform'd. See *BARRIER*, *JUST*, and *TOURNAMENT*.

FIELD-Colours, are small *Flags* about a Foot and an half square, which are carried along with the *Quarter-master General* for marking out the *Ground* for the several *Squadrons* and *Battalions* of an *Army*.

FIELD Pieces, are small *Cannon*, usually carried along with an *Army* in the *Field*; such as three *Pounders*, *Minions*, *Sakers*, six *Pounders*, *Demi-Culverins*, and twelve *Pounders*; which being light, and small, are easily carried.

FIELD Works, in *Fortification*, are those thrown up by an *Army*, in the *Beseiging* of a *Fortress*; or else by the *Beseiged*, in defence of the *Place*. Such are the *Fortifications* of *Camps*; those of the *High ways*, &c.

FIELD Staff, is a *Staff* carried by the *Gunners*: It is about the Length of an *Halbert*, with a *Spare* at the End, which on each Side has *Ears* screw'd on, like the *Cock* of a *Match lock*; and in these the *Gunners* screw in lighted *Matches*, when they are on *Command*. And this is call'd, arming the *Field Staff*.

Flyian FIELDS, see *ELYSIAN FIELDS*.

FLERI Facias, is a *Writ Judicial*, that lieth at all times within the *Year* and *Day*, for him that hath recovered in an *Action* of *Debt* and *Damages*, to the *Sheriff*, to command him to levy the *Debt*, or the *Damages* of his *Goods* on him against whom the *Recovery* was had.

FIFTEENTH, *Decima quinta*, an antient *Tribute*, or *Imposition* of *Money*, laid upon any *City*, *Borough*, or other *Town* through the *Realm*; not by the *Poll*, or upon this or that *Man*, but in general upon the whole *City*, or *Town*. See *TARBUR*, *TAX*, &c.

It is so call'd, because amounting to a *Fifteenth Part* of that which the *City* hath been valued at of old; or to a *Fifteenth Part* of every *Man's* personal *Estate*, according to a reasonable *Valuation*.

This is imposed by *Parliament*, and every *Town* thro' the *Realm* knows what a *Fifteenth* for themselves amounts to, because it is always the same; Whereas the *Subsidy*, which is rais'd of every particular *Man's* *Lands*, or *Goods*, must needs be uncertain. See *SUBSIDY*.

In this View, the *Fifteenth* seems to have been a *Rate*, antiently laid upon every *Town*, according to the *Land* or *Circuit* belonging to it.

Cambden mentions many of these *Fifteenths* in his *Britan*. viz. pag. 171. *Bath geldabat pro viginti bidis, quando Sciria geldabat, &c.* And p. 181. *Old Sarum pro quatuordecim bidis geldabat, &c.* Which *Rates* were according to *Domage*.

The *Fifteenth* therefore seems in old *Time* to have been a yearly *Tribute* in *Certainty*; whereas now, though the *Rates* be certain, yet it is not levied but by *Parliament*. See *QUINSIEME*.

FIFTH, in *Musick*, one of the *harmonical Intervals*, or *Concords*. See *INTERVAL*.

The *Fifth* is the *Third* in *Order*, of the *Concords*. The *Ratio* of the *Chords* that afford it, is 3 : 2. See *CONCORD*. It is call'd *Fifth*, because containing five *Terms*, or *Sounds* between its *Extremes*; and four *Degrees*: So that in the *natural Scale* of *Musick* it comes in the *fifth Place*, or *Order*, from the *Fundamental*. See *DEGREE*, and *SCALE*.

The *Antients* call'd this *Interval*, *Diapente*. See *DIAPENTE*.

The *imperfect*, or *defective Fifth*, by the *Antients* call'd *Semi-Diapente*, is less than the *Fifth* by a mean *Semi-Tone*. See *TONE*, and *SEMI-TONE*.

FIG, *Ficus*, a soft, sweet, delicious *Fruit*; the *Produce* of a *Tree* of the same Name.

There are *Figs* of divers *Kinds*; chiefly denominat'd

from their *Colours*; *White*, *Violet*, *Black*, *Purple*, *Green*, and *Ruddy*: The *White* are esteem'd the best. The *Black* and *Violet* are the worst.

They are gather'd in *Autumn*, and laid on a *Rack*, or *Hurdle*, to dry in the *Sun*.

Figs contain a deal of *Phlegm*; a little *volatile*, *alkali Salt*, and a moderate *Quantity* of *Oil*.

They are very nourishing, and soften the *Aperities* of the *Breath*, &c. And accordingly are us'd in *Medicine*, to make *Gargarisms*, against *Disorders* of the *Throat* and *Mouth*. They are also applic'd externally, to soften, digest, and promote *Maturation*.

Figs are dried, either by a *Furnace*, or the *Sun*. The *Latins* call them *Carice*, or *Ficus posse*, when thus dried. In this *Condition* they are us'd both as *Medicine* and *Food*; being both the wholestomer, and easier of *Digestion*, for being thus clear'd of a deal of their aqueous and viscid Parts.

The *Word* is form'd of the *Latin Ficus*; and that of the *Greek ψῆν*, I produce; by reason the *Fig Tree* is a great *Bearer*, and has usually two *Croops* a *Year*.

The best *Figs* are the *Produce* of *Italy*, *Spain*, *Provence*, &c. The *Ilands* of the *Archipelago* yield *Figs* in great *Abundance*; but they are much inferior in *Goodness* to those of *Europe*. The *Greeks* in those *Ilands* cultivate them with wonderful *Care*, and *Attention*; as making the principal *Food*, and a considerable *Part* of the *Riches* of the *Country*.

They have two *Kinds* of *Fig Trees*, the first call'd *Ornos*, or the wild *Fig Tree*; the second, the domestick *Fig Tree*. The wild, call'd by the *Latins Caprificans*, yields successively three sorts of *Fruits*, call'd *Fornites*, *Crativites*, and *Orui*; none of which are of any use as *Food*; but all absolutely necessary for the ripening those of the domestick *Fig Tree*.

The *Art* of cultivating and ripening these *Figs*, makes a peculiar *Art*, by the *Antients* call'd *Caprificatio*; often spok'd of among them in *Terms* of *Admiration*. Some of the modern *Naturalists* have look'd on it as a *Chimera*; but *Monf. Tournefort* has assur'd us of the *Contrary*, and given us that *Process*, as he learn'd it upon the *Spot*; which see under the *Article CAPRIFICATION*.

The *Generation* of the *Fig* is somewhat anomolous; the *Parts* subservient to the *Office* in other *Plants*; i. e. the *Flower*, not being here apparent. But the *Anatomy* of the *Fruit* helps out of the *Difficulty*.

Monf. de la Hire the younger, in the *Memoirs* of the *Fr. Academy*, shews, that the *Fig* is a *Flower*, as well as a *Fruit*. By *Dissection* it discovers all the *Essentials* of a *Flower*, viz. *Stamina*, *Apices*, and a *Farina* fecundans.

To shew this, that ingenious *Author* divides the *Length* of the *Fig* into three *Parts* or *Spaces*, A, U, X, *Tab. Nat. Hist. Fig. 4*. The first of which, A, being the next to the *Pedicle*, and much the greatest, contains the *Grains*, or *Seeds* of the *Fig*. These *Seeds* are little *Stones*, represented by A, *Fig. 5*, within which are *Kernels*. Each *Stone* is half incomple'd with a *Parenchyma*, B, supported by a *Calyx*, laid on the *Parenchyma*: This *Calyx* is fix'd to a pretty long *Pedicle*, which grows to the inner *Rind* of the *Fig*, as represented in the *Figures*.—The *Division X* of the *Fig* is full of little *Leaves*, like those represented in *Fig. 6*, which are fasten'd by their *Bases* to the *Rind* or *Skin* of the *Fig*. In this *Division* there is a *Hole* B, *Fig. 4*, call'd the *Umbilicus*, or *Navel*, whose outer, or upper *Edge* is furnish'd with little *Leaves*, which close the *Aperture*.—Lastly, the *Space V* is full of little whitish *Bodies*, represented *Fig. 4*, which arise from the internal *Parities* of the *Fig*, by a large *Pedicle* A, at whose *Extremity* is a *Calyx* B C; from the *Divisions* whereof arise three other *Bodies*, D, E, F. These *Bodies* terminate in little *Eminences* in E, F, &c. which are *Capsule*, that include an infinite *Number* of little *Grains*, easily perceivable by the *Microscope*, and all alike, and of a *Size*, perfectly similar to the *Ferize* in the *Apices* or *Capsule* of other *Flowers*. Whence it follows, that the *Bodies* contain'd in the *Space V*, of the *Fig*, are real *Fig Flowers*; tho' several *Naturalists* have taken these in the *Divisions* A, and X, for the *Flowers*; which have no essential *Marks* of *Flowers* at all.

FIGURATE, or *FIGURATIVE*, that which has relation to a *Figure*; or that teaches under some obscure *Resemblance*.

A *Figurative Style* is that which abounds in *Figures*.

The *Figurative Style*, *Fa. Bourbonnais* observes, is neither the most just, nor the best. For this reason, *Cicero* directs us to the *Antients*, who, not having yet berough't themselves to use *figurative Expressions*, but keeping to the most proper, and natural way, have almost all wrote well. *Sunt enim illi veteres, quia nondum ornare poterant ea que dicebant, omnes prope preclare loquuti*. Long *Eu*, say the *Grammarians*, renders that proper in all *Languages*, which at first was *figurative*.

The same *Thoughts* appear more lively when express'd by a *Figure*, than when in simple *Terms*. The *Reason* is,

that *figurative* Expressions denote not only the principal Matter, but also the Emotion and Passion of the Person who speaks.

The Term *figurative* is also much used in speaking of the Mysteries and Figures of the old Law. Thus, *Manna* is said to be *figurative* of the Eucharist.

In the Greek Grammar, *figurative* is also used for what we otherwise call *characteristick*, viz. a Letter that characterizes certain Tenses of the Greek Verbs; or that distinguishes, and specifies them.

In the first Conjugation of the *Barytonous* Verbs, the ϕ is characteristick, or *figurative* of the Preterit; and the ψ of the Future. See CHARACTERISTIC.

FIGURATE Counter-point, in Musick, is that wherein there is a Mixture of Discords along with the Concorde. See COUNTER-POINT.

Figurative Counter-point is of two Kinds: That wherein the Discords are introduced occasionally, to serve only as Transitions, from Concord to Concord; and that, wherein the Discord bears a chief Part in the Harmony. See DISCORD.

'Tis a Rule in Composition, that the Harmony must always be full on the accented Parts of the Bar, or Measure *i. e.* Nothing but Concorde are allowed in the Beginning and Middle; or the Beginning of the first half of the Bar, and Beginning of the latter half thereof in common Time; and the Beginning, and first three Notes in triple Time. But upon the unaccented Parts, this is not so necessary: But Discords may transiently pass there without any Offence to the Ear.

This the French call *Supposition*, because the transient Discord supposes a Concord immediately to follow it. See SUPPOSITION.

Where the Discords are used as a solid, and substantial Part of the Harmony, the *Counter-point* is properly called the *Harmony of Discords*. See HARMONY of Discords.

FIGURE, in Physics, is the Surface, or terminating Extremes of a Body.

All Bodies have some Figure; whence, *Figurability* is generally rank'd among the essential Properties of Body, or Matter. See MATTER.

A Body that should have no Figure, would be an infinite Body. See INFINITE.

The copesular Philosophers account for every thing from the Figures, Bulks, and Motions of the Atoms, or primary Corpuscles. See CORPUSCULAR.

The Earth is of a spherical Figure, or rather a spheroidal. See EARTH. Saturn sometimes appears of an Elliptick, or Oblong Figure. See SATURN.

For the Figures of Bodies, consider'd as Objects of Sight, see VISION.

The Author of a Collection of Dissertations, printed at Paris, in 1715, shews in the first Dissertation on the Hebrew Medals, p. 68. That the Jews were allowed to make any kind of Figures, or Images of Trees, Plants, Flowers, Buildings, &c. excepting those of Animals, the Sun, Moon, and Stars. See IMAGES.

FIGURE, is particularly used by the Philosophers, in opposition to essential Form. See FORM.

There are Bodies of the same nature, and they only differ in Figure, or Configuration. See CONFIGURATION.

The Schoolmen dispute, whether or no the Quality of Figure be the same with that of Form; and if they differ, what it is constitutes the Difference.

Bæcius will have Figure only predicated of inanimate Bodies, and Form of animate. Others extend Figure to all natural Things, and Form to all artificial ones: Whence the Verse,

Formam viventis, nihil dic esse Figuram.

Lastly, others apply Figure indifferently to all kinds of Bodies, but not in all Relations. If only the bare Circumference, or Circumscription be consider'd, they call it Figure; but if the Circumference be consider'd as endued with Colour, then they call it Form.

FIGURE is also applied to all Representations, or Images of Things, in Prints, &c. Such a Book is printed with Figures.

The Figures, or Schemes in Mathematical and Physical Writings, should be made to fold out of the Book.

Some Readers chuse to have the Figures, especially the Mathematical ones, in Wood, for the Convenience of having them immediately annex'd to the Matter they refer to: Others, rather chuse to be at the Pains of turning over, and having Recourse to another Part of the Book, that they may have the Figures more neat and accurate on Copper.

FIGURE, in Geometry, a Surface inclosed, or circumscribed with one or more Lines. See SURFACE.

Such are Triangles, Squares, Polygons, Circles, Ellipses, &c. which see.

Wolffius defines Figure a Continuum, terminated by a Perimeter.

In which Sense Figure is applicable both to Superficies and Solids.

In the former Case, the Perimeter is Lines; in the second, Surfaces. See PERIMETER.

Figures are either *Rectilinear*, or *Curvilinear*, or *Mixt*, according as the Perimeter consists of right Lines, curve Lines, or both. See CURVE.

The superficial Parts of a Figure are called its Sides; the lowest Side, its *Base*; and the Angle opposite to the Base, the *Vertex*. See BASE, VERTEX, &c.

The Height of a Figure is the Distance of the Vertex from the Base. See HEIGHT.

An Equilateral Figure is that whose Sides are equal. See EQUILATERAL.

A Figure Circumscribed, and Inscribed, see CIRCUMSCRIBED, and INSCRIBED.

Similar Figures, see SIMILAR Figure.

All Similar Figures, both Regular, and Irregular, are in a duplicate Ratio of the homologous Sides.

A Regular Figure is that which is Equilateral, and Equiangular.

An Irregular Figure is that which is not both. See REGULAR.

FIGURE, in Conicks, is the Rectangle, made under the *Latus rectum*, and transversum in the Hyperbola, and Ellipsis.

FIGURE of the Diameter. The Rectangle under any Diameter, and its proper Parameter, is in the Ellipsis and Hyperbola called the Figure of that Diameter. See DIAMETER.

FIGURES, in Painting, and Designing, is the Lines and Colours, that form the Representation of a Man, or other Animal. See DESIGN.

Thus we say, There are above an hundred Figures in this Piece: Such a Figure is lame, &c.

But the Term Figure is in a more immediate and peculiar manner understood of human Personages: Thus, a Painter is said to be full of Figures, when there are abundance of Representations of Men: And a Landship is without Figures, when there is nothing but Trees, Plants, Mountains, &c. See COLOUR.

FIGURES, in Architecture, and Sculpture, is used for Representations of Things, made in solid Matters; such as Statues, &c.

In this Sense we say, Figures of Brass, of Marble, of Stucco, of Plaster, &c. But in this Sense too, the Term is more usually applied to human Representations, than other Things. Thus we say, an Equestrian Figure, for a Man on Horseback. See STATUE.

Daviler, however, observes, that those, either represented sitting, as *Popes*, &c. or kneeling, as those on Monuments, &c. or laid all along, as *Rivers*, &c. are more properly called Figures, than Statues.

FIGURE, in Heraldry, a bearing in a Shield, representing, or resembling a human Face; as a Sun, a Wind, an Angel, &c.

Among the Masters of Defence, Figures are the divers Guards, Postures or Dispositions of the Body, Arm, or Sword.—

In Astronomy we say, the Figure of an Eclipse, meaning the Representation of the Path, or Orbit of the Sun and Moon, during the Time of the Eclipse, upon Paper; with the Number of Digits eclipsed, and the Beginning, Middle and End of Darkness. See ECLIPSE.

The Figure, or Delineation of the Full Moon, such as viewed thro' a Telescope, with two convex Glasses, is of considerable use in Observations of Eclipses, and Conjunctions of the Moon with other Luminaries. In this Figure, of the Moon, are represented the Macule, or Spots of the Moon, mark'd by Numbers; beginning with the Spots, which usually enter first, within the Shade at the Time of great Eclipses, and also emerge the first. See MOON, MACULE.

FIGURE, in Astrology, a Description, or Draught of the State and Disposition of the Heavens, at a certain Hour; containing the Places of the Planets and Stars, mark'd down in a Figure of twelve Triangles, called *Hælices*.

This is also called a *Uroscopie*, and *T'hème*. See HOROSCOPE, &c.

In Geomancy, Figure is applied to the Extremes of Points, Lines or Numbers, thrown, or cast at random; on the Combinations or Variations whereof the Sages of this Art found their fantastical Divinations.

FIGURE, in Fortification, is the Plan of the fortified Place; or the Interior Polygon. See POLYGON, &c.

When the Sides and Angles are equal, 'tis called a Regular; when unequal, an Irregular Figure. See REGULAR, &c.

FIGURE, in Dancing, the several Steps which the Dancers make in Order, and Cadence; which mark divers Figures on the Floor.

FIGURE, in the Manufactures, is applied to the various Designs represented, or wrought on Velvets, Damaska, Taffeties, Sattens, and other Cloths and Stuffs.

The most usual **Figures** of such Designs are *Flowers*, imitated from the Life; or *Grottesques* and Compartments of pure Fancy. Representations of Men, Beasts, Birds, Land-ships, have only been introduced since the Taste for the *Chinese* Stuffs, particularly those called *Furces*, have begun to prevail among us.

'Tis the **Wool** of the Stuff that forms the **Figures**: The **Warp** only serves for the Ground. In working *figured* Stuff, there is required a Person to shew the Workman, how far he must raise the Threads of the Warp, to represent the *Figure* of the Design with the Wool, which is to be pass'd 2-crofs between the Threads thus raised. This some call reading the Design. See DESIGN.

For the **Figures on Tapestrey, Brocade, &c.** see TAPESTRY, &c.

For those given by the *Callenders, Printers, &c.* see CALLENDER, &c.

FIGURES, in Arithmetick, are the numeral Characters; or the Characters whereby Numbers are express'd, or wrote. See CHARACTER.

Thus the Number four hundred and fifty, is wrote, or express'd by three **Figures** 450.

For the Antiquity, Use, &c. of the *Numeral Figures*, see NUMERAL CHARACTER.

The **Figures** in Arithmetick, are the nine Digits; 1, 2, 3, 4, 5, 6, 7, 8, 9, and 0.

FIGURE, in Logick, a certain Disposition of the Terms of a Syllogism; particularly of the Medium, with regard to the Extremes.

Chamvis defines it, a proper placing or connecting of the middle Term with the Extremes, so as to have the Effect of a Proof, or Conclusion. See SYLLOGISM.

Hence it follows, that there are so many **Figures** of Syllogisms, as there are different Connections of the Extremes with the Medium: So that, tho' the School-men ordinarily only reckon three; yet a fourth might be admitted.

For the Medium may be either prefix'd to both Extremes; or subjoin'd to both: Or, it may be before the Major, and after the Minor; or before the Minor, and behind the Major.

If it be after the Major, and before the Minor, it is usually called the *First Figure*; this seeming the nearest way of arguing to the natural way.

If it be before the Major, and after the Minor, it is called the *Fourth and Last*; and by the Peripateticks, the *Indirect*; and by others, the *Galenical Figure*; as varying too far from the natural Form.

If it precede both, 'tis called the *Second Figure*.

And if it follow both, the *Third Figure*; as in the following Technical Distich:

Prima infra, & supra: supraque bis, Altera: bisque
Tertia vult infra medium: supra, Ultima, & infra.

A Syllogism, therefore, of the *First Figure* is that wherein the Medium is severally join'd with both Extremes of the Conclusion, so as to be predicated of the lesser; the Conclusion being sometimes Affirmative, and sometimes Negative. In that of the *Second Figure*, the Medium is predicated of both; and the Conclusion is always negative. In the *Third Figure*, the Conclusion, which in the former Cases is sometimes General, sometimes Special, is always Special.

The *Fourth*, called the *Indirect Figure*, some prefer before all the others; by reason 'tis in this alone, that the Medium or mean Term has its natural Situation, *viz.* in the Middle, between the Extremities; it being in the rest no more than a Medium by Office: But in the *Fourth Figure*, the Medium is in the middle Place.

E.g. Take the two Terms, *Man*, and *Living* for Extremes, and *Animal* for the Medium. The Mind argues thus, There is a Connection between *Man* and *Animal*; and between *Animal*, and *Living*: Therefore the Order is, *Man*, *Animal*, *Living*; and by *Animal*, as a Medium, the two Extremes are conjoin'd, as the Extremes of a Line are connected by the Middle.

B ————— —————

FIGURE, in Rhetorick, is an Ornament, or Turn of Speech or Discourse, finer and nobler than what is used in natural, or ordinary talking.

Figures, by the *Greeks* called *Sobemata*, are the Enrichments of Discourse, which we only use when raised and moved with the Consideration of some thing extraordinary. See SUBLIME.

There are two kinds of *Figures*; the one of *Sentences*,

and contained in the *Sense* it self, without any immediate Dependence on any particular Words; the other are only in the *Words* themselves.

Of the **FIGURES of Sentences** some are design'd to move; others to teach; and others only to delight: Of the first kind, the most considerable are, *Exclamation, Imprecation, Obsecration, Interrogation, Doubting, Precavition, Expolition, and Epiphonema.*

Those of the *Second*, are the *Antibiosis, Correction, Communication, and Suspension.*

Those of the *Third*, the *Apostrophe, Hypotyposis, Prosopopeia, Ethopoeia, and Prologopha.* See each under its proper Head, EXCLAMATION, &c.

Of **Figures of Words**, some are *Tropes*, i. e. Translations of Words from their proper Signification, to some more remote and extraordinary one. See TROPY.

The principal of these are, the *Metaphor, Allegory, Metonymy, Synecdoche, Irony, and Sarcasm; Metalepsis, Antonomastia, and Syllepsi.*

Others, are *Figures of Words*, properly so called, and not *Tropes*; being so inherent in the Words, that upon changing of those, the *Figure* is destroy'd; as in *Amantes sunt Amantes*, where the *Figure* would be lost, if instead of *Amantes* you should put *Stulti.*

Of these, the principal are, the *Repetition, Conversion, Complexion, Gradation, Synonymy, Polyandeton, and Pleiystoton, Reticiency, Disjunctio, Similitudo, Peronomastia, and Transition.* See each *Figure* under its Article, as METAPHOR, ALLEGORY, METONYMY, SYNECDOCHE, IRONY, SARCASTIC, &c.

FIGURE, in Grammar, is an Expression that deviates from the common and natural Rules of Grammatic; either for the sake of Elegancy, or Brevity. The best Grammarians only reckon four *Figures*; the *Ellipsis, Pleonastia, Syllepsis, and Hyperbaton*: Others add two more, *viz. Anastrophe, and Enallage.* See each in its Place, ELLIPSIS, PLEONASM, &c.

FIGURE is also used among the Divines, for the Mysteries represented or delivered obscurely to us under certain Types or Actions in the Old Testament. See TYPE.

Thus *Manna* is held a *Figure*, or Type of the Eucharist: The Death of *Abel* a *Figure* of the Suffering of Christ.

Many Divines and Critics contend that all the Actions, Histories, Ceremonies, &c. of the Old Testament are only *Figures, Types, and Prophecies* of what was to befall under the New. See MYSTICAL.

The Jews are supposed to have had the *Figures* or Shadows, and we the Substance. See PROPHESY.

FIGURE is also applied in the like Sense to prophane Matters; as the *Emblems, Enigma's, Fables, Symbols, and Hieroglyphicks* of the Antients. See EMBLEM, ENIGMA, DEVISE, &c.

FIGURED, in the Manufactures; A *figured* Camelot, Stuff, Tabby, &c. is that wherein there are divers Designs of Flowers, Figures, Branches, &c. impress'd by means of hot Irons. See CAMELOT.

FIGURED Velvet, see VELVET.

FIGURED Ribbons, first came into Fashion about the Year 1680. The Method of Performance was by successively applying Steel Plates engraven with divers Ornaments, as Flowers, Birds, Grotesques, &c.

But one *Chandelier*, a Ribbonmaker of *Paris*, invented a much better and readier way of doing it; by a Machine not unlike the Flatter used in Coining to flatten the Pieces of Metal, only much simpler.

The principal Parts thereof, were two Steel Cylinders, engraven with the *Figures* intended to be represented. These Cylinders were plac'd over each other, like the Rolls of a Rolling Press; having each of them, at one of its Extremes, a little dented Wheel, one of which catching into the other, the whole was put in Motion, by means of a Winch, or Handle, fasten'd to the first. The Machine thus prepared: The Workman heats the Cylinders; and places the Ribbon in the little Space remaining between the two, which he contracts yet farther by a Screw, that presses the upper down upon the lower; then, turning the Rolls by the Handle, a whole Piece of Ribbon is *figured* in less Time than a single Yard could be done in the ordinary way. See RIBBON.

FILAMENT, in Medicine, Anatomy, Nat. History, &c. a Term used in the same Sense with *Fibre*; for those fine Threads, whereof the Flesh, Nerves, Skins, Plants, Roots, &c. are compos'd. See FIBRE.

FILANDERS, in Falconry, a Disease in Hawks, &c. consisting of Filaments, or Strings of Blood, coagulated and dried; occasioned by a violent Rupere of some Vein, by which the Blood extravasating, hardens into Points like Needles, to the great Annoyance of the Reins, Hips, &c.

FILANDERS are also a sort of fine, small Worms, that greatly incommode the Hawk in the Gorge and about the Heart, Liver and Lungs; and which, on some Occasions, are of Service, as they feed on the Superfluities of those Parts.

There are five kinds of these *Filanders*, or *Vermiculi*.

The first, in the Gorge, or Throat; the second, in the Belly; the third, in the Reins; the fourth, are called *Neddles*, on account of their exceeding Fineness. The Symptoms that discover the Disease, are, the Bird's gaping frequently; straining the *Fist* or Perch with her Pounces; croaking in the Night; rattling her Train; rubbing her Eyes, Wings, Nostrils, &c.

As the Worms are very restless, the Bird is frequently endeavouring to cast them up; and in opening his Mouth you will readily discover them. From the Throat, &c. they will ascend to the Larynx, Brain, &c. and over over the whole Body.

The ordinary Cause is bad Food. The Cure is, not by killing them, for fear of Impothumes from their Corruption; but chiefly by stupifying them, that they may be offensive but seldom.

This is best effected by making the Bird swallow a Clove of *Garlick*, after which she'll feel nothing of the *Filanders* for forty Days. Others use *Rue*, *Worm-powder*, *Aloes*, *Vervain*, *Saffron*, &c.

The Word is form'd of the *French Filanders*, of *Fil*, Thread.

FILAZER (from the *French Fil*, a Thread, *Line*, or *String*) is an Officer in the Court of Common Pleas, so called, because he *files* the Writs, whereon he makes out Process. Of these there are fourteen, in the several Divisions and Counties.

They make out all *Writs*, and *Process* upon original Writs, issuing out of the Chancery, as well real, as personal and mix'd, returnable in that Court. See *WRIT*, &c.

In Actions merely personal, where the Defendants are return'd *famou'd*, they make out *Pone's* or *Attachments*; which being return'd and executed, if the Defendant appears not, they make out a *Distingas*, and so *Ad infinitum*, or till he does appear. See *DISTRINGAS*, &c.

If he be return'd *Nihil*, then *Process* of *Capias* infinite, if the Plaintiff will; or after the third *Capias*, the Plaintiff may proceed to *Outlawry*, in the County where his Original is grounded, and have an *Exigent* with Proclamation.

The *Filazers* likewise make out all Writs of *View* in real Actions, where the *View* is prayed; and upon *Replevins* or *Recordare's*, Writs of *Retorno habendo*, second *Deliverance*, and *Writ* of *Withernam*. In real Actions, Writs of *Grand* and *Petit Cape* before Appearance.

They enter all *Appearances*, and *special Bails*, upon any *Process* made by them. They make the *fiit Scire Facias* upon *Special Bails*, Writs of *Habeas Corpus*, *Distringas* *nuper Vice-Comitem vel Ballivum*, and *Duces tecum*; and all *Superfideas* upon *Special Bail* or *Appearance*, &c. Writs of *Habeas Corpus cum Causa* upon the *Sheriff's* return, that the Defendant is detained with other Actions, Writs of *Adjournment* of a *Farm*, in case of *Pestilence*, *War*, or publick *Disturbance*. Till an Order of Court made 14 *Dec.* which limited the *Filazers* to all Matters and Proceedings before Appearance, and the *Prothonotaries* to all after, they also enter'd *Declarations*, *Imparances*, *Judgments*, and *Pleas*, wherezo a *Serjeant's* Hand was not requisite, and made out Writs of *Execution*, and divers other *Judicial Writs* after Appearance.

FILBERDS, the best sort of small *Nuts*, worth planting in *Orchards*, or *Gardens*. See *NUT*.

They are raised from *Nuts* fit in the *Earth*, or *Suckers* from the *Roots* of an old *Tree*; or may be grafted on the common *Hazle Nut*.

They delight in a *fine*, *mellow*, *light Ground*, but will grow almost any where, especially if defended from violent and cold *Winds*.

The *Tree* is easily propagated, bears well, and is of two sorts, the *White*, and the *Red*; but the former is the best.

FIL, an Instrument of *Steel*, cut in little *Hatches*, or *Furrows*; used by the *Workmen* in *Metals*, to *smooth*, *polish* and *fashion* the same.—*Files* bear a near Resemblance to *Rasps*: The only Difference between them, is, that the former are cut with *Edge Tools*; and the latter punch'd with pointed ones. See *RASP*.

The *File* is a principal Instrument in all the *Kinds* and *Parts* of *Smithery*.

It should be forged of the best *Steel*; after which rubbing it with *Grease*, to make it more soft under the *Chisel*, they cut it with *Chisells* and a *Mallet*, this and that way, and this or that *Depth*, according to the *Grain* or *Tooth* required. After cutting the *File*, it remains to be *temper'd*; which being the principal *Mystery* in the making of *Files*, will deserve to be particularly described.

Files, then, are temper'd with a Composition of *Chimney Soot*, very dry, and hard, diluted and work'd up with *Urine* and *Vinegar*; to which is added common *Salt*: The whole being to be reduced to the Consistence of *Mustard*.

Now, the *Files* being cut, and rabb'd over with *Vinegar* and *Salt*, to scour off the *Grease* laid on it for the cutting, they cover them over with this Composition; and having

laid several of them together in a *Packet*, and cover'd them in *Loam*, they put them in a *Charcoal Fire*: Out of which they are taken out again, by that Time they have acquired a *Cherry Colour*, which is known by a little *Rod* of the same *Steel*, put in along with them. Upon taking them out, they cast them into the coldest *Spring Water* they can get.

Iron Files require a more intense Heat, than *Steel ones*. When the *Files* are cold, they clean them with *Charcoal*, a *Rag*, &c. to take away any of the *Soot* or *Feces* left in the *Cuttings*: Then drying them before the *Fire*, they put them up carefully in a *Box* of *Wheat Bran*, to keep them from rusting.

Files are of different *Forms*, according to the different Occasions: Those in common use are the *Square*, *Flat*, *Triangular*, *Half-round*, *Round*, *Thin File*, &c. all which are made of different *Sizes*, as well as different *Cuts*, and *Degrees* of *Fineness*, to take place, according as the *Work* is more or less advanced: Some cutting faster, as the *rough tooth'd File*, &c. others more slowly, as the *fine tooth'd File*, &c. See *FILING*.

FILE, is also a *Thread* or *Wire*, whereon *Writs*, or other Exhibits in *Courts*, or *Offices* are fasten'd, properly call'd *Filed*, for the more safe keeping them.

FILE, or *Label*, in *Heraldry*, a bearing of this *Form*; tho' sometimes of more, and sometimes of fewer *Points*.

It is sometimes born as a *Charge* in a *Coat of Armour*, of which *Gullim* gives many Instances: But it is usually the *Difference* or *Mark of Distinction*, which the elder Brother bears in his *Coat*, during his *Father's* Life. See *DIFFERENCE*.

Some distinguish *File*, and *Label*, calling the *File* the upper horizontal *Line*, and the *Label* the *Point*, that issues from it. See *LABEL*.

FILE of three or more *Labels*, see *LABEL*.
FILE in a *Military Sense*, is a *Row* of *Men* standing one behind, or below another from *Front* to *Rear*.

Or **FILE**, in *War*, is a *Line* or *Series* of *Soldiers*, placed one before another; and thus composing the *Depth* of a *Battalion*, which in the *Infantry* ordinarily consists of six *Soldiers* in a *File*; and in the *Cavalry*, of three.

They say, *Close the Files*, that is, bring the *Men* nearer each other: *Double the File*, i. e. Double the *Depth* of the *Battalion*; and diminish its *Breadth*, or *Front* by one half. The last or hindmost *Person* is said to bring up the *File*.

The Word is *French*, *File* literally signifying a *long Series* or *Succession* of any kind of *Things*, of *File*, *Thread*.

FILIAL, something belonging to the *Relation* of *Son*. See *SON*.

The *Divines* usually distinguish between a *Servile*, and a *Filial Fear*. The most abandon'd may have a *servile Fear* of *God*, such as that of a *Slave* to his *Master*; but not a *Filial Fear*, i. e. a *Fear* resulting from *Love* and *Respect*.

FILLIGRANE, or, as some call it, **FILLIGRAM**, or **FILLIGREAM**, a kind of *Enrichment* on *Gold*, or *Silver*, wrought delicately in *manner* of little *Threads*, or *Grains*, or both, intermix'd.

In *Latin* it is call'd *Filatim elaboratum opus, argentum, aurum*. This *Cabinet* is furnish'd with divers fine Pieces of *Filligream* *Work*. *Vases*, *Turkes*, &c. of *Filligream* *Work*.

The Word is a *Compound* of *Fil*, or *Filum*, *Thread*, and *Gramm*, *Grain*.

FILING, one of the principal Operations in *Smithery*, &c. succeeding to *Forging*. See *FILE*.

The coarser *Cut Files* are always to be succeeded by *finer*; and in all the *Kinds* the *Rule* is, to lean heavy on the *File* in thrusting it forward, because the *Teeth* of the *File* are made to cut forwards: But in drawing the *File* back again for a second *Stroke*, it is to be lightly lifted just above the *Work*, by reason it cuts not coming back.

The *rough*, or *coarse-tooth'd File* (which, when large, is call'd a *Rubber*) serves to take off the *Unevenness* of the *Work*, left by the *Hammer*, in *Forging*. See *FORGING*.

The *bastard-tooth'd File* is to take out the too deep *Cuts*, and *File Strokes* made by the *rough File*. The *fine-tooth'd File* takes out the *Cuts*, or *File Strokes* the *bastard File* made. And the *smooth File* tho' left by the *fine File*.

In this *Order* the *Files* of several *Cuts* are to succeed each other, till the *Work* is as *smooth* as it can be filed. After which it may be made yet *smoother* with *Emery*, *Tripoli*, &c. See *POLISHING*.

FILLIUS ante Patrem, q. d. The *Son* before the *Father*, a *Phrase* applied by *Botanists* and *Florists*, to *Plants*, whose *Flowers* come out before their *Leaves*.

FILLET, in *Anatomy*, is the *Extremity* of the membranous *Ligament* under the *Tongue*, more usually call'd the *Frenum*, or *Bridle*. See *FRENUM*.

FILLET, in *Botany*, is understood of those *Threads* usually found in the middle of *Flowers*; as in the *Lily*, *Tulip*, *Rose*, &c. There

There are two Kinds: Those which support Apices, are particularly called *Stamina*; and those which have none, simply *Fillets*. See *STAMINA*.

FILLET, Taniola, in Heraldry, a kind of Orle, or Bordure, containing only a third or fourth Part of the Breadth of the common Bordure. See *BORDER*.

It is supposed to be withdrawn, inwards; and is of a different Colour from the Field. It runs quite round, near the Edge, as a Lace over a Cloak.

FILLET is also used for an Ordinary draw, like the Bar, from the finiter Point of the Chief across the Shield; in manner of a Scarf: tho' it is sometimes also seen in the Situation of a Band, Fels, Crofs, &c.

According to *Guillem*, the *Fillet* is a fourth Part of the Chief; and placed in the chief Point of the Escutcheon. See *CHIEF*.

FILLET, or **FILLY**, in Architecture, a little square Member, or Ornament, used in divers Places, and on divers Occasions; but generally as a sort of Corona, over a greater Moulding.

The *Fillet* is the same with what the *French* call *Reglet*; the *Italians*, *Lista*, or *Listello*; and others, *Baud*, or *Bandelette*. See *REGLET*, *LISTA*, &c.

The Word is *French*, *Fillet*, of Fil, Thread.

FILLET is also used among Painters, Gilders, &c. for a little Rule, or Reglet of Leaf Gold, drawn over certain Mouldings; or on the Edges of Frames, Pannels, &c. especially when painted white; by way of Enrichment.

FILLETS, in the Manage, are the Loins of an Horse; which begin at the Place, where the hinder part of the Saddle sits.

FILM, a thin Skin, or Pellicle, dividing several Parts of the Flesh.

In Plants, it is that thin woody Skin, which separates the Seeds in the Pods, and keeps them apart.

FILTRATION, the Act of passing a thing thro' a *Filter*; called also *Percolation*, and *Transcolation*. See *PERCOLATION*.

Filtration is a kind of Diffillation; perform'd by straining a Liquor thro' a Cloth, Bag, Linnen, or brown Paper, in order to clarify or purify it. The most commodious way of *filtrating* is by brown Paper, fasten'd over the Mouth or Aperture of a Funnel. See *FILTRE*.

The Secretion of the divers Juices in the Body, from the Mass of Blood, seem to be little else but *Filtration*. See *SECRETION*.

Pitcairn, and other late Authors, hold that the Differences of *Filtrations* don't depend on the different Configurations of Pores; but on their different Sizes or Diameters. And Springs seem to be rais'd from the Ocean by the same Principle. See *SPRING*, *ASCENT of Water*, *CAPILLARY Tubes*, &c.

There are also *Filtrations* thro' Sand, pulverized Glass, &c. Spirits of Vitriol, Salt, and Nitre, are *filtrated* thro' a Quantity of beaten Glass, in the Bottom of a Funnel.

Filtration is chiefly concern'd in Tinctures; as when some Portion is drawn from the Ingredients, or suspended in the Tincture, which is not necessary thereunto; but disturbs and renders the rest unpleasant, both to the Palate, and Sight.

The *Filtration* most in use, is the straining a Liquor thro' Paper, which by the Smallness of the Pores admits only the finer Parts through, and keeps the rest behind.

Beside this, there is a *Filtration*, which hath much terour'd the Philosophy of some Ages to account for, viz. that perform'd by the Ascent of the finer Parts of a Liquor, up a Cord, or Skain of Cotton, or such like Matter, which is contriv'd to drop over another Vessel, and leave the grosser behind.

Some say, that the Cause of this Ascent is, because the Liquor swells those Parts of the *Filtre*, that touch it by entering into the Pores of the Threads, which compose it; whereby they rise up, touch, and wet those next above them; and these again the next Threads; and so on, to the Brims of the Vessel; when, the Liquor runs over, and descends in the other Part of the *Filtre*, which hangs down, by its own natural Gravity.

But this Account is liable to many Objections; especially as Liquors rise, after the like manner in Glass Tubes, much above the Surface of the Liquor they are immerged in; where the Glass cannot be imagin'd thus to swell.

Others account for it, by considering every *Filtre*, as composed of a great Number of long, small, solid Bodies, which lie very close together; so that the Air getting in between them, loses much of its Pressure, and cannot gravitate so strongly, as it doth on the Fluid without them: The Consequence is, that the Parts of the Water between the Threads of the *Filtre* must be press'd upwards, and ascend till they come so high, as by their Weight to counter-balance the general Pressure on the other Parts of the Surface of the Water.

Lastly, the Retainers to Sir *I. Newton's* Philosophy deduce the Phenomenon from the Principle of Attraction. See *ATTRACTION*.

The Principle of this *Filtration* is doubtless the same with that whereby Fluids ascend up Heaps or Lumps of Ashes, Sand, &c. The same with that, whereby Water is rais'd in form of Vapour: The Sap rises in Vegetables; and the Blood circulates through the capillary Arteries, and the extremely minute glandular Strainers. See *ASCENT of Liquors*.

FILTRE, FILTER, or PHILTRE, in Chymistry, &c. A piece of Cloth, Linnen, Paper, or other Matter, used to *filtrate* or strain Liquors through. See *FILTRATION*.

The *Filtre* has the same Use and Effect, with regard to Liquids, that the Sieve or Scarce has in dry Matters.

Filtres are of two sorts: The first, simple pieces of Paper, or Cloth; through which the Liquor is pass'd without further Ceremony.

The second are twisted up like a Skain or Wick, and first wet, then squeeze'd, and one End put in the Vessel that contains the Liquor to be filtrated. The other End is to be our, and hang down below the Surface of the Liquor. By means hereof, the purest Part of the Liquor distills Drop by Drop out of the Vessel; leaving the coarser Part behind. This *Filtre* acts as a Syphon. See *SYPHON*.

FILTRE is also a Charm, supposed to have a Virtue of inspiring Love. See *CHARM*.

The Word is derived from the *Greek* *φιλος*, which signifies the same Thing, of *φιλο*, and, I love.

FIMMASHING, in Heraldry. See *FUMETS*.

FIMBRIA, the Extremities or Border of the Tube Fallopianæ were formerly thus call'd; the Word signifying a fringed Border, which that Part resembles. See *FALLOPIAN Tube*.

FIMBRIATED, a Term in Heraldry, signifying that an Ordinary is edged round with another of a different Colour.

Thus, He beareth Or, a Crofs, Pated Gules *fimbriated* Sable.

FIN, that Part of a Fish, made in Fashion of a Feather. See *FISU*.

The Office of the *Fins* has commonly been supposed to be analogous to that of Feathers in Fowls; and to assist the Fish in its progressive Motion, or Swimming: But the later Naturalists find this a Mistake.

'Tis the Tail is the great Instrument of Swimming: The *Fins* only serve to keep the Fish upright, and prevent Vacillation, or Wavering. See *SWIMMING*, *TAIL*, &c.

Whale Fins are commonly taken for that Part of the Whale, which the Populace call Whale-bone; but whence the Mistake should arise, is not easy to determine.

'Tis certain, that fibrous, flexible Matter is not the *Fins* of that Fish, but rather its Teeth; that Species of Whales wherein they are found having no other Teeth. They are taken out of the Throat, and are usually about a Span broad, and 14 or 15 long. See *WHALE BONE*.

The *Whale Fin* are the most valuable Part of the Animal. See *WHALE FISHERY*.

FINAL, that which terminates, or comes last in any Thing: *Final Judgment*; *Final Sentence*, &c.

Divines call the Impenitence of the Reprobrate *Final*, as supposing it to continue to the End of his Life.

FINAL CAUSE, is the end for which any thing is done, The *final Cause* is the first thing in the Intention of a Person who does a thing; and the last, in the Execution. See *FINAL CAUSE*.

Final Causes are of good use in Ethics; but mischievous in Physicks, and by no means to be allowed; yet Mr. *Boyle* propoies some Views and Regulations, under which they may be admitted, in an *Express Inquiry into the Final Causes of Natural Things*.

FINAL LETTERS are those which close the Words. The Figure call'd Apocope, consists in retrenching *final Letters*.

The *Hebrews* have five *final Letters*; which, when at the End of a Word, have a different Figure from what they have at the Beginning, or in the Middle thereof. These are the *ך*, *ם*, *ן*, *ס*, *פ*, *צ*, *ק*, *מ*, *נ*, *ל*, *פ*, *ת*, *ש*, which every where but at the Ends of Words are wrote *כ*, *מ*, *ן*, *ס*, *פ*, *צ*, *ק*, *מ*, *נ*, *ל*, *פ*, *ת*, *ש*.

FINANCE, a Term used by the *French*, for the Revenues of the King, or State. Thus, The Council of the *Finances*, corresponds to our Commissioners of the Treasury: The Comptroller General of the *Finances*, to our Lord High Treasurer, &c. See *REVENUE*, *TREASURY*, &c.

The Word is derived from the *German* *Finantz*, Usury. Tho' *du Cange* chuses rather to deduce it from the barbarous *Latin* *Financia*, *prestatio pecuniarum*.

FINANCES, in the *French* Customs, denote the publick Treasury of the King and Government: Much the same with the Treasury, or Exchequer of the *English*, and the *Fiscus* of the *Romans*. See *TREASURY*, *EXCHEQUER*, &c.

The Word is sometimes also used for the Stock or Cash of a Banker, &c.

The *French* have a peculiar kind of Figures, or numerical Characters, which they call *Chiffre de Finances*. See *CHARACTER*.

FINE, that which is pure, and without Mixture. The Term is particularly used in speaking of Gold and Silver.

Fine Gold should be 24 Carats; but there is but little, if any, that rises to such a Degree of Fineness.

Gold thus fine, is soft, and difficult to work; for which reason they always mix a certain Quantity of Alloy with it. See GOLD, ALLOY, and CARACT.

Fine Silver is that of twelve-penny Weights. See SILVER; see also REFINING.

FINE, in Law, hath divers Uses or Significations.

The first and most noble is, a Covenant made before Judges, and enter'd of Record for Conveyance of Lands, Tenements, or any thing inheritable, being in esse tempore Finit, to cut off all Controversies. See COVENANT.

A Fine, then, appears to be a Concord, acknowledged and recorded before a competent Judge, touching some Hereditament or Thing immovable, that was in Controversy between the Parties to the same Concord; and for the better Credit of the Transaction, it is supposed to be made in the Presence of the King, because levied in his Court.

Hence it binds Women Covert, being Parties, and others whom ordinarily the Law disables to transfer, only for this Reason, That all Presumption of Deceit or evil Meaning is excluded, where the King and his Court of Justice are supposed to be privy to the Act.

Originally this Final Concord was instituted and allowed, in regard that by the Law and ancient Course of Proceedings, no Plaintiff could agree or end the Cause without Licence of the Court: So as Fines have been anciently levied in personal Actions; and for no greater a Sum of Money than 11 l.

But Time has produced other Uses of Fine, viz. To cut off Entails; and with more Certainty to pass the Interest or Title of any Land or Tenement, though not controverted, to whom we think good either for Years, or in Fee: Inasmuch as the passing a Fine in most Cases now is but *Provisio Juris*, supposing an Action or Controversy, where in Truth none is; and so not only operating a present Bar and Conclusion against the Parties to the Fine, and their Heirs; but at five Years End against all others, not expressly excepted, and not claiming (if it be levied upon good Consideration, and without Covin) as Woman Covert; Persons under twenty one Years; Prisoners, or such as are out of the Realm at the Time of its acknowledging.

This Fine hath in it five essential Parts: 1^o. The original Writ taken out against the Cognizor. 2^o. The King's Licence, giving the Parties Liberty to accord; for which he hath a Fine, called the King's Silver; being accounted part of the Crown Revenue. 3^o. The Concord it self, which begins thus, *Et est Concordia talis*, &c. 4^o. The Note of the Fine beginning thus, *K. inter R. querentem, & S. & T. uxorem ejus deservientes*, &c. (where instead of Deservientes, anciently Impedientes was used) 5^o. The Foot of the Fine (*Hec est finalis concordia facta in Curia Domini Regis apud West. a die Pasche in quindecim dies Anno*, &c.) concludes all, containing the Day, Year, and Place, and before what Justice the Concord was made.

This Fine is either Single, or Double.

A Single Fine is that, by which nothing is granted or render'd back again by the Cognizees to the Cognizors, or any of them.

A Double Fine contains a grant and Render-back, either of some Rent, Common, or other thing out of the Land, or of the Land it self, to all or some of the Cognizors for some Estate, limiting thereby Remainders to Strangers, not named in the Writ of Covenant.

Sometimes a Double Fine is, when the Lands do lie in several Counties.

Again, a Fine is with regard to its Effect divided into a Fine executed, and a Fine executory.

A Fine executed is such, as of its own Force, gives a present Possession (at least in Law) to a Cognizee, so that he needs no Writ of *Habere facias seisinam*, for Execution of the same, but may enter; of which sort is a Fine, *Sur Cognizance de droit come ceo que il ad de son done*, that is, Upon Acknowledgment that the Thing mentioned in the Concord, is *Jus ipsius cognizati, us illa que idem habet de dono Cognizoris*. Weist. Sect. 51. K.

The Reason is, because this Fine passeth by way of Release of that Thing which the Cognizee hath already (at least by Supposition) by Virtue of a former Gift of the Cognizor; which is in truth the surest Fine of all.

Fines executory are such, as of their own Force do not execute the Possession in the Cognizees; as Fines *sur Cognizance de droit tantum*; Fines *sur done*, Grant, Release, Confirmation, or Render.

For if such Fines are not levied; or such Render made to those who are in Possession at the time of the Fines levied, the Cognizees must needs sue out Writs of *Habere facias seisinam*, according to their several Cases, for obtaining their Possession; except, at the levying such executory Fines, the Parties to whom the Estate is limited, be in Possession of the Lands passed thereby: For in this Case such Fines do ensure by way of Extinguishment of Right, not at

tering the Estate or Possession of the Cognizee, but perhaps bettering it. Weist. Symb. Sect. 20.

As to the Form of these Fines, it is to be consider'd, upon what Writ or Action the Concord is to be made; which is commonly on a Writ of Covenant. In this Case there must first pass a pair of Indenture between the Cognizor, and Cognizee; whereby the Cognizor covenants with the Cognizee, to pass a Fine to him of such and such Things by a Day limited. As these Indentures are first in this Proceeding, so are they said to lead the Fine. See INDENTURE.

Upon this Covenant, the Writ of Covenant is brought by the Cognizee against the Cognizor, who thereupon yields to pass the Fine before the Judge; and so the Acknowledgment being recorded, the Cognizor and his Heirs are presently excluded, and all Strangers (not excepted) after five Years pass'd.

If the Writ whereon the Fine is grounded, be not a Writ of Covenant, but of *Warrantia Charta*, or a Writ of Right, or Mesn, or of Customs and Services (for of all these Fines may also be found) then this Form is observed: The Writ is served upon the Party that is to acknowledge the Fine; and then he appearing, doth accordingly. See DYER.

Fines are now only levied in the Court of Common Pleas at Westminster, in regard of the Solemnity thereof, ordain'd by the Statute of 18 Edw. 1. Before which Time they were sometimes levied in the County-Courts, Court-Barons, and in the Exchequer; as may be seen in *Origines Juridiciales*, &c.

Plowden says, There were Fines levied before the Conquest: *Palbeck* says, He has seen the Exemplification of one of Henry the First's time: *Dugdale* affirms, That there were none till Henry the Second. See IMPRIMENS.

FINE also signifies a Sum of Money, paid as an Income for Lands or Tenements let by Lease; anciently called *Gerfama*.

Sometimes it also denotes an Amends, pecuniary Punishment or Recompence, upon an Offence committed against the King and his Laws; or against a Lord of a Manor.

In which Case a Man is said, *Ficere Finem de Transgressione cum Rege*, &c.

In all the Diversities of Uses of Fine, it hath but one Signification; and that is, a Final Conclusion, or End of Differences between Parties.

And in this last Sense, wherein it is used for the ending and Remission of an Offence, it is used by *Bracton*, who speaks of a Common Fine, that the County pays to the King for false Judgments or other Trespasses, which is to be satisfied by the Justices in Eyre before their Departure, by the Oath of Knights, and other good Men, upon such as ought to pay it.

There is also a Common Fine in Leets.

FINES for Alienation, are reasonable Fines paid to the King by his Tenants in Chief, for Licence to alien their Lands according to the Statute, 1 Edw. 3. cap. 12. See ALIENATION.

FINE-DRAWING, or RENTERING, a dexterous sowing up, or rejoining the Parts of any Cloth, Stuff, or the like; torn or rent in the dressing, wearing, &c. 'Tis prohibited to fine-draw Pieces of foreign Manufacture, upon those of our own; as has formerly been practis'd. See RENTERING.

FINERS of Gold and Silver, are those that purify, and put those Metals from other coarser, by Fire and Water.

They are also called *Parters* in our old Law-Books, and sometimes *Departers*.

FINESSE, a French Term, of late current in English. Literally, and as it is used among the French, it is of no further import than our English *Finesse*.

But among us, 'tis chiefly used to denote that peculiar kind of Fineness, Delicacy, or Subtlety perceived in Works of the Mind; and the nicest and most secret and sublime Parts of any Science, or Art.

A Person of Taste can never be fond of a Pun, where all the Finesse lies in an Equivoke, or an Ambiguity. This Man understands all the Finesse of his Art. The Substance and necessary Part of a Language is learnt by a little Expence: 'Tis the Finesse and Delicacies that cost the most.

FINGERS, *Digiti*, the extreme Part of the Hand, divided into five Members. See HAND.

The Fingers consist of fifteen Bones, disposed in three Rows, or Ranks; each Finger having three Bones.

The Joints or Jointures are called *Condyli*, and *Inter-nodi*; and their Arrangement or Rows, *Phalanges*: The uppermost of which is the longest and largest; the second less, but yet longer and larger than the third. See PHALANX.

The first Finger is called the *Pollex*, or Thumb: The second, *Index*, sometimes *salutaris Digtus*, and sometimes *numerosus*: The third, the Middle Finger, *Infamis*, *Obscenus*, *Impudicus*, and *Fameosus* because used in mocking and Derision: The fourth, *Anularis*, the Ring Finger, *medius proximus*, and *Medicus*; by reason the Ancients used

to *fir* and mix their Medicines therewith: The fifth, the little *Finger, Auricularis*; by reason the Ear is pick'd therewith.

FINGERS Breadth, a Measure, of two Barley Corns in Length, and four laid Side to Side. See MEASURE.

FINING, see REFINING, CLARIFYING, &c.

FINISHING, in Architecture, &c. is frequently applied to a Crowning, Acroter, &c. rais'd over a piece of Building, to terminate, and *finish*, or complete it. See CROWNING.

FINITE, something bounded, or limited; in Contradiction to Infinite. See INFINITE.

The School-men make two kinds of *Finities*: The one as to *Extension*; which is applied to Things that have not all possible, or conceivable Extension.

The other as to *Perfection*, applied to Things, which have not the last Perfection.

To get an Idea, *e. gr.* of a Thing *finite* in Point of Perfection, we first conceive the thing as having certain Perfections; and then conceive some other Perfection, which it has not, or some Perfection in a further Degree.

Thus, when I say that Three is a finite Number, I first conceive a Number, consisting of three Unites; then conceive other Unites beyond these three. Thus it is I conceive my Mind *finite*, by observing certain Perfections beyond what I find in my Mind.

After the same manner I conceive this Study to be *finite*, by having an Idea of Extension beyond what is contained therein. See EXTENSION.

FINITOR, in Astronomy, the *Horizon*; thus called, by reason it *finishes* or bounds the Sight or Prospect. See HORIZON.

FIOL, see PHIOLO.

FIRE, in Physiology. The most universal and sensible Character of *Fire*; and that which best defines and distinguishes it from every other thing, is its *Heating*.

Fire, therefore, may be defined to be whatever warms, or heats Bodies. See HEAT.

Again, as Heat is something, whose Presence we best perceive by the Dilatation of the Air or Spirit in the Thermometer: *Fire* may be defined to be that whose Presence we perceive by the Expansion of the Air, or Spirit in the Thermometer. See RAREFACTION.

Whence it follows, that *Fire* is a Body, and a Body in Motion.

Its *Motion* is argued from its expanding the Air; which is not effected without communicating Motion thereto: And its *Corporeity* is proved by Experiment.

For pure Mercury being inclosed in a Phial with a long Neck, and kept in a gentle Heat for the space of a Year, is reduced into a Solid; and its Weight considerably increased; which Increase can arise from nothing but the Accretion of *Fire*. See MERCURY.

'Tis a Dispute of some Standing among Philosophers, Whether *Fire* be any specifick Substance, originally distinct from all other; or whether it be the Matter of other Bodies, only under certain peculiar Modifications, *i. e.* Whether *Fire* be such by its own Nature, or by Motion.

Fire, makes one of the vulgar, or Peripatetick Elements, defined to be hot, and dry; or, it is that Part, or Ingredient in all Bodies, which is hot in the highest Degree, and dry in an inferior one. See ELEMENT.

What the School-Philosophers add further, as to the Nature of *Fire*, is, that it is a *Simple* Body; as not including any Contrariety of Qualities; and a Body absolutely *light*, as tending naturally upwards: For which reason they hold its natural Place above all the other Elements, between the Extremity of our Atmosphere, and the Moon; and the Source of *Fire* supposed to reside in that Sphere, they call *Elementary Fire*. See ELEMENTARY.

Fire, according to the *Cartesians*, is an Assemblage of the more solid, earthy Particles; which swimming in the rapidly fluid Matter of the first Element, become vehemently agitated thereby; and by this intense Agitation or Motion are disposed to give the Sensation of Heat, Light, &c. See CARTESIANISM.

Fire, according to Sir *J. Newton*, is a Body heated so hot, as to emit light copiously.

For what else, says that Philosopher, is red-hot Iron, but *Fire*? And what else is a *fiery* Coal, than red hot Wood? By which he suggests, that Bodies which are not *Fire*, may be changed and converted into *Fire*. See FLAME.

Fire, according to some of the latest Philosophers, is a certain Substance, or Body *sui generis*, originally such; and not producible by any Motion or Alteration of other Bodies.

These Authors lay it down as a very subtle, moveable, penetrating Body; and the Cause or Instrument of Heat and Light. Some of them add, that when *Fire* enters the Eye in right Lines, it produces or excites the Idea of *Light*; which rectilinear Motion they account absolutely necessary to the Idea of Light. See LIGHT.

Whereas, to produce Heat, and the other Effects of *Fire*, such Motion is not required; but on the Contrary, an irregular, various Motion is fitter to produce the same. See HEAT.

The Nature of *Fire* is so wonderful, and abstruse, that the Ancients generally revered it as a God: Among the Moderns, we can scarce name one one Point in all Philology of more Importance, or less understood.

Fire, in Effect, is the universal Instrument of all the Motion, and Action in the Universe: Without *Fire*, all Bodies would become immovable; as in a severe Winter we actually see our Fluids become solid, for want thereof. Without *Fire*, a Man would harden into a Statue; and the very Air cohere into a firm, rigid Mass.

Fire, then, is the universal Cause of all Mutation, or Change; for all Mutation is by Motion; and all Motion by *Fire*.

Several Authors have labour'd to set this grand Agent in its just Light; and particularly the excellent *Boerhaave*, in a new Course of Experiments, and Lectures expressly on the Subject, *De Igne*. That Author has indeed done Wonders: The Sum of his Doctrine we shall here sub-join.

Fire, then, is distinguish'd into two Kinds; as it is in it self, called *Elementary*; or as it is join'd with other Bodies, called *Culinary*.

Pure, or *Elemental Fire*, is such as it exists in it self; which alone we properly call *Fire*.

Common, or *Culinary Fire* is that existing in ignited Bodies; or excited, by the former, in combustible Matters, the minute Particles whereof joining with those of the pure *Fire*, constitute pure Flame.

This latter is improperly called *Fire*; in regard only a small Part of it is real, or pure *Fire*.

Pure *Fire*, such as collected in a Burning Glass, yields no Flame, Smoak, Ashes, or the like: Consequently, in ignited Bodies, that which flames, smoaks, &c. is not simply *Fire*.

The Effects, Nature, Properties, &c. of each shall be consider'd.

1. *Pure*, or *Elemental Fire* of it self, is imperceptible; and only discovers it self by certain Effects, which it produces in Bodies; which Effects are only learnt, by observing the Changes that arise in these Bodies.

The First Effect of *Elemental Fire* on Bodies, is *Heat*; which arises wholly from *Fire*; and in such manner as that the Measure of Heat is always the Measure of *Fire*; and that of *Fire*, of Heat. So the Heat is inseparable from *Fire*. See HEAT.

The Second is, *Dilatation* in all solid Bodies; and *Rarefaction* in all Fluids.

That both these are inseparable from Heat, is evident from numerous Experiments. An iron Rod, or Bar being heated, increases in all its Dimensions; and the more so, as it is further and further heated: Upon exposing it to the Cold again, it contracts and returns successively through all the Degrees of its Dilatation, till it arrive at its first Bulk; being never two Minutes successively of the same Magnitude.

The like is observed in the heaviness of all Bodies, Gold; which, when fused, takes up more Space than before: So Mercury, the heaviness of all Fluids, we have known to attend in a narrow Tube over the *Fire*, to above 30 times its Height. See RAREFACTION, and DILATATION.

The Laws of this Expansion, are 1°. That the same Degree of *Fire* rarefies Fluids sooner, and in a greater Degree than it does Solids. Without this, the Thermometer would be of no use; since the Cavity of the Tube would then be dilated in the same Proportion, as the Fluid is rarefied. 2°. The lighter the Liquid, the more it is dilated by *Fire*. Thus Air, the lightest of all Fluids, expands the most; and after Air, Spirit of Wine. See THERMOMETER.

The Third Effect of *Fire* on Bodies, is *Motion*: For *Fire*, in warming and dilating Bodies, must of Necessity move their Parts.

In Effect, all the Motion in Nature arises from *Fire* alone; and taking this away, all Things become immovable: Upon the Absence of only a certain Degree of *Fire*, all Oils, Fats, Waters, Wines, Ales, Spirits of Wine, Vegetables, Animals, &c. become hard, rigid, and inert: And the less the Degree of *Fire*, the sooner, and more violently is this Induration made.

Hence, if there were the greatest Degree of Cold, and all *Fire* were absolutely taken away, all Nature would grow into one concrete Body, solid as Gold, and hard as Diamond. But upon the Application of *Fire*, it would recover its former Mobility.

Consequently, every Diminution of *Fire* is attended with a proportionable Diminution of Motion: And *vice versa*. See COLD.

This *Fire*, whose Effects we have been relating, needs no Air, or Pabulum to sustain or preserve it.

For, putting some Calx of Tin or Lead, in the exhausted Receiver of an Air Pump; and apply a Burning Glass, so as the Focus shall fall on the Calx; the Consequence will be a vehement Dilatation of the Calx, from the Centre towards the Circumference, whereby the Receiver will be broke into a thousand Pieces. And if a Quantity of any essential aromatick Oil be pour'd in Vacuo, upon Spirit of Nitre, there will immediately arise a huge Fire, to the great Danger of the By-standers.

All the above-mentioned Effects of Elemental Fire may be increas'd divers ways, viz.

1^o. By Attrition, or a swift Agitation, or rubbing of one Body against another. This is apparent in Solids: A vehement Attrition of a Flint and Steel, every body knows, will produce Sparks. So in Fluids, Cream, by long churning to separate the Butter, will grow sensibly warm; and a Barometer renders the Effect still more discernable. See ATTRITION.

In effect, all the Heat of an Animal is owing to the Agitation and Attrition of the Parts of its Juices against each other, and the Sides of the Vessel. See CALIDUM Innatum.

The more solid, hard, and elastic the Bodies thus agitated are; the more Points of Contact they have; the more intense the Force whereby they are struck against each other, is; the greater their Motion; the quicker the Returns of the Strokes; and the longer continued; the greater is the Heat produced.

Thus, a piece of Sponge rubb'd lightly, and for a little while against another, acquires no sensible Heat: But a large, heavy piece of Iron briskly rubb'd against another in a cold Season (when Bodies are the densest) will presently acquire an intense Heat, sufficient to fire Sulphur, Gunpowder, or the like.

So a Knife whetted briskly on a dry rough Stone, shall yield Sparks of Fire; but if Oil, or any other fatty Matter be interposed, no sensible Heat shall arise: And the Points of two Needles rubb'd against each other ever so strongly, or so long, will never grow warm; as only touching to a few Points.

Hence 1^o. The Globules of the Cruor, or red Blood drove by the Force of the Heart against each other, or against the Sides of the Arteries, excite more Heat than the Globules of the Serum, or any other Humor in the Animal. Hence 2^o. Those Parts abounding most in these Globules thus agitated, as the Heart, Liver, and Head, will be the hottest of all others: And the denser the Blood, *ceteris paribus*, the greater the Heat, &c. 3^o. The quicker the Contractions of the Heart are repeated, the greater will the Heat be.

The Second Manner of increasing the Effect of Elemental Fire, is by throwing a Quantity of moist or green Vegetables, cut down while full of Sap, into a large Heap, and pressing them close down: The Result of which, is, that they grow warm, hot, smok, and break out into Flame.

The Third way is, by the Mixture of certain cold Bodies. Thus, Water and Spirit of Wine, first warm'd, grow much hotter by the Mixture: So, any of the heavy aromatick Oils, as of Cloves, Cinnamon, Saffraes, Galicum, &c. mix'd with Spirit of Nitre, grow exceedingly hot, and burst forth like Vulcan's. And the same may be said of Spirit of Nitre, and Steel Filings.

The like Effect may be had from dry Bodies. Thus, pure Sulphur, and Steel Filings, well ground and mix'd in equal Quantities, with Water enough to make them into a dry Paste, and laid an Hour or two any where, even under Ground, will smok and erit Flame; and that with the greater Vehemence, as it is more strongly press'd down. See EARTHQUAKE.

The Fourth is by *Pheosphorus*, which is a kind of Magnet, prepar'd from the Parts of Animals, that imbibes and retains Fire for many Ages. See PHOSPHORUS.

But, in all these manners, it does not appear, that any Fire is excited, or generated of what was not Fire before: For, if in a severe Winter's Day you rub a Plate of Gold briskly against another, they will both grow hotter and hotter by Degrees, till at length they become red hot, and at the point of melting: And yet all this time the Plates lose nothing of their Weight; but swell or grow bigger in all their Dimensions.

Hence it follows, that the Particles of the Gold are not converted by the Friction, into Fire; but the Fire existed before; and all the Effect of the Friction, &c. is to collect, or bring together a Quantity thereof before dispersed throughout the Atmosphere.

In Effect, there is no making or producing of Fire *de novo*. All we can do, is, of insensible, to render it sensible, i. e. to collect it out of a greater Space into a lesser; and to direct and determine it to certain Places. This is effected, as above mention'd, by Motion, Attrition, &c.

The Sun also contributes very much to the bringing of Fire to light, by means of his rapid Motion round his Axis; whereby the fiery Particles, every where diffus'd, are di-

rected and determined in parallel Lines towards certain Places, where their Effect becomes apparent. See SUN.

Whence it is that we perceive the Fire when the Sun is above the Horizon; but that, when he disappears, his Impulse or Pressure being then taken away, the Fire continues dispersed at large thro' the ethereal Space.

In Effect, there is not less Fire in our Hemisphere in the Night time, than by day; only it wants the proper Determination to make it perceived.

Another way of rendering it sensible, is, by collecting the parallel Rays into a less Compass, by means of Convex Glasses, or Concave Specula. See LENS, BURNING GLASS, &c.

This Elemental Fire is present every where, in all Bodies, all Space, and at all Times; and that in equal Quantities: For, go where you will, to the Top of the highest Mountain, or descend into the lowest Cavern; whether the Sun shine, or not; in the coldest Winter, or the most scorching Summer; by one or other, or all of the means above mentioned may Fire be collected. In a Word, there is no assignable physical Point without Fire; no Place in Nature, where the Attrition of two Sticks will not render it sensible.

So long as Fire remains equally, and undetermin'd in any Place, it does not discover it self by any Effect. In the severest Weather we perceive no Influence or Effect of Fire, when, at the same time being collected and determined by Attrition, it becomes manifest.

By changing Fire out of its indeterminate State, and impelling it in converging Lines, its Moment is increased. Witness the Phenomena of Burning Glasses.

But, how Attrition, crude Vegetables, &c. contribute towards altering the Direction, &c. of Fire, does not appear.

Of this Fire, and the Effects thereof above mentioned, depends all Fluidity of Humours, Juices, &c. All Vegetation, Putrefaction, Fermentation, animal Heat, &c. See FLUIDITY, VEGETATION, PUTREFACTION, &c.

II. But in what manner soever, Fire is collected in Bodies; upon a Cessation of the collecting Cause, it soon disappears again, unless it be supplied with a *Pabulum*, or Fuel. In which case it becomes Culinary Fire.—

By *Pabulum*, or *Fuel* of Fire, we mean whatever receives, and retains Fire; and is consumed, or at least render'd insensible thereby. See FUEL.

The only *Pabulum* of Fire, in all Nature, is the Oil, Sulphur, or Fat of Bodies: And Bodies are only Fuel, on account of the Oil they contain.

Hence 1^o. All Vegetables, not too moist, nor too dry, afford such a Pabulum; particularly those, which contain the greatest Quantity of Oil; as Balsamick and Resinous Woods, &c. 2^o. All vegetable and animal Coals are a proper Pabulum for maintaining of Fire; as being only the Parts of Vegetables and Animals, which have exhaled their Water and Salt, and retain'd the Oil alone inhering, in a black Form, in their Earth. 3^o. All fossil and bituminous Earths, Turfs, &c. 4^o. All Mineral Sulphur, whether pure or join'd with Earth, Stone, or Metals; as Pit-Coal, &c. 5^o. The Fat and Dung of Animals; and 6^o. Several Productions of Chymistry; as Oils, inflammable Spirits, &c.

This Fire, which burns combustible Bodies, requires Air, to sustain it; which taken away, the Fire is immediately dissipat'd: As appears from the Experiments in Vacuo.

And yet, Fire does not immediately bear, or endure the Air; but always repels it: And by that means forms a kind of Vault, or aerial Furnace all round, which by its Weight, and the Pressure of the incumbent Air acts on all the Particles, or Corporcles that would make their Way through it; and thus retains the Fire, and applies it to the combustible Matter.

Hence, the heavier the Air, the more vehement the Fire: And accordingly, in still cold Weather we observe the Fire to act with more Violence than in warm Weather.

But whether the Air retains Fire by its Weight alone (which Water it self would do), may be questioned: And whether its Elasticity does not contribute something thereto; as also, whether there be not some further unknown Property in the Air, that has a Share, may be doubted. Something of this kind one would suspect from hence, that all Air is not proper to maintain Flame. See AIR.

This Fire, in burning a combustible Matter, affords a *burning Fire*, or a Flame, or both, according to the Diversity of Fuel; and frequently, Smoak, Soot and Aches.

Shining, or *luminous Fire*, seems to be elemental Fire, attracted towards the Parts of the Sulphur, or Oil, with such Force and Velocity, as to move, and shake them very violently, whirl them about, divide, and attenuate them, and thus render them volatile, and ready to be expelled: While, in the mean time, the Air, making its Vault all around, restrains and keeps them in, directs them to the Sulphur, and keeps them still collected in their Place or Pabulum, while the combustible Matter is dissolv'd all around.

Flame seems to be nothing but a thick Sulphur agitated, as before, by Elemental *Fire*; so as the *Fire* is driven with a great Motion around the revolving Particles of the Sulphur. See *FLAME*.

Soot, seems to be produced, when *Fire* and Sulphur cannot break into a *Flame*; being a sort of Coal, consisting of a thick Sulphur, and an attenuated Oil with Earth and Salt. See *SOOT*.

Smoak seems to be the combustible Matter, when it begins to be relinquish'd by the Elemental *Fire*: For, if this *Smoak* be afterwards rais'd thro' a *Flame*, it will it self become *Flame*, as before. See *SMOAK*.

Lastly, *Ashes* are the Earth, and Salt; which the *Fire* leaves unrou'd. See *ASHES*.

Fire may be distinguish'd into *Shining*, and *not Shining*: For, that there is *Fire* which does not emit Light, is evident hence, that a piece of Iron taken out of the *Fire*, before it be red hot, shall yet give *Fire* to Sulphur.

Shining Fire again may be subdivided into two Kinds: That which warms, as red hot Iron; and that which does not warm, as that observed in putrid Fishes, rotten Wood, &c. The Oil whereof beginning to be agitated, and attenuated, produces Light, without any Heat, so far as the Thermometer may be a Judge.

Of *Shining*, and at the same time *Warming Fires*, the principal is that of the *Sun*, as it is called; tho', whether the *Fire* be really emitted from the Body of the *Sun*; or whether it be only the common, vague, universal *Fire*, determin'd by the *Sun*, is not easy to say. This *Fire* we more usually consider under the Denomination of *Light*. See *SUN*, and *LIGHT*.

This *Solar Fire*, in calcining certain Bodies, makes some Addition to the Weight thereof.

Thus, Antimony expos'd in the Focus of a Burning Glass, will smook a considerable Time; and the greatest Part of it seem to evaporate in Fumes: But, if tried by the Balance, it will be found to have gain'd in Weight. And if it be again applied in the Focus of a larger Glass, it will again emit Fumes; and yet still be increased in Weight.

Before the *Solar*, there is likewise a *Subterraneous Fire*.

This appears in digging under Ground: For the first Glebe, next to the Surface, is warm'd by the Heat of the *Sun*; and as you go deeper, you will find it colder; whence in hot Countries they have Conservatories of Ice at some Depth under Ground: Till, arriving at a certain Depth, viz. forty or fifty Foot, it begins to grow warmer; so as no Ice can there subsist: And at a yet greater Depth, 'tis so hot, as to take away Respiration, extinguish Candles, &c. And if the Miner will venture further, and carry a Candle along with him, he frequently sets the whole Place in a *Flame*, the sulphurous Fumes render'd volatile by the subterraneous *Fire*, catching *Flame* from the Candle.

Whence it appears, that there is another Source of *Fire*, or another *Sun*, in the Bosom of the Earth, which gives Motion and Life to every thing growing in, or upon the Globe; and even, that the Centre of the Earth is more *Fire*: which *Fire* is likewise argued to be perpetual from Vulcan's or burning Mountains, which have been known to cast up *Fire*, from the earliest Account of Times. See *VULCANO*.

There are two great *Fires* therefore, the Higher, or *Solar*; and the lower, or *subterraneous*; in every other respect perfectly alike. See *SUBTERRANEAN*, *CENTRAL*, *SOLAR*, &c.

Fire, in Chymistry, is the great Instrument, by which most of the Operations of that Art are perform'd. See *CHYMISTRY*.

The Kind, Degree, Direction, &c. of *Fire* are Things the Chymist is principally to attend to. The Diversity of *Fire* makes a great Difference in the Result of the Experiment; so as, the same Effect, e.g. shall not arise, if an Experiment be made with the *Fire* of Spirit of Wine, and that of Pitcoal.

And to this Cause, Mr. Boyle, in his Treatise of the unexpected Failure of Experiments, attributes it, that a great many Experiments successfully tried by some, have not succeeded in others.

The *Fires* chiefly required by the Chymists, are such as yield no Fumes, or Remains; no Salt, or Smoak: And such are those of the *Sun*, and of Spirit of Wine. Those which come next in Purity, are Oils distilled per Vescum; which lose their Earth and Salt, by their Boiling and Agitation in the Water; so that the oftener the Distillation is repeated, the purer they are render'd: After these come Turf.

Indeed, the very Manner wherein the *Fire* is blown, is found to have some Effect: Thus, *Acosta*, lib. 4. c. 5. relates, that in *Peru*, when they would melt and separate their Silver from the Earth, &c. if the *Fire* be blown up with Belows, the Fusion will not succeed: Nor will any other *Fire* do but that blown by the Wind raised from the Fall of some Water; so that they are forc'd to have Recourse to large Tubes laid to the Feet of large Mountains, or Cataracts to

convey the Wind generated by the Fall of Water to their Works.

The Degree of *Fire*; or the Collocation and Direction of *Fire*, to the Degree proper for each Operation, is almost the Whole of Chymistry: For the *Fire*, e.g. requisite to melt Metals, is by no means proper for the Distilling of Spirit of Wine.

Now, the greater or less Force of *Fire* depends altogether on a greater or less Quantity thereof collected into a Focus: For, as to its Motion, it does not seem in our Power to alter it; or to make any Increase or Diminution of the Force of the *Fire* on that account.

The Chymists use four principal Degrees of *Fire* in their Operations.

The First is equal to the natural Heat of the human Body; or rather that of a Hen, hatching her Eggs; which is the Standard: And accordingly this first Degree is best measured by applying a Thermometer to a Hen; and some Chymists, by keeping a *Fire* continually to this Degree, by means of a Thermometer, have hatch'd Chickens.

By this Degree all their Digestions, easy Separations and Solutions, gentle Distillations, with all Fermentations and Putrifications are perform'd. See *DIGESTION*, *DISTILLATION*, &c.

The Second Degree of *Fire* is that which gives a Man Pain, but does not destroy, or consume the Parts: Like the Heat of a scorching Summers Sun, which chafes and inflames the Skin; and even sometimes raises Blisters.

It is used in making Separations of the more ponderous Bodies, which the first Degree is not equal to; as also in some Fixations, particularly that of Mercury, which is render'd fix'd by a gradual Introduction of such *Fire* among the Parts of the Mercury.

It makes the Serum of the Blood, and White of an Egg coalesce, and so occasions deadly Inflammations; and is too intense for any Digestion, Putrification, or Fermentation to be effected by it.

The Third Degree of *Fire* is that of boiling Water, which separates and destroys the Parts of Bodies. This Degree is perfectly stable; for Water, when once it boils, is at its utmost Degree of Heat, and cannot be rais'd a whit further, by any Augmentation of *Fire*, or Fuel; as was first observ'd by Monf. Amontons.

This Degree serves to attenuate, separate, fix, and perform other Operations, where the two former would not be effectual.

The Fourth Degree is that which melts Metals, and destroys every thing else.

This Degree is too vehement to be estimated by the Thermometer; that Instrument not being able to endure it; so that it is only determinable by its Effect in the Fusion of Metals: As the Heat of boiling Water cannot be increased, so neither can that of melted Metals.

This Degree is used in abundance of Operations, and particularly about Minerals, where the three preceding Degrees are insufficient. This is the last Degree known to the ancient Chymists.

The latest Chymists reckon a Fifth Degree of *Fire*, viz. that where by Gold is made to emit Fumes, and evaporate.

This was first discover'd in the Year 1690, by Mr. *Johann-Bausen*, whose Burning Glass render'd every thing, even Gold itself volatile. See *VOLATILITY*, *BURNING GLASS*, *GOLD*, &c.

Before these five Degrees, the Chymists have several intermediate ones; all which however may be easily reduc'd to the former.

As, the digesting *Fire*, or *Venter Equi*, which is the Heat of a Dunghil.

The *Balneum Mariae*, *Arenosum*, &c. explain'd under the Article *BALNEUM*.

The *Naked*, or *Immediate Fire*, which is the common *Fire* applied under a Vessel.

The *Fire of a Lamp*, which is moderate and equal, and may be increased by the Addition of more Wick; used by Enamellers, &c.

The *Wheel Fire*, which is lighted all round a Crucible, or other Vessel, to heat it all alike.

That called by *Suppression*, which is when the Vessel is not only encompass'd round, but cover'd over with *Fire*.

The *Reverberatory Fire*, when it is in a Furnace close a-top, by which the *Fire* is reflected back, and all around upon the Vessel. See *REVERBERATORY*.

The *Melting*, or *Fusing Fire*, for the Solution and Calcination of Metals and Minerals. See *FUSION*.

The *Glass-house Fire*, for the Vitrifying of the Ashes of Vegetables. See *GLASS*.

And the *Olympick Fire*, which is that of the Sun collected in the Focus of a burning Mirror, &c.

To the several Degrees of *Fire* required, several Forms of Furnaces are accommodated; which see under the Article *FURNACE*.

There are five principal ways of altering the Degrees of *Fire*.

For *Fire* differs 1^o. According to the *Weight of the Pabulum*, or Fuel; it being a Rule, that the heavier the Fuel or combustible Matter is, the more vehement, *ceteris paribus*, is the *Fire*. Thus, Spirit of Wine affords a weaker and less destructive *Fire* than Oil; and this, than Pitch, and so on; the heavier and grosser, still the fiercer.

2^o. According to the *Quantity of the Pabulum*.

3^o. According to the *Distance of the Fire* from the Object; it being a Rule, that the Heat of the *Fire* at different Distances is reciprocally, as the Squares of those Distances.

4^o. By the introducing or blowing of Air into the *Fire*; it being a Rule, that the stronger the Current of Air, or Wind, provided it be not so strong as to break the aerial Fornix or Vault incumbent on the *Fire*, the more is the *Fire* increased.

For a brisk Blowing puts the minute Parts of the Pabulum into a greater Motion, whence a greater Attrition arises, and of consequence, more *Fire* is collected.

5^o. According to the *Solidity, or Resistance of the Medium* between the *Fire* and the Object: For the more solid the Medium, the greater Quantity of Heat, *ceteris paribus*, does it receive from the *Fire*, and communicate to the Object.

Thus, a Vapour Bath communicates much less Heat to the Bodies distilled by it, than a Water Bath; and this, less than a Sand Bath; and this again less than a Bath of Steel Filings; for all Bodies exposed to the *Fire*, grow hot in Proportion to their specific Gravities.

Thus, if a piece of Metal be put in Water, and both set over the *Fire*; while the Water only grows lukewarm, the Metal shall be so hot, as to be pass touching: And thus, a Key in a Person's Pocket sitting near the *Fire*, shall frequently be very hot, while his Cloaths themselves have not any sensible Warmth.—Indeed, this Rule admits of some Exceptions; for we have Oils, lighter than Water, which yet admit of triple its Degree of Heat, before they boil.

'Tis a great Controversy in Chymistry, whether *Fire*, when applied to Bodies, only separates and dissolves them; or whether it does not also change them.

Mr. Boyle, in his *Sceptical Chymist*, we think, has abundantly proved, that *Fire* alters Bodies; and that the Parts or Elements procured from Bodies by *Fire*, did not exist such in the Bodies themselves. See ELEMENTS.

Add, that *Fire* does not only separate and decompound; but it also compounds and mixes Bodies. This no body can doubt of, who knows that *Fire* in acting on many Bodies, infusates and fixes it self among them, and so constitutes one Body together with them.

This is the Case in dissolving of Lead by *Fire*; as is evident from the Increase of the Weight of the Lead: The like is observable in Salt of Tartar, which when first melted, loses somewhat of its Weight; but as it is calcined further and further, grows still heavier and heavier. In like manner, Antimony calcined by a Burning Glass, receives a notable Accession of Weight.

'To say no more, Phosphorus must derive its shining Matter from the fiery Particles it imbibes in the Distillation: For no body will imagine that any of that shining Matter before existed in the human Body. See PHOSPHORUS.

Fire, in Medicine and Chirurgery, is used in the same Sense with Caustery; and is distinguish'd into *Actual*, and *Potential*.

Actual Fire is a hot Iron. There are several Diseases, only to be cured by the Application of *Actual Fire*; which Method of Cure is practiced with great Success in the *East Indes*. See BURNING.

Potential Fire is that contain'd in Caustick Medicines. See CAUSTICKS, and CAUSTERY.

Fire also gives the Denomination to divers Diseases, as *St. Anthony's Fire*, by Physicians more usually called *Erysipelas*. See ERYSIPELAS.

St. Anthony's Fire is also called *Holy Fire*, or *Sacer Ignis*; and in an ancient Instrument, belonging to the Hospital in the Church of *St. Anthony*, at *Marseilles*, it is called *Fire of Hell*, or *Ignis infernalis*.

This Distemper made great Ravages in *France*, in the XIth and XIIth Century; and it was for the Relief of Persons labouring under it, that the religious Order of *St. Anthony* was founded, in the Year 1093, under the Pontificate of *Urban II*.

Walking Fire, called also *Will-with-a-wisp*, *Jack in a Lantern*, *Ignis fatuus*, &c. See IGNIS FATUUS.

Fire, in Theology, is frequently understood of the Punishment of the Wicked after Death. See HELL, GEHENNA, PURGATORY, &c.

'Tis supposed the World will perish at last by *Fire*. See CONFLAGRATION.

God has made several Revelations of himself, under the Appearance of *Fire*: He appeared to *Moses* under the Form of a *Fire* burning in a Bush: The Holy Ghost descended on the Apostles in Tongues of *Fire*; and the Camp of the *Israelites* was guided and conducted in the Night-time by a Pillar of *Fire*.

The *Persians* ador'd *God* under the Image or Representation of *Fire*; by reason 'tis *Fire* gives Motion to every thing in Nature. They are said to have *Fires* still subsisting, which have burnt above a thousand Years.

The *Hebrews* kept up the *Holy Fire* in the Temple; and the *Veitals* were appointed express, to keep up the sacred *Fire of the Romans*. See VESTAL.

Vulcan was worshipp'd among the Antients, and particularly the *Egyptians*, as the Inventor of *Fire*: And *Beer-bove* has made it highly probable, that the *Vulcan* of the Heathens was the *Tabal Cain* of the *Hebrews*, the first who appears to have known the Use of *Fire*; and to have applied it in the Fusion of Metals, and other Preparations of Chymistry. See CHYMISTRY.

Fire-Stone, a kind of Stone, called also *Rigate Stone*, from the Place whence 'tis chiefly brought: 'tis very good, and much used for Chimneys, Hearths, Ovens, Stoves, &c. See STONE.

Fire Office, see OFFICE, of INSURANCE.

Fire Master, in our Train of Artillery, is an Officer that gives Directions and the Proportions of the Ingredients for all the Compositions of *Fire Works*, whether for Service in War, or for Rejoycings and Recreations.

The Orders are given to the *Fire Workers* and Bombarders, who are oblig'd to execute them.

Fire Workers, are laborinate Officers to the *Fire Master*, who command the Bombarders.

They receive the Orders from the *Fire Masters*, and see that the Bombarders execute them.

Fire-Enter. We have a great Number of Charletans, who have procured the Attention and Wonder of the Publick, by eating of *Fire*, walking on *Fire*, washing their Hands in melted Lead, &c.

The most celebrated is our Countryman *Richardson*, much talk'd of abroad. His Secret, as related in the *Journal des Savans*, of the Year 1680, consists in a pure Spirit of Sulphur, wherewith he rubs his Hands, and the Parts that are to touch the *Fire*; which burning and cauterizing the Epidermis, hardens and enables the Skin to resist the *Fire*.

Indeed, this is no new Thing: *Ambr. Pare* assures us he had tried on himself, that after washing the Hands in ones own Urine, or with Unguentum Aureum, one may safely wash them in melted Lead.

He adds, that by washing his Hands in the Juice of Onions, he could bear a red hot Shovel on them, while it continu'd Lard.

Fire Works, or *Artificial Fires* are Preparations made of Gunpowder, Sulphur, and other inflammable and combustible Ingredients, on occasion of publick Rejoycings, and other Solemnities.

The principal of these are *Rockets*, *Serpents*, *Stars*, *Hail*, *Mines*, *Bombs*, *Garlands*, *Letters*, and other Devices. See ROCKET, STAR, BOMB, &c.

The Art of preparing and managing *Fire Works*, is called *Pyrotechnia*. See PYROTECHNIA.

Wild Fire, is a kind of artificial or factitious *Fire*, which burns even under Water; and that with greater Violence than out of it.

It is composed of Sulphur, Naphtha, Pitch, Gum, and Bitumen; and is only extinguishable by Vinegar, mix'd with Sand and Urine; or with raw Hides.

Its Motion or Tendency is said to be contrary to that of natural *Fire*, and always follows the Direction in which it is thrown; whether it be downwards, sideways, or otherwise.

The *French* call it *Greek Fire*, or *Feu Grecois*, because first used by the *Greeks*, about the Year 660; as is observ'd by the Jesuit *Petauinus*, on the Authority of *Nicetas*, *Theophaues*, *Codreus*, &c.

The Inventor, according to the same Jesuit, was an Engineer of *Helopolis*, in *Syria*, named *Callinicus*, who first applied it in the Sea Fight commanded by *Constantine Pogonat*, against the *Saracens*, near *Caicus*, in the *Hellepontus*; and with such Effect, that he burnt the whole Fleet therewith, wherein were thirty thousand Men.

But others will have it of a much older Date; and hold *Marcus Gracchus* the Inventor; which Opinion is supported by several Passages, both in the *Greek* and *Roman* Writers, which shew it to have been antiently used by both those Nations in their Wars. See *Scaliger* against *Cardan*.

Constantine's Successors used it on divers Occasions, with equal Advantage, as himself; and what is remarkable enough, is, that they were so happy as to keep the Secret of the Composition to themselves; so that no other Nation knew it in the Year 960.

Hugh, King of *Burgundy*, demanding Ships of the Emperor *Leo*, for the Siege of *Demetie*, desired likewise the *Greek Fire*. *Chovier Hist. de Dauph.*

Fa. Daniel gives us a good Description of the *Greek Fire*, in his Account of the Siege of *Delmette*, under *St. Louis*.

Every body, says that Author, was astonish'd with the *Greek Fire* which the *Turks* then prepar'd; and the Secret where-

whereof is now lost. They threw it out of a kind of Mortar; and sometimes shot it with an odd sort of Cross Bow, which was strongly bent by means of a Handle, or Winch, of much greater Force than the bare Arm. That thrown with the Mortar, sometimes appear'd in the Air of the Size of a Tun, with a long Tail, and a Noise like that of Thunder. The French by Degrees got the Secret of extinguishing it; in which they succeeded several times.

FIRE, in the Military Language, is sometimes used for the *Fires* lighted in an Army in the Night time.

Thus, the Enemy's *Fires* were seen on the Top of the Mountains.

But, the Term *Fire* is more frequently used for the Discharge of the *Fire Arms*; or the Shot made on the Enemy from the Artillery, &c.

The Horse suffered extremely from the *Fire* of the Foot, which took them in Flank: The Trench was exposed to the *Fire* of the Place: In this Assault the Courtin was all in *Fire*.

In Fortification, the *Fire of the Place* is the Flank, or that Part of the Courtin where the Line of Defence terminates; from whence they *fire*, to defend the opposite Face of the Bastion.

The best way of fortifying is that which gives the most *Fire*. See FORTIFICATION.

FIRE ARMS are those charged with Gunpowder; Such as *Canon*, *Mortars*, and other *Ordnance*; *Musquets*, *Carabines*, *Pistols*, and even *Bombs*, *Granado's*, *Carcasses*, &c. See CANON, MORTAR, ORDNANCE, &c.

For the *Rebound or Resilition of Fire Arms*, see REBOUND: See also GUNPOWDER, BULLET, SHOT, &c.

In the History of the *Royal Academy* for the Year 1707, we have an Account of some Experiments made with *Fire Arms*, differently charged, by Mr. *Casini*.

That Author, among other Things observes, that by loading the Piece with a Ball which is somewhat less than Caliber; and only laying a little Gunpowder below the Ball, and a good deal above it, it will yield a vehement Noise, but have no sensible Effect or Impulse on the Ball.

This he takes to have been all the Secret of those People who pretended to sell the Art of rendering ones self invulnerable, or Shot proof.

FIREBOTE, i. e. Fuel for necessary Occasions, which by the Common Law any Man may take out of the Lands granted to him. See HAYBOTE, ESTOVERS, and LIGNAGIUM.

FIRKIN, an English Measure of Capacity, for Things liquid. See MEASURE.

The *Firkin of Ale* contains eight Gallons; and that of *Beer*, nine: Two *Firkins* of Beer make the *Kilderkin*; two *Kilderkins* the *Barrel*; and two *Barrels* the *Hogshead*: See KILDERKIN, GALLON, BARREL, and HOGSHEAD.

The *Firkins* of Soap and Butter are on the footing of the *Firkin of Ale*, viz. a Gallon per *Firkin* less than that of Ale.

FIRMAMENT, in the antient Astronomy, the eighth Heaven, or Sphere; being that wherein the fix'd Stars are supposed to be plac'd. See SPHERE.

'Tis call'd the *Eighth*, with respect to the seven Heavens or Spheres of the Planets, which it surrounds.

It is supposed to have two Motions: A Diurnal Motion, given it by the Primum Mobile, from East to West, about the Poles of the Ecliptick; and another opposite Motion from West to East; which last it finishes, according to *Tychonis*, in 25212 Years; according to *Ptolemy*, in 56000; and according to *Copernicus*, in 258000: In which Time the fix'd Stars return to the same precise Points wherein they were at the Beginning. This Period is commonly call'd *Plato's Year*, or the Great Year. See PRECESSION of the EQUINOX.

In divers Places of Scripture the Word *Firmament* is used for the middle Region of the Air. Many of the Antients allowed, with the Moderns, that the *Firmament* is a fluid Matter; tho' they, who gave it the Denomination of *Firmament*, must have taken it for a solid One.

FIRMAN, in the *East Indies*, and particularly in the Territories of the Great *Mogul*, is the Passport, or Permit, granted to foreign Vessels, to trade within their Jurisdiction.

FIRMNESS, or **FIRMITY**, in Philosophy, a *Consistence* of a Body; or that State, wherein its sensible Parts cohere, or are united together, so that the Motion of one Part induces a Motion of the rest: In which Sense, *Firmity* stands opposed to *Fluidity*. See FLUIDITY.

Some Authors confound *Firmness* with *Density*; as thinking the same State or Property of Body, implied by both; or at least, that *Firmness* follows *Density*: But this is a Mistake. For Mercury, the densest Body in Nature, excepting Gold, is yet one of the most fluid: And even Gold it self, with all its *Density*, when fused, wants *Firmness*, or Cohesion. See DENSITY.

Many of the *Cartesians*, and others, hold *Firmness* to con-

sist in the mere Quiet of the Particles of the Body, and their mutual immediate Contact; urging, that a Separation of Parts can only arise from some Matter interposed between them, which is excluded, by the Notion of Contiguity.

But the Insufficiency of this Hypothesis is evident: For mere simple Quiet has no Force, either to act, or resist; consequently two Particles only join'd by Rest and Contiguity, would never cohere so as that a Motion of the one should induce a Motion of the other. This is obvious in the Case of two Grains of Sand, which however contiguous, and at rest, will never constitute a *firm*, coherent Body.

The *Firmness* of Bodies, then, depends on the Connection or Cohesion of their *Particules*. Now, the Cause of Cohesion, Sir *I. Newton* and his Followers, hold to be an attractive Force, inherent in Bodies, which binds the small Particles thereof together; exerting it self only at, or extremely near, the Points of Contact, and vanishing at greater Distances. See ATTRACTION.

The *Firmness* of Bodies, therefore, follows the Laws of the Cohesion of Bodies; which see under COHESION.

Hence, *Firmness* in all Bodies must be as the Surfaces, and Contacts of the component Parts: Thus a Body, whose Parts are by their peculiar Shapes capable of the greatest Contacts, is most *firm*; and that, whose Parts are capable of the least Contact, will be most soft.

In the former, the greatest Requisite is to be as near Cubes as possible, and in the latter to Spheres. And in the same manner are to be accounted for, not only all the intermediate Degrees between the most *firm*, and the most soft Bodies, but those different Consistencies, which are distinguish'd by other Names, as *friable*, *tenacious*, *glutinous*, and the like: for the greater are the Solidities of the component Parts of any Body, in Proportion to their Surfaces, though that Body by the Aptitude of the Contacts, may be what we call very hard; yet it will be most *friable* or brittle. And where the Surfaces of the compounding Particles are much extended upon a small Quantity of Matter, the Bodies they compose, though they may be light and soft, yet they will be *tenacious* or *glutinous*: For although the Flexibility of their compounding Parts admits of their easy Changing of Figure by any external Force, yet by their touching one another in so many Points, they are very difficultly separated.

The former is the Case in crystallized Salts, Resins, and the like; the latter in Turpentine, Gums, and all of that Sort. See SOLIDITY, &c.

FIRST FRUITS, *Annates*, or *Primitivæ*, are the Profits of every Benefice for one Year. See PRIMITIVÆ, &c.

The *First Fruits* were originally intended for the Pope's Benefit, and were accordingly, before the Reformation, paid to him: But King *Henry VIII.* by a Statute in the twenty sixth Year of his Reign, transferred them to the Crown.

Queen *Anne*, in the third Year of her Reign, made a Grant of the whole Revenue of *First Fruits* and Tenths, to settle a Fund for the Augmentation of the Maintenance of the poor Clergy. See AUGMENTATION.

By the Act 26 *Hen. 8.* he, who enters on any spiritual Living, before he pays, or compounds for it, on Conviction, forfeits double the Value thereof.

Every Clerk therefore, before his Induction (or soon after) should go himself with one Friend, or send two Friends for him to the *First Fruits* Office, and there enter into Bond to pay the *First Fruits* of his Benefice within two Years next ensuing, at four equal half-yearly Payments. Only one Tenth of the whole yearly Sum, enter'd in the King's Books, is to be deducted; because that must be paid by it self the first Year.

Formerly four Bonds were given for the four several Payments; but by Statute 2 and 3 of Queen *Anne*, one Bond only is appointed to be given; and the Rates of all Benefices, according to the King's Books, are declared unalterable. The Successor is chargeable with Arrears of Tenths, due from his Predecessor; and consequently, by 27 *H. 8. c. 8.* is empower'd to distrain his Predecessor's Goods, being upon the Benefice; and hath likewise a good Action at Law against him or his Executors.

FISC, **FISCUS**, in the Civil Law, the Treasury of a Prince, or State; or that, to which all Things due to the Publick, do fall.

By the Civil Law, none but a Sovereign Prince has a Right to have a *Fisc*, or publick Treasury. At *Rome*, under the Emperors, the Term *Ærarium* was used for the Revenues destin'd for the Support of the Charges of the Empire; and *Fiscum* for those of the Emperor's own Family.

The Treasury, in effect, belong'd to the People, and the *Fisc* to the Prince. See TRASURVÆ.

The Word is derived from the Greek *πισκω*, a great Basket.

FISCAL, something relating to the pecuniary Interests of the King, the Publick, or a private Person.

The Emperor *Adrian* erected the Office of *Fiscal Advocate* in the Roman Empire.

FISH, in Natural History, an Animal that lives in the Waters, as its proper Place of Abode. See ANIMAL.

Naturalists observe a World of Wisdom, and design in the Structure of *Fishes*, and their Conformation to the Element they are to reside in.

Their Bodies are clothed and guarded in the best Manner, with Scales or Shells, suitable to their respective Circumstances, the Dangers they are exposed to, and the Motion and Business they are to perform. See **SKELETON**, and **SCALE**.

The Centre of Gravity is placed in the fittest Part of the Body for Swimming; and their Shape most commodious for making way through the Water, and most agreeable to Geometrical Rules. See **SWIMMING**.

They have several Parts, peculiar to themselves; as *Fins*, to balance and keep them upright. See **FIN**.

And an *Air Bladder*, to enable them to rise and sink to any Height and Depth of Water, at pleasure. See **AIR BLADDER**.

They have Gills, or *Branchie*, whereby they respire; as Land Animals do by the Lungs. See **BRANCHIAE**, and **RESPIRATION**.

The *Tail* is the Instrument of progressive Motion, and serves to row them forward. See **TAIL**.

Their *Eyes* are peculiarly form'd to enable them to correspond to all the Convergences and Divergences of Rays, which the Variations of the watery Medium, and the Refractions thereof, may occasion: In which respect they bear a near Resemblance to Birds. See **EYE**, **CHOROIDEA**, and **BRID**.

Fishes are distinguish'd into *Sea* or *Salt-Water-Fish*, *Piscis Marini*; as the Whale, Herring, Mackerel, &c. *River* or *Fresh-Water-Fish*, *Piscis Fluvialitii*; as the Pike, Trout, &c. and *Pond* or *Lake-Fish*; as the Carp, Tench, &c. To which may be added others, which abide indifferently in fresh Water, or salt, as Salmon, Shad-Fish, &c.

There are also an *Ambibious* Kind, which live indifferently on Land, or Water; as the Castor, Otter, &c. See **AMPHIBIOUS**.

Aristotle, and after him Mr. *Willoughby*, more accurately distinguish *Fishes* into *Cetaceans*, *Cartilaginous*, and *Spinous*.

The *Cetaceous* Kind, called also *Belle Marine*, have Lungs and Breath like Quadrupeds; they copulate also like them; and conceive and bring forth their Young alive, whom they suckle with their Milk.

The *Cartilaginous* Sort are produc'd from large Eggs, like Birds; which are excluded the Womb, also, like those of Birds.

The *Spinous* Kind are also oviparous; but their Eggs are smaller, and they have Spine up and down in their Flesh to strengthen it.

Willoughby thinks, it would be yet more proper to divide *Fishes* into such as *breathe with Lungs*; and into such as *breathe with Gills*: And then, to subdivide those that breathe with Gills, not into *Cartilaginous* and *Spinous*, but into *Viviparous* and *Oviparous*.

The *Viviparous* Kind that breathe with Gills, he subdivides into *Long*; such as the *Galei* & *Canes*, or Sharks, and *Dog Fish*: And *Broad*, such as the *Pastinaca*, *Raja*, &c. The Subdivisions of each whereof he gives in his Chapter of *Cartilaginous Fishes* in general.

The *Oviparous* Kind that breathe with Gills, are the most numerous; and these he subdivides into such as are what we usually call *Flat Fish*; and such as swim with their Back upright, or at Right Angles to the Horizon.

The *Plain* or *Fins Fish* Kind, called usually *Plani Spinosi*, are either *Quadrati*, as the *Rombi* and *Paffores*; or *Longissimi*, as the *Solea*.

Such as swim with their Backs erect, are either *Long*, and *Smooth*, and without Scales, as the *Eel* kind; or *Shorter* and *less smooth*: And these have either but one *Pair* of *Fins* at their Gills, which are called *Orbes*, and *Congeneres*; or else another *Pair* of *Fins* also on their Bellies: And this latter Kind he divides into two Kinds.

1°. Such as have no prickly *Fins* on their Backs, but soft and flexible ones. 2°. Such as have prickly *Fins* upon their Backs.

Those *Fishes* which have only soft and flexible *Fins* on their Backs, may be divided into such as have three, two, or but one single *Fin* there.

No *Fish* but the *Asellus* have three *Fins* on their Backs. *Fishes* with two *Fins* on their Backs, are either the *Truttaceans*, or *Traut Kind*; or the *Gobionite*, or *Loach*, or *Goddeen Kind*.

Fishes with but one soft back *Fin*, are of three sorts: The first Kind have one long continued *Fin*, from Head to Tail, as the *Hippurus* of *Rondeletii*, &c.

The second, have their *Fins* but short, and placed just in the Middle of their Back; and these are either *Marine*, as the *Herring Kind*;

Or *Fluviatile*, as those we call *leather-mounted Fishes*; such as *Carp*, *Tench*, &c.

Such *Fishes* as have prickly *Fins* on their Backs, are of two Kinds.

First, such as have two prickly *Fins* on their Backs, and in these the anterior Radii of their *Fins* are always prickly.

Or, 2°. Such as have but one prickly *Fin* there.

Mr. *Willoughby* gives us the following Catalogue of our English *Fishes*.

(1) Of the Long Cartilaginous Kind are the

- 1 *Canis Carebarius*, or *Lamia*, the White Shark.
- 2 *Galeus Glaucus Rondeletii*, the Blue Shark.
- 3 *Canis Galeus Rondeletii*; called a *Tope* in *Cornwall*.
- 4 *Galeus Acanthias*, five *Spinax*, the Prickled Dog, or Hound-Fish.
- 5 *Galeus, seu Mustela levis*, the Smooth, or unprickled Hound-Fish.
- 6 *Canis Major, vulgo Canicula Aristotelis*, the Rough Hound, called in *Cornwall*, the *Bounce*.
- 7 *Canis Minor*, the lesser Hound-Fish, or *Morgay*.

(2) Of the Plain Cartilaginous Kind, are the

- 1 *Raja levis undulata*, the Skate, or Flare.
- 2 *Raja clavata*, the Thornback.
- 3 *Raja aspera nostras*, the White-Horse.
- 4 *Squatina*, the Angel, or Monk Fish.
- 5 *Rana piscatrix*, the Thoad Fish, or Sea-Devil.

(3) Of the Plain Spinous Kind, are the

- 1 *Rombus maximus aspero squamosus*, called the *Turbot*, or *Brett*.
- 2 *Rombus non aculeatus squamosus*, in *Cornwall* called the *Lug-alef*.
- 3 *Passer Bellonii*, the *Flace*.
- 4 *Passer asper*, five *squamosus*, the *Dab*.
- 5 *Passer fluviatilis, seu ambibius*, the *Flounder*, *Fluke*, or *Butt*.
- 6 *Hippoglossus Rondeletii*, the Holy-Tur, called in the North the *Turbot*.
- 7 *Zuglossus, or Solea*, the *Sole*.

(4) Of the Eel Kind we have,

- 1 *Lampreta major*, the *Lamprey*, or *Lamprey-Eel*.
- 2 *Lampreta parva*, and *Fluviatilis*, the *Lampena*.
- 3 *Anguilla*, the common *Eel*.
- 4 *Conger*, the *Conger*, or *Sea-Eel*.
- 5 *Annadaytes Geshieri*, the *Sand-Eel*, or *Launce*.
- 6 *Gmannelus Cornubiensis*, the *Butter-Fish*.
- 7 *Mustela vulgaris Rondeletii*, the *Sea-Loach*, or *Whittle-Fish*.
- 8 *Mustela fluviatilis*, the *Eel-Pout*, or *Turbou*.
- 9 *Lupus marinus*, the *Wolf-Fish*, or *Sea-Wolf*.
- 10 *Alanda non cristata*, the *Sea-Lark*; called in *Cornwall* *Mulgranoc*, and *Balcad*.
- 11 *Alanda cristata*, the crested *Sea-Lark*.
- 12 *Liparis Rondeletii*.
- 13 *Gobio fluviatilis*, the *Bull-head*, or *Miller's-Thumb*.
- 14 *Scorpana Bellonii similis*, the *Dutch-Pout-Hog*; the *Cornish Boys* call it *Fatber-Lasher*.

(5) Of the Kind of *Fishes* wanting the Belly Pair of *Fins*; we have,

- 1 *Mola Sabini*, the *Sun-Fish*.
- 2 *Acus Aristotelis, species major*.
- 3 *Acus Aristotelis congener*, the *Sea-Adder*.
- 4 *Xiphius, seu Glaucus piscis*, the *Sword-Fish*.

(6) Of the Non-spinous Kind of *Fishes*, with three unprickly soft *Fins* on their Backs; we have

- 1 *Asellus vulgaris major*, the *Cod-Fish*, or *Kaling*.
- 2 The *Whiting* Pollack.
- 3 *Asellus niger*, the *Coal-Fish*, or *Rawling* Pollack.
- 4 *Asellus lucus*, the *Bib*, or *Blinds*.
- 5 *Asellus variegatorum*, the *Haddock*.
- 6 *Asellus mollis major*, the *Whiting*.

(7) Of the Non-spinous Kind, with only two soft *Fins* on their Backs, are found with us,

- 1 *Morlacius*, the *Hake*.
- 2 *Asellus longus*, the *Ling*.
- 3 *Thynnus, Thunnus*, the *Tunny*, or *Spanish Mackerel*.
- 4 *Scomber*, the *Mackerel*.
- 5 *Thymallus*, the *Graging*, or *Umber*.

- 6 *Abula Salmoni similis*, the Guinard.
- 7 *Abula Harengi formis*, the Schelly.
- 8 *Salmo*, the Salmon.
- 9 *Salmalus*, the Samlet, or Branlin.
- 10 *Salmo griseus*, the Gray.
- 11 *Trutta Salmonata*, the Salmon Trout.
- 12 *Trutta Lacustris*, the Scurf, or Bull Trout.
- 13 *Trutta fluviatilis dum generum*, the Trout.
- 14 *Umbia minor Gelfu*, the Red Char, or Welsh Tor-goch.
- 15 *Corpio lacus Bennaci*, the Gault, or Gault Char.
- 16 *Eperlanus, seu Viote*, the Smelt.
- 17 *Gobius Niger*, the Rock-Fish, or Sea Gudgeon.
- 18 *Lampus Anglorum*, the Lump, or Sea Owl.
- 19 *Catophractus Schonfeldii*, in the West of England, a *Deq.*

(8) Of the Non-spinous Kind, with only one Fin on the Back; these are,

- 1 *Harengus*, the Herring.
- 2 *Harengus minor*, the Pilchard, called also *Calebis*.
- 3 *Enerasichobus*, the Anchoris.
- 4 *Aloja, seu Clupea*, the Shad, or Mother of Herrings.
- 5 *Sardina*, the Sprat, or Sparling; which is nothing else but the Pustus of a Herring.
- 6 *Aeus vulgaris*, the Garr Fish, or Hoen Fish.
- 7 *Sturis*, the Surgeon.
- 8 *Lucius*, the Pike, or Pickrel.
- 9 *Cyprinus*, the Carp.
- 10 *Cyprinus latus*, the Bream, or Bruma.
- 11 *Tinea*, the Tench.
- 12 *Orfus Germanorum*, the Rled, Oerve, or Nerfling.
- 13 *Capito, seu Cephalus*, the Chub, or Chevin.
- 14 *Barbus*, the Barbel.
- 15 *Lenciscus*, the Dace, or Dare.
- 16 *Rutilus, seu Rubellus*, the Roach.
- 17 *Alburnus*, the Bleak, or Bley.
- 18 *Gobius fluviatilis*, the Gudgeon.
- 19 *Bobites fluviatilis barbata*, the Locke.
- 20 *Varias, seu Pboxius levis*, the Pink, or Minnow.

The last twelve of these are called by us (*Malacostomi*) *Leather-mouthed Fishes*; because they have no Teeth in their Jaws, but only deep down in their Mouths.

(9) Of the Spinous Kind, with two Fins on their Back, of which the foremost is aculeate, we have,

- 1 *Lupus*, the Basse.
- 2 *Mugil*, the Mullet.
- 3 *Gurcardus Pifeis*, the Grey Garnard.
- 4 *Hirundo Aldrovandi*, the Tub Fish.
- 5 *Cuculus Aldrovandi*, the Red Garnard, or Rotcher.
- 6 *Lyra prior Rondeletii*, the Piper.
- 7 *Mullus major*, the Sar-Mullet.
- 8 *Draco, seu Araneus Plinii*, the Spider.
- 9 *Fraxurus*, the Scud.
- 10 *Perca fluviatilis*, the Perch.
- 11 *Faber Pifeis*, the Dorge.

(10) Of the Aculeate Kind, with only one Fin on the Back, whose Raddi are some prickly, and some soft; these are,

- 1 *Aurata*, the Gilt-Head, or Gilt-Poll.
- 2 *Pagrus*, the Bream.
- 3 *Turdus, vulg.* the Old Wife, or Wrafs.
- 4 *Perca fluviatilis minor, seu aurata*, the Raff.
- 5 *Pifeis aculeatus vulgaris, seu Pungitius Alberti*, the Common Prickle-Back, or Sharping, or Brantfickle.
- 6 *Pifeis aculeatus minor*, the Lesser Prickle-Back.

(11) Of the Cetaceous Kind, we reckon only

- 1 *Balena Britannica Antiquorum*, which foms now to be gone from our Seas; and we scarce know what kind of Fish it was.
- 2 *Balena, vulg. Rondeletii*, the Whale, which is sometimes found stranded on our Coasts, or rambles up our Rivers.
- 3 *Delphinus Antiquorum*, the Dolphin, very rarely, but sometimes seen here.
- 4 *Pboena*, the Porpaf, called by *Schonfeld*, the *Northern Dolphin*.

FISH, with regard to Commerce, is distinguish'd into *Dry, Pickled, Green, and Red.*

Dry, or Salt FISH, is that which is salted and dried, either by the Heat of the Sun; or by Fire. Such principally are the *Cod, Stock-Fish, Herring, and Pilchard.*

Green FISH is that lately salted, and which yet remains moist; as *Green Cod, &c.*

Pickled FISH is that boil'd and steep'd in a Pickle, made of Salt, Vinegar, &c. as *Salmon, Cod, Herring, Mackerel, Pilchard, Anchovy, and Ostlers.*

Red FISH, is some fresh *Fish*, broil'd on the Grid-iron, then fried in Oil of Olives, and barrel'd up with some proper Liqueur; as new Olive Oil, Vinegar, Salt, Pepper, Cloves, and Laurel Leaves, or other Herbs. The best *Fish* thus prepar'd are Sturgeon and Tunny.

FISH, consider'd as a Food, makes a considerable Article in the Furniture of the Table; and the Breeding, Feeding, Catching, &c. thereof makes a peculiar Art of no small Moment in the Oeconomy of a Gentleman's House and Garden.

To this relate the Ponds, Stews, &c. described in their proper Places. See **POND, STEW, &c.**

Some General Rules and Observations on the same Subject, may not here be unacceptable.

1. *For the Breeding of Fish*, the Quality of the Pond, Water, &c. proper for this end, is scarce determinable by any certain Symptom, or Rule: For some very promising Ponds do not prove serviceable that way. One of the best Indications of a *Breeding Pond*, is when there is good Store of Rusht, and Grazing about it, with gravelly Shoals; such as Horle-ponds usually have: So that when a Water takes thus to Breeding, with a few Millets and Spawners, two or three of each, a whole County may be stock'd in a short Time.

Eels and Pearch are of very good Use, to keep down the Stock of *Fish*; for they prey much upon the Spawn and Fry of bred *Fish*, and will probably destroy the Superfluity of them.

As for Pike, Pearch, Tench, Roach, &c. they are observ'd to breed in almost any Waters, and very numerously; only Eels never breed in standing Waters, that are without Springs; and in such are neither found, nor increase, but by putting in: Yet where Springs are, they are never wanting, tho' not put in. And which is most strange of all, no Perion ever lay in an Eel the least Token of Propagation, either by Milt, or Spawn; so that whether they breed at all, and how they are produc'd, are Questions equally mysterious, and never yet resolv'd.

2. *For the Method of Feeding Fish*, take the following Remarks. 1. In a Stew, thirty or forty Carps may be kept from *October* to *March*, without Feeding; and by fishing with Tramels, or Flews in *March*, or *April*, you may take from your great Waters, to recruit the Stews: But you must not fail to feed all Summer, from *March* to *October* again, as constantly as coop'd Chickens are fed; and 'twill turn to as good an Account.

2. The Constancy and Regularity of serving the *Fish*, conduces very much to their well eating and thriving.

3. Any sort of Grain boiled, is good to feed with, especially Pease and Malt, coarse ground: The Grains after Browing, while fresh and sweet, are very proper; but one Bushel of Malt not brew'd, will go as far as two of Grains: Chippings of Bread, and Orts of a Table steep'd in Tap-droppings of strong Beer, or Ale, are excellent Food for Carps. Of these the Quantity of two Quarts, to thirty Carps, every Day, is sufficient: And so fed Morning and Evening, is better than once a Day only.

There is a sort of Food for *Fish*, that may be called accidental, and is no less improving than the best that can be provided; and this is, when the Pools happen to receive the Wash of Commons, where many Sheep have Pasture, the Water is enrich'd by the Soil, and will feed a much greater Number of Carps, than otherwise it would do: And farther, the Dung that falls from Cattel standing in Water in hot Weather, is also a very great Nourishment to *Fish*.

The best Food to raise Pikes to an extraordinary Fatness, is Eels; and without them 'tis not to be done, but in a long Time: Setting these aside, small Perches are the best Meat. Breams put into a Pike-pond, breed exceedingly, and are fit to maintain Pikes; which will take care they do not encrease over-much: The numerous Fry of Roaches and Rouds, which come from the greater Pools into the Pike-Quarrens, will likewise be good Diet for them.

Pikes in all Streams, and Carps in hangry-spring Waters, being fed at certain Times, will come up, and take their Meat almost from your Hand.

The best Feeding-place is toward the Mouth of the Pond, at the Depth of about half a Yard; for by that means the Deep will be kept clean and neat; the Meat thrown into the Water, without other Trouble, will be pick'd up by the *Fish*, and nothing be lost: Yet there are several Devices for giving them Food, especially Pease; as a square Board led down with Meat on it.

When *Fish* are fed in the larger Pools or Ponds, where their Numbers are great, Malt boiled, or fresh Grains, is the best Food. Thus Carps may be fed and rais'd like Capons,

pons, and Tenches will feed as well; but Perch are not for a Stew in Feeding-time.

As to the Benefits that redound from the keeping of Fish, besides furnishing your Table for your Friends, and raising Money; your Land will be vastly improv'd, so as to be really worth, and yield more this way, than by any other Employment whatsoever: For suppose a Meadow of 21. per Acre; four Acres in Pond, will return every Year a thousand fed Carps, from the least Size, to fourteen or fifteen Inches long; besides Pikes, Perch, Tench, and other Fry: The Carps are saleable, and will bring 6d. 9d. and perhaps 12d. a piece, amounting in all to 25s. which is 6l. 3s. per Acre.

FISH-GARTH, according to Skinner, signifies an Engine, to take Fish; but it seems rather to signify the Dam or Wear in a River, where these Engines are laid and used.

For Garth, in the North, is still used for a Back-side, or Horned-dike.

FISH-GILT, see ICHTHYOCELLA.

FISH-PONDS, Reservoirs of Water, for the Breeding, Feeding, and Preserving of Fish.

For these Ponds, 'tis agreed, those Grounds are best, which are full of Springs, and apt to be moorish: The one breeds them well, and the other preserves them from being stolon.

The Situation of the Pond is also to be consider'd, and the Nature of the Currents that fall into it; likewise, that it be refresh'd with a little Brook, or with the Rain-water that falls from the adjacent hilly Ground. Add, that those Ponds, which receive the Stale and Dung of Horses and other Cattle, breed the largest and fittest Fish.

In making the Pond, observe that the Head be at the lowest Part of the Ground; and that the Trench of the Flood-gate or Sluice have a good swift Fall, that it may not be too long an emptying.

If the Pond carry six Foot of Water, it is enough; but it must be eight Foot deep, to receive the Freshes and Rains that should fall into it.

It would also be advantageous to have Shoals on the Sides, for the Fish to sun themselves in, and lay their Spaw on; besides in other Places, certain Holes, hollow Banks, Shelves, Roots of Trees, Islands, &c. to serve as their Retiring Places. Consider farther, whether your Pond be a Breeder; if so, never expect any large Carps from thence; the Greatness of the Number of Spaw overstocking the Pond.

For large Carps, a Store-Pond is ever accounted the best, and to make a Breeding-Pond become a Store-Pond, see what Quantity of Carps it will contain: Then put in all Milers, or all Spawners; whereby in a little Time you may have Carps that are both large, and exceeding fat. Thus, by putting but one Sex, there is an Impossibility of the Increase of them; yet the Roach will notwithstanding multiply abundantly.

Reserve some great Waters for the Head-Quarters of the Fish, whence you may take, or whence you may put any Quantity thereof. And be sure have Stews and other auxiliary Waters, so as you may convey any Part of the Stock from one to the other; so, to lose no Time in the Growth of the Fish, but employ the Water, as you do your Land, to the best Advantage.

View the Grounds, and find out some Fall between the Hills, as near a Flat as may be, so as to leave a proper Current for the Water: If there be any Difficulty in judging of such, take an Opportunity after some sudden Rain, or the breaking up of a great Snow in Winter, and you'll plainly see which way the Ground casts; for the Water will take the true Fall, and run accordingly.

The Condition of the Place must determine the Quantity of Ground to be cover'd with Water. For Example, we may well propose in all fifteen Acres, in three Ponds; or eight Acres in two, and not less: And these Ponds should be plac'd one above another, so as the Point of the lower may almost reach the Head or Back of the upper; which Contrivance is no less beautiful, than advantageous.

The Head, or Bank, which by stopping the Current, is to raise the Water, and so make a Pond, must be built with the Clay and Earth taken out of the Pan, or Hollow, dug in the lowest Ground above the Bank; and that Pan should be shap'd as an half Oval, whereof the Flat comes to the Bank, and the longer Diameter runs square from it. See BANKS for Fish-ponds, and POND-HEADS.

ROYAL FISHES, see ROYAL FISHES.

FISHES, in Astronomy, see PISCIS.

FISHES, in Heraldry, are of themselves of less Esteem in a Coat Armour, than Beasts and Fowls, as being posterior thereto in the Order of Creation: But they sometimes become so dignified by the Persons or Families, who bear them, as to be preferable to many Birds, and Beasts.

Fishes are born divers ways, Upright, Inbowed, Extended, Endorled, Surmounted of each other; Prettied, Triangled, &c.

All Fishes born Feeding, should be term'd *Devouring*.

Those born directly Upright, should be term'd *Havriant*.

And those born Travers'd the Blutchcon, *Najant*.

FISHERY, a commodious Place for Fishing; or, a Place wherein great Quantities of Fish are caught. See FISH, and FISHING.

The principal Fisheries of Europe, for Salmon, Herring, Cod, and Mackerel, are along the Coasts of England, Scotland, and Ireland: For Whales, about Greenland: For Pearls, in the East and West Indies, &c.

The Fishery makes a principal Branch of the British Commerce. A great Quantity of Vessels and Sea-men are employ'd therein; and beside what is spent at home, above 200000 Pounds Sterling is yearly return'd merely for Herring, and Cod, exported to Spain, Italy, several Parts of the Mediterranean, and Islands of the Archipelago.

Yet are our Countrymen reproach'd, and with a good deal of Justice, for their Remissness in this Branch of Trade. The advantageous Situation of our Coasts might be of immense Benefit to us, did not we let our Neighbours share with us therein. The Dutch, French, Hamburgers, &c. come yearly in huge Shoals, and not only take the Fish from our own Doors; but sell them us for our Money, when they have done.

Scotland suffers incredibly on this Score: No Country in Europe can pretend to rival them in the Abundance of the finest Fish, wherewith their numerous Harbours, Loughs, Rivers, &c. are incredibly stored. In the River Dee, 'tis said, an hundred and seventy Head of Salmon is not very extraordinary for a single Draught of Net: And the pickled Salmon sent hence, is allowed the best in Europe. The Scottish Islands, especially those on the Western Side, do certainly ye most commodiously for carrying on the Fishing Trade to Perfection.

King Charles the First began the Experiment, in Conjunction with a Company of Merchants; but the Civil Wars soon set it aside. King Charles the Second made a like Attempt; but having pressing Occasion for Money, he was perswaded to withdraw, what he had employ'd in the Fishery; at which the Merchants, join'd with him, being displeas'd, did the like.

Since the Union, several Efforts have been made, to retrieve it; and there is now a Corporation settled on that footing, called the Royal British Fishery, though now in a very languishing Condition, and ready to sink.

Whale FISHERY, or Greenland-FISHERY.

This huge Fish, we have elsewhere observ'd, is chiefly caught in the North Sea. The largest Sort are those about Spitzberg, some of them amounting to two hundred Foot in length. Those on the Coasts of America are about ninety, or hundred; and those on the Coasts of Guyenne, and the Mediterranean, the smallest of all. See WHALE.

The Dutch have upwards of these hundred Years had the Whale Fishery almost to themselves; and it is now esteem'd one of the principal Branches of their flourishing Trade: The chief Merchants of the several Provinces associate themselves into a Body, for the carrying it on; and send every Year a great Fleet of Vessels to the North Seas for the purpose. They attempted to make their first Establishments in Greenland; but not succeeding, they have since fix'd their Fishery about the Western Coast of Spitzberg; from the Latitude of 76 Deg. 40 Min. to 80 Deg.

This present Year 1725, the English South-Sea Company have begun to share it with them; and by the extraordinary Success they met withal in their first Attempt, beyond any of their Neighbours, will no doubt be induc'd to persist in it.

To give some Idea of the Manner and Importance of this Trade, we shall here subjoin the Discipline, of a long Time observ'd in the Whale Fishery; the Method of Fishing; the Cargo and Equipage of a Vessel; and the Produce thereof.

The Discipline is adjust'd by a standing Regulation, consisting of twelve Articles; the principal whercof, are:

That in case a Fishing Vessel be shipwreck'd, and the Captain and Crew saved, the next Vessel they meet, shall take them in; and the second Vessel take half of them from the first: But that no Vessel shall be oblig'd to take any of the Loading of a Vessel shipwreck'd: That what Effects of a shipwreck'd Vessel, which are absolutely relinquish'd, an other Captain shall find, and take up, upon his Arrival in Holland he shall account for one Half of them to the Proprietors of the shipwreck'd Vessel, clear of all Expenses: That if the Crew desert a shipwreck'd Vessel, they shall have no Claim to any of the Effects saved; but the whole shall go to the Proprietor; but if they be present, when the Effects are saved, and assist therein, they shall have one Fourth thereof: That if a Person kill a Fish on the Ice, it shall be reputed his own, so long as he leaves any

any Person with it; but the Minute he leaves it, it becomes the Duc of the first Captain that comes that way; but that if a Fish be tied to an Anchor, or a Rope fasten'd to the Shore, it shall remain to its first Proprietor, tho' he leave it alone: That if any Person be wounded, or lamed in the Service, the Commissioners of the Fishery undertake to procure him a reasonable Satisfaction; to which the whole Fleet shall contribute.

Beside this general Regulation, which all the Captains, Pilots, and Masters of Vessels are oblig'd to swear to see observed, before they put to Sea; there is also a particular one for each Ship's Crew, which they are all sworn to execute, in Presence of one of the Commissioners, who goes a-board every Ship, to receive the Oath.—

This Regulation is a kind of Charter-Party, importing, That they will attend Prayers Morning and Evening, on pain of an Amercement, at the Discretion of the Captain: That they will not get drunk; nor draw their Knives, on Forfeiture of half their Wages; nor fight, on Forfeiture of the whole: That no body shall lay Wagers, on the good or ill Success of the Fishing; nor buy, or sell on such Conditions, *In case we take one or more Fish*, on Penalty of 25 Florins: That they will be contented with the Provisions allowed them; and that they will never light Fire, Candle, or Match, by Night or Day, without the Captain's Leave, on the like Penalty.

After the Reading of this Regulation, the Crew are all called, to receive the customary Gratuity before their Setting out, with an Assurance of another Sum at their Return, in Proportion to the Success of the Fishing.—

The Captain, on this Occasion, receives from 100, to 150 Florins; the Pilot, from 40, to 60; each Harpinoer, from 40, to 50 Florins; the other Officers, from 26, to 36 Florins; the elder Sailors 20; and the younger 12.

The Fleet, which consists mostly of Fluyts, from two, to three hundred Tuns; and from 35 Men to 41, usually sets Sail about the Beginning of April, and takes its Course by the Isles of Iceland, from 80 to 61 Degrees of Latitude; after which, leaving them to the West, it steers Northward, thro' 73, 74, and 75 Deg. of Lat. where they begin to find the Ice.

'Tis through these huge Heaps of Ice, wherewith the whole Quarter is filled, that they first begin to spy the Whales: And there most of the Vessels fix their Abode for the Fishing.—But, as the Fish are larger and fatter, the further North you go; some Captains will venture as far as 80, or 82 Deg. of N. Lat.

Each Vessel of 300 Tuns has six Chaloupes; and each Chaloupe six Harpinoers, with five Seamen, to row it. To every Chaloupe there are seven Lines, of three Inches Circumference; five of them in the Hind-part of the Vessel, and two behind. The hind Lines together make six hundred Fathoms, and with the Addition of the other two, 880. If the Whale dive deeper, or ran further underneath the Ice, the Line must be cut, lest the Chaloupe be drawn after it.

The Instrument, wherewith the Execution is done, is a harping Iron, or Javelin, five or six Foot long, pointed with Steel, in a triangular Shape, like the Barb of an Arrow.

The Harpinoer, upon sight of the Fish, from one End of the Chaloupe, where he is plac'd, flings the harping Iron with all his Might against the Whales Back; and if he be so happy as to make it penetrate the Skin and Fat, into the Flesh, he lets go a String, fasten'd to the harping Iron, at the End whercof is a dry Guard, which swimming on the Water, discovers wherabout the Whale is; who, the Minute he is struck, plunges to the Bottom.

If the Whale return to breath in the Air, the Harpinoer takes occasion to give him a fresh Wound; till, fainting by the Loss of Blood, the Men have an Opportunity of approaching him; and thrusting a long steeled Lance under his Gills into his Breast, and thro' the Intestines, which dispatches him: And when the Carcass begins to float, they cut off the Fins, and Tail; and tying a Rope to the Place where the Tail was, swim to the Vessel, where he is taken in.—

When they have got their Quota of Whales, they begin to take the Blubber, or Fat, and the Fins, or Whale-bone.

In order to this, the Whale is hoisted over-board, and kept suspended above the Water, by two Ropes, the one tied around his Neck, the other about his Tail; and under the Carcass are two Chaloupes, placed to receive what may chance to drop.

This done, three or four Men go down upon the Whale, with a kind of Calkers, or Irons on their Feet to prevent their Slipping. They begin to open him on the Side, and proceed downwards the Belly; cutting off all the Lard or Fat, in Pieces of about three Foot broad, and eight long: Beside the Fat on the Sides, they likewise cut off that of the Throat, and the under Lip, leaving all the lean behind.—They next proceed to the Whale-bone, which they cut off with a Hatchet, made for the purpose, from

the upper Jaw of the Fish, and make it up in Packets. The Fat and Bone thus procured, what remains of the Whale, they leave for the Bears, who are very fond of it.

In Proportion as the large Pieces of Fat are cut off, the rest of the Crew are employ'd in slicing them smaller, and picking out all the lean. When this is prepared, they stow it under the Deck, where it lies, till the Fat of all the Whales is on Board: Then, cutting it still smaller, they put it up in Tubs, in the Hold, or Bottom of the Vessel, cramming them very full and close.

Nothing now remains, but to sail homewards, where the Fat is to be boiled, and melted down into Train Oil. See WHALE.

Produce of One Years Whale Fishery.

To state the Produce, we make choice of the Fishery of 1697, as being the greatest, and most fortunate that ever was known: To which we shall add that of the present Year.

In the Year 1697, there were an hundred, ninety eight Vessels of divers Nations; whercof an hundred, twenty nine were Dutch; forty seven *Hamburgbers*; two *Swedish*; four *Danish*; twelve of *Bremen*; two of *Emden*; and one of *Lubeck*.

In the present Year 1725, there were 226 Vessels; whercof 143 were Dutch; twelve *English*; forty three *Hamburgbers*; twenty three *Bremers*; one and twenty of *Bergen*; two of *Fleisbuys*. Their Captures each Year were as follow.

In 1697,		
129 Dutch Vessels took	—	1255 Whales.
47 Hamburgbers	—	449 —
2 Swedes	—	113 —
4 Danes	—	52 —
12 Bremers	—	96 —
2 Emden	—	2 —
1 Lubeck	—	1 —
In all, 197 Vessels took		— — 1968 Whales.

In 1725,		
144 Dutch Vessels took	—	2487 Whales.
12 English	—	257 —
43 Hamburgbers	—	46 —
23 Bremers	—	29 —
2 Bergen	—	0 —
2 Fleisbuys	—	0 —
In all, 226 Vessels took		— — 349 Whales.

The Dutch Captures in 1697 produced	41344	Punchions of
The Hamburgbers	—	16414 (Blubber
The Swedes	—	540 —
The Danes	—	1710 —
The Bremers	—	3790 —
The Emdenens	—	28 —

The English Captures in 1725 produced 1000 Punchions of Blubber, and 20 Tuns of Whale Bone.

Now, estimating the Punchion of Blubber at 30 Florins Dutch; or at 1.15 s. English, the current Price in the Year 1697, the total Produce of the Years Fishing amounting to 63826 Punchions, yields

l. 175521—10 s. Sterl.

As to Fins, or Whale Bones, letting them at 2000 Weight per Whale; and hundred Weight at 4 l. 4 s. they will yield

l. 171233

Total l. 346754

Whercof, the Share belonging to the Dutch, was 228737

On the same Footing might the Produce of the Fishery of the present Year be easily stated. It will come far short of that of 1697; which indeed vastly transcends what has ever been known: Each Vessel, taking one with another, caught that Year 20 Whales, &c; And the present Year only one Whale &c; tho' the English, more happy than the rest, caught above two a-piece. But it may be added, that the Whales of the present Year being larger and fatter than those of 1697, produced one with another 40 Punchions of Blubber; and these other only 33 Punchions.

Herring FISHERY.

The Herring is a small Salt-water Fish, with a bluciffl Back, and a white silver'd Belly, not unlike the little Shed Fish; whence it is call'd in Latin *Alosa minor*. *Rondeletius* calls it *Harengus*.

It is a popular Error to believe the Herring to be the *Halce* of the *Romans*. The *Halce* was no particular Fish, but a kind of Sauc, made of any sort of Salt Fish: The modern Herring

Herring seems to have been unknown to the Antients: It is neither the *Hales*, nor *Halex*, nor *Moenis*, nor *Lencomenis*, nor the *Gerres* of *Pliny*. See *Rondelet. de Piscib. marin. L. V. c. 13.* and *Vossius de Idole.*

Herrings are chiefly found in the North Sea. 'Tis true, there are *Fisherries* elsewhere, but none so copious.

They usually make two *Fishing Seasons*; the first in *August*; and the second in *Autumn*: The latter of which is the more considerable, on account of the *Fogs*, which are very favourable to this kind of *Fishing*.

'Tis commonly said, that no body ever saw a Herring alive; and that they die the Minute they are taken out of Water: But there are Instances to the Contrary.

The *Herring* is a Fish of Passage; so that it is allowed to fish them on *Holidays*, and *Sundays*: In the Decretal there is an express Chapter to this Effect. They go chiefly in *Droves*, and are fond of following *Fire*, or *Light*; and in their Passage resemble a kind of *Lightning* themselves.

The *Dutch* were the first who began the *Herring Fishery*, and observ'd the several *Seasons* of their Passage. Their first regular *Fishing* is fix'd to the Year 1163.

The Method of *Salting* and *Barreling* them, was not discover'd, till the Year 1416. *Willoughby*, in his History of *Fishes*, observes, that *Will. Buckels*, a Native of *Bier Ulter*, render'd his Name immortal, by the Discovery of the Secret of *Curing* and *Pickling Herring*: He adds, that the Emperor *Charles V.* coming in to the *Low Countries*, made a Journey to *Bier Ulter*, with the Queen of *Hungary*, on purpose to view the Tomb of this first *Barreler* of *Herring*.

The *Dutch* begin their *Herring Fishing* on the 14th of *June*, and employ no less than 1000 *Vessels* therein. These *Vessels* are a kind of *Barks*, by the *Dutch* called *Flyboats*, carrying from 45 to 60 *Tun*, and two or three small *Canon*. See *Boat.*

None of them are allowed to stir out of *Port* without a *Convoy*; unless there be enough of them together, to make 18, or 20 *Pieces* of *Canon*: In which case they are allowed to go in *Convoe*, or *Company*. Before they set out, they make a verbal *Convention*; which has the same Force, as if it were in *Writing*.

The Regulations of the *Admiralty of Holland* are partly followed by the *French*, and other *Nations*; and partly improved, and augmented with new ones; as, that No *Fisher* shall cast his *Net* within a hundred *Fathoms* of another *Boat*: That while the *Nets* are cast, a *Light* shall be kept on the hind Part of the *Vessel*: That when a *Boat* is by any Accident obliged to leave off *Fishing*, the *Light* shall be cast into the *Sea*: That when the greater Part of a *Fleet* leaves off *Fishing*, and casts *Anchor*, the rest shall do the same, &c.

The Manner of *Fishing* has nothing particular in it. The *Nets* wherein the *Fish* is drawn, should, regularly, have their *Meshes* an Inch square, that none of the lesser *Fry* may be taken. See *NETS*.

The Commerce of *Herring*, both *pickled*, and *red*, is very considerable: But there are so many different Sorts prepared; in such different ways, and different Places, that 'tis hard to say any thing precise thereupon.

Those prepared by the *Dutch*, are in the greatest Repute: They are distinguish'd into four *Kinds*, according to their *Sizes*. The *Goodness* of this Commodity consists in its being fat, fleshy, firm, white; salted the same Day 'tis taken, and with good *Salt*, and well barrel'd.—

The *Irish Herring* are the next in Value after those of *Holland*; and principally those of *Germuth* and *Dublin*, which are scarce inferior to the best *Herring* of *Rotterdam*, or *Enkhusen*. The *Scottish Herring* is not near so well prepared, gutted, salted, nor barrel'd as the *Dutch*; and yet its Taste is excellent: Nor is it doubted, but that if the *Scotts* were as careful in these Circumstances, as their Neighbours, their *Herring* would be the best in the World. The *Herring* fish'd in *England* is inconsiderable; the *Fish* being too dry and fresh for the Market.

Method of *Curing*, and *Preparing Pickled*, and *Red Herring*.

^o. For *Pickled Herring*: As soon as the *Herring* are taken out of the *Sea*, one of the *Crew*, appointed for this Office, cuts them open, and takes out the *Guts*, and every thing but the *Milt*, and the *Eggs* which are always to be left in the *Body* of the *Fish*. Then, washing them in fresh *Water*, they are left the Space of twelve or fifteen Hours in a *Tub* full of strong *Brine* made of fresh *Water*, and *Sea Salt*.

When they are taken out, they drain them; and when well drain'd, put them up in *Barrels*; taking care to dispose and range them evenly, in *Rows*, or *Layers*; and pressing them well down; and strewing a *Layer* of *Salt* both at *Top*, and *Bottom*.

When the *Barrel* is full, they stop it up very close; that no *Air* may get in, nor any *Brine* out; either of which is very prejudicial to the *Fish*.

^o. For *Red Herrings*: The *Fish* being caught, they proceed to wash, gut, and lay them in *Brine*, as for *pickled Herring*; only they let them lie double the *Time* in *Brine*, viz. twenty four Hours; inasmuch as they are to take all their *Salt* here, whereas the other *Kind* takes half its *Salt* in the *Barrel*.

When the *Herring* is taken out of the *Brine*, they spit them, i. e. string them by the *Head* on little wooden *Spits*, and thus hang them in a kind of *Chimneys*, made for the purpose; and when the *Chimney* is as full as it will hold, which less than ten or twelve thousand seldom effects, they make a little *Fire* underneath, of *brush Wood*, which yields a deal of *Smoke*, but no *Flame*.

Here the *Herring* remains, till sufficiently smok'd, and dried; which ordinarily is in 24 Hours. Then they are taken down, and barrel'd up for keeping.

Their *Goodness* consists in their being large, firm, and dry; their *Outside* of a yellow, golden Colour; their *Eggs*, or *Milt* within, and well salted and barrel'd.—

SALMON FISHERY:

The *Salmon*, according to some, breeds in the *Sea*; but the Opinion of others seems better warranted, that he breeds in the clear sandy Parts of *Rivers*, not far from the Mouths thereof. They commonly spawn in *October*, and the young becomes a *Smolt* the following Year, and in a few Months a large *Salmon*. The *Milt* and *Spawner* having perform'd their Office, betake themselves to the *Sea*; and if their Return be prevented by *Wears*, or the like, they become sick, lean, pine away, and die in two Years time: If they spawn in the mean time, the *Produce* is a diminutive *Salmon*, called *Skogger*, which will never arrive at the natural *Bulk*; it being the *Sea* that makes them grow big, and the *Rivers*, fat. The *Female* is distinguish'd from the *Male*, in that its *Nose* is longer and more hooked, its *Scales* not so bright, and its *Body* speckled over with dark-brown Spots; its *Belly* flatter, and its *Flesh* not so red; more dry, and less delicious to the Taste. In spawning Time, when they repair from the *Sea* up the *Rivers*, scarce any thing can stop their Progress. We have seen them leap up *Cataracts* and *Precipices*, many Yards high.—

The chief *Salmon Fisheries* in *Europe*, are along the Coasts of *England*, *Scotland*, and *Ireland*. The *Fishing* usually begins about the first of *January*, and ends by the last of *September*. It is perform'd with *Nets*, in the Places where the *Rivers* empty themselves into the *Sea*; and along the *Sea Coasts* there about. The *Fish* are seen to crowd thither frequently in *Shoals* from all Parts, in search of the fresh *Water*: They also fish for them higher up in the *Rivers*; sometimes with *Nets*; and sometimes with a kind of *Dikes*, or *Wears* made for the Purpose, with iron *Grates* therein, so disposed, as that the *Fish*, in going up the *River*, open them with their *Head*; but are no sooner enter'd, than the *Gate* claps to. Thus the *Salmon* are inclosed as in a *Reservoir*, where it is easy taking them. In some Places they fish for *Salmon* in the *Night* time, by the *Light* of *Torches*, or kindled *Straw*. The *Fishermen* watch when the *Fish* draws towards the *Light*, whereof he is naturally a great Lover, and strike him with a *Fork*, or *Litter*. In some Parts of *Scotland*, it is said, they ride a-fishing up the *Rivers*, and when they spy them in the shallow Parts, shoot them with *Pistols*.—

When the *Fish* is taken, they open them; take out the *Guts* and *Gills*, and salt them, in large *Tubs* for the Purpose: Out of which they are not taken before *October*, to be pack'd up in *Casks* from three to four hundred and fifty *Pound Weight*.

Salmon is also fish'd in *Rivers*, after the manner of *Trout*, with a *Line*, and *Hook*. He bites best in the Afternoon, about *Three*, in *May*, *June*, *July*, and *August*; the *Water* being clear, and a little Breach of *Wind* stirring; especially if the *Wind* and *Stream* let contrary ways. The *Salmon* is catch'd like a *Trout*, with *Worm*, *Fly*, and *Minion*; and especially the *Garden Worm*, if well scour'd, and kept twenty Days in *Moss*. The *Salmon* never stays long in a Place, but is continually shifting; to be as near the *Spring Head* as possible, and swimming generally in the deepest and broadest Parts of the *Rivers*, near the *Ground*. Put two, or three *Garden Worms* well scour'd on your *Hook* at once, as if you were baiting for *Trout*; and be sure to give him *Time* to gorge his *Bait*, before you strike. Some use a *Wire-line* on the *Top* of the *Rod*, through which the *Line* may be let run to any Length at Pleasure, by a *Reel* near at hand.—

MACKAREL FISHERY.

The *Mackarel* is a *Salt-water Fish*, without *Scales*. Its *Body* is round, and fleshy; terminating almost in a Point, at each Extreme.

Some Persons, well skilled in the Naval Architecture, hold it Figure the most commodious for Swimming of all others, and propose it as a Model for the Building of Ships.

'Tis ordinarily about a Foot long: When in the Water, it appears yellow; and when out of it, of a Silver White, excepting for Streaks, or Speckles of a deep Black, on the Back, and Sides.

The Mackerel is found in large Shoals, in divers Parts of the Ocean; but especially on the *French* and *English* Coasts.

The Fishing is usually in the Months of *April*, *May*, and *June*, and even *July*, according to the Place. They enter the *English* Channel in *April*, and proceed up to the Straights of *Dover*, as the Summer advances; so that by *June* they are on the Coasts of *Cornwall*, *Suffex*, *Normandy*, *Picardy*, &c. where the *Fishery* is most considerable. They are an excellent Food, fresh; and not to be despised, when well prepared, pickled, and put up in Barrels.

Naturalists have observed, that the Water wherein Mackerel has been boiled, yields a Light, after stirring it a little.

The Fish is taken two ways; either with a Line, or Nets: the latter is the more considerable; and is perform'd in the Night-time. The Rules observ'd in the Fishing of Mackerel are much the same as those already mentioned in the *Fishery* of *Herrings*.

There are two ways of pickling them: The first is, by opening and gutting them, and filling the Belly with Salt, cramm'd in as hard as possible with a Stick: Which done, they range them in Strata or Rows, at the Bottom of the Vessel, strewing Salt between the Layers.

In the second way, they put them immediately into Tubs full of Brine, made of fresh Water, and Salt; and leave them to steep, till they have imbued Salt enough to make them keep: After which they are taken out, and barrel'd up; taking care to press them close down.

COD FISHERY.

The *Cod* is a Fish of Passage, pretty large, with a frightful Head; Teeth in the Bottom of the Throat; its Flesh, white; its Skin, brownish on the Back, white under the Belly; and cover'd with thin, transparent Scales.

It eats excellently, when fresh; and, if well prepared and salted, will keep a long Time. 'Tis this Fish, commonly eaten among us in Lent, &c. under the Denomination of *Salt-Fish*, or *Stock-Fish*.

There are two Kinds of Salt Cod; the one called *Green* or *White*; and the other *Dried*, or *Cured*: Tho' it is all the same Fish; only differently prepared.

Green Cod.

The chief *Fisheries* for *Green Cod* are in the Bay of *Canada*, on the Great and Little *Bank* near the Coast of *New-found Land*, the Island of *St. Peter*, and the Isle of *Sable*: And hither, Vessels are yearly sent from divers Parts, both of *America* and *Europe*.

The Vessels used herein, are from an hundred, to an hundred and fifty Tons; which will bring thirty, or thirty five thousand Fish a-piece.

The most essential Articles in this *Fishery* are three Persons, who know how to open the Fish, to cut off the Heads, and to salt them; upon the Ability of which last the Success of the Voyage chiefly depends.

Several Authors will have it, that the *Biscayans*, in pursuing their Whales, made the first Discovery of the Great and Little *Bank* of *Cods*, *New-found Land*, *Canada*, &c. a hundred Years before *Columbus's* time; and that it was a *Biscayan New-found-lander*, that gave the first Intimation thereof to *Columbus*.

Others say, that the Great *Bank* was discover'd by a Native of *St. Maloes*, named *Carrier*. But, be the Inventor of what Name or Nation he will, the Invention is certainly highly valuable: Not a trading Nation in *Europe*, but allows the Commerce of *Cod Fish* one of the most secure and gainful that is known.

The best, largest, and fatest *Cod*, are those taken on the South Side of the Great *Bank*; which is a kind of submarine Mountain, 150 Leagues long, and 50 broad; and at the Distance of 25 from *New-found Land*: Those on the North Side are much smaller.

The best Season is from the Beginning of *February*, to the End of *April*; at which Time the *Cod*, which during the Winter had retired to the deepest Parts of the Sea, return to the *Bank*, and grow very fat.

Those caught from *March*, to *June*, keep well enough; but those in *July*, *August*, and *September* soon spoil.

The Fishing is sometimes done in a Month, or six Weeks; sometimes it holds six Months. As Lent draws on, if the Fishers have but half their Cargo, they strive to make home-ward the first; the Market being then the best.

Some will make a second Voyage, before others have got Loading for the first. Each Fisher only takes one *Cod* at

a time; and yet the more experienc'd will take from 350 to 400 per Day: But this is the most; for 'tis very fatiguing Work, both on account of the Weightiness of the Fish, and of the extreme Cold which reigns on the *Bank*.

The Salary usually allowed the Captain and Sailors, is one Third of the *Cod* they bring home found.

They salt the *Cod* on Board. The Head being cut off, the Belly open'd, and the Guts out; the Salter ranges them in the Bottom of the Vessel, Head to Tail; and having thus made a Layer thereof, a Pathos or two square, covers it with Salt: Over this he lays another, which he covers as before; and thus he dispises all the Fish of that Day, taking care never to mix the Fish of different Days together.

By that time the *Cod* has lain thus to drain three or four Days, they are moved into another Part of the Vessel, and salted a-fresh. After this, they are no more to be touch'd, till the Vessel have its Burthen.

Sometimes they put them up in Barrels, for the Convenience of Carriage.

Dry Cod.

In the Fishing of *Dry Cod*, Vessels of all Sizes are used; though such are generally chose, as have large Holds, by reason this sort of Fish incumbers more than it burthens.

As *Cod* is only to be dried by the Sun, the *European* Vessels are obliged to put out in *March*, or *April*, to have the Benefit of the Summer for Drying. Indeed, we send Vessels for *Cod* in *June*, and *July*; but those only buy what has been fil'd and prepared by the Inhabitants of the *English* Colonies of *New-found Land*, and the neighbouring Parts; in exchange for which, we carry them Meats, Brandy, Biscuits, Pulse, Molasses, Linnen, &c.

The principal *Fishery* for *Dry Cod* is along the Coast of *Placentia*, from *Cape-Rose*, to the *Bay des Experts*; in which Compa's there are divers Commodious Ports for the Fish to be dried in.

The Fish intended for this Use, tho' of the same Kind with the *Green Cod*, is yet much smaller; whence it is the fitter to keep, as the Salt takes more hold.

The Method of Fishing is much the same in both; only this latter is the more expensive, as it takes up more Time, and employs more Hands; and yet scarce half so much Salt is spent in this, as the other.

When several Fishing Vessels meet, and intend to fish in the same Port; he whose Chalmoupe first touches Ground, becomes entitled to the Quality and Privileges of Admiral; has the Choice of his Station, and the Refusal of all the Wood on the Coast at his Arrival.

As fast as the Captains arrive, they unrig all their Vessels, leaving nothing but the Shrouds, to sustain the Masts; and in the mean time the Mates provide a Tent on Shore, cover'd with Branches of Fir, and Sails over them; with a Scaffold, sixty, or sixty Foot long; and one third as much broad. While the Scaffold is making ready, the Crew are a-fishing; and as fast as they catch, they bring their Fish, open them, and salt them on moveable Benches: But the main Salting is perform'd on the Scaffold.

When the Fish has taken Salt, they wash them; and to drain them again, lay them in Piles on the Galleries of the Scaffold: When drained, they range them on Hurdles, a Fish thick, Head against Tail, with the Back uppermo'st; observing, while they lie thus, to turn, and shift them four times every 24 Hours.

When they begin to dry, they lay them in Heaps, of ten or twelve a-piece, to retain their Warmth; and continue to enlarge the Heap every Day, till it becomes double its first Bulk: At length they join two of these Heaps into one, which they turn every Day, as before. Lastly, they salt them over again; beginning with those that had been salted first; and thus lay them in huge Piles, as big as Hay-Stacks.

And thus the rest: Till they are carried a Ship-board, where they are laid on Branches of Trees, disposed for that purpose in the Bottom of the Vessel, with Mats all around, to prevent their contracting any Moisture.

There are four kinds of Commodities drawn from *Cod*, viz. the *Tripes*, and *Tongues*, which are salted at the same time with the Fish, and barrel'd up: The *Reers*, or Eggs, which being salted and barrel'd up, serve to cast into the Sea, to draw Fish together, and particularly *Pilchards*: And lastly, the *Oil*, which is used in the dressing of Leather, &c.

The *Seers* catch a small kind of *Cod* on the Coasts of *Biscayan*, which is highly prized, tho' very much like *Lings*. They salt it, and dry it in the Sun, upon Rocks; and sometimes in the Chimney: But the greatest Part of it is spent at home.

Sturgeon Fishery.

The *Sturgeon* is a large Sea Fish, which at its Season runs up the Rivers; having a sharp-pointed Snout, flat Belly,

Belly, and bluish Back. Sturgeons are reckon'd among the Number of Royal Fishes; and when left on Shore, belong to the King; but when taken out at Sea, are the Property of the Person who takes them. See ROYAL FISH.

There are Sturgeons of all Sizes; and we even read of some twenty Foot long; But the middle Size are reckon'd the best.

Some will have this the *Silurus* of the Antients.

'Tis of the Roe, or Eggs of this Fish, that the *Caviar* or *Kavia*, so much prized by the *Italians*, &c. is prepared. See CAVIAR.

Sturgeons, when fresh, eats deliciously. To make it keep, they salt or pickle it in large Pieces, and put them up in Casks, from 25 to 50 Pounds.

The greatest *Sturgeon Fishery* in the World is in the Mouth of the *Volga*, in the *Caspian Sea*; where the *Muscovites* find Employment for a great Number of Men.

They are not caught in Nets, but in a kind of Inclosure, form'd by huge Stakes, dispos'd in Triangles, representing the Letter Z several times repeated. These sort of *Fisheries* are open on the Side towards the Sea; and close on the other; by which means the Fish, ascending in its Season up the River, embarras'es it self in these narrow, angular Retreats, and not being able to turn it self, to go back again, by reason of its Bulk, is easily struck, and killed with a sort of harping Iron.

The chief Object of this *Fishery* is the Roe; which is a Commodity as much used in *Muscovy*, as Butter in *Holland*; and there are Sturgeons, that furnish 400 Pounds thereof. 'Tis only the lesser and younger Sturgeon, that they pickle for Eating.—

PILCHARD *Fishery*.

The *Pilchard* is a small Salt-water Fish, bigger than the Anchovy; but less than the Herring, which in other respects it resembles. Its Head is yellow; Belly, white; and head, a Sea-green. It eats admirably, fresh, or lightly salted.

There are Seasons for fishing the *Pilchard*; which, like the Herring and Anchovy, is a Fish of Passage. They are prepared and salted much as the Anchovy is; with this Difference, that the Head is cut off the latter: But the *Pilchard* were distinguishable from the Anchovy, even tho' its Head were off likewise; the *Pilchard* having a very flat Back, and the Anchovy a round one.

The chief *Pilchard Fisheries* are along the Coasts of *Dalmatia*, to the South of the *Iland Iffa*: On the Coasts of *Bretagne*, from *Bell Island*, as far as *Brest*; and along the Coasts of *Cornewall* and *Devonshire*.

That on the Coasts of *Dalmatia* is so plentiful, that it not only furnishes all *Greece*; but a great Part of *Italy*. That on the Coasts of *Bretagne* employs yearly above three hundred Sloops, and most of the Seamen of the Country.

The Fish caught on our own Coasts, tho' bigger, are not so much valued, as those on the Coasts of *France*; owing principally to their not being so thoroughly cured. The Season is from *June* to *September*.—

The *Pilchards* naturally follow the Light; and will gather about a Boat, which bears a Light in the Night-time; which contributes much to the Facility of the *Fishery*.

On the Coasts of *France* they make use of the Roes of Cod-fish, as a Bait; which, thrown into the Sea, makes them rise from the Bottom, and run into the Nets, dispos'd for the Purpose.

On our Coasts, there are Persons posted a-shore, when spying by the Colour of the Water where the Shoals are, make Signs to the Boats, to get among them, to cast their Nets.

When taken, the Fish are brought to a Ware-house on Shore, where they are laid up in broad Piles, supported by Backs or Sides.

As they pile them, they salt them with Bay Salt; in which, lying soaking twenty or thirty Days, they run out a deal of Blood, with dirty Pickle, and Bittern; which last draws a deal of the Oil from the Fish, to the great Loss of the Owners. When taken out of the Pile, there remains a deal of Salt, Blood, Scales, &c. at Bottom, which, with fresh Salt, serves for another Pile.

They now proceed to wash them in Sea Water, to clear off the Dirt, and Blood; and when dry, put them up in Barrels, and press them hard down, to squeeze out the Oil, which issues away at an Hole in the Bottom of the Cask: And in this State, they are fit for Sale, or Use.—

Pearl FISHERY, see PEARL *Fishery*.

FISHING, the Act, or Art of catching Fish. See FISH. *Fishing* is distinguish'd, with regard to its Instrument, into that perform'd with the Net, for Fish that go in Shoals; and that with the Hook, for solitary Fish: Which latter is properly call'd *Angling*. See NET, and ANGLING.

Fishing again, is distinguish'd, with regard to its Object, into that perform'd in Salt Water; and that in Fresh. The first practis'd for Whales, Herring, Cod, Salmon, Pearls, Mackerel, and other Sea Fish. See FISHERY.

The latter practis'd for Pike, Trout, Carp, Tench, Perch, Dace, Eels, &c.

The Instruments principally used in Angling, or *Fishing with the Hook*, are the Rod, Line, Hook, and Fly. See FISHING ROD, FISHING HOOK, FISHING FLY, &c.

The Points on which the Art of *Fishing* chiefly turns, are the proper Season, Place, Bait, and manner of Application. What relates to each hereof, we shall here entertain the Reader withal, in the several kinds of *Fishing*, chiefly practis'd among us.

PIKE FISHING. The *Pike* is reputed the Tyrant of the fresh Waters: By the common Consent of Naturalists, he is the longest lived of all Fishes. The larger he is found, the coarser the Food; and *vice versa*. This Fish never swims in Shoals, but always single; being very rapacious, and preying even on his own kind. He spawns in *February*, and *March*. The best Sort is in Rivers: The worst in Meads and Ponds. His ordinary Food is Pickeral Weed, Frogs, and what Fish he can lay hold on.

There are two ways of *fishing* for the *Pike*; by the Ledger Bait, and the Walking Bait. 1^o. The *Ledger Bait* is that, fix'd in one certain Place; and which the Angler may leave behind him. Of this kind, the best is some living Bait, as a Dace, Roach, Gudgeon, or yellow Frog. To apply it, if a Fish, stick the Hook through his upper Lip; then fastening it to a strong Line, ten or twelve Yards long, tie the other End of the Line to some Stake on the Ground, or Bough of a Tree, near the Pike's usual Haunt; letting the Line pass over the Fork of a Stick, plac'd for the purpose; suspending the Hook, and about a Yard of Line in the Water; but so, as that when the *Pike* bites, the Fork may give way, and let him have Line enough to his Hold and Paunch. If the Bait be a Frog, the Arming Wire is to be put in at his Mouth, and out at his Gills, and one of the Legs to be stich'd, or tied over the upper Joint of the Wire.— 2^o. The *Walking Bait* is that the Fisher casts in, and conducts with a Rod, &c. This Method is perform'd by a Troll, with a Winch to wind it up withal. At the Top of the Rod is to be plac'd a Ring for the Line to be run thro'. The Line, for two Yards, and a Quarter next the Hook, to be of Silk, double; and arm'd with Wire, the length of seven Inches: On the Shank of the Hook is to be fasten'd a smooth piece of Lead, so as to sink the Fish Bait, which is to be a Gudgeon, with its Head downwards. Thus dispos'd, the Bait to be cast up, and down; and if you feel the Fish at the Hook, give him Length enough, to run away with the Bait, and paunch it: Then strike him with a smart Jerk. To fish with a dead Bait, use a Minnow, yellow Frog, Dace, or Roach, anointed in Gum of Gee, dissolved in Oil of Spike; and cast it where the *Pike* frequents. After it has lain a little while at the Bottom, draw it to the Top, and so up the Stream, and you will quickly perceive a *Pike* in earnest Pursuit thereof. The Fish bites best about three in the Afternoon, in clear Water, with a gentle Gale, from the Middle of Summer, to the End of Autumn; but in Winter all Day long; and in the Spring he bites best early in the Morning, and late at Night.—Another Method of *fishing* for *Pike*, see under HUKING.

TROUT FISHING. The *Trout* is a delicious Fresh-water-Fish, speckled with red and yellow; coming in, and going out of Season with the *Buck*, and spawning in the cold Months of *October* and *November*; whereas all the other Species spawn in hot Summer Weather. There are divers Kinds of this Fish, all valuable; but the best are the red and yellow *Trouts*; and of these the Female, distinguish'd by a less Head and deeper Body, is prefer'd. They are known to be in Season, by their large Backs; which may serve as a Rule for other Fish. All Winter long they are sick, lean, and unwholesome, and frequently looly. As the Spring comes on, deserting the still, deep Waters, they repair to the gravelly Ground, against which they continue to rub, till they have got rid of their Lice, which are a kind of Worms, with large Heads. From that Time they delight to be in the sharp Streams, and such as are swift; where they lie in wait for Minnows and May Flies. At the latter End of *May* they are in their prime.

The usual Baits whereby the *Trout* is catch'd, are the Worm, Minnow, and Fly, either Natural, or Artificial. The proper Worms are the Brandling, Lob-worm, Earth-worm, Dung-worm, and Maggot, or Gentle, especially the two first: But whatever Worms are used, they are the better for keeping, which is to be done in an earthen Pot, with Mole frequently changed. For the *Minnow*, slip the Hook thro' his Mouth, and the Point and Beard out of the Tail, so as it may lie almost straight on the Hook. Then try against the Stream, whether it will turn. In defect of a Minnow,

a small Leach may serve the Turn; or for want of either, an artificial one may be made of Cloth, by the Life, which is found every where as good a Bait as the natural one.

For *Fishing with Flies, either Natural, or Artificial*, see *FISHING Fly*.

Carp FISHING. The *Carp* is generally held the Queen of Fresh-water Fish. It is exceeding subtle, and of all others, the Eel only excepted, lives longest out of Water. Mr. Ray assures us, that in *Holland* they have a speedy way of fattening them, by hanging them up in a Net in a Cellar, and feeding them with White-Bread and Milk. They breed several times in one Year; for which reason we seldom meet with either Male or Female, without either Melt or Spawn. Their natural Place is a Pond; in running Waters they rarely, if ever, breed. To make them fat and large, 'tis a good way, when the Pond is low, in *April*, to rake all the Sides thereof with an iron Rake, and sow Hay Seeds thereon. By Autumn there will be a Crop of Grass; which coming to be overflod'd, as the Pond rises, will be a fine Feeding Place for them.

A World of Patience is required to angle for Carp, on account of their incredible Policy. They always chuse to lie in the deepest Places: They seldom bite in cold Weather; and in hot, a Man cannot be too early, or too late for them. When they do bite, there is no fear of the Hold. The Baits are, the Red Worm, in *March*; the Candice, in *June*; and the Grasshopper in *July, August, and September*. Proper Pastes may also be prepared for him; as Honey and Sugar wrought together, and thrown in Pieces into the Water, some Hours before you begin to angle. Honey and White Creams of Bread mix'd together do also make a good Paste.

Tench FISHING. The *Tench* is a fine Fresh-water Fish, having very small Scales, but large, smooth Fins, with a red Circle about the Eyes, and a little Barb hanging at each Corner of the Mouth. It takes more Delight among Weeds in Ponds, than in clear Rivers; and covets to feed in foul Water. His Slime is said to have a healing Quality for wounded Fish; upon which Account he is commonly called the *Fishes Physician*. When the Carp, Pike, &c. are sick, they find Relief by rubbing themselves against the Tench.

The Season for catching this Fish, is in *June, July, and August*, very early, and late, or even all Night, in the still Part of Rivers. His Bait is a large Red Worm, at which he bites very eagerly, if first dipt in Tar. He also delights in all sort of Pastes, made up of strong scented Oils, or with Tar: Or a Paste of brown Bread, and Honey. Nor does he refuse the Cud-worm, Lob-worm, Flag-worm, green Gentle, Cad-bait, or soft boil'd Bread, Grain.

Pearch or Perch FISHING. The *Pearch* or *Perch* is hook-back'd, not unlike a Hog; arm'd with stiff Gristles, and his Sides with dry thick Scales: He is voracious, and will venture on his own Kind; even with greater Courage than the Pike. He seldom grows above two Foot long: He spawns in *February, or March*; and bites best when the Spring is far spent.

The proper Baits are, the Brandling, Minnow, and small Frog; as also the Cob-Worm, Bob Oak-Worm, Gentle, Wasp, and Cad Bait. The Minnow yields the best Sport, which is to be alive, and stuck on the Hook through the upper Lip, or Back Fin, and kept swimming about Mid-Water. If the Frog be used, he is to be fasten'd to the Hook by the Skin of his Leg. When the Fish bites, as he is none of the Leather-mouthed kind, he must have Time to pouch his Bait. The best Place to fish for him, is in the turning of the Water Eddy, in a good Gravel Bottom.

Roach FISHING. The *Roach*, or *Roabet* is no delicate, but a very filly Fish. Those in Rivers are more valued, than those in Ponds; tho' the latter are much the larger. They spawn about the Middle of *May*.

To angle for this Fish in *April, Cads* or Worms are proper Baits; so are small white Snails or Flies in Summer. The Bait is always to be under Water; for the Fish will not bite a-top. Others use a *May Fly*, in that Season, with good Success. In Autumn a Paste must be used, made of the Crum of White Bread, moulded with a little Water, labour'd with the Hands into a tough Past, and colour'd, not very deep, with red Lead. In Winter, Gentles are the best Bait, Sprouted Malt; the young Brood of Wasps, and Bees, dipt in Blood; and the thick Blood of Sheep, half dried, are Nutrients in this sort of *Fishing*.

Dace, and Dore FISHING. The *Dace*, and *Dore*, bearing a near Resemblance to each other, in Kind, Size, Goodness, Feeding, Canning, &c. we join them together. They bite at any Fly; but especially the Stone Caddice Fly, or *May Fly*, the latter End of *April*, and most Part of *May*; and the Ant Fly in *June, July, August, &c.* They rarely

refuse a Fly a-top of the Water, in a warm Day; but when you fish under Water for them, 'tis best to be within a handful of the Ground. To catch *Dace* in *Waters*, the Bait is a white Worm, with a large red Head, gather'd after the Plough in Heath or sandy Grounds.—The Nutrients for Roaches are also commended for *Dace*.

Gudgeon FISHING. The *Gudgeon* is a small Fish, of a very delicious Taste. It spawns three or four times in the Summer Season, and feeds in Streams, and on Gravel; fighting all kind of Flies: But is easily taken with a small red Worm, fishing near the Ground; and being a leather-mouthed Fish, will not easily be off the Hook, when struck. The Gudgeon may either be fish'd for with a Float, the Hook being on the Ground; or by Hand, with a running Line on the Ground, without Cork, or Float. He will bite well at Wasps, Gentles, and Cad Baits; and one may even fish him with two or three Hooks at the same time; which makes good Sport. When you angle for Gudgeons, stir up the Sand or Gravel with a long Pole, which will make them gather to the Place, and bite the faster.

Flounder FISHING. The *Flounder* is a flat Sea or River Fish; caught in *April, May, June, and July*, in any time of the Day; in a swift Stream, and sometimes also in the still Deep. The best Bait is red Worms, Wasps, and Gentles.—

Eel FISHING. The *Eel* is a Fresh-water Fish, much in Shape of a Serpent: Naturalists have long been divided, as to the Manner how it is produced; whether by Generation, or Corruption as Worms are; or by certain glutinous Dew Drops, which, falling in *May* and *June* on the Banks of some Ponds and Rivers, are by the Heat of the Sun turn'd into Eels. This is certain, that there is not the least Appearance of Sex or Difference therein. *Mr. Mylius*, in a Treatise of the *Origin of Animals*, describes a Method of producing them by Art. He says, that if you cut up two Turfs, cover'd with *May Dew*, and lay one on the other, the grassy Side inwards; and thus expose them to the Heat of the Sun, on the Banks of a Water: In a few Hours time there will spring from them an infinite Quantity of Eels. The Kinds of Eels are various: Some reduce them to four; the *Silver Eel*; a greenish, call'd the *Gray Eel*; a blackish *Eel*, with a broad flat Head; and an *Eel with reddish Fins*. The first is allowed to generate: It is viviparous, and the young, when it comes from the Female, is no bigger than a small Needle.

The *Silver Eel* may be caught with divers Baits; particularly powder'd Beet, Garden Worms, or Lobs, Minnows, Hens Gut, Fish Garbage, &c. But as they hide themselves in Winter in the Mud, without stirring out for six Months, and in the Summer take no Delight to be abroad in the Day, the most proper Time to take them, is in the Night, by fastening a Line to the Bank Side, with a laying Hook in the Water. Or a Line may be thrown at large with good Store of Hooks baited, and plumb'd, with a Float, to discover where the Line lies, in the Morning. The Roach does here well for a Bait, the Hook being laid in his Mouth.—Another usual way of catching Eels, call'd *Swigging*, is perform'd in the Day time, by taking a strong Line, or Hook baited with a Lob, or Garden Worm, and resorting to such Holes and Places, as Eels use to abound in, near Mills, Weirs, or Flood Gates; where, the Bait being gently put into the Hole, by help of a cleft Stick, the Eel will certainly bite.—*Bobbing for Eels* is another Method: In order to this, four some large Lobs, and with a Needle run a twisted Silk through them, from End to End, taking so many as may be wrap'd a dozen times round a Board. Tie them fast with the two Ends of the Silk, that they may hang in so many Links. This done, fasten all to a strong Cord, and about an Handful and an half above the Worms fix a Plummet, three Quarters of a Pound Weight; and make the Cord fast to a strong Pole: *Fishing* with these in muddy Water, the Eels will bite hastily at the Bait. When you think they have swallow'd it, gently draw up the Line, and bring them ashore as soon as may be.—Others use an Eel Spear, with three or four Forks, or jagged Teeth, which they strike at random into the Mud.—

Chub FISHING. The *Chubin* or *Chub* is a Fresh-water Fish, with a large Head. It spawns in *March*, and is very strong, tho' inactive; yielding in a very little Time, after he is struck; and the larger he is, the quieter. His Bait is any kind of Worm, or Fly, particularly the large Yellow-moth; also Grain, Cheese, the Pith in the Bone of an Ox's Back, &c. He affects a large Bait, and Variety of them at the same Hook. Early in the Morning angle for him with Snails; but in the Heat of the Day chuse some other Bait; and in the Afternoon fish for him at Ground, or Fly.

FISHING Fly, a Bait used in Angling for divers kinds of Fish. See FISH, and FISHING.

The Fly is either Natural, or Artificial.

Natural Flies are innumerable: The more usual on this occasion are the *Dun-Fly*, the *Stone*, or *May-Fly*, the *Red-Fly*, the *Moor-Fly*, the *Lacey-Fly*, the *Vine-Fly*, the *Shell-Fly*, the *Cloudy* and *Blackish-Fly*, the *Flag-Fly*; also *Caterpillars*, *Canker-Flies*, *Bear-Flies*, &c. all which appear sooner or later, according to the Forwardness or Backwardness of the Spring. To know the particular Fly the Fish most covets, when you come in the Morning to the River-side, beat the Bushes with your Rod, and take up what Variety you can of all sorts of Flies; try them all, and you will quickly know which are in greatest Esteem: Not but that they will sometimes change their Fly, but it is only when they have glutted themselves therewith.

There are two ways to fish with Natural Flies, either on the Surface of the Water, or a little underneath it.

In angling for Chevin, Roach, or Dace, move not your Natural Fly swiftly, when you see the Fish make at it; but rather let it glide freely towards him with the Stream: But if it be in a still and slow Water, draw the Fly slowly sideways by him, which will make him eagerly pursue.

For the *Artificial Fly*, 'tis seldom used but in blustering Weather, when the Waters are so troubled by the Winds, that the Natural Fly cannot be seen, nor rest upon them.

Of this Artificial Fly, there are reckon'd no less than twelve Sorts; of which these are the principal.

1. The *Dun-Fly*, in *March*, made of Dun Wool, and the Feathers of a Partridge Wing.
2. A *Dun-Fly*, made of black Wool, and the Feathers of a black Drake; the Body made of the first, and the Wings of the latter.
3. The *Stone-Fly*, in *April*, the Body made of black Wool, dy'd yellow under the Wings, and Tail.
4. The *Ruddy Fly*, in the Beginning of *May*; the Body made of red Wool, and bound about with black Silk, with the Feathers of a black Capon, which hang dangling on his Sides, next his Tail.
5. The *Yellow*, or *Greenish Fly*, in *June*; the Body made of black Wool, with a yellow Lint on either Side, and the Wings taken off the Wings of a Buzzard, bound with black broken Hemp.
6. The *Moorish Fly*; the Body made of dusky Wool, and the Wings with the blackish Mail of a Drake.
7. *Tawny-Fly*, till the Middle of *June*; the Body made of tawny Wool, the Wings made contrary one against the other, of the whitish Mail of a white Drake.
8. The *Wasp-Fly*, in *July*; the Body made of black Wool, cast about with yellow Silk, and the Wings of Drakes-feathers.
9. The *Steel-Fly*, in the Middle of *July*; the Body made of greenish Wool, cast about with the Feathers of a Peacocks-tail, and the Wings made of Buzzards Wings.
10. The *Drake-Fly*, in *August*; the Body made of black Wool, cast about with black Silk, his Wings of the Mail of a black Drake, with a black Head.

The best Rules for *Artificial Fly-Fishing*, are

- 1^o. To fish in a River somewhat disturbed with Rain; or in a cloudy Day, when the Waters are moved by a gentle Breeze: The South-wind is best; and if the Wind blow high, yet not too, but that you may conveniently guard your Tackle, the Fish will rise in plain Deeps; but if the Wind be final, the best Angling is in swift Streams.
- 2^o. Keep as far from the Water-side as may be; fish down the Stream, with the Sun at your Back, and touch not the Water with your Line.

- 3^o. Ever angle in clear Rivers, with a small Fly, and slender Wings; but in muddy Places use larger.

- 4^o. When after Rain the Water becomes brownish, use an Orange-Fly; in a clear Day, a light colour'd Fly; a dark Fly for dark Waters, &c.

- 5^o. Let the Line be twice as long, as the Rod, unless the River be incumber'd with Wood.

- 6^o. For every sort of Fly, have several of the same, differing in Colour, to suit with the different Complexions of several Waters and Weathers.

- 7^o. Have a nimble Eye, and active Hand, to strike presently with the rising of the Fish; or else he will be apt to spew out the Hook.

- 8^o. Let the Fly fall first into the Water, and not the Line, which will scare the Fish.

- 9^o. In flow Rivers, or still Places, cast the Fly cross over the River, and let it sink a little in the Water, and draw it gently back with the Current.

Salmon-Flies should be made with their Wings standing, one behind the other, whether two, or four. That Fish delights in the gawdiest Colours that can be; chiefly in the Wings, which must be long, as well as the Tail.

FISHING Floats, are little Appendages to the Line, serving to keep the Hook and Bait suspended at the proper Depth, to discover when the Fish has hold of them, &c.

Of these are divers Kinds; some made of *Muscovy Duck-quills*, which are the best for slow Waters; but for strong Streams, sound Cork, without Flaws or Holes, bored thro'

with an hot Iron, into which is put a Quill of a fit Proportion, is preferable: Pare the Cork to a pyramidal Form, and grind it smooth.

FISHING Hook, a little Engine, of Steel Wire, of a proper Form to catch and retain Fish. See HOOK.

The *Fishing Hook*, in general, ought to be long in the Shank, somewhat thick in the Circumference, the Point even, and straight; let the Bending be in the Shank.

For letting the Hook on, use strong, but small Silk, laying the Hair on the Inside of your Hook; for if it be on the Outside, the Silk will fret and cut it asunder.

There are several Sizes of these Fishing Hooks, some big, some little, and of these some have peculiar Names; as,

1. *Single Hooks*.
2. *Double Hooks*, which have two Bendings, one contrary to the other.
3. *Snappers*, or *Gorgers*, which are Hooks to whip the Artificial Fly upon, or to bait with the Natural Fly.
4. *Springers*, or *Spring Hooks*, a kind of double Hooks, with a Spring, which flies open, being struck into any Fish, and so keeps its Mouth open.

FISHING Rod, a long, slender Rod, or Wand, to which the Line is fasten'd, for Angling.—

Of these there are several Sorts; as,

1. A *Trotter*, or *Tralling Rod*, which has a Ring at the End of the Rod, for the Line to go through, when it runs off a Reel.
2. A *Whipper*, or *Whipping Rod*, a Top Rod, that is weak in the Middle, and top-heavy, but all slender and fine.
3. A *Dopper*, which is a strong Rod, and very light.
4. A *Snapper*, or *Snap Rod*, that is a strong Pole, peculiar for a Pike.
5. A *Bottom Rod*, being the same as the *Dopper*, but somewhat more pliable.
6. A *Sagging*, or *Praking Stick*, a forked Stick, having a short strong Line, with a Needle, baited with a Lob-worm: This is only for Eels in their Holes. See ANGLING, &c.

FISHING Vessels, or those used in the several Fisheries at Sea, or on the Coasts, are the

Buffe.	Fluit.
Coble.	Hocker.
Cock.	North Sea Boat.
Dogger.	Peter Boat.
Driver.	Smack.
Eel Boat.	Strand Boat.
Ear Boat.	Trawler.
Flyboat.	Trinker.—

FISSURE, *Fissura*, in Chirurgery; A Cleft or Crack in a Bone: Or, a longitudinal Fracture of a Bone: Or, a Solution of the Continuity of a Bone, whereby it is only cleft, or crack'd. See FRACTURE.

Fissures are of two Kinds: The one apparent, by the Greeks called *σύνωξις*, or *σύνωξις*; and by the Latins, *Scissura*: The other so small, as not to be visible, called *σύνωξις*, or *σύνωξις*. Capillary; as resembling a Thread.

The Causes of *Fissures* are Falls, Leaps, and Contusions of the Parts against hard Bodies. See BONE.

Fissures, especially in the Cranium, either happen on the Part the Stroke was given on; or on the opposite Part: That on the opposite Part is called *Comiter-Fissure*, or *Counter-Cleft*, by the Greeks *ἀντιώνυμις*; and the Latins, *Respassio*.

Old Men are more subject to *Fissures*, than young ones; by reason their Bones are drier.

Fissures are difficult to find; but the easiest cured of all Fractures: Tho', if they be not known, or be neglected, they bring on Ulcers, and Caries's; and in such Case become dangerous; so that there is frequently a Necessity of having Recourse to an Amputation of the Member.

The Signs of a *Fissure* of the Cranium, are bilious Vomiting; Vertigo; Flux of Blood at the Mouth, or Nose; Dumbness; Delirium, &c. If there be any *Fissure* in the Skull, the Patient will feel a Pain in the Place, upon holding a String between his Teeth, while the Chirurgion pulls it strongly.

In such Cases 'tis frequently necessary to perforate the Cranium, to give Vent for the Blood and Sanies.

FISTULA, in the ancient Musick, an Instrument of the Wind kind, resembling our Flute, or Flagecolor. See FLUTE.

The principal Wind Instruments of the Antients, are the *Tibia*, and *Fistula*: Tho' how these were constituted; or wherein they differ'd; or how they were play'd on, does not appear. All we know, is that the *Fistula* was at first made of Reeds, and afterwards of other Matters. Some had Holes; some none: Some again were single Pipes; others a Combination of several; Witness the *Syringa* of *Paus.* See *TIBIA*.

FISTULA, in Medicine, A deep, winding, callous, cavernous Ulcer, with a narrow Entrance, but opening thence into a spacious Bottom; and generally yielding a sharp, virulent Matter.

Fistula's differ from winding Ulcers in this, that the former are callous, and the latter not. See ULCER.

Chandisier

They attack all Parts of the Body, without Exception; particularly the Anus, Foramen lachrymale, Thorax, &c. The general Cause of *Fistula's*, is some Abscess, or Ulcer, which either being inveterate, or having been ill used, comes to be callous; the Orifice being at first lined or incrustated therewith, and at length the whole Sinus.

The Cure consists, in consuming the Callus, and healing, and consolidating the Ulcer with cleansing Medicines, and Sarcotics.

The Ancients gave the Name *Fistula* to this sort of Ulcers, from the Resemblance they bear, on account of their Depth, to a *Flute*, or *Pipe*, called by the Latins *Fistula*.

FISTULA in Ano, is a *Fistula* form'd in the Anus, of Fundament. See ANUS.

Of this, some Authors reckon four Kinds, *viz.* the *Cecum Interitum*, which is open outwards, but not into the Rectum: The *Cecum Exeritum*, which has an Aperture into the Rectum, but none outwards: The *Complex*, which opens both into the Anus, and the Intestine: And the *Cunicularis*, or that with several Sinus's, which discharge themselves into one common Cavity, that is the Fund, and as it were, Reservoir of them all.

Others, as *Wifeman*, reduces *Fistula's in Ano* to two Classes. The first are those, arising from a Phyma: These are very painful, and difficult to cure; as entering deep amongst the Intestines of the *Muscles*, and forming various Cuniculi, or Sinus's; which, the more remote they are from the Anus, the worse they be, by reason they do not allow of being cut: The second, owe their Origin to an internal Hemorrhage, or Extravasation between the Coats of the Rectum; and have a small Perforation, near the Circumference of the Anus, whence they yield a thin Sanies, or Isbor, without Pain: They in time bring on Itchings and Excoriations; and the Orifices at length become callous, and are sometimes closed, and sometimes open again.

Fistula's, if they do no Harm by the Copiousness of the Flux, the Stench, or the like Accidents, are a Benefit to Nature, as carrying off cachectic Humours; and ought not to be cured, but kept open. The fresh, simple *Fistula* may be cured without Danger.

The great way is by cutting; where that may be done without Damage to the Muscle of the Anus, which might occasion an involuntary Discharge of the Excrements. Cutting is either perform'd with a *T'read*, or a *cutting Instrument*. See each Method under the Article CUTTING for the *Fistula in Ano*.

FISTULA Lachrymalis, is a *Fistula* in the greater Canthus of the Eye, call'd also *Xylops Lachrymalis*.

It is a little deep callous Ulcer, in the greater Caruncle, or the Place of the Glandula Lachrymalis. It usually begins with an Abscess, call'd *Achylops*, which in time produces an Ulcer, that afterwards degenerates into a *Fistula*. When press'd with the Finger, it yields a stinking Matter, not unlike the Yolk of an Egg; and the corrosive Humor finding, or making it self a Passage, there ensues a perpetual Oozing.

Sometimes the Os Ethmoidis it self is corroded, and render'd carious by it; in which Condition it is supposed to be only curable by an actual Cautey: Sometimes it becomes carious; and then, *Riverius* directs, all Medicines to be laid aside.

The Cure of the *Fistula lachrymalis*, is wholly external and chirurgical; excepting that Evacuants and Meturicals may be given internally; as also Decoctions of the Woods. Some perforate the Os Nasæ, to give room for the Matter, to be evacuated that way.

A French Chirurgeon, named *Auel*, has found out a new way, *viz.* by putting a Probe and Syringe of an inconceivable Fineness, thro' the *Puncta lachrymalia* into the *Sacculus lachrymalis*.

FISTULA was also the Pipe put into the Cup, out of which the Communicants antiently sucked the Wine.

Divisi Eccllesiæ Crucis, Ataria, Serinia, Sc. Stulas, Fistulas, & Ornamenta varia. Flor. Wigorn. Anno 1087.

FISTULAR Flowers, among Herbalists, are those made up of many long, hollow, small Flowers, like Pipes; all divided into large Jaggs at the end. See FLOWER.

FISTULOUS, or *FISTULAR*, is applied by the Chirurgeons to Wounds and Ulcers, which degenerate into *Fistula's*.

Care must be taken, not to leave the Scroon too long in the Wound, lest it renders it callous and *stintulous*. Dionis.

Among Botanists, *fistulous* is understood of such Leaves of Plants, as are round and hollow within, like a *Fistula*, or Flute. Thus the Leaves of Onions are said to be *fistulous*.

FIT, in Medicine, an Access, or Paroxysm. See PAROXYSM.

FITS of the Mother, see HYSERIC Affection.

FITS of easy Reflexion and easy Transmissio, see REFLEXION, TRANSMISSION, LIGHT, &c.

PITCHEE, or **FICHEE**, in Heraldry, is when the lower Part of any Cross is sharpen'd into a Point, fit to fix into the Ground.

Thus, Azure, a Cross Potent *Fichee*.

The Origin hereof, *Muckenzey* ascribes to the primitive Christians, who used to carry their Crosses with them, wherever they went; and when they stop'd at any Place in a Journey, fix'd them in the Ground.

FITZ, a French Term, literally denoting Son; sometimes given by way of Addition to the natural Sons of the Kings of England; as *James Fitz-Roy*, Duke of *Grafton*, &c.

FIVE-leav'd Grass, **Cinque-foil**, in Heraldry, is us'd by such as would introduce a Blazon by Herbs and Flowers, instead of Metals and Colours, to signify *Vert* or *Green*. See **VERT**.

FIXATION, the Act of *fixing*, or rendering a thing firm, and fix'd. See **FIXITY**, and **FIRMNESS**.

FIXATION, in Chymistry, is a peculiar Preparation of Mercury, whereby it is put in a Condition to bear the Fire without evaporating; or the Hammer without flying, or separating. See **MERCURY**.

The Alchymists hold, that if they had the true Secret of fixing Mercury, without the Addition of any foreign less heavy and solid Ingredient, they could make Gold, at least Silver. See **PHILOSOPHERS Stone**.

Monf. *Homburg* has a long Process of many Months, to prepare an Oil from the fecal Matter, or human Excrements, which he imagin'd would have fix'd Mercury into Silver; but he fail'd. See **FECAL Matter**.

The Term is likewise applied in the general to any thing that fixes, and binds together what of its own Nature is volatile; and enables it to sustain the Force of the Fire for some considerable Time.

Geber defines *Fixation* an Operation whereby a volatile thing, *i. e.* a thing that cannot endure the Fire, is render'd capable of enduring it. In the general, *Fixation* is the changing of a volatile Body into a fix'd one. See **FIXED**.

FIXT, or **FIX'D Bodies**, in the general, are such, as neither the Fire, nor any Corrosive, has such Effect on, as to reduce or resolve them into their component Elements, *i. e.* absolutely to destroy them.

Chasovius holds it not sufficient to denominate a Body *fixt*, that it can withstand the Fire, or any one Agent; but it should withstand all. He contends, that *Fixity* should not be restrain'd, as it usually is, to an Exemption from Evaporation; but from Destruction, or Resolution into primary Elements; in which sense, Gold, precious Stones and Glass, and even Sulphur, and Mercury it self, are properly *fix'd Bodies*; for Mercury, and Sulphur retain their Nature, notwithstanding all their Evaporation. See **MERCURY**.

FIXT, or **FIX'D Bodies**, among Chymists, are such as bear the Violence of the Fire, without evaporating. See **EVAPORATION**.

The Chymists divide all Natural Bodies into *fix'd* and *volatile*, *i. e.* such as bear the utmost Force of the Fire, without dissipating, or spending themselves in Flame; and such as do not.

Of *fix'd* Bodies, the principal are Gold, Silver, precious Stones particularly the Diamond, Salts, &c.

Of all Metals, Gold and Silver alone are *fix'd*, *i. e.* remaining a long time exposed to the most intense Flame; they alone lose nothing of their Weight. See **VOLATILE**.

Whence this Property should arise, is difficult to say. If the Reader is not contented with the Causes enumerated under **FIXITY**, he may add the following one from *Boerhaave*, *viz.* The Homogeneity and Equality of the Parts.

The Parts, *sc. gr.* of Gold being all homogeneous and equal, will equally sustain each other, and leave equal Forces between them; through which Pores, when fus'd, the Fire finding an easy, equal Passage, goes off, without carrying any thing of the Metal with it: Or rather, the Particles of Gold being of all others the most solid, and heavy (as appears from the Weight of that Metal) and of all others the most strongly united, or bound together (as appears from the infinite Ductility of that Metal) the Force of the Fire is not sufficient to overcome so powerful a Resistance: The Solidity of the Particles, and their Freedom from Air prevents their being rarified, or set further apart; which might lessen their specific Gravity, and diminish their *vis cohesivis*: So that what has the chief Effect in the raising of Fumes and Vapours, *viz.* the Rarefaction, or Expansion of the Body being here precluded, the Metal maintains its natural Weight and Tendency to the Centre. See **RAREFACTION**, and **EXPANSION**.

Mr. *Boyle*, the Prince of *Mirandola*, Monf. *Homburg*, and others, have made numerous Experiments on Gold, Silver, &c. to see how far their *Fixity* extended. Pure Gold, kept in an intense Heat for two Months, lost nothing sensible of

its Weight. See GOLD. Silver, under the like Circumstances and in the like time, lost one twelfth Part of its Weight; tho' Mr. Boyle attributes this to the Metals not being fine and pure. See SILVER. See also SALT, DIAMOND, &c.

Indeed, by the great Burning Glasses of Mess. *Tschirnhausen* and *Villette*, the most *fix'd* Bodies, as Gold it self, are render'd volatile, and lose of their Weight; so that there is no Body in all Nature absolutely *fix'd*. See BURNING GLASS, MIRROR, &c.

Fix'd Stars are such, as constantly retain the same Position, and Diligence with respect to each other: By which they are contra-distinguish'd from erratick or wandering Stars, which are continually shifting their Situation and Distance.

The *Fix'd Stars* are, what we properly and absolutely call Stars: The rest have their peculiar Denomination of *Planet*, and *Comet*. See SYAR, PLANET, and COMET.

Fix'd Signs of the Zodiack, according to some are the Signs *Taurus*, *Leo*, *Scorpio*, and *Aquarius*. See SIGN.

They are so called, because the Sun passes them respectively in the Middle of each Quarter, when that particular Season is more settled and fixed, than under the Sign, which begins and ends it.

Fix'd Salts. The Chymists distinguish Salts into *fix'd* and volatile.

Fix'd Salts are these extracted or gain'd from Bodies by Calcination and Lotion. They are call'd *fix'd*, in that the Fire was not able to sublime or raise them; as those carried off in the Course of Calcination, by the Vehemence of the Fire, are call'd *volatile*. See SALTS.

The Ashes of all Plants yield *fix'd* Salts. See LIXIVIOUS.

The Chymists also give the Appellation *fix'd* to certain of their Preparations.

Fix'd Nitre is a Preparation of that Salt, by fusing it in a Crucible, and then infusing it with throwing in a few Coals, and this again and again, till no more Flame or Detonation arise: Then letting it cool, they pulverize, and then dissolve it in Water, and afterwards evaporate it into a fine white Salt; which serves to draw the Tinctures out of Vegetables. This Salt, *per deliquium*, yields, what we call, the *Liquor of fix'd Nitre*. See NITRE, and SALT-PETRE.

FIXING Sulphur, see SULPHUR and METAL.

FIXITY, or FIXEDNESS, in Philosophy, the Quality of a Body, which denounces and renders it *fix'd*: Or, a Property, which enables it to endure the Fire and other violent Agents.

According to *Chauvin*, *Fixity* consists in this, that the component Principles of the Body are so closely united, or cohere so strongly, and are mix'd in such Proportion, that they cannot easily be divided either by Fire, or any other corrosive Menstruum; or their integral Parts separated, and carried off in Vapour. For a Body may be said to be *fix'd* in two respects.

First, when expos'd to the Fire, or a corrosive Menstruum, its Particles are indeed separated, and the Body render'd fluid; but without being resolv'd into its first Elements: The Second, when the Body sustains the active Force of the Fire, or Menstruum, without its integral Parts being carried off in Fumes. Each kind of *Fixity* is the Result of a strong or intimate Cohesion between the Particles of the mix'd. See COHESION.

FIXITY, or *Fixedness*, in Chymistry, is in a peculiar manner used for the Property opposite to Volatility, i. e. the Property whereby Bodies bear the Action of the Fire, without being dissipated in Fumes. See VOLATILITY.

The principal Causes of *Fixity*, or the Qualifications that contribute most to the rendering a Body *fix'd*, according to Mr. Boyle, are 1^o That its Corporcles be singly of a certain proportionable Bulk, too big and unwieldy to be carried, up by Heat, or buoyed up in the Air. See VAPOUR. 2^o That they have also a proper Degree of Weight, or Solidity. 3^o That their Figure be such as suits them for Evaporation, or flying off; some being branched, others hook'd &c. So that being entangled with one another, they cannot easily be extricated, loosen'd, and separated. To these may be added a fourth Circumstance, viz. the Nearness of the Particles, and their being contiguous in a great many Points, or a deal of their Surface, which produces a stronger Force of Attraction and Cohesion. See ATTRACTION, COHESION, &c.

FLACCIDITY, in Medicine, &c. a Disorder of the Fibres, or solid Parts of the Body, opposite to Rigidity. See FIBRE.

The too great *Flaccidity* of the Parts is cured by Cardiacks; Exercise; Friction; a dry warm Air, and Food, &c.

FLAG, a general Name, including *Colours*, *Standards*, *Antients*, *Banners*, *Ensigns*, &c. which Authors frequently confound with each other. See COLOUR, STANDARD, BANNER, &c.

The Fashion of bearing the *Flags* pointed, or triangular, which now obtains, *Rodric. Toletus*, assures us, came from the *Mahometan Arabs*, or *Saracens*, upon their seizing of *Spain*; before which Time all the Ensigns of War were stretch'd, or extended on cross-pieces of Wood, like the Banners of the Church; on which account they were called in Latin *Vexilla*, q. d. *Vellula*; a *velli diminutive*, as is remark'd by *Isidore*.

The Pirates of *Algiers*, and throughout the Coasts of *Barbary*, are the only People who bear a hexagonal *Flag*. It is *Gules*, charged with a *Moresk Head*, cois'd with its *Turban*, &c. though this be expressly contrary to their Law, which prohibits the making any Image, or Representation of a Man; founded on an Opinion, that they who make them, shall be obliged at the Day of Judgement to find Souls for them; and that in defect hereof they shall be damn'd. But this Portrait is that of *Hali Salsicar*, *Mahomet's* Son in Law, to whose Party the *African* all remain; who order'd that his Effigy should be express'd on their *Flags* and *Standards*, believing himself to be formidable to the *Christians*, that the bare Sight of his Image would carry undoubted Victory over them. *Leunclovius*.

FLAG is more particularly us'd at Sea, for the Colours, Antients, Standards, &c. bore on the Top of the Masts of Vessels, to notify the Quality of the Person who commands the Ship, of what Nation it is, and whether it be equip'd for War, or Trade.

The Admiral alone carries his *Flag* on the Main-Top, or Top of the Main-Mast. See ADMIRAL.

The Vice Admiral carries his on the Fore-Top; and the Rear Admiral his on the Mizzen Top, or Top of the Mizzen Mast.

The Commanders of Squadrons bear their *Flag* on the Mizzen Mast, when in the Body of a Fleet: And on the Main Mast, when they command a Party. It should be cleft two Thirds of its Height, and terminate in a Point.

The *Flags* bore on the Mizzen, are particularly call'd *Gallants*. See MAST, GALLANT, &c.

The *Flag* of the *French* Nation is blue, charged with a white Cross, and the Arms of *France*.

Beside the National *Flag*, Merchant Ships frequently bear lesser *Flags* on the Mizzen Mast, with the Arms of the City, where the Master ordinarily resides; and on the Fore-Mast, with the Arms of the Place, where the Person who fraights them, lives.

To *Lower*, or *Strike* the *Flag*, is to pull it down, out of Respect or Submission, when a weaker Party meets a more powerful one.

By an Ordinance of *Philip II. King of Spain*, 1565. the Captains are peremptorily commanded, to perish rather, than lower the *Royal Flag*, when once hung out.

To *hang out* the *White Flag*, is to ask Quarter: Or, it shews, when a Vessel is arriv'd on a Coast, that it has no hostile Intention, but comes to trade, or the like. The *red Flag* is the Signal of Defence and Battle.

The way of leading vanquish'd Ships in Triumph, is to tie the *Flags* to the Shrouds, or the Gallery in the Hind-part of the Ship, and let them hang downwards to the Waters: And to tow the Vessels by the Stern. 'Twas thus the *Roman* used those of *Carthage*, as *Livy* relates.

FLAG SHIP, a Ship commanded by a General, or *Flag Officer*, who has a Right to carry a *Flag*; in Contra-distinction to the secondary Vessels, under the Command thereof.

FLAG OFFICERS, are the General Officers of Fleets, Squadrons, &c. Such are the Admiral, Vice-Admiral and Rear-Admiral. See ADMIRAL.

The *Flag-Officers* in Sea-Pay are the Admiral, Vice-Admiral, and Rear-Admiral of the White, Red, and Blue. See NAVY.

FLAG STOVES are Staves set on the Heads of the Top-Gallant Masts, serving to let fly, and unfurl the *Flags*.

FLAGS, in Falconry, are the Feathers in a Hawk's Wing near the principal ones. See FEATHER.

FLAGELLANTS, or FLAGELLANTES, a Sect of Heretics, who chastised and disciplined themselves with Whips, in publick.

The Sect of the *Flagellants* had its Rise at *Perouse*, in the Year 1260. Its Author was one *Raisier*, a Hermit. 'Twas in all Probability no more than an Effect of an indiscreet Zeal.

A great Number of Persons of all Ages made Processions, walking two by two, with their Shoulders bare, which they whip'd, till the Blood ran down, in order to obtain Mercy from God, and appease his Indignation against the Wickedness of the Age. They were then call'd the *Devout*; and having establish'd a Superior, he was call'd the General of the Devotion.

Women did not appear in these publick Assemblies; tho' they practis'd the same Severities: But it was in private, and in their own Houses.

In the Middle of the XIVth Century the Sea of the *Flagellantes* was refused, on occasion of a great Mortality; and spread it self into all Parts of Europe.

The Bishops and Magistrates at length found it necessary to put a Stop to their Excess. The Writers and Preachers disputed against it; but the *Flagellantes* remain'd unshaken against all they could say: So that of a Number of perhaps innocent, well-meaning Zealots, Pride, Obstinacy and Schism converted them into a dangerous Sect. They held, that the Blood they thus spilt, was mix'd with that of Jesus Christ; and that by a *Flagellation* of twenty four Days they gain'd the Pardon of all their Sins.

Glennet Vth forbid all publick *Flagellations*. Gerson wrote an express Treatise against publick *Flagellations*, **FLAGELLATION**, a Term appropriated to the Suffering of JESUS CHRIST, when whipp'd and scourged by the Jews; from the Latin *Flagellum*, a Scourge, or Whip.

Thus we say, A *Painting of the Flagellation*; or simply, a *Flagellation*, to denote a *Painting*, or *Print*, representing this Torment inflicted on the Saviour of the World. In this Sense we say, the *Flagellation* of such a Painter, &c.

FLAGELLATION, *Whipping*, is also used for a voluntary Discipline, or Penance, frequently practis'd by the ancient Penitents.

The Parliament of Paris prohibited all publick *Flagellations*, by an Arret of 1601. See **FLAGELLANTS**.

FLAGOLET, or **FLAOLET**, a kind of little Flute, or musical Instrument of the Flute kind; used chiefly by the Shepherds and Country-People. See **FLEUTE**.

'Tis usually made of Box, or other hard Wood; sometimes of Ivory. It has six Holes, or Stops, beside that at Bottom, the Mouth-piece, and that behind the Neck.

FLAIL, see **THRASHING**.

FLAMBEAU, or **FLAMBROY**, a Luminary, made of an Asssemblage of several thick Wicks, cover'd over with Wax; serving to burn a-nights in the Streets; as also at funeral Processions, Illuminations, &c. See **LUMINARY**.

Flambeaux differ from *Links*, *Torches*, and *Tapers*. See **TORCH**, and **TAPER**.

They are made square; sometimes of white Wax, and sometimes of yellow. They usually consist of four Wicks, or Branches, near an Inch thick, and about three Foot long; made of a sort of coarse hempen Thread, half-twisted.

They are made with the Ladle, much as *Torches*, or *Tapers* are; viz. by first pouring the melted Wax on the Top of the several suspended Wicks, and letting it run down to the Bottom: This they repeat twice. After each Wick has thus got its several Cover of Wax, they lay them to dry; then roll them on a Table, and to join four of them together, by soldering them with a red hot Iron.

When join'd, they pour on more Wax, till the *Flamboy* is brought to the Size required; which is usually a Pound, and half, or two Pounds.

The last Thing is to finish their Form, or Out-side; which they do with a kind of polishing Instrument of Wood, by running it along all the Angles, form'd by the Union of the Branches. See **WAX CANDLE**.

The *Flambeaux* of the Antients were different from ours. They were made of Woods, dried in Furnaces, or otherwise. They used divers kinds of Wood for this Purpose: The most usual was Pine. *Pliny* says, that in his Time they frequently also burnt Oke, Elm, and Hazle. In the VIIth Book of the *Æneid*, Mention is made of a *Flambeau* of Pine: And *Servius* on that Passage remarks, that they also made them of the Cornel Tree.

FLAME, the brightest and sublimest Part of a Fire, ascending above the Fuel in a pyramidal or conical Figure. See **FIRE**.

Flame seems to be the Smoak, i. e. the Fumes, or volatile Parts of the Fuel, greatly rarified, and at last kindled, or heated red hot. By the great Rarification, the Matter becomes so light, as to be rais'd with great Velocity in the Air: And by the Pressure of the incumbent atmospheric Fluid, it is kept for some time together; the Air forming a sort of Arch, or Sphere around it, that prevents its immediate Diffusion and Dispipation, and by its Contiguity and Fixation sustains and feeds the Fire of the *Flame*; the aqueous and earthy Parts of the Fume being naturally incapable of being ignited, are only rarified, and to impell'd upwards, without flaming. See **SMOAK**.

Flame is defined by Sir I. Newton, in his little Treatise *De Acidis*, to be *Fumus Condens*, red hot Smoak. The same Author argues, is not *Flame* a Vapour, Fume, or Exhalation heated red hot, that is, so hot as to shine? For Bodies do not flame without emitting a copious Fume; and this Fume burns in the *Flame*. The *Jenius Fumus* is a Vapour, shining without Heat; and is there not the same Difference between this Vapour, and *Flame*, as between rotten Wood, shining without Heat, and burning Coals of Fire? In distilling hot Spirits, if the Head of the Still be taken off, the Vapour which ascends, will take Fire at the *Flame* of a

Candle, and turn into *Flame*. Some Bodies, heated by Motion or Fermentation, if the Heat grow intense, fume copiously; and if the Heat be great enough, the Fumes will shine, and become *Flame*. Metals in Fusion do not flame, for want of a copious Fume. All flaming Bodies, as Oil, Tallow, Wax, Wood, soffit Coal, Pitch, Sulphur, &c. by burning, waste in Smoak, which at first is lucid; but at a little Distance from the Body, ceases to be so, and only continues hot. When the *Flame* is put out, the Smoak is thick, and frequently smells strongly, but in the *Flame* it loses its Smell, and according to the Nature of the Fuel, the *Flame* is of divers Colours. That of Sulphur, e. gr. is blue; that of Copper open'd with sublimat, green; that of Tallow, yellow; of Camphire, white, &c. We find that when Gun-powder takes Fire, it goes off in a flaming Smoak. The manner we conceive to be this: The Charcoal and Sulphur easily take Fire, and set Fire to the Nitre; by which the Spirit of the Nitre being rarified into Vapour, rushes out, the like Vapour of Water out of an *Æolipile*. Then the acid Spirit of the Sulphur entering violently into the fix'd Body of the Nitre, sets loose the Spirit of the Nitre, and excites a greater Fermentation, whereby the Heat is increased, and the fix'd Body of the Nitre rarified into Fume; and thus is a vehement Explosion effected. The *Fisus* of Gun-powder arises from a violent Action, whereby the mixt being quickly and vehemently heated, is rarified and converted into Fume and Vapour: Which Vapour by the Violence of the Action becoming so hot as to shine, appears in the Form of *Flame*. *Newt. Opticks*, p. 318.

'Tis a remarkable Phenomenon of the *Flame* of a Candle, Torch, or the like, that in the dark it appears bigger at a Distance, than near at hand. The reason is, that at a Distance, e. gr. of six Feet, the Eye can readily distinguish between the *Flame*, and the contiguous Air illuminated by it; and less precisely where the *Flame* terminates: But at the Distance, e. gr. of thirty Foot, tho' the Angle subtended by the *Flame* be much smaller than before; yet the Eye not being able to distinguish the precise Bound of the *Flame*, takes part of the Sphere of Air illuminated by it, for the *Flame* it self. See **VISION**.

We have several Instances of actual *Flames*'s being produc'd by the Mixture of two cold Liquors. Dr. *Stare* gives us a List of the Oils which burst into *Flame*, upon mixing them with compound Spirit of Nitre: Such are those of Carraways, Cloves, Sassafras, Guaiacum, Box, Camphor, Pepper, Hartshorn, Blood, &c. *Phil. Transact.* N^o 213.

Vital Flame, **FLAMMA**, or **FLAMMULA Vitalis**, a fine, warm, kindled, but mild Substance, supposed by many both of the Antients and Moderns, to reside in the Hearts of Animals, as necessary to Life, or rather, as that which constitutes Life it self.

'To the Preservation of this *Flame*, they suppose Air as necessary, as it is to the Conservation of common *Flame*; And hence refer the Necessity of Respiration to animal Life. See **LIFE**.

Mr. *Boyle*, by Experiments in an exhausted Receiver found, that the *Vital Flame* of Animals, if Life may be so called, survives, or outlasts the *Flame* of Spirit of Wine, or of a Wax or Tallow Candle, &c. Some Animals would remain alive and well in Vacuo, for three or four Minutes, whereas no common *Flame* would last there one Minute. The Light of Glowworms be found upon presently to be destroy'd by exhausting the Air; and retriev'd again upon its Re admission.

Dr. *Quincy* can find nothing more in the Notion of *Vital Flame*, than the natural Warmth, which is the Effect of a circulating Blood; and which is always as its Velocity. See **CALIDUM Innatum**.

FLAMEN, among the antient Romans, was a Priest, or Minister of Sacrifice.

There were as many kinds of *Flamens* at Rome, as there were Gods who had Priests, and Sacrificers.

Numa, at first, only instituted three: One for *Jupiter*, called *Flamen Dialis*; another for *Mars*, called *Flamen Martialis*; and a third for *Romulus* or *Quirinus*, call'd *Flamen Quirinalis*. See **DIALIS**, &c.

In After-times twelve more were added; which made the Number of *Flamens* fifteen.

The three first were taken from among the Patricians; and were held of a Rank and Distinction superior to the rest. They were called *Greater Flamens*, *Flamines majores*; in Contra-distinction to the other twelve, who were chose from among the Plebeians, and were called *Lesser Flamens*, *Flamines minores*.

The *Flamen of Jupiter* was the first instituted, and held in the greatest Repute. He bore a peculiar Ornament on his Head, called *Abogalerus*, white Cap, or Hat; which was made of a white Vicium, sacrificed to *Jupiter*.

The Cap wore by the rest, was call'd *Flaminium*, or *Galerium*. It was made of a Sheeps Skin, with the Wool on: To

To it was fasten'd a little Branch of an Olive Tree. That of the *Flamen of Jupiter* ended in a Point, called *Turulus*. It was tied under the Chin with Strings. In the Summer time it was only made of woollen Thread: With this the Head was constantly cover'd; it being prohibited them to appear bare headed. And hence, according to *Festus*, came their Denomination of *Flamen*, viz. from *Filamen*, of *Filum*, Thread.

Tho' the *Flamines* all bore one Name; yet did not they continue any thing of a Company or College. Each God had his several Sacrifices, Feasts, and Ceremonies a-part: Nor had one *Flamen* any relation to another; only they were all subordinate to the *Pontifex Maximus*. *Anlus Gellius* assures us, that they were created by the People in the Comitia of the Curia: But the *Pontifex Maximus* consecrated them. Their Priesthood was perpetual; tho' on some Occasions they might be deposed.

The Names of the several *Flamines* are as follow: The three great *Flamines*, as already observ'd, were the *Flamen Dialis*; *Flamen Martialis*, and *Flamen Quirinalis*. The twelve lesser were, the *Flamen Cereualis*, or Priest of the Goddess *Cerere*: *Flamen Falacer*, or Priest of the God *Falacer*; a Name, whose Origin *Varro* observes, is not known: *Flamen Floralis*, or of the Goddess *Flora*: *Flamen Furrinalis*, whose Etymology is not known: *Flamen Levalinalis*: *Flamen Lucullaris*: *Flamen Palatialis*, whom some Moderns will have the Priest of the Goddess that presided over the Palatium; tho' *Varro* owns himself at a loss for its Original: *Flamen Pomonalis*, or of *Pomona*, Goddess of Fruits: *Flamen Virbidialis*, or of the God *Virbidis*, whom some take for the same with *Hippolytus*: *Flamen Vulcanalis*, or of *Vulcan*; and *Flamen Volturnalis*, or of the God *Volturus*.

They had also their *Flamines* or *Flaminice*, who were Wives of the *Flamines*, or the Priestesses of the Deities. In an ancient Marble, quoted by *Gruter*, p. CCCCLIX. n. 9. the Word *Flamina* is used for Priestess: And in the same Author, p. CCCVIII. n. 3. the Priestess of the Goddess *Feronia* is called *FLAM. FERON.* that is, *Flamina*, or *Flaminia Feronia*.

The *Flamina* bore the same Ornament on her Head with the *Flamen*. She had also the same Surname with her Husband; as *Flamina Dialis*, *Martialis*, &c.

FLAMMULA, or **FLANVLA**, in the Greek Militia under the Eastern Empire, was a kind of Ornament, serving as a Mark, or Badge, to distinguish the several Companies, Battalions, Regiments, &c.

In Greek it was called *πράμυλα*. The *Flamula* was sometimes placed on the Cask; sometimes on the Cuirass, and sometimes at the End or Tip of the Pike, &c.

The Emperor *Maurice* order'd, that the *Flammule* of each Division should be of a different Colour, to distinguish them from the other Battalions or Brigades. *πράμυλα ἑκάστη ποσει ἰσχυροῦσιν ἄνω*.

They used to lay aside the *Flammula* before an Engagement, lest it should prove an Incumbrance. The Cavalry had also *Flammule* on their Horses, to distinguish the Troops they belong'd to.

FLANCH, **FLANQUE**, or **FLASQUE**, an Ordinary in Heraldry, form'd by an Archline, which begins at the Corners of the Chief, and ends in the Base of the Escutcheon: Thus, He beareth Ermin, two *Flanches* Vert.

Flanches are always born by Pairs. The *Flanch* bends in more than the *Flask*. *Leigh* makes *Flanque* and *Flank* two distinct and subordinate Bearings; but *Gibbon* judiciously makes them but one, which he calls *Flanque*.

FLANEL, or **FLANNEL**, a kind of slight, loose, woollen Stuff, not cross'd, but very warm; compos'd of a Wool, and Warp, and wove on a Loom, with two Tredles, after the Manner of *Bays*, &c. See *BAYS*.

FLANK, or **FLANC**, in the Manage, is applied to the Sides of Horses Buttocks, &c.

In a strict Sense, the *Flanks* of a Horse are the Extremes of the Belly, where the Ribs are wanting, and below the Loins.

The *Flanks* of a Horse should be full; and at the Top of each, a Feather. The Distance between the last Rib, and Haunch Bone, which is properly the *Flank*, should be short; which they term *well-coupled*: Such Horses being most hardy, and fit to endure Labour.

A Horse is said to have no *Flank*, if the last of the short Ribs be at a considerable Distance from the Haunch Bone; as also when his Ribs are too much streighten'd in their Compaſs.

FLANK, in War, is used by way of Analogy, or Similitude, for the Side of a Battalion, Army, &c. in Contradistinction to the *Front* and *Rear*.

To attack the Enemy in *Flank*, is to discover, and fire upon them on one Side.

The Enemy took us in *Flank*. The *Flank* of the Infantry must be cover'd with the Wings of the Cavalry.

FLANK, in Fortification, is a Line, drawn from the Extremity of the Face, towards the Inside of the Work.

Such is the Line B A Tab. Fortification. Fig. 1. Or, *Flank* is that Part of the Bastion, which reaches from the Courtin to the Face, and defends the opposite Face, the *Flank*, and the Courtin. See **BASTION**.

There is also an *Oblique*, or *Second Flank*, which is that Part of the Courtin, where they can see to four the Face of the opposite Bastion, and is the Distance between the Lines *Rasant*, and *Fitchant*.

The *Low*, *Cover'd*, or *Retired Flank*, is the Platform of the Casemate, which lies hid in the Bastion.

Simple **FLANKS**, are Lines, going from the Angle of the Shoulder, to the Courtin; whose chief Office is for Defence of the Moat, and Place.

FLANK of the Courtin, or *Second Flank*, is that Part of the Courtin between the *Flank* and the Point, where the *Fitchant* Line of Defence terminates.

FLANK Fitchant is that from whence a Canon playing, fireth its Bullets directly in the Face of the opposite Bastion.

FLANK Rasant is the Point, from whence the Line of Defence begins, from the Conjunction of which with the Courtin, the Shot only saletch the Face of the next Bastion; which happens when the Face cannot be discover'd but from the *Flank* alone.

Retired FLANK, or the *Lower* and *Covert Flank*, is that exterior Part thereof, which advanceth to secure the innermost; which advanced Part, if it be rounded, is called the *Orillon*; so that this *Flank* is only the Platform of the Casemate, which lies hid in the Bastion.

FLANK's Angle, is the Angle form'd by the two Faces of the Bastion, and which of course forms the Point of the Bastion. See **BASTION**.

FLANK's Tenaille, call'd also *double Tenaille*. See **TENAILLE**.

FLANK's Flanque, is used by the *French* Herald, to express our *Party per Saltire*; that is, when the Field is divided into four Parts, after the manner of an X.

Tho' *Columbiere* uses the Term in another Sense, which to us appears more natural, viz. for the taking of *Flankers* rounding Sections of the Sides of the Escutcheons; the first from the Angles of it; the latter in front Lines, forming an Angle at the Feet, without making any *Saltire*.

FLANKING, in the general, is the Act of discovering and firing upon the Side of a Place, Body, Battalion, &c.

To *flank* a Place, is to dispose a Bastion, or other Work in such manner, as that there shall be no Part of the Place, but what may be defended, i. e. may be play'd on, both in Front, and Rear.

To *flank* a Wall with Towers. This Bastion is *flank'd* by the opposite *Flank*, and a Half-Moon. This Horn-Work is *flank'd* by the Courtin.

Any Fortification that has no Defence but just right forwards, is faulty: And to render it complete, one Part ought to be made to *flank* the other. Hence the Courtin is always the strongest Part of any Place, because 'tis *flank'd* at each End. See **DEFENCE**.

Battalions also are said to be *flank'd* by the Wings of the Cavalry: And a Houle is sometimes said to be *flank'd* with two Pavillions, or two Galleries; meaning it has a Gallery, &c. on each Side.

FLANKING Line of Defence, see **RASANT LINE of Defence**.

FLASK, **FLASQUE**, a Bearing, more properly called *Flank*, or *Flanque*. See **FLANK**.

FLATS, in Musick, a kind of additional Notes, contriv'd, together with *Sharps*, to remedy the Defects of Musical Instruments. See **SHARP**.

The Natural Scale of Musick being limited to fix'd Sounds, and adjusted to an Instrument; the Instrument will be found defective in several Points: As particularly, in that we can only proceed from any Note, by one particular Order of Degrees; that for this Reason we cannot find any Interval required from any Note or Letter upwards and downwards; and that a Song may be fo contriv'd, as that if it be begun by any particular Note, or Letter, all the Intervals, or other Notes, shall be justly found on the Instrument, or in the fix'd Series; yet were the Song begun with any other Note, we could not proceed. See **SCALE**.

To remove, or supply this Defect, the Musicians have Recourse to a Scale proceeding by twelve Degrees, that is, thirteen Notes, including the Extremes, to an Octave; which makes the Instruments to be perfect, that there is but little to complain of. This, therefore, is the present System or Scale for Instruments, viz. betwixt the Extremes of every Tone of the Natural Scale is put a Note, which divides it into two unequal

unequal Parts, called *Semi-tones*; and the Whole may be called the *Semitonic Scale*, containing twelve Semi-tones betwixt thirteen Notes, in the Compals of the Octave. See *SEMI-TONE*, and *Scale of SEMI-TONES*.

Now, to preserve the Diatonic Series distinct, these inflected Notes either take the Name of the natural Note next below, with a Character \sharp called a *Sharp*; or they take the Name of the natural Note next above, with the Mark \flat called a *Flat*: Thus D \sharp or D *Flat* signifies a Semi-tone below the D natural. And it is indifferent in the main, whether the inflected Note be accounted as a *Flat*, or *Sharp*.

This Semitonic Series or Scale is very exactly represented by the Keys of a Spinnet: The foremost Range of Keys being the natural Notes; and the Keys behind, the artificial Notes, or the *Flats* and *Sharps*. See *SPINET*.

FLATULENT, something, that has a relation to *Flatus*'s or Winds. See *FLATUS*.
Pease, and most kinds of Pulse, Onions, &c. are *flatulent* Foods.

FLATUS, or **FLATULENCY**, a Wind gather'd in the Bowels, or other Cavity of the Body, by Indigestion, or a gross internal Perspiration. It is diffused by warm Aromatics, which rarefy it enough to break away wherever Vent can be found.

FLATTER, or **FLATTENER**, } See *COINING*.
FLATTING, or **FLATTENING**, }

FLAX, or **LINE**, a Plant, with a slender hollow Stem, usually about two Foot high; whose Bark consists of Fibres, or Threads, much like those of Hemp, which being dress'd and work'd in a due manner, makes that noble Commodity, *Linum Cloth*. See *LINEN*.

Flax thrives best in a Soil that has long lain fallow. To bear *Flax*, it must be well plow'd, laid flat and even, and the Seed sown in a warm Season, about the Middle of *March*, or Beginning of *April*. The best Seed is that brought from the East; which, though dear, repays the Charges with Abundance. One Sowing will produce two or three Crops, before it need be renewed.

Flax pull'd up in the Bloom, proves whiter and stronger, than if left standing till the Seed is ripe; but then the Seed is lost.

The Preparations *Flax* must undergo, to fit it for Spinning, are *Peeling*, *Drying*, and *Swinging*. See *HEMPE*.

The Seed of *Flax* has several considerable Properties. It enters the Composition of several Medicines, and yields an Oil, by Expression, which has most of the Properties of Nut-Oil; and which is frequently used, in defect thereof in Painting, to burn in Lamps, &c. That drawn cold, is reputed good in divers Diseases. See *OIL*.

FLEA, in Natural History. The Generation of this familiar Vermin affords something very curious, first discover'd by Sig. *Diacynthus Cypione*.

Fleas bring forth Eggs, or Nits, which they deposit on Animals that afford them a proper Food: These Eggs being very round and smooth, usually slip straight down; unless detain'd by the Piles, or other Inequalities of the Cloaths, Hairs, &c.

Of these Eggs are hatch'd white Worms, of a shining Pearl Colour, which feed on the scaly Substance of the Cuticle, the downy Matter gather'd in the Piles of Cloaths, or other the like Excrement.

In a fortnight they come to a tolerable Size, and are very lively and active; and if at any time disturbed, suddenly roll themselves into a kind of Ball.

Soon after they come to creep, after the manner of the Silk-worms, that have no Legs, with a very swift Motion. When arriv'd at their Size, they hide themselves as much as possible, and spin a silken Thread out of their Mouth, wherewith they form themselves a small round Bag, or Case, white within, as Paper, but without always dirty, and fill'd with Dust.

Here, after a fortnight's Sleep, he bursts out, transform'd into a perfect *Flea*; leaving its Exuvia in the Bag. While it remains in the Bag, it is milk white; till the second Day before its Eruption, when it becomes colour'd, grows hard, and gets Strength; so that upon its first Delivery it springs nimbly away. *Philosoph. Transact.* N^o 24.

FLEA-BITTEN Colour of a Horse is white spotted all over with dark reddish Spots.

FLEAM, is a Surgeon's Instrument to lance the Gums; or a Farrier's Tool to let a Horse blood. See *LANCET*.

FLEDWITE, or **FLIGHT-WITE**, in our ancient Laws, a Discharge or Freedom from Amerciaments, when one, having been an outlaw'd Fugitive, comes to the Peace of our Lord the King, on his own accord, or with Licence. *Rassal*.

Others rather take it to denote a Mulct, or Fine, set upon a Fugitive to be restor'd to the King's Peace.

FLEECE, the covering of Wool shorn off the Bodies of Sheep. See *WOOL*.

The *Golden FLEECE* is famous among the antient Writers. 'Twas this that the *Argonauts* under the Command

of *Jason* went in Pursuit of to *Colechis*, a Province of *Asia*, now call'd *Mingrelia*. See *ARGONAUTS*.

Order of the Golden FLEECE. See *GOLDEN FLEECE*.

FLEET, by the Spaniards call'd *Flota*, or *Flota*, and the French, *Flotte*, a Number of Vessels, going in Company, whether on a Design of War, or Commerce.

In times of Peace, Merchants Ships go in *Fleets*, for their mutual Aid and Assistance: In times of War, beside this Security, they likewise procure Convoys of Men of War; either to escort them to the Places whither they are bound; or only a part of the way, to a certain Point or Latitude, beyond which they are judg'd out of Danger of Privateers, &c. See *CONVOY*.

The Spanish *Fleet*, sent against *England*, by *Philip II.* consisted of 1000 Vessels. In the East there have been *Fleets* seen of 3000 Vessels.

Merchant *Fleets* generally take their Denomination from the Place they are bound to; as the *Turkey-Fleet*, *East India-Fleet*, &c.

The Spaniards call simply the *Fleet*, or *Flota* a certain Number of Vessels, belonging partly to the King, and partly to the Merchants, sent every Year to *Vera Cruz*, a Port of *New Spain*.

The *Flota* consists of the *Captain*, *Admiral*, and *Patach*, or *Pinnace*, which go on the King's account; and about sixteen Ships, from four hundred to a thousand Tons, belonging to particular Persons. They are all so heavily laden both going and coming, that they have much a-do to defend themselves when attack'd. The *Fleet* puts out from *Cadix* about the Month of *August*, and makes it eighteen or twenty Months, before its return. See *FLOTA*.

The *Fleet* sent annually from the same Port to *Peru*, they call the *Gallions*. See *GALLION*.

When the two *Fleets* put out together, they go in Company as far as the *Azilles*, where they separate; the *Gallions* for *Cartagena*, and *Porto Bello*; and the *Flota* for *Vera Cruz*: At their Return they join in the *Havana*.

Of the two *Fleets* the *Gallions* are the most richly laden; not but the Cargo of the *Flota* is very considerable. See *COMMERCE*.

FLEET is also a famous Prison in *London*, thus called from the River *Fleet*, on the Border whereof it stands. See *PRISON*.

To this Prison Persons are usually committed for Contempt of the King and his Laws, or upon absolute Command of the King, or some of his Courts, particularly that of Chancery; and lastly, for Debt.

FLEGM, **FLEGMATIC**, **FLEGMACOGUE**, &c. see *FLEGM*, *FLEGMATIC*, &c.

FLEMISH, is applied to any thing belonging to *Flanders*, or the Inhabitants of *Flanders*.

The *FLEMISH* Tongue is what we call *Low-Dutch*, to distinguish it from the *German*, which is called simply *Dutch*, or *High-Dutch*; whereof it is a Corruption, and a kind of Dialect. See *DEVEN*.

The *Flemish* is the Language used throughout all the Low Countries. It differs from the *Walloon*; which is a corrupt French. See *WALLOON*.

There are several *Flemish* Translations of the Bible. In the Year 1618. it was decreed by the Synod of *Dort*, that a new *Flemish* Version should be made of the whole Scripture; by reason the old Translation which had been taken from that of *Luther*, was full of Faults. Accordingly, several Persons, learn'd in the *Greek* and *Hebrew* Languages, undertook the Work; which was publish'd with Notes in 1637. This Bible is highly valued by the Reform'd in *Holland*, &c. though *M. Simon* censures it as far from the Perfection of a just Translation. See *BIBLE*.

FLEMISH BRICKS, a neat, strong kind of Brick, of yellowish Colour, brought from *Flanders*, and much used for paving. See *BRICK*.

FLESH, **CARO**, in Anatomy, a similar, fibrous Part of an animal Body, soft, thick, and bloody; being that wherof most of the other Parts are compos'd, and whereby they are connect'd together. See *BODY*.

The Antients made five different kinds of *Flesh*: The first *Muscularis*, *Fibrosa*, or *Fistular*; as the Substance of the Heart, and other Muscles. See *MUSCLE*, *FIBRE*, &c. The second, *Parenchymata*, as that of the Lungs, Liver and Spleen. See *PARENCHYMA*, *SPLEEN*, &c. The third, *Viscerous*, as the *Flesh* of the Stomach and Intestines. See *INTESTINES*. The fourth, *Glandulous*, as that of the Breasts, Pancreas, Tonils, &c. See *BREAST*, *PANCREAS*, &c. And the fifth, *Sporious*; as that of the Gums, Glans of the Penis, the Lips, &c. See *GLANS*, &c.

The Moderns only admit of one kind of *Flesh*, viz. That of the Muscles, consisting of little Tubes, or Vessels with Blood therein. See *CARO*; so that the *fleshy* and muscular Parts of the Body with them are the same thing. See *MUSCLE*. Sometimes, however, they apply that Term to the Glans; which they call, by way of Distinction, *Glandulous Flesh*. See *GLAND*.

As to the Parenchymas, they are now found to be quite other Things than the Antients imagin'd. The Lungs are only an Assemblage of membranous Vesicles, inflated with Air. See LUNGS. The Liver a Collection of Glands, where- in the Bile is separated. See LIVER. The Spleen, a Heap of Vesicles, full of Blood; and the Kidneys, like the Liver, a Mass of Glands, for separating of the Urine. See SPLEEN, and KIDNEY.

FLESH is also us'd in Theology, in speaking of the My- sterics of the Incarnation and Eucharist; The Word was made *Flesh*: *Verbum Caro factum est*. See INCARNA- TION.

The Romanists hold, that the Bread in the Sacrament of the Supper is turn'd into the real *Flesh* of Jesus Christ. See TRANSUBSTANTIATION.

The Resurrection of the *Flesh* is an Article of Faith. See RESURRECTION.

The Anthropophagi, or *Cannibals*, feed upon human *Flesh*. See CANNIBAL, and CARNIVOROUS.

FUNGUS FLESH, see FUNGUS.

FLESH COLOUR, see CARNATION.

FLESH is also us'd by Botanists, &c. for the soft pulpy Substancce of any Fruit, inclos'd between the Outer Rind or Skin, and the Stone: Or that part of a Root, Fruit, &c. fit to be eaten.

FLEUR-DE-LISEE, FLEURETTEE, FLEURONNEE, and FLEURY, in Heraldry, see FLOKY.

FLEXIBLE, in Phisicks, is applied to Bodies that are capable of being bent, or changed from their natural Form and Direction. See DUCTILITY.

Trees that grow near Waters, as the Willow, Poplar, &c. are more flexible than others. The Fibres being finer and more flexible in Women than Men, they have generally a greater Degree of Delicacy of Thought, and Imagination. A flexible Voice succeeds in Music.

A Body is not capable of being thus inflected, or bent, unless the whole thereof be at rest. In bending a Body it constitutes, as it were, two Levers; and the Point it is to be bent in, is a Fulcrum: Hence, as a moving Power, the further it is from the Fulcrum, has the greater Force; the longer the flexible Body is, the easier it is bent.

FLEXION, in Anatomy, &c. is applied to the Motion of an Arm, or other Member, when bent.

The Arm has a Motion of *Flexion*, and another of Ex- tension.

The Motion of *Flexion* is, when the Radius and Ham- erus approach each other, and from an Angle, at the Elbow. See FLEXOR.

FLEXION, or FLEXURE of *Curvus*, see POINT of *contrary Flexion*.

FLEXOR, in Anatomy, a Name given to several Mus- cles, in respect of their Action, viz. the *Bending* of the Members, or Joints; in opposition to the *Extensors*, which open or stretch them. See MUSCLE.

FLEXOR *Capitis*, is a Muscle of the Head, called also *Rectus major anticus*. See RECTUS major, &c.

FLEXOR *Carpi ulnaris*, called also *Cubitus internus*, arises tendinous from the inner Protuberance of the Ham- erus, and upper Part of the Ulna, upon which it runs along, till passing under the Ligamentum annulare, it is inserted by a short strong Tendon into the fourth Bone of the first Row of the Carpus.

FLEXOR *Carpi Radialis*, called also *Radiceus Internus*, rises from the same Part with the former, and running along the Radius, is inserted into the upper Part of the Bone of the Metacarpus, which is join'd with the Fore-finger.

Both these Muscles bend the Wrist.—

FLEXOR *Pollicis longus*, a Muscle of the Toe, derived from the Back-part of the Fibula, with a double Order of Fibres, and runs tendinous under the inner Ankle, and thro' the Channel in the inner Part of the Bone of the Heel, to its Insertion at the Extremity of the great Toe, on the under Side.

FLEXOR *Pollicis brevis*, arises from the Middle of the Caudiform Bone. It is short, thick, and fleshy, seemingly two, and running over the Termination of the Peroneus, has a double Insertion into the Os Sefamoida.

FLEXOR *primi Internodii Digitorum Pedis*, see LUM- BRICALES *pedis*.

FLEXOR *secundi Internodii Digitorum Manus*, see PER- FORATUS *manus*.

FLEXOR *tertii Internodii Digitorum Pedis*. See PER- FORANS *Pedis*.

FLEXOR *tertii Internodii Digitorum Manus*, see PER- FORANS *Manus*.

FLEXORES *primi Internodii Digitorum Manus*, are Mus- cles of the Fingers, called also *Lumbricales Manus*. See LUMBRICALES.

FLEXORES *secundi Internodii Digitorum Pedis*, see PER- FORATUS *Pedis*.

FLEXORES *Pollicis Manus*, are two Muscles, serving to bend the Thumb.

The first, called *Flexor tertii Internodii*, &c. arises from the internal Protuberance of the Hamcrus, and part of the Radius, by different Orders of Fibres, and passing under the Ligamentum Annulare, is inserted into the third Bone of the Thumb.—

The second, called *Flexor secundi Internodii*, &c. arises from the Bones of the Carpus, and Annular Ligament; and is inserted into the second Bone of the Thumb.—

FLIE, that Part of the Mariners Compass, on which the thirty two Winds are drawn, and to which the Needle is fasten'd underneath. See COMPASS.

FLIGHT, the Act of a Bird in flying; or the Manner, Duration, &c. thereof. See FLYING.

The Feathers of Birds are admirably contriv'd and fitted for the Ease and Convenience of *Flight*. See FEATHER.

Almost every kind of Bird has its particular *Flight*: The Eagle's *Flight* is the highest: The *Flight* of the Sparrow- Hawk, and Vultur, are noble, dispos'd for high Enterprise and Combat. The *Flight* of some Birds is low, weak, transient, and as they call it, *terry a terra*: The *Flight* of the Partridge and Pheasant, is but of short Continuance: That of the Dove, labour'd: That of the Sparrow, in Waves, &c.

The Augurs pretended to foretell future Events from the *Flight* of Birds. See AUGURY.

FLIGHT, in melting the Lead Ore in the Works in *Mendip*, there is a substance flies away in the Smoak, which they call the *Flight*.

They find it sweetish upon their Lips, if their Faces hap- pen to be in the way of the Smoak, which they avoid all they can— This, falling on the Grass, kills Cattle that feed there; and being gather'd and carried home, kills Rats and Mice in their Houles: That which falls on the Sand, they gather and melt upon a Flagg-herb, into Shoes and Sheet- Lead.

FLIGHT of a *Stair-Cast*, see STAIR-Cast.

FLIGHT, in Heraldry, see VOL.

CAPOUS FLIGHT, in some Customs, is a Compass of Ground, such as a Capon might fly over, due to the eldest born of several Brothers, in making Partition of the Fa- ther's Effects with them, when there is no principal Manor in a Lordship.

It is usually estimated by a Bow-shot.—

FLINT, a small, hard, livid or black Pebble. See STONE, and PEBBLE.

Flints are one of the principal Ingredients in the mak- ing of Glass. See GLASS.

FLINT-Glass, see FLINT GLASS.

FLINT and Steel, see TINDER.

The *Indians*, instead of *Flint* and Steel, use two Pieces of green Wood, which they rub violently against each other. In the East, they use the Wood Candon; and in *Peru*, *Reyaca*. See FIRE.

FLINT-Walls, see WALLS.

FLIP, a sort of Sailors Drink, made of Malt Liqueur, Brandy and Sugar, mix'd.

FLOAT, or FLEET, see FLOTA, and FLOTILLA.

FLOAT of a *Fishing Line*, a Cork, or Quill, swimming on the Water, to observe what becomes of the Hook, whe- ther any thing bite, &c. See FISHING *Floar*.

FLOATS, a certain Quantity of Pieces of Timber joined together with Rafters a-thwart, thrown into a River, to be convey'd down the Stream; and even to convey Burdens down a River with the Stream. The Invention of *Floats* is of great use: 'Tis said to have been first put in Execution at *Paris*, in the Year 1618.

FLOATING *Vessels*, see BOAT.

FLOATING, in Husbandry, is the drowning or watering of Meadows.

FLOOD, a Deluge, or Inundation of Waters. See DE- LUGE.

Plato seems to have had some Notion of the Great Flood, and the Intention thereof. *ἵνα δ' αὖ ἐὼς τὴν πλὴν ἰδῆται κατὰ τὴν πλῆν*, &c. When the Gods purge the Earth with a Flood. *Plat. Tim. p. 25.*

FLOOD is also us'd in speaking of the Tides.

When the Water is at lowest, 'tis called *Flood*; when rising, Young, or Old *Flood*; when at highest, and begin- ning to fall, *Ebb Water*. See TIDES, *Ebb*, *FLUX*, &c.

FLOOR, or FLOOR of an Anchor, see ANCHOR.

FLOOR, in Building, the Under-side of a Room, or that Part we walk on.

Floors are of divers sorts; some of Earth, some of Brick, others of Stone, &c.

Carpenters, by the Word *Floor*, understand as well the framed Work of Timber, as the Boarding over it.

Earthen Floors are commonly made of Lome, and some- times, especially to make Malt on, of Lime, and Brook Sand, and GunDust, or Anvil Dust from the Forge.

Ox-blood, and fine Clay, temper'd together, Sir *Hugh Plat* says, makes the finest *Floor* in the World.

For Brick and Stone Floors, see PAVING.

For boarded Floors, it is observable, that the Carpenters never floor their Rooms with Boards, till the Carcass is set up, and also inclos'd with Walls, lest the Weather should wroog the Flooring; yet they generally rough-plane their Boards for the Flooring, before they begin any thing else about the Building, that they may set them by to dry and season; which is done in the most careful manner.

Floor of a Ship, strictly taken, is only so much of her Bottom, as she rests on, when a-ground; so that such Ships as have long, and withal broad Floors, lye on the Ground with most Security, and are not apt to lee, or tilt on one Side; whereas others, which are narrow in the Floor, or in the Sea-Plate, *Cranck'd by the Ground*, cannot be grounded without Danger of being overthrow'd.

FLORALES *Ludi*, or FLORAL Games, in Antiquity, were Games held in Honour of *Flora*, the Goddess of Flowers. See FLORALIA.

They were celebrated with horrible Debaucheries. The most licentious Discourses were not enough; but the Courtians were call'd together by the Sound of a Trumpet, made their Appearance naked, and entertain'd the People with abominable Shews and Postures: The Comedians appear'd after the same manner on the Stage. *Val. Maximus* relates, that *Cato* being once present in the Theater on this occasion, the People were ashamed to ask for the infamous Pleasure, in his Presence; till *Cato*, surpris'd of the Respect and Respect he inspir'd them withal, withdrew, that the People might not be balk'd of their accustomed Diversion.

There were divers other sorts of Shews exhibited on this occasion; and if we may believe *Strabonius*, in *Gallo*, C. 6. and *Popilius in Carinus*, these Princes presented Elephants dancing on Ropes.

The *Ludi Florales*, according to *Pliny*, L. XVIII. C. 29. were instituted by order of an Oracle of the Sibyls, on the 28th of April; not in the Year of Rome 17XVI. as we commonly read it in the ancient Editions of that Author; nor in 17XIV. as *Fr. Hardouin* has corrected it; but as *Vossius* reads it, in 573. They were chiefly held in the Night time, in the *Patrician-Street*: Some will have it there was a Circus for the purpose on the Hill call'd *Hortulorum*.

Some will have the Goddess *Flora* to be the same with the *Chloris* of the Greeks.

Others hold, that this same *Flora* was a famous Courtisan at Rome, who having enrich'd her self by Prostitution, made the People of Rome her Heir, on condition that they should celebrate the Anniversary of her Birth-day, by the Games and Feasts above-mentioned. Some time afterward, the Senate judging such a Foundation unworthy the Majesty of the Roman People; to enable the Ceremony, converted *Flora* into a Goddess, when they suppos'd to preside over Flowers; and so made it a piece of Religion to render her propitious, that it might be well with their Gardens, Vineyards, &c.

This is the common Account: But *Vossius de Idol. L. I. C. 12.* can by no means allow the Goddess *Flora* to have been the Courtisan above-mention'd: He will rather have her a Sabine Deiry; and thinks her Worship might have commenc'd under *Romulus*. His Reason is, that *Varro* in his Fourth Book of the Latin Tongue, ranks *Flora* among the Deities, to whom *Latinus*, King of the Sabines, offer'd up Vows, before he join'd Battle with the Romans. Add, that from another Passage in *Varro* it appears, that there were Priests of *Flora*, with Sacrifices, &c. as early as *Romulus* and *Numa*.

FLORAL Games. There are a kind of *Floral Games* observ'd at this day in France. They were first instituted in 1324.

The Design and Establishment is owing to seven Persons of Condition, Lovers of Poetry, who about All-Saints Day, in 1325. sent a Circular Letter to all the Provincial Poets, call'd *Troubadours*, to meet at *Troloise* on May-day following, there to rehearse their Poems; promising a Violet of Gold to the Person whose Piece should be judg'd the best.

The *Capitons* found the Design so good, that it was afterwards resolv'd at a Council of the City, to continue it at the City Charge; which is still done, in a manner that does Honour to the Place.

In 1325 a Chancellor, and Secretary of the New Academy were choic'd; and the seven Institutors took the Quality of *Maintainers* thereof. Two other Prizes were afterwards added to the Violet, viz. an Eglantine for the second Prize; and a Pansy for the third. It was also decreed, that the Person who bore away the first Prize, might demand to be made Bachelor; and that whoever bore away all three, should be created Doctor in the *Gaye Science*, that is, in Poetry.

There is a Register of these Games kept at *Troloise*, which gives this Account of their Origin: Tho' others give the thing another turn. It was an ancient Custom, they say, for the Poets of *Provence*, to meet yearly at *Troloise*, to confer together, rehearse their Verses, and receive a Prize

allotted to the best Performance. This held till about the Year 1540, when a Lady of Quality left the best part of her Fortune, to eternize the Custom, and bear the Expence of Prizes; the Number of which she increas'd, ordering an Eglantine, a Pansy, a Violet, and a Pink: The three first a *Caban high*; worth fifteen Piſtoles a-piece.

The Ceremony begins on *May-day*, with a solemn Mass, Music, &c. The Corporation attend; and Poems are rehear'd every day: The third day a magnificent Treat is given the Magistraty, &c. and that day the Prizes are adjudg'd. The three Prizes are the Rewards of three different kinds of Competitions, viz. a Poem, an Eclogue, and an Ode.

FLORALIA, in Antiquity, a general Name for the Feasts, Games, and other Ceremonies, held in honour of the Goddess *Flora*.

The *Floralia* were also call'd *Anthisteses*: They were held at the latter end of the Month of April, as *Ovid* witnesseth,

Exit, & in Majas festum Florale Calendar.

In effect, the *Floralia* began on the 28th of April, and lasted six Days.

They who assist'd at the Ceremony, were crown'd with Ivy, and committed a world of undecent things; which indeed was no extraordinary thing in the Heathen Feasts.

Some apply the Word *Floralia* indifferently to the Feasts, and Games of this Goddess; but others restrain it to the Feasts alone; calling the Games *Ludi Florales*. See FLORALES *Ludi*.

FLORID *Style*, is that enrich'd and heighten'd with *Figures* and *Flowers* of Rhetorick. *Longinus* uses the Terms *florid* and *affect'd Style* indifferently, and lays them down as quite contrary to the true sublime. See STYLE, and SUBLIME.

FLORILEGIUM, FLORILEGES, a Name the Latins have given, to what the Greeks call *ἄνθολογος Anthology*; viz. a Collection of choice Pieces, containing the finest and most florid Things in their kind. See ANTHOLOGY.

The Term is particularly us'd in the Eastern Church, for a kind of Breviary, compiled by *Arcadius*, for the Conventuality of the Greek Priests and Monks, who cannot carry with them in their Travels and Pilgrimages all the Volumes wherein their Office is dispers'd.

The *Florilegium* contains the General Rubricks, Psalter, Canticles, the Horologium, Office of the Ferie, &c.

FLORIN, is sometimes us'd for a Coin, or real Money; and sometimes for an imaginary Money, or Money of Account. See COIN, and MONY.

As a Coin, *Florin* is of divers Values, according to the divers Metals, and divers Countries where it is struck.

Florins were antiently very frequent in Commerce; at present they are less common, though there were abundance of them struck in *Holland*, of English Silver, during the War which was terminated by the Treaty of *Ryswick*.

In all appearance they took their Name from the Place where they were first struck, viz. the City of *Florence*. Their Era is about the Year 1251. though others ascribe the Name to a Flower-de-Lis, which was struck on one Side.

The Gold *Florins* are most of them of a very coarse Alloy; some of them not exceeding thirteen or fourteen Carats, and some seventeen and a half. They weigh about two Penny-weights, and thirtee Grains.

Villani observes, that there were Gold *Florins* in the Year 1067; from which time the Names *Frank*, or *Florin* became apply'd to the Gold Coins, which till that time had been call'd *Soldi*, Shillings.

As to Silver *Florins*, those of *Holland* are worth about 25 French Sois, or 15. 10^s. 4^d. Sterling. Those of *Genoa*, &c. are worth about 8^d. $\frac{1}{2}$ Sterling.

Pieces of three *Florins* are call'd *Ducatoons*. See DUCATOONS.

As a Money of Account, the *Florin* is us'd by the *Italians*, *Dutch*, and *German* Merchants and Bankers, in keeping their Books, and making out their Accounts. But this *Florin* is very diverse, and admits of different Divisions. In *Holland* it is on the foot of the *Dutch* Coin of that Name, containing 24 *Deniers* *Groſch*, and divided into *Powards* and *Penins*. In *Antwerp*, *Nuremberg*, &c. it is equivalent to three Shillings Sterl. and is divided into *Cremers* and *Pfenningi*. At *Liege* it is equivalent to 25. 3^d. At *Strasbourg* to 15. 8^d. In *Savoie* to 11 *d*. At *Genoa* to 8 *d*. $\frac{1}{2}$. and at *Genova* to 6 *d*. $\frac{1}{2}$.

FLORIN was also a Gold Coin, struck in *England* in the 18th of *Edw.* 3. of the Value of six Shillings.

Cambden says, They were so call'd, because made by *Florentines*: And *Fabian* says, they were not so fine Gold as the Nobles and Half-Nobles of that Prince.

But what is most observable, is that *Fabian* calls the *Florin* a Penny, Val. 6. 5. 8. the half *Florin* an Half-penny, Val. 3. 5. 4. the Quarter *Florin* a Farthing, Val. 1. 5. 8 *d*.

These Words you will often meet with in old Histories and Accounts, apply'd to several Coins, as Rials and Angels,

gels, &c. where you are to understand by Denarius the whole, by Obolus the half, and by Quadrans the fourth Part, or Farthing. See DENARIUS, PENNY, OBOLUS, FARTHING, &c.

By Inducement of the Mint in 18 Ed. 3. every Pound weight of old Standard Gold, was to be coin'd into fifty Florins, to be current at six Shillings a-piece; all which made in Tale fifteen Pounds; or into a proportionable Number of half or quarter Florins.

FLORNIANS, FLORIANI, a Sect of Hereticks, of the second Century, denominated from its Author *Florianus*, or *Florianus*, a Priest of the Roman Church, deposed along with *Blasius*, for his Errors.

Floria had been a Disciple of *St. Polycarp*, along with *Ireneus*. He made God the Author of Evil; and taught the *Gnostic* Doctrine of two Principles.

According to *Philastrius*, the *Florianians* likewise denied a future Judgment and Reformation: Held that *JESUS CHRIST* was not born of a Virgin; and taught that the Resurrection was in effect a new Generation. They are also charged with holding criminal Assemblies in the Night-time, and giving into Judasim and Paganism.

They had other Names given them: *Philastrius* says, they were the same with the *Carophorians*. He adds, that they were also called *Soldiers*, *Milites*, *Quia de militariibus fuerunt*. *St. Ireneus* calls them *Gnosticks*: *St. Epiphanius*, *Phibionites*; and *Theodoret*, *Barbortites*, on account of the Impurities of their Life: Others call them *Zaccheus*; others *Coddians*, &c. though, for what particular Reasons, 'tis not easy, nor perhaps wou'd it be worth while, to say.

FLORIST, a Person curious, or learned in Flowers; their Kinds, Names, Characters, Culture, &c. See FLOWERS.

FLORY, FLOWRY, FLEURY, FLORETTES, FLEUR-DE-LISEE, &c. are Terms in Heraldry, when the Outlines of any Ordinary are drawn as if trimm'd with, or in the Form of, Flowers, Lillies, Flower-de-Luces, &c.

Thus, He bears a Cross *Flory*, &c.

FLOTA, or FLOTTA, i. e. Fleet, a Name the *Spaniards* give particularly to the Ships which they send annually from *Cadix*, to the Port of *Vera-Cruz*, to fetch the Merchandises gather'd in *Mexico* for *Spain*. Those sent to fetch the Commodities prepared in *Peru*, are called *Gallions*. See FLEET, and GALLION.

They give the Name *FLOTTILLA* to a Number of Ships, which get before the rest in their Return, and give Information of the Departure and Cargo of the *Fista* and *Gallions*.

FLOTAGES, are all such things as are floating on the Top of the Sea, or great Rivers; a Word more especially used in the Commissions of Water-Bailiffs.

FLOTSON, or FLOTZAM, a Term signifying any Goods lost by Shipwreck, and swimming on the Top of the Water; which, with *Tetson*, and *Lagon*, and *Sbares*, are given to the Lord High Admiral, by his Letters Patents. See ADMIRAL.

Tetson is what is cast out of the Ship, being in Danger of a Wreck, and beaten to the Shore by the Water; or cast on Shore by the Seamen. See JETSON.

Lagon, or *Lagan* is that which lies in the Bottom of the Sea. See LAGON.

Sbares are Goods due to several Persons, by Proportion. **FLOUNDER** *Fishing*, see FLOUNDER FISHING.

FLOWER, Flus, is that Part of a Plant, which contains the Organs of Generation; or the Parts necessary for the Propagation of the Kind. See PLANT and GENERATION of Plants.

The *Flower* is a natural Production, which precedes the Fruit, and yields the Grain or Seed. See SEED, and FRUIT.

The Structure of *Flowers* is somewhat various; though the Generality, according to *Grew*, have these three Parts in common, *viz.* The *Empalement*, the *Foliation*, and the *Attire*. See EMPALEMENT, FOLIATION, &c.

Mr. Ray reckons, that every perfect *Flower* has the *Petala*, *Stamina*, *Apices*, and *Stylus*, or *Pistil*: Such as want any of these Parts, he deems *Imperfect Flowers*. See PETALEA, STAMINA, PISTIL, &c.

In most Plants there is a *Perianthium*, Calix, or *Flower*. Called of a stronger Confidence than the *Flower* it self, and design'd to strengthen and preserve it. See PERIANTHIUM, and CALIX.

In some *Flowers* the two Sexes are confounded, *i. e.* the Male and Female Parts are found in the same *Flower*; in others, they are separated: And of these again, some are followed by Fruits, and others not: Whence, *Flowers* become distinguish'd into *Male*, *Female*, and *Hermaphrodites*.

The Generality of *Flowers* are of the *Hermaphrodite* kind: Such *e. g.* are the *Lilly*, *Tulip*, *Daffodil*, *Rosemary*, *Sage*, *Thyme*, *Geranium*, *Aithes*, &c. See HERMAPHRODITES.

The Structure of Parts is much the same in those where

the Sexes are divided: The Difference between them consists in this, that the *Stamina* and *Apices*, *i. e.* the male Parts, in these, are separated from the *Pistils*; being sometimes on the same stand, and sometimes on different ones.

Those, wherein the *Stamina* are, in regard they bear no Fruit, are called *Male*, or *barren Flowers*, and by the Botanists, *Staminous Flowers*: Those which contain the *Pistil*, being succeeded with Fruit, are called *Females*, or *Knitting*, or *Fruitful Flowers*.

Among the Plants which bear both Male and Female Parts on the same Stand, but at a distance from each other, are reckon'd, the *Cucumber*, *Melon*, *Gourd*, *Turkey Wheat*, *Turnsol*, *Walnut*, *Oak*, *Beech*, *Hir*, *Alder*, *Cypress*, *Cedar*, *Juniper*, *Mulberry*, *Plantain*, &c.

Those, where the Male and Female Parts of the *Flowers* are bore on different Stands, are some Species of *Palm*, the *Willow*, *Poplar*, *Hemp*, *Mercury*, *Spinage*, *Nettles* and *Hops*.—See GENERATION of Plants.

Mr. Ray divides *Flowers* into *Perfect*, and *Imperfect*.

Perfect Flowers he here accounts all such as have the *Petals*, tho' they want the *Stamina*. These he subdivides into *Simple*, which are those not compos'd of other smaller ones, and which usually have but one single *Style*; and *Compound*, which consist of many *Flosculi*, all making but one *Flower*. See *Simple Flowers*.

Simple Flowers are either *Monopetalous*, which have the Body of the *Flower* all of one entire Leaf, though sometimes cut, or divided a little way, into many seeming *Petals*, or *Leaves*, as in *Borage*, *Buglois*, &c.

Or *Polypetalous*, which have distinct *Petals*, and those falling off singly, and not altogether, as the seeming *Petals* of the *monopetalous Flowers* always do.

Both these are farther divided into *Uniform* and *Difform Flowers*.

The former have their *Right* and *Left-hand* Parts, and the forward and backward Parts all alike; but the *Difform* have no such Regularity; as in the *Flowers* of *Sage*, *Dead-Nettle*, &c.

A *Monopetalous difform Flower* is likewise farther divided into

1^o *Semi-fistular*, whose upper Part resembles a *Pipe*, cut off obliquely, as in the *Aristolochia*.

2^o *Labiata*: And this either with one Lip only, as in the *Acanthum* and *Scordium*; or with two Lips, as in the far greater Part of the *Labiata Flowers*.

And here the upper Lip is sometimes turned upwards, and so turns the convex Part downwards, as in the *Chamæcissus*, &c. but most usually the upper Lip is convex above, and turns the hollow Part down to its Fellow below, and so represents a kind of *Helmet*, or *Monk's Hood*; whence these are frequently called *Galleate*, *Cucullate*, and *Gale-riculate Flowers*.

Such are the *Flowers* of the *Lamium*, and most verticillate Plants.

Sometimes also the *Labium* is entire, and sometimes jagged or divided.

3^o *Corniculate*, that is, such hollow *Flowers*, as have on their upper Part a kind of *Spur* or little *Horn*; as in the *Linaria*, *Delphinium*, &c. And the *Corniculum* or *Calcar* is always impervious at the *Tip* or *Point*.

Compound Flowers are,

1^o *Discous* or *Discoidal*, that is, whose *Flosculi* are set together so close, thick, and even, as to make the Surface of the *Flower* plain and flat; which therefore, because of its round Form, will be like a *Discus*.

This *Disc* is sometimes radiated, when there are a Row of *Petals* standing round in the *Disc*, like the *Points* of a *Star*; as in the *Matricaria*, *Chamæmelum*, &c.

And sometimes naked, having no such radiating *Leaves* round the *Limb* of its *Disc*, as in the *Tansicolum*.

2^o *Pluviosifolios*, which are compos'd of plain *Flowers*, set together in circular Rows, round the *Centre*, and whose *Face* is usually indented, notch'd, uneven, and jagged; as the *Hieracia*, *Sonchis*, &c.

3^o *Fistular*, which are compounded of many long, hollow, little *Flowers*, like *Pipes*, all divided into large *Jags* at the *Ends*.

Imperfect Flowers are such as want the *Petals*, and are called likewise *Staminous*, *Apetalous*, and *Capillatious*.

Those which hang pendulous by fine *Threads* like the *Juli*, are by *Tournefort* called *Amentacians*; we call them *Cats-tails*.

Botanists furnish other Divisions and Denominations of *Flowers*.

Campaniform, or *Bell-like Flowers*, are those in Shape of a *Bell*. See CAMPANIFORM.

Cruciform Flowers, are those consisting of four *Petals*, or *Leaves*: The *Calix* also containing four *Leaves*; and the *Pistil* always producing a *Fruit*. Such are those of the *Clove Tree*, *Cabbage Tree*, &c.

Infundibuliform FLOWERS, are such as resemble the Figure of a Funnel, *i. e.* broad, and ample at top, and contracted into a Neck at bottom: Such is that of the Bear's Ear.

Cucurbitaceous FLOWERS, are such as resemble the Flower of the Gourd; or have the same Conformation therewith. See CUCURBITACEOUS.

Stamineous FLOWERS, are such as have no Petals, but consist wholly of Stamina's or Threads, with Apices a-top.

The Leaves placed around these Stamina, are not to be esteem'd as Petals, but a Calix; in regard they afterwards become a Capula, or Cover, including the Seed; which is the Office of the Calix alone. See CALIX.

In effect, it is essential to the Leaves of Flowers, not to serve as a Cover to the Seeds that succeed them: And this is the only Characteristic that distinguishes the Leaves, or Petals of Flowers from their Calix; for, that no particular Colour of the Leaves does determine, whether the Parts in dispute be Leaves of the Flower, or the Calix of the Flowers, appears hence, that there are some Leaves of Flowers, which are green like the Calix; and some Calices colour'd, like Petals.—

Leguminous FLOWERS, are those of Leguminous Plants. These bear some Resemblance to a flying Butterfly; for which reason they are also called *Papilionaceous* Flowers.

Papilionaceous Flowers, consist of four or five Leaves, whereof the uppermost is called *Vexillum*, or Standard; and the lowest *Carina*, as resembling the Bottom or Keel of a Boat: Those between the two, are called *Lateral* Leaves, or *Alæ*.

From the Bottom of the Calix arises a Pistil, which is incompar'd with a Sheath, or Cover, fringed with Stamina. This Pistil always becomes the Fruit, and is usually called the Pod, in Latin, *Siliqua*. See LEGUMINOUS.

Umbelliform FLOWERS, are those with several Leaves doubled, and dispos'd in manner of a Rose; and whose Calix essentially becomes a Fruit of two Seeds, join'd, before they come to Maturity; but afterwards easily separated again.

They have this Denomination, by reason they are generally sustain'd by a Number of Threads, which proceeding from the same Centre, are branch'd all around, like the Sticks of an Umbrello.

Of this kind are the Flowers of Fennel, Angelica, &c. See UMBELLIFORM.

Ferticillate FLOWERS, are those ranged, as it were, in Stories, Rings, or Rays along the Stems: Such are those of Horehound, Cinry, &c.

FLOWERS, in Gardening, are distinguish'd, into *Early*, or *Spring*-Flowers, which flourish in the Months of *March*, *April*, and *May*.

Such are the Anemonies, Daffodils, Hyacinths, Tulips, Junquills, Cowslips, Primroses, &c.

Summer Flowers, which open in *June*, *July*, and *August*, as Pinks, Gilly Flowers, Lillies, Daisies, Campanulas, Poppies, Sun Flowers, &c.

And *Autumnal*, or *Late* Flowers, those of *September* and *October*; as the Oculus Christi, Indian Pinks, and Roses, Pansy, Flower Gentle, &c.

Of these Flowers, those which subsist all the Year, we mean in the Stem, or Root at least, are called *Perennials*; and those which are to be planted, or sow'd a-fresh every Year, according to the Season, are called *Annuals*.—See GREEN-HOUSE.

FLOWER, in Architecture, according to *Vitruvius*, is a Representation of some imaginary Flower, by way of crowning, or finishing, on the Top of a Dome, &c.

In lieu of this the Moderns commonly use a Vase, Ball, or the like.

FLOWER of the Capital, is an Ornament of Sculpture, in form of a Rule, in the middle of the Sweep, of the *Corinthian* Abacus: In that of the Composite, 'tis an imaginary kind of Flower. See CAPITAL.

FLOWERS, in Chymistry, are the finest, and most subtle Parts of dry Bodies, rais'd by Fire, into the Head, and Aludels; and adhering to them, in form of a fine Powder, or Dust. Such are the Flowers of Sulphur, Benjamin, &c. See SUBLIMATION.

FLOWER of Sulphur, or *Brimstone*, is prepared by putting the Sulphur grossly powder'd into a Glass Vessel, placed in a small open Fire, with another earthen Vessel of the same form over, or in it, Neck to Neck. This dispos'd, the Fire will sublime, or raise the Flowers, and gather them in the upper Vessel. See ALUDELL; see also SULFUR.

FLOWER of Wheat, Rye, and other Pulse. See FABRINA.

FLOWERS, in the Animal Oeconomia, are Womens monthly Purgations, or Menfes. See MENSES.

Niced derives the Word in this sense from *naere*, q. d. *Floars*: Others will have the Name occasion'd hence, that Women do not conceive, till they have had their Flowers; so that these are a sort of Forerunners of their Fruit.—

FLOWERS, in Rhetoric, are Figures, or Ornaments of Discourse, by the Latins called *Floruli*. See FIGURE.

FLOWER-de-Liis, or, as it is vulgarly wrote, *de Luce*, in Heraldry, is a bearing antiently of great Dignity; being reputed the noblest of all Flowers, and as such having been in all Ages the Charge of the Royal Escutcheon of the Kings of France; though Tract of Time has made the bearing thereof more vulgar.

In some Coats 'tis bore Single; in others Triple; in others it is Semée, feeded all over the Escutcheon.

FLOWERAGE, a Collection of Flowers of several kinds set together in Husks, and hung up with Strings.—

FLOWER'D, in the Manufactures. A Stuff, or Cloth, is said to be *flower'd*, *flourish'd*, *frig'd*, or *figur'd*, when there are Representations of Flowers, either natural, or imaginary wrought thereon.

There are Stuffs *flower'd* of almost all kinds of Matters: Flowers of Gold, Silver, Silk, Wool, Thread, Cotton, &c. Stuffs and Cloths are usually denominated from the Ground, whereon the Flowers are rais'd.

Thus there are *flower'd* Velvets, Taffaties, Damasks, Satins, Mohairs, Dimities, &c. See VELVET, TAFFATY, DAMASK, &c.

Those *flower'd* with Gold and Silver, are more usually called *Brocades*. See BROCADE.

The Flowers are usually wrought at the same time with the Cloth, or Ground. The Threads of the Warp are rais'd, and lower'd by means of Packthreads, pass'd through them in mounting the Loom; and the Manufacturer shooting his Warp, or matter of the Flowers, whether Gold, Silver, Silk, or the like between the Threads thus rais'd, forms the Flowers. See WARP, WOOL; WEAVING, &c.

'Tis very curious to see them mount a Loom; or, as they call it, *Read a Design*, to be represented on a Stuff: But it is next to impossible to describe it; yet we have endeavour'd to give some Idea thereof under the Article DESIGN; see also TAPISTRY.

FLUIDITY, in Physicks, that State or Affection of Bodies, which denominates, or renders them *fluid*; see FLUID.

Fluidity stands in direct Opposition to *Firminess*, or Solidity. See FIRMINESS.

It is distinguish'd from *Liquidity*, and *Humidity*, in that the Idea of the first is absolute, and the Property contain'd in the thing it self; whereas that of the latter is relative, and implies wetting, or adhering; *i. e.* somewhat that gives us the Sensation of Wetness, or Moisture, and which would have no Existence, but for our Senses.

Thus, melted Metals, Air, Ether, and even Smoak and Flame it self are *Fluid* Bodies, but not *Liquid* ones; their Parts being actually dry, and not leaving any Scule of Moisture. See LIQUID, and HUMIDITY.

The Nature, or Cause of *Fluidity* has been variously assign'd. The *Gassendists*, and antient Corpuscularians, require only three Conditions as necessary thereto, *viz.* a Smallness and Smoothness of the Particles of the Body; Vacuities interspersed between them; and a Spherical Figure. Thus the Epicurean Poet, Lucretius,

*Ille autem debent ex levibus atque rotundis
Esse magis, fluido quæ corpore liquida constant.*

The *Cartesians*, and after them Dr. Hook, Mr. Boyle, &c. beside the Circumstances above mentioned, require a various, perpetual, intestine Motion of the Particles of the Bodies, as that which principally contributes to *Fluidity*.

Fluidity then, according to these Philosophers, consists in this, that the Parts of the Body being very fine, and small, are so dispos'd by Motion, or Figure, as that they can easily slide over one another's Surfaces all manner of ways; and that they be in a constant, various, separate Agitation to and fro; and that they only touch one another in some Parts of their Surfaces.

Mr. Boyle in his *History of Fluidity* mentions these three as the Conditions principally required to *Fluidity*, *viz.*

1^o The *Miscibility of Parts*: As, in effect, we find that Fire, by dividing Metals into fine, small Parts, renders them fluid; and that acid Menstruums dissolve and render them fluid after the like manner; and that Fire turns the hard Body of common Salt almost wholly into a Liqueur, by Distillation: Not but that the Figure of the Particles may have a considerable Share in *Fluidity*.

Thus Mercury, whose Parts are doubtless much grosser than those of Oil and Water, is yet more fluid than either of them: And thus Oil, by the Action of Fire, may be converted into a consistent Substance, like Butter.

2^o *Store of Vacuities* interspersed between the Corpuscles, to give room for the several Particles to move among themselves.

3^o A Motion and Agitation of the Corpuscles; either from some Principle of Mobility within themselves, or from some extraneous Agent, penetrating and entering the Pores, moving variously among them, and communicating to them part of its Motion.

That this last is the Qualification chiefly required in *Fluidity*, he argues from divers Observations and Experiments.

Thus, a little dry Powder of Alabaſter, or Plaiſter of Paris ſingly ſifted, being put in a Veſſel over the Fire; it ſoon begins to boil like Water; exhibiting all the Motions and Phenomena of a boiling Liqueur. It will kindle variously in great Waves like that; will bear ſtirring with a Stick or Ladle like that, without reſiſting; Nay, if ſtrongly ſtir'd near the Side of the Veſſel, its Waves will apparently daſh againſt them: Yet is it all the while a dry, parch'd Powder.

The like is obſerv'd in Sand: A Diſh of which being ſet on a Drumhead, briskly beaten by the Stricks; or on the upper Stone of a Mill, it in all reſpects emulates the Properties of a fluid Body. A heavy Body, *e. gr.* Ice into Water, and ſinks in it to the Bottom, and a light one emerge to the Top: Each Grain of Sand has a conſtant vibratory and dancing Motion; and if a Hole be made in the Side of the Diſh, the Sand will ſpin out like Water.

That the Parts of Fluids are in continual Motion, the *Carteſians* bring divers Conſiderations to prove; as 1^o The Tranſmutation of Solids into Fluids, *e. gr.* Ice into Water, and *vice verſa*; the chief Difference between the Body in thoſe two States conſiſting in this, that the Parts being fix'd and at reſt in the one, reſiſt the Touch; whereas in the other, being already in Motion, they gave way upon the ſlighteſt Impulſe.

2^o The Effects of Fluids, which commonly proceed from Motion: Such are the Inſinuation of Fluids among the Pores of Bodies; the ſoftening and diſſolving of hard Bodies; the Actions of corroſive Menſtrums, &c. Add, that no Solid can be brought to a State of *Fluidity*, without the Intervention of ſome moving, or moveable Body, as Fire, Air, or Water.

Air, the ſame Gentlemen hold the firſt Spring of theſe Cauſes of *Fluidity*; it being this that gives Motion to Fire and Water, though it ſelf receives its Motion and Action from the *Aether*, or ſubtle Medium. See AIR and *AETHER*.

The Learned *Boerhaave*, in his late Excellent *Inſtitut. Chymicæ*, pleads very ſtrenuouſly for Fire's being the firſt Mover, and the Cauſe of all *Fluidity* in other Bodies, as Air, Water, &c. without this, he ſhews, that the Atmosphere it ſelf would fix into one ſolid Maſs. See FIRE.

Sir *I. Newton* ſets aſide this Theory of the Cauſe of *Fluidity*, and ſubſtitutes a new one, the great Principle of Attraction.

The Corpufcular System, with all the Improvements of *Des Cartes*, and Mr. *Boyle*, did not ſufficiently account for the primary Condition, requiſite to conſtitute a Body fluid, *viz.* the various inſteline Motion and Agitation of its Particles.

But, this Motion is naturally enough accounted for, by ſuppoſing it a primary Law of Nature, that, as all the Particles of Matter attract each other, when within a certain Diſtance; ſo at all greater Diſtances, they fly from, and avoid one another.

For then, tho' the common Gravity together with the Preſſure of other Bodies upon them, may keep them together in a Maſs; yet their continual Endeavour to avoid one another ſingly, and the adventitious Impulſes of Heat, Light, or other external Cauſes, may make the Particles of Fluids continually move round about one another, and ſo produce this Quality.

There is a Difficulty indeed, in accounting, why the Particles of Fluids always keep at ſuch a Diſtance from one another, as not to come within the Sphere of one another's Attraction.

The Fabrick and Conſtitution of that fluid Body, Water, is amazing; that a Body ſo very rare, and which has a vaſt Over-proportion of Pores, or interſpers'd Vacuity, to ſolid Matter, ſhould yet be perfectly incompressible by the greateſt Force: And yet this Fluid is eaſily reducible into that firm, transparent, friable Body, which we call Ice, by being only expoſed to a certain Degree of Cold. See COLD and FREEZING.

One would think, that tho' the Particles of Water cannot come near enough to attract each other, yet the intervening frigorick Matter doth, by being mingled *per minima*, ſtrongly attract them, and is it ſelf likewiſe ſtrongly attracted by them, and ſo wedges or fixes all the Maſs into a firm ſolid Body; which ſolid Body loſes its Solidity again, when by Heat the Vinculum is ſolved, and the frigorick Particles are diſjoined from thoſe of the Water, and are forced to fly out of it: And juſt thus may the Fumes of Lead perhaps fix Quickſilver. See FIXATION.

When a firm ſolid Body, ſuch as a Metal, is by Heat reduced into a Fluid, the Particles of Fire diſjoin'd and ſeparate its conſtituent Parts, which their mutual Attraction cauſed before

to cohere; and keep them at ſuch a diſtance from one another, as that they are out of the Sphere of each other's Attraction, as long as that violent Motion laſts; and when by their Lightneſs and Activity they are flown off, unleſs they are renew'd by a continual Supply, the component Particles of the Metal come near enough again to feel one another's Attractions.

As therefore the Cauſe of Cohesion of the Parts of ſolid Bodies appears to be their mutual Attraction; ſo the chief Cauſe of *Fluidity* ſeems to be a contrary Motion, impreſs'd on the Particles of Fluids, by which they avoid, and fly one another, as ſoon as they come at, and as long as they keep at ſuch a Diſtance from each other.

It is obſerv'd alſo in all Fluids, that the Direction of their Preſſure againſt the Veſſels which contain them, is in Lines perpendicular to the Sides of ſuch Veſſels; which Property being the neceſſary Reſult of the Particles of any Fluid's being ſpherical, it ſhews that the Parts of all Fluids are ſo, or of a Figure very nearly approaching thereto.

FLUIDS, are Bodies, whole Particles are but weakly connected; their mutual Cohesion being in great meaſure prevented from ſome external Cauſe: In which ſenſe a Fluid ſtands oppoſed to a Solid. See SOLID.

Sir *I. Newton* defines a fluid Body, to be that whole Parts yield to the ſmalleſt Force impreſs'd, and by yielding are eaſily moved among each other.

The Cauſe, therefore, of *Fluidity*, ſhould ſeem to conſiſt in this, that the Parts do not cohere ſo ſtrongly, as they do in ſolid or firm Bodies; and that their Motion is not hinder'd by any Inequality in the Surface of the Parts; as is the Caſe in Powders.

For, that the Particles whereof Fluids conſiſt, are of the ſame nature, and have the ſame Properties with the Particles of Solids, is evident, from the Conversion of Liquids and Solids into each other, *e. gr.* of Water into Ice; of Metals into Fluors, &c. Nor can it be reaſonably doubted, that the component Parts of all Bodies are the ſame, *viz.* hard, ſolid, impenetrable, moveable Corpufcles. See BODY, and MATTER.

The *Carteſians* define a Fluid to be a Body whole Parts are in continual inſteline Motion; and Dr. *Hook*, Mr. *Boyle* and *Boerhaave*, tho' far from Carteſianiſm, ſubſcribe to the Definition; alledging Arguments to prove that the Parts of Fluids are in continual Motion; and even that it is this Motion, which conſtitutes *Fluidity*. See FLUIDITY.

The later *Newtonians* dare not go ſo far: To ſay that the Parts of a Fluid are in continual Motion, is more than either our Senſes, Experience, or Reaſon will warrant; and to define a thing from a Property that is diſputable, is certainly bad Philoſophy. See DEFINITION.

Add, that the great Argument from Geometry, produced in favour of this continual Motion, *viz.* The Reſiſtance of a Body moving in a Fluid, is leſs, if the Parts of the Fluid be agitated by an inſteline Motion, than if they were at reſt, is demonſtrated to be falſe. See RESISTANCE.

We add, therefore, with Dr. *Clark*, That if the Parts of a Body either do not touch each other, or eaſily ſlide over one another; and are of ſuch a Magnitude, as that they may be eaſily agitated by Heat: And the Heat be ſufficiently great to agitate them; tho' it may perhaps be leſs than ſuffices to prevent Water from freezing: Or, even, tho' the Parts be not actually moved, yet, if they be ſmall, ſmooth, ſlippery, and of ſuch a Figure and Magnitude as diſpoſes them to move and give way: That Body is fluid.

And yet the Particles of ſuch fluid Bodies, do, in ſome meaſure, cohere; as is evident hence, that Mercury, when well purg'd of Air, will be ſuſtained in the Barometre, to the Height of 60 or 70 Inches; that Water will aſcend in Capillary Tubes even in Vacuo; and that the Drops of Liquors in Vacuo run into a ſpherical Form: As adhering by ſome mutual Cohesion like that between poliſh'd marble Planes. Add, that theſe fluid Bodies, if they conſiſt of Particles that are eaſily entangled with each other, as Oil; or if they be capable of being diſſen'd by Cold, and join'd by the Interpoſition of little Cuſts, or Wedges, as Water; they are eaſily render'd hard: But if their Particles be ſuch as can neither be entangled, as Air; nor diſſen'd by Cold, as Quickſilver; then they never grow hard and fix'd. See PARTICLE.

FLUIDS are either Natural, as Water, and Mercury; or Animal, as Blood, Milk, Bile, Lymph, Urine, &c; or Facultious, as Wines, Spirits, Oils, &c. See each under its proper Article, WATER, MERCURY, BLOOD, MILK, BILE, WINE, SPIRIT, OIL, &c.

The Doctrine and Laws of Fluids are of the greateſt Extent in Philoſophy.

The Preſſure, and Gravitation of Bodies in Fluids, and the Action of the Fluids immerſed in them, makes the Subject of *Hydroſtatics*. See HYDROSTATICS.

Hydrostatical Laws of FLUIDS.

I. Of the Pressure and Equilibrium of FLUIDS.

1^o *The upper Parts of all Fluids, as Water, &c. do press upon the lower: Or, as some Philosophers state it, All Fluids do gravitate in proprio loco.*

The Contrary of this was a Principle in the School-Philosophy; but the Certainty of such Pressure is now demonstrated by a thousand Experiments: It will be sufficient to instance one or two.

Immerge a Tube, open at both Ends, and half filled with Oil of Turpentine, in a Vessel of Water, the upper End of the Tube being stopp'd with the Finger: If now the upper Surface of the Oil lie as low as that of the Water; the Oil, upon removing the Finger, will not run out at the lower End of the Tube: Nay, and if the Tube be thrust a little lower, the Water will rise up in it, and bear the Oil above it: But if the upper Surface of the Oil be considerably higher than that of the Water; the Oil will drop out of the Tube. Whence it follows, that the Column of Oil in one case presses or gravitates less on the Plane imagined to pass under its lower Surface, than a Column of Water; and in the other case, more.

Or thus; an empty Vial, close shut, being immersed in Water, and suspended by a Horse Hair to the Beam of a Balance, with a Weight at the other End exactly counterpoising it: Upon untopping the Vial, and letting it fill with Water, it will preponderate, and bear down the End of the Balance; without having any Communication with the external Air.

Which two Experiments abundantly prove the Proposition, that the upper Parts of Fluids press, or gravitate on the lower. See PRESSURE, and GRAVITATION.

Corol. From this Gravity it follows, that the Surfaces of stagnant Fluids are plain, and parallel to the Horizon; or rather that they are Segments of a Sphere concentrical with the Earth.

For, as the Particles are supposed to yield to any Force impress'd, they will be moved by the Action of Gravity, till such time as none of them can descend any lower. And this Situation once attained, the Fluid must remain at rest, unless put in Motion by some foreign Cause; inasmuch as some of the Particles can now move without ascending; contrary to their natural Tendency.

2^o *If a Body be immersed in a Fluid, either wholly, or in part, its lower Surface will be press'd upward by the Water underneath it.*

The Truth of this Proposition is evident from the Experiment above mention'd, where the Oil of Turpentine was suspended, nay and made to mount up in the Tube by the Pressure of the Water upwards on its lower Parts.

The Law, or Quantity of this Pressure is this, that a Body immersed in a Fluid, loses just so much of the Weight it would have in Air; as so much of the Fluid as is equal to it in Bulk, if weigh'd in the Air, would amount to.

This Pressure of Fluids on the lower Parts of an immersed Body is farther confirm'd, by attending to the Reason why Bodies specifically lighter than Fluids ascend therein. The Effect is owing to this, that there is a greater Pressure or Weight on every other Part of the Plane or Surface of the Fluid imagined to pass under the lower Surface of the Body, than there is on that whereon the emerging Body infits. Consequently, to produce an Equilibrium in the Fluid, the Parts immediately under the rising Body being press'd by the rest every way, do continually force it upwards.

In effect, the emerging Body is continually press'd on by two Columns of Water, one bearing against its upper; and the other against its lower Parts: The length of both which Columns being to be accounted from the Top of the Water; that which presses on the lower Part, will be the longer, by the Thickness of the ascending Body, and consequently overbalance it by the Weight of as much Water as will fill the Space that Body takes up. See SPECIFIC GRAVITY.

Corol. 1. Hence we are furnish'd with one Reason, why very minute Corpuscles, either heavier, or lighter than the Liqueur they are mingled with, will be sustain'd therein a good while, without either emerging to the Top, or precipitating to the Bottom: The Difference between the two Columns of the Fluid being here inconsiderable.

Corol. 2. Hence also, if a Body A be specifically lighter than B, an equal Partion of the Fluid in which it is immersed; it will rise with a Force proportionable to the Excess of Gravity of B above A: And if A be specifically heavier than B; it gravitates and descends with the Excess only of its Weight above that of B.

3^o *The Pressure of the upper Parts of a Fluid, on the lower, exerts it self every way, and every way equally; laterally, horizontally, and obliquely as well as perpendicularly.*

For, as the Parts of a Fluid yield to any Impression, and are easily moved, 'tis impossible any Drop shou'd remain in its Place: If while it is press'd by the super-incumbent Fluid, it be not equally press'd on every side.

The same is confirm'd from Experiments: For several Tubes of divers Forms, straight, curved, angular, &c. being immersed in the same Fluid; thro' the Apertures, thro' which the Fluid enters, be differently posited to the Surface or Plane, some being perpendicular, others parallel, and others variously inclined; yet will the Fluid rise to an equal Height in all.

Corol. 1. Hence, all the Particles of Fluids being thus equally press'd on all Sides, 'tis argued that they must be at rest, and not in continual Motion; as has been usually suppos'd.

Corol. 2. Hence also a Body being immersed in a Fluid, sustains a lateral Pressure from the Fluid; which is also increase'd as the Body is plac'd deeper beneath the Surface of the Fluid.

4^o *In Tubes that have a Communication with each other, whatever their Magnitude be, whether equal, or unequal; and whatever their Form, whether straight, angular, or crooked: Still, Fluids rise in them to the same Height.*

5^o *If a Fluid rise to the same Altitude in two Tube that communicate with each other; the Fluid in one Tube is a Balance, or equal in weight, to that in the other.*

If the Tubes be of equal Diameters, the Columns of the Fluid having the same Base and Altitude, are equal, and consequently their Gravities equal; so that they press and gravitate against each other with equal Force:

This is demonstrated from Mechanics. E. gr. Let the Base of G I Tab. Hydrostatics, Fig. 6. be suppos'd Quadruple the Base of H K; and that the Fluid descend in the greater Tube the Space of an Inch, as from L to O; it will then rise in the other the Space of four Inches, as from M to N. Wherefore the Velocity wherewith the Fluid moves in the Tube H K, is to that wherewith it moves in G I, as the Base of the Tube G I to the Base of the other, H K. But the Altitude of the Fluid being suppos'd the same in both Tubes, the Quantity of the Fluid in the Tube G I, will be to that in the other Tube H K as the Base of the Tube G I to the Base of the other, H K.

Consequently, the Momentum of the Fluid in the Tube G I, is to that in the Tube H K, as the Product of the Base of the Tube G I into the Base of the other H K; to the Factum of the Tube H K into the Base of the other G I. Wherefore, the Products being equal; the Momenta must be equal.

The same is easily demonstrated where one of the Tubes is inclined, and the other perpendicular, &c.

Corol. Hence in Tubes that communicate, the Fluid preponderates in that where its Altitude is the greatest.

6^o *In Communicating Tubes, Fluids, of different specific Gravities, will equiponderate, if their Altitudes be in the Ratio of their specific Gravities.*

Corol. Hence we have a Way of finding the Specific Gravities of Fluids, viz. by pouring one Fluid into one of the communicating Tubes, as A B (Fig. 7.) and another, into the other Tube C D; and measuring the Altitudes E B and F D, at which they stand when balanced.

For the specific Gravity of the Fluid in A B, is to that in D C; as D H, to B G. If the Fluids be apt to mix; it may be proper to fill the Horizontal Tube B D with Mercury, to prevent the Mixture.

Corol. Since the Densities of Fluids, are as their specific Gravities; the Densities will likewise be as the Altitudes of the Fluids D H and B G: So that we have hence likewise a Method of determining the Densities of Fluids. See DENSITY.

7^o *The Bottoms, and Sides of Vessels, are press'd in the same manner, and by the same Laws as the Liquids, contained in them.*

Corol. Hence as Action and Reaction are equal; the Fluids themselves, sustain an equal Pressure from the Bottoms and Sides. And as the Pressure of Fluids is equal every way, the Bottom and Sides are press'd as much as the neighbouring Parts of the Fluids: And consequently this Action increases in proportion to the Height of the Fluid; and is equal every way at the same Depth; as depending altogether on the Height, and not at all on the Quantity of the Fluid.

8^o *In perpendicular Vessels of equal Basis, the Pressures of Fluids on the Bottoms, is in the Ratio of their Altitudes.*

This is evident, in that the Vessels being perpendicular, the Bottoms are horizontal: Consequently the Tendency of Fluids by the Action of Gravity will be in Lines perpendicular to the Bottom; so that they will press with all their Weights: The Bottoms therefore are press'd in the Ratio of the Gravities. But the Gravities are as the Bases; and the Bases here are as the Altitudes: Therefore the Pressures on the Bottoms are as the Altitudes.

9° In perpendicular Vessels of unequal Bases, the Pressure on the Bottoms is in a Ratio compounded of the Bases, and Altitudes.

From the preceding Demonstration it appears, that the Bottoms are press'd in the Ratio of the Gravities: And the Gravities of Fluids are as their Bases; and their Bases in a Ratio compounded of the Bases and Altitudes. Consequently, &c.

10° If an inclined Vessel *A B C D*, Fig. 8. have the same Base and Altitude with a perpendicular one *B E F G*, the Bottoms of each will be equally press'd.

For in the inclined Vessel *A B C D*, the Bottom *C D*, is press'd in the Direction *B D*. But the Force of Gravity in the Direction *B D*, is to the absolute Gravity, as *B E* to *B D*. See GRAVITY.

Consequently, the Bottom *C D* is press'd in the same manner; as if it had been press'd perpendicularly by the Fluid under the Altitude *B E*. Therefore, the Bottoms of the perpendicular and inclined Vessels are equally press'd.

11° Fluids press upon subject'd Bodies, according to their perpendicular Altitude, and not according to their Latitude.

Or, as others state it, thus: If a Vessel be taper, or unequally big at Top and Bottom; yet the Bottom will be press'd after the same manner as if the Vessel were cylindrical, and the Top and Bottom equal.

Or thus: The Pressure sustain'd by the Bottom of a Vessel, whatever the Figure of the Vessel be, is ever equal to the Weight of a Column of the Fluid, whose Base is the Bottom it self, and Height, the vertical Distance of the upper Surface of the Water from the Bottom.

Or, yet more explicitly, thus: If there be two Tubes or Vessels, having the same Heights, and Bases, both filled with Water; but one of them made so tapering upwards, that it shall contain but twenty Ounces of Water, whereas the other widening upwards, holds 200 Ounces: Yet, the Bottoms of the two Tubes shall sustain an equal Pressure of Water, viz. each of them, that of the Weight of 200 Ounces.

This is a noble Paradox in Hydrostatics, which it is well worth the clearing and insinuing on. It is found unexpectably true from abundant Experiments: And may even be demonstrat'd and account'd for on Principles of Mechanics.

Suppose e.g. the Bottom of a Vessel, *C D* (Fig. 9.) less than its Top, *A B*. Since the Fluid presses the Bottom *C D*, which we suppose horizontal, in a perpendicular Direction *E C*, note that that Part within the Cylinder *E C D F* can press upon it; the natural Tendency and Pressure of the rest being taken off by the Sides.

Again, supposing the Bottom, *C D* (Fig. 10.) much bigger than the Top *F G*. Or even, for the easier Demonstration, suppose a Tube *F E* fix'd in a Cylinder *A B C D*: And suppose the Bottom *C D* rais'd to *L*; that the Fluid may be moved through the Interval *D L*. Then will it have risen through the Altitude *G H*, which is to *D L*, as the Base *C D* to that *F G*. The Velocity therefore of the Fluid *F E*, is to its Velocity in the Vessel *A D*; as the Base *C D* to the Base *F G*.

Hence, we have the Momentum wherewith the Fluid in the Tubes tends downwards, by multiplying the Base of the Cylinder *C D* into its Altitude *C K*.

Consequently, the Bottom *C D* is press'd with the same Force; as it would be press'd by the Cylinder *H C D I*.

To confirm and illustrate this Doctrine of the Pressure of Fluids in the Ratio of the Base and Altitude, provide a metallick Vessel, *A C D B* (Fig. 11.) so contriv'd, as that the Bottom *C D* may be moveable, and to that End fitted in the Cavity of the Vessel with a Rim of wet Leather, to slide without kerrag any Water pass. Then, thro' a Hole in the Top, *A B*, apply successively several Tubes of equal Altitudes, but different Diameters. Lastly, fastening a String to the Beam of a Balance, and fixing the other End by a little Ring *K*, to the moveable Bottom; put Weights in the other Scale, till they be sufficient to raise the Bottom *C D*: Then will you not only find, that the same Weight is required, what Diameter or Magnitude soever the Tube be of; but even, that the Weight which will raise the Bottom, when press'd by the smallest Tube, will raise it when press'd by the whole Cylinder *H C D I*.

12° The most solid and ponderous Body, which near the Surface of the Water would sink with great Velocity, yet if placed at a greater Depth than twenty times its own Thickness, will not sink, unless assist'd by the Weight of the incumbent Water.

Thus, immerse the lower End of a slender Glass Tube in a Vessel of Mercury: Then, stopping the upper End with your Finger, you will by that means keep about half an Inch of that ponderous Fluid, suspended in the Tube. Lastly, keeping the Finger thus; immerse the Tube in a long Glass of Water, till the little Column of Mercury be more than 13 or 14 times its Length under Water. Then, removing

the Finger, you will find that the Mercury will be kept suspended in the Tube by the Pressure of the Water upwards: But if you raise the Tube a very little above the former Station; the Mercury will immediately run out: Whereas, if before you had removed the Finger from the Top, you had sunk the Pipe so low, as that the Mercury were 12 or 14 Inches, &c. below the Surface of the Water; the Mercury would be violently forced up, and make several Ascens and Descens in the Tube, till it had gain'd its proper Station, according to the Laws of specific Gravity.

Carol. Hence we have a Solution of the Phenomenon of two politt'd Marbles, or other Planes, adhering so strongly together: In that the Atmosphere presses or gravitates with its whole Weight on the under Surface and Sides of the lower Marble; but cannot do so all on its upper Surface, which is closely contiguous to the upper, and suspended Marble.

II. For the Laws of the Pressure and Gravitation in Fluids specifically heavier, or lighter than the Bodies immersed, see SPECIFIC GRAVITY.

For the Laws of the Resistance of Fluids, or the Retardation of solid Bodies, moving in Fluids, see RESISTANCE.

For the Ascens of Fluids in Capillary Tubes, or between Glass Planes, see ASCENS.

The Motions of Fluids, and particularly Water, make the Subject of Hydraulicks. See HYDRAULICKS.

Hydraulick Laws of FLUIDS.

1° The Velocity of a Fluid, as Water, moved by the Pressure of a super-incumbent Fluid, as Air, is equal at equal Depths; and unequal, at unequal ones.

For the Pressure being equal at equal Depths, the Velocity arising thence must be so too; and vice versa: Yet does not the Velocity follow the same Proportion, as the Depth; notwithstanding that the Pressure, whence the Velocity arises, does increase in the Proportion of the Depth. But here the Quantity of the Matter is concern'd: And the Quantity of Motion, which is compounded of the Ratio of the Velocity and Quantity of Matter, is increased in equal times as the Square of the Velocities.

2° The Velocity of a Fluid arising from the Pressure of a super-incumbent Fluid, at any Depth, is the same as that which a Body would acquire in falling from a Height, equal to the Depth. As is demonstrat'd both from Mechanics and Experiments. See DESCENS.

3° If two Tubes of equal Diameters, full of any Fluid, be placed any how, either erect, or inclined; provided they be of the same Altitude, they will discharge equal Quantities of the Fluid in equal times.

That Tubes, every way equal, should, under the same Circumstances, empty themselves equally, is evident; and that the Bottom of a perpendicular Tube is press'd with the same Force, as that of an inclined one, when their Altitudes are equal, has already been shewn. Whence it easily follows, that they must yield equal Quantities of Water, &c.

4° If two Tubes of equal Altitudes, but unequal Apertures or Diameters, be kept constantly full of Water, the Quantities of Water they yield in the same Time, will be as the Diameters: And this, whether they be erect, or any how inclined.

Carol. If the Apertures or Diameters be circular, the Quantities of Water emptied in the same time, are in a duplicate Ratio of the Diameters.

This Law, Mariotte observes, is not perfectly agreeable to Experiment. If one Diameter be double the other, the Water flowing out of the less is found more than a Fourth of what flows out of the greater. But this must be owing to some accidental Irregularities in making the Experiments.

Wolffius ascribes it principally to this, that the Column of Water directly over the Aperture is shorter than that next the Sides or Parietes of the Vessel: For the Water, in its Efflux forms a kind of Cavity over the Aperture; that Part immediately over it being evacuated first, and the other Water not running fast enough from the Sides to supply it. Now, this Cavity, or Diminution of Altitude being greater in the greater Tube, than the less; hence the Pressure or Endeavour to pass out, becomes proportionably less in the greater Tube, than the less.

5° If the Apertures *E* and *F* of two Tubes *A B* and *C D* (Fig. 12) be equal, the Quantities of Water discharged in the same time are as the Velocities.

6° If two Tubes have equal Apertures *E* and *F*, and unequal Altitudes *A B* and *C D*, the Quantity of Water discharged from the greater *A B*, will be to that discharged from *C D*, in the same time; in a subduplicate Ratio of the Altitudes *A B* and *C D*.

Corol. 1. Hence, the Altitudes of Waters, A B, and C D, discharged thro' equal Apertures E and F; are in a duplicate Ratio of the Waters discharged in the same time. And as the Quantities of Water are as the Velocities; the Velocities are likewise in a subduplicate Ratio of their Altitudes.

2. Hence, the Ratio of the Waters discharged by two Tubes A B, and C D, together with the Altitude of one of them being given; we have a Method of finding the Altitude of the other, viz. by finding a fourth Proportional to the three given Quantities; which Proportional multiplied by it self, gives the Altitude of C D, required.

3. Hence also, the Ratio of the Altitudes of two Tubes of equal Apertures being given; as also the Quantity of Water discharged by one of them; We have a Method of determining the Quantity the other shall discharge in the same time. Thus, to the given Altitudes, and the Square of the Quantity of Water discharged at one Aperture, find a fourth Proportional. The square Root of this will be the Quantity of Water required.

Suppose e. gr. the Heights of the Tubes as 9 to 25; and the Quantity of Water discharged at one of them, three Inches: That discharged by the other, will be $= \sqrt{9 \cdot 25 : 9}$ $= \sqrt{25} = 5$.

4. If the Altitudes of two Tubes A B, and C D be unequal; and the Apertures E and F likewise unequal: The Quantities of Water discharged in the same time, will be in a Ratio compounded of the simple Ratio of the Apertures; and the subduplicate one of the Altitudes.

Corol. Hence, if the Quantities of Water discharged in the same time by two Tubes, whose Apertures and Altitudes are unequal, be equal; the Apertures are reciprocally as the Roots of the Altitudes; and the Altitudes in a reciprocal Ratio of the Squares of the Apertures.

5. If the Altitudes of two Tubes be equal, the Water will flow out with equal Velocity, however unequal the Apertures be.

6. If the Altitudes of two Tubes, A B, and C D (Fig. 13.) at also their Apertures E, and F be unequal; the Velocities of the Waters discharged are in a subduplicate Ratio of their Altitudes.

Corol. 1. Hence, as the Velocities of Waters flowing out at equal Apertures, when the Altitudes are unequal, are also in a subduplicate Ratio of the Altitudes; and, as this Ratio is equal, if the Altitudes be equal; it appears, in the general, that the Velocities of Waters flow out of Tubes is in a subduplicate Ratio of the Altitudes.

2. Hence also, the Squares of the Velocities are as the Altitudes.

Mariotte found from repeated Experiments, that if a Vessel A B C D have a Tube E F fitted to it, there will more Water be evacuated through the Tube, than there could have been in the same time, through the Aperture of the Vessel E, without the Tube: And that the Motion of the Fluid is accelerated so much the more, as the Tube E F is the longer.

e. gr. The Altitude of a Vessel A C being one Foot, that of the Tube E F three Feet, and the Diameter of the Aperture three Lines; 6½ Septers of Water were discharged in the Space of one Minute; whereas upon taking off the Tube, only four Septers were discharged. Again, when the Length of the Tube E F was six Feet, and the Diameter of the Aperture F, an Inch; the whole Quantity of Water run out in 27 Seconds: But, cutting off half the Tube F H, the Vessel was not evacuated in less than 45 Seconds; and taking it quite away, in less than 95 Seconds.

7. The Altitudes and Apertures of two Cylinders full of Water, being the same: One of them will discharge double the Quantity of Water discharged in the same time by the other; if the first be kept continually full, while the other runs it self empty.

For the Velocity of the full Vessel will be equable; and that of the other continually retarded. Now, 'tis demonstrated, that, if two Bodies be impell'd by the same Force, and the one proceeds equally, and the second is equally retarded: By that time they have lost all their Motion, the one has moved double the space of the other.

8. If two Tubes have the same Altitudes, and equal Apertures; the Times wherein they will empty themselves, will be in the Ratio of their Bases.

9. Cylindric, and Prismatic Vessels, as A B C D (Fig. 14.) empty themselves by this Law, that the Quantities of Water discharged in equal times, decrease according to the uneven Numbers, 1, 3, 5, 7, 9, &c. taken backwards.

For the Velocity of the descending Level F G is continually decreasing in the subduplicate Ratio of the decreasing Altitudes: But the Velocity of a heavy Body descending, increases in the subduplicate Ratio of the increasing Altitudes. The Motion, therefore, of the Level F G in its Descent from G to B, is the same, as if it were to descend in the inverse Ratio, from B to G. But if it descend from B to G, the Spaces, in equal times, would increase according to the Progression of the uneven Numbers. Con-

sequently, the Altitudes of the Level F G in equal times decrease according to the same Progression inversely taken.

Corol. Hence, the Level of Water F G, descends by the same Law, as, by an equal Force impell'd, it would ascend thro' an Altitude equal to F G.

From this Principle, might many other particular Laws of the Motion of Fluids be demonstrated, which for Brevity sake we here omit.

To divide a Cylindrical Vessel into Parts, which shall be evacuated in certain Parts, or Divisions of time, see CLEPSIDRA.

12. If Water descending thro' a Tube H B (Fig. 15.) spout up at the Aperture G, whose Direction is vertical, it will rise to the same Altitude G I, at which the Level of the Water L M, in the Vessel A B C D does stand.

For since the Water is driven thro' the Aperture G, by the Force of Gravity of the Column E K; its Velocity will be the same as that of a Body by the same Force impell'd, would rise to the Altitude F I. Wherefore, since the Direction of the Aperture is vertical; the Direction of the Water spouting thro' it, will be so too. Consequently, the Water must rise to the Height of the Level of the Water L M in the Vessel.

Indeed, by the Experiment it appears, that the Water does not rise quite so high as I: Beside, that the Aperture G should be smaller, as the Height of the Level of the Water is less: And even smaller, when Mercury is to be spouted, than when Water. But this is no Objection to the Truth of the Theorem; it only shews that there are certain external Impediments, which diminish the Ascent.

Such are the Resistance of the Air; the Friction of the Tube, and the Gravity of the ascending Fluid.

13. Water descending thro' an inclined Tube, or a Tube bent in any manner; will spout up through a perpendicular Aperture to the Height at which the Level of the Water in the Vessel stands.

14. The Lengths or Distances D E and D F, or I H, and I G (Fig. 16.) to which Water will spout either thro' an inclined, or a horizontal Aperture D, are in a subduplicate Ratio of the Altitudes in the Vessel or Tube A B and A D.

For, since Water spouted out thro' the Aperture D, endeavours to proceed in the horizontal Line D F; and at the same time, by the Power of Gravity, tends downwards in Lines perpendicular to the same; nor can the one Power hinder the other, in as much as the Directions are not contrary: It follows, that the Water by the Direction B A will arrive at the Line I G, in the same time wherein it would have arrived at it, had there been no horizontal Impulse at all. Now the Right-lines I H and I G are the Spaces which the same Water would have described in the mean time by the horizontal Impetus: But the Spaces I H and I G, inasmuch as the Motion is uniform, are as the Velocities. Consequently, the Velocities are in a subduplicate Ratio of the Altitudes A B and A D. And therefore, the Lengths or Distances to which the Water will spout in Apertures either horizontal or inclined, are in a subduplicate Ratio of the Altitudes.

Corol. Hence, as every Body projected either horizontally, or obliquely, in an unresisting Medium, describes a Parabola: Water projected either through a vertical or inclined Spout, will describe a Parabola.

Hence we have a way of making a delightful kind of Water Arbours, or Arches, viz. by placing several inclined Tubes in the same Right-line.

On these Principles are form'd various Hydraulic Engines for the raising, &c. of Fluids, as Pumps, Syphons, Fountains, or Jets de Eau, &c. Which see described under their proper Articles, PUMP, SYPHON, FOUNTAIN, SPIRAL SCREW, &c.

For the Laws of the Motion of Fluids, by their own Gravity, along open Channels, &c. see RIVERS, and WAVES. For the Laws of Pressure and Motion of Air, consider'd as a Fluid, see AIR, and WIND.

FLUMMERY, A wholesome Jelly, made of Oatmeal.

The manner of preparing it in the Western Parts of England, is to take half a Peck of Wheat Bran, which must be soaked in cold Water three or four Days; then strain out the Oil and Milk-water of it, and boil it to a Jelly: Afterwards season it with Sugar, Rose and Orange-flower Water, and let it stand till cold, and thicken'd again; and then eat it with White or Rhenish Wine, or Milk-cream.

FLUOR, in Physick, &c. a Fluid; or more properly, the State of a Body, which was before hard, or solid, but is now reduc'd by Fusion or Fire into a State of Fluidity. See FLUIDITY.

Gold and Silver will remain a long time in a Fluor, kept to it by the intensest Heat, without losing any thing of their Weight. See FIXITY.

FLUON is also us'd by the modern Mineral Writers for such soft, transparent, starchy kinds of mineral Concretions, as are frequently found amongst Oars, and Stones, in Mines and Quarries.

FLUOR ALBUS, or *Uterinus*, a kind of Flux, incident to Women, popularly called the *Whites*. See **WHITES**.

It consists in an irregular, disorderly Discharge of some corrupt Humor, sometimes white, and pale, like Whey; sometimes yellow, green, or blackish: At first it is usually soft and harmless, but in time grows hot, sharp, and corrosive, and excoarates all the Parts it touches.

It is attended with a Pain in the Spina Dorſi, a Swelling of the Feet and Eyes, Weariness, Lumbago, a Loss of Appetite, Change of Complexion, &c.

It is frequently produced from a too heavy and lasting Grief. It may be well distinguish'd from an Ulcer in the Uterus, and a Gonorrhæa. See **GNORRHÆA**.

It happens to all Ages; from Girls of three Years old: And at all times; before, after, or even along with the Menſes; and even to Women with Child.

Emuller takes it for a *Gonorrhæa muliebris*, analogous to a non violent Gonorrhæa in Men, and flowing out of the Glandulæ of the Proſtate.

What the *Coryza* is in the Noſtrils; too much weeping in the Eyes; coughing and hawking in the Fauces; that, according to *Emuller*, is this *Flux* in Women.

According to *Piscaria*, all the Difference between the venereal Gonorrhæa, and a *Flux albus*, is that the Humor evacuated in the latter is viscid, and in the former, quite thin and ferous. The same Author adds, that the *Flux albus*, can only be cured by Medicines proper for the venereal Disease. See **GNORRHÆA**.

FLUTE, an Instrument of Musick, the simplest of all those of the Wind kind. See **MUSICK**.

It is play'd, by blowing in it with the Mouth; and the Tones or Notes form'd and changed by stopping or opening Holes disposed for that purpose all along it.

The *Latins* call it *Fistula*, and sometimes *Tibia*, Pipe; from the former of which, some derive the Word *Flute*: Tho' *Borel* will have it derived from *Flutta*, a Lamprey, thus called a *fluitando* in *Fluvius*; in regard the *Flute* is long, like the Lamprey, and has Holes all along it, like that Fish.

The ancient *Fistula* or *Flutes* were made of Reeds; afterwards they were of Wood; and at length, of Metal. But how they were blown, whether as our *Flutes*, or *Hautbois*, does not appear.

This plain, some had Holes, which at first, were but few; but afterwards increased to a greater Number: And some had none. Some were single Pipes; and some a Combination of several, particularly *Pan's Syringa*, which consisted of seven Reeds, join'd together sideways.

They had no Holes; each giving but one Note, in all seven distinct Notes: but at what Intervals, is not known: Perhaps they were the Notes of the Natural, or Diatonic Scale. See **TIBIA**, and **FISTULA**.

The *German Flute* is different from the common one: 'Tis not put into the Mouth, by the End, as the ordinary ones are: The End is stop'd up with a Plug, or Tampon; but the lower Lip is applied to a Hole about half an Inch distant from it.

'Tis usually a Foot long; equally big every where, and perforated with six Holes, beside that of the Mouth. It is us'd as a Treble in a Concert of several Parts.

Its Bass is double, or quadruple that Length. **FLUTES**, or *Flutings*, in Architecture, are perpendicular Channels, or Cavities, cut along the Shaft of a Column or Pilaster. See **COLUMN**, and **PILASTER**.

They are supposed to have been first introduced in Imitation of the Plaits of Womens Robes; and are therefore called by the *Latins*, *Strigæ*, and *Rugæ*. See **STRIGES**, &c.

The *French* call them *Camelures*, as being Excavations; and we, *Flutes*, or *Flutings*; as bearing some Resemblance to the musical Instrument so called.

They are chiefly affected in the *Ionie* Order, where they had their first Rise; tho' they are also us'd in all the richer Orders, as the *Corinthian* and *Composite*; but rarely in the *Doric*; scarce ever in the *Tuscan*. See **IONIC**, **CORINTHIAN**, **COMPOSITE**, **DORIC**, &c.

Their Number is 24, tho' in the *Doric* only, 20.

Each *Flute* is hollow'd in, exactly a Quadrant of a Circle. Between the *Flutes* are little Spaces that separate them, called by *Vitruvius*, *Seria*, and by us, *Lifts*; tho' in the *Doric*, the *Flutes* are frequently made to join each other, without any intermediate Space at all; the Lift being sharpen'd off to a thin Edge, which forms a Part of each *Flute*.

In some Buildings we see Columns with *Flutes* that go winding round the Shaft, spirally; but this is rather look'd on as an Abuse.

Vignola determines the Depth of the *Flutes* by taking the Angle of an equilateral Triangle for the Centre.

Vitruvius describes it from the Middle of the Square, whose Side is the Breadth of the *Flute*: Which latter Method makes them deep.

The *Flutes*, or *Strigæ*, are frequently fill'd up with a

prominent, or swelling Ornament, sometimes plain, in form of a Staff or Reed; and sometimes a little carved, or enrich'd, in imitation of a Rope, or otherwise, and therefore called a *Rudenture*, or *Cabling*; and the Columns thus enrich'd, *Cabled Columns*. See **COLUMN**.

This is most frequent in the *Corinthian* Order. The *Cablings*, or *Fillings* up commence from about one Third of the Height of the Column, reckoning from the Base; and are continued to the Capital: That is, they begin and end with the Diminution of the Column. See **DIMINUTION**.

FLUTES, or *Flutings*, are also us'd in Botany, in describing the Stems and Fruits of certain Plants, which have Furrows, analogous to those of Columns.

FLUTE, or *Fluyt*, is also a kind of long Vessel, with flat Ribs, or Floor Timbers; round behind, and swell'd in the Middle; serving chiefly for the carrying of Provisions in Fleets, or Squadrons of Ships: tho' it is also us'd in Merchandizes.

The Word *Flute*, taken for a sort of Boat, or Vessel, is derived, according to *Borel*, from the ancient *Fletta*, a little Boat. In the verbal Proceeds of the Miracles of *St. Catharine* of Sweden, in the XIIth Century, we read, *Unus equum suum una cum mercibus magni ponderis introduxit super instrumentum de lignis fabricatum, vulgariter dictum Fluta*.

Upon which the *Bollandists* observe, that in some Copies it is read *Flotta*, an Instrument call'd by the *Latins* *Ratis*; and that the Word *Flutta*, or *Fotta*, arose from *Flotten*, or *vlotzen*, to float.—

FLUTE-GRAFTING, see **ENGRAFTING**.
FLUX, **FLUVIUS**, in Medicine, an extraordinary Issue, or Evacuation of some Humor. See **HUMOR**.

Fluxes are various, and variously denominated, according to their Seats, or the Humors thus voided; as, a *Flux of the Belly*; *Uterine Flux*, *Hepatic Flux*, *Salivary Flux*, &c.

The *Flux of the Belly* is of four kinds, which have their respective Denominations, viz. the *Lientery*, or *Fluvus Lientericus*; the *Celiac*, or *Fluvus Celiacus*; *Diarrhœa*; and *Dysentery*, or *Bloody Flux*. See each explain'd under its proper Article, **LIENTERY**, **DIARRHÆA**, &c.

A Wound, or Scarification cross the Crown of the Head is used in Scotland to cure *Fluxes* and Difficulties. *Pbil. Transact.* N^o 312.

FLUX of the Mouth, or *Salivary Flux*, see **SALIVATION**.

The *Hepatic Flux* of the Antients is a mere Name; being, in reality a hemorrhoidal Flux, out of the hemorrhoidal Veins; and so reducible to the *Dysentery*. See **HEMORRHOIDS**.

Women are subject to three kinds of *Fluxes* extraordinary: The first, call'd the *Menſes*, or *Menstrual Flux*, as happening every Month; sometimes *Courſes*, as keeping pace with the Moon; and sometimes *Flowers*. See **MENSES**, and **FLOWERS**.

The second is after Delivery, call'd *Lochia*. See **LOCHIA**.

The third is irregular, and præternatural; and for want of a better Name call'd *Flux albus*, or *Whites*. See **FLUOR ALBUS**.

FLUX, in Hydraulicks, a regular, periodical Motion of the Sea; happening twice in twenty four Hours; wherein the Water is rais'd, and driven violently against the Shores.

The *Flux*, or *Flow*, is one of the Motions of the Tide; the other, whereby the Water sinks and retires, is call'd the *Reflux*, or *Ebb*. See **TIDES**.

There is always a kind of reflux, or Cessation of about half an Hour, between the *Flux* and *Reflux*: During which the Water is at its greatest Height, call'd *High Water*.

The *Flux* is made by the Motion of the Water of the Sea, from the Equator towards the Poles; which, in its Progress, striking against the Coasts in its way, and meeting with Opposition from them, swells, and where it can find Passage, as in Plains, Rivers, &c. rises up, and runs into the Land.—

This Motion follows in some measure the Course of the Moon; as it loses, or comes later every Day by about three Quarters of an Hour; or more precisely, 48 Minutes: And by so much is the Motion of the Moon slower than that of the Sun. It is always highest and greatest in full Moons, particularly those of the Equinoxes. In some Parts, as at Mount *St. Michael*, it raises 80 or 90 Feet; tho' in the open Sea it never rises above a Foot, or two: And in some Places, as about the *Morea*, there is no *Flux* at all.

It runs up some Rivers above 120 Miles. Up the River *T Thames* it only goes 80; viz. near to *Kingston* in *Surrey*.

Above *London* Bridge the Water flows four Hours, and ebbs eight; and below the Bridge, flows five Hours, and ebbs seven. See **FLOOD**.

Flux Powders are these prepared to facilitate the Fusion of the harder Metals; as also to melt Ours, in order to discover what Proportion of Metal they contain. See **FUSION**.

Powder of Antimony is a very good *Flux Powder*. By this alone may you readily melt Iron or Steel in a Crucible, with

with an ordinary Charcoal Fire. See ANTIMONY; see also FOUNDRY.

FLUXION, in Medicine, a sudden Collection of morbid Matter in any Part of the Body.

Fluxions arise either from the Weakness, Flaccidity, and Inactivity of the Part affected, which does not disperse, protract, or expell the Humors naturally receiv'd into it: Or from the Derivation of some extraordinary Quantity of peccant Matter from some other Part.

This latter is properly call'd *Defluxion*, and by the Antients, *Astraction*. See DEFLEXION.

Fluxions are occasion'd by Motion, Heat, Pain, Fomentation, &c.

A Fluxion, or Defluxion on the Lungs, is call'd a Catarrh. See CATARRH.

FLUXIONS, or the Method of FLUXIONS, is the Arithmetick, or Analysis, of infinitely small variable Quantities; or the Method of finding an Infinitesimal, or infinitely small Quantity, which being taken an infinite Number of times, becomes equal to a given Quantity. See INFINITE, and INFINITESIMAL.

Sir I. Newton, and after him all the English Authors, call these infinitely small Quantities, *Fluxions*; as considering them as the momentary Increments or Decrements of variable Quantities, e. g. of a Line consider'd as generated by the Flux of a Point; or of a Surface generated by the Flux of a Line.

Accordingly, the variable Quantities are call'd *fluens*, or *flowing Quantities*; and the Method of finding either the Fluxion, or the Fluens, the Method of Fluxions. See METHOD.

M. Leibnitz, and the Foreigners after him, consider the same infinitely small Quantities as the Differences, or Differential of two Quantities; and call the Method of finding those Differences, the *Differential Calculus*. See CALCULUS DIFFERENTIALIS.

Each of these ways of considering and denominating, has its Advantages; which the Readers to this, or that Method, strenuously assert.

Variable Quantities, i. e. such as in the Genesis of Figures by local Motion are continually increasing and diminishing, are certainly very properly denominat'd *Fluents*: And as all Figures may be conceiv'd as so generated; the infinitely small Increments, or Decrements of such Quantities are very naturally denominat'd *Fluxions*.

Beside this Difference in the Name, there is another in the Notation.

Sir I. Newton expresses the Fluxion of a Quantity, as \dot{x} by a Dot placed over it, as \dot{z} ; and Mr. Leibnitz expresses his Differential of the same x by prefixing a d as dx ; each of which Methods of Notation has likewise its Advantage. See DIFFERENTIAL CALCULUS.

Setting aside these circumstances, the two Methods are the same.

The Method of Fluxions is one of the greatest, most subtle and sublime Discoveries of this, or perhaps any other Age; it opens a new World to us, and extends our Knowledge, as it were, to Infinity. It carries us beyond the Bounds that seem'd to have been prescrib'd to the human Mind; at least infinitely beyond those to which the ancient Geometry was confin'd.

The History of this important Discovery, as fresh as it is, is a little dark, and imbroiled. Two of the greatest Men of this Age, do both of them claim the Invention, Sir I. Newton, and M. Leibnitz; and nothing can be more glorious for the Method it self, than the Zeal wherewith the Partisans of either side have asserted the Title.

To give the Reader a just View of this noble Dispute, and of the Pretensions of each Party, we shall lay before him the *Origines* of the Discovery, and mark where each Claim commenced, and how it was supported.

The first time the Method made its Appearance in publick, was in 1684; when M. Leibnitz gave the Rules thereof in the *Leipfite Acts* of that Year; but the Demonstrations he kept to himself. The two Brothers, the *Bernoullis*, were presently struck with it, and found out the Demonstrations, tho' very difficult; and practis'd the Calculus with surprising Success.

This is all we hear of it, till the Year 1687; when Sir I. Newton's admirable *Principia* came forth, which is almost wholly founded on the same Calculus.

The common Opinion at that time, was, that Sir Isaac, and M. Leibnitz had each invented it about the same time: And what confirm'd it, was, that neither of them made any mention of the other; and that, tho' they agreed in the Substance of the thing, yet they differed in their ways of conceiving; call'd it by different Names, and us'd different Characters.

In effect, Mr. Leibnitz's Character, was suppos'd by Foreigners to be somewhat more commodious than that of Sir Isaac Newton; accordingly, the Method soon spreading it self throughout Europe, M. Leibnitz's Character went with it; by which means the Geometricians were insensibly

accustomed too look on him as the sole, or principal Inventor.

The two Great Authors themselves, without any seeming Concern, or Dispute as to the Property of the Invention, enjoy'd the glorious Prospect of the Progresses continually making under their Auspices; till the Year 1699; when the Peace began to be disturb'd.

M. Favio, in a Treatise of the *Line of swiftest Descent*; having declared that he was oblig'd to own Sir I. Newton as the first Inventor of the Differential Calculus, and the first by many Years; and that he left the World to judge; whether M. Leibnitz, the second Inventor, had taken any thing from him: This precise Distinction between first and second Inventor; with the Suspicion it insinuated; rais'd a Controversy between M. Leibnitz, supported by the Editors of the *Leipfite Acta*; and the English Geometricians, who declared for Sir I. Newton.

Sir Isaac himself never appear'd on the Scene: His Glory was become that of the Nation; and his Adherents, warm in the Cause of their Country, needed him not to animate them.

Writings succeeded each other but slowly, on either side; probably on account of the Distance of Places; but the Controversy grew still hotter and hotter: Till at length it came to such Pass, that in the Year 1711, M. Leibnitz complain'd to the Royal Society, that Dr. Kiehl had accus'd him of publishing the Method of Fluxions invented by Sir I. Newton, under other Names, and Characters.

He insisted, that no body knew better than Sir Isaac himself, that he had stolen nothing from him; and required that Dr. Kiehl should publicly disavow the ill Construction which might be put on his Words.

The Society, here appeal'd to as Judge, appointed a Committee to examine all the old Letters, Papers, &c. that had pass'd among the several Mathematicians, relating to the Point: And after a strict Examen of all the Evidences that could be procur'd, gave in their Report, "That it did not appear that M. Leibnitz knew any thing of the differential Calculus before I utter wrote him by Sir I. Newton, and sent to him at Paris, in the Year 1673; wherein the Method of Fluxions was sufficiently explain'd, to let a Man of his Sagacity into the whole Matter; and that Sir I. Newton had even invented his Method before the Year 1669, and of consequence fifteen Years before M. Leibnitz had given any thing on the Subject in the *Leipfite Actis*." And thence they concluded, that Dr. Kiehl had not at all injured Mr. Leibnitz in what he had said.

The Society printed this Censure of theirs, together with all the Pieces and Materials relating thereto, under the Title of *Commercium Epistolicum, de Analyfi promota*. London, 1712.

The Book was carefully distributed through Europe, to vindicate the Title of the English Nation to the Discovery; for Sir Isaac, as already hinted, never appear'd in it: Whether it were, that he trusted his Honour with his Compatriots, who were zealous enough in the Cause; or whether it were, that he were even superior to the Glory thereof.—

M. Leibnitz and his Friends could not shew the same Indifference: He was accus'd of a Theft; and the whole *Commercium Epistolicum* either expresses it in Terms, or insinuates it.

Soon after the Publication thereof, a loose Sheet was printed at Paris, in behalf of M. Leibnitz, then at Vienna. It is wrote with a world of Zeal and Spirit, and maintains boldly, that the Method of Fluxions had not preceded that of Differences; and even insinuates, that it might have arose from it.

The Detail of the Proofs on each side would be too long, and could not be understood without a large Comment; which must enter into the deepest Geometry.

M. Leibnitz had begun to work upon a *Commercium Epistolicum*, in opposition to that of the Royal Society; but he died before it was compleated.

It must be own'd, there are strong Presumptions in favour of M. Leibnitz; Pretensions, we mean, that he was no Plagiary: For that Sir Isaac Newton was the first Inventor, is pass all Dispute: His Glory is secure: The reasonable Part, even among the Foreigners, allow it; and the Question is only, Whether M. Leibnitz took it from him, or fell upon the same thing with him: For in his *Theory of abstract Motions*, which he dedicated to the Royal Academy, in 1671, before he had seen any thing of Sir Isaac Newton's, he already suppos'd infinitely small Quantities, some greater than others; which is one of the great Principles of the System.

The Doctrine consists of two Parts, viz. Fluxions properly so call'd, or the DIRECT METHOD of Fluxions call'd also Calculus Differentialis; and the INVERSE METHOD of Fluxions, or Calculus Integralis.

The latter is directly opposite to the former; and is a Sequel of it. Both of them are adopted into the new Geometry, and make reigning Methods therein.

The first descends from finite, to infinite; the latter ascends from infinitely small, to finite: The one decomposes a Magnitude, the other re-establishes it.

Direct Method of FLUXIONS.

All finite Magnitudes are here conceiv'd to be resolv'd into infinitely small ones; which are the Elements, Moments, or Differences thereof.

The Art of finding these infinitely small Quantities, and of working on them, and discovering other infinite Quantities by their means, makes the *Direct Method of Fluxions*.

What renders the Knowledge of infinitely small Quantities of such infinite Use and Extent, is that they have Relations to each other, which the finite Magnitudes, whereof they are the Infinitesimals, have not.

Thus, *e. gr.* In a Curve of any kind whatever, the infinitely small Differences of the Ordinate and Abscisse, have the Ratio to each other, not of the Ordinate, and Abscisse; but of the Ordinate and Subtangent; and of consequence, the Abscisse and Ordinate alone being known, give the Subtangent unknown; or which amounts to the same, the Tangent itself. See the *inverse Method of Fluxions*.

The Method of Notation in Fluxions, introduc'd by the Inventor Sir I. Newton, is thus,

The Fluxion of the variable, or flowing Quantity, to be uniformly augmented, as suppose the Abscisse of a Curve, he denotes by *x*, or Unite; and the other flowing Quantities he denotes by the Letters *v x y z*; and their Fluxions by the same Letters, with Dots plac'd over them, thus $\dot{v} \dot{x} \dot{y} \dot{z}$.

Again, as the Fluxions themselves are also variable Quantities, and are continually increasing, or decreasing; he considers the Velocities with which they increase, or decrease, as the Fluxions of the former Fluxions, or second Fluxions; which are denoted with two Dots over them, thus, $\ddot{y} \ddot{x} \ddot{z}$.

After the same manner one may consider the Augments, and Diminutions of these, as their Fluxions also; and thus proceed to third, fourth, fifth, &c. Fluxions, which will be noted thus, $\overset{\cdot}{y} \overset{\cdot}{x} \overset{\cdot}{z} :: \overset{\cdot\cdot}{y} \overset{\cdot\cdot}{x} \overset{\cdot\cdot}{z} :: \overset{\cdot\cdot\cdot}{y} \overset{\cdot\cdot\cdot}{x} \overset{\cdot\cdot\cdot}{z}$ &c.

Lastly, if the flowing Quantity be a Surd, as $\sqrt{x-a-b}$; he notes its Fluxion $\dot{\sqrt{x-a-b}}$: If a Fraction $\frac{x}{d-y}$ be

$$\text{noted it, } \frac{\dot{x}}{\dot{d}-\dot{y}}$$

The chief Scope and Business of Fluxions, is, from the flowing Quantity given, to find the Fluxion: For this, we shall lay down one general Rule, as stated by Dr. Wallis; and afterwards apply and exemplify it in the several Cases.

" Multiply each Term of the Equation separately by the several Indices of the Powers of all the flowing Quantities contain'd in that Term: And in each, change one Root or Letter of the Power into its proper Fluxion: The Aggregate of all the Products connected together by their proper Signs, will be the Fluxion of the Equation desired."

The Application of this Rule will be contain'd in the following Cases.

I. In the General: To express the Fluxions of simple variable Quantities, as already mention'd, you need only put the Letter, or Letters, which express them, with a Dot over them: Thus, the Fluxion of x is \dot{x} ; and the Fluxion of y is \dot{y} ; and the Fluxion of $x+y+z$, is $\dot{x}+\dot{y}+\dot{z}$ &c.

Note. The Fluxion of Permanent Quantities, when any such are in the Equation, you must imagine o , or a Cypher; for such Quantities can have no Fluxion, properly speaking, because they are without Motion, or invariable.

II. To find the Fluxions of the Products of two or more variable or flowing Quantities;

Multiply the Fluxion of each simple Quantity by the Factors of the Products; or the Product of all the rest; and connect the last Products by their proper Signs; the Sum or Aggregate is the Fluxion sought.

Thus; the Fluxion of xy is $\dot{x}y + x\dot{y}$; and the Fluxion of xyz , is $\dot{x}yz + x\dot{y}z + xy\dot{z}$; and the Fluxion

of $xvyz$, is $\dot{x}vyz + xv\dot{y}z + xv\dot{z}y + xv\dot{z}y$; and the Fluxion of $\frac{x}{b-y}$ by $b-y$ (the common Product being $ab - bx - yz - xz$) will be $\dot{b}x - \dot{y}a - \dot{x}y - x\dot{y}$.

III. To find the Fluxion of a Fraction;

Multiply the Fluxion of the Numerator by the Denominator, and after it place (with the Sign -) the Fluxion of the Denominator to the Numerator, and divide the whole by the Square of the Denominator.

Thus, the Fluxion of $\frac{x}{y}$ is $\frac{\dot{x}y - x\dot{y}}{y^2}$;

For suppose $\frac{x}{y} = z$, then will $x = yz$; which equal Quantities will have equal Fluxions; therefore $\dot{x} = \dot{y}z + y\dot{z}$; and $x - yz = 0$; and dividing all by y^2 $\frac{x-x}{y^2} = 0 = (\text{because } \frac{x}{y} = z) \frac{y\dot{x} - x\dot{y}}{y^2}$: Wherefore this

last is the Fluxion of the Fraction $\frac{x}{y}$; because 0 being $= \frac{x}{y}$, 0 will be equal to the Fluxion of $\frac{x}{y}$.

And the Fluxion of $\frac{a}{x}$ will be $-\frac{\dot{x}a}{x^2}$; for the permanent Quantity a having no Fluxion, there can be no Product of the Fluxion of the Numerator into the Denominator, as there would have been, had a been x , or any other variable Quantity.

IV. To find the Fluxion of a Power;

Multiply the Power (first brought one Degree lower) by the Index of that first Power; and the Product by the Fluxion of the Root.

Thus, the Fluxion of xx will be $2x\dot{x}$, for $xx = x \times x$; but the Fluxion of $x \times x = \dot{x}x + x\dot{x} = 2x\dot{x}$, &c. and the Fluxion of x^3 will be $3x^2\dot{x}$. That of x^m will be $m x^{m-1}\dot{x}$, &c. Or if m express the Index of any Power, as suppose x^m , its Fluxion will be $m x^{m-1}\dot{x}$, or $m x^{m-1}$.

For x^m brought one Degree lower (m being a general Index) must be x^{m-1} ; then that x by m the Index, makes $m x^{m-1}$; and this last by the Fluxion of the Root, produces $m x^{m-1}\dot{x}$.

If the Power be produced from a Binomial, &c. as suppose $x^2 + 2xy + y^2$, its Fluxion will be $2x\dot{x} + 2x\dot{y} + 2y\dot{y}$, by the Fourth and Second Rules.

If the Exponent be Negative, as suppose x^{-m} or $\frac{1}{x^m}$, its Fluxion will be $-\frac{\dot{x}}{x^{m+1}}$.

Or, if you would do it by way of Fraction, $\frac{-m x^{m-1} \dot{x}}{x^{2m}}$ (for the Square of x^m is as well x^{2m} as x^{m^2}) or according to Sir I. Newton's Method, which is yet shorter, $\frac{-m \dot{x}}{x^{m+1}}$.

If the Power be imperfect, *i. e.* if its Exponent be a Fraction, as suppose \sqrt{x} ; or in the other Notation $x^{\frac{1}{2}}$, suppose $x^{\frac{1}{2}} = z$: Then if you raise up each Member to the Power of n , it will stand thus, $x^{\frac{1}{2}} = z^2$; the Fluxion of which will be, by this general Rule, $m x^{m-1} \dot{x} = n z^{n-1} \dot{z}$; Wherefore \dot{z} will be $= \frac{m x^{m-1} \dot{x}}{n z^{n-1}}$ (by dividing

both Parties by $n z^{n-1}$) and $\frac{m x^{m-1} \dot{x}}{n z^{n-1}} = \frac{m x^{m-1}}{n x^{\frac{n-1}{2}}}$; or $\frac{m}{n} x^{\frac{1}{2}} \dot{x}$, by putting instead of $n z^{n-1}$, its Value $\frac{m}{n} x^{\frac{1}{2}}$.

again, with Steps every where of the same Breadth and Length as before. See STRATA-CASS.

FLYING, the progressive Motion of a Bird, or other winged Animal in the liquid Air. See FLIGHT, and BIRD. Flying is either *Natural*, or *Artificial*.

Natural FLYING is that perform'd by an Apparatus or Structure of Parts concerted for that end by Nature her self. Such is that of most Birds, and Insects; and some Fishes. In *Virginia*, and *New England*, they have also flying *Harts*. *Philosopb. Transact.* N^o 127. And in *Languedoc*, flying Grasshoppers, about an Inch long, wherewith the Ground, in several Parts, in the Year 1683; was cover'd one third of a Foot deep.—*Ibid.* N^o 182.

The Parts of Birds, &c. chiefly concern'd in *Flying*, are the *Wings*, and *Tail*: By the first, the Bird sustains and wags himself along; and by the second he is assisted in ascending, and descending; to keep his Body poisd and upright, and to obviate the Vacillations thereof. See WING and TAIL.

'Tis by the Largeness and Strength of the temporal Muscles, that Birds are so well dispos'd for quick, strong, and continued *Flying*.

These Muscles, which in Men are scarce $\frac{1}{2}$ Part of the Muscles of the Body, in Birds, exceed and outweigh all the other Muscles taken together: Upon which Mr. *Willoughby* makes this Reflection, that if it be possible for Man to fly, his Wings must be so contriv'd and adapted, that he may make use of his Legs, and not his Arms in managing them. See PECTORAL Muscle.

The *Flying* of Birds is thus effected:

The Bird, first, bends his Legs, and springs with a violent Leap from the Ground: Then, opens or expands the Jointures of his Wings, so as to make a Right-line, perpendicular to the Sides of his Body. Thus, as the Wings, with the Feathers therein, constitute one continued Lamina; being now rais'd a little above the Horizon, and vibrating the Wings with great Force and Velocity, perpendicularly, against the subject Air; the Air, tho' a Fluid, resists those Successions both from its natural Inactivity, and from its Elasticity, which makes it restore it self, after it has been compress'd, and react as much as it is acted on: By such means is the whole Body of the Bird protruded.

The Sagacity of Nature is very remarkable in the opening and recovering of the Wing for fresh Strokes.

To do it directly, and perpendicularly, it would needs have a great Resistance to overcome: To avoid which, the bony Part, or Bend of the Wing into which the Feathers are inserted, moves sidewise with its sharp End foremost; the Feathers following it like a Flag.

The Resistance the Air makes to the withdrawing of the Wings, and consequently the Progress of Bird, will be so much the greater, as the Waist, or Stroke of the Fan of the Wing is the longer: But, as the Force of the Wing is continually diminish'd by this Resistance; when the two Forces come to be in Equilibrio, the Bird will remain suspended in the same Place: For the Bird only ascends so long, as the Arch of Air the Wing describes, makes a Resistance equal to the Excess of the specific Gravity of the Bird above the Air. If the Air therefore be so rare as to give way with the same Velocity as it is struck withal, there will be no Resistance, and consequently the Bird can never mount on such unstable Steps.—

Mr. *Ray*, *Willoughby*, &c. have suppos'd the Tail to do the Office of a Rudder, in steering and turning the Body this way or that: But *Borelli* has shewn it unfit for any such Office.

The *Flying* of a Bird, in effect, is quite a different Motion from the Sailing of a Ship: Birds don't vibrate their Wings towards the Tail, as Oars are struck towards the Stern; but wag them downward: Nor does the Tail of the Bird cut the Air at right Angles, as the Rudder does the Water; but is dispos'd horizontally, and preserves the same Situation what way soever the Bird turns.

In effect, as a Vessel in the Water is turn'd about on its Centre of Gravity to the right, by a brisk Application of the Oars to the left; so a Bird, in beating the Air with its right Wing alone, towards its Tail, its Force-part will be turn'd to the left: As when in swimming, by only striking out with the right Arm, and Leg, we are driven to the left.

Thus, we see Pidgeons, changing their Course to the leftward, labour it with the right Wing; keeping the other almost at rest.

Add, that Birds with long Necks have another way of altering their Course: For by only inclining the Head and Neck towards this or that Side, the Centre of Gravity of the whole being shifted, the Bird will proceed according to his new Direction.

Birds never fly upwards in a perpendicular Line, but always in a Parabola, the Line described by Projectiles.

In a direct Ascent, the Natural and Artificial Tendency would oppose and destroy each other; so that the Progress

would be very slow: In a direct Descent, they would aid one another; so that the Fall would be too precipitate.

Indeed, the Hawk we frequently find take that Advantage in seizing of the Partridge: But ordinarily, Birds keep their Wings expanded, and at rest, to retard their Descent; and at the same time stretch out their Feet, and Legs.—

Artificial FLYING, is that attempted by Men, by the Assistance of Mechanicks.

The *Art of Flying* is one of the great Defiderata of Mechanicks; attempted in divers Ages: The Discovery whereof might prove of great Service, and great Diservice to Mankind.

No body seems to have bid so fair for that Invention, as our famous Fryar R. *Bacon*, who liv'd upwards of 500 Years ago. He not only affirms the Art feasible; but affares as he himself knew how to make an Engine, in which a Man sitting might be able to carry himself through the Air, like a Bird: And affirms, that there was another Person, who had actually tried it with Success.

The Secret consist'd in a Couple of large thin hollow Copper Globes, exhausted of Air; which being much lighter than Air, would sustain a Chair, whercon a Person might sit. See AIR-PEMP.

Fa. *Francisco Lane*, in his *Prodromus*, proposes the same thing, as his own Thought. He computes, that a round Vessel of Plate Brass, fourteen Foot in Diameter, weighing three Ounces the square Foot; will only weigh 2848 Ounces; whereas a Quantity of Air of the same Bulk, will weigh 3755 $\frac{1}{2}$ Ounces: So that the Globe will not only be sustain'd in the Air; but will carry with it a Weight of 3753 Ounces; and by increasing the Bulk of the Globe, without increasing the Thickness of the Metal, he adds, a Vessel might be made to carry a much greater Weight.

But the Fallacy is obvious: A Globe of the Dimensions he describes, Dr. *Hook* shews, would not sustain the Pressure of the Air; but be crush'd inwards. Beside, that in whatever Ratio the Bulk of the Globe were increas'd, in the same must the Thickness of the Metal, and consequently the Weight, be increased: So that there would be no Advantage in such Augmentation.

The same Author describes an Engine for *Flying*, invented by the Sieur *Besnier*, a Smith of *Sable*, in the County of *Maine*. *Philosopb. Collect.* N^o 1.—

FLYING BRIDGES, in Fortification, are these made of two small Bridges, laid one upon the other, so that the uppermost, by means of Ropes and Pulleys, is forc'd forwards, till the End of it is join'd to the Place designed. See BARRIEX.

FLYING CAMP, a small Body of an Army, consisting of 4, 5, or 6000 Men, and sometimes a greater Number, as well Foot as Horse, which continually keep the Field, making divers Motions, to prevent the Incursions of the Enemy, or to frustrate their Enterprizes; to hinder Convoys, to harass the adjacent Country, and to be thrown into a besieged Place, as Occasion shall serve.—

FLYING PINION, is a Part of a Clock, having a Fly or Fan, whereby to gather Air, and so to bridle the Rapidity of the Clock's Motion, when the Weight descends in the striking Part. See PINION, CLOCK, &c.

FOCAGE, or *FOAGE*, Fire-money, Hearth-money, or Chimney-money. See FUAGE.

FOCILE, *FOCILI*, in Anatomy, a Name the *Arabs* give to the two Bones of the Arm, reaching from the Elbow, to the Wrist. See ARM.

The biggest, which is what we call the *Cubitus*, and *Ulna*, they call the *greater Focil*, *Focile majus*.

The less, which we call *Radius*, they call *Focile minus*. See CURTUS, and RADIUS.

The like is observ'd with regard to the Bones of the Leg. The biggest of which, by the *Latins* called *Tibia*, the *Arab* Writers, &c. call the *great Focil*: And the less, or *Fibula*, the lesser *Focil*. See TIBIA, and FIBULA.

FOCUS, in Geometry, and the Cnic Sections, is applied to certain Points in the Parabola, Ellipsis, and Hyperbola; wheroin the Rays reflected from all Parts of these Curves do concur, or meet. See CURVE.

The *Focus* of a *Parabola* is a Point in its Axis, as F, (*Tab. Conicis*, Fig. 18.) wheroin the semi-ordinate F N, is equal to the Semi-parameter; or a Point in the Axis distant from the Vertex, by a fourth Part of the Parameter, or Latus rectum. See PARABOLA.

'Tis demonstrat'd in Conicks, 1^o That in a Parabola, the Distance of the *Focus*, from the Vertex, A F, is to the Parameter, in a subquadruple Ratio.

2^o That the Square of the semi-ordinate is quadruple of the Rectangle of the Distance of the *Focus* from the Vertex, and the Absciss.

3^o That the Right-line F M drawn from the *Focus* F to the Extremities of the Semi-ordinate of the Parabola is equal to the aggregate of the Absciss A P; and the Distance of the *Focus* from the Vertex A F.

The *Foci* of an *Ellipsis* are two Points, as F f (*Fig. 19.*) in the Axis A B, on which, as Centres, the Figure is described:

scribed: Or, two Points in the longer Axis, whence two Right-lines being drawn to any Point in the Circumference, shall be together equal to the Axis it self. These are also called *Umbilici*. See *UMBILICUS*, and *CENTRE*.

To find the *Foci* of an Ellipsis, from B to L, set off half the Parameter: And in the Centre C erect a Perpendicular C K, meeting a Semicircle described on A L. Then making C P = C K; the Point F will be the *Focus*.

If then the Axis A B be cut in the *Focus* F; the Rectangle of the Segments of the Axis A F, F B, will be sub-quadruple of the Rectangle of the Parameter into the Axis; whence the Square of the Distance of the *Focus* from the Centre is equal to the Rectangle of half the Axis into the Difference of the Semi-parameter from half the Axis. See *ELLIPTICIS*.

Focus of the *Hyperbola*, see *HYPERBOLA*.

Focus, in Opticks, is a Point wherein several Rays concur, and are collected; either after having undergone Refraction, or Reflection. See *RAY*.

It is thus called, by reason the Rays being here brought together, and united; their Force and Effect is increas'd; so that they become able to burn: Accordingly, 'tis in this Point, that Bodies are plac'd to sustain the Force of Burning Glasses, or Mirrors. See *BURNING GLASS*, &c.

It must be observ'd, that the *Focus* is not strictly speaking a Point; the Rays are not all accurately collected into the same Place: *Huygens* demonstrates, that the *Focus* of a Lens convex on both Sides is $\frac{1}{2}$ of the Thickness of the Lens. See *LENS*.

Focus, in Dioptricks, is the Point wherein the refracted Rays, by Refraction render'd convergent, do concur, or meet, and cross the Axis. See *REFRACTION*.

The same Point is also call'd the *Point of Concourse*, or *Coincurrence*. See *POINT OF CONCOURSE*.

Virtual Focus, in Dioptricks, is the Point from which refracted Rays, when by Refraction they are render'd divergent, do begin to diverge, or recede from each other. See *VIRTUAL FOCUS*.

The same Point is also call'd *Punctum Dispersus*. See *POINT OF DISPERSION*.

The Effect of convex Glasses, or Lenses, is to render the Rays, transmitted thro' them, convergent, and bring them together into a *Focus*, which will be nearer or further off, as the Lens is a Portion of a greater or less Sphere. See *CONVEX*, and *CONVERGENT*.

The Effect of concave Lenses is to render the Rays transmitted thro' them, *divergent*, or to disperse them from a *Virtual Focus*. See *CONCAVE*, and *DIVERGENT*.

For the *Place*, *Position*, *Distance*, &c. of the *Foci* of Rays refracted thro' Plain, Concave, and Convex Mediums of divers Densities, as Air, Water, Glass, &c. see *REFRACTION*, &c.

The Laws of the *Foci* of Glasses, and the Methods of finding the same, being those of most Use, and Importance; we shall here subjoin them a-part, as deliver'd and demonstrated by the ingenious Mr. *Molyneux*, in his *Dioptrica Nova*.

1^o then, The *Focus* of a convex Glass, i. e. the Point wherein parallel Rays transmitted through a convex Glass, whose Surface is the Segment of a Sphere do unite, is distant from the Pole, or Vertex of the Glass, almost a Diameter and half of the Convexity.

2^o In a *Plano-Convex Glass*, the *Focus* of parallel Rays, or the Place where they unite with the Axis, is distant from the Pole of the Glass a Diameter of the Convexity; provided the Segment do not exceed 30 Degrees.

The Rule or Canon in *Plano-Convex Glasses*, is as 107 : 193 : : So is the Radius of the Convexity : to the refracted Ray taken in its Concourse with the Axis; which in Glasses of larger Spheres, is almost equal to the Distance of the *Foci* taken in the Axis.

3^o In *Double Convex Glasses* of the same Sphere, the *Foci* is distant from the Pole of the Glass about the Radius of the Convexity, if the Segment be but 30 Degrees.

But if the Convexities are unequal, or if the two Sides are Segments of different Spheres, then the Rule is,

As the Sum of the Radii of both Convexities : to the Radius of either Convexity alone : : So is the double Radius of the other Convexity : to the Distance of the *Foci*.

Here observe, that the Rays which fall nearer the Axis of any Glass, are not united with it so soon as those farther off: Nor will the *Focal Distance* be to great in a *Plano-Convex Glass*, when the convex side is towards the Object, as when the contrary way.

Hence it is truly concluded, that in viewing any object by a *Plano-Convex Glass*, the convex Side should be turned outward; as also in burning by such a Glass.

For the *Virtual Focus* observe,

1^o That in *Concave Glasses*, when a Ray falls from Air parallel to the Axis, the *Virtual Focus*, by its first Refraction becomes at the distance of a Diameter and an half of the Convexity.

to the Axis, the *Virtual Focus* is distant from the Glass the Diameter of the Convexity.

2^o In *Plano-Concave Glasses*, as 107 : 193 : : So is the Radius of the Convexity, to the Distance of the *Virtual Focus*.

3^o In *Double Concaves* of the same Sphere, the *Virtual Focus* of parallel Rays is at the Distance of the Radius of the Convexity.

But whether the Concavities be equal or unequal, the *Virtual Focus*, or Point of Divergency of the parallel Rays is determined by this Rule;

As the Sum of the Radii of both Concavities : is to the Radius of either Convexity : : So is the double Radius of the other Convexity : to the distance of the *Virtual Focus*.

4^o In *Concave Glasses*, if the Point to which the incident Ray converges, be distant from the Glass farther than the *Virtual Focus* of parallel Rays; the Rule for finding the *Virtual Focus* of this Ray is this;

As the Difference between the Distance of this Point from the Glass, and the Distance of the *Virtual Focus* from the Glass : is to the Distance of the *Virtual Focus* : : So the Distance of this Point of Convergence from the Glass : is to the Distance of the *Virtual Focus* of this converging Ray.

5^o In *Concave Glasses*, if the Point to which the incident Ray converges, be nearer to the Glass, than the *Virtual Focus* of parallel Rays; the Rule to find where it crosses the Axis, is this;

As the Excess of the *Virtual Focus*, more than this Point of Convergence : is to the *Virtual Focus* : : So the Distance of this Point of Convergence from the Glass : is to the Distance of the Point where this Ray crosses the Axis.

Practical Rules for finding the *Foci* of Glasses.

To find the *Focus* of a Convex Spherical Glass, being of a small Sphere, apply it to the End of a Scale of Inches, and Decimal Parts, and expose it before the Sun; upon the Scale you will have the bright Intersection of the Rays mensur'd out; or, expose it in the Hole of a dark Chamber; and where a white Paper receives the distinct Representation of distinct Objects, there is the *Focus* of the Glass.

For a Glass of a pretty long *Focus*, observe some distant Objects thro' it, and recede from the Glass till the Eye perceives all in Confusion, or the Objects begin to appear inverted; here the Eye is in the *Focus*.

For a *Plano-Convex Glass*: Make it reflect the Sun against a Wall; you will on the Wall perceive two Sorts of Light; one more bright within another more obscure: Withdraw the Glass from the Wall, till the bright Image is at its smallest; the Glass is then distant from the Wall about the fourth Part of its focal Length.

For a double Convex: Expose each Side to the Sun in like manner; and observe both the Distances of the Glass from the Wall. The first Distance is about half the Radius of the Convexity turned firm the Sun; and the second, about half the Radius of the other Convexity.

Thus, we have the Radii of the two Convexities; whence the *Focus* is found by this Rule;

As the Sum of the Radii of both Convexities : is to the Radius of either Convexity : : So is the double Radius of the other Convexity : to the Distance of the *Focus*.

Focus, in Opticks, is a Point wherein the Rays reflected from the Surface of a Mirror, or Speculum; and by Reflection render'd convergent; do concur, or meet. See *MIRROR*.

The Effect of Concave Mirrors is to collect the Rays falling on their Concave Surface into a *Focus*. See *CONCAVE MIRROR*.

The Effect of Convex Mirrors, is to disperse the Rays falling on them, or render them more Divergent. See *CONVEX MIRROR*.

For the Laws of the *Foci* of Rays refracted from Mirrors, or Specula, see *REFLECTION*, &c.

The *Foci* of Concave Glasses are had by Reflection: For as a Concave Mirror burns at the Distance of about half the Radius of the Convexity; so a Concave Glass, being suppos'd a reflecting Speculum, unites the Rays of the Sun, at the Distance of about half the Radius of the Convexity.

To find the *Foci* of all Glasses, Geometrically;

Dr. *Halley* furnishes us a general Method for finding the *Foci* of Spherical Glasses of all kinds, both concave, and convex; expos'd to any kind of Rays, either parallel, converging, or diverging; under the following Problem.

To find the *Focus* of any Parcel of Rays diverging from, or converging to a given Point in the Axis of a Spherical Lens, and inclined thereto under the same Angle: The Ratio of the Sines of Refraction being given.

Suppose G L (*Tab. Opticks*, Fig. 38.) a Lens; P a Point in its Surface; V its Pole; C the Centre of the Sphere whereof it is a Segment; O, the Object, or Point in the Axis, to or from which the Rays do proceed; and O P a given Ray: And suppose the Ratio of Refraction to be as r to s . Then,

Then, making CR to C O, as s to r for the Immersion of a Ray; or as r to s for the Emergence (*i. e.* as the Sines of the Angles in the Medium which the Ray enters, to their corresponding Sines in the Medium out of which it comes) and laying CR, from C towards O, the Point R will be the same for all the Rays of the Point O. Lastly, drawing the Radius P C, if need be, continued; with the Centre R, and Distance O P strike a piece of an Arch, intersecting P C in Q. The Line Q R being drawn, shall be parallel to the refracted Ray; and P F being made parallel thereto, shall intersect the Axis in the Point F, the Focus sought.

Or, make it, as C Q : C P :: C R : C F. Then will C F be the Distance of the Focus from the Centre of the Sphere.

This Author gives a Demonstration of the Method; and adds various Figures, exhibiting the various Cases of Rays either diverging, or converging, as they enter, or emerge out of the Surface either of a convex or concave Lens.

From this Principle all the Rules for the Foci of Rays parallel to the Axis, as likewise for the principal Focus, where the Rays nearest the Axis do unite, are deduc'd. As,

Hence 1^o If O P be equal to C R; the Points Q and C are coincident, and the Rays O P, after Refraction, run on parallel to the Axis. 2^o If the Point Q fall on the same Side of the Axis, as is the Point P; then the Beams after Refraction do tend on, either Diverging, or Converging, as before: But if Q fall on the other Side the Axis, the Diverging Rays are made to converge by a Convex, or the Converging to diverge by a Concave Glass. 3^o If O P do exceed C R, the Focus is in all Cases on the same Side of the Glass, as is the Centre of the Sphere C. But contrarywise, if O P be less than C R, the Focus falls on the other Side of the Glass beyond the Vertex V. 4^o An Object may be so placed, that the Rays next the Axis of a Convex Glass shall have an imaginary Focus transmitting diverging Rays, when the more remote Parts thereof shall make them converge to a real Focus. 5^o If O V, the Distance of the Object from the Pole or Vertex of the Glass, be taken instead of O P, then will C Q be the Difference of O V and C R; and as that Difference is to C R, so is the Radius C V, to C F, the Distance of the principal Focus from the Centre of the Sphere, whereof the Glass is a Segment. Or else, as C Q : to O P or R Q :: So P C : to V F, the focal Distance from the Pole of the Glass. Whence follows a General Rule for the Foci of all Glasses; only according to Cor. 3. If O V do exceed C R, the Focus is on the same Side of the Glass, as the Centre of the Sphere: But if C R be greater, then the Focus is on the opposite Side of the Glass: Whence it will be determined, whether the Focus be real, or imaginary.

What has been said of one Surface of the Lens, is easily applicable to the other, taking F the Focus, for an Object.

FODDER, any kind of Meat for Horses, or other Cattle: In some Places Hay and Straw mingled together, is accounted Fodder.

In the Civil Law it is us'd for a Privilege that the Prince has, to be provided of Corn, and other Meat, for his Horses, by the Subjects, in his warlike Expeditions.

FODINA, a Name some Authors give to the Labyrinth in the Bone of the Ear. See LABYRINTH.

FOECES, } See { FEACES.
FOECAL, }
FOECULE, }

FOETOR, in Medicine, stinking, or fetid Effluvia, proceeding from the Body, or the Parts thereof. See EFFLUVIA.

Foetus arise from stagnat, extravasated, corrupted, or poison'd Humors; as also from any thing capable of attenuating and volatilizing the Oil and Salts: As, Abstinence, Heat, too much Motion, Acrimony of Food, &c.

Foetus Nativus, Stench of the Nostrils, a sort of Disease, arising from a deep Ulcer, within side the Nose, yielding a fetid Smell. In this Cause, according to Galen, is a sharp Humor, falling from the Brain upon the Mamillary Processes. This is one of the Causes that annuls Marriage. See DIVORCE.

FOETUS, in Medicine, denotes the Child, while yet contain'd in the Mother's Womb: but particularly, after it is perfectly form'd: Till which Time it is properly call'd Embryo. See EMBRYO.

The manner of the Conception, or Generation of the Foetus, is Matter of great Controversy.

That all the Parts of the Animal did exist, and that its Fluids were in Motion, before Generation, is generally allow'd; but whether the Animakule was lodg'd in the Male, or Female, is not agreed of.

Many of the Moderns will have the Ova, or Eggs, contain'd in the Ovary of the Female, to be the first Matter, or Stamen of the Foetus: These Eggs, they suppose to contain all the Parts of the Foetus in little; and that being impregnated with the Male Seed, the Parts thereof become en-

larg'd, and display'd: From the Ovary they are convey'd by the Fallopian Tubes into the Uterus, where they receive their Impregnation, Accretion, &c. See EGG, and OVARY.

Others will only have the female Ovum to be a proper Nidus for the Animakule, which, they contend, is in the Male Seed. The Animakule getting into an Ovum fit to receive it; and this falling thro' one of the Tube Fallopian into the Womb; the Humors which distill thro' the Vessels of the Womb penetrating the Coats of the Egg, swell and dilate it, as the Juice of the Earth does Seed thrown into the Ground. Or else, the Branches of the Veins and Arteries, whereby the Egg was tied in the Ovary, being broken, knit with the Vessels of the Womb. See GENERATION, CONCEPTION, SEED, &c.

The first thing that appears of a Foetus, is the Placenta, like a little Cloud, on one Side of the external Coat of the Egg: About the same time the Spina is grown big enough to be visible; and a little after, the Cerebrum and Cerebellum appear like two small Bladders: Next, the Eyes stand prominent in the Head; then the Punctum salivæ, or Pulsation of the Heart is plainly seen. The Extremities discover themselves last of all.

The Foetus, when form'd, is almost of an Oval Figure, while it lies in the Womb: For its Head hangs down, with its Chin upon the Breast: Its Back is round; with its Arms it embraces its Knees, which are drawn up to its Belly; and its Heels are close to its Buttocks: Its Head upwards, and its Face towards its Mother's Belly. About the ninth Month, its Head which was hitherto specifically lighter than any other Part, becomes specifically heavier; its Bulk bearing a much smaller Proportion to its Substance, than it did.

The Consequence of this Change, is, that it tumbles in the Liquer which contains it: Its Head falls down; its Feet get up; and its Face turns towards its Mother's Back. But being now in an irksome Posture, tho' at the same time a favourable one for its Exit; the Motion it makes for its Relief, gives frequent Pains to the Mother; which causes a Contraction of the Womb, for the Expulsion of the Foetus: See DELIVERY.

Indeed, what some Anatomists pretend to give of the Posture of the Foetus in the Womb, in the several Stages of Gestation, is very precarious.

In the first Month it is of no moment, how it lies in the Womb: In the latter Months, after the Foetus is grown not only quick, but robust, it frequently changes its Posture of it self; as not only the Mothers themselves feel, but any other Person by laying the Hand on their Bellies, frequently may. However, its ordinary Posture is supposed to be sitting: As the Time of Birth draws near, it turns it self, and presents the Head to the Os Uteri; tho' sometimes it offers the Feet first, and sometimes lies a-crofs, and offers either a Hand, a Knee, or the like; which are irregular Situations, and without a deal of Address in the Midwife in turning the Foetus, both the Mother and the Infant are in Danger. See PARTURITION, &c.

The Foetus is enclosed in two Membranes, or Coats; the inner, which immediately invests the Foetus, and the Liqueur wherein it lies, is call'd the Amnion: The outward Membrane is called the Chorion. See AMNION, and CHORION.

In some Animals there is a third Membrane, called the Allantois, whose Place is between the other two; and serves for the Discharge of the Urine of the Foetus, brought hither by the Urachus.

Dr. Needham seems to have discover'd something analogous hereto in the human Foetus, and calls it the Membrana Urinaria: But others chuse only to make it a Duplication of the Chorion; tho' the Necessity of such third Membrane be the same in Men, as in Cows, Sheep, &c. See ALLANTOIS.

There are some Differences in the Structure, Mechanism, and Proportion of the Parts of a Foetus; from those of an Adult: And even some additional and extraordinary Parts; by which the Nutrition of this Zoophyte, or Plant Animal, and the Circulation of the Blood therein, are effected.

The principal Variations are about the Liver, Heart, and Lungs. Of these the most considerable are the Umbilical Vessels, which are two Arteries, a Vein, and Urachus, arising from the Placenta, and convey'd thro' the Navel to the Liver of the Foetus, near the Navel; which after the Birth drying up, become impervious and useless. See FUNICULUS, and UMBILICAL VESSELS.

In the Liver it self is an extraordinary Communication between the Porta and Cava, call'd Canalis Venosus, which after the Birth gradually dries up. In the Heart, at the Mouth of the Vena Cava, is the Foramen Ovale, whereby that Vein has a Communication with the pulmonary Vein: There is also a Communication between the Aorta, and Pulmonary Artery, by means of the Canalis Arteriosus, which passes between the two, at about two Inches distance from the Base of the Heart. 'Tis by means of these two Canals or Passages, that the Blood circulates in the Foetus while inclos'd in the Womb; they serving to convey and pass the

Blood from the Heart into the Arteries; and from the Veins into the Heart again, without passing through the Lungs, which are now useless. See CIRCULATION.

The Lungs of a *Fetus* are of a darker Colour, and closer Consistence, than after they have been breath'd into; as appears from their swimming in Water, after Birth, which they will not do before: Which Difference affords an useful Experiment, in case of the suspected Murder of Children. For if they were still-born, the Lungs sink in Water; if born alive, they swim.

The two Canals above-mentioned serve only to prevent the Obstruction the Blood would otherwise have within the Lungs, before they have been open'd. After Respiration has open'd the Lungs, the Blood taking its Course through them, the Passages close up. See FORAMEN OTALE, RESPIRATION, &c.

The Head of the *Fetus* is much bigger in proportion to the Body, than afterwards: The Bones and Brain softer: The Sutures open, and leaving a great Space on the Top of the Head, cover'd only with a Membrane; and the Glands, particularly the *Thymus*, and *Renalis*, bigger and softer. For other Differences in the Proportions, see EMBRYO.

Bartholin, in his Treatise *De infolitis partus viis*, relates a great many stupendous Cases of *Fetus's* Dead and putrid in the Womb; the Parts of which have made their way thro' Apertures; one whereof at the Navel was some Years in coming away: And in the *Philosoph. Transact.* we meet with the like Instances; particularly, of one voided piece-meal by the Anus, several Years after Conception.

Authors give Accounts of *Fetus's* found in the Fallopian Tubes; and others in the Cavity of the Belly.

M. de S. Maurice, in the Memoirs of the R. Academy of Sciences, relates the History of a *Fetus* form'd in the Ovary of the Mother; and which at three Months from Impregnation, burst the Testicle, forc'd its Way through, into the Epigastric Region.

During the Rapture, the Mother felt all the Preludes of an imminent Travel; and calling her Chirurgion, died in his Arms, crying, I am delivering, I am delivering!

The Story of *Margaret Countess of Holland*, who is said to have been deliver'd of 364 *Fetus's*, all alive, and afterwards baptiz'd, commonly passes for a Fable: And yet there is a Picture of this notable Delivery still preserv'd in the Church of *Loflune*, as a Monument of the Truth thereof. *Albertus Magnus* gives a like Instance of a Woman, who brought forth 150 *Fetus's*, or Embryo's, all form'd, and as big as the little Finger.

FOG, or MIST, a Meteor, consisting of gross Vapours, floating near the Surface of the Earth. See VAPOUR.

If the Vapours, plentifully rais'd from the Earth, and Waters either by the solar or subterraneous Heat, meet, at their first Entrance into the Atmosphere, with Cold enough to condense them considerably; their specific Gravity being hereby increas'd, their Ascent will be stop'd, and they will either return back in form of a Dew, or drizzling Rain; or remain suspended, for some time, in form of a Fog. See RAIN, and DEW.

Fogs are only low Clouds; or Clouds in the lowest Region of the Air: And Clouds are no other than Fogs rais'd on high. See CLOUD.

Objects view'd thro' Fogs, appear larger, and more remote than thro' the common Air. See VISION.

The fishing for Herring is chiefly practis'd in foggy Weather. See HERRING FISHERY.

FOGAGE, in the Forest Law, is Rank Grass, not eaten in the Summer.

FOIBLE, a French Term, frequently us'd also in our Language.

It literally signifies weak, and in that Sense is apply'd to the Body of Animals, and the Parts thereof: As, *foible* Reins, *foible* Sight, &c. being deriv'd from the Italian *Fievelo*, of the Latin *Fiebilis*, to be lamented, pitied.

But it is chiefly us'd with us subatively; to denote the principal Defect, or Flaw in a Person, or Thing. Thus we say, Every Person has his *Foible*; and the great Secret consists in hiding it artfully: Princes are gain'd by Flattery, that is their *Foible*: The *Foible* of young People is Pleasure: The *Foible* of old Men is Avarice: The *Foible* of the Great and Learned, is Vanity: The *Foible* of Women and Girls, Coquetry, or an Affectation of having Gallants: You should know the Force, and the *Foible* of a Man, before you employ him: We should not let People perceive that we know their *Foible*.

FOIL, a Sheet of Tin, Quicksilver, or the like, laid on the Backside of a Looking Glass, to make it reflect. See FOLIATING.

The Word is form'd of the Latin *Folium*, Leaf. FOILING, among Hunters, is the footing, and treading of Deer, which is on the Grass, but scarce visible.

FOLDS, in the Manufactures, see PLAITS, CLOTH, PACKING, &c.

FOLDS of the Drapery, in Painting. See DRAPERY.

FOLIA, in Botany, is us'd for the Leaves of Plants and Flowers; but particularly the former: The Leaves of Flowers being more properly call'd *Petala*. See LEAVES, and PETALA.

FOLIACEUM *Expansum*, in Anatomy, is that Extremity of the Fallopian Tube, next the Ovary; and which is expand'd like the Mouth of a Trumpet, and involv'd with a sort of Fringe. See FALLOPIAN Tube.

FOLIAGE, a Cluster, or Assemblage of Flowers, Leaves, Branches, &c.

FOLIAGE is particularly us'd for Representations of such Flowers, Leaves, Branches, Rinds, &c. whether Natural, or Artificial; us'd, as Enrichments on Capitals, Frontons, Pediments, &c. See CAPITAL, FREEZE, &c.

FOLIATING of Looking Glasses, is the spreading a Composition of something which will firmly adhere to the Back of the Glass, and there reflect the Image. See MIRROR.

This is call'd the *Foil*, and is usually made with Quick-silver, mix'd with some other Ingredients.

For the Method of Foliating Looking Glasses, see LOOKING GLASS.

In *Philos. Transact.* N^o 245 we have a Method of foliating Globe Looking Glasses, communicated by Sir R. Sautewell.

The Mixture is of Quick-silver, and Marsh-male of Silver, of each three Ounces; and Tin, and Lead, of each half an Ounce: To these two first throw on the Marsh-male; and last of all the Quick-silver. Stir them well together over the Fire; but they must be taken off, and be towards cooling, before the Quick-silver is put to them.

When you use it, the Glass should be well heated, and very dry: But it will do also when it is cold, tho' best when the Glass is heated.

FOLIATION, in Botany, &c. is us'd by Dr. Grew, to express the Assemblage of the *Folia*, or Petals of a Flower. See PETALA.

The *Foliation* is the most conspicuous Part of Flowers; being that Collection of fugacious, colour'd Leaves, which constitute the Compass, or Body of the Flower. See FLOWER.

It is of great use in the Generation and Preservation of the young Fruit, or Seed: It filtrates a fine Juice, to nourish it in the Uterus, or Pistil. See GENERATION of Plants.

In some Species, as Apricocks, Cherries, &c. it likewise serves to guard the young tender Fruit from the Violence of Wind, Weather, &c. for their being of a very tender, and pulposy Body, and coming forth in the colder Parts of the Spring, would be often injured by the Extremities of Weather, if they were not thus protected, and lodged up within their Flowers.

Before the Flower opens, the *Foliation* is curiously and artfully folded up in the Calix or Perianthium. See CALIX.

Dr. Grew enumerates several Varieties of these Foldings, viz. the *Cloze Couch*, as in Roses; the *Concave Couch*, as in the *Blattaria flore albo*; the *Single Plait*, as in Peale Blossoms; the *Couch and Plait*, as in Marigolds; the *Rowl*, as Ladies Bower, &c.

FOLIO, signifies Page. See PAGE.

Thus *Folio 7*, writ abridgedly *F^o 7*, denotes the seventh Page, &c.

Folio Recto, or *F^o R^o* expresses the first Side or Page of a Leaf.

Folio Verso, or *F^o V^o* the second, or back side of the Leaf.

The Word is Italian, and literally signifies Leaf. FOLIO, among Book-sellers, a Book in *Folio*, or simply, a *Folio*, is that where the Sheet is only folded in two, each Leaf making half a Sheet.

Beneath the *Folio* are the *Quarto*, *Octavo*; *Duodecimo*, *Sextens*, *Twenty fours*, &c. See BOOK.

FOLIUM *Indicum*, or *Indum*, call'd also *Thamalapatra*, and *Malabarum*; a Leaf brought from the Indies, growing chiefly about *Cambaya*, produc'd by a Tree not unlike the Lemon Tree; us'd in the Composition of Venice Treacle. See TREACLE.

FOLIUM *Cariophyllatum*, or Clove Leaf. See CLOVES.

FOLK-LAND, in our ancient Saxon Customs, denoted Copyhold Lands. See COPYHOLD.

In opposition to these, Charter Lands were call'd Boclands. See Boc-LAND.

Pundus sine scripto possessus (says *Soumer*) *ensum penitentium annuum, & officiorum servituti obnoxius: Terra popularis.*

FOLCMOTE, and FOLKESMOTE, among our Saxon Antecessors, signified, according to *Lumbard*, two kinds of Courts.

One, now call'd the County Court: The other, the *Sheriff's Turn*. See COUNTY COURT, and TURN.

The Ward, says *Stow*, is still in use among the *Londoners*, and signifies, *Celebrem ex omni Civitate concurrentum*. But *Manswood* says, it is the Court holden in *London*, where in all the Folk and People of the City did complain of the Mayor and Alderman for any Misgovernment.

Mr. *Sommer*, in his *Saxo* Dictionary, makes it a general Assembly of the People, for considering and ordering Matters of the Commonwealth. *Omnnes proceres regni, & milites & liberi homines universi totius Regni Britannie facere debent in pleno Falcote fidelitatem Domino Regi, coram Episcopo Regni. In Leg. Fæd. Confess. cap. 35. Et amplius non fit in Hastings, Miskenniga, i. e. speaking amiss; neque in Folkestone, neque in aliis placitis infra Civitatem. Charta H. 1. pro London. Du Cange.*

When this great Assembly is made in a City, it may be call'd a *Burgemote*; when in the County, a *Shiregemote*. *Cum aliquod vero inopinatum & malum contra regem vel contra coronam Regis emerferit, statim debent pulsatis campanis, quod Anglice vocatur Amobel, convocare omnes & universos, quod Anglici vocant Folkmote, &c. Leg. Alfred.*

FOLLICULUS, among Gardeners, the Seed-Vessel, Case, Coat, Husk, or Cover, which some Seeds and Fruits have over them. See *FRUIT*, and *SAMP*.

FOLLICULUS Feltis, see *VESICA Biliaris*.

FOLLY, according to Mr. *Lock*, consists in the drawing of false Conclusions from just Principles; by which it is distinguish'd from *Madness*, which draws just Conclusions from false Principles. See *MADNESS*.

FOMAHANT, in Astronomy, a Star of the first Magnitude, in the Constellation *Aquarius*. Its Longitude is 329 Degrees, 17 Minutes, Latitude 21 Degrees, 3 Minutes. See *AQUARIUS*.

FOMENTATION, a liquid Medicine, applied on any diseas'd Part.

Fomentations are either Simple, or Compound.

Simple FOMENTATIONS are those made with luke warm Water, Milk, Oil, OXCREAT, or other the like LIQUOR.

Compound FOMENTATIONS are Decoctions of Roots, Leaves, Flowers, Seeds, made in common Water, or other proper LIQUOR; to which are sometimes added Salts, Axungie, Oils, &c.

To use, or apply them, they dip a hot linen Cloth, or Flannel in the LIQUOR, and spread it on the Part affected.

There are also Fomentations made another way; viz. by boiling certain Drugs in linen Bags, and then applying 'em, Bags and all, on the Part.

There are also a sort of dry Fomentations, being Bags fill'd with Medicines, but not boil'd, only sometimes sprinkled with a little Wine or Brandy.

The Intention of Fomentations is to resolve, discuss, soften, assuage, fortify, constringe, &c. the Parts they are applied on.

Fomentations are also called *Local Baths*, or Partial Baths; because, being applied on a diseas'd Part, they have much the same Effect as a Bath, or Half-bath has on the whole Body. See *BATH*, and *BATHING*.

FONT, or Baptismal Font, a Stone, or Marble Vessel, at the lower End of a Parish Church, serving to hold the Water, to be us'd in administering the Sacrament of Baptism. See *BAPTISM*.

A Baptismal Font is the Character of a Parish Church. See *PARISH*.

Its Place, at present, is at the Bottom of the Church, or in a little Chapel within the Church. Antiently, it was placed in a little Church, distinct from the great one, tho' near to it, called the *Baptistry*. See *BAPTISTRY*.

It was a common thing, during the first Ages of the Church, for the Baptismal Font to be fill'd miraculously, at the time of Easter, which was their great Baptizing Season. *Baronius* gives divers Instances of these miraculous Fountains, in the Years 417, 554, and 558.

Possennius B. of Lilybæum, who wrote in 445, observes, that in the Year Four hundred and seventeen, under the Pontificate of *Sofianus*, there was an Error committed in the time of celebrating Easter; it being held on the 25th of March, in lieu of the 22^d of April, which was the Time it was held on at *Constantinople*. He adds, that GOD was pleas'd to shew the Error in a very convincing manner, by the Fountains of a certain Village, which always us'd to be miraculously fill'd against Easter; and which, this Year, were not full till the 25th of April. See *Tillemont Hist. Eccles. T. X. p. 678, and 679. Gregory de Tours, p. 320, 516, 746, 950, 1063.*

FONTICULUS, or FONTANELLA, in Chirurgery, a general Name for Issues, Scars, Caustics, and other small artificial Discharges. See *ISSUE*, *SEATON*, *CAUSTERY*, &c.

The Word is a Diminutive of *Fons*, Fountain.—

FONTALIA, or FONTANALLA, in Antiquity, a religious Feast, held among the *Romans*, in honour of the Deities who presid'd over Fountains, or Springs.

Varro observes, that it was the Custom to visit the Wells on those Days; and to cast Crowns into Fountains. *Scaliger* in his Conjectures on *Varro*, takes this not to be the Feast of Fountains, as *Festus* insinuates; but of the Fountain which had a Temple at *Rome*, near the *Porta Capena*, call'd also *Sporta Fontinalis*: He adds, that his Fountain *Cicero* speaks in his II Book de *Legib.* The Fontinalis were held on the 15th of October.—

FOOD, or ALIMENT, is whatever Matter is taken in at the Mouth, digested in the Stomach, and other Viscera, and converted into the Matter of the Body, to repair, or supply what is spent, or wanting. See *DIGESTION*.

The Changes which the Food undergoes, before it become a Part of our Body, are 1^o Mastication; 2^o Deglutition; 3^o Concoction; 4^o Chylification; 5^o Sanguification; 6^o Assimilation. See *MASTICATION*, *CONCOCTION*, *CHYLIFICATION*, *NUTRITION*, &c.

Food is of two Kinds, viz. Esculent, or Meat; and Potulent, or Drink. See *ESCULENT*, *DRINK*, *WINE*, *MALT LIQUORS*, *WATER*, &c.

The first Foods of our Great Forefathers, were Water, and the spontaneous Productions of the Earth; with which whole Nations sustain themselves to this Day.

Julius, Obf. 14. 10. notes, That Men antiently fed after the same rate as other Animals; and lived of Hay and Corn. By degrees they came to the Humors or Juices of certain Beasts, as Milk; and at length they commenced Carnivorous, and devour'd the Parts of the Animals themselves. See *CARNIVOROUS*.

The Variety of Foods, it seems, does not make any Difference in the Substance, or Actions of the Bodies sustain'd thereby; the Viscera having a Power of altering and assimilating them, however heterogeneous, into one similar Substance, like themselves. See *ASSIMILATION*.

The Difference in Foods consists principally in this, that some are more easily digested and assimilated, than others; and afford more nutritious Juice, than others: To which end it is, that the divers Kinds of dressing have been invented; viz. to dispose the Matter for a more easy and plentiful Assimilation. See *DRESSING*.

The best, most simple, and light of Digestion are these Foods prepar'd of Frumentations, and Leguminous Seeds; as Wheat, Rye, Barley, Oats, Mays, dried, ground, fermented, baked, &c. See *BREAD*. Pease, Beans, Vetches, &c. Also green Plants, and Pot-herbs, as Lettice, Beet, Parsly, &c. See *SALLET*. Fruits, as Apples, Pears, Berries, Plumbs, Cherries, &c. See *FRUIT*. And the lean Parts of Animals, Birds, Fishes, Insects, &c. prepar'd by Boiling, Baking, Stewing, &c.

And yet for different Intentions, different kinds of Food are requir'd: Thus hard, dry, thick, heavy, viscid Foods are best for those whose Viscera are strong, Digestion quick, &c. and soft, light, humid, simple Foods to such, are pernicious. Again, to the Weak, valdeudinary, studious, and sedentary, those Foods are best, which are either by Art, or Nature the nearest to Chyle, as Milk, Broths, &c.

Where the Temperature inclines to Acidity, these alkalious Foods are the most suitable; and Acids, where the Constitution inclines to be alkaline.

Some will have it, that Iron, Metals, Minerals, &c. may by a proper Preparation become Food; on which accounts Decoctions of Gold, Chalybeat's, &c. are crid up: But 'tis certain, that no such Matters can ever be assimilated, and become Part of our Body. They may act on the Blood, and the Blood Vessels, by their Weight, Impetus, &c. and on that account, may be of use in Medicine; but not as Food.—

A due Regulation of the Quantity, and Quality of our Food; and a nice Adjustment thereof to the concussive Powers, would be of the utmost Consequence to Health and long Life. See *HEALTH*.

What we expend in Motion, Excretion, Effluvia, &c. is but a determinate Quantity; and the Supply should only keep pace with the Expence. A just Proportion of the two would probably preferve us from acute Dilemper; as it certainly would from chronic ones; Moll, or all of which proceed from Repletion, as appears from their being cured by Evacuation. See *EVACUATION*.

The Qualities of Foods, as to Easiness, or Difficulty of Digestion, Dr. *Cboeye* thinks, may be determin'd in all Cases from these three Principles.

1^o That those Substances which consist of the grossest Parts, are hardest of Digestion; by reason their constituent Parts touch in the most Points; or have the greatest Quantity of Contact, upon which their Cohesion depends. See *COHESION*.

2^o That those Substances, whose Parts are brought together with the greater Force, cohere proportionally closer, and are the more difficultly separated.

3^o That Salts are very hard to be digested; because united by plain Surfaces, under which they are always comprehended: Hence, in the last Stages of the Circulation, where

where it is slower, they readily shoot into larger Clusters, and so are hard to be driven out of the Habit.—

From these Principles that Author infers, That such Vegetables and Animals, as come sooner to their Growth, are easier of Digestion, than those long in attaining to Maturity: The smallest of their kind, sooner than the larger: They of a dry, fleshy, and fibrous Substance, sooner than the oily, fat, and glutinous: Those of a white Substance, sooner than those of a redder: Those of a soft, mild, and sweet, sooner than those of a rich, strong, poignant, aromatic Taste: Land Animals, than Sea Animals; Animals that live on light, vegetable Food, than those on hard and heavy Food; plain dress'd Food, than what is pickled, salted, bak'd, smok'd, or otherwise high season'd; boil'd Meats sooner than roast, &c.

The same Author adds, that Abstinence, and Exercise most concur with the due Food for the Preservation of Health; and that where Exercise is wanting, as in studious Persons, the Defect must be supplied by Abstinence. See ABSTINENCE, and EXERCISE.

FOOL, according to Mr. Lock, is one who makes false Conclusions from right Principles; by which he is distinguish'd from a Madman. See MADNESS.

Dr. Willis relates, That upon dissecting of a Fool, the principle Differences found between him and a Man of Sense, were, that the Brain was smaller; and that the Cervical Plexus, form'd of the Intercostal Nerve, whereby the Correspondence between the Brain and Heart is effected, was less, and sent forth fewer Branches to the Heart, &c.—*Nervor. Descript. & Us. c. 26.* See CONSENT of PARTS.

FOOT, a Part of the Body of most Animals, whereon they stand, walk, &c. See BODY.

Animals are distinguish'd, with respect to the Number of Feet, into *Bipedes*, q. d. two-footed; such are Men, and Birds: *Quadrupedes*, q. d. four-footed; such are most Land Animals: And *Multipedes*, q. d. many-footed; as Insects. See QUADRUPED, INSECT, &c.

The Reptile Kind, as Serpents, &c. have no Feet. See REPTILE.

The Merchants would persuade us, that the Bird of Paradise has no Feet; that when it sleeps, it hangs by its Wings; and when it feeds, by its Bill: But the Matter is, they cut them off, that the Bird may be thought the more extraordinary. Others say, 'tis for fear they should spoil the Feathers, which are very beautiful.

Lobsters have twelve Feet; Spiders, Mites, and Poly-pods, eight; Flies, Grasshoppers, and Butterflies, six Feet.

Galen has several good Observations on the wise Adjustment of the Number of Feet in Men, and other Animals, in his Book *De Usu Part. L. 3.*

The Fore-feet of Moles are admirably form'd to dig, and scratch up the Earth, and make way for its Head, &c. In Water Fowls, the Legs and Feet are excellently adapted to their respective Occasions and Manners of living. In such, as are to wade in the Rivers, the Legs are long, and bare of Feathers a good way above the Knee: Their Toes also are broad; and in such as bear the Name of Mud-lackers, two of the Toes are somewhat jointed, that they may not easily sink in walking upon boggy Places.

Others are *whole-footed*, i. e. have their Toes webbed together, as the Goose, Duck, &c. And 'tis pretty enough to observe, how artificially these will gather up their Toes and Feet, when they withdraw their Legs, or go to take their Stroke in swimming; and again expand, or open the whole Foot, when they press upon, or drive themselves forward in the Water. See LEG.—

Foot, in Anatomy, or the great Foot, is the whole Extent from the Jointure of the Hip, to the Tip of the Toes; as the *Hand* is the whole, from the Shoulder to the Fingers Ends. See HAND.

The *Pes magus*, or great Foot, is divided into the Thigh, the Leg, and the Foot, properly so called. See THIGH, LEG, &c.

Its Bones are the *Femur*, or Thigh Bone; the *Tibia* and *Fibula* for the Leg; and those of the *Tarsus*, *Metatarsus*, and *Fingers*. See FEMUR, TIBIA, &c.

Its Arteries are Branches of the Crural Artery; and its Veins terminate in the crural Vein. See CRURAL.

Of these there are five principal ones, viz. the *Saphena*, great and little *Ijchiadic*, the *Musculous*, *Popliteus*, and *Surena*. See each under its proper Article, *SAPHENA*, &c.

The *Lesser Foot*, or Extremity of the Foot, which is the Foot properly so call'd, consists of three Parts, viz. the *Tarsus*, the Space from the Ankle to the Body of the Foot; answering to the Wrist in the Hand: The *Metatarsus*, the Body of the Foot to the Toes; and the *Digiti*, or Toes.

Each of these Parts consists of a great Number of Bones, as the *Calc*, *Talus*, *Cuneiformis*, and *Cuboides*. The Bottom of all is call'd the *Sole*, or *Planta Pedis*. See TARSUS, METATARSUS, CALC., &c.

Foot, in the Greek, and Latin Poetry, the Metre, or Measure of the Verse. See MEASURE, and VERSE.

Feet are compos'd of a certain Number of long and short Syllables. See QUANTITY.

The *Spondee*, *Jambic*, *Trochee*, and *Piirbic*, of two Syllables, each.

The *Dactyl*, *Anapest*, *Moloss*, *Tribrach*, &c. of three Syllables. See SPONDEE, JAMBIC, DACTYL, &c.

Hexameter Verses consist of six Feet; Pentameters of only five. See HEXAMETER, and PENTAMETER.

Even, and Odd Foot, *Par*, and *Impar*, in Poetry, and particularly in Jambic Verses. Feet are denominat'd *Odd*, and *Even*, in respect of their Situation in the Verse.

Thus, the first, third, and fifth Foot of the Verse are *uneven*, in regard those Numbers are not capable of being divided into two equal Parts.

In the ancient Tragedy, the Jambic Verses, which prevail'd therein, only allow'd the uneven Feet to the Spondee; so that the second, the fourth, and sixth Feet were to be Jambus's, in regard they were even. This regular Mixture of Spondees in the uneven Feet, render'd the Verse the more solemn and noble.

The Comic Poets, the better to disguise their Verse, and make it more like Prose, took the contrary Course; putting Spondees, where the Tragic Poets would only have allow'd Jambus's.—

Foot, is also a Measure, consisting of twelve Inches. See MEASURE.

The *Foot-long* is divided into twelve Inches; and the Inch into three Barley Corns. See INCH, &c.

Geometricians divide the Foot into ten *Digits*; the *Digit* into ten *Lines*, &c. See DIGIT, &c.

The *French* divide their Foot like us, into twelve Inches, and the Inch, into twelve Lines. See LINE, &c.

The *Foot square* is the same Measure, both in Length, and Breadth; containing 144 Square, or superficial Inches. See SQUARE.—

The *Cubic*, or *Solid Foot* is the same Measure in all the three Dimensions; containing 1728 Cubic Inches. See CUBIC, and CUBIC.

The Foot is of different Lengths, in different Countries.

The *Paris Royal Foot* exceeds the *English* by seven Lines and a half: The *Ancient Roman Foot* of the Capital, consisted of four Palms; equal to eleven Inches, and seven Tenths *English*: The *Rhineland*, or *Leiden Foot*, by which all the Northern Nations go, is to the *Roman Foot*, as 950 to 1000—The Proportions of the principal Feet of several Nations, compar'd with the *English* and *French*, are as follow.

The *English Foot* being divided into 1000 Parts; or into 12 Inches; the other Feet will be, as follow;

		Thous. Parts.	F. In. Li.
London	Foot	1000	0 12 0
Paris	the Royal Foot	1068	1 00 8
Amsterdam	Foot	942	0 11 3

Foot Rule, see RULE.

Foot Level, an Instrument, which serves to do the Office both of a Level, a Square, and a Foot Rule. See LEVEL, SQUARE, &c.

The *Foot Level*, represented *Tab. Surveying, Fig. 22.* consists of two Branches, about an Inch broad, opening and shutting like a two-foot Rule.

These Branches are hollow'd half way up the side of each, to receive a kind of Tongue, or thin piece of Brass, which is fasten'd to one of them, by means whereof the Branches may be shut close together. The Use of this Tongue is such, that when the End of it is placed in the Branch it is not fasten'd to, where there is a Pin that holds it, the two Branches will stand at Right Angles: To the Head of the Instrument is likewise added a square piece of Brass; by means whereof it does the Office of a Square. At the Bottom of the Angle of the said Piece of Brass is a little hole, wherein is fasten'd a Line with a Plummet; which falling on a perpendicular Line, drawn on the Tongue, shews whether any thing the Instrument is applied to, be level, or not.

Foot of the Forest, *Pes Foreste*, in our ancient Customs, contain'd 18 Inches, or $\frac{1}{2}$ of the common Foot.

Notandum est, quod Pes Foreste, institutus tempore Ric. Ossel, in Arravatatione Vastorum, factus est, signatus & sculptus in pariete Cancelle Ecclesie de Edwinstone, & in Ecclesia Beate Marie de Notingham: Et dictus Pes continet in Longitudine octidecim pollices, &c. Ex Regist. Abb. de Novo Loco in Com. Not.

Foot Pace, *Half Pace*, or *Landing Place*, see STAIR CASES.

Foot Bank, or BANQUETTE, in Fortification, is a small Step of Earth, on which the Soldiers stand to fire over the Parapet. See BANQUETTE.

Foot Gilde, was an ancient Amerciamen, for not cutting out the Balls of the Feet of great Dogs in the Forest; which was done for preventing their running after the King's Deer; and was call'd *Expeditation*. See EXPEDITATION.

Foot Husks, among Gardners, are short Heads, out of which Flowers grow.

FORAMEN, in Anatomy, a Name given to certain Holes or Perforations in divers Parts of the Body; as the

FORAMEN OVALE, or FORAMEN BOTALE, an Oval Aperture, or Passage thro' the Heart of a Fetus, which closes up after Birth.

It arises above the Coronary Vein, near the right Auricle; and passes directly into the left Auricle of the Heart. See HEART.

The *Foramen Ovale* is one of the temporary Parts of the Fetus; wherein it differs from an Adult. It serves for the circulating of the Blood in the Fetus, till such time as the infant breaths, and the Lungs are open'd. See FORUS, and LUNGS.

Its Use was first exactly describ'd by *Leon. Botal* of *Affa* in *Piedmont*, in the Year 1562; who tracing the Courses and Passages of the Blood, asserted the *Foramen Ovale* to be one, whereby the Blood in Fetus's was convey'd from the right Ventricle to the left.

The Modern Anatomists stand to the Discovery; and the *Foramen Ovale* is now generally allow'd a part necessary in the System of the Circulation of the Blood in the Fetus. See CIRCULATION.

At the Aperture of the *Foramen*, there is a kind of floating Membrane, which looks like a Valve; but has nothing of the Office thereof: It does not hinder the Blood from passing from either Auricle to the other: All it serves for, according to *Mr. Winslow*, is, to close the *Foramen* after the Birth.

It has generally been thought, that the *Foramen Ovale* might sometimes remain open, even in Adults: And in effect, divers Authors furnish us with Instances thereof.

Dr. Cowper assures us he found it but half clos'd in a Girl of four or five Years old; and in another Girl which he open'd at *Oxford*, there was Room left to thrust a Tent thro'. *Dissert. Med. Phys. de Sup. Os. Cost.*

The accurate *Mr. Cowper* adds, that he has often found the *Foramen Ovale* open in Adults. *Anat. Append. Fig. 3.* And the *Paris Anatomists* observe, that in a Sea Calf the *Foramen Ovale* is always open; by which means it is enabled to stay so long under Water.

Somewhat of this, too, is suppos'd to have been the Case in the extraordinary Recoveries of divers Persons drown'd, hang'd, &c. See HANGING, and DROWNING.

But *Mr. Ghefelden* ventures to set aside all these Authorities; and contends, that the *Foramen Ovale* is neither open in any Adult Land Animals, nor in Amphibious Creatures.

When he first applied himself to Dissection, he tells us, he had no Distrust of the frequent Accounts in Authors of the *Foramen* being open: But he afterwards found that he mistook the Osium of the Coronary Veins for the *Foramen*; and the like he imagines other Authors to have done; who assert, that it is always open in amphibious Animals: For that upon a diligent Enquiry into these Animals, he could never find it open in any.

Neither does he think that sufficient, to enable those Creatures to live under Water, as the Fetus does in Utero, unless the Ductus Arteriosus were open also: *Ghefeld. ap. Der. Phys. Theol. L. IV. c. 7.*

FORAMEN of the *Membrana Tympani*, is a Perforation in the Membrane of the Tympanum, or Drum in the Ear; which admits of the Passage of Wind, Smoak, &c. from the *Meatus a palato* to the Drum. See EAR.

This Passage is very small, and runs obliquely from the Tympanum thro' the upper Part of its Membrane, near the Process of the Malleus. The Existence of this Perforation is more evident, when Ulcers affect the Palate, by the Egress of Wind, upon the Patient's stopping his Nose and Mouth, and forcing the Wind by the Ears, than by any Anatomical Inspection. See TYMPANUM.

FORAMEN LACERUM, see DURA MATER.

FORCE, VIS, or POWER, in Mechanics, Philosophy, &c. See VIS, and POWER.

<p>Attractive FORCE, Repelling FORCE, Elastic FORCE, FORCE of Gravity, FORCE of Cohesion, Central FORCE, Centripetal FORCE, Centrifugal FORCE, FORCE of Inactivity, Resisting FORCE, Retarding FORCE, Accelerating FORCE, &c.</p>	} See	<p>ATTRACTION. REPULSION. ELASTIC. GRAVITY. COHESION. CENTRAL. CENTRIPETAL. CENTRIFUGAL. VIS INERTIE. RESISTANCE. RETARDATION. ACCELERATION, &c.</p>
---	-------	--

FORCE, in Common Law, signifies an Offence, by which Violence is us'd to Persons, or Things.

Force is either *Simple*, or *Compound*.
Simple Force is that which has no other Crime adjoin'd to it: As if one by Force do enter into another Man's Possession, without doing any other unlawful Act.

Mix'd, or Compound Force is that Violence committed with such a Fact as of it self only is criminal: As if any by Force enter into another Man's Possession, and there kill a Man, or ravish a Woman, &c.

Force is also divided into *True Force*, and *Force after a fact*.

There are other Branches; as *forcible Entries, forcible Detaining, or Holding; unlawful Assembly, Riots, Riots, Rebellions, &c.* See FORCIBLE ENTRY, FORCIBLE DETAINING, UNLAWFUL ASSEMBLY, RIOT, &c.

FORCE, in Grammar, and some other Arts, is applied to something which stands in lieu of, or has the same Effect as, another.

In our Language, the *f* between two Vowels has the Force of a *s*, and is sometimes put for a *z*: As in *Horion*, *Baptizing*, &c.

In Hebrew, the *Dagesh* is said in Arabic, the *Tesid*, have the Force of a Letter suppress'd. A Figure before a Cypher, has the Force of ten.

FORCEPS, *Pair of Tongs*, a Chirurgeon's Instrument, wherewith dead, and corrupt Parts are seiz'd, cut, or pulled off, &c. As also foreign Bodies extracted out of Wounds, &c.

They are of divers Forms, long, crooked, with *Teeth*, with *Beaks*, *half-moon'd*, &c. See SPECULUM.

FORCIBLE Entry, a violent, actual Entry into a House or Land, &c. or a taking Distress of any Person, weapon'd, whether he offer Violence or Hurt to any Person there, or forcibly drive any out of the Possession thereof, or not. See ENTRY.

FORCIBLE holding, or detaining Possession is a violent Act of Resistance, by a strong Hand of Men, weapon'd with Harnes, or other Action of Fear in the same Place, or elsewhere, whereby the lawful Entry of Justices, or others, is barr'd, or hindered.

FORDICIDIA, in Antiquity, a religious Feast among the *Romans*, held on the thirteenth of *April*.

It was thus call'd from the Latin *Forda*, a Cow big with Calf, and *cedo*, I flay, or sacrifice; by reason Cows were herein sacrificed to the Goddess *Jellus*, or the Earth.

Forda, a Cow with Calf, is form'd, according to *Ovid*, from *fero*, I bear; or rather, as *Scaliger* and *Salmafius* imagine, from the Greek *φορδω*, *φορδω*, signifying the same thing. *Varro* writes, that there were several of these Cows sacrific'd in the *Curia*. *Livy*, and *Halicarnassus* relate, that there was one in each *Curia*; so that there were thirty in all; which is confirm'd by *Ovid*, *Faustor*. *L. IV. v. 635*.

The *Fordicidia* were first instituted by *Numa*, on occasion of a general Barrenness among the Cattle: *Ovid* gives a particular Description of the Ceremony, in the Passage first quoted: He adds, that part of these Cows were sacrific'd in the Temple of *Jupiter*; that is, in the Capitol.

FORE-Knight, in the Sea Language, a piece of Wood, carv'd in the Figure of a Man's Head, and fast bolted to the Beams upon the second Deck.

FORE-Castle of a Ship, is that Part where the Fore-mast stands: It is divided from the rest of the Floor by a Bulk-head; that Part of the Fore-Castle which is aloft, and not in the Hold, is called the *Prow*.

FORE-Mast of a Ship, is a round large piece of Timber, seated in her Fore Part, on which is burn the Fore-Sail, and Fore-Top-Sail Yards. See *MAST*.

Its Length is usually $\frac{2}{3}$ of the Main-Mast.

The Fore-Top-Mast is half the Length of the Fore-Mast, and the Fore-top-gallant Mast is half the Length of the Fore-Top-Mast. See *GALLANT*.

FORELAND, or FORENESS, in Navigation, a Point of Land jutting out into the Sea. See *CAPR*.

FORELAND, in Fortification, is a small Space of Ground between the Wall of a Place, and the Moat, call'd also *Berme*. See *BERME*.

FORLOCAS in a Ship, are little flat Wedges like pieces of Iron; us'd at the Ends of Bolts, to keep them from flying out of the Hoies. See *BOLTS*.

FORE-Sail, the Sail of the Fore-Mast. See *SAIL*.

FORE-shorten, among Painters, &c. See *SHORTENING*.

FORE-Loan, among Hunters, is when a Hound going before the rest of the Cry, meets Chace, and goes away with it.

FORE-Skin, see *PREPUCE*.

FOREJUDG'd the Court, is when an Officer of any Court is banish'd or expell'd the same for some Offence, or, for not appearing to an Action by Bill fil'd against him; and in the latter he is not to be admitted to officiate, till he appear to the Bill, Anno 2 Hen. 4. c. 8.

He shall loose his Office, and be forejudg'd the Court, &c. *Forjudicare, interdum est male judicare. Spel.*

FOREJUDGE, in Law, signifies a Judgment, whereby a Man is depriv'd, or put by the thing in question.

FORCLOSE'd, in our ancient Law Books, signifies barr'd, shut out, or excluded for ever.

FORFOOT, in the Sea Language, is when one Vessel fails, or lies a-cross another's way.

As if two Ships being under Sail, and in Ken of one another, one of them lies in a Course with her Stern so much a weather the other, that if both hold on, the windward Ship will run out a-head of the other. Such Ship is said to lie with the others *forfoot*.

The, as soon as she has pass'd, they say, she is gone out a-head.

FOREIGN, something extraneous, or adventitious. *Foreign* Minister, *Foreign* Prince, *Foreign* Goods, &c. are those belonging to other Nations. *Foreign* to the Purposes, i. e. remote.

Matter is *foreign* to the Idea of Space, i. e. is not inherent therein, but additional thereto. See *VACUUM*.

Foreign Plants are particularly call'd *Exoticks*. See *EXOTIC*.

In some Universities they give the Appellation *Foreign Doctors*, *Doctores Foreneses*, to such as do not reside in the Place, or the University; but take Degrees to go and live else where, and in other Counties.

In the Life of St. Paul, Bishop of *Verdon*, written by an anonymous Author, and publish'd from a MS. above 400 Years old, by *Bollandus*; we meet with *Forensis Prefbyter*, of a Priest who lives in another Part. The same *Bollandus* notes, that St. *Ambrose* uses the Word *Forensis* for *Exterior*.

Foreign, or *Foraine Traitte*, is a Duty belonging to the King of *France*, of $\frac{2}{3}$ of the Value of all Goods imported or exported out of the Kingdom. See *DUTY*.

The Word *Foreign* is form'd of the Latin *Foris*, Doors; or *foris*, or out of doors; or *Forum*, Market, &c.

FOREIGN, is us'd in Law in several Senses, and join'd with divers Substantives. Thus,

FOREIGN Answer, is such an Answer, as is not triable in the County where it is made. See *ANSWER*.

FOREIGN Attachment, is an Attachment of *Foreigners* Goods found within a Liberty or City, in the Hands of a third Person; for the Satisfaction of some Citizen, to whom the *Foreigner* oweth Money. See *ATTACHMENT*.

FOREIGN Matter, in Law, is Matter triable in another County; or Matter done in another County. See *MATTER*.

FOREIGN Officer, or *Apposer*, is an Officer in the Exchequer, to whom all Sheriffs or Bailiffs do repair to be appoy'd by him of their Green-Wax, after they are appoy'd of their Sums out of the Pipe Office; and from thence draws down a Charge upon one of them to the Clerk of the Pipe.

His Business is, to examine the Sheriff's Estreats with the Record, and to ask the Sheriff, what he says to every particular Sum therein.

FOREIGN Plea is a Refusal of the Judge as incompetent, because the Matter in hand was not within his Pincind. See *PLEA*.

FOREIGN Service, is such Service whereby a mesn Lord holdeth of another, without the Compass of his own Fee; or else that which a Tenant performeth, either to his own Lord, or to the Lord Paramount out of his own Fee. See *SERVICE*.

FOREIGN Hope, in an Army, the *Enfans perdues*. See *ENFANS PERDUES*.

FORESCHOKE, *Dereclitum*, antiently signified as much as *forfaken* in our modern Language.

It is specially us'd in one of our Statutes, for I and or Tenements seiz'd by the Lord, for want of Services due from the Tenant; and so quietly held and possess'd beyond the Year and Day.

As if we should say, that the Tenant, who seeing his Lands or Tenements taken into the Lord's Hand, and possess'd so long, takes not the Course appointed by Law to recover them; does in due Presumption of Law disavow or forsake all the Right he has to them.

And then such Lands shall be call'd *Forefoboke*, says the Stat. 10 Ed. 2. c. unico.

FOREST, *Silva*, in Geography, a huge Wood: Or, a large Extent of Ground, cover'd with Trees. See *WOOD*.

The *Calidonian* and *Hercynian* Forests are famous in History: The first was a celebrated Retreat of the ancient *Periss*, and *Scots*: The latter, antiently possess'd the greatest Part of *Europe*; particularly *Germany*, *Poland*, *Hungary*, &c. In *Cesar's* time it extended from the Borders of *Asia* and *Switzerland* to *Transylvania*; and was computed 60 Days Journey long, and nine broad: Some Parts, or Cantons thereof are still remaining.

The Forest of *Dean* in *Gloucestershire* is famous for the Iron Works therein. See *IRON*.

The Ancients ador'd Forests, and imagin'd a great Part of their Gods to reside therein: Temples were frequently built in the thickest Forests; the Gloom and Silence whereof naturally inspire Sentiments of Devotion, and turn Men's Thoughts within themselves.

For the like reason, the antient *Druids* made Forests the Place of their Residence, perform'd their Sacrifices, instructed their Youth, and gave Laws therein. See *DRUIDS*.

The Word *Forest* is form'd of the Latin *Foresta*, which first occurs in the Capitularies of *Charlemagne*, and which it self is deriv'd from the German *Forst*, signifying the same thing. *Speelman* derives it from the Latin *foris restas*, by reason Forests are out of Towns. Others derive *Foresta* a *feris*, q. d. *Foresta*, quod sit rata hano ferarum, as being a safe Station or Abode for wild Beasts.

FOREST, in a Law Sense, is defined a certain Territory of woody Grounds, and fruitful Pastures, privileg'd for wild Beasts, and Fowls of Forest, Chase and Warren, to rest and abide in the safe Protection of the King for his Princely Delight; meerd and bounded with unmoveable Bounds, Marks, Meers, and Boundaries, either known by Matter of Record, or Prescription; Replenish'd with wild Beasts of Ventry, or Chase, and with great Covers of Vert for Succour of the said Beasts. For Preservation and Continuance of which Place with the Vert and Venison, there are certain peculiar Laws, Privileges, and Officers.

The Properties or Characters of a Forest, are,
1^o That it cannot be in the Hands of any, but the King; because none else hath Power to constitute such *Commissioners* as are necessary to the Being of a Forest, beside the King; as, particularly that of a Justice in Eyre of the Forest.

And yet the Abbot of *Wibirby* had a Forest by Grant of King *Henry* the Second, and King *John*; with all Officers incident thereto.

The Second Character, is the Courts belonging thereto, which are, the *Justice Seat*, held every three Years; the *Serjeantate*, held twice every Year; and the *Attachment*, once every forty Days. See *JUSTICE SEAT*, *SWANMOTE*, &c.

The Third Characteristic is the Officers belonging thereto, for Preservation of the Vert and Venison; as the *Justices of the Forest*, the *Warder*, or Keeper, *Ranger*, *Verderers*, *Foresters*, *Ajitors*, *Regardors*, *Bailiffs*, *Beadles*, &c.

See each under its proper Article, *JUSTICE of the Forest*, *WARDEN*, *RANGER*, *VERDER*, or *REGARDER*, &c.

But the most essential Mark of a *Forest* is the *Swainsmere*, which is no less incident thereto, than the Court of *Pye-Powder* to a *Fair*. If this fail, it ceases to be a *Forest*, and commences a *Chace*. See *CHACE*.

The way of making a *Forest*, is thus: Certain Commissioners, appointed under the Great Seal, view the Ground intended, and fence it round: This being reported in Chancery, the King causes it to be proclaimed throughout the County where the Land lies, that it is a *Forest*; and thenceforth to be govern'd by the *Laws of the Forest*; and prohibits all Persons from hunting therein, without his Leave.

New *Forest*, in *Hampshire*, History tells us, was rais'd by the Destruction of 22 Parish Churches, and all the Villages, Manors, Chappels, &c. for the space of 30 Miles together. Beside New *Forest*, there are now subsisting 68 *Forests* in *England*; thirteen *Chaces*, and more than 781 *Parks*. See *PARK*.

Our ancient *Norman* Kings were the first who inclos'd *Forests*, and settled the Jurisdiction thereof: Their Taste run mightily that way. In the Course of a few Reigns from the Conquest, no less than sixty eight *Forests* were inclos'd; the strictest *Laws* were made to secure them; and the severest Penalties inflicted on all Trespassers thereon.

William the Conqueror decreed, the Eyes of any Person to be pull'd out, who took either a *Buck*, or *Boar*: *William Rufus* made the Stealing of a *Doe* a hanging matter: The taking of a *Hare* was fined at 20 s. and a *Cony* at 10 s.

Fadmer adds, that fifty Persons of Fortune being apprehended by the same Prince, for killing his *Bucks*, were forc'd to purge themselves by the Fire of *Ordeal*, &c.

Henry the First made no distinction between him who kill'd a *Man*, and a *Buck*; and punish'd those who destroy'd the Game, tho' not in the *Forest*, either by Forciture of their Goods, or Loss of Limbs; tho' *Henry* the Second remitted it for a temporary Imprisonment.

Richard the First revived the old Discipline of gelding and pulling out the Eyes of those convict of hunting in the *Forest*: But he afterwards relax'd a little, and was contented to make such Convicts abjure the Realm, or be committed, or pay a Fine.

Charter of the FOREST, see *CHARTA de Foresta*. *FOREST* is also us'd adjetively. The *Forest Cities* of the Empire are four Cities situate in the *Black Forest*, or *Silva Nigra*, a Part of the ancient *Hyrcinian Forest*; viz. *Rhinfield*, *Valdhuft*, *Seckingen*, and *Lauffembourg*. But, now that the Bounds of the *Black Forest* are contracted, these Cities are out of the Limits thereof.

FOREST LAWS. The *Forest Laws* are peculiar *Laws*, different from the common Law of *England*. See *LAW*.

Before the making of *Charita de Foresta*, Offences committed therein, were punish'd at the Pleasure of the King, in the severest manner; and even in the Charter were some grievous Articles, which the Clemency of later Princes have since by Statute thought fit to alter *Per Affitas Forestae*.

Yet to this Day, in *Trespases* relating to the *Forest*, *Vulnitas reputabitur pro factis*; so that if a *Man* be taken hunting a *Deer*, he may be smelted, as if he had taken a *Deer*. The *Forester* may take, and arrest a *Man*, if he be taken either at *Dog-draw*, *Stable-stand*, *Back-bear*, or *Bloody-band*; notwithstanding that three of these be only *Presumptions*. See *DOG-DRAW*, *STABLE-STAND*, &c.

FORE-STAFF, an Instrument us'd at Sea, for taking the Altitudes of heavenly Bodies. See *ALTITUDE*.

The *Fore-staff*, call'd also *Cross-staff*, takes its Denomination hence, that the Observer, in using it, turns his Face towards the Object; in contradiction to *Back-staff*, where he turns his Back of the Object. See *BACK-STAFF*.

The *Fere* or *Cross-staff*, represented in *Tab. Navigation*. Fig. 14. consists of a straight, square, graduated Staff, A B, and four Crosses, or Vanes F F, E E, D D, C C, which slide thereon.

The first, and shortest of these Vanes F F, is call'd the *Ten-cross*, or *Vane*, and belongs to that side of the Instrument, whereon the Divisions begin at three Degrees, and end at 10. The next larger Vane E E is call'd the *thirty Cross*; belonging to that Side of the Staff, wherein the Divisions begin at 10 Degrees, and end at 30, call'd the *thirty Scale*. The next Vane D D is call'd the *sixty Cross*, and belongs to the Side where the Divisions begin at 30 Degrees, and end at 60. The last, and longest, C C, call'd the *ninety Cross*, belongs to the Side whereon the Divisions begin at 30 Degrees, and end at 90.

Use of the FORESTAFF.

The great Use of this Instrument, is to take the Heights of the Sun, and Stars, or the Distance of two Stars: And the Ten, Thirty, Sixty, or Ninety Crosses are to be us'd according as the Altitude is greater, or lesser; that is, if

the Altitude be less than 10 Degrees, the Ten Cross to be us'd; if above ten, but lesser than 30, the Thirty Cross to be us'd, &c.

Note, for Altitudes greater than 60 Degrees, this Instrument is not so convenient as a *Quadrant*, or *Semi-circle*. See *QUADRANT*.

To observe an Altitude by the FORESTAFF; Apply the flat End of the Staff to your Eye, and look at the upper End b of the Cross for the Centre of the Sun or Star, and at the lower End a for the Horizon. If you see the Sky instead of the Horizon, slide the Cross a little nearer the Eye; and if you see the Sea, instead of the Horizon, slide the Cross further from the Eye: And thus continue moving, till you see exactly the Sun or Star's Centre by the Top of the Cross b, and the Horizon by the Bottom thereof, a.

Then the Degrees, and Minutes cut by the inner Edge c of the Cross upon the Side of the Staff peculiar to the Cross you use, is the Altitude of the Sun, or Star.

If it be the Meridian Altitude you want, continue your Observation as long as you find the Altitude increase; still moving the Cross nearer to the Eye. See *MERIDIAN*.

By subtracting the Meridian Altitude thus found from 90 Degrees, you will have the Zenith Distance.

To work accurately, an Allowance must be made for the Height of the Eye above the Surface of the Sea; viz. for one English Foot, 1 Minute; for five Foot, 2; for ten Foot, 5; for twenty Foot, 5; for forty Foot, 7, &c.

These Minutes subtracted from the Altitude observ'd; and added to the Zenith Distance observ'd; give the true Altitude, and Zenith Distance.

To observe the Distance of two Stars, or the Moon's Distance from a Star, by the FORESTAFF; Apply the Instrument to the Eye; and looking to both Ends a and b of the Cross, move it nearer, or farther from the Eye, till you see the two Stars; the one on the one End, and the other on the other End of the Cross. Then the Degrees and Minutes cut by the Cross on the Side proper to the Vane in use, give the Star's Distance.

FORESTAGE, FORESTAGIUM, in our ancient Customs; an obsolete Duty, or Service, paid by the Foresters to the King.

In *Britany*, *Lobineau* observes, the Office of Foresters was held by Gentlemen of the first Rank, who for their *Forestage* were oblig'd to furnish the Lord, when he kept open House, with Caps and Spoons.—

Forestage also seems to have been us'd for a Duty, payable to the King's Foresters. *Et sint quieti de Theobonio, & Passagio, & de Forestagio, &c. Chart. Edm. 1.*

It may likewise be taken for a Right to use the Forest; or, a taking of reasonable Estovers. See *ESTOVER*.

FORESTAL, or FORSTAL, in *Domelday* wrote *Foristel*, is an intercepting in the Highway; or stopping, or even insulting a Passenger therein.

Speelman defines it an Obstruction, or flutting up of the King's Highway.

In the *Laws of Hen. 1.* the Sense of the Word is thus explain'd: *Forestal est, si quis ex transverso incurrat, vel in viam expectet, & assidet inimicum suum.*

The Word is form'd of the *Saxon Fore*, before; and *Stral*, Journey, Road.

FORESTALLER, a Person who *forestals* the Market, or buys up Goods upon the Road. See *FORESTALLING*.

FORESTALLING, the buying, or bargaining for Corn, Cattle, or other Merchandize, by the Way, before it reaches the Market, or Fair, to be sold; or by the Way, as it comes beyond the Sea's, or otherwise, toward any City, Port, Haven, or Creek of this Realm; with design to take Advantage thereof, and sell it again at a more advanc'd and dear Rate. See *REGATOR*, and *ENGROSSER*.

Forestalling is particularly us'd in *Crompton*, for stopping a *Deer* broken out of the Forest, and preventing its returning home again; or, a lying between him and the Forest, in the Way he is to return.

Fleta says, it signifies *Obstructionem viae, vel impedimentum transitus & Fugae avertorum.*

FORESTER, a sworn Officer of the Forest, appointed by the King's Letters Patent, to walk the Forest, and to watch the Vert, and Venison; as also to attach and present all Trespassers against both, within his Bailiwick or Walk, to the Forest Courts; to be punish'd according to their Offences. See *FOREST*.

Tho' the Letters Patent of a *Forester* be ordinarily only granted, *quam diu bene se gesserint*; yet they are granted, to some, and their Heirs; who are hereby call'd *Foresters in Fee*. See *Fee*.

Sir *William Temple* relates, that the *Franks* having subdued all *Gaul*, their Princes reduc'd *Flanders* into a kind of Government; and gave the Quality of *Forester*, with part of the Province, to the bravest of their Captains.

This Quality of *Lord Forester* held till the time of *Charles the First*, or, according to others, of *Charles the Bald*, in whose Time *Floulers* being erected into a County, the Title of *Forsters* was chang'd into that of *Count*. See *COUNT*.

FORFEITURE, originally signifies a Transgression, or Offence against some penal Law.

But with us, it is now more frequently us'd for the Effect of such Transgression, or the losing some Right, Privilege, Estate, Honour, Office, or Effects, in consequence thereof; than for the Transgression it self.

As, *Forfeiture of Estates, &c. Forfeiture of Goods, &c.* A Fee becomes vacant by the *Forfeiture* or Rebellion of his Vassal.

Goods forfeited, and *Goods confiscated*, differ: Those which have a known Owner who has committed some Offence, whereby he loses his Goods, are said to be *forfeited*.

Those which an Offender disavows, as not his own; and which are not claim'd by any other, are said to be *confiscate*. Stat. 25. Edu. 3.

Forfeiture, or *Forfeit*, again, is rather more general; and Confiscation more particular, to such as *forfeit* only to the King's Exchequer. See *CONFISCATION*.

The Word is form'd of the base Latin, *Forisfactura*; whence *Forisfactura*, and *Forisfactura*, and the French *Forfait*. *Forisfactura* comes of *forisfacere*, which, according to *Isidore*, signifies to hurt, or offend, *facere contra rationem*; and which is not improbably deriv'd of *foris*, out, and *facere*, to do, q. d. an Action out of Rule, or contrary to the Rules. *Borel* will have *Forfait* deriv'd from the using of Force, or Violence: *Lobineau* in his Glossary will have *Forisfactura* properly to signify a Muir, or Amend; not a *Forfeit*, which latter he derives from the base Briton *for-fod*, a Penalty.

Full FORFEITURE, *plena forisfactura*, call'd also *plena vita*, is a *Forfeiture* of Life and Member, and all else that a Man has.

FORFEITURE of Marriage, *Forisfactura Maritogii*, a Writ, which laid against him, who, holding by Knight's Service, and being under Age, and unmarried, refus'd her whom the Lord offer'd him, without his Disparagement, and married another.

FORFEX, an Instrument to draw Teeth withal.

FORGE, properly signifies a little Furnace, wherein Smiths, and other Artificers in Iron and Steel, &c. heat their Metals red hot, in order to soften and render them more malleable and manageable on the Anvil, &c. See *FURNACE*.

Farriers Forge, *Silversmiths Forge*, *Curlers Forge*, *Locksmiths Forge*, &c.

The *Forge* us'd by the several Operators in Iron, is very simple: We shall instance in that of the Blacksmith, to which all the rest are reducible.

The *Hearth*, or Fire-place, is a Massive of Brick, about two Foot, six Inches high: The *Back* of the *Forge* is built upright to the Ceiling, and is inclos'd over the Fire-place with a *Hovel*, which leads into a Chimney, to carry away the Smoke. In the Back of the *Forge*, against the Fire-place, is a thick iron Plate, with a taper Pipe fix'd therein, about five Inches long, call'd the *Fewel*, into which the Noie or Pipe of the Bellows is receiv'd: The Use of this Plate and *Fewel* is, to preserve the Pipe of the Bellows, and the Back of the *Hearth* from being burnt. Right before the Back, at about two Foot distance, is the *Trough*, fill'd with Water, to wet the Coals in, and thereby increase their Force; as also to quench the Iron in. Behind the Back of the *Forge* is plac'd the *Bellows*, one of whose Boards is fix'd to the side, that it move not, either upward, or downward; and to the other is fitted a Rope, Chain, or even Rod; which rising perpendicularly, is fix'd to a cross piece, call'd the *Recker*, which moving on a kind of Fulcrum, near the Middle, serves as a Handle.

By drawing down this Handle, the moveable Board of the Bellows rises, and by a considerable Weight a-top of its upper Board sinks down again; and by this alternate Agitation performs the Office of a pair of Bellows.

Brassers, and *Coppersmiths* *FORGE* differs but little from that already describ'd; only that it is much less, and that nothing is burnt in it but Charcoal; the Metals us'd by these Operators not being able to sustain the Violence of Pit Coal.

FORGE is also us'd for a large Furnace, wherein iron Ore taken out of the Mine, is melted down. See *IRON*.

But this is not so properly call'd a *Forge*, as a *Furnace*. See *FURNACE*.

FORGE is more properly us'd for another kind of Furnace, wherein the iron Ore, melted down and separated in a former Furnace, and there cast into Sows, and Pigs, is heated, and fus'd over again, and beaten with large Hammers, and thus render'd more soft, pure, ductile, and fit for use. See *IRON*.

Of these *Forges* there are two kind; which the Iron successively passes through, before it comes to the Smith.

The first, call'd the *Finary*, where the Pigs are work'd

into *Gross Iron*, and prepar'd for the second, which is call'd the *Chafery*, where it is further wrought into Bars, fit for Use. See *FINARY*, &c.

FORGER of *Falfe Deeds*, signifies either him, that fraudulently makes, and publishes false Writings, to the Prejudice of any Man's Right; or else the Writ that lies against him who commits this Offence.

Fitz. Nat. Br. fol. 96. b. says, That a Writ of *Deceit* lies against him, who commits this Offence, and the Penalty of it is declar'd in the Stat. 5. *Edw. cap. 14.*

FORGING, the Act of beating, or hammering Iron on an Anvil; after having first made it red hot in the *Forge*; in order to Fashion, and extend it into various Forms, and Works.

Iron is hammer'd, and *forg'd* two ways: Either by the Force of the Hand; in which there are usually several Persons employ'd, one of them turning the Iron, and hammering likewise; and the rest only hammering.

Or, by the Force of a Water-mill; which raises, and works several huge Hammers, beyond the Force of Man, under the Strookes whereof the Workmen present large Lumps, or pieces of Iron, which are sustain'd at one End by the Anvils, and at the other by iron Chains fasten'd to the Ceiling of the *Forge*.

This last way of *forging* is only us'd in the largest Works, as Anchoes for Ships, &c. which usually weigh several thousand Pounds. See *ANCHOR*.

For the lighter Works, a single Man suffices to hold, heat and turn with one Hand, while he strikes with the other.—

Each Purpose the Work is design'd for, requires its proper Heat. If it be too cold, it will not feel the *Weights of the Hammer*, as the Smiths call it (i. e. will not stretch, or give way); and if it be too hot, it will red-fear, i. e. break or crackle under the Hammer. See *HAMMERING*.

The several Heats the Smiths take of their Iron, are 1^o A Blood-red Heat. 2^o A white-flame Heat. 3^o A sparking, or welding Heat. See *HEAT*.

FORKED Heads, among *Hammers*, all *Deers Heads*, which bear two *Croches* on the Top; or which have their *Croches* doubled.

FORLET Land, was such Land in the Bishoprick of *Hereford*, as was granted or leas'd, *dom Episcopis in Episcopatus steteris*; that the Successor might have it for his present Income.

But now that Custom is disus'd, and the same Lands are granted, as others, by Lease; yet they still retain the Name. *Butterfield's Survey, fol. 56.*

FORLINS, or FIELD FORTS, are Scones, or little Fortresses, whose flank'd Angles are generally distant one from another 120 Fathom; but their Extent and Figure are different, according to the Situation and Nature of the Ground; some of them having whole Bastions, and others only Demi-Bastions.

They are made use of only for a time; either to defend the Lines of Circumvallation, or to guard some Passage or dangerous Post.

FORM, in Philosophy, is the manner of being peculiar to each Body; or that which constitutes it such a particular Body, and distinguishes it from every other. See *BODY*.

The Philosophers generally allow two Principles of Bodies: *Matter*, as the common Basis, or Substratum of all; and *Form*, as that which specifies and distinguishes each; and which added to a Quantity of common Matter, determines or denominates it this, or that, Wood, or Fire, or Ales, &c. See *PRINCIPLES*; see also *MATTER*.

Aristotle calls *Form* *ἡ ψυχή*, the Reason, or Manner of the *Essence*, or Being of a thing: But as *Plotinus* denotes *Substance*, as well as *Essence*, a mighty Controversy has arose in the Schools, in which sense the Word is here to be us'd; and whether *Forms* are to be accounted *substantial*, or only *essential*: i. e. Whether the *Forms* of Bodies be any real Substances, and have an Existence distinct from that of Matter, or not.

'Tis certain, the most ancient Philosophers never dreamt of making *Form* a Substance. *Parmenides* and *Zenophon* expressly assert, all natural Things to consist of one and the same kind of Substance, and only to differ in Accidents. And tho' *Empedocles* allow'd of a substantial *Form* in mixt Bodies; yet he deny'd it in the Elements, and only held an essential one.

Galen allow'd of nothing in Matter more than the Temperature of the primary Elements, in which he was seconded by *Alex. Aphrodisiensis*, *Philoponus*, and others.

Substantial FORMS seem to have been first brocht'd by the Followers of *Aristotle*, who thought Matter, under different Modes or Modifications, not sufficient to constitute different Bodies; but that something substantial was necessary to let them at a sufficient Distance: And thus introduc'd substantial *Forms*; on the footing of Souls, which specify and distinguish Animals.

The Considerations which the Peripateticks principally insist on, in confirmation of this Doctrine, are: 1^o That with-

out substantial *Forms*; all natural Things would be of the same Species, Nature, and Essence; which is suppos'd an Absurdity.

2^o That every thing has its peculiar Pow'r, Motion, and Operation; as the Magnet, *e. gr.* has of attracting Iron; but that this Pow'r, does not flow from the Matter of the Body, which is only passive; nor from the Accidents: And therefore must arise from a substantial *Form*.

3^o That without substantial *Forms* there would be no Generation; for a Production of Accidents is only an Alteration.

4^o That without such *Form*, the Nature of a Man and of a Lyon would not differ.

What contributed much to their Error, was the Circumstances of Life and Death: For, observing, that as soon as the Soul was departed out of a Man, all Motion, Respiration, Nutrition, &c. immediately cess'd; they concluded that all those Functions depended on the Soul; and consequently that the Soul was the *Form* of the animal Body, or that which constituted it such: And that the Soul was a Substance, independent of Matter, no body doubted; whence the *Forms* of other Bodies were concluded equally substantial.

But to this it is answer'd, that tho' the Soul be that by which a *Man* is *Man*; and consequently is the *Form* of the *human* Body, as *human*; yet it does not follow, that it is properly the *Form* of this Body of ours, as it is a Body; nor of the several Parts thereof, consider'd as distinct from each other.

For those several Parts have their proper *Forms* so closely connected with their Matter, that it remains inseparable therefrom, long after the Soul has quitted the Body: Thus, Flesh has the *Form* of Flesh; Bone, of Bone, &c. after the Soul is remov'd, as well as before.

The Truth is, the Body does not become incapable of performing its accustomed Functions, by reason the Soul has deserted it; but the Soul takes its leave, by reason the Body is not in a Condition to perform its Functions.

The ancient and modern corpuscular Philosophers therefore, with the *Cartesians*, exclude the Notion of substantial *Forms*; and shew by many Arguments, that the *Form* is only the Modus, or manner of the Body it is inherent in.

And as there are only three primary Modes of Matter, *viz.* Figure, Rest, and Motion; with two others arising therefrom, *viz.* Magnitude, and Situation: The *Forms* of all Bodies they hold to consist therein; and suppose the Variations these Modes are capable of, sufficient to present all the Variety observable in Bodies. See *MONSIEUR*.

Many Varieties we actually see result from changes in these Modes; which may very well pass for Differences of *Form*: Thus an Awl only differs from a Needle in Magnitude; a Globe from a Cube in Figure: Transparent Glass being pulveriz'd, will reflect the Light, and appear white; and yet all the Alteration consists in the Order and Arrangement of the Parts: When Wheat is ground into Flower, and when the Flower is bak'd into Bread, what is it but the same Particles associated again, in another manner. By agitating Water, a Froth is form'd; if the Agitation be increased, the Particles will exhale, and form Clouds; which being congregated again, return in Dew, Snow, Hail, or Rain: And the same Water, by the Accession of Cold, might have been form'd into Ice. So many different Bodies, endued with different Qualities, and which the Peripateticks themselves allow specifically different, arise from one and the same Body, by mere Motion, and Rest.

The Philosophy of substantial *Forms*, its Rise, Use, and Extent, are set in an excellent light by Fa. *Mallebranch*.

The way of thinking, that first introduc'd it, is this: Every thing I perceive in tasting, seeing, and handling this Honey, and Salt, is in the Honey, and Salt: But it is certain, that the things I perceive in the Honey, *e. gr.* the Colour, Taste, &c. differ essentially from those I perceive in the Salt; consequently, there is an essential Difference between the two.

Hence it follows, that they are grossly deceiv'd, who take all the Differences between those Bodies to consist in the different Configurations of the component Parts; since the different Figure is not at all essential to the different Bodies: For change the Figure of the Parts of the Honey how you will; and even give them those of the Parts of Salt; yet it is Honey still.

There must therefore be some Substance added to the common Matter of all Bodies, to make them essentially different. And thus are substantial *Forms* hook'd in; those fertile Substances, which perform every thing that we see in all Nature.

Since then in every natural Body there are two Substances; the one common to Honey, Salt, and all other Bodies; and the other, that which makes the Honey, Honey; the Salt, Salt; and all other Bodies what they are: It follows, that the first, *viz.* Matter, having no contrary, but being in-

different to all *Forms*, must remain without Force, and Action; as having no occasion to defend it self.

But for the others, *viz.* the substantial *Forms*, there is a Necessity of their being accompany'd and invest'd with Faculties and Qualities for their Defence, and Subsistence. These must be always on their Guard, for fear of being surpris'd: They are in possession of a thing, which they are to hold against numerous Predecessors; and therefore must be continually at work, to fortify themselves, and extend their Dominion over the neighbouring Matters, and push their Conquests as far as they can: Were they to remain unactive, and unprepar'd, other *Forms* would lay hold of them, and banish and destroy them for ever. To guard against this, they keep constant watch; and entertain mortal Enmities and Antipathies against those other *Forms*, which only wait to destroy them.

If now it happen, that one *Form* seize the Matter, or Receptrice of another; that the *Form* of a Carcass, for instance, seize the Body of a Dog; it is not enough, that this new *Form* annihilate the former; but its Hatred must be further gratify'd with the Destruction of all the Qualities, that took its Enemy's part.

The Hair of the Carcass, then, must be turn'd white; by a Creation of a new Colour: Its Blood must become red, but of such a red, as is not to be suspected in the Interest of the Enemy; and the whole Body to be invest'd with Qualities, truly to their new Master, whom they are to defend with all the Power the Qualities of a Carcass can have; till such time as being overpower'd, this *Form* gives way too, in its turn, to the *Form* of Maggots, Worms, &c.

But, as nothing can be in perpetual War; but every thing has its place of Rest; it follows, that even the Fire must likewise have its Centre, whether its natural Levity always prompts it, that it may remain at rest, cease to burn, and even quit its Heat, which it only maintains here below for its Defence.

They may serve as a Taste of the Consequences, drawn from that important Principle, substantial *Forms*; which is infinitely fertile, and furnishes every Philosopher with all sorts of Solutions, according to his Ability, Address, Inclination, &c.

FORMS are distinguish'd into *Essential*, and *Accidental*. *Essential* *FORMS*. Though the five Modes above-mention'd, generally taken, be adventitious; yet, to this, or that Body, *e. gr.* to Fire, or Water, they are essential: Thus, it is *accidental* to Iron, to have this, or that Magnitude, Figure, or Situation; since it might exist in different ones; yet, to a Knife, or Hammer, the Figure, Magnitude, and Position of Parts, which constitute it a Hammer, or Knife, are *essential*; and they cannot exist, or be conceiv'd without them.

Hence it is infer'd, that tho' there be no substantial, there are *Essential* *Forms*, whereby the several Species of Bodies become each what they are, and are distinguish'd from all others. See *ESSENTIAL*.

Accidental *FORMS* are those really inherent in Bodies; but in such manner, as that the Body may exist in all its Perfection, without them.

Such is Whiteness in a Wall; Heat in Water; a Figure of a Man in Wax, &c.

Metaphysical *FORM* is nothing else but specific Difference; as metaphysical Matter is nothing else but Genus.

Thus, *Rational*, is the Metaphysical *Form* of Man.

Syllogistic *FORM* is a just Disposition, both of the Terms, in respect of Predicate, and Subject; and of the Propositions, in respect of Quantity, and Quality.

By just Disposition we mean such an one, wherein the Conclusion follows duly and legitimately from the two Premisses; there being no *Form*, where there is no Conclusion. See *SYLLOGISM*.

The Disposition of the several Terms, being, as it were, so many Steps or Degrees of a *Syllogistic* *Form*; is call'd the *Figure* of the Syllogism. See *FIGURE*.

The Disposition of the Premisses alone, being as it were another Degree, is call'd the *Mode* of the Syllogism. See *MODE*.

FORMS, again, are distinguish'd into *Simple*, and *Compound*.

Simple *FORMS* are those of Simple Bodies, *i. e.* of such as have but few Properties.

Compound *FORMS* are those of more Compound Bodies; or such, as have more Properties.

Thus, *e. gr.* If the *Form* of a *hard* Body be compar'd with the *Form* of Wood; the former may be account'd *Simple*, and the latter *Complex*; inasmuch as a hard Body, consider'd only as *hard*, has fewer Properties than Wood. Absolutely speaking, however, *Simple* *FORMS* are those of the Elements; and *Compound*, of mixt Bodies.

Lastly, some distinguish *FORMS* into a *Natural*, and *Artificial*.

Natural, are those inherent in Bodies, without any thing contributed thereto on the part of Man. Such is the *Form* of Marble.

Artificial, are those arising from human Industry: Such is that of a Statue. But this Distinction is useless; and does not imply any intrinsic Difference in the *Forms* themselves.—

Form of Corporeity, according to *Avicenna*, and the *Scottists*, is that which constitutes Body in the general *Essence* of Body.

That there is such a thing, they prove thus: The human Body is a natural Body, which cannot be plac'd in the *Essence* of Body, but by the *Form* of Corporeity: For it is either plac'd by this, or by the rational Soul; not by the Soul, since that is spiritual; therefore by the *Form* of Corporeity. And the same may be understood of other Bodies: But the later Philosophers set this aside as a Chimera.

Form, in Theology, is one of the essential Parts of the Sacraments; being that which gives them their Sacramental *Essence*. See SACRAMENT.

The *Form* consists in certain Words, which the Priest pronounces in administering them.

In some of the *Romish* Sacraments the *Form* is deprecativ; in ours it is absolute, or indicative.

The Fathers and ancient Divines held, that the Sacraments consisted of Things, and Words, *Rebus & Verbis*. *William of Auvergne* was the first, who, about the Beginning of the XIIIth Century introduc'd the Terms, Matter, and *Form* in lieu thereof.

Form is also the external Appearance, or Surface of a Body; or the Disposition of its Parts, as to Length, Breadth and Thickness: In which sense it coincides with *Figure*. See FIGURE.

Form is also us'd in the Mechanic Arts, for a kind of Mould, whereon a Thing is fashion'd, or wrought.

As the Hatters *Form*, the Papermakers *Form*, &c.
Hatters *Form*, is a large Block, or piece of Wood, of a cylindrical Figure; the Top thereof rounded, and the Bottom quite flat.

Its Use is, to mould or fashion the Crown of the Hat, after the Matter thereof has been beaten, and fall'd.—

To *form* a Hat, 'tis necessary the Wool, Hair, &c. be very hot, just recking out of the Copper. See HAT.

Papermakers *Form* is one of the Moulds wherein the Sheets are fram'd. See PAPER.

Printers *Form*, is a Frame, or Board, compos'd of divers Letters, rang'd in Order, and dispos'd into Pages, by the Compositor; from which, by means of Ink, and a Press, the Printed Sheets are drawn.—

Every *Form* is inclos'd in an Iron Chafe, wherein it is firmly lock'd by a Number of pieces of Wood; some long, and narrow; and others in form of Wedges. See CHASE.

There are two *Forms* requir'd for every Sheet; one for each side; and each *Form* consists of more or fewer Pages, according to the Volume of the Book. See PRINTING.

Form is also us'd in a Moral sense, for a manner of being, or doing a thing according to Rules.

This Republic has frequently chang'd its *Form* of Government; that is, its ancient Order, or Constitution. Pardons generally express a Remission, or Abolition of a Crime; in what *Form*, or Manner soever it were committed. He was admitted Doctor in *Form*: Put your Argument in *Form*.

Form, in Law, is apply'd to certain establish'd Rules, to be observ'd in Processes, or Judiciary Proceedings; in which sense the Word stands oppos'd to the Ground or Matter in dispute.

'Tis a Maxim in Law, that the *Form* leads, or sways the Matter: The very contrary Maxim should be true.

Form, in Joinery, &c. is apply'd to the long Seats, or Benches in the Choirs of Churches, for the Priests, Canons, Prebends, Religious, &c. to sit on.

Such a Joiner made the *Forms* of such a Church. *Du Cange* takes the Name to be deriv'd hence, that the Backs of these Seats were antiently enrich'd with Figures of Painting and Sculpture; call'd in Latin *Forme & Typi*.

In the Life of Sir *William of Reshild* we meet with *Forma*, as signifying a Seat for an Ecclesiastic, or Religious in a Choir; and in that of *St. Lupicin*, we have *Formata* in the same sense. In the Rule of the Monastery of *St. Cesarea*, the Nun, who presides over the Choir, is call'd *Priniceria*, vel *Formaria*.

FORMA Pauperis, or *In Forma Pauperis*, is when any Person has Cause of Suit, and is so poor that he cannot dispense the usual Charges of suing at Law, or in Equity.

In this case, upon his making Oath that he is not worth 5*l*. his Debts being paid; and bringing a Certificate from some Lawyer, that he has just cause of Suit; the Judge admits him to sue in *Forma Pauperis*, that is, without paying Fees to Councillor, Attorney, or Clerk. This Custom has its Beginning from Stat. 11 H. 7. c. 12.

FORMAL, anything that regards the *Form*; that gives the Manner, or *Form*.

Thus, we say, The *formal* Cause joining it self to the material, produces the Body, or Compound.

The Schoolmen also apply it to any thing which has a kind of *Form*, either Essential, or Accidental; at least, in our Conception.

Thus, we frequently hear the Philosophers talk of the *formal* Object of Knowledge; the *formal* Reason of any thing; *formal* Unity, &c. The *formal* Cause.

Formal Cause, is defin'd by certain Philosophers to be something implanted in Matter, wheteby it is distinguish'd from other Matter.

For Matter is suppos'd common to all Bodies; consequently, that they are distinguishable from one another does not arise from their Matter, but the *Form* which is peculiar to each: So that what is produc'd by such Cause, is said to be *form'd*. See MATTER.

Hence it follows, that the Causality of Matter, and *Form*, is not the same; or that the Component Pow'r, and the Actual Composition are different. Contrary to the Opinion of the Generality of Schoolmen, who maintaining *Form* to be a Substance coextended with Matter, make it a real component Part; as much as Matter it self. See CAUSE, FORM, SUBSTANCE, and SUBSTANTIAL.

Formal is also us'd in a Moral sense, importing positive, express, and precise.

Thus we say, A *formal* Agreement; a *formal* Text; *formal* Answer, &c.

FORMALITER, or FORMALLY, is variously us'd in the Schools.

Sometimes it is understood of the Subject, when a Predicate is therein on account of some *Form*: Thus, White *formally* taken, diffuses the Light; *q. d.* the *Form* inherent in this Subject, viz. Whiteness, is the Cause why the Subject diffuses the Light.

Formally has also place in Suppositions; A Word being *formally* suppos'd, when it is taken for the Thing it was intended to signify; as *Man* is an *Animal*.

Formally is also us'd in the same sense with adequately, and totally: Thus, a Syllogism *formally*, i. e. adequately taken, requires three Propositions.

Sometimes it is also us'd for *Quidditatively*: Thus, *Man* *formally* taken is a reasonable Animal.

Formally is also us'd for *Really*, in opposition to objectively: And a thing is said to be *formally* such, when it is such in the proper Notion of the thing spoke of.—

Formally, again, is us'd in speaking of the Manner wherein a Thing is contain'd in another; in opposition to *Virtually*, and *Eminently*. See VIRTUALLY, and EMINENTLY.

FORMALITY, the Quality of a *Form*, or *Formata*; or that which constitutes, and denominates them such. See FORM, and QUALITY.

Formality, as defin'd in the Schools, is any Manner, or Notion, wherein a thing is conceiv'd: Or, a Manner in any Object, importing a Relation to the Understanding, whereby it may be distinguish'd from another Object.

Thus, *Animality*, and *Rationality* are *Formalities*.

The *Scottists* make great use of *Formalities*; in opposition to the *Virtualities* of the *Thomists*. See SCOTIST.

The *Scottists* hold, that the Metaphysical Degrees in Man are so many *Formalities*, really distinct from each other; as *Man*, *Living*, *Animal*, &c. And the same they hold of the Attributes of God: The *Thomists*, on the contrary, contend, that they are really and intrinsically the same. See DEGREE.

In Matters of Law, *Formalities* are frequently us'd for the *Formata*'s themselves; or the Rules prescrib'd for judiciary Proceedings. In Contracts of strict Law, all the *Formalities* must be strictly observ'd. An Omission of the least *Formality* may ruin the whole Convention.

The Term is also us'd for a certain Order, certain Decencies, and Ceremonies observ'd.

This Composition of *Formalities*, Decencies, and Circumstances, may form a political Poetan; but not an Ambassador, who must be a Gallant Man. *Wicqefort*.

FORMATION, in Philosophy, &c. the Act of forming, fashioning, or producing a thing.

The *Formation* of the Chick in the Egg, is admirably explain'd by *Matpighi*, in an express Treatise, *De Formatione Pulli in Ovo*. See EGG.

The *Formation* of the Fetus, the Embryo in the Womb, is a Process of which we have but very dark Conceptions. See CONCEPTION, FETUS, &c.

The *Formation* of Metals is effected in the Veins of the Earth, of Fumes or Vapours rais'd by the subterraneous Fire, and fix'd, or condens'd as they arrive toward the Surface of the Earth. See METALS, MINERALS, &c.

The *Formation* of an Abscess in the Body, see ABSCESS.

FORMATIX, or FORMATRICE. The ancient Philosophers admitted a *Virtus*, or *Facultas Formatix*, whereby all Bodies had their *Form*s given them. See FACULTY.

FORMÉ, or FORMY, in Heraldry. A Crofs *Formé*, or *Formy*, is a Crofs narrow in the Centre, and broad at the Extremes; so call'd by *Leigh*, and *Morgan*; though most other Authors call it *Pates*. See *PATE*.

FORMED, or FIGURED Stones, among Naturalists, are such Bodies, as being either pure Stone, Flint, or Spar, are found in the Earth, to form'd as that they bear a near Resemblance to the external Figure of Mussels, Cockles, Oysters, and other Shells, or Plants.

Authors are greatly divided as to their Origin: The several Opinions see under *FOSSIL*, *SHELL*, *STONE PLANT*, *SPAR*, &c.

FORMED, in Heraldry, see *SEATED*.

FORMEDON, in Law, a Writ which lies for him who has Right to Lands, or Tenements, by virtue of any Intail, arising from the Statute of *Westm. 2. c. 1.*

There are three Kinds, viz. *Forma Denonatoris*, or *Formedon, in the Defendant*; *Formedon in the Reverter*; and *Formedon in the Remainder*.

Formedon in the Defendant, lies for the Recovery of Lands, &c. given to one and the Heirs of his Body; or to a Man and his Wife, and the Heirs of their two Bodies; or to a Man, and his Wife, being Cousin to the Donor, in Prick Marriage, and afterwards alienated by the Donee.

After his Decease, his Heir shall have this Writ against the Tenant, or Alienee.

Fitz. Nat. Br. fol. 211. &c. makes three sorts of *Formedon* in the Defendant: The first is that now express'd: The second, for the Heir of a Coparcenor, that aliens, and dies: The third he calls, *Infructum tenentis*; which lies for a Coparcenor, or Heir in Gavel-kind, before Partition against him, to whom the other Coparcenor or Heir has alienated, and is dead.

Formedon in the Reverter, lies for the Donor, or his Heirs (whose Land is entail'd to certain Persons, and their Issue, with condition, for want of such Issue to revert to the Donor, and his Heirs) against him to whom the Donee alienates after the Issue extinct, to which it was entail'd.

Formedon in the Remainder, lies where a Man gives Land in Tail, the Remainder to another in Tail, and afterwards the former Tenant in Tail dies without Issue, and a Stranger abates; then he in Remainder shall have this Writ.

FORMICA, literally signifies an *Ant*, and is us'd to express little Tumours, which appear like the Bites of these Creatures.

FORMING, is us'd for the Act of giving Being, or Birth to any thing: Thus, GOD is said to have form'd Man after his own Image. Every thing generated, is form'd of something corrupted.—

The Word is also simply us'd for giving the Figure to any thing. The Potter forms his Vessels as he pleases. Geometry teaches, how to form all kinds of Figures.—

Also, for the producing of a thing: Thus, Thunder is form'd of Exhalations: The Lines of his Face began to be form'd.

Forming of a Siege, is the making Lines of Circumvallation, to fortify the Camp, and disposing things for the Attack of a Place, in form. See *SIERGE*.

They also say, to form a Squadron, or Battalion; meaning, to range the Soldiers in form of a Squadron, &c.

The Term is also us'd in speaking of a Body of Forces; which being out of any order of Squadrons, Battalions, &c. do halt, range themselves into Order, and put themselves in a Condition for the Attack. As soon as the Enemy orders this Motion, they began to form themselves.

FORMING, is also us'd in Grammar, in speaking of certain Tenses of Verbs, which are made from others, by a Change of certain Letters.

The Present Tense is form'd from the Infinitive. Compound and Derivative Words, and even all that have any Etymology, are also said to be form'd.

FORMS, in Hunting, the Seat of an Hare; or the Place or Time when and where she squats.

FORMULA, a Rule, or Model; or certain Terms prescribed, and decreed by Authority, for the Form and Manner of an Act, Instrument, Proceeding, &c.

The Roman Law was full of *Formula's*. Divorces, Adoptions, Stipulations, &c. were perform'd by certain *Formula's*, or in certain Terms.

Cicero Flavianus publish'd a Collection of the *Formula's* of his Time; which were well receiv'd. The least Slip or Failure in any of the Terms of these *Formula's*, render'd the whole Transaction Null. The *Formula's* of *Marculphus*, with *M. Bigon's* Comments, are in great Esteem.

FORMULA, in Church History, and Theology, is a Formula, or Profession of Faith.

The Council of *Seleucia* was dissolv'd by *Leonas*, the Emperor's Commissary, as not able to bring them to sign the *Formula*.

FORMULA is particularly us'd for a little Form, or Prescription; such as Physicians direct in extemporaneous Pra-

scrip; in Distinction from the greater Forms, which are the Official Medicines. See *PRESCRIPTION*.

FORMULARY, a Writing, containing the Form, or Formula of an Oath, Declaration, Attestation, or Abjuration, &c. to be made on certain Occasions.

There are also *Formularies* of Devotion, of Prayers, &c. Liturgies are *Formularies* of the publick Service in most Churches. See *LITURGY*.

FORNACALIA, or FORNICALIA, a Feast held among the ancient Romans, in honour of the Goddess *Fornax*, or *Ferax*, Furnace. See *FEAST*.

It was solemniz'd with Sacrifices, perform'd before the Mouth of a Furnace, or Oven, wherein they dry'd their Corn, bak'd their Bread, &c.

The *Fornacalia* were moveable: The Grand Curio proclaim'd the time of Celebration every Year on the twelfth of the Calends of *March*.

They were first instituted by *Numa*. The *Quirinalia* were instituted for the sake of such as had not kept the *Fornacalia*. See *QUIRINALIA*.

FORNICATION, WHOREDOM, the Ad, or Crime of Incontinency between single Persons: For if either of the Parties be married, it becomes *Adultery*.

St. Thomas labours to prove simple *Fornication*, contrary to the Law of Nature. See *CONCUBINE*.

By the ancient Law of *England*, the first Offence herein was punish'd with three Months Imprisonment: The second was made Felony, by an Act in the time of the late Usurpation. See *WHOREDOM*.

FORNICATION is sometimes us'd as a General Term, including all kinds of Offences against Chastity.

Its Species are, 1^o *Simple Fornication*, which is that committed with a Prostitute. 2^o call'd *Susprium*, is that committed with Persons of Reputation and Sobriety. 3^o That committed with Relations, call'd *Incest*. 4^o That committed with married Persons, *Adultery*. 5^o That committed with Persons consecrated to God, *Sacrilege*. 6^o That committed between Persons of the same Sex, *Sodomy*. 7^o That committed by Persons on themselves, *Manusupration*. 8^o That committed with Beasts, *Bestiality*. See *ADULTERY*, *INCEST*, *SODOMY*, &c.

FORNIX, in Anatomy, the Extremity of the Corpus Callosum, next the Cerebellum; which is separated or divaricated into two Legs, forming a kind of Arch, or *Fornix*. See *CORPUS CALLOSUM*.

FORPRISE, in Law, an Exception, or Reservation: In which Sense the Word is us'd in the Statute of *Exon*, 14 *Edw. 1.* but there written *Horreprise*.

We still use it in Conveyances and Leases, wherein *Accepted* and *Forpriisd* are synonymous.

FORPRISE is also us'd for an *Excussion*: In which Sense it is the same with *Forcipium*.

Totum pratum, &c. sine quacunque Forpripa in excussionibus pro placito dedit.

FORAGE, Provision for Cattle, of Hay, Oats, and Straw; particularly in War.

In Marching, Encamping, &c. care must be taken, that the Cavalry may find *Forrage*. To go to *forrage*: They were sent *a-forraging*. A Ration of *Forrage* is the Portion of Hay, Straw and Oats, allow'd each Horseman, for the Subsistence of his Horse one Day; which is 12 Pounds of Hay, as much Straw, and three Pecks of Oats. See *RATION*.

Skinner derives the Word from *foras agere*, by reason they go abroad to seek *Forrage*: Others, from *Far*, which antiently signify'd any kind of Corn, or Grains: *Menage*, from *Foderagium*, of *Foderum*, or *Fodrum*, which the Romans us'd in the same Sense. *Cujas*, and *du Cange*, derive it from the German *Futter*, *Horst*-meat: *Vossius*, from the German *Fuden*, or *voeden*, to feed: *Nicod*, from *Farrago*; which literally signifies what we call *Forrage*; and figuratively, a Mixture of divers kinds of Things. *Hicks* derives it from the Saxon *Fodre*, or the English *Fodder*, or the base Latin, *Fodrum*.

FORSTAL, } See § FORSTAL.

FORSTALLING, } See § FORSTALLING.

FORT, a little Castle, or Fortress; or a Place of small Extent, fortify'd by Art, or Nature, or both. See *CASTLE*, and *FORTRESS*.

A *Fort* is a Work encompass'd round with a Moat, Rampart, and Parapet; to secure some high Ground, or Passage of a River; to make good an advantageous Post; to fortify the Lines and Quarters of a whole Line, &c.

Royal Fort is a Fort whose Line of Defence is at least 26 Fathoms long. See *DEFENCE*.

Star Fort, is a Sconce, or Redoubt, constituted by re-entering and salient Angles; having commonly from five, to eight Points; and the Sides flanking each other. See *SCONCE*.

Field Fort, see *FORTIN*.

FORTERRESSE, or FORTRESS, a general Name for all fortify'd Places, whether so fortify'd by Nature, or Art: Such are fortify'd Towns, Castles, Citadels, Forts, Towers, Redoubts, Sconces, &c.

FORTIFICATION, call'd also *Military Architecture*, is the Art of fortifying, or strengthening a Place; by making Works around the lame, to render it capable of being defended by a small Force, against the Attacks of a more numerous Enemy. See *Military Architecture*.

Some Authors go back to the Beginning of the World, for the Author and Origin of Military Architecture.

According to them, GOD himself was the first Engineer; and Paradise, or the Garden of Eden, the first Forteress. Cain improv'd on the Hint, in building the first City, Gen. iv. 17. After him came Nimrod, Gen. x. 17. Then Semiramis, as Ptolemy relates, *Stratagem. L. VIII. c. 27. The Canaanites*, Numb. xiii. 19. *Deut. i. 28. David*, 2 Kings v. 9. *Solomon*, 2 Chron. iii. 5. *Rehoboam* his Son, 2 Chron. xi. 5, 10. and the other Kings of *Juda* and *Israel*, and at length the *Greeks* and *Romans*. *Vitruvius L. X. last Chap. and L. i. c. 5.*

Such is the Series of those who fortify'd Places: To which might be added *Pharaoh*, the Persecutor of the *Israelites*, who built the Cities of *Pithom* and *Ramesis*. *Exod. i. 11.*

But how ancient soever the surrounding of Cities with Walls, Towers, &c. may be; the Name *Fortification*, and the Art now understood thereby, are of no very old Standing.

They had their Rise since the Invention of Cannons; the terrible Effects whereof render'd it necessary to change the Structure of the ancient Walls, and add to many Things thereto, that those Changes were thought enough to constitute a new Art, which was call'd *Fortification*, by reason of the Strength it afforded those in Cities, to defend them against an Enemy.

The first Authors who have wrote of *Fortification*, consider'd as a particular form'd Art, are *Ramelli*, and *Cataneo*; *Italians*. After them *Errard*, Engineer to *Henry* the Great of *France*; *Stevinus*, Engineer to the Prince of *Orange*, *Morlois*, the *Chevalier de Ville*, *Lorini*, the Count de *Pagan*, and the *Mareschal de Vauban*: Which two last Noble Authors contributed very greatly to the Perfection of the Art.

From the Idea and Office of *Fortification*, some General Fundamental Rules or Axioms may be drawn, as

1° That the Manner of fortifying should be accommodated to that of Attacking: So that no one Manner can be assur'd will always hold, unless it be assur'd the Manner of Besieging be incapable of being alter'd; and to judge of the Perfection of a *Fortification*, the Method of Besieging at the Time when it was built, must be consider'd.

2° All the Parts of a *Fortification* should be able to resist the most forcible Machines us'd in Besieging.

3° A *Fortification* should be so contriv'd, as that it may be defended with as few Men as possible; which Consideration, when well attended to, saves a world of Expence.

4° That the Defenders may be in the better Condition, they must not be expos'd to the Enemy's Guns and Mortars; but the Aggressors be expos'd to theirs.

Hence 5° All the Parts of a *Fortification* should be so dispos'd, as that they may defend each other; in order to this, every Part thereof is to be flank'd, i. e. capable of being seen and defended from some other; so that there be no Place where an Enemy can lodge himself, either unseen, or under Shelter.

6° All the Campaigns around must lie open to the Defenders; so that no Hills or Eminences must be allow'd, behind which the Enemy might shelter himself from the Guns of the *Fortification*; or from which he might annoy them with his own.

The Fortresses, then, is to command all the Place round about; consequently the Outworks must all be lower than the Body of the Place.

7° No Line of Defence to be above Point blank Musket Shot, which is about 120 Fathom.

8° The acuter the Angle at the Centre; the stronger is the Place, as consisting of the more Sides, and consequently more defensible.

Such are the General Laws and Views of *Fortification*: The Particular ones, respecting each several Work or Member thereof, will be deliver'd under their proper Articles.— See **FORTIFIED Place**.

FORTIFICATION is also us'd for the *Place fortified*; or the several Works rais'd to defend and flank it, and keep off the Enemy.

All *Fortifications* consist of Lines and Angles, which have various Names, according to their various Offices. See **LINE**, and **ANGLE**.

The principal Angles are those of the CENTRE, the FLANKING Angle, FLANK'd Angle, Angle of the EPAULE.

The principal Lines are, those of CIRCUMVALLATION, of CONTRAVALLATION, of the CAPITAL, &c. See each in its Place.

Fortifications are divided into *Regular*, and *Irregular*; and again into *Durable*, and *Temporary*.

Regular FORTIFICATION, is that wherein the Bastions are all equal; or that built in a regular Polygon; the Sides

and Angles whereof, are generally about a Musket Shot from each other. See **POLYGON**.

In a *Regular Fortification*, the Parts being all equal, have the Advantage of being equally defensible; so that there are no weak Places.

Irregular FORTIFICATION, is that wherein the Bastions are unequal, and unlike; or the Sides, and Angles not all equal, and equidistant.

In an *Irregular Fortification*, the Defence and Strength being unequal; there is a Necessity for reducing the Irregular Figure, as near as may be, to a Regular one.

And, as the Irregularity of a Figure depends on the Quantity of Angles and Sides; the Irregularity of a *Fortification* arises either from the Angles being too small, or the Sides being too long, or too short.

Consequently, an *Irregular Figure* being propos'd to be fortify'd; all the Angles, with the Quantity of the Sides, must be found, to be able to judge how it is to be fortify'd.

Durable FORTIFICATION, is that built with design to remain a standing Shelter for Ages. Such are the usual *Fortifications* of Cities, Frontier Places, &c.

Temporary FORTIFICATION, is that erected on some emergent Occasion, and for little time.

Such are Works cast up for the seizing and maintaining a Post, or Passage; those about Camps, &c. as *Circumvallations*, *Contravallations*, *Redoubts*, *Trenches*, *Batteries*, &c.

FORTIFIED Place, a *Fortress*, or *Fortification*; i. e. a Place well flank'd, and shelter'd with Works.

Places fortified, after the modern way, consist chiefly of *Bastions*, and *Curtains*, and sometimes of *Demi-Bastions*; according to the Situation of the Ground, of *Cavaliers*, *Ramparts*, *Fausse-braye*, *Ditchet*, *Counter-scarp*, *Cover'd Ways*, *Half Moons*, *Ravelins*, *Hornworks*, *Crownworks*, *Outworks*, *Espalades*, *Redents*, and *Tenailles*. See each under its proper Article, **BASTION**, **CURTAIN**, **RAMPART**, **CAVALIER**, **FAUSSEBRAYE**, **DITCH**, &c.

There are other moveable and additional Parts, as *BERMES*, *PARAPETS*, *BANQUETTES*, *EMBRASURES*, *CORDONS*, *BOYARDS*, *MOULINETTS*, *CHEVAUX DE FRISE*, *CHAUSSE-TRAPES*, *GALLERIES*, *MANTELETTS*, *BATTERIES*, *SAFS*, *MINES*, *BLINDS*, *GABIONS*, and *PALISSADES*. See each in its Place.

Several of these Works, again, consist of divers Parts, which have different Denominations: Thus a *Bastion* consists of *FACES*, *FLANES*, *CASEMATES*, *ORILLONS*, *GORGE*, &c. which see.

The Methods of *Fortifying*, that have been invented, are various; and new Methods continue still to be propos'd. The principal, and those which chiefly obtain thro' *Europe*, are those of *Coburn*, *Pagan*, *Vauban*, and *Scheiter*, from which all the rest are easily conceiv'd.—

FORTIFICATION, according to the *Dutch Method*, is that, which making the Flank perpendicular to the Curtain, makes the Flank subduple of the Face, and subtriple of the Curtain; and the Angle of the Bastion, equal, either to two thirds of the Angle of the Polygon; or to half thereof, with the Addition of 15 or 20 Degrees, to make it equal to a right Angle.

Freitach determines the Quantity of the Flank in a square to be six; in a Pentagon, seven; in a Hexagon, eight; in a Heptagon, nine; in a Enneagon, ten; in a Decagon, eleven and in all other Figures, twelve *Rhinland* Perches: Consequently, the Face 24, and the Curtain 36 Perches.

To draw the Profile of a *Fortification* after the *Dutch manner*; Draw the inner Polygon G H Tab. *Fortification*. Fig. 6. into five equal Parts: The Demigorge A B is to contain one of them; and the Capital A B, two. Then divide the Curtain E A into four Parts; and make the Flank A B one.

This is *Freitach's Method*: But the *French* make both the Demigorge, and Flank a sixth Part of the Polygon; and in Squares, and Pentagons, setting aside the second Flank, describe a Semicircle upon B S, that the Angle of the Bastion C may be a right Angle.

The *Italians* giving the same Dimensions to the Gorge and Flank; make the secondary Flank half the Curtain, in Polygons exceeding a Hexagon, and a third of the Curtain in the rest.

Lastly, the *Spaniards* giving the same Dimensions to the Flanks, omit the secondary Flanks.

But Flanks perpendicular to the Curtain, with secondary Flanks, are in Disrepute, on account of the Obliquity of the Defence; so that the *Dutch Method* of fortifying, with the other ancient ones, founded on the same Principles, are now out of Doors.—

FORTIFICATION, according to the *Count de Pagan's Method*; supposes in the larger Fortifications, the external Polygon A B, Fig. 7. to be 100, the Face A G, 50 Perches; in the smaller, the first, 80, and the second, 25; and in the middle Size, the first 90, and the second 27: The Perpendicular C D, 15, and the Flanks G F and H E perpendicular to the Lines of Defence A F and B E, cover'd with

an Orillon, and tripled; and a Ravelin, Curtain and Bastions built on the Outside the Rampart.

This Method was receiv'd with great Applause, and must be allow'd greatly preferable to the Dutch Method.

But it has its Defects, for besides that the fortifying of Places by it is very expensive; its triple Flanks are too close, so as to lie expos'd to the Violence of the Bombs; the Orillon is so large as to prejudice the Length of the Flanks; the outer Rampart of the Bastion is too big, &c.

FORTIFICATION, according to Monsr. Blondel's Method; has a great Affinity with that of the Count de Pagan, only that the Quantity of the Lines and Angles are differently determined.

Thus, a Right Angle being subtracted from the Angle of the Polygon, and to a third part of the Remainder, 15 added; the Sum gives the diminish'd Angle. In the greater Fortifications, the outer Polygon is 100, in the smaller 85. The external Polygon being divided into ten parts, seven of them give the Lines of Defence; and the Faces are half those of the Tenaille.

This Method is very well calculated for the Purposes of Architecture; only, being somewhat expensive, 'tis but little us'd.

FORTIFICATION, according to Monsr. Vauban's Method, supposes the outer Polygon in the larger Fortifications to be 100; in the smaller, 80; and in the middle Size 90: The Faces are made $\frac{2}{3}$ of the same; the Perpendicular, in a square, $\frac{3}{4}$, in a Pentagon $\frac{3}{5}$, in the other Polygons $\frac{1}{2}$ of the same. The Complement of the Face to the Line of Defence, he makes equal to the Distance of the Epaulé: He uses re-entering and crooked Flanks; and places a low Tenaille before the Curtain; and the Dutch Ravelin with Lunettes.

This Method of fortifying pleases most People; both as it increases the Strength, without much Expence; and as it is perfectly well accommodated to the Principles of military Architecture, above laid down.

Yet it seems defective in this, that the Faces are too much expos'd to the View of the Enemy; and that the Lunettes are a little too long to be defended.

Monsr. Vauban's newer Method of Fortifying, is that which builds large Bastions before small ones, and covers the Curtain with a double Ravelin; drawing a low Tenaille before the same Curtain.

Detached Bastions are perfectly suitable to what we have deliver'd in the former Method; excepting that the Flanks are rectilinear, and destitute of an Orillon.

FORTIFICATION, according to the Method of Scheiter, supposes the external Polygon, in the larger Fortifications to be 100 Perches; in the lesser 80; in the middle Size 90: The Flanks perpendicular to the Lines of Defence; and the Lines of Defence in the greater Fortifications 70 Perches, in the lesser 60, and the middle Size 65.

It detaches Bastions from the Curtain, and forms a kind of inner Recels behind the Curtain: It assumes the Angle of the Bastion, in a Square, to be 64 Degrees; to this adding 8, the Product is the Angle in a Pentagon; to which adding six Degrees, the Sum is the Angle of the Bastion in a Hexagon; and adding 5 to this, the Sum is the same Angle in a Heptagon.

FORTIN, a Diminutive of the Word Fort, importing a little Fort, or Sconce, call'd also *Field Fort*, built in Hedge, for defence of a Pass, or Post; but particularly to defend a Camp, in the time of a Siege, where the principal Quarters are join'd, or made to communicate with each other by Lines defended by Fortins and Redoubts.

Fortins being very small, their flank'd Angles are generally 120 Fathom distant from each other; but their Figure and Extent is various, according to the Place and Occasion; some having whole Bastions, and others only half Bastions. See REDOUBT.

Star-FORTIN, is that whose Sides flank each other, &c. See Star Fort.

FORTUNA, in our ancient Law Books, is the same with what we call *Treasure-Trove*. See TREASURE-TROVE. *Treasureum incepto Fortunam invenire inquirendam est per 12 Juratores pro Rege, &c. quod fideliter presentabant, &c. omnes Fortunae, abjuraciones, appellas, &c.*

Spelman tells us, it also signifies *Fortune occisus*; but this seems to be very fanciful. See SACROBARRA.

FORTUNATE Islands, in the ancient Geography, an Appellation which has given the Critics and Antiquaries a world of Perplexity; being a Denomination of a Place famous for Golden Apples, which grew therein: Or, as *Varron* says, for Sheep, with Golden Fleeces.

The Antients describe them as situate without the Straights of Gibraltar, in the Atlantic Ocean.

The common Opinion of the Moderns takes them for the Canary Islands; grounded principally on the Situation and Temperature of those Islands, which renders the use of Cloaths unnecessary; and the Abundance of Oranges, Lemons, Grapes and other delicious Fruit growing therein. See GOLDEN FLEECE.

Ol. Rudbeck has found a very different Place for them. That learned Author, who makes his native Country *Sweden* the Scene of all that is great and extraordinary in ancient Tradition and Fable; will have the *Fortunate Islands* to be *Sweden*.

The delicious Fruits, talk'd off by the Antients, his Imagination suggests, were nothing but the Virtue, and good Manners, which antiently flourish'd in that cold Hyperborean Nation.

FORTUNE, see PROVIDENCE, FATE, &c.

The Name *Fortuna*, *τοζα*, was unknown in the earlier Ages; and does not occur either in *Homer*, or *Hesiod*; as nor being yet invented.

In after-days, it was introduc'd as a Machine; and made to serve divers Purposes in Natural Philosophy, and Theology.

Men observing a world of Evils, and Disorders to fall out, and not daring directly to complain of Providence; and being willing withal to excuse themselves from being the Occasions of their own Misfortunes, had recourse to the Notion of *Fortune*: Against whom they might vent all their Resentments *impune*.

Plutarch, in an express Treatise of the *Fortune of the Romans*, accounts for the Practice of the ancient Poets, who seem to make *Jupiter* the Author of all the Evils of Life. Mankind, he observes, before the Name of *Fortune* had got into the World, perceiving a certain arbitrary Cause, disposing of things in an irresistible manner, call'd it *God*; but the same Cause being often observ'd to act at random, and without any Rule or Order at all; the supreme Being came to be divid'd of the Attribute; and *Fortune*, or *Destiny* acknowledged in his stead. See DESTINY.

It is not easy to unravel, what the Antients meant by the Name *Fortuna*.

The *Romans* understood by it, I know not what Principle of Fortuity, whereby things came to pass, without being necessitated thereto; but what, and whence that Principle is, they do not seem to have ever precisely thought: Whence their Philosophers are often intimating, that Men only fram'd the phantom *Fortune* to hide their Ignorance; and that they call *Fortune* whatever befalls a Man, without his knowing why.

Juvenal asserts, it was Men who made a Deity of *Fortuna*.

Nallum Numen abest si sit prudentia; sed te, nos facimus, Fortuna, Deam, Caloque locamus.

According to the Sentiment of the Heathens, therefore, *Fortune*, at Bottom, was only the Arrival of Things in a sudden and unexpected Manner, without any apparent Cause, or Reason: So that the Philosophical Sense of the Word, coincides with what is vulgarly call'd *Chance*. See CHANCE.

But in Religion it had a further Force: Altars and Temples in great Numbers were consecrated to this *Fortuna*, as a Deity.

This intimates, that the Heathens had personify'd, and even deify'd their Chance; and conceiv'd her as a sort of Goddess, who dispos'd of the Fate of Men at her pleasure. Hence that Invocation of *Horace*, *O Diva gratum que regis Antium*; in the 35th Ode of the first Book, where he recommends *Augustus*, then preparing for a Visit to *Britain*, to her Protection.—

From these different Sentiments it may be infer'd, that the Antients at one time took *Fortune* for a peremptory Cause, bent upon doing good to some, and persecuting others: And sometimes for a blind, inconsistent Cause, without any View or Determination at all.

If then the Word *Fortune* had no certain Idea in the Mouth of those who erected Altars to her; much less can it be ascertain'd what it denotes in the Mind of those who use the Word in their Writings.

They who would substitute the Name *Providence* in lieu of that of *Fortune*, cannot give any tolerable Sense to half the Phrases wherein the Word occurs.

To these, *e. gr.* we must always distrust *Fortune*, but especially when she seems to flatter us most: The Contempt of Riches, in the Philosophers, is a secret Desire of revenging their Merit against the Injustice of *Fortune*, by a Contempt of those very Benefits she deprives them off: *Fortune* is so blind, that amidst a Crowd, wherein there is but one wise Man, we must not imagin she will trace him out, to accumulate him with her Favours.—

On these and the like Occasions, the Word *Providence* cannot be substituted in lieu of *Fortune*: The Idea answering to the Expression, is Pagan, as well as the Expression itself. Add, that it is a Fault, even in point of Accuracy, to use a Term that signifies nothing; as much as it is in point of Religion, to associate *Fortune* with *Providence*, in the Direction of the Universe.

Horace paints the Goddess, preceded by Necessity, holding Nails and Wedges in her Hands, with a Cramp-iron, and melted Lead to fasten it; rarely accompanied with Fidelity, unless when she abandons a Family; for in that case Fidelity never fails to depart with her, as well as Friends.

The Painters represent her in a Woman's Habit, with a Bandage before her Eyes, to show that she acts without Discrimination; standing on a Wheel, to express her Instability. The *Romans*, says *Laetantius*, represented her with a Cornucopia, and the Helm of a Ship, to show that she distributes Riches, and directs the Affairs of the World. In effect, 'tis with such Characters, that we see her represented on so many Medals, with the Inscriptions, FOR TUNA AUG. FORTUNA REDUX. FORTUNE AUG. or REDUCIS, &c. Sometimes she is seen pointing at a Globe before her Feet, with a Sceptre in one Hand, holding the Cornucopia in the other.

The *Romans* had a Male, and Female Fortune for the Objects of their Adoration: The *Fortuna Virilis*, honour'd by the Men; and the *Fortuna Muliebris*, by the Women.

On the Reverse of a Medal of *Commodus*, was a Representation of Fortune, under the Quality, or Surname of *Manens*, i. e. stable, permanent; holding a Horle by the Reins. On the Greek Medals we meet with ΑΤΑΘΗ, or ΚΑΑΗ ΤΥΧΗ, Good Fortune. *Constantine* gave the Epithet *Αυτοβουλο*, i. e. flourishing, to the Fortune of his new City *Constantinople*.

FORUM, in Antiquity, is us'd in divers Acceptations. Sometimes for a Place of Negotiation, or Merchandizing, answering to our Market-Place; in which sense it has usually some Adjective added to it, as *Forum Boarium*, the Beast Market; *Forum Piscarium*, the Fish Market; *Olivarium Forum*, the Herb Market, &c. See MARKET.

FORUM, again, is us'd for any Place, where the Governor of a Province convenes his People, to give Judgment, according to Course of Law: Whence a Man is said *Forum agere*, when he keeps the Assizes; *Forum indicare*, when he appoints the Place where they are to be kept, &c.

FORUM is also a publick Standing Place in the City of Rome, where Causes were judicially try'd, and Orations deliver'd to the People.

Of these *Forums* there were several; at first only three, viz. *Romulum*, *Julianum*, and *Augustum*: But that Number was afterwards increas'd to six, by the Addition of the *Transitorium*, call'd also *Palladium*; the *Trojanum*, and *Sainctii Forum*.

The first, and most eminent of these, was the *Forum Romanum*, call'd also *Forum Vetus*; and absolutely, *Forum*, or the *Forum*.

In this was an Apartment, call'd the *Rostra*, where the Lawyers pleaded; the Officers harangued; and Funeral Orations were deliver'd, &c. See ROSTRA.

In the same *Forum* was the *Comitium*, or Hall of Justice, with the Sanctuary of *Saturn*, the Temple of *Castor*, &c. See COMITIUM.

FORUM is also us'd among Casuists, &c. for Jurisdiction.

Thus, they say in *Foro Legis*, or the *Outer Forum*, i. e. in the Eye of the Law, or the common Course of Justice; In *Foro Conscientie*, or the *Inner Forum*, i. e. in the Eye of GOD, or a Man's own Conscience.

There are a great many things not condemn'd in *Foro Legis*, which yet are criminal in *Foro Conscientie*.

FOSS, in Fortification, &c. a Ditch, or Moat. See DITCH, &c.

The Word is form'd of the Participle *Fossim*, of the Verb *fodio*, I dig.—

Foss, in Anatomy, is a kind of Cavity in a Bone, with a large Aperture, but no Exit, or Perforation.

When the Aperture is very narrow, it is called a SINUS. In the Cranium there are six Internal, and fourteen external Fosses. The Cavity of the Orbit, which contains the Eye, is a Foss.

Foss is particularly us'd for a Cavity, or Denture in the Back Part of the Neck. See NECK.

Foss-Way, was antiently one of the four great Highways of England; so call'd, because in some Places it was never perfected, but left as a great Ditch. See WAY, see also WATLING Street.

FOSSA Magna, or *Navicularis*, is an oblong Cavity, forming the Inside of the *Pudendum Muliebre*, and which presents it self upon opening the *Labia*; and in the Middle whereof are the *Caruncule Myrtiformes*. See PUDENDUM.

FOSSA, in our antient Customs, was a Ditch, full of Water, where Women, committing Felony, were drowned; and Men hanged.

Nam & ipsi in omnibus tenementis suis omnem ab antiquo legale balneum justitiam, exedictis ferrum, fossam, furcas, & similia. See FURCA.

In another Sense 'tis taken for a Grave, as appears by these old Verses;

*Hic jacet in Fossa Bona venerabilis ossa,
Hic est fossatus, qui bis erat hic cathedratus.*

FOSSARII, in Antiquity, a kind of Officers in the Eastern Church, whose Business was, to inter the Dead.

Cicero relates, that *Constantine* created 90 *Fossaries*; whom he took out of the divers Colleges or Companies of Tradesmen: He adds, that they were exempted from Taxes, Services, onerary Offices, &c.

Fa. Gear, in his Notes on the Greek *Euchelagos*, insinuates, that the *Fossarii* were establish'd in the times of the *Apollis*; and that the young Men, who carried off the Body of *Ananias*, and those Persons full of the Fear of GOD, who inter'd *St. Strepben*, were of the Number. *St. Jerome* assures us that the Rank of *Fossarii* held the first Place among the Clerks: But he is to be understood of those who had the Direction and Intendance of the Interment of the Dead.

FOSSIL Kingdom. The Chemists divide all Bodies into three Classes, or Kingdoms; viz. Fossil, or Mineral; Vegetable; and Animal. See each in its Place, FOSSIL, VEGETABLE, &c.

FOSSIL, in Natural History, is us'd, in a general Sense, for any thing dug up, or found under Ground. Such are all Minerals, Metals, Rock Salts, &c.

There are also Fossil Salt Petre, Fossil Borax, &c.

FOSSILS may be distinguish'd into 1^o Such as are Native of the Earth; and 2^o Such as are adventitious and deposited therein by any extraordinary Means, as Earthquakes, Deluges, &c.

Native FOSSILS, or FOSSILS properly so call'd, are strictly defin'd to be sensible Bodies generated, and growing in, and of the Earth; whose constituent Parts are so simple, and homogeneous, that there is no apparent Distinction of Vessels, and Juices; between the Part, and the Whole.

Native Fossils are either Simple, or Compound.

Simple FOSSILS are those, whose Parts, however divided, are all of the same Nature, i. e. of the same Gravity, Magnitude, Figure, Hardness, and Mobility.

Such is Quicksilver, which, however divided, is always found the same.

Compound FOSSILS are those which may be divided into different, or dissimilar Parts.

As Antimony, which may be resolv'd by Fire into Sulphur, and a Metallic Part.

The Simple Fossils are all Metals, Salts, Stones, both vulgar and precious, and Earths. See METAL, SALT, STONE, and EARTH.

The Compound FOSSILS are all Sulphurs, all Semimetals, or what we properly call Minerals; and all Bodies comb'd out of any two, or more of the preceding, either Simple, or Compound Fossils. See SULPHUR, and SEMI-METAL.

Adventitious, or Foreign FOSSILS, include the subterraneous Exuvie of Sea and Land Animals, and even vegetables; as Shells, Bones, Teeth, Leaves, Stalks, &c. which are found in great Abundance, in divers Parts of the Earth.

These Extraneous Fossils have employ'd the Curiosity of several of our latest and best Naturalists, who have each their several System to account for the surprising Appearances of petrify'd Sea-fishes, in Places far remote from the Sea, and on the Tops of Mountains: Shells in the Middle of Quarries of Stones: Elephants Teeth, and Bones of divers Animals, peculiar to the Southern Climates; and Plants only growing in the East, found in our Northern and Western Parts. See SHELL, &c.

Some will have these Shells, &c. to be real Stones, and Stone Plants, form'd after the usual manner of other figur'd Stones, and Stone Plants: Of which Opinion is our learned *Dr. Lister*.

That Author, tho' he allows of petrify'd Shells on the Sea Shores, will by no means agree, that there are any such Petrifications in the Midland Countries. The Shell-like Stones, found in our Quarries, he contends, are *Lapides sui generis*; and never were any Part of an Animal.

His Reasons are, that their Matter, and Texture, is perfectly the same with that of the Rock, or Quarry, where they are taken; as Iron-stone Shells are all Iron-stone; Spar, or Crystalline, all Spar, &c. That Quarries of different Stone yield different Sorts of these Shells: And that there are no Animals in Nature, which yield any thing exactly like them: See STONE, and STONE Plant.

But 1^o These Shells found under Ground, are perfectly conformable to those in the Sea in Figure, Substance, Magnitude, &c. 2^o The Substance of these Fossils differs essentially from the common Substance of Stones. 'Tis true, we frequently find them cover'd, or incrustated with a Mineral, or Stony Matter, which has gradually insinuated it self into the Pores; but it is easy distinguishing that Matter from the Substance of the Shell.

The common Opinion is, that these fossil Shells, with all other foreign Bodies, found within the Earth, as Bones, Trees, Plants, &c. were buried therein at the time of the universal Deluge; and that having been penetrated either by the Bituminous Matter, abounding chiefly in watery Places;

Places; or by the Salts of the Earth, they have been preserv'd entire, and sometimes petrify'd. See DELUGE.

Others think, that those Shells, found at the Tops of the highest Mountains, could never have been carried thither by the Waters, even of the Deluge; inasmuch as most of these aquatic Animals, by reason of the Weight of their Shells, always remain at the Bottom of the Water, and never move but close along the Ground.

They imagine, that a Year's Continuance of the Waters of the Deluge, intermix'd with the salt Waters of the Sea, upon the Surface of the Earth, might well give occasion to the Production of Shells of divers kinds in different Climates; and that the universal Saltness of the Water was the real Cause of their Resemblance with the Sea Shells. The Lakes form'd daily by the Retention of Rain, or Spring Water, produce different Kinds.

Others think, that the Waters of the Sea, and the Rivers, with those which fell from Heaven, turn'd the whole Surface of the Earth upside down; after the same manner as the Waters of the Loire, and other Rivers, which roll in a Sandy Bottom overturn all their Sands, and even the Earth it self, in their Swellings and Inundations: And that in this General Subversion, the Shells come to be interr'd here, Fishes there, Trees there, &c. See the *Journ. des Savans*, M DCC XV. p. 19. and the *Mem. de Trev.* 1713.

But no body has set this Sentiment in a better Light, than Dr. Woodward, in his *Nat. History of the Earth*. That Ingenious Author maintains the whole Mass of Earth, with every thing belonging thereto, to have been so broke, and dissolv'd, at the Time of the Deluge, that a new Earth was form'd in the Bottom of the Water, consisting of different Strata, or Beds of terrestrial Matter, ranged over each other nearly, according to the Order of their specific Gravities. See STRATA. By this means, Plants, Animals, and especially Fishes, and Shells, not yet dissolv'd among the rest, remain'd mix'd and blended among the Mineral and Fossil Matters; which preserv'd them, or at least assum'd and retain'd their Figures and Impressions, either indentedly, or in Relievo.

Comenius attacks this Sentiment of Dr. Woodward, and goes yet higher. He supposes 1^o That the greatest Part of the Shells now dug from under Ground, had been plac'd there before the Deluge, that is, at the Time of the Creation, when God separated the Earth from Waters. 2^o That without having recourse to the Diffusion of the Earth by the Waters, one might suppose most of them to have slip'd in at the Chinks and Crevices naturally happening after the Waters were retir'd, and the Earth sufficiently drain'd. 3^o That particular Inundations might have swept most of these Shells into the Places where we now find them. 4^o That the Sea may have wrought, or cast up most of these Shells through subterraneous Spiracles and Canals. 5^o That GOD has created divers Stony and Metalline Bodies, perfectly like the Vegetables and Animals, we see on Earth, and in the Sea.

To all these Suppositions, Dr. Woodward answers, 1^o That it is no ways probable, God should create such a Number of Shell-fish of the same Species at once; and that purely with a Design to destroy them all again in loon after: That among the fossil Shells of the same Species, 'tis easy to distinguish different Ages: That some appear precisely such as we now find them in the Spring, the Season when the Deluge began: That 'tis not only Shells, we find under Ground, but also Bones of Quadrupeds, Plants, and Trees of extraordinary Sizes; and which are not of the Number of Aquatics: And lastly, that the Waters were separated from the Earth on the third Day; and that none of these Things were created, till afterwards. 2^o That, on the second Supposition, these Shells would be dispos'd perpendicularly, and not horizontally, as they are always found: That we should sometimes find them in the Cists of the Earth, of which there is none but where they are broke. 3^o That we have no Acquaintance with any of these pretended Inundations: That they could never have brought Shells, Stags Horns, and Elephants from America, and the East Indies, to England and other Parts of Europe; Nor those Pines and Beeches, frequently found far greater than any of our Growth. Add, that these particular Inundations must have risen to the Tops of the highest Mountains, and of consequence must have been general. 4^o On the fourth Supposition it must be held, that God did not only create all these several Bodies in the Entrails of the Earth; but their several Parts, and the separate Pieces and Fragments of those Parts: a Piece of a Shell, for Instance; a Side of a Shell, which consists of two; a Shell void of the Fish it should contain; Beards of Corn, without the Grain; Pieces of Cedar Bark, without Wood; Pieces of Bullocks Hides without Flesh and Bones; human Skins without Bodies; a Bone without the rest of the Skeleton; a Tooth without the Jaw, &c. Add, that the fossil Shells have not only external, but essential Resemblance to Sea Shells; both, *e. gr.* Yielding, by

Analysis, a Quantity of Sea Salt: That among the fossil Teeth of Fishes, we meet with some apparently worn: And lastly, that the Shell Fish called *Purple*, has a long sharp Tongue, by means whereof it pierces other Shells, and picks the Fish out of them; and that in digging under Ground we actually meet with divers of these Shells thus pierc'd. Can such minute, thro' paced Resemblances be the accidental Effect of a *Lapses Nature*?

This is the Substance of what has hitherto been advanced on the Point.

POSTERLEAN, antiently signify'd Nuptial Gifts: Much the same with what we now call Jointure. See JOINTURE.

The Word is originally Saxon, and signifies *Ciborum exhibitio*, that is, a Stipend which the Wife has for her Maintenance.

Postea sciendum est cui Posterlean pertinet, vadit hoc Brigidis, & plerique amici sui.

FOTUS, in Medicine, the same as Fomentation. See FOMENTATION.

FOVEA Cordis, the Hollow of the Heart. See HEART.

FOUGADE, or FOGGASS, in the Art of War; a kind of little Mine, in manner of a Well, scarce exceeding ten Foot in Width, and twelve in Depth; dug under some Work, or piece of Fortification, and charg'd with Barrels or Sacks of Gunpowder. 'Tis set on fire like other Mines, with a Saucidge. See MINE.

The Word is French. *M. Hoet* derives it from *focate*, of *focus*, Fire.

FOULE, in the Sea Language, is us'd in various Senses; *viz.* When a Ship has been long untrim'd, so that Grails, Weeds, Perriwinkles, Barnacles, or the like stick or grow to her Sides under Water, she is said to be foule. Again, a Rope is said to be foule, when it is either tangled in it self, or hinder'd by another, so that it cannot run, or be haled.—A Ship is said to make foule Water, when being under Sail, she comes into such Shoals, or low Water, that tho' her Keel do not touch the Ground; yet she comes so near it, that the Motion of the Water under her raises the Mud from the Bottom, and so fouls the Water.

FOUNDATION, that Part of a Building under Ground: Or, the Mass of Stone, &c. which supports a Building; or upon which the Walls of a Superstructure are rais'd: Or, it is the Coffin, or Bed, dug below the Level of the Ground, to raise a Building upon; in which Sense the Foundation either goes the whole Area and Extent of the Building, as when there are to be Vaults, Cellars, or the like; or it is drawn in Cuts, or Trenches, as when only Walls are to be rais'd. See BUILDING.

The Foundation is properly so much of the Masonry, as reaches as high as the Surface of the Ground; and is always to be proportion'd to the Load, or Weight of the Building it is to bear.

Sometimes it is massive, and continued under the whole Building; as in the antique Arches, and Aqueducts, and some Amphitheatres: More usually it is only in Spaces, or Intervals; either to avoid Expence, or because the Vacuities are at too great a distance, in which latter case they make use of insulated Pillars, bound together by Arches.—

That we may found our Habitation firmly, says Sir H. Wotton, we must first examine the Bed of Earth, upon which we are to build; and then the Under-cielings, or Substruction, as the Antients call'd it. For the former, we have a general Precept in *Vitruvius*, *Substructionis Fundationes solentur, si queant inventiri ad solidum & in solido*: By which he recommends not only a diligent, but even jealous Examination of what the Soil will bear; advising us not to rest upon any appearing Solidity, unless the whole Moeld thro' which we cut, have likewise been solid. But how deep we should go in this Search, he has no where determin'd, as perhaps depending more on Discretion, than Regularity, according to the Weight of the Work: Yet *Palladio* has ventur'd to reduce it to a Rule; allowing for the *Cavafove*, *i. e.* hollowing or under-digging, a sixth Part of the Height of the whole Fabric, unless there be Cellars under Ground, in which case he would have it somewhat lower. Sir H. Wotton's *Elem. of Architecture*.—

The Foundations of Buildings are either Natural, or Artificial.

Natural, as when we build on a Rock, or a very solid Earth; in which case we need not seek for any further Strengthening.

But, if the Ground be sandy, or marshy, or have lately been dug; in such case recourse must be had to Art. In the former Case, the Architect must adjust the Depth of the Foundation by the Height, Weight, &c. of the Building: A sixth Part of the whole Height is look'd on as a Medium: And as to Thickness, double that of the Width of the Wall, is a good Rule.

Where the Natural Foundation may not be trusted, they either fortify the Ground by *pallifying* it, *i. e.* driving it full of Piles; see PALLIFICATION: Or else lay large wooden Planks at the Bottom of the Trenches, dug for the Foundation.

In some Places they found the Peers of Bridges, and other Buildings near the Water, on Sacks of Wool, laid like Mattresses; which being well press'd; and greasy, will never give way, nor rot in Water.

FOUNDATION is also us'd for the Establishment of a City, or Empire.

The Romans reckon'd their Years from the *Foundation of Rome, Ab Urbe Condita*; which we sometimes express by *ab U. C.* Chronologers make 479 Years from the passing out of Egypt, to the *Foundation of Rome*. See *EROGNA*.

FOUNDATION is also a Donation, or Legacy, either in Money, or Lands, for the Maintenance and Support of some Community, Hospital, School, Lecture, or other work of Piety. See *SCHOOL, HOSPITAL, COLLEGE, &c.*

Among the Order of *Augustins*, there is a *Foundation* for the marrying of poor Maids; and another for the furnishing of Trusses to poor People, who have Ruptures, or Hernias.

FOUNDER, He who lays a *Foundation*; or who founds and endows a Church, School, Religious House, or other Work of Charity and Piety. See *FOUNDATION*.

The *Founders* of Churches may preferre to themselves the Right of Patronage, or Presentation to the Living. See *PATRONAGE*.

FOUNDER, is also an Artificer that melts, or casts Metals into various Forms, for divers Uses; as Guns, Bells, Statues, Bombs, Types or Printing Characters, and other small Works, as Candlesticks, Bits, Buckles, &c.

The Word is form'd of the *French fondre*, to melt, or fuse. In the *Roman Law* they are call'd *Statuarii*.

From the different Productions, or Works of the *Founders*, they are differently denominated, as *Founders of small Works; Bell Founders; Gun Founders; Letter Founders; and even Carvers, or Statuarii*.

What belongs to each, see under the Article *FOUNDRY*. **FOUNDER**, in the Sea Language; A Ship is said to founder at Sea, when by an extraordinary Leak, or by a great Sea breaking in upon her, she is so filled with Water, that she cannot be freed of it; nor is she able to swim under it, but sinks with the Weight thereof.

FOUNDERING, in the Manage, a Disorder in Horses, whereof there are two Kinds, viz. in the Feet, and in the Chest.

Foundering in the Feet, arises from hard Riding, sore Labour, great Heats, sudden Colds, &c. which inflame the Blood, melt the Greate, and make it descend downward to the Feet, and there fetter; which causes such a Numbness, and pricking in the Hoof, that the Horse has no Sense or Feeling thereof, being hardly able to stand; or when he does, shaking and trembling, as if he had an Ague.

A Horse may likewise be foundered by wearing straight Shoes, and travelling upon hard Ground.

It may be known when he is foundered on his Forefeet, and not his Hindfeet, by his treading only on his Hindfeet, and sparing the other; or his going crouching and crippling on his Buttocks.

Sometimes, tho' rarely, he is foundered on his Hindfeet, and not his Fore; which is known by his leaning weak behind, and resting as much as possible on the Forefeet.

The general Methods of curing this Distemper, are first by paring all the Horse's Soles, so thin that the Quick may be seen; then bleeding him well at every Toe; stopping the Vein with Tallow and Rosin; and having tack'd hollow Shoes on his Feet, stopping them with Bran, Tar, and Tallow, as boiling hot as may be; which is to be renew'd once in two Days, for a Week together; after which he is to have good Exercise.

Or, after he is pared thin, and let Blood at the Toes, his Feet are to be stop'd with Cows Dung, Kitchen Fee Tar, and Soot holl'd together, and pour'd boiling hot into them.

Foundering in the Body, befalls a Horse by eating too much Provender suddenly, when too hot; as also by drinking too much upon travelling, when he is hot, and riding him after it.

The Effect of which, is, that his Body is oppress'd with ill Humors, which take away his Strength, and put him in such Condition, that he can neither go, nor bow his Joints; and being once laid, cannot rise again, &c. His Legs swell; and soon after begin to peel: He has a dry Cough, which makes his Eyes water; his Nose runs with white phlegmatic Matter, &c.

FOUNDRY, or **FOUNDERY**, the Art of melting and casting all sorts of Metals, particularly Brass, Iron, Bell Metal, &c. See *METAL, FUSION, &c.*

The Word is also us'd for a Place, or Work-house, furnish'd with Furnaces, or Forges for this Purpose. See *FURNACE*.

Foundry of Small Works, or the Manner of Casting in Sand.

The Sand us'd by the *Founders*, in casting of Brass, &c. is yellowish, pretty soft, and greasy; but after it has been us'd, becomes quite black, by reason of the Charcoal Dust

us'd in the Moulds. Every time they would use this Sand, they work and tow it several times over in a Board about a Foot square, plac'd over a kind of Trunk, or Box, into which it may fall from off the Board. This Tewing is perform'd with a Roller, or Cylinder, about two Foot long, and two Inches in Diameter; and a kind of Knife, made of the Blade of a Sword: With these two Instruments they alternately roll and cut the Sand, and at length turn it down into the Box under a neath.

Then, taking a wooden Board, or Table, of a Length and Breadth proportional to the Quantity of Things to be cast; round this they put a Frame, or Ledge, and thus make a sort of Mould. The Mould they fill with the Sand before prepar'd, and a little moisten'd. This done, they take wooden, or metalline Models, or Patterns of the Things intended to be cast; apply them on the Mould, and press them down into the Sand, so as to leave their Form indented. Along the Middle of the Mould is laid half a little Cylinder of Brass, which is to be the Master Jet, or Canal for running the Metal; being so dispos'd as to touch the Ledge at one Side, and only to reach to the last Pattern on the other. From this are plac'd several lesser Jets, or Branches, reaching to each Pattern, whereby the Metal is convey'd thro' the whole Frame.

This first Frame thus finish'd, they turn it upside down, to take out the Patterns from the Sand: In order to which they first loosen them a little all round, with a small cutting Instrument.

After the same manner they proceed to work the Counter Part, or other Half of the Mould, with the same Patterns, in a Frame exactly like the former; excepting that it has Pins, which entering Holes, corresponding thereto in the other, make, that when the two are join'd together, the two Cavities of the Pattern fall exactly on each other.

The Frame thus moulded, is carried to the Founder, or Melter, who after enlarging the principal Jet, or Canal of the Counter Part, with a kind of Knife, and adding the Cross Jets, or Canals to the several Patterns in both, and sprinkling them over with Mill Dust, sets them to dry in a Furnace.

When both Parts of the Mould are sufficiently dry'd, they join them together, by means of the Pins; and to prevent their starting or slipping aside by the Force of the Metal, which is to come in flaming hot thro' a Hole contriv'd at the Master Jet, they lock them in a kind of Press, either with Screws; or, if the Mould be too big, with Wedges.

The Moulds thus put in Press, are rang'd near the Furnace, to be in Readiness, to receive the Metal as it comes out of the Crucible.

While the Moulds are thus preparing, the Metal is put in Fusion in an earthen Crucible, about ten Inches high, and four in Diameter.

The Furnace wherein the Fusion is made, is much like the Smith's Forge; having like that a Chimney, to carry off the Smoak; a pair of Bellows, to blow up the Fire; and a Massive, or Hearth, where the Fire is made, and the Crucible plac'd. 'Tis the Use of this Massive, that chiefly distinguishes the Furnace from the Forge. See *FORGE*.

In the Middle thereof is a square Cavity, ten or twelve Inches wide, which goes to the very Bottom. It is divided into two, by an iron Grate: The upper Partition serves to hold the Crucible and the Fuel; and the lower, to receive the Ashes.

When the Fuel, which is to be of dry Wood, is pretty well lighted, they put the Crucible full of Metal in the Middle, and cover it with an earthen Lid: And to increase the Force of the Fire, beside blowing it up with the Bellows, they lay a Tile over part of the Aperture or Cavity of the Furnace.

The Metal being brought to a *Floor*, they fill the Crucible with pieces of Brass, beaten in a Mortar. To put them in, they make use of a kind of iron Ladle, with a long Shank at the End thereof, form'd into a kind of hollow Cylinder, out of which the Ball is drop'd.

Nothing, now, remains, but for the Founder to take the Crucible out of the Fire, and carry it in a Pair of iron Tongues (whose Feet are bent, the better to embrace the Top of the Crucible) to the Mould: Into which he pours it, through the Hole answering to the Master Jet of each Mould.

Thus he goes successively from one to another, till his Crucible is emptied, or there is no Matter enough left for another Mould.

Then, casting cold Water on the Moulds; they take the Frames out of the Presses, and the Cast-works out of the Sand, which they work again for another Casting. Lastly, they cut off the Jets, and sell, or deliver the Work to those who bespeak it, without any further repairing.

FOUNDRY of Statues, Great Guns, and Bells.

The Art of Casting Statues in Brass, is very ancient; In-fomuch that its Origin was too remote and obscure, even for the Research of *Pliny*, an Author admirably skill'd in discovering the Inventors of other Arts.

All we can learn for certain, is, that it was practic'd in all its Perfection first among the *Greeks*, and afterwards among the *Romans*: And that the Number of Statues consecrated to the Gods and Hero's, surpass'd all Belief.

The single Cities of *Athens*, *Delphos*, *Rhodes*, &c. had each 5000 Statues; and *Marcus Scaurus*, tho' only *Edile*, adorn'd the *Circus* with no less than 4000 Statues of Brass, for the time of the *Green-faw* Games.

This Taste for Statues was carried to such a Pitch, that it became a Proverb, That in *Rome* the People of Brass were not less numerous than the *Roman* People.

Among us, the casting of Statues was but little known, or practic'd before the Seventeenth Century. See STATUE.

As to the Casting of Guns, 'tis quite Modern; and it were perhaps to be wish'd, we were as ignorant of it as the *Antients*.

All the Authors agree, that the first Canon were cast in the fourteenth Century; tho' some fix the Event to the Year 1358; and others to 1380. See CANON, ORDNANCE, &c.

The Casting of Bells is of a middle Standing, between the other two.

The Use of Bells is certainly very ancient in the Western Church; and the same were likewise us'd in the Church of the East. But at present *Fauvel* assures us, in his second Account of *Egypt*, he had found but one Bell in all the Eastern Church, and that in a Monastery in the upper *Egypt*. See BELL.

The Matter of these large Works is rarely any simple Metal, but commonly a Mixture of several, as Brass, Bell Metal, &c. We shall here give the Process in the Foundry of each.

Method of casting Statues, or Figures.

There are three things chiefly requir'd in casting of Statues, Busts, Basso-Relievo's, Vases, and other Works of Sculpture; viz. The Mould, Wax, and Shell or Coat.

The Mould, or Core, (thus call'd from *Cava*, as being in the Heart, or Middle of the Statue) is a rude, lumpy Figure, a little resembling the Statue intended. 'Tis rais'd on an iron Grate, strong enough to sustain it, and is strengthen'd withinside by several Bars or Ribs of Iron.

It may be made indifferently of two sorts of Matter, at the Discretion of the Workmen, viz. Pottery Earth mix'd up with Horſe Dung and Hair; or of Plaster of Paris, mix'd with fine Brick Dust.

The Use of the Mould in Statues is to lessen the Weight, and save Metal. In Bells it takes up all the Inside, and preserves the vacant Space where the Clapper is hung. In Great Guns it forms the whole Barrel, from the Mouth to the Breech: And in Mortars, the Barrel, and Chamber.

The Wax is a Representation of the intended Statue in Wax.

If it be a piece of Sculpture, the Wax must be all of the Sculptor's own Hand, who usually fashions it on the Mould itself. Tho' it may be wrought a-part in Cavities moulded, or form'd on a Model, and afterwards dispos'd and arrang'd on the Ribs of Iron over the Grate, as before; filling the vacant Space in the Middle with liquid Plaster, and brick Dust; by which means the Mould, or Core is form'd in Proportion as the Sculptor carries on the Wax.

When the Wax (which is to be the intended Thickness of the Metal) is finish'd, they fit little waxen Tubes perpendicularly to it, from Top to Bottom; to serve both as Jets for the Conveyance of the Metal to all Parts of the Work, and as Vent Holes, to give Passage to the Air, which would otherwise occasion great Disorder, when the hot Metal came to encompass it. By the Weight of the Wax us'd herein, is that of the Metal adjust'd; ten Pounds of this last being us'd to one Pound of the former.

The Work brought thus far, wants nothing but to be cover'd with its Shell; which is a kind of Coat, or Crust laid over the Wax; and which being of a soft Matter, and even at first liquid, easily takes and preserves the Impression of every Part thereof, which it afterwards communicates to the Metal, upon its taking the Place of the Wax between the Shell and the Mould.

The Matter of this outer Cover, or Shell, is varied according as different Lays, or Strata are apply'd. The first is a Composition of putty and old Crucibles well ground, and sifted, and mix'd up with Water, to the Consistence of a Colour fit for Painting. Accordingly, they apply it with a Pencil, laying it seven or eight times over; letting it dry betwixt whiles. For the second Impression they add Horſe Dung, and natural Earth to the former Composition: The third Impression is only Horſe Dung and Earth. Lastly,

the Shell is finish'd by laying on several more Impressions of this last Matter made very thick with the Hand.

The Shell thus finish'd is secur'd and strengthen'd by several Bands or Girts of Iron wound around it at half a Foot's Distance from one another, and fill'd at the Bottom to the Grate under the Statue, and a-top to a Circle of Iron, where they all terminate.

Here it must be observ'd, that if the Statue be so big, that it won't be easy to move the Mould when thus provided, it must be wrought on the Spot where it is to be cast.

This is perform'd two ways: In the first, a square Hole is dug under Ground, much bigger than the Mould to be made therein; and its Insides lined with Walls of Free-stone or Brick. At the Bottom is made a Hole of the same Materials, with a kind of Furnace, having its Aperture outwards. In this is a Fire to be lighted, to dry the Mould, and afterwards melt the Wax. Over this Furnace is plac'd the Grate; and on this the Mould, &c. framed as above explain'd. Lastly, at one of the Edges of the square Pit is made another large Furnace to melt the Metal, as hereafter mention'd.

In the other way, 'tis sufficient to work the Mould above Ground; but with the same Precaution of a Furnace and Grate underneath. When finish'd, four Walls are to be run up around it; and by the Side thereof a Massive made for a melting Furnace.

For the rest, the Method is the same in both.

The Mould being finish'd and inclos'd between four Walls, whether under Ground, or above it; a moderate Fire is lighted in the Furnace under it; and the Hole cover'd with Planks, that the Wax may melt gently down, and run out at Pipes contriv'd for the purpose at the Foot of the Mould, which are afterwards very exactly clos'd with Earth, as soon as all the Wax is carry'd off.

This done, the Hole is fill'd up with Bricks thrown in at random, and the Fire in the Furnace augmented, till such time as both the Bricks and the Mould become red hot; which ordinarily happen in 24 Hours. Then, the Fire being extinguish'd, and every thing cold again, they take out the Bricks, and fill up their Place with Earth, moisten'd, and a little beaten, to the Top of the Mould, in order to make it the more firm and steady.

Things in this Condition, there remains nothing but to melt the Metal, and run it into the Mould.

This is the Office of the Furnace above; which is made in manner of an Oven, with three Apertures; one to put in the Wood, another for a Vent, and a third to run the Metal out at. From this last Aperture, which is kept very close all the time the Metal is in Fusion, a little Tube or Canal is laid, whereby the molten Metal is convey'd into a large earthen Basin over the Mould, into the Bottom of which all the big Branches of the Jets, which are to carry the Metal into all the Parts of the Mould, are insert'd.

It must be added, that these Jets are all terminat'd, or stop'd with a kind of Plugs, which are kept close, that upon opening the Furnace, the Brass, which gushes out like a Torrent of Fire, may not enter any of them, till the Basin be full enough of Matter to run into them all at once: Upon which occasion they pull out the Plugs, which are long iron Rods, with a Head at one End capable of filling the whole Diameter of each Tube. The Hole of the Furnace is open'd with a long piece of Iron, fitted at the End of each Pole; and the Mould filled in an Instant.

The Work is now finish'd; at least so much as belongs to the Casting; the rest being the Sculptor's or Carver's Business; who, taking the Figure out of the Mould and Earth, it is encompass'd withal, saws off the Jets wherewith it appears cover'd over, and repairs it with Instruments proper to his Art, as Chisels, Gravers, Pancheons, &c.

Bell Foundry, or the Manner of casting Bells.

What has been hitherto shewn of the Casting of Statues, holds, in proportion, of the Casting of Bells: All that there is particular in these latter, is as follows.

First, then, the Metal is different; there being no Tin in the Metal of Statues; but no less than a Fifth Part in that of Bells. Secondly, the Dimensions of the Mould, or Core, and the Wax of Bells, especially if it be a Ring of several Bells that is to be cast, are not left to Chance, or the Caprice of the Workman; but must be measur'd on a kind of Scale, or Diapason, which gives the Height, Aperture, and Thickness necessary for the several Tones required.

It need not be added, that 'tis on the Wax, that the several Mouldings, and other Ornaments and Inscriptions to be represented in Relief on the Outside of the Bell, are form'd.

The Clapper, or Tongue, is not properly a Part of the Bell, but is furnish'd from other Hands.

In *Europe*, it is usually of Iron, with a large Head at the Extreme, and is suspended in the Middle of the Bell.

In China it is only a huge wooden Mallet, struck by Force of Arm against the Bell: Whence they can have but little of that Concordancy to muchad mir'd in some of our Rings of Bells. The Chinese have an extraordinary way of increasing the Sound of their Bells, viz. by leaving a Hole under the Canon; which our Bell Founders would reckon a Defect.

The Proportions of our Bells differ very much from thosc of the Chinese. In ours, the modern Proportions are to make the Diameter fifteen times the Thickness of the Ledge, and twelve times the Height.

The Manner of casting great Guns, or Pieces of Artillery.

The Casting of Canons, Mortars, and other Pieces of Artillery, is perform'd like that of Statues and Bells: Especially as to what regards the Mould, Wax, Shell, Furnaces, &c.

As to the Metal, it is somewhat different from both; as having a Mixture of Tin, which is not in that of Statues; and only having half the Quantity of Tin that is in Bells, i. e. at the rate of ten Pound of Tin, to an hundred of Copper. A Canon is always shap'd a little Conical, being thickest of Metal at the Breech; where the greatest Effort of the Gunpowder is made, and diminishing thence to the Muzzle: So that if the Mouth be two Inches thick of Metal, the Breech is six.

Its Length is measur'd in Callipers, i. e. in Diameters of the Muzzle. Six Inches at the Muzzle require 20 Callipers, or ten Feet in length: There is about $\frac{1}{4}$ of an Inch allow'd Play for the Ball.

Letter Foundry, or the Manner of casting Printing Letters.

The Invention of Printing Letters we shall speak of under the Articles PRINTING, and LETTER.

Their Difference, Kind, &c. has already been explain'd under the Articles CHARACTER, &c.

The two Things principally to be regarded in the casting of Letters, are the Matter, and the Matrices.

The Matter is a Compound Metal; partly Copper, and partly Lead, mix'd in a certain Proportion, which every Letter Founder regulatcs at his own Discretion, and to which he frequently adds a certain Quantity of some other Metal or Mineral, as his Experience directs him, to render his Composition the harder.—

The most usual Proportion of the two Metals, is a hundred Pound of Lead to twenty or twenty five Pound of Brass. Some (tho' not the best Founders) use Iron, instead of Brass; in the Proportion of a hundred Pound of Lead, to thirty, or thirty five of Iron.—

These Metals are melted separately in large Crucibles; the Brass, or Iron with Antimony, and the Lead by it self. When in Fusion, they are mix'd together: This Fusion, and Mixture are the most laborious Parts of the Letter Founders Art.

The Matrices of the Letters are Pieces of Copper, whereon the Impression of the intended Character has been cut, or struck in Creux, by means of Punchions, &c. graven in Relief. See MATRICE, PUNCHION, &c.

Each Letter has its proper Matrix; and there are particular ones for Points, Virgula's, Figures, Rules, Head-pieces and other Ornaments of Printing: Excepting the Quadrats, which being only of Lead, and not intended to leave any Impression, are cast without Matrices, and only in Moulds: And each Matrice has its Punchion, made of Steel, or Iron, well temper'd. See ENGRAVING IN STEEL.

The Matrices being struck, and touch'd up, or repair'd, where needful, are put each at the End of an iron Mould, inclos'd between two thin pieces of Board, two or three Inches square; the two upper Angles being cut off, so as to compose an irregular Hexagon.

The principal Parts of these Moulds, which, as already mention'd, are hid between the pieces of Wood; are 1^o Two Steel Plates, with each its Screw, to keep them fast, at a distance from the Boards. 2^o Long Pieces. 3^o A Piece call'd the Blank, which is what properly forms the Body of the Character, and at the Extremity whereof the Matrice is put. 4^o A Jet; which is a sort of little Funnel, to receive and convey the melted Matter to the Matrice. 5^o A Register, serving to rejoin the two Parts of the Mould, after they have been open'd to take out the Letter, when cast.

On the Outside of the Moulds are three other Pieces, viz. the Bow, at bottom; and two Hooks a-top. The Bow is a thick Steel Wire, two or three Lines in Diameter; and eight or ten Inches long, bent in a manner of a Bow, or Arch; whereof the lower piece of Wood is as it were the Chord, or String. One End is fasten'd to the Board, and the other, which is left at liberty, serves, by its Spring, or Elasticity to press and retain the Matrice of the Chara-

cter against the Extremity of the Blank, where the melted Matter running in, makes the Impression.

The Hooks a-top of the Mould are also of Wire, about the same Size with the Bow, and about an Inch and half long; being fasten'd, one of them to one Board, and the other to the other. Their Use is, to open the Mould, and to take out the Character when cast, so as the Workman may not be incommoded with the Heat.

Every thing belonging to the Mould being thus dispos'd, they begin to prepare the Matter.

The Furnace, whereon the Basin is plac'd for the Metal to be melted in, is made of the same Matter as Crucibles. It is usually 18 or 20 Inches high, and ten or twelve in Diameter. An iron Grate horizontally plac'd, divides it into two: The lower Part serves to hold the Ashes, and is furnish'd with a Hole to let in Air. The Wood is put in the upper Part, thro' an Aperture made over the Grate. An earthen Pipe serves to carry off the Smoke out at a Window, near which the Furnace is ordinarily plac'd. Lastly, a Stone, or wooden Stool serves to support the Furnace, and raise it to a proper Height for the Workman, to work standing.

Over the Furnace is plac'd the Melting Basin, or Copper. It is about nine Inches in Diameter, and takes up the whole Aperture a-top; being even luted to it all round, with Pottery Barbs. Its Matter is a kind of Pot Metal; and that it may be fit for melting both hard and soft Metals, it is divided into two equal Parts, by a perpendicular Partition.

In this Basin they melt only the Matter already prepar'd; that is, the Mixture or Composition made in the Crucibles above mention'd. A little iron Ladle serves to skim off the Scoria or Impurities from the Surface of the melted Metal. These Scoriae are not all lost, but serve to melt over again.

Two Workmen are usually employ'd at each Furnace. Each of them has his Part of the Basin to empty; and they have a Table or Bench in common, where they lay the Characters as fast as they are cast.

To run the Metal into the Mould, the Founder holds it in his left Hand; and in his right a little iron Ladle with a wooden Handle, containing just enough for one Letter.

Having now fill'd this Ladle with liquid Metal, he pours it into the Jet, or Funnel, whose Aperture is in the Middle of the two Hooks of the Mould; and thrusting his Hand briskly forward wherewith he holds the Mould, makes the Metal run into the Matrix of the Character; which without such Motion might grow cold before it arriv'd there.

He then unbends the Bow, opens the Mould, and with one of the Hooks takes out the Character; and without Loss of Time thrusts it again, replaces the Matrice, and casts a new Letter. 'Tis incredible with what Expedition and Address all this is done.

The Letter being cast, they view it, before they break off the Jet; to see whether it be perfect; otherwise to throw it among the Refuse of the Foundry.

If it be found complete, the Jet is broke off; the superfluous Metal occasion'd by the Mould's not being exactly closed, taken off with a Knife; the long-tail'd Letters, as f and s hollow'd at bottom, to give room for the Massive of the other Letters to be plac'd underneath.

With the same Knife they scrape the Letter, to smooth its two broadest Sides, or Faces, and fit them to be rub'd on the Stone. They take care only to rub those Sides; for fear of damaging a Notch on one of the other Sides, which is to show the Sides to the Compositor when he sets his Forms.

The Stone they grind them on, is a sort of hard, coarse-grain'd Free-stone, plac'd horizontally; before which the Workman sits. To save his Fingers from the Friction, he has a kind of Finger-stalls, made of some old piece of Leather; with which he covers the two Fingers next the Thumb: With these he works each Side of the Letter backwards and forwards: To shift Sides, he makes use of the Thumb, but without discontinuing the Motion; so that the By-stander would easily be deceiv'd, and be ready to swear they had all the while rub'd on the same Side.

The Letters thus ground are plac'd on the Compositor, to be scrap'd and brought to the proper Thickness on the two other Sides, viz. that of the Notch, and its Opposite. This they call *Compositing*.

The Compositor is a wooden Ruler, with a little Ledge at Bottom, against which the Letters are rang'd. On the same Instrument the Quadrats, Rules, Borders, &c. are adjust'd.

When the Letters are compos'd, they remain to be justified, both as to Thickness and Height. In order to this, they use a little Copper-plate, which is their Level. The Justification, as to Thickness, is made on a piece of Marble; and that for the Height, on an iron Compositor. The Justification of the Height, is guided by the *m* of some Body of Characters already justified.

Letters are said to be of their *just* Height, when the Part of the Plate, or Level bears equally on the standard *m* plac'd on its Foot, in the little Compositor, and on the Face of two Letters newly cast plac'd a-side of it to be justified: As to the Thickness, the Justification is perform'd by laying the Standard Letter flat on the little Marble, and two new Letters a-side of it; and thus levelling the three, with the Plate.

All that remains, is to get ready the Letters, i. e. to cut the Foot, or rather hollow it, and make that sort of Groove which every Letter has at bottom, precisely opposite to the Eye or upper Part, or Face of the Letter.

In order to this they turn a long Line of them upside down in the Justificator; which is an Instrument of polish'd Iron or Steel, consisting of two long Pieces join'd together by Screws. Between these two, they enclose as many Letters as it will hold, all plac'd against each other in the same Situation, as when compos'd for Books; excepting that the Face in the former case is downwards, and the Foot a-top. When the Justificator is full of Letters, they set it on the Table of the Cutter, between two Checks of Wood; which pressing it very tight, enable the Workman to run his Plane along the Line of the Letters thus inverted.

This Plane consists of three Parts; two of Steel, and the third Wood. Of the Steel ones, that at bottom consists of two moveable Steel Plates, which may be drawn closer, or set further off, at pleasure, by means of two Screws. Within the Interval between the two, they pass the Feet of the Row of Letters; and thus is the Plane kept from deviating.

The second Part of the Plane, answering to the Bit of Steel in the common Planes, consists of two Branches, and two Screws, which serve to raise or let down the Steel, as the Groove is to be cut deeper, or shallower. The Position of this piece of Steel, which is four or five Inches long, is almost perpendicular.

The last Part of the Plane, which is Wood, serves to join the other two. Its Form is that of an Arch: One End of it is fasten'd to the posterior Extreme of the Plates, and the other to the Branches, which carry the Bit of Steel: So that the three Parts together make a kind of Triangular, voided in the Middle.

The Cutter is a Steel Instrument, with a wooden Handle, in manner of a Chissel; serving to pare off the rough Wire Edge of the Letters when they are got ready.

The Letters are now fit for the Printer's Use. See PRINTING.

The Perfection of Letters thus cast, &c. consists in their being all severally square and flat, on every side; and all, generally of the same Height, and evenly lined, without sloping one way or other; neither too big in the Foot, nor the Head; well groov'd, so as the two Extremes of the Foot contain half the Body of the Letter; well ground, barb'd, and scrap'd; with a sensible Nouch, &c.

The Letter Founders have a kind of Policy or Catalogue to regulate the Number of each kind of Letters in a Found. See FOUNT.

FOUNT, or FONT, among Printers, &c. a Set, or Quantity of Characters, or Letters of each Kind; cast by the Letter Founder, and sortet.

Thus we say, A Founder has cast a *Font* of *Pica*, of *Englisch*, of *Pearl*, &c. meaning, he has cast a Set of Characters of these Kinds. See LETTER, LETTER FOUNDRY, &c.

A Complete *Font* does not only include the running Letters; but also *Mainpieces*, or Large, and Small *Capitals*, Single Letters, *Double Letters*, *Points*, *Commas*, *Lines*, *Borders*, *Head-pieces*, *Tail-pieces*, and *Numeral Characters*.

The Letter Founders have a kind of List, or Tarif, whereby they regulate their *Fonts*.

The Occasion thereof is, that some Letters being in much more use, and oftener repeated than others; their Cells, or Cases should be better fill'd and stor'd than those of the Letters which do not return so frequently.

Thus the *o* and *i* for instance, are always in greater Quantity than the *k* or *z*.

This Difference will be best perceiv'd from a proportional Comparison of those Letters with themselves, or some others.

Suppose a *Font* of a hundred thousand Characters, which is a common *Font*: Here the *a* should have five thousand; the *c* three thousand; the *e* eleven thousand; the *i* six thousand; the *m* three thousand; the *k* only thirty; and the *x*, *y* and *z* not many more.

But this is only to be understood of the Letters of the Lower Case; those of the Upper having other Proportions, which it would be here too long to insist on. See LETTER, CHARACTER, LETTER FOUNDRY.

FOUNTAIN, FONS, in Philosophy, a *Spring*, or Source of living Water, rising out of the Ground.

For the Phænomena, Theory, Origin, &c. of Springs or Fountains, see SPRING.

Among the Antients, the *Fountains*, or Sources of Rivers were held sacred, and even worshipp'd as a kind of Divinities.

Seneca observes as much in his Forty first Epistle: And *Cicero* L. III. *de Nat. Deor.* c. 20. mentions, that the *Roman* Priests and *Augurs* us'd in their Prayers and Invocations to call on the Names of the *Tiber*, and other Rivers, Brooks and Springs about *Rome*. The seventh Inscription in p. XCIV. of *Gruter* has, FONTI DIVINO ET GENIO NUMINIS FONTIS. It was a Point of Religion, not to disturb or muddy the Waters in Washing or Bathing. See FONTINALIA.

Tacitus gives an Instance hereof in *Nero* *Annal.* L. IV. c. 22. And *Servius* *Antiq. Rom. Syntag.* c. 1. p. 167.

FOUNTAIN, or Artificial FOUNTAIN, in Hydraulicks, a Machine, or Contrivance, whereby the Water is violently spouted, or darted up; call'd also *Jet d'Eau*. See JET d'Eau, FLUID, &c.

There are divers kinds of these Artificial *Fountains*; some founded on the Spring, or Elasticity of the Air; and others on the Pressure or Weight of the Water, &c.

The Structure of each hereof, being very pretty and curious, and affording a good Illustration of the Doctrine of Hydraulicks and Pneumatics, shall be here explain'd.

Construction of an Artificial FOUNTAIN, playing by the Spring, or Elasticity of the Air.

A Vessel, proper for a Reservoir, as A B, *Tab. Hydraulicks* Fig. 17. is provided of Metal, Glass, or the like; ending in a small Neck c, a-top. Thro' this Neck a Tube' is put, c a, traversing the Middle of the Vessel, till its lower Orifice, d, nearly, but not absolutely, reach the Bottom of the Vessel; the Vessel being first half fill'd with Water. The Neck is so contriv'd, as that a Syringe, or condensing Pipe may be screw'd upon the Tube; by means whereof, a large Quantity of Air may be intruded thro' the Tube into the Water; out of which it will disengage it self, and emerge into the vacant Part of the Vessel, and lie over the Surface of the Water, C D.

Now, the Water here contain'd, being thus press'd by the Air, which is e. gr. twice as dense as the external Air; and the Elastic Force of Air being equal to its gravitating Force: The Effect will be the same as if the Weight of the Column of Air over the Surface of the Water, were double that of the Column, pressing in the Tube; so that the Water must, of necessity, spout up, thro' the Tube, with a Force equal to the Excess of Pressure of the included, above that of the external Air. See AIR.

Construction of an Artificial FOUNTAIN, playing by the Pressure of the Water.

Having the Convenience of a Fund, or Reservoir of Water, in a Place considerably higher than that where the *Fountain* is to be (whether that Fund has been plac'd there by Nature; or whether it have been rais'd for the Purpose, by a proper Engine, as a Pump, Syphon, Spiral Screw, or the like) from the Reservoir lay vertical Tubes for the Water to descend thro'; and to these vertical Tubes, fit other horizontal ones, under Ground, to carry the Water to the Place where the *Fountain* is to play. Lastly, from these horizontal Tubes erect other vertical ones, by way of Ajustages, Jets, or Spouts; their Altitude being much less than that of the Tubes whereby the Water was brought to the horizontal ones.

Then will the Water, by the Pressure of the superincumbent Column, be spouted up at these Jets; and that to the Height, or Level of the Water in the Reservoir; and this, howsoever any of the Tubes be bent or incurvated: *The Demonstration hereof, see under FLUIDS.*

Thus may Water be spouted to any given Height at pleasure: The Tubes may be so proportion'd as to yield any given Quantity of Water, in a given Time; or several Tubes of the same *Fountain* may be made to yield Water in any given Ratio: Or, lastly, different Tubes may project the Water to different Altitudes. Rules, for all which, the Reader will find among the Laws of FLUIDS.

These aerial, or aquatic *Fountains*, may be applied in various manners; so as to exhibit various Appearances: And from these alone, arise the greatest Part of our artificial Water-works.

An Instance or two, will not be disagreeable.

A FOUNTAIN that shall spout the Water in various Directions.

Suppose the Vertical Tube, or Spout in which the Water rises, to be A B (*Tab. Hydraulicks*, Fig. 18.) into this, fit several other Tubes; some Horizontal, others oblique; some inclining, others reclining, as O P, M N, F L, &c.

Then, as the Water retains the Direction of the Aperture, thro' which it is spouted: That, issuing thro' A, will rise perpendicularly; and that thro' L, H, N, P, E will describe Arches of different Magnitudes, and tending different ways.—

Or thus: Suppose the Vertical Tube A B, Fig. 19. thro' which the Water arises, to be stop'd a-top, as in A; and instead of Pipes, or Jets, let it be only perforated with little Holes all around, or only half, its Surface. Then will the Water spū forth in all Directions thro' the little Apertures, and to a Distance proportional to the Height of the Fall of the Water.—

And hence if the Tube A B be suppos'd the Height of a Man, and be furnish'd with an Epistomium, or Cock at C: Upon opening the Cock, the Spectators, dreaming of no such Matter, will be cover'd with a Shower.

It must be here observ'd, that the Diameters of the Apertures, by which the Water is emitted, must be considerably less than those of the Tubes in which the Water is brought; lest the Resistance of the Air, and other Impediments, specify'd under FLUID, break the Force of the Water.—

A FOUNTAIN playing by the Draught of the Breath.

Suppose A B, Fig. 20. a Glass or Metal Sphere; wherein is fitted a Tube, C D, having a little Orifice in C, and reaching almost to D, the Bottom of the Sphere. If now the Air be suck'd out of the Tube C D, and the Orifice C be immediately immerg'd under cold Water; the Water will ascend thro' the Tube into the Sphere.

Thus proceeding, by repeated Exductions, till the Vessel be above half full of Water; and then applying the Mouth to C, and blowing Air into the Tube; upon removing the Mouth, the Water will spū forth.

Or, if the Sphere be put in hot Water; the Air being thereby rarify'd, will make the Water spū as before.

This kind of Fountain is call'd *Pila Herois*, or *Hero's Ball*, from the Name of its Inventor.

A FOUNTAIN, the Stream whereof raises, and plays a Brass Ball.

Provide a hollow Brass Ball A, Fig. 21. made of a thin Plate, that its Weight may not be too great for the Force of the Water. Let the Tube B C, through which the Water rises, be exactly perpendicular to the Horizon.

Then, the Ball being laid in the Bottom of the Cup, or Basin B; will be taken up in the Stream, and sustain'd at a considerable Height, as A; alternately vibrating, or playing up and down.

Hence, as the Figure of the Ball contributes nothing to its reciprocal Rise, and Fall: Any other Body, not too heavy, may be substituted in lieu thereof; *e. gr.* a Bird with its Wings stretch'd forth.

But, note, that as 'tis necessary the Globe, when on the Descent, shou'd keep the same precise Perpendicular, wherein it rose (since otherwise it wou'd miss the Stream, and fall downright); such a Fountain shou'd only be play'd in a Place free from Wind.

A FOUNTAIN which spouts the Water in manner of a Shower.

To the Tube wherein the Water is to rise, fit a Spherical, or Lenticular Head, A B, Fig. 22. made of a Plate of Metal, and perforated a-top, with a great Number of little Holes.

The Water rising with Vehemence towards A B, will be there divided into innumerable little Threads, and afterwards broke, and dispersed into the finest Drops.—

A FOUNTAIN which spreads the Water in form of a Cloth.

To the Tube A B, Fig. 23. solder two Spherical Segments C, and D, almost touching each other; with a Screw E, to contract, or amplify the Interstice or Chink at Pleasure. Others chuse to make a smooth, even Nitch, in a Spherical, or Lenticular Head, fitted upon the Tube.

The Water spouting thro' the Chink, or Nitch, will expand it self in manner of a Cloth.

FOUNTAINS wherein the Water spouts out of the Figures of Men and other Animals.

Since Water may be deriv'd or convey'd by Tubes in any Situation; and always retains the Direction of the Aperture: All here requir'd, is to inclose Tubes within the Figures of Men, or other Animals, having their Orifices in those Parts whence the Water is to spū forth.

From the Principles hitherto laid down, it will be very easy to deduce whatever relates to the Furniture of Fountains, and the various Forms Water may be put into by their means: All depending on the Magnitude, Figure, and Direction of the Ajustages, or Apertures.—

A FOUNTAIN, which when it has done spouting, may be turn'd like an Hour-glass.

Provide two Vessels, L M, and N O, Fig. 24. to be so much the bigger as the Fountain is to play the longer; and plac'd at so much the greater Distance from each other, P N, as the Water is desir'd to spū the higher. Let B A C be a crooked Tube, furnish'd in C with a Cock; and F B D an other crooked Tube, furnish'd with a Cock in D. In I, and K are to be other lesser Tubes, open at both Ends, and reaching near to the Bottoms of the Vessels N O, and L M: To which the Tubes Q R, and S T are likewise to reach.

If, now, the Vessel L M be fill'd with Water; it will descend thro' the Tube B A, and upon opening the Cock C, will spū up near to the Height of K: And, after its Fall again, will sink thro' the little Tube I, into the Vessel N O, and expell the Air thro' the Tube Q O. At length; when all the Water is emptied out of the Vessel L M; by turning the Machine upside down, the Vessel N O will be the Reservoir, and make the Water spū up through the Cock D.

Hence, if the Vessels L M, and N O contain just as much Water as will be spouted up in an Hour's time; we shall have a spouting Clepsydra, or Water Clock, which may be graduated or divided into Quarters, Minutes, &c. as shewn under the Article CLEPSYDRA.

A FOUNTAIN that begins to play upon the lighting of Candles, and ceases as they go out.

Provide two Cylindrical Vessels, A B, and C D, Fig. 25. Connect them by Tubes, open at both Ends, K L, B F, &c. so that the Air may descend out of the higher, into the lower. To the Tubes solder Candlesticks, H, &c. And to the hollow Cover of the lower Vessel, C F, fit a little Tube, or Jet F E, furnish'd with a Cock G, and reaching almost to the Bottom of the Vessels. In G let there be an Aperture, furnish'd with a Screw, whereby Water may be pour'd into C D.

Then, upon lighting the Candles H, &c. the Air in the contiguous Tubes becoming rarify'd thereby; the Water will begin to spū thro' E F.

By the same Contrivance may a Statue be made to shed Tears upon the Presence of the Sun, or the lighting of a Candle, &c. All here requir'd, being to lay Tubes from the Cavity wherein the Air is rarify'd, to some other Cavities near the Eyes, and full of Water.—

FOUNTAIN, with regard to Architecture, is an Assemblage of Masonry, Sculpture, &c. either for the Decoration, or Convenience of a City, Garden, or the like.

Fountains acquire various Denominations, according to their Form, and Situation; as,

Spring FOUNTAIN, a kind of plain Spout, or Stream of Water, issuing out of a Stone, or Hole in a Wall, without any Decoration.

Such is the Fountain of *Trevi* at *Rome*.

Cover'd FOUNTAIN, a kind of Pavillion, built of Stone; either Insulate, and square; or round; or Multilateral; or back'd: And that, either with a Projecture, or Indenture: Inclosing a Reservoir, and spouting, or darting forth the Water thereof thro' one or more Cocks; in the Middle of a Street, Square, Garden, Court, or the like. Such is that in *Lincoln-Inn*, *London*.

Open FOUNTAIN, is any spouting Fountain, with a Basin, Cup, and other Ornaments; all open: As is frequent in our Gardens, and the Vineyards at *Rome*.

Spouting FOUNTAIN, or *Jet d'Eau*, is any Fountain; whose Water is darted forth impetuously thro' one, or more Jets, or Adjutages, and returns in Rain, Nets, Folds, or the like. See *JET d'Eau*.

Basin FOUNTAIN, is that with only a simple Basin, of any Figure whatever; in the Middle whereof is a Jet, or Spout, or perhaps a Statue; or even a Group of Figures: As in the Court of *Buckingham House*.

Cup FOUNTAIN, is that which beside a Basin, has likewise a Cup of one single piece of Stone, or Marble, supported on a Shaft, or Pedestal, and receiving a Jet, or Spout, rising out of the Middle thereof. As the Fountain in the Court of the *Vatican*; the Cup whereof is of Granite, and antique; being brought from the Baths of *Titus* at *Rome*.

Pyramidal FOUNTAIN, that form'd of several Basins, or Cups, rang'd in Stories over each other, and diminishing all the way; being supported by a hollow Stem, or Shaft.

As the Fountain of *Monte-Dragone* at *Frescati*: Or else supported by Figures, Fishes, or Consoles; the Water whereof in its Fall makes Nois in divers Stories, and represents a kind of Water Pyramid: As that at the Head of the Cascades at *Verjailles*.

Statuary FOUNTAIN, that which being open and insulated

lated, or even back'd, is adorn'd with one or more Statues, by way of finishing, or crowning: As the *Fountain of Loretta* at *Versailles*; and that of the Shepherd at *Caprarola*. There are also Statues, which spout forth Water at some of their Parts; or at Sea Shells, Vases, Urns, and other Attributes of the Sea.

Rustic Fountain, is that form'd, or enrich'd with Rock-work, Shell-work, Petrifications, &c.

Satyric Fountain, a kind of *Rustic Fountain*, in manner of a Grotto; adorn'd with Termini, Mascarons, Fauns, Sylvans, Bacchantes, and other Satyrical Figures, serving for Ornaments as well as Jets d'Eau.

Marine Fountain, that compos'd of Aquatic Figures, as Sea Divinities, Nalads, Tritons, Rivers, Dolphins, and other Fishes, and Shells. As the *Fountain of the Place Palestrina* at *Rome*; where a Shell supported by four Dolphins, serves as a Cup; and supports a Triton, that spouts Water out of his *Concha Marina*.

Naval Fountain, is that made in form of a Vessel. Such is that of the *Place d'Espagne* at *Paris*, representing a *Bark*: That at *Monte-Cavallo*, representing a *Galley*; or that before the *Vineyard Mattei* at *Rome*, resembling a *Boat*.

Symmetrical Fountain, that where the principal Ornaments are the Attributes, Arms, or Cognizances of the Person who erected it. As the *Fountain of St. Peter* in *Montorio*, resembling a *Cattle* flank'd with *Towers*; and *Dionysus*, representing the *Arms of Castile*: And some other *Fountains* at *Rome*; among which are the *Flower-de-Lis*, and the *Dove*, the Bearings of the Family of *Pope Innocent X.*

Arch'd Fountain, that whose *Bason* and *Jet* are plac'd perpendicularly under an *Arch*. Such are the *Fountains of the Colonnade*, and *Triumphal Water Arch* at *Versailles*.—

Fountain Pen, is a sort of *Pen*, contriv'd to contain a great Quantity of *Ink*, and let it flow by gentle Degrees; so as to supply the *Writer* a long time, without a Necessity of taking fresh *Ink*.—

The *Fountain Pen*, represented *Tab. Miscellany, Fig.* consists of divers Pieces *F G H* of *Brass*, *Silver*, &c. whereof the middle Piece *F* carries the *Pen*, which is screw'd into the Inside of a little *Pipe*; which again is folder'd to another *Pipe*, of the same *Figure*, as the *Lid G*; in which *Lid* is folder'd a *Male Screw*, for screwing on the *Cover*; as also for stopping a little *Hole* at the *Place*, and hindering the *Ink* from passing thro' it. As the other End of the Piece *F* is a little *Pipe*, on the Outside whereof the *Top Cover H* may be screw'd. In the *Cover* there goes a *Port Crayon*, to be screw'd into the last mention'd *Pipe*, in order to stop the End of the *Pipe*, into which the *Ink* is to be pour'd by a *Funnel*.

To use the *Pen*, the *Cover G* must be taken off, and the *Pen* a little *Shaken*, to make the *Ink* run more freely.

FOURCHEE, or **FOURCHY**, in Heraldry. A *Cross Fourchee* is that forked at the Ends. See **CROSS**.

Upton rather represents it as *Anchor'd*, the Extremities turning in a circular manner to sharp Points; whereas the true *Cross Fourchee*, i. e. forked, has its Forks compos'd of straight Lines, and blunt Ends.

FOURCHER, an ancient Law Term, signifying a putting off, prolonging, or delaying an Action.

As by hammering we draw out our Speech, not delivering that we have to say, in ordinary time, so by *fourching* we prolong a Suit, that might be ended in a shorter Space.

In *Westm. 1. cap. 41.* we have these Words: Coparceners and jointenants shall no more *fourche*, but only shall have one *Effoin*, &c. And *Anno 6 Ed. 1. cap. 10.* it is us'd in the same Sense; The Defendants shall be put to Answer without *fourching*, &c. In the *Latin* 'tis call'd *furcare*, and is us'd, Where a Man, and his Wife, or each of them cast a *Effoin*. 'Tis call'd *furcare*, because 'tis twofold. *Caveat vir & mulier implacitati, quod semper in Effoino alterius alter compareat, quando furcare possunt; & cum ultra non possint, conveniant coram Effoinia in suis locis: Alter autem eorum tantum suum Effoinium de malo lecti habere potest.* *Hengham Mag. cap. 9.*

FOURTH, in Music, one of the Harmonic Intervals, or Concords. See **CONCORD**.

The *Fourth*, is the Fourth, in order, of the Concords. It consists in the Mixture of two Sounds, which are in the Ratio of 4 to 3; i. e. of Sounds produc'd by Chords, whose Lengths are to each other as 4:3. See **CHORD**, and **INTERVAL**.

'Tis call'd *Fourth*, because containing four Terms, or Sounds between its Extremes; and three Degrees: Or, as being the *fourth* in the Order of the Natural Scale from the Fundamental. See **DEGREE**, and **FUNDAMENTAL**.

The Ancients call the *Fourth*, *Diatesarou*, and speak of it as the fifth and principal of all Concords; and yet the

Moderns find it one of the most imperfect. 'Tis so very barren, and jejune, that it affords nothing good, either by Multiplication, or Division. See **DIATESARON**.

The *Redundant Fourth* is a Discord compos'd of the Ratio's of 27 to 16; and of 4 to 5. See **DISCORD**.

FOUTGELD, or **FOOT-GELD**, antiently denoted an Armament, for not cutting out the Balls of great Dogs Feet, in the Forest. See **EXPEDITE**.

To be quit of *Foutgeld*, is a Privilege to keep Dogs within the Forest, unawful, without Punishment, or Controul.

FWL, in its general Sense, is of equal Import with *Bird*. See **BRD**.

Fowl, is in a more peculiar manner understood of *Poultry*; or the larger sort of Birds, both Domestic, and Wild; either bred up, or hunted for the Table. Such are *Turkeys*, *Geese*, *Cocks*, *Hens*, and *Ducks*, both wild and tame; *Pheasants*, *Partridges*, *Pidgeons*, *Snipes*, &c. See **POULTRY**.

Game Fowl, are a necessary Part of the Stock of a Country Farm; and yield considerable Service and Profit by their Eggs, Brood, Feathers, *Dung*, &c.

They may be kept at a very early Expence near any Highway side; as being able to shift for themselves the greatest Part of the Year, by their feeding on insects, Worms, Snails, Gleaning, or almost any thing eatable.

The oldest Hens are always the best for sitting; and the youngest for laying: But no sort will be good for either, if kept too fat.

The best Age to set a Hen for Chickens, is from two Years old to five; and the most proper Month to set them in, is *February*: Tho' it may be done to good purpose any time between that and *Michaelmas*. One Coo will serve ten Hens: A Hen sits twenty Days; whereas *Geese*, *Ducks*, *Turkeys*, sit thirty.

Backwheat, or *French Wheat*, or *Hemp-seed*, 'tis said, make them lay faster than any other Food: And the same *Backwheat*, either whole, or ground, and made into a Paste, makes them apter; tho' the common Food for that purpose is *Barley-meal*, or *Wheat-flower*, soak'd in *Milk*, or *Water*, made into a Paste, and cram'd down their Throats twice a day, till they will hold no more. A Goose will scarce sit on any, but her own Eggs: A Hen, indifferently on all.

The lightest colour'd *Geese* are the best: And those that begin to lay the soonest; as they have a Chance of hatching twice in one Year. They begin to lay in the Spring; and lay 12 or 16 Eggs. Green *Geese* are begun to be taken'd at a Month old; and will be fat in a Month more. Old *Geese* are chiefly fatten'd at six Months old, in, or after the Harvest. A wild Goose, if red footed, is old, and harry; but if white footed, and not harry, she is young.

When the Eggs are set under a Hen, or other *Fowl*, 'tis necessary to mark the upper sides thereof; and when she goes to feed, to note whether she minds to turn them up-side down, or not; that, if she neglect that Office, it may be done for her. See **EGG**, **FEATHER**, &c.

FWLING, the Art, or Craft of catching Birds with Nets, Birdlime, Decoys, and other Devices; as also of breeding up the same. See **POWL**, **NET**, and **BIRDLIME**.

FWLING is also us'd for the pursuing, and taking of Birds with *Hawks*, *Falcons*, and other Birds of Prey; more properly call'd *Falconry*. See **FALCONRY**.

FWLING Piece, a portable Fire Arm for the shooting of Birds. See **FIRE ARM**.

Of *Fowling Pieces*, those are reputed the best, which have the longest Barrel, viz. from $\frac{1}{2}$ Foot, to 6; with an indifferent Bore, under Harquebuss: Tho' for different Occasions they shou'd be of different Sorts, and Sizes. But in all, 'tis essential the Barrel be well polish'd and smooth within; and the Bore all of a *Figure*, from one End to another; which may be prov'd by thrusting in a piece of Wood, cut exactly to the Bore of the Muzzle, down to the Touch-hole.

FOX Hunting, see **FOX HUNTING**.

FRACTION, in Arithmetic, a Part, or Division of an Unite, or Integer: Or, a Number which stands in the relation to an Unite, a Part to its Whole.

The Word literally imports a Broken Number. See **NUMBER**.

Fractions are usually divided into *Decimal*, *Sexagesimal*, and *Vulgar*.—

For *Decimal*, and *Sexagesimal Fractions*, see **DECIMAL**, and **SEXAGESIMAL Fractions**.

Vulgar Fractions, called also *Simple Fractions*, are always express'd by two Numbers, the one wrote over the other, with a Line between them.

The lower, call'd the *Denominator of the Fraction*, denotes the Unite, or Whole, that is divided into Parts; and the upper, call'd the *Numerator of the Fraction*, expresses the Parts given in the present Calc. See **NUMERATOR**, &c.

Thus, two third Parts of a Line, or other Thing, are wrote $\frac{2}{3}$. Where the Denominator 3 shews, that the whole Line is suppos'd to be divided into three equal Parts; and the Numerator 2 indicates or assigns two of such Parts.

Again, twenty nine Sixtieths is wrote $\frac{29}{60}$; where the Numerator 29 expresses 29 Parts of an Integer divided into Sixty; and the Denominator 60 gives the Denomination to these Parts, which are call'd Sixtieths.

The real Design of adding the Denominator, is to shew what *aliquot Part* the broken Number has in common with Unity. See DENOMINATOR, &c.

In all Fractions, as the Numerator is to the Denominator; so is the Fraction it self; to the Whole, whereof it is a Fraction.

Thus, supposing $\frac{3}{4}$ of a Pound equal to 15s. 'Tis evident, that 3 : 4 :: 15 : 20. Whence it follows 1^o That there may be infinite Fractions of the same Value, one with another; Inasmuch as there may be infinite Numbers found, which shall have the Ratio of 3 : 4. See RATIO.

Fractions are either Proper, or Improper.

A Proper FRACTION is that where the Numerator is less than the Denominator; and consequently the Fraction less than the Whole, or Integer; as $\frac{3}{4}$.

An Improper FRACTION is, where the Denominator is either equal to, or bigger than the Numerator; and, of course, the Fraction, equal to, or greater than the Whole, or Integer, as $\frac{5}{4}$; or $\frac{7}{3}$; or $\frac{10}{10}$.

Fractions, again, are either Simple, or Compound.

Simple FRACTIONS are such, as consist of only one Numerator, and one Denominator; as $\frac{3}{4}$, or $\frac{7}{10}$, &c.

Compound FRACTIONS, call'd also Fractions of Fractions, are such as consist of several Numerators, and Denominators; as $\frac{3}{4}$ of $\frac{5}{6}$ of $\frac{7}{8}$ &c. &c.—

Of Fractions those are equal to each other, whose Numerators have the same Ratio to their Denominators. Those are greater, whose Numerators have a greater Ratio; and those less, which have less: Thus, $\frac{3}{4} = \frac{6}{8} = \frac{9}{12} = \frac{15}{20}$. But $\frac{3}{4}$ is greater than $\frac{2}{3}$; and $\frac{3}{4}$ less than $\frac{5}{6}$.

Hence, if both the Numerator, and Denominator of a Fraction, as $\frac{3}{4}$, be multiply'd, or divided by the same Number, as 2; the Facts in the former Case, $\frac{6}{8}$, and the Quotients in the latter, $\frac{3}{2}$, will constitute Fractions, equal to the first Fraction given.—

The Arithmetic of Fractions consists in the Reduction, Addition, Subtraction, and Multiplication thereof.

I. Reduction of FRACTIONS.

1^o To reduce a given whole Number into a Fraction of any given Denominator: Multiply the given Integer, by the given Denominator: The Factum will be the Numerator.

Thus we shall find $3 = \frac{30}{10}$; and $5 = \frac{40}{8}$; and $7 = \frac{70}{10}$ &c.

If no Denominator be given, the Number is reduc'd to a Fraction, by writing 1 underneath it, as a Denominator. Thus $\frac{3}{1}$, $\frac{4}{1}$, $\frac{5}{1}$.

2^o To reduce a given Fraction to its lowest Terms; i. e. to find a Fraction, equivalent to a given Fraction, ($\frac{3}{4}$) but express'd in less Numbers: Divide both the Numerator 3, and Denominator 48 by some one Number, that will divide them both without any Remainder, as here by 4. The Quotients 3 and 12 make a new Fraction, $\frac{3}{12}$, equal to $\frac{3}{4}$.

And if the Division be perform'd with the greatest Number that will divide them both; the Fraction is reduc'd to its lowest Terms.

Now, To find the greatest common Divisor of two Quantities: Divide the greater by the less; Then divide the Divisor of the Division by the Remainder thereof: Again, divide the Divisor of the second Division by the Remainder of the second; and so on, till there remain nothing. The last Divisor is the greatest common Measure of the given Numbers.

If it happen that Unity is the only common Measure of the Numerator and Denominator; then is the Fraction incapable of being reduc'd any lower.

3^o To reduce two, or more Fractions to the same Denomination; i. e. to find Fractions equal to the given ones, and with the same Denominators: If only two Fractions be given, multiply the Numerator, and Denominator of each, by the Denominator of the other: The Products given are the new Fractions requir'd.

Thus $\frac{3}{4}$ and $\frac{5}{6}$ make $\frac{9}{12}$ and $\frac{10}{12}$. If more than two be given, multiply both the Numerator and Denominator of each into the Product of the Denominators of the rest. Thus, $\frac{3}{4}$, $\frac{5}{6}$, $\frac{7}{8}$, $\frac{9}{10}$ = $\frac{315}{720}$, $\frac{525}{720}$, $\frac{630}{720}$, $\frac{729}{720}$.

4^o To find the Value of a Fraction in the known Parts of its Integer: Suppose, e. gr. It were requir'd to know what is $\frac{3}{4}$ of a Pound; Multiply the Numerator 3 by 20, the Number of known Parts in a Pound, and divide the Product by the Denominator 4. The Quotient gives 15s. Then multiply the Remainder 3 by 12, the Number of known Parts in the next inferior Denomination; and dividing the Product by 4, as before, the Quotient is 3d. So that $\frac{3}{4}$ of a Pound = 15s. 3d.

5^o To reduce a mix'd Number, as $4\frac{1}{2}$, into an improper Fraction of the same Value: Multiply the Integer, 4, by 2;

the Denominator of the Fraction; and to the Product 8 add the Numerator: The Sum 59 set over the former Denominator, $\frac{59}{2}$, constitutes the Fraction requir'd.

6^o To reduce an improper Fraction into its equivalent mist Number: Suppose the given Fraction $\frac{13}{4}$; divide the Numerator by the Denominator; the Quotient $3\frac{1}{4}$ is the Number sought.

7^o To reduce a Compound Fraction into a Simple one: Multiply all the Numerators into each other for a new Numerator; and all the Denominators for a new Denominator: Thus $\frac{3}{4}$ of $\frac{5}{6}$ of $\frac{7}{8}$ reduc'd, will be $\frac{105}{64}$.

II. Addition of Vulgar Fractions.

1^o If the given Fractions have different Denominators, reduce them to the same. Then, add the Numerators together, and under the Sum write the common Denominator. Thus, e. gr. $\frac{3}{4} + \frac{5}{6} = \frac{9}{12} + \frac{10}{12} = \frac{19}{12}$. And $\frac{3}{4} - \frac{1}{2} = \frac{3}{4} - \frac{2}{4} = \frac{1}{4}$.

2^o If Compound Fractions are given to be added; they must first be reduc'd to simple ones: And if the Fractions be of different Denominations, as $\frac{3}{4}$ of a Pound, and $\frac{1}{2}$ of a Shilling, they must first be reduc'd to Fractions of the same Denomination of Pounds.

3^o To add mist Numbers: The Integers are first to be added; then the fractional Parts: And if their Sum be a proper Fraction, only annex it to the Sum of the Integers. If it be an improper Fraction, reduce it to a mix'd Number; adding the integral Part thereof to the Sum of the Integers, and the fractional Part after it. Thus, $5\frac{1}{2} + 4\frac{3}{4} = 10\frac{5}{4}$.

III. Subtraction of FRACTIONS.

1^o If they have the same common Denominator, subtract the lesser Numerator from the greater, and set the Remainder over the common Denominator.

Thus from $\frac{3}{4}$ take $\frac{1}{4}$, and there remains $\frac{2}{4}$.

2^o If they have not a common Denominator, they must be reduc'd to Fractions of the same Value, having a common Denominator, and then as in the first Rule.

Thus, $\frac{3}{4} - \frac{5}{6} = \frac{9}{12} - \frac{10}{12} = -\frac{1}{12}$.

3^o To subtract a whole Number from a mix'd Number; or one mix'd Number from another: Reduce the whole, or mix'd Numbers to improper Fractions, and then proceed as in the first and second Rule.

IV. Multiplication of FRACTIONS.

1^o If the Fractions propos'd be both single, multiply the Numerators one by another for a new Numerator, and the Denominators for a new Denominator.

Thus $\frac{3}{4}$ into $\frac{5}{6}$ produces $\frac{15}{24}$.

2^o If one of them be a mix'd, or whole Number, it must be reduc'd to an improper Fraction; and then proceed as in the last Rule.

Thus $\frac{3}{4}$ into $5\frac{1}{2}$, gives $\frac{15}{8}$; and $\frac{5}{6}$ into $7\frac{3}{4} = \frac{49}{6}$.

In Multiplication of Fractions observe that the Product is less in Value, than either the Multiplicand, or Multiplier; because in all Multiplications, as Unity, is to the Multiplier; so is the Multiplicand, to the Product: Or, as Unity, is to either Factor; so is the other Factor, to the Product. But Unity is bigger than either Factor, if the Fractions be proper; and therefore either of them must be greater than the Product.

Thus in whole Numbers, if 5 be multiply'd by 8, it will be, as 1 : 5 :: 1 : 8 :: 40; or 1 : 8 :: 5 : 40. Wherefore in Fractions also, as 1 : $\frac{3}{4}$:: $\frac{3}{4}$: $\frac{9}{16}$; or as 1 : $\frac{5}{6}$:: $\frac{5}{6}$: $\frac{25}{36}$. But 1 is greater than either $\frac{3}{4}$ or $\frac{5}{6}$; Wherefore either of them must be bigger than $\frac{9}{16}$.

V. Division of FRACTIONS.

1^o If the Fractions propos'd be both simple, multiply the Denominator of the Divisor, by the Numerator of the Dividend; the Product is the Numerator of the Quotient. Then multiply the Numerator of the Divisor, by the Denominator of the Dividend, the Product is the Denominator of the Quotient.

Thus $\frac{3}{4}$ \div $\frac{5}{6}$.

2^o If either Dividend, Divisor, or both, be whole or mix'd Numbers, reduce them to improper Fractions: And if they be compound Fractions, reduce them to simple ones; and proceed as in the first Rule.

In Division of Fractions, observe that the Quotient is always greater than the Dividend; because in all Division, as the Divisor, is to Unity; so is the Dividend, to the Quotient; as if 3 divide 12, it will be, as 3 : 1 :: 12 : 4. Now 3 is greater than 1; wherefore 12 must be greater than 4: But in Fractions as 1 : $\frac{3}{4}$:: $\frac{4}{3}$; where, 1 is less than 1; wherefore $\frac{4}{3}$ must also be less than $\frac{3}{4}$.

FRACTIONS in Species, or Algebraic Quantities.

To reduce Fractions in Species to their least Terms: The Numerators and Denominators are to be divided by the greatest common Divisor as in Numbers.

Thus the Fraction $\frac{a^2 a c}{b c}$ is reduc'd to a more simple one $\frac{a}{b}$ by dividing both $a^2 a c$, and $b c$ by c ; and $\frac{203}{667}$ is reduc'd to a more simple one $\frac{7}{23}$ by dividing both 203 and 667 by 29; and $\frac{203 a a c}{667 b c}$ is reduc'd to $\frac{7 a a}{23 b}$ by dividing by 29 c . And so $\frac{6 a^2 - 9 a c c}{6 a^2 - 3 a c c}$ becomes $\frac{2 a a - 3 c c}{2 a - c}$ by dividing by 3 a . And $\frac{a^2 - a a b - a b b - b^2}{a a - a b}$ becomes $\frac{a a - b b}{a}$ by dividing by $a - b$.

To reduce Fractions in Species to a common Denominator. The Terms of each are to be multiplied by the Denominator of the other.

Thus, having $\frac{a}{b}$ and $\frac{c}{d}$, multiply the Terms of one $\frac{a}{b}$ by d , and also the Terms of the other $\frac{c}{d}$ by b , and they will become $\frac{a d}{b d}$ and $\frac{b c}{b d}$, whereof the common Denominator is $b d$. And thus a and $\frac{c}{d}$, or $\frac{a}{1}$ and $\frac{a b}{c}$ become $\frac{a c}{c}$ and $\frac{a b}{c}$.

But where the Denominators have a common Divisor, it is sufficient to multiply them alternately by the Quotients.

Thus the Fraction $\frac{a^2}{b c}$ and $\frac{a^2}{b d}$ are reduc'd to these $\frac{a^2 d}{b c d}$ and $\frac{a^2 c}{b c d}$, by multiplying alternately by the Quotients c and d , arising by the Division of the Denominators by the common Divisor b .

Addition and Subtraction of Fractions in Species.

The Process is in all respects the same in Species, as in Numbers. E.g. Suppose it required to add the Fractions $\frac{a}{b}$ and $\frac{c}{d}$. These, when reduc'd to the same Denomina-

tion, will be $\frac{a d}{b d}$ and $\frac{b c}{b d}$. Consequently their Sum is $\frac{a d + b c}{b d}$.

So, if the Fraction $\frac{a}{b}$ were to be subtracted from $\frac{c}{d}$; Having reduc'd them, they will be $\frac{a d}{b d}$ and $\frac{b c}{b d}$, as before. Their Difference, therefore, is $\frac{b c - a d}{b d}$.

Multiplication and Division of Fractions in Species.

Here too, the Process is perfectly the same as in Vulgar Arithmetic. Thus, E.g. Suppose the Factors, or Fractions to be multiplied, $\frac{a}{b}$ and $\frac{c}{d}$; The Product will be, $\frac{a c}{b d}$.

Or, suppose the Fractions required to be divided, $\frac{a c}{b d}$ and $\frac{a}{b}$; the Quotient will be $\frac{a c}{b d} \div \frac{a}{b} = \frac{a b c}{a b d} = \frac{c}{d}$.

Hence, as $a = \frac{a}{1}$: The Product of a into $\frac{c}{d}$, that is, of an integral Quantity into a Fraction, $\frac{c}{d} \times a = \frac{a c}{d}$. Whence it appears, that the Numerator of the Fraction is to be multiplied by the Integer.

Hence also, the Quotient of $\frac{c}{d}$ by a , that is, of the broken Quantity, divided by the whole one, $\frac{c}{d} \div a = \frac{c}{a d}$.

Beside the common Notion of a Fraction, there is another necessary to be understood. Thus, Suppose $\frac{1}{4}$ or 20 s. or a Pound Sterling, were the Fraction;

This Fraction instead of three Quarters of one Pound may be consider'd as a fourth Part of three Pounds; that is, by taking as many of the Integers, as the Numerator expresses (viz. 3.) and dividing them by 4, the Denominator; for then the Quotient of the same Value will arise for 4) 60 s. 15 s. This shows the Reason of that manner of Expres-

sion us'd by Geometers and Algebraists, who read $\frac{a}{b}$, thus, a divided by b .

Logarithm of a FRACTION, see LOGARITHM.
Summing of infinite FRACTIONS, see SUMMATORY Calculus.

FRACTURE, in Medicine, and Chirurgery, a Breach, or Rupture of a Bone: Or, a Solution of Continuity in a Bone, when it is crush'd or broken, by some external Cause. See BONE.

In Fractures, the Bone is either broken breadth-wise, that is, transversely; or length-wise, which last is properly call'd a *Fissure*. See FISSURE.

Transverse Fractures are more easy to discover, but more difficult to cure than longitudinal ones. A Fracture in the Middle of a Bone is less dangerous than towards the Articulation. When the Fracture is attended with a Wound, Contusion, &c. or when the Bone is shatter'd into several Pieces, 'tis highly dangerous. A Fracture of the Femur in Adults is very rarely, if ever cur'd; but there still remains a Lameness. Fractures of the lesser Bones are usually cur'd in seven or fourteen Days; those of the greater, in 20 or 40 Days.

In the Cure of Fractures, the Chirurgeon has two Things to attend to: First to restore the fractur'd Bone into its natural Situation; and to keep it tight with Ferule, or Splinters, and Bandages: In which case Nature takes on her self the Office of healing and conglutinating it, by forming a Callus thereon. See CALLUS.

If there be an Inflammation, it must be cur'd before any thing be attempted about the Fracture. If the Bone happen to be broke again, it never breaks in the Callus, but at a distance from it. After setting or replacing the fractur'd Bone, Bleeding is requir'd, to prevent any Lodgment of Blood on the Part aggriev'd, by the Violence upon the Fibres. A Fracture of the Cranium is certain Death, without Trepanning. See TREPPANNING.

FRENUM, BRIDLE, in Anatomy, a Name given to divers Ligaments, from their Office in retaining, and curbing the Motions of the Parts they are fitted to.

The *Frenum Lingue*, or *Bridle of the Tongue*, is a membranous Ligament, which ties the Tongue to the Os Hyoides, Larynx, Fauces, and lower Part of the Mouth. See TONGUE.

In some Subjects, the *Frenum* runs the whole Length of the Tongue, to the very Tip: In which Cases, if it were not cut, it would take away all Possibility of Speech.

The *Frenum of the Penis* is a slender Ligament, where-by the Prepuce is tied to the lower Part of the Glans. See PENIS.

Nature varies in the Make of this Part; it being so short in some, that unless divided, it would not admit of perfect Erection. See ERECTION.

There is also a kind of little *Frenum*, fixen'd to the lower Part of the Clitoris. See CLITORIS.

FRAIGHT, FREIGHT, or FRET, in Navigation and Commerce, the Hire of a Ship, or of a Part of it; for the Conveyance and Carriage of Goods, from one Part, or Place to another: Or the Sum agreed on between the Master and the Merchant, for the Hire and Use of a Vessel.

The *Freight* of a Vessel is usually agreed on at the Rate of so much for the Voyage; by the Month, or per Tun.

FRAIGHTING, or letting out of Vessels on Freight, or Hire, is one of the principal Articles in the Trade of the *Hollanders*: They are the Carriers of all the Nations of Europe, and their Purveyors; notwithstanding that their Country produces nothing at all, and that they are forc'd to have every thing necessary for the Building of a Vessel from other Countries.

The principal Laws and Rules relating to freighting, are: That if a whole Vessel be hired, and the Merchant, or Person who hires it, don't give it its full Load, or Barten; the Master of the Vessel cannot without his Consent take in any other Goods, without accounting to him for Freight.

That, tho' the Merchant don't load the full Quantity of Good, agreed on in the Charter Party; yet he shall pay the whole Freight; and if he load more, he shall pay for the Excess.

That, the Master may set a-shore such Goods as he finds in his Vessel, which were not notify'd to him; or take 'em at a higher Rate, than was agreed on for the rest.

That, if a Ship be stopp'd or detain'd in its Course, either thro' the Master's, or the Merchant's Default; the Delinquent shall be accountable to the other.

That if the Master be oblig'd to refit his Vessel during the Voyage, the Merchant shall wait; or else pay the whole *Freight*: If the Vessel could not be refitted, the Master is oblig'd to hire another immediately; otherwise only to be paid his *Freight* in proportion to the Part of the Voyage perform'd (tho', in case the Merchant prove that the Vessel at the time it set sail, was not capable of the Voyage, the Master must loose his *Freight*, and account for Damages to the Merchant.

That *Freight* shall be paid for Merchandizes which the Master was oblig'd to sell for Victuals, or refitting, or other necessary Occasions; paying for the Goods at the Rate the rest were sold at, where they were landed.

That in case of a Prohibition of Commerce with the Country whither the Vessel is bound, so that it is oblig'd to be brought back again; the Master shall only be paid *Freight* for going.

And if a Ship be stop'd or detain'd in its Voyage, by an Embargo by order of the Prince; there shall neither be any *Freight* paid for the Time of the Detention, in case it be hired per Month: Nor shall the *Freight* be increas'd, it hired for the Voyage; but the Pay, and Victuals of the Sailors during the Detention, shall be deem'd Average.

That the Master shall take no *Freight* for any Goods lost by Shipwreck, plunder'd by Pyrates, or taken by the Enemy; unless the Ship and Goods be redeem'd; in which case he shall be paid his *Freight* to the Place where he was taken; upon contributing to the Redemption.

That the Master shall be paid his *Freight* for the Goods sav'd from Shipwreck; and in case he can't get a Vessel to carry them unto the Place where they were bound, that he shall be paid in Proportion to the Part of the Voyage already gone.

That the Master may not detain any Merchandize in his Vessel, in default of Payment of *Freight*; tho' he may order them to be seiz'd any time, or any where afterwards. That if Merchandizes in Casks, as Wines, Oils, &c. have so run out in Carriage, that the Vessels are left empty; or almost empty, the Merchant may relinquish them, and the Master be oblig'd to take them for their *Freight*; though this does not hold of any other Goods damag'd, or diminish'd of themselves, or thro' Accidents.

The Word *Freight* is form'd of the French *Fret*, signifying the same thing; and *Fret*, of *Fretum*, an Arm of the Sea; tho' others chuse to derive it from the German *Fracht*, or the Flemish *Fracht*, signifying Carriage.

Freight is also a Duty of 50 *Sols* per Tun, paid to the Crown of France by the Captains and Masters of all foreign Vessels at their Entrance and coming out of the Ports and Havens of that Kingdom. And note, that all Vessels not built in France, however they may belong to the Subjects of France, are repated Foreigners, and subject to this Impost; unless it be made appear, that two Thirds of the Ship's Crew are French.

By the 11th Article of the Treaty of Commerce concluded at *Utrecht* between England and France, this Duty of 50 *Sols* per Tun should be remitted the English; and at the same time the Duty of 5 *s*. Sterling should be suppress'd in favour of the French: But the Execution of that Article, as well as the Tariff settled between the two Nations, has been suspended. The Dutch however and the *Hans Towns* are exempted from the Duty of *Fret*.

Freight is also the Burthen, or Lading of a Ship; or the Burthen of Goods, &c. she has on board. See *BURTHEN*.

FRAIL, a Basket of Ruffes; or such like Materials, to pack up Figs, Raisins, &c.

It is also a certain Quantity of Raisins, of about 75 Pounds.

FRAISE, in Fortification, a kind of Defence, consisting of pointed Stakes, driven parallel to the Horizon, into the Retrenchments of a Camp, a Half Moon, or the like; to fend off and prevent any Approach or Scalade.

Fraises differ from Palisades chiefly in this, that the latter stand perpendicular to the Horizon; and the former jet out parallel to the Horizon. See *PALISADE*.

Fraises are chiefly us'd in Retrenchments, and other Works, thrown up of Earth: Sometimes they are found under the Parapet of a Rampart; serving instead of the Cordon of Stone, us'd in Stone Works.

He fortified all the weak Places of his Camp with *Fraises* and Palisades.—All the Outworks of the Place were *frus'd* and palisaded.

FRISING of a Battalion, is the lining of the Musquetiers all around with Pikes; in case of their being charg'd by a Body of Horse.

FRAME, in Joinery, &c. a kind of Case, wherein a thing is set, or inclos'd, or even supported; as a Window *Frame*, *Frame* of a Picture, of a Table, &c. See *WINDOW*, &c.

The *Frame* is also a Machine, us'd in divers Arts. The Printers *Frame* is more usually call'd *Chase*. See *CHASE*.

The Founders *Frame* is a kind of Ledge, inclosing a Board; which being fill'd with Sand, serves as a Mould to cast their Work in. See *FOUNDERY*, and *MOULD*.

FRAME is particularly us'd for a Sort of Loom, wherein they stretch their Linens, Silks, Stuffs, &c. to be embroider'd, quilted, &c. See *EMBROIDERY*, *TAFESTRY Work*, &c.

FRAME, among Painters, &c. is a kind of a *Chaffy*; of Square, compos'd of four long Pieces, or Slips of Wood, join'd together; the intermediate Space whereof is divided by little Strings or Threads into a great Number of little Squares, like the Masics of a Net; and for that reason sometimes call'd *Retricula*.

Its Use is in the reducing of Figures from great to finally; or from small to great. See *REDUCTION*.

FRAMING of a House, is all the Timber Work therein; viz. the Carcase, Flooring, Partitioning, Roofing, Cieling Beams, Afloring, &c. See *CARCASE*, *PARTITION*; *ROOF*, *FLOOR*, &c.

FRAMPOL Fences are such Fences as any Tenant in the Manor of *Wristel* in *Essex* hath against the Lords Demands; whereby he hath the Wood growing on the Fence; and as many Trees or Poles as he can reach from the Top of the Ditch with the Helve of his Ax; toward the Repair of his Fence. The late Chief Justice *Brampton*, whilst Steward of this Court, acknowledg'd he could not find out the Reason, why these Fences were call'd *Frampole*.

It may come from the *Saxon* *Fremful*, profitable; or may be a Corruption of *Frampole*, because the Poles are free for the Tenant to take.

FRANCHISE, a Privilege, or Exemption from the ordinary Jurisdiction; or an *Asylum*, or Sanctuary, where People are secure of their Persons, &c. See *ASYLUM*.

Churches and Monasteries in Spain are *Franchises* for Criminals: So were they antiently in England; till they were abus'd to such a degree, that there was a Necessity for abolishing them. See *SANCTUARY*.

One of the most remarkable Capitularies made by *Charlemain*, in his Palace of *Hersful*, in 779; was that relating to the *Franchises* of Churches.

The Right of *Franchises* was held so sacred, that even the less religious Kings observ'd it to a degree of Scrupulousness: But to such Excess in time was it carried, that *Charlemaign* resolv'd to bring it down. Accordingly he forbid any Provision being carried to Criminals retir'd into Churches for Refuge. See *REFUGE*.

FRANCHISE is also us'd for an Immunity from the ordinary Tributes and Taxes.

This is either Real, or Personal; that is, either belonging immediately to the Person; or else by means of this or that Place, or Office of Immunity.

FRANCHISE Royal, is a Place where the King's Write runs not; as at *Chester*, and *Durham*: And antiently at *Tyndal* and *Exambire* in *Northumberland*. See *SAC*.

FRANCHISE of Quarters, is a certain Space, or District at *Rome*, wherein are the Houses of the Embassadors of the Princes of Europe; and where such as retire, cannot be arrested or seiz'd by the *Sbirri*, or Sergeants, nor prosecuted at Law.

The People of *Rome* look on this as an old Usurpation, and a scandalous Privilege, which Embassadors, out of a Jealousy of their Power, carried to a great length in the XVth Century, by enlarging insensibly the Dependances of their Palaces or Houses, within which the Right of *Asylum* was antiently confin'd. Several of the Popes, *Julius III. Pius XIV. Gregory XIII. and Sixtus V.* publish'd Bulls and Ordinances against this Abuse; which had refus'd to considerable Part of the City from their Authority, and render'd it a Retreat for the most abandoned.

At length *Innocent XI.* expressly refus'd to receive any more Embassadors but such as would make a formal Renunciation of the *Franchise of Quarters*. See *PRIVILEG'd Place*.

FRANCHISING, see *ENFRANCHISING*, and *MANUMISSION*.

FRANCIGENA, or *FRENCHMAN*, in our antient Customs, was a general Appellation of all Foreigners, i. e. all Persons who could not prove themselves *Englishmen*. See *ENGLISHERY*.

FRANGIPANE, an exquisite kind of Perfume, frequently given to the Leather whereof Gloves, Pursts, Bags, &c. are made.

It takes its Name from a Roman Nobleman, of the antient Family of *Frangipani*; who was the Inventor thereof.

There is also a kind of perfum'd Liquor of the same Denomination, said to have been invented by a Grandson of *Mutio Frangipani*; and a perfum'd kind of *Ros Solis*, call'd by the same Name. See *ROS SOLIS*.

FRANK, or *FRANC*, a Term literally signifying free, open, and sincere, exempt from publick Impostions and Charges; as *Frank Confession*, *Frank Fair*, *Frank Letter*, &c. See *FREE*.

The Term *Frank* is much us'd in our antient Customs and Tenures; where it receives various particular Modifications and Meanings, according to the Words it is combined with, as

FRANK ALEU, or *Alloatum*, is a Land, Tenement, or Demesne, that does not hold of any superior Lord. See **ALLOTIUM**, and **FREE LAND**.

FRANK ALMS, or *Free Alms*, is a Tenure of Lands or Tenements bestow'd on God; that is, given to such People as devote themselves to the Service of GOD, in pure and perpetual Alms.

Whence, the Feoffors, or Givers cannot demand any terrestrial Service, so long as the Lands remain in the Hands of the Feoffees. *Byron* mentions another kind of this Land given in Alms, but not *free Alms*; the Tenants being tied in certain Services to the Feoffor. See **ALMOIT**.

FRANK BANK, see **FREE BENCH**.

FRANK FEE, or *Feudum liberum*, is that for which no Service is perform'd to any Lord. See **FREE**.

According to *Frachin*. l. 7. c. 39. Lands held in *Frank Fee* were exempted from all Services, except Homage.

Frank Fee, as defin'd by *Broke*, is that which is in the Hand of the King, or Lord of any Manor; being ancient Demesne of the Crown: In Contradistinction to that in the Tenants Hands, which is only *Antient Demesne*. See **Demesne**.

In the *Reg. of Writs*, *Frank Fee* is said to be that which a Man holds at Common Law to him and his Heirs; and not by such Service as is requir'd in antient Demesne, according to the Custom of the Manor.

'Tis added, that the Land in the Hands of King *Edward* the Confessor, at the making of Domesday Book is Antient Demesne; and all the rest, *Frank Fee*. Upon this footing, all the Lands in the Realm are either Antient Demesne, or *Frank Fee*.—

Others define *Frank Fee* to be a Tenure in Fee Simple, of Lands pleadable at Common Law; and not in Antient Demesne.

FRANK FERM, or *Ferma libera*, is Lands or Tenements, wherein the Nature of the Fee is chang'd, by Feoffment, from Knights Services, to certain yearly Services; and whence neither Homage, Wadship, Marriage, nor Relief may be demanded: Nor any other Service, not contain'd in the Feoffment. See **FREE FARM**.

FRANK FOLD, is where the Lord hath the Benefit of folding his Tenants Sheep, within his Manor; for the manuring of his Land. See **FALDAE**.

FRANK LAW, is the Benefit of the Free, and Common Law of the Land. See **LAW**.

He that for any Offence, as Conspiracy, &c. loofeth his *Frank Law*, incurs these Inconveniences. 1^o That he may not be impend'd upon any Jury or Assize; or otherwise us'd as an Evidence, or Witness to the Truth. 2^o That if he have any thing to do in the King's Court, he must not approach it in Person, but appoint his Attorney. 3^o That his Lands, Goods and Chattels be seiz'd into the King's Hands; and his Lands be eviscerated, his Trees rooted up, and his Body committed to Custody. See **CONSPIRACY**.

FRANK MARRIAGE, or *Liberum Matrimonium*, is a Tenure in Tail Special, whereby Lands or Tenements are held to a Person and his Wife, and the Heirs of their Bodies, on condition of doing Fealty to the Donor from the fourth Degree.

This Tenure arises from these Words in the Gift: *Sciatis*, &c. me T. B. de O. dedisse ac concessisse, & presenti carta mea confirmasse A. B. filio meo, & Marie uxori eius, filie vere C. D. in liberum matrimonium suum Matrimonium, &c. See **TAIL**.

Glauvil divides Marriage, *Matrimonium*, into *liberum*, and *servitio obligatum*. See **MARRIAGE**.

Fleta gives this reason, why the Heirs do not Service, till the fourth Degree: *Ne donatores vel eorum heredes per homagii receptionem a reversione repellantur*: And why in the fourth Descent they shall do Service to the Donor, *quia in quarto gradu vehementer presumitur quod terra est pro defectu heredom donatorum reuerfura*.

FRANK MARRIAGE, or *Liberum Matrimonium*, is more clearly express'd by *Bracton*, to be that where the Donor intends that the Land thus bestow'd, shall remain quiet, and free from all secular Service that might be affect'd to the Fee; so that he who gave it, shall claim no manner of Service from it, untill the third Heir, and the fourth Descent, or Degree; reckoning the Donor in the first Degree, his Heir in the second, the Heir of him in the third, and his, again, in the fourth: But afterwards the same Land to become subject to all the former Services; as being then suppos'd to revert to the Lord for want of Heirs.

The Lands otherwise given in Marriage, *vis. Servitio obligate* were with a Reservation of the Services due to the Lord, which the Donor and his Heirs were bound to perform for ever: Only, Homage was not to commence till the fourth Degree; when both Service and Homage were to be enjoin'd for ever.

FRANK PLEDGE, signifies a Pledge, or Surety for a free Man; call'd also *Friburgh*. See **FRIBURGH**.

The antient Custom of *England*, for Preservation of the

publick Peace, was, that every free born Man, at 14 Years of Age (religious Persons, Clerks, Knights, and their eldest Sons excepted) should find Surety for his Truth towards the King and his Subjects, or else he kept up in Prison.

Accordingly, a Number of Neighbours became interchangeably bound for each other, to see each Man of their Pledge forthcoming at all times; or to answer for the Offence committed by any one gone away: So that when ever one offended, it was presently enquir'd in what Pledge he was; and then those of the Pledge either brought him forth with in one and thirty Days to his Answer; or satisfy'd for his Offence.

This Custom was call'd *Frank Pledge*; and the Circuit it extended to *Decenna*, by reason it usually consist'd of ten Households; and every Person thus bound for himself and Neighbours, was call'd *Decennier*. See **DECENNA**.

This Custom was so observ'd, that the Sheriffs at every County Court did from time to time take the Oaths of young Persons, as they arriv'd at the Age of 14; and see they were settled in one *Decenna*, or *Docen* or another. Whereupon this Branch of the Sheriffs Office and Authority was call'd *Vivus Franci Plegii*, i. e. *Vivus of Frank Pledge*. See **LEET**, **VIVUS OF FRANK PLEDGE**, &c.

Omnis homo, sine liber, sine servus, aut est, vel debet esse in Franco Plegio, aut de aliquo mansuissit, nisi sit aliquis itinerans de loco in locum, qui non plus se tenent ad unum quem ad alium, vel quid habet quod sufficiat pro Franco Plegio, sicut dignitatem, vel ordinem, vel liberum tenementum, vel in civitate rem immobilem, &c. Bracton l. III. Tract. de Corona, c. 10.

FRANK CHACE, is Liberty of Free Chace in a Circuit adjoining to a Forc't, by which all Men, though they have Land of their own within that Compass, are forbidden to cut down Wood, without the View of the Forester; though it be their own Demesne.

FRANKINCENSE, or **INCENSE**, an odoriferous aromatic Gum, or Resin, antiently burnt in Temples, and still us'd in Pharmacy. See **GUM**, and **RESIN**.

For all the great Use of this Gum, both in the antient Religion, and the modern Medicine; the Tree that produces it, or even the Place where the Tree grows, is but little known.

The most common Opinion has always been, that it was brought from *Arabia Felix*, and was found near the City of *Saba*; whence its Epithet *Sabaenum*: And yet the Name *Olibanum*, which it sometimes bears, seems to intimate, that there are of these thieriferous, or incense bearing Trees in the Holy Land near Mount *Libanon*. And Travellers are positive, that there are others in the *East Indies*.

Nor are we less at a loss as to the Form or Kind of the Tree from which it flows. *Pliny* contents himself to say, that it at first resembles the Pear Tree; then the Mastick Tree; then the Laurel; but that in reality it is the *Turpentine Tree*.

Frankincense, is either *Male*, or *Female*.

The *Male Incense*, call'd also *Olibanum*, is in fair, white Bits, or Tears, a little yellowish, of a bitter disagreeable Taste; and when chew'd, promotes the Flux of Saliva.

It is call'd *Male*, in respect of its Tears, which are larger than the common, or *Female*. See **OLIBANUM**.

That brought from the *Indies*, is not near so good as that from *Arabia*, or Mount *Libanon*. It is usually call'd *Incense of Mecha*, or *Female Incense*; tho' it be not brought from that City. 'Tis usually in a Mass, but sometimes in Drops or Tears; somewhat reddish, and bitter to the Taste.

Some sell it for the true *Bellium*. See **BELLUM**.

The *Manna of Frankincense* is only little, round, clear, transparent Grains of the Incense it self.

Root of Incense is the fine Flower, rub'd or ground off the Gum in Carriage, and burnt like Rosin, to make *Lampblack*.—

Bark of Incense, is the Bark of the Tree that produces it. It has much the same Qualities, and the same Smell as the Incense it self.—

Jewels Incense is only red **Storax**. See **STORAX**.

Male Incense, or *Olibanum*, is an Ingredient in divers *Galenic*, and *Chymical Preparations*. It is also us'd to assuage the Tooth-ach: But it is apt to spoil the sound Teeth. The *Female* is inferior to it in all respects.

FRANKS, **FRANCES**, **FRANCKIS**, or **FRANQUIS**, a Name the *Turks*, *Arabs*, *Greeks*, &c. give to all the People of the Western Parts of *Europe*.

The Appellation is commonly suppos'd to have had its rise in *Asia*, at the time of the *Croisades*; when the *French* made the most considerable Figure among the *Croisiers*: From which time the *Turks*, *Sarracens*, *Greeks*, *Abyssinians*, &c. us'd it as a common Term for all the Christians of *Europe*; and call'd *Europe* it self, *Frankistan*.

The *Arabs* and *Mahometans*, says *Monf. d'Herbelot*, apply the Term *Franks* not only to the *French* (to whom the Name originally belong'd) but to the *Latins* and *Europeans* in general.

Frank, or *Frenk*, primarily denotes a *Frenchman*; and by Extension, an *European*, or rather a *Latin*, by reason, say they, the *French* distinguish'd themselves above the other Nations, engag'd in the Holy War. See *CROISADE*.

But *FA Gear*, in his Notes on *Codinus*, c. V. n. 43. furnishes another Origin of the Appellation *Franks*, of greater Antiquity than the former.

He observes that the *Greeks* at first confin'd the Name *Franks* to the *French*, i. e. the *German* Nations, who had settled themselves in *France*, or *Gaul*: But afterwards they gave the same Name to the *Aplians* and *Calabrians*, after they had been conquer'd by the *Normans*; and at length the Name was further extended to all the *Latins*.

In this Sense is the Word us'd by divers *Greek* Writers; as *Commentius*, &c. who, to distinguish the *French*, call them the *Western Franks*.

Du Cange adds, that about the time of *Charlemagne*, they distinguish'd Eastern *France*; Western *France*; and *Latin*, or *Roman France*, and *German France*, which was the ancient *France*, afterwards call'd *Franconia*.

The *FRANK Language*, or *Lingua FRANCA*, is a kind of *Jargon*, spoke on the Mediterranean, and particularly thro'out the Coasts and Ports of the *Levant*; compos'd of *Italian*, *Spanish*, *French*, vulgar *Greek*, and other Languages.

The *Lingua Franca* is the *Trading Language*; and is thus call'd from the *Franks*, a common Appellation given in the *Levant* to all the *European* Merchants and Traders, who come thither to traffick.

In this Language, if it may be so call'd, nothing but the Infinitive Mood of each Verb is us'd; this serving for all the Tenses and Moods of the Conjugation: And yet this lame, mutilated Diction, this barbarous Medley, is learnt and understood by the Merchants and Mariners of all Nations who repair thither.

FRANK, or *FRANC*, is also an ancient Coin, struck, and current in *France*; thus call'd from its Impression, which represented a *Frenchman*, sometimes on horseback, and sometimes on foot. See *COIN*.

The *Frank* was either of Gold, or Silver: The first was worth somewhat more than the *Ecu d'Or*, or Gold Crown; See *ECU*.

The second was a Third of the first: But the Money has been long diffus'd.

The Term *Frank*, however, is still retain'd, as the Name of a Money of Account. In this Sense it is equivalent to a *Livre*, or 20 *Sols*, or $\frac{1}{2}$ of a *French* Crown.

Thus they say indifferently, a hundred *Franks*, or a hundred *Livres*. See *LIVRE*.

FRATERNITY, BROTHERHOOD, the Relation, or Union of Brothers, Friends, Partners, Associates, &c. See *BROTHER*, and *COMPANY*.

FRATERNITY, in a Civil Sense, is particularly us'd for a Guild, Association, or Society, of Persons, united into a Body, for some common Interest, Advantage, &c. For the Origin, Use, &c. of *Fraternities*, see *GUILD*.

FRATERNITY, in a Religious Sense, is a Society of Persons, meeting together to perform some Exercises of Devotion, or Divine Worship. See *SOCIETY*.

In the *Romish* Church, such *Fraternities* are very numerous and considerable; being most of them establish'd by Royal Patents: As the *Fraternity of the Sepulchry* of *St. Francis's* Cord. The Bishop may hinder the Establishment of any such *Fraternity* in his Diocese. At *Rome* there is a *Fraternity* call'd the *Archi-Fraternity*, or Grand *Fraternity*, under the Title of *Our Lady of the Suffrages*, establish'd in favour of the Souls in Purgatory; approv'd and confirm'd by a Bull of *Pope Clement VIII.* in 1584.

There are nine different Sorts of *Fraternities*, or Confraternities in *France*, viz. 1^o Of Devotion. 2^o Of Charity, or Mercy. 3^o Of Penitents, under divers Names. 4^o Of Pilgrimages. 5^o Of Merchants, to procure the Divine Favour on their Endeavours. 6^o Of Officers of Justice. 7^o Of the Sufferings of *Christ*. 8^o Of Arts and Trades of divers kinds; and 9^o Of Factions.

Fraternities, in *Latin* call'd *Sodalitates*, derive their Origin from the Heathens; as is shown by *Polydore Virgil*, in his Book of *Inventiones Rerum*.

The good Use made of them by the Christians, has effectually purg'd them of any Impurities, deriv'd from so ill a Source.

Numa Pompilius is said to have establish'd *Fraternities* of all the Arts and Trades in ancient *Rome*; and to have prescrib'd the Sacrifices each Profession was to perform to the Patrons or Tutelary Gods he had assign'd them. See *COLLEGE*.

FRATERNITY is also a Title, or Quality. See *QUALITY*. Kings and Emperors gave it each other; so do Bishops, and Monks. We meet with it frequently in Authors under the Eastern Empire, both *Greek*, and *Latin*; ἀδελφότης, *Fraternitas*.

FRATERNITY of Arms, was an Alliance, or Association in Arms, antiently concluded between two Knights, who there-

by agreed to go together, share their Fortune, and mutually assist each other against all the World.

Bertrand du Guesclin, and *Oliver Clifton* swore a *Fraternity of Arms* in the Year 1379. laying their Hands on the Gospel. *Hist. de Bret. T. 1. p. 395.*

FRATICELLI, a Sect of Hereticks, who rose in the Marquisate of *Ancona*, about the Year 1294.

The Word is an *Italian* Diminutive, signifying *Fraticelli*, or little Brothers; and was here us'd, by reason they were most of them apollate Monks, whom the *Italians* call *Frattelli*.

The Founders were *P. Maurato*, and *P. de Fossimbrenco*; who having obtain'd of *Pope Celestine V.* a Permission to live in Solitude, after the manner of Hermits, and to observe the Rule of *St. Francis* in all its Rigor; several idle, vagabond Monks join'd them; who living after their own Fancies, and making all Perfection to consist in Poverty, were soon condemn'd by *Pope Boniface VIII.* and the Inquisitors order'd to proceed against them as Hereticks. Upon this, retiring into *Sicily*, *Peter John Oliva de Scriguan* had no sooner publish'd his Comment on the *Apocalypse*, than they adopted his Errors.

They held the *Romish* Church to be *Babylon*; and propos'd to establish another far more perfect one; maintain'd that the Rule of *St. Francis* was the Evangelical Rule observ'd by *Jesus Christ* and his Apostles.

Some say they even elected a *Pope* of their New Church: At least they appointed a General, with Superiors; built Monasteries, &c. Beside the Opinions of *Oliva*, they held that the Sacraments of the Church were useless; by reason those who administer'd them, had no longer any Power or Jurisdiction.

They were condemn'd a-fresh by *Pope John XXII.*; but several of them returning into *Germany*, were flourish'd by the Duke of *Batavia*.

The *Fraticelli* had divers Denominations: They were call'd *Fraticelli*, by reason they liv'd in Community, in imitation of the Primitive Christians; *Dalaini*, from one of their Doctors; and *Bischoes*, for what reason we don't know.

FRATRAGE, *FRATRICIUM*, or *FRERAGE*, the Partition among Brothers, or Cohens, coming to the same Inheritance or Succession. See *PARTITION*.

FRATRAGE is also us'd more particularly for that Part of the Inheritance, which comes to the youngest Brothers: For whatever the Cadets, or younger Brothers possess of the Father's Estate, they possess *ratione Fraternitatis*, and are to do Homage to the older Brother for it; in regard he is to Homage for the Whole to the Superior Lord. See *HOMAGE*.

FRATRES Conjurati, in our ancient Law Books, &c. denote sworn Brothers, or Companions.

Sometimes they are also so call'd who were sworn to defend the King against his Enemies, *Leg. W. 1. cap. 59. Precipimus ut omnes liberi homines sint fratres conjurati ad Monarchiam nostram & Regnum nostrum contra inimicos pro posse suo defendendum. Leg. Eds. cap. 31.*

FRATRICIDE, the Crime of murdering ones Brother. See *PARRICIDE*.

Gain committed the first *Fratricide*: The Empire of *Rome* began with a *Fratricide*.

FRAUD, a secret, under-hand, Deceit, or Injury, done any one.

To export, or import Goods by *Fraud*, or fraudulently, is to do it by indirect ways; in order to avoid the paying of Duty, &c. if they be permitted Goods; or if they be contraband Goods, to avoid the Penalties adjudg'd by the Laws. See *DEFAUD*.

A *Fraudulent ACTION*, *Fraudulent BANKRUPT*, &c. see *BANKRUPT*.

FRAY, literally signifies to fret; as Cloth or Stuff does by rubbing, or over-much wearing.

Among Hunters a Deer is said to *fray her Head*, when she rubs it against a Tree, to ease the Itch of her new Horns to come off.

FRECKLES, a kind of little, hard, dusky Bubo's, or Pustles, arising on the Skin of the Face, or Hands; particularly in Persons of the fairest, finest Skins.

Some pick the *Freckles* out with a Pin; or squeeze them out with the Fingers.

Freckles, according to *M. Homberg*, are only the earthy, oily, and saline Part of the Sweat; retain'd in the Plexus, or Masses of the Skin. While the aqueous Liqueur, which was their Vehicle, is evaporated by the Heat of the Body, these grosser Parts are gradually accumulated, till the Masses are full.

Some Parts of this Sweat, he observes, are continually oozing thro' the Cuticle; and being of a viscid nature, retain the Dirt, Dust, &c. that flies about the Face. This viscid Matter on the Surface of the *Freckles* will stick there, notwithstanding any repeated Wipings, which rather condense and press it into the Cavities thereof. 'Tis this Dust, thus incorporated with the glutinous Basis above-mentioned, that forms in those black Specks on the Pores of most Peoples Noises in

Summer, call'd *Freckles*; which, as they may be squacc'd out by a dexterous Application of the Fingers, many People have been induc'd to take them for little Worms, generated in the Skin, whose Head is the little Speck above-mention'd; whereas, in reality, they are little Pelotons of Sweat, dried in the Pores of the Skin; the outer Tip, or Extreme whereof is dirty, and blacken'd with the Dust continually floating in the Air, arrested by the glutinous Matter of the Sweat it self.—

They are found more about the Nose and Skin, than any where else; by reason the Skin is more stretch'd there, and consequently the Pores more patent, to receive the Dust, &c.

From this Theory it follows, that there can scarce be any such thing as an adequate Remedy or Preventive of *Freckles*. Temporary ones there may be, which shall draw out and dissipate, what Matter is already gather'd: But the Spaces will fill up again in time.

Bullocks Gall mix'd with Alum; and after the Alum has precipitated, expos'd three or four Months to the Sun in a close Phial, *Monf. Homberg* observes, is one of the best Remedies known for *Freckles*. It acts as a Lixivium; clogs the Pores, and dilutes and dissolves the Coagulum of the *Freckles*. *Mém. de l'Acad. Royal des Sciences. An. 1709. p. 472. &c.*

FREE, a Term variously us'd; but generally in opposition to constrain'd, confined, necessitated. See **FRANK**.

Thus, a Man is said to be *free*, who is out of Prison: And a Bird is *free*, when let out of the Cage: *Free from Pain, i. e.* void of Pain: *A free Air: Free Passage, &c.*

But in speaking of Things endued with Understanding, the Word *Free* has a more peculiar relation to the Will, and implies its being at full Liberty. See **LIBERTY**.

The Stoicks maintain, that their sage or wise Man alone is *Free*. See **STOIC**.

Free is al'o us'd in opposition to *Slave*.

The Moment a Slave sets foot on *Englisk* Ground, he becomes *free*. The finest Legacy the ancient *Romans* could leave their Slaves, was their *Freedom*. See **SLAVE**, **SERVITUDE**, and **MANUMISSION**.

FREE Will, see **WILL**.

FREE Thinker, see **DEIST**.

FREE Mason, see **MASON**.

FREE State, is a Republick govern'd by Magistrates elected by the *free* Suffrages of the Inhabitants. See **STATE**. *Free, or Imperial Cities in Germany*, are those not subject to any particular Prince; but govern'd, like Republicks, by their own Magistrates. See **EMPIRE**.

There were *Free Cities, Libere Civitates*, even under the ancient *Roman* Empire: Such were those to whom the Emperor, by the Advice, or Consent of the Senate, gave the Privilege of appointing their own Magistrates, and governing themselves by their own Laws. See **CITY**.

FREE Bench, or *Franch Bona*, signifies that Estate in Copyhold Lands, which the Wife hath after the Death of her Husband, for her Dower, according to the Custom of the Manor. See **DOWER**.

Thus, at *Orleton* in the County of *Hereford*, the Relict of a Copyhold Tenant is admitted to her *Free Bench*, i. e. to all her Husband's Copyhold Land, during her Life, at the next Court after her Husband's Death. See **BENCH**.

Frisoberbert calls *Free Bench* a Custom, whereby, in certain Cities, the Wife shall have her Husband's whole Lands, &c. for her Dower.

Of this *Free Bench*, different Manors have different Customs: Thus, *E. gr.* in the Manors of *East*, and *West Emborne* in *Berks*, if a customary Tenant die, the Widow shall have her *Free Bench* in all his Copyhold Lands, *dom sua & casta fuerit*; but if she commit Incontinency, she forfeits her Estate: But if she will come into Court riding backwards on a black Ram, with his Tail in her Hand, rehearing a certain Form of Words, the Steward is bound by the Custom to restore her to her *Free Bench*.

The like Customs are in the Manor of *Chadeworth* in *Berks*; that of *Tor* in *Devonshire*, and other Parts of the Well.

FREE Bord, *Franc Bord*. In some Places three Feet, in some more, and in others less, is claim'd by way of *Free Bord* beyond, or without the Fence.—

Et totum Boscum, quod vocatur Brendewode, cum Franc Bordo duorum pedum, & dimid. per circuitum illius bosc. *Mon. Ang. 2^a Part, fol. 241.*

FREE Chapel, is a Chapel founded by the King, and by him exempted from the Jurisdiction of the Ordinary. See **CHAPEL**.

Tho', a Subject may be licenc'd by the King to build such a Chapel; and by his Charter may exempt it from the Visitation of the Bishop, &c.

FREE Stool, see **FRIDSTOLL**.

FREE Warren, the Power of granting or denying Licence to any one to hunt in such and such Ground. See **WARREN**.

FREE Fee, see **FEF**.

FREE Fair, see **FAIR**.

FREE Stone, a white Stone, dug up in many Parts of *Englond*, that works like *Alabastr*; but more hard, and durable; being of excellent use in Building, &c. See **STONE**.

It is a kind of *Groet*, but finer sanded, and a smoother Stone.

FREEBOOTER, or **FLEUSTER**, a Name given to the Corsairs, or Pirates, who scour the *American Seas*; particularly such as make War against the *Spaniards*. See **BUCANIER**.

The *French*, &c. call them *Flibusters*, deducing the Word from the English *Flibore*, or *Flybore*; by reason the first Adventurers of this kind were the People of *St. Domingo*, who made their Excursions with *Flybotes*, which they had taken from the *Englisk*.

FREEDOM, the Quality, or Habit of being *Free*. See **FREE**.

FREEDOM of the Will, a State, or Faculty of the Mind, wherein all the Motions of our Will are in our Power; and we are enabled to determine on this, or that; to do good, or evil, without any Force, or Constraint from any foreign Cause whatever. See **LIBERTY**.

The Schoolmen distinguish two kinds of *Freedom*.

Viz. **FREEDOM of Contradiction**, whereby we are at our choice to *will*, or *not will*; to love, or not love, &c.

Thus, if I give my Friend a Power to take my Horse; that Friend has *Freedom of Contradiction*, with respect to the Horse; since it is in his own Power, either to use him, or let him alone. See **CONTRADICTION**.

FREEDOM of Contrariety, or of *Contraries*, is that whereby we are at our choice to do good, or evil; be virtuous; or vicious; take a Horse, or a Lion.

Thus if I offer my Friend a Horse, or a Lion; and give him his Option of the two, he is said to have a Liberty of Contrariety, over the Horse and Lion. See **CONTRARIETY**.

But the Logicians charge this as a faulty, or unartful Division; in regard one Member of the Division is contain'd in the other, as a Species in the Genus: For whatever is *free*, in respect of Contradiction, is also *free* in respect of Contrariety; tho' not *vice versa*: For if it be *free* for my Friend to take the Horse, or the Lion; it is also *free* for him, to let them both alone: But he may be *free* to take one of them, without a *Freedom* of choosing which to take.

Yet is the Distinction of some use; as it intimates that the Will is not always possess'd of both kinds of *Freedom*; and that the Matter, or Subject of the two is different.

The Will, tho' *free*, has not a Liberty of Contrariety: Thus, any evident Truth being propos'd to the Mind, *e. gr.* That the Whole is greater than a Part, we have a Power of not assenting thereto, by diverting our Attention to some thing else: But we have not a Power of dissenting from that Proposition, and judging that the Whole is not greater than the Part.

Hence, the Moralists commonly hold, that with respect to the Supreme Good, Mankind has a Liberty of Contradiction; inasmuch as he may abstain from the Love, or Pursuit thereof: But not a Liberty of Contrariety, whereby to hate Goodness.

Add, that tho' the human Mind may have a *Freedom of Contradiction*, with respect to all Objects, even the Supreme Good it self; yet the *Freedom of Contrariety* is restrain'd to certain Particulars, which either are, or appear to be Good: The Will having such a natural Propensity to Good, that it cannot desire evil, but under the Notion and Appearance of Good. See **GOOD**, and **EVIL**; see also **NECESSITY**.

FREEDOM of Thinking, see **DEISM**.

FREEDOM of Conscience, see **LIBERTY**, and **TOLERATION**.

FREEDOM of a City, Town, &c. A Right, or Capacity of exercising a certain Trade, or Employment in a City, or Town Corporate; and of being elected to the Dignities and Offices thereof, procur'd regularly by serving an Apprenticeship; but sometimes purchas'd with Money; and sometimes consider'd as a Favour or Complement. See **CITY**, **CORPORATION**, **APPRENTICESHIP**, &c.

FREEHOLD, **FRANCH TENEMENT**, or *Libertum Tenementum*, is Land, or Tenement, which a Man holds in Fee, Fee Tail, or for Term of Life.

Freehold is of two kinds; in *Deed*, and in *Law*.

The first is the real Possession of Land, or Tenement in Fee, Fee Tail, or for Life: The other is the Right a Man has to such Land or Tenement before his Entry, or Seizure.

Freehold is likewise extended to such Offices as a Man holds in Fee, or for Life. See **FEF**.

Briton defines *Franch Tenement* to be a Possession of the Soil, or Services issuing out of the Soil, which a Free-man holds in Fee, or at least for Life, tho' the Soil be charg'd with *free Services*.—

FREEHOLD is also sometimes taken in opposition to *Villanage*. See **VILLENAGE**.

Lambard observes, that Land, in the Saxons time, was distinguishing'd into *Bockland*, i. e. holden by Book, or Writing; and *Folk-land*, held without Writing.

The former, he says, was held on far better Condition, and by the better sort of Tenants; as Noblemen and Gentlemen; being such as we now call *Freehold*: The latter was mostly in Possession of Peasants; being the same with what we now call *at the Will of the Lord*. See *BOCKLAND*, and *FOLKLAND*.

In *Reg. Judicial*, it is express'd, that he who holds Land upon an Execution of a Statute Merchant, until he hath satisfy'd the Debt, *tenet ut liberum tenementum sibi & assignatis suis*; and the name of a Tenant per *Elegit*: The Meaning of which seems to be, not that such Tenants are *Freeholders*, but as *Freeholders* for the Time till they have receiv'd Profits to the Value of their Debt.

In the ancient Laws of *Scotland*, *Freeholders* are call'd *Milites, Knights*.

FREEZE, or FRIZE, in Architecture, that Part of the Entablature of Columns, between the Architrave and Corniche. See *ENTABLATURE*.

The *Freeze* is properly a large, flat Face, or Member separating the Architrave from the Corniche. See *CORNICHE*.

The Ancients call'd it *Zophoros, Ζωφός*, by reason it was usually enrich'd with Figures of Animals; and our Denomination *Freeze* has a like Origin, being form'd of the Latin *Phrygia*, an Embroiderer, because commonly adorn'd with Sculptures in Basso Relievo, imitating Embroidery.

The *Freeze* is suppos'd to be intended to represent the Heads of the transverse Beams that sustain the Roof or Covering.

In the *Tuscan Order* it is quite plain: In the *Doric*, enrich'd with Triglyphs: In the *Ionic*, 'tis sometimes made arch'd, or swelling; particularly in which case 'tis call'd by *Vitruvius, Pntuinatus, q. d. pillow'd*: In the *Corinthian*, and *Composite*, it is frequently join'd to the Architrave, by a little Sweep; and sometimes to the Corniche. And in these richer Orders it is usually adorn'd with Sculpture, Figures, Compartments, Histories, Foliages, Festoons, &c. See *TUSCAN, DORIC, IONIC, &c.*

As to the Height of the *Freeze*, 'tis in the general much the same with that of the Architrave.

The *Tuscan FREEZE, Vitruvius* makes 30 Minutes; *Vignola*, 35; *Palladio*, who makes it swelling, gives it but 26; and *Scamozzi* 42. The *Doric*, in *Vitruvius* and *Vignola*, is 30 or 40 Min: in *Palladio*, *Sc. 45*. The *Ionic, Vitruvius* makes flat, adorn'd with *Acanthus* Leaves, Lions, &c. and makes it 30 Minutes high; *Vignola*, who also makes it flat, gives it 45 Minutes: And *Palladio*, who makes it convex, or swelling, 27 Minutes; and *Scamozzi* 28. The *Corinthian, Vitruvius* enriches with *Acanthus* Leaves, human Figures, &c. and makes its Height 37 Minutes; *Vignola*, 45; *Palladio* 28; and *Scamozzi* 312. Lastly, the *Composite*, which in *Vitruvius* is set with Caroufals, and carv'd between them, is 52 Min; *Vignola*, who makes it like *Vitruvius*, only gives it 45 Min. *Palladio* who makes it swelling, only 30: And *Scamozzi*, 32.

From the Variety of Enrichments practic'd on the *Freezes*, they become variously denominat'd.

Convex, or Pntuinat'd FREEZES, are those whose Profile is a Curve; the best Proportion whereof, is, when drawn on the Base of an equilateral Triangle.

In some the Swelling is only a-top, as in a Console: In others at Bottom, as in a Balluster.

Rustic FREEZES are those whose Courses are rusticated, or imbold'd; as in the *Tuscan Freeze of Palladio*.

Flourish'd FREEZES are those enrich'd with Kinds of imaginary Foliages; as the *Corinthian Freeze* of the Frontispiece of *Nero*: Or with Natural Leaves, either in Clusters; or Garlanded: Or Continued, as in the *Ionic* of the Gallery of *Apollo* in the *Lowere*.

Marine FREEZES are those representing Sea Horses, Tritons, and other Attributes of the Sea; or Shells, Baths, Grotto's, &c.

Historical FREEZES are those adorn'd with Baso-Relievo's, representing Histories, Sacrifices, &c. as the Arch of *Titus* at *Rome*.

Symbolical FREEZES are those adorn'd with the Attributes of Religion; as the *Corinthian*, of the Temple behind the Capitol at *Rome*, whereon are represented the Instruments and Apparatus of Sacrifice.

FREEZE of the Capital, see *HYPOTRACHELIUM*.

FREEZE, in Commerce, a kind of Cloth, or Stuff; see *FRIZE*.

FREEZING, CONGELATION, in Physiology, the Fixing of a Fluid; or depriving it of its natural Mobility, by the Action of Cold: Or the Act of converting a fluid Substance into a firm, coherent, rigid one, call'd *Ice*. See *ICE*, and *COLD*.

The *Cartesians* define *Freezing* to be the resting of a fluid Body, harden'd by Cold; which follows naturally enough

from their Notion of Fluidity, where the Parts are suppos'd to be in a continual Motion. See *FLUID*.

In effect, one may pretty safely say with some of those Philosophers, That Water only *freezes*, because its Parts lose their natural Motion, and adhere close to each other. See *FIRMNESS*.

The *Principal Phenomena* of *FREEZING* are,
1^o That Water dilated or rarify'd, and all Fluids, Oil excepted, in *freezing*, i. e. take up more Space, and are specifically lighter than before.

That the Bulk, or Dimensions of Water is increas'd by *freezing*, is Matter of abundant Experiment; and here it may be proper to observe the Process of Nature.

A Glass Vessel, then, B D full of Water to D, being immerg'd in a Vessel of Water, mix'd with Salt, R S T V, the Water presently rises from E to F; which seems owing to the sudden Constriction of the Vessel hastily plung'd into so cold a Medium. Soon after, from the Point F it continually descends, condensing, till it arrives at the Point G; where, for some time, it seems to remain at rest. But it soon recovers it self, and begins to expand; rising from G to H; and from thence, soon after, by one violent Leap, mounts to I. And here the Water in B is immediately seen all thick, and cloudy; and in the very Instant of this Leap, is converted into Ice. Add, that while the Ice is growing harder; and some of the Water near the Neck of the Vessel B is *freezing*, the Flux of Water is continu'd above I, towards D, and it at length runs out at the Vessel.

2^o That they lose not only of their Specifick, but also of their Absolute Gravity, by *freezing*; so that when thaw'd again, they are found considerably lighter than before.

3^o That *frozen* Water is not quite so transparent, as when liquid; and that Bodies don't perspire so freely thro' it.

4^o That Water, when froze, evaporates almost as much as when fluid.

5^o That Water does not freeze in Vacuo; but requires the Presence and Contiguity of the Air.

6^o That Water which has been boiled, does not freeze quite so readily as that which has not.

7^o That the Water being cover'd over with a Surface of Oil of Olives, does not freeze so readily as without it; And that Nut Oil absolutely preserves it under a strong Frost, when Olive Oil would not.

8^o That Spirit of Wine, Nut Oil, and Oil of Turpentine don't freeze at all.

9^o That the Surface of the Water, in *freezing*, appears all wrinkled, the Rays, or Wrinkles being sometimes in parallel Lines, and sometimes like Rays, proceeding from a Centre to the Circumference.

The *Theories* of *FREEZING*, or the Method of accounting for these Phenomena, are very numerous.

The great Principles different Authors have gone upon, are either, That some foreign Matter is introduc'd within the Pores of the Fluid, by whose means it is fix'd, its Bulk increas'd, &c.

Or, that some Matter naturally contain'd in the Fluid, is now expell'd; by the Absence whereof the Body becomes fix'd, &c.

Or, that there is some Alteration produc'd in the Texture or Form, either of the Particles of the Fluid it self, or of something contain'd within it.

To some one of which Principles all the Systems of *Freezing* are reducible.

I. The *Cartesians*, e. gr. who ascribe all to the Quietude of the Parts of the Fluid, before in Motion; account for *Freezing* from the Recoils of the æthereal-Matter out of the Pores of the Water. The Activity of that Æther, or subtle Matter, they hold to be that which gave the Particles of the Fluid their Motion: Consequently, upon the Absence of this Matter, the Fluidity must cease.

Tho' others of the same Sect ascribe *Freezing* to a Diminution of the usual Force and Efficacy of the æthereal Matter, occasion'd by an Alteration in the Temperature of the Air, whereby it is incapacitated for agitating the Parts of the Fluid as usual.

II. The *Gassendists*, and other Corpuscularians, with more Probability ascribe the *Freezing* of Water to the Ingrefs of Multitudes of cold or frigorick Particles, which entering the Liquor in Swarms; and dispersing themselves every way thro' it, do crowd into the Pores of the Water, and hinder the wonted Agitation of its Parts; wedging it up, as it were, into the hard and consistent Body of Ice. And hence its Increase of Dimensions, Coldness, &c.

This Intromission of a foreign frigorific Matter they suppose essential to *Coagulation*; as that characterises and distinguishes it from *Congelation*: The former being effected indifferently by a hot, or cold Mixture; but the latter only by a cold one. See *COAGULATION*.

Of what kind these frigorific Particles are, or how they produce their Effect, is Matter of Debate; and has given occasion to various Systems.

Hobbs will have it common Air, which intruding into the Water in *Congelation*, entangles it self with the Particles of the Fluid; prevents their Motion, produces those numerous Bubbles observ'd in Ice; thus expanding its Bulk, and rendering it specifically lighter: But this Opinion is overturn'd by *Mr. Boyle*, who shows that Water will freeze in Vessels Hermetically seal'd, and into which the Air can have no ingress; yet the Bubbles will be as numerous herein, as in that case in the open Air. Add, that Oil is condens'd, in *freezing*: Consequently, the Air cannot there be the Cause.

Others, and those the greatest Number, will have the *freezing Matter* to be a Salt; arguing, that an Excess of Cold will render Water torpid; but never congeal it, without Salt. They are saline Particles, say they, and those dissolv'd and mix'd in a due Proportion, that are the chief Cause of *Freezing*: *Congelation* bearing a near relation to *Crystallization*. See *CRYSTALLIZATION*.

This Salt, they suppose of the Nitrous kind; and to be furnish'd by the Air, which is generally allow'd to abound in Nitre. See *AIR*, and *NITRE*.

How the Particles of Nitro may prevent the Fluidity of Water, is pretty easily accounted for: These Particles are suppos'd to be so many rigid, pointed Spicula, which are easily driven into the Stamina, or Globules of the Water; which thus becoming variously mingled and entangled therewith, by degrees inebble and destroy the Motion thereof.

The Reason this Effect only arises in severe Winter Weather, is, that 'tis then only, that the retarding Action of the nitrous Spicula, is more than equal to the Power or Principle whereby the Fluid is otherwise kept in Motion, or dispos'd for Motion. See *FLUID*.

This Opinion is supported by the known Experiments of Artificial *Freezing*.

A Quantity of common Salt or Petre being mix'd with Snow, or Ice pulveris'd; and the Mixture dissolv'd by the Fire: Upon immersing a Tube full of Water in the Solution; the Water, that Part of it next the Mixture, presently freezes, even in warm Air. Whence it is argued, that the Spicula of the Salt, by the Gravity of the Mixture, and of the incumbent Air, are driven thro' the Pores of the Glass, and mix'd with the Water: For that it is the Salt has the Effect, is evident; inasmuch as we know assuredly that the Particles of Water cannot find their Way thro' the Pores of Glass. In these Artificial *Freezings* whatever Part the Mixture is applied in, there is presently produced a Skin, or Lamina of Ice; whether at top, or bottom; or on the Sides: By reason there is always a Stock of saline Corpuscle, sufficient to overpower their Corpuscles of Fire: But *Natural Congelations* are confin'd to the Top of the Water, where the Salt most abounds.

Against this System the ingenious Author of the *Novoelle Conjecture pour Expliquer la Nature de la Glace*, objects, That it does not appear, that Nitre always enters the Composition of Ice, but that if it did, it would come short of accounting for some of the principal Effects. For how, for instance, should the Particles of Nitre by entering the Pores of Water, and fixing the Parts, oblige the Water to dilate and render it specifically lighter? Naturally they should augment its Weight. This Difficulty, with some others, shew the Necessity of a new Theory. That Author, therefore, advances the following one, which seems to solve the Phenomena in a more easy, and simple manner; as not depending on the precarious Admission or Extrusion of any heterogeneous Matter.

III. Water, then, *freezes* in the Winter only, because its Parts being more closely join'd together, mutually embarrass one another, and lose all the Motion they had: And the Cause of this closer Union of the Water, is the Air; or rather an Alteration in the Spring and Force of the Air.

That there are an infinite Number of Particles of gross Air, interspers'd among the Globules of Water, is abundantly evident from Experiment: And that each Particle of Air has the Virtue of a Spring, is confess'd: Now, this Author argues, that the small Springs of gross Air mix'd with the Water, have more Force in cold Winter Weather, and abound themselves more, than at other times. Hence, those Springs thus unbending themselves on one Side, and the external Air continuing to press the Surface of the Water on the other; the Particles of Water thus confining'd and lock'd up together, must lose their Motion and Fluidity, and form a hard consistent Body: Till a Relaxation of the Spring of the Air, from an Increase of Heat, reduce the Particles to

their old Dimensions, and leave room for the Globules to flow again.

But this System has its Feible: The Principle on which it stands, may be demonstrated to be false. The Spring, or Elasticity of the Air is not increas'd by Cold; but diminish'd. Air expands it self by Heat; and condenses by Cold: And 'tis demonstrat'd in Pneumatics, that the elastic Force of expanded Air, is to that of the same Air condens'd; as its Bulk when rarify'd, to its Bulk, condens'd. See *EASTRICHY*, and *AIR*.

We don't know, whether it is worth mentioning, what some Authors have advanc'd, to account for the Increase of Bulk and Diminution of specific Gravity of frozen Water: *viz.* That the aqueous Particles, in their natural State, were nearly Cubes, and so fill'd their Space without the Interposition of many Pores: But that by *Congelation* they are chang'd from Cubes, to Spheres; whence a Necessity of a deal of empty Space between them. Cubic Particles are certainly much less proper to constitute a fluid, than spherical ones; and spherical Particles less dispos'd to form a fix'd, than cubic ones.

Thus much the Nature of Fluidity and Firmness easily suggests.

After all, for a consulting Theory of *Freezing*, we must recur either to the frigorific Matter of the Corpuscularians; consider'd under the Light and Advantages of the *Newtonian* Philosophy: Or to the ethereal Matter of the *Cartesians*, under the Improvements of *Monf. Gasteron*, in the *Memoires de l'Academie Royale des Sciences*, An. 1709.—

Each of which we shall here subjoin; and leave the Reader to make his Choice.

For the *first*: A Number of cold, saline Corpuscles being introduc'd into the Interstices between the Globules of Water; may be so near each other, as to be within the Spheres of one another's Attractions; the Consequence of which must be, that they will cohere into one solid, or firm Body: Till, Heat afterwards separating them, and putting them into various Motions, breaks this Union, and separates the Particles so far from one another, that they get out of the Distance of the attracting Force, and into the Verge of the repelling Force; and then the Water re-assumes its fluid Form.

For, that Cold and *Freezing* do arise from some Substance of a saline Nature floating in the Air, seems probable hence, that all Salts, and more eminently some particular ones, when mix'd with Snow, or Ice, do prodigiously increase the Force and Effects of Cold: Add, that all saline Bodies do produce a Stiffness and Rigidity in the Parts of those Bodies, into which they enter.

Microscopical Observations upon Salts manifest, that the Figures of some Salts, before they shoot into Masses, are thin, double, wedge-like Particles, which have abundance of Surface with respect to their Solidity (the Reason why they swim in Water, when once mix'd in it, tho' specifically heavier). These small Points of the Salt getting into the Pores of the Water, whereby also they are in some measure suspended in the Winter time (when the Heat of the Sun is not strong enough to dissolve the Salts into a Fluid, to break their Points, and to keep them in perpetual Motion) being less disturbed; are more at Liberty to approach one another; and by floating into Crystals of the Form above mention'd, do, by their Extremities, insinuate themselves into the Pores of Water, and by that means *freeze* it into a solid Form.

Further, there are many little Volumes or Particles of Air, included at several Distances both in the Pores of the watry Particles, and in the Interstices made by the spherical Figures. By the Insinuation of these Crystals, the Volumes of Air are driven out of the watry Particles; and many of them uniting, form larger Volumes, which thereby have a greater Force to expand themselves, than when dispers'd; and so both enlarge the Dimensions, and lessen the specific Gravity of the Water, thus congeal'd into Ice.

Hence also we may conceive, how Water impregnated with Salts, Sulphurs, or Earths, which are not easily dissolvable, may form itself into Metals, Minerals, Gums, and other Essels; the Parts of these Mixtures becoming a Cement to the Particles of Water, or getting into their Pores, change them into these different Substances.

For the *second*: As an ethereal Matter or Medium is generally allow'd the Cause of the Motion of Fluids; see *MIXTURE*: And as the Air it self has all its Motion from the same Principle; it follows, that all Fluids must remain in a State of Rest, or Fixity, when that Matter loses of its necessary Force. Of consequence, the Air being less warm'd in the Winter time, from the Obliquity of the Rays of the Sun; the Air is denser, and more fix'd in Winter, than any other Season of the Year.

But further, from divers Experiments we have learnt, that the Air contains a Salt, suppos'd to be of the Nature of Nitre. This granted, and the Density of the Air allow'd, it follows, that the Molecules of this Nitre must likewise

be brought nearer together, and thick'n'd by the Condensation of the Air: As, on the contrary, a Rarefaction of the Air, and an Augmentation of its Fluidity, must divide and separate them.

If now the same Thing happen to all Liquors that have imbibed, or dissolv'd any Salt; if the Warmth of the Liquid keep the Salt exactly divided; and if the Coolness of a Cellar, or of Ice give occasion to the Molecules of the dissolv'd Salt to approach, run into each other, and shoot into Crystals: Why should the Air, which is allow'd a Fluid, be exempt from the general Law of Fluids?

'Tis true, the Nitre of the Air being grosser in cold Weather, than hot; must have less Velocity: But still, the Product of its augmented Mass, into the Velocity remaining, will give it a greater Momentum, or Quantity of Motion. Nor is any thing further requir'd to make this Salt act with greater Force against the Parts of Fluids: And probably, this is the Cause of the great Evaporation in frosty Weather.

This aerial Nitre must promote the Concretion of Liquids: For 'tis not the Air, nor yet the Nitre it contains, that gives the Motion to Fluids: 'Tis the Etherial Medjum. From a Diminution of the Force of that, therefore, arises a Diminution of Motion of the rest.

Now the etherial Matter, weak enough of it self in the Winter time, must lose still more of its Force by its Action against Air condens'd and loaded with large Molecules of Salt. It must, therefore, lose of its Force in cold Weather, and become less dispos'd to maintain the Motion of Fluids. In a Word, the Air, daring Frost, may be esteem'd like the Ice impregnated with Salt, wherewith we ice our Liquors in Summer time. Those Liquors, in all Probability, freeze from a Diminution of the Motion of the etherial Medium, by its acting against the Ice and Salt together: And the Air, for all its scorching Heat, is not able to prevent its Concretion.

FREEZING RAIN, or Raining Ice, a very uncommon kind of Shower, which fell in the West of England, in December, Anno 1672; wherof we have divers Accounts in the *Philosophical Transactions*.

This Rain, as soon as it touch'd any thing above Ground, as a Bough, or the like; immediately settled into Ice; and by multiplying and enlarging the Icicles, broke all down with its Weight. The Rain that fell on the Snow, immediately froze into Ice, without sinking in the Snow at all.

It made an incredible Destruction of Trees, beyond any thing in all History: "Had it concluded with some Gust of Wind," says a Gentleman on the Spot, "it might have been of sad importance."

"I weigh'd the Sprig of an Ash Tree, of just three Quarters of a Pound; the Ice on which weigh'd 16 Pound."—"Some were frighted with the Noise in the Air; till they discern'd it was the Clatter of icy Boughs, dash'd against each other."

Dr. Beale observes, that there was no considerable Frost observ'd on the Ground during the whole; whence he concludes, that a Frost may be very fierce and dangerous on the Tops of some Hills, and Plains; while in other Places it keeps at two, three, or four Foot distance above the Ground, Rivers, Lakes, &c. And may wander about very furious in some Places, and remain in others, not far off. The Frost was followed by glowing Heats, and a wonderful Forwardness of Flowers and Fruits. See **FROST**.

FREEZING, in Commerce and Manufactures; see **FRIZING**.

FREEZING Mixture, a Preparation for the artificial Congelation of Water, and other Liquors.—

All kinds of Salts, whether alkalizate, or acid; and even all Spirits, as those of Wine, &c. as also Sugar, and *Saccharum Saturni*, mix'd with Snow, are capable of freezing other Bodies: And the same Effect is produc'd in a very great Degree by a Mixture of Oil of Vitriol, or Spirit of Nitre with Snow: Thus **Mr. Boyle**.

Monf. Homberg observes the same of equal Quantities of corrosive Sublimate, and *Sul Ammoniac*, with four times the Quantity of Vinegar distill'd. See **WATERS**.

FREZÉLAND Horse, in War, the same with **Cheval de Frise**. See **CHEVAL de Frise**.

FRENCH, absolutely us'd, signifies the Language of the People of France. See **LANGUAGE**.

The *French*, as it now stands, is no Original, or Mother Language; but a Medley of several: Scarce any Language, but it has borrowed Words, or perhaps Phrases, from.

The Languages that prevail most, and that are, as it were, the Basis thereof, are 1^o The *Celtic*; whether that were a particular Language it self, or whether it were only a Dialect of the *Gorbic*, as spoke in the West, and North. 2^o The *Latin*, which the *Romans* carried with them into the *Gauls*, when they made the Conquest thereof. And 3^o, The *Teutonic*, or that Dialect of the *Teutonic* spoke by the *Franks*, when they pass'd the *Rhine*, and establish'd themselves in the *Gauls*.

Of these three Languages, in the space of about thirteen

hundred Years, was the *French* form'd; such as it is now found.

Its Progress was very slow; and both the *Italian* and *Spanish* were regular Languages long before the *French*.

Pasquier observes, it was under *Philip de Valois*, that the *French* Tongue first began to be polish'd; and that in the Register of the Chamber of Accounts of that Time, there is a Parity seem almost equal to that of the present Age.

However, the *French* was still a very imperfect Language, till the Reign of *Francis I.* The Custom of speaking *Latin* at the Bar, and of writing the publick Acts and instruments of the Courts of Justice in that Language, had made them overlook the *French*, their own Language. Add, that the preceding Ages had been remarkable for their ignorance, owing in good measure to the long and calamitous Wars, which *France* had been engag'd in: Whence, the *French* Noblesse deem'd it a kind of Merit, not to know any thing; and the Generals regarded little, whether or no they wrote and talk'd politely, provided they could but fight well.

But *Francis I.* who was the Restorer of Learning, and the Father of the Learned; chang'd the Face of Things; and after his Time *Henry Stevus* printed his Book *De la Precellence du Langage Francois*.

The Change was become very conspicuous at the End of the XVIth Century; and under *Henry IV. Anyot, Coeffereau, and Malherbe* contributed towards bringing it to Perfection; Which the Cardinal de *Richelieu* completed, by the Establishment of the *French* Academy; an Assembly, wherein the most distinguish'd Persons of the Church, the Sword, and the Gown have been Members.

Nor did the long Reign of *Louis XIV.* contribute a little to the Improvement of the Language. The peculiar Qualities of that Prince, and his Taste for the polite Arts, and that of the Princes of the Blood, render'd his Court the politest in the World. Wit and Magnificence seem'd to vie; and his Generals might have disputed with the *Greeks, Romans, &c.* the Glory of Writing well, if they could not that of Fighting.

From Court, the Elegance, and Purity of the Language spread it self into the Provinces; and now there is no Body but writes and speaks good *French*.

One of the Characters of the *French* Language is to be natural, and easy. The Words are rag'd in it much in the same Order as the Ideas in our Minds; in which it differs exceedingly from the *Greek* and *Latin*, where the Inversion of the natural Order of the Words is a Beauty.

Indeed, the *Hebrew* surpasses even the *French* in this Point; but then it comes short of it in Copiousness and Variety.

It must be added, however, that as to the Analogy of Grammar, and the Simplicity wherewith the Moods of Verbs are form'd; the *English* has the Advantage, not only over the *French*, but over all the known Languages in the World: But then the Turns, the Expressions, and the Idioms of the *English* are sometimes so quaint, and extraordinary, that it loses a good deal of the Advantage which its grammatical Simplicity gives it over the rest. See **ENGLISH**.

The *French* has but few compound Words; wherein it differs widely from the *Greek, High Dutch, and English*. This the *French* Authors own a great Disadvantage in their Language; the *Greek* and *Dutch* deriving a great Part of their Force and Energy from the Composition of Words; and frequently expressing that in one sounding Word, which the *French* cannot express but by a Periphrasis. And the Diminutives in the *French* are as few as the Compounds: The greatest Part of those remaining in use having lost their diminutive Signification. But what distinguishes the *French* most, is its Justice, Purity, Accuracy, and Flexibility.

French is the most universal and extensive Language in Europe. The Policy of States and Courts has render'd it necessary for the Ministers of Princes, and their Officers, &c. And the Taste of Arts and Sciences has had the same Effect with regard to the Learned.

In Germany, and elsewhere, the Princes and Persons of Distinction value themselves on understanding *French*: And in several Courts of Europe, *French* is almost as much known as the Language of the Country; tho' the Court of Vienna is an Exception from this Rule. *French* is there very little us'd: The Emperor *Leopold* could not bear to hear it spoke in his Court: The *Latin* and *Italian* are there cultivated instead of it.

This Extensiveness of the *French* Language is no modern Advantage: *William* the Conqueror gave Laws to England in the *French* Language; and the ancient Customs of most of the Provinces of the *Netherlands* are wrote in the same.

Lastly, the *French* is the same Language every where; not only in all the Provinces of France, but in all the Places where 'tis spoke, out of France.

The several Nations who speak *Slavonic*, don't so much speak the same Language, as different Dialects of the same Language. In several Parts of *Europe* there are as many different Languages, as there are States; and in *Italy* there are reckon'd no fewer than ten or twelve Dialects, some of which differ as much from the common *Italian* as from the *French*, or *Spanish*. In *Holland*, the Seamen of *Rotterdam*, and the Banks of the *Meuse*, don't understand those of *Amsterdam*, and the Coasts of the *Zuyder Zee*. They who understand *Castilian*, will not understand the Language of *Catalonia* and *Cerdagvia*. The *Hgh Dutch* is not the same in *Sweden*, as in *Jutland*: In the Low Countries, as at *Lubeck*. *Bohemia*, *Hungary*, *Croatia*, &c. are Countries belonging to the Emperor; yet speak a Language different from that spoke at *Vienna*. The King of *Sweden*, when he speaks the Language of his Country, will not be understood by his Subjects in *Pomerania*, *Lapland*, &c. And the like may be observ'd of the King of *Denmark*, with regard to his Subjects of *Norway* and *Island*: Whereas, at *Quebec*, the *Louisiana*, *Martinico*, *St. Domingo*, *Pondicberi*, &c. they speak the same Language as at *Paris*, and throughout the rest of *France*.

For a critical Acquaintance with what regards the *French* Tongue, see the *Remarques* of *M. Vaugelas*; and the *Observations* of *M. Corneille* has made on those Remarks: The *Remarques* of *Fa. Bouhours*; and the *Zonbis* of a *Bretton* Gentleman by the same Father: The *Coverfations* of *Aryste* and *Eugene*: The *Observations* of *M. Menage*, and his *Etymologies*; with those of *M. Huet*: *Fa. Buffier's French Grammar*; and that of the *Abbe Regnier*. And the two Discourses of the *Abbe de Dangeau*; one on the Vowels, and the other on the Consonants.

FRENCH Bread, a Sort of Bread, valued for its Delicacy. See **BREAD**.

It is prepar'd by taking half a Bushel of fine Flower, to ten Eggs, and a Pound and half of fresh Butter; and into that putting as much Yest with a Manchet.

Then, tempering the whole Mass with new Milk pretty hot, let it lie half an Hour to rise. Which done, make it into Loaves or Rolls, and wash it over with an Egg, beaten with Milk. The Oven not to be too hot. See **BAKING**.

FRENCH-MAN, see **FRANCIGENA**, and **ENGLEREY**.

FRENDES MAN, was the old *Saxon* Name for him whom we call an *Outlaw*. See **OUTLAW**.

The Reason is, because he was, upon his Exclusion from the King's Peace and Protection, deny'd all Help of Friends after certain Days: *Nam foris fecit amicos*.

FRENZY, and **FRENETIC**, see **PHRENZY**, and **PHRENETIC**.

FRESCO, a kind of Painting; perform'd on fresh Plaster; or on a Wall laid with Mortar not yet dry, and with Water Colours. See **PAINTING**.

This sort of Painting has a great Advantage: By its incorporating with the Mortar, and drying along with it, it is render'd extremely durable; and never falls or falls, but along with it. The *Italians*, from whom we borrow the Term, call it a *FreSCO*: *Vitruvius*, lib. 7. c. 3. calls it *Ulo Scelivro*.

Painting in *FreSCO* is very ancient; and having been practiced in the earliest Ages of *Greece* and *Rome*.

It is chiefly perform'd on Walls and Vaults, newly plaster'd with Lime and Sand: But the Plaster is only to be laid, in proportion as the Painting goes on; so more being to be done at once, than the Painter can dispatch in a Day, while it is dry.

Before he begins to paint, a Cartoon or Design is usually made on Paper; to be calk'd, and transfer'd to the Wall, about half an Hour after the Plaster is applied.

The Antients painted on Stock; and we may remark in *Vitruvius*, what infinite Care they took in making the In-crustation or Plastering of their Buildings to render them beautiful and lasting: Tho' the modern Painters find a Plaster made of Lime and Sand preferable thereto; both as it does not dry so hastily; and as being a little brownish, it is fitter to lay Colours on, than a Ground so white as Stock.

In this kind of Painting, all the Compound and Artificial Colours, and almost all the Minerals are set aside; and scarce any thing us'd but Earths; which are capable of preserving their Colour, defending it from the burning of the Lime, and resisting its Salt, which *Vitruvius* calls its *Bitumens*.

For the Work to come out in all its Beauty; the Colours must be laid on quick, while the Plaster is yet moist: Nor must they ever be retouch'd, dry, with Colours mix'd up with the White of an Egg, or Size, or Gum, as some Workmen do; by reason such Colours grow blackish: Nor do any preserve themselves, but such as were laid on hastily at first.

The Colours us'd, are *White* made of Lime slack'd long ago, and white Marble Dust; *Oker*, both red, and yellow; *Violet Red*; *Verditer*; *Lapis Lazuli*; *Smalt*; *Earth Black*, &c. All which are only ground, and work'd up with Water; and most of them grow brighter and brighter, as the

FreSCO dries. See **COLOUR**, **WHITE**, **BLACK**, **VERDITER**, **LAPIS**, &c.

FRESH-WATER, is that not tinctur'd or impregnated with Salt, or saline Particles, enough to be discoverable by the Sense. See **WATER**.

Such generally is that of Springs, Rains, Wells, Lakes, &c. See **SPRING**, **RAIN**, **WELL**, **LAKE**, &c.

Dr. Lister is of Opinion, that the natural and original State of Water is to be Salt: The *Freshness* he supposes to be accidental, and to be owing to the Vapours of Plains, and the Breath of Animals therein; and to the Exhalations raised by the Sun.

Others will have Water originally *fresh*; and take its Saltness to be accidental: To account for which, a great Number of Hypotheses have been fram'd. See **SALTNES**.

The Saltness of Water is a foreign, and in most Cases a hurtful Quality. It renders it not only nauseous to the Taste, but greatly prejudicial to the Body: And it is generally agreed, that those Waters, *esterts paribus*, are best, not only for drinking, but for economical Uses, as Washing, Boiling, Brewing; which are the free'd from Saltness.

Hence, various Methods have been contriv'd for examining the *Freshness* of Waters; and of making salt Water *fresh*.

Mr. Boyle gives us a Method of examining the *Freshness* of Water, by means of a Precipitate, which casts down any saline Particles before floating therein.

Into 1000 Grains of distilled Water, he puts one Grain of Salt; and into the Solution lets fall a few Drops of a strong well filtrated Solution of well refin'd Silver, dissolv'd in clear *Aqua Fortis*; upon which there immediately appears a whitish Cloud, which, tho' but slowly, descends to the Bottom, and there settles to the Bottom in a white Precipitate, which is the saline Matter of the Fluid.

This Method, if it were requir'd, would examine Water to a greater Nicety, than that here speci'd. It has discover'd Salt in Water, where there was but one Grain of the Salt in 1000, nay 3000 times the Weight of Water. In

The Experiment was tried before the Royal Society, in 1692. by *Dr. Sloan*; where it was likewise found that a Drop or two, even of Spirit of Salt, mix'd with common Water, would be discover'd by the same Method.—

Dr. Hook, in the same Year, read a Lecture before the Royal Society, on a Method of his own, for discovering the smallest Quantity of Salt contain'd in Water, on a Principle of Hydrostatics.

The Operation was perform'd by means of a large Polse of Glass, of the Shape of a Bolt Head; the Ball thereof three Inches in Diameter, and the Neck $\frac{1}{2}$ of a Inch. This being stopp'd, with red Lead put in it, as to make it very little heavier than *fresh* Water; and then suspended by the small Stem, which was graduated, to the End of a nice Beam of a Balance; and the Degree or Division of the Neck, contiguous to the Surface of the Water, not'd: Upon infusing a Quantity of Salt, only equal to the two thousandth Part of the Weight of the Water, the Neck of the Polse sunk near half an Inch lower in the Water.

The Duplicating, or making of salt Water *fresh*, is a Secret, and has been long sought with great Attention.

Dr. Lister takes the most easy, safe, and natural way of procuring *fresh* Water from the Sea, to be by putting Sea Plants, as *Siga Marina*, or common Sea Weed into a Quantity of the Water, in a Glass Body, with a Head, Beak, and Receiver: From which a *fresh*, sweet, and potable Liquor will continually distill.

Monf. Hauser has at length declared his Secret of making Sea Water *fresh*.

It consists first, in a Precipitation, made with Oil of Tartar, which he can prepare at a small Expence. Next he distills the Sea Water, with a Furnace contriv'd to take up little Room, and which, with a very little Fire, will distill 24 *French* Quarts of Water in a Day. For the Cooling thereof, instead of making the *Worm* pass thro' a Vessel full of Water, he makes it pass thro' a Hole made on purpose out of the Ship, and enter it again at another; so that the Sea Water does the Office of a Refrigeratory. To the two proceeding Operations he joins Filtration, which is performed by a peculiar kind of Earth, mix'd and stirr'd with the distilled Water; and at length suffer'd to settle. This Filtration leaves it perfectly salubrious. *Phil. Trans.* N^o 67.

FRESH FINE, is that which was leiv'd within a Year past. *Weslm.* 2. c. 45. See **FINE**.

FRESH FORCE, *Friske Fortia*, in Law, is a Force done within forty Days. See **FORCE**.

If a Man be distress'd of any Lands or Tenements, within any City or Borough; or deserv'd from them after the Death of his Ancestors, to whom he is Heir; or after the Death of his Tenant for Life, or in Tail; he may, within forty Days after his Title accrued, have his Remedy by an *Affize*, or Bill of *Fresh Force*.

FRESH Sute, Recens Infeantio, is such a present and active Prosecution of an Offender, as never ceases, from the Time of the Offence committed, or discover'd, till he be apprehended. See **SUTE**.

The Benefit of such Pardon of a Felon, is, That the Party performing shall have his Goods restor'd to him, whereas otherwise they are the King's.

Fresh Sute may continue for seven Years.—

Fresh Sute is either within the View, or without. **Manwood** says, That upon **fresh Sute** within the View, Trespassers in the Forest may be attached by the Officers pursuing them, tho' without the Limits of the Forest.

FRESH Spell, in the Sea Language, a **fresh Gang**, to relieve the Rowers in the Longboat. See **SPELL**.

FRESH Sbot, in the Sea Phrase, signifies the falling down of any great River, into the Sea; by means whereof the Sea hath **fresh Water** a good way from the Mouth of the River.

As this is more or less, they call it a *great* or *small Fresh Sbot*.

FRET, or **FRETTE**, in Architecture, a kind of Knot, or Ornament, consisting of two Lists, or small Fillets variously interlac'd, or wove; and running at parallel Distances, equal to their Breadth.

A necessary Condition of these **Frets** is, that every Return, and Intersection be at Right Angles. This is so indispensable, that they have no Beauty without it; but become perfectly *Gothic*.

Sometimes the **Fret** consists but of a single Fillet; which, if well managed, may be used to fill its Space exceedingly well.

The Antients made great use of these **Frets**: The Places they were chiefly applied on, were even, flat Members, or Parts of Building; as the Faces of the Corona, and Eves of Cornices; under the Roofs, Soffits, &c. on the Pillars of Bases, &c.

The Appellation was occasion'd hence, that the Word **Frette** literally signify'd the Timber Work of a Roof, which consists chiefly, of Beams, Rafters, &c. laid a-cross each other, and as it were, *fretted*.

FRET-work, an Enrichment of **Frets**; or a Place adorn'd with something in manner thereof. See **FRET**.

Fret-work is sometimes used among us, to fill up, and enrich flat, empty Spaces; but 'tis principally practis'd in Roofs, which are *fretted* over with Plaster Work.

The *Italians* also apply it to the Mantlings of Chimneys with great Figures: A cheap Piece of Magnificence, and as durable almost within Doors, as harder Matters in the Weather.

FRET, or **FRETTE**, in Heraldry, is a Bearing consisting of six **Bars**, cross'd, and interlac'd, *fret-wise*; as in the adjoining Figure.

He bears Diamond a **Fret** Topaz: The Coat Armor formerly of the Lord *Maltrevers*, and now quarter'd by the Duke of *Norfolk*.

When it consists of more than six Pieces, the Number must be specified.

Some call this the true *Lovers Knot*; others, *Harrington's Knot*, because 'tis their Arms, and *Nodiforme* the Motto. *Gibson* is for calling it *Heraldorum Nodus Amatorum*.

FRETTE, or **FRETTIE**, in Heraldry, is where there are divers Bars laid a-cross each other.

Frettee is of six, eight, or more Pieces. Azure, **Fretty** of eight Pieces Or: The Coat of the Lord *Wiltongby*.

Columbiere observes, that **Fretty** absolutely us'd, without any Addition, is suppos'd to be of six Pieces; that is, so many Bars or Pieces crossing each other: Which, therefore, need not be express'd; but if there be more, as much must be mention'd.

And yet *Guillim* has Azure, **Fretty** of six, Argent: The Coat of the ancient Lords *Elstingbam* of *Stuffex*.

Guillim derives the Word from the French *Rets*, Net: But the Reader will easily furnish himself a better Etymology from the Word **FRET**, in *Architecture*.

FRIABLE, is applied to Bodies, to denote them tender and brittle; easily crumbled, or reduc'd to Powder between the Finger: Their Force of Cohesion being such as easily exposes them to Solution.

Such is Pumice, and all calcin'd Stones, burnt Alam, &c. **Friability** is suppos'd to arise hence, that the Body consists wholly of dry Parts, irregularly combined, and which are readily separated, as having nothing unctuous, or glutinous to bind them together. See **COHESION**.

FRIAR, or **FRIER**, by the *Latins* call'd *Frater*, the *Italians* *Fraticello*, and the *French*, *Frere*, that is, *Brother*, is a Term common to the Monks of all Orders; founded on this, that there is a kind of Fraternity, or Brotherhood presumed between the several religious Persons of the same Convent, or Monastery. See **BROTHER**, **MONK**, &c.

The kinds of **Friars** are very numerous, *Augustin Friars*; *Dominican*, or *Black*, or *Preaching Friars*; *Franciscan*, or *Grey*, or *Minor*, or *Begging Friars*; *Carmelites*,

or *White Friars*, &c. See **Religious ORDERS**; see also **DOMINICAN**, **FRANCISCAN**, **CARMELETTE**, &c.

FRIAR, in its more peculiar and proper Sense, is restrain'd to such Monks, as are not **Priests**; for those in Orders, are usually dignify'd with the Appellation of *Father*. See **FATHER**.

FRIARS, or **FRIERS Observant**, *Frates Observantes*, were a Branch of the *Franciscans*, which are *Almores tam Observantes, quam Conventuales & Capucini*. See **MINOR**, and **OBSERVANT**.

They were call'd *Observants*, because not combin'd together in any Cloister, Convent, or Corporation, as the *Conventuals* are; but only agreed among themselves to observe the Rules of their Order, and that more strictly than the *Conventuals* did; from whom they separated themselves out of a Singularity of Zeal; living in certain Places of their own chusing.

FRIBURGH, or **FRITHORGE**, among our *Anglo-Saxon* Ancestors, denoted the same as *Frank-pledge* did after the Time of the Conquest. See **FRANK-PLEDGE**.

Præterea est quedam summa & maxima securitas, per quam omnes sub firmissimo sustententur, viz. ut unusquisque stabilitur se sub fidelissimo securitate, quam Angli vocant Freoborghes: soli tamen Eboracenses dicunt eundem Tienmannatale, quod sonat latine decem hominum Numerum. II Edu. per Lam.

Every Man in this Kingdom was antiently associated in some Decenary, or Company of ten Families, who were pledg'd or bound for each other, to keep the Peace, and observe the Law. See **DECENNA**.

If any Offence was done by one, the other nine were to answer it: That is, if the Criminal fled from Justice, they had thirty Days allow'd to apprehend him: If he was not taken in that time, he who was the *Friburg*, i. e. the principal Pledge of the ten, should take two of his own Number, and the chief Pledges of three neighbouring *Friburgs*, with two others out of each of the said *Friburgs*; who were to purge themselves and their *Friburg* of the Forfeiture and Flight of the Criminal. If they could not do this, the principal Pledge, with the other eight, were to make Satisfaction.

Great Men were not combin'd in any ordinary *Decenna*, or *Dozein*; as being deem'd a sufficient Assurance for themselves and their mental Servants. See **DOZEN**.

FRICASSEE, a Dish, or Meats, hastily dress'd in a Pot, or *Frying-pan*, and season'd with Butter, Oil, or the like.

Thus we say, a *Fricassee* of Pullets, of Rabbits, of Tenches, of Tripe, of Frogs, of Eggs, of Peas, &c.

The Word is pure *French*, form'd of the Latin *Fricatura*, *frying*. Others will have *Fricassee* form'd in imitation of the Noise made by Butter, or other Fat, when melted in the Pan.

FRICTION, the Act of rubbing, or grating the Surface of one Body against that of another; call'd also *Attrition*.

The Phenomena arising upon the *Fricition* of divers Bodies under divers Circumstances, are very numerous and considerable.

Mr. Hawkesbee gives us a Number of Experiments of this Kind: Particularly that of the *Attrition*, or *Fricition* of Glass, under various Circumstances; the Result of which was, that it yielded Light, became Electrical, &c. See **ATTRITION**, **ELECTRICITY**, &c.

All Bodies by *Fricition* are brought to conceive Heat; many of them to emit Light; particularly a Cats-paw, Sugar, beaten Sulphur, Mercury, Sea Water, Gold, Copper, &c. But above all, Diamonds, which when briskly rubb'd against Glass, Gold, or the like, yield a Light, equal to that of a live Coal, when blow'd by the Bellows. See **FIRE**, **LIGHT**, **HEAT**, **PHOSPHORS**, **DIAMOND**, &c.

FRICTION, in Mechanics, the Resistance a moving Body meets withal from the Surface whereon it moves. See **RESISTANCE**.

Fricition, arises from the Roughness or Asperity of the Surface of the Body mov'd on, and that of the Body moving. For such Surfaces consisting alternately of Eminences, and Cavities; either the Eminences of the one must be raised over those of the other; or they must be both broke and wore off: But neither can happen without Motion; not can Motion be produc'd without a Force impred'd. Hence, the Force applied to move the Body, is either wholly, or partly spent on this Effect; and consequently there arises a Resistance, or *Fricition*: Which will be greater, *ceteris paribus*, as the Eminences are the greater, and the Substance the harder. And as the Body, by continual *Fricition* grows more and more Polite, the *Fricition* diminishes.

Hence it follows, that the Surfaces of the Parts of Machines that touch each other, should be as smooth and polish'd as possible. But, as no Body can be so much polish'd, as quite to take away all Inequality; witness those numerous Ridges discover'd by the Microscope on the smoothest Surfaces: Hence arises the Necessity of anointing the Parts that touch, with Oil, or other fatty Matter.

Laws of FRICTION.

1^o As the Weight of a Body moving on another, is increased, so is the Friction.

This we see experimentally in a Balance ; which when only charged with a small Weight, easily turns ; but with a greater, a greater Force is required.

Hence, if the Line of Direction of a moving Body be oblique to the Surface moved on; the Friction is the greater; this having the same Effect as an Increase of Weight.

And hence, again, as a perpendicular Stroke, or Impression is to an oblique one as the whole Sine, to the Sine of the Angle of Incidence ; and the Sine of the greater Angle is greater, and that of the lesser, less : The Friction is the greater, as the Line of Direction approaches nearer to a Perpendicular.

This is easily observable, and especially in the Teeth of Wheels, which are frequently broke on this very account. The Friction, therefore, is taken away, if the Line of Direction of the moving Body be parallel to the Surface.

2^o The Friction is less in a Body that rolls, than it would be were the same Body to slide, as is easily demonstrated.

For suppose a dented Ruler, A B, Tab. *Mechanicks*, Fig. 58, and suppose a Wheel D E to move along it, with its Teeth perpendicular to the Circumference. If now the Body were to slide; the Tooth F, when it touch'd the Ruler, would describe a Right Line on the Surface thereof : And, as the Tooth of the Ruler, H, resists the same ; it could not proceed without removing, or breaking either the Tooth H ; or that F. And the same will hold in the sliding of any rough Surface upon another ; where all the Frictions will take place, than can any way arise from the Roughness of the Surface. But if the Wheel E D roll along the Ruler, then the Tooth H will no longer resist its Motion, only as it is to be hoisted out of the Cavity F over the Eminence of the Tooth H : And the same holds in the rubbing of any rough Body over the Surface of another.

Hence, in Machines, let the Friction should employ a good Part of the Power ; Care is to be taken, that no Part of the Machine slide along another ; if it can be avoided : But rather that they roll, or turn upon each other. With this View it may be proper to lay the Axes of Cylinders, not, as is usually done, in a Groove, or Concave Matrix ; but between little Wheels, A B C D Fig. 59, moveable on their respective Axes. This was long ago recommended by P. Casanus ; and Experience confirms, that we have a deal of Force by it. Hence also it is that a Pulley moveable on its Axis resists less than if it were fix'd. And the same may be observ'd of the Wheels of Coaches, and other Carriages.

From these Principles, with a little farther Help from the higher Geometry, *Olaus Roemer* determined the Figure of the Teeth of Wheels, that should make the least Resistance possible ; and which should be epicycloidal. And the same was afterwards demonstrated by *de la Hire* ; tho', which is to be lamented, the Thing is not yet taken into Practice.

Hence in Sawing-Mills, the Sides of the wooden Rect-angle the Saws are fitted into, should be furnish'd with *Rozette*, or little Wheels ; which would greatly lessen the Friction ; and the like in other Cases. Add, that as Winches, or curved Axes prevent all Friction ; those should be used in lieu of Wheels, as often as it is possible. See *WINDS*.

Calculation of the Quantity or Value of FRICTION.

The Friction is a Point of the utmost Importance in Machines ; and by all means to be consider'd, in calculating the Force thereof : Yet it is generally overlook'd in such Calculations : But this, principally, by reason its precise Value is not known.

It is not yet reduc'd to certain, and infallible Rules : The common Method is, barely to compute the Advantage, which a moving Power has from the Machine ; either on account of its Distance from a fix'd Point ; or of the Direction in which it acts. And in all the Demonstrations it is suppos'd that the Surfaces of Bodies are perfectly smooth and polish'd. Indeed the Engineers expect, that in the Practice they should lose part of the Advantage of their Force, by the Friction : But how much, it is suppos'd nothing but the Practice can determine. M. Amontons, indeed, has made an Attempt to settle, by Experiment, a Foundation for a precise Calculation of the Quantity of Friction ; and M. Parent has confirm'd it from Reasoning, and Geometry : But their Theory, however warranted, is not generally, and fully received.

M. Amontons's Principle, is, that the Friction of two Bodies depends on the Weight, or Force wherewith they bear on each other ; and only increases as the Bodies are more strongly press'd, or applied against each other ; or are charged with a greater Weight : And that it is a vulgar Error, that the Quantity of Friction has any Dependence on the Bigness of the Surfaces rub'd against each other ; or that the Friction increases as the Surfaces do.

Upon the first Proposal of this Paradox, M. de la Hire had Recourse to Experiments, which succeeded much in favour of the new System. He laid several Pieces of rough Wood, on a rough Table : Their Sizes were unequal ; but he laid Weights on them, so as to render them all equally heavy. And he found, that the same precise Force, or Weight, applied to them by a little Pulley, was requir'd to put each in Motion ; notwithstanding all the inequality of the Surfaces. The Experiment succeeded in the same manner in Pieces of Marble, laid on a Marble Table.

Upon this, M. de la Hire betook himself to the Ratiocination of the Thing ; and has given us a Physical Solution of the Effect : And M. Amontons settled a Calculus of the Value of Friction, and the Loss sustain'd thereby in Machines, on the footing of the New Principle.

In Wood, Iron, Lead, and Brass, which are the principal Materials us'd in Machines, he finds the Resistance caused by Friction, to be nearly the same ; when those Materials are anointed with Oil, or other fatty Matter : And this Resistance, independent of the Quantity of Surface, he makes to be nearly equal to a third Part of the Force wherewith the Bodies are press'd against each other.

Beside the Friction, the Magnitude wherof determines that of the Friction ; there is another Circumstance to be consider'd, viz. the Velocity. The Friction is the greater, and the more difficult to surmount, as the Parts are rub'd against each other with the greater Swiftness : So that this Velocity must be compar'd with that of the Power necessary to move the Machine, and overcome the Friction. If the Velocity of the Power be double that of the Parts rub'd, it acquires, by that means, an Advantage that makes it double ; or, which amounts to the same, diminishes the contrary Force of Friction by one half ; and reduces it to a sixth Part of the Weight or Pressure. But this Velocity M. Amontons only considers as a Circumstance that augments or diminishes the Effect of the Friction, i. e. the Difficulty of the Motion : So that the Friction still follows the Proportion of the Weight. Only, we are hereby directed to dispose the Parts of Machines that rub against each other, in such manner as that they may have the least Velocity possible : And thus the Diameter of the Axis of a Wheel should be as small as possible, with regard to that of the Wheel ; in that the lesser the Axis, the slower will be the Motion of the Surfaces rubbing against each other : since the Velocity of a circular Motion always goes diminishing from the Circumference to the Centre. And for the same Reason the Teeth of dented Wheels should be as small and thin as possible : For a Tooth catching on a Notch, &c. rubs one of its Sides against a Surface equal to its own ; and is to disengage it self in a certain time by passing over a Space equal to the Surface : Consequently, the less the Surface, the less Space it has to move ; the littleness of the Surface diminishing the Resistance of the Friction ; not as it is a less Surface that rubs, but as there is a less Space to move.

But notwithstanding all the Confirmations and Illustrations of this Theory of Friction ; the Publick, nor even the Academy it self where it was propos'd, could not be brought fully to acquiesce in it. 'Tis granted, the Friction has a great Effect ; and is, in many Cases, the only Thing to be consider'd in Frictions : But 'twill be hard to persuade us absolutely to exclude the Consideration of the Surface. In effect, the contrary seems capable of a Metaphysical Demonstration.

If two Bodies with plain Surfaces, suppos'd infinitely hard, and polish'd, be moved along each other ; the Friction will be none, or infinitely small : But, if in lieu of such Supposition, which has no Place in Nature, we suppose two Bodies with rough, uneven Surfaces ; the Difficulty of moving one of them on the other, must either arise from this, that the first is to be rais'd, in order to disengage the Parts catch'd or lock'd in the second ; or that the Parts must be broke and wore off ; or both.

In the first Case, the Difficulty of raising one of the Bodies, makes that of the Motion ; and of consequence, the Friction arises wholly from the Weight, or Pressure ; and the Surface has nothing to do.

In the second Case, the Magnitude of the Surface would be all ; and it is possible this second Case could be absolutely abstracted from the first ; i. e. could the Parts of one Body be rub'd and wore against those of the other, without raising one of them ; it being visible that a greater Number of Parts to be broke would make a greater Resistance, than a less. But as in Practice we never rub, or grind without raising the Body ; the Resistance arising from the Greatness of the Surface is always combined in the second Cause with that from the Pressure : Whereas in the former Case that arising from the Pressure, may be alone, and uncompounded.

Add, that what is wore off a Body, is ordinarily very little ; with regard to the great Number of times the Body must have been raised during the Friction ; and all the little Heights added together, which the Body must have been raised to.

Hence, as the Resistance from Friction may be single; and as the same always accompanies that arising from the Magnitude of the Surfaces; and is usually much the more considerable of the two, when it does accompany it: For these Reasons in most of the Experiments that are made, it is the only one perceived, and the only one that need to be consider'd.

But then, as 'tis possible, in certain Cases, for the Friction to be very slender; and the Number of Parts to be rub'd very great: It must be own'd there are Cases wherein the Friction follows very sensibly the Proportion of the Surfaces.

For the Friction of the Parts of Fluids, see RESISTANCE, and RETARDATION of Fluids.

Friction, in Medicine, and Chirurgery, the Act of rubbing a diseas'd Part with Oils, Unguents, or other Matters, in order to cure, relieve, and cure it. See UNGUENT.

Frictions are much us'd, especially abroad, in Venereal Cases; where they prefer the applying of Mercury externally, by way of Friction; to that of giving it internally to raise a Salivation. See SALIVATION, and MERCURY.

There are also Frictions with the Flesh-brush, a lince Cloth, or the Hand only: For the Effect of which last, see STROAKING.

Frictions in the general, and of any kind, are a sort of Exercise that contributes very greatly to Health; as they excite and stir up the natural Warmth, divert Defluxions, promote Perspiration, open the Pores of the Skin, and carry off Humors.

The Flesh-brush, Dr. Cheyne observes, is an Exercise most useful for promoting a full and free Perspiration and Circulation. Every Body knows the Effect of carrying of Horles; that it makes them sleek, gay, lively, and active; so as to be judg'd equivalent to half the Feeding.

This it can no otherwise effect, but by assisting Nature to throw off the Recrements of the Juices which stop the free Circulation; and by constant Friction, Irritation and Stimulation, to call the Blood and Spirits to the Parts most distant from the Seat of Heat, and Motion, and so pump up the superficial Muscles. And the same Effects it would have in other Creatures, and Man himself, if managed in the same manner, and with the same Care and Regularity.

Persons, therefore, of weak Nerves and sedentary Lives, would do well to supply the Want of other Exercise with spending half an Hour, Morning and Night, in carrying and rubbing their whole Body, especially their Limbs, with a Flesh-brush. See EXERCISE.

Friction, or Friction, in Chymistry, is the same with what in Cookery we call Frying, viz. a Preparation of certain Matters in a Pan, with the Addition of some unctuous thing, as Oil, Fat, &c.

The Friction of Medicines is perform'd over a slow, moderate Fire; and that of Foods over a quick one.

FRIDSTOLL, and FRIHSTROW, in our ancient Writers, signifies a Seat, Chair, or Place of Peace. See SANCTUARY.

In the Charter of Immunities granted to the Church of St. Peter in York, by Hen. 1. and confirm'd An. 5. H. 7. we read thus, — *Quod si aliquis vestro Spiritu agiturus diabolico ausu quemquam copere presumerit in Cathedra lapidea iuxta Altare, quod Anglice vocant Fridstol, i. e. Cathedra quietudinis vel pacis; huius tam flagitiosi sacrilegii emendatio sub nullo iudicio erit, sub nullo pecunie numero elucidabitur, sed apud Anglos Botocle, hoc est, sine emenda, vocabatur.*

Of these there were many others in England; but the most famous was at Beverly, which had this Inscription, *Hec sedes lapidea Friddstoll dicitur, i. e. Pacis Cathedra, ad quam reus fugiendo perveniens, omnimodam habet securitatem.* Camb.

It signifies also a Palace, which is usually a privileged Place.

FRIENDLY Society, see OFFICE of INSURANCE.

FRIEZE, or FRIZE, or FREEZE, in Architecture, a Member, or Division of the Entablature of Columns, by the Ancients call'd *Zophoros*. See FREEZE.

FRIGATOON, a Venetian Vessel, commonly us'd in the Adriatick.

It is built with a square Stern, and without any Fore-mast, having only a Main-mast, Mizen-mast, and Bowprit.

FRIGID, of the Latin *frigidus*, cold, is variously us'd.

A *frigid* Style, is a low, jejune manner of Diction, wanting Force, Warmth of Imagination, Figures of Speech, &c. See STYLE.

FRIGID Zone, or Frozen Zone, in Geography. See ZONE.

FRIGIDITY, is also us'd in the same Sense with Insipidity; see IMPOTENCY.

FRIGORIFIC, in Physics; something that occasions cold. See COLD.

Some Philosophers, particularly *Gassendus*, and other Corpuscularians, denying Cold to be a mere Privation or Absence of Heat, contend that there are actual *frigerific* Corpuscles, or Particles as well as fiery ones: Whence proceed Cold and Heat. But the later Philosophers allow of no other *frigerific* Particles, beside those nitrous Salts, which float in the Air in cold Weather, and occasion Freezing. See FREEZING.

FRIPPERY, a French Term, sometimes us'd in our Language.

Frippery, or *Fripperie*, properly imports the Trade, or Traffick of old second-hand Cloaths, and Goods.

The Word is also us'd for the Piece, where such sort of Commerce is carried on, and even for the Commodities themselves.

The Company of *Frippiers*, or *Frippiers* at Paris, are a regular Corporation, of an ancient Standing, and make a considerable Figure among the *Communitates* of that City. See BROKER.

FRIT, or FRAYT, in the Glass Manufacture, is the Matter, or Ingredients, whereof Glass is to be made, calcined, or bak'd in a Furnace. See GLASS.

A Salt drawn from the Ashes of the Plant Kali, or from Fern, mix'd with Sand, or Silins, and bak'd together, make an opake Mass, call'd by Glassmen *Frit*; probably from *frittare*, to fry; or by reason the *Frit*, when melted, runs into lumps like *Frittari*, call'd by the Italians, *Frittelli*.

By the Ancients it was call'd *Hammoustrum*, or *Ammonitrum*, of *αμμον*, Sand, and *νιτρον*, Nitre: Under which Name it is describ'd by *Pliny* thus: Fine Sand from the *Volturnian* Sea, mix'd with three times the Quantity of Nitre, and melted, makes a Mass call'd *Ammonitrum*; which being re-boil'd, makes pure Glass. *Hist. Nat. L. 36. c. 26.*

Frit, *Neri* observes, is only the Caix of the Materials which make Glass; which, tho' they might be melted, and Glass be made without thus calcining them, yet would it take up much more Time. This Calcining, or making of *Frit*, serves to mix and incorporate the Materials together, and to evaporate all the superfluous Humidity. The *Frit* once made, is readily fused and turned into Glass.

There are three kinds of *Frits*: The First, *Crystal Frit*, or that for Crystal Metal, made with Salt of Polverine and Sand.

The Second, and ordinary *Frit* is made of the bare Ashes of Polverine, or Barilla, without extracting the Salt from them. This makes the ordinary white, or crystal Metal.

The Third, is *Frit* for Green Glasses, made of common Ashes, without any Preparation. This last *Frit* will require 10 or 12 Hours baking.

The Materials in each, are to be finely powder'd, wash'd, and siev'd; then equally mix'd; and frequently stirr'd together in the Melting Pot. For the rest see GLASS, and CRYSTAL.

FRITHBURGH, see FRIBURGH.

FRITHGILD, was antiently the same we now call a Guild, or a Fraternity, or Company. See GILD.

FRIZE, or FAZZE, in Architecture, a Part of the Entablature of Columns, more usually wrote, and pronounced *Freeze*. See FREEZE.

FRIZE, or FREEZE, in Commerce, a kind of woollen Cloth, or Stuff, for Winter Wear, being *friz'd* or nap'd on one Side; whence, in all Probability, it derives its Name.

Of *Frizes*, some are cross'd; others not cross'd. The former are chiefly of English Manufacture: The latter of Irish. See FRIIZING.

FRIIZING of Cloth, a Term in the Woolen Manufacture, apply'd to the forming of the Nap of a Cloth, or Stuff, into a number of little hard Bars, or Prominences, covering almost the whole Ground thereof.

Some Cloths are only *friz'd* on the Back-side; as black Cloths: Others on the right Side, as colour'd and mix'd Cloths, Ratacons, Bays, *Frizes*, &c.

Frizing may be perform'd two ways: One with the Hand, i. e. by means of two Workmen, who conduct a kind of Plank, that serves as a *frizing* Instrument.

The other by a Mill, work'd either by Water, or a Horse; or sometimes by Men. This latter is esteem'd the better way of *frizing*; by reason the Motion being uniform, and regular, the little Knobs of the *Frizing* are form'd more equally, and alike. The Structure of this useful Machine is as follows.

The three principal Parts are, The *Friser*, or *Crisper*; the *Frizing* Table; and the *Drawer*, or Beam.

The first are two equal Planks or Boards, each about ten Foot long, and sixteen Inches broad; differing only in this, that the *Frizing* Table is lined, or cover'd with a kind of coarse Woolen Stuff, of a rough, sturdy Nap; and that the *Friser* is incrustated with a kind of Cement, composed of

Glue, Gum Arabick, and yellow Sand, with a little *Agnus Vite*, or Urine. The *Draw*, or *Drawer*, is thus called, by reason it draws the Stuff from between the *Frizer* and *Fri- zing Table*, which is a wooden Roller, beset all over with little, fine, short Points or Ends of Wire, like those of Cards, used in carding of Wool.

The Disposition and Use of the Machine is thus: The Table stands immovable, and bears, or sustains the Cloth to be frized, which is with that Side uppermost, on which the *Frize* is to be railed. Over the Table is plac'd the *Frizer* at such Distance from it, as to give room for the Stuff to be pass'd between them: So, that the *Frizer* having a very slow semicircular Motion, meeting the long Hairs or Nap of the Cloth, twists and rolls them into little Knobs, or Buttons; while, at the same time, the *Drawer*, which is continually turning, draws away the Stuff from under the *Frizer*, and winds it over its own Point.

All that the Workman has to do while the Machine is going, is to stretch the Stuff on the Table, as fast as the *Drawer* takes it off; and, from time to time, to take off the Stuff from the Points of the *Drawer*.

It has already been observ'd, that the *Fri- zing Table* is lined with Stuff of a short, stiff, flabby Nab; the Use whereof is to detain the Cloth between the Table, and *Frizer* long enough for the Grain to be form'd; that the *Drawer* may not take it away too readily; which must otherwise be the Case, inasmuch as it is not held by anything at the other End.

It were needless to say any thing particular of the manner of *fri- zing* Stuffs with the Hand; it being the Aim of the Workmen to imitate as near as they can, with their wooden Instrument, the slow, equable, and circular Motion of the Machine. It needs only be added, that their *Frizer* is but about two Foot long, and one broad; and that to form the Nap more easily, they moisten the Surface of the Stuff lightly with Water, mingled with Whites of Eggs, or Honey.

FRONT, the *Forehead*, or that Part of the Face above the Eyebrows. See *OS FRONTALIS*.

The Word is form'd of the Latin *Frontis*, and that from the Greek *opsis*, to think, perceive; of *ops*, *mens*, the Mind, Thought. *Martinus*, to make out this Etymology, observes, that from the Forehead of a Person we perceive what he is, what he is capable of, and what he thinks of. *Du Laurens* chuses to derive it from *ferre*, by reason it bears the Marks of what we have in our Head.

FRONT is also us'd where several Perions, or Things are ranged Side by Side, and shew their *Front*.

Those Troops ranged in form of *Battel* made a large *Front*: The three Legions were here dispos'd in two Lines, as *Cæsar* us'd to do, when with a few Forces he had occasion to extend his *Front*. The *Front* of the Army consisted of so many Battalions, and so many Squadrons.

The Military Evolutions teach how to make a *Front* of any Side, i. e. How to present the Face and Arms to the Enemy, what Side soever he attack on. They attack'd the Enemy in *Front*, and in *Flank*. See *FLANK*.

FRONT, in Architecture, the principal Face, or Side of a Building; Or that presented to the chief Aspect, or View. See *FACE*.

The Palace consists of a large Pile in *Front*, flank'd with two Wings. See *FRONTISPIECE*.

FRONT, in Perspective, a Projection, or Representation of the Face or Fore-part of an Object; or of that Part directly opposite to the Eye; call'd also, and more usually, *Orthography*. See *ORTHOGRAPHY*.

FRONTAL, in Architecture, a little *Fronton*, or *Pediment*, sometimes placed over a little Door, or Window. See *PEDIMENT*.

FRONTALE OS, in Anatomy, see *OS FRONTALIS*.

FRONTALE, or **FRONTAL**, in Medicine, an external Form of Remedy, applied on the Forehead, with a Bandage; for the Cure of the Head Ach, Megrim, Vapours, &c.

Frontals are composed of *Roses*, *Elder Flowers*, *Betony*, *Marjoram*, *Lavender*, &c. wrap'd in a Linnen Cloth, and applied over the Forehead and Temples.

There are also *Frontals* in manner of Linements, made of *Unguentum populeum*, Extract of Opium; or of *Pastes*, *Powders*, *Seeds*, &c.

In *Frontals* applied to ease the Violence of the Head-ach in the height of Fevers, they frequently mix the Kernels of *Cherries*.

FRONTAL, **FRONTLET**, or **BROW-BARD**, is also us'd in speaking of the Jewish Ceremonies.

The *Frontal* consists of four several Pieces of Vellum, on each whereof is wrote some Text of Scripture. They are all laid on a piece of black Calves Leather, with Thongs to tie it by. The Jews apply the Leather with the Vellum on their Foreheads, in the Synagogue, and tie it round the Head with the Thongs.

FRONTALES, in Anatomy, two Muscles, one on each Side the Forehead; commonly supposed to spring from the

Skull, but now known to arise from the Occipital Muscles; or rather, it appears that the *Frontales* and *Occipitales* are only one continued Digastric Muscle, on each Side, moving the Scalp and Skin of the Forehead and Eyebrows. See *OCIPITALIS*.

The *Frontales* begin to be thus denominated a feet they have begun to pass the Coronal Suture, with Fibres passing obliquely to the Eyebrows, where they terminate, and in the lower Part of the Skin of the Forehead.

They have each two Appendages; the superior, or external is commonly fix'd to the Bone of the Nole; the lower is fix'd to the *Os Frontis*, and is by *Voleberus Cotter* made a distinct Muscle, and called *Corrugator*, from its Use in drawing the Eyebrows to each other.

FRONTATED, a Term us'd by the Botanists, to express that the Petalum or Leaf of a Flower grows broader and broader; and at last, perhaps, terminates in a Right Line.

In opposition to *cuspidated*, which expresses that the Leaves terminate in a Point. See *PETALA*.

FRONTIER, the Border, Confine, or Extreme of a Kingdom, or Province; which the Enemies find in *Front*, when they would enter the same.

A *Frontier Town*: *Frontier Province*. *Frontiers* were anciently called *Marches*. See *MARCHES*.

The Word is derived from the French *Frontiere*, and that of the Latin *Frontaria*, as being a kind of Front opposed to the Enemy. *Skinner* derives *Frontier* from *Front*; inasmuch as the *Frontier* is the exterior, and most advanced Part of a State, as the *Front* is that of the Face of a Man.

FRONTIS OS, in Anatomy, the Bone of the Forehead. See *FRONT*.

The *Os Frontis* is a Bone of the Cranium, in form almost round: It joins the Bones of the Sinciput and Temples by the Coronal Suture, and the Bones of the upper Jaw by the transverse Suture, and the *Os Sphenoides*, by the Sphenoidal Suture. See *CRANIUM*.

It forms the upper Part of the Orbit, and has four Apophyses, which are at the four Angles of the two Orbits.

It has two Holes above the Orbits, thro' which pass the Vein, Artery, and some Twigs of the first Branch of the fifth Pair. It has also one in each Orbit, a little above the Planum, thro' which a Twig of the Ophthalmick Branch of the fifth Pair of Nerves passes to the Nole.

It has two Sinus above the Eyebrows, between its two Tables; they are lined with a thin Membrane, in which there are several Blood Vessels and Glands, which separate a mucous Serosity, that falls into the Nostrils.

The Inside of this Bone has several Inequalities, made by the Vessels of the Dura Mater. It has two large Dimples made by the anterior Lobes of the Brain. Above the *Crista Galli*, it has a small blind Hole, into which the End of the Sinus *longitudinalis* is inserted.

FRONTISPIECE, in Architecture, the *Portail*, or principal Face of a fine Building. See *PORTAIL*.

The *Frontispiece* of the *Louvre* is the finest Piece of Architecture in France.

The Word is form'd of the Latin *Frontispicium*, q. d. *Frontis bominis inspicilio*. Hence, by a Figure, we say the *Frontispiece* of a Book, meaning an Ornament with an engraven Title on the first Page.

FRONTLET, see *FRONTAL*.

FRONTON, in Architecture, an Ornament among us, more usually called *Pediment*. See *PEDIMENT*.

FROST, an excessive cold State of the Weather, whereby the Motion and Fluidity of Liquors is suspended: Or, it is that State of the Air, &c. whereby Fluids are converted into Ice. See *FREEZING*, and *ICE*.

Metals contract, or are shorten'd in *Frost*: *Monf. Aumont* found by Experience, that an iron Tube twelve Foot long lost two Lines of its Length, upon being exposed to the Air, in a froisty Night. But this we suppose wholly the Effect of the Cold.

Frost does not contract Fluids, as was formerly imagined: On the contrary, it swells or dilates them by nearly $\frac{1}{7}$ of their Bulk.

Scheffer assures us, that in Sweden the *Frost* pierces into the Earth two Cubits, or Swedish Ells; and turns what Moisture is found therein, into a whitish Substance, like Ice. He adds, that standing Waters freeze to a greater Depth; even to three Ells, or more: But those that have a Current, less; and rapid Waters, and bubbling Springs, never.

Mr. *Boyle* gives us several Experiments of Vessels made of Metals, exceeding thick and strong; which being fill'd with Water, close stop'd, and exposed to the Cold: The Water, in freezing, coming to be expanded; and not finding either Room, or Vent, burst the Vessels.

A strong Barrel of a Gun, with Water in it, close stop'd and frozen, was rent the whole Length: And a small Brass Vessel, five Inches deep, and two in Diameter, fill'd with Water, &c. hit up its Lid, which was press'd with a Weight of 56 Pounds.

Olearius assures us, that in the City of *Moscow* he observ'd the Earth to be cleft by the *Frost* many Yards length, and a Foot broad. *Scheffer* mentions sudden Cracks or Rifts in the Ice of the Lakes of *Sweden*, nine or ten Foot deep, and many Leagues long; and adds, that the Rupture is made with a Noise not less terrible than if many Guns were discharged together. By such means the Fishes are furnish'd with Air; so that they are rarely found dead.

In the great *Frost* of 1683, Oaks, Ashes, Walnut Trees, &c. Mr. *Bobart* tells us, were miserably split, and cleft, so that one might see thro' them; and this frequently with terrible Noises, like the Explosion of Fire Arms. The Cracks were not only in the Bodies, but continued to the larger Boughs, Roots, &c. See an Inquiry into the Circumstances and Causes hereof in the *Philos. Transact.* N^o 163. See also *FREZZING RAIN*.

The Natural History of *Frosts* furnish very extraordinary Effects thereof. The Trees are frequently scorcht and burnt up as with the most excessive Heat; of which there are divers Instances in so warm a Climate as that of *Provence*. *Mozerey, Hist. de France*, An. 1570.

The Year 1708 was remarkable throughout the greatest Part of *Europe* for a severe *Frost*. Mr. *Derham* says, it was the greatest in Degree, if not the most universal in the Memory of Man. It extended throughout *England*, *France*, *Germany*, *Denmark*, *Italy*, &c. But was scarce felt in *Scotland* or *Ireland*. All the Orange Trees, and Olives in *Italy*, *Provence*, &c. And all the Walnut Trees throughout *France*, with an Infinity of other Trees, perish'd by *Frost*.

They had a kind of Gangrene grew on them; which *Monf. Gatteron* takes to have been the Effect of a corrosive Salt, corrupting and destroying their Texture. He adds, there is so much Resemblance between the Gangrene befalling Plants thro' *Frost*, and that which the Parts of Animals are liable to, that they must have some analogous Cause. Corrosive Humors burn the Parts of Animals; and the aerial Nitre condensed, has the same Effect on the Parts of Plants. *Penetrabile Frigus adest. Memoires de l'Academie Royale des Sciences*, An. 1709.

In *Germany* the Fresh-water Fish were every where killed; and a vast Destruction befall the smaller Birds. The Spittle was no sooner out of a Man's Mouth, than it was froze. The *Lusatian* Letters add, that many Cows were froze to death in their Stalls; and many Travellers on the Road were some quite froze to death, others lost their Hands, Feet, Noses, or Ears.

G. *Remus*, the Author of an Academical Exercise on this Subject, publish'd at *Hall* in *Saxony*, entitled *Consideratio Physico-Mathematica Hyemis proxime præterlapsæ*, gives Instances from the News Papers, of two Gentlemen and a Smith in *England*; and above 60 Men, and many Cattle near *Paris*; and the like at *Venice*, and 80 *French* Soldiers near *Nismes*; all kill'd on the Road with Cold. On the Coasts of *Italy* many of the Mariners aboard the *English* Men of War died of the Cold; and several lost part of their Fingers and Toes.

In *England*, the greatest Sufferers in the animal Kingdom, Mr. *Derham* observes, were Birds and Insects; particularly Larks and Robin-red-breasts: Much the greatest Part of which perish'd. But the Vegetables were much the greatest Sufferers. Few of the tender Sorts escap'd: Bays, Hollies, Rosemary, Cypress, Alaterni, Phyllyrea's, Arbuti, Laurastines, and even Furse, with most of the frutescent Herbs, as Lavenders, Abrotanums, Rue, Thyme, &c. Mr. *Bobart* informs us, were generally destroyed. The same Writer adds, that the Sap of the finer Wall Fruit was so congeal'd, and disorder'd, that it stagnated in the Limbs and Branches, and produced Disorders like to Chillblains in human Bodies, which in many Parts of Trees would turn to Mortifications: That the very Buds of the finer Trees, both the Leaf Buds, and Blossom Buds, were quite killed and dried into a farinaceous Matter.

In *Switzerland*, *Schenbner* relates, that not only the Walnut Trees and Vines, but even the Beech, Laryx, &c. were undone. And yet in some Parts of those Cantons, he adds, there never was a milder Winter Season known.

Mr. *Derham* relates it as a common Observation, that Vegetables suffer'd more from the Sun, than the *Frost*; in that the Sun-shine melting the Snow, and opening the Ground, left it more expos'd to the Rigours of the ensuing Night. And at a Meeting of the Royal Society, it was observ'd, that the Calamities which befall Trees, arose not purely from their being frozen; but principally from the Winds shaking and rocking them, when they were so; which rent and parted their Fibres. *Philosop. Transact.* N^o 524.

Hoar Frost, or *White Frost*, *Prunina*, is the Dew, froze or congeal'd early in cold Mornings; chiefly in Autumn.

Hoar Frost, Mr. *Regis* observs, consists of an Assemblage of little Parcels of Ice, or Crystals; which are of various Figures, according to the different Disposition of the

Vapours, when met and condensed by the Cold. See *CRYSTALLIZATION*.

Dew, is in all appearance the Matter of *Hoar Frost*: Tho' many of the *Cartesians* will have it form'd of a Cloud, and either congeal'd in the Cloud, and so let fall; or ready to be congeal'd as soon as it arrives at the Earth. See *Dew*.

FROTH, a white, light Substance, form'd on the Surface of Fluids, by vehement Agitation. See *BOILING*.

Froth consists wholly of little Spherules, or Globules; and accordingly, may be defin'd an Assemblage of *Aques-aeræ* Bubbles. See *BUBBLE*; see also *SCUM*.

FROZEN, or *FATED ZONE*, see *ZONE*.

FRUGIVOROUS Birds, according to Mr. *Willoughby*, are those of the Parrot kind, which tho' they have a crooked Beak and Talons, and therefore belong in general to the Birds of Prey, as being rapacious, and carnivorous; yet because they eat *Fruit* too, he distinguishes them from the rest by the Title of *Frugivorous*. See *BIRD*.

FRUIT, in its general Sense, includes whatever the Earth produces, for the Nourishment and Support of Men, and other Animals; as Herbs, Grains, Pulse, Hay, Corn, Flax, and every thing, express'd by the *Latin* under the Name *Fruges*. See *HERB*, *GRAIN*, *PULSE*.

The Devotion and Solemnity of Rogation Week, were instituted to procure a Blessing on the Fruits of the Earth. See *ROGATION*.

In the Civil Law, we distinguish three kinds of *Fruits*: *Natural Fruits*, which the Earth produces spontaneously, and without any Culture; as those of Trees.

Fruits of Industry, which, tho' Natural, require some Culture to perfect them.

And *Civil Fruits*, which are only *Fruits* in the Eye of Law, as Rents, Salaries, Wages, &c.

In the Canon Law, *Fruits* include every thing whereof the Revenue of a Benefice consists; as Glebe, Tythes, Rents, Offerings, Mills, &c. See *FIRST FRUIT*.

FRUIT, in Nat. History, is the Production of a Tree, or Plant; for the Propagation, or Multiplication of its Kind: In which Sense *Fruit* includes all kinds of Seeds, with their Furniture, &c. See *SEED*.

FRUIT, in Botany, is properly that Part of a Plant whereof the Seed is contain'd; call'd by the *Latin* *Fructus*, and the *Greeks* *κέρτα*.

The *Fruit* of a Plant is sometimes single, as in the Poppy; and sometimes in great Number, as in the Apple Tree, &c. Sometimes dry; and sometimes soft, and fleshy.

The Word also implies an Assemblage of Seeds, in a Plant, as in a *Rapuncula*, *Pea*, &c. And in the general, all kinds of Grains, whether naked, or inclosed in a Cover, Capsula or Pod, whether bony, fleshy, skinny, membranous, or the like. See *SEED*, *GRAIN*.

The *Fruit* is the Product, or Result of the Flower; or that for whose Production, Nutrition, &c. the Flower is intended. See *FLOWER*, and *GENERATION OF PLANTS*.

The Structure and Parts of different *Fruits* are somewhat different; but in all the Species, the essential Parts of the *Fruit* appear to be only Continuations, or Expansions of that observ'd in the other Parts of the Tree.

Dr. *Boerhaave* suggests some very good Reasons for a direct Communication between the remotest Parts of the Tree and the *Fruit*; so that the same Fibres or Stamina, which constitute the Root, Trunk and Boughs are extended into the very *Fruit*. See *PLANT*.

Thus, cutting open an *Apple* transversely, it will be found to consist of four Parts, viz. 1^o A *Skin*, or Cortex, which is only a Production of the Skin, or outer Bark of the Tree. 2^o A *Parenchyma*, or Pulp; which is an Expansion, and Intumescence of the Ble or inner Bark of the Tree. 3^o *Fibres* or Ramifications of the woody Part of the Tree, dispersed throughout the *Parenchyma*.

Of these last, Authors generally reckon sixteen principal Branches: Ten whereof penetrate the *Parenchyma*, and incline to the Basis of the Flower; the other five ascend more perpendicularly from the Pedicle, or Stalk, meet with the former at the Basis of the Flower: To which Branches are fillen'd the Capsule or Coats of the Kernel.

These Branches being at first extended through the *Parenchyma* to the Flower, furnish the necessary Matter for the Vegetation thereof; but, the *Fruit* increasing, it intercepts the Aliment, and thus the Flower is starv'd, and falls off.

4^o The *Core* which is the Produce of the Pith or Medulla of the Plant; indurated and strengthen'd by Twigs of the Wood and Fibres, insolated therewith. It serves to furnish a Cell, or Lodge for the Kernels; filtrates the Juice of the *Parenchyma*, and conveys it thus prepared to the Kernel.

In a *Pear* we distinguish five Parts, viz. the *Skin*, *Parenchyma*, *Ramification*, *Stone*, and *Actarium*.

The three first Parts are common to the *Apple*. The *Stone*, observ'd chiefly in *Chalk Pears*, is a Congeries of stony Corpuscles, dispers'd throughout the whole *Parenchyma*.

ms, but in the greatest Plenty, and closest together, about the Centre or Acetarium. It is form'd of the stony or calcareous Parts of the nutritious Juice of the Parenchyma, extravasated in Muffets.

The *Acetarium*, is a Substance of a tart, acid Taste, of a globular Figure, inclos'd in an Assemblage of several of the stony Parts above-mention'd.

In the *Plum*, *Cherry*, &c. there are four Parts, viz. A Coat, *Parenchyma*, *Ramification*, and *Stone*, or *Nucleus*. The Stone consists of two very different Parts; the inner, call'd the *Kernel*, is soft, tender, and light; being derived from the Pith or Medulla of the Tree by seminal Branches, which penetrate the Base of the Stone: The external or harder Part, call'd the *Shell*, or *Shell*, is a Concretion of the stony, or calcareous Parts of the nutritious Juice; like the Stone in Pears, and like that, contains a soft, parenchymous Matter within it.

The *Nut*, analogous to which is the *Acorn*, consists of a *Shell*, *Cortex*, and *Medulla*. The *Shell* consists of a Coat and *Parenchyma*, derived from the Bark and Wood of the Tree. The *Cortex* consists of an inner, and outer Part: The first is a Duplicate of the inner Tunic of the Shell; the second is a mossy Substance, derived from the same Source as the *Parenchyma* of the Shell. But whether the Medulla or Pulp of the Kernel arise from the Pith of the Tree, or the cortical Part of the *Fruit*, is not agreed.

Lastly, *Berries*, as *Grapes*, &c. beside three general Parts, viz. Coat, *Parenchyma*, and *Ramification*, contain *Grains* of a stony Nature, to do the Office of *Seeds*.

As to the Use of *Fruits*, beside the Pleasure and Advantage they afford Men, &c. they are of service in guarding, preserving, and feeding the Seed inclos'd; in filtering the coarser, more earthy and stony Parts of the nutritious Juice of the Plant, and retaining it to themselves; sending none to the Seed but the purest, most elaborated and spirituous Parts for the Support and Growth of the tender delicate Embryo, or *Plantule* contain'd therein.

So that the *Fruit* does the same Office to the Seed that the *Leaves* do to the *Fruit*. See *PLANT*, *GENERATION*, *FLOWER*, *LEAVES*, &c.

FRUIT, in Gardening, is the Production of *Fruit-Trees*; as the *Apple*, *Pear*, *Plum*, *Peach*, *Apricock*, *Cherry*, *Grape*, *Currant*, *Orange*, *Fig*, *Almond*, &c. See *FRUIT-TREE*.

Fruits are distinguish'd into *Stone Fruit*, and *Kernel Fruit*; *Summer Fruit*, and *Winter Fruit*; *Wall Fruit*, and *Dwarf Fruit*, &c.

Monf. *Quintiny* observes, that cold, heavy, moist Lands produce the fairest and largest *Fruit*; but the hotter, dryer, and lighter, the more delicious and rich tasted.

FRUITS, with regard to Commerce, are distinguish'd into *Recent*, or *Fresh*; and *Dry*.

Recent Fruits are those sold just as they are gather'd from the Tree, without any further Preparation: As are most of the Productions of our Gardens and Orchards, sold by the *Fruiters*.

Dry Fruits are those dried in the Sun, or by Fire, with other Ingredients, sometimes added to them, to make them keep; imported chiefly from beyond Sea, and sold by the *Grocers*. Such are *Raisins*, *Currants*, *Figs*, *Rice*, *Capers*, *Olive*, *Cloves*, *Nutmegs*, *Pepper*, and other *Spices*: Which see under their respective Articles, *RAISIN*, *CURRANT*, *FIG*, &c. See also *SPICERY*.

Under the Denomination of *Dry Fruits* are also frequently included *Apples*, *Pears*, *Almonds*, *Fibrics*, &c.

FRUIT TREES are distinguish'd, like the *Fruits* they bear, into *Wall Fruit Trees*, *Standard Fruit Trees*, &c. See *FRUIT*, and *TREE*.

With regard to *Fruit Trees*, Monf. *Quintiny* observes, 1^o That the cutting and trimming of young Trees hinders them from quick bearing; tho' it contributes both to the Beauty of the Tree, and the Richness and Flavour of the *Fruit*.

2^o That *Kernel Fruit Trees* come later to bear, than *Stone Fruit Trees*; the Time required by the first before they arrive at a fit Age for bearing, being, one with another, about four or five Years: But that when they do begin, they bear in greater Plenty than *Stone Fruit*.

3^o That *Stone Fruit*, *Figs* and *Grapes* commonly bear considerably in three or four Years; and bear full Crops the fifth and sixth Year; and hold it for many Years, if well order'd.

4^o That *Fruits* in the same Neighbourhood will ripen a fortnight sooner in some Grounds, than others of a different Temperature.

5^o That in the same Spot, hot or cold Summers let considerably forward, or put backwards the same *Fruit*.

6^o That the *Fruits* of *Wall Trees* generally ripen before those on *Standards*; and those on *Standards* before those on *Dwarfs*.

7^o That the *Fruits* of *Wall Trees* planted in the South and East Quarters commonly ripen about the same time,

only those in the South rather earlier than those in the East: Those in the West are later by eight or ten Days, and those in the North by 15 or 20. See *EXPOSURE*.

For the *Planting*, *Pruning*, *Engrafting*, &c. of *Fruit Trees*, see *PLANTING*, *TRANSPLANTING*, *PRUNING*, *ENGRAFTING*, &c. See also *ORCHARD*, *GARDEN*, *SEMINARY*, &c.

Monf. *de Reffous*, in the *Memoires de l'Academie Royale des Sciences*, An. 1716. gives us a Method of *Grafting Stone Fruit Trees*, without losing of Time; so that a Tree which bore forty *Fruit* the preceding Year, shall bear the choicest the Year following.

It frequently happens, that Persons are deceiv'd in their *Fruit Trees*; especially those bought of the Nursery Men: And it is a melancholy thing, after having waited three Years for *Fruit*, to find it naught at last; and to be oblig'd to graft the Tree again, and wait four Years more, for the second Hopes. In effect, in the common Methods of grafting, they know nothing better than to cut off the Head of a Tree, and make it put forth new Wood, to graft in: This necessarily makes a long Delay; which Monf. *Reffous* shews how to abridge.

Upon considering the Union of the Sap in Grafts, that Author was led to think, that all the Office the Bark has in grafting, is to receive the *Scutcheon*; so that if the Bark be not quite hard, dry, and inflexible, and incapable of yielding without Cracking, or Bursting; it should seem indifferent, whether one grafted on new Wood, or old: The Sap passing equally into both. Which Reasoning had the Fortune to be verifi'd by a Number of Experiments made with that View.

We are at liberty, then, to graft almost at any Age, and in any Wood. Accordingly, a Peach Tree of a worse Kind or Quality, may be grafted from another of the best, in Autumn, in the Height of its *Fruit*, and Sap, without cutting off any Branches; the Graft soon cements to the Tree by the Union of the Saps, without shooting at all: So that cutting off the Branches above the Grafts the Spring following; the same Graft inserted the preceding Autumn will shoot vigorously; and being on a Wood of the same Kind, the *Fruit* thenceforth produc'd will be much the larger and finer. But this is not the great Point: For the Tree thus ingrafted will not bear till the third Year; and we want *Fruit* the first.

In order to this, it is to be observ'd, that there are three kinds of Branches: *Wood Branches*, growing immediately from the Stem or Stock of the Tree: *Fruit Branches*, and *Branches half Wood, half Fruit*, being such as arising from the largest *Wood Branches*, preserve the Character thereof, but which, in two Years time will produce *Fruit Branches*. Now, 'tis these intermediate kind of Branches, that we are to chuse for *Scutcheons* or *Grafts*. They are easily known by being bigger than the *Fruit Branches*; and less than the *Wood Branches*: They have each of them two, three, four, or even five Leaves to each Eye; and the Eyes are further distant from each other than those of the *Fruit Branches*, but closer than those of the *Wood Branches*. It must be added, that the Eyes on such Branch are three; one, intended for a *Wood Branch*, being situate between the two Leaves, and advancing further than the other two, which are intended for *Fruit*, and are plac'd without-side the Leaves.

'Tis these last are the precise Subject to be chosen for the Grafting withal. Twelve of these *Scutcheons*, more or less, according to the Strength of the Tree to be grafted on, being daly applied; we may depend on a Crop of good *Fruit*, the very next Year, on the same Tree which last Year produced the worth.

STONE-FRUIT TREES, see *STONE FRUIT*, and *TREE*.

WALL-FRUIT TREES, see *WALL FRUIT*, and *WALL*.

FRUITERY, a Place for the laying up and keeping of *Fruit*.

The *Fruitery* should be inaccessible to any thing of Moisture, or oven Frost.

FRUITFULNESS, the Quality of bearing plenty of *Fruit*; call'd also *Fertility*, and *Fecundity*. See *FECONDITY*.

FRUMENTACEOUS, a Term applied to all Plants which have a Conformity with Wheat, or *Frumentum*; either in respect of their *Fruits*, *Leaves*, *Ears*, or the like.

Thus *Barley*, *Dogs-grass*, &c. are *Frumentaceous Plants*.

FRUMENTARI, in Antiquity, a kind of Soldiers, or Archers, under the Western Empire.

St. *Cyprian* relates, in one of his Letters, that some of these *Frumentarii* were sent to take him.

The first time we read of *Frumentarii*, as Officers, is in the Time of the Emperor *Adrian*. *Spartian*, in his Life of that Prince, assures us, that he made use of them to inform himself of what pass'd: Before, the Name *Frumentarius* was only given to the Corn Merchants, or Measurers of Corn.

The *Fruentarii* did not make any particular Corps, distinct from the other *Feroci*: But there were a certain Number of them in each Legion; as, among us, there are a certain Number of Grenadiers in each Battalion. Accordingly, in antient Inscriptions, we meet with *Fruentarii* of this or that Legion.

'Tis suppos'd they were originally a Number of young Persons dispos'd by *Augustus* throughout the Provinces, particularly on all the grand Roads, to advertise the Emperor with all Expedition of every thing that happen'd. In order to this, they had a kind of Intendance of all the Carriages: And on this account came to be employ'd for the Conveyance of Corn, *Fruentum*, to the Armies: Whence their Appellation.

Afterwards they were incorporated into the Troops themselves; where they still retain'd their ancient Name.

Their principal Office was the giving of Intelligence; in which they agreed with those call'd *Curiosi*, with whom they were frequently join'd. See *CURIOSI*.

FRUMENTY, popularly FRUMENTY, a kind of Potrage, or Broth, the Basis whereof is Wheat, boil'd up with Milk, Sugar, and sometimes Spice.

Pliny tells us, that in his Time they mix'd Chalk among it. *Galen* describes it as a very nutritious sort of Corn or Pulse, boil'd with Water, Wine, and Oil.

The *Latins* call'd it *Alica*, which *Festus* derives *ab alendo*; as being very feeding. But then it must be observ'd, that made it of any kind of Corn.

Ours being restrain'd to Wheat, we have given its Denomination accordingly, from *Fruentum*.—An Emulsion wherein Wheat were an Ingredient, would be a kind of *Fruentum*.

FRUSTUM, in Mathematicks, a Piece cut off or separated from a Body.

Thus the *Frustum* of a Pyramid, or Cone, is a Part, or Piece thereof; cut off, usually, by a Plane, parallel to the Base. See PYRAMID, and CONE.

All round, and square Timber that goes tapering, may be conceived as the *Frustum* of a Cone, or Pyramid; to find the Quantity whereof, take the following Theorem; which in the main is *Mr. Oughtred's*. Given, B, the Side of the Greater Base, b the lesser Base's Side, A the Height of the *Frustum*: Tho', below, we suppose B and b to represent the Area's of the two Bases. Whole Height a \div A = H.

equal to the *Frustum* of the Pyramid required; which Theorem in Words is this.

Multiply the lower Base by the whole Height; and from the Product subtract the upper Base multiply'd by the Height of the Top-piece waiting; and then one third of the Remainder shall give the *Frustum*.

And the same way you may proceed for the *Frustum* of a Cone; only it will be more difficult to find the Circular Bases.

FRUTEX, SHRUB, a Vegetable, of a Genus between a Tree, and Herb; but of a woody Substance. See STRAW.

FRUTICOSE Stalks, of Plants, are those of a hard woody Substance. See STALK.

FRYTH, or FRITH, is explain'd by *Sir Edward Coke*, as a Plain between two Woods; a *Lownd*. *Chaucer* uses it for a Wood.

Comden, for an Arm of the Sea; or a Streight, between two Lands; from *Fretum*.—Maketh his Issue into the Estuary or *Firth* of *Thames*.

Smith, in his *England's Improvement*, makes it signify all Hedge-wood, except Thorns.

How to reconcile these different Sentiments, we know not; but we are sure the *Saxon* Word signifies Peace; and that *Fryth*, in our Records, is often us'd for a Wood; *Letor, tu tibi Ordinis esto*.

FUAGE, or FOAGE, a Tax, or Imposition, laid on Hearths, or Chimnies; i. e. Fire-places, or Families, call'd also *Hearth Silver*, and *Chimney Money*. See HEARTH SILVER, and CHIMNEY MONEY.

Edward III., the Black Prince, having *Aquitain* granted him, laid an Imposition of *Fuage*, or *Foage* upon the Subjects of that Dukedom, viz. One Shilling for every Fire. After his Example, *Charles V.* of France laid a like Tax of a Franc for each Fire for one Year only. His Successor

Charles VI. augmented it under the same Name: *Charles VII.* render'd it perpetual, and call'd it *Taille*.

By an Ordinance of *Humbert II.* Dauphin of France, the Imposition of *Fouage*, or *Fouage*, was then laid per Fire, i. e. per Fire, or Family, seu per *Lares focum habentes*. In Latin it was call'd *Focagium*, q. d. pro singulis focus.

Sometimes it was also call'd *Fouage*, on account of the Oven, or Furnace: In Greek *αυραριον*, of *αυρα*, fumus, Smoke.

In *Will. Tyr. de Bellis Sacris*, it is call'd *Focagium*: For it was also impos'd by the Kings of *Jerusalem*. The Counts, and other Lords likewise impos'd it on their Feudatories, or Vassals. *Zonaras* affirms us, that the General *Nicephorus* first establish'd it among the Greeks.

FUCUS, in Natural History, a Sea-plant, call'd also *Alga*. See *Marine PLANT*.

The Flowers of the *Fucus* grow on the whole Extent of its Leaves; in form of little Tufts, composed of a great Number of exceedingly fine Filaments, about the length of a Line. The Seed is inclos'd in a viscid Matter, at the Extremity of the Leaves. See MUSHROOM, CORAL, GENERATION OF Plants, SEED, &c.

FUCUS is also us'd for a *Paint*, or a Composition applied on the Face, to beautify it, and lighten the Complexion. See COSMETIC.

Old Women make use of *Fucus*'s and *Pomatums*, to appear young. The *Fucus* made with *Ceruis*, is corrosive; and pernicious to the Skin.

The Chymists abuse the Ladies in selling them Oil of Bricks, as an excellent *Fucus*. *Pliny* says, that the *Fucus* of the *Roman* Ladies was a kind of white Earth, or Chalk brought from *Cbio*, and *Samos*, dissolv'd in Water.

The *Fucus Solimanni* is a Composition of prepared Sublimate, in great Repute among the *Spaniards* of *Peru*.

FUEL, or FEWEL, the Pabulum of Fire; see FEWEL.

FUGA Vacui, in the antient School Philosophy, a Principle, whereby various Effluvia were produced, arising from a suppos'd Aversion, in Nature, to a Vacuum. See VACUUM.

The *Fuga Vacui* was a very fertile, and extensive Principle; and solv'd abundance of Difficulties with a deal of Ease. Suppose, s. gr. a Syringe; immerse one Extremity of it in Water; and draw up the Embolus, or Sucker: Then hear how the Antients will reason upon it. They first laid it down for granted, that there can be no Vacuum; then arguing, that there must be a Vacuum, unless the Water should follow the Embolus; they conclude, that the higher the Embolus is drawn, the higher shall the Water ascend; and this, *Fuga Vacui*, to keep out a Vacuum.

In after times, the Matter was stated in other Terms; and the Water was said to rise, *Motu Vacui*, for fear of the Vacuum; which must otherwise ensue. And at length, as if this were not enough, instead of *Fuga*, and *Motu*, they substituted the Word *Horror*; and affirm'd, that the Water rose out of Natures Aversion of a Vacuum. Which was just as good Sense, as if a Person being ask'd, Why Cools were brought to London? should answer, That it was done *fuga*, or *metu*, or *horrore frigiditatis*; for fear of Cold. Which is giving the Final Cause, when the Efficient one is required.

Most of the Phenomena, which the Antients ascribed to the *Fuga Vacui*, the Moderns have demonstrated to arise from the Gravity and Pressure of the Air. This is the Case in the Ascend of Water in Syringes, Pumps, &c. See AIR; see also PUMP, SYRINGE, &c.

FUGALIA, in Antiquity, a Feast, celebrated among the *Romans*. See FEAST.

Hoffman, after *Festus*, takes the *Fugalia* to be the same with the *Regifugium*, a Feast held on the 24th of February; in Memory of the Expulsion of the Kings, and the abolishing of the Monarchical Government. But *Strabo*, *Antiq. Roman. Syntag.* c. 9, distinguishes the *Fugalia* from the *Regifuge*: And even doubts, whether the *Regifugium* were thus call'd on account of the Expulsion of the Kings; or, by reason the *Rex Senerum*, after the Sacrifice was ended, fled hastily out of the *Forum*, and *Comitia*. See *REGIFUGIUM*.

Be this as it will, the only antient Author of Note, that makes express mention of the *Fugalia*, is *St. Augustin*, *De Civit. Dei*, l. 11. c. 6. And his Commentator *Prosper*, shews a great Inclination to correct the Reading of the Word, were it not, that *St. Augustin* adds, that the Feast was a true *Fugalia*; and Decency and Modesty being banish'd therefrom.

That learned Person conjectures, that the *Fugalia* were the same thing with the *Populogia*, or the Feast of *Fugia*, the Goddels of Joy; occasion'd by the Rout of an Enemy; which was the Reason why the People abandon'd themselves to Riot and Debauchery: And that the Feast was first instituted on occasion of the Victory gain'd over the *Prulnates*, *Fidenates*, and neighbouring Nations, upon their Attempt to take Possession of *Rome*, the Day after

ter the People had withdrawn from it. As related by *Varro L. V. de Ling. Lat.*

But *Varro* relates, that the *Poplifugia*, which fell on the Month of *June*, were held in Memory of the Flight, or Retreat of the People, in a Sedition rais'd among them: 'Tis true, he adds, that the Day followed soon after the Retreat of the *Gauls*, and the time when the neighbouring Nations confid'd against them: But this does not appear to have any relation to the *Poplifugia*, being only meant to mark the *Aera*, or Time when the Sedition and Flight of the *Roman* People happen'd.

After all, tho' the *Poplifugia* might have been originally establish'd in Commemoration of the Flight of the People; and not that of the Enemies; this does not hinder, but the *Fugalia* of *St. Augustin* may probably be the *Poplifugia* of *Varro*: according to the Conjecture of *Vives*.

FUGITIVE, a Wanderer, or Renegado; a Person oblig'd to fly his Country, or remove from a Place where he had some Abode, or Establishment; on account of his Crimes, Debts, or other Occasions.

A Person who has broke open, or escap'd out of Prison, is oblig'd to be a *Fugitive*. *Cain* became a *Fugitive*, after the Murder of his Brother.

Among the Learned, *fugitive* Pieces are those little Compositions, on loose Sheets, or half Sheets; thus call'd, because easily lost, and soon forget.

In the *Roman* Law, a *Fugitive* Slave was such a one as was apt to run away from his Master. In selling a Slave, the Master was oblig'd to declare, whether or no he were *fugitive*. The Term is also apply'd to Deserters in an Army; or those who fly from the Combat.

FUGITIVE Goods, *Bona Fugitivorum*, are the proper Goods of him that flies upon Felony; which after the Flight lawfully found, do belong to the King, or Lord of the Manor. See *WARR*.

FUGUE, in Music, is when the different Parts of a musical Composition follow each other; each repeating what the first had perform'd.

There are three kinds of *Fugues*: The Single *Fugue*; Double *Fugue*, and *Counterfugue*.

The Single, or Simple *Fugue*, is some Point consisting of 4, 5, 6, or any other Number of Notes, begun by one single Part, and then seconded by a third, fourth, fifth, and sixth Part, if the Composition consists of so many, repeating the same, or such like Notes; so that the several Parts follow, or come in, one after another in the same manner, the leading Parts first flying before those which follow.

FUGUE-DOUBLE, is when two or more different Points move together in a *Fugue*, and are alternately interchanged by several Parts.

For the Counter *Fugue*, see *COUNTER FUGUE*.

The *Italians* say, a *Fugue* of Rooms, or Chambers, meaning a Series, or Range of Rooms, the Doors whereof answer in a Right Line behind each other; so as they may be all seen at once, from one Extreme to the other.

FULCRUM, Prop, in Mechanics; see *LEVER*.

FULIGINOUS, an Epithet applied to a thick Smoak, or Vapour, replete with Soot, or other crass Matter. See *SMOKE*, *SOOT*, and *VAPOUR*.

The Word is form'd from the Latin *Fuligo*, Soot; and is rarely us'd but when join'd with *Vapour*. In the first Fashion of Metals there exhales a great deal of *fuliginous* Vapour; which retain'd and collected, makes what we call *Litharge*. See *LITHARGE*.

Lampblack is what is gather'd from the *fuliginous* Vapours of Pines, and other resinous Woods, when burnt. See *LAMP BLACK*.

Some Physicians talk of *fuliginous* Vapours, emitted from the Spleen to the Brain; which they will have the Cause of the Hypochondriac and Hysteric Disorders: Thence called the *Vapours* and *Spleen*. See *HYPOCHONDIAC*, &c.

FULL, is variously us'd, in opposition to empty, narrow, confin'd, &c.

The *Cartesians* hold, that the Universe is full, i. e. every Part, or Point has Matter in it. See *PLENUM*.

When the Body is full of Humors, it should be purged. See *PLENITUDE*, and *PLETHORA*.

An Embassador has full Power given him to act, transact, &c.—The Army was in full March, i. e. the whole Army was in March, with all the Forces it consisted of.—A Man is said to bear the Arms of a Family, full, i. e. without any Differences. See *DIFFERENCE*.

FULL MOON, *Plenitimum*, the Phase of the Moon, when her whole Disk, or Face is illumined; which is in the Time of her Opposition to the Sun. See *PHASES*, *MOON*, and *OPPOSITION*.

Eclipses of the Moon, happen at the time of full Moon, See *ECLIPSE*.

FULLER, a Workman employ'd in the Manufactories, to full, mill, or scour Cloths, Rattens, Serges, and other woolen Stuffs, by means of a Mill; to render them thicker, more compact, and durable. See *FULLING*.

The *Fullers*, among the *Romans*, wash'd, scour'd, and stit'd up Cloaths; and their Office was judg'd of that Importance, that there were formal Laws precrib'd them for the manner of performing it.

Such was the *Lex Metella de Fullonibus*. See also *Pliny* L. VII. c. 56. *Ulpian* lib. 12. ff. de *Fortis*, l. 13. §. 6. *Locati*, l. 12. §. 6. ff. §c.

The Word is form'd of the Latin *Fullo*, which signifies the same thing.

FULLERS EARTH, a fatty, fofile Earth, abounding in Nitre; of great Use in the woolen Manufacture.

It serves to scour Cloths, Stuffs, &c. and imbibe all the Grease, and Oil necessarily us'd in the preparing, dressing, &c. of the Wool. See *WOOL*, *CARDING*, *WEAVING*, *CLOTH*, &c.

Fullers Earth is only dug out of certain Pits near *Brickhill* in *Staffordshire*; no other Country affording any.

It is absolutely necessary to the well dressing of Cloth; and hence, Foreigners, who can procure Wool to be clandestinely exported out of the Kingdom, can never reach to the Perfection of the *Woolish* Cloths, &c. without *Fullers Earth*.

For this reason, it is made a contraband Commodity; and the Export made equally criminal, with that of exporting Wool. See *CONTRABAND*.

Abroad they make great use of Urine, in lieu of *Fullers Earth*. This Earth abounds much in the vegetative Salt, which promotes the Growth of Plants; and is therefore reckon'd by Sir *H. Plar*, and others, a great Improver of Land. When diffus'd in Vinegar, it disperses Simples and Pulses; checks Inflammations, and cures Burns.

Fullers Wood, *Tristle*, or *Teazle*. See *TEAZLE*.

FULLERY, a Work-house, or Place where Cloths, &c. are full'd.

The Term is principally understood of the Fulling Mill.

Thus, when they say, Carry that Cloth, Serge, or the like, to the Fullery, they mean it is to be sent to the Mill, to be scour'd and full'd. See *FULLING MILL*.

FULLING, the Art, or Act of cleansing, beating, and pressing Cloths, Stuffs, Stockings, to render them stronger, closer, and firmer; call'd also *Milling*. See *MILL*.

Pliny, lib. 7. cap. 16. assures, that one *Nicias*, the Son of *Hermias*, was the first inventor of the Art of Fulling: And it appears by an Inscription, quoted by Sir *G. Wheeler*, in his Travels thro' Greece, that this same *Nicias* was a Governour in Greece, in the time of the *Romans*.

The Fulling of Cloths, and other Stuffs, is perform'd by a kind of Water-Mill; thence call'd *Fulling*, or *Scouring Mill*.

These Mills, excepting in what relates to the Mill Stones and Hopper, are much the same with Corn Mills. And there are even some, which serve indifferently for either Use; Corn being ground, and Cloths full'd by the Motion of the same Wheel.

Whence, in some Places, particularly France, the Fullers are call'd Millers; as grinding Corn, and milling Stuffs at the same time.

The principal Parts of the Fulling Mill, are, The Wheel, with its Trundle; which gives Motion to the Tree, or Spindle, whose Teeth communicate it to the Pestles, or Stampers, which are hereby rais'd, and fallen alternately according as its Teeth catch on, or quit a kind of Latch in the Middle of each Peltic. The Pestles and Troughs are of Wood; each Trough having at least two, sometimes three Pestles, at the Discretion of the Master, or according to the Force of the Stream of Water.

In these Troughs are laid the Cloths, Stuffs, &c. intended to be full'd: Then, letting the Current of Water fall on the Wheel, the Pestles are successively let fall thereon, and by their Weight and Velocity stamp, and press the Stuffs very strongly; which by this means become thickned and condensed.

In the Course of the Operation, they sometimes make use of Urine; sometimes Fullers Earth, and sometimes Soap.

To prepare the Stuffs, to receive the first Impressions of the Peltic, they are usually laid in Urine; then in Fullers Earth, and Water; and lastly in Soap, dissolv'd in hot Water. Soap alone would do very well; but this is expensive; though Fullers Earth, in the way of our dressing, is scarce inferior thereto; but then it must be well clear'd of all Stones and Gritinesses, which are apt to make Holes in the Stuff.

As to Urine, 'tis certainly prejudicial, and ought to be entirely discard'd; not so much on account of its ill Smell, as of its Sharpness, and Saltness; which is apt to render the Stuffs dry and harsh.

The true Method of Fulling with Soap, is deliver'd by *Monf. Colner*, in an authentic Memoir on that Subject, supported by Experiments made by order of the *Marquis de Louvois*, then Super-Intendant of the Arts and Manufactories of France. The Substance of which we shall here subjoin.

Method

Method of Fulling Cloths and Woolen Stuffs, with Soap.

A colour'd Cloth, of about 45 Ells, is to be laid, in the usual manner, in the Trough of a Fulling Mill; without first soaking it in Water, as is commonly practis'd in many Places.

To full this Trough of Cloth, 15 Pounds of Soap are requir'd; one half of which is to be melted in two Pails of River or Spring Water, made as hot as the Hand can well bear it. This Solution is to be pour'd by little and little upon the Cloth, in proportion as 'tis laid in the Trough: And thus it is to be full'd for at least two Hours; after which it is to be taken out, and stretch'd.

This done, the Cloth is immediately return'd into the same Trough; without any new Soap; and there full'd two Hours more. Then taking it out, they wring it well, to express all the Grease and Filth.

After this second Fulling, the Remainder of the Soap is melted, as the former, and cast at four different times, on the Cloth; remembering to take out the Cloth every two Hours, to stretch it, and undo the Plains and Wrinkles it has acquired in the Trough. When they perceive it sufficiently full'd, and brought to the Quality and Thickness required, they scour it out for good, in hot Water, keeping it in the Trough, till it be quite clean.

As to white Cloths; in regard these full more easily, and in less time, than colour'd ones, a third Part of the Soap may be spared.—

FULLING of Stockings, Caps, &c. should be performed somewhat differently; viz. either with the Feet, or the Hands; on a kind of Rack, or wooden Machine, either arm'd with Teeth of the same Matter, or else Horles, or Bullocks Teeth.

The Ingredients made use of hereina, are Urine, green Soap, white Soap, and Fullers Earth. But the Urine also is reckon'd prejudicial here.

Note, woven Stockings, &c. should be full'd with Soap alone; For those that are knit, Earth may be us'd with the Soap.

Indeed, 'tis frequent to full these kinds of Works with the Mill, after the usual manner of Cloths, &c. But that is too coarse and violent a Manner, and apt to damage the Work, unless it be very strong. See STOCKINGS.

FULMINANT, FULMINANS, or FULMINATING, an Epithet applied to something that thunders, or makes a Noise like that of Thunder. See THUNDER.

Jupiter Fulminans: Aurum Fulminans: Pulvis Fulminans. Pericles was call'd the fulminating Orator.

Aurum FULMINANS, is a Preparation of Gold, thus call'd, because when laid on the Fire, it produces a huge Noise. It consists of Gold dissolv'd in *Aqua Regia*, and precipitated by means of Oil of Tartar *per Deliquium*; or Volatile Spirit of Sal Ammoniac. See GOLD.

Pulvis FULMINANS, is a Composition of three Parts of Nitre, two Parts of Salt of Tartar, and one of Sulphur. See GUN-POWDER.

Both the *Aurum* and *Pulvis Fulminans* produce their Effect principally downwards: In which they differ from Gunpowder, which acts *in orbem*; but principally upwards. If they be laid in Brass Ladles, and to set a fire; after Fulmination, the Ladles will be found perforated.—

FULMINATING Legion, was a Legion in the Roman Army, consisting of Christian Soldiers; who, in the Expedition of the Emperor *Marcus Aurelius* against the *Sarmate, Quadi and Marcomanni*, saved the whole Army, then ready to perish of Thirst; by procuring, with their Prayers, a very plentiful Shower thereon: And, at the same time, a furious Hail, mix'd with Lightning and Thunderbolts on the Enemy. See LEGION.

This is the Account commonly given by Ecclesiastical Historians: And the whole History is engraven in Bass-Relievo's, on the *Antonine Column*. And hence arose the Denomination *Fulminans*: Tho' some say, that the Legion those Christians were of, was call'd the *Fulminating Legion* before.

FULMINATION, in the *Romish Canon Law*, a Sentence of a Bishop, Official, or other Ecclesiastical appointed by the Pope; whereby it is decreed, that some Ball sent from the Pope, shall be executed. See BULL.

Fulmination is the same thing with the *Verification*, or Recognition of a Letter, or Instrument of a Prince in a Lay Court.

FULMINATION is also us'd for the Denunciation, or Execution of a Sentence of Anathema, made in publick, with due Solemnity.

In fulminating Anathema's, the Bishop who pronounces Sentence, is to be clothed in his Episcopalia. See ANATHEMA, EXCOMMUNICATION, &c.

FULMINATION, or FULGURATION, in Chymistry, a vehement Noise, or Shock made by divers Preparations; as *Aurum fulminans*, &c. when set on Fire. See DETONATION.

FUMIGATION, in Medicine, and Chymistry, is understood of Things taken in *Fume*, or *Smook*; or that are turn'd into *Smook*: And particularly for the Corrosion of a Metal, by the Fumes, or Steam of Lead, Mercury, Vinegar, or other acrimonious Matter.

'Tis dangerous taking Mercury by *Fumigation*. This *Fumigation* is a kind of potential Calcination; the Vapour of Mercury laid on the Fire, corroding and reducing into a Calx, the little Laminae of Metals suspended over it. See MERCURY.

Cera's is made by the *Fumigation*, or Vapour of Vinegar, gnawing and corroding Plates of Lead. See CRAVUS.

Alexander Severus made a very severe Decree against Physicians who sold *Smook*, that is, *Fumigations*. The Decree importeth, *Pomo pereat qui Fumum vendidit*. A Northern Physician has an express Treatise to justify the Physicians in this respect.

FUMIGATION is also us'd for the Art of making a suspended Body receive the Fumes, or Steam of one or more other Bodies; in order to calcine them, to correct them, or impart to them some new Quality.

FUNAMBULUS, among the *Romans*, was what we call a Rope-dancer, and the Greeks, *Scenobates*. See ROPE-DANCER.

The Term is also us'd for such as letting themselves down by a Rope, or Cord; make their Escape out of a City, or Place besieged: as observ'd by *Du Gange*.

Julius Capitolinus, and *Horace*, make mention of *Funambuli*. *Aron*, on *Horace*, assures us, that it was the *Orator Messala*, who first introduc'd the Word *Funambulus*, in lieu of *Scenobates*, us'd by the Greeks. For the Greeks seem to have had of these Rope-Dancers from the first institution of their Scenic Games, which are said to have been invented about the time of *Icarus*, Son of *Erigon*; or of *Diogenes*, surnam'd *Liber Pater*, whom *Theophrastus* first introduc'd into *Athens*.

At *Rome*, the *Funambuli* first appear'd under the Consulship of *Sulpitius Peticus*, and *Licinius Stolo*, who were the first Introducers of the Scenic Representations. It is added, that they were first exhibited in the Island of the *Tiber*: And that the *Censors Messala* and *Cassius* afterwards promoted them to the Theatre.

In the *Floralia*, or *Ludi Florales*, held under *Gulba*, there were *funambulatory Elephants*, as we are inform'd by *Suetonius*. *Nero* shew'd the like, in honour of his Mother *Agrippina*. *Vopiscus* relates the same of the Time of *Carinus* and *Numerianus*.

There was a *Funambulus*, it seems, of that Mankind, who perform'd at the time when the *Hevra* of *Terence* was acted; and the Poet complains, that the Spectacle prevented the People from attending to his Comedy. *Ita populus studio stupidus in funambulo animam occupat*.

FUNCTION, the Act of doing something, for which the Agent was destin'd, or which he was oblig'd to. See ACTION.

Thus we say, the Stomach performs its *Function*; i. e. digests, well. The Fumes of Wine disturb the Brain in the Performance of its *Functions*.

Physicians divide the *Functions* of the human Body into *Vital*, *Natural*, and *Animal*.

Vital Functions are those necessary to Life; and without which it cannot subsist: As the Actions of the Heart, Brain, Lungs, &c. See LIFE.

Natural are those which change the Food, &c. so as to assimilate it to our own Nature: Such are the Actions of the Viscera, and the Vessels which receive, retain, secrete, &c. the Humors. See NATURAL.

Animal, are those without which we cannot perceive, will, remember, &c. Such are *Feeling*, *Seeing*, *Imagining*, *Judging*, *Passions*, *voluntary Motion*, &c.

FUNCTION is also us'd figuratively in speaking of the Offices, Duties, or Occupations a Person is engag'd in.

He acquitted himself of all the *Functions* of the Magistracy with a Praise. The Actions of an Ambassador must be distinguish'd from his *Functions*; the one regard his Character; the other his Person.

FUND, *FUNDUS*, a Latin Term, us'd for the Bottom of certain Things; and particularly of certain Parts of the Body.

FUND of the Eye, is that Part possess'd by the Choroides and Retina. See EYE, RETINA, &c.

The Images of Objects are reflected in an inverted Situation, in the Fund of the Eye. See VISION.

FUNDUS Uteri, or Fund of the Womb, is the Body, or principal Part thereof; in contradistinction to the Cervix, or Neck; the *Osculum*, or Mouth; and the *Vagina*. See UTERUS.

FUNDUS Vesicæ, or of the Bladder, is the Cavity thereof, wherein the Urine is contained. In Men it is placed over the *Rectum*; and in Women over the *Matrix*. See BLADDER.

FUND of the Gall Bladder, the Stomach, &c. See GALL BLADDER, STOMACH, &c.

FUNDUS Platanæ, is that Part of a Plant, where the Stalk just meets, and joins the Root.

FUNDUS Cæli, is the Point opposite to the Point of Culmination; or the Point of the Ecliptick, wherein it is intersected by the Meridian, beneath the Horizon.—

FUND, in Commerce, is used for the Capital, or Stock of a Merchant, Company, or Corporation; or the Sum of Money they put into Trade. See STOCK, CAPITAL, &c.

In this Sense we say absolutely, the *Funds*, the *Publick Funds*; meaning the Stock of the great Companies, or Corporations, as the *Bank*, *South Sea*, *East India*, &c. See BANK, COMPANY, &c.

FUNDAMENT, the *Anus*, or Aperture, thro' which a Man voids his Excrements. See ANUS.

FUNDAMENTAL, something that serves as a Base, Rest, Support, or Foundation for any thing. See FOUNDATION.

The Apostles Creed contains the *fundamental* Points of Religion. The *Satie Law* is the *fundamental* Law of the Polity of *France*.

FUNDAMENTAL, in Music, the principal Note of a Song, or Composition, to which all the rest are in some measure adapted, and by which they are sway'd; call'd also the *Key* of the Song. See KEY.

FUNERAL, the Ceremonies perform'd at an Interment; or the last Offices paid the Deceased. See OMBREUXES.

The Word is form'd of the Latin *Fundus*; and that of *Fundulus*, by reason of the Torches (which were *Funes*, *cera circumdati*) us'd in the *Funerals* of the *Romans*. Tho' others derive *Funus* from the Greek $\phi\upsilon\sigma$, Death, or Slaughter.

The *Funeral Rites* among the ancient *Romans* were very numerous.

The Deceased was kept seven Days; and every Day wash'd with hot Water, and sometimes anointed with Oil, that in case he were only in a Slumber, he might thus be wak'd; and every now and then his Friends meeting, made a horrible Outcry, or Shout, with the same View: Which last Action they call'd *Conclamatio*.

The third Conclamation was on the seventh Day; when, if no Signs of Life appear'd, the Deceased was dress'd and embalmed by the Polliniflores, plac'd in a Bed near the Door, with his Feet and Heels outward, toward the Street; and the Outside of the Gate, if the Deceased were of Condition, garnish'd with Cypress Boughs.

In the course of these seven Days an Altar was rais'd near his Bed side, call'd *Acrera*; on which his Friends every day offer'd Incense; and the *Libitinarii* provided Things for the *Funeral*.

On the seventh Day a Crier was sent about the City to invite the People to the Solemnisation of the *Funeral* in these Words, *Exequias L. Tito L. Filio, quibus est commo-dum, iree. Jam tempus est. Otilus ex edibus offertur.*

The People being assembled, the last Conclamation ended, and the Bed cover'd with Purple; a Trumpeter march'd forth, followed by old Women, call'd *Præfæce*, singing Songs in praise of the Deceased: And lastly, the Bed followed, bore by the next Relations. And if the Person were of Quality and Office, the waxen Images of all his Predecessors were carried before him on Poles. See IMAGE.

The Bed was followed by his Children, Kindred, &c. *arrati*, or in Mourning: From which Act of following the Corps, these *Funeral Rites* were call'd *Exequie*.

The Body thus brought to the *Rostra*, the next of Kin *laudabat Defunctum pro rostris*, made a *Funeral* Oration in his Praise, and that of his Ancestors.

This done, the Body was carried to the *Pyra*, or *funeral* Pile, and there burnt: His Friends first cutting off a Finger, to be buried with a second Solemnity. See PYRA, and ROGUS.

The Body consumed, the Ashes were gather'd; and the Priest sprinkling the Company thrice with clean Water, the eldest of the *Præfæce* crying aloud, *Illicet*, dismiss'd the People, who took their leave of the Deceased in this Form, *Vale, Vale, Vale: Nos te ordine quo natura permisit, sequemur.*

The Ashes, inclos'd in an Urn, were laid in the Sepulcher, or Tomb. See URN, SEPULCHER, and TOMB.

The first *Romanus* did not burn their Dead, but interr'd them, as we do. See BURNING.

Pliny, lib. 7. c. 54. assures us, that the Custom of Burning was not introduced till after they had learnt, that their Enemies dug up, and expos'd the Bodies of their Soldiers buried in remote Countries. And yet *Plutarch*, in his Life of *Numa*, observes, that *Numa* was buried; as having expressly forbid them by his Testament to burn him: Which shews that the *Romans* had practis'd Burning before him.

This Custom of burning the Dead, lo religiously observ'd by the *Greeks* and *Romans*, was held in Abhorrence by several other Nations.

Herodotus relates, that the *Persians* detested it; as hold-

ing Fire to be a God. The *Egyptians* declined to burn their Dead; as taking Fire for an inanimate Beast; and judging it Impiety to commit the Bodies of the Deceased to be devour'd by Beasts. The Custom of burning among the *Romans* ceas'd under the Empire of the *Antonines*.

FUNERAL Oration, or *Sermon*, a Discourse pronounced in praise of a Person deceased, at the Ceremony of his *Funeral*.

The Custom of making *funeral* Oration is very antient. The *Romans* had it of a long standing; and it was always one of the nearest Relations that made it. *Augustus* did the Office to his Grandmother *Julia*, when only twelve Years of Age. *Suet. Aug. c. 8.* And we have divers parallel Instances.

The Custom seems to have begun with the Republic; at least, the first *funeral* Oration we read of, was that of *Brunnus*, who expell'd the Kings, and was the first Consul; who having been kill'd in a Battle against the *Hetrurians*, was *laudatus pro rostris*, prais'd in the *Forum* by *Valerius Publicola* his Colleague.

Indeed, some Authors will have the Practice more antient. They maintain it to have been in use among the *Greeks*; and that *Solon*, who, according to *Annius Gellius*, gave Laws to the *Arbemians* in the Time when the elder *Tarquinius* reign'd at *Rome*, was the first Author thereof: Something like which, it seems, the Oration *Anaximenes* has left in Writing. See *Polydore Virgil de Invenit. Rer. L. III. c. 10.*

FUNERAL Games, or *Ludi Funebres*, were a Part of the Ceremony of the antient *Funerals*. See GAMES.

They consist'd in mortal Combats of Gladiators around the *funeral* Pile. See GLADIATOR.

The Custom was very antient; tho' it had not always been the same. At first, they cut the Throats of a Number of Captives before the *Pyra*, as Victims to appease the *Manes* of the Deceased. This *Achilles* does in *Homer*, *Iliad*, 9, at the *Funeral* of *Patroclus*: And *Æneas*, in *Virgil*, *L. XI.* at that of *Pallas*, Son of *Eveander*. *Cæsar*, in his Commentaries *L. VII.* relates, that the *Gauls* did the same.

But at length it appear'd barbarous, thus to butcher Men; and therefore to save the Horror of the Spectacle, yet without the Dead's losing any thing thereby; they made the poor Captives fight and kill one another, only saving some few of such as came off Victors.

This Custom was borrow'd of the *Greeks* by the *Romans*; among whom the cruel Diversion was call'd *Munus*.

The first who introduc'd it at *Rome*, was *Junius Brutus*, at the Obsequies of his Father; or, according to others, *Ap. Claudius*, and *M. Fulvius*, during their Consulship.

The like horrible Combats were also occasionally exhibited by the Magistrates; and sometimes added to the Theatrical Pieces.

The Emperor *Claudius* decreed, that whereas these accursed Games were till then arbitrary; it should be the Practice for the future, to perform them regularly every Year, at the Expences of the State; and that the *Ædiles* should have the Care and Direction thereof. But he conceiv'd a Horror for them himself; and soon after abolish'd them: Tho' it was still allow'd particular Persons to have them, provided they were worth forty thousand Sesterces per Annum.

They were not finally abolish'd before *Theoderic* King of the *Goths*, at the End of the fifth Century.

FUNERAL Column, a Column crown'd with an Urn, wherein the Ashes of some deceased Person are suppos'd to be inclos'd; the Pill, or Shaft being set with Tears, or Flames; the Symbols of Grief, and Immortality. See COLUMN.

FUNGUS, in Natural History; see MUSHROOM.

FUNGUS, in Medicine, a fleshy Tumor, or Excrecence, very spongy, soft, and pale; arising on the Membranes, Tendons, and other nervous Parts, in consequence of Ulcers, Wounds, Contusions, and Strains.

Fungus is a frequently form'd on the Meninges, or Membranes of the Brain, in Wounds of the Head when not well cover'd, or defended from the external Air: They are also frequent about the Joints; which last grow very insensibly. But where the Skin is open, finding more room, they grow to a prodigious degree in a very little time, assuming the Form of a Mushroom or *Fungus*.

There are also *Fungus*'s of the *Anus*, and *Uterus*. They are all suppos'd to proceed from a Retention and Depravation of the nutritious Juice.

The *Fungus* is a general kind of Excrecence, whereof there are divers particular Species; as the *Ficus*, *Sarcoma*, *Candyloma*, &c. See FICUS, &c.

FUNGIOUS Flesh, is a spongy, excrecent, or (as we popularly call it) proud Flesh, frequently growing on the Lips of Wounds, Ulcers, &c. See FUNGUS.

The *Sarcocœle* is sometimes the Result of a *fungous* Flesh. See SARCOCELE.

In Ulcers, *Wifeman* observes, there frequently arises a spongy, or *fungous* Flesh, either from the too great Afflux of Humors; or thro' the Surgeon's Unskilfulness.

It must be suppress'd, or taken off by drying Medicines, or even Causticks: As *Lapis Tutia*, burnt Alum, Precipitate of Mercury, *Roman Vitriol*, &c. See *ULCER*.

There is also a malignant kind of *Fungus* rooted in the *Rectum*. See *RACTUM*.

FUNNEL of a *Chimney*, the Shaft, or smallest Part of the *Chimney*, from the *Waft* upwards. See *CHIMNEY*.

Palladio orders, that the *Funnel* be carried three, four, or five Foot at least above the *Roof*, that it may carry the *Smok* clear from the *House* into the *Air*.

Care too is to be taken, as to the *Width*; for that if they be too wide, the *Wind* will drive back the *Smok* into the *Room*; and if too narrow, the *Smok* will not be able to make its way.

Chamber *Chimneys* therefore are not to be made narrower than ten or eleven inches; nor broader than fifteen.

FURBISHER, a Person who *furbishes* or polishes Arms, and gives them a Brightness and Lustre. See *FURBISHING*.

In the general Sense of the Word, it includes what we now call *Armourers* and *Sword Caslers*: In a more restrain'd Sense, it is appropriated to those who clean, and scour up old Swords, Guns, Halberds, and put them in order.

Among the Officers of the *Tower* is a *Furbisher of small Arms*, and another of *Swords*. And the like is at most of the *Palaces* and *Armories of England*; as *St. James's, Windsor, Chester, Plymouth, Hull, and Berwick*.

FURBISHING, the Act of cleaning, scouring, and polishing Arms; as *Guns, Pistols, Swords, &c.* See *FURBISHER*; see also *SWORN, GUN, &c.*

Furbishing is principally perform'd with *Emery*. See *EMERY*.

The Word is form'd of the French *Fourbiffure*, which *Hicks* derives from *Furben*; which in the Language of the ancient *Frank*s signify'd to clean and polish.

M. Huet chooses rather to derive the French *Fourbir* and *Fourbiffure*, from the English *Furbish*, and *Furbishing*.

Skinner observes, that some Authors derive the English *Furbish* from the Latin *fervus*, and *ferreo*; but for his part he rather derives it from the German *Farb*, Colour, and *farben*, to give a colour.

FURCA, *Fork*, in Antiquity, a kind of Punishment, or rather Instrument of Punishment, among the *Romans*.

The Form of the *Roman Furca* is very obscurely described by the *Antients*, and much controverted by the *Moderns*.

All we know for certain, is that it was of Wood, and resembled a *Fork*; whence it is called in *Writers* *Furca*, *Furca*, *Furca*, *Furca*, that is, *ligurum duplex, bicornutum, geminum*, a double fork'd or horned *Timber*.

Plutarch, treating of the *Furca*, says, it is originally a piece of *Timber*, wherewith the *Beam* of the *Waggon* was upheld: He adds, that it is the same with what the *Greeks* call *Hypostate* and *Sterigma*: And the *Sterigma* is described by *Hegebius* as the forked Piece of *Timber* put under the *Yoke* of the *Waggon*.

From the two, *Goodwin* takes the *Furca* to have been the *Beam* of a *Waggon*, to which the *Yokes* were fasten'd.

The Punishment of the *Furca* was of three kinds: The first, only *Ignominious*, was when a *Master* forc'd his *Servant* for small Offences to carry a *Furca*, or *Fork* on his *Shoulders*, about the *City*; confessing his *Fault*, and warning others to beware of the like; whence such *Servant* came to be denominated *Furcifer*.

The second kind was *Penal*; when the *Party* having the *Furca* on his *Neck*, was lead about the *Circus*, or other *Place*, and whip'd all the way.

The third was *Capital*; the *Malefactor* having his *Head* fasten'd to the *Furca*, and so whip'd to death.

In After-times of the *Empire*, when *Crucifying* became interdicted, the Form of the *Furca* was changed, and made like our *Gibets* or *Gallows*. See *CROSS, CAUCIFYING, GIBET, &c.*

FURCA, in our ancient Customs, was the same with *Caufurca*, or *Foffa*, i. e. *Gallows*, and *Pit*; viz. a *Right* or *Jurisdiction* of punishing *Felons*; that is, *Men* with hanging; *Women* with drowning. See *GALLOWES*.

FURCHE, in *Heraldry*, a *Cross* in the *Form* here represented. See *CROSS*.

FURCULA, in *Anatomy*; see *JUGULUM*.

FURFUR, literally signifies *Husk*, or *Chaff*; and therefore is used for the *Scales*, *Scarf*, or *Dandriff*, which grows upon the *Skin* with some *Likeness* thereto. See *CUTICLE*. Hence

FURFURATION, the falling off of *Furfures* in *Cumbings*, &c.

FURIES, EUMENIDES, DIRÆ, in the *Heathen* *Theology*, and *Poetry*, were infernal Deities, supposed to enter, and possess *Men*; so to torment, and punish them. See *GOB*.

The *Furies* were reputed the *Ministers* of *Pain*; and the *Avengers* of *Crimes*. *Strabo* paints them clothed in long *Robes* falling to their *Heels*, but girt about the *Breast*. They were three in Number: *Typhoea, Megera, and Alecto*.

Paris, Spanheim, &c. will have it to be them, which we see on a *Medal* of the *Emperor Philip*, struck at *Antioch*, on whose *Reverse* are represented three *Women* dress'd as above-mentioned, and arm'd with a *Key*, burning *Torches*, *Poniards*, and *Serpents*.

Struvinus, Antiq. Rom. Jur. C. I. p. 182. adds, that the three *Furies* may probably be no other than the triple *Hecate*, whom the *Antients* believ'd to pursue and torment the *Wicked* in *Hell*, on *Earth*, and in *Heaven*.

Some of the *Poets* add a fourth *Fury*, call'd *Iossa*; a *Greek* Word, signifying *Madness, Rage*. They represent them with *Eyes* inflam'd, their *Heads* twist'd round with *Snakes*, with *Whips* and burning *Torches* in their *Hands* to punish the *Guilty*.

The *Daffodil* was sacred to the *Furies*; and such as offer'd *Sacrifices* to them, were crown'd therewith. This we learn from *Eustathius*, on the first *Book* of the *Iliad*, p. 87.

These *Furies* were also call'd *Pæne, Ioliva*, by reason of the *Punishments* they inflict'd on *Criminals*: As their *Denomination* *Furies* arose from the *Rage* and *Madness*, which they threw into the *Conscience*. *Voss. de Idolol. L. VIII. c. 18.*

The *Greeks* call'd them *Eumenides*; the *Origin* of which *Name* is much controverted among the *Learned*: The *Etymology* that seems best authorized, derives it from *Eumen*, gentle, mild; which was applied to them on occasion of *Orestes*'s being absolv'd of the *Murder* committed by him on the *Person* of his *Mother*. *Minerva*, it seems, appeas'd and pacified the *Furies*; so that they ceas'd to pursue him: Upon which the *Albanians* ever after denominated them *Eumenides*.

But it must be added, that the *Albanians* call'd them by the same *Name*, long before *Orestes*'s time; as appears from the *Oedipus* of *Sophocles*. There was a *Temple* in *Athens*, near the *Areopagus*, consecrated to the *Eumenides*, whom the *Albanians* call'd *Venerable Goddesses*. *Aristides* and the *Scholiast* of *Thucydides* speak of this *Temple* as erected in *Memory* of the *Judgment* of *Orestes*. See *EUMENIDES*.

FURLING LINES, are small *Lines* made fast to the *Top-sails*, *Top-gallant Sails*, and to the *Mizen-yard* Arms, serving to *furle* up those *Sails*.

The *Mizen* hath but one *Furling Line*, but all the rest have two, one at each *End*.

FURLONG, an *English* long Measure, containing the eighth Part of a *Mile*. See *MILE*, and *MEASURE*.

The *English Furlong* is equal to forty *Poles*, or *Perches*; and the *Perch* to 16½ *Pect*. See *PERCH*, *FUR*, &c.

Hercules is said to have ran a *Stadium* or *Furlong* at one *breath*. See *STADIUM*.

FURLONG is also us'd for the eighth Part of an *Acre*, now call'd a *Roof*. See *ROOF*.

'*Tho*', in an old *Law Book*, printed in *Henry* the VIII's time, we read, that six hundred *Foot*, of five *Score* to the *Hundred*, make a *Furlong*. See *ACRE*.

In the former Signification the *Romans* call it *Stadium*; in the latter, *Fugerum*.

FURLONG is also us'd for a piece of *Land*, of more, or less *Acres*.

Quintus Christi Fidel. Johannes Blunt de Ege, Arm. — Dedit Thome Cresti & Francisco Lovel, Arm. unum Furlongum terre arabilis continens per estimationem quatuor Acres, &c. Dat. 20 Jan. 3. Eli.

FURLOUGH, a *Licence* granted by an *Officer* to a *Soldier*, to be absent for a *while*.

FURNACE, an *Utensil*, or *Vessel*, proper to contain *Fire*; or to raise and maintain a vehement *Fire* in; whether of *Coal*, or *Wood*. See *FIRE*.

There are divers kinds of *Furnaces*, of various *Forms*, and for various *Uses*.

The *Domestick Furnace*, us'd in making *Confections*, &c. is usually of *Iron*, or *Earth*.

Those us'd by the *Goldsmiths, Refiners, &c.* are much larger, and of a different *Structure*.

Those wherewith *Lime, Bricks, &c.* are burnt, are call'd *Kilns*. See *LIME, BRICK, &c.*

FURNACE is particularly us'd for a kind of *Oven*, wherewith the *Ores* of *Metals*, after beating, washing, &c. are melted down, by a *hott Coal* or *Wood Fire*. See *FUSION*.

The *Structure* and *Application* of these *Furnaces* is somewhat different in the different *Metals*. See *GOLD, SILVER, COPPER, TIN, &c.*

FURNACE is more strictly applied to those us'd in the melting of *Iron*; which *Authors* frequently confound with *Iron Forges*; tho' there is a considerable Difference between them.

The *Furnace* is a Brick Structure, much in the Shape of an Egg set an end, wherein the Iron Ore, after it has been burnt in a Kila, is put, intermix'd with Cinders and Charcoal; and the whole mix'd, till it trickle down into a Receiver underneath; where, the Scum and Dross being taken away, the Metal is thrown into Furnaces made in a Bed of Sand, and thus cast into Sows or Pigs of Iron. See *IRON-WORK*.

The *Forge* is a Place, where the Pigs are heated and fufed a second, and even third time, to prepare and fit them further for use. See *FORGE*.

Glaß-benfe FURNACE, is the Place wherein the Materials of Glass are fufed, and vitrified. See *GLASS*.

There are three kinds of *Furnaces* us'd in the *Glaß-works*.

The first call'd the *Calcar*, serves to prepare or calcine the *Frit* in. It is made in fashion of an Oven, ten Foot long, seven broad, and two deep. The Fuel, which is Sea Coal, is put in a Trench, on one Side of the *Furnace*; and the Flame reverberates from the Roof back upon the *Frit*. The Coals burn in an iron Grate, and the Ashes fall hence into a Hole underneath. See *Frit*.

The second, is the *Working Furnace*, serving to melt the Metal in, or make the Glass. Its Figure is round, three Yards in Diameter, and two high, being arch'd over. Round the inside are eight, or more Pots plac'd, and piling Pots on these. The Number of Pots is always double that of the *Boccas* or Mouths, or that of the Workmen; that each may have one Pot refined, to work out of; and another for Metal, to refine in, while he works out the former.

The *Furnace* has two Partitions; the lower, separating the Pots from the Fire Place, has a circular Hole in the Centre, cover'd with a Grate, through which the Flame passes from the Fire Place into the *Furnace*; from the arch'd Sides and Roof whereof it is reverberated into the Melting-pots.

The second Partition divides this from the *Leer*, or *Annealing Furnace*. Thro' the *Boccas*, or Working-holes the Metal is taken out of the Pots, and the Pots put in the *Furnace*. These *Boccas* are stop'd with moveable Covers, made of Lute and Brick, to screen the Workmen's Eyes from the Fire. On each Side the *Bocca* is a *Bocarella*, out of which, colour'd Glass, or the finer Metal is taken from the Piling-pot. To the *Furnace* likewise belong Ovens or Holes near the *Leer*, for the calcining of Tartar, Iron, &c.

The *Leer*, which serves to anneal and cool the Vessels; and which *Agricola* makes a particular *Furnace*, consists of a Tower, and the *Leer*. The Tower lies directly over the Melting *Furnace*, with a Partition betwixt the Aperture, having an Aperture, call'd *Oecbio*, or *Lumella*, thro' which the Flame or Heat ascends out of the *Furnace* into the Tower; On the Floor or Bottom of this Tower, the Vessels fashion'd by the Masters, are set to anneal. It has also two *Boccas* or Mouths, by which the Glasses are put in with a Fork, and set on the Floor.

The *Leer* is an Avenue, five or six Yards long, continued to the Tower: Thro' this the Glasses, when anneal'd, are drawn in iron Pans, call'd *Fraches*; by which they come to cool by degrees; being quite cold, by that time they reach the Mouth of the *Leer*, which enters the *Sarofel*, or Room where the Glasses are to be set.

The third, is the *Green Glaß Furnace*, which is a kind of Compound of all the former. It is made square (the two former being circular) having an Arch, at each Angle thereof, for annealing and cooling the Glasses. The Metal is wrought on two opposite Sides; and on the other two, they have their *Calcars*, into which are made *Linet Holes* for the Fire to come from the *Furnace* to bake the *Frit*; as also to discharge the Smoke. Fires are made in the Arches to anneal the Vessels; so that the whole Process is done in one *Furnace*.

The Stones wherewith the Insides of these *Furnaces* are built, are not Brick (which would soon melt down into Glass, as also all the softer Stones); but hard, and sandy, by *Imperat*. call'd *Pyracomia*.

Founders FURNACE, is of divers kinds, according to the different kinds of Work to be cast.

That us'd by the Founders of Small Work, is much like the Smiths Forge, with this only Difference, that the Fire is made on the Massive, built in a Cavity in the Middle of the *Furnace*, to which the Pipe of the Bellows reaches.

This Cavity goes to the Bottom of the Massive: A cro's the Middle of it is plac'd a Grate, which holds the Fire and the Crucible: And below is the Place for the Ashes, &c. See *FOUNDRY*.

The Statuaries, or Figure-makers, use two kinds of *Furnaces*; which see describ'd under the Article *FOUNDRY of Statues*.

Glaß-Painters FURNACE, is made of Brick, nearly square, and about two Foot and a half each way.

It is cut horizontally in the Middle by a Grate, which sustains the Pan or Shovel the Glass is bak'd in. This *Furnace* has two Apertures; one below the Grate, to put the Fuel in at; the other above it, thro' which the Workman

spies how the Colours goes on. See *Painting on GLASS*.

Letter Founders FURNACE, is very small, not exceeding a Foot and half in Height, and one in Diameter; being plac'd on a wooden Stand, or Bench, to raise it to a proper Height for the Artift, who works standing. It is made of the same Earth with Crucibles. See *Letter FOUNDRY*.

Plumbers FURNACE is of three Kinds: In the first, they melt the Lead, whereof Sheets are to be cast.

This is only a sort of large Copper, or Receptacle like a Copper, made of Free-stone and Potters Earth, well plaister'd round with a little iron Pan at bottom.

In the second, they melt the Lead to be cast in Moulds, for Pipes, &c. which are not to be solder'd.

The third, is the *Tinning Furnace*, which is a square Frame of Wood, or sometimes a Massive of Stone work, with a Brick Hearth, whereon is made a Charcoal Fire, which serves them for the applying of thin Tin Leaves on their Works. See *PLUMBERY*.

Hatters FURNACES are of three Kinds: A little one under the Mould, whereon they form their Hats: A larger, in the Fallery under a little Copper full of Water and Lutes: And a very large one under the great Copper they dye their Hats in. See *HAT*.

Bellows-FURNACE, is one of the two kinds of *Furnaces* us'd in the *Mintage*, for the fusing of Metals.

It consists of a flat Hearth at Bottom, into which the Air may be admitted by a Hole contriv'd therein.

On a Level with the Hearth is a second Aperture, which gives Passage to the Pipe of the *Bellows*, from which the *Furnace* is denominated. About a Foot over this is a moveable Grate, which may be taken off and put on at pleasure. Lastly, over this is the Place where the Crucible is set; which is square, and made of the same Earth with the Crucible; of Breadth sufficient to bear a Range of Coals around the Crucible.

To melt a Metal in this *Furnace*, they lay a little Plate of forged Iron over the Grate; and on this they set the Crucible, which is likewise cover'd with an iron, or earthen Lid. Then they fill the *Furnace* with Charcoal; and when it is well lighted, and the Crucible sufficiently hot, they stop the Vent-hole. Lastly, throwing on fresh Coals, they stop the *Furnace* with an iron Lid: Thus, continuing to work the Bellows, and supply fresh Fuel, till the Metal be in Fusion. See *COINING*.

Wind-FURNACE is the second *Furnace* us'd in the Fusion of Metals for Coinage. At Bottom it has a Hearth made hollow, in manner of a Coupel, with a Vent-hole in the Fore-part thereof. Over the Vent-hole, is a Grate seal'd in the Massive of the *Furnace*. Over the Grate is the Place for the Crucible, which is usually of forged Iron.

The Fire being lighted, the Crucible is set in, with a Cover over it; and a Capital or Cover of Earth or Iron laid likewise over the *Furnace*. A-top of this Capital is a Hole five or six Inches in Diameter.

It is call'd *Wind Furnace*, by reason the Air entering thro' the Vent-hole at bottom, which is always open, serves the same purpose as the Bellows in other *Furnaces*.

Gold is usually melted in the *Bellows Furnace*, as requiring an intenser Heat before it fuses. See *GOLD*.

Silver, and Copper, are commonly melted by the *Wind-Furnace*. See *COINAGE*.

FURNACE, in Chemistry, is an earthen Vessel, wherein the Fire necessary for the several Operations, is contain'd, determin'd, and directed. See *FIRE*.

The *Furnace* consists of several Parts; as, a Place for the Vessel, or Body to be wrought on; a *Focus* or *Hearth* for the Ashes; a *Chimney*; a *Grate*; a *Door*; a *Dome*, and a *Pan*; or else *Registers*, whereby to let in Air, to increase, or abate the Fire.

The Perfection of a *Furnace* consists in its maintaining a constant equable Fire; and this easily temper'd; and at an easy Expense.

To have the Expense easy, the whole Action of the Fire or Fuel must be employ'd on the Subject or Matter of the Operation.

It must be equable, since different Degrees of Fire have different Effects; so that if any given Degree would answer any given Intention; an Alteration of that Degree will prevent the Intention from taking place. And on these Circumstances does all the Variety of *Furnaces* depend.

Furnaces are either fix'd and immovable, call'd *Athanas*; or portable, call'd *Catholice*, or Universal, being proper for all Operations, where the Body to be operated on is not too large.

The first Species of Athanas, or fix'd *Furnace* is fitted to give a Heat equal to that of a healthy Man.

The second is the *Furnace* of the *Balneum Marie*, fit for the Distillation of the more subtiler Spirits. See *BALNEUM Marie*.

The third is the *Digesting Furnace*. See *DIGESTING*.

The fourth, the Anema, or *Wind Furnace*, call'd also *Melting Furnace*, and *Metallic Furnace*; us'd in the Fusion of Metals, Minerals and Vitrifications.

It is call'd *Wind Furnace*, by reason the Air drives forcibly in at the same, to blow up the Coals: Its Form is much like that of the *Reverberatory Furnace*, only less.

For the *Reverberatory Furnace*, see REVERBERATORY. *FURNACE of a Mine*, in the Art of War; see CHAMBER and MINE.

FURNITURE, in Dialling, certain additional Points and Lines, drawn on a Dial, by way of Ornament. See DIAL.

Such are the Signs of the Zodiac, Length of Days, Parallels of Declination, Azimuths, Meridians of the principal Cities, *Babylonick* and *Italian Hours*, Points of the Compass, &c. See DIALLING.

For drawing Furniture on Dials, the *Analemma*, or Triangle of Signs is an Instrument of principal Use. See ANALEMMA.

FUROR Uterinus, a Species of Madness, peculiar to Women, exciting them to a vehement Desire of Vengence, and rendering them insatiate therewith. See UTERINE FURY.

It is owing, according to *Semmerus*, to a too great Abundance of Semen, and a preternatural Heat and Pungency thereof.

FURR, the Skin of divers kinds of Wild Beasts, dress'd with the Hair on; to be us'd as a Lining, or Doubling of Garments, Robes, &c. either for Warmth, Ornament, or Distinction of Rank and Dignity.

The Robes of Kings, Dukes and Peers are lined with divers kinds of Furrs, and particularly Ermine, to render them more magnificent. See ERMINE, &c.

The same may be observ'd of several chief Magistrates, Judges, and Doctors of different Faculties in the Universities.

The Kinds of Furrs, or the Skins chiefly dress'd in Alum, and with the Hair on, are those of the *Ermine*, *Sable*, *Squirrel*, *Coat*, *Castor*, *Otter*, *Dog*, *Fox*, *Wolf*, *Tiger*, *Beaver*, &c. See SKIN.

The Word is form'd of the French *Furraire*, a Lining; which *Du Cange* derives from *Furrura*, us'd in the barbarous Latin, for the same thing. We also meet with *Furratura*, *foderata*, *foderatum*, and *foderatura*, in the same sense.

FURRA, in Heraldry, a Representation of the Skins of certain wild Beasts, &c. both in the Doublings of the Mantles of Coat Armour, and in the Armour itself.

The Heralds use two Metals, five Colours, and two Furrs, or hairy Skins, *Ermine* and *Vaire*.

The Origin of these Furrs, *Mackeway* ascribes to the Shield's being antiently cover'd with Skins; which Skins or Coverings were afterwards represented in the Shields: A more probable Derivation, in our Opinion, than to say they were plac'd on Shields, because they had been wore in Mantles and Garments.

Furrs either consist of one Colour, which is white; or more than one; and these either two, or more than two.

Furrs of two Colours are either *Ermine*, being white with black Spots; *Ermines*, black with white Spots; *Ermineau*, whose Ground is yellow; or *Pean*, which is black, powder'd with yellow. See ERMINE, PEAN, &c.

Furrs of more than two Colours are *Vair*. See VAIR, and VAIRY.

FURRIER, a Person who trades, or works in Furrs, or lines Robes, &c. therewith. See FURR.

FURRING, in Architecture, the making good the Rafters Feet in the Cornice. See RAFTER.

Thus, when Rafters are cut with a Knee, these *Furrings* are Pieces which go straight along with the Rafter, from the Top of the Knee, to the Cornice.

Also, when Rafters are rotten, or sunk hollow in the Middle, there are Pieces cut thickest in the Middle, and tapering towards each End, which are nail'd upon them to make them straight. Such Pieces are call'd *Furrs*; and the Putting them on, *Furring the Rafters*.

FUSAROLE, in Architecture, a Moulding, or Ornament, plac'd immediately under the Echinus, in the *Doric*, *Ionic*, and Composite Capitals.

The *Fusarole* is a round Member, carved, in manner of a Collar or Chapelet, with oval Beads. The *Fusarole* should always answer exactly under the Eye of the Volute in the *Ionic* Capital.

The *Italians* call it *Fusciolo*; and the *French*, from whom we borrow it, *Fusarole*.

FUSEE, or FUSY, in Watch-work, is that conical Part, drawn by the Spring, and about which the Chain, or String is wrapp'd. See WATCH.

The Spring of a Watch is the first Mover. It is roll'd up in a Cylindrical Box, against which it acts, and which it turns round in unbending itself. The String, or little Chain, which at one End is wound about the *Fusée*, and at the other

fasten'd to the Spring-box, disengages itself from the *Fusée*, in proportion as the Box is turn'd. And hence the Motion of all the other Parts of the Spring Watch. See SPRING.

Now the Effort, or Action of the Spring is continually diminishing from first to last; and of consequence, unless that Inequality was rectify'd, it would draw the String with more Force, and wind a greater Quantity of it upon the Box at one time than another; so that the Movement would never keep equal time.

To correct this Irregularity of the Spring; nothing could be more happily contriv'd than to have the Spring applied to the Arms of Levers, which are continually longer as the Force of the Spring is weaker. This foreign Assistance, always increasing as 'tis most needed, maintains the Action, and Effect of the Spring in an Equality.

'Tis for this reason, that the *Fusée* is made of a conical Figure. Its Axis, which is immovable, is the Series of the Centres of all the unequal Circumferences, which compose the Surface of the *Fusée*. According as the Part of a String which is unwinding, is applied to a larger Circumference, it is at a greater Distance from the fix'd Point in the Axis, corresponding thereto; and of consequence the Power which draws by this String, viz. the Spring, acts with the more Advantage. The Spring begins to draw by the Top of the Cone; the most disadvantageous Part, by reason its own Force is then the greatest. See LEVER.

If the Action of the Spring diminish'd equally, as the Parallel Bases of a Triangular do; the Cone, which is generated of a Triangle, would be the precise Figure required for the *Fusée*. But 'tis certain the weakening of the Spring is not in that Proportion; and of consequence the *Fusée* should not be conical.

In effect, Experience shews, that it should not be strictly so; but that it be a little hollow toward the Middle, i. e. the Arm of the Lever must be there a little shorten'd; by reason the Action of the Spring is not sufficiently diminish'd of it self.—

'Tis a Matter of Inquiry among Geometricians what the precise Figure of the *Fusée* should be; that is, what the Curve is, by whose Revolution round its Axis, the Solid, whose Figure the *Fusée* is to have, shall be produced.

M. *Varignon* has determin'd this Curve. The Axis of the *Fusée* is also the Axis of the Curve, which is convex on the Side toward the Axis, and of consequence concave all the way on the other, or outside; and the Ordinates are the different Distances wherein the String is to be with regard to all the successive fix'd Points of the Axis.

The Force of the Spring multiplied by the Arm of the Lever it is applied to, each Moment, being always to make an equal Product; it follows that when the Solid of the Curve shall be form'd, an Ordinate multiplied by the Surface of the Solid comprised between that Ordinate, and the greatest of all the Ordinates, viz. that of the Base, will always yield a Product equal to that of any other Ordinate multiplied in the same manner. For the Ordinates are only Arms of the Lever; and the Parts of the Surface comprehended between them and the Base are equal to the Lengths of the Spring, which cover them; i. e. to the correspondent Forces of the Spring: Which is what constitutes the Equation, and the Essence of the Curve.

FUSZE, FUSIL, or FUSZ, in War, an Appendage of a Bomb, or Granado-Shell, by which the Powder or Composition in the Shell is set on Fire, to do the design'd Execution. See BOMB, and GRANADO.

The *Fusée* is a wooden Pipe or Tap, fill'd with Wild-fire, or the like Composition; and is design'd to burn so long, and so longer, as is the time of the Motion of the Bomb from the Mouth of the Mortar, to the Place, where it is to fall; which Time is about 27 Seconds: So that the *Fusée* must be contriv'd, either from the Nature of the Composition or the Length of the Pipe which contains it, to burn just that time.—

The usual Composition of *Fusées* is two Ounces of Nitre, to one of Sulphur, and three of Gunpowder Dust.

The Word is *French*, and literally denotes a *Spindle*.

FUSIBILITY, that Quality in Metals, and Minerals, which disposes them for Fusion. See FUSION.

Gold is more fusible than Iron, or Copper; but less so than Silver, Tin, and Lead. See GOLD, SILVER, &c.

Borax is frequently mix'd with Metals, to render them more fusible. See BORAX.

FUSIL, in Heraldry, by the *French* call'd *Fusée*, q. d. *Spindle*, is a bearing of a Rhomboidal Figure, more slender than the *Lozenge*; its upper and lower Angles being more acute than the two collateral or middle ones; as represented in the adjoining Figure.

FUSILIERS, in an Army, are the same with Musketeers; and are call'd so from the Word *Fusil*, a *Fire-arm*, or *Musquet*. See MUSQUET.

FUSILITY, or *Fusibilité*, is when a Field or Ordinary is entirely cover'd over, or divided into *Fusils*.—

FUSION, the Solution, or melting of Metals, Minerals, &c. by means of Fire; Or, the Act of changing them from their solid State to a Fluid. See *SOLUTION*, and *DISSOLUTION*.

To give the Ore its metallic Form, they *fuse* it: When it is in *Fusio*, the metalline Substance, being the heaviest, sinks to the Bottom of the Furnace; the other terrestrial Matters rising in Form of Scoria to the Surface. See *METAL*.

'Tis commonly imagin'd, that the *Fusio* and metalline Form of Minerals is wholly the Effect of Fire; and we have Theories of Fusibility built on this Principle: But 'tis a mistaken one. Fire, no doubt, is the principal Agent: But Fire alone is not sufficient.

A Mineral, or piece of Metal not purify'd, being put alone in a Crucible, melts with a world of Difficulty, and never becomes a perfect Metal: Copper Ore, for instance, being thus applied, its impure Part turns a Scoria, and vitrifies; the metalline Part residing at Bottom, under the Appearance of a black *Regulia*.

To promote the *Fusio* and Separation, they mix Coals, or Stones, or Cinders, or old Scoria along with the Ore; the inflammable Principle in which, by help of the Fire, fuses them perfectly, sets the heterogeneous Part at liberty, and attaches it to the Top.

The general reason of *Fusio* is pretty easily assign'd. The Firmness, or Solidity of the Body arises from the Force wherewith its Particles cohere. See *FIRMNESS*. And the Cohesion in all Bodies is as the Quantity of Contact in the component Particles. See *COHESION*.

Now, the Corpuscles of Fire entering with Rapidity into the Pores of the Metal agitates, and by degrees, loosens, divides, and diminishes their Contact, till at length there is not enough to hinder their rolling over each other; and giving way upon the least Impulse. See *FLUIDITY*.

The Dilatation observable in all *Fusions*, is a Proof that their Particles are separated and set at a distance from each other, and consequently their Contacts and Cohesions diminish'd.

In effect, Rarefaction and Dilatation is the necessary Consequence of Fire and Heat. See *FIRE*, *DILATATION*, *RAREFACTION*.

From the Difference of Cohesion proceeds that Variety we observe in the *Fusio* of Bodies: for such as have least Contact of Parts, soonest give way to the Fire; and some will melt away by the Warmth of a Vapour only, when others, which have a stronger Contact, are not to be separated, but with Difficulty. Upon this account, Vegetables very easily disunite; Minerals slower, and Metals slowest of all: And of the last, those wherlein the Contact of Parts is least, as in Lead and Tin, most readily melt; but those which are more compact as Gold, and Silver, are not to be managed, but by a violent Heat.

If now the Force of Cohesion were proportional to the Quantity of Matter, or to the Weight of Bodies, we might from Staticks account for all the Variety that occurs in *Fusion*; for by knowing the specific Gravity of a Body, we should then know, what Force is required to melt it: But because the same Quantity of Matter may be so variously disposed, that in one Body there shall be a much greater Contact, than in another, tho' the Gravity be equal, or even less at the same time; therefore the Force of Cohesion cannot be estimated by Gravity: For Lead, tho' more ponderous than all other Metals, except Gold; yet in the Fire is more easily melted, than any other: So that it necessarily follows, that in this Metal there must be a less Cohesion, or Contact of Parts, how much soever it may exceed others in the Quantity of its Matter. See *LEAD*.

Bodies after *Fusio* return again into a solid Mass, upon removing them from the Fire; because their Particles hereupon approach nearer to one another by their attractive Force, and are so compelled to unite.

Such as consist of homogeneous and unalterable Parts, as Wax, Gums, and the purer Metals, recover their ancient Form: For when the same Texture of Parts remains in the whole Body, it must of course resume the same Appearance, when the separating Power ceaseth to act; but other Bodies, whose Parts, with respect to Density and Surface, are ex-

tremely different from one another, while some are carried off by the Force of Heat, and others are changed as to Figure and Position, must be forced to appear in another Form: For they cannot recover their original Phases, unless every Particle could reconstitute it self in that very Situation it had before, which may be hindered infinite ways; as may be experienced easily in heterogeneous Bodies.

The Difference, therefore, observ'd even in homogeneous Bodies after Liquefaction, is no ways to be accounted for but from the changeableness of Surface in its Parts: For those Bodies whose Parts constantly retain the same Surfaces, never lose their Form; but others, by having the Surfaces of their Parts altered, have a different Texture, and put on another Appearance.

FUST, in Architecture, the *Shaft* of a Column; or that Part comprehended between the Base, and the Capital; called also the *Naked*. See *SHAFT*.

The *Fust* is that cylindrical Part, which makes, as it were, the Body, or Trunk of the Column, exclusive of the Head and Foot. See *COLUMN*.

The Word is *French*, and literally signifies a *Cask*. **FUSTIAN**, in Commerce, a kind of Stuff, which seems, as it were, cross'd, on one Side.

Right *Fustians* should be made altogether of Cotton Thread, both Wool, and Warp.

There are *Fustians* of divers Kinds, wide, narrow, coarse, fine; with Shag, or Nap, and without it. There are also a great many made wherof the Warp is Flax, or even Hemp. *Fustian* cross'd, and napp'd on both Sides, is called *Bombastin*.—

The Plumbers use *Fustian* to cast Lead on. See *PLUMBERY*.

Monage derives the Word from *Fustanum*, which in the corrupt *Latin* Writers is used in the same Sense; and is supposed to be form'd from *Fustis*, on account of the Tree wherof the Cotton grows. See *COTTON*.

Bozbars derives it from *fustat*, which in *Arabic* signifies the ancient City of *Mempolis*, where Cotton is produced in great Abundance.

FUSTICK, or **FUSTOCK**, a yellow Wood, us'd by the Dyers. See *DYING*.

The Colour it yields is a fine golden Yellow; but there should be some other Ingredients mix'd with it, to make it lasting. See *YELLOW*.

The Tree that yields it, grows in all the *Antilles* Islands; but particularly that of *Yabago*, where it rises to a great Height.

The Dyers use it chiefly for Blacks. See *BLACK*. But some of the ablest, and honestest among them, who would dye none but the best, and most lasting Colours, are of Opinion it should be absolutely excluded out of all Dying.

Beside this, there is another kind of *Fustick* or *Fustel*, growing in *Italy*, *Provence*, &c. us'd to dye a Coffee Colour. **FUT-FA**, in Music, one of the Clefs. See *CLEF*.

FUTURE, something to come hereafter. A *future* Contingency. There is none but God to whom *future* Things are present. A *future* State. See *RESURRECTION*, and *IMMORTALITY*.

FUTURE, or **FUTURE TENSE**, in Grammar, an Inflection of Verbs, whereby they denote, that a Thing *will be*, in some Time yet to come. The last Day will come. I shall see an End. See *TENSE*.

The *future* Time admits of two Cases: Either we may have a mind to express a thing that shall come to pass in a short time; or a thing that shall happen in any indefinite Time.

Thus the *Greeks* have their *partio post Future*, *ἄνω μέλλω*, which marks a thing about to be done; as *ἄνω μέλλω*; beside the common, indefinite *Future* *ἔτιω*, I will do it; *ἄνω*, I will love.

In *Latin*, *Italian*, *French*, and even *English*, the *Future* of the *Indicative* expresses only the Design, or Intention of doing a thing, or simply that the Thing will be; as, I will praise, I will be approved: And the *Future* of the *Subjunctive* shews that the thing will be done under certain Circumstances; when I shall have seen *Versailles*, I will tell you. Sometimes the *Future* is express'd by the Present; if I meet your Friend; *si offendero*; *si incidero*.

G.

G, Is the seventh Letter of the Alphabet, and the fifth Consonant: But in the Alphabets of all the Oriental Languages, the Hebrew, Phœnician, Chaldee, Syriac, Samaritan, Arabic, and even Greek, G 'tis the third Letter. See LETTER.

The Hebrews call it *Ghimel*, or *Gimel*, *q. d.* Camel; by reason it resembles the Neck of that Animal: And the same Appellation it bears in the Sarmatian, Phœnician, and Chaldee: In Syriac 'tis pronounced *Gomal*; in Arabic, *Giim*, and in Greek, *Gamma*.

The Letter G is of the mute Kind, and cannot be any way founded without the Help of a Vowel. 'Tis form'd by the Reflection of the Air against the Palate, made by the Tongue, as the Air passes out of the Throat: Which *Martianus Capella* expresses thus, *G, spiritus, cum palato*; so that the G is a palatal Letter. See LETTER, MUTE, and PALATAL.

The Latins took the Liberty to drop the Letter G, at the Beginnings of Words, before an *u*; as in *gnatus, gusfo, godibilis, gnarrat*, &c. which they ordinarily wrote, *natus, usfo, nobilis*, &c. They also frequently changed it into C, as *Gamelus*, into *Camelus*; *Grogulus, Graculus*; *Quingentum, quicentum*, &c. Sometimes it is put instead of N, before a C, and another G; as *Agchistes, Agcora, Agquilla*, &c. for *Achistes, Ancora, Anguilla*, &c. Instead of P; as *Magilia*, for *Mopilia*, &c. G is also used instead of Q, and Q instead of G, as *Anguina, Angina, Anginus*, &c. Instead of R, as *Aquagium*, for *Aquarium*; *Agger, Arger*, &c. And instead of S, as *Spargo, sparsi, sparsim*; or, rather, it is retrench'd from those last Words, to avoid the Cacophony of *sparsi, or sparsit*.

G, is also put for C; as *Cneius*, for *Gneius*; *Caisti*, for *Gaisti*; *Gaeta*, for *Caeta*: for V, as *figere*, for *fiore*.

The Northern People frequently change the G into V, or W; as in *Gallus, Wallus, Gallia, Wallia, Vallia*, &c. For in this Instance it must not be said that the French have changed the W into G; by reason they wrote *Gallus* long before *Wallus*, or *Wallia* were known; as appears from all the ancient Roman and Greek Writers.

And yet, 'tis equally true, that the French change the W of the Northern Nations, and the V Consonant into G; as *Willielmus, William*, into *Guillaume*; *Wulphilat*, into *Gulphilas*; *Posco*, into *Gasco*, &c. It may be added, that the ancient Gauls, and Celts changed the *v* or *w* of the primitive Language into G: Accordingly, in the Bas Breton they still say *goun*, of *v* Wine, from *v*, by changing the latter 'v' into 'g'.

Diomed. L. II. de Litera, calls G, a new Letter: His Reason was, that the Romans had not introduc'd it before the first Punic War; as appears from the Rostral Column, erected by *C. Duilius*, on which we every where find a C in lieu of G. It was *Sp. Carvilius*, who first distinguish'd the G: as we are assured by *Trentinus Scamrus*. The C served very well for G; it being the third Letter of the Latin Alphabet, as the *g* or *γ* was of the Greek.

The G is found instead of C in several Medals: *Vallaus Num. Imperat. T. I. p. 39.* M. Reger produces a Medal of the *Familia Ogulnia*, where G AR is read instead of CAR, which is on those of *M. Patin*. But the C is more frequently seen on Medals, in lieu of G; as AUCUSTALIS CALLAECIA CARTAGINENSES, &c. for AUGUSTALIS, &c. Not that the Pronunciation of those Words was alter'd; but only that the G was uselessly or negligently cut by the Workmen. As is the Case in divers Inscriptions of the Eastern Empire; where AUC, AUCC, AUCC, are frequently found for AUG, &c.

The Form of our G is taken from that of the Latins, who borrowed it from the Greeks; the latin G being certainly a Corruption of the Greek Gamma γ, as might easily be shewn, had our Printers all the Characters and Forms of this Letter, which we meet withal in the Greek and Latin MSS. thro' which the Letter pass'd from γ to G.

As to the Gamma of the Greeks, 'tis manifestly the *γ* Ghimmel of the Hebrews, or Samaritans. All the Difference between the Gamma and Ghimmel consists in this, that the one is turn'd to the Right, and the other to the Left, according to the different manners of writing and reading, which obtain'd among those different Nations: so that all the pains *Salmastus* has taken on *Solimus*, to prove that the G was deriv'd from Greek Kappa, is lost.

G has also been us'd as a Numerical Letter, signifying 400, according to the Vetic,

G A B.

G Quadringentes demonstrativa tenetibi.

When a Dash was added a-top the G, it signify'd forty thousand. See A.

G is also us'd in Music, to signify one of the Clefs. See CLEF.

G is the Clef of the highest Part, call'd the Treble, or Alt. See TREBLE.

GABBARA, a Name the Egyptians gave the dead Bodies, which they kept by them, instead of burying them.

That People, out of a Custom which they had receiv'd from their Ancestors, and which arose in some measure from the Disposition of their Country, which is exposed to the Inundations of the Nile; us'd to wrap up the Bodies of Persons of Piety and Eminence, particularly those of Saints, and Martyrs, in a great Number of linen Cloths, with Balms, and Spices; and instead of interring them, preserved them in their Houses: thinking, that thereby they did them much more Honour. And these, *St. Augustin* tells us, were what they call'd *Gabaras*. *Sermon CXX. De diversis, c. 12.*

Pliny makes mention of the same thing, *L. VII. c. 16*: where he relates, that in the time of *Claudius a Gabbara* was brought from Arabia, almost ten Foot long.

Fa. Hardouin imagines, that *Pliny* here took the Word for a proper Name; and accordingly searches in *Lucius*, for one *Abbarus*, a King of Arabia: But *Hardouin* himself is not of that Opinion; taking the Word to be rather the *גביר* *Gibbor*, of the Hebrews; or *גביר* *Gabbur*, of the Arabians; and to signify a Giant.

But the Jesuite *Rosweyd* has given us a much better Account in his learned Notes, on the Life of *St. Anthony*, *c. 7*; and in his Onomasticon, under the Word *Gabbara*; where he shews that we meet with both *Gabbara, Gabbares, Gabarus*, and *Gabbarus*; and that they all signify a Bodyembalm'd; which he proves from the Testimonies of *Cicero, Tullius, Quæst.*; of *Pompon. Mela, L. I. c. 9. 3*; of *Sexus Empiricus, L. III.*; *Pyrrhus Hypobes, c. 24. 5*; of *Lucian, de Lactu*; of *Corippus, L. III. De funere Justiniani*; of *St. Augustin, Cassian, Damascenus*, &c. See MUMMY.

The Word is Arabic, Syriac, and Hebrew, form'd of *גביר* *Gaber*, a Man.

GABEL, or GABELLE, in the French Customs, a Duty or Imposition on Salt. See SALT.

The Gabelles is let out to Farm; and make the second Article in the King's Revenue. See DUTY, FARM, &c.

There are three Farms of Gabels; the first comprehends the greatest Part of the Kingdom: The 2^d is that of the *Lyoannis* and *Languedoc*; and the 3^d that of *Dauphine* and *Provence*. There are several Provinces exempt from the Gabel; having purchas'd the Privilege of *Henry II.*

This Duty is said to have had its Rise in France, in 1286, under *Philip the Fair*. *Philip the Long* took a Double *per Livre* on Salt, by an Edict in 1351; which he promis'd to remit when he was deliver'd from his Enemies; and which he did accordingly in 1355. King *John* reclaim'd it in 1355; and it was granted the Dauphin in 1358, to ransom King *John*. *Charles V.* made it perpetual. *Charles VII.* rais'd it to six Deniers: *Louis XI.* to twelve; and *Francis I.* to 24 *Livres per Muid*. And it has been considerably augmented since. *Philip de Valois* first establish'd Granaries and Officers of the Gabelles, and prohibited any Persons from selling Salt: From which time the whole Commerce of Salt, for the Inland Consumption, has lain wholly in the King's Hands, who sells and distributes every Grain thereof by his Farmers, and Officers created for the purpose.

The Produce of this Impoit is so considerable, that it is computed to make one Fourth of the whole Revenue of the Kingdom; and yields the Crown as much as all the Mines of *Pertu, Chilly Potoff*, and the rest of *America* does the Spaniards.

Etymologists are extremely divided as to the Origin of the Word. Some derive it from the Hebrew *Gab*, a Present; others from *קבל* to deliver; others from *קבל* *Kabalab*, Receipt; others from *Ghabel*, or *Gabe*, unjust Law; others from the corrupt latin *Gabella*, or *Gabium*, Tribute.—

GABEL is also us'd in some of our ancient Writers, for any sort of Tax, or Imposition: As *Gabel of Wines*, of Silks, &c. See DUTY.

GABIONS, in Fortification, &c. large Baskets, made of Oier Twigs, wove of a cylindrical Form, six Foot high, and four wide; which being fill'd with Earth, serve as a Defence, or Shelter from the Enemy's Fire.

They are commonly us'd in Batteries, to screen the Engines, &c. In order to which one is placed on either Side each Gun, only leaving room for the Muzzle to appear thro'. See **BATTERY**.

There are also a smaller sort of *Gabions*, us'd on Parapets, in Trenches, &c. to cover the Musquetiers; being placed so near as that a Musquet can but just peep thro'.

They also serve as a Parapet on Lines, Lodgements, &c. where the Ground proves too hard to dig into. See **PARAPET**.

To render the *Gabions* usefule, they endeavour to set them on fire, by throwing pitched Faggots among them.

GABLE, or **GABLE-End** of a House, is the upright triangular End; from the Cornice, or Eaves, to the Top of its Roof. See **HOUSE**.

GAGE, in our antient Customs, signifies a Pledge, or Pawn, given by way of Security.

The Word is only properly us'd for Moveables; for Immoveables, *Hypotheca* is us'd. If the *Gage* perish, the Person who received it is not to answer for it, but only for extreme Negligence, &c. See **PLEDGE**.

The Word *Gage* is particularly us'd for a Challenge, to Combat; in which Sense it was a Pledge, which the Accuser, or Challenger cast on the Ground, and the other took up, as accepting the Challenge: It was usually a Glove, Gantlet, Chaperon, or the like. See **COMBAT**, and **DURE**.

The Grand Customary mentions *Gages Pleiges de Duels*. These were Gentlemen, of their Relations or Friends: If he who had given the *Gages Pleiges*, was overcome, he was to pay a Muid agreed on.

The Word *Gage* is only retain'd as a Substantive: As a Verb, the G is chang'd into W; and of *Gage* is form'd *Wage*; as, to wage Law; to wage Deliverance, &c. d. to give Security a thing shall be deliver'd. See **WAGE**.

Thus, if a Person who has distrain'd be sued for so having deliver'd what he had took by Distress, he is all wage or *gage* Deliverance; that is, put in Surety that he will deliver them. See **LAW**; see also **MORTGAGE**.

MORTGAGE, it that which is left in the Hands of the Proprietor, so that he reaps the Fruits thereof, in opposition to *Vif-gage*, where the Fruits or Revenues are reap'd by the Creditor, and reckon'd on the Foot of the Debt, which diminishes in proportion thereto.

The second, acquits, or discharges it self; the first does not.

Pomey also uses *Mort-gage* for the Possession of any Effects, on condition of surrendering them up at the good pleasure of the Person who gave them. See **MORTGAGE**.

GAGE, in the Sea Language. When one Ship is to windward of another, she is said to have the *Weather-gage* of her.

The Seamen also call trying how much Water a Ship draws, *gaging*, or rather *gaging* of her; and it is done thus:

They drive a Nail into a Pike, near the End, and then put down this Pike by the Rudder, till the Nail catch hold under it; for then as many Feet as the Pike is under Water, is the Ship's *Gage*, or Depth of Water she draws.

GAGE, in Joinery, is an Instrument made to strike a Line truly parallel to the straight Side of any Board or Piece of Stuff.

Its chief Use is for *gaging* of Tenants true, to fit into Mortises; and for *gaging* Stuff of an equal Thickness.

It is made of an oval piece of Wood, fitted on upon a square Stick, to slide up and down freely thereon, and with a Tooth in the End of a Staff, to force, or strike a Line upon the Stuff at any Distance, according to the Distance of the Oval from it.

GAGER *del Ley*; see **WAGE**, and **WAGER** of Law.

GAGGE, and in Geometry, } see { **GANGER**.
GAGING, } see { **GANGING**.

GAIANITES, **GAIANIYK**, or **GAINIYK**, a Sect of antient Hereticks, sprung from the *Eutyebi*ans.

This Sect was of an older Standing than *Gaioan*, or *Gain*, a Bishop of *Alexandria*, in the VIth Century, from whom they took their Name. They adhered to the Opinions of *Julian Hilarianus*, the Chief of the *Incorruptibles* and *Phantasticks*; and came at length to be decimated *Gainites*, upon *Gaioan*'s putting himself at their Head. They denied that Jesus Christ, since the Hypothetical Union was subject to any of the Infirmities of human Nature. See **PHANTASTICKS**.

GAIN, the Profit, or Lucre a Person reaps from his Trade, Employment, or Industry.

There are legal and reputable *Gains*, as well as usurid and infamous ones. What is *gain'd* by Gaming, is all liable to be restored again, if the Loser will take the Benefit of the Law. *Ménage* derives the Word from the German *Ge-*

win; whereof the *Italians* have made *Giudogno*; the *French*, and *English*, *Gain*.

GAIN, in Architecture, is the Workmens Term for the Beveling Shoulder of the Joist, or other Timber.

It is us'd also for the lapping of the End of the Joist, &c. upon a Trimmer, or Girder: and then the Thickness of the Shoulder is cut into the Trimmer also beveling upwards, that it may just receive the *Gain*; and so the Joist and Trimmer lie even and level with their Surface. This way of working is us'd in Floors and Hearths.

GAINAGE, in our antient Writers, signifies the Draught-oxen, Horses, Wain, Plough, and Furniture for carrying on the Work of Tillage by the baler sort of Sokemen and Villains; and sometimes the Land it self, or the Profit rais'd by cultivating it.

Brañow, lib. 1. cap. 9. speaking of Lords and Servants, says, *Ut si eis destruant, quod saltem non possit eis esse Wainagium sumum*. And again, *Lib. 3. Tract. 2. cap. 1. Villanus non amercietur, nisi salvo Wainagio suo*. For antiently, as it appears both by *Mag. Char.* and other Books, the Villain, when amerced, had his *Wainage* free; to the end his Plough might not stand still: And the Law, for the same Reason, does still allow a like Privilege to the Husbandman, that is, his Draught-horses are not, in many Cases, distrainable. See **DISTRAIN**.

GALACTITES, in Natural History, a Stone, thus called by reason when broke or ground, it resolves into a white Liqueur, like Milk, which the *Greeks* call *γαλακ*.

The Stone is of an Ash Colour, and pretty soft, and sweet to the Taste. 'Tis found in *Tuscany*, *Saxony*, and other Parts. Authors recommend it as good in Defluxions of the Eyes, and for Ulcers: It is suppos'd to make the Milk more copious in Nurses; and when hung to the Necks of Children, promotes Salvation.

GALACTOPHAGI, and **ΓΑΛΑΚΤΟΦΟΡΑ**, in Antiquity, Persons who lived wholly on Milk, without Corn, or the use of any other Food.

Certain Nations, in *Scythia* *Asiatica*, as the *Getae*, *Nomades*, &c. are famous in antient History, in quality of *Galactophagi*, Milk-eaters. *Howar* makes their name, *Arab. lib. III. Prælog.* in his Geography, places the *Galactophagi* between the *Ribbean* Mountains, on one Side; and the *Horcasian* Sea on the other.

The Words are compounded of *γαλακ*, *γαλακ* Milk; *φαγος*, I eat; and *φορος* of *φορ* I drink.—

GALACTOPHEROUS *Doch*, are such Vessels as serve to convey Milk. See **MILK**.

Such are the Lacteals, and Mamillary Vessels. See **LACTEALS**, and **MAMMÆ**.

GALACTOSIS, the changing into Milk; or the Production of Milk. See **MILK**.

The Term properly denotes the Action whereby the Food, or Chyle, is converted into Milk.

GALANGA, or **GALANGAL**, a Medicinal Root, brought from the *East Indies*; the Produce of a Tree of the same Name.

There are two kinds of *Galanga*'s; the small, and the great: The small is a rough, knotty Root, of a ruddy Colour both within, and without, and of a very pungent aromatic Taste, and Smell. It is brought from *Ceylon*, and is used with good Success in all Disorders of the Stomach, Bowels, and Womb, arising from the Weakness of the Nerves.

The greater *Galanga*, growing chiefly in *Java* and *Malabar* inclines more to an Ash Colour. Its Qualities are of the same kind with those of the other; only less efficacious, and much less used. The Vingar-makers use both. See **ACORUS**.

GALAXY, in Astronomy, That long, white, luminous Track, which seems to encompass the Heavens like a Swath, Scarf, or Girdle; and which is easily perceivable in a clear Night, especially when the Moon does not appear.

It passes between Sagittary, and Gemini, and divides the Sphere into two Parts: It is unequaly broad; and in some Parts is single, in others double.

The *Greeks* call it *Γαλαξίας*, *Galaxy*, of *Γαλακ*, *γαλακ* Milk; on account of its Colour, and Appearance: The *Latins*, for the same reason, call it *Via Lactea*; and we, the *Milky Way*.—

The antient Poets, and even Philosophers, speak of the *Galaxy*, as the Road, or Way, by which the Hero's went to Heaven.

Aristotle makes it a kind of Meteor, form'd of a Crowd of Vapours, drawn into that Part by certain large Stars disposed in the Region of the Heavens answering hereto.

Others, finding that the *Galaxy* was seen all over the Globe; and that it always corresponded to the same fix'd Stars; and that it transversed the Height of the highest Planets; set aside *Aristotle*'s Opinion, and placed the *Galaxy* in the Firmament, or Region of the fixed Stars, and concluded it to be nothing but an Assemblage of an infinite Number of minute Stars.

Since the Invention of the Telescope, this Opinion has been abundantly confirmed. By directing a good Telescope to any Part of the Milky Way; where, before, we only saw a confused Whiteness, we now descry an innumerable Multitude of little Stars. These Stars are so remote, that a naked Eye confounds them: The like we observe in those other Spots, called Nebulose Stars, which when examined with the Telescope, are distinctly perceived to be Clusters of little Stars, too faint to affect the Eye singly. See STAR.

GALBANETUM, a Composition, or Preparation of Galbanum, formerly prescribed, but now much out of Use. See GALBANUM.

GALBANUM, in Pharmacy, A Gum issuing from an Incision in the Root of a ferulaceous Plant, call'd in Latin, *Ferula Galbanifera*; growing in *Arabia, Syria, &c.* See GUM.

There are two kinds of *Galbanum*; the one in Tears; the other in Mass: The first is to be choic'd of a golden Yellow without sicc, but much paler within; of a bitter Taste, and strong, disagreeable Smell. For the second, take that which is fullest of Tears, very dry, clear, and not stinking. This last is easily sophisticated with broken Beans, Rosin, and Gum Ammoniac.

Galbanum is of an emollient, and resolutive Nature; good in all Hystric Cafes, and in Asthma's and inveterate Coughs: It provokes the Menstrua, and brings on Delivery: But it is chiefly us'd externally, in Plasters for the Belly, which it loosens, what way soever applied.

The Word is deriv'd, according to *Martinius*, from the Hebrew *Chelbenah, Fat*.

GALE, a Sea Breeze, for the blowing of the Wind at Sea: When the Sea doth not blow so hard, but that a Ship can carry her Top-sails a-trip, that is, hoisted up to the highest, they say it is a *Loom Gale*: When it blows very strong, they say it is a *Stiff Gale*, or at least a *Fresh Gale*; but when it blows so hard, and violently, that a Ship cannot bear any Sail, they say, it blows a *Storm*.

When two Ships are near one another at Sea, and there being but little Wind blowing, one feels more of it than the other; they say, the Ship *gales* away from the other.

GALEARIL, or **GALIARIL**, in Antiquity, a Name the Romans gave to the Black Guards or Servants of the Soldiers. *Vegetius III, 6. Salmastius* on the third Chapter of the *Life of Adrian by Spartian*.

GALEASSE, or **GALEACE**, a large, low built, heavy Vessel; the biggest of all Vessels that go with Oars. See VESSEL.

It may carry twenty Guns; with a Stern, capable of lodging a great Number of Musketeers. It uses both Sails and Oars; and the Rowers are under Cover. It has three Masts; the Main, Mizzen, and Bowprit, which are never to be taken down, or lowered, as they may be in Galleys. It has 32 Benches of Rowers, and to each Bench five or six Slaves; tho' *Will. of Tyre* makes mention of *Galeasses*, with 100 Benches of Oars.

It has three Tirc of Guns, in the Head, one over the other, of two Guns each, bearing Balls of 36, 24, and 10 Pounds. It has but two Tirc in the Stern; each containing three Guns, carrying Balls of 18 Pounds. See GALLEY.

The *Venetians* are the only People who have *Galeasses*: Antiently, the *French* likewise made use of them.

GALenic Medicine, is properly the Manner of considering and treating Diseases, founded on the Principles of *Galen*; or introduced by *Galen*. See MEDICINE.

Claud. Galen, was of *Pergamus in Asia*, the Son of a famous Architect, and Pupil of *Satyrus* and *Pelops*, two able Physicians. He first distinguish'd himself at *Athens*; then at *Alexandria*, and lastly at *Rome*; where he wrote a great deal; where he also died, in the Year of Christ 140.

He is said to have composed 200 Treatises, whereof there are 170 still extant. There have been 25 several Editions of this Author: The first is that of *Venice*, in Folio, in the Year 1535: The best is that of *Paris*, in 13 Volumes in Folio, *Greek and Latin*, publish'd in 1639.

This Author, collecting and digesting what the Physicians before him had done; and explaining every thing according to the strictest Doctrines of the Peripateticks, set Physic on a new Footing; introduced the Doctrine of the four Elements; the Cardinal Qualities, and their Degrees; and the four Humors or Temperaments. See ELEMENT, QUALITY, DEGREE, HUMOR, &c.

GALenic is now more frequently us'd in a wider Signification, viz. for that Method of Physick, contradicting us'd from *Clymical*. See MEDICINE.

In this Sense, *Galenic Medicine*, *Galenic Pharmacy*, &c. are those which go upon the easier Preparations of Herbs, Roots, &c. by Infusion, Decoction, &c. and attain their Ends, and make their Remedies effectual, by the combining and multiplying of Ingredients: In opposition to *Chemical Medicine*, or *Pharmacy*, which torture the *Materia Medica* by Fire, and draw their more intimate and remote Virtues by elaborate Preparations; as Calcination, Di-

gestion, Fermentation, &c. See CHEMISTRY, and PHARMACY.

Medicine was wholly *Galenic*, till the Time of *Paracelsus*, *Geber*, indeed, and after him *Raymond Lully*, *Arnoldus de Villa Nova*, and *Basil Valentine*, made some Attempts to apply Chemistry to Medicine; especially the last of them; but so great Advance was made. *Paracelsus*, and after him *Van Helmont*, alter'd the whole of Medicine; exploded *Galenism*, and the Peripatetic Doctrine, and render'd Medicine wholly *Chemical*. See CHEMISTRY.

The late Improvements in Philosophy, have reform'd; and reduc'd the *Galenic Medicine*, which has now very little of *Galen's* in it. 'Tis now all Mechanical and Corporeal: Instead of Qualities and Degrees, every thing is now reduced to mechanical Affections; to the Figures, Balke, Gravities, &c. of the component Particles, and to the great Principle of Attraction. See MECHANICAL, and CORPUSCULAR; see also MEDICINE.

GALENISTS, a Denomination given such Physicians, as practice, prescribe, or write on *Galenic* Principles. See GALENICAL.

The *Galenists* stand oppos'd to the Chymists: The *Materia Medica* of the first, is chiefly of the Vegetable Kind; the Virtues of which they procure by the more simple and easy means; and seldom go beyond Decoction. The latter take in Minerals, Salts, Stones, and even Metals, and Semimetals: These, they hold, afford more efficacious Remedies; and their Virtues, procur'd by long, artful, labour'd Processes, with the Help of Fire, are had more pure, and in a lesser Compais. See CHEMIST.

At present, the *Galenists* and Chymists are pretty well accommodated; and most of our Physicians use the Preparations and Remedies of both. See PHYSICIAN, REMEDY, &c.

GALENISTS, **GALENASTS**, or **GALENITES**, are also a Branch of the *Manichees*, or *Anabaptists*, who take in several of the Opinions of the *Socinians*, or rather *Arians*, touching the Divinity of our Saviour. See MANICHEE.

They are thus call'd from their Leader *Galenus*, a learned, and eloquent Physician of *Amsterdam*, who is accus'd of being a thorough *Socinian*. *Joves T. I. p. 413. &c.*

GALERICULATE Flowers; see FLOWERS.

GALILEANS, a Sect among the antient Jews, denominat'd from *Judas of Galilee*, their Chief; who, esteeming it unworthy, that the Jews should pay Tribute to Strangers, rais'd up his Countrymen against the Edict of the Emperor *Augustus*, which had order'd a Census and Enumeration to be made of all his Subjects.

Their Pretence was, that God alone should be own'd as Master, and call'd by the Name of *Lord*. In other respects, they had much the same Doctrines as the *Pharisees*; but as they judg'd it unlawful to pray for infidel Princes, they separated themselves from the rest of the Jews, and perform'd their Sacrifices apart. See PHARISEE.

As our Saviour, and his Apostles were of *Galilee*, they were suspect'd to be of the Sect of *Galileans*; and it was on this Principle, as *St. Jerom* observes, that the *Pharisees* laid a Snare for him, asking, whether it was lawful to give Tribute to *Cesar*; that in case he denied it, they might have an Occasion of accusing him. *Joseph. Ant. Jud. L. 18.*

GALL, a yellow, bitter Juice, or Humor, call'd also *Bile*, secreted from the Blood, in the Glands of the Liver, and deposited in a peculiar Reservoir, call'd the *Gall-bladder*. See LIVER, and GALL-BLADDER.

The Bile contain'd in the *Gall Bladder*, properly call'd *Gall*, is somewhat different from the Bile deposited in the *Forus Biliaris*; being of a brighter Yellow, a greater Consistence, and more bitter and acrimonious. For the rest; the manner of Secretion with the Qualities, Use, &c. of the two Juices, are the same; which see under the Article BILE.

The *Gall* of divers Animals, is found of divers Uses: That of a Hog is said to make the Hair grow; detaches and heals Ulcers of the Ears: That of a Lamb is recommended for the Epilepsy: That of the Pike, for intermitting Fevers: That of the Carp, clears and strengthens the Sight: That of a Kid, mix'd with the white of an Egg, Bread, and Oil of Laurel, and applied in form of Poultice on the Navel; is an approved Remedy for a quotidian Fever: That of a Cock, and a Ballock, reputed good in Diseases of the Eyes, and to take away freckles and other Disfigurements of the Skin. See PISCINE. That of a Roebuck, or Hare, detaches and carries off Clouds, Specks and Catarrhs of the Eyes: That of the Boar, externally applied, is resolute, and good in scrophulous Tumors: Those of the Sheep and Partridge, serve to deterge and cleanse Ulcers of the Eyes. *Fa. Roger* adds, that the *Mahometans* of *Palestine* use no other Remedy against Poisons, but seven, or eight Drops of the *Gall* of a Bear.

GALL Bladder, call'd also *Vesicula* and *sacculus fellis*, is a membranous Receptacle, in Figure somewhat like a Pear; situate at the lower Margin of the Liver, on the concave Side, and about the Bigness of a Pullet's Egg. See BLADDER.

The Gall Bladder adheres to the Liver, both by its Vessels, which it receives from it; and likewise by its Membranes, whereof the external is common with that of the Liver. The lower Part, which hangs out of the Liver, rests on the Pylorus of the Stomach, which it dyes yellow with the Gall transfusing thro' its Membranes.

Its Membranes are reckon'd five: An outer, or common one, from the Peritonæum; an inner one, from the Capsula of the Porta, and Porus Biliaris; and three proper ones: The first, *Vascularis*, consisting of white Fibres, interwove with Vessels; the second, *Muscular*, consisting of a double Row of fleshy Fibres, the one longitudinal, the other annular; the third, or inner Coat, *Glandulous*, consisting of a great Number of Glands, like the Crusta Villosa of the Stomach, which secrete a Mucus that lines the Inside of the Gall Bladder, and defends it from the Acrimony of the Bile.

The Bladder is usually divided into two Parts, the *Fundus*, or Bottom; and the *Collum*, or Neck: At the Orifice of which latter is plac'd a Ring, or Circle of muscular Fibres, which serve as a Sphincter to constrict the Orifice of the Gall Bladder, and hinder the too liberal Discharge of the Bile. See CYSTIC, HEPATIC, &c.

There are some Animals without Gall Bladders; as Deer, Horses, Asses, Mules, Camels; and among Fishes, the Sea Calf, and Dolphin. The Gall of these Animals is inclos'd in Ducts, which terminate in the Intestines.

GALLANT, or GALANT, a French Term, signifying civil, polite, well bred; a Person of Wit, and Address; that does every thing with a good Grace. A *galant* Man is a civil Man, somewhat brighter, gay, and more agreeable than ordinary.

'Tis very difficult to define all the Qualities attach'd to the Idea of a *galant* Man: It frequently implies an Air of the World; a Disposition to please, and particularly the Ladies; and a great Devotion to the Sex. The French Authors are very nice on the Point: They distinguish *galant Homme*, and *Homme galant*.—

Mercur GALANT, is the Title of a Book, which has appear'd Monthly at Paris for several Years. See JOURNAL.

It contains abundance of very pretty, curious Things; tho' several of the Wits have made it their Business to decry it. *M. de Vise* was the first Projector, and Author, or rather Collector: Since his Death, it has been continued by three other Persons successively.

GALLEATE *Florets*; see FLOWERS.

GALLEON, see GALLION.

GALLERY, in Architecture, a cover'd Place in a House, much longer than broad, and which is usually on the Wings of the Building; serving to walk in.

The Galleries of the *Louvre* are magnificent: A Gallery of Painting; a complete Apartment is to consist of a Hall, Antichamber, Chamber, Cabinet, and Gallery. See APARTMENT.

Sotus, in his Architecture, derives the Word Gallery from *Gaul*, as (supposing the ancient *Gauls* to have been the first who us'd them. *Nicod* fetches it from the French *aller*, to go, *q. d. Aller*. Others bring it from *Galere*, Gally, by reason it bears some Resemblance thereto in respect of Length. In the corrupt *Latin* we meet with *Gallian*, for the Gallery of a Monastery.

GALLERY, is also a little list, or Walk, serving as a common Passage to several Rooms, plac'd in a Line, or Row.

The Gallery of a Church is a kind of continued Tribune, with a Balustrade; built along the Sides or lower End of a Church, to hold the more People: And, in the Greek Churches, to separate the Women from the Men.—*Gallery of a Theatre*, see CHURCH, THEATRE, &c.

GALLERY, in Fortification, is a cover'd Walk, made of Timber; serving for the safe Passage of a Ditch.

The Sides of the Gallery are to be Musket proof, and consist of a double Row of Planks, lined with Plates of Iron; and the Top is sometimes cover'd with Earth, or Turf, to hinder the Effect of the Stones, artificial Fires, &c. of the Enemy.

Galleries are chiefly us'd to secure and facilitate the Mines Approach to the Face of the Bastion, over the Moat, which is already suppos'd fill'd up with Faggots and Bains, and the Artillery of the opposite Bank dismounted. Sometimes it is call'd a *Traverse*. See TRAVERSE.

GALLERY of a Mine, is the Passage, or Canal of a Mine; or any Branch thereof. See MINE.

The Besiegers, and Besieg'd do each of them carry Galleries, or Branches under Ground, in search of each others Mines, which sometimes meet and destroy each other.

GALLERY in a Ship, is a kind of Balcony, made upon the Stern, without Board, into which there is a Passage out of the Captain's Cabin, call'd the Great Cabin.

These Galleries are indeed for Shew, and the Captain's Pleasure, rather than any other Benefit; for in Ships of War, all open Galleries of this kind are to be avoided; in

regard of the Facility of an Enemy's Entrance, and boarding of the Ship that way.

GALLEY, a low built Vessel, going both with Oars and Sails; chiefly us'd by the States bordering on the Mediterranean. See VESSEL.

Galley's have usually from 25 to 30 Benches of Oars, on each Side; and four or five Galley Slaves, to each Bench.

The Galley carries a large Gun, call'd the *Courser*; two Barbad Pieces; and two small Pieces, with two Masts and two Latin, or square Sails. It is usually from 20 to 22 Fathoms long; three broad; and one deep.

All the Galley's, both ancient, and modern, are of a finer, and slenderer Make than Ships. Formerly they made divers kinds; at present the Galley's are all alike: All the Difference between them is as to Size, and nothing as to Figure. They usually keep towards the Coasts; tho' sometimes they cross the Sea.

The King of France keeps up forty Galley's for the Use of the Mediterranean, the Arsenal thereof being at *Marseilles*: The General of the Galley's bears a double Anchor, plac'd in Pale, behind the Escutcheon of his Arms, as a Mark of his Authority.

Galley's, in Latin are call'd *Biremes*, *Triremes*, and *Quadriremes*; not on account of their having two, three, or four Ranges of Oars before one another, as many learned Men have imagin'd, and particularly *Scaliger* and *Suallius*, tho' this last has wrote excellently on the Subject of Navigation; for this were impracticable: Nor yet on account of their having but two, three, or four Oars; for then there would want Strength: But by reason there were two, three, or four Rowers fasten'd to each Oar, as in the Galley's us'd among us; as is very well shewn by the Jesuite *Deobales*, in his Art of Sailing.

This Error was occasioned by some ancient Galley's, represented on Medals, or in Basso-Relievo's, wherein are several Ranges of Rowers plac'd over each other: But all the Mathematicians, Pilots, and Ship-builders look on this as a mere Vision; inasmuch as *Pliny* makes Mention of Galley's of 15, 20, 30, 40, 50 Rows of Rowers; so that if they were rang'd over each other, tho' we were only to allow four Feet for each Deck, there would be a Distance of 160 Feet between the lowest Rowers, and the highest: And yet we are assur'd, that the highest Ship ever built, was only 72 Feet high.—

Scaliger affirms, that the first *Triremis*, or Galley of three Stories, was built at *Corinth*; and is of opinion, that what *Pliny* calls *Long Ships*, were what we call *Galleasses*; the first whereof was that of the *Argonauts*. *Vegetius* mentions a Galley of five Decks; and *Memnon*, another with eight, and only one Man to each Oar.

The Galley is call'd by the Greek Authors under the Eastern Empire, *Γαλαία*, and *Γαλιε*; and by the Latin Authors of the same Time, *Gales*; whence the modern Denomination.

Some say, it was call'd *Galea*, on account of the Figure of a Cask, or Helmet, which it bore on its Head, or prow, as *Ovid* attests, *De Tristib.* The French call it *Galere*, by reason, they say, that the Top of the Masts is usually cut in manner of a Hat, which the *Italians* call *Galero*. Others derive both *Gales* and *Galere* from a Fish, by the Greeks call'd *Γαλαίωτες*, or *Galætes*; and by us, the *Sword-fish*, whose Shape this Vessel resembles. Lastly, others derive *Galley*, *Galea*, *Galere*, *Galleasse*, &c. from the *Syriac* and *Chaldee* *Gaul*, and *Gallia*, a Man expos'd on the Water, or in a Vessel of Wood.

The Captain-GALLEY is the principal Galley of a State, commanded by the Captain General of the Galley's: In France, the Royal Galley is the first.

The Patron GALLEY is the second Galley, both of France, *Tuscany*, and *Malta*. The General of the Galley's is on Board the Royal Galley; and the Lieutenant, on the Patron.

The Terms peculiar to Galley's, are very numerous; and make a new System of Sea Language, quite different from that us'd in Ships. *Monf. de Baras*, an ancient Officer on Board the King of France's Galley's, we hear, is engag'd in writing a New Dictionary of the Dialect of the Galley's.

Condemnation to the GALLEY, is a Penalty impos'd on Criminals and Delinquents, particularly in France; whereby they are adjudg'd to serve the King, or State, as Slaves, on Board the Galley's; either for ever; or for a limited Time. See PUNISHMENT, and SLAVE.

Condemnation to the Galley's for ever, imports Confiscation of Lands, Goods, &c. For in France, he that confiscates the Person, confiscates the Goods. A Man condemn'd to the Galley's for Perpetuity, is dead in a Civil Sense. He cannot dispose of any of his Effects; cannot inherit; and if he be married, his Marriage is null: Nor can his Widow have any of her Dowry out of his Goods. The Ecclesiastical Courts cannot sentence to the Galley's: It is out of their Jurisdiction, and Resort. By an Ordinance of *Charles IX.* in 1564, the Judges

Judges are enjoin'd, not to condemn a Criminal to the Gallies for less than ten Years: And Henry III. by another, of 1579, enjoins the Captaives, not to detain their Gallie Slaves, after their Time is expired. But neither of these Laws are now observ'd.—

GALLEY, in Printing, a wooden Frame, or Instrument, into which the Composer empties the Letters out of his Composing Stick, as often as it is fill'd. The Galley, when fill'd, contains the Matter of one Page; and when they have compos'd as many Pages, as are required for a Whole Sheet, Half Sheet, &c. they impose them, i. e. take the several Pages out of the Gallies; put them into a Chase; lock them up with the Furniture; and so make Forms, ready for the Press. See PRINTING; see also COMPOSING-STICK, CHASE, and FORM.

GALLI, in Antiquity, a Name given in Phrygia to the Eunuch Priests of the Goddess Cybele.

The Principal of them was called *Archi-gallus*. The Galli were also call'd *Dactyli Idei*, *Corybantæ*, &c. See DACTYLI, CORYBANTES, CURETES, &c.

Authors are not agreed as to the Reason of this Denomination. St. Jerome, in the fourth Chapter of *Heslon*, says, it was, because they took Gauls for the Priest of this Goddess; and by way of Punishment and Derision for burning of Rome, castrated them. *Forestius* maintains the same Opinion, *L. V. de Gallor. Imp. & Pœlof.* But *Valle*, *Eleg. P. e. 6.* and *Vollius de Idolol. L. I. c. 20.* reject it, with reason; as the Phrygians were no ways interested in the burning and sacking of Rome.

Others derive the Name from the River *Gallus*; by reason they drank of its Waters, which inspir'd them with, I know not what religious Fury and Enthusiasm, and deprived them of their Senses to such Degree, that they mutilated themselves. Others hold, that the first Priest of *Cybele* having been nam'd *Gallus*; the Name became appropriated to all his Successors. *Vollius*, who proposes these two Opinions, seems to incline most to the latter; tho' *Ovid*, in the fourth of his *Fæsti*, and *Herodian*, *L. I.* favour the former.

These Priests threw themselves into a kind of Phrenzy, when they perform'd the Ceremonies of the Goddess; apparently, in imitation of the young *Alys*, her Favourite; whom they likewise imitated, by mutilating themselves.

For Authors relate, that *Cybele* being desperately in Love with that young Phrygian, she gave him the Superintendance of her Sacrifices, on condition he would keep his Virginity; but that soon after, forgetting his Promise, he had an Affair with the Nymph *Sagaritis*: That *Cybele* provoked hereat, struck him mad: That in a vehement Access of his Phrenzy he was going to kill himself; and that the Goddess relenting, restored him to his Understanding: That out of his own Remorse, he castrated himself; and that after his Example all the Priests of *Cybele* from that Time did the like.

Their Phrenzy, at the time of the Sacrifices, consisted in throwing round the Head with great Rapidity, and making violent Contortions of the whole Body: They had also Drums and Flutes, wherewith they play'd, and danced to them; as already observ'd under the Articles CORYBANTES, and CURETES.

GALLIAMBIC, in the ancient Poetry. A *Galliambic* Poem is a Composition in *Galliambic* Verses.—A *Galliambic* Verse consists of six Feet; 1^o An *Anapest*, or a Spondee; 2^o An *Iambus*, or an *Anapost*, or *Tribrach*. 3^o An *Iambus*. 4^o A *Dactyl*. 5^o A *Dactyl*; and 6^o An *Anapest*.

Tho', one might measure the *Galliambic* Verse in another manner; and make a different Arrangement and Combination of Syllables; which would give different Feet.—'Tis certain, the Antients regarded little more in the *Galliambic* Verse, beside the Number of Measures, or Intervals; without troubling themselves about the Number of Syllables, or the Kinds of Feet, wherof it was compos'd.

GALLIAMBUS, in Poetry, a pleasant kind of Verse, us'd to be sung by the Priests, in honour of the Goddess *Cybele*.

Galliambus is also a Piece, or Composur in *Galliambic* Verses. See **GALLIAMBIC**.

The Word is a Compound of *Gallus*, a Priest of *Cybele*; and *Jambus*, a Foot in the Greek and Latin Verse.

GALLIARD, or **GAILLARDE**, in Music, and Dancing, a sort of Dance, antiently in great Request; consisting of very different Motions, and Actions, sometimes proceeding *terra a terra*, or smoothly along; sometimes capering; sometimes along the Room, and sometimes a-croß.

It was also call'd *Romanesque*, because brought from Rome.

Thomas Arbeau, in his *Orchestrography*, describes it as consisting of five Steps, and five Positions of the Feet, which the Dancers perform'd before each other, and wherof he gives us the Score, or Tablature, which is of six Minims, and two triple Times.—

The Word is French, and literally signifies gay, merry, sprightly.—

GALLICAN, a Term chiefly us'd in the Phrase *Galliean Church*, q. d. the French Church; or the Assembly, or Convocation of the Prelates of France. *M. du Puy* has an express Treatise of the Liberties of the Galliean Church.

The *Galliean Breviary* is the Breviary us'd by the Church of *Agrigentum*, in *Sicily*; which the modern Writers call *Breviarium Gallieanum*.

The Reason, no doubt, is its having been introduced by St. *Gerlan*, who was made Bishop of *Agrigentum*, after Earl *Roger* had been driven out of *Sicily* by the *Saracens*; and by the other French Bishops, which the Norman Princes brought thither. See **BREVIARY**.

The *Galliean Liturgy* is the manner of performing the divine Offices antiently observed in the *Gauls*. *Pa. Mabillon* shows wherewith it differ'd from the Roman Liturgy. *I. Liturg. Gall. e. 5. Sec.*

GALLICISM, a Phrase, or Construction, peculiar to the French Language; or which has something contrary to the ordinary Rules of Grammar of the other Languages. See **PERAGE**, and **IDIOTISM**.

Thus, *Cet homme est sur sa Benche*, is a *Gallieism*, having no regular Construction: And the same may be said of *Faire de la terre le festi*; which no Grammar could never find out. See **ANGELICISM**.

GALLIMATHIAS; a dark, perplex'd Discourse, wherof Words, and Things are budded together so as to make an inconceivable Jargon.

The Word is French, *form'd*, as some will have it, from *Polymathus*, which signifies Diversity of Sciences; by reason such as have their Memory charg'd with several kind of Sciences, are usually confus'd, and express themselves ill.

M. Huet takes the Word *Gallimathias* to have had the same Origin with *Aibornas*; and to have first arose at the time when all the Pleadings at the Bar were in Latin. There was a Cause, it seems, upon the Carpet, about a Cock, belonging to the Plaintiff *Mattias*. The Council in the Heat of his Harangue, by often repeating the Words *Gallus*, and *Mattias*, happen'd to blunder; and instead of saying *Gallus Mattias*, said *Galli Mattias*; which at length became a general Name for all confus'd, imbroil'd Diction, and Discourse.

GALLIMAUFERY, a Ragout, Hache, or Hotch-potch, made of the Remains of several kinds of Meats. See **RA-GOUT**.

Hence the Word is us'd in a figurative Sense for a Piece, or Composition, of several different Parts, ill digested, and embarras'd.—

The Word is French, *Gallimaufree*.

GALLION, or **GALLEON**, a large Vessel or Ship of War, of three, or four Decks. See **VESSEL**.

The Term is now only us'd in speaking of the Spanish Fleet; the *Gallions* being a Part of the Ships employ'd in the Commerce of the West Indies.

The Spaniards send every Year two Fleets; the one for Mexico, which they call the *Flota*; and the other for Peru, which they call the *Gallions*. The first, we have already given an Account of under the Article **FLOTA**.

The *Gallions* are eight in Number, the principal wherof are the *Captaine*, the *Amirante*, the *Gouverno*, the *Patache*, and *Marguarita*, of fifty Pieces of Braß Canon: Beside which there is a *Patache* of Advice. These are all Ships of War, and go on the King's account; but are so laden and embarras'd with Merchandises, that in case of an Attack, they would find it difficult to defend themselves.

Beside the King's *Gallions*, there are usually twelve, or sixteen Merchant Ships, call'd *Register Ships*, belonging to private Persons, who obtain leave for the same, or rather buy it; there being no West India Company in Spain. See **REGISTER**.

The *Gallions* are loaded at *Cadix*, from whence they may put out at any time: They are about two Years in the whole Voyage. Their Departure is usually some Months before that of the *Flota*; which cannot put out before *August*, by reason of the Winds. When they put out together, they separate about the *Antilles* Islands; the *Gallions* for *Cartagena*, and *Porto Bello*; and the *Flota* for *Vera Cruz*. At their Return, they rejoin at the *Havana*, in the Isle of *Cuba*.

The Loading of the *Gallions* is always the richest: An Estimate of the yearly Returns or Cargo's, both of the *Flota* and *Gallions*, is as follows.

Of Gold, the *Gallions* bring yearly about two or three Millions of Crowns; and the *Flota* about one. Of Silver, the *Gallions* bring 18 or 20 thousand Crowns; and the *Flota* 10 or 12. Of precious Stones, the *Gallions* bring as follow; two hundred thousand Crowns worth of Pearls; two or three hundred thousand Crowns of Emeralds; and twenty or thirty thousand Crowns worth of Beryards, Amethysts, and other Stones of less Value: The *Flota* brings none at all. Of Wools, the *Gallions* bring forty or fifty thousand Crowns: The *Flota*, none. Of Quinquina, the *Gallions* bring for twenty thousand Crowns: The *Flota*, none. Of Skins and Leathers,

Leathers, the *Gallions* bring for seventy thousand Crowns: The *Floa* as much. Of Campeche Wood, the *Gallions* bring for sixty thousand Crowns: The *Floa* none. Of Skins and Leathers from *Buenos Ayres*, the Register Ships may bring for about two hundred thousand Crowns: Of Cochineal, about a Million of Crowns: And of Indigo, about six hundred thousand Crowns. See **COMMERCE**.

GALLIOT, a small Galley; or a sort of Brigantine, built very slightly, and design'd for Chace. See **BRIEANTINE**.

She hath but one Mast, and can both sail, and row. She usually carries two or three *Podreros*, and hath sixteen or twenty *Oars*.

Some call the Bomb-ketches, *Galliot*.

GALLOGLASSES, a kind of Militia, or Soldierly in *Ireland*. *Combein*, in his *Annals of Ireland*, p. 792. relates that the *Irish* Militia consists of Cavalry, or Horsemen, call'd *Galloglasses*, or *Galloglaffis*, who use a very sharp sort of Hatchet, and Infantry, call'd *Kernes*.

GALLON, an English Measure, for things both liquid and dry. See **MEASURE**.

The *Gallon* always contains eight *Pints*, or four *Quarts*; but those *Pints*, and *Quarts*, and consequently the *Gallon* it self, are different, according to the Quality of the Things measur'd: The *Wine Gallon*, for instance, contains 231 Cubic Inches, and holds eight Pound, *Averdupois*, of pure Water: The *Beer*, and *Ale Gallon*, contain 282 solid Inches: And the *Gallon* for Grains, Meas, &c. 272 Inches, and hold nine Pound, 130 Ounces of pure Water.—See **ALE MEASURE**, **WINE MEASURE**, and **DRY MEASURE**.

GALLOON, in Commerce, a thick, narrow kind of Ferret, Ribband, or Lace, us'd to edge, or border Clothes.

The Term is ordinarily understood of that made of Woolen; sometimes, that of Thread; or even Gold, or Silver.

GALLOP, in the Manage, is the swiftest natural Pace of a Horse, perform'd by Reaches, or Leaps; the two Fore-feet being rais'd almost at the same time; and the Hindfeet, the like.—

In *Galloping*, the Horse may lead with which Foreleg he pleases, the most usual way is that with the Right: But which soever it be, the Hindleg of the same Side must follow it next; otherwise the Legs are said to be *disunited*. To remedy this Disorder, the Rider must stay the Horse a little on the Hand, and help him with the Spur on the contrary Side to that on which he is disunited.

In a Circle, the Horse is confin'd always to lead with his Foreleg, within the *Turn*; otherwise he is said to *gallop false*. But here, too, the Hindleg of the same Side must follow.

We say, a *Hand Gallop*, a *Canterbury Gallop*, a *School Gallop*, &c. A smooth *Gallop* close to the Ground, the *French* call the *English Gallop*, *Gallop a l'Angloise*.

The Word is borrowed from the Barbarous Latin *captare*, or *captare*, to run. Some derive it from *caballare*: Others from the Greek *καλλάρειν*, or *καλλάρω*, to spur a Horse.

GALLOWES, an Instrument of Punishment, whereon Persons convicted capitally of Felony, &c. are executed by *Hanging*. See **PUNISHMENT**, **FELONY**, **HANGING**, &c.

Among our Ancestors it was called *Fores*, *Fork*; a Name by which it is still denominat'd abroad, particularly in *France* and *Italy*. In this latter Country, the Reason of the Name still subsists; the *Gallowes* being a real Fork drove into the Ground, a cross the Legs whereof is laid a Beam, to which the Rope is tied. See **FURCA**.

GALLS, or **GALL NUTS**, in Natural History, &c. a kind of morbid Tumors or Excrescences, found on divers Vegetables; as the Oak, Willow, &c. in form of Balls, Cones, or little Apples.

The manner of the Production of *Galls*, is well described by *Malpighi*, in an express Treatise, de *Gallis*.

The Process, as observ'd, in the *Galls*, or Apples on the Gems of Oaks, is also given us by Mr. *Derham*.

These Cones, says that Author, are in outward Appearance perfectly like the Gems, or Buds themselves, only vastly bigger; and, in effect, they are no other than the Gems swell'd out in Bulk, which naturally ought to be push'd out in length. The Cause of which Obstruction of Vegetation is this: Into the very Heart of the young, tender Bud, which begins to be rigid in *June*, and shoots out in a Month more, an Insect of the Ichneumon Fly-kind, thrusts one, or more Eggs; and in all Probability, some venomous Ichor therewith. This Egg soon becomes a Maggot; which eats it self a little Cell in the very Heart or Pith of the Gem; which should be the Rudiment of the Branch, Leaves, and Fruit.

The Branch thus destroy'd, or at least, its Vegetation obstructed; the Sap that was to nourish it, is diverted into the remaining Parts of the Bud, which are only the Scaly Teguments; and which by this means grow large and flourishing, and become a Covering to the Insect Cell, as before they were to the tender Branch, &c. The Case lying with-

in this Case, is, at first, but small; but, by degrees, as the included Maggot increases, so does the Case; till it comes to the Size of a large white Pea, shaped like an Acorn.

It may be added, that even Nettles, Ground-ivy, &c. have a kind of Balls or Cases produced on their Leaves, by the Injection of the Eggs of a Fly of the same Kind. These Cases always grow in, or adjoining to some Rib of the Leaf; and their Production, *Malpighi*, and Mr. *Derham* describe thus:

The parent Insect, with its stiff setaceous Tail, penetrates the Rib of the Leaf, when tender, and makes way for its Eggs into the very Pith, or Heart thereof; emitting along with it a proper Juice to pervert the regular Vegetation.

From this Wound rises a small Excrescence; which, when the Maggot is hatch'd, increases, and swells on each Side the Leaf, between the two Membranes; extending it self into the parenchymous Parts thereof; till it be grown as big as two Grains of Wheat. In this Case lies a small white, rough Maggot; which turns to an Aurelia, and afterwards to an Ichneumon Fly.

GALLS, or *Aleppo GALLS*, are a particular kind of vegetable Tumors, or Excrescences; used in Dying, making Ink, &c.

These *Galls* are produced on the hardest Species of Oak, called *Resure*, from the Latin *Robur*. Those on other Oaks are less fit for the Purpose. They are hard as Shells; and yet are no other than the Cases of Insects, which are bred in them after the manner above described; and which, when come to Maturity, gnaw their Way out: Which is the Cause of those little Holes observable in them.

Of the Insects bred in them, we have a particular Account in *Philos. Transact.* N^o 245.

There are three Sorts of these *Galls*: The first, Blackish; the second, bordering on Green; the third, Whitish. The Dyers use them all, according to their respective Qualities: The Green and Black, serve to dye in Black; and the White, for Linnens. 'Tis the Black, and Green, that are used in the making of Ink. See **INK**.

The *English* and *Dutch* import yearly from *Aleppo*, ten thousand Quintals of *Galls*. The *Turks* have likewise a kind of ruddy *Gall*, of the Size of a small Nut; which they mix with Cochineal, and Tartar, to dye in Scarlet wital. See **DYING**.

GAMBEZON, **GAMBESO**, or **GAMBA**, in the ancient Military Language, was a kind of Coat, or Doublet, wore under the Cuirass, to make it fit easy, and prevent its hurting the Body. It was made of Wool, or Cotton, quilted between two Stuffs; and was likewise called *Coaster-Point*.

Others define the *Gambeson* a kind of soft, quilted Waist-coat, wear under the Coat of Mail, and hanging down over the Thighs.

Pectora tot Coriis, tot Gambesonibus ornant.

—*Ego Johannes Beccado Testamentum*—*Je done n'aimé a Dieu & mon Corps a ensemble at Abby de Kirkstede en le Chapel St. Maurice, ou mon meleur Cibical pris de at Marki, mon Hasbert de Guerre, mes Chacones, mes Couvertures de Fer, mon Gambeson, ma Terge, et tout mon Harnois de Guerre q' a mon Corps appent, &c.*

The Word is form'd of the German *Wambon*, or *Saxon Wambes*, the Belly; *quasi Wambasium*, a Covering of the Belly and Breast.

GAME, **PELX**, **LUDUS**, a regular Diversion; or a Sport prescribed, and limited by Rules. See **GAMING**.

Games may be distinguish'd into those of *Exercise*, and *Address*; and those of *Chance*, or *Hasard*. See **EXERCISE**, and **HAZARD**.

To the first, belong *Tennis*, *Billiards*, *Chest*, *Bowls*, *Cudgels*, *Wrestling*, *Quits*, *Shooting with Bow*, &c. See **TENNIS**, **BILLIARDS**, &c.

To this also belong'd the ancient *Jousts* and *Tournaments*. See **JOUST**, and **TOURNAMENTS**.

Under the second, come *Cards*, and *Dice*, &c. See **CARDS**, **DICE**, &c.

Under *Cards*, again, come several subordinate *Games*; the principal whereof are, *Ombre*, *Picquet*, *Basset*, *Whist*, &c. See **OMBRE**, and **PICQUET**.

GAMES, **Ludi**, in the *Purals*, were Shews, or publick Representations, used among the Antients, on Religious, Funerary, and other solemn Occasions. See **SPECTACLE**.

Such, among the *Greeks*, were the *Olympic*, *Pythian*, *Isthmian*, and *Istian* Games. See **OLYMPIC**, **PYTHIAN**, **ISTHMIAN**, and **ISTHMIAN**.

Among the *Romans*, there were three Sorts of *Games*; *Sacred*, *Honorary*, and *Ludicrous*: And *Asynaites* observes a Difference, somewhat of the same Kind, among those of the *Greeks*; two of their celebrated *Games* being dedicated to *Gods*; and two to *Herol*. See **GOD**, and **HERO**.

The *Sacred Games* were instituted immediately in honour of some Deity; of which kind were the *Cerealia*, or *Ludi Cereales*, *Vivales Martiales*, *Apollinares*, *Megalenses*, *Romani*,

manni, or Consulales, or Circensis, Capitolini, Seculares, Plebeii, Compitalitii, Augustales, Palatini, Votivi. See each described in its Place.

To this Class may also be refer'd those, celebrated in Memory of some Illustrious Person, or Action; as the *Ludi Nervadiani* and *Africani*, &c. See ACTIACI, &c.

Authors mention a Decree of the Roman Senate, by which it was enacted, that the Publick Games should be consecrated, and united with the Worship of the Gods, as a Part thereof; and accordingly, Feasts, Sacrifices, and Games appear to have made up the greatest Part, or rather the whole, of the external Worship, or Service, offer'd to the Deities of the Romans. See FEAST, SACRIFICE, &c.

The Honorary Games, *Ludi Honorarii*, were those exhibited by private Persons, out of their own Park; in order to gratify the People, or ingratiate themselves with them, to make way for their own Preference. These were the Combats of *Gladiators*, *Scenic Games*, *Tragedies*, *Comedies*, and other Theatrical and Amphibeatrical Sports. See GLADIATOR, SCENIC, TRAGEDY, COMEDY, &c.

The Ludicrous Games were of the same Kind with the Games of Exercise and Hazard among us. Such were the *Lusus Trojannus*, or *Pyrrhicus*; the *Tesserae*, and *Tali*, *Sortes*, or Dice; and the *Lutruculi*, or Chess; the *Diskus*, or Quoit; the *Pila*, Ball; *Trochus*, Top; *Nucis*, odd, and even with Nuts; *Harpastum*, Foot-ball; *Capita vel Navium*, Crofs and Pile, &c. See TROJANNUS, LATRUNCULI, &c.

Others, distinguish the ancient Games into three Classes, viz. Races, Combats, and Spectacles.

The first were called *Equestrian*, or *Carule*, *Ludi Equestres*, or *Carules*; being Races of Horses, and Chariots, perform'd in the Circus, in honour of the Sun and Neptune. See CIRCENSIS.

The second were called *Agonales*, or *Gymnici*; being Combats of Men, or Beasts, in the Amphitheatre, dedicated to *Mars* and *Minerva*. See AMPHITHEATRE.

The last, called *Scenici*, *Poetici*, and *Musici*, were Tragedies, Comedies, Balls, &c. represented on the Theatres, sacred to *Venus*, *Bacchus*, *Apollo*, and *Minerva*. See THEATRE, &c.

Homer gives us a fine Description of the Games which *Achilles* instituted at the Funeral of his Friend *Patroclus*, in his *Iliad*; and others of the different Games held among the *Phoenici*, *Ibaciens*, and at the Court of *Alicinus*, in his *Odyssy*. *Virgil's* Description of the Games celebrated by *Aeneas*, at the Funeral of old *Aeneas*, is nothing inferior to any of them. See FUNERAL.

GAME is also used for all kinds of wild Beasts and Birds, fit for eating; and which are sought after on that account. See BEAST.

Game includes Wild Beasts of Venery, and Chase; and also Beasts and Fowls of Warren. See VENERY, CHASE, and WARREN.

Some Authors divide Game into Large; which includes Red, and Fallow Deer: And Small; to which belong Hares, Rabbits, Pheasants, and Partridges.

A Forest is a Place set apart for the preserving, feeding, breeding, &c. of all sorts of Game; and consists of divers Things, viz. Soil, Covert, Laws, Courts, Judges, Officers, Game, Bounds. A Chase differs from a Forest, in this, among other Things, that it has not such Variety of Game. See FOREST, &c.

Ways of catching Game, are by *Hunting*, *Hawking*, *Fowling*, &c. See HUNTING, CHASING, HAWKING, &c.

Laws for the Preservation of the Game.

There are abundance of Laws made for the Security and Preservation of the Game: The Forest Laws of King *Canutus*, and the *Charta de Forestis* of King *Henry III.* we have elsewhere mentioned. See FOREST LAW, and CHARTA DE FORESTIS; see also PURSUEV, and POURALLEE.

By a Stat. in 33 Hen. 8. it is enacted, That no Person shoot with, or keep in his House any Cross-bow, or Stone-bow, Hand-gun, or Hagbut, under the Length of one Yard; unless he have Lands of the yearly Value of 100 l. on Pain of a Forfeiture of 10 l. for every Offence: Nor shall any Person travel with a Cross-bow, bent; or Gun, charged; or shoot within a Quarter of a Mile of a City or Town, except at a dead Mark, or in defence of his House; under the like Forfeiture; to be divided between the King and the Prosecutor.—None, under the Degree of a Baron, shall shoot with any Hand-gun, within a City, or Town; or shoot at any Fowl whatever with Hail-shot; on the same Forfeiture. *Id.* Stat.

Any Person shooting in the Night-time, or disguised, shall be deem'd a Felon, if he deny; if he confess, he is fineable at the next General Sessions. *1 Hen. 7.*

None shall kill or take Pheasants or Partridges, with any Net, or Engine, in the Night-time; on Forfeiture of 20 s. for every Pheasant; and 10 s. for every Partridge. *33 Eliz.*

None shall hawk or hunt with Spaniels in standing Com, or before it be shock'd, unless on his own Ground; on the Pe-

nalty of 40 s. half to the King; and the other Half to the Proprietor of the Ground.

He that is convicted of killing or taking a Pheasant, Partridge, Duck, Heron, Hare, or other Game; or of taking and destroying the Eggs of Swans, Pheasants, or Partridges, shall pay 20 s. for every such Fowl, Hare, &c. to the use of the Poor. *1 Jac. 1.*

Every Person convicted to have kept a Greyhound, Dog, or Net, to kill, or take Deer, Hare, Pheasant, or Partridge, unless he have Inheritance of 10 l. per Annum; or a Lease for Life of 31 l. per Annum; or be worth 200 l. in Goods; or be the Son of a Knight, or Heir apparent of an Esquire; shall pay 40 s. for the Use aforesaid.—Nor shall any sell, or buy to sell again any Deer, Hare, Pheasant, or Partridge, on pain of 40 s. *Id.* Stat.

The Lord of a Manor, or one having Inheritance of 40 l. per Annum Freehold of 80 l. or Goods worth 400 l. or their Servants licens'd by them, may take Pheasants, or Partridges within their own Lands or Precincts, in the Day-time, between *Michaelmas* and *Christmas*. *7 Jac. 1.*

No Lay-man, who hath not Lands of 40 s. per Annum; nor Clerk, who hath not 10 l. Revenue, shall keep any Greyhound, Hound, Ferret, Net, or Engine, to destroy Deer, Hares, Conies, or other Gentlemans Game; on pain of a Years Imprisonment. *13 Jac. 1.*

They that kill and take away Red, or Fallow Deer, without Consent of the Owner, shall forfeit 20 l. to be taken by Distress; one half to the Owner, and the other to the Informer; or for want of such Distress suffer a Years Imprisonment. *13 Car. 2.*

Lords of Manors, or other Royalties, or under the Degree of Esquire, may commission one or more Game-keepers; who may seize all Guns, Dogs, Bows, &c. of Persons not having Estates of 100 l. per An. Freehold; or 150 l. per An. Leasehold; or are not Sons and Heirs of Esquires; and destroy, or convert such Guns, &c. to the Use of the Lord. *22 Car. 2.*

If any enter a Coney-warren, tho' not inclosed, and chase or kill Conies, he shall forfeit treble Damages, and be imprison'd three Months: And they that kill Conies in the Night-time upon the Borders of Warrens, or Grounds used for keeping Conies, shall be amerced at the Discretion of the Justice of Peace, in any Sum not exceeding 10 l. *Id.* Stat.

He who unlawfully hunts, takes in Toyles, kills, or takes away any Deer, in any Forest, Chase, Park, Purlieu, or other inclosed Ground; or shall be aiding and assisting therein, shall forfeit 30 l. for every Deer killed, wounded, or even wounded; and 20 l. tho' none shall be taken or taken: To be levied by Distress. *3 Will. and Mar.*—And if the Keeper of a Forest, &c. be an Offender herein, or be aiding thereto, he shall forfeit 30 l. *5 Georg.* Levied as above.

In case any Hare, Partridge, Pheasant, Fish, Fowl, or other Game shall be found in any Offender's House, he shall forfeit a Sum not less than 5 s. nor more than 20 s. to be levied by Distress; or in Want thereof be committed to the House of Correction for a space of Time not greater than a Month; nor less than 10 Days. And if any Person, not qualified by Law, shall keep or use any Bows, Greyhounds, Setting Dogs, Ferrets, Tumblers, Snares, &c. he shall be subject to the same Penalties.

If any Higler, Chapman, Carrier, Inkeeper or Victualler shall have in his keeping any Hare, Pheasant, Partridge, Heath Game, or Growle, not put in his Hands by a Person qualified by Law, he shall forfeit 5 l. for every such Hare, &c. half to the Informer, and half to the Poor, levied by Distress; or for want thereof be sent to the House of Correction for three Months. *5 Anne.*

Persons not qualified keeping Greyhounds, Lurchers, Setting Dogs, or Engines to destroy Game; and Game-keepers who under colour of Office kill and sell Game, without their Masters Knowledge, are liable to the like Penalty. *Id.* Stat.

No Lord of a Manor to appoint more than one Game-keeper, and his Name to be enter'd with the Clerk of the Peace, who is to give a Certificate thereof; otherwise he is liable to the Penalties against Higlers. *5 Anne.*

If any Hare, Pheasant, &c. be found in the Possession of a Person not qualified; or be entic'd to it by some Person that is qualified; the same shall be adjudg'd an Exposing it to Sale. Persons destroying a Hare in the Night, shall incur the Forfeiture of 5 l. *5 Ann.*

No Lord of a Manor shall appoint a Game-keeper, with Power to kill or destroy Game, unless he be truly a Servant of such Lord; or be immediately employ'd to kill Game for the sole Use of such Lord: Nor shall any Lord authorize a Person not qualified to keep or use Gun, Greyhounds, &c. And such Persons as shall be found offending in either of these Points, shall for every Offence forfeit 5 l. *3 Geo.*

Lastly, if any Person enter a Park, Paddock, or other inclosed Ground, where Deer are usually kept, and wilfully wound or kill any Red, or Fallow Deer, he shall be transported to the Plantations for seven Years. *5 Georg.*

GAMELIA, Nuptial Feasts, held among the Antient Greeks, in the Month *Gamelion*.

They were thus called from $\gamma\alpha\mu\epsilon\lambda\omicron\varsigma$, Marriage; whence **ΓΑΜΕΛΙΩΝ**, an Epithet, or Surname, given to *Jupiter* and *Juno*, consider'd as presiding over Marriages.

GAMELION, or **GAMELIUM**, is a Poem, or Composition in Verse, on the Subject of a Marriage; more usual call'd *Epithalamium*. See **EPITHALAMIVM**.

GAMING, the Art, or Act of performing, or practising a Game; particularly a Game of Hazard. See **GAMER**.

All public Gaming is feverly prohibited; and what Money is thus lost, is recoverable again by Law. See **PLAY**.

In *China*, Gaming is equally prohibited the common People, and the Mandarins; and yet this does not hinder their Playing, and frequently losing all they have; their Lands, Houses, Children, and even Wife, which are all sometimes, laid on a single Card. *F. le Comte*.

The Business of Chance, or Hazard, is of Mathematical Consideration; inasmuch as it admits more, and less. It is, or is suppos'd to be, an Equality of Chance; upon which the Gamesters set out: This Equality is to be broke in upon in the Course of the Game by the greater good Fortune, or Adress of one of the Parties; upon which he comes to have a better Chance; so that his Share in the Deposit, or Stakes, is now proportionably more, or better than at first: This more and less is continually varying, and runs thro' all the Ratio's between Equality, and infinite Difference; or from an infinitely little Difference till it arrives at an infinitely great one, upon which the Game is ended. The whole Game, therefore, with respect to the Event or Issue thereof, is only a Change of the Quantity of each Person's Share, or Chance; or of the Proportion their two Shares bear to each other; which Mathematicks alone can measure. See **CHANCE**.

Hence several Authors have computed the Variety of the Chance in several Cases and Circumstances that occur in Gaming; particularly *M. de Moivre*, in a Treatise, *De Mensura Sortis*: Which, as it may either be of service to the practical Gamester, or the Better, in teaching them on what Side the Advantage lies; and whether they may lay on the square; or to the speculative one, in letting him in to the way of thinking and determining in such cases, we shall here give the Reader an Abstract thereof.

Laws of Chance applied to GAMING.

Suppose *p* the Number of Cases wherein an Event may happen, and *q* the Number of Cases wherein it may not happen; both Sides, the contingent and non-contingent, have their Degree of Probability. And if all the Cases wherein the Event may, and may not happen, be equally easy; the Probability of the happening, to that of the not-happening, will be as *p* to *q*.

If two Gamesters, A and B, engage on this footing, that if the Cases *p*, happen, A shall win; but if *q* happen, B shall win; and the Stake be *a*: The Chance, or Expectancy of A

will be $\frac{p a}{p+q}$; and that of B $\frac{q a}{p+q}$; consequently if A or B sell their Expectancies, they should have for them $\frac{p a}{p+q}$ and $\frac{q a}{p+q}$ respectively.

If there be two independent Events; and *p* be the Number of Cases wherein the first may happen; and *q* the Number of those wherein it may not happen; and *r* the Number of Cases wherein the second Event may happen, and *s* the Number of those wherein it may not happen; multiply $p+q$ by $r+s$; the Product, viz. $p r+q r+p s+q s$ will be the Number of Cases wherein the Contingency or non-Contingency of the Events may be varied.

Hence, if A lay with B, that both Events shall happen, the Ratio of the Chances will be as $p r$ to $q r+p s+q s$. Or if he lay that the first shall happen, but not the second; the Ratio of the Chances will be as $p s$ to $p r+q r+p s$. And if there were three, or more Events; the Ratio of the Chances would be found by Multiplication alone.

If all the Events have a given Number of Cases wherein they may happen, and also a given Number of Cases wherein they may not; and *a* be the Number of Cases wherein any one may happen, and *b* the Number of Cases wherein it may not; and *n* be the Number of all the Events: Raise *a*-*b* to the Power of *n*.

If now A and B agree, that if one or more of the Events happen, A shall win; if none, B: The Ratio of the Chances will be as $a-b$ to b^n for the only Term where *a* is not found, is b^n .

Prob. I. If A and B play with a single Die, on this condition, that if A throws two or more Aces at eight Throws, he shall win; otherwise B shall win: What is the Ratio of their Chances?

Sol. Since there is but one Case wherein an Ace may turn up, and 5 wherein it may not; let $a=1$, and $b=5$. And again, since there are eight Throws of the Die, let $n=8$; and you will have $a-b=1-5=-4$ to $b^n=5^8=390625$. That is, The Chance of A, will be to that of B, as 663992, to 1015625; or nearly as 2, to 3.

Prob. II. A and B are engaged at single Quits, and after playing some Time, A wants 4 of being up, and B, 6; but B is so much the better Gamester, that his Chance against A upon a single Throw, would be as 3 to 2: What is the Ratio of their Chances?

Sol. Since A wants 4, and B, 6, the Game will be ended in 9 Throws at the most; therefore raise $a-b$ to the ninth Power, and it will be $a^9-9 a^8 b+36 a^7 b^2-84 a^6 b^3+126 a^5 b^4-126 a^4 b^5+84 a^3 b^6-36 a^2 b^7+9 a b^8-b^9$. And take all the Terms wherein *a* has 4 or more Dimensions, for A; and all those wherein it has 6 or more, for B: And the Ratio of the Chances will be as $a^5-9 a^4 b+36 a^3 b^2-84 a^2 b^3+126 a b^4-126 a^2 b^5+84 a^3 b^6-36 a^4 b^7+9 a^5 b^8-b^9$. Call $a, 3$; and $b, 2$; and you will have the Ratio of the Chances in Numbers 1759077 to 194048.

Prob. III. A and B are to play with single Quits; and A is the best Gamester; so that he can give B, 2 to 3: What is the Ratio of their Chances, then, in a single Throw?

Sol. Suppose the Chances as n to 1; and raise $n-1$ to its Cube; it will be $n^3-3 n^2+3 n-1$. Now since A could give B 2 out of 3; A might undertake to win three Throws running; and consequently the Chances in this Case will be as n^3 to $3 n^2+3 n-1$. Consequently, $n^3=3 n^2+3 n-1$. Or, $n^3-3 n^2+3 n-1=0$. And therefore $n=\sqrt[3]{3 n^2+3 n-1}$; and consequently $n=\sqrt[3]{2 n^2+1}$. The Chances therefore are $\frac{3}{2}$ and 1 respectively.

Prob. IV. To find at how many Trials it is probable any Event will happen; so that A and B may lay a Wager upon even Terms.

Sol. Let the Number of Cases, wherein the thing may happen at the first Trial, be *a*, those wherein it may not, *b*; and *x* the Number of Trials, wherein it is an even Chance, whether the Thing happen or not. By what is above shewn $\frac{a-b}{a+b} x^n = b^n$: Or, $\frac{a-b}{a+b} x^n = 2 b^n$. Therefore, $x^n = \frac{2 b^n (a+b)}{a-b}$. Again, reforme the Equation $\frac{a-b}{a+b} x^n = 2 b^n$, and let $a : b :: x : q$, and the Equation will change into this $x + \frac{x^n}{q} = 2$. Raise $x + \frac{x^n}{q}$ to the Power of *x*, by Sir *I. Newton's* Theorem, and let $x + \frac{x^n}{q} = 1 + \frac{x^n}{q} = 1 + \frac{x^{n-1}}{q} + \frac{x^{n-2}}{2 q^2} + \dots$

In this Equation, therefore, if $q = x$, then $x=1$: If *q* be infinite, *x* will also be infinite. Supposing *x*, to be infinite, the Equation above will be $1 + \frac{x^n}{q} = 1 + \frac{x^n}{x} = 1 + x^{n-1}$. Again, let $n=2$, and we shall have $1 + 2 x - \frac{1}{2} x^2 = 2$; &c. &c. But $1 + 2 x - \frac{1}{2} x^2 = 2$; &c. &c. is a Number whose hyperbolical Logarithm, is 2; consequently $2 = \text{Log. } 2$. But the hyperbolical Logarithm of 2 is 7 very nearly; and therefore $x=7$ nearly.

Hence where *q* is 1, then $x=n$; and where *q* is infinite, $x=n$ nearly. Thus are the Limits of the Ratio of *x* to *q* fix'd; for that Ratio begins with Equality, and when rais'd to Infinity, ends at length in the Ratio of 7 to 10 nearly.

Examp. 1. To find in how many Throws A may undertake to throw two Aces with two Dice?

Sol. Since A has but one Case wherein he may throw two Aces with two Dice; and 35 wherein he may not, $q=35$: Therefore multiply 35 by 7; the Product 245, shews that the Number of Throws required is between 24 and 25.

LEM. To find the Number of Cases, wherein any given Number of Points may be thrown with a given Number of Dice?

Sol. Let $p-1$ be the given Number of Points; *n* the Number of Dice; and *f* the Number of Sides or Faces of each Die: Let $p-f=q$, $q-f=r$, $r-f=s$, $s-f=t$, &c. The Number of Cases requir'd will be,

$$1 + \frac{p-1}{f} + \frac{p-1}{f^2} + \dots$$

$$-\frac{q}{1} \times \frac{q-1}{2} \times \frac{q-2}{3} \times \dots \times \frac{n}{n-1}$$

$$-\frac{r}{1} \times \frac{r-1}{2} \times \frac{r-2}{3} \times \dots \times \frac{n}{n-1}$$

$$-\frac{s}{1} \times \frac{s-1}{2} \times \frac{s-2}{3} \times \dots \times \frac{n}{n-1}$$

Which Series is to be continued, till some of the Factors either become equal to nothing, or negative. And note, for many Factors of the several Products $\frac{q}{1} \times \frac{q-1}{2} \times \frac{q-2}{3} \times \dots \times \frac{q-p+1}{p-1}$ &c. are to be taken as there are Units in $n-1$.

Prax. Suppose the Number of Cafes required wherein 16 Points may be thrown with four Dice?

$$-\frac{1}{1} \times \frac{1}{2} \times \frac{1}{3} \times \frac{1}{4} = 455$$

$$-\frac{2}{1} \times \frac{2}{2} \times \frac{2}{3} \times \frac{2}{4} = 336$$

$$-\frac{3}{1} \times \frac{3}{2} \times \frac{3}{3} \times \frac{3}{4} = 6$$

Now, $455 - 336 - 6 = 125$; so that 125 is the Number required.

Examp. 2. To find at how many Cafes A may undertake to throw 15 Points with six Dice?

Sol. Since A has 1666 Cafes, wherein he may turn up 15 Points, and 44990 against him; divide 44990 by 1666; and the Quotient 27 will be $=g$. Therefore, multiply 27 by 7; the Product 189 shows the Number of Throws required to be nearly 19.

Prob. V. To find the Number of Trials wherein it is probable any Event may happen twice, β that A and B may lay a Wager thereon with an equal Chance?

Sol. Suppose the Number of Cafes wherein the Event may happen the first Trial, to be a ; and those wherein it may not, b ; and call the Number of Trials required, x : It appears from what is above shown, that $\frac{a-b}{a} x = 2b^x$

$$-\frac{1}{1} \times \frac{1}{2} \times \frac{1}{3} \times \dots \times \frac{1}{x} = 2$$

Let $q=1$, and then $x=3$. Let q be infinite, and x will also be infinite: Suppose x infinite, and $x=2$, and then $1 + \frac{1}{2} + \frac{1}{3} + \dots = 2$, &c. $= 2 + 2 + 2$

and therefore $2 = \text{Log. } 2 + \text{Log. } \frac{1}{2} = 1$: If then $\text{Log. } 2$ be called g ; the Equation will be transform'd into the following fractional one $\frac{1}{1-g} = y$. And investigating the Value of y by the Powers of g , we shall find $y = 1.678$, nearly; and therefore x will always be between the Limits 3 g and 1.678 g ; but x will soon converge to 1.678 g ; and therefore if g have not a very small Ratio to 1, we may take $x = 1.678 g$. Or if there be any Suspicion of x being too small,

substitute its Value in the Equation $1 + \frac{1}{q} = 2 + \frac{2x}{q}$, and note the Error, if it be worth regarding: Thus will x be a little increased; substitute the thus increased Value for x in the foregoing Equation, and note the new Error: Thus, from the two Errors, may the Value of x be corrected with sufficient Accuracy.

Here we shall add a Table of Limits, that will carry the Intent of this Problem much further.

If the Wager be upon happening once, the Number of Trials will be between

If upon twice, between	1 g and 0.693 g
3 g and 1.678 g	
If upon three, between	5 g and 2.675 g
If upon four times, between	7 g and 3.671 g
If upon five times, between	9 g and 4.673 g
If upon six times, between	11 g and 5.668 g

Examp. To find at how many Throws A may undertake to throw three Aces, twice, with three Dice?

Sol. Since A has but one Cafe, wherein he may throw three Aces; and 215, wherein he may not; $g=215$. Therefore multiply 215 by 1.678. The Product 360, 7 will show the Number of Throws required to be between 360 and 361.

Prob. VI. A, and B deposit each 12 pieces of Money, and play with three Dice, on this footing, that every time

11 Points are thrown, A shall give B one Piece; and every time 12 Points are thrown, B shall give A a Piece; and that he shall win the whole, that first gets all the Money in his Hands: We demand the Ratio of the Chances of A to that of B.

Sol. Let β be the Number of Pieces each severally takes; and a and b the Number of Cafes wherein A and B may respectively gain each a piece; the Ratio of their Chances will be as a to b : In this case, $\beta=12$, $a=27$, $b=15$; or if when 27 : 15 :: 9 : 5, you make $a=9$, $b=5$; and therefore the Ratio of the Expectancies will be as 9^{12} to 5^{12} , or as 244140625 to 282429536481.

NB. Great Care must be taken to avoid the confounding of different Problems together, from some Appearance of Affinity between them. The following one seems very like the former.

Prob. VII. C having 24 Pieces, or Counters, throws three Dice; and every time 27 Points turn up, gives one Counter to A; and every time 12 turn up, gives one to B; and A and B engage on this footing, that he who first gets 12 Counters, shall win the Stake: We require the Ratio of their Expectancies?

This Problem differs from the preceding one, in that the Game must necessarily end in 27 Throws; whereas, in the former, it might hold out to Eternity, by reason of the Reciprocations of Loss and Gain, which destroy one another.

Sol. Raise $a-b$ to the 27th Power, and the 12 former Terms will be to the 12 latter as the Expectancy of A to that of B.

Prob. VIII. Three Gamesters, A B and C, have each twelve Balls, 4 of them white, and 8 black; and being hoodwink'd, play on this condition, that the first who chuses a white Ball, shall win the Stake; and that A shall have the first Choice, then B, then C; and so round again: What, then, is the Ratio of the Chances of A, B, C?

Sol. Let n be the Number of Balls, a the Number of white ones, b of black ones, and s the Stake. Here

1^o A, has the Cafes a , wherein he may chuse a white Ball; and the Cafes b for a black one: Consequently, his Expectancy, from the first Choice, is $\frac{a}{a+b}$, or $\frac{a}{n}$. Wherefore, subtracting $\frac{a}{n}$ from 1; the Value of the remaining Expectancies will be $1 - \frac{a}{n} = \frac{n-a}{n} = \frac{b}{n}$.

2^o B, has the Cafes a for a white, and the Cafes $b-1$ for a black one; but the first Election is in A; and 'tis uncertain, whether or no he may have won the Stake; and therefore the Stake, in respect of B, is not 1, but only $\frac{b}{n}$; so that his Expectancy from the first Choice is $\frac{a}{n} \times \frac{b}{n} = \frac{ab}{n^2}$. Subtract $\frac{ab}{n^2}$ from $\frac{b}{n}$ and the Value of remaining Expectancies will be $\frac{b}{n} - \frac{ab}{n^2} = \frac{bn-ab}{n^2} = \frac{b(n-a)}{n^2} = \frac{b^2}{n^2}$.

3^o C, has the Cafes a for a white; f the Cafes $b-2$ for a black one; and therefore his Expectancy from the third Choice is $\frac{a}{n} \times \frac{b-1}{n} \times \frac{b-2}{n} = \frac{a(b-1)(b-2)}{n^3}$.

4^o After the like manner, A has the Cafes a for a white; and $b-3$ for a black; so that at the fourth Choice, the Expectancy will be $\frac{a}{n} \times \frac{b-1}{n} \times \frac{b-2}{n} \times \frac{b-3}{n} = \frac{a(b-1)(b-2)(b-3)}{n^4}$. And so of the rest.

Write down, therefore, the Series $\frac{a}{n} + \frac{ab}{n^2} + \frac{a(b-1)(b-2)}{n^3} + \dots$ &c. Where P, Q, R, S, &c. denote the preceding Terms, with their Characters; and take as many Terms of this Series, as there are Units in $b-1$ (for there cannot be more Choices than there are Units in $b-1$) and the Sum of all the third Terms, skipping the two Intermediate, beginning from $\frac{a}{n}$, will be the whole Expectancy of A; the Sum likewise of all the third Terms, commencing from $\frac{ab}{n^2}$, will be the whole Expectancy of B; and the Sum of the Thirds, commencing from $\frac{a(b-1)(b-2)}{n^3}$, will be the whole Expectancy of C.

Lastly, making $a=4$, $b=8$, $x=12$; and the General Series will change into the following one $\frac{1}{2}P + \frac{1}{4}Q + \frac{1}{8}R + \frac{1}{16}S + \frac{1}{32}T + \frac{1}{64}V + \frac{1}{128}X + \frac{1}{256}Y$.

Or into this other (by multiplying all the Terms by some common Number judg'd most expedient for the throwing out of Fractions, *viz.* in the present Case, by 495)

$$165 + 120 + 84 + 56 + 35 + 20 + 10 + 4 + 1$$

And therefore A will have $165 + 56 + 10 = 231$; B will have $120 + 35 + 4 = 159$; and C will have $84 + 20 + 1 = 105$. So that their several Expectancies will be as 231, 159, 105; or as 77, 53, 35.

Prob. IX. A and B having 12 Counters, four of them white, and eight black; A wagers with B, that taking out seven Counters, blindfold, three of them shall be white: What is the Ratio of their Expectancies?

Sol. 1^o Seek how many Cases there is for seven Counters, to be taken out of 12; they will be found from the Doctrine of Combinations, to be 792.

$$\frac{12!}{7!5!} = 792$$

2^o Set aside three white ones, and find all the Cases wherein 4 of the eight black ones may be combined therewith; they will be found to be 70.

$$\frac{8!}{4!4!} = 70$$

And since there are four Cases, in which three white may be taken out of four; multiply 70 by 4: Thus, the Cases, wherein 3 Whites may come out with 4 Blacks, are found to be 280.

3^o By the common Laws of Gaming, he is reputed Conqueror, who produces an Effect oftener than he undertook to do, unless the Contrary be expressly agreed on; and therefore, if A take out 4 Whites with 3 Blacks, he wins. Set aside 4 Whites, then, and find all the Cases wherein 3 of the 8 Blacks may be combined with four Whites: These Cases will appear to be 56.

$$\frac{8!}{4!4!} = 56$$

4^o A, therefore, has $280 + 56 = 336$ Cases, wherein he may win; which subtracted from the whole Number of Cases 792, leaves 456 the Number of Cases wherein he may lose. The Ratio of the Chance of A, therefore, to that of B, is as 336 to 456; or as 14 to 19.

To avoid too much Prolixity in this Article, we must desist from further Investigations, which in the following Problems grow very long, and more perplex'd. In the rest, therefore, we shall content ourselves to give the Answer, or Refut, without the Process of arriving at it; which may be of use, as it furnishes so many Data, from whence, as Standards, we may be enabled occasionally to judge of the Probability of Events of the like Kinds: Tho', without letting the Mind into the precise Manner, and Reason thereof.

Prob. X. A and B play with two Dice on this Condition, that A shall win, if he throw six; and B, if he throw seven: A to have the first Throw, in lieu of which B to have two Throws; and both to continue with two Throws each turn, till one of them wins: What is the Ratio of the Chance of A to that of B?

Ans. As 10355 to 12276.

Prob. XI. If any Number of Gamesters, A, B, C, D, E, &c. equal in point of Dexterity, deposit each one piece of Money, and engage on these Conditions, that two of them, A and B, beginning the Game; which ever of them shall be overcome, shall give place to the third, C, who is to play with the Conqueror; and the Conqueror here, to be taken up by the fourth Man, D, and thus on; till some one, having conquer'd them all round, draws the Stake: What is the Ratio of their Expectancies?

Sol. This Problem, M. Bernoulli solves analytically. Here, calling the Number of Gamesters $n-1$, he finds that the Probabilities of any two immediately following each other in the Course of playing, are in the Ratio 1:1:2ⁿ to 2ⁿ; and therefore the Expectancies of the several Gamesters A B C D E &c. are in a Geometrical Progression $1-2^n: 2^n: 2^{2n}: 2^{3n}: 2^{4n}: 2^{5n}$ &c.

Hence it is easy to determine the State of the Probabilities of any two Gamesters, either before the Game, or in the Course thereof. If e. g. there be three Gamesters, A, B, C, then $w=2$ and $1-2^n: 2^n: 2^{2n}$ is $2: 4: 16$: That is, Their several Probabilities of winning, before A have overcome B, or B, C; are as the Numbers 5, 3, 4; and therefore their Expectancies are $\frac{5}{12}, \frac{3}{12}, \frac{4}{12}$: For all of them taken together, must make 1, or absolute Certainty. After

A has overcome B, the Probabilities of A, B and C will be $\frac{3}{5}, \frac{3}{5}, \frac{4}{5}$, as in the Answer above. If there be four Gamesters, A B C D, their Probabilities from the Beginning will be as 81, 81, 72, 64. After A has beat B, the several Probabilities of B D C A, will be as 25, 32, 56, 56, respectively. After A has beat B and C, the Probabilities of C B D A will be as 16, 16, 28, 87.—

Prob. XII. Three Gamesters, A, B and C, whose Dexterities are equal, deposit each one Piece, and engage upon these Terms, That two of them shall begin to play, and that the vanquish'd Party shall give place to the third, who is to take up the Conqueror; and the same Condition to go round; each Person when vanquish'd, forfeiting a certain Sum to the main Stake; which shall be all swept by the Person who first beats the other two successively. How much, now, is the Chance of A and B better or worse, than that of C?

Ans. 1^o If the Forfeiture be to the Sum each Person first deposited, as 7 to 6, the Gamesters are upon an equal footing. 2^o If the Forfeiture be in a less Ratio to the Deposit, A and B are on a better footing than C: If in a greater Ratio, the Advantage is on the Side of C. 3^o After A has overcome B once, the Probabilities are as $\frac{7}{5}, \frac{7}{5}, \frac{6}{5}$; or as 4, 2, 1; *viz.* that of A the greatest, and of B the least.

M. Bernoulli gives an analytical Solution of the same Problem, only made more general; as not being confined to three Gamesters, but extending to any Number at pleasure.

Prob. XIII. A and B, two Gamesters of equal Dexterity, play with a given Number of Balls; and after some time A wants 1 of being up, and B, 3: What is the Ratio of their Chances?

Ans. A's Expectancy is worth $\frac{7}{8}$ of the Stake, and B's only $\frac{1}{2}$; so that their Chances are as 7 to 1.

Prob. XIV. Two Gamesters, A and B, of equal Dexterity, are engaged in play, on this Condition, that as often as A exceeds B, he shall give him one Piece of Money; and that B shall do the like, as oft as A exceeds him; and that they shall not leave off, till one has won all the other's Money: Each now having four Pieces; two By-standers, R and S, lay a wager, on the Number of Turns, in which the Game shall be finish'd; *viz.* R, that it shall be over in 10 Turns; S that it is the Value of the Expectancy of S.

Ans. $\frac{500}{560}$ or $\frac{25}{28}$ of the Wager; or it is to that of R as 560 to 464.—

If each Player had 5 Pieces, and the Wager were, that the Game should end in ten Turns, and the Dexterity of A were double that of B; the Expectancy of S would be $\frac{5120}{8128}$.

If each Gamester have 4 Pieces; and the Ratio of the Dexterities be required to make it an even Wager that the Game shall end in 4 Turns: It will be found that the one must be to the other as 5.174 to 1.

If each Gamester have 4 Pieces, and the Ratio of their Dexterities be required to make it an even Lay that the Game shall be ended in 6 Turns; the Answer will be found to be, as 2.576 to 1.

Prob. XV. Two Gamesters, A and B, of equal Dexterity, being agreed not to leave off playing till ten Games are over; a Spectator, R, lays a Wager with another, S, that by that time, or before, A shall have beat B by three Games: What is the Value of the Expectancy of R?

Ans. $\frac{1472}{1792}$ of the Wager; or it is to that of S as 352 to 672.

GAMM, GAMMUT, GAMUT, or GAM-ut, in Music, a Scale, whereon we learn to found the Musical Notes, Ut, re, mi, fa, sol, la, in their several Orders, and Dispositions. See NOTE, and SCALE.

The Invention of this Scale is owing to Guido Aretin, a Monk of Aretinum, in Tuscany; tho' it is not properly an Invention, as an Improvement on the Diagramma or Scale of the Antients. See DIAGRAM.

The Gammut is also call'd the Harmonical Hand; by reason Guido first made use of the Figure of the Hand, to arrange his Notes on.

Finding the Greek Diagramma of too small Extent, Guido added five more Chords, or Notes to it: One, below the Proslambanomenos, or gravest Note of the Antients; and four, above the Note, or Acutest. The first, he call'd Hypo-proslambanomenos; and denoted it by the Letter G, or rather the Greek Γ , Gamma: Which Note being at the head of

of the Scale, occasion'd the whole Scale to be call'd by the barbarous Name *Gamm*, or *Gammur*.

Some say, *Guido's* Intention in calling his first Note *G*, *Gamm*, was to shew, that the *Greeks* were the Inventors of Musick; Others, that he meant hereby to record himself; this being the first Letter of his own Name.—

Guido's Scale is divided into three Series, or Columns; the first call'd *Molle*, or flat; the second *Natural*; and the third *Durum*, or Sharp, as represented in the Scheme, *Tab. Musick*, Fig. 3. But since his Time, some Alterations have been made there.

The Use of this Scale, is to make the Passages, and Transitions from *B Molle*, to *B Durum*, by means of the Tones and Semitones. The Series of *B Natural* standing betwixt the other two, communicates with both; so that to name the Chords of the Scale by these Syllables, if we sound the Semitones in their natural Places, viz. *b c* and *e f*, then we apply *ut* to *g*; and after *la* we go into the Series of *b natural* at *fa*; and after *la* of this, we return to the former at *mi*, and so on: Or, we may begin at *ut* in *c*, and pass into the first Series at *mi*, and then back to the other at *fa*: By which means the one Transition is a Semitone, viz. *la, fa*; and the other a Tone, *la, mi*. To follow the Order of *b Molle*, we may begin with *ut* in *c*, or *f*, and make Transitions after the same manner. See *TONE*, and *SEMITONE*.

Hence came the barbarous Names of *Gammur*, *Ar*, *Bmi*, &c. But what a perplex'd Work is here, with so many different Syllables applied to every Chord; and all to mark the Places of the Semitones, which the simple Letters *a b c* &c. do as well, and with more Ease?

Several Alterations have since been made in the *Gamm*. *M. le Maire*, particularly, has added a seventh Note, viz. *fi*; and the *English* usually throw our both *ut* and *fa*, and make the other five serve for all: As will be shewn under the Article *SOL-FADING*.

GAMM, *GAMMA*, or *GAMMUT*, is also the first, or gravest Note in the modern Scale of Musick; the Reason whereof is shewn under the preceding Article.—

GANG, in the Sea Language: To man a Boat, is call'd to put a Gang of Men (which is a Company) into her: They are commonly called the *Coxswain's Gang*, who has the Charge of her.

GANGWAY, signifies all the several Entrances, Ways, or Passages, from one Part of the Ship to the other; and whatsoever is put in one of these Passages, is said to be laid, or put in the *Gangway*.

GANGLION, or *GANGLIUM*, in Medicine, a small, hard, knotty Tumor, form'd on the nervous and tendinous Parts, without any discolouring of the Skin, or Sense of Pain. See *TUMOR*.

The Cause of the *Ganglion* is a too great Dilation of the Pores of the Part; or the too great Compression, or a Laceration, thereof: Any of these occasion the nutritious Juice to be there stop'd and retain'd; and even to exude, condense, and harden into a Tumor. The same Effect is sometimes produced by a Bruise, hard Labour, or the like. Most Authors fix the next Cause of the *Ganglion* to be a heavy, viscid Pituita.

The *Ganglion* is sometimes removed, and resolved by mere dry Friction, long continued; and sometimes by Friction with Saliva. Some chuse to apply a Plate of Lead, anointed with Mercury: Others use Gum Ammoniac; or Emplaster of Vigo, with Mercury. If these don't succeed, Recourse is had to Section.

The Word is *Greek*, γανγλιον, signifying the same thing. The Tumor, when on the Nerves, Tendons, Articulations, or any of the membranous Parts, retains its Name, *Ganglion*; every where else, it is call'd *Nodus*. See *NODE*.

GANGRENE, *GANGRENA*, in Medicine, is a Mortification in its first, or beginning State; while yet the Part retains some Sense of Pain, and a Share of natural Heat: By which this Disease is distinguish'd from a *Sphacelus*, or thorough Mortification; where there is no Sense or Warmth left at all. See *MORTIFICATION*, and *SPHACELUS*.

The *Gangrene* is a Disease in the Flesh of the Part, which it corrupts, consumes, and turns black; spreading, and seizing itself of the adjoining Parts: And is rarely cured without Amputation.

It arises from a Stoppage, or Interception of the circulatory Motion of the Blood; which by this means, fails to furnish the Part with the nutritious and spirituous Juices, necessary to preserve its Warmth, and Life.

This Interception of Circulation, which is the next Cause of the *Gangrene*, is it self occasion'd divers ways; as, by large Tumors, Erysipela's, great Inflammations, violent Cold, tight Bandages or Compressions, sudden Fluxions of some malignant Humor, Bites of venomous Beasts, Fractures, Wounds, and Ulcers ill managed, &c.

It is distinguish'd by the Colour of the Flesh, which now turns pale, dusky, or livid; and by its growing loose, and flabby of vehemently Tense which it was before. In the

Progress of the Disease, the Part distils a fetid, discolour'd Water; and emits a cadaverous Smell.

Upon the first Seizure, the Skin turns pale, afterwards livid; Vescications arise, and the Colour at length changes to black; the Flesh becomes fetid, Emions, and moist; then withers, and soon becomes insensible: The Heat and Pulsation of the Part being likewise diminish'd. *Shew*.

If in a large Wound, the Tumor of the Lips do not suppurate, nor any Flux of Matter, or Inflammation arise; if the Lips do not swell, or after Swelling grow lank and flaccid again on a sudden: 'Tis reckon'd a safe Sign of an approaching *Gangrene*. See *WOUND*.

When a *Gangrene* proceeds from extreme Cold, the Part affected is first benumbed, or seiz'd with a pricking Pain, followed by a Redness, which gradually changes to a Black. See *COLD*.

When a tight Bandage is the Cause, a Flaccidity of the Part is join'd to the Insensibility thereof: When the Scarry, it often begins in the great Toe, and appears in form of a blackish Spot, which turns to a dry Crust, succeeded by a Stupor of the Part, &c.—When the Bite of any venomous Creature is the Cause, a continual Fever attends, &c. Pain is felt in the Part; which usually brings on a Syncope, or Delirium: Pustles arise about the Bite, &c.

By the Microscope, the *Gangrene* has been discover'd to consist of an infinite Number of little Worms, ingender'd in the morbid Flesh; and which continually producing new Broods, they swarm, and over-run the adjacent Parts.

To stop the Progress of the *Gangrene*, the Physicians prescribe, internally, Sedorifics, and Alexipharmicks; externally, Decoctions of Quick-lime, either simple, or with the Addition of Sulphur, Mercurius dulcis, and Spirit of Wine camphorated.

In a severe Stage of the Distemper, they scarrify deep, to the very Quick; and afterwards apply hot Liqueurs, Cataplasms, &c. Some recommend Horses Dung, boil'd in Wine, or Urine. The Unguent *Aegyptiacum* also comes into Use.

Belleste prescribes the following, as the most efficacious Remedy, known for *Gangrenes*; viz. Quicksilver dissolved in double the Quantity of Spirit of Nitre, or Aqua fortis; a linen Cloth dip't therein, and applied to the *gangrenous* Part. This alone, he assures us, is sufficient.—If the *Gangrene* be occasion'd by an intense Frost; Snow Water, or a linen Cloth dip't in cold Water, and applied to the Part affected, *Zerbarbar* directs as the best Cure.

If the *Gangrene* proceed to an utter Sphacelation, and be seated in any of the Limbs, or extreme Parts, recourse must be had to the Operation of *Amputation*. See *AMPUTATION*.

The Word *Gangrena*, *Gangrene*, is derived by some Authors from the *Paphlagonian* *Gangra*, a Goat; it being the Character of a Goat to browse the Grass all around, without shifting its Place. It is juster, perhaps, to derive it from the *Greek* Verb γαγρη, γαγρη, manducos, absumo, I eat, I consume: But 'tis yet safer, to bring it from the Word γαγγρη, which signifies the same thing.

GANTLET, or *GAUNTLET*, a large, strong Glove, made to cover the Arm, or Hands of a Cavalier, when arm'd at all Points. The *Gauntlet* is of Iron; and the Fingers, plated.

The Cask, and *Gauntlets* were always bore in the ancient Marches in Ceremony. *Gauntlets* were not introduc'd, till about the 13th Century.

The *Gauntlet* was frequently thrown, like the Glove, by way of Challenge. See *GLOVE*, *CHALLENGE*, *CHAMPION*, *COMBAT*, &c.

The Word is derived of the French *Gantelet*; and that of *Gant*, or *Gant*, Glove.—

GANTLET, in Chirurgery, is a kind of Bandage for the Hand.

'Tis a sort of Swathe, four or five Yards long; where-with they wrap up the Hand, and all the Fingers, one after another.

GANYMEDE, a Term lately come into Use, to express a *Cannite*, or *Bardachio*. See *CATAMITE*, *SODOMY*, &c.

The Expression takes its rise from a young, beautiful *Trojan* Shepherd, thus call'd; whom *Jupiter* ravish'd, or carried off by his Eagle, or rather by himself under the Figure of an Eagle, as he was hunting on Mount *Ida*; and made him his Cup-bearer, in the place of *Hebe*; who, having made a false Step, and spilt her Liqueur, was turn'd out of Office.

Some say, that the *Jupiter*, who ravish'd *Ganyমেদে*, was *Zantalus*, King of *Phrygia*: The Eagle express'd the Swift-ness, wherewith he was carried off. *Vossius*, *De Idolol. L. I. c. 14*, &c. And *Zarirus*, on the *Thebaid. L. I. v. 548*.—

GARBE, in Heraldry, a Representation of a Sheaf of Corn, or other Grain; sometimes bore in Coat Armour, to signify Summer, or the Month of *August*; as the Branch of Grapes does Autumn.

He bears Azure, a Garbe, or; the Arms of the *Grosvener*s of *Easton*, in *Cheshire*.

GARBLER of Spices, is an Officer of great Antiquity, in the City of *London*, who is empower'd to enter any Shop, Ware-house, &c. to view, and search Drugs, &c. and to garble and cleanse them.

GARBLES, the Dust, Soil, or Uncleaness that is severed from good Spice, Drugs, &c.

GARBLING of Spice, Drugs, &c. is the purifying it from the Drofs and Dust mix'd therewith; and severing the good from the bad.

GARBLING of Bees Stoves, is the sorting, or calling out the good from the bad.

The Word may come from the *Italian Garbo*, Finery, or Neatness.

GARCON, or, as we pronounce it, **GARSOON**, a *French* Term, literally signifying *Boy*, or a Male Child, any time before his Marriage.—The *Italians* use *Garfoue* in the same Sense.

Pontanus remarks, that they antiently wrote it *garcon*: But the Etymologists can't agree as to its Origin.—To say nothing of all the rest, *Martinius* alone proposes seven Derivations; without pitching upon any, viz. the Latin *garrire*, to prattle; the *Chaldee* גרר, Student, Learner; the *French Garder*, to guard; the *German warden*, to tarry, or wait; the *Greek* γαρύς Young-man; the *Arabic* غارم, Young-man; and the *Hebrew* גרם, the young of any Brute.

GARCON is also applied to divers inferior Officers: Thus, all the People in the King's Chamber, Wardrobe, &c. who do the lesser Offices thereof under the proper Officers, are called *Garçons de la Chambre*, de la *Garderobbe*, &c.

GARD,
GARDS,
GARDIAN,
GARDEROBE, &c. } see {
 GUARD.
 GUARDS.
 GUARDIAN.
 WARD-ROBE.

GARDANT, in Heraldry. See **GUARDANT**.

GARDEN, an Inclosure, or Plot of Ground, curiously cultivated, and furnish'd with Variety of Plants, Flowers, Fruits, &c. See **GARDENING**; see also **ORCHARD**.

Gardens are distinguish'd into *Flower Gardens*, *Fruit Gardens*, and *Kitchen Gardens*: The first for Pleasure, and Ornament; and therefore placed in the most conspicuous Parts: The two latter, for Service; and therefore made in By-places. See **FLOWER**, **FRUIT**, &c.

In a *Garden*, the principal Things to be consider'd, are the *Form*, *Soil*, *Situation*, and *Aspect* or *Exposure*.

For the first Point, the *Form*: A Square, or other Oblong, is most eligible; leading from the Middle of the Houfe, with a Gravel Walk in the Midst; narrow Grass-borders on each Side; and on either Side of these, Rows of Variety of Winter Greens: If the Ground be irregular, it may be made uniform in as to afford a Prospect nothing inferior to the most regular; fruit Lines will reduce any Figure to Order. A Triangle has its Beauty, as well as a Square; and the most irregular Spots may be brought by Borders, and Walks to those two Figures.

Indeed, an Irregularity is easily hid in a large *Garden*, by long Walks, and tall Hedges, interrupting a distant View: And the little Corners, and Triangular Spaces, may be agreeably fill'd up with Borders of Flowers, Dwarf Trees, flowering Shrubs, or Ever-Greens. Nor is it prudent, to be solicitous to throw the whole *Garden* into a single View; as Irregularities, and Unevennesses, afford many uncommon, pretty Devices, &c. See **WALKS**, and **BORDERS**.

For the second Point, or the *Soil*: A deep, rich, black Mould is best for Plants; sandy Land is warm and forward, and good for Flowers; chalky Land is cold and backward. But both are easily corrected by Composts, or Materials of opposite Kinds. See **SOIL**, and **COMPOST**.

For the *Situation*: If the *Garden* be too high, it will be expos'd to the Winds, which are highly prejudicial to Trees; if too low, the Dampness will be injurious, beside the breeding of Vermine: A Flat, therefore, or the Side of a Hill, are the happiest Situation; especially the latter, as it is usually well water'd, and shelter'd from the Extremes of Weather; beside that the Water descending from on high, will supply Fountains, Cascades, and other Ornaments of a *Garden*. See **FOUNTAIN**, &c.

For the *Aspect*, or *Exposure*, we have already consider'd what relates thereto, under the Article *Exposure*: See **EXPOSURE**.

Of all things, the Ground, or Soil of the *Garden* is the most important: Unless this be rich, and fertile, all the other Advantages will be vain. To judge of the Quality of the Soil, some direct us to look, whether there be any Heath, Thistles, or other Weeds growing spontaneously therein, as a certain Sign of a poor Ground: The Growth of the Trees, too, thereabout, is to be consider'd; if they grow crooked, ill shap'd, and grubby, of a faded Green, and full of Moss; the Place is to be immediately rejected. If the contrary be found; you must proceed to examine the Depth of the Soil, by digging Holes under Ground. The Soil

should be three Foot deep; but less than two, is not sufficient.

The chief Furniture of Pleasure Gardens are, *Porticoes*, *Vista's*, *Glades*, *Groves*, *Compartiments*, *Quadrances*, *Verdant Halls*, *Arbour Work*, *Mazes*, *Labyrinth*, *Fountains*, *Cabinets*, *Cafés*, *Canals*, *Terrasses*, &c. See each under its proper Article, **TERRASS**, **CASCADE**, **FOUNTAIN**, &c.

In the *planting of a Fruit or Kitchen Garden*, if the Soil be a hungry Gravel, or Sand, Mr. *Switzer* directs the Holes where the Trees are to be planted, to be dug two Foot deep, and three or four over, and filled with rotten Horfes or Cows Dung, mix'd with rich Mould: If it be Marle or stiff Clay, a Compost of Rubbish, Lime, Pieces of Brick, Ashes, Sand, &c. will be best to mix with Dung and Mould; the he is of opinion, that untried Earth, dug from a Waste or Common where Cattle has been fed, would prove the best Soil for young Trees. See **FRUIT TREE**.

The Trees being now taken out of the Nursery, the biggest Roots are to be shorten'd to about six Inches; all the small Fibres taken off; and the Head to be pruned, so as not to leave above two Branches; and those not above six Inches long. See **PLANTING**.

The *Wall Trees*, to be placed as far from the Wall, as possible; that there may be the more Room for the Roots to spread. Then, filling up the Hole with Mould, there remains nothing but to secure the Roots from the Winter's Frost, by covering the Spot with Straw, Fern, Dung, &c. And in Summer, from the Sun; by Sand, and Pebble Stone. See **WALL FRUIT**.

For Trees planted in Borders, the common Practice is to make a Trench by the Wall-side, two Foot broad, and as many deep. This Trench they fill with old Dung, mix'd with Earth, lightly laid, near as high as the Borders are intended to be; and then trodden down to half the Height in the Places where the Trees are intended to be. 'Tis prudent, to plant the Trees shallow, and to raise the Earth about them; especially in a wet, clayey Soil.—See **PLANTING**, **SEMINARY**, &c.

'Tis an Observation of some Importance, that Wall Trees, and Fruit thrive best, when the Walks that run parallel to them, are Gravel; more of the Rays of the Sun being thereby reflected to them, than if they were Grass. Add, that no sort of tall Trees are to be suffer'd to grow in any of the opposite Borders, or intermediate Spaces, so as their Shade might reach to the South East, or South West Walls. The Places near the Walls are most advantageously filled with Dwarf.—See **DWARF**, **ESPALIER**, &c.

GARDENING, **HORTICULTURE**, the Art of cultivating a *Garden*. See **GARDEN**.

Gardening has in all Ages been esteem'd an Employment, worthy the greatest Hero's, and Philosophers: The Emperor *Diocletian*, at *Salona*; and *Epicurus*, and *Metrodorus*, at *Abtus*, have emul'd the Art beyond all Encomium.

Goetius, Superintendent of *Lubeck*, printed a Dissertation in 1706, entitled *Methodus seu De Eruditis Hortorum Cultoribus*, Of the Learned Men who have loved, and cultivated Gardens; among which Number he ranks *Adam*, *Gregory Nossianzen*, *St. Augustin*, *Pliny*, and *Cicero*: Nor should he have forgot the elder *Cato*, *Democritus*, *Plato*, and his Academy.

The *Sicur le Nostre* first carried *Gardening* to any thing of Perfection: *M. la Quintaine* has gone yet further; nor have our own Countrymen of late been wanting to its Improvement; as *London*, and *Wife*, *Bradley*, *Laurence*, *Fairebild*, &c.

M. Fatio has lately apply'd Mathematical Reasoning to *Gardening*, and shewn how to make the best use of the Sun's Rays in Gardens. See **WALL**.

The principal Operations in *Gardening*, are *Planting*, *Transplanting*, *Engrafting*, *Inoculating*, *Pruning*, *Securing*, &c. Which see under their proper Articles, **PLANTING**, **TRANSPLANTING**, **ENGRAFTING**, **PRUNING**, &c.

Other Particulars, relating to the Art of *Gardening*, see under **PINCHING**, **VARIEGATING**, **NURSERY**, **SEED**, **GREEN-HOUSE**, **HOT-BED**, &c. See also **PLANT**, **TREE**, **FRUIT-TREE**, **WALL-TREE**, **DWARF**, &c. See also **SALADE**, &c.

GARDENING, in *Falconry*. To *garden a Hawk*, is to put her on a Turf of Grass to cheer her.—Some also use the same Phrase for the giving her an Airing, or letting her fly at large.

GARDEVISURE, in Heraldry; see **VIZON**.

GARGARISM, **GARGLE**, in Medicine, a liquid Form of Remedy, for Disorders of the Mouth, Gums, Throat, &c. *Gargarismus* are composed of Honey, Salts, Syrups, Spices, Vinegar, Waters, and Decoctions; and produce their Effect by cleansing, lubricating, &c. the Parts.

An Astringent *Gargarism*, Detergent *Gargarism*, Reli-gent *Gargarism*, &c.

The Word is form'd of the *Greek* γαργαλιζω, collaere, to wash.—Or of the *Hebrew* *Garghera*, the Throat.—

GARLAND, an Ornament for the Head, in manner of a Crown. See CROWN.

Garlands are a sort of Chaplets, made of Flowers, Feathers, or even of precious Stones; but especially Flowers: To which the Word in our Language is more immediately affected.

Janus passus, in Antiquity, for the Inventor of **Garlands**. *Alben. Dipnot. L. XV.*

The Word is form'd of the Barbarous Latin *Ghirlanda*; which is still retain'd in the *Italian*. *Ménage* traces its Origin from *Girus*, thro' *girulus*, to *girulare*, *girare*, *gbrlandus*, *gbrilanda*, and at length *gaurlanda*, and *Garland*; so that *Guirland*, or *Garland* are descended in the eighth Degree from *Gyrus*.—

Hicks rejects this Derivation, and brings the Word from *Gardel banda*, which in the Northern Languages signify, a *Nesgay* artfully wrought with the Hand.—

GARLAND, in a Ship, a Collar of Rope, which is wound about the Head of the Main-mast, to keep the Shrouds from galling.

GARNISH. In some ancient Writings and Statutes, to garnish the *Heir*, signifies to warn the Heir.

GARNISHEE, in Law, the Party, in whose Hands Money is attach'd within the Liberties of the City of *London*; so call'd in the Sheriff of *London's* Court, because he has had *Garnishment*, or Warning, not to pay the Money, but to appear and answer to the Plaintiff-Creditor's Sute. See ATTACHMENT.

GARNISHING, or **GARNISHMENT**, is popularly used for the Furniture of any thing; or an Assèmbage, or Sortment necessary for the using, or adorning of any thing. See FURNITURE.

The **GARNISHING** of a *Dish*, consists of certain Things which accompany it; either as a Part, and Ingredient thereof; In which Sense Pickles, Mushrooms, Oysters, &c. are *Garnishing*: Or as a Circumstance, or Ornament; as when Leaves, Flowers, Roots, &c. are laid about a Service, to amuse the Eye.

The same Word is us'd for the finer Herbs, Fruits, &c. laid about a Sallad: *Garnishing* of Lemon, *Pitcher's*, *Pomgranate*, Yolks of hard Eggs, *Artichok Bottoms*, *Capers*, *Truffles*, *Sweet-bread*, &c.

The Word is *French*, form'd of the Verb *Garnir*, to furnish, or fit out.

GARNISHMENT, in Law, a *Warning* given any one to appear; and that for the better furnishing the Cause, and Court. Suppose, e. gr. one is sued for the Detinèe of certain Charters, and says, they were deliver'd to him, not only by the Plaintiff, but *J. S.* also; and therefore prays, that *J. S.* may be warn'd to plead with the Plaintiff, whether the Conditions are perform'd, or no.

In this Petition he is bid to pray *Garnishment*; which may be interpreted, a *Warning* to *J. S.* to provide himself of a Detinèe; or else a furnishing the Court with all Parties to the Action, whereby it may thoroughly determine the Cause.—

GARRISON, a Body of Forces, dispos'd in a Fortrelle, to defend it against the Enemy; or to keep the Inhabitants in Subjection; or even to be substituted during the Winter Season. See FORTRESS.

The Words *Garrison*, and *Winter Quarters*, are sometimes used indifferently for the same thing; and sometimes they denote different Things.

In the latter Case, a *Garrison* is a Place wherein Forces are maintain'd, to secure it; where they keep regular Guard: As, a *Frontier Town*, a *Citadel*, *Castle*, *Tower*, &c. The *Garrison* should always be stronger than the Towns-men.

Winter Quarters, signify a Place where a Number of Forces are laid up in the Winter Season, without keeping the regular Guard. The Soldiers like better to be in *Winter Quarters*, than in *Garrison*. See FORTIFIED PLACE, WINTER QUARTERS, &c.

Du Cange derives the Word from the corrupt Latin *garnicio*, which the later Writers use to signify all manner of Munition, Arms, Victuals, &c. necessary for the Defence of a Place, and the sustaining of a Siege.

GARTER, literally signifies the same with the Greek *περικνηστιον*, *Pericnetia*, a Ligature, to keep up the Stockings; and is particularly used for the Badge, or Cognizance of a Noble Order of Knights, hence denominat'd the *Order of the Garter*. See the following Article.

GARTER, or *Order of the Garter*, is a Military Order, instituted by King *Edward III.* in 1350; under the Title of the *Sovereign*, and *Knights-Companions of the most Noble Order of the Garter*. See ORDER.

This Order consists of 26 Knights, or Companions; generally, all Peers, or Princes; whereof the King of *England* is the Sovereign, or Chief.

They wear a blue *Garter* on the left Leg, with this Motto, or Device, *Honi soit qui mal y pense*; *g. d.* Shame to him, that thinks evil hereof. See MOTTO.

They are a College, or Corporation; having a Great,

and Little Seal: Their Officers are, a *Prelate*, *Chancellor*, *Register*, *Dean*, *King at Arms*, and *Officer*. See PRELATE, CHANCELLOR, &c.

Beside which, they have a *Dean*, and twelve *Canons*, with *Petty Canons*, *Vergers*, and 26 *Peisflowers*, or *poor Knights*. See CANON, &c.

The Order is under the Patronage, or Protection of *St. George*, the Tutelary Saint of this Kingdom. See PATRON.

Their College is held in the Castle of *Windfor*, within the Chapel of *St. George*, and the Chapter-house, erected by the Founder for that Purpose. Their Robes, &c. are the *Garter*, deck'd with Gold, Pearl, and precious Stones; and a Buckle of Gold, to be worn daily on the left Leg; and, at Feasts and Solemnities, a *Surcoat*, *Mantle*, *high Velvet Cap*, *Collar of SS's*, composed of Roses enamel'd, &c. See SURCOAT, COLLAR, &c.

When they wear not their Robes, they are to have a silver Star on the left Side; and they commonly bear the Picture of *St. George*, enamel'd on Gold, and beset with Diamonds, at the End of a blue Ribbon, crossing the Body from the left Shoulder. They are not to appear abroad without the *Garter*, on Penalty of 6 s. 8 d. paid to the Register.

The Order of the *Garter* appears the most ancient and noble Lay Order in the World. 'Tis prior to the *French Order of St. Michael*, by 30 Years: To that of the *Golden Fleece*, by 80 Years: To that of *St. Andrew*, by 150 Years; and to that of the *Elephant*, by 209 Years. See ORDER OF ST. MICHAEL, GOLDEN FLEECE, ST. ANDREW, ELEPHANT, &c.

Since its Institution, there have been eight Emperors; and 27 or 28 foreign Kings; beside numerous Sovereign Princes enroll'd as Companions thereof.

Its Origin is somewhat differently related: The common Account is, that it was erected in Honour of a *Garter* of the Countess of *Salisbury*, which she dropt in Dancing, and the King pick'd it up: But our best Antiquaries for this abide as fabulous.

Cambden, *Fern*, &c. take it to have been instituted on occasion of the Victory obtain'd over the *French*, at the Battle of *Cressly*: That Prince, say some Historians, order'd his *Garter* to be display'd, as a Signal of Battle; in commemoration whereof, he made a *Garter* the Principal Ornament of the Order, erected in memory of this Signal Victory; and a Symbol of the indissoluble Union of the Knights.—

Fr. Papebroch, in his *Annotata* on *St. George*, in the third Tome of the *Acta Sanctorum*, publish'd by the *Hollandists*, has a Dissertation on the Order of the *Garter*. This Order; he observes, is not less known under the Name of *St. George*; than under that of *Garter*; and that, tho' it was only instituted by *K. Edward III.*; yet it had been projected before him, by *K. Richard I.* in his Expedition to the Holy Land; if we may credit an Author, who wrote under *Henry VIII.* *Papebroch* adds, however, that he does not see what that Author grounds his Opinion on; and that tho' the Generality of Writers fix the Epocha of this Institution to the Year 1350, he chuses, with *Fraissard*, to refer it to the Year 1344; which agrees better with the History of that Prince; where we read, that he call'd an Extraordinary Assèmbly of Knights that Year.

In 1551 *Edward VI.* made some Alterations in the Ritual of this Order: That Prince compos'd it in Latin; the Original whereof is still extant in his own Hand Writing. He there order'd, that the Order should no longer be call'd the Order of *St. George*; but that of the *Garter*; and instead of the *George*, hung at the Collar, he substituted a Cavalier, bearing a Book on the Point of his Sword, with the Word *Protectio* graven on the Sword; and *Verbum Dei* on the Book; with a Buckle in the left Hand, and the Word *Fides* thereon.— *Larrey*.

Authors on this Order are, *Cambden*, *Ashmole*, *Leland*, *Polydore Virgil*, *Heylin*, *Legar*, *Glover*, and *Fawyn*.

Erbard, *Collins*, and the Prince of *Orange*, adds *Papebroch*, have given Descriptions of the Ceremonies used at the Installment of Knights; and a *Cistercian* Monk, named *Mendocius Bealeus*, has a Treatise, intitled *la Garretiere*, or *Spectaculum Anglicanum*, since printed under the Title of the *Catechism of the Order of the Garter*: Wherein he explains all the Allegories, real, or pretended of those Ceremonies, with the Moral Significations thereof.

GARTER, *Principal King at Arms*; see KING AT ARMS.

Garter, and *Principal King at Arms*, are two distinct Offices, united in one Person: *Garter's* Employment is to attend the Service of the *Garter*; for which he is allowed a Mantle and Badge, a House in *Windfor* Castle, and Pensions both from the Sovereign, and Knights, and lastly, Fees. He also carries the Rod and Sceptre at every Feast of *St. George*, when the Sovereign is present: Notices the Election of such as are new chosen: Attends the Solemnity of their Installations, and takes care of placing their Arms over their Seats: Carries the *Garter* to foreign Kings and Princes;

for which Service, it has been usual to join him in Communion with some Peer of the Realm.

Garter's Oath relates only to Services to be perform'd within the Order; and is taken in Chapter before the Sovereign and Knights. His Oath, as King at Arms, is taken before the Earl Marshal.

GARTER is also a Term in Heraldry, signifying the Moicity, or half of a *Bend*. See *BEND*.

GAS, in Chemistry, a Term us'd by *Van Helmont*, to express the Seeds, or Fermentations, or first Principles of Things; But he applies it to obscurely, and precariously, that 'tis hard reducing it to any one Sense.

Thus, he calls the vital Principle in Man, *Gas Vitale*; and the same Denomination *Gas* he gives to the sulphurous Steams, which occasion Damps; Add, that he calls the Air, *Gas Ventosum*; and Water, the *Gas of Salts*.

Some would fix his Meaning to the Spirit, or subtle and most volatile Part of a Body; And thus, *Gas Cerevisiæ*, is the spirituous Steam, which flies off from Ale, while in working; but this does not take in the whole Idea of *Gas*.

GASCOIN, or **GASROIN**, the hinder Thigh of a Horse; commencing from the Stifle, and reaching to the Ply, or bending of the Ham.

GASCONADE, a boasting or vaunting of something very improbable. He pretended he had fought singly against three Men; a downright *Gasconade*.

The Term has its Rise from the *Gascons*, or People in *Gascony*, in *France*, who are distinguish'd for Bragging, and Rhodomontado.—

GASTALDIUS, or **CASTALDIUS**, an Officer, antiently entertain'd in the Courts of divers Princes; See also *Gastaldus*, *Gastaldio*, *Gastaldatus*, *Gastaldus*, &c.

The *Gastaldus* was what in *Italy* and *Spain* is now call'd *Majordomo*, viz. the Master, or Steward of a Household. The *Gastaldus* was a *Comes*, or Count, which shews his Office to have been very considerable.—

In the *Laws of Italy* we sometimes meet with *Gastaldus*, in the Sense of a Courier; and sometimes as an Ecclesiastical Officer, so that it is somewhere express'd to be *Simony*, to buy the Function of *Gastaldus*.

Maeri derives the Word from the Arabic *Chafendar*, Parveyor of a Hoofe; Others, from the German *Gast*, and *halten*, to retain Travellers.—

GASTEREPILOICA, in Anatomy, a Vein, which opens into the Trunk of the *Vena Porta*; form'd of several Branches; derived from the Stomach, and Epiploon; whence its Name, γαστήρ, and ἐπιπλόον. See *VEIN*.

GASTEROCNEMIUS, in Anatomy, a Name common to two Muscles, constituting the *Sura*, or *Calc* of the Leg; the one call'd *Externus*, the other *Internus*.

GASTEROCNEMIUS Externus, call'd also *Suralis Externus*, and *Gemellus*, has two distinct, fleshy Originations, from the superior, and hindermost Part of each Tubercle of the lower Appendage of the Thigh-bone; which in their Descent are each dilated into two small fleshy Bellies, the innermost of which is thickest and largest; having each a different Series of fleshy Fibres, which at length uniting, make a broad, strong Tendon; which narrowing itself, joins the great Tendon of the *Soleus*, four Fingers breadth above its Insertion into the *Os Calcis*.

When this Muscle acts, the Foot is said to be extended or pulled backwards; which Motion is very necessary in walking, running, leaping, or standing on tip-toe, &c. whence it is, that those who walk much, or carry heavy Burdens; and who wear low-heel'd Shoes, have these Muscles larger than others.

GASTEROCNEMIUS, or *Suralis Internus*, call'd also *Soleus*, from its Figure, resembling a Sole-Fish, is placed under the external. Its external fleshy Part is cover'd with a transparent tendinous Expansion, which makes it appear of a livid Colour.

It begins partly tendinous, chiefly from the hindermost Part of the upper Appendix of the Fibula, and back-part of the Tibia, that is, below the Insertion of the *Subpopliteus*; and increasing to a large fleshy Belly, composed of various Orders of fleshy Fibres, some of them underneath aptly expressing the Figure of the Top of a Feather, whose Stamina, being here tendinous, join with the great Tendon, which is about a Finger's Breadth long; and inserted into the superior and hindermost Part of the *Os Calcis*.

The Foot, together with the Toes, being, as it were, a Lever to the whole Body, ought therefore to be attended with Muscles of great Strength to extend it; which is the Reason that these Muscles so much exceed their Antagonists.

GASTRIC, **GASTRICUS**, in Anatomy, is applied to divers Veins, an account of their proceeding from the Stomach, or Ventricle, which the *Greeks* call γαστήρ. See *STOMACH*.

The *Gastricus major*, or greater *Gastric* Vein is inserted into the Splenic Vein; and the *minor*, or lesser *Gastric*, into the Trunk of the *Vena Porta*.

GASTRILOQUUS, or **GASTRILOQUUS**, a Person who speaks inwardly, or within his Stomach; and whose Voice seems to come a-far off; more usually call'd *Ventriiloquus*. See *VENTRILOQUUS*.

The Word is form'd of the Greek γαστήρ, Belly; and the Latin loqui, to speak.

GASTROLÁTER, a Glutton, or Belly-god; *Cujus Deus venter est*. See *IDOLATER*.

GASTROMANCY, or **GASTROMANTIA**, a kind of Divination, practis'd among the Antients, by means of Words; coming, or seeming to come, out of the Belly. See *DIVINATION*.

The Word is form'd of γαστρομαντία, composed of γαστήρ, Belly, and μαντία, Divination.

There is another kind of Divination, call'd by the same Name, *Gastronomy*, which is perform'd by means of Glasses, or other round, transparent Vessels; at the Bottom whereof certain Figures appear, by Magic Art. 'Tis thus call'd, by reason the Figures appear as in the Belly of the Vessels.—

GASTROTOMY, the Operation of cutting open the Belly; the same with what is otherwise call'd the *Cæsarian Section*. See *CÆSARIAN SECTION*.

GÁTE, a large Door, leading, or giving Entrance, into a City, Town, Castle, Palace, or other considerable Building. See *DOOR*.

Thebes, in *Egypt*, was antiently known by the Appellation, *With an hundred Gates*. *Fez*, in *Africa*, has 31 *Gates*. In Antient *Rome* there was a *Triumphal Gate*, *Porta Triumphalis*. See *TRIPUMPH*. In the *Modern Rome* there is the *Jubilee Gate*, which is only open'd the Year of a Grand Jubilee. See *JUBILEE*.

The *Gates of London* are many of them converted into Goals, or Prisons; as *Ludgate*, *Newgate*, &c. See *PRISON*. The lesser, or By-gates, are call'd *Posterns*. See *POSTERN*.

Gates thro' which Coaches, &c. are to pass, should not be less than seven Foot broad; nor more than twelve; The Height to be 1½ the Breadth.

GAVEL, in Law, signifies Tribute, Toll, Custom, yearly Rent, Payment, or Revenue; of which there are several Kinds, as *Gavel-Corn*, *Gavel-Malt*, *Out-Gavel*, *Gavel-Padder*, &c.

GAVEL, is sometimes us'd for what we more usually call the *Gable*. See *GABLE*.

GAVEL-LIND, a Tenure, or Custom, whereby the Lands of the Father are equally divided, at his Death, among all his Sons; or the Land of the Brother among all the Brethren, if he have no Issue of his own. See *CUSTOM*, and *TENURE*, *DESCENT*, &c.

*Tenonicis priscis succedit in agris
Masculus stirpis omnis, ne fores ulla potens.*

This Custom, which antiently obtain'd throughout *England*, is still of Force in the greatest Part of *Kent*, *Urbensfield* in *Hertfordshire*, and elsewhere; tho' with some Difference: But by the Stat. 34 and 35 *Hen. 8.* all *Gavelkind* Lands in *Wales* are made defendible to the Heir, according to the Court of common Law. See *H212*, &c.

Cambden in his *Britan.* gives the Origin and Nature of *Gavelkind* thus: 'The People of *Kent*, upon the *Norman* Invasion, could not be reduced to surrender to the Conqueror, but on these Conditions, that they should retain their antient Country-customs without any Infringement or Diminution; and especially that call'd *Gavelkind*. The Lands held under this Denomination, descend equally, and are divided, share and share alike, among all the Male Children; and in defect of these, among the Females.' He adds, 'That they are of Age, or qualified to take the Lands upon them, at Fifteen; and may then give, vend, or alienate the same to any Person, without the Consent of any Lord: And Children here inherit their Fathers Land, tho' convicted of Felony, Murder, &c. The Tenants in *Gavelkind* are to do Fealty; and to be in the Tutelage of the next a-kin, who is not next Heir after them, till 15 Years of Age; to pay Acknowledgment to the Lord for the Lands,' &c.

In an antient Book of Records in *Christ-Church, Canterbury*, of the time of *Henry VIII.* our *Saxon* Ancestors are said to have either held their Lands by Writing, or without: The first were call'd *Bookland*; whose Owners were Men, whom we now call *Freeholders*: The second was call'd *Folkland*; the Owners whereof were of servile Condition, and possess'd ad *voluntatem Domini*. See *BOOKLAND*, *FREEHOLD*, *FOLKLAND*, &c.

Now, the Inheritance, or Freehold, did not, in those Days, descend to the eldest Son, but to all alike; which in *Saxony* was call'd *Landes Scyppan*, and in *Kent*, *To shift Land*; whence came the Custom *Gavelkind*. And the Reason why it was retained in *Kent* more than other Places, was that the *Kenishmen* were not conquer'd by the *Normans*: For, say our Historians, *Stigand*, the Arch-Bishop of *Canterbury*;

terbury, and one *Egelfine*, an Abbot, who commanded the Forces in that County; ordering every Man, fit to bear Arms, to march and cover themselves, with green Boughs in their Hands: In this Disguise they met the Conqueror unaware at *Stanscomb*; where, discovering themselves, the Archbishop and Abbot acquainted him with their Resolution of standing and falling in defence of the Law of their Country. Upon this the Conqueror, imagining himself encompass'd in a Wood, granted, that they, and their Posterity, should enjoy their Rights, Liberties, and Laws: Some of which, as particularly that of *Gavelkind*, continues to their Descendants to this Day.

GAVELMAN, a Tenant, who is liable to Tribute.—*Villani de Terring, qui vocatur Gavelmani. Somner, Gavelkind.*

GAVELET, in Law, a special, and ancient kind of *Cof-favoi*, us'd in *Kent*, where the Custom of Gavel-kind continues; whereby the Tenant shall forfeit his Lands and Tenements to the Lord, if he withdraw from him his due Rents and Services. See *FEE, SERVICE, and GAVEL-KIND.*

The Process of the *Gavelet* is thus: The Lord is first to seek by the Steward of his Court, from three Weeks to three Weeks, to find some Distress upon the Tenement; till the fourth Court; and if in that time he find none, at this fourth Court, it is awarded, that he take the Tenement into his hand in name of a Distress, and keep it a Year and a Day without manuring; within which time, if the Tenant pay his Arrears, and make reasonable Amends for the Withholding, he shall have and enjoy his Tenement as before: If he come not before the Year and Day be past, the Lord is to go to the next County Court, with Witnesses of what paid at his own Court, and pronounce there his Process, to have further Witnesses; and then by the Award of his own Court, he shall enter and manure the Tenement as his own: So that if the Tenant desire afterwards to have and hold it as before, he must agree with the Lord, according to this old Saying:

*Has he not since any thing given, or any thing paid,
Then let him pay five Pounds for his Wore, e're he become
Healder again.*

Other Copies have the first Part with some Variation;

Let him nine times pay, and nine times repay.

GAUGE-Point, of a solid Measure, is the Diameter of a Circle, whose Area is equal to the solid Content of the same Measure. See *MEASURE, and CONTENT.*

Thus, the Solidity of a Wine Gallon being 231 Cubic Inches; if you conceive a Circle to contain so many Inches, the Diameter of it will be 17.15; and that will be the *Gauge Point* of Wine Measure.

And an Ale Gallon containing 288 Cubic Inches; by the same Rule, the *Gauge Point* for Ale-measure will be found to be 19.15: And after the same manner may the *Gauge-Point* of any other Measure be determined.

Hence we deduce, that when the Diameter of a Cylinder in Inches is equal to the *Gauge-Point* in any Measure, (given likewise in Inches) every Inch in length thereof will contain an Integer of the same Measure. In a Cylinder, whose Diameter is 17.15 Inches, every Inch in Height contains one intire Gallon in Wine-measure; and in another, whose Diameter is 19.15, every Inch in length contains one Ale Gallon.

GAUGE Line, a Line on the common Gauging Rod, whose Description and Use see under the Article *GAUGING.*

GAUGER, an Officer of the King's Excise, whose Business it is to gauge, i. e. to examine, survey, or measure all Casks of Beer, Wine, Oil, &c. and to give them a Mark of Allowance (which is a Circle burnt with an Iron, before they be fold in any Place within the Extent of this Office. See *EXCISE, and GAUGING.*

GAUGING, the Art, or Act of measuring the Capacities, or Contents of all kinds of Vessels; and determining the Quantity of Fluids, or other Matters, contain'd therein. See *MEASURING, CONTENT, &c.*

Or, *Gauging* is the Art of reducing the unknown Capacity of Vessels of divers Forms; cubical, parallelepipedal, cylindrical, spheroidal, conical, &c. to some known cubic Measure; and of computing, for instance, how many Gallons, Quarts, Pints, or the like, of any Liquor, e. g. Ale, Beer, Wine, Brandy, &c. are contain'd therein. See *CUBZ, PARALLELIPED, &c.*

Gauging is a Branch of *Stereometry*. See *STEREOMETRY.*

The principal Vessels that come under its Operation, are *Pipes, Barrels, Rundlets*, and other Casks; *Bags, Coolers, Fats, &c.* See *BARREL, &c.*

The solid Content of cubical, parallelepipedal and prismatical Vessels, we have already observ'd, is easily found in

Cubic Inches, or the like, by multiplying the Area of the Base by the perpendicular Altitude. See *SOLID, PRISM, &c.*

And for cylindrical Vessels, the same is found by multiplying the Area of the circular Base, by the perpendicular Altitude, as before. See *CYLINDER.*

Casks of the usual Form of Hogheads, Kilderkins, &c. may be consider'd as Segments of a Spheroid cut off by two Planes, perpendicular to the Axis; which brings them to *Oughtred's Theorem*, for measuring Ale and Wine Casks; which is thus: Add twice the Area of the Circle at the Bung, to the Area of the Circle of the Head. Multiply the Sum by one third of the Length of the Cask: The Product is the Content of the Vessel in Cubic Inches.

But, for Accuracy, Dr. Wallis, Mr. Caswell, &c. think, that most of our Casks had better be consider'd as Frusta of parabolic Spindles; which are less than the Frusta of Spheroids of the same Base, and Height; and give the Capacity of Vessels nearer the Truth, than either *Oughtred's Method*, which supposes them Spheroids; or than that of multiplying the Circles at the Bung and Head, into half the Length of the Cask, which supposes them parabolic Conoids; or than that of *Clavius*, &c. who takes them for two truncated Cones; which is further off of all.

The common Rule for all Wine or Ale Casks, is to take the Diameters at the Bung, and at the Head; by which you may find the Areas of the Circle there: Then taking two Thirds of the Area of the Circle at the Bung, and one Third of the Area of the Circle at the Head; and adding them together into one Sum; this Sum multiplied by the internal Length of the Cask, gives the Content in solid Inches: Which are converted into Gallons, by dividing by 288 for Ale, and by 231 for Wine Gallons.

But *Gauging*, as now practis'd, is chiefly done by means of Instruments, call'd *Gauging Rods*, or *Rules*, which do the Business at once, and answer the Question without so much Calculation; which is no inconsiderable Addition, both to the Ease and Dispatch of the Work. This Instrumental way of *Gauging*, therefore, we shall here chiefly insist upon.—

Construction of a Gauging Rod, whereby the Content of any Cylindrical, or other common Vessel is easily had.

Take the Diameter A B of a Cylindrical Vessel, A B D A, *Tab. Surveying, Fig. 16.* that holds one of the Measures wherein the Fluid is estimat'd, e. g. Gallons; and at the Extremity A, erect an indefinite Perpendicular, A 7. From A to 1, let off a Right Line, equal to A B; then will B 1 be the Diameter of a Vessel, that holds two Measures, or Gallons, of the same Height as the former.

Again, let A 2=B 1; then, B 3 will be the Diameter of a Vessel that holds three Measures, but of the same Height as that which only holds one: And, after the same manner, find the Diameters of other larger Vessels, A 4, A 5, A 6, A 7, &c.

Lastly, set off the several Divisions thus found, A 1, A 2, A 3, &c. upon one Side of a Rod, or Rule; and on the other the Height, or Depth of a Cylinder, that holds one Measure or Gallon, repeated, as oft as it will go. Thus is the *Gauging Rod* complet.

Demonstration. For Cylinders, that have the same Altitude, are to each other as the Squares of their Diameters; consequently the Square of the Diameter that holds 2, 3, or 4 Gallons, must be double, triple, or quadruple of that which only holds one. And since in the first, A B=A 1, the Square of B 1 is double, that of B a right, that of B 3 quadruple, &c. it is evident, that the Right Lines A 2, A 3, A 4, &c. are the Diameters of the Vessels required.

These Divisions, therefore, being applied to the Side of a cylindrical Vessel, it will immediately appear how many Measures, e. g. Gallons, a cylindrical Vessel of that Base and of the Height of that which holds one Gallon, will contain.

Wherefore, finding by the Divisions on the other Side of the Rod, how often the Height of one Gallon is contained in the Height of the given Vessel; and multiplying the Diameter before found by this Number: The Product will be the Number of Gallons the Vessel contains.

Thus, e. g. if the Diameter of the cylindrical Vessel be 8, and its Height 12, its Content will be 96 Gallons.

Note, 1^o The less you take the Height of the Cylinder, containing one Gallon, the greater will the Diameter of the Base be: Whence both that, and the Diameters of the Cylinders, containing several Gallons, will be the more easily divisible into lesser Parts. *Boyer* directs such Height to be only one Digit, or Tenth of an Inch.

2^o The Diameters of Vessels holding one or more decimal Parts of a Gallon, will be had by dividing one or more decimal Parts of the Vessel holding a whole Gallon, by its Height; which gives us the Area of the circular Base; from whence the Diameter is easily found by the Rules de-

diver under DIAMETER, CIRCLES, &c. And after the same manner the Diameters are found for the Divisions of Vessels that hold two or more Gallons.

Use of the Gauging Rod.

To find the Content of a Cask; that is, to determine the Number of Measures *e. gr.* Gallons, it will hold: Apply the Gauging Rod to the Vessels, as directed in the preceding Article; and find both the Length of the Cask A C, Fig. 27. and both Diameters G H, and A B. Now, as we find by Experiment, how far soever it may be from Geometrical Exactness, that a common Cask of this Form, may safely enough be reputed as a Cylinder, whose Base is a Medium between the Head and the Belly; find such Medium, which call the equated Diameter.

Then, multiplying the Number thus found by the Length of the Cask A C; the Product will be the Number of Measures the Vessel contains.

Suppose *e. gr.* A B = 8, and G H = 12, and A C = 15; the equi-different Mean will be 10; which multiplied by 15, gives the Capacity of the Cask, 150 Measures.

If it happen that the Diameters of the two Ends be not equal; measure them both, and take half their Sum for the Diameter to work by.

There is another Method, whereby the Content of a Vessel is had even without any Calculation at all, which obtains in divers Parts of Germany and the Low Countries: But as this supposes all Vessels to be similar to each other; and their Length double of the equated Diameter, that is, of half the Sum of the Diameters A B, and G H; it is not safe to use it in all places. Kepler, however, prefers it so much before all others, as including all the Precautions possible; that he recommends it to the Publick, to enact it by Law, that all Casks be made in this Proportion.

The Methods of Gauging, which chiefly obtain among us, are by the Four Foot Gauging Rod, and Everard's Sliding Rule.

Description and Use of the Four Foot Gauging Rod.

The Four Foot Gauging Rod, represented in Tab. Surveying, Fig. 28. is usually made of Box, and consists of four Rules, each a Foot long, and about three Eighths of an Inch square, join'd together by three brass Joints; by which means the Rod is render'd four Foot long, when the four Rules are quite open'd; and but one Foot, when they are folded together.

On the first Face of this Rod, mark'd 4. are plac'd two Diagonal Lines; one for Beer, and the other for Wine: By means of which the Content of any common Vessel is Beer or Wine Gallons may be readily found, by putting the Rod in at the Bung-hole of the Vessel, till it meets the Interfection of the Head of the Vessel with the Staves opposite to the Bung-hole. For distinction of this Line, there is writ thereon, *Beer and Wine Gallons.*

On the second Face, 5. are, a Line of Inches, and the Gauge Line; which is a Line expressing the Areas of Circles, whose Diameters are the correspondent Inches in Ale Gallons. At the Beginning is writ, *Ale Area.*

On the third Face, 6. are three Scales of Lines; the first, at the End of which is writ *Hoghead*, is for finding how many Gallons there is in a Hoghead, when it is not full, lying with its Axis parallel to the Horizon. The second Line, at the End of which is writ B. L. signifying a *Butt lying*, is for the same Use as that for the Hoghead. The third Line is to find how much Liquor is wanting to fill up a Butt when it is standing: At the Ends of it is writ B. S. signifying a *Butt standing*. Half way the fourth Face of the Gauging Rod, 7. are three Scales of Lines, to find the Wants in a Firkin, Kilderkin, and Barrel, lying with their Areas parallel to the Horizon. They are distinguish'd by Letters P. K. B. signifying a *Firkin, Kilderkin, and Barrel.*

Use of the Diagonal Lines on the Gauging Rod.

To find the Content of a Vessel in Beer or Wine Gallons. Put the Brass End of the Gauging Rod into the Bung-hole of the Cask, with the Diagonal Lines upwards; and thrust the Brass End to the Meeting of the Head and Staves: Then, with Chalk, make a Mark on the Middle of the Bung-hole of the Vessel; and also on the Diagonal Lines of the Rod, right against, or over one another, when the brass'd End is thrust home to the Head and Staves. Then turn the Gauging Rod to the other End of the Vessel, and thrust the brass'd End home to the End as before.

Lastly, see if the Mark made on the Bung-hole, when the Rod was thrust to the other End; which if it be, the Mark made on the Diagonal Lines, will, on the same Lines, shew the whole Content of the Cask in Beer or Wine Gallons.—

If the Mark made on the Bung-hole, be not right against that made on the Rod, when you put it the other way; then, right against the Mark made on the Bung-hole, make another on the Diagonal Lines: And the Division on the Diagonal Line, between the two Chalks, will shew the Vessel's whole Content in Beer or Wine Gallons.

Thus, *e. gr.* if the Diagonal Line of a Vessel be 28 Inches four Tenths, its Content in Beer Gallons will be near 51, and in Wine Gallons 61.

If a Vessel be open, as a Half-barrel, Tun, or Copper, and the Measure from the Middle on one Side, to the Head and Staves, be 58 Inches; the Diagonal Line gives 122 Beer Gallons; half of which, viz. 61, is the Content of the open half Tun.

If you have a large Vessel, as a Tun, or Copper, and the Diagonal Line taken by a long Rule, prove 70 Inches: The Content of that Vessel may be found thus:

Every Inch at the Beginning end of the Diagonal Line, call ten Inches. Thus, ten Inches become 100 Inches; and every Tenth of a Gallon call 100 Gallons; and every whole Gallon, call 100 Gallons.

Exam. at 44. 8 Inches, on the Diagonal Beer-Line, is 100 Gallons; so also 4 Inches 48 Parts, now called 44 Inches 8 Tenths, is just two Tenths of a Gallon, now called 100 Gallons: So also, if the Diagonal Line be 76 Inches and 7 Tenths, a cote Cask, of such Diagonal, will hold 1000 Beer Gallons: But an open Cask, but half so much, viz. 500 Beer Gallons.

Use of the Gauge Line.

To find the Content of any Cylindrical Vessel in Ale Gallons: Seek the Diameter of the Vessel in the Inches, and just against it, on the Gauge Line, is the Quantity of Ale Gallons contain'd in one Inch deep: This multiplied by the Length of the Cylinder, will give its Content in Ale Gallons.

For Example: Suppose the Length of the Vessel 32. 06, and the Diameter of its Base 23 Inches; what is the Content in Ale Gallons?

Right against 23 Inches, on the Gauge Line, is one Gallon, and .745 of a Gallon; which multiplied by 32. 06, the Length, gives 55.9447 Gallons for the Content of the Vessel.

The Bung Diameter of a Hoghead being 25 Inches, the Head Diameter 22 Inches, and the Length 32. 06 Inches; to find the Quantity of Ale Gallons contain'd in it.

Seek 25, the Bung Diameter, on the Line of Inches; and right against it on the Gauge Line you will find 1.745: Take one Third of it, which is .580, and set it down twice: Seek 22 Inches the Head Diameter, and against it you will find on the Gauge Line, 1.356; one Third of which added to twice .580, gives 1.6096; which multiplied by the Length 32.06, the Product will be 51.603776, the Content in Ale Gallons.

Note, This Operation supposes, that the aforesaid Hoghead is in the Figure of the middle Frustum of a Spheroid.

The Use of the Lines on the two other Faces of the Rod, is very easy; you need only put it down right into the Bung-hole (if the Vessel you desire to know the Quantity of Ale Gallons contain'd therein be lying) to the opposite Staves; and then, where the Surface of the Liquor cuts any one of the Lines appropriated for that Vessel, will be the Number of Gallons contain'd in that Vessel.

The Description and Use of Everard's Sliding Rule for GAUGING, see under the Article SLIDING RULE.

GAUGING ROD; see GAUGING.

GAULISH Language; see ROMAN, and FRENCH.

GAUNT, an old Word for lean, or lank: Thus we say, a gaunt-belly'd or light-belly'd Horse, when his Belly shrinks up towards his Flanks.

GAURES, GAVRES, a religious Sect in Turkey, Persia, &c. The Turks call the Christians, *Gaures*; *q. d.* Infidels, or People of a false Religion; or rather, as *Leunclavius* observes, *Heathens, or Gentiles*: The Word *Gaure* among the Turks having the same Signification, as *Pagan, or Infidel*, among the Christians; and denoting any thing not *Mahometan*.

In *Persia*, the Word has a like general Signification; and beside a more peculiar one, wherein it is applied to a Sect dispersed thro' the Country, and said to be Remains of the ancient *Persians*, Worshipers of Fire: Tho', upon the whole, they rather appear to have been *Persians* converted; who being afterwards left to themselves, mingled their ancient Superstitions with the Truths and Practices of Christianity; and so form'd themselves a Religion a-part.

The *Gaures* pretend they derive their Religion from one *Aser*, a Frank by Nation, and by Profession a Sculptor: This Man coming to *Babylon*, where they then dwelt, married a Maid of the Country, named *Dogdon*; who, after a Visit which she received from an Angel, was fill'd with a Divine Light;

Light; and soon afterwards found herself with Child. The Astrologers, at the same time, perceiving that the Child would be a great Prophet, and the Founder of a new Religion; *Neubron*, the Prince then reigning, was advertis'd hereof; who gave immediate Orders for all the Women with Child to be put to death, throughout his Empire.

The Order was executed accordingly; but the Mother of the future Prophet, shewing no Tokens of Pregnancy, escaped; and was at length happily deliver'd of a Son, call'd *Ebrahim Zer-Atheub*.

After his Birth, new Dangers arose: The King, being inform'd thereof, had him brought before him; and drawing his Sabre, would have slain him with his own Hand; but his Arm grew motion-less upon the Spot: Upon this, a huge Fire was lighted, and the Child cast into the same; but he recited therein, as on a Bed of Roses. He was afterwards deliver'd from other kinds of Death, by a sort of Flies, which infested the Kingdom; one whereof, entering the King's Ear, render'd him frantic, and at length killed him.

Cha Gloebter, his Successor, made the like Attempts on the Child; but was so struck with the Miracles which he saw him work, that he began to adore him, as all the rest of the People already did.

At length, after a great Number of Miracles, the Prophet disappear'd.—Some hold he was translated into Heaven, Body, and Soul: Others, that he found an iron Coffin near *Bagdar*, where shutting himself up, he was carried away by the Angels.

After he was in Possession of Paradise, God sent them, thro' his means, seven Books; which contain'd all the Matters of Religion; and afterwards, seven more, of the Explication of Dreams; and lastly, seven of Medicine. *Alexander* the Great burnt the first seven, by reason so body understood the Language, and kept the other fourteen for his own Use.

After his Death, some of the Priests and Doctors among the *Gaures*, retriev'd as much as their Memory would allow them, of the lost Books; and compos'd a large Volume, still extant among the modern *Gaures*; tho' they understand nothing, either of the Words, or the Character.

Throughout the whole, we see the Marks, and Traces of Christianity; tho' grievously defaced: The *Annunciation*; the *Magi*; the *Massacre of the Infants*; Our Saviour's Miracles; his *Persecutions*, *Ascension*, &c.

GAWZE, in Commerce; a very thin, slight, transparent kind of Stuff, wove sometimes of Silk, and sometimes only of Thread. See *STUFF*.

To warp the Silk for making of *Gauze*, they use a kind of Mill, upon which the Silk is wound: This Mill is a wooden Machine, about six Feet high; having an Axis perpendicularly placed in the Middle thereof, with six large Wings, on which the Silk is wound from off the Bobbins, by the Axis turning round.

When all the Silk is on the Mill, they use another Instrument, to wind it off again on to two Beams: This done, the Silk is paid thro' as many little *Beads* as there are Threads of Silk; and thus rulled on another Beam, to supply the Loom.

The *Gauze Loom* is much like that of the common Weavers, tho' it has several Appendages peculiar thereto. See *LOOM*.

There are *Figur'd Gauzes*; some with Flowers of Gold and Silver, on a Silk Ground: These last are chiefly brought from *China*.

GAYAC, **GAYACUM**, or **GAYACAN**, a Medicinal Wood, brought from the *Indies*; much used in Venereal Disorders, called also *Lignum Sanguinum*; and by the *Spaniards*, *Ligno Sauto*. See *WOOD*.

Gayac grows equally in the East and West *Indies*: That of the latter is brought in large Pieces, some of them weighing four or five hundred Pound; by which it is distinguish'd from the former.

The *Gayac* Tree, is the Height of our Walnut Tree; and is distinguish'd into two Kinds, Male and Female; only differing, as their Leaves are more or less round; being all equally green, the Flowers blue, and of a starchy Form; having a little Orange-colour'd Fruit, about the Size of a small Nut, at the Tip thereof.

The Wood *Gayac* is extremely hard and heavy, and on that account used as Ebony, in Music Work, &c. as also for the making of *Burnt Moulds*. See *EBONY*.

But its principal Use is in Medicine, being found to warm, rify, attenuate, attract and promote Sweats and Urine. The usual way of applying it, is in Decoction.

The best is that in large Pieces, of a dusky Colour, fresh, gummy, heavy, of an agreeable Smell, and a brisk pungent Taste; the Bark sticking close to the Wood.

The Bark of *Gayac* is held of as much Virtue, as the Wood it self: The Rind is of no Efficacy; so that to make a Sudorific Decoction or Pisan of the Wood, they first pare off all the white Part, which in Reality is the Rind; and

only chip or rasp the hard, solid Part, which is black, heavy and resinous.

The Chirurgeons frequently substitute Box-wood, instead of *Gayac*, and 'tis said, with equal Success.

The Resin drawn from *Gayac*, is held much more effectual in Venereal Cases, than either the Wood, or Bark. 'Tis brought us in large Pieces, not unlike common *Resin*; but very different in respect of Smell: The former, when cast on the Coals, yielding a very agreeable balsamick Fume.

GAZETTE, a News Paper, or printed Account of the Transactions of divers Countries, in a loose Sheet.

Thus we say, the *Londou Gazette*, *Paris Gazette*, *Gazette a la main*, &c.

Gazettes, which most People look on as Trifles, are really the most difficult kind of Compositions that have appear'd. They require a very extensive Acquaintance with the Languages, and all the Terms thereof; a great Business and Command of writing, and relating, Things cleanly, and in a few Words.

To write a *Gazette*, a Man should be able to speak of War both by Land and Sea; be thoroughly acquainted with every thing relating to Geography, the History of the Time, and that of the Noble Families; with the several Interests of Princes, the Secrets of Courts, and the Manners and Customs of all Nations.

Vignol de Marville recommends a Set of *Gazettes* well wrote, as the fittest Books for the Instruction of young Persons, coming into the World.

The Word is form'd of *Gazetta*, a kind of Coin, formerly current at *Venice*; which was the ordinary Price of the first News Papers printed there: Tho' others derive it by corruption from the Hebrew *Agad*, which signifies *Nuntius*, a Messenger; but this Etymology is too much forced, and the former ought to be preferred.

The first *Gazette* publish'd in these Parts, is said to be that of *Paris*, begun in the Year 1631 by *Theophrast Renandot*, a Physician of *Montpelier*, in his Office of Intelligence. See *INTELLIGENCE*.

GAZONS, in Fortification, Pieces of fresh Earth cover'd with Grass, cut in form of a Wedge, about a Foot long, and half a Foot thick; to line Parapets, and the Traverties of Galleries. See *PARAPET*, *GALLERY*, &c.

GEERS, a general Term for Trappings, Harness, and all other Things, that belong to Draught-horses or Oxen.

GEHENNA, a Scripture Term, which has given some pain to the Critics. It occurs in *St. Matthew* v. 22, 29, 30. x. 28. xviii. 9. xxiii. 14. 33. *Mark* ix. 42. 44. 46. *Luke* xii. 5. *James* iii. 6.

The Authors of the *Lovain*, and *Geneva* Versions, retain the Word *Gehenna*, as it stands in the *Greek*; the like does *Mont. Simon*: The *English* Translators render it by *Hell*, and *Hell-Fire*; and the like do the Translators of *Mont*, and *Father Beaubours*.

The Word is form'd from the Hebrew *Gebinnom*, i. e. Valley of *Hinnom*. In that Valley, which was near *Jerusalem*, there was a Place named *Tophet*, where some Jews sacrificed their Children to *Moloch*, by making them pass through the Fire. *King Josiah*, to render this Place for ever abominable, made a *Cloaca*, or common Shore thereof, where all the Filth, and Carcasses in the City were cast. The *Jews* observe further, that there was a continual Fire kept up, to burn and consume those Carcasses, for which reason, as they had no proper Term in their Language, to signify *Hell*, they made use of that of *Gebenna*, or *Gebinnom*, to denote a Fire unextinguishable.—

GELATINOUS, among Physicians, is applied to any thing approaching the glutinous Consistence of a Jelly.

GELD, in our ancient Customs, a Mulct, or Compensation for a Crime, or Delinquency. See *MULCT*.

Hence, *Wergild* was antiently used for the Value or Price of a Man slain; and *Orgild* of a Beast.

Et sunt quiesci de Geldis, & *Danegeldis*, *Hirngeldis*, & *Forngeldis*, & *de Blodwita* & *Fintwita*, & *Leirwita*, & *Heingwita*, & *Fremingwita*, & *Werdpeni*, & *Awerpeni*, & *Hundredpeni*, & *Totingpeni*. *Charta Ric. a. Priorat. de Hatland* in *Devon*.

GELDABLE, see *GILDALE*.

GELDING, the Operation of Castrating, and particularly Horses. See *CASTRATION*.

The same Term is also applied to a Horse thus castrated; or whose Testicles are cut out; to disable him from being a Stallion.

In gelding of Horses, regard is had to their Age, the Season of the Year, and the State of the Moon.

For the First, if it be a Colt, the Operation may be perform'd at nine, or fifteen Days old, if the Testicles be come down; in regard the sooner he is gelded, the better it will be for his Growth, Shape, and Courage; tho' a Horse may be gelded at any Age, if care be taken in the Cure.

As for the Second, the best Time is about *April*, or *May*; or else about the latter End of *September*.

For the Third, The Wane of the Moon is prefer'd as the fittest Time.

The manner of *gilding* is thus: The Beaf being cast on some soft Place, the Operator takes the Testicles between his fore and great Finger; flits the Cod, and presses out the Stones; then with a pair of Nippers made very smooth, either of Steel, Box, or Brazil, clips the Strings of the Stones between them, very near to where the Stones are set on; and presses them so hard, that there may be no Flux of the Blood; then sears away the Stone with a thin drawing cauterizing Iron, made red hot.

This done, he takes a hard Plaster, made of Wax, Rosin, and wash'd Turpentine melted together, and melts it on the Head of the Strings with the hot Iron; and afterwards sears the Strings, and melts more of the Salve, till there is a good Thickness of the Salve laid on the Strings.

This being done to one Stone, the Nippers are loosen'd, and the like done to the other; and the two Slits of the Cod fill'd with white Salt; and the Out-side of the Cod anointed with Hogs Grease: And thus they let him rise, and keep him in a warm Stable, without tying him up.

If he swells much in his Cod, or Sheath, they chafe him up and down, and make him trot an Hour in a Day; and he soon recovers.

GELOSCOPY, **GELOSCOPIA**, a kind of Divination, perform'd by the means of Laughter: Or, a Knowledge of any Person's Character and Qualities, acquired from the Consideration of his Laughter. See **PHYSIOGNOMY**.

Metascopy, **Chromancy**, **Galefscopy**, **Ophthalmoscopy**, **Idemgraphy**; *Majestrat*. p. 607.

GEM, **GEMMA**, a common Name for all precious Stones, or Jewels. See **PRECIOUS STONES**.

Among Gems, the principal are the *Diamond*, *Ruby*, *Sapphire*, *Emerald*, *Turquoise*, *Opal*, *Agat*, *Crystal*, &c. See each under its proper Article, **DIAMOND**, **RUBY**, **SAPPHIRE**, **EMERALD**, &c.

Pearls are also ranked among Gems; tho' not Stones. See **PEARL**.

Several Authors, both Antient and Modern, relate Wonders of the Virtues and Medicinal Properties of Gems: But their Reputation, in this respect, is now not a little fallen; and many even deny them any Virtue at all. Yet are the Fragments of such Stones still preserv'd by the Physicians, in some of the most celebrated Compositions; and there are several Chemical Preparations made of them.

In effect, as several Persons of the greatest Candour and Experience, have related some considerable Effects of certain Gems, on their own particular Observations; and, as it is no ways improbable that some of the softer Stones may have considerable Operations on the human Body; it might be imprudent indiscriminately to exclude them from any Medicinal Virtue at all.

When such the greatest Part of their traditory Qualities are set aside as fabulous; there will still remain some, on as real, and well warranted a footing, as many of our other Medicines.

On such Considerations, Mr. Boyle was induced to give us a Treatise of the *Origin and Virtue of Gems*; the Part thereof is to make appear, that such Stones were originally in a fluid State; or made up of such Substances as were formerly fluid; and that many of their general Virtues are probably derived from the Mixture of Metalline, and other Mineral Substances usually incorporated with them; while the great Variety, and the particular Efficacy of their Virtues arise from some happy concurrent Circumstances of that Mixture; or, *gr.* the peculiar Nature of the impregnating Liqueur, the Proportion wherein it is mix'd, with the petrescent Juice, and the like.

To support this Hypothesis of the Virtues of Gems, he shows that several of them are not simple Concretions of any petrescent Liqueurs, but consist also of other mineral adventitious Parts; which he argues from the Separateness of such Substances in some Stones; the specific Gravity in others; and the different Waters or Tinctures to be met with in Gems of the same Species, as Rubies, Sapphires, Granates, and even Diamonds; of which some are yellow; some of other Colours; and some green, almost like Emeralds.

There may therefore be in some Gems numberless adventitious Corpuscles: But there is great reason to think that some of their Corpuscles may be endued with several Properties and Medicinal Virtues: There is a great Difference among these impregnating Particles; and probably a greater Variety than is known by us: And lastly, many Gems are very richly impregnated with these Particles; why, then, may not they exert some Power? This is the Substance of what is directly alleg'd, in behalf of Gems.

The Stress of what is objected against them, is, that the Mineral Substances they contain, are so closely locked up, that they can communicate nothing to the Body, and so can have no medicinal Operation, being unconquerable by so

small a Heat, as that of the Stomach, and other Parts of the Body. See **DIGESTION**.

Which Objection might be plausible enough to prevent one's ascribing any Medicinal Virtues to them *a priori*; but can conclude nothing against what is warranted by so many Facts, and Observations; especially, when there are several Particulars, that obviate this Objection.

For, a vigorous Loadstone, tho' frequently harder than many Gems, is known to emit copious Effluvia: And there are many which have been found to have a manifest and inconvenient Operation on the human Body, by being wore in the Pocket, or long held in the Hand. Mr. Boyle has found many transparent Pebbles, which, when cut, would resemble Diamonds, that might be immediately brought to emit copious, and strong-scented Streams. And if electrical Attractions be owing to the Effluvia of Bodies excited by rubbing; very slight Alterations may suffice to procure Expirations from transparent Gems, many of which are electrical, and even the hardest of all, *viz.* Diamonds; one of which Mr. Boyle kept by him, which upon a little Friction would attract very vigorously. See **MAGNET**, **EFFLUVIA**, **ELECTRICITY**, **DIAMOND**, &c.

To that Part of the Objection, which pretends Gems not to be digestible by the Heat of the Stomach, it may be replied, that we do not know how far the Digestion of Things in the Stomach is owing to Heat: Nor is it proved, that such Materials can have no Operation on the Body, without being digested, *i. e.* in passing thro' it, without undergoing any sensible Change of Bulk, Figure, &c. as Gems, when swallow'd, are supposed to do.

For some Chemists make a kind of Bullets of Regulus of Antimony, which they call *Pillule perpetue*, because when they have perform'd their Operation in the Body, and are cast forth with the Excrements, they may be applied again and again to the same purpose. Nor do we know, what Analogy there may be between some Juices in the Body, and tho' mineral Parts which impregnate Gems: For tho' *Oculus Mundi* be reckon'd among the rare Gems; yet if one of the best fort, be, for a while, kept in common Water, it will receive an Alteration, obvious to the Eye.

Add that Mr. Boyle has, without Heat, obtain'd a manifest Transparence from several hard Bodies, and even from a transparent sort of Gems, by means of a faint Liqueur, distilled from a Vegetable Substance; as harmless, and as plentifully eaten as Bread. And whether some Juices of the Body, assisted by the natural Heat thereof, may not serve for Menstrua to some Gems, we will not say; but even the natural Heat of a human Stomach, may perhaps of the external Parts of the Body, may be able, tho' not to digest precious Stones, yet to fetch out some of their Virtues: For 'tis certain, it makes a sensible Alteration in the hardest Sort of them: Witness a Diamond of Mr. Boyle's; which might have its electric Faculty excited without rubbing, only by a languid Degree of adventitious Heat: And another, which, by means of Water, made a little more than luke warm, might be brought to shine in the dark. See **PHOSPHORUS**.

Lastly, if it be yet objected, that 'tis not likely Gems should part with any Effluvia, or Portions of themselves, inasmuch as they lose none of their Weight: It may be answer'd, that the Antimonial Glass and Cup imbue Wine and other Liqueurs, with a strong emetic Quality, without undergoing any sensible Diminution of Weight. Add, that though common Water be not allow'd a Menstruum fit to draw any thing from Mercury; yet, both *Helmont*, and others inform us, that a large Quantity of it being kept a Day or two upon a small Proportion of that Drug, will acquire a Virtue of killing Worms; tho' the Mercury retains its former Weight. See **MERCURY**.

GEM, or **GERMEN**, in Botany, a Shoot, or Bud of a Plant. See **PLANT**, **GERMEN**, **BUD**, **GERMINATION**, &c.

GEMARA, or **GHEMARA**, the second Part of the *Talmud* of *Babylon*. See **TALMUD**.

The Word גמרה *Gemara*, is commonly supposed to denote a Supplement; but, in Strictness, it rather signifies Completion, Perfection; as being form'd of the *Coalde* גמרה *Gemar*, or *Ghemar*, to finish, perfect, or complete any thing: In which Sense it is that the Rabbins use the Word.

For, the Pentateuch, they call simply the *Law*; the first Part of the *Talmud*, which is only an Explication of that Law, or an Application thereof to particular Cases, with the Decisions of the antient Rabbins thereon, they call the *Mischna*, *i. e.* Second Law; and the second Part, which is a more extensive and ample Explication of the same Law, and a Collection of Decisions of the Rabbins, posterior to the *Mischna*, they call *Gemara*, *i. e.* Perfection, Completion, Finishing; by reason they esteem it the Finishing of the Law, or an Explication, beyond which there is nothing further to be desired. See **MISCHNA**.

The *Gemara* is usually call'd *Talmud*, the common Name of the whole Work. In this Sense we say, there are two

Gemara's, or *Talmuds*; that of *Jerusalem*, and that of *Babylon*: Tho' in Strictness, the *Gemara* is no more than an Explication of the *Mishna*, made by the Jewish Doctors in their Schools: Much as the Commentaries of our School Divines on *St. Thomas*, or the Master of the Sentences, are an Explication of the Writings of those Authors.

A Commentary, *Monf. Tillentum* observes, was wrote on the *Mishna*, by one *Johanan*, whom the *Jews* place about the End of the second Century: But *Fa. Marin* proves from the Work it self, wherein mention is made of the *Turks*, that it was not wrote till the time of *Heraclius*, about the Year 620: And this is what is call'd the *Gemara*, or *Talmud of Jerusalem*, which the *Jews* do not use or esteem much, by reason of its Obscurity.

They set a much greater Value of the *Gemara*, or *Talmud of Babylon*, began by one *Asa*, discontinued for 73 Years, on occasion of the Wars with the *Saracens* and *Persians*; and finish'd by one *Josa*, about the Close of the seventh Century.

Tho' the Name *Talmud*, in its Latitude, include both the *Mishna*, and the two *Gemara's*; yet it is properly that of *Asa* and *Josa* alone which is meant under that Name.

This the *Jews* prize above all their other Writings; and even set it on a Level with Scripture itself: In effect, they conceive it as the Word of God, derived by Tradition from *Moses*, and preserv'd without Interruption to their time. See TRADITION.

Ra. Jehuda, and afterwards *R. Jehanan*, *R. Asa*, and *R. Josa*, fearing the Traditions should be lost in the Dispersion of the *Jews*, collect'd them into the *Mishna* and *Gemara*.

GEMATRIA, or **GAMETRIA**, the first kind of arithmetical Cabbala, us'd by the Cabbalistical *Jews*. See CABBALA.

Gematria is a Geometrical, or Arithmetical manner of explaining Words; whereof there are two Kinds: The first bearing a more immediate Relation to *Aristmetick*; and the latter, to *Geometry*.

The first consists, in taking the Numerical Value of each Letter in a Word, or Phrase; and giving it the Sense of some other Word, whose numerical Letters, taken after the same manner, make the same Sum.

For it is to be observ'd, that neither the *Hebrews*, nor *Greeks*, have any other Numeral Figures, beside the Letters of the Alphabet. See LETTER, and CHARACTER.

Thus, a Cabbalist, taking the two first Words in *Genesis*, **בְּרֵאשִׁית** **נִבְרָא**, and by Addition getting the Sum total of all the Numbers, signify'd by those Letters; finds that these two Words signify the same as those other three, **וַיֵּשֶׁב** **נֹחַ** **בְּאֶרֶץ שׁוּשַׁן** For, as to the first; **ב**, is 2; **ר**, 200; **א**, 1; **ש**, 300; **י**, 10; **ת**, 400; **ו**, 2; **י**, 200; and **נ**, 1; Which, together make 1116. And as to the latter; **ו**, signifies 2; **י**, 200; **ש**, 300; **ת**, 400; **ו**, 2; **י**, 200; **ש**, 300; **י**, 10; **ת**, 400; **ו**, 2; **י**, 200; and **נ**, 1: Which, summ'd up, yield the same ber 1116.

Whence the Cabbalist concludes, **בְּרֵאשִׁית** **נִבְרָא**, in the Beginning he created; signifies the same thing as **וַיֵּשֶׁב** **נֹחַ** **בְּאֶרֶץ שׁוּשַׁן**, it was created at the beginning of the Year; and accordingly, the received Opinion of the Cabbalists, is, that the World was created at the beginning of the Month *Tebeth*, which was anciently the first Month in the Year, and answers to our first Month in Autumn, viz. *September*.

So, again, in the Prophecy of *Jacob*, *Gen. xl. 9*, the Words **וַיֵּשֶׁב** **יִשְׂרָאֵל** are understood of the *Messiah*; by reason they make the same Number with **וַיֵּשֶׁב**, which signifies the *Messiah*.

The second kind of *Gematria* is much more obscure, and difficult; and accordingly less us'd: 'Tis employ'd in seeking for abuse, and hidden Interpretations in the Dimensions and Parts of the Buildings mention'd in Scripture, by dividing, multiplying, &c. those Magnitudes by each other. Of this we shall give an Example from some Christian Cabbalists.

The Scripture says, that *Noah's* Arch was 300 Cubits long, 50 wide, and 30 high: Now, the Cabbalist takes the Length for the Basis of his Operations: 300, in the *Hebrew*, is express'd by the Letter **ש**; which Length, divided by the Height 30, gives the Quotient 10: The *Hebrew* Character whereof is **י**, to be placed on the right Side of **ש**. He then divides the same Length by the Width, 50; the Quotient whereof, 6, is express'd by a **ו**; which being placed on the left Side of **ש**, makes, together with the other two Letters, the Name *Jesus*, **שׁוּשַׁן**. Thus, by the Rules of Cabbala, it appears, that there is no Salvation, but in *Jesus* Christ; as, at the Deluge, no Person was saved but those in the Ark.

After the same manner, is the same Name **שׁוּשַׁן** found in the Dimensions of *Solomon's* Temple. But it is rather an Injury, than an Advantage to the Christian Religion, to support it by such frivolous Evidences.

The Word *Gematria* is derived from the Rabbinical *Hebrew* **גִּמְטְרִיָּה**, form'd by Corruption of the *Greek* *Γεωμετρία* *Geometry*.

GEMELLES, in Heraldry, a bearing of Bars by Pairs, or Couples, in a Coat of Arms: As, he beareth Gules on a Chevron Argent, three Bars *Gemelles* Sable, by the Name of *Troymorton*.

GEMELLUS, in Anatomy; a Muscle of the Arm, call'd also *Biceps externus*, as having two Heads. See *Biceps*.

One of the Heads of this Muscle rises tendinous from the upper Part of the inferior Costa of the Scapula, whence passing between the Muscles to the back Part of the Humerus, it joins the other Head; and both run together to their Insertion at the Anco or Tip of the Elbow.

The *Gemellus* is the first Extensor of the Cubit; and is by many reckon'd two distinct Muscles; the first call'd *Loagus*; the latter, *Brevis*.

GEMINI, in Astronomy, the *Twins*; a Constellation, or Sign of the Zodiac: The third in Order; representing *Castor* and *Pollux*. See SIGN, and CONSTELLATION.

The Stars in the Sign *Gemini*, in *Ptolemy's* Catalogue are 24; in *Tycho's* 29; in the *Britannic Catalogue* 79. The Order, Names, Longitudes, Latitudes, Magnitudes, &c. whereof, are as follow.

Stars in the Constellation GEMINI.

Names and Situations of the Stars.	Longitude.	Latitude.	Magn.

GEMINI, in Anatomy, two Muscles of the Thigh, which arise from the Protuberance of the Ischium, and are inserted with the Pyramiformis into the Dent at the Root of the great Trochanter.

GEMMA, or *Sal Gemmae*, is peculiarly used for Rock Salt, or Salt dug out of Mines.—See **SALT**.

The Name *Gemma* is applied hereto, on occasion of its Lustre, and Brilliant; which is not unlike that of Crystal.

The principal Mines of this Salt are those of *Witlica*, in *Poland*; of *Eperie*, in *Upper Hungary*; and of *Cardonna*, in *Catalonia*.—The principal Use of this Salt is for the powdering, or pickling of Meats, in Places destitute of Salt-Springs, &c.

GEMMA, among Botanists, the turgid Bud of any Tree, when it is beginning to bear; call'd also *Oculus*, or *Eye*. See **BUD**, **EYE**, &c.

GEMONIAE, call'd also *Stale GEMONIAE*, and *Gradus GEMONII*, among the *Romans*, were much the same as *Gallows*, or *Gibbets* in *England*. See **GALLOWS**, and **GIBBET**.

The *Gradus Gemonii*, according to *Publius Victor*, or *Sextus Rufus*, was a Place rais'd on several Steps, from whence they precipitated their Criminals. Others represent it as the Place whereon they were executed, and afterwards expos'd to publick View.

The *Gemonie* were in the tenth Region of the City, near the Temple of *Juno*. *Camillus* first appropriated the Place to this Use, in the Year of *Rome* 358.

Some say, they were thus denominated from the *Perseus* who rais'd them; Others, from the first Criminals, that suffer'd on them; Others, from the Verb *gemo*, I gibe, or groan.

GEMOTE, *Couventus*, a *Saxon* Word, denoting a *Meeting*. *Omnis homo pacem habeat evado ad Gemotum & rediens de Gemoto, nisi probatus fuerit*. LL. Ed. Comf.

GENDARMES, or **GENS D'ARMES**, *q. d. Men of Arms*, a Term used among the *French*, for the King's Horse Guards; by reason they succeeded the ancient *Men of Arms*, who were arm'd at all Points, and thence call'd *Gendarmes*. See **GUARDS**.

At present, the Companies of the King's *Gard de Corps*, the Musketeers, and Light Horse, are reputed to belong to the *Gendarmerie*. See **GENDARMERIE**.

The *Grand Gendarmes*, sometimes call'd simply the *Gendarmes*, are a Company of Gentlemen, to the Number of about 250, who guard the King's Person. The King himself is their Captain; and one of the prime Peers, the Lieutenant Captain. When the King marches with all his Household Troops, the *Gens d'Armes* close the March.

Their Device is, a Thunderbolt, falling from Heaven, with the Motto, *Quo jubeat iratus Jupiter*. There are also *Gens d'Armes* of the Queen, the Dauphin, &c.

GENDARMERIE, or **GENS D'ARMERIE**, the *French* Cavalry, and particularly that of the King's Household. See **GENDARMES**.

The *Gendarmerie*, at present, is a Body of Horse, consisting of 16 Companies, *viz.* the *Scotch Gendarmes*; the *English Gendarmes*; the *Burgundy Gendarmes*; and the *Flemish Gendarmes*: Which four Companies compose the King's *Gens d'Armes*, or Life Guard.

The other Companies take their Names from the Princes who command them, as Captains; *viz.* the Queen's *Gens d'Armes*; the Queen's Light Horse; The Dauphin's *Gens d'Armes*; the Dauphin's Light Horse; The Duke of *Burgundy's Gens d'Armes*; the Duke of *Burgundy's* Light Horse; The Duke of *Orleans's Gens d'Armes*, &c. Each Company, at a Medium, consists of 76 *Gens d'Armes*, or Light Horse.

GENDER, **GENUS**, in *Metaphysics*; see **GENUS**, and **KIND**.

GENDER, in *Grammar*, a Division, or Distinction of Nouns or Names, according to the different Sexes of the Things they denote. See **NOUW**.

It has been thought proper, in order to render Discourse more express, and distinct, as also to embellish it by a Variety of Terminations; to contrive certain Diversities in Adjectives, accommodated to the Substantives they are applied to: Whence, from a Regard to that notable Difference there is between the two Sexes, all Nouns Substantives have been distinguish'd into *Masculine*, and *Feminine*; and the Nouns Adjectives also varied to correspond therewith. See **ADJECTIVE**.

But as there was an Infinity of Words, which had no proper Relation, either to the one Sex, or the other; they had *Gender* assigned them, rather out of Caprice, than Reason: And hence it is that the *Gender* of a Noun is frequently dubious and fluctuating. See **MASCULINE**, and **FEMINE**.

It should here however be observed, that this Institution of *Gender* was not made with Design and Deliberation, by the Masters of Language; but was introduced by Custom and Usage. At first, there was only a Difference between the Names of Animals, when spoke of Males, and Females; by degrees, the same Regulation was extended to other Things: The Grammarians have only observed and followed, what Usage had establish'd.

The Oriental Languages frequently neglect the Use of *Gender*; and the *Persian* Language has none at all, which is no Disadvantage; the Distinction of *Gender* being intrinsically useless.

The *Latin*, *Greek*, &c. generally content themselves to express the different *Gender* by different Terminations, as *Bonus equus*, a good Horse; *Bona equa*, a good Mare, &c. But in *English*, we frequently go further, and express the Difference of Sex by different Words; as *Boar*, *Sow*; *Boy*, *Girl*; *Buck*, *Doe*; *Bull*, *Cow*; *Cock*, *Hen*; *Dog*, *Bitch*, &c.

We have only about 24 *Feminines*, distinguish'd from the Males, by the Variation of the Termination of the Male into *ess*; of which Number are *Abbot*, *Prince*; *Count*, *Courtes*; *Ador*, *Actress*; *Heir*, *Heiress*; *Price*, *Princess*, &c. which is all that our Language knows of any thing like *Gender*.

The Eastern Languages, as well as the vulgar Languages of the West, have only two *Gender*s; the *Masculine Gender*, and *Feminine Gender*. The *Greek* and *Latin* have likewise the *Neuter*, *Common*, and the *Doubtful Gender*; and beside these, they have the *Epicene*, or *Promiscuous*, which under one single *Gender* and Termination includes both the *Kinds*. See **MASCULINE**, **FEMINE**, **NEUTER**, **EPICENE**, &c.

GENDER, in *Geometry*. Geometrical Lines are distinguish'd into *Gender*s, *Classes*, or *Orders*, according to the Number of the Dimensions of an Equation, expressing the Relation between the Ordinates, and the Abscissæ. See **GEOMETRICAL LINE**.

GENDER, in *Botany*. } see } **GENUS**.

GENDER, in *Musick*, &c. } see } **GENUS**.

GENEALOGY, a Series, or Succession of Ancestors, or Progenitors: Or, a summary Account of the Relations and Alliances of a Person, or Family, both in the Direct, and Collateral Lines. See **LINE**, **COLLATERAL**, **DIRECT**, **DEGREE**, &c.

In divers Chapters, and Military Orders, 'tis required that the Candidates produce their *Genealogy*; to shew that they are Noble by so many Descents. See **DESCENT**.

The Word is *Greek*, γενεαλογια, which is form'd of γενος, *Genus*, *Progenia*, Race, Lineage; and λογος, *Sermo*, Discourse.

Genealogical Tables, *Genealogical Tree*, *Genealogical Collins*: The *Genealogical Degrees* are so presented in Circles, ranged over, under, and aside of each other. The Antients had the like; which they call'd *Semmata*, from a *Greek* Word, signifying *Crown*.—

GENERAL, something that comprehends all, or extends to a whole Genus. See **GENUS**; see also **UNIVERSAL**.

Thus we say, a *General Rule*, *g. d.* an universal Rule, a *general Loss*, &c. 'Tis disputed, whether *Noah's Flood* was *general*, or *no*. See **DELUGE**.

All the Sciences have some *general Principles*, or *Maxims*. See **MAXIM**. A *general Court*: *General Councils* are particularly called *Oecumenical*. See **OECUMENICAL**.

GENERAL ISSUE, in Law; see **ISSUE**.
General is particularly applied to divers Officers and Dignities.

} see	}	STATES.
		OECUMENICAL.
		ASSEMBLY.
		VICAR.

GENERAL OFFICERS, in an Army, are those who do not only command over a single Company, or Regiment; but whose Office and Authority extends over a Body of several Regiments of Horse, and Foot.

Such are *Lieutenant Generals*, *Major Generals*, *Generals of the Horse*, of the Foot; *Paymaster General*, *Commissary General*, *Chirurges General*, &c.

The Word is also now used in a more extensive Sense; and comprehends such as may command, by virtue of their Rank, over several Bodies of Forces, tho' all of the same Kind; in which Sense Brigadiers are *General Officers*; notwithstanding that they are attach'd to one kind of Forces, either Infantry, or Cavalry, See **BRIGADIER**.

The Pay of a *Lieutenant General*, when in Service, is 4 l. per Day: Of a *Major General*, 2 l. Of a *Brigadier General*, 1 l. 10 s. Of a *Captain General*, 10 l. See **LIEUTENANT GENERAL**, **MAJOR GENERAL**, &c.

We have also Officers in the Law, in the Revenues, &c. distinguish'd by the Appellation of *General*: As, *Attorney General*, *Solicitor General*, &c. See **ATTORNEY**, and **SOLICITOR**.

Receiver General, **Controller General**, &c. See **RECEIVER**, and **CONTROLLER**.

GENERAL is also used in a *Monastic Sense*, for the Chief of an Order; or of all the Houses, or Congregations establish'd under the same Rule. Thus we say, the *General* of the *Cistercians*, the *Franciscans*, &c. See **ORDER**.

Fa. Thomassin derives the Origin of *Generals* of Orders, from the Privileges granted by the ancient Patriarchs to the Monasteries situate in their capital Cities. By such means they were exempted from the Jurisdiction of the Bishop, and immediately subjected to that of the Patriarch alone.

GENERAL is also used in the *Military Art* for a particular March, or Beat of Drum.

To beat the *General*, is to give Notice to the Infantry to march. See **DRUM**.

GENERAL TERMS, or *Words*, are such as express, or denote *general Ideas*. See **WORD**.

Ideas become *general*, by separating from them, the Circumstances of Time, Place, or any other Ideas that may determine them to this or that particular Existence. See **IDEA**.

By this way of Abstraction they become capable of representing more Individuals, than one; each of which having a Conformity to that abstract Idea, is of that Sort. See **ABSTRACTIONS**, **INDIVIDUALS**, &c.

All Things, Mr. *Lock* observes, that exist, being Particulars, it might be expected, that Words should be so too in their Signification: But we find it quite contrary; for most of the Words, that make all Languages, are *general Terms*.

This is the Effect of Reason and Necessity: For, 't' is impossible that every particular Thing should have a distinct, peculiar Name; because it is impossible to have distinct Ideas of every particular Thing, to retain its Name with its peculiar Appropriation to that Idea. 2^o It would be useless, unless all could be supposed to have these same Ideas in their Minds: For Names, applied to particular Things, whereof one alone has the Ideas in his Mind, could not be significant or intelligible to another, who is not acquainted with all those particular Things which had fallen under his Notice. 3^o It would be of no great use for the Improvement of Knowledge; which, tho' founded in particular Things, enlarges itself by *general Views*, to which Things, reduced into Sorts under general Names, are properly subservient.

In Things, where we have occasion to consider and discourse of Individuals, and Particulars, we use proper Names: As in Persons, Countries, Cities, Rivers, Mountains, &c. Thus we see that Jockeys have particular Names for their Horses, because they have often occasion to mention this or that Horse particularly, when he is out of sight.

The first Ideas Children get, are only particular, as of the Nurse, or Mother; and the Names they give them, are confined to these Individuals: Afterwards, observing, that there are a great many other Things in the World that resemble them in Shape, and other Qualities, they frame an Idea, which they find those many Particulars do partake in; to that they give, with others, the Name, Man, for Ex-

ample. In this they make nothing new, but only leave out of the complex Idea they had of *Peter, James, Mary*, &c. that which is peculiar to each, and retain only what is common to all: And thus they come to have a *general Name*, and a *general Idea*.

By the same Method they advance to more *general Names* and *Notions*: For, observing several Things that differ from their Idea of Man, and which cannot, therefore, be comprehended under that Name, to agree with Man in some certain Qualities; by retaining only those Qualities, and uniting them into one Idea, they have another, more *general Idea*; to which, giving a Name, they make a Term of a more comprehensive Extension.

Thus, by leaving out the Shape, and some other Properties signified by the Name, Man; and retaining only Body, with Life, Sense, and spontaneous Motion; we form the Idea signified by the Name Animal. After the same manner, the Mind proceeds to Body, Substance, and at last to Being, Thing, and such universal Terms, which stand for any Ideas whatsoever. See **ENS**, **ESSE**, &c.

Hence we see the whole *Mystery* of Genus and Species; is nothing but abstract Ideas, more or less comprehensive; with Names annexed to them: This shows us the Reason; why in defining Words, we make use of the Genus; namely, to save the Labour of enumerating the several simple Ideas, which the next general Term stands for.

From what has been said, it is plain, that *General* and *Universal* belong not to the real Existence of Things; but are the Inventions of the Understanding, made by it for its own Use, and concern only Signs, either Words, or Ideas. See **UNIVERSAL**.

General Words do not barely signify one particular Thing; for then they would not be *general Terms*; but proper Names: Neither do they signify a Plurality; for then Man and Men would signify the same thing; but what they signify, is a sort of Things: And this they do, by being made a Sign of an abstract Idea in the Mind, to which lower, as Things existing are found to agree, so they come to be ranked under that Name, or to be of that sort.

The Essences then of the Sorts, or Species of Things, are nothing but these abstract Ideas. See **ABSTRACT**.

It is not denied here, that Nature makes Things alike; and so lays the Foundation of this sorting and classing: But the Sorts or Species themselves are the Workmanship of human Understanding; so that every distinct abstract Idea, is a distinct Essence; and the Names that stand for such distinct Ideas, are the Names of Things essentially different. Thus Oval, Circle, Rain and Snow are essentially different. See this further illustrated under **ESSENCE**, **SUBSTANCE**, &c.

GENERALISSIMO, call'd also *Captain General*, and simply, the **GENERAL**; is an Officer, who commands all the military Powers of the Nation; who gives Orders to all the other General Officers; and receives no Orders himself but from the King.

Monf. *Bataas* observes, that the Cardinal *de Richelieu* first made this Word, of his own absolute Authority, upon his going to command the *French Army in Italy*.

GENERATED, or **GENEYED**, is used in *Mathematicks*; for whatever is produced, either in Arithmetick, by the Multiplication, Division, or Extraction of Roots; or in Geometry, by the Invention of the Contents, Areas, and Sides; or of extreme and mean Proportionals, without arithmetical Addition, and Subtraction.—

GENERATING Line, or *Figure*, in Geometry, is that which by its Motion or Revolution produces any other Figure, Plane, or Solid. See **GENESIS**.

GENERATION, in *Physicks*, the Act of procreating, or producing a thing, which before was not: Or, as the Schoolmen define it, the total Change, or Conversion of a Body; into a new one, which retains no sensible Part or Mark of its former State. See **BODY**.

Thus, Fire is said to be *generated*, when we perceive it to be, where before was only Wood, or other Fuel; or, when the Wood is so changed, as to retain no sensible Character of Wood: Thus also, a Chick is said to be *generated*, when we perceive the Chick, where before was only an Egg; or the Egg is changed into the Form of the Chick.

In *Generation*, there is not properly any Production of new Parts, but only a new Modification or manner of Existence of the old ones; by which *Generation* is distinguish'd from *Creation*. See **CREATION**.

It is distinguish'd from *Alteration*, in that the Subject, in this latter, remains apparently the same; and only the Accidents, or Affections are changed: As when the same Body is to day well, and to morrow sick; or Brisk, which before was round, is now square. See **ALTERATION**.

Lastly, *Generation* stands oppos'd to *Corruption*; which is the utter Extinction of a former Thing: As, when that which before was Wood, or an Egg, is no longer the one or the other: Whence it appears, that the *Generation* of one Thing is the *Corruption* of another. See **CORRUPTION**.

The Peripateticks explain *Generation* by a Change of

Passage from a Privation, or Want of a substantial Form, to the having of such a Form. See *Substantial Form*.

The Moderns allow of no other Change in *Generation*, than what is *local*: According to them, 'tis only a Transposition, or new Arrangement of Parts; and thus, the same Matter shall successively undergo an Infinity of *Generations*.

A Grain of *Wheat*, *e. gr.* is committed to the Ground; this imbuing the Humidity of the Soil, becomes turgid, and dilates to such Degree, that it becomes a *Plant*, and, by a continual Accretion of Matter, ripens by degrees into an Ear; and at length into new *Seed*. This *Seed*, ground in the Mill, appears in form of *Flour*; which, mix'd up with Water, makes a *Paste*; whereof, with the Addition of Yest, Fire &c. *Bread* is generated: And this *Bread*, broke with the Teeth, digested in the Stomach, and convey'd thro' the Canals of the Body, becomes *Flesh*.

Now, in all this Series of *Generations*, the only thing effected, is a local Motion of the Parts of the Matter, and their setting again in a different Order; so that, in Reality, wherever there is a new Arrangement, or Composition of Elements, there is a new *Generation*; and therefore *Generation* is reduced to Motion. See *ELEMENT*, and *MOTION*.

GENERATION is more immediately understood of the Production of Animal and Vegetable Bodies, from Seed, or the Coition of others of different *Sexes*, but the same *Genus*, or *Kind*. See *ANIMAL*, and *VEGETABLE*; see also *SEX*, &c.

Some of the modern Naturalists maintain, after *Mont. Perrault*, that there is not properly any new *Generation*: That God created all Things at first: And that what we call *Generation*, is only an Augmentation and Expansion of the minute Parts of the Body of the Seed; so that the whole Species to be afterwards produced, were really all form'd in the first, and inclosed therein; to be brought forth and enclosed to view in a certain Time; and according to a certain Order and Oeconomy. See *SEED*.

Thus, *Dr. Garden*: 'It is most probable, that the Stamina of all the Plants and Animals that have been, or ever shall be in the World, have been form'd *ab origine*.' *Musard*, by the Almighty Creator, within the first of each respective Kind. And he who considers the Nature of Vision, that it does not give us the true Magnitude, but only the Proportion of Things; and that what seems to our naked Eye but a Point, may truly be made up of as many Parts as seem to be in the whole Universe, will not think this an absurd or impossible Thing." *Mod. Theor. of Generat.*

The Manner, wherein the Seed of the Male Animal acts on that of the Female, to impregnate, and render it prolific, has long been inquir'd after; and yet remains still a Mystery. Some, with *Aristotle*, hold the Male Semen to do the Office of a Coagulum; and the Female that of Milk: Which some later Authors have improved on, by supposing the Male Seed an Acid; and the Female an Alkali. Others, consider the thicker Seed of the Male, as the Flower; and the thinner Seed of the Female, as Water, out of which two an animal Paste is wrought, and baked by the Heat of the Womb. But the Moderns are generally agreed, that what Effect soever the Male Seed produces on the Female, 'tis by Motion and Mechanicks that it produces it.

GENERATION of Animals, or ANIMAL GENERATION, is a Process in the Oeconomy of Nature, very difficult to be traced. The Parts concurring hereto, are numerous; and their Functions mostly discharg'd in the Dark.

The Antients distinguish'd two kinds of *Generation*: *Regular*, called *Univocal*; and *Anomalous*, called also *Equivocal*, or *Spontaneous*.

The first was effected by Parent Animals of the same kind; as that of Men, Birds, Beasts, &c. The second was supposed effected by Corruption, the Sun, &c. as that of Insects, Frogs, &c. But this latter Kind is now generally excluded. See *EQUIVOCAL*, *SPONTANEOUS*, *UNIVOCAL*, &c.

There are two principal Theories, or Methods of accounting for the *Generation* of Animals: The one supposes the Embryo, or Fœtus to be originally in the Seed of the Male; the other, in the *Ovary*, or Egg of the Female.

The first supposes Animalcules in the Male Seed, to be the first Rudiments of the Fœtus; and that the Female only furnishes a proper Nidus, and Nutriment to bring them forwards. See *SEED*, and *ANIMALCULA*.

The second supposes the first Rudiments of the Animal to be in the Ova; and that the Male Seed only serves to warm, cherish and ripen the Ova, till they fall off out of the Ovary into the Womb. See *EGG*, *OVARY*, &c.

The first System is well illustrated by *Dr. Geo. Garden*: That Author, upon comparing the Observations, and Discoveries of *Harvey*, *Malpighi*, *De Graaf*, and *Leeuwenboeck* together, concludes it most probable, "That all Animals are *ex animalibus*: That these Animalcules are originally in *Semine Mariæ*, and not in that of the Female; but that they can never come forward, nor be form'd into Animals, without the Ova in the Female."

The 1^o of these Points he argues from the three following Observations:

1^o That something has often been observed by *Malpighi*, in the Cleavricula of an Egg before Incubation, like the Rudiments of an Animal, in form of a Tadpole. See *CICATRICULA*.

2^o From the sudden Appearance and Displaying of all the Parts, after Incubation, it seems probable, that they are not then actually formed out of a Fluid; but that the Stamina of them have been formerly there existent, and are now expanded.—The first Part of the Chick, which is discover'd with the naked Eye, is the *Punctum Salientis*, and that not till three Days and Nights of Incubation are past; on the fifth Day the Rudiments of the Head and Body appear. This made *Dr. Harvey* conclude, that the Blood had a Being before any other Part of the Body, and that from it all the Organs of the Fœtus were both formed and nourish'd; but by *Malpighi's* Observations it appears that the Parts are then only so far extended, as to be made visible to the naked Eye; and that they were actually existent before, and discernible by Glasses. After an incubation of 30 Hours, we see the Head, the Eyes, and the Carina, with the Vertebrae, distinct, and the Heart. After 40 Hours, its Pulse is visible, and all the other Parts more distinct, which cannot be discerned by the naked Eye, before the Beginning of the fifth Day: From whence it seems very probable, that even the so early Discovery of those Parts of the Fœtus by the Microscope, is not the discerning of those Parts newly form'd; but only more dilated and extended by receiving of Nutriment from the Colligamentum; so that they seem all to have been actually existent before the Incubation of the Hen. And what *Swanwardam* has discover'd in the Transmutation of Insects, gives no small Light to this; since he makes appear, that in those large *Eruca's* which feed upon Cabbage, if they be taken about the Time they retire to be transformed into *Aurelias*, and plunged often in warm Water to make a Rupture of the outer Skin; you will discern, thro' the Transparency of their second Membrane, all the Parts of the Butterfly, the Trunk, Wing, Feelers, &c. folded up: But, that after the *Eruca* is chang'd into an *Aurelia*, none of these Parts can be discerned; being so much drench'd with Moisture, tho' they be there actually form'd. See *FœTUS*, *AURELIA*, &c.

3^o As to the Analogy between Plants and Animals: All Vegetables, we see, do proceed *ex Plantulis*; the Seeds of Vegetables being no other but little Plants of the same kind, folded up in Coats and Membranes: Whence we may infer, that so curiously an organiz'd Creature, as an Animal, is not the sudden Product of a Fluid, or Colligamentum, but does much rather proceed from an *Animalcule* of the same kind, and has all its little Members folded up according to their several Joints and Plicatures, which are afterwards enlarged and distended, as we see in Plants.

The 2^d Point, which our late Discoveries have made probable, is, that these Animalcules are originally in the Seed of the Male, and not in the Female: For 1^o There are observ'd innumerable Animalcula in *semine mæstino*, of all Animals. *Leeuwenboeck* has made this so evident, that there seems little room to doubt thereof.

2^o We observe the Rudiments of a Fœtus in Eggs which have been fecundated by the Male; tho' no such Thing is visible, in those not fecundated. *Malpighi*, in his Observations, makes it very probable, that these Rudiments proceed originally from the Male, and not from the Female.

3^o The Resemblance between the Rudiments of the Fœtus in Ovo, both before and after Incubation, and the Animalcule, makes it very probable that they are one and the same. The same Shape and Figure, which *M. Leeuwenboeck* gives us of the Animalcule, *Malpighi* gives of the Rudiments of the Fœtus, both before and after Incubation; yea, and even the Fœtus's of viviparous Animals appear to at first to be the naked Eye; whence *Dr. Harvey* acknowledges, that all Animals, even the most perfect, are begotten of a Worm.

4^o This gives a rational Account of many Fœtus's at one Birth, especially that of the Counts of *Holland*: And how, at least, a whole Cluster of Eggs in a Hen are fecundated by one Coition of the Male. See *FœTUS*.

5^o This gives a new Light, as it were, to the first Prophecy concerning the *Messiah*, that the Seed of the Woman shall bruise the Head of the Serpent; all the rest of Mankind being thus most properly and truly the Seed of the Man.

6^o The Analogy already mention'd, which we may rationally suppose between the manner of the Propagation of Plants and Animals, does likewise make this probable. Every Herb and Tree bears its Seed after its Kind; which Seed is nothing else but a little Plant of that Kind; which being thrown into the Earth, as into its Uterus, spreads forth its Roots, and receives thence its Nourishment; but has its Form within it self: And we may rationally conjecture some such

such Analogy in the Propagation of Animals. See VEGETATION.

The III^d Thing, which our Discoveries make probable, is, That Animals cannot be form'd of these Animalcula without the *Ova in Feminis*, which are necessary for supplying them with proper Nutrim^t; and this is evinc'd from the following Considerations.

1^o It appears, that an Animalcule cannot come forward, if it do not fall into a proper Nidus: This we see in the Cicatrícula in Eggs; and thro' a Million of them should fall into one Egg, none of them would come forward, but what were in the Center of the Cicatrícula; and perhaps the Nidus, necessary for their Formation, is so proportioned to their Bulk, that it can hardly contain more than one Animalcule; which may be the Reason why there are so few Monsters. This, we see, is absolutely necessary in the Oviparous Kinds; and the only Difference which lies between them and the Viviparous, seems to be this, that in the latter the Ova are properly nothing but the Cicatrícula, with its Colliquamentum, so that the Fœtus must spread forth its Roots into the Uterus, to receive its Nourishment; but the Egg in Oviparous Animals may be properly term'd an Uterus, in relation to the Fœtus; as it contains not only the Cicatrícula, with its Amnion and Colliquamentum, which is the immediate Nourishment of the Fœtus, but also the Materials which are to be converted into that Colliquamentum; so that the Fœtus spreads forth its Roots no farther than into the White and Yolk of the Egg, from whence it derives all its Nourishment. Now, that an Animalcule cannot come forward without some such proper Nidus, will not be deny'd; for if there were nothing needful but their being thrown into the Uterus, we do not see why many hundreds of them should not come forward at once, at least while scatter'd in so large a Field.

2^o That this Cicatrícula is not originally *in Utero*, seems evident from the frequent Conceptions which have been found *extra Uterum*: Such as the Child which continued 26 Years in the Woman of *Tobago's* Belly: And the little Fetuses found in the Abdomen of *Mad. de St. Mere*, together with the Testicle torn, and full of clotted Blood: Such also seem to be the Fœtus in the Abdomen of the Woman of *Copenhagen*, mention'd in the *Nouvelles des Lettres*, for *Sept. 85*. All the Members of which were easily to be felt thro' the Skin of the Belly, and which she had carried in her Belly for four Years: And the seven Years Gravitation evident by *Dr. Cole*. Now, granting once the Necessity of a proper Nidus for the Formation of an Animalcule in an Animal, these Observations make it probable, that the Testes are the Ovaria appropriated for this Use: For thro' the Animalcule's coming thither in such Cases, may seem to be extraordinary, and that usually the Impregnation is in Utero; yet it may be collected from hence, that the Cicatrícula or Ova to be impregnated, are in *Testibus feminis*; for if they were not so, the Accidental coming of Animalcules thither, could not make them come forward more than in any other Part of the Body; since they cannot be form'd and nourish'd without a proper Nidus.

3^o It is acknowledg'd, that the Fœtus *in Utero*, for some considerable Time after Conception, has no Connexion with the Womb; that it fits wholly loose to it, and is perfectly a little round Egg, with the Fœtus in the midst; which sends forth its umbilical Vessels by degrees, and at last lays hold on the Uterus. Now, from hence it seems evident, that the Cicatrícula, which is the Fountain of the Animalcules Nourishment, does not sprout from the Uterus, but has its Origin elsewhere; and falls in thither as into a fit Soil: from whence it may draw Nutrim^t for the Growth of the Fœtus; else it cannot be easily imagin'd how it should not have an immediate Connexion with the Uterus, from the Time of Conception.

It is indeed difficult to conceive, how these Eggs should be impregnated *per semen maris*, both because there is no Connexion between the Fallopian Tubes, and the Ovary, for its Transmision; and for that *Dr. Harvey* could never discover any thing of it *in Utero*: But as to the last, *M. Leeuwenboeck* has cleared that Difficulty by the Discovery of innumerable Animalcula in the Tube, or Cornua Uteri, and those living a considerable Time after Coition. And as to the former, we may either suppose that there is such an Inflation of the Tube, at the Time of Coition, as makes them embrace the Ovaries; and such an Approach of the Uterus and its Cornua, as that it may easily transmit the Seed into the Ovary: Or else, that the Ova are impregnated by the Animalcules after they descend into the Uterus, and not in the Ovary. The former seems probable for this Reason, that at least a whole Cluster of Eggs in a Hen will be fecundated by one Tread of the Cock: Now this Fecundation seems to be in the Vitellary, and not in the Uterus, as the Eggs pass along from day to day: For it can hardly be supposed, that the Animalcules should subsist so long, being scatter'd loosely in the Uterus, as to wait there,

for many Days, for the Fecundation of the Eggs as they pass along. The latter Conjecture has this to strengthen it: That the Animalcules are found to live a considerable Time in the Uterus, and that if they should impregnate the Ova in the Ovary it self, the Fœtus would increase so fast; that the Ova could not pass thro' the Tube Uteri; but would either burst the Ovary, or fall down into the Abdomen from the Orifices of the Tube: And from hence probably proceed those extraordinary Conceptions in the Abdomen, out of the Uterus. See *FALLOPIAN Tube*.

Thus much is urg'd for the *System ab Animalcula*. The Retainers to the *System of Generation ab Ovo*, contend that the Rudiments of the Fœtus are laid in the Ovary, and that the Female furnishes the whole Matter of the Body; which they chiefly support from the Conformation in Rabbits, Sheep, Cows, &c. where the Vagina of the Womb is so long, and sinuous, that it is scarce possible the Male Seed should ever arrive within the Body of the Uterus; especially in Cows, whose Vagina is fill'd with a thick, viscid Lchor, and the inner Orifice of the Womb exactly clos'd: Beside that, the Thickness of the Membranes of the Ova should seem impenetrable to so crassa a Matter as the Male Seed. Add, that if Animalcula be found in the Male Seed, which however, will admit of some Dispute (that intestine Motion and Agitation of the grosser Particles thereof, which give rise to the Opinion being accountable for from the common Laws of warm Fluids) yet are the same observ'd in Vinegar, Pepper, Water, &c. Add, that it is highly improbable, that Animalcules should contain the Rudiments of a future Body; since their large Numbers would produce too plentiful an Offspring; inasmuch that it would be necessary for 9999 Parts of them to be in vain, and perish: Which is contrary to the Economy of Nature in other Things.

Analogy is likewise urg'd in favour of this System: Thus, all Plants are maintained to arise from Eggs; Seeds being no other than Eggs under another Denomination. All Oviparous Animals do unexceptionably arise from Eggs, which the Female casts forth; and 'tis highly probable, that the Viviparous only differ from Oviparous, in that the Females lay and hatch their Eggs within themselves. See *VIVIPAROUS*, and *OVI PAROUS*.

Against this Hypothesis it is urg'd, that what are usually call'd Ova, or Eggs, in Women, are no other than little Cells, or Bladders, full of a certain Liguor: And how can a Drop of Liguor pass for an Egg? Add, that these imaginary Eggs have no proper Membrane belonging to them; nor any Covering but that of the Cell; which seems to be inseparable therefrom, that when they are discharged, it is hard to conceive how they should take it with them. And beside, how should they make themselves a Passage through the common Membrane wherewith the Ovary is invested, which is of so close a Texture, that it must seem absolutely impenetrable by a round Body of so soft a Consistence, as one of these Vesicles. Lastly, Vesiculae, in all respects perfectly like Ova, have been found in other Parts of the Body, where it is apparent they could not serve for any purposes of Generation. *Mém. del Acad. Royal des Sciences, An. 1708, 1709.*

To this it is answer'd, that Ova or Vesiculae have been actually found in Dissections, detach'd and separated from the Ovary, and the Ruptures in the Membrane of the Ovary, thro' which they had pass'd, still visible. *M. Littere* even observed some of these separated Ova spread with Blood Vesicles, like those in the Yolks of Birds Eggs. Nay more, the same Author is positive, that he saw an Embryo in one of the Ova not yet separat'd; could discern its Head, Mouth, Nose, Trunk, and Funiculus Umbilicalis, whereby it adhered to the Membranes of the Ovary. See *EMBRYO*. But this will come to be further consider'd under *GENERATION of Man*.

Sir John Floyer starts a Difficulty, which seems to press equally against each System, taken singly: 'Tis fetch'd from Monsters: In a Male, for instance, which is the Production of a Veneral Copula between an Ass, and a Mare, the Bulk of the Body partakes of the Form of the Dam; and the Feet, Tail, and Ears of that of the Sire: Hence it is argued, that the Rudiments of the greater Part of the Fœtus are laid in the Ovum; and that the Impregnation either conveys, or changes the Extremities. If the Male supplied the Animalcula, the Fœtus should always be of the same Species as the Male: If the Female supply it, it should be of her kind; whereas Monsters are of both. See *MONSTER*.
